ABSTPACT

This booklet has been prepared to guide the implementation, operation, and evaluation of the field tests of the Creating a Career program. This field test guide describes the preparation needed for a field test, (acquiring materials, choosing the instructor, registration, scheduling the field test, preparing the classroom, orientation of other personnel), and agenda for an instructor orientation course, and samples of the registration forms used for the course. The remainder of the guide provides the forms used in the evaluation of the instructor orientation course and in the field test evaluation. (Author/BP)

CREATING A CAREER

Field Test Guide

Training Research and Development Station Department of Manpower and Immigration Prince Albert, Saskatchewan

FOREWORD

This booklet has been prepared to guide the implementation, operation and evaluation of the field tests of the Creating a Career Program. It is intended for use by persons directly concerned with the field tests and to be used in conjunction with the Creating a Career Instructor's Manual in preparing for, conducting and reporting on the field test.

A field test is the operation of a new program under ordinary conditions to determine and evaluate the installation and maintenance procedures and operational characteristics with the objective of more precisely determining the nature of these factors prior to a broader acceptance or adoption of the program. The field test instructor, the program administrator, and the students participating therefore have significant roles in determining the future direction of the development of Creating a Career.

The developers gratefully acknowledge the cooperation and assistance of the various field test institutions, the respective provincial adult training authorities and the regional officials of the Department of Manpower and Immigration in coordinating and conducting the field test.

Creating a Career is a project of the Career Development Programs Unit, Adult Development Division, Training Research and Development Station. The Training Research and Development Station was established to develop new methods of training and counseling.

L.G. Tippett, Head Career Development Programs

PART I INTRODUCTION

WHAT IS CREATING A CAREER?

Creating a Career is a curriculum based vocational guidance program. Its two principal objectives are: to have students make an appropriate occupational choice and to have students develop job search skills.

Creating a Career was developed to meet the urgent needs of many of the more than 250,000 young people who leave school each year and who experience difficulty in obtaining and retaining satisfactory employment. A great many of these young people are enrolled in various adult basic education and other programs which are conducted in a variety of institutions including community colleges, technical institutes and other adult retraining centres. A curriculum based recational guidance program in conjunction with other courses appears he an appropriate way to provide the necessary career planning experiences for these people.

A complete and comprehensive description of the program can be found in the <u>Creating a Career Instructor's Manual</u>.

WHAT IS A FIELD TEST?

In the development of a new training program, particularly one in which one or more innovative instructional processes or approaches are employed, the various stages of development are followed by trials to enable the developers to get feedback in order to confirm the utility of their approaches and to direct further development.

In the case of <u>Creating a Career</u>, these developmental stages have been:

1. The Concept Study. This work was begun in December, 1972. It involved a study of the problems of young people who have difficulty in formulating occupational goals and who have difficulty in successfully bridging the gap from school to work. Literature was reviewed, various programs and practices were examined and a solution was proposed. The proposal was to develop a curriculum based program which would develop the knowledge, skills and attitudes required to meet the principal program objectives. The concept study was completed in mid-January, 1973. An

abridged version of this study entitled Vocational Counseling, can be obtained from Information Canada, Box 1565, Prince Albert, Saskatchewan.

- 2. Exploratory Development. In this stage, the implications and objectives drawn from the Concept Study were used as the basis for determining content areas, more specific objectives and instructional strategies. The result of this work was the design specification and precise definition of the content, process and components of the total instructional system which was to be developed. This work was completed in June, 1973.
- J. Prototype Development. The development team produced the various components which carry the objectives, instructional strategies and evaluation systems to the point where the first trials of the various lessons could be exposed to students. The resulting prototype course was designed to be conducted by the developers and did not require the various support elements necessary for implementation remote from the developmental laboratory. The prototype Creating a Career course was ready for trial in mid-November, 1973.
- 4. Program Experimentation and Pilot Study. During late November 1973, many of the exercises were conducted with a group of students at the Prince Albert Regional Community College. The purpose of these trials was to get student reaction to the methods and materials used. Principally, these were exercises which employed group strategies and those in which several of the new instructional materials were used in conjunction with individualized experiences.

In the Pilot Studies which followed in December, 1973, the total program was conducted in each of a class of BTSD students and a class of BJRT students. These were also conducted at the Prince Albert Regional Community College. In both pilot classes the course was conducted full time for a block of two weeks (10 days).

Program experimentation and pilot study indicated that several exercises and materials required modification, that several should be deleted, that some new ones were required and that some should be resequenced.

5. Advanced Development and Program Formalization. Work in this stage was done in the period from mid-December 1973 to the end of May 1974. Modifications were made, all material components were improved to standards required for a broader field test and reproduced in required quantities. A description of the program was written and made available to interested individuals and organizations and a number of seminars were conducted to make potential users aware of general nature of the program.

6. <u>Field Test</u>. A field test is conducted to test the program under ordinary operating conditions remote from the developmental laboratory. In general it is to determine the nature of program support services required, effect on other programs, and its acceptability by institutions, instructors and students.

Specifically the field test of <u>Creating a Career</u> is part of its ongoing development and formalization and is conducted to:

- a. Determine and evaluate installation requirements such as instructor training, orientation and roles of other personnel, acquisition of materials and scheduling.
- b. Determine and evaluate operational characteristics such as time, cost, and appropriateness of materials and methods.
- c. Determine and evaluate the program's acceptability in and for such programs as BTSD, BJRT, Outreach and others.
- d. Determine and evaluate the program's acceptability by Department of Manpower and Immigration, other program funding organizations and programs, departments of education, training institutions, instructors and students.
- e. Determine and evaluate the program acceptability and adaptability for use in urban and rural areas and large and small institutions.

Twelve to sixteen field tests are planned and will be conducted in a variety of institutional types, in a variety of programs and for a variety of student populations across the country. The implementation of the field tests is being coordinated by regional offices of Department of Manpower and Immigration and the respective adult training authorities in the provinces.

1. Acquiring Materials

The material components required to conduct the field test should be on hand at least one week prior to the start of the course so that they can be checked and prepared for placement in the classroom.

The materials developed a produced by the Training Research and Development Station are purchased a Information Canada, Box 1565, Prince Albert, Saskatchewan. These materials can be purchased by ordering "Materials for Creating a Career Field Test." The materials supplied will be sufficient for a class of 15 students. The price for the complete set to field test sites only is \$400.00.

Specifically these materials along with the requirements are:

Creating a Career Instructor's Manual	1	required
Creating a Career Student's Book		per student
Creating a Career Role Play Situations		required
Creating a Career Audio Tape Set (3 tapes)		required
Creating a Career Video Tape "Listening		required
Techniques"		
Creating a Career Overhead Projectual Set (/8 projectuals)	1	required
Exploring Occupations Kit (KLysort Cards)	1	required
Occupational Information Index Package		required

The materials required from commercial publishers and to be <u>ordered</u> directly from these publishers or distributors are:

Occupational Explorations Kit 1971

NOTE: The Ohio Vocational Interest Survey is machine scored only. The administration of the test, the handling of materials and procedures for ordering the scoring service will be covered in the Instructor Orientation Course.

NOTE: Prices quoted for commercial materials are the latest published by the respective suppliers.

NOTE: The respective suppliers have been contacted to ensure that they have sufficient supplies of those commercial materials on hand.

2. Choosing the Instructor

The choice of the instructor to conduct the course will be made by the appropriate persons in the designated field test institutions. The following points may be considered in selecting the instructor.

- a. The instructor chosen must attend an instructor orientation course at the Training Research and Development Station. The instructor thus prepared for the field test project might well be considered as a resource person on the staff of the institution to further develop the program to meet local needs, to direct such development or provide consultation to other staff members for a wider adoption of the program or a modification of it.
- b. Since the project is a field test, the purpose of which is to evaluate the <u>Creating a Career</u> program as it exists, the instructor should be one who can and will conduct the course in accordance with the methods and materials designated in the instructor's manual.
- Since the first scheduled operation of the course will be a field test situation, the instructor should be able to critically assess the implementation procedures, operational characteristics and student acceptance of the instructional experiences so that an effective evaluation can be made.

3. Registering for the Instructor Orientation Course.

A registration form is provided, in Part III of this manual. This form may be completed by the chosen instructor or the program supervisor. It should be submitted to the Training Research and Development Station, Box 1565, Prince Albert, Saskatchewan S6V 5T2.

4. Scheduling the field lost

In view of the timing of the instructor orientation course the lead time required to acquire materials, and normal training schedule enrollment dates, it is expected that the field test instruction will begin in early or mile the respective of leges and institutions may choose a scheduling scheme most suited to their particular organizational needs and the needs or schedules of the selected student group. The course requires about 50 hours of instruction. Some possible scheduling schemes are:

- a. a two-week block, with the course being conducted full time for each of 10 days;
- b. a four-week schedule, with the course being conducted half time and other courses in the student's program being conducted in the remaining half-days;
- c. a regularly timetabled one-hour class period daily for 50 days along with other courses in the student's program;
- d. one full day each, week for 10 weeks.

4. Preparing the Classroom

Most classrooms available for BTSD or other courses are suitable to conduct the program. Movable table and chairs will enable the instructor to change the classroom arrangement as required for large group, small group or dyads for role plays. Extra tables or suitable shelving should be available on which to place the kits and other materials for easy access by students.

In addition, the classroom should be equipped with a screen and an overhead projector throughout the course as this equipment is used in most topics and units. A video tape playback unit for 1/2 inch reel to reel tape and a television set is required in Topic II and again in Topic IX. An audiotape playback unit or recorder suitable for group listening is required in Topic II, Topic III and again in Topic IX. The audiotapes supplied are cassette type.

The Instructor Orientation Course will be conducted in an area which will be set up as a model classroom for the program. Therefore instructors will have an opportunity to observe and experiment with the various arrangements, materials and equipment.

5. Orientation of Other Personnel

The instructor, or the program supervisor should plan to conduct a briefing for other personnel who have contact with the students. This briefing, which would normally require about two hours, will familiarize these personnel with the general nature of the program so that they will be better able to coordinate their related activities with the class and be better able to assess the operational characteristics and student reaction to the instructional experiences.

PART III INSTRUCTOR ORIENTATION COURSE

PLACE

Training Research and Development Station

154 - Sth Street East

PRINCE ALBERT, SASKATCHEWAN

DATES

Monday, September 23 to Friday, September 27, 1974.

TRAVEL

Prince Albert is served by bus and by air transportation both connecting with major national carriers at Saskatoon, Saskatchewan. Air transportation to or from Saskatoon, is not available on weekends. Limousine service is available to and from the airport. The bus depot is centrally located downtown.

ACCUMMODATION

There are several downtown hotels and several motels on Highway 2 at the southern entrance to the city. If downtown hotel accommodation is preferred, the Sheraton-Marlboro Motor Hotel is within easy walking distance of the Training Research Station and is recommended as the most suitable accommodation.

COSTS

There is no charge for the orientation course but participants through arrangements with their respective employers are responsible for their own travel, accommodation and sustenance expenses.

PROGRAM

The objective of the orientation is to prepare the participants to conduct the <u>Creating a Career</u> course in their own institutions. The orientation is being planned on the assumption that participants are adult basic education or skill instructors without special training in guidance and counselling.

RECISTRATION

Please send the registration form (see page 10 of this guide) to the Training Research and Development Station at least one week before the course begins.

MATERIALS

Participants are requested to bring this guide to the course.

ERIC

INSTRUCTOR ORIENTATION COURSE

Day 1 - Monday

9:00 a.m. - 12:00 noon

Registration

1:30 p.m. - 4:30 p.m.

Introductions, Introduction to Creating a Career, Distribution of Materials, Overview of the Orientation Course, The Adult Learner, Vocational Guidance for Adults

Day 2 - Tuesday

9:00 a.m. - 12:00 noon

Creating a Career - content, process and components of Topics I, II and III

1:30 p.m. - 4:30 p.m.

Creating a Career - content, process and components of Topic IV

Day 3 - Wednesday

9:00 a.m. - 4:30 p.m.

Creating a Career - content, process and components of Topic V.

Day 4 - Thursday

9:00 a.m. - 12:00 noon

<u>Creating a Career</u> - content, process and components of Topics VI to IX

1:30 p.m. - 4:30 p.m.

The Occupational Information System, CCDO. Standard Tests

Day 5 - Friday

9:00 a.m. - 12:00 noon

Organizing for Instruction, Preparing the Classroom, Scheduling Activities, Conducting the Program Evaluation

In addition to the scheduled sessions several independent study stations will be prepared so that participants can do extra reading, research, etc. on topics of personal interest or need.

PART IV EVALUATION

The function of evaluation is to facilitate and expedite decision making. Effective decision making is dependent upon having the appropriate kind and amount of valid and reliable information available at critical decision points. An evaluation process includes collection, compilation, and analysis of data to derive information in appropriate form to serve the decision situation at each level of decision making, the provision of this information to the levels of decision making and the determination and exploration of various alternative courses of action.

Evaluation Policy

Decisions to evaluate, what to evaluate, how to evaluate and how to use the derived products of the evaluation of the field test of Cresting a Career lie with the administration of the field test institutions and the respective provincial adult training authorities. The evaluation system and instruments included later in this section have been prepared with a view to assisting local and provincial evaluation of the field test.

The Evaluation Process

The data collection instruments have been designed principally to serve what are seen to be the information needs of the program or division levels and the institutional levels of decision making. The focus of the data collection is on students, instructors, the Creating a Career course, the overall program in which the course is used and the institution. In addition, the various forms and procedures are intended for precourse, on-course and post-course data collection. The determination of information needs, at each level and within the precourse, on-course and post-course timing have been determined on the basis of the following:

Focus	DECISION SITUATIONS	INFORMATION NEELS
Students	Problems, Needs, Solutions	Ed. level, Goals, Learning styles, Motivation, Interests Numbers, Demographic
Instructors	Preparation, Effect- iveness	Knowledge, Skills, Attitudes, Morale
Program/ Course Development	Objectives, Methods, Materials, Evaluation	Validity, Reliability, Effectiveness, Appropriateness, Adequacy
ln-titution	Program support, Admin- istrative support, Effectiveness, Cost, Local Needs	Personnel, Plant, Student personnel, Equipment, Cost, Program objectives, Program validity, Program effectiveness
