ABSTRACT

This report is a continuation of the planning effort undertaken in 1973 regarding the planning and coordination of postsecondary education in Michigan. The present study updates the enrollment reports, projections, and manpower data, reviews progress toward the objective of developing comprehensive and continuous planning for postsecondary education, and provides recommendations for an interdepartmental effort to secure and utilize appropriate manpower planning information. MICHIGAN DEPARTMENT OF EDUCATION

FOREWORD

This report is a continuation of the planning effort undertaken in 1973 in response to the second basic responsibility of the State Board of Education regarding the planning and coordination of postsecondary education in Michigan. A prior report indicated the need for the development of a state management information system for collecting appropriate information from public and private institutions and government agencies. Major elements of the system included projecting annually the enrollments of both public and independent colleges and universities in Michigan, and for relating present and future manpower needs of the state and nation to the programs and services provided by the institutions.

This present study updates the enrollment reports, projections, and manpower data, reviews progress towards the objective of developing comprehensive and continuous planning for postsecondary education, and provides recommendations for an interdepartmental effort to secure and utilize appropriate manpower planning information.

PART' I

INTRODUCTION

The Constitution of the State of Michigan designates the State

Board of Education as being responsible for general planning and

coordination of all public education, including higher education. This

mandate is reflected in the State Plan for Higher Education, which calls

for "the orderly development of a comprehensive state system of educa
tion beyond the secondary level that will effectively and efficiently

serve all the needs of the State (Goal 1)." There goals of the plan

address the identification of these educational needs, and various

other aspects of the planning process.

Issues Addressed in This Report

One of the basic elements of planning is the collection of data related to the issue under review. Information on college enrollments and degrees, certificates, and awards granted is reported annually through the Higher Education General Information Survey (HEGIS). This process, now in its eighth year, collects data from public baccalaureate institutions and community colleges, and independent colleges and universities, and forms the basis for the analysis of enrollment trends for this report.

Manpower data is obtained primarily from reports provided by the Michigan Employment Security Commission.

The primary issue of concern in this study is the relationship between future manpower needs and academic program planning on the part

of the institutions. The two possible failures in this process are

(1) the failure of the educational system to provide qualified

personnel to meet the man power needs of the state, and (2) the enrollment of students in programs for which there is little or no opportunity for future employment. In time, the market forces of supply and
demand will cause the system to reach a balance, but the examples of
a shortage of physicians and surplus of teachers indicate that the
present process can bear improvement.

Regardless of the outcome of the recommendations contained in this report with respect to the planning process, the data which is made available should be of assistance to institutional planners and thus hopefully will improve the planning process in this critical area.

PART II

TRENDS IN COLLEGIATE ENROLLMENTS

The base line for a study of enrollment trends in higher education is an analysis of current enrollments, and the number and characteristics of students who are presently taking advantage of educational programs. Data for this report is based upon the Higher Education General Information Survey (HEGIS) of opening fall enrollments.

Enrollments by Type of Institution

As shown in Table I, opening fall enrollments of degree credit students at institutions of higher education in Michigan, boun public and private, reached a total of 424,763 in 1973. Included in this total were 221,075 in public four-year institutions, 153,355 in public two-year colleges, and 50,333 students at private institutions. (Table 1 is illustrated graphically in Figure 1.)

Table 2 shows the increase in total enrollments from 19-2 to 1973 of 18,721 students, the largest headcount increase in three years, with most of the increase accounted for by the public two-year colleges. Private institutions showed a decline in enrollments, but the smallest decrease in three years.

Percentage changes from year to year are shown in Table 3. The total increase of 4.6% between 1972 and 1973 is the largest since 1970, while the public four-year institutions showed a modest increase of 1.1% compared to a loss of 0.7% the prior year. The increase for public community colleges was 12.2% and the decline for the independent institutions was 0.6%.

Table 4 shows the percentage distribution of students by type of institution for each of the years from 1960 to 1973. The public four-year institutions enrolled 62.9% of the students in 1960, and 52.0% in 1973; private institutions accounted for 21.2% of the enrollments in 1960, compared to 11.8° in 1973; and the public community colleges had 15.9% of the students in 1960 and 36.1% in 1973. (Table 4 is shown graphically in Figure 2).

Enrollments by Institution

Tables 5 to 7 show a comparison between opening fall enrollments at each institution for the years 1972 and 1973. As the HEGIS data counted extension students and non-degree-credit enrollments in a slightly different manner in 1973, the figures are adjusted slightly to maintain comparability to the prior year. Thus the totals will be at variance with the 1973 totals in Tables 1 to 3.

Table 5 indicates that five of the public baccalaureate institutions declined in enrollment on a headcount basis, while eight increased enrollments. In referring to the 1971 report, Eastern Michigan, Ferris State College, and Western Michigan University have shown declining enrollments two years in a row, while Central Michigan, Northern Michigan, and Wayne State Universities reversed enrollment losses in 1972 to show increased student headcount in 1973.

Six of the 29 community colleges showed decreased headcount enroll-ments from 1972 to 1973, compared to 13 showing declines between 1971 and 1972. To some extent, increased enrollment levels may be attributable to the inclusion of extension course enrollments in degree-credit headcount under the HEGIS format for 1973.

Table 7 shows headcount enrollment comparisons for the 46 independent colleges and universities participating in the survey. Although these institutions showed a net gain in overall total enrollments, exactly half reported fewer students in 1973 than a year refor.

Enrollments by Sex and Full-Time Status

Tables 8 to 10 provide detailed information by institution of enrollment by sex and full-time or part-time status for the fall, 1973 term.

As shown in Table 8, there were 122,937 men and 98,956 women enrolled in public baccalaureate institutions, or 55.4% male students. This compares to a nearly identical ratio a year prior. Full-time students consisted of 72.5% of the total, compared to 74.7% full-time enrollments in 1972.

For Community Colleges, in Table 9, male students were 54.6% of the total, compared to 56.9% in 1972. Full-time enrollment declined from 36.3% in 1972 to 32.3% in 1973, a total of 49,367 full-time students in 1973.

Table 10 shows 31,122 men students in independent colleges and universities and 20,038 women, indicating male students at 60.8% the same ratio as the year prior. The ratio of full-time to part-time enrollments also remained constant, at about 76%.

Enrollments for Advanced Degrees

Tables 11 and 12 show the number of students enrolled for advanced degrees in Michigan during the fall, 1973, term. These enrollments are shown by institution and field of study.

Table 11 shows a total of 44,116 students enrolled for advanced degrees at public baccalaureate institutions in the fall of 1973, an increase of 3,567 over 1972. Of these 11.8% were enrolled in first professional degrees of dentistry, medicine, veterinary medicine, and law. Of the 36,903 students enrolled in masters and higher level programs, there were 15,537 or nearly 40% in Education. Next in popularity were Business and Management Programs, with 3,596 students, with Social Sciences, Engineering, and Health Professions in that order next in size of enrollments.

Enrollments at private colleges and universities are shown next, with 2,475 students enrolled in professional degree programs and 2,231 in master's and higher programs. Table 12 indicates Law to be the highest enrollment professional program. Business and Management comprise about 35% of enrollments in masters and higher programs. The total advance degree enrollment at private institutions for 1973 was 4,706 compared to 4,525 in 1972, an increase of 181.

Total professional and graduate enrollment for public and private colleges was 48,822 or 11.5% of all college, university and community college enrollment in 1973, compared to 45,074 or 11.1, in 1972.

Recommendation

Examination of degree program enrollments, in particular graduate programs as shown in Table 11, indicates a considerable number of low-enrollment programs.

Due to cost and manpower needs it is questionable for graduate institutions to offer advanced degree programs where numbers enrolled do not justify costs.

Therefore, it is recommended that the State Board of Education support the phasing out of graduate programs that cannot, in a three year period, produce a full-time equated enrollment of at least 15 students.

PART III

PROJECTION OF COLLEGIATE ENROLLMENTS

Table 13 provides a summary of the projections of student enrollment from the State Plan for Higher Education in Michigan (1969). At that time, it was estimated that total enrollments for all Michigan institutions would grow from an estimated 397,300 in 1970, to 541,200 in 1975, and to 642,000 in 1980. Public two-year institutions would have 27.5 percent of the total in 1970, 32.5 percent in 1975, and 35.5 percent in 1980. Private institutions would enroll 14.9 percent in 1970, 12.5 percent in 1975, and 10.9 percent in 1980.

A number of variables account for the difficulties of a purely statistical extrapolation of enrollment trends from the past. Among these are: (1) termination of the military draft, resulting in a decline in the college-going rate for U.S. males; (2) decreased emphasis upon a college degree as a credential for employment; (3) state and federal programs to enhance equality of access and equality of opportunity for potential students; (4) a declining birthrate and resultant reduction in the pool of available college-age youth; and (5) the potential expansion and increased availability of external degree and nontraditional college programs. The combined effect of these trends is to bring about a substantial decrease in the projected college enrollment level for institutions of higher education in the state.

These factors also account, to some extent, for the shift in enrollment mix towards the two-year community colleges, and away from the public four-year baccalaureate institutions. Extension of the present trend in enrollments by type of institution is shown in Table 14, indicating a decline in public baccalaureate enrollment to 47.2%

of the total in 1980, compared to 52.0% in 1973. Community college enrollments, if continued at the rate of the past several years, would be 40.8% of the total in 1980, compared to 36.1% in 1973. Private institutions would remain about constant at 12% of all students on a headcount basis.

Table 15 provides an estimate of enrollments by type of institution, 1975 to 1980. Total estimated enrollments are a function of the projected population of the state, assuming the rate of enrollments in college to remain constant over the period to 1980.

The total of 450,750 students, shown in Table 15, compares to 642,000 projected in the 1969 State Plan, and to a total of 427,000 developed in a report of the Population Studies Center, University of Michigan, for the Governor's Commission on Higher Education. A comparison of the three projections is shown in Table 16, and illustrated graphically in Figure 3.

Projected enrollments for Michigan institutions of higher education indicate a much lower potential for future enrollments than had previously been estimated. Each institution, individually, may be expected to view that its share of the total would be proportionately greater than the overall average. However, each institution draws essentially from the same pool of potential students, and that pool is not expanding greatly, if at all. Department of Education staff, together with representatives of the institutions, will jointly develop a projection of enrollments by institution for the state through the year 1980. These projections would take into account the human aspirations of the citizens of the state, the capabilities of the institutions, and the needs of society, as well as the overall total of potential students.

PART IV

DEGREES AND AWARDS

One of the commonly accepted measures of output for institutions of higher education is the number of program completions represented by degrees awarded.

Such information provides insights into the kinds of educational needs currently being met, as well as rates of retention by program at the various institutions.

Based on the HEGIS report of degrees and other awards for the period July 1, 1972 to June 30, 1973, the following tabulations comprise one measure of productivity for Michigan colleges and universities. Table 17 shows 10,382 Associate Degrees awarded at public community colleges, compared to 9,409 degrees awarded in the preceding year. In addition, 3,223 certificates of completion and other awards were given.

Table 18 shows distribution of degrees by level for the public baccalaureate institutions, with a total of 50,302 degrees in 1972-73, compared to 47,440 a year prior. It is interesting to note that 31% of all degrees are for the masters level or above for these institutions. A similar tabulation for independent colleges and universities is shown in Table 19, indicating a total of 9,590 degrees awarded at all levels in 1972-73, 16% of which were at the masters level or above.

Table 20 reports the distribution of bachelor's degrees by academic program for public institutions. Following the overall enrollment statistics, 23% of degrees awarded (7,543) were in education, with social

studies second in popularity at 5,704.5 out of a total of 33,015. (The 0.5 indicates split majors.)

Distribution of master's and doctor's degrees by program and institution are shown in Tables 21 and 22, with a total of 12,494 master's and 1,736 doctorates awarded by public baccalaureate institutions.

Again, degrees in education predominate, with business and management in second place at the master's level, and social sciences placing second in number of doctorates.

Table 23 summarizes first-professions degrees conferred, with a total of 1,205 degrees from public institutions, and 512 from private colleges and universities. Of all degrees in dentistry, 82% are awarded by the University of Detroit, a private institution. A total of 252 law degrees were awarded by private colleges and universities, 26% of the total of 970 law degrees given in 1972-73.

105 36 151

Recommendation

Almost no Jata is collected or is routinely available on student enrollment or completion in non-collegiate postsecondary institutions. The 1974 report of the National Commission on Financing Postsecondary Education stresses the point of the need to expand our definition of postsecondary education to include these schools. The Commission expended great effort to assemble a comprehensive data base including the non-collegiate sector. It is recommended that the data gathering function on enrollments and completions be expanded to include non-collegiate institutions as an integral part of the planning function to meet manpower needs.

PART V

MANPOWER REQUIREMENTS

One of the major issues of advising on the educational needs of the state is the assessment of societal needs. A measure of such needs is the estimated demand for trained or educated persons in specific occupations in the future. These requirements can then be related to the capabilities of the institutions, and the aspirations of individual citizens to pursue career fields.

As an example, Table 24 shows total employment and projections to 1976 for ten occupational categories. As can be seen, major growth is anticipated in professional occupations, management and clerical positions in business, sales, and service occupations. Farm managers, craftsman, machine operators, and household employee occupations show little growth or declining employment potential.

In order to translate this information into a format useful for academic program planning, obviously more detailed information is needed. For example, 26,375 additional professional people will be needed each year through 1976. This category would include medicine, law, education, dentistry, or a number of other occupations. Other detail is needed as to where job openings are likely to occur for specific occupations. Community colleges especially are designed to serve a local population, and manpower planning data must be made available at the local institutional level as well as or a regional or statewide basis.

Recommendation

That efforts be continued to establish a comprehensive manpower planning information system in conjunction with such other state, federal, or local agencies as may be appropriate. Such a system shall be designed to provide information on manpower needs to local institutions, for regional planning, and for the state, and be correlated with enrollments at postsecondary institutions.

PART VI

CONCLUSIONS AND RECOMMENDATIONS

Enrollment trends for institutions of higher education in the State of Michigan appear to be following the national pattern. Overall enrollment growth has slowed from the high rate of the mid-sixties. However, the state did experience a slightly higher enrollment growth rate than the national average (4.6 percent vs. 3.9 percent).

Community colleges continue to gain an increasing share of total college enrollments, while the proportion attending public four-year and private institutions has declined over the past ten years. Programs such as degree reimbursement and expanded student financial assistance may tend to stabilize private and independent college enrollments at about their present 50,000 level.

As to projections of enrollments, most national studies indicate a leveling of college enrollments through the 1980's, with actual declines in student attendance in some cases. Substantiation for these projections is provided by the fact that there are fewer potential college-age students presently in K-12 schools, reducing the total number of possible college students in future years. The end of the military draft is also cited as a reason for a decline in male college enrollment in the 17-19 age group, along with a general decline in interest in college on the part of many young people.

Going counter to the factors causing a decline in college enrollments are new programs in nontraditional studies and increased interest on the part of adults of all ages in college programs. Increases in

enrollments by women in general, and ethnic minorities in particular, also may partially affect the declines in overall enrollment.

Altogether, there is no reason to expect higher education enroll-ments in Michigan to differ significantly from the national picture. Slight increase; in total enrollment are projected through 1978, with a decline in the total through 1980.

The impact of the overall enrollment levels on individual institutions has already been significant, and it is essential that adequate planning be undertaken to assist in the transition from a period of rapid growth to a "no-growth" situation.

The Department of Education staff, together with representatives of the institutions, will develop a projection of enrollments by institution through the year 1980.

A review of enrollments in graduate programs indicates a substantial proportion with very low enrollments (15 students or less). Because of the high cost, and low potential of manpower needs for such programs, their continuance in operation is questionable.

Therefore, it is recommended that the State Board of Education support the phasing out of graduate programs that cannot, in a three-year period, produce a full-time equivalent enrollment of at least 15 students.

The report of the National Commission on Financing Postsecondary Education indicates nearly 3,000 public and private colleges and universities in the United states. An additional /,000 institutions of a vocational, technical, or trades nature are accredited by a recognized accrediting agency, or approved for Veteran's or Social Security

educational benefits. There is an additional 3,500 postsecondary schools that offer formal learning experiences in fields such as real estate, foreign languages, and recreation, but do not participate in federal student aid programs. A substantial number of these 10,500 noncollegiate institutions exist in Michigan, and yet very little is known of their enrollments, productivity, or student achievement.

The data gathering function on enrollments and student completions should be expanded to include non-collegiate institutions, as an integral part of the process of planning to meet manpower needs.

The bulk of the data which is currently available deals with student enrollments and completion or degree statistics. This constitutes the "supply" side of the equation. On the "demand" side of the equation is information on manpower requirements and projections which can be linked to the academic programs. It is here that the greatest deficiency exists in the structure of the information system.

Staff of the Department of Education are working with the Michigan Employment Security Commission (MESC) to make use of employment data being developed by MESC.

It is recommended that efforts be continued and expanded to provide a comprehensive manpower planning information system compatible with the Academic Program Classification Structure, in conjunction with other state, federal, and local agencies, for use in academic program planning by institutions and state agencies.
