ABSTRACT

The 13th in a series of annual publications provides an abstract of statistical information covering American education from kindergarten through graduate school. Subjects on which statistical are provided include the number of schools and colleges, and information on enrollments, teachers, graduates, educational attainment, finances, federal funds for education, libraries, international education, and research and development. The digest is divided according to (1) all levels of education, (2) elementary and secondary education, (3) higher education, (4) federal programs for education and related activities, and (5) selected statistics related to education in the United States. Innovations include data on enrollment and teachers of the handicapped in public elementary and secondary schools; enrollment in higher education, by place of residence; trends in enrollment in higher education, by type and control of institution; institutions of higher education, by highest level of offering, sex of students, and control of institution; characteristics of persons receiving doctor's degrees; federal libraries; federal expenditures for research and development; and summary data from the National Assessment of Educational Progress in science, 1970 and 1973, and in music, 1971-72. NATIONAL CENTER FOR EDUCATION STATISTICS

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and, from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . and review and report on education activities in foreign countries."--Section 406(b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e-1).

FOREWORD

The 1974 edition of the Digest of Educational Statistics is the 13th in a series of annual publications initiated by this office in 1962. Its primary purpose is to provide an abstract of statistical information covering the broad field of American education from kindergarten through the graduate school. In order to perform this function, it utilizes materials from numerous sources, including the statistical surveys and estimates of the National Center for Education Statistics and other appropriate sources, both governmental and nongovernmental. The publication contains information on a variety of subjects within the field of educational statistics, including the number of schools and colleges, enrollments, teachers, graduates, educational attainment, finances, Federal funds for education, libraries, international education, and research and development.

The Digest is divided into five chapters: All Levels of Education, Elementary and Secondary Education, Higher Education, Federal Programs for Education and Related Activities, and Selected Statistics Related to Education in the United States. To qualify for inclusion in this publication, material must be nationwide in scope and of current interest and value. Series of data extending as far back as 1870 have been employed in many instances in order to give some historical perspective. The introduction supplements the tabular materials in chapters I through V by providing a brief description of current trends in American education.

In addition to updating many of the statistics that appeared in previous years, this edition of the Digest contains a number of new tables and charts. Included in the new material are data on enrollment and teachers of the handicapped in public elementary and secondary schools; enrollment in higher education, by place of residence; trends in enrollment in higher education, by type and control of institution; institutions of higher education, by highest level of offering, sex of students, and control of institution; characteristics of persons receiving doctor's degrees; Federal libraries; and Federal expenditures for research and development as a percent of the Federal budget. Summary data from the National Assessment of Educational Progress in science, 1970 and 1973, and in music, 1971—72, are also included.

In the past, the Digest of Educational Statistics has proved useful to persons interested in the nature and scope of education in the United States and in particular to those individuals concerned with the formulation and conduct of educational policy. We trust that the readers of the 13th edition will find it as valuable as its predecessors.

MARJORIE CHANDLER, Chief Division of Statistical Information and Studies KENNETH A. SIMON, Chief Reference, Estimates and Projections Branch

INTRODUCTION

A Statistical Look at American Education: Fall 1974

Education is today the major occupation of about 62.2 million people in the United States. That figure, along with the fact that approximately \$108 billion is likely to be spent by educational institutions this year, lends support to the contention that education is now the Nation's largest enterprise. Included in the 62.2 million total are 58.9 million students enrolled in our schools and colleges, 3.0 million teachers, and about 300,000 superintendents, principals, supervisors, and other instructional staff members. This means that in a Nation with 212 million people nearly 3 out of every 10 persons are directly involved in the educational process.

Total enrollment in regular educational programs from kindergarten through the graduate school increased for 27 consecutive years before reaching an all-time high of 59.7 million in the fall of 1971. The small decreases that subsequently have occurred at the elementary school level reflect the fact that there are now fewer children 5 to 13 years of age than in the recent past. Enrollment is continuing to rise at the high school and college levels.

The following percentages of the school-age population are estimated to be enrolled in school in the fall of 1974: Of the 5-year-olds (the usual kindergarten age), 84 percent; 6- to 13-year-olds (grades 1 to 8), 99 percent; 14- to 17-year-olds (grades 9 to 12), 93 percent; and 18- to 24-year-olds (college age), 25 percent. These estimates are derived from data obtained in the annual fall surveys of the U.S. Department of Commerce, Bureau of the Census, and reported in Current Population Reports, Series P-20.

Enrollment in degree-credit programs in colleges and universities is estimated at 8.9 million this fall. This represents an increase of about 4½ percent over the 8.5 million students enrolled 1 year earlier. The figures for both years exclude undergraduate students in occupational programs not creditable toward a bachclor's degree as well as people attending other types of postsecondary educational institutions.

Enrollment in public and nonpublic schools at the secondary level (grades 9 to 12) is expected to total about 15.6 million students this fall. This is a rise of

200,000, or about 1½ percent, over the 15.4 million enrolled a year ago. Enrollment in nonpublic schools held steady at about 1.2 million, while the number of public school students rose from 14.1 million last fall to an estimated 14.4 million in 1974.

Enrollment at the elementary school level (kindergarten through the 8th grade) apparently declined by about 2.1 percent—from 35.1 million pupils last year to a current estimated level of 34.4 million. Non-public school enrollment is estimated at 3.5 million this fall compared with 3.6 million a year ago, while public school enrollment is now about 30.9 million compared with 31.5 million pupils last fall.

School enrollment in future years will be significantly influenced by trends in the birth rate. Data from the National Center for Health Statistics, U.S. Public Health Service, show that the number of live births in this country attained an alltime high of 4.3 million in 1961. They then declined each year until they reached 3.5 million in 1968. Small increases occurred in 1969 and 1970, but in subsequent years there have been further decreases. On the basis of data for the first 9 months of this year, it appears that only about 3.1 million children will be born in the United States in 1974. This will be the smallest number of births in any year since 1945, a development with major implications for educational planning for the 1980's.

More immediately, the latest projections of the National Center for Education Statistics indicate that there will be small annual reductions in elementary school enrollment for the remainder of this decade reflecting the decrease in the population aged 5 to 13 in the years just ahead. High school enrollment is expected to reach a maximum in 1975, hold steady in 1976, and then begin a series of small annual declines. College enrollment is expected to reach a peak about 1980. A decrease in the college-age population will become evident in the early 1980's, but the extent of the expected enrollment decline will be determined by emerging trends in college attendance rates. At the present time the percentage of young people attending college is down 'ghtly from the high levels attained in the late 1960's.

1

Currently, about 2,380,000 persons are employed as classroom teachers in public and nonpublic elementary and secondary schools. This represents practically no change from the number of persons teaching a year ago. A small increase in secondary school teachers this year will approximately offset a slight decline in employment at the elementary school level. More than 2.1 million persons are teaching in public schools this fall, and an estimated 240,000 are in nonpublic schools. Approximately 1,290,000 are teaching in elementary schools and 1,090,000 at the secondary level.

Overall, the number of public school teachers is growing at a somewhat faster rate than the number of pupils. The result is a continuing improvement in the pupil-teacher ratio. This fall there are about 21.1 pupils per teacher as compared with 25.1 pupils for each teacher 10 years ago. Moreover, a recent study by the National Education Association indicates that public school teachers today are better prepared academically than were their predecessors. Only 3 percent of the teachers in 1971 did not have a bachelor's degree, as compared with 15 percent in 1961. In 1971 more than 27 percent of the teachers held a master's degree, compared with 23 percent 10 years earlier.

The average annual salary of classroom teachers in public elementary and secondary schools rose 6 percent last year over the preceding year, and a similar increase is anticipated in 1974—75. Salaries averaged about \$10,700 in 1973—74 and are expected to exceed \$11,300 in 1974—75. The average salary of the total professional instructional staff is somewhat larger: The estimates for 1973—74 and 1974—75 are \$11,200 and \$11,850, respectively.

The number of instructional staff members in colleges and universities did not rise appreciably during the past year, according to estimates of the National Center for Education Statistics. The total remains near 620,000. College faculties expanded at a rapid rate during the middle and late 1960's in an attempt to keep pace with burgeoning enrollments. Even so, the trend in recent years has been toward larger classes and greater utilization of graduate assistants in the classroom.

The average full-time faculty member in 4-year colleges and universities earned nearly \$14,400 in the academic year 1973—74. Average salaries have been rising about 5½ percent annually in recent years. A further increase to about \$15,200 is expected for the academic year 1974—75.

Approximately 3.1 million persons graduated from high school in 1974. The class of 1975 is expected to exceed 3.1 million, which will make it the largest graduating class in history. The size of these gradu-

ating classes reflects the high birth rate in the 1950's and also the tendency of most young Americans to remain in school at least until high school graduation. About 75 percent of the young people today finish high school, and about 43 percent (or about 58 percent of the high school graduates) can be expected to enter a degree-credit program in a college or university. If present trends continue, about 23 percent of persons in their late teens today can be expected to earn a bachelor's degree; 7 percent, a master's degree; and more than 1 percent, a doctorate.

In a recent survey of the educational attainment of the population, conducted in March 1972, the Bureau of the Census found that the median number of school years completed by young people 20 and 21 years of age was 12.8 years: persons 45 to 54 had completed a median of 12.3 years; persons 75 and over, 8.6 years.

During the school year 1973-74, the number of earned degrees conferred by colleges and universities is estimated as follows: bachelor's, 977,000; first-professional, 54,000; master's, 270,000; and doctor's, 34,000. In 1974-75, the comparable figures are expected to be 975,000, 54,000, 280,000, and 35,000. More degrees were conferred in 1973-74 than in any previous year, and annual increases are expected through the early 1980's.

Expenditures for public and private education from kindergarten through graduate school are estimated at nearly \$98 billion for the 1973—74 school year, and preliminary estimates place the 1974—75 figure at about \$108 billion. Elementary and secondary schools last year expended more than \$6° billion, and institutions of higher education spent more than \$35 billion. Public schools and colleges spent an estimated \$80 billion in 1973—74, as compared with about \$18 billion for nonpublic institutions.

Viewed in another context, the total expenditures for education during 1973—74 amounted to 7.6 percent of the gross national product (GNP). The percentage of GNP spent for education has been in a rising trend for most of the time during the past 30 years. The low point in modern times was reached in 1943—44, in the midst of World War II, when educational expenditures dropped to 1.8 percent of the GNP.

The current expenditure per pupil in average daily attendance in public elementary and secondary schools has more than doubled in the past decade, rising from about \$485 in 1964-65 to more than \$1,200 in 1974-75. The largest item in the school budget is teachers' salaries, and expenditure increases in recent years reflect the efforts of local school systems to provide more adequate compensation for

2

instructional staff members. The rise in expenditures would be much smaller, of course, if allowance were made for changes in the purchasing power of the dollar.

The role of the Federal Government in providing support to education at all levels continues to grow. Whereas Federal grants amounted to \$3.4 billion in 1965, in 1975 they are expected to reach \$14.3 billion. Grants to higher education have more than tripled during the past decade, and aid to elementary and secondary education has increased more than fivefold. The largest percentage increase, however, is in grants for vocational-technical and continuing education, which is more than seven times as great in 1975 as in 1965. This support reflects the widely held view that more students should be

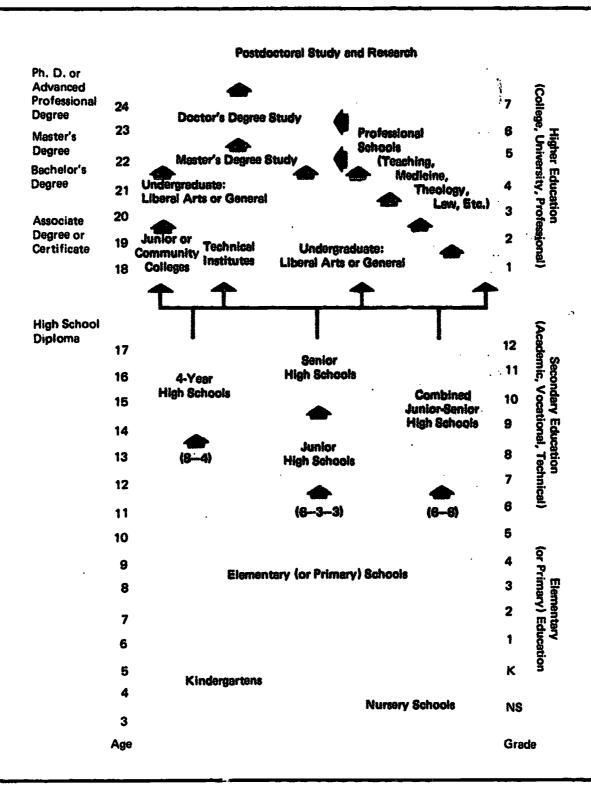

prepared for useful employment before terminating their formal education.

Summing up, there are a number of recent developments in American education that enable one to view the future with optimism. Young people today spend more years in school than their parents and grandparents did. There is an increased emphasis on education for a career: most young people graduate from high school, while many go on to some form of postsecondary education. In public schools, there are fewer pupils per teacher than in earlier years, and the teachers tend to be better paid than their predecessors. Efforts to support education (both in actual dollars and as a percentage of the GNP) have reached new peaks. It appears that some progress is being made.

3

Figure 1.—The structure of education in the United States

CHAPTER I

All Levels of Education

The purpose of this chapter is to provide a broad overview of education in the United States from kindergarten through the graduate school. It brings together materials from elementary, secondary, and higher education to present a composite picture of the American educational system. It contains tables which show the total number of persons enrolled in school, the number of teachers, the number of schools, and total receipts and expenditures for education at all levels. Statistics on educational attainment, on illiteracy and school retention rates, and on annual and lifetime income by years of school completed are also included.

Figure 1 provides a graphic presentation of the structure of education in the United States. The right side of the chart indicates the three levels of education (elementary, secondary, and higher); the left gives the approximate age of persons at each level. As the chart indicates, pupils ordinarily spend from 6 to 8 years in the elementary grades, followed by 4 to 6 years of high school. The entire 12-year program is normally completed at age 17 or 18 years.

High school graduates may enter a junior college, a technical institution, a 4-year college or university, or a professional school. A junior college normally offers the first 2 years of a standard 4-year college program and a broad selection of terminal-vocational courses. Academic courses completed at a junior college are transferable for credit to 4-year colleges and universities. A technical institute offers post-

secondary technical training not leading to bachelor's or higher degrees.

An associate degree requires at least 2 years of college-level work, and a bachelor's degree normally can be earned in 4 years. At least 1 year beyond the bachelor's is necessary for a master's degree, while a doctor's degree usually requires 3 or 4 years beyond the baccalaureate.

Professional schools differ widely in requirements for admission and in length of programs. Medical students, for example, must complete at least 3 years of premedical studies at a college or university before they can enter the 4-year program at a medical school. Engineering students, on the other hand, can enter an engineering school immediately upon completion of a secondary school program.

Many of the statistics in this chapter are derived from the annual and biennial surveys of the National Center for Education Statistics. When necessary, these survey data have been supplemented by estimates prepared especially for this volume in order to make the tables as useful as possible. In addition, substantial contributions have been made by statistics received from other agencies, both governmental and nongovernmental, as indicated in the source note at the end of the appropriate tables. The data obtained from the Bureau of the Census surveys of educational attainment, governmental finances, and school enrollment by age, race, and sex are worthy of special mention for the valuable information they provide.

¹ The 1973 figures for regular nonpublic and other elementary and recondary schools, and all 1974 figures, are estimates. Surveys of nonpublic elementary and secondary schools have been conducted at less frequent intervals then those of public schools and of institutions of higher education. Consequently, the estimates for nonpublic schools are less reliable than those for other types of institutions. The estimates for 1974 are derived from the increases expected from population changes combined with the long-range trend in school enrollment rates of the population.

2 "Regular" schools include schools which are a part of State and local school systems and also most non-profit-making nonpublic elementary and secondary schools, both church-effiliated and nonsectarian. "Other" ischools include subcollegiate departments of institutions of higher education, residential schools for exceptional children, Federal schools for Indians, and Federal schools on military posts and other Federal installations.

3 Excludes undergraduate students in occupational programs which are not

NOTE - Fall enrollment is usually smaller than school-year enrollment, since the letter is a cumulative figure which includes students who enroll at any time during

¹ The 1973 figures for nonpublic and other elementary and secondary schools • The 1973 rigures for nonpublic and other elementary and secondary schools and for institutions of higher education, and all 1974 figures, are estimates. Dets for nonpublic elementary and secondary sphools are not as complete as those for public schools; consequently, the estimates for nonpublic schools are not as reliable as those for public schools or for higher education. The estimates for 1974 are derived from expected enrollment changes combined with the long-term trend in pupil-teacher retios.

SOURCES: Surveys and estimates of the National Center for Education Statistics, U.S. Department of Hesith, Education, and Welfere.

principals.

2 includes faculty for resident instruction in degree-credit courses: excludes faculty engaged in administration, research, extension work, etc.

3 Excludes subcollegiste departments of institutions of higher education, resi-

dential schools for exceptional children, and Federal schools.

4 Date for 1927–28.

⁵ Estimated.
6 Data for 1926-27.

⁷ Distribution by sex estimated.

Data for 1945-48.

Beginning in 1969-60, data are for the first term of the academic year.

The figures include elementary and secondary classroom to schers in regular public and nonpublic schools and other schools, such as Federal schools for

Indians, federally operated schools on posts, subcollegiate departments of colleges, and residential schools for exceptional children. For 1973, the numbers of such teachurs are estimated as 12,000 in public and 2,000 in nonpublic elementary schools; 4,000 in public and 3,000 in nonpublic sacondary schools.

secondary sendos.

3 includes full-time and part-time staff with rank of instructor or above, and junior staff, such as graduate assistants, for instruction in resident courses.

Statistics of Public Elementary and Secondary Day Schools, Fall 1973; unpublished data from the survey of Nonpublic Elementary and Secondary Education, 1970–71; and Fall Enrollmens in Higher Education, 1972.

Data for 1970-71.

Includes universities, liberal arts colleges, reachers colleges and other independent professional schools, and junior colleges.

Includes regular 4-year high schools, junior high schools, senior high schools, and junior-senior high schools.

Data not available.

School Retention Rates

A new computation of school retention rates by the National Center for Education Statistics indicates that young people today stay in school longer than their predecessors did a decade ago. As the accompanying chart shows, about 98 percent of the 5th-graders in the fall of 1965 reached the 9th grade, 87 percent got as far as the 11th grade, and 75 percent received a high school diploma in 1973. The proportion of young people who graduated from high school rose from about two-thirds in 1962 to three-fourths in the graduating class of 1973.

College attendance rates are also higher today than they were in the early 1960's. Currently, about 43 percent of young adults (or close to 58 percent of the recent high school graduates) enter a degree-credit program in a college or university. A decade ago slightly over one-third of the appropriate age group entered college. Approximately 23 percent of persons in their late teens in 1973 can be expected to graduate from college with a bachelor's degree. Ten years ago slightly more than one young person in six went on to earn a 4-year degree.

The Office of Education bases its school retention rates on 5th-grade enrollment because the high rate of retardation in the early elementary grades tends to inflate the enrollment figures for these grades. Fifth-grade enrollment is regarded as a better measure of the number of persons entering the 1st grade for the first time 4 years earlier than is total 1st-grade enrollment for that year.

Compulsory attendance laws keep virtually all children in school at least until the 5th grade. Retention rates are based on enrollment in public elementary and secondary schools and are adjusted to include estimates for nonpublic schools. The computations include all college students, full time and part time, who are enrolled in programs cred table toward a bachelor's degree.

For trends in school retention rates over the past 40 years, the reader may consult table 13 of this report.

Rates for the 5th grade through high school graduation are based on entitlements in successive grades in successive years in public elementary and secondary schools and are adjusted to include estimates for nonpublic schools. Rates for first-time college enrollment include full-time and part-time students enrolled in programs creditable toward a bachelor's degree.

2 Data not evaliable.

NOTE.—Beginning with the class in the 5th grade in 1958, data are based on fell enrollment and exclude ungraded pupils. The not effect of these changes is to increase high school graduation and college entrance rates slightly.

Illiteracy in the United States

The illiteracy rate in the United States was cut in half during the 1960's, according to sample surveys conducted by the Bureau of the Census. The latest data indicate that in November 1969 only 1.0 percent of the population 14 years of age and over were unable to read and write a simple message in English or in some other language. A similar survey conducted in March 1959 found that 2.2 percent of the persons in the same age group were illiterate.

The Bureau of the Census has collected statistics on illiteracy since 1840, but the figures for 1840, 1850, and 1860 are not regarded as comparable with those for subsequent years. Reasonable comparability has been maintained since the census of 1870. The data show that 100 years ago illiterates constituted 20 percent of the population. In other words, the proportion of illiterates was 20 times as great in 1870 as it is today (see the accompanying chart). Each generation tends to spend more years in school than the generation that preceded it, and illiteracy declines as the older people in the population are replaced by younger ones.

Traditionally, the illiteracy rate has been higher for men than for women, but in 1969 the difference was negligible: 1.1 percent of the men and

1.0 percent of the women were classified as illiterate. This may be attributed in part to the fact that women live longer than men, and illiterates are more likely to be found in the older age groups.

The census surveys have consistently found that the inability to read and write is more prevalent among blacks than among the white population. In 1870, for example, 79.9 percent of the nonwhite population were illiterate as compared with 11.5 percent of the white. In 1900, the comparable percentages were 44.5 and 6.2, respectively. In recent years, however, dramatic strides have been made toward the eradication of illiteracy among all Americans. The illiteracy rates in 1969 were 0.7 percent for whites and 3.6 percent for blacks.

For additional information the reader may wish to consult the Bureau of the Census publication, Illiteracy in the United States: November 1969 (Current Population Reports, Series P-20, No. 217). The report may be obtained for 15 cents from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

income of Men by Years of School Completed

The Bureau of the Census has recently released new estimates of the average lifetime income of men by years of school completed. These data indicate that in the years from 18 to death an average elementary school graduate in 1972 could expect an income of approximately \$344,000; a high school graduate, \$479,000; a college graduate, \$711,000; and a person with one or more years of graduate study, \$824,000.

According to the income data presented in the accompanying chart, an average college graduate can look forward to half again as much income as a high school graduate who fails to enter college. The holder of a bachelor's degree can expect more than twice as much income as a person who leaves school after completing the 8th grade. And a man who has completed five or more years of college can anticipate an income which is nearly three times as great as that of an elementary school dropout.

Recent trends in annual income by years of school completed have also been made available by the Census Bureau. The income of all segments of the population has grown substantially in recent years, but the greatest increases have occurred at the higher educational levels. Between 1967 and 1972, for example, the average income of a male elementary school graduate 25 years of age or over rose from approximately \$5,200 to \$6,800; a high school graduate, from \$7,600 to \$10,400; and a college

graduate, from \$11,200 to \$15,300. The increase during the 5-year period was thus about \$1,600 for an elementary school graduate, \$2,800 for a high school graduate, and more than \$4,000 for a college graduate. These trend figures are in current dollars; that is, they make no allowance for changes in the purchasing power of the dollar between 1967 and 1972.

Not all of these variations in lifetime and annual income should be attributed to differences in educational attainment. A number of other factors, including ability, motivation, opportunities for employment, and family background, influence the level of income an individual will eventually attain. Nevertheless, it would appear that the number of years spent in school does have an important effect upon future earning power.

These data are derived from sample surveys of the population. They are subject to sampling variability as well as to errors of response and nonreporting. For more detailed information, the reader may wish to consult the Bureau of the Census report, Annual Mean Income, Lifetime Income, and Educational Attainment of Men in the United States, for Selected Years, 1956 to 1972.

Public	23.4 12.0	20.4 10.9	30 1.1	26.1 13.4	23.2 12.3	29 1.1

These estimates are based on date shown in the National Center for Education Statistics publications Statistics of State School Systems, Statistics of Higher Education, and Bund Sales for Public School Purposes. Expenditures of public elementary and secondary schools and all institutions of higher education for 1973—74 and 1974—75 are derived from enrollment changes combined with the trend in current expenditures per student, Capital outlay for all institutions of higher education is derived from the 1971—72 capital outlay. All estimates of expenditures for monpublic and other elementary and secondary schools are based on the assumption that expenditures per tracher (lincluding donated services) are the same as for the public schools. Some previous estimates of the cost of education in nonpublic schools were based on the assumption that per-pupil costs in nonpublic schools were based on the assumption that per-pupil costs in nonpublic schools were based on the assumption that per-pupil costs in nonpublic schools were the same as for the public schools. Since the pupil tracher ratio is higher in nonpublic than in public schools, the previous estimates were higher than those shown here.

Includes estimates for interest, as follows:

(in billions of dollars)

		ntary ndary		jher Btion
	Public	Nonpublic	Public	Nonpublic
1973-74 1974-75	\$1.7 1.9	\$0.2	\$0.4	\$0.2

³ Includes other elementary and secondary schools, such as residential schools for exceptional children, Federal schools for Indians, federally operated elementary and secondary schools on posts, and subcollegiste departments of colleges. Expenditures for these schools were estimated as follows:

[In billions of dollars]

	Total	Public	Nonpublic
1973~74	\$ 0.3	\$0.2	80. 1
1974~75 ,	.3	.2	

⁴ Excludes an estimated expenditure of \$62 million by public, and \$39 million by nonpublic, subcollegiate departments of institutions of higher education. These amounts were included with other elementary and secondary school expenditures.

NOTE.--Explanations of data are as follows:

Data sources

Data are based on statistics shown in U.S. Department of Health, Education, and Welfare, National Center for Education Statistics, publications: Statistics of Education Statistics, publications: Statistics of Public Schools, annually fell 1964 through fell 1973: Financial Statistics of Higher Education, annually 1965-66 through 1971-72; Higher Education Finances: Selected Trend and Summary Data; and unpublished data in the National Center fell Education Statistics.

Definitions

Total expenditures are defined as the expenditure of all money from both losing and grants and exclude only the funds used for reducing debt. Expenditures from Federal, State, and local sources are defined as institutional expenditures of all grants (but not loses) of funds received from those sources. Expenditures from all other sources include all funds received by the institutions that were not received as a grant from Federal, State, and local governments. Loans from any source are included in this category. (It was estimated that in 1975 about \$31 million in Federal losus to institutions of higher education were included in the "all other" category shown here.) category shown here.)

Since the foregoing definitions are aimed at showing sources of funds through the eyes of educational institutions, the Federal figures shown in this table are different from the ones shown in the chapter on Federal funds for education. The ree main reasons for the difference are as follows:
(1) Different items are included. For example, the tables on Federal funds

show grants and loans to individuals, which would show up in institutional accounts as a receipt from tuition or auxiliary services; or they may be spent for board and room outside the institution and not be a receipt of the institution from any source.

(2) The same items may be handled differently. For example, the tables on Federal funds show only basic research for institutions of higher education, while the institutions include some applied research grants from the Federal Superpress.

(3) The tables on Federal funds frequently show obligated funds, while the institutional figures show expenditures.

The total expenditures shown here were estimated according to the method shown in footnote 1 of the preceding table. The breakdown by source of funds was estimated by first adjusting receipts to equate them with expenditures, and then assuming a continuation of the trend in the amount of receipts from each source. Equating receipts to expenditures was accomplished mainly by including loans and excluding receipts that were used for reduction of debt.

Less than \$50 million.

Less than 0.05 percent.

In addition to regular schools, these figures include other elementary and secondary schools, such as residential schools for exceptional children, Federal schools for indiams, federally operated elementary and secondary schools on posts, and subcollegiste departments of colleges. See footnote 3 of preceding

Educational Expenditures as a Percentage of the Gross National Product

Total expenditures for public and nonpublic schools at all levels of education from kindergarten through the graduate school amounted to approximately \$84.7 billion during the 1971–72 school year. This outlay more than doubles the \$40 billion spent only 7 years earlier and is nearly 10 times the \$8.8 billion expended in 1949–50, in neither case allowing for changes in the purchasing power of the dollar over these periods. The rapid rise of educational expenditures in recent years reflects the growth of the school-age population as well as the increased efforts of the Nation to provide quality education for its young people.

The accompanying chart measures the country's efforts to support education since 1929—30 by comparing expenditures with the gross national product (GNP). The GNP, which is calculated by the Bureau of Economic Analysis, U.S. Department of Commerce, "represents the total national output of goods and services at market prices. It measures this output in terms of the expenditures by which the goods and services are acquired. The expenditures comprise purchases of goods and services by

consumers and government, gross private domestic investment, and net exports of goods and services." GNP thus constitutes a convenient yardstick by which one may appraise the level of educational expenditures.

The percentage of the GNP that went for education has varied widely over the past 40 years. Educational expenditures were relatively itigh in the mid-1930's, exceeding 4 percent of the GNP in 1933-34. They later declined to a low point of 1.8 percent during the war year of 1943-44. Except for a brief period during the Korean conflict, when the annual investment in education tended to stabilize, there has been a steady increase in the proportion of the GNP spent for education since the end of World War II. Expenditures in 1971-72 were higher than ever before, both in terms of actual dollars and as a percentage of the GNP (8.0 percent). In table 27, both dollar expenditures and percentages of the GNP are traced for the period 1929-30 to 1973-74.

Expenditures of State and Local Governments

During the decade 1962—72, education was consistently the largest item in the budgets of State and local governments. Expenditures for education accounted for 37 cents of every dollar spent in 1962—63 and for 39 cents per dollar expended in 1971—72. The total spending by State and local governments for education rose from \$23.7 billion in 1962—63 to \$64.9 billion in 1971—72.

Here, for purposes of comparison, are some other major expenditures at the State and local levels, including outlays for highways, public welfare, and health and hospitals. Expenditures for highways, for instance, amounted to 17 cents of every dollar spent in 1962—63 but came to only 11 cents in 1971—72. On the other hand, there was a substantial increase in the proportion of money spent for public welfare during that decade. In 1962—63 one of every 12 State and local government dollars went for welfare, but by 1971—72 this had risen to one dollar in every eight. During the 10-year period, public welfare replaced

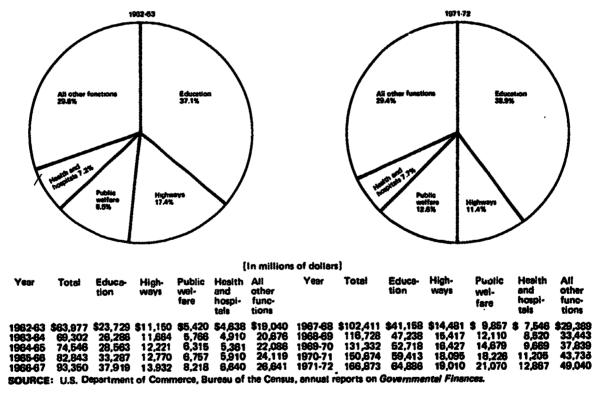

highway as the second largest item in the budgets of State and local governments.

The proportion of money spent for health and hospitals rose slightly during the decade. In 1971-72 these items together accounted for about 8 cents of every dollar expended. Outlays for health and hospitals have consistently ranked fourth among the expenditures of State and local governments.

All of the figures cited above relate to "direct general" expenditures; that is, they exclude expenditures resulting from the operation by State and local governments of utilities, stores, and insurance and retirement systems. They are derived from the annual reports of the Bureau of the Census on Governmental Finances. Additional information on the expenditures of State and local governments may be found in the accompanying table and chart.

CHAPTER II

Elementary and Secondary Education

The United States has gone a long way toward providing universal elementary and secondary education for its citizens. While regulations differ somewhat from one jurisdiction to another, it may be said in general that free public education is available to all and that school attendance is compulsory between the ages of 7 and 16. A school dropout before the age of 16 is becoming a rarity in this country, and the great majority of young people graduate from high school.

Elementary and secondary education is offered by some 64,900 public elementary schools, 25,900 public secondary schools, 14,000 nonpublic elementary schools, and 3,700 nonpublic secondary schools. The largest segment of the school population is found in public schools. Pupils in the regular public school system account for about 89 percent of the total enrollment in kindergarten through grade 8, and for 92 percent of the total in grades 9 through 12. Enrollment in nonpublic schools, which grew at a rapid pace in the 1950's and early 1960's, has tended to decline somewhat in recent years. Today about 1 pupil in 10 is enrolled in a nonpublic (church-related or nonsectarian) school.

The National Center for Education Statistics obtains statistics each fall from the State departments of education on the pupils, teachers, and estimated expenditures of public elementary and secondary day schools. These data are usually available within about 5 months after the opening of the school year. More comprehensive statistics on the organization, staff, pupils, and finances of public schools are collected biennially from the same sources. The data from the two surveys are published in Fall Statistics of Public Elementary and Secondary Day Schools and Statistics of State School Systems, respectively. In these two publications emphasis is placed upon State and

national totals. To secure data on pupils, staff, and finances at the local level, the National Center for Education Statistics conducts a survey of Statistics of Local Public School Systems. Separate reports have been issued on the pupils and staff and on the finances of local school systems.

In recent years this office has expanded its coverage of nonpublic schools with the publication of Statistics of Nonpublic Elementary and Secondary Schools. The latest report in this series covers the school year 1970—71. Valuable information on nonpublic schools has also been made available by State education agencies, the National Catholic Educational Association, and the Bureau of the Census.

Since much of the instruction in vocational education takes place at the secondary school level, statistics on enrollment in and expenditures for vocational education are also included in this chapter. More detailed information in this area is contained in the annual reports on *Vocational and Technical Education* issued by the Office of Education.

Other recurring reports of the National Center for Education Statistics which have appeared at less irequent intervals are the studies of public secondary day schools, offerings and enrollments in high school subjects, and special education for exceptional children. The most recent statistics from each of these surveys, supplemented by estimates where appropriate, are summarized in the tables which follow.

In general, the statistics in this chapter relate to 48 States and the District of Columbia through the school year 1957—58. Data for 1959—60 and subsequent years also include both Alaska and Hawaii. Any deviation from this rule is clearly indicated in the tabular presentation.

¹ Enrollment in ungraded and special classes is not shown separately but is proreted among the grades.

NOTE.-Because of rounding, details may not add to totals,

SOURCES: (1) U.S. Department of Health, Education, and Welfere, National Center for Education Statistics, Statistics of State School Systems, 1971-72. (2) Estimates of the National Center for Education Statistics.

² Data derived from special studies or estimates.

³ Estimated from fell data.

⁴ Figures in parentheses, shown in normal progression, indicate enrollments in successive grades of the pupils who entered the 1st grade in 1962-63, including retarded and accelerated pupils. Because of retardation, school retantion rates should not be calculated directly from 1st-grade enrollment.

5 Less than 0.05 percent.

Figure for a given State includes pupils enrolled for the first time in the United States during the school year and pupils transferring to that State from another during the school year (except those with footnotes 3 and 4).

Includes estimates for nonreporting States.

Not enrollment for the school year.

Enrollment not cumulative but as of a specific date.

Not strictly comparable with those of other States because attendance figures include excused absences and enrollment is not cumulative.

Data and available.

⁷ Estimated by the National Center for Education Statistics.
8 Legal minimum.
9 Data from published annual State report.
10 Data from various published reports.
11 Data for 1967—88 school yeer.

¹ Unless otherwise indicated, includes enrollment in subcollegiate departments of

NOTE,-Beginning in 1959-60, includes Alaska and Hawaii.

SOURCES: U.S. Department of Health, Education, and Welfere, National Center for Education Statistics, Statistics of State School Systems: Statistics of Public Elementary and Secondary Day Schools: Statistics of Nonpublic Elementary and Secondary Schools: and unpublished data.

seconcary graces. Separate provisions which apply to persons or kindergerten, nursery school, or junior college age are not included in this tabulation.

Many States have special provisions for children who have completed a certain level of education (usually the 8th grade or higher) and who are employed.

Some States have special provisions for veterans and disabled portions. Also, the statutes in a few States provide that no person shall be deprived of educational opportunities by reason of age.

⁴ Not specified in the statutes.

⁶ A school board may admit children who have reached their 6th birthday on or before

Unless otherwise indicated, includes enrollment in subconfiguate departments or institutions of higher education and in residential schools for exceptional children. Beginning in 1949—50, also includes Federal schools.

Includes all persons residing in the United States, but excludes Armed Forces oversees. Data from the decennial censuses have been used when appropriate. Other figures are Bureau of the Census estimates as of July 1 preceding the

Other rigures are Bureau of the Census estimates as of July 1 preceding the opening of the school year.

3 Excludes enrollment in subcollegiate departments of institutions of higher education and in residential schools for exceptional children.

4 Data for 1927-28.

⁵ Estimated. ⁶ Preliminary data.

2 Fail enrollment

3 Data for 1870 21

4 Pror to 1919 20, data are for the number of different persons employed rather than number of positions

4 Distribution estimated by the Office of Education.

Because of a modification of the scope of "current expenditures for elementary and secondary day schools," data for 1959—60 and later years are not entirely comparable with data for prior years.

Includes summer schools, community colleges, and adult education, Seginning in 1959—60, also includes community services, formetly classified with "current expenditures for elementary and secondary day schools."

8 Seginning with 1971 - 72, excludes community colleges and adult education.

SOURCE U.S. Department of Health, "discation, and Welters, National Center for Education Statistics, Statistics of State School Systems, 1971 – 72.

<sup>Pincludes supervisors, principals, teachers, and other nonsupervisory instructional staff.

Excludes current expenditures not allocus in to pupil costs,

11 "A.D.A." means average delly attendance in elementary and secondary day schools.

13 Includes interest on school debt.

13 The expenditure figure used here is the sum of current expenditures allocable to pupil costs, capital outlay, and interest on school debt.</sup>

¹⁴ Per-day rates derived by dividing annual rates by average length of term.

Public Schools in Large Cities

Each fall the National Center for Education Statistics collects basic data on the public elementary and secondary schools in each State. In the same survey, statistics are also obtained on the public schools in the 20 largest cities in the country, as determined by the 1970 Census of Population. Data from the latest survey have recently become available with the publication of a report entitled Statistics of Public Elementary and Secondary Day Schools, Fall 1973.

The public schools of the 20 largest cities are an important segment of American education. In the fall of 1973 they accounted for slightly more than one-tenth of all public school pupils in the country, enrolling 10.5 percent of those at the elementary school level (grades K-8) and 10.0 percent of those at the secondary level (grades 9-12). They also employed 10.2 percent of all the classroom teachers in public elementary and secondary schools in the United States. There were 21.5 pupils enrolled for each classroom teacher in large cities, a figure quite similar to the pupil-teacher ratio in the Nation (21.4 pupils per teacher).

During the 1973—74 school year the 20 cities spent an estimated \$7.3 billion for public elementary and secondary schools, as compared with about \$56.0 billion nationwide. Indicative of the effort large cities are making to support public education are the facts that their current expenditure per pupil in average daily attendance is about 30 percent higher than the national average and their teachers' salaries are about 20 percent higher.

Additional information on public schools in large cities may be found in table 35 and in Statistics of Public Elementary and Secondary Day Schools, Fall 1973, which may be purchased for 85 cents from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

 8 Date are number of full-time and part-time positions,

Selected Characteristics of Public School Teachers

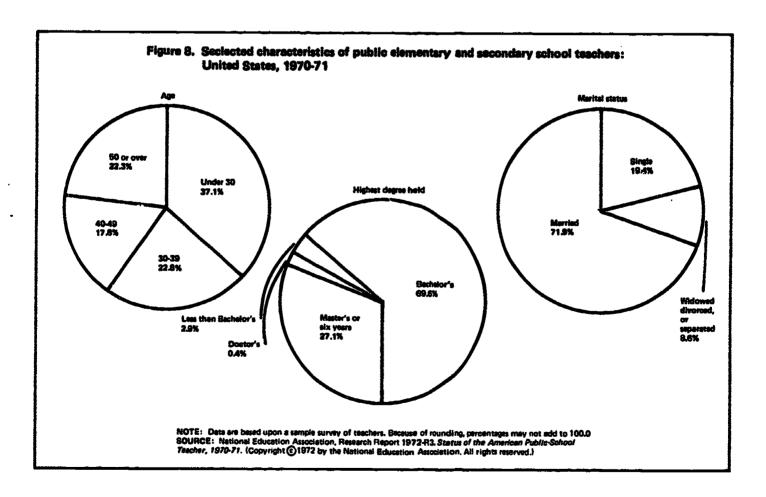

The National Education Association (NEA) in 1972 issued a report on the Status of the American Public-School Teacher, 1970—71. The study provides a wealth of information on the personal characteristics, professional qualifications, teaching assignments, and economic status of public elementary and secondary school teachers. The data on the age, marital status, and academic attainment of teachers in 1971 are summarized in the accompanying chart.

The NEA has conducted several similar surveys at intervals of 5 years. When the data for 1960-61 and 1970-71 are compared, the following trends emerge: The typical teacher in 1971 was younger than in 1961 (35 as compared with 41 years old) and had fewer years of teaching experience (8 versus 11 years). Teachers in 1971 tended to be better educated than previously; only 3 percent did not hold a bachelor's degree, compared with 15 percent in 1961. They also earned substantially higher average salaries, nearly \$9,300 in 1970-71 as contrasted with less than \$5,300 in 1960-61.

Men teachers accounted for 34 percent of the total in 1971 but only 31 percent of all teachers in 1961. Secondary school teachers constituted 47 percent of the total in 1971 and 43 percent of all teachers 10 years earlier. There was a slight decline in the number of pupils taught by each teacher between 1961 and 1971, but the average number of hours worked per week remained the same (37 hours in the required school week and 47 hours per week on all duties).

Since the above figures are based upon sample surveys, they are subject to the usual sampling variability. Highlights from the teacher studies were published previously in the December 1971 and March 1972 issues of the NEA Research Bulletin. The material is copyrighted by the NEA and is used by permission.

 $^{{\}bf 1}$ includes supervisors, principals, classroom teachers, and other instructional

SOURCES: U.S. Department of Health, Education, and Welfare, National Center for Education Statistics, Statistics of State School Systems and Statistics of Public Elementary and Secondary Day Schools, Fall 1973.

<sup>Includes supervisors, principals, classroom teachers, and other instructional staff.

Based on the Consumer Price Index, prepared by the Bureau of Labor Statistics, U.S. Department of Labor.

Bestimated.

Beginning in 1889—60, includes Alaska and Hawali.

Data not svallable.

Partly estimated.

Excludes kindergarten teachers.
Includes administrators.</sup>

⁹ Includes clerical assistants to instructional personnel,
10 Represents actual salary for 1972—73 school year.
11 Includes attendance personnel,
12 Excludes vocational schools not operated as part of the regular public school

Table 59.—Average annual salary of instructional staff in public elementary and secondary day schools, and average annual earnings of full-time employees in all industries, in unadjusted dollars and adjusted dollars: United States, 1929—30 to 1973—74

	Unadjust	ed dollars	Adjusted doll purchasin	ars (1973—74 g power) ^į

<sup>Includes regular 4-year high schools preceded by 8-year elementary schools; no reorganization has taken place.
Includes 2- and 3-year junior high schools.
Includes 3- and 4-year senior high schools preceded by junior high schools.
Includes 5- and 6-year high schools. Beginning in 1967—68, also includes combined elementary-secondary schools.

Excludes incomplete high schools and vocational or trade high schools (480 in 1887—68 and 670 in 1970—71).</sup>

High School Graduates Compared With Population 17 Years of Age

The National Center for Education Statistics estimates that nearly 3.1 million young people graduated from American high schools during the school year which ended in June 1974. This represents an increase of about 2 percent over the 3.037.000 persons who graduated in 1973.

The size of these graduating classes reflects the high birth rate in the mid-1950's and also the present tendency of students to remain in school at least until high school graduation. During the past century, as the accompanying chart shows, the proportion of young people finishing high school has steadily increased. Between 1870 and 1970, the number of high school graduates for each 100 persons in the population 17 years old rose from 2 to 76.

In the class of 1973, as in each graduating class for the past 100 years, there were more girls than boys. Of the 3,037,000 graduates, 1,536,000 (50.6 percent) were girls, and 1,501,000 (49.4 percent) were boys. This represents a substantial change in the distribution of graduates since 1920, when girls made up 60 percent of the graduating class.

The figures for high school graduates reported above include graduates of both public and private schools. In 1973, approximately 90 percent of the graduates were awarded their diplomas by public high schools and the remaining 10 percent by private high schools. In addition, each year a number of persons are granted high school equivalency certificates. In 1973, approximately 191,000 persons received these certificates.

¹ Federal revenue receipts include Federal grant programs to State and local school systems, including funds under the Elementary and Secondary Education Act, Economic Opportunity Act, eld to federally impacted areas, National Defense Education Act, Manpower Development and Training, vocational education, stc. Funds received from the School Lunch and Milk Program are included, but reporting on the money value of commodities received is incomplete. Funds from States' share of general revenue sharing are included.

² Local and other revenue receipts include revenue receipts from local and intermediate sources, gifts, and tuition and fees from patrons,

³ Includes \$8,000,000 of general revenue sharing apportioned through foundation programs to public schools.

SOURCE: National Education Association, Research Report 1973-R6, Estimates of School Statistics, 1973-74. (Copyright © 1974 by the National Education Association. All rights reserved.)

National Education Association estimates.
 Includes \$12,600,000 from general revenue sharing.

NOTE.-Because of rounding, percents may not add to 100.0.

SOURCE: U.S. Department of Health, Education, and Welfare. National Center for Education Statistics, Statistics of State School Systems, 1971 72.

¹ Includes value of commodities distributed under the school lunch and milk programs.
2 Includes a relatively minor amount from other sources (gifts and tuition and transportation fees from patrons) which accounted for 0.4 percent of total revenue receipts in 1967-68.

1 D. - I from published reports.

⁴ Both State and local revenues are reported even though the entire State of Hawaii is regarded as a single school system.

 ⁵ Includes date from published end unpublished reports; partially estimated by the National Center for Education Statistics.
 ⁶ Data from United Nations report.

¹ includes value of commodities donated by the U.S. Department of Agriculture,

SOURCE: U.S. Department of Heelth, Education, and Welfers, National Center for Education Statistics, Statistics of Public Elementary and Secondary Day Schools, Fall 1973.

I includes value of commodities donated by the U.S. Department or Agriculture, except as indicated by footnote 8.

Includes expenditures for summer schools, edult education, community services (such as public libraries operated by school districts, expenditures for nonpublic schools where authorized by law, community centers, recreational activities, and community colleges and technical institutions under the jurisdiction of local boards of education).

Includes extimates for nonreporting States.

Data not available.

Data include expenditures for summer school.

<sup>Does not include the value of commodities donated by the U.S. Department of Agriculture.
Does not include junior colleges.
Dots for 1972–73.</sup>

NOTE.-Because of rounding, details may not add to totals.

SOURCES: (1) U.S. Department of Health, Education, and Welfare, National Center for Education Sustitutes, Statistics of Public Elementary and Secondary Day Schools, Fall 1973. (2) U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, August 1974.

Public School Expenditures Compared with Personal Income

Current expenditures for public elementary and secondary day schools in the United States totaled about \$47.0 billion during the school year 1973—74. Total personal income during the calendar year 1973 amounted to \$1,057.8 billion. A comparison of these figures reveals that the operating budgets of public schools accounted for 4.44 percent of the Nation's personal income.

As the accompanying chart and table 76 indicate, there are substantial differences among the States in the proportion of personal income that went for public education. Thirteen States and the District of Columbia spent less than 4.0 percent of their personal income for public schools. Fifteen States spent between 4.0 and 4.49 percent; 10 States, between 4.50 and 4.99 percent; 6 States, between 5.0 and 5.49 percent; and 6 States, 5.50 percent or more. In each case the percentages are based upon the current operating expenditures for public elementary and secondary day schools. Expenditures for other school

programs, capital outlay, and interest payments on school debt are excluded from the computations.

Comparing public school expenditures with personal income is one way of assessing the effort State and local governments are making to support public education within a State. However, it should be pointed out that the amount of assistance the public schools receive from the Federal Government varies widely from State to State. In 1971—72, for example, the percent of revenue receipts from the Federal Government ranged all the way from 4.0 percent in one State (Ohio) to 27.8 percent in another (Mississippi). In general, the States that receive large amounts of Federal funds are those with relatively low personal incomes per capita and those with numerous Federal installations within their borders.

CHAPTER III

Higher Education

Union and in all of the larger and more populous outlying areas. More than two-fifths of the entire group of 2,720 institutions are under the control of State governments or of cities, counties, or other subdivisions of States. Seven service schools and one junior college are controlled by the Federal Government. The remaining 56 percent of the institutions are controlled by religious denominations, professional organizations, or self-perpetuating groups of public-spirited persons. The publicly controlled colleges and universities tend to be much larger than their privately controlled counterparts. Approximately three-fourths of all college students attend public institutions.

A salient characteristic of higher education in this country is its diversity. American colleges and universities offer a wide range and great variety of programs. For example, a junior college usually offers only the first 2 years of training at the college level, but a university normally offers a full undergraduate course in the liberal arts, graduate work leading to the doctorate, and courses preparing for entrance into at least two or three of the learned professions. Between these two extremes are numerous colleges which reflect local needs and purposes.

Higher education has become increasingly accessible to all segments of the population. The growth of public junior colleges and other low-cost public institutions means that the expenses of the students attending these institutions can be held to a minimum. The Basic Educational Opportunity Grant Program, Guaranteed Student Loan Program, and other Government programs have also attracted many students who otherwise would have found it difficult to finance a college education.

A less optimistic sidelight to higher education is that most American colleges and universities, faced

with rising costs, have found it necessary to increase their basic student charges over time. Thus the typical college student usually finds that his expenses for tuition, fees, room, and board are higher when he returns to school in the fall than they were the preceding year. How to raise fees without losing some the students they would like to attract is increasingly a problem for college administrators.

The National Center for Education Statistics conducts an annual survey of opening fall enrollment in which it obtains statistics directly from the colleges and universities on total and first-time students. Preliminary data are usually available within 3 or 4 months after the opening of the fall term. The opening fall enrollment survey has been supplemented from time to time by a comprehensive survey in which more detailed information is requested. In the comprehensive survey, students are classified not only by control of institution and by sex but also by status as resident or extension students and by full-time or part-time attendance.

Other studies of institutions of higher education which have been conducted periodically by this office include surveys of faculty and other professional staff; faculty salaries; earned degrees conferred; enrollment for advanced degrees; engineering enrollments and degrees; receipts, expenditures, and property; basic student charges, including tuition and fees and room and board rates; and land-grant institutions. The most recent data from each of these studies are summarized in the pages which follow.

Some of the tables in this chapter provide totals for the 50 States and the District of Columbia. Others also include those outlying areas—American Samoa, the Canal Zone, Guarn, Puerto Rico, the Trust Territory of the Pacific Islands, and the Virgin Islands—which have within their borders one or more institutions of higher education. The coverage of each table is specified in its title or in the table stuty.

NOTE.- For institutions with more than one campus, enrollment shown is the combined figure for all campuses.

SOURCE: U.S. Department of Health, Education, and Welfare, National Center for Education Statistics, Fall Enrollment in Higher Education, 1973.

Institutions 'sinked by size of total enrollment

Publicly controlled institutions are identified by a "1", privately controlled, by a "2".

The types of institutions are identified as follows: "U", universities: "F", other 4-year institutions; "T", 2-year institutions.

Includes students whose programs of study are creditable toward a bachelor's or higher degree, and also undergraduate students in 1, 2-, or 3-year occupational programs which are not creditable toward a bachelor's degree.

SOURCE U.S. Department of Health, Education, and Welfere National Center for Education Statistics, Fall Enrollment in Higher Education.

Included in 1939—40 and subsequent years.

Date are actual census counts as of June 1 from 1870 to 1900; for leter years they are estimates by the Bureau of the Census as of July 1 preceding the fall term of each school yeer.

3 Data from 1889- 70 to 1939- 40 are estimates by the Office of Education from

figures for broad age groups supplied by the Bureau of the Census, data for later years are estimates by the Bureau of the Census.

Includes students enrolled for first-professional degrees. Also includes "unclassified" students when not reported by level.
 Date not evallable.
 Distribution by sevel estimated.

NOTE. Data are based upon a sample survey of full-time freshmen enrolled in college for the first time. Because of rounding, percents may not add to 100.0.

College Students by Major Field of Study

In October 1966 and again in October 1972, the Bureau of the Census collected statistics on the major field of study of students enrolled in colleges and universities in the United States. The data are for students between the ages of 14 and 34. When the figures for the two years are compared, some interesting trends in enrollment emerge.

Enrollment in all fields increased from 6.0 million in 1966 to 8.3 million in 1972, a gain of about 39 percent. Some fields, however, received more than their share of the additional students, while other fields failed to keep pace with the overall enrollment increase (see the accompanying chart). The number of students majoring in education, engineering, and physical or earth sciences actually declined during the 6-year period. Reflecting the decrease in the demand for new public school teachers, education majors declined from 19 to 12 percent of the total enrollment. Engineering majors decreased from 9 to 4 percent, and physical or earth science majors from 4 to 2 percent of the total. There were small increases in the percent of students majoring in the social sciences and in the biological and health sciences. Substantial increases were reported for students majoring in "other" fields (subjects other than the arts and sciences) and those not reporting a major.

There were noticeable differences in the majors of college men and women in 1972. The fields in which women predominated were education, health fields, and English and journalism. About one-half of the majors in the social sciences and fine arts were women. While women were well represented among the majors in the biological sciences and in mathematics and statistics, a majority of these students were men. Men were clearly predominant in such fields as engineering, agriculture, law, business and commerce, and physical and earth sciences.

The data cited above are based upon sample surveys of the population. They are subject to the sampling errors inherent in surveys of this kind. For more detailed information, the reader may wish to consult the Bureau of the Census publication, Social and Economic Characteristics of Students, October 1972 (Current Population Reports, Series P-20, No. 260). The report is available at \$1.30 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Selected Characteristics of College Faculty Members

A recent report from the American Council on Education describes in considerable detail the demographic characteristics, professional backgrounds, and academic activities of the teaching faculty in colleges and universities in 1972—73. While college teachers are obviously a diverse group, a composite picture of the typical faculty member emerges from the report.

The typical American college teacher is a white male between the ages of 31 and 50. He holds at least a master's degree, and he has attained the rank of assistant professor or above. He earns nearly \$15,000 a year, but this figure is inflated somewhat by the fact that a sizable number of teachers are employed for 11 or 12 months a year rather than the traditional 9 or 10 months.

The typical college teacher received his highest academic degree in the 1960's, and he also began service with his present employer in the 1960's. His principal occupation is classroom teaching rather than administration or research, and he likes his work. If he had a chance to start all over again in a new job or a different academic discipline, he would decline the opportunity.

The Carnegie Commission on the Future of Higher Education and the American Council on Education conducted a similar survey of college faculty in

1968-69. When the 1968-69 and 1972-73 studies are compared, the following trends are apparent: During the 4-year period, the age of college faculty members increased. A larger percent of teachers were 41 years old and over in 1972-73, and a smaller proportion were aged 40 or less. The percent of women on college faculties increased from 19 to 20 percent. The proportion of faculty members who are black rose from 2 to 3 percent. The percent of teachers with the rank of professor or associate professor increased from 42 to 51 percent, while the percent with the rank of instructor declined from 20 to 13 percent. Possibly reflecting the growth of enrollment and staff in 2-year colleges, the percent of faculty members holding a professional or doctor's degree declined substantially between 1968-69 and 1972-73.

A great deal of additional information appears in the two reports, College and University Faculty: A Statistical Description and Teaching Faculty in Academe: 1972-73, both by Alan E. Bayer. They may be purchased from the American Council on Education, 1 Dupont Circle, Washington, D.C. 20036.

Trends in the Number of Institutions of Higher Education

Between 1953-54 and 1973-74, the number of colleges, universities, and professional schools listed in the Office of Education's Education Directory: Higher Education increased from 1,845 to 2,720. The net increase of 875 institutions included almost 500 2-year institutions and nearly 400 4-year colleges and universities. The number of 2-year institutions nearly doubled over the 20-year period, while the 4-year colleges and universities increased by more than one-fourth.

The last two decades have seen an upsurge in the relative importance of public higher education. Twenty years ago public institutions enrolled slightly more than one-half of all college students. Today more than three-fourths of the students are attending these institutions. The number of public institutions has increased by 557 since 1953—54, while private colleges and universities rose by 318. About 56 percent of the colleges and universities at the present time are private, but they tend to be substantially smaller than their publicly controlled counterparts.

Another major trend in higher education today is the trend toward coeducation. As the accompanying chart suggests, the number of single-sex institutions reached a peak in the mid-1960's (there were 236 colleges for men and 281 for women in 1965-66) and has subsequently declined very substantially. Today there are only 127 men's colleges and 142 women's colleges in the country. They tend to be small, privately controlled institutions, and many of them are affiliated with a religious group. There are only 11 publicly controlled, single-sex institutions in the country today. Five of these are service academies operated by the Federal Government. The remaining six are State institutions, four for men and two for women.

For more detailed information on the characteristics of institutions of higher education, the reader may wish to consult the Education Directory: Higher Education. The 1973-74 edition of this annual publication is available for \$5.30 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

SOURCE: U.S. Department of Health, Education, and Welfere, Office of Education, Earned Degrees Conferred.

Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., D.D.S., and D.V.M.
 Institutions ranked by total number of doctor's degrees conferred during the 10-year period 1981—62 to 1970—71.
 Includes degrees conferred by Radollife College.
 Estimated by the Office of Education.

Includes degrees conferred by the University of Kenses City, which become a brench of the University of Missouri in 1963—64.
 Includes degrees conferred by Case Institute of Technology and Wastern Reserve University prior to their marger in 1966—67.

Includes Ph.D., Ed.D., and comparable degrees at the doctoral level. Excludes first-professional degrees, such as M.D., D.D.S., and D.V.M.
 Includes 90 degrees in other or unspecified fields not shown separately.
 Based upon responses from 61 percent of the graduates.
 Mathematics is included under physical sciences.

NOTE.—The above classification of degrees by field differs somewhat from that in most publications of the National Center for Education Statistics. The major

differences are that history is included under arts and sciences rather than societ sciences, and psychology is included under social sciences. Because of rounding, percents may not add to 100,0.

SOURCE: U.S. Department of Health, Education, and Welfers, National Center for Education Statistics, Financial Statistics of Institutions of Higher Education.

Tultion and fees received from veterans under Public Law 550 are reported under student fees and not under income from the Federal Government.

Income from the Federal Government for research a spicultural experiment stations administered by land-grant institutions is included under Federal Government "other purposes," not under "research,"

Data not separately collected.

Includes Federal sid received through State channels and regional compacts.

Income from State and local governments tabulated under State.

Beginning in 1967–68, the private grants represent nongovernmental revenue for sponsored research and other sponsored programs.

Recertically designated or semmerked funds.

Major public service programs previously reported in Federal Government research, in related activities, and in other items of education and general revenue.

Date not collected.
 Does not include interfund transfers.
 Includes funds functioning as endowment; increase calculated on book value.

Deta for 1987—68 to 1971—72 include separately reported revenue from nongovernmental sources for sponsored research and other sponsored programs.

Deta for 1967—68 to 1971—72 were reported as revenue from nongovernmental sources for sponsored research.

Expludes revenue for student work assignments and student loans.

SOURCE: U.S. Department of Heelth, Education, and Welfare, National Center for Education Statistics, Financial Statistics of Institutions of Higher Education.

Excludes transfers and loans.
 Date not collected.

Who Pays for Higher Education?

The National Center for Education Statistics has estimated that colleges and universities in the United States spent an average of \$2,219 to educate each full-time student during the academic year 1971-72. The cost per student was somewhat lower for publicly controlled institutions (\$2,020) and substantially higher for privately controlled colleges and universities (\$2,800). It is generally recognized that college students, through their tuition and fees, pay for only a portion of the cost of their education. Publicly controlled institutions derive a substantial part of their income from governmental appropriations, especially State governments, while private colleges and universities depend upon a variety of other sources, including private gifts and grants, endowment earnings, and the Federal Government.

The average full-time undergraduate student attending a publicly controlled institution in his or her home State (or local district in the case of students attending locally controlled colleges) paid \$376 in tuition and fees for the academic year 1971-72. Public institutions received some additional funds from out-of-State and graduate students, so that the average tuition and fees for all students was \$447. For undergraduate students attending privately controlled institutions in

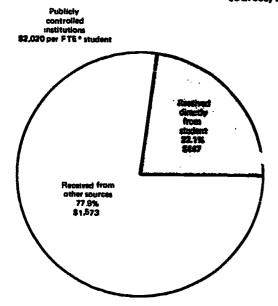

1971-72, the average tuition and fees came to \$1,820. Some additional charges to graduate students brought the overall average to \$1,827. The accompanying chart shows the amount and the percent of money that colleges and universities received from tuition and fees and from other sources.

The "student education" expenditures used in these computations include expenditures for general administration, instruction and departmental research, other sponsored programs, libraries, and physical plant maintenance and operation. Over the past decade the percentages represented by tuition and fees as a source of revenue for "student education" expenditures have remained very stable. The increases in tuition and fees in recent years have only kept pace with the increasing expenditures for "student education."

"Student education" expenditures are a portion of educational and general expenditures and exclude expenditures for separately budgeted research, extension and public service, and organized activities of educational departments. The excluded items are those which largely serve the general public rather than the students.

-C. GEORGE LIND statistician

CHAPTER IV

Federal Programs for Education and Related Activities*

Federal land grants provided under the Northwest Ordinance of 1787 represent the first instance of U.S. Government financial assistance for education. With this enactment, the National Government embarked upon a program of educational support unique among national governments in its commitment to State and local autonomy and in the responsibility it assumed for a public function of national interest.

A variety of programs and procedures are used by the Federal Government to support numerous educational activities. Procedures include financial grants and loans, allocation of surplus commodities and federally owned property, operation of special programs and institutions, and the cost of services or contracts.

This highly complex Federal educational involvement affects, directly or indirectly, every person in this country and many persons from other countries. Programs may be for the purchase of research and training services in educational institutions; for support of individuals for whom there is a special Federal responsibility; for support of schools in areas where Federal activities would result in undue burdens on school services without such support; for support of vocational education, foreign language study, and similar special areas; or for numerous other purposes.

A capsule view of the history of Federal educational activities is provided in the following list of selected Federal educational legislation:

Year Program

- 1787 Northwest Ordinance—authorized land grants for the establishment of educational institutions.
- * Albert R. Munse of the Reference, Estimates, and Projections Branch, National Center for Education Statistics, had the major responsibility for development of data for this chapter.

- 1862 First Morrill Act—authorized public land grants to the States for the establishment and maintenance of agricultural and mechanical colleges.
- 1867 Department of Education Act—authorized the establishment of the Office of Education.
- 1874 Aid to State nautical schools—provided funds for State nautical schools.
- 1890 Second Morrill Act—provided for money grants for support of instruction in the agricultural and mechanical colleges.
- 1917 Smith-Hughes Act—provided for grants to States for support of vocational education.
- 1918 Vocational Rehabilitation Act—authorized funds for rehabilitation of World War I veterans.
- 1919 Federal surplus property—authorized use of Federal surplus property by educational institutions.
- 1920 Smith-Bankhead Act—authorized grants to States for vocational rehabilitation programs.
- 1933 School lunch programs—provided assistance in school lunch programs. The use of surplus farm commodities in school lunch programs began in 1936 and the National School Lunch Act of 1946 continued and expanded this assistance.
- 1935 Bankhead-Jones Act (PL 74-182)—made grants to States for agricultural experiment stations.
- 1937 National Cancer Institute Act—established
 Public Health Service fellowship program.
 Subsequently, fellowships were authorized
 in legislation concerning other agencies.
- 1941 Amendment to Lanham Act of 1940—authorized Federal aid for construction, maintenance, and operation of schools in federally impacted areas. Such assistance was continued under Public Laws 815 and 874, 81st Congress, in 1950.

1943 Vocational Rehabilitation Act (PL 78-16)—provided assistance to disabled veterans.

School Lunch Indemnity Plan (PL 78-129)—provided funds for local school lunch food purchases.

1944 Servicemen's Readjustment Act (PL 78-346) provided assistance for education of veterans.

Surplus Property Act (PL 78-457)—authorized transfer of surplus property to educational institutions.

1946 George-Barden Act (PL 79-586)—expanded Federal support of vocational education.

1948 United States Information and Educational Exchange Act (PL 80-402)—provided for the interchange of persons, knowledge, and skills between the United States and other countries.

1949 Federal Property and Administrative Services Act (PL 81-152)—provided for donation of surplus property to educational institutions and for other public uses.

1950 Public Laws 815 and 874—provided assistance for construction (Public Law 815) and operation (Public Law 874) of schools in federally affected areas.

Housing Act (PL 81-475)—authorized loans for construction of college housing facilities.

1954 School Milk Program (PL 83-690)—provided funds for purchase of milk for school lunch programs.

Cooperative Research Act (PL 83-531)—authorized cooperative arrangements with universities, colleges, and State education agencies for educational research.

National Advisory Committee on Education Act (PI.83-532)—established a National Advisory Committee on Education to recommend to the secretary of the Department of HEW needed studies of national concern in the field of education and to propose appropriate action indicated by such studies.

1956 Library Services Act (PL 84-597)—authorized grants to States for extension and improvement of rural public library services.

1957 Practical Nurse Training Act (PL 84-911)—provided grants to States for practical nurse training.

1958 National Defense Education Act (PL 85-864)—
provided assistance to State and local school
systems for strengthening instruction in
science, mathematics, modern foreign
languages, and other critical subjects;
improvement of State statistical services;

guidance, counseling, and testing services and training institutes; higher education student loans and fellowships; foreign language institutes and advanced foreign language study and training provided by colleges and universities; experimentation and dissemination of information on more effective utilization of television, motion picture, and related media for educational purposes; and vocational education for technical occupations necessary to the national defense.

Public Law 85-926—Federal assistance for training teachers of the handicapped authorized.

Public Law 85-905—authorized a loan service of captioned films for the deaf.

1961 Area Redevelopment Act (PL 87-27) included provisions for training or retraining of persons in redevelopment areas.

1962 Manpower Development and Training Act (PL 87-415)—provided training in new and improved skills for the unemployed and underemployed.

Public Law 87-447—provided grants for the construction of educational television broadcasting facilities.

Migration and Refugee Assistance Act of 1962 (PL 87-510)—authorized loans, advances, and grants for education and training of refugees.

1963 Health Professions Educational Assistance Act (PL 88-129)—provided funds to expand teaching facilities and for loans to students in the health professions.

Vocational Education Act of 1963 (PL 88-210)—increased Federal support of vocational education, including support of residential vocational schools, vocational work-study programs, and research, training, and demonstrations in vocational education.

Higher Education Facilities Act of 1963 (PL 88-204)—authorized grants and loans for classrooms, libraries, and laboratories in public community colleges and technical institutes as well as undergraduate and graduate facilities in other institutions of higher education.

1964 Civil Rights Act of 1964 (PL 88-452)—
authorized the Commissioner to (1) arrange,
through grants or contracts with institutions
of higher education, for the operation of
short-term or regular session institutes for
special training to improve ability of elementary and secondary school instructional

staff to deal effectively with special education problems occasioned by desegregation; (2) make grants to school boards to pay, in whole or in part, the cost of providing inservice training in dealing with problems incident to desegregation; (3) provide school boards technical assistance in desegregation and required nondiscrimination in federally assisted programs.

Act of 1964 Economic Opportunity (PL 88-452)—authorized grants for college work-study programs for students of lowincome families; established a Job Corps program and authorized support for worktraining programs to provide education and vocational training and work experience for unemployed youths; provided training and work experience opportunities in welfare programs; authorized support of education and training activities and of community action programs, including Head Start, Follow Through, Upward Bound; authorized the establishment of the Volunteers in Service to America (VISTA).

1965 Elementary and Secondary Education Act (PL 89-10)—authorized grants for elementary and secondary school programs for children of low-income families; school library resources, textbooks, and other instructional materials for school children; supplementary educational centers and services; strengthening State education agencies; and educational research and research training.

Health Professions Educational Assistance Amendments (PL 89-290)—authorized scholarships to aid needy students in the health professions and grants to improve the quality of teaching in schools of medicine, dentistry, osteopathy, optometry, and podiatry.

Higher Education Act of 1965 (PL 89-329)—provided grants for university community service programs, college library assistance, library training and research, strengthening developing institutions, and educational opportunity; insured student loans; teacher training programs; and undergraduate instructional equipment. Established a National Teacher Corps and provided for graduate teacher training fellowships.

Medical Library Assistance Act (PL 89-291)—provided assistance for construction and improvement of health sciences libraries.

National Foundation on the Arts and the Humanities Act (PL 89-209)—authorized grants and loans for projects in the creative and performing arts, and for research, training, and scholarly publications in the humanities.

National Technical Institute for the Deaf Act (PL 89-36)—provided for the establishment, construction, equipping, and operation of a residential school for postsecondary education and technical training of the deaf.

National Vocational Student Loan Insurance Act (PL 89-287)—encouraged State and non-profit private institutions and organizations to establish adequate loan insurance programs to assist students to attend post-secondary business, trade, technical, and other vocational schools.

Disaster Relief Act (PL 89-313)—provided for assistance to local education agencies to help meet exceptional cost resulting from a major disaster.

1966 International Education Act (PL 89-698)—
provided grants to institutions of higher
education for the establishment,
strengthening, and operation of centers for
research and training in international studies
and the international aspects of professional
and other fields of study.

National Sea Grant College and Program Act (PL 89-688)—authorized the establishment and operation of Sea Grant colleges and programs by initiating and supporting programs of education and research in the various fields relating to the development of marine resources.

Adult Education Act (PL 89-750)— authorized grants to States for the encouragement and expansion of educational programs for adults, including training of teachers of adults and demonstrations in adult education (previously part of the Economic Opportunity Act of 1964).

Model Secondary School for the Deaf Act (PL 89-694)—authorized the establishment and operation, by Gallaudet College, of a model secondary school for the deaf to serve the National Capital region.

Elementary and Secondary Education Amendments of 1966 (PL 89-750)—in addition to

modifying existing programs, authorized grants to assist States in the initiation, expansion, and improvement of programs and projects for the education of handicapped children at the preschool, elementary, and secondary school levels.

1967 Education Professions Development Act (PL 90-35)—amended the Higher Education Act of 1965 for the purpose of improving the quality of teaching and to help meet critical shortages of adequately trained educational personnel by authorizing support for the development of information on needs for educational personnel, training and retraining opportunities responsive to changing manpower needs, attracting a greater number of qualified persons into the teaching profession, attracting persons who can stimulate creativity in the arts and other skills to undertake short-term or long-term assignments in education, and helping to make educational personnel training programs more responsive to the needs of schools and colleges.

Public Broadcasting Act of 1967 (PL 90-129)—established a Corporation for Public Broadcasting to have major responsibility in channeling Federal funds to noncommercial radio and television stations, program production groups, and ETV networks directly or through contract; conduct research, demonstration, or training in matters related to noncommercial broadcasting; and authorize grants for construction of educational radio as well as television facilities.

1968 Elementary and Secondary Education Amendments of 1967 (PL 90-247)-in addition to modifying existing programs, authorized support of regional centers for education of handicapped children, model centers and services for deaf-blind children, recruitment of personnel and dissemination of information on education of the handicapped; technical assistance in education to rural areas; support of dropout prevention projects; and support of bilingual education programs. Also, in order to give adequate notice of available Federal financial assistance, authorized advance funding for any program for which the Commissioner of Education has responsibility for administration by authorizing appropriations to be included in the appropriations act for the

fiscal year preceding the fiscal year for which they are available for obligation.

Handicapped Children's Early Education Assistance Act (PL 90-538)—authorized preschool and early education programs for handicapped children.

Vocational Education Amendments of 1968 (PL 90-576)—changed the basic formula for allocating funds; provided for a National Advisory Council on Vocational Education, expansion of vocational education services to meet the needs of the disadvantaged, the collection and dissemination of information for programs administered by the Commissioner of Education, and the preparation of a cat. log of all Federal education assistance programs.

Higher Education Amendments of 1968 (PL 90-575)—provided new programs to assist disadvantaged college students through special counseling and summer tutorial programs, and to assist colleges to combine resources for cooperative uses, including closed-circuit television and computer networks. Also authorized grants to expand and strengthen student cooperative programs and to expand programs which provide clinical experiences to law students.

1970 Elementary and Secondary Education Assistance Programs, Extension (PL 91-230)—authorized comprehensive planning and evaluation grants to State and local education agencies; provided for the establishment of a National Commission on School Finance.

National Commission on Libraries and Information Science Act (PL 91-345)—established a National Commission on Libraries and Information Science to meet the needs of the people, to utilize effectively the Nation's educational resources, and to cooperate with State and local governments and public and private agencies in assuring optimum provision of such services.

Environmental Education Act (PL 91-516)—
established an Office of Environmental
Education for the purpose of curriculum
development and initiation and maintenance
of environmental education programs at the
elementary-secondary education levels;
dissemination of information; the provision
of training programs for teachers and other
educational, public, community, labor, and
industrial leaders and employees; community education programs; and the

distribution of material dealing with environment and ecology.

Drug Abuse Education Act of 1970 (PL 91-527)—provided for the development, demonstration, and evaluation of curriculums on the problems of drug abuse; dissemination of information; training programs for teachers, counselors, lawenforcement officers, and other public leaders and officials; and community education programs for parents and others on drug abuse problems.

Appropriations for the Office of Education and for other purposes (PL 91-380)—provided Emergency School Assistance for assistance to desegregating local education agencies.

1971 Comprehensive Health Manpower Training Act of 1971 (PL 92-257)—amended title VII of the Public Health Service Act. Increased and expanded provisions for health manpower training and training facilities.

Nurse Training Act of 1971 (PL 92-158) amended title VIII, Nurse Training, of the Public Health Service Act. Increased and expanded provisions for nurse training facilities.

1972 Drug Abuse Office and Treatment Act of 1972
(PL 92-255)—established a Special Action
Office for Drug Abuse Prevention to provide
overall planning and policy for all Federal
drug-abuse prevention functions; a National
Advisory Council for Drug Abuse
Prevention; community assistance grants for
community mental health centers for treatment and rehabilitation of persons with drugabuse problems; and, in December 1974, a
National Institute of Drug Abuse.

of 1972 Education Amendments (PL 92-318)—established a National Institute of Education; general aid for institutions of higher education; Federal matching grants for State student incentive grants; a National Commission on Financing Postsecondary Education; State Advisory Councils on Community Colleges; a Bureau of Occupational and Adult Education and State grants for the design, establishment, and conduct of postsecondary occupational education; and a bureau-level Office of Indian Education. Amended current Office of Education programs to increase their effectiveness and better meet special needs. Prohibited sex bias in admissions to institutions of vocational, professional, graduate higher, and public institutions of undergraduate higher education.

1973 Older Americans Comprehensive Services
Amendment of 1973 (PL 93-29)—makes
available to older citizens who need them
comprehensive programs of health, education, and social services.

of 1974 1974 Educational Amendments (PL 93-380)-provides for the consolidation of certain education programs; establishes a National Center for Education Statistics in the Office of the Assistant Secretary for Education and transfers to the Center, from the Office of Education, the responsibility for the collection of education statistics and facts and the diffusion of such information; specifies that the Office of Education shall be the primary Federal agency responsible for the administration of programs of financial assistance to educational agencies, institutions, and organization; authorizes a White House Conference on Education, and mandates several education surveys and studies.

There is no single total for Federal funds for education that is meaningful for all purposes, but there are many possible totals which may be constructed to service particular needs. This multiplicity is probably due to the many kinds of assistance provided, the differences in the manner of distributing assistance, the special circumstances which describe the program beneficiary as each program was legislatively tailored for its special purpose, and, of course, the purposes of the data user. However, table 138 (Part I), "Federal funds supporting education in educational institutions," gives one summary which the Office of Education has found useful. Part I includes those programs more frequently considered in the general category of Federal aid to education. Grants and loans are separated because of the obvious difference which requires repayments of loans but not grants. Part II includes data for other programs which may also be considered in determining Federal funds for education.

In contrast with table 138, which shows program amounts, table 137 shows where the money comes from—the Federal agencies which make the funds available for the various education programs. This table reveals that the Federal role in education and related activities involves many Federal agencies and varies from relatively insignificant amounts to almost \$8 billion estimated for the Department of Health, Education, and Welfare for the 1975 fiscal year. Six

123

agencies report education amounts in excess of \$100 million, exclusive of outlays for research and development. The support provided various levels of education—elementary-secondary, higher, vocational-technical and continuing education, and "other" programs—is also shown.

Noteworthy is the fact that amounts in tables 137 and 138 report Federal funds from a "Federal" vantage point. This will differ from State and local education agency reports and higher education reports of Federal receipts. A major reason for the difference is the fact that payments to individuals and to nonschool agencies for education or education services cannot be identified as Federal funds by the educational institutions. Consequently, summaries of State, local, and institutional reports of Federal receipts will be less than amounts reported for the same years from this "Federal" perspective.

A somewhat different view of the Federal educational involvement is brought into focus in table 139, from the National Science Foundation publication Federal Funds for Research, Development, and Other Scientific Activities, Vol. XXII. For example, to the extent that federally supported research may be considered to be education-related, this table shows federally supported educational activity taking place in many institutions other than those formally described as educational, including industrial establishments, federally operated facilities, and various nonprofit establishments. Figures from the National Science Foundation were used also to obtain the research and development amounts reported in tables 137 and 138 for colleges and universities and for Federal obligations to universities and colleges reported in table 143.

Table 140 gives additional information about the programs for training grants, fellowships, and

traineeships included in table 137. Figures for this tabulation, like those in tables 137 and 138, were obtained from information provided the Office of Management and Budget for "Special Analysis H," a chapter in its publication Special Analyses, Budget of the United States, Fiscal Year 1975.

A summary of Office of Education disbursements for the years from 1960 to 1975, by legislative program, is presented in table 142. This table reveals the support pattern for the Office of Education by showing changes in levels of support for different educational activities and the appearance of new activities. Funds transferred to the Office of Education from other Federal agencies for various education services are presented at the bottom of table 142.

State-by-State data on Federal educational assistance from various Federal agencies are displayed in tables 141, 143, and 144. Table 143 includes amounts for higher education institutions only and is based on Federal obligations during the 1972 fiscal year regardless of when funds were spent by a recipient institution. Higher education loans to students and institutions, Federal expenditures for Federal employee training, and veterans' education benefits are not included in these higher education figures.

In contrast with table 143, "Obligations," amounts reported in table 141 combine "obligations" for Office of Education programs with "outlay" amounts by the Department of Agriculture and the Office of Child Development in the Department of Health, Education, and Welfare. Table 145 shows Office of Education funds for instructional materials and equipment.

Includes Office of Economic Opportunity, Indian education, Appalachian Regional Development, Department of Labor, NYC in-school work support, and Head Start Preschool.

² Includes small amounts for National Defense Education Act loans to private elementary-secondary schools.

Includes Elementery and Secondary Education Act, Title I, handicapped children, dropout prevention, bilingual education, Kendall School for the Deef, and Murle' School fo. the Deef.

5 Includes District of Columbia, Canel Zone, territories and dependencies, Cuban refugees, and payments in lieu of taxes by the Atomic Energy Commission and the Tennessee Valley Authority.

6 Includes elementary-accordary programs of the National Science Foundation, National Foundation on the Arts and the Humanities, Department of Defense, Junior ROTC, and National Aeronautics and Space Administration; elso, Office of Child Development programs not included elsewhere, and Office of Education programs and expenditures not otherwise included.

7 Date are from Federal Funds for Research, Development, and Other Scientific Activities, ennuel publication, National Science Foundation. Includes university operated research centers.

8 1975 amounts are estimated by the Office of Education at 5.7 percent increase over 1974 level

9 Includes adult vocational education and manpower training programs.

- 10 Includes Office of Education, Action, Social and Rehabilitation Service, Department of Housing and Urban Development, Office of Economic Development, and additional programs for continuing education.
- 11 Includes National Defense Education Act and insured student loans.
- 12 Includes Department of Housing and Urban Development college housing toens and Office of Education college facilities loans.
- 13 Includes Library of Congress, Smithsonian Institution, General Services Administration, National Archives and Records Service, National Agricultural Library, National Library of Medicine, and Government Printing Office depository library and catalog and Index activities.

14 Also includes education broadcasting facilities.

15 Includes Office of Education and education programs and administration expenditures not otherwise included.

NOTE.—Because of exclusion of some programs and because date are based on Federal disbursement rather than on the authority to spind, the figures since 1968 are not strictly comparable with those for earlier years.

SOURCES: (1) National Center for Education Statistics, U.S. Department of Health, Education, and Welfare, from information collected by the Office of Management and Budget for its report Special Analyses, Budget of the United Stores, Fixed year 1912. (2) Research and development data from National Science Foundation, Federal Funds for Research, Development, and Other Scientific Activities, Vol. XXII.

Includes supplemental centers, school library materials, strengthening State education agencies, captioned films for the deaf, dissemination of information, school counseling and testing, American Printing House for the Blind, planning and avaluation.

² Estimated.
2 Changes in program amounts may reflect the proposed "consolidated education grants" for 1975 (\$1,910,400,000) that include amounts for disadventaged (\$1,200,800,000), handicapped (\$38,200,000), innovation (\$88,000,000), supporting services (\$88,100,000), vocational education (\$88,000,000), and education (\$88,000,000), and education of the handicapped is not included here but is included under "Education of the handicapped is not included here but is included under "Educational improvement for the handicapped." "Nutrition and Health" included in "Networks and Development."

4 Includes some elementary escondary school expenditures from expired scounts of the latter of the National Defense Education Act (NDEA).

accounts
5 Indudes Title X, National Defense Education Act (NDEA).
6 Amounts for college library improvement are included under research and

Amounts for college library improvement are included under research and development.
Includes Basic Educational Opportunity Grants.
Amounts for vocational research are included under research and development.
Includes funds for tacher training institutes (after 1969) provided under the National Foundation on the Arts and the Humanities Act and NDEA.
Includes assistance under the National Foundation on the Arts and the Humanities Act.
It includes "Ellender" fellowships.
It includes Fullbright-Nays Act.

¹³ includes transfers to the National Institute of Education, Program detail not

eveilable.

14 includes emounts for college library improvement and vocational research in

¹⁴ Includes amounts for college library improvement and vocational research in addition to other R. & D. funds.
15 Includes "Nutrinon and Health."
16 Includes "Nutrinon and Health."
16 Includes amounts for adult vocational education and adult vocational education teacher training.
17 Amounts for this activity supported with transferred funds prior to 1969.
18 Amounts listed below are not included in the Office of Education expenditure totals.
19 Includes amounts for Area Redevelopment Act.
19 Includes Educational Exchange.
21 Funds transferred prior to 1987 are included in the Consolidated Working Fund. Since 1972, also includes Development Pacifities, Economic Development Astatence. Department of Commerce; Regional Development Programs, Regional Action, Planning Commission; and Military Construction, Army.
22 Some OEO transfers also included in the Consolidated Working Fund.

CHAPTER V

Selected Statistics Related to Education in the United States

This chapter consists of a collection of miscellaneous tables which do not fit readily into one of the other chapters. They were selected because they are closely related to education in the United States and are of general interest. They are arranged in six major categories: (1) Employment status and job opportunities of persons completing educational programs and of school dropouts, (2) international education, (3) library and public television statistics, (4) research and development, (5) equal educational opportunity, and (6) National Assessment of Educational Progress.

Included in the first group of tables are data from the Bureau of Labor Statistics on the employment of recent high school and college graduates and dropouts. Other tables provide information from the College Placement Council on salaries offered candidates for bachelor's, master's, and doctor's degrees.

The section on international education contains Institute of International Education data on American college students and college faculty abroad and on foreign students enrolled in American institutions of higher education. A related table, showing the number of foreign students attending college in each State in fall 1972, appears in chapter III of this report. Two other tables provide statistics from the United Nations Educational, Scientific, and Cultural Organization (UNESCO) on population and school enrollment for the world, the continents, and selected countries. The figures in these latter tables show general magnitudes only, but they are suitable for making rough comparisons among countries. The enrollment estimates were prepared in a variety of

ways and for different years, and the enrollment groupings by level are not strictly comparable from one country to another.

The third group of tables contains data from the National Center for Education Statistics on public libraries, college and university libraries, Federal libraries, and public television stations. Also included are data from *Publisher's Weekly* and the *Library Journal* on trends in the prices of books and periodicals. A table providing Bureau of Labor Statistics estimates of the number of librarians in the country has been included again this year.

The fourth group of tables relates to the general area of research and development. Included is a table showing the number and median salary of scientists on the National Science Foundation's National Register of Scientific and Technical Personnel by field and by type of employer. Other tables, utilizing data obtained from the National Science Foundation, show the amounts and sources of funds used for research and development. Additional information on Federal funds for research and development may be found in chapter IV.

The next group of tables presents statistics from the Commissioner's report on Equality of Educational Opportunity, released by the Office of Education in 1966, and from recent data distributed by the Office of the Secretary of Health, Education, and Welfare.

The final group of tables was derived from the National Assessment of Educational Progress. Summary data are presented on the performance of persons in various age groups in the areas of writing, citizenship, science, reading, literature, and music.

Data are for school year 1970-71.

SOURCE: United Nations Educational, Scientific, and Cultural Organization, Paris, Statistical Yearbook, 1972.

¹ Excludes the U.S.S.R. (shown separately in column 10).
² Excludes Mexico and Central America, which are included with Latin America.

Data are for mid-year 1971.

Data are for mid-year 1970.

First level includes elementary school enrollment, the main function of which is to provide basic instruction in the tools of learning. Preschool, kindergerten,

and special education in the tools of fearning. Preschool, kindergerten, and special education enrollments are excluded.

Secund level includes general, vocational, and teacher-training enrollments at the secondary school level. Entrance to secondary schools requires at least 4 years' previous instruction at the first level. Special and adult education enrollments are excluded.

⁶ Third level includes colleges and universities that require the successful completion of education at the second level as a minimum entrance requirement. Adult education enrollments are excluded.
Includes United States, Canada, Bermude, Greenland, and St. Pierre and Aditional on

Miquelon.

8 includes all other countries in the Western Hernisphere.

¹ First level includes elementary school enrollment, the main function of which is to provide basic instruction in the tools of learning. Preschool, kindergarten, and special eduction enrollments are excluded.

2 Second level includes general, vocational, and teacher-training enrollments at the secondary school level. Entrance to secondary schools requires at least 4 years' previous instruction at the first level. Special and adult education especialists are required.

⁴ years' previous instruction at the first level. Special and adult education enrollments are excluded.

3 Third level includes colleges and universities that require the successful completion of education at the second level as a minimum entrance requirement. Adult education enrollments are excluded.

Institutions are ranked by the number of volumes at the end of the year foolumn 3). Although this is a convenient measure of size, the measures in columns 4–11 warrant equal attention for comparative purposes.

Law library is included for collections only.

Includes library of health sciences at Medical Center, Chicago.

Excludes 111,458 volumes and 95,138 microfilm units of the Dearborn campus library, which had been included through 1970–71.

Physical count. Previous data were based on a combined physical-bibliographical count.

Includes branch campuses in California and overseas.

Count corrected since previous year.

Data are for the State university system.
Includes a regional campus library, and L.B.J. School of Public Affairs Library.

Includes 4 regional campus libraries.

 12 Includes Fainburger psychology library.
 13 Data adjusted downward from previous year on besis of a partial inventory count.

14 Includes law library and Pacific Northwest Regional Health Science library.

16 Includes lew library and Pacific Northwest regional Teach 5.3 Includes 4 regional campuses.
16 Includes all branch libraries.
17 Includes Medical Can.ar libraries in Kansas City.
18 Includes branch libraries.
19 Revised downward from previous year on basis of physical count.
20 Excludes branch libraries at Hershey and Middletown.
21 Includes down water from previous year on Middletown.

Avorage of the 5 tests	43.1	45.1	44.4	50.1	41.1	52.0					

NOTE.—This table presents the results of standard achievement tests of certain intellectual skills such as reading, writing, calculating, and problem solving. The tests were designed to measure the skills which are the most important in our society for getting a good job and moving up to a better one, and for full participation in an increasingly technical world.

The scores in each test were standardized so that the average over the national sample equaled 50 and the standard deviation equaled 10. This means that for all

pupils in the Nation, about 16 percent would score below 40 and about 16 percent would score above 60.
