ABSTRACT

This report presents the 1972-73 educational assessment results from each of the school districts in Michigan. Information on each of the district measures used in the 1972-73 Michigan Educational Assessment Program is presented in two ways. First, a figure is shown that represents the district's "score" on each measure. For example, the average years of teaching experience, the average instructional expense (in dollars) per pupil, and the average reading score of each district are shown. Then a percentile rank is shown for each measure except the basic skills achievement measures. This percentile rank indicates how each district fared in relation to other districts in the state. Secondly, information about each district's composite basic skills achievement is presented in a decile distribution which shows the percentage of each district's fourth and seventh grade pupils earning composite achievement scores in each tenth of a statewide ranking of pupil scores. These decile distributions show what percent of each district's pupils fell into each of ten general achievement levels. Statistical terms used in this report are defined in Appendix A; Appendix B contains definitions of the educational assessment measures; Appendix C contains the definitions of the community types used in this report; Appendix D contains a list of the county code numbers used as a part of the identifications of local school districts; and Appendix E contains alternative procedures for interpreting district achievement scores through the use of statewide pupil norms. FOREWORD

The Michigan Educational Assessment Program (MEAP) was initiated by the State Board of Education by the Governor, and funded by the legislature initially through enactment of Act 307 of the Public Acts of 1970 and subsequently under Act 38 of the Public Acts of 1970.

The State Board of Education has adopted a six-step process as a guide or model for improving education. The six steps are: the identification of common goals, the development of performance standards, the assessment of educational needs, the analysis of delivery systems, the evaluation and testing of programs, and recommendations for educational improvement. This report presents information for the assessment of educational needs. Educational assessment provides general information on student needs, along with other information gathered by local educators, will assist in identifying areas of need in local schools and pupils.

The purpose of this report, the fourth in the 1972-73 series, is to provide the public with information regarding the average scores on the educational assessment measures of all public school districts. The information provides a general indication of areas within the local district which may need attention. The Michigan Educational Assessment Program is not and should not be viewed as a general evaluation of schools. Instead, its purpose is to provide information on certain school and student needs, which along with other information may identify for citizens and local school officials the needs of local schools and children. Some of the areas so identified may be undertaken by local school people in order to determine the need for which changes in curricula and resource allocations are justified. Thus, the educational assessment is intended to contribute to the improvement of educational programs for Michigan children and youth.

Thanks are due to a large number of individuals and groups for making the Michigan Educational Assessment Program a reality and for continuing to work with it in its fourth year: to the State Board of Education for proposing it and continuing to support it, to the Governor and legislature for actively supporting it, to local educators for assisting with it. The program was designed and administered by the Research, Evaluation and Services Unit, Michigan Department of Education, with the assistance of Educational Testing Service, New Jersey, and the counsel of the MEAP Advisory Council.

This report was prepared by Dr. Edward D. Roeber, Dr. Thomas H. Fisher, and Mrs. June Olsen of the Michigan Department of Education, and by Dr. David L. Donovan, Mr. Robert J. Huyser, and Dr. Daniel E. Schooley. Questions or requests for information relative to this report should be directed to the educational assessment staff.

John W. Porter
Superintendent of
Public Instruction

FOREWORD

Assessment Program (MEAP) was initiated by the State Board of Education, supported by the legislature initially through enactment of Act 307 of the Public Acts of 1969, and Act 307 of the Public Acts of 1970.

The Board has adopted a six-step process as a guide or model for improving Michigan schools. The steps are: the identification of common goals, the development of performance objectives, the analysis of delivery systems, the evaluation and testing of these systems for educational improvement. This report presents information for the third step -- needs. Educational assessment provides general information on student needs which, gathered by local educators, will assist in identifying areas of need on the part of

This report, the fourth in the 1972-73 series, is to provide the public with information on the educational assessment measures of all public school districts in Michigan. It gives a general indication of areas within the local district which may need closer study. The MEAP Program is not and should not be viewed as a general evaluation of Michigan schools. It provides information on certain school and student needs, which along with other information, can help local school officials determine the needs of local schools and children. Specific evaluations should be undertaken by local school people in order to determine the need and extent to which resource allocations are justified. Thus, the educational assessment data are intended to help in the development of educational programs for Michigan children and youth.

A number of individuals and groups have worked with the Michigan Educational Assessment Program in its fourth year: to the State Board of Education for initially supporting it, to the Governor and legislature for actively supporting it, and to Michigan school districts. The program was designed and administered by the Research, Evaluation, and Assessment Department of Education, with the assistance of Educational Testing Service of Princeton, and the MEAP Advisory Council.

Special thanks are given to Dr. Edward D. Roeber, Dr. Thomas H. Fisher, and Mrs. June Olsen with the assistance of Robert J. Huyser, and Dr. Daniel E. Schooley. Questions or requests for additional information should be directed to the educational assessment staff.

John W. Porter
Superintendent of
Public Instruction

INTRODUCTION

This report presents the 1972-73 educational assessment results from each of the school districts in Michigan. Information on each of the district measures used in the 1972-73 Michigan Educational Assessment Program is presented in two ways. First, a figure is shown that represents the district's "score" on each measure. For example, the average years of teaching experience, the average instructional expenditure per pupil, and the average reading score of each district are shown. Second, a percentile rank is shown for each measure except the basic skills achievement measures. This percentile rank indicates how the district is compared in relation to other districts in the state. For example, a district whose score on a measure has a percentile rank of 75 would be above 75 percent -- and below 25 percent -- of the state on that measure. For each basic skills achievement score a percentile "band" is shown. This band indicates the percentile ranks within which the "true" mean score is expected to fall. For example, a percentile band of 45-55 for a district mean score on reading indicates that the true mean reading score for that district should be expected to fall between the 45th and 55th percentile 95 percent of the time if the test is administered many times on the same student under the same conditions.

Secondly, information about each district's composite basic skills achievement is presented in a decile distribution which shows the percentage of each district's fourth and seventh grade pupils each year who achieved scores in each tenth of a statewide ranking of pupil scores. These decile distributions indicate the percent of each district's pupils fell into each of ten general achievement levels.

INTRODUCTION -

The 1972-73 educational assessment results from each of the school districts in each of the district measures used in the 1972-73 Michigan Educational Assessment ways. First, a figure is shown that represents the district's "score" on each average years of teaching experience, the average instructional expense (in dollars) reading score of each district are shown. Second, a percentile rank is shown for basic skills achievement measures. This percentile rank indicates how each district compares to other districts in the state. For example, a district whose score on a given measure would be above 75 percent -- and below 25 percent -- of the state's districts on basic skills achievement score a percentile "band" is shown. This band is a range of scores within which the "true" mean score is expected to fall. For example, a percentile band of scores on reading indicates that the true mean reading score for that district would fall between the 45th and 55th percentile 95 percent of the time if the testing could be repeated under the same conditions.

About each district's composite basic skills achievement is presented in a decile percentage of each district's fourth and seventh grade pupils earning composite scores in the tenth of a statewide ranking of pupil scores. These decile distributions show what percentage of pupils fell into each of ten general achievement levels.

Statistical terms used in this report are defined in Appendix A; Appendix B contains definitions of educational assessment measures; Appendix C contains the definitions of the community types used; Appendix D contains a list of the county code numbers used as a part of the identifications of districts; and Appendix E contains alternative procedures for interpreting district achievement in relation to the use of statewide pupil norms.

SECTION I

QUALIFYING INFORMATION

This section discusses qualifying information regarding the use of educational data, including cautions that should be exercised in their interpretation. Appendix A contains definitions of statistical terms which the reader will need to understand in order to interpret the educational data.

The following qualifying information will be discussed: scope of educational assessment and cautions to be exercised in interpretation, value of other data, and accuracy of district and school means.

Scope of the Educational Assessment Data

Defining the goals of education. Michigan's schools as they presently function are meeting the needs of many individuals by providing instruction in the basic communication and computational skills of reading and arithmetic. Michigan's educational goals encompass more than the basic skills, of course, and commonly include at least six other areas: science, social science, fine arts, health, physical education, and occupational skills. The 1972-73 educational assessment effort, however, dealt only with the basic skills and therefore measured the performance of children in Word Relationships, Reading, Mechanics of Writing, and Mathematics. It is necessary to remember that this report does not contain information about the other instructional areas mentioned above.

Measuring school/pupil performance. It is difficult to build tests that are equally valid for students from varied cultural and economic backgrounds. Therefore, the reader should be aware that results from the achievement battery yield only an approximate index of the skills of some children.

information will be discussed: scope of educational assessment data, cautions to
n, value of other data, and accuracy of district and school mean scores.

Scope of the Educational Assessment Data

Education. Michigan's schools as they presently function are meeting the needs of
instruction in the basic communication and computational skills of reading, writing,
educational goals encompass more than the basic skills, of course, since school offerings
other areas: science, social science, fine arts, health, physical education, and
2-73 educational assessment effort, however, dealt only with the basic skills and
performance of children in Word Relationships, Reading, Mechanics of Written English, and
to remember that this report does not contain information about the other important
above.

Performance. It is difficult to build tests that are equally valid for children
omic backgrounds. Therefore, the reader should be aware that responses to any
y an approximate index of the skills of some children.

Measuring school resource. The selection of school resource information for large-scale efforts such as the 1972-73 Michigan Educational Assessment Program is limited by the unavailability and by our limited understanding of relationships between those resources and educational performance.

It is not possible to state with certainty what impact school-related factors have on educational performance. It is also impossible to measure all outcomes of educational programs. Therefore, the selection of an educational system crucial to learning which are not included in this educational assessment. However, each measure included was selected because some evidence suggests that it may be related to performance.

Cautions to be Exercised in Interpretation

Interpretation of percentile ranks. Percentile ranks are used in this report in order to provide an idea of where each district stands in relation to other districts on each of the assessment measures. The achievement measures. It must be understood that this method of reporting makes certain that some districts will rank very low, even though the absolute difference between high and low scores may be small. A low percentile rank on a measure, therefore, does not necessarily imply that the district is performing poorly. It does indicate that most districts score higher than the one under consideration. For example, a low ranking on average years teaching experience should not necessarily imply any inadequacy on the part of the district in question, but it does indicate that most other districts' teachers have more years of teaching experience.

A district which ranks high or low on a measure compared to other Michigan districts may be doing so only in relative terms, particularly if the absolute difference between high- and low-scoring districts is small.

ce. The selection of school resource information for large-scale assessment Michigan Educational Assessment Program is limited by the unavailability of data of relationships between those resources and educational performance. state with certainty what impact school-related factors have on educational performance to measure all outcomes of educational programs. Therefore, there are elements of learning which are not included in this educational assessment report. was selected because some evidence suggests that it may be related to educational

Cautions to be Exercised in Interpretation

Percentile ranks. Percentile ranks are used in this report in order to give the reader a point of comparison with other districts on each of the assessment measures except that it must be understood that this method of reporting makes certain that on each measure a score is low, even though the absolute difference between high and low scores may be quite small on a measure, therefore, does not necessarily imply that the district is inadequate. A district's score higher than the one under consideration. For example, a low percentile ranking in teaching experience should not necessarily imply any inadequacy on the part of the district. It does not indicate that most other districts' teachers have more years of teaching experience. A high or low score on a measure compared to other Michigan districts may be high or low particularly if the absolute difference between high- and low-scoring districts is small.

on the measure used for ranking. An example is the ranking on percent of racial-ethnic minority. Statewide data show that a district with 2.6 percent racial-ethnic minority students ranks at the 1st percentile while a district with 0.1 percent racial-ethnic minority students ranks at the 5th percentile. A district with 2.6 percent racial-ethnic minority students is a high percentage only when compared to the rather few districts with an even lower percentage; and by ordinary standards the difference between 2.6 percent of racial-ethnic minority students is small.

Differences in district mean achievement scores also tend to be small in comparison to the range of pupil scores on these same measures. In other words, test scores of individual pupils cover a wider range of standard scores than do the mean scores of districts. Figure 1, which was prepared from grade seven scores on the Mechanics of Written English test, illustrates this phenomenon. It shows that grade seven test scores range from below 25 to above 75 (a range of over 50 standard score units), while district mean scores are concentrated between 40 and 63 (a range of only 23 standard score units). Yet these comparisons may be significant both statistically and educationally.

This statistical characteristic of the score distributions is common to all normative achievement tests. It is not a quirk of the MEAP data. It is based upon the mathematical notion that averages of scores are less variable than are the scores themselves. In other words, the range of district scores is less than the range of pupil scores because the district scores are averages.

In practice, this means that any given standard score average would yield two different percentiles upon whether the district or the pupil distribution is used. In Figure 1, a standard score of 40 yields a district percentile of 1 but a pupil percentile of 30. This point is of interest because most commercially used achievement tests provide only pupil distributions. To compare a district percentile with a score average from a locally used test on a pupil percentile basis would be

ranking. An example is the ranking on percent of racial-ethnic minority students.

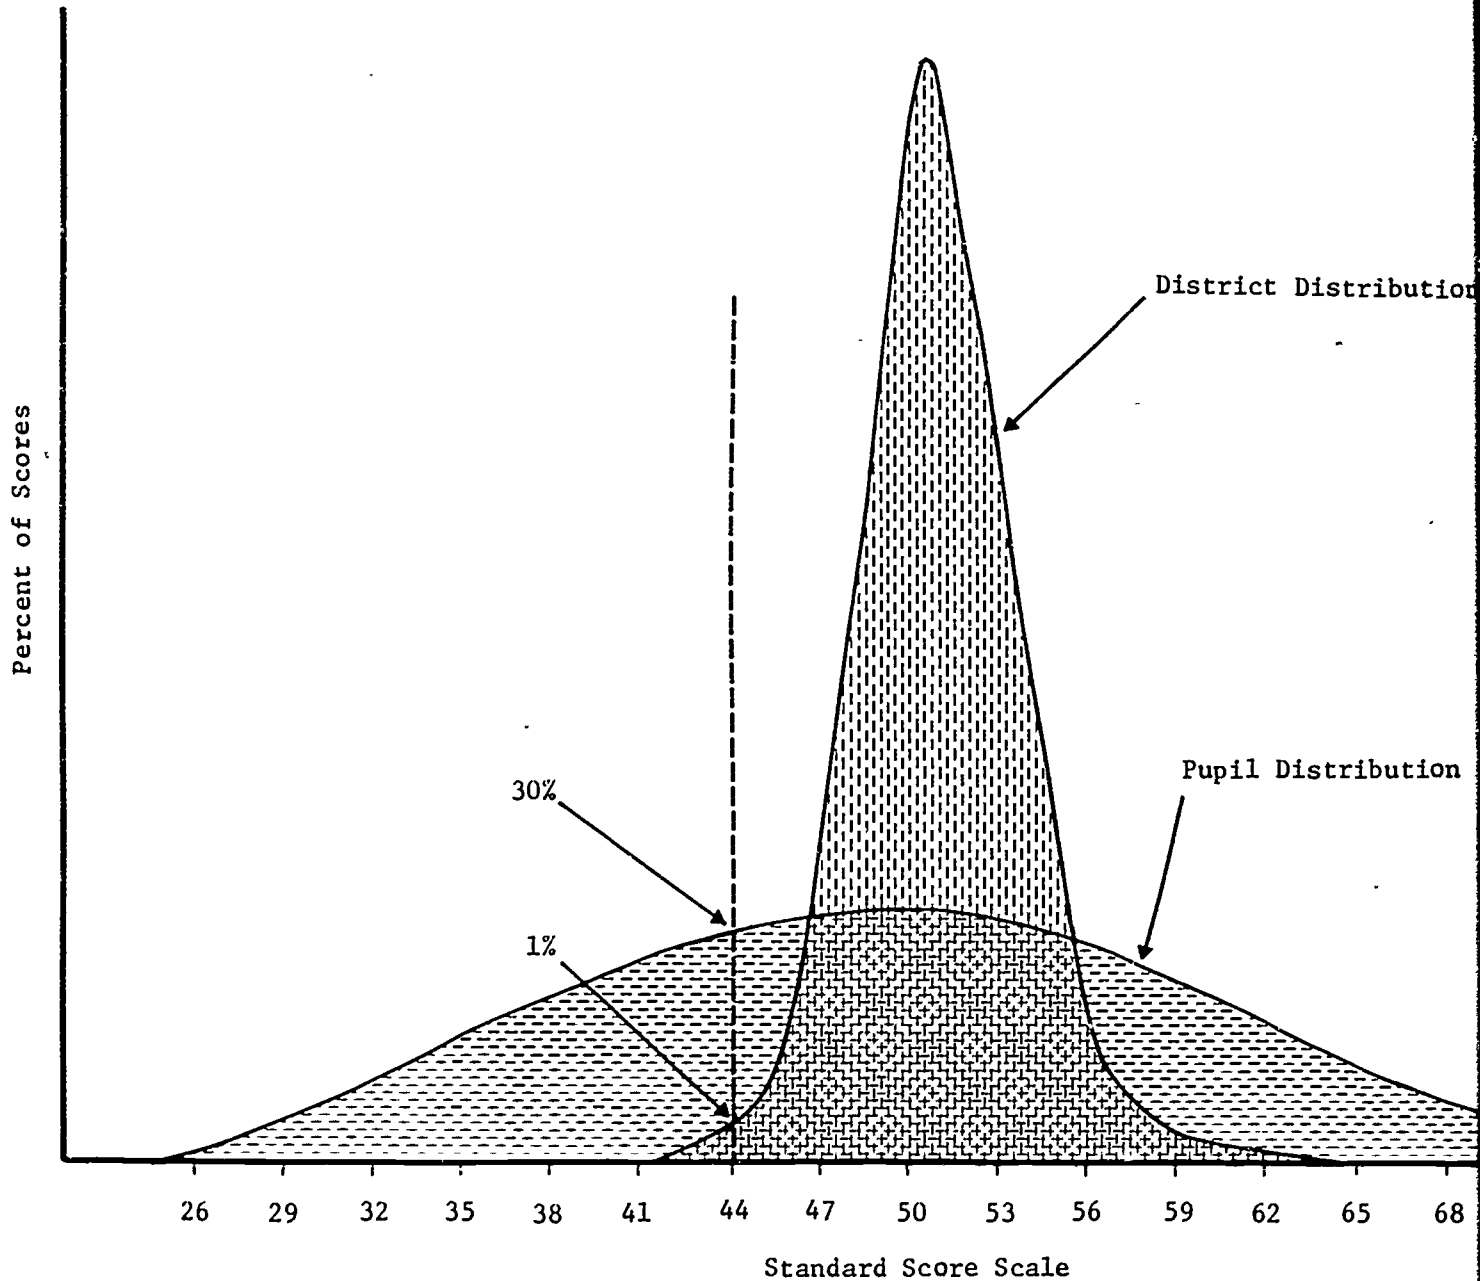

A district with 2.6 percent racial-ethnic minority students ranks at the 65th percentile. A district with 2.6 percent racial-ethnic minority students ranks at the 5th percentile. Obviously 2.6 percent racial-ethnic minority students is a high percentage only when compared to the rather large number of districts with a lower percentage; and by ordinary standards the difference between 2.6 percent and 0.1 percent racial-ethnic minority students is small.

District mean achievement scores also tend to be small in comparison to the rather wide range of individual pupil scores on the same measures. In other words, test scores of individual pupils cover a wider range than do the mean scores of districts. Figure 1, which was prepared from grade seven data on an English test, illustrates this phenomenon. It shows that grade seven pupil scores on that test range from below 20 to above 75 (a range of over 50 standard score units), while district mean scores are clustered between 50 and 63 (a range of only 23 standard score units). Yet these comparatively small differences in mean scores are statistically and educationally significant.

A characteristic of the score distributions is common to all normative achievement tests and other test data. It is based upon the mathematical notion that averages of scores are less variable than the scores themselves. In other words, the range of district scores is less than that of pupil scores. District mean scores are averages.

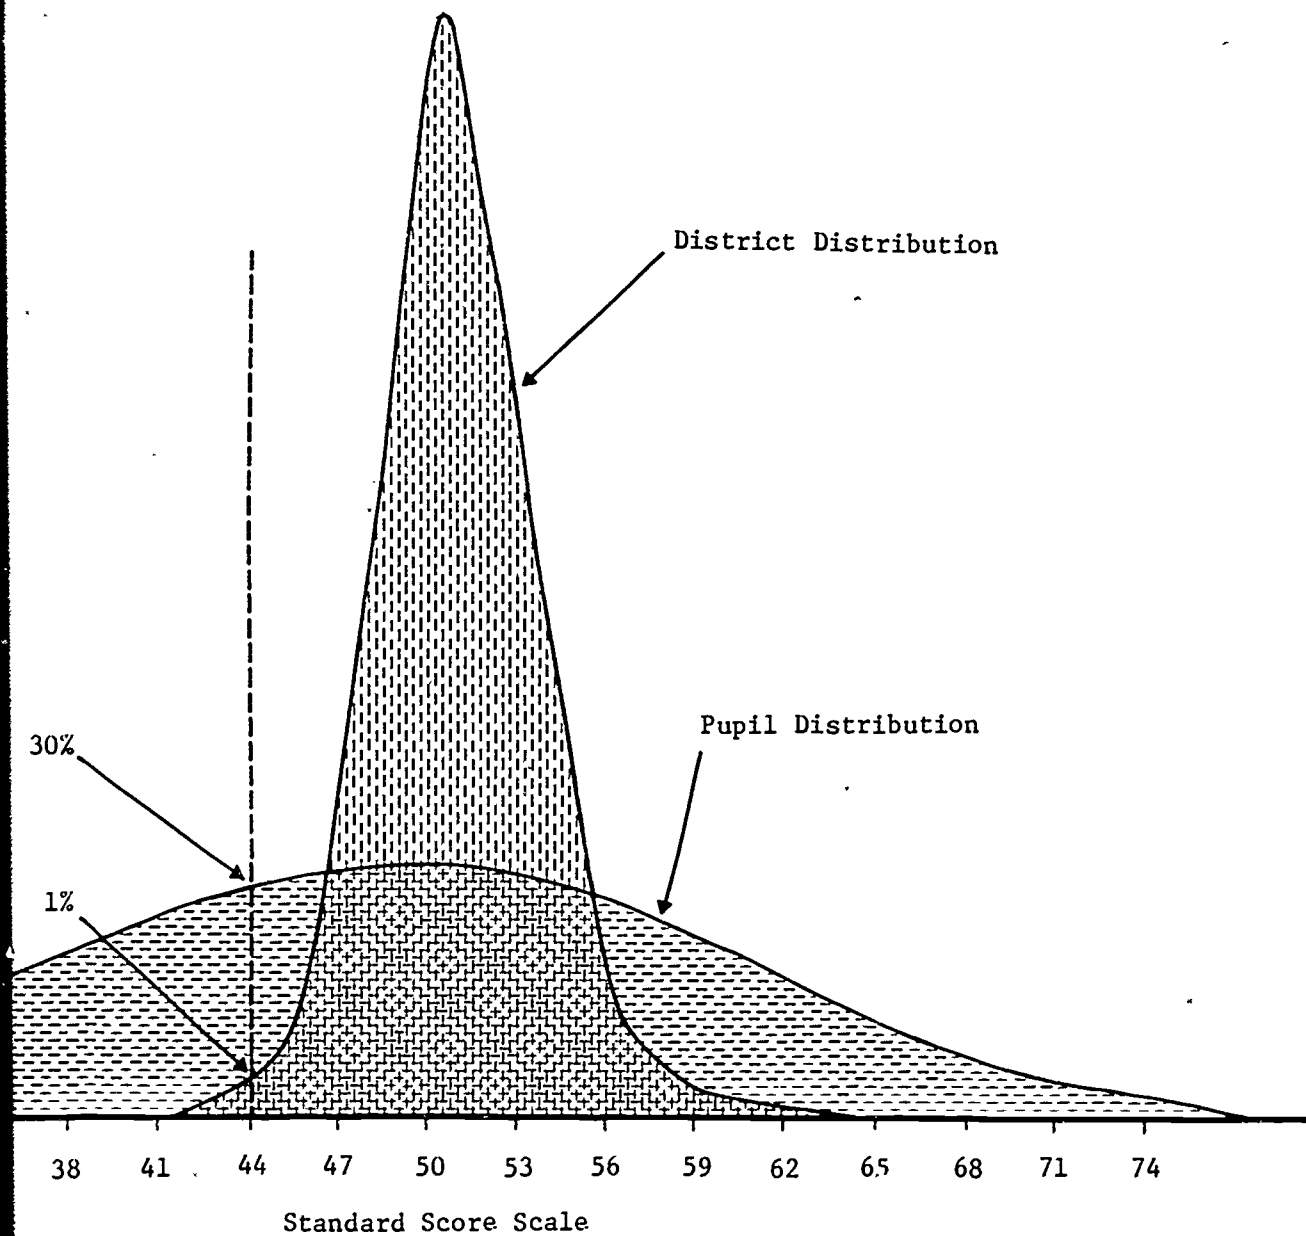

This means that any given standard score average would yield two different percentiles depending upon whether the district or the pupil distribution is used. In Figure 1, a standard score of 44, for example, would be a district percentile of 1 but a pupil percentile of 30. This point is of interest to local educators because most locally used achievement tests provide only pupil distributions. To compare a MEAP district percentile with a district percentile from a locally used test on a pupil percentile basis would be an error.

FIGURE 1. DISTRIBUTIONS OF PUPIL SCORES AND DISTRICT AVERAGES*

*DATA ILLUSTRATED REFLECT STATEWIDE PUPIL SCORES AND DISTRICT MEANS ON MECHANICS OF WRITTEN ENGLISH FOR GRADE 7

FIGURE 1. DISTRIBUTIONS OF PUPIL SCORES AND DISTRICT AVERAGES*

Interpretation of percentile bands. A percentile "band" is shown for each district mean basic skills achievement measures. This percentile band defines a range of percentile ranks within a district's true score mean -- a true score is a hypothetical score without measurement error -- making an allowance for the error of measurement associated with the pupil scores on which it is based. The range has been determined by a method that will enclose 95% of the "true" score means.

It will be noted that the band is wide for small districts and narrow for large districts. The fact that in districts which test many pupils the errors of measurement tend to "average out" their influence on the district mean will be small; but in districts which test few pupils these errors may be quite large.

Percentile bands are shown only for test score means. Nevertheless, there are sources of error in other measures, also. For example, appraising the value of real property involves judgmental decisions which contribute an element of error to the state equalized real property value per pupil for a district. The procedures for estimating the magnitude of those errors are not as highly developed as are the procedures for estimating the error components in test scores.

Accuracy of District and School Average (Mean) Score

Size of groups tested. When making interpretations of assessment data, it is important to consider the measures used and their ability to produce meaningful and stable information. For example, the school average in reading will be quite stable from year to year if the number of pupils taking the test is large. If the number of pupils tested in a district or school is small -- say 30 or less -- a few of the best readers could lower the average reading score for that district or school. If a small district had critical absences, the district should include this fact in any interpretation.

file bands. A percentile "band" is shown for each district mean score on the
res. This percentile band defines a range of percentile ranks within which the
a true score is a hypothetical score without measurement error -- would fall after
error of measurement associated with the pupil scores on which it is based. That
method that will enclose 95% of the "true" score means.
band is wide for small districts and narrow for large districts. This reflects
each test many pupils the errors of measurement tend to "average out" so that their
will be small; but in districts which test few pupils these errors of measurement
own only for test score means. Nevertheless, there are sources of error in the
sample, appraising the value of real property involves judgmental factors that can
to the state equalized real property value per pupil for a district. However,
magnitude of those errors are not as highly developed as are the procedures for
ts in test scores.

Accuracy of District and School Average (Mean) Score

When making interpretations of assessment data, it is important to bear in mind
ability to produce meaningful and stable information. For example, a district or
will be quite stable from year to year if the number of pupils taking the test is
pupils tested in a district or school is small -- say 30 or less -- the absence of a
lower the average reading score for that district or school considerably. If a
the district should include this fact in any interpretation of its data.

Because of this concern, the Michigan Educational Assessment Program has deleted from this report from districts whose average scores were based on fewer than five pupils.

Representativeness of groups tests. School district mean scores may be unrepresentative if the scores tested are not typical of the school population. They could be atypical if the pupils in the group differ in ability from the general school enrollment. In this case, the results would not fairly represent the performance of the entire student body of the district or school. As a rule of thumb, an annual year-to-year variation in pupil ability three to five times as large as the allowance for test error may be made. Thus, caution should be exercised in generalizing the fourth and seventh grade assessment results to other grade levels.

Administrative error. Individual pupil and school and district test score averages are subject to error because of improper test administration procedures. While the assessment tests are regarded as insensitive to minor variations in administrative procedures it is possible to cause year-to-year variations in average scores if test conditions, timing, instructions, etc., are not clearly within the specified limits. Unfortunately, the amount of error introduced by these factors is impossible to determine.

Reliability of scores on which means are based. The basic skills achievement tests used in the Michigan Educational Assessment Program are regarded as reliable enough to warrant the reporting of individual scores and thus will also produce highly reliable group scores. The percentile band provides a range of scores and errors due to unreliability.

Value of other data. Care must be taken not to interpret educational assessment scores in isolation when comparing schools and school districts. It must be remembered that much other relevant school data (e.g. population mobility, educational attitudes and aspirations of the community, density

Michigan Educational Assessment Program has deleted from this report decile data scores were based on fewer than five pupils.

Small groups tests. School district mean scores may be unrepresentative if the groups are small relative to the school population. They could be atypical if the pupils in the grades tested are not representative of the total school enrollment. In this case, the results would not faithfully reflect the total student body of the district or school. As a rule of thumb, an allowance for sampling error should be made three to five times as large as the allowance for test score variation. Caution should be exercised in generalizing the fourth and seventh grade educational assessment results to other grade levels.

Individual pupil and school and district test score averages are subject to variation due to sampling error and administration procedures. While the assessment tests are regarded as being fairly reliable, variations in administrative procedures it is possible to cause year-to-year fluctuations. Variations in test conditions, timing, instructions, etc., are not clearly within the specified parameters. The amount of error introduced by these factors is impossible to determine.

Which means are based. The basic skills achievement tests used in the Michigan Educational Assessment Program are regarded as reliable enough to warrant the reporting of individual pupil scores as well as the use of the highly reliable group scores. The percentile band provides an allowance for sampling error.

Caution must be taken not to interpret educational assessment scores in isolation when comparing scores between districts. It must be remembered that much other relevant school and community factors such as educational attitudes and aspirations of the community, density and sparsity

of population, etc.) are also important to consider when drawing conclusions based on education results. It would be unfair to expect basic skills levels alone to provide adequate comparison and districts unless the districts are similar on all other factors.

important to consider when drawing conclusions based on educational assessment
to expect basic skills levels alone to provide adequate comparisons of schools
if subjects are similar on all other factors.

SECTION II

THE EDUCATIONAL ASSESSMENT MEASURES USED IN THIS REPORT

This section lists the twenty-two 1972-73 educational assessment measures. Definitions can be found in Appendix B.

Listing of Educational Assessment Measures

For the reader's convenience the twenty-two measures used in the Michigan Educational Assessment Program are listed on the next page. These measures are grouped into six major categories: (A) Human Resources, (B) District Financial Resources, (C) Percent Minority, (D) Dropout Rate, (E) Achievement, and (F) Other. Those measures which are newly added since the 1971-72 educational assessment program are indicated by an asterisk (*). Data which were necessary to compute each measure came from one of two sources: (1) the Michigan Department of Education records, such as the "Fourth Friday Report"¹, or (2) the Michigan educational assessment battery. Data for all measures are reported at the district level and constitute this report. District level measures were provided to each district for its own schools with the third report in the series -- Local District and School Report: Explanatory Materials.

¹ Membership and enrollment for state aid programs is reported by Michigan public schools as of the fourth Friday after Labor Day. This report is commonly referred to as the "Fourth Friday Report."

SECTION III

READING AND INTERPRETING THE TABLES

It is the purpose of this section to explain how one may read and interpret the tables which contain the actual Michigan educational assessment data. This explanation makes use of two examples containing fictitious educational assessment data. Example 1 contains a partial listing of fictitious community type and fictitious data about those districts. Example 2 shows these same district assessment scores divided into deciles. When combined with the equated scores from 1970-71 and 1971-72, a longitudinal analysis of the assessment data is possible (see The Equating Report for additional information).

Educational Assessment Results and Percentile Ranks by District

Table 1 of this report contains a listing of the assessment scores on all of the twenty-two districts each of the participating school districts. The table contains the name of the district, the scores obtained on each variable, and the associated district percentile rank. In the case of the district, the percentile rank is presented as a "confidence band" as previously explained. Also, it should be noted that the test averages are displayed in units which have been equated to the scale used in 1969-70.

Example 1 shows a sample of typical data which appear in Table 1. Using Venice Public Schools as an illustration, it may be seen from column two that the number of teachers per 1,000 pupils was at the 5th percentile in a ranking of Michigan's districts on this measure. In other words, the

FICTITIOUS DATA

Schools had more teachers per 1,000 pupils than 5 percent of the state's school districts.

Or, considering column nine, the Venice Public Schools had a K-12 instructional expense per pupil of \$1,000. This expenditure is at the 77th percentile in a ranking of the state's districts -- higher than 77 percent of the state's districts on this measure.

The Decile Distribution Table

Table 2 of this report contains a decile distribution of the composite achievement scores for the participating school districts. These decile distributions show what percent of the fourth grade pupils scored in each of ten composite achievement levels. A district whose pupils are distributed throughout the state would have approximately ten percent of its pupils' scores in each decile. Districts whose average composite achievement scores are higher than the state average will find higher percentages of pupils' scores in the higher deciles and correspondingly lower percentages in the lower deciles.

The use of mean (average) achievement scores for districts tends to mask important information in the manner in which pupils scores are distributed. The decile distribution of pupil scores is an alternative to the mean score, but it, too, has certain deficiencies. For example, even though approximately ten percent of the scores are usually contained in each of the deciles, the score scale represented by the deciles is not the same. The fifth decile and the tenth decile do not represent the same portion of the score scale.

Secondly, the range of district scores is rather small compared to the range of pupil scores as illustrated by Figure 1. The decile distributions shown in Table 2 do not reflect this phenomenon. The standard score scale does not appear on the charts. Figure 2, shown below, provides these standard score boundaries for each decile.

er 1,000 pupils than 5 percent of the state's school districts.
nine, the Venice Public Schools had a K-12 instructional expense per pupil of \$600.
77th percentile in a ranking of the state's districts --- higher than 77 percent of
is measure.

The Decile Distribution Table

contains a decile distribution of the composite achievement scores for each of
districts. These decile distributions show what percent of the fourth and seventh
of ten composite achievement levels. A district whose pupils are typical of those
have approximately ten percent of its pupils' scores in each decile. Districts whose
nt scores are higher than the state average will find higher percentages of their
r deciles and correspondingly lower percentages in the lower deciles.
ge) achievement scores for districts tends to mask important information about the
es are distributed. The decile distribution of pupil scores is an attempt to add
out it, too, has certain deficiencies. For example, even though approximately ten

DECILES								
	1	2	3	4	5	6	7	8
GRADE 4	Below 36.8	36.8-41.1	41.2-45.1	45.2-48.1	48.3-51.1	51.2-53.7	53.8-56.1	56.2-58.7
GRADE 7	Below 37.2	37.2-41.7	41.8-45.1	45.2-47.7	47.8-50.4	50.5-52.7	52.8-55.4	55.5-57.7

By combining the decile distribution values with the standard score boundaries, it can be possible for a low scoring district to have large numbers of pupils who obtain higher scores than a high scoring district -- and vice versa.

The reader is cautioned that for districts testing small numbers of pupils (e.g., less than 100) the number of pupils in each decile can be noticeably affected by small differences between pupils' scores. In addition, with the confidential nature of individual pupil's scores and in recognition of the unrepresentativeness of average scores based on very small numbers, decile distributions based upon fewer than five pupils should not be reported.

The interpretation of the decile distribution can best be illustrated by examining the data presented in Example 2. The fictitious data presented in this example show that the hypothetical Calvert District had a mean score of 47.1 on composite achievement at the seventh grade level. This score is within the range of all of the district means as is shown by a percentile band of 6-7 (from Example 1). However, it is noted that, of the 264 pupils tested in the seventh grade of the district, some could be found in

FIGURE 2

FICTITIOUS DATA

instance, 6 percent of the students scored in the tenth or highest decile. This decile corresponds to scores 60.8 and higher.

As yet another example, the Baalbek School District had an average composite achievement score of 50.8 at the fourth grade level. As shown in Example 2, 3 percent of the students scored in the first decile, 12 percent scored in the tenth decile. Also, 12 percent of the students scored in the third decile and 12 percent scored in the seventh decile.

To illustrate their meaning and interpretation, decile data can also be displayed graphically. The percentages on a graph similar to the one in Figure 3. The graph in Figure 3 shows a probability distribution for the Venice Public Schools fourth grade composite achievement scores. The graph compares the decile distribution of Venice Public Schools with the decile distribution of fourth grade composite achievement scores throughout the state. This comparison illustrates that the distribution of fourth grade composite achievement scores from Venice Public Schools closely parallels the statewide distribution of fourth grade composite achievement scores. Each decile containing approximately the same percentage of scores. This finding is consistent with the fact that the Venice Public Schools' fourth grade average score on composite achievement was 50.8. The graph in Figure 3 is used to indicate that, because of rounding errors, not exactly ten percent of the students would fall in each decile.

The purpose of the next section in this report is to present the actual educational achievement data for Michigan's public school districts through the use of the two tables previously explained. The listing of Michigan districts arranged alphabetically within community type and presented in Table 1. Table 1 lists the twenty-two variables which constitute the program. Table 2 contains an identical listing of districts and presents the achievement data in the format of a decile distribution.

the students scored in the tenth or highest decile. This decile corresponds to standard

le, the Baalbek School District had an average composite achievement score of 52.4 at

APPENDICES

APPENDIX A
STATISTICAL TERMS

Average (Mean)

An average or mean score is the average of a particular set of scores and is obtained by adding all the scores in the set and dividing the sum by the total number of scores.

Decile Distribution

A decile distribution is a ranking of scores which is divided into ten equal parts. Each part represents ten percent of the total number of scores. When deciles are computed on a statewide test, ten percent of the state's pupil will fall into each decile. Pupils in the first decile on a test constitute the lowest scoring ten percent of the pupils tested throughout the state. Pupils in the tenth decile on composite achievement constitute the highest ten percent of the pupils tested. District decile distributions are valuable because they can show whether the scores of pupils in the district are concentrated in one part of the score distribution or another or scattered more evenly throughout the possible decile scores.

Equated Standard Scores

Equated standard scores are reported for all basic skills achievement measures given in a test. This is useful in producing scores which may be compared directly with those scores from another test (of an identical) test. Equated standard scores are obtained by transforming the raw scores on a test into score units previously established for the other test.

APPENDIX A

STATISTICAL TERMS

Mean is the average of a particular set of scores and is obtained by adding all of the scores and dividing the sum by the total number of scores.

Decile is a ranking of scores which is divided into ten equal parts. Each part has an equal share of the total number of scores. When deciles are computed on a statewide basis, approximately 10 percent of the pupils will fall into each decile. Pupils in the first decile on composite achievement tests constitute the lowest ten percent of the pupils tested throughout the state. Pupils in the tenth decile constitute the highest ten percent of the pupils tested. District and school decile scores are reported because they can show whether the scores of pupils in the district or school are concentrated in one part of the score distribution or another or scattered more evenly throughout the range of scores.

Standard scores are reported for all basic skills achievement measures given in this report. Equating scores from one test to scores which may be compared directly with those scores from another similar (but not necessarily the same) test. Standard scores are obtained by transforming the raw scores on a test into standard scores based on the standard deviation established for the other test.

District mean scores on the 1972-73 basic skills achievement measures are reported in u the standard scores established for the corresponding 1969-70 achievement measure. As a res district scores are comparable to the 1969-70 scores on the corresponding measures.

Percentile Band

A percentile band is a range of percentile ranks within which a district's "true" score pected to fall a certain percentage of the time (a "true" score is a hypothetical score with limits of the percentile bands in this report have been determined by a method that places 9 "true" score means within the band.

It will be noted that the bands are wider for small districts than they are for large d reflects the fact that in large districts the errors of measurement tend to "average out" so fluence on the district mean is small, but in small districts the errors of measurement may and tend to be larger.

Percentile Distribution

A percentile distribution is a ranking of scores which is divided into 100 equal parts, equal number--one percent--of the total number of scores. Percentile distributions are use a particular score lies in relation to other scores. For example, a school district score on a distribution of assessment scores would be at the median--or middle--of the distributio at the 75th percentile would be above 75 percent--and below 25 percent--of the district score

Standard Deviation

The standard deviation is a method of indicating how much "spread" there is in a distri

on the 1972-73 basic skills achievement measures are reported in units equated to
lished for the corresponding 1969-70 achievement measure. As a result, these 1972-73
table to the 1969-70 scores on the corresponding measures.

a range of percentile ranks within which a district's "true" score mean may be ex-
percentage of the time (a "true" score is a hypothetical score without error). The
bands in this report have been determined by a method that places 95% of the district
the band.

the bands are wider for small districts than they are for large districts. This
large districts the errors of measurement tend to "average out" so that their in-
mean is small, but in small districts the errors of measurement may not average out

ation is a ranking of scores which is divided into 100 equal parts, each having an
of the total number of scores. Percentile distributions are useful in showing where
relation to other scores. For example, a school district score at the 50th percentile
assessment scores would be at the median--or middle--of the distribution. A district score
ould be above 75 percent--and below 25 percent--of the district scores in the distribution.

on is a method of indicating how much "spread" there is in a distribution of scores.

Two groups of scores could have the same mean but the "spread" be quite different. For example, one district might have children whose scores on composite achievement are very similar to one another and all are close to a mean of 50. In this district the "spread" of scores would be small. Another district might have a few children with high scores and a number with low scores and still have a mean score of 50. In this district the "spread" of scores would be large.

One common way of indicating the "spread" of scores is to calculate a standard deviation. In a normal distribution, two-thirds of the scores will fall between one standard deviation above and one standard deviation below the mean. The larger the standard deviation, the larger is the "spread" or variability in the scores. In the example above, the district with the mixture of high and low scores would have a larger standard deviation than would the district with similar scores.

Standard Scores

Standard scores are scores that are derived from "raw" or response scores using the mean and standard deviation. In the Michigan Educational Assessment Program, standard scores were developed so that the mean score from any assessment battery measure was 50 and the standard deviation was ten, when compared to other pupils at the same grade level. For example, a pupil with a standard score of 40 on reading was one standard deviation below the state mean; a pupil with a standard score of 60 was one standard deviation above the mean; and a pupil with a standard score of 65 was one and one-half standard deviations above the mean; and so on. The use of standard scores facilitates the comparison of scores on different tests. The mean score for a district was computed by averaging the standard scores of the pupils tested at the same grade level in that district.

ave the same mean but the "spread" be quite different. For example, one district scores on composite achievement are very similar to one another and have a mean score "spread" of scores would be small. Another district might have a number of children with low scores and still have a mean score of 50. In this district the "spread" of scores is to calculate a standard deviation. Usually about half fall between one standard deviation above and one standard deviation below the mean. The larger is the "spread" or variability in the scores of a distribution. A district with the mixture of high and low scores would have a larger standard deviation than a district with similar scores.

Standard scores that are derived from "raw" or response scores using the mean and standard deviation of the Educational Assessment Program, standard scores were developed so that the pupil with a mean battery measure was 50 and the standard deviation was ten, when computed for all pupils. For example, a pupil with a standard score of 40 on reading was one standard deviation below the mean; a pupil with a standard score of 60 was one standard deviation above the mean; a pupil with a standard score of 65 was one and one-half standard deviations above the mean; and so forth. This facilitates the comparison of scores on different tests. The mean score for each grade is determined by averaging the standard scores of the pupils tested at the same grade level in that

APPENDIX B

DEFINITIONS OF THE EDUCATIONAL ASSESSMENT MEASURES

The twenty-two measures reported in the 1972-73 Michigan Educational Assessment Program and One measure, total operating millage, has been added since the 1971-72 program. Another measure, estimate of socioeconomic status, has been deleted since the 1971-72 program. In addition, the average contracted salary of teachers is different from that which was used in 1971-72.

Human Resources

1. Professional instructional staff per 1,000 pupils. The information to compute this measure is from the 1972 "Fourth Friday Report." The total number of professional instructional staff was obtained by adding the number of elementary and secondary staff (expressed as full time equivalency) in the following categories: principals, assistant principals, other administrators, (excluding district-wide administrative staff), consultants and supervisors, classroom teachers, librarians, audio-visual staff, guidance and school counselors, psychological staff, radio and television instructional staff, teachers on contract, and other instructional staff. The total number of pupils was obtained by counting all pupils in grades one through twelve except special education pupils. Pupils who attended the school for the day and attended a non-public school for the remainder of the day were included on a full-time basis. For example, a pupil who attended the school for one-fourth of each day and attended another school for the other three-fourths of each day was counted as one-fourth pupil. In order to compute the number of professional instructional staff per 1,000 pupils, the total number of professional instructional staff was multiplied by 1,000 and divided by the total number of pupils.

APPENDIX B

DEFINITIONS OF THE EDUCATIONAL ASSESSMENT MEASURES

as reported in the 1972-73 Michigan Educational Assessment Program are defined below. g millage, has been added since the 1971-72 program. Another measure, composite status, has been deleted since the 1971-72 program. In addition, the definition of f teachers is different from that which was used in 1971-72.

Instructional staff per 1,000 pupils. The information to compute this measure was taken y Report." The total number of professional instructional staff was obtained by ary and secondary staff (expressed as full time equivalency) in the following istant principals, other administrators, (excluding district-wide administrative rvisors, classroom teachers, librarians, audio-visual staff, guidance personnel nological staff, radio and television instructional staff, teachers of the home- al staff. The total number of pupils was obtained by counting all pupils enrolled e except special education pupils. Pupils who attended the school for a portion of ublic school for the remainder of the day were included on a full time equivalency l who attended the school for one-fourth of each day and attended a non-public ourths of each day was counted as one-fourth pupil. In order to obtain the number al staff per 1,000 pupils, the total number of professional instructional staff divided by the total number of pupils.

2. Teachers per 1,000 pupils. The information to compute this measure was taken from the "Fourth Friday Report." The total number of teachers was obtained by adding the number of elementary school teachers, Kindergarten teachers, special education teachers, and non-classroom teachers were included in the total. The total number of pupils was obtained by counting all pupils enrolled in grades one through twelve except special education pupils. Pupils who attended the school for a portion of the day at a non-public school for the remainder of the day were included on a full time equivalency basis. To obtain the number of teachers per 1,000 pupils, the total number of teachers was multiplied by 1,000 and then divided by the total number of pupils.

3. Average years teaching experience. The information to compute this measure was taken from the "Fourth Friday Report." The average was obtained by dividing the total years of teaching experience of full time classroom teachers who work only in a school by the number of such teachers in that school. District level averages were obtained by adding the total years of experience for all schools in the district and then dividing by the sum of the full time classroom teachers in all schools in the district.

4. Percent of teachers with master's degree. The information to compute this measure was taken from the 1972 "Fourth Friday Report." It was obtained by dividing the number of full time classroom teachers who completed all of the requirements for a master's degree by the total number of full time classroom teachers. The resultant value was multiplied by 100 to convert to a percent figure.

5. Average contracted salary of teachers. The information necessary to compute this measure was taken from the 1972 "Fourth Friday Report." It was obtained by dividing the total annual contractual salaries of full time classroom teachers who work only in a school by the number of such teachers in that school. District level averages were obtained by adding the total annual contractual salaries for all schools in the district and then dividing by the total number of full time classroom teachers in all schools in the district.

pils. The information to compute this measure was taken from the 1972 "Fourth

and dividing by the sum of full time classroom teachers in all schools in the district.

The average salary of teachers in 1971-72 did not include supplemental payments such as coaching, summer school, department head bonus, etc. The salary figures reported for 1972-73 payments insofar as such payments were part of the contractual agreement between teacher and

School District Financial Resources

6. State equalized valuation per resident member (1971-72). The information to compute was taken from records filed with the Michigan Department of Education. The total state equalized valuation (SEV) is equal to approximately 50 percent of the fair cash value of the real and personal property in the district. It is calculated as of May 26, 1971 (the fourth Monday in May) and applied to the fiscal year. In order to obtain a per pupil value for SEV, the total SEV was divided by resident membership for the 1971-72 academic year. Resident membership, obtained from the 1971-72 "Fourth Friday Report," includes pupils residing in the district who attended public school in that district or in any other district. Resident membership excludes pupils who attended school in the district but resided in another district or in another state, excluding pupils who attended private or parochial schools.

7. Local revenue per pupil 1971-72. The information to compute this measure was taken from the financial statements provided by the local districts and filed with the Michigan Department of Education. The financial statements were reported in the Annual School District Financial Report for the fiscal year which ended June 30, 1972. The total value for local revenue included revenue from sources such as the following: property taxes (the primary source of local revenue), local government appropriations, tuition, transportation fees, revenue from school activities (i.e., revenue from food services, book stores, and student body activities), rent from school

full time classroom teachers in all schools in the district.

teachers in 1971-72 did not include supplemental payments such as payments for department head bonus, etc. The salary figures reported for 1972-73 include such payments were part of the contractual agreement between teacher and school district.

Resources

Valuation per resident member (1971-72). The information to compute this measure was obtained with the Michigan Department of Education. The total state equalized valuation is approximately 50 percent of the fair cash value of the real and personal property in the district as of May 26, 1971 (the fourth Monday in May) and applied to the 1971-72 academic year. The per pupil value for SEV, the total SEV was divided by resident membership for the 1971-72 academic year. Resident membership, obtained from the 1971-72 "Fourth Friday Report," includes all students who attended public school in that district or in any other district; resident students who attended school in the district but resided in another district, as well as students who attended private or parochial schools.

Pupil 1971-72. The information to compute this measure was taken from records maintained by the Michigan Department of Education and filed with the Michigan Department of Education. The financial information is from the School District Financial Report for the fiscal year which ended June 30, 1972. The revenue included revenue from sources such as the following: property tax (the major source of revenue), local government appropriations, tuition, transportation fees, revolving funds (for library services, book stores, and student body activities), rent from school facilities, etc.

Tuition from community college patrons was not included in the calculation. In order to obtain per pupil, total local revenue was divided by the state aid membership (the total number of pupils in the district as of October 1, 1971, the Fourth Friday after Labor Day).

8. State school aid per pupil 1971-72. The information to compute this measure was taken provided by the local districts and filed with the Michigan Department of Education. The financial information taken from the Annual School District Financial Report for the fiscal year which ended June 30, 1972. The value for total state school aid represented the direct appropriations from the state, including for state school aid, driver education, underprivileged children, and other state grants. In order to obtain the state school aid per pupil, the total state school aid was divided by 1971-72 state aid membership.

9. K-12 instructional expense per pupil 1971-72. The information to compute this measure was taken from records provided by the local districts and filed with the Michigan Department of Education. The financial information was reported in the Annual School Financial Report for the fiscal year which ended June 30, 1972. The total K-12 instructional expense included expenditures for salaries and supplies connected with elementary education, secondary education, special education, summer school, and adult education. Expenditures with community colleges were omitted from the calculation. In order to obtain a value for instructional expense per pupil, total K-12 instructional expense was divided by the 1971-72 state aid membership.

10. Elementary instructional expense per pupil 1971-72. The information to compute this measure was taken from financial reports provided by the local districts and filed with the Michigan Department of Education. Financial information was reported in the Annual School District Financial Report for the fiscal year which ended June 30, 1972. The elementary instructional expense included expenditures for salaries and supplies connected with elementary education.

connected with elementary education. In order to obtain a value for elementary instructional pupil for districts organized to operate a high school, total elementary instructional expense by the elementary state aid membership, taken from the 1971-72 "Fourth Friday Report." For districts organized to operate a high school (i.e., those that operate no grade above grade 8) total elementary instructional expense was divided by the K-8 state aid membership. Prekindergarten and special education were not included.

11. Total current operating expense per pupil (1971-72). The information to compute this measure was taken from records provided by the local districts and filed with the Michigan Department of Education. Financial information was reported in the Annual School District Financial Report for the fiscal year ended June 30, 1972. The total current operating expense included expenses connected with administrative, attendance, health services, pupil transportation, plant operation, plant maintenance, and fixed assets in addition to instructional expenses (including elementary, secondary, special education, summer school, and adult education instructional expenses). Community college expenses were not included in the total operating expense. The value for total current operating expense was divided by the 1971-72 membership.

12. Total operating millage (1971-72). The information to compute this measure was taken from records provided by intermediate districts and filed with the Michigan Department of Education. Millage was reported on the form "1971-72 Tax Levies of School Districts Based on 1971 State Equalized Valuation" submitted to the Department in November of 1971 for the 1971-72 school year. Total operating millage tax rate in mills applied to the state equalized valuation of a district to produce revenue for

education. In order to obtain a value for elementary instructional expense per
d to operate a high school, total elementary instructional expense was divided
membership, taken from the 1971-72 "Fourth Friday Report." For districts not

71-72 Tax Levies of School Districts Based on 1971 State Equalized Valuation"
In November of 1971 for the 1971-72 school year. Total operating millage is the
the state equalized valuation of a district to produce revenue for the operation

of its schools (not including building and site or debt retirement millage).

Percent Minority

13. Percent of racial-ethnic minority students. Percent of racial-ethnic minority students for each school in the state. The information to compute this measure was taken from the 1972 Report." The total number of racial-ethnic minority students included all racial-ethnic minorities at the school. Pre-kindergarten students, kindergarten students, special education students and part-time students were all included in the total. Since the information was expressed in terms of a head count, students were not counted differently from full-time students. Students were classified as belonging to a racial-ethnic minority group if they were considered by the school to be of that group. Pre-kindergarten students, kindergarten students, special education students, and part-time students were included in the total. To calculate the percent of racial-ethnic minority students, the total number of racial-ethnic minority students was divided by the total number of students and the resultant figure was multiplied by 100.

Dropout Rate (1971-72)

14. School dropout rate. School dropout rate was computed from information taken from reports filed by the local districts and filed with the Michigan Department of Education. The measure was based on information from the local districts' School Dropout Report and enrollment of students in grades 9-12 during the 1971-72 academic year. Included as dropouts were students who left school for any of the following reasons: transferred to another district, sent to corrective institutions, accepted employment, or dropped from attendance roll because absent for more than 30 days. Not included as dropouts were students who left the district because they transferred to another district, were sent to institutions for defectives, or the student was sick or died. The dropout rate is

building and site or debt retirement millage).

ethnic minority students. Percent of racial-ethnic minority students was computed

The information to compute this measure was taken from the 1972 "Fourth Friday" report. Racial-ethnic minority students included all racial-ethnic minority students in grades 1-12, kindergarten students, special education students and part-time students. Since the information was expressed in terms of a head count, part-time students were converted to full-time equivalents. Students were classified as belonging to a racial-ethnic group considered by the school to be of that group. Pre-kindergarten students, kindergarten students, and part-time students were included in the total. In order to compute the percent of racial-ethnic minority students, the total number of racial-ethnic minority students was divided by the total number of students and the resultant figure was multiplied by 100.

School dropout rate was computed from information taken from records provided by the Michigan Department of Education. The measure was based on figures from the School Dropout Report and enrollment of students in grades 9-12 during the 1971-72 school year. Dropouts were students who left school for any of the following reasons: married, accepted employment, or dropped from attendance roll because absent 10-30 days. Students who left the district because they transferred to another district, were expelled, or the student was sick or died. The dropout rate is calculated by

dividing the number of dropouts by the sum of the number of students enrolled in grades 9-12 Friday" plus new students enrolled during the year, computed from the 1971-72 School Dropout resultant figure was multiplied by 100.

Achievement

15. Word Relationships. The fourth grade Word Relationships test contained 45 verbal items which were designed to measure students' knowledge of the meaning of words and the relationships and concepts. Twenty minutes were allowed to work on the test. The seventh grade test contained of the same type. The time allowed to work on this test was 15 minutes.

16. Reading. The fourth grade Reading test contained 50 questions which assessed paragraph comprehension, ability to understand words from the context in which they are encountered, and ability to select a correct synonym for a word. Students at the fourth grade level were allowed 35 minutes to work on the test. The seventh grade test was similar in content but contained 60 questions to be answered in 40 minutes.

17. Mechanics of Written English. The Mechanics of Written English test consisted of two parts for fourth graders, and three parts for seventh graders, each separately timed. In part A, spelling items were to identify misspelled words. The fourth grade test presented 15 items to be completed in 5 minutes, the seventh grade test presented 20 items to be completed in 6 minutes. Part B, effectiveness of expression required students to select the best way of expressing a thought or the best word to complete a sentence. The fourth grade test contained 28 items while the seventh grade test contained 30 items. All pupils were allowed 17 minutes to complete part B. Recognizing errors of punctuation and capitalization was the object of part C. The fourth grade booklet had 12 items and allowed 8 minutes, and the seventh grade booklet had 15 items and allowed 10 minutes.

outs by the sum of the number of students enrolled in grades 9-12 on the "Fourth enrolled during the year, computed from the 1971-72 School Dropout Report. The multiplied by 100.

2. The fourth grade Word Relationships test contained 45 verbal analogy problems to measure students' knowledge of the meaning of words and the relationships between words. Students were allowed to work on the test. The seventh grade test contained 38 questions and the time allowed to work on this test was 15 minutes.

The fourth grade Reading test contained 50 questions which assessed paragraph comprehension. Questions asked students to identify words from the context in which they are encountered, and ability to identify the main idea. Students at the fourth grade level were allowed 35 minutes to work on this test. The seventh grade test was similar in content but contained 60 questions to be answered in 40 minutes.

Written English. The Mechanics of Written English test consisted of three parts for seventh graders, each separately timed. In part A, spelling, students were asked to identify words. The fourth grade test presented 15 items to be completed in 5 minutes; the seventh grade test presented 20 items to be completed in 6 minutes. Part B, effectiveness of written expression, asked students to select the best way of expressing a thought or the best word or phrase to use. The fourth grade test contained 28 items while the seventh grade test contained 30 items; students were allowed 10 minutes to complete part B. Recognizing errors of punctuation and capitalization was part of the test. The fourth grade booklet had 12 items and allowed 8 minutes, and the seventh grade

booklet had 14 items and allowed 7 minutes.

18. Mathematics. The Mathematics test at both grade levels involved mathematical reasoning, solving and computation. In addition, problems in the seventh grade test involved algebraic and geometric concepts. Pupils at both grade levels had 30 minutes in which to answer 40 questions.

19. Composite Achievement. A Composite Achievement score was computed for each student. The score was obtained by averaging the individual's standard scores on the Reading, the Mechanics of English, and the Mathematics tests. The test scores were combined in this way so that each score contributed equally to the average -- despite the fact that the number of items was different on the tests.

It should be noted that the Word Relationships test score was not included in the calculation of the Composite Achievement score. Analogies, as those contained in the Word Relationships test are not the subject of direct instruction. Further, the Word Relationships score is believed to respond more to the other scores to the influence of schooling and may be considered to be a measure of developmental ability. Therefore, it was excluded to focus the composite achievement score upon those aspects of achievement that respond most readily to instruction.

Size Measures

20. Grade 4 membership. Grade 4 membership was obtained by counting all full time pupils in grade 4 except special education pupils.

21. Grade 7 membership. Grade 7 membership was obtained by counting all full time pupils in grade 7 except special education pupils.

22. Total membership. Total membership was obtained by counting all full time pupils in the district operated by the district from kindergarten through the 12th grade, except special education pupils.

Total membership was obtained by counting all full time pupils in all grades
m kindergarten through the 12th grade, except special education pupils.

APPENDIX C

DEFINITIONS OF MICHIGAN SCHOOL DISTRICTS BY MAJOR COMMUNITY TYPE

Five major community types are used to classify the communities that the school districts serve. These community types are defined below.

1. Metropolitan Core Cities:

Communities are classified as Metropolitan Core Cities if they meet at least one of the following criteria:

- (a) the community is the central city of a Michigan Standard Metropolitan Statistical Area; or
- (b) the community is an enclave within the central city of a Michigan Standard Statistical Area;
- (c) the community was previously classified as a Metropolitan Core City.

Note: The U. S. Census Bureau defines the central city of a Standard Metropolitan Statistical Area as those cities named in the titles of the Standard Metropolitan Statistical Areas in the U. S. Department of Commerce, Statistical Abstract of the United States [Washington: U. S. Census Bureau, 1968], p. 2.)

2. Cities:

Communities are classified as Cities if they have a population of 10,000 or more and have not been classified as a Metropolitan Core City or Urban Fringe.

3. Towns:

Communities are classified as Towns if they have a population of 2,500 to 9,999. Rural communities impacted by large military installations nearby are also classified as Towns.

APPENDIX C

CLASSIFICATIONS OF MICHIGAN SCHOOL DISTRICTS BY MAJOR COMMUNITY TYPE

Types are used to classify the communities that the school districts in Michigan are defined below.

Cities:

Classified as Metropolitan Core Cities if they meet at least one of the following

Community is the central city of a Michigan Standard Metropolitan Statistical

Community is an enclave within the central city of a Michigan Standard Metropolitan Statistical Area;

Community was previously classified as a Metropolitan Core City.

Census Bureau defines the central city of a Standard Metropolitan Statistical Area as a community named in the titles of the Standard Metropolitan Statistical Area. (See U.S. Department of Commerce, Statistical Abstract of the United States [Washington: Bureau of Economic Analysis, p. 2.]

Classified as Cities if they have a population of 10,000 or more and have not been classified as a Metropolitan Core City or Urban Fringe.

Classified as Towns if they have a population of 2,500 to 9,999. Rural communities and military installations nearby are also classified as Towns.

4. Urban Fringe:

Communities are classified as Urban Fringe, regardless of their size, if they meet at least one of the following criteria:

- (a) the mailing address of the community is a Metropolitan Core City or a City that is on a RFD Route; or
- (b) the community is within ten miles of the center of a Metropolitan Core City;
- (c) the community is within five miles of the center of a City.

5. Rural:

Communities are classified as Rural if they have a population of less than 2,500, or their mailing address is an RFD Route of a Town, City, Urban Fringe, or Metropolitan Core, and they are outside the perimeter defined above under Urban Fringe.

NOTE: No communities in Wayne County are classified rural.

These definitions of community types were established in the Fall of 1971. They have been used to make the classification as objective and consistent as possible without altering the basic principles of the classification. All classifications were made using 1970 census data and the most recent address for each district.

classified as Urban Fringe, regardless of their size, if they meet at least one
criteria:

ing address of the community is a Metropolitan Core City or a City unless it

APPENDIX D

COUNTY CODE NUMBERS

The following code numbers have been used in Table 1, and Table 2 to identify the county district. In both tables the county code appears immediately after each district's name.

01	Alcona	22	Dickinson	43	Lake	64	Oceana
02	Alger	23	Eaton	44	Lapeer	65	Ogemaw
03	Allegan	24	Emmet	45	Leelanau	66	Ontonagon
04	Alpena	25	Genesee	46	Lenawee	67	Osceola
05	Antrim	26	Gladwin	47	Livingston	68	Oscoda
06	Arenac	27	Gogebic	48	Luce	69	Otsego
07	Baraga	28	Grand Traverse	49	Mackinac	70	Ottawa
08	Barry	29	Gratiot	50	Macomb	71	Presque Isle
09	Bay	30	Hillsdale	51	Manistee	72	Roscommon
10	Benzie	31	Houghton	52	Marquette	73	Saginaw
11	Berrien	32	Huron	53	Mason	74	St. Clair
12	Branch	33	Ingham	54	Mecosta	75	St. Joseph
13	Calhoun	34	Ionia	55	Menominee	76	Sanilac
14	Cass	35	Iosco	56	Midland	77	Schoolcraft
15	Charlevoix	36	Iron	57	Missaukee	78	Shiawassee
16	Cheboygan	37	Isabella	58	Monroe	79	Tuscola
17	Chippewa	38	Jackson	59	Montcalm	80	Van Buren
18	Clare	39	Kalamazoo	60	Montmorency	81	Washtenaw
19	Clinton	40	Kalkaska	61	Muskegon	82	Wayne
20	Crawford	41	Kent	62	Newaygo	83	Wexford
21	Delta	42	Keweenaw	63	Oakland		

APPENDIX D

COUNTY CODE NUMBERS

These numbers have been used in Table 1 and Table 2 to identify the county of each district. The county code appears immediately after each district's name.

22	Dickinson	43	Lake	64	Oceana
23	Eaton	44	Lapeer	65	Ogemaw
24	Emmet	45	Leelanau	66	Ontonagon
25	Genesee	46	Lenawee	67	Osceola
26	Gladwin	47	Livingston	68	Oscoda
27	Gogebic	48	Luce	69	Otsego
28	Grand Traverse	49	Mackinac	70	Ottawa
29	Gratiot	50	Macomb	71	Presque Isle
30	Hillsdale	51	Manistee	72	Roscommon
31	Houghton	52	Marquette	73	Saginaw
32	Huron	53	Mason	74	St. Clair
33	Ingham	54	Mecosta	75	St. Joseph
34	Ionia	55	Menominee	76	Sanilac
35	Iosco	56	Midland	77	Schoolcraft
36	Iron	57	Missaukee	78	Shiawassee
37	Isabella	58	Monroe	79	Tuscola
38	Jackson	59	Montcalm	80	Van Buren
39	Kalamazoo	60	Montmorency	81	Washtenaw
40	Kalkaska	61	Muskegon	82	Wayne
41	Kent	62	Newaygo	83	Wexford
42	Keweenaw	63	Oakland		

APPENDIX E

SUPPLEMENTARY INTERPRETATION OF SCHOOL AND DISTRICT MEANS USING PUPIL NORMS

The primary interpretation of district mean scores on assessment measures should be made using the pupil norms supplied with the report entitled Local District and School Report: Explanatory Material.

However, additional meaning can be derived by using the district mean scores on assessment measures and the pupil norms to answer the question: "If a pupil's score were equal to our district mean score, what would be the pupil rank among all pupils in the state?" These pupil norms have been prepared to provide answers to questions of that nature. They are used by entering the pupil norms table in the column of the district mean score to be interpreted, finding the score closest to that mean score, then locating the percentile rank in the percentile distribution column at the left.

It should be made clear whenever pupil norms are used with district means that these norms indicate the rank of the district. Rather, the pupil norms indicate the rank of a pupil among all pupils in the state. If that pupil is typical of the pupils in a district, as he will tend to be if his score is equal to the district mean, that score (and the district mean) take on added meaning. The achievement level in the district can be interpreted in terms of the ranking of the district's average among the averages of other districts in the state by using district norms and in terms of the ranking of a hypothetical "average pupil" among all pupils in the state by using pupil norms.

APPENDIX E

ALTERNATE INTERPRETATION OF SCHOOL AND DISTRICT MEANS USING PUPIL NORMS

Interpretation of district mean scores on assessment measures should be made using the district report entitled Local District and School Report: Explanatory Materials.

Information can be derived by using the district mean scores on assessment measures with the question: "If a pupil's score were equal to our district mean score, where would he rank among all pupils in the state?" These pupil norms have been prepared to provide answers to this question. They are used by entering the pupil norms table in the column of the test whose mean score is being found, finding the score closest to that mean score, then locating the percentile rank in the adjacent column at the left.

Whenever pupil norms are used with district means that these norms do not indicate achievement level. Rather, the pupil norms indicate the rank of a pupil among all pupils in the state. The ranking of the pupils in a district, as he will tend to be if his score is equal to the district mean) take on added meaning. The achievement level in the district can be interpreted in terms of the ranking of the district's average among the averages of other districts in Michigan in terms of the ranking of a hypothetical "average pupil" among other pupils in the state.
