 DESCRIPTORS Building Trades; \*Carpenters; Communication Skills; \*Job Analysis; Knowledge Level; \*Occupational Information; Safety; Skill Analysis; Skill Development; Skilled Occupations; \*Task Analysis; Task Performance; Work Attitudes

ABSTRACT

The general purpose of the occupational analysis is to provide workable, basic information dealing with the many and varied duties performed in the carpentry occupation. The analysis starts with the progress of a house from the first study of the blueprints to the laying out of the excavations and continuing step-by-step until the interior finish is applied to the completed structure. The document opens with a brief introduction followed by a job description. The bulk of the document is presented in table form. Ten duties are broken down into a number of tasks and for each task a two-page table is presented, showing on the first page: tools, equipment, materials, objects acted upon; performance knowledge (related also to decisions, cues and errors); safety--hazard; and on the second page: science; math--number systems; and communications (performance modes, examples, and skills and concepts). The duties include: surveying; footing and foundation walls; framing floors, walls and ceilings, and roofs; roofing; exterior finish; insulation; interior trim; and stairs. The two appendixes consist of list of basic arithmetic skills and concepts, and carpentry tools and equipment. (BP)

## FOREWORD

The occupational analysis project was conducted by The Instructional Materials Laboratory, Trade and Industrial Education, The Ohio State University in conjunction with the State Department of Education, Division of Vocational Education pursuant to a grant from the U.S. Office of Education.

The Occupational Analysis project was proposed and conducted to train vocational educators in the techniques of making a comprehensive occupational analysis. Instructors were selected from Agriculture, Business, Distributive, Home Economics and Trade and Industrial Education to gain experience in developing analysis documents for sixty-one different occupations. Representatives from Business, Industry, Medicine, and Education were involved with the vocational instructors in conducting the analysis process.

The project was conducted in three phases. Phase one involved the planning and development of the project strategies. The analysis process was based on sound principles of learning and behavior. Phase two was the identification, selection and orientation of all participants. The training and workshop sessions constituted the third phase. Two-week workshops were held during which teams of vocational instructors conducted an analysis of the occupations in which they had employment experience. The instructors were assisted by both occupational consultants and subject matter specialists.

The project resulted in producing one hundred two trained vocational instructors capable of conducting and assisting in a comprehensive analysis of various occupations. Occupational analysis data were generated for sixty-one occupations. The analysis included a statement of the various tasks performed in each occupation. For each task the following items were identified: tools and equipment; procedural knowledge; safety knowledge; concepts and skills of mathematics, science and communication needed for successful performance in the occupation. The analysis data provided a basis for generating instructional materials, course outlines, student performance objectives, criterion measures as well as identifying specific supporting skills and knowledge in the academic subject areas.

## PREFACE

The purpose of developing this task analysis of the carpentry trade is to provide a detailed and orderly sequence in the process of developing the necessary concept and skills of an individual to become proficient in this trade.

This analysis takes in the scope of the basic skills that are necessary to function as a carpenter employed in residential construction.

This analysis starts with the progress of a house from the first study of the blueprints to the laying out of the excavations and continuing step by step until the interior finish is applied to the completed structure.

Individuals may find items with which they do not completely agree. Many problems are solved daily on the job by procedures that differ between workers in the same area and differ more between workers in various parts of the country.

## ACKNOWLEDGMENT

We wish to acknowledge the valuable assistance rendered by the following subject matter specialists. They provided input to the vocational instructors in identifying related skills and concepts of each respective subject matter area and served as training assistants in the analysis process during the two-week workshops.

## JOB DESCRIPTION

The term carpentry refers to the cutting, fitting and assembling of wood or related materials in the construction of residential buildings and many other types of structures made from similar materials. Throughout many successive periods of history, carpentry has maintained a prominent position in the construction of buildings and still remains as one of the most important areas of the building trades. Many new materials have taken places along with wood in construction work and are installed by carpenters. Carpentry has had to expand to include skills and techniques which were not even thought of a generation ago. Architects and engineers have developed structures which have tested the ability and ingenuity of builders. The carpenter has had to come up with the ways and means to construct these buildings.

The carpenter is involved in almost every phase of erecting a home or any other type of building. He/she provides the formwork for footings and foundations; builds a sound basic structure from the first study of the blueprints to the installation of sills, floors, walls, and roof; builds and installs cabinets and trims the house inside and out; and prepares the way for other workers and works closely with them. The carpenter knows the materials used and is able to shape them with precision, using hand and power tools.

The carpenter must have a wide background in building methods and must be able to work and coordinate activities with other workers. He/she must meet the challenge of specialization and mass production.

Duty A Surveying

- 1 Layout buildings (instrument method)
- 2 Erect batter boards
- 3 Layout driveway
- 4 Layout building columns for commercial building

//

(TASK STATEMENT) LAYOUT BUILDINGS (INSTRUMENT METHOD)

TOOLS, EQUIPMENT, MATERIALS, OBJECTS ACTED UPON	PERFORMANCE KNOWLEDGE	SAFETY - HAZARD

Duty D Wall and Ceiling Framing

- 1 Layout plates and rough openings on exterior walls
- 2 Cut and assemble corner posts
- 3 Cut and fabricate headers and rough sills
- 4 Assemble and erect exterior wall sections
- 5 Layout, assemble and erect interior partitions
- 6 Install double plates
- 7 Install backing for fixtures
- 8 Layout, cut and install ceiling joists
- 9 Install nailers

48

(TASK STATEMENT) LAYOUT PLATES AND ROUGH OPENINGS, EXTERIOR WALLS

TOOLS, EQUIPMENT, MATERIALS, OBJECTS ACTED UPON	PERFORMANCE KNOWLEDGE	SAFETY - HAZARD
<p>Standard tool kit Power standard tool kit Saw horse Proper material</p>	<p>Read blue print specifications Select proper material Cut and layout</p>	<p>Wear hard hat, safety glasses, safety shoes Hazard - flying or falling objects</p>

SCIENCE

Simple machines used to gain mechanical advantage [hammer]  
 Effect of heating and cooling on expansion of materials  
 [expansion and contraction of materials]  
 Motion resulting from two or more forces acting on a point  
 in a body [expansion and contraction of material]  
 Arrangement of molecules, atoms and ions and the effect on  
 structure and strength of materials [tensile strength of  
 materials]  
 Resistance of materials to change in shape [material warps  
 or twists]

MATH -- NUMBER SYSTEMS

Rational - positive  
 Use of numbers (without calculation) - counting, measuring  
 Basic arithmetic skills and concepts (see appendix)  
 Measure sense/role of unit; linear measurement; read and  
 interpret scale drawings/floor plans/blueprints  
 Use of variables in formulae, ir. functions, Pythagorean -  
 figuring rise and run for the pitch of a roof;  
 solve problems involving literal algebraic expressions  
 Knowledge of geometric relationships - congruence [same  
 slope], similarity [same shape], parallel, perpendicular  
 Understanding and use of the Pythagorean theorem, based on  
 the right triangle; determination of area and altitude of  
 triangles; determination of area and circumference of  
 circles; geometric constructions [plumb rafter]  
 Basic logic - deductive or inductive

(TASK STATEMENT) INSTALL ROOF CAPS AND LOUVRES AND VENTS

**TOOLS, EQUIPMENT, MATERIALS,  
OBJECTS ACTED UPON**

Standard tool kit  
Power standard tool kit  
Proper material  
Fastening devices  
Ladder

**PERFORMANCE KNOWLEDGE**

Read blueprint specifications  
Select proper materials  
Select fastening devices  
Select proper location  
Select method of installation

**SAFETY - HAZARD**

Wear safety shoes, safety glasses, hard hats  
Stabilize ladder  
Hazard - flying or falling objects, falls

DECISIONS

Determine proper material  
Determine proper fastening devices  
Determine proper location  
Determine proper method of installation

CUES

Blueprint and specifications  
Correct spacing  
Loose caps or louvres

ERRORS

roof caps blow off in a strong wind  
Leaky roof

**SCIENCE**

<p>Standard tool kit                      Power standard tool kit                      Ladder                      Proper materials                      Fastening devices</p>	<p>Read blueprint and specifications                      Select proper material                      Select proper fastening devices                      Select layout method                      Select method of cutting and installing</p>	<p>Wear safety glasses, safety shoes, hard hat                      Stabilize ladder                      Hazard - flying or falling objects, falls</p>
<p><b>DECISIONS</b>                      Determine proper materials                      Determine proper fastening devices                      Determine if layout is correct                      Determine proper method of cutting and installing.</p>	<p><b>CUES</b>                      Blueprint and specifications                      Stringers not secured properly away from wall                      Angles of stringers off                      Tread too wide or narrow                      Rise too high or low</p>	<p><b>ERRORS</b>                      Wrong material used                      Improper fastening                      Not layed out properly</p>

**SCIENCE**

Simple machines used to gain mechanical advantage [hammer]  
 Effect of heating and cooling on expansion of materials  
 [expansion and contraction of materials]  
 Motion resulting from two or more forces acting on a point  
 in a body [expansion and contraction of materials]  
 Arrangement of molecules, atoms and ions and the effect on  
 structure and strength of materials [tensile strength of  
 materials]  
 Resistance of materials to change in shape [material warps  
 or twists]

**MATH - NUMBER SYSTEMS**

Rational - positive  
 Use of numbers (without calculation) - counting, ordering,  
 measuring  
 Basic arithmetic skills and concepts (see appendix)  
 Measure sense/role of unit; instruments [ruler]; linear  
 measurement; read and interpret scale drawings/floor  
 plans/blueprints  
 Use of variables in formulae; expression of product in  
 terms of its prime factors, numerical or monomial  
 [Pythagorean theorem; substitute given values in order  
 to find the value of the required unknown]; solve  
 problems involving literal algebraic expressions  
 [Pythagorean theorem]  
 Knowledge of geometric relationships; understanding and  
 using the Pythagorean theorem, based on the right  
 triangle; geometric constructions  
 Basic logic - deductive or inductive

**COMMUNICATIONS**

PERFORMANCE MODES

APPENDIX A  
Basic Arithmetic Skills and Concepts

Set of Real Numbers

Irrationals/Rationals

Fractions/Decimals

Integers (. . . -3, -2, -1, 0, +1, +2, +3, . . .)

Whole Numbers (0, 1, 2, 3, . . .)

Counting Numbers (1, 2, 3, 4, . . .)

Fundamental Operations (Calculation)

Addition algorithm

Subtraction algorithm

Multiplication algorithm

Division algorithm

Order of operations, i.e., use of parentheses in simplifying arithmetic expressions

Basic Skills

Reduction of fractions

Changing mixed numbers to improper fractions

Changing percents to fractions and fractions to percents

Finding a percent of a number and what percent one number is of another

Changing fractions to decimals and decimals to fractions

Ratio and proportion - estimation

Rounding off decimals and whole numbers

Approximation using scientific notation

Guess and check method

Rule of thumb

Property of comparison

equality/equivalence

inequality/greater than/less than

Properties of the real number system

commutative (order), associative (grouping), distributive (multiplication W.R.T. addition)

identity of one (x)

identity of zero (+)

multiplication by zero

transitive

inverses—multiplicative and additive

APPENDIX B  
Tools and Equipment

Standard Tool Kit consists of:

Claw hammer	File card	Line level	Block plane
Nail puller	Screwdriver, 4''	Level, 28''	Needle nose pliers
Chalk box	Screwdriver, 6''	Wing dividers	Common pliers
Cross-cut saw	Plumb bob	Files	Coping saw
Crayon	Dry line	Red pencil	Drywall saw
Folding rule	T-bevel	Carpenter's pencil	Butt gauge
Tape, 10'	Scratch awl	Twist drill bits	Pop rivet gun
Tape, 50'	Try square	Chisels	Spackling knife
Tape, 100'	Framing square	Bee's wax	Straight snips
Pinch bar	Combination square	Crescent wrench	Aviation snips
Speed bore bits	Utility knife		

Power Standard Tool Kit consists of:

Portable circular saw	Sabre saw
Reciprocating saw	Portable power plane
Portable electric drill	Portable power block plane
Portable router and cutters	Portable sander
Pneumatic nailer	Extension cords
Hinge butt router template	Hammer drill
Mitre saw	

Hand Tools consist of:

Shovel  
Pick axe  
Spade  
Sledge

Surveying Equipment consists of:

Level transit  
Builder's level  
Tripod  
Leveling rod
