ABSTRACT

The tables in this report present a summary of the area, in net assignable square feet, used by each institution of higher education in Maine, broken down by room type and also by organizational unit for fall 1972. Data is presented concerning enrollment information of public and independent colleges and organizational units and room type for public colleges, independent colleges, and percentage of space. STATE COMMISSION
FOR THE
HIGHER EDUCATION FACILITIES ACT OF 1963

Christo Anton, Biddeford, Chairman

Dana R. Darling, Cape Elizabeth

John Ezhaya, Norridgewock

Mrs. Inge L. Foster, Dresden

Mrs. Sylvia Lund, Augusta

Robert Marquis, Van Buren

Mrs. Julia Nault, Machias

Mrs. Lucille Sheppard, Westbrook

Carroll R. McGary, Commissioner of Education

Wayne H. Ross, Executive Director

ACKNOWLEDGMENTS

The gathering and compilation of the data in this report have been a statewide effort, and the Higher Education Facilities Commission hereby gratefully acknowledges the help put forth by those college administrators mentioned in Appendix A.

This Commission now has facility data on tape for all colleges, both public and private, in Maine. This promises much more significant planning in the future. We anticipate many more worthwhile uses in the field of space utilization and needs. The use of the computer should minimize the cost, in time and expense.

The Commission is happy to say that, in Maine, all institutions of higher education submitted data, including those whose size and category made it rather inconvenient. For this, we thank you all.

INTRODUCTION

Realizing that the colleges and universities of the nation would not have the necessary physical facilities to accommodate the large number of college students who were the result of the "Baby Boom" after World War II, the Congress of the United States enacted the "Higher Education Facilities Act of 1963" (Public Law 88-204). The Congress felt that it was essential to assist the nation's colleges and universities, public and private, in the expansion necessary to accommodate these students.

In Maine, Governor John H. Reed designated the State Board of Education as the State Commission for the Higher Education Facilities Act of 1963, for the purpose of administering the Act. The Act was amended in 1966, to provide for grants to state administrative offices to conduct higher education facilities comprehensive planning programs. Later the Amendments of 1972 incorporated Title I of the Higher Education Facilities Act of 1963 as Title VII of the Higher Education Act of 1965.

Probably the most important result of the Higher Education Facilities Act of 1963, so far, has been the formulation of a data base of inventory of institutional physical facilities as described in Higher Education Facilities Classification and Inventory Procedures Manual. This information is of importance at all levels of government - federal, state and local.

At the national level, this data base is available to the Office of Education to enable them to make recommendations to the Congress for which federal appropriations can be justified.

The state - State Commission for the Higher Education Facilities Act of 1963 - needs this data for two purposes. In the first place, a primary purpose of the Commission is to administer Title VII of the Act which distributes grant money to the institutions on a basis of need. The data is also necessary in the function of the Commission in its role as coordinator of higher education facilities comprehensive planning.

The local or institutional level has many uses for the data. The need forces many institutions to actually take stock of themselves for the first time. It assists the institutions in writing proposals and grant requests. The schools now have basic data on their facilities which is standardized and comparable with other colleges of like size and purpose, country wide. Also, there are management uses for the data, such as utilization studies and planning projects.

Under Title VII of the Act, grants of up to 50 percent of the total cost are provided for the construction, rehabilitation, or improvement of needed undergraduate academic facilities, with a portion of the money separately allotted for public community colleges and public technical institutes. The design of this program called for a partnership arrangement between the State and the Federal government. The State Commission establishes the State's priorities for use of funds allotted under the Act. Through a State Plan, the Commission designates a priority system by which all applications for Title VII grants are ranked. The State Plan provides objective standards and methods, not only for ranking the applications, but also to determine the amount of the federal share for each project.

Basic eligibility requirements under Title VII center around two conditions. The applicant

must qualify as an institution of higher education as defined in the law and must show a commitment to make an urgently needed substantial expansion of enrollment capacity or, in the case of new institutions, to create enrollment capacity where it is urgently needed.

A review of the Higher Education Facilities Act Program shows that institutions of higher education, states, and the federal government can work together effectively and with a great deal of mutual trust. The Higher Education Facilities Program has been a dynamic program. The Act has been amended, the regulations have been revised, and the forms and procedures have been changed several times. The changes have been well conceived and needed, and have improved the program.

Through Fiscal Year 1972, the Maine Higher Education Facilities Commission has been awarding grant money to Maine institutions of higher education for eight years. Seventeen (17) institutions have been awarded a total of \$12,071,014, which has generated \$39,263,822 in facility construction and added 885,950 in net assignable square feet. Of the award total, 53% went to independent institutions.

Under Title VI-A of the Higher Education Act of 1965, each institution must provide matching funds. Eligible acquisitions include audiovisual, laboratory and classroom equipment, printed and published materials other than textbooks, and closed circuit equipment. Minor remodeling may be included in a project cost if required to install the equipment or otherwise make it useable.

Statewide comprehensive planning at the college level was forced on most states by the Higher Education Facilities Act of 1963, as amended. Most states still do very little in this field,

although a few require that a "Master Plan" be revised periodically by specific agencies. The Higher Education Facilities Commission is authorized to conduct comprehensive planning to assist the institutions of higher education in Maine to construct needed classrooms, laboratories, and libraries, in order to accommodate mounting student enrollments.

During the first years of the Higher Education Facilities Comprehensive Planning Grants Program, the Maine State Commission carried out some of the more basic elements of comprehensive planning. The end results of this planning will enable the State Commission to supply better documented information about the scope and nature of needs for higher education facilities construction.

EXPLANATION

The Tables in this report present a summary of the area, in net assignable square feet, used by each institution, broken down by room type and also by organizational unit. These classifications are as defined in Higher Education Facilities Classification and Inventory Procedures Manual - a glossary of these definitions are in Appendix B - and the order of presentation follows that manual.

Tables 1-C and 11-C show percentages of space utilized for the various categories. Individual schools cannot be compared against others, for obvious reasons, but the Tables are useful for annual comparisons.

GLOSSARY

Class Laboratory

A room used by regularly scheduled classes which require special - purpose equipment for student participation, experimentation, observation or practice in a field of study.

Classroom

A room used by classes which do not require special-purpose equipment for student use.

Construction Area

That portion of the gross area which cannot be put to assignable use because of the presence of structural features of the building.

Custodial Area

The sum of all areas on all floors of a building used for building protection, care, maintenance, and operation.

Facilities Inventory

A tabulation of all physical facilities of the institution. When done in accordance with Federal guidelines, the facilities are classified by type of space, organizational unit, subject field, and function.

Facility

A building which is owned, leased, rented or used by the institution.

Function

The use to which a type of room is put, generally in terms of instruction, research, public service, academic support, student service, institutional support, or independent operations.

Gross Area	Sum of the floor areas included within the outside faces of exterior walls for all stories or areas, which have floor surfaces.
HEGIS	Higher Education General Information Survey
Net Assignable Square Feet	The sum of all areas on all floors of a building assigned to, or available for assignment to, an occupant, including every type of space functionally usable by an occupant (excepting Custodial Area, Circulation Area, and Mechanical Area).
Office	A room used by faculty, student, or staff working at a desk (or table).
Open-Stack Reading Room	A room which is a combination of study room and stack, generally without boundaries between the stack areas and the study areas.
Study Room	A room used to study books or audio-visual materials on an individual basis.
Type of Room	HEGIS facilities inventory category designation which classifies all types of space found in buildings on the campus of an institution of higher education by its physical characteristics in relation to its primary use.
