ABSTRACT

Computer routines to summarize data and generate reports from weekly log records submitted by teachers participating in the Southwest Regional Laboratory's communications skills monitoring program are described. Written in Univac FORTRAN V, Communications Skills 1, Weekly Log Summary, Revision 1 (CS-1-WLSR1) displays information by student group, class, teacher, school, district, and overall. This document is intended to serve as the software documentation for the programs. Included are a program description, data format specifications, program constraints and limitations, and operating instructions. Program flowcharts, program listings, sample data forms, and sample reports are also provided. (DGC)

TITLE: COMMUNICATION SKILLS 1, WEEKLY LOG SUMMARY, REVISION 1 (CS-1-WLSR1)

AUTHOR: Howard Wolfe and Thomas Foote

ABSTRACT

This document is part of a series describing the IMS Version 2 Computer Programs for FYCSP. An overview of the FYCSP system functions is documented in TN 5-70-01 by Ralph Hanson and Jerry Bailey.

The primary modification in CS-1-WLSR1 which distinguishes it from its predecessor, CS1-WLS (TN 5-70-39), is the use of classes rather than groups as the basic elements in summarizing the Weekly Log data.

COMMUNICATION SKILLS 1, WEEKLY LOG SUMMARY, REVISION 1 (CS-1-WLSR1)

1.0 - PROGRAM IDENTIFICATION

CS-1-WLSR1

2.0 - OBJECTIVE

CS-1-WLSR1 summarizes by unit, class, teacher, school, district and overall, the data contained in the Weekly Log file.

3.0 - PROGRAM DESCRIPTION

3.1 - Program Narrative

3.1.01 - Overview

The input file contains Weekly Log records for all ten units of FYCSP, sequenced by class identification number, date, and group number.

The program processes each Weekly Log in a loop which is incremented by week day (e.g., Monday = 1, Tuesday = 2, ... Friday = 5). Because classes may be divided into groups, instances of more than one weekly log per class per week, are to be expected. At the end of each week, group values are averaged to obtain the summary for the class. This averaging is done immediately at the end of each week for routines described in 3.1.06 through 3.1.10 whereas for the routines described in 3.1.11 through 3.1.14 the values to be averaged are saved and averaged only after all the records for that class have been read. In both cases the weekly averages are accumulated to obtain class totals. Upon encountering a new class all summary data for the preceding class is processed and printed. Additional summaries containing average values for teacher, school, district and overall are maintained and printed.

The reader is advised to study the details of the following routines in conjunction with the program flowchart (8.0).

3.1.02 - Calendar Routine (tables for this routine are taken from the calendars for 1969 and 1970.)

Each Weekly Log Sheet contains a date to which a week number will be assigned. For example, if a sheet contains the date October 15, 1969, the program looks first in the following table at the month October, and determines that for any day in October, at least 14 weeks must have transpired since week number 1 (which we have designated to have begun July 1, 1969). Now the exact number of weeks which have transpired prior to October 15th must be determined.

The calendar day representing the Sunday of the first complete week within a given month is used as the initial value to which 15 is compared. According to the table the Sunday of the first complete week for October falls on the fifth.

Month	LNWKS (MONTHS) Least number of weeks which must have transpired if in the given month	ISUM (MONTH) Calendar day on which the Sunday falls for the first complete week of a given month
1 (July)	1	6
2 (Aug.)	5	3
3 (Sept.)	10	7
4 (Oct.)	14	5
5 (Nov.)	18	2
6 (Dec.)	23	7
7 (Jan.)	27	4
8 (Feb.)	32	8
9 (March)	36	8
10 (April)	40	5
11 (May)	44	3
12 (June)	49	7

Since the 15th is "greater" than the 5th, the least number of weeks value is incremented by one. Now we know that at least 14 + 1 = 15 weeks have transpired. Seven is then added to our first Sunday value of 5 to indicate the second October week began on the 5th + 7 = 12th. Again, the IF comparison is made, 15 is still found to be greater than 12, and again the least number of weeks is incremented (15 + 1 = 16). On the next iteration, however, the 15th is finally "captured" by the week increments of 7, i.e., the 15th is finally "less than" the 12th + 7 = 19th indicating that October 15 must fall in the week preceding the week beginning on the 19th. Hence, we assign week number 16 to the date October 15, 1969.

3.1.03 - Determine Unit No. for Initial Instruction

If on a given day the unit number is marked, that unit number is accepted and the search for a unit number is bypassed. However, if the unit number is not marked while some other initial instruction grid is marked (other than clerical time) the program accepts the most recent unit number marked for this class. In the event that no preceding unit number has been established for the class, the program uses the first following unit number marked on the current Weekly Log Record. If there is no following unit number further processing for initial instruction on this record is bypassed.

3.1.04 - Determine Unit No. for Second Instruction

Logic is identical to 3.1.03 above.

3.1.05 - Criterion Exercise Routine

If the criterion exercise is given for group 0 (meaning the entire class) the criterion-exercise-given flag is switched on for all the groups in the class. If the criterion exercise is given for a group number other than 0, i.e., any one of groups 1 through 5, the criterion-exercise-given flag is switched on for that particular group number and group 5 (group 5 identifies a Weekly Log Sheet in which grouping is indicated but no group number is marked).

3.1.06 - Initial Instruction Time by Outcome

For a given day, the total instruction time is apportioned to each outcome according to the following fraction: number of activities marked for the respective outcome over total number of activities marked for all outcomes.

Activities with no specific outcome number are assigned to outcome 5 which is presented under the heading "OTHER" in the printed summary (Appendix C).

If no activities were marked on a given day, all the time for that day is also added to outcome 5.

If "more" (indicating more than 60 minutes) is marked in the initial instruction time, then the duration of initial instruction is assumed to have been 70 minutes.

3.1.07 - Initial Instruction Days by Outcome

This is similar to 3.1.06 above though fractions of days rather than fractions of minutes, are apportioned to each outcome.

3.1.08 - Second Instruction Time by Outcome

For a given day the total time marked is apportioned according to the relative number of exercises marked for each outcome, as in 3.1.06 above. However, in this case Outcome 5 refers to the Criterion Exercise Retest. The results of this count are presented under the "OTHER" heading of the printed summary blocks.

If no exercises are marked, the second instruction time is added to the array representing the 'TOTAL' column of the printed summary.

3.1.09 - Practice Exercise Time by Outcome

This routine apportions the Practice Exercise Time to each outcome according to the following fraction: number of practice exercises marked for the outcome over the total number of exercises (practice and other) marked for all outcomes.

3.1.10 - Second Instruction Days

Although the day rather than the time in minutes is apportioned over the outcomes, the apportionment technique here is identical to that used in 3.1.08 above.

3.1.11 - Assessment Needed

Phase 1

If a mark in either the "Skill or Activity" column or the "Daily Assessment Passed" column has not been encountered before for a particular activity, and that activity requires assessment, the assessment needed indicator (ANEED array) is set to the day (JDAY) of the school year on which it was needed. (JDAY is set with logic similar to the logic used in the Calendar Routine, 3.1.02).

Phase 2

After an entire class has been read, the day of the year values stored in phase 1 are retrieved, the instances in which these fall within a particular week are counted, and that sum is accumulated by week, then averaged over the number of groups submitting data that week. Note that the week of the school year can be determined from the day number (e.g., days 1-5 (JDAYLO = 1, JDAYHI = 5) fall within week 1, days 6-10 within week 2, and so forth).

3.1.12 - Assessment Given

Phase 1

The assessment given indicator (AGIVE array) is set to the day of the school year on which assessment was given, providing that the activity 1) needs assessment, 2) has not been encountered before, 3) occurred on the same day that assessment was needed for this activity, and 4) that the corresponding "Daily Assessment Passed" column has been marked "Y" or "N."

Phase 2

Logic is identical to Phase 2 of 3.1.11 above.

3.1.13 - Review Needed

Phase 1

The review needed indicator (KRN array) is set for a given activity if that activity 1) needs assessment, 2) has not been encountered before, and 3) has "N" marked in "Daily Assessment Passed" column.

Phase 2

Logic is identical to Phase 2 of 3.1.11 above.

3.1.14 - Review Given

Phase 1

The review indicator (KRG array) is set to the day of the school year on which that review was given if the review activity was given the day after review was needed for that activity.

Phase 2

This is similar to Phase 2 of 3.1.11. However, the days bounding the school week are shifted forward one day, e.g., 2-6, 7-11 . . . rather than 1-5, 6-10. This is done in order to detect review given on the Monday following the Friday on which review was needed. The lower limit of each week 2, 7 . . . is contained in KDAYLO. The upper limit 6, 11 is contained in KDAYHI.

3.1.15 - Group Averaging

For a given class at the end of each week, values derived from routines 3.1.06 - 3.1.10 are averaged over the groups into which that class was divided. These average values are then accumulated by class (see XWEEK and AWEEK arrays).

3.1.16 - Supplementary Initial Instruction Time

If in processing a unit within second instruction, that unit's criterion exercise has not been given (on initial instruction), the second instruction time marked is added to that unit's initial instruction time. Moreover, if the above unit was not given in the initial instruction section on the day being processed, then one day is added to the initial instruction days corresponding to that unit.

3.1.17 - Output Routine

The output routine prints all unit summaries of the class most recently processed. Teacher, school, district and overall summaries are also printed.

3.2 - Variables and Internal Tables

3.2.1 - Subscripts and Arrays

Subscripts

SUBSCRIPT	MEANING
unit	Unit number (range: 1-10)
level	Level number i.e., 1 = overall 2 = district 3 = school 4 = teacher 5 = class
group	Group number + 1. (range: 1-6) The addition of 1 is made to handle group 0 (e.g., IGROUP = 1 identifies group 0) which represents the entire class when no grouping is indicated.
skill	Number of a skill or activity within the initial instruction section. (range: 1-15)
outcome	Outcome number: (range: 1-6) to which a particular skill or activity is directed. 1 = outcome 1 2 = outcome 2 3 = outcome 3 4 = outcome 4 5 = "other" for initial instruction or "criterion exercise retest" for second instruction.

SUBSCRIPT	MEANING
	6 = total of outcomes 1-5
month	School month (as defined in 3.1.02).
week	School week (as defined in 3.1.02).
line	Line number (range 1-10) of printed summary block, see Appendix C.

Arrays (Unless otherwise noted all variables are integer type)

AG (unit, level) - This array counts the number of times assessment was given for the appropriate unit and level (see Phase 2, 3.1.12).

AGIVE (group, unit, skill) - This array is used to indicate whether or not assessment was given for the appropriate group, unit, and skill (see Phase 1, 3.1.12).

AN (unit, level) - For a given class this array counts the number of times assessment was needed for the appropriate unit and level (see 3.1.11, Phase 2).

ANEED (group, unit, skill) - This array indicates whether or not assessment was needed for the appropriate group, unit, and skill (see 3.11.1, Phase 1).

AVG (unit, level) - This array counts the number of classes to be averaged at each level for the appropriate unit (See Appendix C, print line number 0).

AWEEK (group, unit, outcome, line) - For a given class this array accumulates one week's data. In turn this weekly data is accumulated in XWEEK (See 3.1.06 to 3.1.10).

IASSES (unit, skill) - For a given unit and skill a value of 1 or 0 in this array indicates whether or not that skill requires assessment (see Table 3, 3.2.2).

ICON (2, 8) - This array is used to convert alpha instruction times coded by the scanner to numeric values representing minutes (see Table 2, 3.2.2).

IRC (unit) - The Criterion Exercise activity numbers for each test unit are stored in this array (see Table 1, 3.2.2).

IHDGS (level) - This alpha array contains the labels of the levels to be inserted in the heading of each unit summary print block.

IHDGS (1) = 'OVER'

IHDGS (2) = 'DIST'

IHDGS (3) = 'SCHL'

IHDGS (4) = 'TCHR'

IHDGS (5) = 'CLSS'

INDCRI (unit, group) - This integer array indicates with a 1 or 0, whether or not the Criterion Exercise has been administered to the appropriate group, for the appropriate unit.

ISUN (week) - This array contains the calendar day on which the Sunday falls for the first complete week of a given month (see 3.1.02).

JALUNI (unit) - For a given class this array indicates the units which were reported on the Weekly Logs received.

JWKUNI (unit) - For a given class and week this array indicates the units which were reported on the Weekly Logs received.

KDSTC (level) - This array contains the class identification number (identifying District, School, Teacher, and Class) of the preceding Weekly Log record:

Level	KDSTC (level)
1	Not used
2	District

Level	KDSTC (level)
3	School number
4	Teacher number
5	Class number

KRN (group, unit, skill) - For a given group, unit and skill KRN = JDAY indicates that review was needed, while KRN = -1 indicates that it was not. KRN = 0 indicates that no data for this cell was encountered (see 3.1.13).

KRG (group, unit, skill) - For a given group, unit and skill KRG = JDAY indicates review was given, while KRG = -1 indicates that it was not. KRG = 0 indicates that no data for this cell was encountered (see 3.1.14).

LDSTC (level) - This contains the alpha labels corresponding to the appropriate level numbers (e.g., LDSTC(2) = 'DIST') to be inserted in the heading line of the print summary block.

LNWKS (month) - Least Number of Weeks. This array contains the least number of weeks that must have transpired if in a certain month, e.g., if the month October (month 4) is read, the 4th element in LNWKS indicates that at least 14 weeks must have transpired (see 3.1.02).

MALPHA (238) - This array contains all the alpha data of one Weekly Log. See Appendices A ("Weekly Log Response Sheet") and B ("Format of the Input Records").

MBUFF (44) - Buffer area used by NTRAN routine (see 4.1).

MDSTC (level) - This array contains the class identification number of the current Weekly Log. The structure of this array is identical to KDSTC.

MOUTCO (9) - This array is used to allocate an outcome number to each second instruction exercise. See Table 6 of 3.2.2. The subscript value corresponds to any one of the 9 positions of a given row in the second block of the second instruction section. See Appendix A.

NGRPS (week) - For a given class this array contains the number of groups into which the class was divided for each week data was submitted.

NOUTCO (unit, skill) - This array contains the number of the outcome toward which a given skill within a given unit is directed (e.g., from Table 4 of 3.2.2, the entry in the second row and third column indicates that the second skill within the third unit is directed toward outcome No. 2).

PACT (outcome) - On a given day this array is used to count the number of second instruction Practice Exercises administered for each outcome.

RACT (outcome) - For a given day this array is used to count the number of skills that were administered for each outcome.

RAVG1 (unit, outcome, level) - This array contains the average daily initial instruction time apportioned by outcome for each level and unit (see Appendix C, print line number 8).

RAVG2 (unit, outcome, level) - This array is similar to RAVG1 although it contains the average daily second instruction time, rather than initial instruction time (see Appendix C, print line number 9).

RAVG3 (unit, outcome, level) - This array contains the ratio of practice exercise time to second instruction time as a percentage apportioned over outcomes for each summary level and unit (see Appendix C, print line number 10).

RG (unit, level) - This array counts the number of times review was given for a given unit and level (see 3.1.14).

RN (unit, level) - This array counts the number of times review was needed for a given unit and level (see 3.1.13).

SACT (outcome) - For a given day this array is used to count the number of second instruction exercises administered for each outcome. In this application Outcome 5 refers to the Criterion Exercise Retest. Outcome 6 counts the Total No. of outcomes given for second instruction that day.

XWEEK (unit, outcome, level, line) - This array accumulates the class data for print lines 1-5 of the summary print block.

3.2.2 - Internal Tables

Table No.

3.2.3 - Variables

IAG - For a given class, unit and week IAG is used as a counter of the times assessment was given.

IAN - IAN is similar to IAG though it counts the number of times assessment was needed.

IBLANK - Contains (1H)

ICIEX - For a given day and unit this value references the location of the Criterion Exercise activity in the Skill or Activity columns of the Weekly Log Sheet.

ICURU - For a given class this is the most recent unit number processed in the initial instruction section.

IDAY - This variable representing the day of the week is incremented from 1-5 as the program processes from Monday thru Friday of the Weekly Log Sheet.

IEOF - This flag variable is set equal to one on encountering EØF.

IFIRST - This flag equals 1 until the class identification number has been initialized. Thus, every record starting with number 2 will be read with IFIRST = 0.

IHI - For a given day this is the upper limit of a Do-loop used to process the "Skill or Activity Column" of the Weekly Log.

Its value corresponds to the bottom of the "Skill or Activity Column" on the Weekly Log Sheet.

ILEV - This subscript is used to reference level number (e.g., ILEV = 1 implies overall, ILEV = 2 implies district, etc.)

ILØ - Lower limit corresponding to IHI (e.g., the value stored in ILØ corresponds to the top, and IHI, to the bottom, of the "Skill or Activity Column").

IØUT - Subscript identifying the selected outcome, where IØUT = 1 through 4 identifies outcomes 1 through 4 and IØUT = 5 identifies the "OTHER" column of the printed summary. In the initial instruction, the "OTHER" column contains the time and days with no skill or for skills or activities given which were not associated with outcomes 1-4. In the context of the second instruction section "OTHER" contains the time and days spent on the "Criterion Exercise Retest," and an IØUT value of 6 references the "Total" column of the printed summary.

IRECS - IRECS is a count of the number of Weekly Log records read.

IRN - IRN is similar to IAN but it counts instances in which review was needed instead of assessment for a given class, unit, and week.

IRG - IRG is similar to IAG but it counts the instances in which review was given instead of assessment for a given class, unit, and week.

ISKILL - This subscript is used to reference the "Skill or Activity" number within the "Skill or Activity Column" of the Weekly Log form.

ISWRL - This integer code number identifies the output mode (e.g., 6 = Printer
8 = Tape).

IUNI & IUNIT - These subscript values reference the instructional unit number.

IWEEK - IWEEK contains the number of the school week assigned by the Calendar Routine (3.1.02) according to the date marked on the Weekly Log record just read.

IX - This Do-loop index is used in the Calendar Routine (3.1.02) to loop through a month in increments of seven days.

JCURU - For a given class this is the most recent unit number processed in the initial instruction section.

JDAY - This identifies the day of the school year. See Calendar Routine (3.1.02).

JDAYHI - For a particular week this serves as the upper limit of the range of the day value stored in arrays KRN, ANEED, and AGIVE (see Phase 2 of sections 3.1.11, 3.1.12, 3.1.13).

JDAYLO - This lower limit is used in conjunction with JDAYHI.

JHI - Upper limit of Do-loop value used to process a day row within the second block of the second instruction section.

JLEV - This is the inversion of LEV, e.g.,

1 = Class Level

5 = Overall Level

JLEV is used to determine the order in which the print block summaries are to be produced.

JLO - Lower limit of Do-loop value used to process a day row within the second block of the second instruction section (see JHI).

JOUT - Subscript used to reference a particular outcome number.

JSKILL - Subscript used to reference "Practice Exercises," "Other," and "Criterion Exercise Retest" fields in the Second Instruction section.

JSUN - As lower limit of the Calendar Routine Do-loop, JSUN indicates the calendar day on which the Sunday falls for the first complete week of a given month.

JUNIT - Subscript used to reference the second instruction unit number.

K1 - This is used as the temporary value for a cell of array KRN.

K2 - This is used as the temporary value for a cell of array KRG.

KDAYHI - For a particular week this is the upper limit of the range of the day value stored in KRG (See Phase 2, 3.1.14).

KDAYLO - This is the lower limit used in conjunction with KDAYHI.

KGROUP - This identifies the group number of the prior Weekly Log.

KGRP - This subscript is used to reference group number.

KLINE - Refers to lines 1-5 of each printed summary block. See Appendix C.

KOUT - This subscript serves to reference the outcome number.

KPUNI - On a given day this is set to the initial instruction unit number to be processed. It is then tested in the Supplementary Initial Instruction Routine (See 3.1.16).

KSKILL - This subscript serves to reference skill or activity number.

KWEEK - This variable contains the prior school week number of the class being processed.

LEV - This index variable is used in the Do-loop which determines at which level the ID change took place.

LEV = 1 indicates the overall level

= 2 indicates the district level

= 3 indicates the school level

= 4 indicates the teacher level

= 5 indicates the class level

The final value of LEV on existing the Do-loop is used to control the print loop in the Output Routine.

LGRID - This subscript serves to reference unit number in initial instruction section.

LGRID2 - This subscript serves to reference unit number in the second instruction section.

LWEEK - This subscript serves to reference week number.

MAX - This Do-loop upper limit serves to determine which initial instruction activities have been given on a particular day.

MDAY - This subscript serves to reference the day field on Weekly Log Sheet.

MGROUP - This variable contains the group number +1 of the latest record read. The addition of 1 enables the use of MGROUP as a subscript since group number starts with 0 (0 = entire class).

MIN - This Do-loop lower limit value serves in conjunction with MAX to determine which initial instruction activities have been given on a particular day.

MLEV - Each time the output print loop is executed, MLEV is incremented. In turn the level pointer is calculated by the equation JLEV = 6 - MLEV. This steps JLEV thru the class, teacher, school, district, and overall levels.

MMAX - This Do-loop upper limit serves decode unit number (see 3.1.04).

MMIN - This is the lower limit of Do-loop used in 3.1.04 to decode unit number.

MONTH - Indicates the month (July = 01, Aug. = 02 . . . June = 12) in which the Weekly Log Sheet was dated.

MSTAT - This NTRAN (4.1) status word indicates the status of the NTRAN read/write operations according to the following codes:

0 indicates the number of words transmitted

= -1 indicates transmission not complete

= -2 indicates EOF

= -3 & -4 indicates tape error.

NBOT - This Do-loop index value is used in 3.1.03 to check for unit numbers marked on the following days.

NLEV - This serves as the lower limit of index value in the Do-loop used to zero the appropriate levels of the LDSTC array.

PAGAN - This print value contains the percentage of time during which assessment was given (see line 6 of Appendix C).

PRGRN - This print value contains the percentage of time during which review was given (see line 7 of Appendix C).

RMINS - This type read variable serves as a count of initial instruction time in minutes.

SMINS - This type read variable serves as a count of second instruction time in minutes.

4.0 - SUBROUTINES AND FUNCTIONS

4.1 - Subroutine NTRAN

NTRAN is a FORTRAN callable subroutine used on the Univac 1108. In conjunction with subroutines ENCODE and DECODE, NTRAN is called to read and write the Weekly Log File's formatted logical record because their lengths exceed the capacity of the standard FORTRAN READ and WRITE statements. For details of NTRAN, see the manual entitled "UNIVAC 1107 FORTRAN UP - 3969 Rev. 1," Section 7, pp. 9-13.

5.0 - DATA SPECIFICATIONS

5.1 - Input Formats

See Appendices A and B for the relationship between the record positions 1-238 on tape and their respective locations on the Weekly Log Sheet. Note that all of fields are of alpha type. Characters corresponding to marks on the Weekly Log Sheet are contained in tape record positions 1-238, while the remaining positions of the tape record contain the following numeric data:

Positions	Description
239 - 240	District No.
241 - 242	School No.
243 - 244	Teacher No.
245 - 246	Class No.
247 - 248	Month (July = 01 - June = 12)
249 - 250	Day
251 - 251	Group No.
252 - 264	Unused by this program

5.2 - Output Formats

An example of the output summary blocks can be found in Appendix C. Concurrent with the hardcopy output, a tape was written with the same format, though summaries above the class level were omitted.

6.0 - PROGRAM CONSTRAINTS AND LIMITATIONS

6.1 - Fortran V

6.2 - Vendor

University Computing Company

6.3 - Storage Requirements

25,000 octal words

6.4 - Hardware Configuration

Univac 1108, card reader, 2 tape drives and printer

6.5 - Program Parameters

None

6.6 - Error Messages

1. MORE THAN ONE SHEET PER WEEK FOR A GROUP AT RECORD NO. This is a warning message only. Program adds 1 to group count and averages in this additional sheet or sheets.

2. FAILED TO FIND UNIT IN 'DO 1003 LOOP' FOR RECORD NO. This is a warning message in which the program indicates that it was unable to find a unit number, even though it had encountered initial instruction data.

3. FAILED TO FIND UNIT IN'DO 4503 LOOP' FOR RECORD NO. This is a warning message in which the program indicates it was unable to find a unit number, even though it had encountered second instruction data.

7.0 - OPERATING INSTRUCTIONS

The Weekly Log Processor was executed using the following control cards.

@ RUN, W WOLFE, account no., 7, 400

@ MSG DELIVER TO SWRL

@ RAKEX ASG E = 1343 NORING

@ RX ASG H = S1019

```
@ FOR WLS, WLS
  (Source Deck)

@ XQT WLS

@ XQT CUR
  TRI E, H
```
