ABSTRACT

The Rural Manpower Service as administered by the Tennessee Department of Employment Security provides placement services to rural employers and workers and assures that they receive "equity of access" to manpower services. It is also concerned with assuring that the Rural Development Act is being implemented in a manner designed to give the fullest consideration to planning and development groups in attaining their goals. This 1973 annual report of the Rural Manpower Service reviews its operations during the year. The report covers program planning; economic developments; employment and unemployment trends; services for rural people; rural manpower programs and activities for farm workers; community development activities; public relations activities; evaluations, problems, plans, and recommendations; selected data on farm placement operations; day-haul activities at points operated by the State agency; composition of interstate farm migrant groups; and interstate seasonal agricultural clearance activities. The attachments include an organizational chart and the Rural Hanpower Services directory. (NQ)

ANNUAL
RURAL
MANPOWER
REPORT

1973

This report reviews the operations of the Rural Manpower Services as administered by the Tennessee Department of Employment Security, during 1973. It is written to illustrate the primary objective of the Rural Manpower Section, providing placement service to rural employers and workers. The report reveals factors affecting attainment of these objectives, such as the limited supply of available workers to plant, cultivate, harvest, and process perishable crops.

During 1973, as in previous years, excellent cooperation and assistance was received from employers, other state agencies, newspapers, radio and television, churches, and other interested community groups. Indebtedness has been acknowledged and appreciation is expressed to all the above without whose cooperation the overall success of the program would have been impossible.

Part I Annual Summary

PLANNING

1. Administrative Organization

During 1973 there was no organizational change in the Rural Manpower Service. The Chief of Rural Manpower Services provided functional supervision and direction to the program, and one or more individuals in each local office was designated and assigned duties to assure that rural applicants and employers received "equity of access" to manpower services.

2. Pre-Season and In-Season Meetings

Manpower meetings throughout the year to gather and exchange information so that more effective programs could be rendered. Throughout the year there were numerous informal meetings with growers, processors, and other community groups. Due to budgeting reasons, Farm Labor and Rural Manpower meetings were greatly reduced during the year. The annual scheduled meeting was held during the year as follows:

Joint East Tennessee-Western North Carolina Rural Manpower Meeting Maggie Valley, North Carolina, February 27, 1973

ECONOMIC DEVELOPMENTS

A. Impact of Rural Industrialization and Related Developments

The Research and Statistic Division reported a total of 22,949 new jobs in rural areas of the state during 1973. These new jobs occurred as a result of new industry moving into rural Tennessee, and expansion in existing industry.

Many of the non-urban areas throughout the state organized committees concerned with attracting new industry. These committees worked with the Industrial Development Division of the Economic and Community Development Department.

Most new industry that moved into the rural areas were concerned with semi-skilled production workers, and very little difficulty was encountered in training rural residents.

The demand by most existing and new industries locating in rural areas of the state were for those workers who live outside the urbanized part of the county.

Vocational training was provided to rural residents through MDTA and other cooperative programs with E. S. such as NAB-JOBS, and JOPS. Training varied according to the needs of the community. Many high schools in rural areas of the state arranged for adult training and enrollment in vocational fields.

There still seemed to be a slight out migration of rural children into the urban areas, however, this was reduced by the expansion of non-agricultural industry into the rural areas.

Impact of Agricultural Mechanization, Changing Production Techniques

A reduced need for seasonal agricultural workers continued as increased mechanization in many crops still expanded. The largest crop in the western part of the state, soybeans, was completely machine harvested. The utilization of larger, and in some instances, complicated machinery in harvesting had increased COPT AIRILABIL the demand for experienced equipment operators.

Few gains were made in machine harvest of fresh market vegetables, and researchers coatinued to seek the improvement of machines for this purpose.

Agricultural chemicals, including pesticides and herbicides, were reported to have increased in use during 1973 despite adverse publicity of their use on certain crops.

EMPLOYMENT AND UNEMPLOYMENT TRENDS

The rural work force estimated at 52.1 percent of the total A. statewide work force remained at about the same level during the year. A total of 50 rural counties made small gains, but these were balanced by losses in others, while still others remained the The largest employer in one rural county of Scott closed its doors effective October 31. This affected 800 different individuals and immediately shot the unemployment rate from 4 percent to 15 percent in this county. Many rural areas of the state began feeling the impact of the energy crisis by the last of December. Many indefinite layoffs had taken place in manufacturing, primarily textiles and construction.

The overall business climate was favorable during 1973, with 64 plants announcing locations in the state during this period.

B. Unemployment Trends

The annual average unemployment rate for the state dropped to 2.5, well below the national average during the year. A county-by-county study indicated that rural counties decreased more than counties with metropolitan areas.

C. Farm Employment Trends

The farm work force continued its downward trend which can be attributed to decreased number of farms, reduced acreages being cultivated, and crop loss and/or damages due to weather, as well as out migration.

There were fewer migrant workers used because of programs designed to place the migrant out of the migrant stream.

Again, seasonal hired farm workers employment in 1973, reached its highest level in August when an estimated 12,000 seasonal placements were made. Strawberries, snap beans, potatoes, cotton, tobacco, apples, peaches, and some other vegetables, such as squash and peppers were most dependent on the hiring of seasonal farm labor. The majority of these crops were harvested by local labor with the exception of strawberries, tobacco, and apples. The use of the "pick-your-own" method continued to increase.

There was an increased demand for farm equipment operators throughout the state to work generally eight months out of the year. Insofar as year round workers are concerned, the demand remained great for dairymen. The skill level, however, was upgraded

considerably since a great number of the smaller dairy herds were sold to larger operators requiring fewer but more highly trained workers per milking unit.

The beginning of harvest for the crop year of 1973, saw a shortage of locally available workers throughout the state. Due to extensive use of radio, television, and newspaper advertisement, the Employment Service was able to get local workers into the fields on a day-to-day basis. Apparently, through this same publicity, several migrant groups came into the state, and before the season was over, contact was made with some thirteen different groups, representing four crew leaders, and nine family heads. All of these groups "free-wheeled" into the state which caused problems regarding both scheduling work and housing. The Rural Manpower Representatives were able to place some of these groups where approved housing was available.

SERVICES FOR RURAL PEOPLE

Continued efforts were made to ensure that rural residents received "equity of access" to manpower services.

Twenty-seven local offices offered remote area services in every county in the state. The most effective type of rural manpower operation was in eleven <u>full-service</u> <u>sub-offices</u> located in rural counties. The staff members were trained, and all programs were operational in these offices. If an applicant or employer could not receive service for any reason at a sub-office, a specialist was immediately sent in from the local office having jurisdiction over the sub-office to assist.

In addition to the eleven sub-offices mentioned above, there were fifty-nine itinerant points. Manpower services were offered from these offices staffed by Employment Service interviewers on a one or two day-per-week schedule. Usually the county provided office space at these itinerant points, including telephone. Portable microfiche viewers were used at these offices and referrals were made directly from the itinerant offices from the statewide Job Bank. Overall, manpower services to rural residents, as well as rural area employers, continued to increase during 1973. Even with the limited resources, Rural Manpower Services used a combination of WIN, Food Stamp and Farm positions. This provided a greater range of Manpower Services in areas where there had been no service rendered.

RURAL MANPOWER PROGRAMS AND ACTIVITIES FOR FARMWORKERS

The demand for local farm workers still exceeded the supply, even though a decline in the number of farms continued. Manpower programs, designed to assist farm workers, were the same as those for all rural areas. Rural Manpower Representatives recruited farm labor in high schools and attempted to acquaint students with available summer work.

Migrant workers were used in several areas of the state. As in past years, orders were extended to clearance for migrant workers in strawberry harvest in Middle Tennessee. These workers were brought into the state to supplement the local work force supply and followed their normal established migratory pattern of working in strawberry harvest as they worked their way into northern harvests during the summer months.

Tennessee continued direct clearance agreement with North Carolina, and day haul crews were referred between states. This direct clearance agreement helped meet the demand for seasonal farm workers in the upper east part of the state.

When Federal regulations became more stringent on transportation, housing, etc., some employers in Tennessee refused to extend interstate clearance orders through the Employment Service, resulting in a loss of control of migrant crews coming into the state. This caused the Annual Work Plan to be less effective, as only a few workers received assistance in scheduling from the Employment Service in the supply states.

The Department of Education, Vocational Education Division conducted programs for migratory children. All support services that were available to local residents were also available to migrants.

RURAL MANPOWER SERVICE PARTICIPATION IN COMMUNITY DEVELOPMENT ACTIVITIES

The Rural Manpower Service was concerned with rural development in Tennessee, and as a member of the State Rural Development Committee, attempted to assure that the Rural Development Act was being implemented in a manner designed to give the fullest consideration to planning and development groups in attaining their goals.

PUBLIC RELATIONS ACTIVITIES

All local Employment Service offices had access to publicity through television, radio, and newspapers. During crop seasons when extra seasonal labor was needed, as well as other times during the year, the Public Relations Division of the Tennessee Agency provided excellent coverage for recruitment of workers, in bringing growers and workers together.

The Bi-Weekly Farm Labor Bulletin published from April through October gave crop data, job openings, labor supply and demand. This bulletin was distributed statewide within the Employment Service, as well as news media, various other agencies, and interested persons.

EVALUATIONS, PROBLEMS, PLANS, AND RECOMMENDATIONS

1. Service to the outlying areas increased during 1973, and considerable progress was made in providing service to our rural areas.

The value of Tennessee's crop production amounted to a record \$580.0 million in 1973, 35 percent above the 1972 value.

"Equity of Access" was not fully attained by the Employment Service during 1973. Many problems were encountered in providing expanded manpower services, the greatest being the lack of financial resources to properly staff needed positions. The Employment Service attempted to provide these expanded manpower services to rural areas under the adversity of a diminishing staff. The operation of weekly and bi-weekly itinerant points by the Employment Service was not the most effective way to provide realistic manpower services to rural areas. Many of our facilities were rent free and were low in quality. Attempts have been made with the Agricultural Extension Service to form a cooperative agreement on a hitchike concept, however, since this service insisted on pay for staff time used, we were unable to develop this program.

We are continuing to emphasize compliance with the Secretary of Labor's 13-Point Program, and have implemented a monitoring system, using POSAR Tables to analyze our "equity of access" to manpower services of rural applicants.

8

¹Tennessee Crop Reporting Service

2. Recommendations

With the merging of Farm Positions into Title III grants, and discontinuance of the Agricultural Time Reporting Code 700, we would recommend the elimination of the Agricultural and Non-Agricultural designation on placements, thereby having one count of placements.

In order to effectively expand Employment Service into rural areas, and to provide even the 80 percent parity desired for rural areas, we would recommend funding be made available for acquisition of office space and communications in rural counties where needs exist.
