ABSTRACT

Contents of this report from Florida on the National Council of Teachers of English achievement awards in writing are divided into seven sections: the principles followed in pairing the twenty-two judges into eleven teams; the principles followed in assigning students' papers to judges; the procedure used in selecting winners; the range of students' performances (with a table and a graph); a comparison of ratings for impromptu, autobiographical, and best writing papers (with a table); the range of differences in judges' evaluations (with a table); and a comparison of ratings by: (1) public school teachers, and (2) junior college and university teachers (with a table). THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL NATIONAL INSTITUTE OF EDUCATION POSITION OR POLICY.

Part I: Principles followed in pairing the twenty-two judges into eleven teams

- The two judges in a team were from different sections of the state.
- In almost every case one judge from each team was from the public schools and the other was from a junior college or university. (There were two partial exceptions to this principle. One team was made up of two judges from junior colleges, but one of the two judges has spent most of her career in public school teaching. Another team was made up of two people who have spent their careers in public school teaching, though one of them had just accepted a position in a junior college.)

Part II: Principles followed in assigning students' papers to judges

- No judge read a paper from his or her school or immediate locality.
- Usually the papers of only one student from a particular school went to a judging team. In some cases, when avoiding other problems made it necessary, the papers of two students from the same school went to a judging team.
- The judges did not know what schools their papers were from.
- Each team judged approximately the same number of papers. (Ten teams had eighteen sets of papers each; one team had nineteen sets.)

Part III: Procedure used in selecting winners

- Florida could have as many as 30 winners.
- 17 students were chosen as winners by both judges; these were named winners without any further study of their papers. The range of these students' scores was from 19 to 22. (The highest possible score was 24--12 points from each judge.) (The range includes twelve students; five of these seventeen students did not receive specific scores from one of their judges.)
- 47 students were chosen as winners by only one judge. The range of these students' scores was from 13 to 21. (This range includes all forty-seven students; the papers of nine students who received specific scores from only one of their two judges were rated with specific scores by the state coordinator.)
- 9 of the remaining 13 positions went to students (chosen as winners by one judge) with scores of 20 and 21 without any further study of their papers.
- 12 students had scores of 19. The state coordinator studied the papers of these twelve students and chose as winners the four whose work he thought was best. This action filled the remaining 4 places: $17 + 9 + 4 = 30$.

Part IV: Range of students' performance (See graph on next page.)

Key: Score of 3 represents "undistinguished writing."
 Score of 6 represents "good writing, but no better than might be expected of a nominee."
 Score of 9 represents "unusually effective writing."
 Score of 12 represents "outstanding writing."

Notes: The study is based on the writing of 199 students.

There are two scores for each of 163 students, only one score for each of 36 students. There are, then, 362 scores.

Each score represents the accumulative rating for the student's three papers--an impromptu theme, an autobiographical essay, and a sample of his or her best writing. A top score of 4 is possible on each paper.

<u>Score</u>	<u>Number of Instances</u>	<u>Per Cent of Instances the Score Occurred</u>
3	10	= 2.76 %
4	24	= 6.63 %
5	39	= 10.77 %
6	58	= 16.02 %
7	62	= 17.13 %
8	48	= 13.26 %
9	47	= 12.98 %
10	38	= 10.50 %
11	30	= 8.29 %
12	6*	= 1.66 %

*Though six students received a rating of 12 by one of the two judges, no student received a rating of 12 by both judges.

Part V: Comparison of ratings for Impromptu, Autobiographical and Best Writing Papers

Key: Score of 1 represents "undistinguished paper."
 Score of 2 represents "good paper, but no better than might be expected of nominee."
 Score of 3 represents "unusually effective paper."
 Score of 4 represents "outstanding paper."

Note: The averages (means) are based on 362 ratings for each of the kinds of papers.

<u>Kind of Paper*</u>	<u>Mean Score</u>
Impromptu.....	2.32
Autobiographical.....	2.32
Best Writing.....	2.48

*The Impromptu was a one-hour paper on a subject assigned by NCIE. The Autobiographical paper was a short statement (250-300 words recommended) written at the student's leisure. The student and his or her teacher could select the Best Writing sample; no genre was specified.

Part VI: Range of differences in judges' evaluations

This part of the study is based on the judges' ratings of the 163 students for whom there is a rating from each of the two judges. A judge could award a student's writing a total rating of from 3 to 12. The possibility exists, then, that the two judges could differ by as much as 9 points on a 10-point scale. The following table shows the difference in total scores that the judges assigned to a student's papers. (The 0 indicates that the two judges awarded the same scores to the student's writing.)

<u>Difference in Two Judges' Ratings</u>	<u>Number of Instances</u>	=	<u>Per Cent of Instances</u>
0	25	=	15.34 %
1	58	=	35.58 %
2	41	=	25.15 %
3	23	=	14.11 %
4	13	=	7.98 %
5	1	=	0.61 %
6	2	=	1.23 %
7, 8, 9	0	=	0.00 %

One way to interpret this data is to consider that there are 4 descriptive classifications of the students' writing and 10 possible ratings (from 3 through 12, inclusive). A descriptive classification, then, covers a range of $2\frac{1}{2}$ numbers. This being true, we can say that in from 76 % to 90 % of the cases the two judges' ratings fell within the range of one descriptive classification.

- Key: Rating of 3 represents "undistinguished writing."
- Rating of 6 represents "good writing, but no better than might be expected of a nominee."
- Rating of 9 represents "unusually effective writing."
- Rating of 12 represents "outstanding writing."

Notes: The study is based on the writing of 199 students. There are two ratings for each of 163 students, only one rating for each of 36 students. There are, then, 362 ratings. Each rating represents the total rating for the student's three papers--an impromptu theme, an autobiographical essay, and a sample of his or her best writing. A top score of 4 is possible on each paper.

BEST COPY AVAILABLE**Part VII: Comparison of ratings by (1)public school teachers and (2)junior college and university teachers**

This part of the data is based on the evaluations by seven teams of judges. (Data is not used for four of the teams because specific numerical scores are lacking from one judge in each of two teams and since in two teams the judges were not paired to clearly represent both (1)the public schools and (2)the junior colleges and universities.) These seven teams of judges evaluated the writing of 127 students.

The table below shows each judge's average (mean) rating for the 18 or 19 students whose papers he evaluated. The lowest possible rating for a student is 3; the highest, 12.

	<u>Junior College or University Judge</u>	<u>Public School Judge</u>	<u>Difference in Averages</u>
Team A	8.44	8.33	.11
Team B	7.63	8.11	.48
Team C	6.61	5.33	1.28
Team D	8.11	7.39	.72
Team E	5.67	5.50	.17
Team F	7.00	7.05	.05
Team G	6.39	6.56	.17
Average	7.12	6.90	.22

On a 10-point scale (3 through 12, inclusive) the judges' averages differed less than .5 of a point in five teams. In one team they differed between .5 and 1 point. In one team they differed between 1 and 1.5 points. In three teams the public school judges awarded the higher scores; in four teams the junior college or university judges awarded the higher scores. The average score awarded by the junior college and university judges was slightly higher than the average score awarded by public school judges.

Final note on similarity and difference in judges' conclusions: all 11 teams and 22 judges and all 199 students are included in these statements.

--17 students were chosen as winners by both judges.

--47 students were chosen as winners by one judge but not the other.

--135 students were chosen as winners by neither judge.
