#### ABSTRACT

The National Commission on Libraries and Information Science held its Mid-Atlantic States Regional Hearing at Philadelphia, Pennsylvania, on May 21, 1975. Oral testimony was given by college, university, public, state, school, county, and special librarians, as well as by publishers, educators, library association officials, interested citizens, and officials of state, federal, and local governments. In responding to the commission's draft reports, witnesses dealt with such topics as national information centers, cooperative programs, the proposed national network, existing networks, financial support for libraries, standards for library and information services, new technology, the relationship between the public and private sectors, the information needs of the American public, the library as a community information center, and the copyright versus copying problem. Witnesses represented the states of nelaware, Maryland, New Jersey, New York, and Pennsylvania, as well as the District of Columbia. (LS)

Documents acquired by ERIC include many informal unpublished \* materials not available from other sources. ERIC makes every effort \* to obtain the best copy available. nevertheless, items of marginal \* reproducibility are often encountered and this affects the quality \* of the microfiche and hardcopy reproductions ERIC makes available \* via the ERIC Document Reproduction Service (EDRS). MRS. BESSIE BOEHM MOORE

(The hearing was opened at 8:00 a.m. bŷ

Dr. Frederick Burkhardt of the Commission.)

DR. BURKHARDT: We wanted to get started.

Mr. De Gennaro is going to lead off with his testimony.

We conduct these meetings very informally. You can generally assume that the members of the commission have read the papers mentioned, so I think it would save us time if you would just give us what you consider to be the high spots of your testimony, or point out anything that you want us to consider, and then we can talk about that and your paper because we will have questions on the paper to put to you.

Now you wrote your paper sometime ago and you took great exception to our Chapter 4 of the new version. I think we've rectified a great many of your criticisms, most of which were, I thought well founded, and I don't know whether you have seen the revised version or not but has Al told you what it is?

MR. DeGENNARO: Yes.

2

DR. BURKHARDT: So why don't you launch into the subject and tell us how you feel about things and what you think you ought to get clear about them.

5

1

MR. DeGENNARO: I am Richard DeGennaro,
Director of Libraries at the University of Pennsylvania.

7

I took exception to the fourth chapter

4

because I thought that it seriously changed the orientation of the program, but I have read the new

10

and revised chapter and I think that it pretty much

11

reflects most of the criticisms that I made.

12

I think it is now a fourth chapter that

13

is, I think, acceptable. I haven't seen the rest of

1 1

the chapters and the changes that were made, but I assume that in the same spirit there were modification:

15

and it seems to me now that the program document,

16

as I imagine it to be right now, is quite an

18

acceptable thing.

proceeds with its work.

as I imagine it to be right now, is quite an

19

I still have just some concerns that I

20

21

would like to state about it. This is not in criticism of the document itself but something that

22

I think the Commission might keep in mind as it

23

I think that the whole approach is much too hierarchical for local, state and regional, and

21

' *:* 

it just seems to me to be very complexed, perhaps unnecessarily complexed, and I think there is too much emphasis on the state level. I realize, of course, that the state is an important political element in the country, but somehow I think there is perhaps being too much reliance placed on the state as the center of all these activities.

DR. BURKHARDT: What would be the alternative. I appreciate your point, but it is really a matter of the mechanisms you use, and the only alternative one can see is direct action from the Federal level, which I don't think is practicable or would be only received either, for that matter, if it got too heavy.

MR. DeGENNARO: Yes, I think it has to be a combination of both. I am not suggesting that the local, state and regional concept is invalid. I am merely saying that I think there is perhaps too much emphasis being placed on that, and there is a missing element and I think the missing element is certain national centers and I would like to, in just a moment that I have here for this testimony, rather than go back and rehash what I wrote to you, I would like to just merely, if I may, read a couple of sentences from a summary paragraph of a paper I

21

25

wrote, which it seems to me captures the essence of what I would like to say, and I say:

"The urgent task of developing effective means of library resource sharing has two major components of equal importance. One is to increase the total library resources available and the other is to improve the organizational and technical mechanisms for gaining access to them. To increase the total resources available involves not only strengthening existing libraries, but also creating an essential missing element: a national library resources center modeled after and combining the best features of the Center for Research Libraries and British Library Lending Division. To improve the mechanisms for gaining access to these resources involves building a national library network supported by a computer-based national bibliographical and communications system. These two major components must go forward together. We should not allow the more glamorous and exciting technological elements to overshadow the more prosaic but equally important resource building elements."

This is taken from a paper that recently appeared in the May 15 issue.

DR. BURKHARDT: You weren't reading from

your paper to us?

MR. DeGENNARO: No, no. This was --

DR. BURKHARDT: I kept trying to find it in this paper.

MR. DeGENNARO: This was not in that paper

DR. BURKHARDT: All right.

MISS SCOTT: The essence of your statements has been adopted as a resolution, is that correct, by the Association?

MR. DeGENNARO: That's right.

MISS SCOTT: Now, is this a periodical lending resource center that you speak of only, or --

MR. DeGENNARO: I see it as initially a national periodical resources center, but I think it should be designed in such a way as to allow it to evolve into what I would call a national library resources center; that is to say, it could take in the kinds of functions that the Center for Research Libraries is now providing, and in effect it is molded after the British Library Lending Division, which includes both periodicals and monographs and other research materials, but I think initially in order to get it started, the greatest need is for a national periodicals resources center; that's where I would start. That's where the greatest need

RIC

l

is and where the greatest payoff would be.

2

MISS SCOTT: Does that mean that would

3

be the first point of access for a small library,

for instance?

5

MR. DeGENNARO: Perhaps not for the small

К

local libraries, but certainly for the major libraries,

not just the research libraries but the major

libraries.

0

It seems to me to be unnecessarily complicated to have major libraries going through

10 11

a hierarchical kind of structure when they could go

12

directly to the source and thereby not get involved

13

in the complex communications system that is implied

11

in the planning documents that we have seen.

15

DR. BURKHARDT: Mr. Becker.

16

MR. BECKER: Dick, in the program there,

17

18

as you know, the last objective is the national

14

network and in that there is a good deal said about the desirability of centralized services, and I

20

can't remember whether CRLS is mentioned but a

21

national periodical bank is, as well as other organi-

2:3

zations like it. So imbedded in that particular objective is what I think you have described, in

23 24

addition to which there is another one which has to do with unique resources and with their screngthening

25

and with their active participation in a national network. But the other elements in the program relate by and large to the state for performing many different other functions, which we have sensed are needed and desirable, and the choice of the states were, of course, for the administrative arrangements which they have provided in terms of their relationship to the Federal Government.

But I do think the two are separate and I don't believe that the national network elements such as the ones that you are talking about, and that I have just described, would necessarily mean that one would have to go through hierarchical steps to use them.

DR. BURKHARDT: Mrs. Moore.

MRS. MOORE: I would like to ask a question of you about this matter of the states.

You are familiar, of course, with Title 3 of NSCA?

MR. DeGENNARO: Yes.

MRS. MOORE: If the states were not the ones to do this, who would coordinate the efforts within a state to try to get the maximum service to the people and cooperation among the various types of libraries?

ľ

I might say, for instance, that I am from a small state, if the state libraries didn't do this there would be nobody else who could.

4 5

3

What would be your suggestion in that, or do you object to that kind of an arrangement for this purpose?

6 7

MR. DeGENNARO: No.

8

IJ

10

As I say, I don't really object. think there is an important role for the states to play in this, but I think the research libraries, and this, of course is my point of view, I am speaking as a research librarian, as a president of ARL and so on.

a certain validity for the public libraries, for

the local libraries and so on, but I do think that

for the research libraries of the country, I think

1.2

11

21 23

the state boundaries are quite artificial and don't really reflect the realities of who has got the resources and how to acquire them. So I think that while I am quite willing to see the state as having a major role, I think that there are some national centers and some national orientations that are needed in addition to these, and I think that as Joe says, there is mention of them, but I would

I think that the state orientation has

suggest that, for example, in the planning document what was it called -- resources, the Wesstat study. 3 In that document, which was quite a lengthy report, it did mention the concept of 4 national centers and national periodical resource centers, but gave it just a few sentences, whereas 6 I think that it should be a real major component in the whole network concept. 9 I think that the network concept, as 10 it was laid out in that document, is quite valid, but 11 in addition to that one needs a few nationally 12 orented regional centers as well. 1.3 DR. BURKHARDT: And the --1.1 COL. AINES: You made a comment earlier 1.5 about the requirement for more resources and also 16 for more mechanisms. 17 I believe that is the formula that you 18 suggested. 14 MR. DeGENNARO: Yes. 20

COL. AINES: And you listed the British Library and Central Library resources as some kind of a direction for blueprinting.

MR. DeGENNARO: Right.

COL. AINES: You recognize, as you have done so well in your letter, that in reality we are

21

25

1	having an extraordinary clash of interests in	
2	institutions, public and private	
3	MR. DeGENNARO: Right,	
4	COL. AINES: In order to form the kinds	
5	of posture or the direction that we require.	
6	MR. DeGENNARO: Yes.	
7	COL. AINES: Now in addition to that	
*	part dealing with the British Library, the library	
()	resources approach, obviously it is a large area of	
10	surfaces, programs, institutions that have to be	
11	considered.	
12	Do you have any guidance source on	
! }	how you might see the convergence of some of these	
14 ,	opposing forces, Dick?	
15	That might be helpful to us as we move	
16	forward, beyond perhaps even our present plan that	
17	you have read so carefully.	
]8	MR. DeGENNARO: And I am not quite sure	
10	I understand your question.	
20	If the opposing forces that you are	
21	referring to are the private sector and the copyright	
22	question, I could make some comments on that but I	
23	am not sure that's what you are getting at.	
24	COL. AINES: You are very perceptive.	
25		

ERIC

25

It is beyond that, actually. I consider that to be

a small skirmish in a large battle. The problem
that I see, and I hope you can address yourself to
this --

MR. DeGENNARO: Yes.

1

5

G

9

10

21

25

COL. AINES: -- is that unless we find a formula for reducing the friction and providing security for many of these elements --

MR. DeGENNARO: Yes.

a system that really will grow in complete competition with no group really talking to one another, interacting with one another, and we will all lose in the long haul. It is in this philosophic sense that how do we find this lubrication with these possibilities for bringing the community together that I am really concerned about.

MR. DeGENNARO: I think one of the most important things that is dividing the private sector and the libraries is this whole question of the commercial versus the library people. I think that much of that is in the copyright question, and if that can be resolved through legislation, one way or another, I think that will remove the open sore that is troubling this whole situation.

I also think that in the creation of a

ERIC
Prull Text Provided by ERIC

1	national periodical resources center of some of
2	these national centers that may provide also an
3,	additional answer in that if one were to concentrate
4	that much of the copying that goes on in a few
5	centers, one could then control it and if necessary
6	pay the royalties or whatever it is that is required.
7	I think what most librarians are objecting
8	to is the idea of all the bookkeeping and the
9	problems that would be involved in record keeping
n	and paying royalties, whereas if you could concentrate
1.	in a BLLD kind of organization or center for research
2	libraries kind of thing, it's going to be much
3	more easily manageable, but I think the law itself,
-1 -	of course, has to change.
5	I don't want to get into the whole
6	copyright matter. Did you?
7	DR. BURKHARDT: You know, of course, we
-8	are going to sponsor some meetings between the various
9 .	MR. DeGENNARO: Yes, indeed.
(0	DR. BURKARDT: contending parties, in
1	the hope that we would be able to work out something.
22	We have time for one more question.
*	Carlos?
4	DR. CUADRA: Dick, in some point of time
	also the Commission is going to have to address who

11

15

16

17

18

19

20

21

25

pays for the kinds of things we have been talking about, all of us, and in trying to make a distinction between some things that are so important so that they should be paid for by tax money, collected from everyone in this offer and some things which are specialized interests and should be paid for by the people who benefit from those services.

Can you offer any suggestions on the dividing line between those two kinds of ways of paying for things?

What should be paid for with tax money and what should be paid for by the people who use the services?

MR. DeGENNARO: Well, I guess I couldn't answer that question without giving it considerably more thought, but as you may know, I wrote an article recently on this whole subject and my point of view was that this is a mixed economy that we are in, and that one should not get too rigid about what should be paid for and what should not, and that many of these decisions can be made on an ad hoc basis to respond to particular situations in an environment.

I charge certain fees in my library for photocopying, for bibliographic search service, and

so on, but we give a lot of other things away free 1 and it depends on the particular situation and the mix, and I think that the only thing that I could say about that is to reiterate that we should really hang loose on that question and not get too rigid 5 about it. 6 DR. BURKHARDT: Well, thank you, Mr. DeGennaro. 9 10 11 DR. BURKHARDT: Eugene P. Kennedy, Dean of Libraries, New York University, New York, New York. 12 13 Gene. MR. KENNEDY: Good morning. 1.1 15 DR. BURKHARDT: Did you hear what I told 16 Mr. DeGennaro? 17 I don't think it is necessary to read your paper to us again. We read it, but if you want 18 to add something or bring out something that you 10 20 particularly want to be sure that those who even 21 read it should hear, please say it. 22 MR. KENNEDY: I think my chief concern 23is the passage of time in the problem of money for 21 libraries everywhere when we stop and review the work

25

of the Commission. This is now a second Commission,

and the first commission dates back to the mid-'60's. We soon will be celebrating a tenth anniversary

2

and at a recent meeting of the Association of Research

1

Libraries, our British colleagues admonished us to

5

some extent on the inability to come to a point in

6

making decisions and moving ahead with the job, and

+

I think that is the critical issue.

8

I think most of us know what is needed

9

into an action mode. I think many, not only among

10

research library groups, but others in education have reservations about the ability to mount a national

12

network that is based upon too much reliance on

1.3

the state library agencies.

14

My reservations there are based upon

1.5

knowledge, a little bit out-of-date perhaps, but

16

nevertheless knowledge based on visits to many of them in the latter part of the 60's, and I question

18

whether the expertise is there in the State agencies,

10

in many cases, to deal with the complexities, the

20

kinds of programs that are of concern to this

21

Commission.

-::

23

٠, س

24

25

inconsistency in the whole situation, and that is that there is in many states no bibliographic relevance

Secondly, there is a technical flaw or

in terms of one part of the state to the other.

er. People

in the Philadelphia area, for example, do not relate to Pittsburgh.

Before coming to New York I was in Missour!

In Kansas City you had no relationship, bibliographyspeaking, to St. Louis, and St. Louis related Illinois,
and I would draw the Commission's attention to the
work done by the office of education mounting its
research and development centers which is a national

IJ

network where they had a group study how the countries

[()

could be divided, educationally speaking, so that the elements that normally met with across the

country would be formed into a network that had some

relevance, and I think that is one of the major

1-1

stumbling blocks.

DR. BURKHARDT: Wouldn't you say it is really a matter of what function we are talking about?

obviously could and should be done in a much larger framework and the state ought to be regional at least federal probably, or national, I should say, rather than federal. There are other functions that are quite properly and most effective, most efficiently done on the state level. I fail to see what in our program alarms you and Mr. DeGenn ro about the undue emphasis on the state.

What functions are you talking about that we should know?

3

2

4

11;

17

18

19

20

21

1)1)

23

21

25

MR. KENNEDY: I think we are talking about that we ought to insure to there will be appropriate administrative interrelationships among the states because in many sections of the country to develop networks or modules of network systems, you are talking about in some cases three and four different states that vould have to be involved at a given time.

DR. BURKHARDT: I am well aware of that.

MR. KENNEDY: I mean this is a very difficult problem to surmount and --

DR. BURKHARDT: But, as you know, there are quite a number of interstate networks already either in building or in operation. OCLC is a prime example and in trying to define an interstate function that is not easy either because again they vary. The New England Nelle-Net has a different kind of administrative funding base, say, from Solle-Net and so on. Some of them are automated and some of them are manual -- all kinds of different problems.

And the interstate function is a very difficult one to define, except abstractly when it

1 -	gets down to how does it work concretely. It is not
2	easy.
3	MR. KENNEDY: That is why I suggested,
-1	perhaps, studying the model that has been in effect
5	for a number of years now and reach the
б	DR. BURKHARDT: OCLC.
7	MR. KENNEDY: No, the Office of Education
٧	and Research Development centers would meet the
G :	needs of the elementary and secondary schools
(1)	throughout the country. They have been functioning
I	now for about ten years.
2	MRS. MOORE: It is not quite effective
3	because
,	DR. BURKHARDT: I know one effective one,
5	that's all.
6 7	Mr. Casey.
S	MR. CASEY: As you are aware, the
9	Commission asked Dr. Elizabeth Stone to prepare a
20	program to continue education of librarians. That
1	document has been turned over to the profession
22	for implementation.
	On page 3 you asked for retraining and
,	I am wondering if you think the program that we have
5	turned over to the profession will serve the purpose
	that you advocate, and I am wondering how practical

you think that Dr. Stone's document is.

2

25

Do you think it can apply in a situation wherein you say the Commission should assume a partial responsibility to see that legislation is introduced in the retraining of librarians.

Do you think that that training could be included in Dr. Stone's document?

MR. KENNEDY: Unfortunately I am not familiar with Dr. Stone's document. I really can't directly answer that question.

I think it is a very important problem.

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: This morning I got to feeling that you said ten years is too long to wait and we

testimony, which was written, you asked whether this

is the time because of the recession we are in,

ought to get moving. On the other hand in your

and that possibly this is not the time for new

legislation, and you said, Mr. Kennedy, that it is

more realistic to expect that a program can be started through a combination of amending existing

legislation along with preparing new legislation.

Will you give us some broad outlines in twenty five words or less as to what you have in mind?

25

Yes. For example, the MR. KENNEDY: American Association of Universities has established a series of ad hoc committees to either amend or recommend new ligislation relating to the higher education act. I happen to be on the committee dealing with libraries. The committee is planning for a meeting with the Association of Research Libraries, Federal Relations Committee in Washington in the early part of June.

I think much emphasis will be given then to seeing what can be done in Congress at the present time to try to get some elements of what might he called national network written into existing legislation.

There are things that we have now such as the matter of the national service lending library concept that Mr. DeGennaro spoke about. You could very easily go into this legislation.

DR. BURKHARDT: It is very little in our program that needs new legislation. You could get a good part of it done with existing legislation if you could get it funded.

MR. KENNEDY: No. I think there is a feeling on the part of some librarians with whom I have discussed the work of the Commission, that there

has been a holding off with the idea of coming up with a more grandiose plan than we have had before, and perhaps that is just based upon a lack of proper understanding of the work of the commission.

MR. TREZZA: Gene, the Commission is aware of existing legislation and needs to look at it where comes up for either extension or demise, as the case may be.

which will start this summer on the whole problem of extending and strengthening revision of the LSCA. We have also been concerned about HEA, but I must say the profession has been very slow and it is supposed to expire June 30 of 175. We have got that one year extension and from this date and association, ARL, ARLA or anybody else has come up with any recommendation for revision other than simply saying, "We haven't gotten around to it yet. Why don't we just extend it?"

So I do agree with you that we of the profession as a whole are going to have to do our homework in a hurry.

MR. KENNEDY: I think the work of the AAU is very encouraging because they projected the work of four major higher education associations to

see what their priorities are. They have done this very recently through our own university. of them have libraries as priority. They feel that certain items are going to be hatcheted in Congress and they are at this point going to give up libraries and we are going back with them hoping to get that kind of support. I think one of the most detrimental things to our whole program at the present time is the extremely distressing situation with the office of education. I had occasion to be there last week and for all practical purposes what was once a bureau has now reached the level of a branch and I think to consider the problems that we have, naturally with the work of the commission and the national network trying to really get it off the ground without having a vital and forceful program within the Office of Education is going to make it extremely difficult.

I would hope that the Commission might be able to do something.

DR. BURKHARDT: We feel the same way. We are having our trouble getting off the ground ourselves.

Mr. Becker.

MR. BECKER: Gene, I just wanted to

ERIC

clarify something and perhaps it isn't as clear as it should be in our program document.

-1

But there are objectives to the national program, the last of which deals with the national network and which involves centralized services to achieve economies, and also the establishment of resource centers for collection development, again on the national basis.

ti

Now I think that we see the funding of those elements of the network as being independent of the states and not through them, but the intra-state and multi-state development would have largely to do with many of the first seven objectives and would be administered that way. There is no reason why the latter part, that is the eight objectives, the network, these centralized services would have to be administered by the states, and I don't believe we

MR. KENNEDY: No.

have that in mind.

I think one of the problems in this whole area is just a misunderstanding of the relationship as viewed by the commission on the part of many librarians regarding the role of the state agency.

I think if that problem can be somewhat resolved,

various groups that are involved in this program might

work together.

DR. BURKHARDT: Okay. One more question.

MRS. MOORE: I just want to make a comment

I would like to solicit on behalf of the Commission -- I hope you are aiding and interpreting the time frame. You know, the Advisory Commission was not appointed until 1967 and went cut of business in 1969. The new Commission did not get off the ground until 1971. That is a four-year span right there. That's two years out of the ten years that you set.

There was four years when nobody was in business, and one of the things that we have consistently cautioned the profession about and asked their indulgence and help was not to expect too much too soon, and we solicited people of your stature to help us get this across. This is extremely important, just the time frame as far as we consider it, and we ask your help in this area.

MR. KENNEDY: Okay.

DR. BURKHARDT: The next witness is Milton S. Byam, Director, Queensborough Public Library, Jamaica, New York.

I

Mr. Byam.

2 3

You sent in your testimony and I would like you to just talk about it rather than read it and tell us what you want us to register, and then

25

we will ask our questions.

MR. BYAM: I would like to say a few I don't have much in the way of additional testimony to give this morning. I don't feel it is the mission of this Commission or indeed any Federal body to seek to preserve the public library per se, but I do feel that there is some need to promote library services to all of the citizens of this nation, and I don't think we have gone about it in quite the right way with our tremendous dependence on local resources, which have been kind of dripping away bit by bit.

The last two libraries in which I have served I have noticed that the proportion of the budget which is extended to public library service had begun to erode as other services began to seem more important, and indeed this is in the face of a tremendous increase in City resources.

It is my feeling that this was a way which made it possible for the public library to grow and be nurtured through tax funds available to the city

which apparently now has dried up and that merely 1 the extension of additional money through these 2 public libraries on a per capita or other basis it 3 seems to me is not going to assure the people of the -1 United States that they are going to get services .5 anywhere they are at the level they are. We need 6 a device which will do two things: One, assure the kind of funding that the tax structure assured 8 the public library continuation; and, two, a quality 9 kind of portion which will make it possible for us 10 to move forward in all libraries in extending better 11 service than we presently are, and I don't think that 12 the present funding, or indeed some of the projected 13 plans make allowances for this kind of thing. 14 DR. BURKHARDT: Do you think the services 1.5 in the Queensborough public library system has been 10 deteriorating as a result of the tightness of funds? 1.7 MR. BYAM: I think this is true in all 18 of our large cities that serious services are deterio-19 ating and that it doesn't only take money, of course, 211 but it will --21 DR. BURKHARDT: It is both money and time. )) MR. BYAM: Yes. 2.1 DR. BURKHARDT: 24 Lou.

25

I gather from what you say,

MR. LERNER:

or I am not sure, that you con't completely agree with the proposal of the Urban Libraries Council on the per capita funding for urban libraries.

You are familiar with that proposal?

MR. BYAM: Yes, I am.

MR. LERNER: Would you come in on that, please?

MR. BYAM: Yes. I would be happy to.

I, of course, will stand in line with the others as we go to get the money. However, I don't see this as a long-term solution to the problems of libraries throughout this nation. I'm not certain -- in fact, I'm fairly certain that merely extending dollars, merely adding more money from some other source, and we take it all from the same source, in fact will in any way add to those two things, which is assuring continued funding for what are good services throughout this nation and extending services on some kind of quality basis in the future.

DR. BURKHARDT: Mr. Dunlap.

MR. DUNLAP: What do you see as the possible solution, if it is not more money?

MR. BYAM: Well, I am not saying it is not more money. At the same time, I am just saying the way we spend the money.

25

For example, I think of the possibility of our making an effort to improve those services which are obviously quality services in this nation, and which are already in fact extending themselves beyond their libraries, beyond their borders, beyond even this nation in the extension of services and therefore carrying out one of the aims of this Commission -- aiding those libraries so that they can continue to do things, because they are the very services that will disappear if they get in trouble financially, you see, and therefore assuring ourselves that exemplary services can continue would be one thing.

And when I say exemplary services, I go straight across the board and include all the university libraries which have materials and quality people to provide services to this nation which are not doing it now, to the extent that it could be furthered.

MRS. MOORE: Mr. Byam, there was an article in the Wall Street Journal which you may have seen.

MR. BYAM: Yes, I did.

MRS. MOORE: And it said, if you look hard in libraries now you might find a book.

MR. BYAM: Yes.

i

-1

MRS. MOORE: The picture was, of course, a discussion of all the things that the libraries are now doing.

MR. BYAM: Right.

l l

1.

MRS. MOORE: You know, lending pictures and going away out, having all sorts of programs in the library to attract their various publics, and the total of the article, I would say, the way I judged it, was that the writer of this article failed to say at least that in hard times, such as we are having now, that the libraries were neglecting their principal function, which is dealing with books and information to the people in favor of these other services.

What is your reaction to that?

MR. BYAM: I think that war simed essentially at the public library and I, in fact, agree that this has in fact occurred, and I agree that it should have occurred.

I feel that today's cities are made up almost entirely of populations which are not book-oriented, or not aware of the value of print and in fact are being taught in the schools that there is no value in the reading of print.

I think it is imperative for the library

and the public library generally to promote the value of print, not only because it is our business, but because this nation sits on that and it cannot continue to exist if we do not further the ends of reading and print, and the value of the past contributions of our society.

However, there is very little point in having the print sitting in a repository for a group of people who are unaware of it, uninterested in it, and, in fact, uninvolved in it. And, therefore, these programs which I feel are properly a part of the library mission, give us an opportunity to make the people in the community aware not only of the fact that the library has print and has these other resources, but that the library can demonstrate the language between a photograph, a frame print, a bit of audio visual material and a book, and that exists.

MRS. MOORE: One final thing.

I wonder if the Wall Street Journal will have any communications from people such as you in regard to that article.

MR. BYAM: They never ask people such as

MRS. MOORE: Well, you could write a

ERIC

.

me.

AREA-WIDE FEDERAL REPORTING, INC.

4.340

l

letter.

2

COL. AINES: In reading your testimony

3 -

MR. BYAM: Yes, sir.

5

COL. AINES: -- I find a rather interesting comment that you have made and very briefly it says:

6 '

"It is to those libraries and information services

7

presenting aggressive and innovative proposals to

8

exploit existing knowledge resources, and to establish new pools of information, that support should be

9

extended."

10

Now, this is a different voice --

12

MR. BYAM: Yes.

1.3

COL. AINES: From the ones we usually hear.

1.4

Now I would like to ask you in the very

15

short time that we have, obviously, hopefully in

16

two or three sentences.

17

How would you extend your thoughts, bearing in mind what the role of the Commission is, so that

18 · 19

we could understand in writing the kind of future

20

legislation we hope to write, we can capture your

21

thought?

22 23

Construction Act, and this is the Act for the most

MR. BYAM: Well, the Library Service

24

25

part that I speak to under this although not exclusively, it is the big one and while it has been

ERIC

1 of some aid in giving opportunity to some libraries 2 to demonstrate new types of programs, new experiences .3 which have been in some cases copied by other libraries, I think for the good of all no coherent program has or can come from this in the way that it В is presently administered, which is through the states, which varies therefore on a state-wide basis in the effect and effectiveness of the actions taken, 1) which results in the kind of pool sharing of the 10 dollars which are available in the best of states 11 where their best library can't get a few dollars 12 more to do a job because it would be unfair to the 1.3 other libraries, and let's look among the libraries 14 and choose those programs which each of them presents 15 which equals given numbers of dollars and so on. 16 I think this is wrong as a policy stand 17

for an overall national program in the library field because, one, we need some programs to be maintained in the face of any other financial considerations which exist, and, indeed many people have already recognized this.

The National Endowment for the Humanities has extended funds for the New York Public Library, the State of New York has written special legislation to extend service to the New York Public Library

ERIC"

18

11)

20

21

22

2.3

21

because of the tremendous resources which exist
there, which we would hate to see disappear or
as is already happening for the New York Public
Library being eroded, disappearing, not being
accepted and not being processed because they do not
have the funds to do this thing.

Now somebody is going to have to take a look -- this is a national resource, -- to do something about that kind of thing.

I think of the District of Columbia Public Library where -- you know, I worked up until very recently and here is a library which is maintaining service for the entire metropolitan region which makes it possible for the State of Maryland and the State of Virginia to do without. central libraries of any size in the proximity to the District of Columbia Public Library. Well, somebody should pay for that other than the District of Columbia Public Library and the result is that in fact the District of Columbia Public Library services get eroded and rot away underneath with no one watching and with this resource possibly disappearing and dependent entirely on its own community for funds.

DR. BURKHARDT: One more question.

MR. LERNER: You have obviously read the national program that the Commission has produced.

MR. BYAM: Yes, I have.

MR. LERNER: Except for making you feel better as a librarian of a broad level, would you react to it as a librarian of an urban library with a lot of problems?

MR. BYAM: Well, yes. I don't think it solves my problems. The report, in fact, does not from my point of view.

Well, I would say nothing but disappointment for the large public library situation in the face of the Commission's program. I see how it comes about -- that, in fact, this will extend services for lots of little people across the nation but I am already able to do on a very local basis most of what you are promising this nation, and in fact can probably do it better right now with a little money.

So I am not one of those enthusiastic about this program from our point of view.

about another political entity beyond the regional and the sub-regional level, what was your experience with, for example, the COBE relationship of a cross-state border and state lines for the Metropolitan

21

25

And we have both the COBE in Washington, D.C., Metro in New York, and some of the others, both of which I have worked with and have served on It seems to be a fine organization trying to do a needed job. However, one of the difficulties. with this that I see is that that helps create the incoherency that I find and one of the difficulties that we have in both situations is that many of the libraries which are participating in these organizations are defensive about the operations of this so-called metropolitan operation and organization and feel that the organization is getting in the way, performing some of the things they should be performing and indeed duplicating functions and this kind of thing, and while they perform what is essentially a very important function in bringing together the libraries and in sharing expertise among the libraries, I think the basic overall thrust of most of these metropolitan types of regions is incoherency to add to the inability of the total library organization within that area to respond to the service needs of the community actively.

DR. BURKHARDT: Okay, thank you very much.

l

4 -

1.1

1.3

141-

DR. BURKHARDT: Let's hear from Mr. William I. Bunnell, vice-president/president-elect, the Library Association, Dover, New Jersey.

MR. BUNNELL: You have all read our testimony that was written on sort of a committee basis and has been spread among the people in the association.

One point that we did not make that we would really like to have clarified for us and I think for many people throughout the country is a clear definition of the standards that should be written in order to meet your objective one of minimal library services. We have them in New Jersey. I think most states do have them. But we would like to know what the Commission feels so that we can also work on up-dating our own standards.

I also feel, as do a number of people in the New Jersey Library Association, that while many librarians know about the Commission and the work and the proposed national program, the people who use libraries at all levels and the people who

ultimately are going to pay for any program know very little about the Commission, know very little about a national program and what it can mean for them, and is there going to be a form of attempt to get some popular information to people who are going to pay for this.

6

DR. BURKHARDT: Well, there are two questions. The last one, I think with the White House conference, if that is coming, there is going to be a tremendous amount of opportunity to get a partial understanding of the national program and the country's library needs done that way with each state playing its part.

14 -15 16 ] - I think Roger MacDonough also mentions the need for a more popular submission of this national program and those things, I think we definitely have in mind.

18

10

17

Now the question of minimum standards.

Of course there are minimum standards

already in existence --

20

MR. BUNNELL: True.

•)•)

DR. BURKHARDT: -- which are not being lived up to for the most part.

21

25

The ALA minimum standards almost without exception don't exist in most of the libraries in

A Bear

1	the country. I don't know about New Jersey.
2	Have you got minimum standards that
3	are lived up to in your sta+.
i	MR. BUNNELL: Only about a third live
5	up to them.
ห่	DR. BURKHARDT: About 30 percent. That's
7	pretty good, I would say.
8	So that we have got enough minimum
ŋ	standards now if they were only lived up to. So that
40	I don't think we need any national commission to set
11	any more.
12	Do you agree with that, or do you think
13	maybe there should be some more realistic ones?
11	MR. BUNNELL: I think that perhaps some
15	more realistic ones should be developed. At least,
16	that's the consensus of the people that I am talking
17	for.
15	DR. BURKHARDT: Abstractly, I see your
19 an .	point, but there is bound to be less good than the
20 · 21	present minimums, aren't there?
22	MR. BUNNELL: True.
24	DR. BURKHARDT: Mr. Casey.
21	MR. CASEY: Mr. Bunnell, on page 2 you
	make the reference to the New Jersey plans. Will you

expand on that phrase a little bit and tell me what

you mean?

-1

S

O

1.3

MR. BUNNELL: The New Jersey plan is a plan of services that was developed after the Gaver and Martin report back in the 60's. What it has done is to establish throughout the state, really, a very basic system. We have divided the state into 24 area libraries and we also have four research libraries.

What happens is, if someone at the local level cannot answers or mat. ials, they move upwards to the area libraries; if the area library cannot find it, it goes to one of the research libraries. This is presently being studied by a library development committee, and we hope to come up with an amended plan.

We have now been operating this way for approximately ten years. It is now being evaluated and hopefully expanded.

MR. CASEY: Would these 24 area libraries work feasibly into our national program in terms of interlocking all libraries?

MR. BUNNELL: I think very much so. In fact, we have just sent back, in light of the national plan -- at least we have been talking with the executive board level of the New Jersey Library

ERIC.

Association, along with the State Library who does administer this area program. We are sending back some recommendations to make the adjustments that are being proposed in the present program to come more in line with some of the plans that we read from the National Commission.

MR. CASEY: Thank you.

MRS. MOORE: Is there another question?
Mr. Velde.

MR. VEIDE: I just feel that in your report you are not too pleased with having New Jersey go in the direction of New York or Philadelphia for aid, you would rather develop a stronger New Jersey system.

MR. BUNNELL: We would very much like to continue to develop and strengthen the system that we already have. Many times we feel, as most travelers do, that New Jersey is that turnpike between New York and Philadelphia, a place without any identity of its own, and we feel that we have good resources. We feel that we have good people. We would just like to really continue and have a strong system within our state that can look into a national program.

That is not saying that we wouldn't want

to use and wouldn't take advantage of New York and Philadelphia, and we do.

MRS. MOORE: Mrs. Wu.

1.5

2:2

MRS. WU: Just a few words to go back to the minimal standards.

Since there are ALA minimal standards to meet the needs of the different types of libraries, are you suggesting that the National Commission should develop, as you said, a more realistic national study for all or different types of libraries? What would you suggest in terms of a realistic standard?

MR. BUNNELL: I haven't gotten to the point of really suggesting standards, but a number of us were talking and felt that we really should look at some of the existing standards, not only ALA, but some of those promulgated by the states, and see if there isn't a more realistic goal that we can set that more libraries in the country can meet, hopefully without reducing quality too much.

But if there are so many standards and some of them complement each other, some of them really do disservice to people because they are so low.

MRS. MOORE: Mr. Trezza.

ERIC

-1

Q

3.3

MR. TREZZA: Mr. Bunnell, that is an area that we have been concerned with in the Commission, and in fact we are working right now in trying to get a study under way this fall which is going to attempt to look at the national inventory that was done in '65, which was based on the Board of Libraries were against standards, and look where libraries seem to be today, both on the national and on the sampling state basis against existing standards, and then try to determine on that basis what are the gaps and also what are the gaps in the standards, and what might be developed.

So I do think that the suggestion is a good one and we are looking towards it. Our problem is that we are reluctant to talk about a National Commission standard, per se. What we would talk about is maybe some kind of a national commission measurement stick and let the associations continue to take responsibility for developing these standards along with anything else.

MR. BUNNELL: I think this would satisfy my constituency very much.

MRS. MOORE: Any other questions?

Thank you very much, Mr. Bunnell, for appearing.

i MRS. MOORE: Our next witnesses are 2 Ms. Ann Calvert and Suzanne S. Brotman. 3 Are they here? 4 Since you are both listed together you might just come to the table and complement each 5 6 other's testimony. Ms. Calvert. 7 MS. CALVERT: Yes. 8 MRS. MOORE: You heard what we have told 9 the others, I presume. 10 MS. CALVERT: Yes, I have. 11 MRS. MOORE: We have had your testimony 12 and most people have read it. Would you like to 1.3 add anything further to your testimony? 1.1 MS. CALVERT: Well, I would just like 1.5 to say that it is interesting and perhaps a bit 16 ironic that we are meeting here this morning in 17 the Pennsylvania Room, and in the State of Pennsylvania 18 to discuss a national network and a national program. 19 In view of a recent report by the 20 State Librarian which cites us as 40th in number of 21 volumes per capita, and 46th in circulation. I think 22 this points up very well the need to spruce up our 23 state library system a bit and to speak to the con-24 ditions in the public libraries particularly. 25

I must recognize at the outset that I

1 do have a very strong public bias as a member of 2 the board of Friends Free Library here in Philadelphia 3 MRS. MOORE: Would anybody have any .1 questions? 5 MR. CASEY: Yes, Madam Chairman. 6 Ms. Brotman, you realize 60 to 75 percent 7 of the budget of public libraries now go to salaries 8 and benefits. 9 Now would you allocate a larger percentage 10 of the budget for salaries, thus reducing the amount 11 available for library materials and library supplies? 12 MS. BROTMAN: Is that directed to me? MR. CASEY: Yes, it is directed to Ms. Brotman. 1.5 MS. BROTMAN: I don't feel that I am in 16 17

a position to set any percentage figures that should be allocated to various items in the budget. point that I hope to make in my written testimony is that I feel that public libraries have been underfunded across the board, and I have been concentrating on the question of staffing, but I think they need more input, as far as the money is concerned, for all the services and other aspects of the budget, as well as for staffing.

> MR. CASEY: In the section on Okay.

1.3

1.1

18

19

20

21

22

23

24

q

understaffing on page 8 of your testimony, I am wondering, do you think that curriculums of libraries should be increased in order that the training will better serve public libraries?

MS. BROTMAN: Well, I think if the network becomes reality and as this technology becomes applied to libraries more and more it is necessary that librarians be trained in a different way and I think the only experience I have with the training of librarians is the training that I am getting right now.

And I think the library schools are already showing a willingness and a responsiveness to meet the needs that are coming much faster than any of us anticipated a while ago.

MS. CALVERT: I would like to speak to that, if I may. I have pointed out in my testimony that I think there is a lag between what the library schools are currently offering and what is available and how you can practice it when you do get into the market. We are turning out many, many catalogs, and if the national program becomes reality these people will be out of a job and a person who is trained to be a cataloger is not only by personality

DIC.

but not by training qualified to deal with the public.

And I think that this is a very real problem that
needs to be spoken to.

MS. BROTMAN: I might add also, we are getting some familiarity with the computer technology, and yet speaking from my own experience and some of a small medium sized public library, it is going to be a long, long time before anyone working in those libraries is going to see a computer.

MRS. MOORE: Mr. Lerner:

Before you do that, we didn't give Ms.

Brotman an opportunity to comment on her testimony,

to see if she wanted to add anything to what she
has already sent in. If you would hold your
question for a minute until we give her an opportunity
to do that.

MS. BROTMAN: Thank you.

The only thing I would want to add is -- there were two things.

One is, for nine years I served as a member of the Board of Education and the experience has left me very sensitive to the needs to communicate with the public and to maintain credibility with the public at all times. So that I thought it might be worthwhile to mention.

I can see from the way the Commission, has been conducting the hearing that they are very sensitive to the need to communicate with the public, and I think it might be wise to keep a caution in mind, insofar as the discussions of economies, of scale that apply to networking.

In my experience, the taxpayer when he hears the word "economy," he usually thinks, well, he is not going to have to pay as much taxes, but usually when someone talks about these things, someone in public life talks about these things, what they are actually saying is we propose to provide you with a service that you do not already have, or we propose to improve a service that you have. We propose to do it in a way that will be more economical than any way it has been done in the past.

So this is an additional service and networking would be very long, long range comprehensive operation and I think it would be very important not to make people expect that it would not be a very costly undertaking.

There is no doubt that there are economies of scale that can be obtained but at the same time there are new complexities, new demands, the generation of more information and while on paper there may

appear that there are ways that money can be saved, I think in actual practice it will turn out to be an extensive undertaking, and I think we have to be very straightforward about that. MRS. MOORE: That's a very excellent comment. MS. BROTMAN: I have just one question. I was reading the third draft of the national program and I was left with the impression that while the Commission very heartily endorses a campaign that would make the public aware of information and its potential and where it's available I was left with the impression that the Commission

MRS. MOORE: I think not. But we will let some of the other members of the Commission respond.

feels that the information industry in undertaking

an industry-wide public relations campaign would be

serving the national interest and that it could be

left with the information industry. I wonder if that

Joe.

was a correct impression.

MR. BECKER: It was a correct impression in the third draft but not in the fourth.

> MR. LERNER: It's been excised.

4.00

MR. BECKER: I think we are very much aware of the need to inform the community about the kind of national program that has been suggested, and in the comments received in the third draft, a good many statements were suggested that this responsibility be a joint responsibility rather than assigned to any one organization. Consequently, it has been eliminated from the program for the time being.

MS. BROTMAN: Thank you very much.

MRS. MOORE: Now before we go back to our questions that we had, I believe Mr. Lerner was first and then Mr. Velde.

MR. LERNER: I would like to ask Ms. Calvert to tell us about the work of the Friends Free Library and exactly what you do.

And another part of that is, if the Friends attempt to enforce legislation and in fact take a political role as well as one giving teas and smiling a lot.

MS. CALVERT: Well, because of our tax status we are not allowed to take a political stand; however, we have --

MR. LERNER: Not even in favor of more money for libraries?

1

10

1 1

1 1

1:

7 1

17

20

21

11

MS. CALVERT: Well, we have given testimony at city council hearings in the past and last year, as a matter of fact, the budget came back from the budget director's office with \$1,000,000 less money than the libraries had counted on, and the Friends were very successful, I think, in giving testimony and rallying public support to --

MR. LERNER: Tell us how you did that.

MS. CALVERT: Well, we were asked to come and speak to all the council members. We had private interviews with council members, and we had many friends in evidence at city council hearings who made their views known.

The rallying cry, I think, was Sunday closings. The library was going to have to be closed on Sunday, and this really was quite a boon to getting out public support, because they needed the library to be open.

The Friends of the Free Library started as an official organization approximately two years ago and three new programs that we are now developing I think you might be interested in.

One in particular is programs for deaf people in a city institute branch of the Free Library and story hours offered for deaf children by deaf

2	population that has been sorrowfully neglected by
٠,	the public library, and we are attempting to answer
4	a need and also to have a pilot program in that
5	area.
h	We have also had the teas and we have don
7 -	a lot of smiling, but that is also necessary.
8	MRS. MOORE: We will have time for one
9	more question.
10	Mr. Velde.
11	MR. VELDER: Ms. Brotman, I just wanted
12	to thank you for your bibliography. I think it would
13	help all the commission members to do their homework.
11	MRS. MOORE: Is there another question.
15.	MR. CASEY: Ms. Calvert, on page 3 or
16	4 you make a reference to the Friends of Library
17	approving support of the public libraries and so
18	forth. Do you have library trustees that area also
19 '	meeting
20	MS. CALVERT: Yes, we do.
21	MR. CASEY: here in support of your
22 1	library establishing policy?
23	MS. CALVERT: Yes, we do.
24	MR. CASEY: I would be hopeful that in
25 -	matters of records like this that recognition would

21

2.;

21

25

be given to the Board of Trustees of the public libraries in your State in order that this very important segment of people who volunteer their time in behalf of libraries would receive proper credit.

MS. CALVERT: We have a very active and fine board of trustees who are also quite instrumental in giving testimony at City Council and in rallying support.

MRS. MOORE: One final question to Ms. Brotman. Just as a matter of curiosity, did your service on the Board of Education influence you to take training as a librarian?

MS. BROTMAN: I think I had a library bias even prior to that service. Thank you.

DR. BURKHARDT: Ms. Brotman, I wasn't here all through this, so I don't know whether the question got answered, but in your paper you quote about the Federal Government having primary responsibility to insure that all who participate in the national program are educationally equipped and qualified to do their job, and then you ask are we, as a commission, contemplating Federal controls of accreditation.

I think I can answer the second question. Very definitely, no, we are not.

ឥ

25.

But I can see why the phraseology or the phrasing of that sentence put that thought in your mind, and I think it has got to be fixed up. We didn't mean what you took it to mean and we will have to clarify this.

Actually the accreditation and obtaining minimum levels of competency is a matter for the various schools and the private, the non-federal areas to get down to public libraries and so forth. The profession has got to do that, but I think what we intended to communicate there was that we have got some responsibility to see to it that when funds are needed to achieve levels of this kind of competence, that it is the government as a whole, the people as a whole that needs this sort of thing and so we have a responsibility to support any effort in that direction, and I think it is just a kind of too short a statement to be that clear.

Does any other commissioner want to comment on that? Have I got that right?

MR. TREZZA: I just want to say that I think when you look at the document that you must also keep in mind that even when we state an objective we want to continue to engage it. The implementation of that objective has not been developed, and that's

Ms. Brotman our next stage, and so when you look at it don't always automatically assume that because the statement is made that we have signed it. It simply says this is a need. Someone has not to now begin working on implementation, and in that stage you determine where is the right place, how to do it and so on. MS. BROTMAN: At the time that I wrote the paper I had only seen the second draft and I think that particular matter is cleared up, at least to my satisfaction, and the third is I don't know anything about the fourth. MR. LERNER: Neither do we. DR. BURKHARDT: I don't want this

DR. BURKHARDT: Now, as I announced earlier, you may not have heard it, Mr. Meadow, that I don't feel that you have to read your paper. We have read it, but do give us any comments or additional materials you want, and then we can start the question period quite rapidly.

MR. MEADOW: Sir, if I may, I would like to make a few comments which were generated by my reading of the final draft, which I didn't have when I wrote the first testimony.

My main point remains that I believe it would be in the best interest of the Commission, the profession, and the country, for the Commission to write or sponsor the writing of a definitive course, benefits and impact analysis of the proposed program.

Throughout the document there are references to the needs of various groups to possible impact on the information industry and to the national network as a solution for various problems. I do not believe the interrelationship among these elements are clear nor are the consequences of the network creation. There are many demands for federal funds these days, and I would like to see the

information profession take the lead in providing
with the requests the information needed to evaluate

it.

A few specifics along these lines:

In the final draft there is the reference to a list of monographs on various relevant topics provided by specialists consulted by the Commission that this is not included.

I believe that one of the ways in which the Commission's work would achieve better acceptance would be to make public the information base underlying its recommendation. I realize there are publication deadlines involved, but many of us have never found the information available to us.

I continue to feel that the goals stated on page 4 are unrealistic. I feel that maybe in politicking I would be convinced of its need or the practicality if I were a member of the Appropriations Fund.

Later, on page 12 there is a mention of the information need of special constituencies. I wonder how these groups will feel about the support of this goal. Will they see benefits to themselves in a program attempting to provide access to all information to everyone, when they are lacking the

basic essentials of good libraries?

}

---

Third: I welcome the statement on pages 4 and 5 that the Federal Government will not control the proposed network. That answered one of my earlier objections, and I agree that further study is needed to determine who should control it and from where federal support should come.

From page 44 to 46 there are several references to the impact of cooperative library programs on the information industry and to the Government responsibility for disseminating information that it generates.

As your report stated, many people feel that the Government should disseminate information free or at a low rate for the benefit of all.

Now I can recall that when I was a graduate student I got a good deal of otherwise unattainable information free and quickly from the then National Advisory Committee on Aeronautics -- perhaps it came from Mr. Becker -- but regrettably there are ample counter examples and these lead one to wonder whether the Federal operation of the vast retail business is the most effective or economical way to get the job done. Alternatives should be investigated and measurements made of

existing services.

Similarly, I am not sure anyone knows what the effect of interlibrary network is or will be on the purchasing of new information or materials, but it should be possible to find out.

I feel these questions should receive the Commission's prompt and urgent attention or their answers should be prerequisites of the policy guidance called for on page 47, and which I agree is necessary.

That includes any added comments.

Thank you.

DR. BURKHARDT: I think your questions are all good, and I think almost all of them still need to be answered except maybe one. That fine draft has pretty well answered on the individual industry in "will the commission response?"

And Colonel Aines I would like to respond to something that struck me.

First, I should say that apparently

Drexel has used the present thunderstorm as a

compliment to some of the comments that it's made.

I have taken notice of that. That's good planning.

You make a comment here about the belief that you have that the Commission should have something analagous to enviornmental impact statements

which justify these recommendations.

I think you recognize the difficulty of any such approach, even though it is something of a fadism to follow that particular idea.

MR. MEADOW: Indeed, I do.

COL. AINES: As a matter of fact, to tease you a bit, I would like to see the equivalent produced by you in your comments that justify the kind of criticisms you offer. When we put it in that tone obviously we come to an impasse. We can hardly do anything of this type, but I do appreciate anyway on a more sober note what you are trying to say: that everything we will be recommending will be very carefully scrutinized and the applied set of statements for the type you are looking for will be sought.

Is this the point you are making?
MR. MEADOW: Yes.

I intended to say in my printed statement, which I didn't read this morning, I hope it is realized that I am not intending to criticize the conclusions to which you have come. I am simply saying that difficult as it may be, and I don't in any way underestimate it, I am completely in agreement with you on that, it would be very difficult to

do what I ask, but the fact is that suggestions are being made, in effect money is being asked for because this network is not going to come for free, and I feel that some part of your resources should be devoted to explaining this to considering the alternative; not that I would ask you to change your views.

I am saying help yourselves and help all of us by explaining this and making available to people what the options were, what is likely to happen, what benefits will really accrue, not merely saying: Here is the problem and here is the solution, and now may we have our appropriations.

COL. AINES: I should explain to the fellow commissioners that Dr. Meadows has spent over a year with me in the office of science technology looking at information programs across the board, so I commend to you the fact that he is both knowledgeable and has had experience in this area.

MR. MEADOWS: And learning a great deal about how much easier it is to criticize than to do.

(Laughter)

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: A comment and a question.

The comment, first, is based on your

asking what about the papers which acted as the underpinnings of the program, and I, for one, feel very strongly that those papers should be of public record and eventually published by the Commission. I think it is terribly important and it is a good suggestion. We have talked about it in the past.

Secondly, I am fascinated with your comments on the technological imperatives and what I get out of what you say is the "public" will react negatively in most cases to these technological changes and I wonder, for example, what your feeling is about the use of cable television. I know that Drexel has taken the lead in commenting on cable television vis a vis libraries. Will you tell us what the future holds in that particular area?

MR. MEADOW: No. I'm really not among the Drexel contingent that has specialized in this field. My colleague, Professor Kenney is away this year in Germany, and she is the real one who has taken the lead.

But in a sense, perhaps, it does illustrate the problem that when the question of cable television first came out there was a great hue and cry for using it in the public library and other public institutions, and yet we find years later nothing

I went to a meeting --

MR. LERNER: No money?

MR. MEADOWS: Well, I suspect there may be more than that:

I went to a meeting in Columbia, Maryland let's say, about two years ago, being held for the purpose of reviewing -- I think it was a five-year plan put out by the City of Columbia five years previous to that, and in that plan there had been quite an elaborate communications system to include cable and five years later when they were reviewing the plan, I think the meeting was sponsored by the American Society for Information Science, some of the people who came were representative of the entrepreneurs who were developing Columbia, and their point simply was that interest waned.

When it came time to actually thinking about putting in the network, there really wasn't anyone who had anything specific and they canceled what they wanted to do with it, and lacking that enthusiasm, nothing ever happened.

DR. BURKHARDT: Mr. Cuadra.

MR. CUADRA: We are struggling with the issue of how does everything get paid for and

3

1

particularly the dividing line between things that should be paid for with tax money and things which should be paid for by users.

5

h

Do you have any comments or suggestions on where that dividing line might be, or what kinds of principles would be helpful to us to think of as we address that problem?

1

10

MR. MEADOW: I am coming more and more to have, I think, a minority dissident view on that, and that is people should have to expect to pay a little more for their information services than I did when I was getting free material for my thesis

11 12

from Joe Becker.

13 11

1.5

I am new to this City. I am not really well versed in its politics, but in recent days. we have learned that our school system is \$36,000,000 in the hole. Yesterday's papers brought the news that the Supreme Court has overruled some grants to the Pennsylvania parochial school system which will cost the area \$13,000,000; that is the Philadelphia

area.

That's \$39,000,000 missing suddenly from our school system, which is rather bad.

25

When the Commission or any other body, the Friends of the Free Library, whomever it may be, comes and asks for substantial amounts of money for

21

Library services, they are going to have to look this \$39,000,000 debt in the face, and someone is going to have to decide whether we need more: the debt to be paid for the school system or new and better information systems.

And, quite frankly, I think it would be hard to decide in favor of more libraries. Again, not that I am in favor of doing away with libraries, but when we are talking about new money, here we are with the very fundamental lack in our education system, so I think that yes, that users who want free photocopying from a library might be asked to ante-up a quarter for it. It won't break them. It might help the system.

I am talking about that order of magnitude of payment, but I don't think that will hurt anyone too badly. I think the users of these network services, such as myself, can afford 25 cents now and then, or even a dollar, and if people who are using the library and photocopying, are probably not the disadvantaged people that you mentioned who are among the constituency you are trying to serve.

DR. BURKHARDT: Mrs. Moore.

MRS. MOORE: I am fascinated with your statement here when you say "...it seems to me that

and reliability of information systems would be of great benefit to our country." I am not assuming that you would mean for us to do that.

MR. MEADOW: No, I don't think that you could accomplish that by yourself. I would certainly welcome your getting into that arena and that refers to something entirely aside from the library world and refers to the information science part of your title.

There are commissions and laws governing such areas as privacy and better reporting and so on. but I have a feeling that no one is looking at the quality of information services in general, not just library services provided. Possibly I am oversensitive to the fact that I am a victim of some relatively minor but very irritating business practices recently. A simple example is after the theft of three credit cards from our house, we found that all three large companies, large and well known, two of them had excellent systems for recovering from this, and we were very pleased to find this One had a system so bad I think it should be almost criminal, and I think this hurts everyone in the information -- it hurts everyone.

25

1

them more money to recover from it because of the battles we have had, it cost me more. It isn't necessary. Simply when you are talking about a public relations campaign to make people aware of information, I think that awareness of that sort of thing could help too; that everyone, who has an information system of any kind, dealing with the public, has a responsibility to see to it that it works and works properly, and works responsibly.

DR. BURKHARDT: Any other questions?

COL. AINES: Could you tell me privately what card I should do away with?

(Laughter)

MR. MEADOW: I would be happy to, privately, yes.

DR. BURKHARDT: Mr. Becker.

MR. BECKER: Charlie, do you have any idea on how we could go about doing a cost analysis of the total program?

We have thought of this and until now we now have a reasonably well-defined program. It seems like it may be ripe to do that. Any suggestion:?

MR. MEADOW: I think not that it would take less than about four hours to make, frankly.

Again, I recognize and as Andy suggested, this is

21

22

9-1

21

25

not an easy problem. I don't suggest it is. It would take a long time to plan it but I simply urge that some of your efforts go into it.

DR. BURKHARDT: Miss Scott?

MISS SCOTT: No.

DR. BURKHARDT: A1?

MR. TREZZA: I just wanted to make a statement. Those related papers you referred to in the back of the program document will be published. In fact, we have got something like 16 of them in and they are now going to GPO for publication. The balance of them, I think altogether there will be 27, will also be published.

We are fortunate in publishing one big volume but that would take another year, and rather than wait we are going to publish them as monographs so you can pick and choose the ones you want. So early Fall we hope to have them for you.

DR. BURKHARDT: Dan.

MR. CASEY: Mr. Meadow, you make a point in your next to the last page about the fact that the Federal government recognizes needs in education and needs in library services, but those needs are not satisfied at the local level.

I know that what you say is true, but

ERIC -

יכיני

can you give us some opinion as to why this condition exists?

Why is it the local people in their

3

-1

5

2

towns and villages and cities and so forth are not sensitive enough to educational library needs and the result is we have to go to Washington thousands

6 7

and thousands of miles away to get Federal money

 $\mathbf{S}$ 

and things of that nature in order to provide the

9)

things at the local level?

10

11

MR. MEADOW: I think it is a very profound question, sir, and I am not sure that I really do

12

13

11

15

16

17

18

14

have an answer. We had an election here yesterday and a law and order candidate won. However, Philadelphia seems to have, depending on the statistics you read, among the very worst crime situations in the City. We have allowed our school system to go into I don't understand it unless it is a fact debt. that on any given day these problems are not pressing unless it has been your house that has been burglarized, and only someone sitting in Washington with

problem on a day to day basis, can have the broader

a more responsible and broader point of view, and

perhaps somewhat relieved of having to solve the

view and recognize that something has to be done

on a longer term basis to just try to solve these 1 2 problems. 3 MR. CASEY: Thank you very much. 1 DR. BURKHARDT: Thank you, Mr. Meadow. .5 6 DR. BURKHARDT: Alice Dulany Ball, 7 Executive Director, the United States Book Exchange,  $\mathbf{s}$ Inc., Washington, D.C. 9 MS. BALL: I am here testifying this 10 morning not for the United States Book Exchange but 11 for the Council of National Library Association, 12 and it is a pleasure to be able to come before the 13 Commission and offer you something rather than ask 14 for something. 15 We are offering a tool which we think lin the Commission can make good use of in the years to 17 come when you are working on the further planning of 18 the national program, and on the implementation of it. 111 I would like to add a few things to the 20 short presentation which I made to you in writing 21 by way of clarification, and then you may have further questions, since we put about 30 years of 23 history into two pages. 2.1 The Council of National Library Associa-25 tions offers a time-tried forum for library

associations to come together and discuss problems of all kinds and matters of library concern of all kinds.

The Council forms a switching point between the several associations, national associations in this country, and there are the same associations in the discussions which go back to them. It would certainly prove to be, we believe, a conduit for g. the Commission to use to pour into the agenda of the council problems which you would like to have discussed on matters of concern or information which you feel the library community could give you help on through this association complex and at the same time the council could serve as a purveyor of

information back to the commission.

As you know from looking at my paper, a great deal of what comes out of the CNLA is seminal rather than actual, but there are very active things which the council can do, particularly in the way of committee action, which has provided some very substantial additions to American librarianship, and also from referrals after the Central Council discussions have taken place, referrals of the problems back to a particular library association which can panel it, or in some cases has two or

2

3

three which combine with their particular interests in a particular problem, can bring some light to them and bring some solution to them.

12

13

11

15

11,

17

15

14

211

21

))

21

25

This is a useful tool and it is perhaps or certainly less well known than it ought to be because it does operate with almost no funds. For the first fifteen years I guess it operated with no funds. Now the association pays a very small membership fee which keeps the operation going. It could perhaps serve considerably more effectively if it did have a paid secretary but it operates now without that.

MISS SCOTT: How often do you meet?
MS. BALL: Twice a year.

The board, which also does things as an operating body as well as bringing things to the general council, meets as often as necessary. Sometimes several times a year.

MISS SCOTT: Have you conducted special studies or are you geared up to do things like that or just discussing the general problems?

MS. BALL: Discussion of general problems is, of course, the main function but specific problems can also be discussed.

All the associations are equal in this

•

11/6

organization so that it is a sort of senate of library associations and this means that sometimes matters of moment to a very special part of the library community can be brought into general discussion but, of course, the associations through the various mechanisms of the council such as joint committees or appointing an individual -- just to give you an example, Jerrold Orne, as chairman of the committee on Z39, which has been so effective in working on library standards, that is the kind of thing that can be assigned from council arrangement, even though it has no funds of its own to do such things.

DR. BURKHARDT: Is Z39 a committee of the Council?

MS. BALL: It is under the sponsorship of the Council. That is, it has been for many years. This may change. But like the U.S. Book Exchange, it may branch out into either sponsorship from another funding organization or an independent life.. and not probably for 239, but this has happened to other children of the Council like the U.S. Book Exchange.

DR. BURKHARDT: Mr. Velde.

MR. VELDE: Ms. Ball, do you think that

1

MS. BALL: Oh, I am sure that it could. Now when you say "active", it couldn't do anything that would require funding, but certainly it could bring into the discussions and into the feedback to the associations that does occur after these meetings.

MR. VELDE: Could you help form a committee of all the groups for the White House Conference?

MS. BALL: I certainly see no reason why this could not be done. I am not the chairman of the Council at this point. In fact, Mr. Efran Gonzale, who is the current chairman, is sitting back there, but I am sure that this would be very much in line with what the Council could do.

MR. VELDE: Thank you, because we need you.

MS. BALL: Incidentally, we have had

discussions, I hate to say for how many years back,

of the proposed White House Conference.

In fact, this was brought up, if my memory serves me correctly, about 15 years ago the first time it was discussed in the Council as a possibility.

DR. BURKHARDT: Andy.

COL. AINES: I am delighted to see you again. I think first the record should show that 239 is a constituent committee of the American National Standards Institutes.

MS. BALL: Yes, that's true.

COL. AINES: Unless we understand the involvement we've had with it, but I think the record should show it is an organization.

The question I have for you, however, is why is it, and you may not be able to answer this question...be not concerned if you cannot -- why is it that this group that you talk about, CNLA, has not over the years been able to act as a more dynamic organization.

Has this been because it would be in competition with the various constituent groups that comprise it, or is there some other reason?

MS. BALL: Well, I certainly would not attempt to give a single answer to this.

There are a good many parts of the reason and I don't know what all those parts are.

I do know that it was proposed and the proposal is still not dead, although in these economic times it is certainly dormant. It was proposed that the Council should become a group of libraries, that is

١,

.1

(ı

1-1

2;

an umbrella service, if you like, to libraries like the American Council of Learned Societies, and to do that there were a number of things that needed to be done, and the funding was never achieved. I think all the other things have been done, the matter of organization, reorganization, clearing up of objectives -- all of this has been done but it is possible that at some future time that could come.

Now that doesn't answer your question except to say that I think the achieving of a paid secretary would be the first thing that would be needed. Operating on a purely volunteer basic, it almost is precluded from the kind of activities that would make it more dynamic but at the same time, perhaps, dynamism is not the only virtue towards an organization of this kind.

In its very low key operations over this period of 30 years it has certainly not attacked all of the problems, but it has gone up to some and solved them.

COL. AINES: Well, if I may, just to pursue this a little bit more. It just strikes me as extraordinary that something as revolutionary in the total community as the national program offered by the National Commission comes into being and your

organization is not responding specifically to the contents of that program, and I wondered how it was. organized and its strength internally and why it did not, as an element, address this problem.

MS. BALL: I don't know that I can answer that and perhaps Mr. Gonzales would like to say a word as to that. I don't know.

This refers to immediate activities of the Board, which I am not familiar with.

MR. GONZALES: Efran Gonzales.

I think that the answer that I would understand was that the nature of the Council is not such that it would undertake comment on the program. I think what the nature of the Council is currently operating would be to see to it that the constituent associations were well aware of this activity which is so vital to the librarianship, and we did this in several ways.

Actually, we should say two people. We have had the successor executive directors come to the Council as a key speaker on two separate occasions, to keep all constituent associations up to date on the thinking of the Commission itself on the status of the programs which, of course, at our last meeting just last Thursday, as a matter of

fact, Al Trezza was our key speaker and was able to give us the clue as to what has happened to the draft.

And I believe, getting back to the answer, the whole idea of this organization, as it is currently operating, is to make sure that the constituent associations are aware of activities and problems and try to find out how they can address them.

The Council's response to the program, per se, we believe is less useful to the commission than getting response from interested and involved associations.

MISS SCOTT: Might I also add, Mr. -DR. BURKHARDT: You have to speak through
the mike.

MISS SCOTT: We've heard twice from the Council: One, Mr. Gonzales appeared, and Ed Stragel, as well, in the past.

MR. GONZALES: And Bob Gibson.

MR. CUADRA: A few months back the Commission published a report of a conference that we had in Denver about a year and a half or two back that attempted to define the needs of the various constituent groups for library information servies.

1.1

1-1

We knew at the time that it was an incomplete report and incomplete because a number of important groups were left out, such as the legislators and educators and all, and incomplete because one can't have much depth in a short month's time.

Now what we are intending putting out is to say, "This is where we have gone thus far, this is admittedly incomplete, help us expand our knowledge and our ability to state the needs of the various kinds of groups."

My question is, would the Council be of particular help for us to work through the Council or through the Associations themselves to aggressively solicit responses to that report?

MS. BALL: I would certainly think the Council would be a first step in that it does represent 13 of the national associations, the Council could make a concerted approach to the associations and have, let us hope, a concerted reply. Although the reply would come probably from the individual associations, but we noticed in the first draft there was little mention made of the role of the associations, and I think that this is an important thing and the forum activity and the cooperative and combined aspects of the association.

activity through the Council could be very useful to the Commission.

3

2

DR. BURKHARDT: Julia.

.1

5

6

MRS. WU: Could you brief me a little bit on the activities of the U. S. Book Exchange, and do you think your activities can fit into the national program?

7

brogram:

8

MS. BALL: I would be glad to, if this

9 10 is appropriate, since I am testifying for the Council and not for the U. S. Book Exchange.

11

DR. BURKHARDT: Fine, because we are

12

interested.

15

[ii

17

18

19

20

21

22

2.3

24

25

MS. BALL: Well, we have prepared a related paper, which I hope will be accepted by the Commission, and in that we do point out a number of matters which we feel are important for the development of the network activity for the development of cooperative activity in the United States.

The U. S. Book Exchange has a membership now -- this is one point -- a membership of 1,600 libraries, 1,300 of which are in the United States. And this is a cooperative group of all kinds of libraries ranging from the Library Congress down to five high school libraries -- only five high school libraries, because most of what the U. S. Book

Exchange handles is a resource of publications in the research areas.

This is a natural outgrowth of an exchange pooling from all kinds of libraries because what might come from smaller public libraries or most school libraries is not likely to be unconditioned or of a type to be used by other libraries.

But a second point is that this is a cooperative activity with some rather unusual demands on its members. The service to the members tries to be as economical and as effective as possible but at the same time the members are asked to send in material at their own expense and to take back things from the pool in a way which is not exactly like other things they do, so that there is a demand on them which they are used to answering in the cooperative mode.

So that this is now a 27-year old activity and just the kind of cooperative and across-the-board library membership that I assume the national program envisions, and it is something which is now operating and it is free standing, it is self-supporting, so that we, as we inevitably will get into electronic activity in the record keeping and in connection with our member libraries, we will be

•

24

25

getting into a phase which is part of the plan of the national program, and at this point it is operating in a self-supporting way and in a general attitude which is very much in line with the program.

DR. BURKHARDT: Miss Scott.

MISS SCOTT: Do you envision this as an extension of the concept of Dr. Gennaro on the National Periodicals Center or on the library concept?

MS. BALL: Well, in the related paper that I mentioned I have suggested two or three possibilities. I think this is a resource which is represented both by actual, past and future, that is the publications resources, and the value, addedvalue given to it through the cooperative aspects of it and the refining aspect of the USBE process. All of these together are going to have to come into the program somewhere or other if it is not going to -- and now I am talking shout the National Periodical Network bank program. It is going to have to come into it some way. How will depend on how the program develops. If the Center for Research Libraries should become the national center, then possibly the USBE will be feeding into that as it is doing now in the new development service center.

٠l

1.3

1-1

Presumably, if the national periodical program is broken up into a number of regional notes, USBE could very well become one for the area in the east or the southeast sector.

DR. BURKHARDT: Mr. Casey.

MR. CASEY: Does the Council actively advocate certain programs that come before it, or does the Council get them and have nothing more to do with them, or does the Council take a neutral position and simply transmit information?

I know you have a number of programs listed in testimony in which you have been involved. Now the fact that you are involved and you are associating yourself with these different programs, does that imply that you have endorsed them, whereas there are other programs not listed that you have turned down, that you have nothing to do with them and therefore you do not associate them with your Council?

MS. BALL: I think there are two answers to that, Mr. Casey: One is, that in the limited time of the Council's activity it cannot serve all of the questions that may come up in librarianship, and certainly it has not been presented with many of the things that are very important in library

ERIC \*FUII TEXT Provided by ERIC

AREA-WIDE FEDERAL REPORTING, INC.

concerns. Some of these may, in the estimation of the Council or council members may already be served in other ways. The Council tries to take up things that are not served in other ways, in its estimation.

Now, secondly, there are things which the Council has looked at and has turned down, not because of lack of value in the program, but simply because the members did not feel that it was appropriate to the aims of the Council, which is to bring all of the associations together and take up things that are of mutual interest.

For these reasons they have been turned down and also there are some things which the Council or which committees of Council have tried to do and have not been able to because of lack of financing and the lack of support.

MR. CASEY: Let me ask you this: Are you taking a position relative to our national program; is that still under study or what is the st tus of the national program in terms of your Council?

MS. BALL: I think that, as Mr. Gonzales said, what the council has done with the national program is the matter of information transmittal.

1.3

Both of the executive directors of the Commission 1 have given programs to the Council, and these then are referred back to the Association. DR. BURKHARDT: Thank you, Ms. Ball. It is 10:00 o'clock and we have been going 5 two hours steadily now. Now I think we should give Ð our stenotypist a little rest, so let's have a break of ten minutes and reconvene promptly ten S minutes from now. 10 (Recessed at 10:00 o'clock a.m.) 11 12 1.3 14 DR. BURKHARDT: Okay. Is Mr. Dawson here? 15 MR. DAWSON: Yes. 16 DR. BURKHARDT: Because John M. Dawson 17 is the next witness. He is the Director of 18 Libraries, University of Delaware, from Newark, 19 Delaware. 20 Mr. Dawson, you did not submit any testi-21 mony in advance? 22 MR. DAWSON: No, I did not. 23 DR. BURKHARDT: All right. Will you 21 give us a brief summary of what you have got and

1 then leave it behind, please? 2 MR. DAWSON: I beg your pardon? 3 DR. BURKHARDT: Would you leave your 4 testimony behind after you have finished? 5 MR. DAWSON: Yes, sir. 6 You simply want a quick summary of what 7 I have to say? 8 DR. BURKHARDT: Yes; right. 9 MR. DAWSON: Well, I certainly feel 10 that the national program is an extremely constructive 11 document, and it seems to cover the spectrum of 12 libraries and information services, and I really have 13 only a few comments to make. 14 In the plan there is stress played on 1.5 supporting the major research universities and 16 research libraries, and I certainly concur with 17 that, but I would hope that in supporting the major 18 libraries you do not ignore the second line, the 19 medium sized university research library. 20 The greatest problem facing us now, I 21 think, is inflation, which is increasing the cost 22 for universities in every aspect, and is certainly 23eroding library budgets. 24 Dr. DeGennaro, I understand, has already 25testified this morning. I am quite sure he has

ا ر

touched upon what is really my major point and that is the need for certainly a lending library analogous to the British Lending Library Division, and if the members of the Commission haven't read Dr. DeGennaro's article in the Library Journal, I would commend that to you.

I certainly agree with the program of federal aid to all libraries, but I do endorse the principle enunciated by this commission that each jurisdictional level should bear its share of the total burden.

I would hope, though, that federal support does emerge in some major way that one could be assured of continuity of the federal funding and federal programs, because the discontinuance of federal programs does not provide much of a base for the sound development of constructive programs.

Perhaps, as a result of our experience in Delaware, I would hope that with federal funding would go some clear guidelines to us as to what the federal money is to be used for. It seems to me we are always between the Scylla and Charybdis of federal funds and federal money, and I think one would do nothing but kid oneself if one said that money was going to come without any control at all, and

- CZ-13.

1.5

1.

21

2.1

I am not sure this is altogether bad, based on our experience in Delaware.

I also have a great concern over some of the things that are being said and the draft of the copyright act which would impose a licensing fee on libraries for copying materials. It seems to me that several points might be kept in mind. First is for most publications and particularly research journal sales, the libraries provide the economic basis which permits the publications at all.

For example, at the hearing before the Select Committee on Education on November 29, 1973, Mr. Hoopes, who was then president of the Association of American Publishers said, "If we lose the library market through the failure of federal subsidies for libraries, a good many promising works of fiction and indeed of non-fiction will never be produced, because their production is uneconomical in the absence of that market"; secondly, the proliferation of journals and publications seems to me to be live protestations of the sad economic plight of publishers; and, finally, libraries in a great many instances are paying subscription prices which are multiples of the prices charged individual subscribers. Consider, too, the

25

universities are supporting research; secondly, frequently the university pays page charges for journals; and then a premium or price for subscription.

If, on top of those vastly inflated costs there are copying royalties, I wonder how many journals will cease to exist.

DR. BURKHARDT: Thank you very much.

Any questions?

Mr. Dunlap.

MR. DUNLAP: John raised one point which particularly interested me.

You are familiar with the concerns of research libraries and most of your presentation addressed yourself to those concerns, but you made a very special point that the Commission can keep in mind the special requirements of the front, second—line university, the ones that are doing the jobs in the states that are not research libraries, or at least members of such associations.

Would you amplify how the second line differs from the front line, since when you went on ahead you spelled out periodical banks and publisher problems of copyright and so forth, which we think of as being the concerns of all the rest of us.

MR. DAWSON: Well, when I am talking

about second line, it is not a very good phrase, perhaps, but I am talking about libraries such as the University of Delaware. We are not a multimillion volume library. We are a million volume library.

When you and I were young, Maggie, that was a good sized library, but we have seen in the dispensation of research funds that the bulk of the money goes to the major institutions, Harvard, Yale, et cetera, et cetera, with libraries that would be essentially the libraries of the members of the Association of Research Libraries, although I might point out that Delaware is bigger than some of those.

I am not suggesting that these libraries should not receive adequate support but that the others should also receive support. We are a resource library also and so are other medium sized university libraries. We have unique collections which are national resources. We have literature from all over the country and indeed from Europe, small though we may be.

I wish to emphasize that this is not stated in any sense of envy of the larger institutions whatsoever, simply that we of the medium sized librar-

11

14,

17

15

11

211

71

1 : }

2;

21

ies, which are certainly regional or state resources.

For example, we are essentially the only research library in Delaware. Grant you, Delaware is not very large. We are the only one there. We lend more than we borrow. That's my point.

DR. BURKHARDT: Are you acquainted with the Library Partnership Act that the administration is sponsoring?

MR. DAWSON: Not in any detail, no, sir.

DR. BURKHARDT: I was going to ask you whether you felt that that was in any way a step in the direction that you would find helpful.

MR. DAWSON: I am not sufficiently familiar with that. I have just heard of them.

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: As a mid-le sized research university library, how do you see your fit into this national program, speaking for the libraries such as yours across the country. And how do you see your particular niche in filling the borrowing-lending function and the research function in a broadly based plan such as the one we are commenting on here today?

MR. DAWSON: Well, we have special areas of strength and, for example, the University of Delaware is strong in chemical engineering. This

1.

11

15

15

111

\_\*e }

11

21

is one example. We could certainly develop our collections and be a regional resource in this area.

There is no library, as you know, that can make any claims to self-sufficiency today. We all borrow from each other and lend to each other. I think libraries of our size have to contribute as well as to draw on the larger libraries.

I think we can contribute by developing our own special areas. We have no interest at the University of Delaware of becoming the largest library in the country. We just want to be a damn good library to ourselves. Does that answer your question?

MR. LERNER: Yes, I think so.

DR. BURKHARDT: Any other questions?

John.

MR. LORENZ: How does your university library relate to the state library program of Delaware?

MR. DAVSON: There is a program in

Lelaware that goes by the name of Delaware Reference
and Interlibrary Loan System, and the truth of
the matter, although not on paper, is that the

University of Delaware is the " system.

\* ( ,

We lend to everybody. The state pays a fee of \$4.00 for every book that we lend and \$2.00 for every unsuccessful learch. It is really sort of backwards.

As you know, the unsuccessful searches are the ones that take the time and this is it.

We lend to other libraries. We answer reference questions for other libraries and that is how we fit into that.

We also have reciprocal borrowing privileges with the other state institutions in the State. Informally, we are the resource, the research library for the state and they are used by state officials, county officials, city-town officials.

MR. LORENZ: Do you feel this is going in the right direction if the compensation was adequate for the service you provide?

MR. DAWSON: Yes.

DR. BURKHARDT: Well, there are no more questions.

Thank you very much, Mr. Dawson.

DR. BURKHARDT: The next witness is Roger McDonough.

Mr. McDonough is the director of the

ERIC

10

11

17

1.1

New Jersey State Library, Trenton, New Jersey.

Roger, good morning.

1

2

1 \*

1 1

211

2 €

., ;

MR. McDONOUGH: Good morning. Thank you.

I gathered from your letter, Mr.

Chairman, that I am not to address myself to the testimony I have already submitted, and so I shall not. If you have questions to ask me -- Dan Casey has warned me that he has.

DR. BURKHARDT: You were pretty rough on us, Roger, and I think maybe you ought to pick out, so the rest of the audience can hear what your most telling criticisms in your mind are about our national program.

MR. McDONOUGH: Well, I am not -- (Laughter)

I didn't come here, Mr. Chairman -DR. BURKHARDT: No, no, I understand,
but that might bring some questions from the
Commission that might, I think, bring also some
light.

MR. McDONOUGH: Yes.

Well, first to the document itself, it's improved enormously over some earlier versions but I don't always agree with Carl Niven -- that's a massive piece of understatement -- but I thought

his remarks in the LJ hot line were well taken, that this badly needs re-writing and I hope your announced intention of adopting this draft tomorrow was rumor only.

And my staff and I found it somewhat encouraging, as you know, that a good many individuals from distance points were asked to submit testimony today and so on, and then to be confronted with the fact that really this is a cosmetic or a pro forma exercise, because you have already made up your minds what you are going to do. You know, a carte blanc.

DR. BURKHARDT: Well, let me assure you that isn't exactly so. There is plenty of time, maybe not this particular printing, but there is plenty of time to get your input into this thing because we are going to be at this and implementing this and reworking it for another year or two, at least.

MR. McDONOUGH: Good.

DR. BURKHARDT: So please get in whatever you have to say and don't worry about our doors being closed, our minds being closed.

MR. McDONOUGH: Good. I appreciate that and I think it is very important to have you, Mr.

11

1 1

211

Chairman, say just that.

11

12

11

11.

1.

21

J.";

And I do want you to know, also, that
I am basically very supportive of the work of the
Commission and of what you are attempting to do as
set out in this document. I may quarrel with the
details and it only hunts when I laugh when I note
the continued omission of New Jersey from the list
of states that are presumed to have networks and I
am sure that Iowa is much more advanced than our
Northeastern establishment, but we like to think we
are pretty good --

DR. BURKHARDT: If we have learned anything, Roger, it is that we must not make lists of anything. We are bound to leave somebody out and from now on we are never going to mention another name.

(Laughter)

MR. McDONOUGH: Okay, we have got a big
Jersey delegation here today and we wrap everybody
in New Jersey, and I think that is exactly what the
Commission is trying to do. I think there aren't
too many states that truly wrap in the total
library community in any given state, and we are very
proud of this fact.

Just one quick key. Somewhere in the

ERIC Provided by ERIC

back of the report there is a statement to the effect that many people still don't approve of federal aid to libraries and so on. I cut that out. That's beating a dead horse, I think. We studied that a great many years ago in the American Library Association and I really don't think there is any point in repeating that.

I would like to speak about state libraries for the moment. Not surprisingly, I am very pleased and I am sure I speak for my fellow state librarians, Ernie Doerschuk can take issue if he wants, when we say that we very much appreciate the emphasis this draft of the report puts on the important coordinative leadership funding role of the state agencies, and I will say no more than that at this time.

DR. BURKHARDT: Were you here when the research libraries were testifying first to the people?

MR. McDONOUGH: No.

21)

25

DR. BURKHARDT: They are perturbed at the emphasis we place on state libraries.

MR. LERNER: And Mr. Byam as well.

MR. McDONOUGH: Is Milt still here?

He knew I was coming.

10

20

21

21

25

DR. BURKHARDT: Well, anyway, why don't we turn it over for questions.

Now, Mr. Casey.

MR. CASEY: On page 4 you make the statement, "There is every evidence that state and local governments will not use revenue sharing funds in any adequate measure to bolster local library support." Of course, that is the understatement in your whole statement. We local libraries only get about one or two percent at most from revenue sharing.

Now, how can you account for this deplorable condition, and what would you recommend to improve what we find around the country?

MR. McDONOUGH: Well, I am giving a talk at San Francisco on the library in the political process, and I suspect I could use our failure to do better in obtaining funding through the federal revenue source as an example of our failure to do as well in this area as we should.

I will admit that quite possibly library boards and librarians and friends of libraries have not been quite as aggressive across the board in trying to obtain those funds as they should. I know

ERIC

AREA-WIDE FEDERAL APPORTING, INC.

i

-

+ )

1 3

. .

that I have personally sent out letters to every library in New Jersey calling attention to the existence of the funds, the importance of getting after them, and in spite of that, and I know a good effort was made by many communities, we didn't emerge at the top of the heap and places that did obtain funds, in many instances they were merely a substitute for local funds.

I can't give you a clear answer. I am afraid part of it, Dan, derives from the fact that libraries, while schools at least in New Jersey, are not mandated, and we have to work about ten times as hard to get a buck or what we consider our proper share of the tax dollars as do some other agencies.

DR. BURKHARDT: Any questions?

MRS, MOORE: There are two statements, Roger, that I would like to ask you to amplify.

One is that you say, "I am not at all sure the nation's libraries can represent an orderly system, given the history of library development and the vagaries of library funding." Would you expand on that, and then I have one other question.

MR. McDONOUGH: Well, all I am referring to there is the fact that the library profession --

Tam not speaking primarily of the public libraries there, Bessie. They involve community after community, and we have some libraries in New Jersey who are too proud to accept state aid and won't still at this late stage of the game; are reluctant to enter fully into general arrangements for the greater good of all citizens.

I don't mean by that statement that I don't favor a national plan that will require the states, the multi-state agencies, to tie in in a very proper, meaningful way, one to another within a national orbit. I just mean that librarians and the libraries they represent, certainly are kind of individualistic and we have got to recognize that fact.

MRS. MOORE: The other statement is, and you state that you will give us the cautions, and the first caution is: "That the research needs of the few do not overshadow the daily, less sophisticated needs of the many." Could you expand on that a little more?

MR. McDONOUGH: Yes. I think this is the reaction to the overall tone of the report. As you go through it there is great emphasis on information as a commodity, and I kept being reminded as

111

11

12

1:

11

...1

I reread it of the late Ralph Shaw's love of referring to megabits -- Joe, you remember -- and I guess what I am getting at is this: There is a sophisticated audience which needs answers to questions, can well afford to pay for them, and is quite willing to do so because it will use those pieces of information in the course of its daily business of one kind or another. They will get this information one way or another.

Then there is the great mass of people who can't even articulate and in many instances their needs which are incoherent and vaguely expressed and any good reference librarian knows that he or she has to be almost a consulting psychologist to pull out from the individual involved precisely what he or she is looking for, and I just want to make sure that we are not losing sight of 99 percent of the public we are trying to take care of and the percentage is probably larger than that.

DR. BURKHARDT: Miss Scott.

MISS SCOTT: You have some very strong industrial libraries in New Jersey?

MR. McDONOUGH: Sure do.

MISS SCOTT: Would you care to tell me more about their cooperation in this network of yours

111

1 "

1 1

In the state?

l

1 >

21

27

MR. McDONOUGH: Yes, indeed.

our state Library Act aid passed in 1967, the then president of Rutgers University, our state university, Mason Gross, wrote to the hundred largest corporations in New Jersey, Esso, Exxon, and so on, saying this law, among other things, will not only improve local libraries, it will improve the Rutgers Library by giving us some extra funds, and Princeton University Library to open up our resources more fully to serve business and industry in the state, and we got some wonderful support from business and industry as a result of that by Mason Gross, and that is exactly the way things worked out.

We are pumping money into Princeton and Rutgers on a simple annual contractual appropriation basis. In return, these special libraries of business and industry are sharing the wealth with us through the pipe lines and network, and naturally there is a certain amount of classified information and everybody understands that, but it is a very simple two-way system.

DR. BURKHARDT: Is there a real problem to be solved by the proprietary information of these

businesses and industries, the special libraries?

MR. McDONOUGH: It is not --

DR. BURKHARDT: Some people seem to be worried about that but a lot of your testimony indicates that that could be solved very readily.

MR. McDONOUGH: Yes. We have not had a major problem with it, Fred, to be hohest with you.

DR. BURKHARDT: Yes, John.

MR. LORENZ: Roger, you urged the Commission to support not only the continuance of categorical aid to libraries, but increased categorical aid to libraries. However, you also realize that aid to school libraries in most cases goes to individual schools or school systems; aid to college university libraries mostly goes to individual college and university libraries.

Do you see overlaying the needs for federal legislation more assistance that will in fact create state and regional and a national system?

MR. McDONOUGH: Yes, John. But I remind you that the basic philosophy of the Commission, if I read this document correctly, is that you envision an interconnected system that is based on solid

\_' i

21

support for local libraries, public schools, colleges, you name it; in other words, provide a sound basis down here. And I think this is absolutely essential in a dynamic society such as ours. Then over and above that, funds to encourage support, coordinative and cooperative efforts.

The New Jersey plan, if I may say so, is identical with the philosophy that is embodied in this report.

DR. BURKHARDT: Mr. Becker.

MR. BECKER: Roger, because of the close similarity between the constructed New Jersey, and what we propose nationally, that is, you have an interdependent inter-type network functioning within New Jersey, and you had it for some time, what would you say would be the two or three lessons that you have learned or key principles that we could benefit from as we proceed in a national context?

MR. McDONOUGH: I made a speech around the country when I was president of the American Library Association. It was only a few years ago. Anyway, I never printed the speech, but I called it, "The Seven Deadly Sins of Librarianship," and I ticked off a number of items that kept the best

11

7 :

laid plans of mice and men, and so on, and in the library sense, from doing what they were constructed to do, and darn it, I haven't changed my views on this.

enough money, I think -- don't say this back home across the river, please -- but basically we have the means to do a first class job of getting for any individual anywhere in our state -- either within our state or through our pipelines, into Pennsylvania union catalog, et cetera, basically whatever they need and where the darn system breaks down is in somebody's mind and heart at one level or another, and this obviously means that continuing education is enormously important, and I am glad the report addresses itself to this.

Perhaps it should be even more forcefully expressed, because the human element in here is all essential. We can have all the best plans in God's world and they won't mean much if that human element is not there to carry out every assignment that is indicated.

DR. BURKHARDT: Are you talking about continuing education of librarians?

MR. McDONOUGH: I sure am.

ı

ā

ŧ ı

14.

٠,

21

DR. BURKHARDT: Okay.

MR. McDONOUGH: Not to mention trustees.

3

DR. BURKHARDT: We have time for two

.1

more brief questions.

5

Mr. Velde, then Mr. Alties.

6

MR. VELDE: Mr. McDonough, I was

wondering if you had any special plan in New Jersey

that tried to let the general public, those less

n

sophisticated users, know of what the library

10

really has to offer.

17

MR. McDONOUGH: The new president of the New Jersey Library Association, Howard Vote

12

of the Bloomfield Public Library, which is one of

1.3

our 24 area libraries, the second echelon resource,

14

has stated as his announced goal that we have a

15 111

year long rublicity program to do just the thing you

17

are talking about, and I think that although we have

18

all been making efforts of various kinds, we will

20

141

be concentrating more on this in the year immediately

ahead.

21

MR. VELDE: That is the great hope of the White House Conference, I think, if we can

23

really get some support.

21

25

MR. McDONOUGH: I think the visibility we are going to get from the Governor's Conference

will be enormously important, and we are tooling up this. On next Wednesday we have a meeting in my office that I called of the representatives of all the library associations, as well as other individuals, just to tool up so that we all are working together and not going our desperate ways.

DR. BURKHARDT: Mr. Aines.

COL. AINES: A couple of years ago we started to prepare this program and largely it was to cope with such problems as unevenness, inadequacies of service, of funding, largely it was done in anticipation of growth. Now if the recession continues and we begin to find that we have to refocus a look at survival, have to look at an era of resource shrinkage, you ask us to re-posh, reorganize, rewrite the report, and we may find if we have to follow that formula, even though you ameliorated your position earlier, I despair that we would ever get a document that could start some action. We may find that perhaps it might be useful that prosperity may return, we go back to our original hopeful, but right now there is a feeling of great concern; in some quarters desperation.

Would you be wil ing then to encourage

us to get out a report that would not be picture perfect, polished to the extreme, if only we can start some useful action with the hope that we can improve as we go along?

MR. McDONOUGH: I won't quarrel with that, Colonel, and I would hope that some way would be found to put out a real good popular version of the report that would have less technical language in it and that could be widely distributed, particularly at these Governor's conferences, and so on. I think that is extremely important.

I wouldn't insist on holding up for the perfect document.

COL. AINES: I feel a lot better. Thank you.

DR. BURKHARDT: Okay, Roy. Thank you very much. I mean it.

DR. BURKHARDT: Mr. Doerschuk.

Mr. Doerschuk is State Librarian of Pennsylvania.

Did you submit --

MR. DOERSCHUK: I did submit, and I will make a brief reference to it.

DR. BURKHARDT: Very good.

MR. DOERSCHUK: In my written statement, Mr. Chairman, I pointed out that the existing Pennsylvania network of local, district and regional public libraries and, by the way, this includes one State University library and two State College libraries, that this network is due in large part to the impetus given by LSA and then later by LSCA, and I show that the federal program in Pennsylvania was matched by striking improvements in both local and state funding library programs.

And, like Roger McDonough, I would like to see that categorically continue, and I am pleased to see that the Commission has that recommendation in its report.

But the present programs, of course, are not enough. In Pennsylvania we are looking for techniques, and, of course, we are looking for money, too, to bring academic, special and school libraries into the existing network, or possibly into a new network, moving from a single purpose, single type of library network to a multipurpose, multitype of library network, seems to have a lot of problems. A big one is finding funds and an organizational mechanism that will allow the larger libraries to participate without losing their shirts,

.1

1.1

1.1

1.7

on the one hand, and on the other hand, assuring that the far ends of the network, the local communities and the information outlets are in fact able to offer quality information and library services to users.

Again, the LSCA program has aided us in getting a large number of public and academic libraries in our state to begin participating in two OCLC based consortiums, PAL and PRLC, but the problem we have not yet solved is that of equitable and adequately reimbursed sharing of library resources

And I see some hope in the national program that this problem will be tackled, and in my written statement I list a bunch of obstacles that I see to library progress in Pennsylvania, not the least of them being the ordering of the library dollar, but the same time the number of dollars isn't multiplying very fast.

Well, this condition, I must say, does cause me to be sympathetic with the cry for some kind of per capita federal aid to libraries, a cry that we are hearing especially from the urban libraries. However, I personally think that federal grants ought to be tied to specific objectives and it seems to me that funding of the presently

A ....

1	authorized LSCA programs would be far better than
2	entering into a new blanket per capita based
3	federal aid program.
-1	DR. BURKHARDT: Any questions from the
5	group?
65	MR. DOERSCHUK: I am glad you came to
7	Pennsylvania, by the way.
8	MR. LERNER: I have a question here I
9	was going to ask of another state librarian, but
10	you are here first so you win.
11	This is really a question of some depth.
12	What is the chief concern of state
1.3	libraries? What was it ten years ago? What is it
1.1 -	today and what will it be in the future?
15	MR. DOERSCHUK: Well, I hope you ask
16	the next state librarian too, but ten years ago
17	we were just beginning in Pennsylvania to put into
18	effect this network, this state aided network of
19	local, district and regional public libraries.
20	So that in Pennsylvania the concern
21	of the state libraries has been it must be
22 .	admitted because it is in the statute that way
2.3	largely that of improving general public library
21	services.
25	Along came Title 3 of LSCA and this gave

AREA-WIDE FEDERAL REPORTING, INC.

us a beginning, a handle, a reason, a legal reason for also looking at the institutional library needs, and the needs of the blind and handicapped at bringing together service programs that involve participation by academic and school libraries, so I think that is our concern now.

Ten years from now one hopes concerns will be making Pennsylvania's role in the national network just very fine.

DR. BURKHARDT: Bud.

MR. VELDE: Do you feel that aid to a specific library in your state from the federal government should properly flow through the state library?

MR. DOERSCHUK: Yes, I do.

I very emphatically think that it should.

DR. BURKHARDT: Mr. Becker.

MR. BECKER: Ernie, on page 3 of your testimony you say "So the master plan report has not had wide acceptance to this point." I believe you are referring there to the Pennsylvania network plan.

MR. DOERSCHUK: Well, yes. There has been at work in Pennsylvania a so-called master plan library committee which has drawn together a document with recommendations for improving library services

.l 

4 5

9 10 .

1.1

and coordinating library services from all types of libraries. Their report recommended, among other things, that the school library interest be centralized and academic interests, insofar as the state is concerned, be centralized under one administrative commission for libraries.

They are recommending a regional program whereby 12 regions would be established for library planning in Pennsylvania, and within each region a citizen's board would receive state monies for improving library services of all kinds to the public within that region, maybe contracting with an academic library if that turns out to be the best thing, or a school library, special library and so forth.

Well, those two recommendations have not received -- well, each of them has a considerable body of opposition, I would say, from school library folks on the one hand and feel they really ought to be directly involved in the curriculum service program at the state level rather than in a generally greater program, and the other sources of opposition, I don't want to use too strong a term, comes from our present district libraries who already have a regional function in a sense that they get a the money in order to render certain services to other libraries within

3

a district and they naturally feel that this new regional program might change things in a way they wouldn't like.

DR. BURKHARDT: Mrs. loore.

21 25

MRS. MOORE: I notice that you say that one of the principal recommendations of the committee or the principal one is strengthening of the state library agencies by creating the Commission for Library Services within the Department of Education with the responsibility and authority for working with all types of libraries.

How are you presently organized? Are you an independent agency?

MR. DOERSCHUK: We are presently organized within the Department of Education but at the bureau level rather than as a commission. So that the master plan committee -- and by the way, this recommendation does have wide support except possibly from the school groups. We are organized as a bureau within the Department of Education. I report to the Secretary of Education. There is an advisory counsel which advises the Secretary of Education and me. This proposed plan would make this a commission, would establish a commissioner, still within the department.

111

\* 1 1

"

23

21

25

MRS. MOORE: Is the secretary a member of the Governor's cabinet?

Is that correct?

MR. DOERSCHUK: Yes, he is. And by the way, he regrets he was not able to respond to your invitation to be here today.

MR. CASEY: Mr. Chairman.

DR. BURKHARDT: Mr. Casey.

MR. CASEY: I note in listing the obstacles to library development in Pennsylvania you say that the role of the volunteers is controversial.

Can you expand on that? What do you mean by that?

MR. DOERSCHUK: No. I didn't really mean that was an obstacle, but let me put it this way.

We find that especially in the smaller libraries that volunteers attempt to be looked upon as a means of getting library services on the cheap, and they wish, for example, that we would give a monetary value to the services of the volunteer and then have this monetary value accomplish part of their required local financial effort in order to qualify for state aid at certain levels that they must reach before getting aid. This is realized.

MR. CASEY: Well, isn't this a realistic

request because you are familiar with the small budgets that the local libraries have and if they don't depend upon these volunteers, the services would be greatly reduced so that we would have to take into consideration the context in which the volunteers do perform their work.

MR. DCERSCHUK: Yes. I don't object to the use of volunteers but merely to the substitution of volunteers for local, legally required financial efforts to require the community to support libraries.

DR. BURKHARDT: Miss Scott, did you have a question?

MISS SCOTT: Yes, I have a question.

I must apologize but we just received your report. I have your statement here in front of me. I just scanned it briefly.

But on page 2 at the top of it, maybe
I am naive, but "Title 3 funds have expanded public
network library services to include other types of
libraries. In a delivery system, in book location
services and in participation in shared cataloging
services offered by the Ohio College Library Center,
Federal funds have been put to good use."

MR. DOERSCHUK: Yes.

1.0

1	MISS SCOTT: You are using Federal
$_2$	funds for the participation?
3	MR. DOERSCHUK: Yes, indeed, just for
ŀ	start-up, Miss Scott.
5	MISS SCOTT: Yes. All right, tell me
6	about it.
7	MR. DOERSCHUK: It is just for start-
ï	up course, however, not for continuing support of it.
G	In other words, we used a hunk of Federal money
10) -	LSCA in order for us to make it possible for about
11	21 of our district library centers to hook up with the
12	OCLC data base in Columbia for a year and a half.
1.)	After that they are on their own.
11	Then we also used some Federal money
15	in order to provide terminals only for a group of
16	academic libraries, because we see the possibilities
17 - 18	for the location of specific materials and the
	exchange of them being vastly enhanced, and there are
1	a number of both academic and public libraries
20	participating in the data base and being able to
-1	determine by calling up on the stream what other
1	libraries have a particular book they need.
· · · · · · · · · · · · · · · · · · ·	DR. BURKHARDT: We've got time for one
25	short question and short answer.
	MP I WONED. Francis of the second because the

commission has had a study made by GSSF of Philadelphia and in which they called in conclusion for a balanced funding, Federal, State, the bulk of the funding coming from the state and local.

Could you comment on that?

As you know, they called for a balanced funding of 50% state, 30% local and 20% federal. Do you want to talk about the reality of that?

MR. DOERSCHUK: Yes. I think that's realistic.

Those master planning reports that I referred to, by the way, also suggest 50 percent state funding. They suggest that the state ought to match dollar for dollar every tax dollar put into public library services of Pennsylvania.

If you want to know how it is right now, state aid accounts for 18.6 percent of public library support in Pennsylvania, federal aid for 3.7 percent. I agree with the GSS report that 50 percent state would be good. I would like to see more federal than there is, but I believe that I share the views of our Secretary of Education who has told me repeatedly that he doesn't want to go out for increased state aid formulas for library programs for Pennsylvania without at the same time putting an

additional media on the local communities so that it will be encouraged to do that.

MR. LERNER: So there is some responsi-

MR. DOERSCHUK: Right.

DR. BURKHARDT: Well, thank you.

24 25 DR. BURKHARDT: Mayor Kenneth Gibson of the City of Newark was supposed to testify today and he was unavoidably detained. He has sent us some testimony in Roger McDonough. Did I understand that you have some sort of message to give, because if so we can make a little time for you now.

MR. McDONOUGH: Not an instructed delegate.

DR. BURKHARDT: I understand that.

MR. McDONOUGH: I just think that the

City of Newark is enormously fortunate to have
Kenneth Gibson mayor at this particular time. It
just happened that the Mayor gave a moving address
to the New Jersey Library Association when we met
in Newark just a year ago and his attitudes are
undoubtedly conditioned by the fact that as a young
boy, young man working his way through college he

spent every day in the room, reading room of the

Newark Public Library, and you don't have to sell him on the value of libraries. He made it the hard way.

And I have on my desk a letter to him emphasizing our commitment to metropolitan libraries. As I have told him, we are not turning our backs on the metropolitan libraries in New Jersey, because we believe we must build on strength and they must be maintained.

It is an interesting observation, Mr. Chairman, that was made by a former mayor of Newark, Mayor Carlin, when he told former Librarian Ned Bryant many years ago that he thought the City of Newark ought to operate the branches, and the County of Essex ought to operate the main library, and I think this sort of consideration should be kept in mind by members of the National Commission.

I know that urban library trustees council is interested in major legislation, and that they are not politically naive. They know how difficult that is going to be to get through the Congress as a special title in LSCA, or even as a separate bill, and so I think we should be exploring a division, perhaps, of funding responsibilities.

If it is true that over 50 percent of the revenues of the Newark Public Library is from other

than citizens of Newark, and this is undoubtedly true, they have kept statistics on this, then it, Newark, per se, deserves some kind of recompense of this splendid service it is rendering. We have tried to do our part by declaring Newark a regional metropolitan regional library center, and through various combinations of state and federal aid, and special projects and so on. We are providing approximately three quarters of a million dollars. Newark's annual budget is a little over two million, so it begins to be not insignificant. They should get more than that.

I really think that is all I have to say at this time, Mr. Chairman.

DR. BURKHARDT: Thanks very much.

MR. LORENZ: What is the County of Essex doing for Newark's public library funds?

MR. McDONOUGH: Pretending it isn't there.

I don't mean to be cynical, but let's face it. You know what happens around the country and what happens around the country is happening in Newark and its surrounding suburbs.

Nothing.

DR. BURKHARDT: Now, at 11:00 o'clock we passed that, but we set aside a period between

11:00 and 1:00 for public testimony, and people who had not sent testimony in advance, and we might start in on that. But I believe Mr. Penland is the first.

Mr. Penland did send in some testimony but I gather he wants to testify now instead of at 2:00, and I think we can accommodate him.

Mr. Penland, would you introduce your-self, please.

MR. PENLAND: My name is Pat Penland, the Library School, University of Pittsburgh.

able to appear before the Commission, first, and second, to be able to advance the time a little earlier than at 2:00 o'clock, for which you had scheduled it.

I have not appeared before a commission of this nature before and I am not quite sure how to handle myself. I understand that I am not to read the testimony which I did submit, but to respond to any inquiries that you might have. Is that the procedure, Mr. Chairman?

DR. BURKHARDT: Right. Unless you want to tell us a few things that you want to highlight in your testimony.

MR. PENLAND: Yes, I would.

11

15

1++

1:

1 %

11

25

DR. BURKHARDT: And then we can ask the questions.

MR. PENLAND: Okay.

I would like to point out one or two features of the testimony that I think is important.

page by page without reading it, I do believe that while the approach of the Commission and the draft report, the third draft report has done an outstanding job, I have some reservations in my mind that the rationale for library development in this nation needs really to be looked at and placed upon a broader base than the kind of rationale that is developed in the past in the communications elite.

I feel that we need a rationale of why people process information in the society as a whole, and not the sort of geography reading kind of approach which we are still kind of stuck with, that deals with the who, what and where of information distribution kind of thing in getting at the thy information is processed in the minds of the information disadvantaged and the communications underprivileged.

Now by this I don't mean any particular segment of population, but I mean the population as a whole does not use the libraries as a primary source

of information. And I feel that studies need to be initiated into the why of information processing for the average American.

3

1

\_

f;

7

•

.

10

11

12

1:

1 1

15

] i ,

17

1+1

11

. .;

<u>.</u> 1

25

Now I think we have a pattern of the model that has been developed by our information science colleagues into the why of information processing, and this is revealed in the numerous summaries of user studies that have been done in the past, but I feel these user studies, as Mr. Mendelson indicated, and which other people have indicated, user studies have not really addressed the question of why.

Now what I am asking or just proposing to the commission is that the commission consider initiating some studies into the why of information processing by the average citizen, based upon the kinds of sampling techniques that are readily available in the social science done by public opinion surveys and so forth.

Now there have been some studies that

I think we could get guidelines from, at least we
are working in that area, to utilize the guidelines
that have been developed in, say, the adult education,
our colleagues in the adult education association.

I am thinking specifically of Alan Tuss in his survey

and research that has been done over a period of years in the Puritan publication called "The Adult Learning Project", and it got into why people use information for continuing learning.

worked on his side, and the University of Chicago a number of years ago did a little study. Now I think this provides us with a model by which at least creates an awareness in the minds of the cross section of the American population that librarians and information scientists and media specialists are indeed interested in the population as a whole and not just the communications elite. I feel we have this legacy that we have been living under ever since the public library inquiry of 1948 and 150, and particularly the general report of the public library inquiry that reckoned that the libraries for the next twenty gears focus or spend their resources upon the communications elite.

So, Mr. Chairman, that sort of gives the general tone and thrust that I wanted to call to the Commission's attention. I just wanted to make sure that somebody spoke for the masses of people in America, and not in the sense of geography and reading studies.

17

1"

11

1 \_

11

15

Ĭ i

i.

15

1 . .

11

4.5

DR. BURKHARDT: I imagine you also included in this position of yours the question of why the potential users who aren't users now, who don't come to the libraries, don't use the sources that are available. How do we go about finding out why they don't?

MR. PENLAND: Mr. Chairman, I would rather tend to view myself as being an optimist; I like to look at why people use information regardless of where they get it from, and to study these patterns and processes that people do use information, and then finding out where libraries might fit into it.

It is my intuitive guess that the librarians are not tooled up to do this, and this may be the reason why people don't use the libraries. I can only speculate on this. I think this would come out as a result if studies were initiated into this phenomenon, but we know little if anything about the phenomenon of the information used in the lives of people as they go about their daily tasks.

My reaction then is that I think from a positive approach to the problem the negative approach will, I think, reveal itself.

DR. BURKHARDT: Carlos, you have a question.

MR. CUADRA: Yes.

 $^{24}$ 

25

Dr. Penland, are you familiar with the Denver conference? Have you had an opportunity to see the report of the conference on the user needs identification?

DR. PENLAND: I have only looked at this in a general and brief way.

MR. CUADRA: From your comments I would think that might be worth a review.

We did attempt to look at some of the kinds of things that you are talking about and the terms of the priorities for services, the priorities were definitely in the direction of information, life type information from the masses as opposed to what you prefer using, "communications elite." If you do have an opportunity to look at it more closely I am sure the Commission would welcome any comments you have.

DR. PENLAND: May I make a comment right now, Mr. Cuadra?

MR. CUADRA: Yes.

DR. PENLAND: I do believe there is some direction in the profession now towards this concern. I think the fact of the continuing learning project developed for public libraries in 1971, and

ERIC

Full Text Provided by ERIC

evidence of the Boston Public Library more recently getting into this, and NEH funding kind of thing,

I think the direction is here.

My point is that the American people need to know about this in the sense of the sampling studies across the board of the American population.

It is one thing to do these studies among ourselves and file them away some place and say this was a wonderful study, but it is another thing to give evidence that the library profession, which I think this Commission does represent, is going to the people, in other words, and as a result of going to the people, pull together some generalizations or recommendations as a result of that kind of study.

I admit it's a process, but the process is awfully important.

MR. CUADRA: Let me ask you the other half of the question. We have been taking testimony and talking to perhaps thousands of people for the last three or four years, including people who purport to represent the needs of various kinds of constituencies. We haven't been mythologically supersophisticated and tidy, but I wonder what you think we might learn, what kind of content you think we

111

11

12

13

11

15

24

2.7

might learn that we have not already heard, what kind of things might we be discovering that might supply us an effective way in which we lay out a national program?

DR. PENLAND: I think what might surprise you, Mr. Cuadra, is the fact that most people, and this again is an intuitive guess, process information in a rather sophisticated way, and I suppose we are responsible for this as a redirection of the profession, a re-training of the profession, this dentification for continuing education where the librarian becomes a consultant for learning and a consultant for change, as defined by the client and defined by the community in which the client lives, planned social change based upon the sense of direction of those clients in that community and I think the surpriseful thing, and I use that in quotes, in the sense that probably librarians are aware of this but they don't have a great deal of confidence in the fact that this is what really the public wants, and the librarian becomes a change agent and an agent for growth and development of the individuals. I think this would be the surpriseful thing.

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: One of the things we have

1:

11

...,

learned over the last few years is that people don't know what they need to know, no question about that. But we have done, and many people have done, user studies, non-user studies, and so on, and I am really trying to zero in on what you have in mind, which is more broadly based in the sociological aspect, or is it possible -- Mr. Meadow said this morning when he was having trouble with his credit cards, and he looked upon that as an information function, and the public looks on that as a public relations and credit function.

How do you change this? I really want to zero in on more of what you really have in mind, which goes beyond what we have done so far.

DR. PENLAND: To go beyond what we have done so far, it seems to me we need to study the patterns in which people use this information in their own lives, intraperson as well as interpersonal and I think we know very little about this in an organized way, which I think these studies would help to reveal.

Now I am not sure that I entirely agree with you, Mr. Lerner, when you say that people don't know what it is. My intuitive guess is from the little work I have done in this area that they do

11

12

13

11

15

11,

1.7

1 ~

1 1

- î

11

indeed know what it is they want, but to articulate this and to come up with retrieval patterns more specifically that relate to this they need help.

They need help in articulation of their concern and they need help in applying the information to those

concerns.

G

10

11

12

13

11

i.i

16

1.

114

25

Now I think that is the thrust of the burden of this approach.

DR. BURKHARDT: One more question.

MR. VELDE: I just wondered in reading part of this, you mentioned that in each passing year the majority of the American people have less access assistance to which their rising educational level and their increased concern for the quality of learning should entitle them.

DR. PENLAND: Right.

MR. VELDE: I feel that they have more.

DR. PENIAND: Mr. Velde, in terms of a one to one basis, in terms of exposure, you are exactly right, but they have little in the sense of a consultant help in utilizing that information and making it pertinent and responsive to their real life concerns and interests.

I agree with you that on a one to one basis that probably there have been more information

distribution, more information retrievals done, but I don't think the usefulness has been made as evident to the average citizen as it needs to be made.

MR. VELDE: One other statement that I can just suggest.

You worry me a little bit when you talk about help people work for planned social change.

I am not quite sure just how far or what we are talking about there.

DR. PENLAND: I think this has to be defined by the community itself, by the neighborhood and by the people. I don't think the profession can determine what planned social change is for any nation or any individual, but I think the professional cohort, the professional librarians need to be responsive to such functions as advocacy and ombudsmanship, these kinds of things, as these are spelled out in terms of professional responsibility and specifically, Mr. Velde, I think that the fiasco about a code of ethics has been left over since 1938, and we still have had no code of ethics for this profession, is an indictment on the profession.

This is the area that seems to me we need to address ourselves to. We need progress.

DR. BURKHARDT: Dr. Penland, thank you

1"

11

DR. BURKHARDT: Now, we have got five more people on the public session, and if each of them confines his remarks to ten minutes, the Commission will be able to get some lunch. If you don't, we will just have to get through it as we can.

I would like to call on Mr. Marvin Scilken, from the Orange Public Library, Orange, New Jersey.

MR. SCILKEN: I will try to be very brief. DR. BURKHARDT: Thank you.

MR. SCILKEN: I happen to be a neighbor of Newark, so we are familiar with the problems of Newark.

However, we in Orange have a problem. We have one of the highest tax rates in the State of New Jersey, if not the highest. It is higher than Newark's tax rate, so we have to fight for every dollar we get, and we are fighting every other city service, because there is not much money to spread around, and our concerns are that we get enough money to continue our programs.

25

When I hear the previous speaker it makes me a little leary. I don't think the taxpayers are going to pay me to change the social order, and I wonder if that is a viable sort of program, unless we get funds from the Federal Government.

DR. BURKHARDT: Mr. Scilken, when you say we have the highest taxes ...

MR. SCILKEN: I mean Orange, New Jersey.

DR. BURKHARDT: Orange, New Jersey.

MR. SCILKEN: One of the highest tax

DR. BURKHARDT: Property taxes?

MR. SCILKEN: Right.

On the State terms of equalized valuation basis, it is over 776, and I believe that is higher than Newark.

what is what, but it is a sore point with our city fathers, that much state aid of one kind or another goes to the larger cities at the expense of the smaller cities, which have the same types of problems, and that is another point in the New Jersey plan, which in our area has had the effect of Hood Robin approach. It robs from the poor and gives to the rich, in that the library which is the richest

serves the richest town, and it doesn't tax itself.
sufficiently to meet the demands of its people, and
it shifts that burden of meeti, these demands to the
rest of us, which we meet through the New Jersey
plans. So the state is building up the cities, and
I have an article on that if you care to read it.

It is not true of all rich towns; it is just a few, and I hope that when you do a national plan you will take this into consideration that it should not be used to bail out people who can afford to tax themselves for library services, and charge their services to their neighbors.

I hope that you will work out a national plan and encourage the states in their plans to encourage side to side borrowing, borrowing from one's neighbor, in line of the numerical register approach used in Louisiana and Texas, and first, I am sorry to say, it was mentioned back in '48 by Mr. Deway. We were a long time trying to pick up this approach. It's a very inexpensive approach, much cheaper than most other types of union catalogs, and it should be examined by you, I believe.

And the reason we have difficulty getting support is not very hard to see. Milton Byam

ERIC

1+1

1 1

12

11

17

111

17

15

111

21

spoke about it this morning, schools denigrate the value of print. Very few people read books in this country.

Even if we had a good PR campaign, it wouldn't do us a hell of a lot of good because it didn't touch the lives of most people. I mean, they don't read books. And if we are telling them they should read books, we turn off more people. It would probably do more harm than good.

It seems, in my observation, that the schools do so well monetarily because the further you get from the taxpayers the easier it is to get the dollars and they are sort of insulated.

I have some random thoughts that I wrote down here as the other people were speaking. I certainly think you are a brave lot to sit here through three years of this or two years of this. I am sort of -- and at this morning's session. We should know what we are talking about when we speak about a network. It is a very small part of our operations. We circulated last year, 1974, 140,000 adult items. Of this we borrowed 750 from outside our library. Many of these books we own ourselves. Half of the interlibrary loans were for college students who might have gotten them back at their

colleges, if the colleges were geared up to meet those needs.

Well, I could go on --

DR. BURKHARDT: Perhaps we could turn to the question.

MR. SCILKEN: I have one other point.

Another reason, a big point with me is why people don't use us; we make life difficult for people who want to use us. I refer to the catalog cards which are written in code, only breakable by librarians and a few elite people in fair numbers, and we refuse to print them in English, and from there to ISBBM it is going to get worse.

DR. BURKHARDT: Mr. Casey.

MR. CASEY: I halieve you made the point that Orange has the highest tax rate in New Jersey, or one of the highest?

MR. SCILKEN: One of the highest.

No, it does not.

MR. CASEY: Okay. Now, how do you rate in terms of local per capita support for libraries?

Does that high tax rate translate into

the highest local support for libraries or not?

MR. SCILKEN:

We have an expenditure of \$9.00 per capita, and receive \$6.00 from the City. We happen

25

1 \_

11

1.4.

to be endowed. We get state aid, thanks to Roger, and fines and fees and various other things make up the difference, so we get \$6.00. We are below average in the county. Our state per capita income is \$9,000, our family income, as compared to the City, which is three times that, twice that.

MRS. MOORE: Since you seem to be sort of psychologically inclined, I wanted to share something with you and then ask you a question.

I had a group come to see me recently from the Mental Health Association, and somehow they had gotten a copy of this document and they chastised me rather severely because they said we were giving all of our attention to information and very little to the important point of doing more to encourage people to read, because from their point of view it would solve many of the mental health problems, and they thought that we should mount a campaign to encourage people to read like Robert Frost or whatever this was would be a healing matter for the nation.

You have mentioned the fact that very few people are reading books.

Do you think this Commission has any responsibility in this field, as the Mental Health

10

11

12

11

11

.11

Association felt we did?

10

1.

11

MR. SCILKEN: I hope so. I would like to make a pitch for a stand that is based on not how. many books people acquire, but how many books a reader can find that he wants when he comes into the library, and I have suggested that in my written report to which I have submitted, which no doubt you will get, and I am a little leary of the stand that merely counts books.

I think the most important things are books or whatever have you; the most important thing is what happens. Is the possible reader satisfied when he comes into the library; does he find what he wants?

MR. LERNER: How do you measure that SQ, you know, satisfaction quotient?

MR. SCILKEN: You ask them.

Rutgers came down and did a study, one day study, statistically invalid, on 431 people who used our library for Monday, a 12 hour day, and they asked that question: Did you find what you wanted?

And 75 to 80 percent said they did. I think it is pretty good. But I would like to see us measure all our standards in those terms.

Does the college supply the students with

the books that they want? I understand from colleges it is 40 percent, and I would like to know-- I mean, I fell colleges in our areas, some have them. I am sure I can say this, but the fact is I don't know how students react, but we see a lot of college students who are trying to use our networks to borrow books that the colleges of course should have, and it costs the state money. That college not having that book in a usable form for the student costs us all a fortune, and then by the time we get it -- we are not too fast sometimes, especially for text-books. He doesn't want it, so it is down the drain.

COL. AINES: I would like to explore an angular vision that you expressed a moment ago, and I think you said that the schools have denigrated the value of print, or words to that effect.

MR. MOORE: Colonel Aines.

MR. SCILKEN: I think Milton Byam said that this morning. I don't want to be saddled with that.

COL. AINES: Thank you. But I assume your quotation indicates that you have some sympathy for that view, which may be an accurate observation, by the way. I was always under the impression that television had more to do with it than perhaps schools

111

encouraging a diversion from print. They have moved towards audio visual, true, but is this because of the type which causes students, the kind of world that now exists, or is this a deliberate attempt on the part of the schools to move away from the print as medium?

MR. SCILKEN: I can't say why. I know that they have spent a lot of money on AV materials. If you ask many teachers they will say AV is not too good, the type of materials that they get, because the market is too small to have really good films and so forth, but when we serve children who are from the schools they look around for cassettes and the film strips, and what have you, and we can't afford very many of those because a book, though expensive as it is, is about one-tenth of the cost of a similarity. In fact, it might be one-hundredth of the cost of some one item that is just out of The schools seem to have the money to our reach. afford these things where we don't, so when a kid comes in from school looking for the same type of things that he found in his school library, immediately we just don't rate. There is a huge gap on the type of things that we have and he has in his school.

MRS. MOORE: We thank you very much, Mr.

ERIC"

141

1 1

12

1;

11

1,

10

1

21

Scilken, for coming in and giving us some interesting testimony.

MRS. MOORE: Our next witness is Mr. Clyde Evans from the State University of New York.

You have heard how the other witnesses have reacted. I have seen you back there in the audience, so we don't suppose there is any need for any special instructions, so we will be glad to hear from you for whatever statements you would like to make and to respond to questions.

MR. EVANS: My name is not Clyde. It is Glen Evans. I am Director of Library Services, State University of New York.

I should said straightaway that what testimony I am offering to the Commission is a personal view and doesn't necessarily represent statements of the State University. I hope you will accept it in that term.

I also apologize that I haven't prepared written testimony at all. It is my expectation that I will do so, and I will submit a written statement that will be supportive of the notes taken here.

I welcome the report very much. It has the virtue of all good reports. There are eight

ERIC\*

111

11

12

] ‡

41

11

statements in it that will never act to stop anybody from doing anything. The world will keep on going and the progress that has been made and is being made in developing the network over the last two years will seem quite innovative.

The times have changed a lot and I feel that I want to draw the Commission's attention to what I think is quite a drastic change the year in which the Commission is performing this work, the change which has taken place within the last two years.

I was very taken with an expression that Col. Aines used this morning when he used the phrase "re-focus on survival." The question of whether or not the Commission's statement should be re-written.

My suggestion is that you should not re-write the proposal in terms of changing it. Your proposals as they stand are perfectly appropriate where the one is extending or contending with the economy.

One of the papers that I have had the pleasure of reading was the Wesstat report. The Wesstat report drew very heavily and drew attention to the existing resources that were available to the Commission and to the library network.

I am somewhat disappointed that in the

111

11

1;

11

15

1 ,

1.

j ~,

translation from the Wesstat report to the text of the draft, the final draft, I take it that now is the final draft, that important segment of the Wesstat report seems to be diminished somewhat in importance, and it is beginning to look a little more like an overlay of something or what is already happening. The Commission is already aware of what is happening in the development of the OCLC and that in New York State they have provided no network to develop graphic networks. There is no need to pursue those except to say that the technology is changing yet again.

ment of the patent license granted to a subsidiary of writers. This report was in the New York Times of April 5, of this year, in which at last cable television and ?freeze frame television and digital computer data base were linked together through the same network. It seems to me that will have a profound impact on the way the library technology will develop in the next few years and I hope as the Commission continues its work it will continue to be aware of that particular development.

Now the reason I draw your attention to that is that technology can go similarly towards

solving one segment of the problem that the library community is facing, but only those problems which are concerned with cost efficiency. If we can reduce the cost of processing material we can improve the efficiency of operations. That says nothing towards the effectiveness of the operation.

Let me give you an example. If you can reduce the cost of cataloging a book by a dollar, and you are cataloging 10,000 books a year, you have saved yourself \$10,000. If it so happens these \$10,000 books are books you don't necessarily want, you will have only a 5 or 6 percent utilization.

So that I understand and indeed I am presently working with heavy emphasis on the use of technology in the development of the library services and library information services that become self limiting at some point.

Do we put an end to the progress that can be made into the efficiency and on the savings that can be gained?

Let's go back. I am sorry, I should have added, sort of referred to Col. Aines statement that I take the view we are not talking about an increase in money. I think we are talking about a reallocation of existing resources, and that is the viewpoint that

111

11

1.

I present to this commission.

1

\$

١

h

111

11

12

11

11

Now let me look at the question of cost effectiveness, which is totally different again altogether. It is clear evidence, I think, that the kinds of central periodical resources that Dr. DeGennaroa and Dr. Kennedy addressed in their own presentations this morning, it is clear evidence that such a service can be both cost efficient and cost effective, and so let me underline and underscore what I see as a very vital task that the Commission could undertake.

However, that development of a serious resource or any natural resource in itself can't be self-sufficient either. It, too, must be supported with the technology, and it may well be that technology of the document transmission and in fact transmission is an appropriate one to think about.

Some quite serious thought is devoted to the question of document travel versus communication substitutability.

At what point is it not necessary for the human being to get into a car and drive into a city to perform the job of work? At some point it may be cheaper and easier for the individual working at home or away from the city to perform equally by the use of television, digital computing transmission and so on and so on. I want you to keep that in your minds.

In looking at cost effectiveness, I
think we have to look much more closely at role
or roles of libraries, and, unfortunately I understand
the position the Commission finds itself in. All
libraries tend to be equal and tend to be treated
equal and that probably is a fact of life that
It would have to be treated as equal in the recommendations that the Commission has made. Unfortunately,
life isn't like that. It may be that what is necessary
is a reallocation of resources to beef up and support
those connections which are unique and/or national
resources.

It was very interesting in taking in the remarks of the director from the University of Delaware this morning, who pointed out the importance of his chemical engineering collection to the community on the one hand, and maybe changing the entire mode of operation of small libraries on the other.

I was present at a conference in Chicago.

Al was there and the previous speaker-witness, Mr.

Scilken gave a paper there, and I want to underline

11+

11

12

1 1

15

1.

and support what he said about standards. It may well be that one of the modes of reallocation -- I really present this as a speculation -- is that college libraries and some libraries will grow small, they will become usable libraries and will have small volume collections, and they will stay small and monies will be reallocated, beefing up the large important collections, like the public library, and indeed, in special cases, like to give an example, the chemical engineering collection of Delaware.

This means, however, another look at the standards and the way standards are derived, and I just want to say that I have a lot of sympathy for the suggestion that Scilken made. It may well be that standards should be refined in terms of the goal of the library and the use to which the collection is put, and not the building of heavy collections or anything to that effect.

I understand how difficult that is, and
I understand that we don't necessarily have the
ability now to identify what these co-collections are,
how they should be found, but again that is not
the work in progress, and I trust the Commission will
keep abreast of that work as it continues deliberations.

Finally, I just want to point out two

specific things: One that I had written personally to Mr. Trezza about, and one was a professional question that came from Dr. Burkhardt, who questioned the role of the state. I understand the importance that this Commission has to place on the state's role, and I understand the prosecution recordance of that, and I really don't have any problem about federal funds flowing into a state agency, and I don't have any problem about the appropriate agency for that.

I do have, however, a concern that the state agency may not be the only arbiter of disbursement of the funds. Not all state agencies are equal. Some of them are better, some of them are worse, some of them are fast, some are slow, and I would hope that once it is perfectly proper and necessary for a state agency to have maintained their coordination role, they should not necessarily, I think, in my view, be the arbiter of the disbursement of funds. They should have an opinion and the disbursement responsibility should be placed elsewhere.

Finally, there is a small question which relates to a minor concern that I have, and that is the relationship between the libraries and the

! 1

1,

information industry segment of the concerned. In fact, it is extremely difficult for the library which is providing services, more particularly if they are of the computing or technological nature, to offer services to a full profit agency. It's a very real concern that one may lose one's IRS not for profit tax status if one seems to be providing service to a full profit agency.

I am not that well versed with the income tax laws, and all I do is pay, but I do suggest that the Commission may want to consider this as a possible hindrance in the closer integration and necessary closer integration of information and people with the librarians.

DR. BURKHARDT: Thank you.

Any question?

May I admonish the commissioners that if they want to eat lunch they have got to make their questions few and short.

MR. EVANS: I will answer yes or no. (Laughter)

DR. BURKHARDT: Bud.

MR. VELDE: You mentioned as far as the disbursal of funds, you don't feel that the state librarians should have the last word. You mentioned

11

it should be done elsewhere.

1

2

3

1

111

11

12

13

11

1.

\_ i

2.

Where are some of the elsewhere places?

MR. EVANS: I would expect it would back up to the federal level.

MR. VELDE: Back up to federal, not some other groups in the state.

MR. EVANS: Yes.

I understand the difficulty of that.

MR. LERNER: Should some of those funds come directly to other institutions, by-passing the state library?

MR. EVANS: I wouldn't have any objection to that fact. Do you have any?

DR. BURKHARDT: It is really a question, though, what kind of function the state library agency does serve so far as the disbursement of funds.

When you look at the various fiscal agencies in existence, the state libraries certainly are candidates for some kind of funds.

MR. EVANS: Yes. Let me try and clarify and maybe repeat what I said. I don't have any objection to funds being channeled through the state librariy agencies; I think that is perfectly appropriate and they have a valid and vital coordinating role. There may well be occasions when

ERIC

people will probably find very valid appeals for funds that may not necessarily receive the 100 percent support of the state agency, and I would like to see at least the right of appeal.

DR. BURKHARDT: They shouldn't be the exclusive --

MR. EVANS: The exclusive arbiter, yes.

I have no concern about them being the channel. I am concerned about their being the exclusive arbiter.

MR. LERNER: What do you think of a state library agency with the State Library Commission broadly representative of the people of the state?

MR.EVANS: I don't take any objection to that providing it is a Commission that is not a mere advisory --

MR. LERNER: Yes.

It would be a directing commission.

MR. EVANS: I wouldn't have any problem with that.

DR. BURKHARDT: Mr. Becker.

MR. BECKER: Glen, you spoke of efficient centralized service, and I think you mentioned OCLC as an example.

1

10

11

12

11

\_1

In your kind of picture of the future as implied by the national program, do you see one such activity as being required to satisfy the libraries of the country, or several?

\_11

MR. EVANS: I think on the levels of appropriateness, I think a lot of it depends on what the traffic is. It may be that one center is enough to handle cataloging and serious cataloging and serious control. I would doubt if one center is enough to handle, say, circulations on a university-wide basis, which is one of my concerns. So I think a lot of it depends on the volume of activity. I don't see any reason why there should be more than one center, providing the center is offering good and valuable service.

Let me offer two more points that I should have made in my address in relation to that statement.

At some point the Commission might want to address itself in its work to the fact that it is now possible to demonstrate clear cost efficiency savings through the use of systems like OCLC. We now have enough experience and libraries are going to have enough experience that we can point not to the kind of cost analysis questions that

you asked an earlier witness, but to the fact that

it is now possible to demonstrate clear cost savings. I hope that the Commission will attempt to do some of that evidence in support of this. It doesn't have to be an open dollar with no return.

The second thing I want to point out is to remind you that Mr. Trezza very kindly came to a meeting of the Council library headquarters in Chicago a few weeks ago and after that meeting I just want to reinforce publicly what we said then.

a group of network directors who are actively engaged in the development of library networks. We are now talking about an OCLC system with a thousand terminals by Christmas and fifteen hundred by the end of the year. That group of people have done the job in the sense that they have gone out and beaten the bushes and gotten the libraries into the system, librarians changed. There is a corpus of experience and a corpus of expertise which I hope this Commission will feel can be utilized.

DR. BURKHARDT: Thank you, Mr. Evans.

DR. BURKHARDT: We must move on to the next witness.

Miss Gallivan, Mercer County Library, Trenton, New Jersey.

MISS GALLIVAN: I am Mary Gallivan;

I am the assistant director of Mercer County Library,
and I will read the statement of the director. I
should say that Mercer County Library serves a
population of about 90,000, including the townships
surrounding Trenton, New Jersey.

And referring to Mr. McDonough's statement, we are the one library that welcomes state ald.

DR. BURKHARDT: How long is your testimony, Miss Gallivan?

MISS CALLIVAN: Very short, sir.

DR. BURKHARDT: All right.

MISS GALLIVAN: "Public Libraries have existed for well over a hundred years. Yet, the same libraries have not achieved the potential of impact the founders believed they would. With this dubious record it is no wonder we have present confusion about where the federal money would do the most good.

"We believe innovative programing in

11)

1 \_

public libraries is vital to attract patrons to libraries because it serves a means for introducing the many information and recreation services which are available to the taxpayer.

My first proposal for the effective use of federal money would be to establish a creativity grant of \$1,000 to every library serving populations of 10,000 to 49,000, and \$1,500 to every library serving populations of 50,000 to 100,000. This money would be used to pay for programs fitted to the library's community. The receipient library would be required to report on how the money was spent and the data thus received would be published so that an idea volume could be developed.

"Secondly, I would like to see some of the money used to develop a core of library program specialists. These people would have the responsibility to develop programs of interest to the library community, they would be trained in skills of communicating human psychology and business merchandising. A free library serving a population of 50,000 or more would be requested to have one on the staff. Under this proposal money would go to library schools to alter their curriculum support to accomplish these goals.

21

27

† 1

1.

Convention systems and an arrange

"Thus, I would like to see a federal salary guarantee whereby a national salary level for librarians would be established and a federal subsidy making of the difference between local hiring rates and the national average rate be implemented. Such action would help libraries in the cities and in the rural areas attract and hold top quality library school graduates.

"In conclusion, I do remind this body that information is only one part of what libraries are responsible for."

DR. BURKHARDT: Miss Gallivan, are you prepared to answer questions?

MISS GALLIVAN: I can attempt to do so. DR. BURKHARDT: Any questions.

MR. TREZZA: On the salary guarantee, when you are talking about attracting them to the small communities, one of the problems we had in Illinois, for example, where we were willing to do some of the support to do that, we couldn't get any librarians out of the schools. They didn't want to go to work in the hinterlands, out in the boondocks, as they would say.

In other words, our problem, unfortunately, is like the farmer. We can't get people who will

work in the rural areas no matter what you pay them. That's the real problem.

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: What kind of cooperation does the county library have with the City of Trenton? Is there a reciprocal agreement?

MISS GALLIVAN: Trenton is an area library so we have interlibrary loans through Trenton.

MR. LERNER: No. My question is can the citizens of Trenton use your library?

MISS GALLIVAN: No, they can not.

MR. LERNER: Ah, that's fair. Think about that.

MISS GALLIVAN: I wish they could.

DR. BURKHARDT: Mr. Casey, your advocacy that there would be a guaranteed salary level at the local community guaranteed with the Federal Government, of course, is an exciting concept.

How far would you apply that? Would you say that the police officers in your community should be guaranteed a certain level of pay through the Federal Government because the prevention of crime, of course, is an important thing in your community and translate that, of course, all across all the municipal services.

MISS GALLIVAN:

MISS GALLIVAN: It has a wide repercussion.

DR. BURKHARDT: I think you better

answer directly that one. Any other questions?

If not, thank you very much.

11

DR. BURKHARDT: Our next witness is Mr.

Herbert S. White, ASIS:

MR. WHITE: I am Herbert White. I am the immediate past president of the American Societies for Information Science, but I am not making a statement here, an official statement on behalf of the society because the Joshua Smith, our executive director, testified at some length at your hearings in Denver. So I am really speaking to some extent as an individual.

as I am sure he has, the unique role that ASIS as a society can play in this, even though it is a small group, about 4,000 members. It represents a cross-section of librarians and information processors, and information distribution sources, and the for profit and the not for profit industries. So we are sort of a small cosmos of all the things we are talking about.

Speaking as an individual then I would " want to emphasize, perhaps at the risk of redundancy, something you have heard on previous testimony that there is a need to differentiate between the cost of information and the price at which information is furnished. The cost of information services, the cost of producing information and distributing information, is clearly going up in the society, as everything is going up, and information supplied, and information distributors, and information users are all in the same type financial constraing box. This is not particularly unusual in a sense, because we have the same kinds of problems certainly in oil and food and housing, and in every other economic sector of our community, but unlike those in our sector of the community we have never been realistically as a society been willing or able to come to grips with the increasing cost of this, and addressing myself to some of the questions which were raised in regard to earlier testimony, it is probably because we have never been able to convince our citizens of the crucial needs of information and library services as contrasted to police protection and sewers and garbage collection.

I think to some extent that is because we

have in fact hidden behind the use of the word "free", and I think to some extent the connotation of the word "free" in the minds of our citizenry is if it is free it can't really be worth very much. And I say this in the full knowledge of the fact that I am speaking in the city of the Free Library of Philadelphia.

Much of the testimony that you have heard this morning has addressed itself to some of the inequities within the library situations themselves: the Newark Public Library forced to serve residence of Essex County and not being properly reimbursed; Orange County serving college students and not getting properly reimbursed for this; the University of Delaware Library acting as the central reference and interlibrary source for the entire State.

And, perhaps, one way to address these internal squabbles, it seems to me, would be to look at some ability to provide some funds and therefore some voting power in the way he spends those fur. is to the ultimate user of information and on a need basis and something the same way in which we provide funds rather than food on a need basis to the people who need to eat, and let them vote then with the way in which they utilize these funds, which information supplier, including which library, they wish to

liget this information from.

This is a rather involved concept. I haven't thought it out in any great detail, but I think it is worthy of thought.

The final point then, and I am sure you can surmise this from what I have said before, I am not terribly impressed with the concept of total national systems in which the government becomes the activity in terms of the centralized activity, in terms of the supply function. I think there is no evidence in my judgment that such large, grandiose government civilized functions work effectively, that they work efficiently, and very, very ultimately they stop being our servants and instead of doing what we want they in fact start telling us what it is we want. And I think I will stop with that, recognizing your time constraints.

DR. BURKHARDT: All right.

Mr. Becker, do you have a question?

MR. BECKER: No, I don't.

DR. BURKHARDT: Mr. Casey?

MR. CASEY: Sir, are you advocating that libraries should charge for some of their services, in other words?

MR. WHITE: I think that we must come

to grips realistically with the fact that libraries must be in some manner reimbursed for the cost of what it is the do, and I think one approach is, of course, across the board subsidy funding, but I think there are problems with this.

One other approach is to make it possible for the users to have the resources, recognizing very clearly that we cannot discriminate against the user because he is poor and therefore refuse him service but nevertheless to make it possible for the user to come in and acquire the services which he wants on a regular transaction basis.

DR. BURKHARDT: Andy.

col. AINES: You recognize the point of view that you expressed here has been mentioned by Knox, mentioned by Golf and a number of other people, and there is a germ of thought there, it is true that it has to grow, particularly when funds become short and the search for ultimate ways of funding become quite evident to all.

The difficulty we have is that there have been no recommendations on where one begins, how one adjudicates the differences.

I wonder if you would care to give us some perception that you see where we might be able

1 1

to start on that approach.

MR. WHITE: Well, I think I am sure I can't give you a real total answer to your question but I think we have got to begin this approach by the recognition that in fact, as I indicated, we are operating within one total environmental box involving the librarian and the information supplier in a total environment, and it seems to me that we lose sight of this, as we now talk about this and some of the legislation, either on the one hand forbidding systematic copying entirely, and on the other hand, you know, permitting systematic copying without any constraint whatsoever.

Because clearly, systematic copying and the ability to share resources is the way in which libraries need to go, and at the same time recognizing that there is an impact on the information producer.

I think we have as a society to stop being as divisive as we are between our private and public sectors, between our users and supporters, and for that matter within the library sector itself and look at it as the total national problem that it is.

COL. AINES: Well, if you have any glimmers of ideas that will permit us to move in an

orderly fashion in that direction that you feel is imperative, I sure would like to have some of them.

I am sure the commissioners would like to hear that too DR. BURKHARDT: Mr. Cuadra.

MR. CUADRA: There are some functions like national defense that all of us expect to be paid for by the federal government on a tax basis, because it is insane to think of the individual cities and counties, state and et cetera. There are some other kinds of functions that clearly we expect the user, the ultimate beneficiary, to pay for.

Can you think of any principles or philosophy guidelines to determine what information services, what library services, are so vital that they should be paid for through the tax system and what services should be paid for by the people who benefit directly from them?

MR. WHITE: I think that information service and library services, and the cost of these services are very much an integral part of many of the other things we do, but have never been accepted as such and I think it is important to determine this and to add it into the cost of the various things that we do in our life-style under the decisions that we make. It includes realistically the cost of providing

information, as I say, as a part of the cost of the totality of what in fact is done.

Now I would believe then that selfsufficiency funding and internal control of expenditure
of funds I think are essential. Again, recognizing
that the government's role here ought to be in terms
of a subsidy type of role as necessary and as
demonstrated is necessary, rather than simply as an
across the board granting of largess.

I am not sure I have directly addressed your question.

MR. CUADRA: Part of it.

DR. BURKHARDT: Well, Mr. White, I think we have to thank you and move on to the next witness.

DR. BURKHARDT: Finally, Miss Pennypacker.

Would you introduce yourself and say
where you are from.

MISS PENNYPACKER: I am Annabelle Pennypacker, Supervisor of the Library Services from the
Lenape Regional High School District in New Jersey,
the immediate past president of the New Jersey School
Media Association, and appointed member of the New
Jersey Library Resources Council.

10

11

1-

.By this identification clear it states that I am now a sophisticated information science user, and I also confess my subjectivity.

I am very much impressed by the fact that this commission is seriously trying to put together the crystal ball of smash truth. Each of us has a piece of it and claim to know the total. I think however my major concern as an unsophisticated librarian media information user continues to be that which I more or less pointed out in the testimony I submitted, that I am deeply concerned for the individuals. I am concerned that we not build our house on sand, that we try, as has been emphasized many times this morning, to emphasize the information, the educational needs to make our public aware of what the librarian media information services can do for them and help to make them avid for these services.

I feel in listening to the testimony so far somewhat more close to Mrs. Moore's national health persons than perhaps to Mr. Evans' people with their sophisticated MBO and PPBS type of cost efficiency and cost effectiveness, although heaven knows in New Jersey we have been under a court order for the past year to come up with a definition for

T and E, which closely affects library media services in our state.

I would suggest that possibly in response to a very recent question that when trying to allocate resources standards are to be considered and that a support program be directed towards those elements of the information media information science area that meets standards that have been nationally developed.

DR. BURKHARDT: Thank you.

Any question.

MRS. WU: Now you are suggesting that the National Commission should develop a set of national standards.

In what way do you think we can affect the school districts.

As I note, most of the school libraries are far from their state standards or far from ALA standards.

Do you think the national standards will encourage the school districts to bring their libraries up to standards?

MISS PENNYPACKER: I think this is a case of my failure to communicate accurately. I agree that the standards exist, beginning with ALA, AASL

1960 standards for school library programs, the .
recent up-dating to and including the school and
district programs for 1975 developed by AASL and AECT.

I do not think that the imposition of national standards on top of this would necessary do anything. I think these standards have been developed after consideration by professional and lay persons and are valid criteria. I think the national commission in directing funding could find those services which meets the standards and reimburse them accordingly, withholding, perhaps, the sanction of additional funding to those that are operating below standards, although I realize there is a real problem in this also.

I think the fact that schools, many elementary, do not meet even the basic standards, and is an indication of an area which needs further concern. I think very many secondary schools due to the secondary school evaluation program, have library media programs that have been brought up to a standard that is not reached by the elementary schools, lacking the added clout of the evaluation by the regional committee.

DR. BURKHARDT: Any other questions?
MISS SCOTT: You weren't here when

+ 1

i,

1 1

Milton Byam spoke earlier, but do you agree with his earlier premise that schools are tending to go to the A-V material more than to the printed word and encouraging their students in that direction?

I think that is what I understood by his remarks.

The schools themselves are taking the students away from the printed word and directing them to the audio-visual word.

MISS PENNYPACKET: We see in schools,
I believe, the needs of the user in whatever form it
is. If the youngster is not a reader to begin with
and he is a picture recognizer and interpreter, it
is not beneath us to try to meet that need and lead
him from that into a captioned picture, into
additional reading. I think the youngster's need
is the thing that directs us, although I must say I
cannot see any library that I have been acquained
with has left the printed word on the shelf.

DR. BURKHARDT: Thank you.

I would now like to call a recess for lunch with 35 minutes. We will be back here at 12:50 and we will start off with Mr. Carabello.

(Luncheon recess at 12:15 o'clock to 12:50 o'clock p.m.)

ı

DR. BURKHARDT: All right, are we ready? Mr. Carabello, would you introduce yourself and then proceed with your testimony?

MR. CARABELLO: Frank J. Carabello, and I am a former councilman and chairman of the local a library which is situated in the Borough of Yeadon.

It is a community of about 13,000 people. 9 It is adjacent to Southwest Philadelphia, sitting 11 between Highway 13 and Highway 1.

The story that I want to talk about actually is called The Yeadon Story. It has to do 14 with the experience that I personally had in libary 15 work as a result of federal aid, state aid, and the 16 vill of the people.

Back in 1965 our library was at that 18 time situated on the third floor of Borough Hall and anybody who had a heart condition wouldn't dare o try to go up those three flights of stairs to get p to the top floor to use the facilities.

At the best we could hold maybe seven r eight thousand books, and the prime users of the ibrary in those days were the children. They had ots of energy. They could climb the stairs with

1.3

2.5

no problem at all. As a result of it, I think

90 percent of the population in the borough of Yeadon
did not even know we had a library and therefore

Council at that time thought it would be a good idea
to relocate that library and because most politicians,
and we call ourselves "politicians" in small
boroughs, are a little bit chicken, you might say -
I used that in quotation marks -- we put it on a
ballot. We wanted the people to decide whether they
wanted to spend the money to relocate this library
and it was in the primary of 1965, and, of course,
just like all primaries 33 percent of the people
came out to vote.

And to give you some parliamentary, let's assume that 3,000 people came out to vote. Of the 3,000, 1,100 said yes, 1,000 said no, and the other 900 didn't even bother to say yes or no. So you can see that roughly one-ninth of the voting population in the Borough of Yeadon said yes, let's relocate the libarary.

And, of course, this could never have happened if we wouldn't have had rederal and state assistance, because that library cost roughly \$197,000, of which I percent of the money came from the borough itself. It is the only cultural building

that we have in the town of Yeadon.

l

:3

ŋ

1-1

1.3

We have promoted monthly displays of various collections and things of that sort to fire the imagination, especially of the youngsters. Every year we have had art exhibits, mostly produced by youngsters still going to school in order to demonstrate to the people in the area that we do have talented people going to school and they should be encouraged to continue with the natural talents that they have, and of course this is only possible if you have a suitable library with good lighting, attractive place to come in there and take a look and see these things.

We also had during one month where we invited the public to bring in anything of a cultural interest and so they were all displayed at one time. In fact, the library was too small. We had to use the facilities of the Girard Bank, which was only a short distance away, to promote that interest, to continue with it. We did one thing with the help of the Pennsylvania State Library. We located this library in one of the best residential areas that we have in the Borough of Yeadon. I mean, they aren't cheap homes. And when we built it the architectural design itself conformed with the rest of the homes

in that area. We have had a lot of favorable comments and many people come from a more affluent area and wonder how we did it, because they would like to create facilities which are better for their own community.

Politicians as a rule are afraid to spend money for things that the majority of the people don't understand, and when I say they don't understand, when we were thinking about building this library many people said to me, "I didn't know you were a book lover. What do you want to do this for? It is going to raise our taxes," it is going to do this, it is going to do that. Besides all the schools have libraries.

They always visualize that a library is only serving the children, the youth of the borough, and today that has changed quite a bit because we have many retired people in that horough and they are using the facilities.

Our adult circulation is maybe twice as great as the children's circulation, which speaks well for itself. The atmosphere in the place is very good.

I bring a story to you that it is very important in a small community where the only way

.21

.1

õ

11.

1.3

1-1

they can raise funds to support all of the services of the borough is through taxes. They don't have any large companies. We have a small industrial park which helps but nobody is donating thousands of dollars.

DR. BURKHARDT: You said that some of the opposition to your plans said all the schools have got libraries.

Is it true that they have?

MR. CARABELLO: Well, in the State of Pennsylvania most of our schools -- in fact, the Catholic school now has a small library which helps to serve the children with their homework. I think that is a mandatory situation in the State of Pennsylvania. I am not an authority on that, but I see Mr. Doerschuk is in the audience and maybe he can tell you.

DR. BURKHARDT: Right.

Any questions from the members of the Commission?

MR. CARABELLO: I just wanted to finish one thing which is very important.

In the past, small communities in which I lived had the interest of the people with specialized skills and those people were willing to

ERÎC

1.

...

1.1

run for office in order to maintain a smooth operation, a low-costing operation, and people who were either engineers or CPA's or they were anything that you would say it was necessary, a man who was vice-president of a large chain of banks was our finance director. Now these people gradually have either moved out and some of them have been very much discouraged and people who have replaced them have been what I call the run of the mill politicians, petty politicans, who are interested in petty politics and in power. They don't really have anything to contribute to what I call the great plans for the town, to improve the town. They don't think in the same category and as a result of that the library functions or services are put on the back burner.

17

18

19

20

21

22

23

21

25

We have a situation in our place where, though, everybody on the council are the same political family, the chairlady now of that particular library is not in good standing with the rest of them and therefore they see to it that she has to maintain her operating budget in line with the way it is set up and a lot of other things. This is a lot of rubbish which I don't like.

I am out of it now, but having spent

20

21

22

53

24 25 so many years in trying to create this beautiful thing I hate to see some small time politicans interfere, and the only thing that they fear is loss of money.

Now when a library receives several thousands of dollars year after year to operate the library, which is used to buy books and for labor, they are afraid to lose that. It is the only fear they have and, therefore, I would certainly say to you people that support for these libraries is very important, especially in small communities, because without it I think it would be a very hard thing to do.

Thank you.

DR: BURKHARDT: Any questions?

How big a library is it, actually?

MR. CARABELLO: It will hold at least 30,000 volumes. It is air conditioned, well lighted, carpeted, and it is stone and brick and plenty of light. I think it is about 50 by 60.

MRS. SCOTT: You mentioned that you have a growing community. Now, are senior citizens -- do you have any special programs for that constituency

MR. CARABELLO: Yes. We just got a new librarian. The other one was retired and she

has made appearances to the senior citizens who 1 are very well organized. They have an organization 2 that meets, I think, every other Wednesday for 3 lunch, and there are at least 150 men. They call 4 themselves the army. That is the Association of 5 Retired Men of Yeadon. That is why they call it the ARMY, and these people are tax conscious. mean, they have to watch their money and they, too, 9 realize that the maximum levy is three mills, and 9 we are getting very close to it now. We are up 10 to 2.95.

So that's another reason we wanted to continue receiving funds from the state and Federal Government. If anything, we hope that it is increased.

But she has gone to those meetings, taken books to them, she has opened the library at 10:00 o'clock in the morning three days a week to accommodate those men so they can come in and peace and quiet when the children aren't there, because they come in at 3:30. It is a little noisy and the modern librarian doesn't say SHH all the time. Today we feel they should be quiet but not silent.

Any other questions?

24-

MISS HOPPER: Well, I will introduce myself, if you don't mind, Dr. Burkhardt.

I am Jean Hopper, the former head of the Business Science Department of the Free Library as of January, 1974. I am also on the staff of the Gray Panthers. I am also serving on the advisory council on day care centers for the Philadelphia Corporation on Aging, which is a conduit agency for the use of the Older Americans Act money and Social Security money for the service to the aged.

I am here to answer any questions that you suggested in your letter.

Do you want me to describe the Gray Panther movement?

DR. BURKHARDT: Yes, tell us.

MISS HOPPER: The Gray Panthers is not an organization, it is a movement of the coalition of the old and young who are brought together by competence, sir, to be able to change society, to enable people to live to the fullest potential.

We are also very interested in being people to involve ourselves in the decision making process in every agency or every organization that actually affects us.

We do not feel because of our age, because

we are too young and too old, that we must be thrown out of the mainstream of life and politics, and therefore we make every effort to set up many movements, many coalitions that will enable us to perform these functions.

we are very interested in citizens monitoring movements, we are very interested in coalitions with other agencies in actually correcting transportation ills, we are very interested in creating better housing policies, we are interested in giving more options in taking care of older people other than nursing homes and any other institutionalized type of methods of relegating cld people to.

DR. BURKHARDT: Would you say that the present information resources now available to you are sufficient for you to really get the data you need for thse various programs?

MISS HOPPER: Let me put it first on the local level and then on the national level.

Since we are a national network we, through our national offices, receive a great deal of mail and calls for assistance but I will put this on a local level. On the local level it is true we have the IRAC, which is part of a health and welfare

1

council information retrieval system.

3

We also have SARA, which is part of the Philadelphia Corporation of Aging.

.

However, even if we have these two networks, we never feel that we have a conclusive solution to the problems that come in by telephone

7

to us.

Although we are not a service agency, we are continually bombarded by many calls for help from older people, from children of older people, and we find that we need one coordinated type of information retrieval system that will make the community work more efficiently and be able to do a much better job for the people who call in for help.

Right now, we do have these isolated and distress type of information systems but we would like something much more cohesive and we would know we would just be working through one network and not trying to call up three or four different systems for the one question.

Is that what you wanted to know?

DR. BURKHARDT: Yes.

MISS HOPPER: Now on the national level
I want to cite one particular project that we are

working in. We are working in a project on the inadequacies of long term care. Two of our staff received funds from the Presbyterian Church to make a study of nursing homes and other alternatives, of nursing homes.

Now in the study there were two elements that were very important that would have been very useful had we had these services. The one element which is very important is that the individual consumer and groups are truly asking how and where to get started on nursing home reform. We are trying to set up in different parts of the country citizen monitoring groups that will monitor nursing homes and boarding homes and will monitor any type of institution that takes care of the older people.

Now we do not have any type of a network on a national basis that will be able to pull out these various isolated groups that are working on this type of a reform and we do get calls constantly from government agencies all over the country, from state agencies asking us for that type of information.

Now another form of information we would need on a national level, what official governmental agencies, what non-official governmental agencies are working with nursing homes, any type of home, health

care, what are their present policies, what are they planning, what innovative ideas are they planning for.

This is the type of thing we would like to be able to pull in and be able to actually give a better service in trying to initiate nursing homes and alternative care reform.

MRS. MOORE: I think maybe your constituency might like to know that the law of this Commission requires that the interest of older citizens be considered, and that a person be on the Commission specifically to represent that group, and you may be happy or unhappy to know that I am that person. I am the only one that admits to be old enough.

MISS HOPPER: I think I have met you.

MRS. MOORE: And I thought you might
like to know that you have an advocate in this
commission.

MISS HOPPER: Thank you very much. DR. BURKHARDT: Mr. Casey.

MR. CASEY: I am inquiring specifically in reference to the Philadelphia Free Library.

You refer to the nursing home hearing agencies, health care transportation and so forth.

1 1

1.

1.

111

1

Some of the libraries have what they call community information centers, it is described in a number of different ways, or human resources centers, which indicates where a person can call if you need information on the subject you mentioned, or if you need one of the child care facilities in this community, or where can I get legal aid; I am an alcoholic, where can I get a clinic and so forth.

Now, does Philadelphia Free Library provide such a list of these human resources so that if one calls can you refer them to a legal aid society or something like that?

MISS HOPPER: To a limited degree.

I must say that we have made every the effort to try to act as a source of information but I don't think it's really developed enough to be as useful as I would care to see.

MR. CASEY: That's the Free Library.

MISS HOPPER: One thing we run into
in our questions at the local level is a geographic
approach.

Well, let me tell it. We get calls from the northeast, say, from either an older woman or a son of an older woman, who are asking for information and our help would be on a geographical

25

1 1

12

13

1 1

1.

or local level. We find great difficulty in answering that question on a local level. We have to have some sort of input to answer our questions.

MR. CASEY: Well, can you refer that person to the library to find out the information -- to the Philadelphia Free Library?

MISS HOPPER: But not the geographic level. That's pretty difficult. I have even called up the Health and Welfare Council which has IRAC, and they were unable to answer that question for me, too. I think it is a much better way for us to get information.

See, when a person is actually, say, horthwest, and he can't get here, transportation is a very, very serious problem with many people, so that we have to give this information on a very, very detailed geographic level if people are unable to get transportation, and also be able to participate in any sort of activity that is in his local area.

That has been my great problem.

DR. BURKHARDT: Any other questions?

One more question, please.

MRS. WU: Just a very minor question.

Does your State Department of Human Resources provide you with the materials that you

need, career materials?

1 ( )

12

11

27

MISS HOPPER: You mean materials, published materials?

MISS WU: Right.

MISS HOPPER: I am also the librarian of the Gray Panthers. That is how I got in on this, because of Elma Greese, who heads the nursing home project in Washington with Ralph Nader. We receive a great deal of materials from HEW and many of the agencies because of her relationship to Ralph Nader, but normally unless we ask for it we don't get it automatically.

If that is what you mean, we don't, no.

MISS SCOTT: What do you think

libraries can really do now for the senior citizens
that they are not doing in this locale, in Philadelphia?

What specifics do you have in mind?

MISS HOPPER: Now, let me put it this
way. Education is now becoming less of a formal
nature and more informal. I think libraries can
do much more in terms of getting older people, perhaps, to try to really study and develop different
careers.

Let me give you a very good example.

The other day, this man called up. He is very much concerned about his mother who is all alone up there in the fortheast, doesn't do anything, very lonely. Now this is a woman who should be doing something economically for herself, doing something very, very interesting that really is important to society and not just what I call a play-pen concept of going and doing something. I am against the play-pen concept with citizens. I want to tell you that. I believe they should be doing something that is socially valuable to society, whether it is paid or unpaid.

And I would actually like to see that woman take a course, some sort of a course in the library that would prepare her for some sort of clerical job, any sort of a job where she would actually participate in society itself, not participate in playing cards or things of that nature.

I think that we need a great deal. We need to stimulate us old people because I think if you don't stimulate people they will actually become senile, they will lose their interest, but I think you have to stimulate them in the sense they feel they really are doing something very, very

usefly.

1

111

11

1.

<u>:</u> ‡

25

The library has to take a role, active advisory role which seems to be not as neutral as it used to be, but to get them interested in seeing that they get involved in sitting on monitoring City Planning Commission, getting interested in participation in actual agencies.

This is the type of thing I would like to see, the actual doing of something of a non-neutral nature but putting a lot of meaning into these peoples lives, and not just having a play-pen and day-care center concept.

DR. BURKHARDT: Thank you, Miss Hopper. Thank you very much.

DR. BURKHARDT: Mr. Harrod.

I guess the Metroliner was not on time.

MR. HARROD: Yes, please excuse me.

It was on time but I had no breakfast and I couldn't convince the lady downstairs to expedite feeding me.

(Laughter)

DR. BURKHARDT: Well, it is no trouble at all, Mr. Harrod. You just go right on into your testimony.

i

1.1

.11

17

Introduce yourself first.

MR. HARROD: My name is George Harrod and I feel rather naked here. I am the deputy director of personnel for the D.C. Government. I was asked by Dr. Harvey Franklin to give my ideas. He is the director of libraries for this group. I sent a paper up and I will be very brief.

I know that you are --

DR. BURKHARDT: We have read your paper, Mr. Harrod, so you can just hit the highlights and then we will have time to question you on that.

MR. HARROD: Okay, fine.

I think that some of the things this body could do would be give us some advice or guidance in realistic services that we can give to people in the metropolitan or the urban areas. I am speaking specifically now of Washington, D.C.

Just recently, as I am sure everybody knows, we were granted the wonderful thing of having our own home rule, which can be very good and it can be very bad. Because in talking to Dr. Franklin yesterday the City Council did a beautiful job on the libraries funds and it is causing us a lot of dismay.

Now from the employment standpoint or

as a focus point for assisting the unemployed in the metropolitan areas of Washington, D.C. The libraries are being utilized far more intensively than they have ever been done before, and the people are not coming in to read the paperback books and things. They are coming in to get information about jobs that heretofore they were unable to go to. They want some insight on them. They want to know what it takes to do the type of job and I feel that we are not giving them this type of service. This type of information is not always available.

We had, oh, last year, I think prior to Dr. Franklin coming, Dr. Byam, who I understand spoke early this morning, was a librarian. We proposed a suggestion to him. We wanted to have some satellite personnel centers located in significant libraries in Washington, D.C. Here is what we wanted to do:

11

One, we wanted to encourage people to come and utilize the libraries; we wanted to give them access to all vacancies in the District government and the Federal Government so that they would have an opportunity to see where jobs were available.

We placed them, as I said, in four

a largely densely populated Spanish speaking area.

We were very disappointed with the fact that they were not utilized. We had to close them and I just couldn't see why. I thought we had a service that we were giving to people. I had a problem with some of the library people because you have to get enthusiasm. We from the personnel standpoint had it. We had to develop enthusiasm on their part to contribute towards the service, but we finally got it all together. But then we couldn't get the people to respond.

Now in talking to Dr. Franklin as recently as just yesterday, we are going to try that again. We are going to try a different approach. We are going to try and combine certain areas in the government, the Department of Human Resources, which has Medicaid and our food stamp program, we are going to take personnel where I am definitely involved, we are going to take libraries, we are going to put people in there with the authority to give services. We are going to try to train. We are going to take the library staff and let them take a look at the vacancies that we have available and then extend to the people who are coming in and

asking for information the type of book and things they should read to attempt to benefit them to take advantage of these jobs.

I feel that we in Washington, D.C., we have no way of charging for our library service; we are sort of in the middle. The people from the States of Maryland and Virginia utilize the libraries in Washington. There is no way we can get any funds back and we are giving tremendous service for it.

The mayor just recently threw up a trial balloon for commuter tax similar to what you have, I think, in New York and it was shot down terribly, so we are just afraid to say we want to charge to use the libraries from the people from Maryland and Virginia. But we are actually being over-utilized and underpaid.

I think that I have listened very intently and, as I said, I think I have learned something here today and I am going to be a lot more lenient when I deal with libraries in the District of Columbia from the personnel standpoint from now on. But, really, I think you can do a tremendous service if you will allow the large libraries in the urban areas -- I think the same problem exists in the cities of Detroit and New York;

11

1\_'

1.

I have talked to the people there -- to give the services that the community needs by supplying the type of information they need, and I think it would offset some of the economic problems that we have.

I don't have any more to say, because
I have learned so much from the experts, but I am
receptive to any questions if you think I can answer
them.

MISS SCOTT: When you opened up that satellite location -- I assume it is 18th and Columbia Road --

MR. HARROD: Definitely. That's where it was.

MISS SCOTT: I am a voter in the District of Columbia so I know some of your problems, but I assume you put a Spanish-speaking librarian into that area?

MR. HARROD: Not only did we do that.

The first time I went in, I am sorry to say this, they put it downstairs in the basement and I will not use the words that I used to express my dismay at it being there, but it was placed upstairs on the first floor with a big sign and we did utilize the Spanish-speaking person.

I might add this. As I said, we are

1:1

1.

. 1

going to do this again. We are trying it at the Woodrow Wilson Center, since you are familiar with that, which is right around the corner. We are having a little difficulty with the Spanish speaking community because we have got five different factions that don't agree on anything and I thought for a long time that they said we blacks didn't agree, but I mean we are really together. I am just trying to get them together. (Laughter)

So, that's one of the problems that I have.

MISS SCOTT: Now, from the City Council's viewpoint, how much clout do you actually have between the mayor and the City Council in getting your appropriations, because they are coming from the Federal Government to begin with, from Congress.

MR. HARROD: Well, I am almost reluctant to say this, being an employee of the District Government, but we have two unique things. You say you live there. We have the mayor, who, I think, is doing an excellent job from the negative standpoint. We have the elected City Council who feels they are doing what their constituents want. However, I think the basic problem is a lack of familiarity with big time administration, and when you cut what

10

11

1:

11

1 -

1.

17

ž ~

} \* F

241

\* †

appears to be fat in a budget really isn't fat.

In talking to Dr. Franklin yesterday they cut out the things that he needed most of all. They cut out some additional jobs that he wanted to put in new libraries.

Yesterday I visited the Walter Daniels
Library, which will be located at 7th and Rhode
Island Avenues.

I hate to speak directly to this lady but she does know Washington.

I think it is going to be a beautiful thing. It is in a real neglected neighborhood, and as we were coming out two youngsters said to us "When are you going to open it?" And Dr. Franklin said, "Do you want to see it?" They said, "Yes." He just took them right back in.

Now it is practically finished except for the shelves and different things being filled in, and the kids were amazed. They said, "This is going to be in our neighborhood?" We are trying to stimulate some interest where the people will learn how to construct and keep things up rather than to tear them down, and that is the problem we have got there.

We shington is made up of so many, for

10

:1

...

lack of a better word -- I am a native Washingtonian emigrant persons who have come from all different geographic areas with many, many frustrations that are taken out, seemingly, when he gets there, and then we, who have been there for years, who are trying to still maintain that status, we are having difficulty, and that is not your problem. But, I mean, we are having difficulty trying to show them that the library is for their own good.

I went in the area down by Terrill
School yesterday and I was so extremely pleased to
see youngsters getting photo-visual information,
learning how to read. It's discouraging. They are
not getting it, evidently, in the schools and the
library was attempting to do what I think some of the
schools should do.

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: You have talked about that problem which we heard and it has been testimony that we have heard all over the country and what I want to zero in on is the problem of the relationship between your library and, for example, neighboring states, and we have this problem we saw here this morning between a city library and the counties. People in the county can use a city library but the

that same kind of a problem with people from Virginia, people from Maryland, using the D. C. Public Library and yet there is apparently no reciprocal agreements, I am sure.

What would happen to your central library, for example, if you suddenly by administrative fiat announced, "Okay, nobody but a resident of D.C. can use this library any more."

What happens then, if anything?

MR. HARROD: Well, please, I want to
be extremely honest here and I don't want you to
think I am being insulting.

We would be clobbered, because we are in a Federal city. You have got the congressmen from Maryland and Virginia, and before you got it out of your mouth you would be retracting it. So that's about the only way that I can explain it to you, sir. "e have no control. We are a city with no authority in a sense. We have got home rule with one form of representation, who is a non-voter. We are trying to change that. Jomething must be done. And I feel that it would have to be done from your level because we just can't do it.

MR. LERNER: That's my real question.

Can this Commission fulfill part of that need in terms of these overlapping jurisdictions?

MR. HARROD: I think it can, sir, because I think when you recommend, if you do, that the funds -- I think there could be certain stipulations that if one state gets this and the other gets that it must be that the other people involved could utilize it.

That's just my layman's answer to you.

DR. BURKHARDT: Andy.

COL. AINES: I regret to tell you I am one of those commuters from Virginia.

(Laughter)

Just to set the stage for you.

I am fully sympathetic with what you are trying to do. As a matter of fact, I would argue that if in the large cities what you are looking for is not done, not only during times of depression but at all times, libraries are simply going to find themselves always looking for funds and looking for people to use services and that is too bad.

The question I have for you is something along this line. There has to be a pull mechanism as well as a push mechanism. There are great difficulties in getting the people to understand

as you clearly indicated with your one illustration, to come and understand that there are banks of knowledge that would help them in their day to day living. Let us say then the investment is made that more of such information is available, more people are there who can help personalize the services. Now the problem is how do you get the people in.

As a native Washingtonian, even though you have to put up with a lot of immigrants who you have little control over, do you see any possibilities of something in the educational system, something where some of the federal agencies would provide a demonstration program and additional funds.

My own organization is the National Science Foundation and it does not mean that I can promise you that we can provide any grants. That's another department.

The point I am making to you is that it appears to me there is a lot that has to be done to bring the two communities together, the librarians who want to help with the information that will be useful and the people who can be better served by getting the information, and simply having the community stay in place after we provide the facilities

10

11

13

1 1

15

1 .

15

1

21

is not going to solve the problem.

1

11

1.5

16

17

15

14

21)

21

3 E

2.

21

25

So I hope that you have some bright words you can offer on how to bring the two together.

MR. HARROD: Well, I don't know if these would be bright words, Mr. Aines. I can only say this: That the District government is starting out on a program where herebefore -- let me give you a little background. I have got 34 years in the District, 32 in the Federal Government, and I am see now a fragmented District government becoming unified. As I said, we were about to open up a place in the Woodrow Wilson Center. We are now instead of D.C. Personnel Office, which I am a part of, going out and attempting to do it by ourselves and it can't be done. We are pulling the Department of Human Resources in, we are going to pull the library In, we are going to pull the D.C. power administration in, we want to be able to tell in each ward in the District of Columbia what the employment rate is, what types of jobs are in that ward and what we would be looking for. This, I think, we in the District must first set the stage.

I am not saying that the Federal Government should come and just pour money in. I think
since we have asked for home rule we should demonstrate

that we can rule ourselves and to rule ourselves we have got to set examples.

I looked yesterday and I saw a lady who was working overtime, no pay, because they have no pay to give her, in the library but she felt that she was doing something and she had the interest of all the youngsters and older people around. I think it is just going to take a little extra, and I am not above giving it, and I think there are many, many thousands of people in the District government who are willing to contribute. just that we have got to put it together, find out just which way we can do it and start working and, please, I don't want this to get back to the mayor that we haven't worked as a team, but I would like to say that we really should work more as a team and I think then the Federal Government, and you say your organization, the National Science Foundation, and things like that, once we initiate it, would be very happy to come in and to assist us, because I think this is going to be the key. I think Washington, D.C., is the focal point of this whole United States and I think this coming year with the Bicentennial coming in, this is why we are working so very hard on it. We want it to work because we know there is

going to be millions of visitors from all over the United States and we want Washington to be reflective of what the United States is so that's what we are going to have to do. We are just going to have to get in and dig.

I hope I have answered your question.

COL. AINES: I appreciate it very much.

DR. BURKHARDT: One final question from Mrs. Moore.

MRS. MOORE: Mr. Harrod, I am sure you can't answer this but I want to pose it anyway.

I am sure you are active in personnel associations throughout the country.

MR. HARROD: Through the district.

MRS. MOORE: Do you know any other personnel officers that have visited any libraries, taking a personal interest in it?

To your own personal knowledge, do you know of any others?

MR. HARROD: Up until yesterday my only dealings with the library were from an administrative standpoint, from a classification standpoint for the employment but I was so sold yesterday. I will continue to utilize my office and I am going to advocate when I go back on Thursday at our personnel

H

officers' meeting in the District of Columbia government that they all must do it, but I really cannot say that I know too many that have done it.

MRS. MOORE: I doubt that any have.
That's why I am asking you the question.

MR. HARROD: Yes, madam.

who get interested in the libraries can probably do more good than all the commissions put together. After all, it is the officials of the City government and other governments who really have the fate of the libraries in their hands, and since you have become a convert I hope you will make it your business to help convert other personnel offices.

I just wanted to give you what I used to call a little heart lecture, hoping that you would go out now and do likewise and get others converted.

MR. HARROD: I am going to do that.

I want to close by saying that I feel the D.C. public libraries, if we get the assistance that we want at the lower level it will benefit us. We have now got our own school, Federal City College for underprivileged kids to go to. This will be the basis for them to materialize into higher and better

111

11

11

citizens.

111

11

11

15

1,

1 -

11

25

I was very frightened when I walked in here but you have made me feel very comfortable, not being a librarian, and I can assure you that forcibly or subtly I am going to convert some more personnel people back in Washington.

(Laughter)

DR. BURKHARDT: Very encouraging.

DR. BURKHARDT: Mrs. Larson.

Mrs. Phyllis S. Larson, and you are chairman of Citizens for Libraries in Delaware County, Pennsylvania, right?

MRS. LARSON: Yes, sir.

DR. BURKHARDT: Mrs. Larson, we have had your testimony and I think you can assume that we have read it. But if you want to emphasize a few of the points before we ask you questions, please feel free to do so.

MRS. LARSON: All right.

I am Phyllis Larson, Chairman of the Citizens for Libraries of Delaware County. Citizens for Libraries is a coalition of civic groups in the County, such as the League of Women Voters, the

1

2

3

American Association of University ...omen and the Federated Womer's Clubs and our aim is to work towards library development in the County but predominantly towards getting county funding for county library programs.

G

5

Consequently, my testimony was submitted

•

from the point of view of a user of a small local

·

library and at the same time as a taxpayer.

1)

The Commission had suggested that one of its ideals is to provide equal access to every

10

individual to the information resources in this

12

Country. I think It is probably a well-known fact

13

. . . .

11

that the libraries, particularly the small public libraries, differ so much in the quality of service

1

they are able to provide. This is a major problem.

10,

Any individual services are dependent upon the

17

locale. Consequently, one of the first things I

1 >

would suggest might be a priority for the Commission

ļ 1 **3** 

would be standardization, both qualitative and

• '

quantitative of these small public libraries.

\_i

it is also very self evident that local, state

...

and federal funds would have to be used and probably

As a means of doing that, of course,

21

to state, state to federal, is the most efficient

the current method of having matched funds. local

way of doing this. However, I would hate very much to see things like LSCA be discontinued because to the small public library very often these funds make a great deal of difference as to what sort of facilities they have and what sort of programs they can offer.

Our experience in Delaware County has been that one of the major problems on the whole funding issue is the lack of political support for libraries and this is dependent on two factors, a general public apathy towards libraries and also the fact that when you have inequalities then you get involved in a faction sort of thing of people being either unwilling or unable to share.

It seems that since the Commission's program, which is a very far reaching one, is going to necessitate spending on all three levels of government, it is going to be extremely important that you somehow get the support of the average citizen. The apathetic citizen has been spoken about quite a bit here today. The fact that you have librarians willing to offer services and you have a public which is perhaps not taking advantage of the services already offered. It has been a suggestion of mine that perhaps an education program here is

necessary, perhaps from the federal level on down to encourage people to use what they have and to support increased services or better services.

General's report came out about cigarette smoking, it wasn't too long after that on television, magazines whatever, you saw a great deal of information about the Surgeon General's report about cigarette smoking.

Now if something like that could be devoted toward educating the public to the fact that libraries and information centers and the whole concept of information is a vast resource of this country, and teach them to use it, encourage them to use it, I think the funding then would be much easier to obtain to implement the kind of program that the Commission has in mind.

DR. BURKHARDT: Thank you. Any questions?

MR. LERNER: I don't think your use of the campaign on cigarette smoking is a good one because cigarette smoking has in fact increased with all of that but I don't think that proves anything or nct.

Let me ask about the use of "political power" or "clout" in terms of getting the kind of

11

funding you want in the county.

Tell us how you do this and tell us what kind of an organization Citizens for Libraries has set up to have some political power to get some of the monies you need to operate.

MRS. LARSON: Well, I think you have really hit right at the heart of our problem. Our organization is a very loose coalition, to begin with, of the citizen groups such as the League of Women Voters, and has to be very careful as to their political environment. They deal with issues but not with candidates, for example. The major difficulty seems to be that very often people in governmental positions themselves perhaps may not be library users or very dedicated to the whole concept of libraries. If you are dealing with that sort of situation you have a problem.

Furthermore, they have all of these demands for things that are far more real to a lot of people, like sewers and policemen and that sort of thing. Consequently, libraries take a very low priority.

Now the way we have been trying to get around the situation has been to work with a grass roots public sort of thing, trying to show them what

11

12

1 1

15

1 .

1.

111

11

21

libraries can do for them and trying to get the public them to exert their forces on their local elected officials and go at it at that rate.

DR. BURKHARDT: Mr. Casey.

MR. CASEY: May I ask you, in terms of your organization, is it only concerned with public libraries or do you extend your interest to schools and college libraries and things like that?

MRS. LARSON: We are only concerned with the local public libraries in our county.

MR. CASEY: Would it not further strengthen your efforts if you were to support better school libraries, particularly because the audience served by public libraries and school libraries in a community, to some extent, is the same. In other words, the youngsters.

Have you ever considered going to your board of education, for example, for certain support of school libraries?

MRS. LARSON: Well, I think that's something that's very much needed, however, we didn't conceive that to be our function since our primary function was to obtain funding for a county system of public libraries.

DR. BURKHARDT: Andy.

1-1

1.3

2-1

COL. AINES: My comments are more
addressed to apathy. I am going to make a suggestion
half in jest. The first is that perhaps you ought
to unite with the Gray Panthers. They have a large
community that are looking for something to do.
A lot of them belong to an older culture in which
libraries are beautiful and important and perhaps
you can enlist their support almost on a house to
house basis, keep working with the community and
to be an auxiliary for library workers to help them
on that score.

The second deals with the comment made by my learned colleague, Dr. Lerner.

Perhaps what you should do is look for a television program and urge people not to come to libraries and maybe they will.

(Laughter)

DR. BURKHARDT: John.

MR. LORENZ: What has been your experience with Federal revenue sharing in your county?

MRS. LARSON: That has been mixed on the county level. I do not think any funds were used specifically for libraries. Some individual localities, municipalities, some federal revenue

sharing funds were used. This is one reason why

I feel that any funds that come from the Federal

Government should be mandated for library use

because the competition with the other needed services
is so great that libraries come out on the short

end sometimes.

DR. BURKHARDT: Any other questions?

If not, thank you very much.

DR. BURKHARDT: Mr. David Bender.

Mr. Bender, would you introduce yourself and then since we have read your testimony, would you just give us a few of the things you want to set up for us to ask questions about?

MR. BENDER: My name is David Bender.

I am assistant director of the Division of Library

Development and Service, Maryland State Department

of Education. My testimony basically is written

from a school media program viewpoint and with

emphasis from a State Department of Education level.

There are only several areas which I would like to

highlight from the testimony and then I will want

to respond to questions from the Commission.

I think that one of the concerns that I have from a State Department level is what roles and responsibilities we really have to play in the Commission's report. It seems to me that there are some fuzzy issues, and really not some clear-cut areas that we have responsibility at the federal level. The state level, or the local level. I think especially in the school media programs I have a real concern of how the office of libraries and rendering resources in the Bureau of School Systems, and the Department of Health, Education and Welfare also ties into this since they basically are our

l

ţ

ti

S

1.4

I think that as you read the report also some of the priorities -- I think that all of the objectives are very monumental and can accomplish much but it seems to me it is impossible to accomplish all of them at one time, if there are any real priorities established.

liaison and working staff at the federal level.

As I indicated in my written testimony upon a number of occasions, I have either spoken or written to several of the members of the Commission or to the executive director and have some real concerns of how the school libraries and school media programs tic into the workings of the Commission,

-1

1.1

Ы

both in the written materials and also in the opinions and the information expressed by these individuals. It seems to me that much of the material in school media programs really is an isolation and does not tie directly into a network. It seems to me that a network can accomplish much more, and I am not real sure how school media programs tie only into a network serving a national program.

I think some of the views expressed by some of the people here today really indicate on a school media staff members that we have a real selling job to inform people what our role is and what our mis sion is.

DR'. BURKHARDT: All right.

I think, Mr. Bender, my impression is that the school media programs are not mentioned as such, but I think we -- at least I had them generally in my mind under this general rubric of the school libraries which are mentioned and, of course, which do not fit into the program but I am going to ask you. In other words, we are not intending to leave them out. Just how they fit in is something that will have to be worked out a little more in detail than it is in the program and it is true, but you have heard a bit of evidence today

3

.[

from some librarians of the more traditional sort, who maintain that the school media, and by that I mean audio-visual things are keeping the kids from learning how to read and discouraging reading and so forth.

5

10101

6

generalization is justified?

8

MR. BENDER: Let me make just several

Do you feel that this charge or

9 [

10

points in reference to your question.

I think that when I use the term

"school media" I am including both print and non-

Commission's report on libraries I fully accept
that as part of it being the media area.

I think in most of the testimony that
was given by several individuals in the audience
cannot be substantiated on fact. I think that some

of it is off the top of the head kind of reactions

print into that, so what material you have in the

and are really not based.

Let me give you an example of some of the programs that we have going on in several Maryland school systems. I think that on the Eastern Shore we have a reading program going on in a number of smaller systems where they have put in a number of paperback materials and have encouraged some kind Ì

25

of program in support and in relationship to the media program itself occurring in the school and within this media center there will be both print and non-print materials available.

where everyone within the school building stops whatever activities are going on and they all sit and read or do some kind of reading activities within the school. So I think this indication is the students are using materials both print and non-print, but there is emphasis being placed upon reading the printed word. I think that much stress within the program is on the printed word itself, but I think we also have to realize in education that not everyone can learn from the printed format so that some students can be motivated, challenged by some other visual experience or auditory experience, and then have some reinforcement back to the print itself.

DR. BURKHARDT: Do you think that proportion of that kind of child is increasing as the result of TV and so forth?

MR. BENDER: I think that there is much change going on in education because of all the stimulus and so forth that we are being exposed to.

I think we are probably a more visual society than we ever have been before and a child from very early age through adulthood is constantly bombarded with many experiences that are not just in a printed format, and so I think this study is learning in many different ways.

DR. BURKHARDT: Any questions?
Joe?

MR. BECKER: Dr. Bender, we have met with the American Association of School Libraries and with AECT in trying to come to grips with precisely what you are talking about, that is, the role of the school media programs in a nationwide network.

We talk in our program about the value of protecting centralized services such as the National Audiovisual Centers in national archives or the National Medical Audiovisual Center in Atlanta, which is part of the National Medical Library of Medicine as national collections or resources which could be made available to all the schools, so that would be something which could be provided to schools through a nation-wide network.

But what do you see as the return, for networking is really a quid pro quo kind of activity,

and let me give you an illustration:

2

3

that in some states the school media program should consider sharing their audiovisual resource more actively with the local public libraries in the state.

It has been suggested, for example,

Would that be a quid for a pro or what other ideas have you?

MR. BENDER: Okay.

In some of my opening remarks, and I think some of it comes through in some of the written testimony. I am not sure what the real role of the school media programs might be in a networking system. I think in the written testimony I had expressed the concept that I think when you go into a networking, to me all segments have to be equal in some way, shape or form. If you are looking at a school building program collection that basically is geared to the objectives, the instructional goals and so forth of that school building. So I am not sure what they have to go into a system. If you go into the system level off within the school system, I think the collection is a very realistic thing. They can work in a cooperative agreement within its own jurisdiction but I think

H

1.3

1-1

if you are getting into a larger regional kind of thing, I am not sure how extensive the school system film collection might be, how it can support greater demand, greater use being put on an increased population. I think if funds were available additional copies could be obtained of films, film strips, whatever. It may be more applicable, but I think if you are going with the basic foundation of collections as they stand now, there would be very few school systems that could afford to pick up added services with a number of copies or the prints they have available now for I think this should be limited.

I think that if you look at some of the national collections that are available now either through the tape collection or whatever, I am not sure how applicable these are either to building a usage but I am not sure that there are too many buildings that really call on a nationwide collection to support the programs that are going on within their school. So I think that whatever would come out in the network situation would have to be something readily available, copies could be obtained easily and could be almost an instantaneous thing from the time it is requested

until it is in use within that school building.

DR. BURKHARDT: Mrs. Moore.

MRS. MOORE: Dr. Bender, Ben Francovia, as you know I am sure, has written one of our supporting papers in this connection which I think you will find quite interesting.

I would like to depart just a minute to commend you on your reply to what has been said today about the charge that the schools are no longer making the effort that they did in teaching children to learn to read. Until last June 30th I was a member of the staff of the State Department of Education in Arkansas where I was educated as a reading specialist at the University of Connecticut and I know that these charges are consistently made but I know as you do, and I would like to put this into the record, that the Society is more conscious now of non readers than they were, say, ten years ago because of the whole career implication that were not stressed. There are more people now that undertand about learning disabilities and there are more people that are beginning to realize that teaching a child to read is a very complicated thing and that not every child can learn to read when he enters the first grade at school.

ì

2

3

.5

6

7

 $\mathbf{S}$ 

9

So I think this is really a tribute .

to enlightened society that we are recognizing these problems as problems of society to need to be dealt with and dealt with by specialists that the charge that has been made about the schools I agree with you could not be substantiated in fact.

MR. BENDER: Thank you.

DR. BURKHARDT: Julia.

MRS. WU: May I supplement Mrs. Moore's comment.

I think to use the audio-visual aid as a massive to encourage and motivate youngsters' reading interest, it is not only applied for youngsters today. It also applies to adults. In a lot of adult education programs and the community colleges there are the setups of resource skill recovers and they provide a lot of machines and audiovisual materials for the adults to use.

David, I have a couple of questions to ask you concerning the network relationship with school media program.

Do you really think the network, the national network would benefit school media programs at both elementary and secondary levels?

If it does benefit the school media

11

10

13

12

14 15

1.1

program what types of services, what major types of services do you think you expect the network to provide and then do you expect the national network to provide any funding incentive to encourage the local school media program to affiliate?

MR. BENDER: I really, as I said earlier, have a very difficult time of seeing how a building level medium program would tie into a national network program. I think that the services are much different. The services in a building level are needed almost immediate to whenever the request comes in from a student or teacher so that materials need to be there instantaneously.

Now I think if the turn around time that the network can be raised in such a fashion that you can have this communication, fine, then there might be some real ties.

I think when it comes into areas I think the network seems to be a very feasible kind of thing that would develop in many possibilities, but I am not sure if this kind of cooperation really is the kind of thing that can be accomplished between the different kinds of clients we work with, the users we have, the communities we are serving and so forth. I think that before this

l

kind of program would get under way some kind of research or some kind of study would really have to investigate this fully of how valuable it would support a school media program at the individual building level.

I think if you are talking on a network that would be a regional in some way, shape or form, computerized instruction or something in this area might very feasibly come out on a national system or network or whatever. I think very few school systems have really gotten into CAI in any way, shape or form, but lets of them are starting to experiment in some areas in some ways and so there is a lot of duplication going on but not a lot of solid things are happening in many ways. So I think that this could be one real service

function.

As far as other direct programs into student operations, simulation exercise games, this kind of activity I think also might be something coming from a regional kind of setup or operation

but as far as a holding collection, I am not sure

what could be served from a network into the school

1.1

22.

program.

DR. BURKHARDT: It might not be

necessary.

-1

ń

MR. BENDER: Right.

DR. BURKHARDT: Mr. Lerner.

MR. LERNER: Mr. Bender, it has been commented on by Mrs. Moore and by Mrs. Wu, and my concern is really one of self-condemnation in a sense and that is that your reaction to Mr. Becker's question and part of Mrs. Wu's question on cooperation with libraries has been almost wholly negative, which I find to be consistent by the way with most educators.

A librarian would come here and be concerned and interested in cooperating with other institutions and at least I have found that always in my personal experience that cooperation on almost any level from the educational institutions is difficult at best, and I find your answers in terms of: Well, we need a study for that, or we are not sure what we would put into it, to be limited to the four walls of the school and it is extremely reluctant to go beyond that and I am concerned about that reaction.

MR. BENDER: I am sorry if that is the impression you have because I think cooperation is a very important and essential element in the

2

19

20

21

22

23

21

25

My only concern is that when you get into program. a network system and you are talking about cooperation from this angle and this area and when 3 Mr. Becker referred to the network of bringing whatever you have into a network you have something to share also and I am not sure what it is that the schools can put into this collection. If it is the film collection, if it is services, if it is some area opening that school program to summer sessions or to adult education or what it is, but I think that there needs to be many areas studied in a school program.

If you are going into adult education what is the staffing patterns; what is the funding; what are the facilities of the school; how does it relate to whatever programs are going on in the school program.

I think there are many areas of cooperation in services that haven't been looked into but I don't know how to put some of these service things into a network and so if you are looking at networking as the area of cooperation, I am fuzzy on that but I think there are many other areas of cooperation which we do do. There are many things going on in Maryland I think there are cooperation

between.

ı

-1

 $\mathbf{s}$ 

1.3

For example, one of the local public libraries in the school system has taken all the professional materials from the public library, school board or office, and has housed them in a public library. It is open both to the school community from the hours that that library opens. It is open to the general public and so forth, which wouldn't happen if it were locked in the board of education office. So there are many areas I think we can explore and if I have given the

DR. BURKHARDT: Mr. Trezza.

opinion that I am against cooperation, I am not.

MR. TREZZA: I just wanted to say that one of the misunderstandings that people have in coping with a national network, they think of it as running at the national level, whatever that means.

Your national network means a partnership of local, state, regional and national. So the local school is a part of a national network and may never, say, three years, have to go to a national library like LC for some things. It is still part of a national network, however, because it works in its own area, its own region, and maybe eventually

at the top.

2.3

24

25

My quarrel with a lot of the school libraries, and I work with them closely in Illinois, is that they are more defensive than they need to be. We realize there are limitations on a small library, be it a school or small public library, for that matter, on what they can give. The important thing is not so much what they can but what they are willing to, if it is necessary.

Take your film collections. There are times when the school film collection -- two thirds of it sits on a shelf in any film collection. So there are times when you can share that limited film collection.

I agree with you again, if you are borrowing films it is not a good system which produces it when you need it, it is not of much value. So I agree with what you are saying in terms of problems by understanding we can resolve those if we agree to do the work and the sharing and the cooperation, but if we don't get the attitudes changed we can't solve the problems.

DR. BURKHARDT: Mr. Aines.

COL. AINES: One short comment of two years representing the Commission. I have gone to

AECT at the national conventions. I have spoken about the work we are doing. I asked for cooperation I asked them to look carefully at the programs they are laying out. I met with the officers of that organization and last week I met with Dr. Hitchens, who is the director of the group that I think was centrally representing the audio-visual community. I pleaded with them to become involved and interested. They said they would.

Now I hope you do us a great favor and go back and tell them the offer is still there. We would like to get their cooperation and help. I wish I had known that you had written to the Commission at an earlier time because it might have been a way to open that communication even more.

> DR. BURKHARDT: Mr. Becker.

MR. BECKER: Just one short word,

Dave.

This conception which just came to mind, I don't know whether it is worth anything, but the point is I don't think that in a nationwide network that it is just materials that have to be exchanged between all component parties. There may be a function that the school media program can perform from the network which no other component

ì	of it could perform as well, such as the education
2	of the child with respect to how to use the network
3	and how to use information resources as he grows
-1	and develops. He has this knowledge as he enters
5	society.
6	DR. BURKHARDT: Is Mr. Adler here?
7	All right, we will take a five-minute
8]	break.
9	(Recessed for five minutes)
10	DR. BURKHARDT: I would like to call
11	on Miss Eleanor Campion.
12	MISS CAMPION: My name is Eleanor
13	Campion. I am director of the Union Library Catalogue
1.4	of Pennsylvania.
15	DR. BURKHARDT: I am sorry. I mis-
16	read the agenda and I will return to Miss Lunin
17	right away, but you go on, please.
18	MISS CAMPION: All right. I won't be
19	very long.
20 (	I submitted my testimony making some
21	rather pointed criticism of the staffing of the
22	regional bibliographical centers.
23	Based on many years experience of
21	feeling requests for over a million and a half items
25	in the Union Library Catalogue of Pennsylvania, T

ERIC

1.3

was particularly concerned that the staffing of the proposed centers in the network are geared for plenty of technicians who know how to operate those machines, and then we get down to the clerks who are supposedly sealing the questions. I think this is a great oversight. I think I remember back when the President's Commission on Libraries met back in the '60's, I went and made an appeal and made a criticism of this kind, and one of the members of that commission said, "Human brains and human intellect is still necessary, Miss Campion. Please relax."

well, I relaxed a little bit but I am not happy with this and I think that we need to think about different kinds of people who have the brains and we do. They do not necessarily have to be librarians. We need people who are well rounded in literature, in the humanities and the classics, who know that there is more than one Priestly and who know that Dodson also was a famous mathematician as well as he was "Alice in Wonderland." This is the kind of nonsense that I am very concerned with.

I am also very upset over the number of studies in the library line, the number of

10

11

12

1.3

complaints that there are that people aren't clearing up their problems before they pass them on to the next fellow to solve, that the problems aren't that great. We are just making our own problems by leaving the initial request and the reference requests in the hands of clerical people, I am afraid. And I would like to point out that we can solve a lot of these things at home before we feed them into the network.

DR. BURKHARDT: T' ink you.

Any questions from the Commission?

MR. TREZZA: We tried in the national program document in a couple of places, one of them continuing education and another one where we talked about the importance of human resource, pointing out the success of any national program such as the one we are proposing which involves network geographic centers and all absolutely depend on qualified staff.

Although we talk about librarians information science, namely we do in a couple of places point out that it is qualified human resources that we are talking about and not simply librarians or simply information specialists. Perhaps not as strong an emphasis as we need, but I think there

2.10

is recognition of that and the one big problem, of course, is trying to determine at what level the local responsibility ends and the state comes in, and then the regional and the national. We have this dilemma. In one breath they say that we at national should insist on certain kinds of things. 6 In the next breath they say, "But don't control us." And it is kind of a dichotomy and awfully hard for us to always draw the line and our hope is that 9 as we develop towards implementation of these things we can try to define these more precisely as you suggest.

And I do think that the point you are making is very true. There are many, many jobs in library which must be done by specialists who are not librarians.

MISS CAMPION: Thank you.

DR. BURKHARDT: Miss Campion, this Pennsylvania Union Catalogue, does that include manuscripts as well as books and things?

MISS CAMPION: Our Union Catalogue includes every item in the library catalog. libraries have catalogs of their manuscript collection in detail. We do not include music scores, we do not include audiovisual, we do not include films, but

mostly manuscripts and all printed monographs and serials.

DR. BURKHARDT: The other question I would like to ask you is how does the OCLC work in connection with your Union Catalogue?

MISS CAMPION: Well, it developed from three libraries in the City of Philadelphia wanting to operate through OCLC on an experimental basis, and the Union Library Catalogue being a non-profit corporation was able to contract with OCLC for these three libraries for a period of two or three years.

After the first year and a half the Union Library Catalogue urged additional libraries whose holdings are included in its files, to go into OCLC and just this last year we had LSCA funds come to us from the State Library in Harrisburg to include, as was spoken to this morning, many more libraries in Pennsylvania.

So we see this as we are the first Union Library Catalogue that I know of to really urge these people to go into an automated system. We are the first one to become automated.

DR. BURKHARDT: How many other states have got a union catalog that you know of?

ERIC

2.36

1 MISS CAMPION: There is one in Nebraska, there is the regional union catalog in Denver, there 9 is a Pacific Northwest, there is one in North 3 Carolina -- we are the largest regional union 4 catalog of its kind and have been active for the 5 6 longest. DR. BURKHARDT: Thank you. 8 MISS SCOTT: Is the Union Catalogue 9 on film or --10 MISS CAMPION: We are now decentralizing 11 the Union Catalogue by another grant with LSCA funds 12 to microfilm a basic part and distribute sets of 13 that microfilm to six strategic locations in the 1.1 state for services to the public library system 15 of this state, and from this we hope that other 16 academic libraries and special libraries will also 17 acquire the same which will decentralize our 18 services. 19 DR. BURKARDT: Mr. Lerner. 20 MR. LERNER: Well, with the growth 21 of OCLC coming into more libraries, are you not 22 in fact putting yourselves out of business? 23 MISS CAMPION: That is exactly what we 24 are doing, much to the consternation of Pennsylvania 25

ERIC

Libraries, Philadelphia libraries in particular we

1 are in the process of studying what should be done. 2 I have just made a survey and the academic community is considerably upset, due 1 .1 primarily to the present economic situation. The 5 school community is very upset. ß DR. BURKHARDT: Because of jobs? 7 MISS CAMPION: Of what we do, telephone  $\mathbf{S}$ service, teletype service. We feel all kinds of location problems, bibliographic problems, we U) 10 have foreign language specialists, subject specialists 11 and so on, and industry in many instances has 12 reduced its library staff to the clerical level, 1.3 and we find they don't read English very well, 1.1 and when it comes to something else they don't 15 recognize it so they depend very heavily on us for 16 this. 17 And the industrial community seems 18 to feel that they are willing to pay the freight 19 for us to continue a highly specialized kind of 20 thing. 21 MR. LERNER: But aren't they willing 22 to pay OCLC's freight? 23 MISS CAMPION: No. 24 MR. LERNER: We have the idea that 25

industry is willing to pay for some things but not

everything. ı

2

}

4

.5

6

7

9

10

11

72

13

1.1

15

MISS CAMPION: There are several industrial libraries in this area who have asked if they can go on OCLC through us, which they probably will do.

DR. BURKHARDT: Lou?

MR. DUNLAP: I hadn't known that your catalog included libraries outside of Philadelphia.

There are a half dozen or so outside of Philadelphia?

MISS CAMPION: Many of them. sir. We started expanding around 1948 and in 1960 when the statewide library program started we went as far as Pittsburgh to bring in the four strong region resource libraries in the state which back up the state system.

MR. DUNLAP: I am curious about the amount of duplication between the old materials represented in your files and the National Union Catalog 356 imprints, as it is now published, about halfway through the alphabet.

MISS CAMPION: That is a very sore I would just as soon not get into it, but I would be glad to answer your question.

> You needn't. Thank you. MR. DUNLAP:

16

17

18

19

20

21

22

23

21

25

MISS CAMPION: For many years we sent 1 2 all of our actual files to the National Union 3 Catalog, as you may well know. 4 MR. DUNLAP: I expect you did. 5 MISS CAMPION: And it depends upon which :6 side of the bed the researcher got up on in the 7 morning what they selected as important research 8 materials from our files. 9 So you will find large sections, for -10 instance, like Benjamin Franklin, where we have some 11of the best holdings in the Country will not have 12 any Philadelphia locations on it, or Pennsylvania 1:3 locations, because whoever was there that day 14 didn't think it was important. 15 Now I am not being facetious. This is 16 a fact of life. Our Union Catalogue has never been 17 a selective Union Catalogue. It's been all 18 inclusive, and furthermore our Union Catalogue has 19 always taken care of withdrawals. So if a 20 library discards or loses a book, we would put that 21 information in our files, which is not the case on 22 the national level. 23 DR. BURKHARDT: Mr. Casey. 24 MR. CASEY: How long has the Union 25 Catalogue of Pennsylvania been encouraging libraries

ERIC

Full Text Provided by ERIC

3.3

to join OCLC. Has it been a year? How long would you say?

MISS CAMPION: It's been now actively encouraging people for two years.

MR. CASEY: Now what has been the acceptance of this suggestion and have most libraries picked up OCLC? Is there a great rejuctance?

MISS CAMPION: No. I think it is an economic thing. I think many smaller libraries are anxious to go into it but cannot face the financial cost, so now we are working out with this group. I think they call it PALNET, which is handling the OCLC operation, is working out a piggy-back operation which I think will bring many smaller academic institutions into it.

MR. CASEY: Does the library subscribe to both or is there a duplication, did you say or not?

If a library has the Union Catalogue as well as OCLC, is there a duplication of service?

MISS CAMPION: There is a duplication at the moment. At the present time the Union Library Catalogue is in the process of reorganizing and probably changing its name to PALNET of the Union Library Catalogue. There will be two

25

services offered: OCLC service and the Union
Catalogue service. Members may subscribe to one or
both, either or.

DR. BURKHARDT: If there are no further questions, thank you.

DR. BURKHARDT: Mrs. Lois F. Lunin.

I would like to apologize for jumping over you on the program, Mrs. Lunin.

MRS. LUNIN: That's all right.

I would like to bring to your attention today the following matter which I think is in addition to the original testimony that I submitted. The original testimony was concerned with user education, quality of information, information analysis centers, interface journals and data bases; interdisciplinary communication concerning information needs of the programs, and a design for blending different parts of the total information community.

Today I would like to add an addendum to the section on information analysis, and I have a copy here for your use.

Many of us have been concerned with the design of information systems and information centers, their creation and their operation, but I

what happens after they cease to live.

I would like to spend a few minutes

3

١,

on the topic after death, what. It is not a very cheerful topic, but reality should cause us to

ă

consider what happens to an information center when

7

the life support is cut, the body dies but the

8

1

estate remains.

9

10

11

12

1.3

11

15

16

17

18

19

20

21

22

23

24

25

Let's make a few assumptions. Let's assume the lifeline from the sponsor is severed but that the feeder lines to the users were to remain and in fact the users still wish to use the services of the center.

Let's also assume a new sponsor cannot be found to support the costs of the center.

Let's assume, too, that the center has a machine readable data base of scientific information, the machine readable mailing list of users, a collection of microfilm records and other records.

What happens to these materials?

The sponsor may wish only to reclaim and store them in a warehouse. The users, individuals and services, capable of utilizing these materials might not know of the fate of the center and the existence of such records and, as you know, some of

these materials deteriorate if they are not stored under proper conditions.

-1

()

1-1

And as we all know, the cost of building the machinery of a data base is significant. The materials in the data base have been gathered and stored for retrieval purposes for now and in the future, you know, not for dead storage.

And in the case of the data base supported by federal funds, tax monies have gone to design, build and maintain the system and it is a waste of public funds to discard such resources.

Plans should be made early in the data base operation for its proper disposition in the event of the determination by a parent organization and some of the questions I suggest should be faced by the sponsor or whoever claims the data base as its property or who will maintain the data data base and in what environment.

Who will maintain the documentation?
Who has the documentation? Is there a backup
set in the event of a mishandling of the original
tape and how will potential users know of the
existence of this material?

Some federal guidelines have been established for the disposition of records and

ERIC

1.1

**)**=3

matters. However, the disposition from the viewpoint of fore-planning has not appeared to receive much attention, especially in the case of data bases, and this is probably because the problem is relatively recent and yet data bases develop and flow and that interest of sponsors change the disposition of these data bases will in all likelihood become of increasing concern. Many data bases will have to see other homes or disintegrate and flow away bit by bit.

What I am proposing for this group is
to suggest that in the design of the national
information system the Commission give consideration
to a plan for the disposition of Government sponsored
data base once a sponsor has lost interest in
supporting the project and I am suggesting that there
be specific wordings in the national plan to the
effect that Government sponsored data base be turned
over to the other centers or clearing houses to
which users can be referred for the use of such
data base, or at least the public for specified periods
of time, knowledge of their transfer and existence.
And this means the appropriate documentation should
also be provided to accompany the data base.

I

what I am really saying is that I
think there should be recommendations written concerning a well, proper disposition to legal heirs and location of burial for such data and there is a little more but that's the essence of it.

DR. BURKHARDT: We get the idea.

Any comments from our data base experts on the Commission?

MR. BECKER: I think it is a very good suggestion, Lois, and we thank you very much for it.

Martha Williams has done a paper on data bases and the relationship of them to the national program, which I commend to your attention. I don't know whether or not she has touched on this particular point. I don't think so.

And I think it would be very helpful to her if you got it to her, but you will find that her paper is very complete in terms of describing what is happening today and where she thinks it is going tomorrow.

DR. BURKHARDT: How common is the data base phenomenon. Can you think of any very recently?

MISS LUNIN: Well, I am not sure we have

the ideology of this border, but I gather from a few things I have been hearing that it is increasing and I saw Dr. Cuadra shaking his head in an affirmative way, so I figure he knows much more about it than I do but I have been hearing waves around that this happens, especially at some of the federally supported information analysis centers which have been terminated for various reasons and there is some of the material that they have collected in that form.

Apparently there has not been specific wording to their disposition.

DR. BURKHARDT: Carlos.

DR. CUADRA: I was shaking my head at one called "Nexus" which was a data base of Baker and Taylor that covered history, sociology and economics, as it ceased to operate. That's one that has kind of gone in the cardboard box.

I was wondering whether the repository known as Cosmic down at the University of Georgia would be a suitable place where they ordinarily store programs and documentation for programs. Do you think it would make sense to think of recommending some expansion of that function to include data bases?

-1

6;

1.3

1.1

В

7 8

Ы

. . . .

MR. LORENZ: Just for argument, why don't you apply the for profit test of the market-place, and if nobody is willing to support it and continue it, therefore it is not really wanted and let it die.

MISS LUNIN: I am going on a different assumption that the users do want it, do request searches of the data base, because the sponsor who has underwritten the course of the program is no longer interested in spending money in that area, has other interests that take priority, yet there is large communities of users that will pay for the searches, but their payment is not enough to continue all the input and other things that have to go in to build up the data base.

MR. LORENZ: So you are saying you would need some federal support to keep it going.

MISS LUNIN: Or some sponsor support, not necessarily federal, but support of some organization, yes.

DR. BURKHARDT: Andy.

COL. AINES: Lois, there was one situation that I recall arose in an area that should have been very practical of a concern to the people, and there was a center -- this was probably before

٠,

1.1

computerization -- dealing with deterioration of materials when suddenly the sponsor found he was unable to get funds to finish, and yet there was a large community out there seeing things rot or erode or corrode, using that knowledge, but the sponsor could not be found at this particular time.

It is a problem, I believe, that is very worthy of attention. I suspect that this is a real life problem that you are talking about that may be affecting your center at this stage of the game but it is not by any manner of means something that should be neglected.

I think a librarian would consider it almost book burning if such a collection is thrown out just because a particular group suddenly lost interest in support or I should say akin to book burning.

The problem is who should judge whether or not that has relevance and importance for society? The group that tossed it out doesn't really care because they simply don't have the money. Do they go to other groups who they feel socially responsible to make that determination rather than sending a center out looking for a new sponsor, and perhaps you have a point over there that in our own

1	conscience we ought to consider either in this
2	particular program and I suspect in the area of
3	scientific and technical information, your letter
4 -	ought to be sent to certain people whose names I
7	will give you separately to bring that problem to
6 -	their attention.
-	DR. BURKHARDT: Anyone else?
s	MR. VELDE: I just want to thank you
9	for some of your ideas on the White House Conference
10	and some of the philosophical reasons for libraries.
11	They are very good.
12	MRS. LUNIN: Thank you very much.
Β,	DR. BURKHARDT: Thank you very much.
1-1	<del></del> -
15 °	DR. BURKHARDT: Robert H. Muller,
16	Chief Librarian, Queens College, Flushing, New York.
17	MR. MULLER: I have submitted my
18	suggestions to the Commission in writing. I am
19	prepared to answer any questions.
20	I assume that I am not supposed to
21	repeat.
22	DR. BURKHARDT: No. But if you want
23 24 \	to add or amplify anything please feel free to do so.
■ اث	

21

25

MR. MULLER: Well, let me just make

a general comment that I have very high regard for the mission of this commission. It was perhaps reflected when I got up this morning at 4:30 to be at this meeting today. Maybe at this point I may appear a bit bewildered.

I think the second draft, which is the

 $^{2}$ 

1.3

I think the second draft, which is the only thing I have read, and I understand there is a third draft coming out as to which there is a great improvement.

Thave a few general comments. One is that it is an admirable comprehensive statement but I would like to see some indication of priorities, relative importance of various recommendations. For instance, is it equally important to serve the 40,000,000 ethnic minorities as it is to provide continued education of the practicing librarians. Which is more important? I think that is something that ought to be added. It's a very difficult thing to do because you are in a political arena here, and with all kinds of factions to satisfy, obviously.

DR. BURKHARDT: Have you got any ideas about what the priorities should be?

MR. MULLER: From where I am sitting, naturally the whole research component, the research library seems to be the most important but then I

3

-1

am saying I am not involved in the school library business or the public library business. That's the way I would put it. It is up to the commission to make some of these painful decisions.

5

6

The second comment would be that I would like to see some bit of evidence added to some of the statements in the Commission's report.

8

9

For instance, when you say that some colleges have no libraries at all, the question to

10

my mind is what percentage, how many out of the

11

2,000 or 3,000 colleges have no library at all, and

12

is this perhaps an exaggeration of the deficiency.

13

14

15

16

17

18

141

20

21

22

23

21

25

The third comment that may perhaps reflect maybe a lapse of memory, but in reading the report which I did sometime ago, I don't recall perhaps the sufficient recognition of something that I see in the environment, namely, the tremendous proliferation by publishing, which in some sense undoubtedly has had an effect on the use of public libraries and also college libraries.

And these are pretty much my general comments.

DR. BURKHARDT: Any questions from the Commission?

> MR. LORENZ: In terms of building

24

25

retrospect data base, Bob, would you agree that it is of first importance to go forward in all languages before going retrospective in any?

MR. MULLER: Well, here it depends again on which particular point of view you are talking about. Perhaps from the point of view of the liberalized colleges, it may be more important to go back in the English language, because the knowledge of foreign languages is very definitely declining and therefore the demand for that type of material.

On the other hand, the research libraries, of which I was connected for a good many years at the University of Michigan, it would be the opposite. I think there it is much more important to go for the languages, but that is one of these difficult decisions that has to be made.

MR. LORENZ: I take it in going retrospective you would go back in segments.

You mentioned 50 years.

MR. MULLER: Right.

MR. LORENZ: But you would agree that it is more important first to go ten years back and then 20?

MR. MULLER: Right. To make a start.

MR. LORENZ: How did you happen to select 50 years?

MR. MULLER: Quite arbitrarily. I had no particular scientific base for making that selection.

DR. BURKHARDT: Carlos.

DR. CUADRA: You mentioned in your testimony that one of the impediments to the information retrieval services is the cost and that some of the individuals have one search and others are without research or other kinds of funds back of them.

I thought you might be interested in some data that is just emerging from a nationwide study of on line retrieval services involving ten suppliers of such services, five federal and five others, including one in Canada and one in Italy. The average cost per search, the most typical cost per search is under \$10.00. That's the model point and the median is about \$18.00 to \$19.00.

My question is, does that number strike you as a number which is beyond the means of people who need searches to pay?

MR. MULLER: Well, the reason that I put this recommendation in is simply that it surprises

3

-1

٦

6

7

8 0

10

1-1

12

13

1-1

15

16

19

20

21

22

23

21

25

me that when inquiries were made through questionnaire and so on in our area as to the demand for these services among faculty members, it seemed to be so low and this attributed to the long conditioning of faculty members to obtaining services of this sort free.

Now if they want to make a search for abstracts it costs them money. If they have research funds for their research project then, of course, it is easy to get paid for and in some institutions I am sure the institution does pay it, but if they don't they are just not geared to paying. for this kind of services out of their own pocket.

And right now, for instance, we are providing at City University through Teachers College of Columbia and offering this service at. Teachers College, but the average search fund is \$10.00.

Well, many faculty members will not take advantage of this. They will go through the more laborious type of search and, of course, it involves no outlay of money. I just thought in order to encourage this, and there is a tremendous opportunity here where some subsidization may be

ŏ

1.1

necessary.

MR. CASEY: You have made a reply on page 2 of your letter which applies to the upgrading of library professionals, and that is both coming from New York State and you realize that in New York the librarians must be certified.

Now would you make it mandatory that librarians must take additional courses and continuing education after getting the master's degree, in order to hold that certificate, assuming that the subsidy took place that you called for and assuming that the post-graduate courses are sufficiently beneficial?

Now, you have put in two conditions:
Assuming they are both met, then would you make it
necessary to take this additional work to retain your
certificate, so many hours every five years or else
you are not satisfied; something like that?

MR. MULLER: Well, let's first clarify the matter of certification. I don't think it applies to the academic institutions. I think it probably applies to public libraries and to school libraries. So I am not really the person to answer that question.

But I would require that because I don't

really what the demands are.

.1

S

As to your other question, if I understood you correctly, it was would I make it --

MR. CASEY: In order to retain the certification, would you make it mandatory that the person take additional courses in continuing education after getting the master's degree?

MR. MULLER: I don't think I would be inclined to. As a matter of fact, I would be opposed to any such mandatory requirements. I much prefer that a person obtain the kind of education which is very particular geared to the needs of the job that he is to perform or that he wants to perform, but I think it is unfortunate to get into this certification environment, because it becomes a pro forma kind of complaint which I don't think makes good sense very often.

DR. BURKHARDT: Carlos.

DR. CUADRA: You gave a clear answer to my question before but it triggered another one.

Given that there is a faculty member that wants to have a retrospective literature search performed and it costs, say, \$18.00, to take a random number, and he is not used to paying \$18.00, one can either try to educate the user and say this

l

2

is what it does cost and that is why it is \$18.00, or subsidize it as you were suggesting.

3

-1

7

My question is, who should pay: The Federal Government, the state, the City of New York, the professor, the student? Who should actually pay that bill for the professor? Who?

В

MR. MULLER: I think if it is possible

s

the institution should attempt to pay it and

4)

as a matter of fact, as you may know, the faculty

10

of City University is represented by a union, and part of the union contract provides for search

or woman, they simply include that in the package

and that is the way to pay it." Now how colleges

raise these funds, of course, is another question.

want to draw on outside sources, and it seems to me

and say, "I need \$2,000 for a computer search,

If you are in a fiscal bind, naturally you may

if the particular research is not one merely

benefitting the individual but having possibly

some kind of broad impact or potential that some

justification of federal subsidy or state subsidy

Now if a man wanted to do some research,

12

funds.

could be justified.

AREA-WIDE FEDERAL REPORTING, INC.

260

l <sup>£</sup>

MR. LORENZ: I take it Queens College is a user of OCLC.

3

2

You are a user of OCLC?

1

MR. MULLER: Yes, correct.

5

MR. LORENZ: Can you give us some

ti

impression of how much money the use of OCLC has saved your institution either in absolute terms or

s

percentage terms?

9

MR. MULLER: Well, I don't think I am

in the best position to answer the question but I

10

will indicate my idea on the subject because the

11

reason I say I am not in the best position is that

Lì

we are under a peculiar restraint which is tenure

11

of people who have been appointed by the college or

15

by the university for many years, so we cannot just

16

lay off people the way some other institutions might.

17

We have to retain them if we have no opportunity

18

to transfer such people.

19 20

within a relatively short period after we have been

I would anticipate, however, that

21

in this only for, I think, less than a year,

22

attrition takes place we will be able to reduce our

professional staff very considerably and that is

23 21

a very expensive staff in places like City University

25

where librarian salaries are equal with faculty

2

٠;

25

salaries. So I would anticipate that I can't imagine that there would not be very substantial savings, depending, of course, upon the opportunity to have resignations and retirements take effect.

DR. BURKHARDT: Thank you very much

DR. BURKHARDT: Mr. Earl Coleman.

MR. COLEMAN: Good afternoon.

Thank you very much for having me here.

I am Earl Coleman. I am the president of Plenum Corporation. We are a fairly large scientific and technical publisher and among our publishing activities we publish approximately 150 journals, which are all low-run limited search circulation journals which bear the brunt of photocopying and the letter I have written to you has to do with photocopying. It touches on several questions.

I would like to pursue that by going to another part of the forest in terms of a letter I have just written to Thomas Harris of the University of Libraries at the University of Northern Colorado, asking if it would be possible for us or if we would be willing to sign a contract with him under

-1

t)

1.5

the terms which we would allow him to -- he would have a license to produce our materials.

My answer follows:

"The problem with licensing schemes is that they really do not answer the underlying question. The question as I see it runs along the following lines. There are several kinds of journals. There is the journal that depends for its existence on advertising. No amount of photoduplication threatens such a journal. There is the journal that has the very high circulation and therefore a very low price, and is scholarly in content. That journal, too, especially if it is a journal of long standing and is therefore one of the primary holdings of a library, is equally not threatened, particularly by any form of photoduplication.

Then there is the scholarly and scientific journal with a low run and sometimes a high price because of the low run that has a very limited subscribership because it aims at a very limited market. Sometimes that total potential market is as few as a population of 2,000. Since one never gathers the total population of prospective subscribers, the actual subscribers of such a journal might actually be only a few hundred. This journal

1

5

8

q

14

11

12

1,

1.1

15

14,

17

15

111

20

21

1)

41 :

21

25

does not normally carry advertising and, therefore, depends for its very existence on reaching every possible subscriber it can. Sometimes the difference between the continuation of such a journal and its demise can be as few as 20 or 30 subscriptions, which could turn it from a marginally profitable journal to one in the red. It is that kind of journal that is an endangered species.

Now let us turn to another part of the forest. A scholar or scientist may believe Journal X is either a sine qua non of his profession and in diminishing degree is either very important, somewhat important or merely peripherally important.

part in his decision, it is probable that if there were no photocopying machines, many more journals would wind up in the very important category and the scholar would simply have to find the money to make sure he could subscribe to those journals.

With the advent, however, of cheap and easy and illegal copying, the scholar can kid himself into believing that if he can only call upon specific articles from these journals that will really satisfy his needs, perhaps not perfectly, but then nothing is perfect in this world. Every

subscriber thus lost brings that journal closer to extinction.

٦,

1.5

One could say parenthetically: "Well, then, let it die." But that seems to me to work at variance with the professed aim of the entire library community which says it wants to supply more and more information, not less and less. Thus it would seem at first blush that the library would have to be very concerned over the death of a source of information. In the face, however, of the attitudes taken by most librarians this does not seem to be their concern. Their concern seems to be instead: "The economics of whether a journal lives or dies is really not our problem; that, of course, is up to the publisher. We just want to right to freely disseminate what does exist."

Well, such an attitude, it seems to me, is less than responsible, because either we as society need to protect this endangered species, or we should all shru, our shoulders and say, "Well, the information will just simply not be available."

with the terrible truth, namely, that if we do not protect this endangered species it will in fact die and there will be nothing to photocopy.

1 -

-)

\_

G

1 1

1 11

)-j

Now a great deal has been written and spoken concerning the possibility of increasing revenues, undoubtedly dreamed up by some humorist for such endangered journals, by way of the willingness of libraries and other groups to actually pay some form of license fee for the privilege of disseminating this information. Again, parenthetically, this strikes me as a completely nonsensical notion, since a publisher is a publisher precisely because he disseminates information -- it is what he is in business to do.

For example, every article in every journal I publish, and I publish 150 journals, is available from me at \$15.00 per article regardless of length. It is quite true that these journals cost me a great deal of money to produce, which is why I must charge \$15.00 per article. Obviously, also a journal costs a library nothing to produce so they might charge \$2.00 per article and make a profit. It would seem to me that even in the case of well-meaning and well-wishing libraries who want to be both legal and moral and want, therefore, to establish some form of licensing whereby they would pay the owner of the information, the publisher, for the privilege of disseminating that information,

-1

ō

b

Ç)

1 .

2.3

an important question goes begging. Of course, the library is going to charge a lower price than the publisher. When all the verbiage is cut out and the entire question is pared down to basics, we come solely to the question not of the accessibility of information, because as I have just pointed out the information is readily available from me, but of a lower price.

Nobody tells the orange grower that he must sell oranges for two cents apiece; nobody tells egg producers that they must sell eggs for 60 cents per dozen; but in a sense they do tell the publisher of information what he should charge. If I were ready to make my articles available at ten cents each rather than \$15.00, evidently no one would want to rip me off or take over my function of disseminating information.

I seem to have spoken here solely about my responsibility as a publisher to make money for my company. But as we all know, publishers pay royalties to authors, which is how they survive. So authors obviously share in the revenues that publishers receive. The anomoly here is that the author is supplying the brainpower without which there is no information: The publisher is risking his money

15

16

17

15

1"

211

21

22

2 ;

21

25

and his organization to make this information available to the world without which efforts the world would not have it: The library in acting as a middleman on behalf of the consumers says in effect: "The consumer wants this at a cheaper price and we are going to give it to him at a cheaper price, and in the process, we cannot be too concerned over whether you and the author survive."

Let me return, however, to the idea of the license. As I think we all know -- I am taking too much time?

DR. BURKHARDT: Mr. Coleman, I just wanted to warn you that you are obviously dealing with a very highly technical subject, and don't use up all your question time.

MR. COLEMAN: Okay. You are right.

Let me jump right to the end.

I obviously object to any form of licensing because any form of licensing can only get me a fraction of the money this costs me, and it is absolutely impossible for us to supply any kind of money in any kind of real sense.

I end by saying: "The answer to the problem of the high cost of information is government funding. The answer is not bleeding the journals

to death so they will have to cease publication, when there will be nothing left to copy. Whether government funding should be to libraries or to publishers is unclear to me at this moment, but there is no question in my mind that unlimited photocopying leads to the extension of the limited-circulation scholarly journal.

Thank you.

ì

٦,

1.3

DR. BURKHARDT: Thank you.

MR. VELDE: I am sure that there will be many questions. I thank you for coming.

Would you put your articles into a publisher's pool?

MR. COLEMAN: I have given my answer in this letter. The answer is, there is no possibility for that. I will give you a tiny for instance: Supposing I sell my articles for \$15.00, and supposing in that publishing pool the library was going to sell that article for \$2.00 and suppose in that article I was going to get a 10 percent commission on it, we will say a royalty on it, and then let's say that means I am going to get 20 cents an article. It makes absolutely no sense economically for me to believe that I will get any form of recompense for that article

at all commensurate with what we call the first copy cost of that article. No way.

MR. VELDE: If a request for an article comes in one afternoon, how long does it take before it is sent out?

MR. COLEMAN: It takes one minute, as a matter of fact. We send it out immediately.

I am assuming the mails will take 24 hours. That minute.

MR. VELDE: Have you ever talked to other publishers as to why their articles aren't available?

MR. COLEMAN: Yes. Other publishers don't believe in doing this and they are wrong, but that slife. I believe in doing this.

If I say what I do say, which is that the publisher is the disseminator of information and the librarian is only the middleman, when I say that I ought to be prepared to put my money where my mouth is and that means if I say that I must be ready to have that material readily accessible, which it is from me. Not free. Freely available, not free.

DR. BURKHARDT: Mr. Coleman, I don't want to quarrel with you, but the publisher is a

1	disseminator, but in that capacity he is also a
$\frac{1}{2}$	middleman. The man who created the stuff
3	MR. COLEMAN: True.
.1	DR. BURKHARDT: he is the man. You
ï	can't do without him and you are making his stuff
<b>6</b>	possible.
7	MR. COLEMAN: Absolutely. You are
8	right.
9	DR. BURKHARDT: So you are both middle
	men.
11	MR. COLEMAN: Okay.
12	MISS SCOTT: The majority of your
В	journals are translation journals, is that correct?
14	MR. COLEMAN: About a hundred of the
15	hundred fifty are translation journals.
16	MISS SCOTT: So then it is your payment
17	to the translator himself?
18	MR. COLEMAN: Right.
19	MISS SCOTT: Another question: Do you
20	participate at all in the Institute for Scientific
21	Information programs?
22	MR. COLEMAN: Yes, I do.
27	MISS SCOTT: Philadelphia based?
21	MR. COLEMAN: Yes, I do.
25	MISS SCOTT: So that they buy
0	

1 MR. COLEMAN: That has worked out very, very uneconomically from our point of view because they have in fact put our materials in current 3 contents, and when they use articles we get royalties. Those royalties can't have amounted to more than a few dollars a year, literally, and so to no avail. 7 MISS SCOTT: But you still continue? 8 MR. COLEMAN: We have. O MR. DUNLAP: I appreciate the depth of your concern in the ramifications in some of the 10 11 problems, but I was surprised to see you say that libraries augment their income through photocopying, 12 13 because most of us do not, I assure you. We operate 14 under revolving funds. It is a cost basis. 15 If it was taken out of my library 16 tomorrow it wouldn't make any difference to the 17 budget under which I operate, and I think that my 18 library is fairly typical in this respect. 19 MR. COLEMAN: Then I have not covered 20 all libraries. I am sorry. 21 MR. DUNLAP: I think you have covered 22 very few. 2; MR. COLEMAN: Okay. 21 DR. BURKHARDT: Mr. Becker.

ERIC

25

I have two things, one in

MR. BECKER:

How can you be sure that the reduction

1

the form of a question and the other a comment.

2

in subscriptions is a function of libraries photo-

3

copying and not of some other cause such as low

.,

quality, lack of user demand, change of scientific

6

interest and so forth?

5

MR. COLEMAN: It would seem to me I could do that for the following reasons:

ч

10

11

12

11

1 1

15

ţr

17

15

14

20 21

22

21

21

25

At the journal conference I attended, run by the National Library of Medicine, run in Bethesda, in any event when Bob Cannon spoke of the journals of the American Chemical Society, which I questioned anybody who would want to argue about high level journals. He can show you the same graph that I can show you, almost identical, which is the downturn of subscriptions starting around six, seven years ago and you can see the exact graph.

You can duplicate that, I believe, for every scientificand technical publisher throughout the world.

Now if you want to say that his journal is low level, I would doubt it. I could say that anybody else's might be, that's ckay, but you will find that true throughout the entire scholarly community. All journals are down. They are not all low level, and they are all down just about the

<u>.</u>1

25

same amount. My guess is, and it is an educated guess, that it comes from photo-duplication.

Now I could go further and say this:

Because I am not a fireman, that doesn't stop me from perceiving a fire. It doesn't stop me from perceiving a danger. The danger is simply expressed, is this an ertangered species? If it is we had better pay attention to it as such. If it isn't, well, then we can all have it back and have a right to say it isn't an endangered species; don't worry about it. If it is, that's what we have to concern ourselves with because that might die. Then there will be nothing left to photocopy, which is my point.

MR. BECKER: My second point was that I thought you wrote a very persuasive letter to Bill Beddington on which you presented with your testimony with a copy to Bill Knox.

He is a private research library and the government clearing house are both involved in this. The response from the two gents don't appear. Did you get any?

MR. COLEMAN: I got a letter from
Bill Beddington which simply says he understands my
heat, but obviously there are two sides to the
argument and does not go on to give his side of the

argument. Bill Knox simply responded by saying could I be more precise about what he had taken, and that was all.

DR. BURKHARDT: Mr. Coleman, as a user of scholarly journals, I would say that if I used a scholarly journal frequently enough so that it would pay me to subscribe, I would do so. I wouldn't, if I paid \$15.00 for a copy of an article from one of your journals and I expect that this journal is of interest to me over the years, I am going to lose a lot of money by paying \$15.00. I get a subscription to it.

MR. COLEMAN: Suppose you buy it for \$2.00.

DR. BURKHARDT: So, my point is I think from the user point of view one doesn't actually use photocopies for the kind of things one uses all the time, however relatively regularly because you save money. You only use a photocopy on a rare and unusual or something you don't get or hear about very frequently, so that I would never subscribe to a magazine which I use an odd article maybe once or twice a year, and so that has to be put into anything, the economics of this situation, too.

I think you have a logical argument

and it seems to make such great common sense but when I try to apply it to my own use I don't see that I have jeopardized any periodical life in the way I use it and I suspect scholars generally work the way I do.

I subscribe to six or seven that come usually -- I have three, four things a year or quarter, and it is the odd one that I don't and would normally not subscribe to anyway because it wouldn't pay me.

MR. COLEMAN: Well, might I point this out, as not totally in answer to your question but there is this: Supposing you were a librarian pressed for funds and you had to curtail whatever it was, something had to give. You can't curtail your labor because there is no way to keep labor costs down, there is no way to do anything at all like that, nothing at all you can do. Something must give or you must get more money.

Well, if something must give you are going to go obviously and correctly to those journals which have a lesser demand, not a question in the world about that.

My question would come down to the.

following level: If your lesser demand was caused

25.

by networking or the possibility that you could get it from other places, or the possibility that that journal in fact you could use one copy for ten libraries, et cetera, if that turns out to be the fact and the way it was, that journal could be killed.

Now I grant immediately one could say logically: "Well, let the journal be killed."

I question that that is what anybody wants to say and if that's not what they want to say there has to be someone who will sit down with an overview of this entire subject and say: "Sir, now hold the phone before we go too far and kill all these things."

Are we embarking on the right road?

Is it the right path that we are following? I am not sure that it is at all. I see a great cry for users; I see a great cry for consumers out there;

I see a great cry for libraries who, heavy knows, need the money. I see no one saying, "Let's not kill these things." I see no one saying that.

DR. BURKHARDT: Andy.

COL. AINES: And you, of course, are very persuasive in what you are saying and I am sure it is very much tonic for those people who want to

understand the message that you are conveying.

Let's look at history a little bit. The publishers and the professional societies found that they were unable to support their programs and the institution of age charges was born. government subsidy, no matter what else you call it, even though the private sector, I understand, paid an equivalency. Apparently it was decided back at this time when this happened by the Federal Council to Scientific Technology that they did not want to see the publications be ground under, for whatever reasons. Now we are coming to another Y in the road, and the private producers are coming forward and saying: "Look, as a result of economics, new technology, new practices among people, now we find ourselves in the same boat."

And so you are pointing out that you would not like to see a new kind of a network be created that will make matters worse for you.

I hope I am stating your problem.

MR. COLEMAN: Exactly.

COL. AINES: I would like to suggest that the idea of looking for similar subsidies might be one way, but again it might be very much of a dangerous way to go.

MR. COLEMAN:

That is exactly right.

2

٠1

ı

COI

COL. AINES: So we now find not only

one endangered species but there are a number of endangered species, including the libraries.

MR. COLEMAN: That is absolutely correct.

COL. AINES: This then would indicate to me that some very serious thinking still has to be done in the area and I am pleased to say that there isn't a final word, there is no decision in terms of law at this stage of the game, in terms of any national decision, but I would hope your community continues to put the matter in the clear perspective, not only looking at your own problems but being able to articulate just as effectively the recognition of a number of endangered species and the search for some new formula, which I don't think we have yet been able to find.

DR. BURKHARDT: Mr. Casey.

MR. CASEY: Will you please give me your opinion as to the feasibility and practicality of a suggestion that I have received in regard to the problem.

Assuming you are publishing a scholarly journal every month with ten articles in it, you anticipate through your experience that three of them

are going to be very, very popular, and out of all 1 the copies there may be a big demand for those three. 2 So in your magazine you are only publishing a 3 summar of those three, thereby forcing the reader to write to you and pay the \$15.00 to get the complete 5 text of those three. So there is no use copying 15 it in the library because it is not complete. 7 you want the complete one they have got to read the 4 summary and order from you the complete text. 9 MR. COLEMAN: I question very much 10 whether, one, I could depression, or even my editors 11 could depression enough to know which of those 12 13 articles are really going to be that important. 14 That is first of all. 15 Second of all, from the point of view 16 of a journal publishing program of any size, whatever 17 yes, if we were doing one journal we might be able 18 to do that. It's a possibility. But doing 150 19 journals, obviously it is a total impossibility. 20 It would seem to me not only too 21 co bersome but I question really that it could be 22 effective. I doubt very much. 23 I have thought about it a great deal, 24

19

20

21

22

23

24

25

MR. COLEMAN: Well, let me tell you-I am afraid I am taking too much time, but let me
tell you a hair-raising answer to what you have
just asked. The hair-raising answer is this: Yes,
taken to reduction, what would happen. My price
will go from \$10.00 a year to \$30.00 a year, to
\$60.00 a year, et cetera, right, and eventually as
this continues to clamb obviously the subscriptions
will continue to decline. Perfectly obvious.

Now what happens? Let's come down to the finality of it. When you get down to the bottom you are producing one single copy, right.

At the end, very end for the network, right, because that is really where it is going to wind up. The information isn't going to go away. That's where it is going to wind up.

ı

1-1

16.

Who is that network library? That network library has to be the AT&T and the IT&T and Western Union, IBM, et cetera. That is who it is likely to be.

Now one step backwards. I am a monopolist. I own information and for \$15.00 you can break my monopoly. That is easy. Pay me \$15.00 for my book and you have got it. You have broken my monopoly.

You will not get on their consoles for \$15.00. No way in this world. One step away from the fact that large places will own this information. One step away from there is Big Brother and big government. One step away. But that is where it must go unless literally small publishers can reain as publishers, continuing to publish information which is freely available, but not free, to anyone. That's the real answer for that question.

MR. LERNER: As a publisher I wish you had answered Carlos's question. I wanted to get one of your secrets.

MR. COLEMAN: Obviously, as the circulation declines the price has no choice but to rise.

MRS. MOORE: We will have time for just

one more question.

Į

6i 

22 -

Julia.

MRS. WU: In your testimony you said the solution to this is to have the libraries expand their budgets.

Are you suggesting that the libraries will pay for the costs of the photocopying?

MR. COLEMAN: No. I am suggesting not for photocopying at all. I am suggesting that the libraries, if the libraries have sufficient budgets then the libraries would be able to afford the journals that they need and that we, as the society, would be going past the individuals and localized problems of local library funding and go to the heart of the problem, at least I think it is, which is if these journals are endangered and we cannot allow that to happen, if that is our answer, and we cannot allow that to happen then we have to make sure that doesn't happen.

Well, then, the library is going to have to get money from the government or from some-where to enable them to buy the subscriptions for these journals. That's what is going to have to happen. That's the answer to it, not photocopying.

MRS. MOORE: Mr. Coleman, you have

been very stimulating and we thank you for coming. You have shed real light on the problem. Thank you.

Thank you very much.

MR. COLEMAN:

MRS. MOORE: Our next witness is Mr. Samuel Douglas, Director of the New Castle County Library Department.

MR. DOUGLAS: My name is Samuel Douglas. I am from New Castle County, Delaware.

In my written testimony I point out the very deep concern that we have in the State of Delaware over the lack of development of the State Library. As some of you know, Mr. Trezza, I am sure you know, a couple of years ago the position of the state librarian was eliminated from the budget and the state librarian found out about it when he received his copy of the budget.

Since then there has been no state librarian. There have been attempts recently to preserve the State Library. In the meantime, though, the State has gone to the development of County library systems, which you would think would be a logical thing to happen along with the development of a State Library.

> MRS. MOORE: How many counties?

MR. DOUGLAS: We have three counties.

\_

.5

б

ĸ

New Castle has about half of the land area and about two thirds of the population. The other two counties, Kent and Sussex Counties are small and essentially rural counties.

Now I came to Delaware just three months ago. The legislation which created the New Castle County system was passed along about November and we are going to have our system in official existence on the first of July.

However, to update my testimony, the lower counties in Delaware have introduced bills into the State Legislature to climinate for them the necessity to mandate, to create a county library system, and they want to retain what has been in the past, which is a library based on a school district tax level managed by the local library commission.

Now not all of the libraries in New

Castle County are coming into the system directly.

I will administer directly for libraries but some of the smaller libraries and some of the libraries with a great deal of private interest in their development, in their history, will contract with us for library services.

We are trying to figure out good ways of policing those contracts and it is a little bit difficult when you are not allowed to see books, you are not allowed to have audits when a single individual owns the building in which the library is housed. Any number of different things like that.

So my question was, for the State of Delaware is it really best to focus development on the State level? We can't seem to get anything done there and there doesn't seem to be any interest. I am not an empire realtor but I would say very definitely that New Castle libraries will be far in the lead. We have 75 to 80 percent of the state library resources. When you add the University of Delaware library, I think you heard Dr. Dawson this morning, when you add that complex to the medium sized but good collection of Wilmington 'nstitutes, and you add the Delaware Historical Society, the private library, both historical kinds and business and other kinds of necessary information, Du Pont Company, you have a rather amazing collection of libraries. I wonder how you feel about this lack of effort on the State and I wonder if you have suggestions for us to help get things moving.

15

Hi

17

18

19

20

21

22

23

24

25

ì	MRS. MOORE: Mr. Douglas, the purpose
2	of this hearing was for us to listen to you, not
3	for you to listen to us.
4	MR. DOUGLAS: Of course, I understand.
5	MR. LERNER: How are LSCA funds
6 -	administered?
7	MR. DOUGLAS: They are administered
8	through the State Library.
9	MR. LERNER: But you said there isn't
10	a State Library.
11	MR. DOUGLAS: There is a State Library.
12	There is not a state librarian. The State Library
13	has been operated over the last couple of years
1.1	by a very capable woman who has done a good holding
15	job. She was trained as a bookkeeper and that has
16 .	been the state librarian.
17	She has expressed to me very strongly
18	her desire to have a capable person who can do the
19	kinds of programs and planning that are necessary
20	on the state level. I have been asked to write the
21	State Library plan for Delaware, and I don't think
22	the other counties are going to take well to that
23	at all.
24	MR. TREZZA: The problem in Delaware,
25 🕆	of course, is two-fold: First of all the office

I

of education should not permit that to happen by simply withholding the funds.

Q

opinion could be made that they have to have a professional, but be that as it may, the librarian and the trustees or the citizens of Delaware must assume the responsibility for pursuing that. Now, if that is decided, the State of Delaware may well find that after the development of the programs that it needs to be more regional than state, as they do out in the area far west.

1.1

.).,

For example, a number of states will do a lot more regionally than they do in the state. They have a state library with a limited program but this they tap in on a regional basis and do more. And it may well be that Delaware is small enough, the problems are sufficient so that one aspect of it may be that you have to go to Maryland and Pennsylvania, for example, on a regional basis to get some help. But I do think that is your basic problem.

How do you first get your state level resources shared?

It can only be answered by the librarians and the citizens of Delaware and the best we can do

is to suggest that maybe some of the other states that have some of these problems might be able to

help you in working with you.

I

25

MR. DOUGLAS: Could I give you an example of the way this has worked?

Recently, the last three months, we were invited to apply to the State Library for a sort of grant of twenty-some thousand dollars, available for each of the three counties. All we had to do was send in an application and this would come to us after paper work. I wrote up a very short two-page grant, sent it in and about two weeks ago I was called by the people in the State Library to know if they could send a copy of my proposal to the other two counties because they would not apply for the money because they thought applications were too difficult to write.

MR. TREZZA: You have got problems.

DR. BURKHARDT: Any other questions?

MR. LORENZ: I am really surprised that there isn't greater emphasis on getting the public involved and greater emphasis in using whatever political power you can muster in fact in terms of helping the libraries. That really surprises me that the libraries and librarians have

eric—

2

been so acquiescent in dealing with this question.

15

16

17

18

19

20

21

22

27

21

25

MR. DOUGLAS: Actually, the lead in developing the system for the county was taken by the current president of the county council who worked for many years. Now there's a great deal of citizen involvement and we have a civic library board of 13 members, the League of Women Voters has taken on libraries as a project and done a real tremendous job and good analysis, and all of this information was presented to me in a package when A lot of the groundwork was done and I I arrived. had not very much of it to do.

There is citizen involvement but it gets right down to the fact if better libraries require a raise in the county taxes it is not going to happen.

We have just been through our budget hearings. Somewhere along the line somebody mentioned 1.5 million dollars for libraries and it has been held to that. Almost to the penny. And we have had to work, for example, with the Wilmington Institute. We have required 25 percent reduction in their staff, at the same time telling them that they may not reduce their hours or they won't get their money. No one is out of work. We

error.

are absorbing them into our County system but it gets down to the fact that living in what is essentially an urban county is expensive enough that people don't even want to hear pennies added onto their county taxes. In other words, we want it but not if we want to pay for it.

MISS SCOTT: What is this \$200,000 sort of grant?

MR. DOUGLAS: \$20,000.

MISS SCOUT: Sorry. A typographical

MR. DOUGLAS: I wish it were.

MISS SCOTT: Who is it that indexes that got the \$20,000?

MR. DOUGLAS: Oh, that was just a for instance. We have some important local history information in the Wilmington Institute Library which is completely well kept. It is an amazing catalog and we were toying with the idea of getting some kind of computer generated index and placing it around so we could take the physical pressure off the Institute, but we don't buy multiple copies of best sellers, and my point was that when you read in the newspaper that your are spending \$200,000 on a computer project and you are 26th in line for

1	the best seller you want to read, you are going to
2	go to your county councilman.
3	DR. BURKHARDT: Okay.
4	MR. LERNER: It is the horror story of
5	the day.
6	MR. DOUGLAS: Yes.
7	DR. BURKHARDT: Thank you, Mr. Douglas.
s	MRS. MOORE: When you have solved this
9	you come back and tell us about it.
10	
11 -	
12	- DR. BURKHARDT: And now, Miss Wright.
1.3	Lottie M. Wright, Director of
14	Library and Media Services Division, The Federal
1.5	City College.
16	MISS WRIGHT: I am Lottie Wright, the
17	Director of the Library and Media Services at
IS	Federal City College in Washington, D.C.
19	I wish to thank the commission for
20	inviting me here for this testimony. I do not wish
21	to elaborate any further on the testimony that I
22	have submitted. I would like to express another
23	concern not shown in the first testimony. That
4	concern is for a national cultural center of black
2.5	information to be located in Washington.

.3

[6

[9

encompasses approximately three million people.

Recent reports on population growth show what is called a sharp decline in the metropolitan area population growth rate, however, the fact remains that blacks are still the majority in the District of Columbia, per se. Therefore it seems altogether reasonable to me to argue for a national network of information having its base in Washington, D.C., as a national cultural center of black information.

A number of efforts have been undertaken to bring such a network of black informat\_on
together in organized fashion. The failure of
these efforts to effectively accomplish such a feat
to date is the same as in similar undertakings
of this magnitude: One, inability to find the
necessary funding; and, two, lack of available
leadership free from economic constraint or restraints
to produce a permanent project requiring years
of study and implementation.

This establishment of such a center in Washington will be of inestimable value in illuminating an area only barely touched by similar efforts.

The disbursement of materials relating

States has heretofore hampered efforts to comprehend its nature. In a pragmatic sense the traditional inability of either black or white cultures to communicate on the basis of equality is to some extent affected by this difficulty in certifying close culture communication efforts.

The center must, as a consequence, be seen as one which will provide a base for the generation of knowledge necessary for a statement and certification of black culture as it relates to whites in the generation of mechanism of communications between the two.

In order to make the problem of scholarship and satisfy the largest social needs a central depository for materials relating to race and development of black culture in America and elsewhere should be established in the District of Columbia within the City's broad range of complementary facilities.

And here I am referring to the many libraries in the area and many information centers in the area which number something around one thousand.

This is ideal for a national education

24

national resource within easier reach of students, researchers, educators, politicians are the man in the street.

We go further to suggest that this center might be established at the University of the District of Columbia soon to be.

Its relationship to the community would be in keeping with the practical community outreach commitment of a land grant institution. However, this center would not merely be a central depository or clearing house, but would carry with it a commitment to the crucial urban social problems facing the nation today and involvement as a vital force in engendering communications.

We therefore strongly recommend that the following suggestions be considered in the development of the federal library legislation:

One, large metropolitan areas with a heavy concentration of information resources such as the District of Columbia be distinguished from areas with less significant facilities and their role as a national network defined for specific and unique network programs;

Two, the Washington area has developed strong library cooperation to expand available

**⊈**FRIC'-

resources to its constituency. l Federal support for these cooperations would significantly advance network development; 3 Three, a black culture information center based in Washington at the University of 5 the District of Columbia and as a clearing house for disbursement of information throughout the nation 8 should be established; 9 Four, support for the Council on 10 Covernment and the many projects now under way to 11 bring together the resources available in the many 12 libraries in the Washington area. 13 Thank you. 1.1 DR. BURKHARDT: Now, Miss Wright, 15 this is new testimony, isn't it? 16 MISS WRIGHT: This is new testimony. 17 DR. BURKHARDT: So, could you send it 18 to us so we will have it for the record? 19 MISS WRIGHT: Most certainly. 20 DR. BURKHARDT: All right, good. 21 I wanted to ask you, also, could you 22 name three or four places now that have substantial 23 collections of black information. 21 I imagine the Schonberg collection in

ERIC

25

AREA-WIDE FEDERAL REPORTING, INC.

New York would be one. What others are there that

1	have collected a large amount of material now
2	that could be a base for such a network, say?
3	MISS WRIGHT: There is a large amount
-1	of material at the Fiske University in Nashville,
5	Tennessee. There is also a large collection at the
б	Atlanta University at the library there. There is
7	a large collection at Florida State University, at
8	Tuskegee Institute. There are numerous others. $ ule{}^{\tilde{'}}$
9	MR. LERNER: The Lennon and Hart
10	Collection, Public Library.
11	MISS SCOTT: What about Howard University?
12 -	MISS WRIGHT: And Howard University,
1.3	of course.
1-1	DR. BURKHARDT: Howard is the one
15	you are thinking of as perhaps the location?
16	MISS WRIGHT: No. We are thinking of
17	the to-be-created University of the District
18	of Columbia. At this point we are thinking of the
19	Federal City College but we prefer to move to the
20	larger plans for the University.
21	MISS SCOTT: At Howard, just to pursue
22 :	this a little, this is not an open collection; is
23	that correct?
21	MISS WRIGHT: This is correct, that the
25	collection at Howard is not an open collection. As

a matter of fact they have had a lot of problems with the borrowers, who have recently damaged and mutilated and stolen a great deal of the material that they had hoped to preserve for the sake of scholarly research.

MR. LERNER: I want to ask basically what is a hostile question. It has to do with the relationship between City Colleges and Public Libraries and reading your testimony which you furnished us in advance, it seems as if you are asking in effect for a D.C. public library to take over in fact the research library's functions of the Federal City College and that you are concerned that they are not doing their jobs for students, and my question is, shouldn't you and other City College librarians, that is not only a D.C. problem, but it exists all over the country -shouldn't in fact you do more of your own jobs rather than calling upon the facilities of the public library to do it for you?

That is an unfair question, but it has, you know, time and time again.

MISS WRIGHT: I am sorry that you got this from the testimony. Our intent was to show that the D.C. Public Libraries cannot in fact do l

2

3

.1

٦,

ii

7

8

9

111

11

12

this thing. They cannot provide this kind of research. They are not funded to do so and they have not been over a period of years.

We would like to be able to do this and we are attempting to do it by establishing our own research library on the Federal City College campus and we do have at this point a small facility.

However, the magnitude of the research libraries that we are concerned with is a regional facility far surpasses the kind of budget that the D.C. Public Library is now given.

I have been a member of the D.C. Public Library staff myself before I went to Federal City College and I had great difficulty in justifying a budget for in-depth material to take care of the students in the various colleges who used the facilities where I worked.

MR. LERNER: What do you think this relationship in fact should be then between the public library collections and the support of City colleges?

MISS WRIGHT: I think if they were funded properly both should complement, supplement, support each other; that a strong referral system

22

23

21

would facilitate this, but it is necessary there 1 again for a network, a union catalog to be provided so that each facility will know what is available 3 at the other. 1 COL. AINES: I have a couple of questions .5 I would like to ask you. 6 7 Has there been any effort, to your knowledge, to create a black oriented consortium 3 among the universities that you have talked about O [0] having collections of the type that might be put 11 together? 12 MISS WRIGHT: Not in the District. 1.3 only have the consortium of libraries as are related to that consortium of universities. 1-1 15 COL. AINES: No. Pardon me. I have 16 given you the wrong question. 17 I think you mentioned Fiske and mentioned 15 a number of others. 19 MISS WRIGHT: Oh, yes. Yes. 20 has been such an attempt. 21 In 1971, '72 there was a group meeting 22 Cassidy Co. mittee who attempted to establish such 24 a network. However, it did fail because of funding 21 mainly, and also for the fact that I mentioned

25

leadership that was free and funded strongly enough

1 that people could really get down to business of 2 trying to bring together such a network. 3 Last year in Atlanta another group met -1 to try to effect this. I do not recall the results .5 of that. 6 COL. AINES: You would be interested 7 in knowing it is a very small footnote that I was 8 the one who tried to get that started for you as 9 the chairman of Cassidy at that time. 10 MISS WRIGHT: I see. Thank you, Mr. 11 Aines. 12 COL. AINES: Unfortunately, Cassidy 13 disappeared and all the authority and power we had 14 went with it. 15 The other question that I have is: 16 Have you brought this proposal to the D.C. Government 17 in any way, to Mr. Washington or any of the 18 people in the governmental sector? 19 MISS WRIGHT: No, sir, I have not. 20 As a matter of fact, I have just only 21 recently been in a position to put together this 22 type of information that I might at some point 23 very soon I hope bring this before them. 21 COL. AINES: It might be a good idea 25 just to try it out and see what happens.

MR. NESS: Oh, it's in the new folder.

DR. BURKHARDT: I am sorry. Maybe you had better amplify it.

MISS SCOTT: Since we have not had a chance to read it.

MR. NESS: As a state association we are especially concerned about the networking and the resource sharing. We have in this state many different cooperative groups, I forget exactly how many, 19 or 20. Some of these groups have been in existence for quite some time. Some provide shared cataloging information and location for interlibrary loans through OCLC tie-ins.

Some less sophisticated manage to provide services, strengthen services, and resources, to their constituents through cooperative arrangements, and these are many and varied.

Some include only college library, academic libraries, some include a variety of the libraries, public and special academic, some cut across state lines, some have been established by law.

I suppose the point is that it seems to me in my federal partnership we could consider the role of these consortiums, these groups, and

2

3

in fact that some of them might well become active nodules in a national program.

On one other matter we, as an association

.1

are concerned about selling the idea of networks, selling the idea of resource sharing and so forth

to the grass roots activity and have appointed a

to legislators, to the citizens. We look forward

I perceive regular activity in the coming year whereby we will be working with the public and relating the needs to the citizens and to the legislators.

MR. CASEY: Mr. Chairman, may I ask a question, please?

> DR. BURKHARDT: Yes. Mr. Casey.

MR. CASEY: In your capacity as the president of the Pennsylvania Library Association, your attitude towards the White House Conference is possible because we hope to have governors conferences or free White House conferences in every state and territory, and the enthusiasm of the people on the state level, of course, is going to generate the enthusiasm in Washington at the national conference.

l

-1

• ''

Now, how do you feel about the White

House Conference? What do you expect for it, what

anticipation and what aspirations do you have for it?

MR. NESS: Well, first of all I think

it will be only as good as the Governor's Conference.

Let me just go back to the governor's conferences. I think these have to be well organized. It has to be good input into the governor's conferences and out of the governor's conferences will come the papers and so forth and the ideas that will culminate in the White House Conference. I foresee in the White House Conferences that the real national priorities will develop just as I see these priorities developing at the state level, and I also think that as priorities develop, also there will be a reassessment of many of the operations, critical evaluations on what has taken place in the past.

Also, certain courses of action that we will follow in the years ahead.

MR. CASEY: Thank you.

MRS. MOORE: Could I?

You are assuming, of course, that we will have the White House Conference and you are?

MR. NESS: I am assuming that we will.

1

1

.,

ij

8

: }

10

11

13

11

15

17

18

. 1

MRS. MOORE: And that you are going ahead with your plans to have this conference next year?

MR. NESS: We are also assuming that the Governor of this State will call a Governor's Conference for the fall of 1976.

MRS. MOORE: And this would be the conference that you would use as a preparation?

MR. NESS: Yes, makem.

And we could have all of our people, various people, participating in this and interested citizens and so on.

But we will be working closely with the State Librarian, with other associations, Pennsylvania School Library Associations, for example in bringing this about.

We also have nine chapters in our State Association and we will use the organizational structure that we have to focus attention on many matters that will have to come up at the Governor's conference.

DR. BURKHARDT: Does anyone else have a question?

MR. LERNER: Charlie, you are certainly

ERIC

This is a question which is really

MR. NESS: How do we sell it to all

familiar with the national program document.

2

a question which goes well into the future.

the libraries?

3

do we and how do you as the PLA sell this to all

5

level?

6 7

libraries?

9

8

MR. LERNER: Yes.

10

MR. NESS: Well, there are different

11

ways. And I get back to the point I made before.

I think first of all we use the organizational

1.

structure that we have, and I have mentioned nine

11

chapters.

15

16,

17

15

11

\_11

21

-1-1

1,

21

Most chapters have two meetings a year. The chapter is really a composite of the whole membership, the geographic local, and you begin by having meetings in your chapters and you invite not only your librarians, your members, but other people as well. You use your publications. We have publications out six times a year. The committee is working very closely with the State Library setting up programs and we have waged a PR campaign. In fact, we have PR workshops now in

I think this will be a good test. the state.

18

21,

21

11

17

We use our legislative network. haven't mentioned that because we just completed the final plans for our network, but we did send out a trial notice and that notice is on the Governor's Conference. This is a network whereby we are able to communicate throughout the state by c stacting them through a chain of contacts initiated from the PLA headquarters in my office, but we have done a lot of grass root work and we used the media, and we sell it. Now I am not saying that every member of our association approves all that is in the commission's report, but we have many interests in our association, but there is a selling job to do.

> DR. BURKHARDT: Bud.

It would be very nice if MR. VELDE: we knew more definitely the time of the White House Conference and more properly in most states they will be called the State Conferences rather than the Governor's Conference.

MR. NESS: I realize that.

MR. VELDE: In turn, I think that's something that you in this state will have to watch to be sure you don't eliminate some help some way from tre planning of the White House Conference in the tate Conference.

MR. NESS: Right, I understand.

DR. BURKHARDT: John.

3

11

12

MR. LORENZ: Perhaps I should have asked his question of Ernie Doerschuk but since you re there, do you happen to know if the State Grant rogram for Pennsylvania, the public libraries, does equire some minimum local or county effort in order to qualify for state grants in Pennsylvania?

MR. NESS: I think it does, yes.

MR. LORENZ: Do you feel that the same principle can be applied to the way several programs -in other words, there there be some minimum state
offort before federal grants would be obtainable?

MR. NESS: I must say this did concern us somewhat when we prepared the statement, because we were looking at what was expected of the state and the situation in many states, of course, is not very good as far as finances are concerned, and this is not in the statement but the burden on the state is going to be considerable and we question whether that was really something that we could expect as a matching grant or support from the state.

We haven't resolved that but it did

bother us.

11

MR. LORENZ: It seems to me if that isn't to be obtained then there must be some alternative developed, wouldn't you agree

MR. NESS: There must be some funding somehow.

DR. BURKHARDT: One more point from Mr. Trezza.

MR. TREZZA: One of the points about the national program you must keep in mind is that we are talking about funding and we are talking about a partnership. While I like another term better called balance in the governmental funding where there is a local share and a state share and a federal share and it is not either all federal or all state. It is all three and it seems to me you can't have one without the other.

I don't think, for example, the new federal initiative of the magnitude we are talking about is possible unless the local and state are willing to put up their money.

Local meaning all kinds of local libraries academic, special, public and so forth, the state the same way. Otherwise it won't work.

Because our problems of financing is

severe enough so only a mix will do it. don't think when you look at that program you should forget that it is pretty strong in that pro-It does give the state the major responsibility because they are a coordinating agency, at least they have the ability to be, and as someone earlier this morning said, they vary with states. And we are saying, I guess, that each state must use its existing agency or develop a new one if it doesn't work, to do this job.

So don't take it as if we are trying to put undue purposes on the state, just its appropriate share.

MR. NESS: Okay, I understand.

DR. JRKHARDT: I guess, Mr. Ness, I will want to thank you very much for your

For the benefit of those of you who are not familiar with my interests in appearing here today, I am president of an organization, a private organization which collects, classifies, abstracts, indexes, micropublishes government documents no longer limited to Congressional documents, despite our name.

April expressing my concern as a publisher who deals with government information, with the need for better coordinating relative roles of the private and public sectors in the dissemination of public information and suggested the need for a national policy to be established by the government in order to facilitate the implementation of public-private cooperation in this field.

I was delighted to see in the most recent draft of your national program document a similar statement with regard to the need for material policy guidance in this area. I only wish that the statement were perhaps even stronger than it currently appears.

I would like to mention that the new name and perhaps more important the new charter of

ERIC

22.2

the House Subcommittee on Government Information and Individual Rights, now chaired by Representative Bella Abzug, offers a positive vehicle for congressional consideration that this vehicle needs and to suggest to the Commission that it might communicate its recommendations along these lines

I would also like to make one additional point if I might.

to that subcommittee.

In my conversations with our various and some governmental officials regarding this issue, the need for federal information policy, I very often hear a question which I believe must be answered if the federal policy on distribution of government information is to be established. More often than not the question goes something like "We citizens pay for government information once with our taxes, why should we pay for it a second time through a commercial distributor?" believe that the question itself reflects what appears to me, at least, to be a basic misconception of the information process. If this is a proper time and place to pursue this issue I would be happy to do so, unless there are other matters that the Commission would prefer to raise during the

37.3

very limited time that we have here this afternoon.

DR. BURKHARDT: Why not? Go ahead.

MR. ADLER: Okay. I would like to draw an analogy, if I may. Let us assume for the moment that I am the author of information, perhaps I am a government employee who is the author of information. On which is needed by and can be used by certain members of the American public, and that all of these people have been gathered here in Soldiers Field in Philadelphia to hear me present that information. In the absence of a public address system, ver; few of the hundred odd thousand people who can fit into that stadium would hear what I have to say.

I think many of us in the information industry and indeed virtually all of you in the library community are in the position of one way or another providing that public address system. Without such a public address system what I have to say before that crowd will only be heard by a very small number. It is the existence of the distribution apparatus, if you will, that makes that added value for this information. It indeed multiplies the value of this information by enabling it to reach more users.

1

10

11

2

}

1

)

''

.

. 8

10

11

12

13

1 1

15

Hi

17

18

131

26 21

. . . .

21

25

I will take my analogy one step further and suggest to you that it is possible that all of the people who need this information are the Spanish speaking members of our population who do not speak English, in which case it might be necessary to provide not only public address systems but also a translator. That is recasting the original form of information into a new format so that it can be more readily used by the potential users.

I take it one step further and suggest to you that the situation might be one in which the hundred and some odd thousand people who might need the information have not been gathered in Soldiers Field yet and somebody may have to go out and get them, make them aware of the meeting and get them to Soldiers Field. That is bringing them to the information, if you will.

Now it seems to me that irrespective, regardless of the source of information, whether it be publicly authored or privately authored, the publishing process, the rest of the information process, which is more simply a publishing process, goes on independently of the creation of the information. It begins after the information has

been created and the person or the organization
that provides the loud speaker, the public address
system that provides the translating or the reformating
it goes out and creates the attention in performing
functions that need to be recognized and indeed
unfortunately paid for, regardless of how much, if
anything, is paid for the original message.

In the dissemination and distribution of public information, which may well be in the interest of the government to disseminate, those same processes have to go on. I think that there is a very valid question as to when the government should provide its own loud speaker and provide its own translation and provide its own group of messengers running up and down the streets saying, "Come to Soldiers Field and hear the message." think there are certain circumstances where the government should be in this base, but I do think that those of us who are currently doing it commercially should not be accused of doing nothing but taking free information and charging for it, but what we are charging for it is all the things we do after the message has been created, and I think that the question I posed before is one which would seem to me to betray a misunderstanding of that

ERIC

relationship.

111

11

12

1:

11

15

In

17

1

14

20

21

2.3

24

DR. BURKHARDT: I suppose one aspect of the problem is, how does it happen that a system produces so much information that stops with it just having been done when presumably it was produced in order to get to somebody and a lot of it is just there, and I agree with you, it would never get any place if it weren't for some of these distributors in the picture, but there is something wrong with the thinking involved in the whole operation if these sort of lie dormant until someone picks it up.

MR. ADLER: I would like to comment on that, if I may, Dr. Burkhardt, because I ask myself the same question and that is why I am doing what I now do.

About six years ago I became aware of the enormous amount of information which Congressional committees generate for their own benefit, for their own use, to meet their own needs in the process of either creating legislation or overseeing the implementation of existing legislation, and I became aware of the existence of this information and of its value, and of its potential usefulness to people who did not currently know about the information

ERIC

3.7

content of the documents that were being produced in the Congress.

It is not, it seems to me, that the r ime function of the Congressional committees is to worry about the fact that information that they have created for their own use has use elsewhere. Ι don't think that Congressional committees should impede somebody like Congressional Information Service, who see a future use for this information and who can multiply it by providing another public address system. But I think we have to recognize the fact that a very high percentage, and I will take a guess right out of the air, I will say ninety percent of the information which is generated by the government is generated for relatively narrow purposes and only later does it become apparent that other people can use it.

DR. BURKHARDT: Mr. Becker.

MR. BECKER: Jim, if a forum were established to consider federal policy in this area, what would you suggest be its terms of reference? Would it include, for example, a re-study of the GPO practices, would it include audio-visual materials? How far would they go in trying to do this?

MR. ADLER: In answer to your first

ERIC

10

11

12

13

11

15

lii

17

18

20

21

21

question, would it include GPO practices:

Certainly. One of the difficulties we now face is that GPO is making printing decisions which are perfectly valid as printing decisions, and hardly invalid as information policy decisions, but in the absence of the Congressional policy decisions which are made for relatively narrow purposes, have very broad effects, and I think this is perhaps the biggest single problem that exists with regard to the distribution of Government information.

I think we are dealing primarily with information which has been put into printed form or secondarily which has been put into computer readable form.

I am less concerned with audio-visual materials because it is my impression rightly or wrongly that in terms of the entire volume of information created by Government agencies and needed by information users, audio-visual materials are relatively a small section, and if one chose to ignore them one would not be ignoring the main part of the problem.

But my guess is that if you could establish some basic guidelines that will apply

14,

1+,

17

15

20

21

21

27,

as if they were sensible guidelines, they would probably apply as well to audio-visual as to printed and computer readable.

MR. BECKER: And the last question from me is the private sector includes two parts, a for-profit and not-for-profit.

MR. ADLER: Yes.

MR. BECKER: How do you see those two relating to what you are talking about?

MR. ADLER: The more contact I have with the not-for-profit sector the more I become convinced that the only difference is that when we seek a service we call it a profit, and when they seek surplus they call it a surplus. I think we are both non profitable agencies, and I think that is essential.

COL. AINES: Jim, we have talked on the subject before, I believe.

The problem that you have posed for the Commission I think is a very proper one.

I think we have to make a determination somewhere along the line just what the proper roles are on the information generated by the federal agencies and which should be disseminated to the public and in one sense one answer has been given

in the terms of the Freedom of Information Act which, in effect makes large volumes of information available to be exploited in any way that any group wants to exploit it.

You certainly have been one of the entrepreneurs, one of the leaders in what now is going to become by and large, I suspect, a large industry as long as the Government keeps on publishing it.

This is one of the problems that I see, that we must not let this process become so corrosive, so unfriendly, that the decision is made to stop publishing a lot of information which in effect is what you need in order to push your products.

Now you have suggested on occasion that where there should not be any clashes would be in the newer areas where the Government hasn't created an information system and bear in mind some information systems are created because of pressures of Congress. Laws are passed requiring certain kinds of dissemination and undoubtedly some of our colleagues have had difficulty because of the interpretation made as to who has the responsibility for the dissemination.

MR. LORENZ: What are some of the areas where you feel it is ready for the Government to do

The only point I would like to make is that I do believe we have reached a point where public discussion of this issue needs to be made. I don't believe many people in Congress are aware, even outside of Congress, even in our community, are aware of the rapidity in which this problem now has come to a boil virtually, and I commend you for bringing this point up, suggesting in this very courteous and intelligent way that maybe it is time to come up with a policy.

I have my own ideas and ways to go.

Of course, you have heard me on that subject. But
I believe there ought to be room for each community
to survive, exist, and hopefully prosper with this
new direction that we are moving towards.

So any way we can cooperate or work together we will be delighted to do so.

MR. ADLER: Well, those words abound to my ears. I am delighted to hear such thoughts from a member of this Commission and I certainly hope that the Commission will choose to grapple, or perhaps to use its influence to call the issue to the attention of the Federal government.

MR. ADLER: You ask the question in a I won't say a peculiar way, but in a way that ti is not often asked to me. It seems to me that if you wish to avoid a government monopoly of the information process, then you are guided to begin with by a philosophy that says the less the government is involved in the information process the better off the public will be.

The creation, the production of the information, of government information, is quite obviously a government function.

I think when it comes to dissemination, the less government activity the better. There are certain places where it is obviously necessary.

MR'. LORENZ: Such as --

MR.ADLER: Such as, well, certainly the nature of getting out the Congressional Record and other Congressional printing and getting out the Federal Register must be a government procedure.

A number of years ago the only way
that a large scale scientific and technical information dissemination operation like NTIS could have
been launched under government auspices and I think
that at the time that was an appropriate decision

for the Government to have made and certainly one of the major problems that we have come across and we deal with some eight or nine hundred government bodies in the course of collecting the materials that we abstract and index is the sad lack of adequate lateral communications between government agencies. I can think of agencies in the same building that are unaware of each other's output information and certainly the Government needs to concern itself with solving that problem because it will operate better when it does.

I also believe that as another philosophical point that if we are going to have further subsidies in the information field, if they turn to be necessary, that I would much prefer to see subsidies aimed in the direction of the user rather than aimed in the direction of the producer and if there is going to be a key role for the Government in this whole question of disseminating information I think it is likely to turn out to be a funding role, and I would furthermore suggest that those funds should be directed towards the user community rather than towards the producer community.

DR. BURKHARDT: Dr. Cuadra, and then

I think that will be the last question.

DR. CUADRA: This is just one point of clarification. My colleague, Andy Aines, mentioned the Freedom of Information Act helping in this dissemination area.

As it turns out, it is not really clear whether the act applies to magnetic tapes. HEW has taken the position that magnetic tapes are not library records. The House Subcommittee on Information and Public Policy has taken the position that they are, and so there is a case now in dispute at the moment.

MR. ADLER: I would like to, if I may, Dr. Burkhardt, take ten more seconds.

There is a further problem with the Freedom of Information Act which is that while it was apparently drafted with information files, unpublished information files in mind, and speaking to staff members of the committee that drafted the legislation, that's what they tell me, it is becoming apparent that material which was theoretically published and therefore presumably not needing the assistance of a Freedom of Information Act in order to get out to the public is also a problem and I think the ultimate question in the next two sub-

committees is likely to recognize that.

DR. BURKHARDT: Well, thank you, Mr.

Adler.

DR. BURKHARDT: Okay. We are now ready for Miss Jane Hammond.

Miss Hammond, would you introduce yourself?

MISS HAMMOND: Yes. I am Jane
Hammond. I am appearing here toda; in my capacity
as president elect of the American Association of
Law Libraries, and shall become president next
month.

Jack Ellenberger, a member of our executive board, has submitted a statement on behalf of the American Association of Law Libraries. I am here to answer questions you may have about that statement but before I do I would like the opportunity to make a few comments.

DR. BURKHARDT: Please do.

MISS HAMMOND: I want to reaffirm that the AALL, American Association of Law Libraries, stands ready to support the National Commission in its endeavor to improve library service to everyone in the United States. We are particularly concerned

ERIC\*

that the White House Conference on Libraries be funded in a manner to fulfill its promise.

We are encouraged by the action of the National Commission in speaking on a resolution of the conflicts over revision of the copyrights law.

We appreciate the conclusion of Julius Mark, chairman of our Copyright Committee, in your meeting on this issue of library photocopying of copyrighted material.

The law is found in books. Law
libraries are truly the lawyer's laboratory. Everyone
with a legal problem is dependent upon books or
their modern counterpart for an answer. The American
Association of Law Libraries is comprised of
individuals and institutions devoted to providing
those answers not only to lawyers but also to laymen
in need of legal information.

Our written statement defines clearly the problems of law library service at the local level. The lack of adequate funds for collection and for staff I could tell you stories that would make the Delaware story sound very reasonable.

I would like to elaborate on the problem of backup centers for necessary small local libraries which can be considered libraries as a final resort to other libraries and which will be crucial for

§ \_\_\_\_\_

1.5

any network serving law libraries, providing legal materials for nonlibraries. Our problems, almost every one of them has as its primary function the service of a discreet clientele with service to the general public, which is at least a secondary function.

Amplifying on that, the problem of a discreet clientele, the only truly national law library is the law library of Congress which has its primary clientele as the Congress, its committee staff and legal counsel. Service beyond Capitol Hill is a secondary function.

The Law Library of Congress is obviously a national library to become the National Law Library, but its mission must be redefined.

The next group of law libraries for conservative regional centers or law school libraries. Here again they are supported by a certain discreet group, the law school students and faculty. The biggest one, Harvard Law Library, receives no tax support. Others, such as those of the state universities in the big ten do receive state funding. They have served the non-law school community in their various roles very well in the past, but the legislators are not as generous as they have been

11

1.

| |

in the past either with funds for maintaining the collection or funds for new building to store the collections.

There is a consortium of law libraries of the big ten. I have a statement with me from Edward F. Hess, Jr., chairman of that, which I can submit to you, stating what that one consortium has been trying to do in that area to improve their library services.

DR. BURKHARDT: If you will leave it behind we will put it in the record.

Oh, we have it already.

MISS HAMMOND: There is a copy there. I submitted it as I answered.

The final group of law libraries which concern the final resort in their areas are state libraries.

However, again many of these are agencies of a specific group, usually the State Supreme Court, and they serve them first, the state citizens thereafter.

To illustrate the problem which arises because of this within the last year the state law library has been told by the state supreme court judges that it can no longer lend periodicals

AREA-WIDE FEDERAL REPORTING, INC.

because members of the court want all the periodicals available to them at all times. This has caused great problems to the other law libraries in that state who now can turn only to the State University. Law Library when their own collections prove inadequate In some only a few states have state law libraries that are in fact public libraries. The only true public law libraries are the county law libraries and few of them have the support to maintain even an adequate collection which is served by an adequate staff.

DR. BURKHARDT: Thank you, Miss Hammond.
John.

MR. LORENZ: I know I am asking for it, but I believe that the Law Library of Congress does consider the National Law Library.

Can you tell me what you feel the
Law Library of Congress should be doing as the National
Law Library that it is not doing?

MISS HAMMOND: The Law Library of Congress has first limited lending facilities. They try to keep their collection intact, the integrity of their collection. This limits what is available for someone to turn to them in order to get the material from them. This is one of the basic problems.

This is also the problem that the other law libraries I mentioned have, the question of having backup materials for ending purposes.

DR. BURKHARDT: Miss Hammond, you know about the National Library of Medicine and its network and so forth?

MISS HAMMOND: Yes.

DR. BURKHARDT: Do you think lawyers require anything as sophisticated and as on-line as that kind of service?

MISS HAMMOND: There is now a commercial on-line service which gives some lawyers access to full text materials of basic legal documents, court report statutes. It is seemingly feasible but it is far from complete.

DR. BURKHARDT: Is it expensive?

MISS HAMMOND: Of course. I guess I should also amplify that I am the librarian of the Villanova University School of Law. If I put it in my law library it would be \$18,000 a year. When you consider these county libraries I am talking about in the State of Pennsylvania, only 41 counties in Pennsylvania, 21 have book budgets of less than \$10,000. This puts it out of the reach of anyone outside the metropolitan area. I think we can

solve it without going that far. I think we can have regional libraries.

Obviously, Philadelphia is going to

5

be the region in this area to have to have to include Delaware where the State Law Library is in the Kent

6

County Court House.

DR. BURKHARDT: I am not sure you

quite answered my question.

MISS HAMMOND: I am sorry.

DR. BURKHARDT: 10 a way, you did.

What I was trying to get at is, are the professional needs of lawyers on somewhat the same level without the social urgency, say, of the medical profession, when you have to go answer points right away, do you need that kind of sophisticated machinery to get your work done or would some other kind of network do the deed for you?

MISS HAMMOND: I am not prepared to speak for the association. What I have to say here will be a personal opinion. I personally do not think so. Lawyers very frequently have immediate demands because you have clients who have immediate problems. You have a very limited time in which to respond to an order of the Court or to a specific problem.

The layman comes in with a notice from his landlord and needs specific answers, but this does not require a large network. In many cases you do not need immediately of the answer. Certain parts of the legal profession are willing to pay very highly for the immediate answer because of their time costs.

MR. DUNLAP: I would like to ask a question which might throw some light on the question that Dr. Burkhardt asked.

I recall about ten years ago there was an indexing project located at the University of Pittsburgh. It was both index of Pennsylvania reports and you put them into the computer and you did something with them.

What has happened to that project?

MISS HAMMOND: That project has

evolved into a subsidiary of American Can, which now

publishes primarily in the health area, which

isn't as remote as it sounds because it was

originated by Mellon for health purposes. The project

which I mentioned earlier which is known as Lexis is

in effect the same sort of thing and it's a further

offshoot of what John Harding has down at the

University of Pennsylvania.

17

18

1 1 1

11

11

As I say, it is expensive and it is used primarily by the private law firms and United States district attorneys in various cities. It does not, for instance, at this point have Pennsylvania on it. It only has Federal Government and five states. They will not put Pennsylvania on until they get ten libraries in it or law firms in Pennsylvania to sign up. This is how with this campaign I happen to know the charge would be for Pennsylvania right now.

DR. BURKHARDT: Philadelphia lawyers don't seem to want it?

MISS HAMMOND: This is one of the problems, I might say, now that we have the library service as law libraries and that is the presumption that lawyers can pay and forget that there are the people who are in prison, there are the people, the walk-in clientele who can't pay.

DR. BURKHARDT: Dr. Cuadra.

DR. CUADRA: I am sure you didn't intend to convey the impression that the only thing that the system you are referring to does is to do things a little faster. Isn't it true that one of the intentions is to be able to search, to have access points to texts that might not be findable in

MISS HAMMOND: Yes. It is the total text which means that you will have complete access to all words within the text.

Now, the law field, of course, has had extremely good commercially produced finding tools with the data process, which is one of the reasons it may be a little slover in these other areas in developing in the electronic system, but they were what the other parts of the world would call abstracts. The computer has allowed us to have full text access, yes.

DR. BURKHARDT: Mr. Velde.

MR. VELDE: A new law school at a university, what type of help can the American Association of Law Libraries give it in the development of its law library?

MISS HAMMOND: As an association, very little.

We run a placement service and get somebody a good library, and I think it goes on from there.

MR. VELDE: I had in mind the Pepperdine University on the Malibu Campus in California.

MISS HAMMOND: I started a brand new library 20 years ago. We also have an exchange program. MISS SCOTT: In Jack Ellenberger's statement, there is a statement here about the ñ Association being uncomfortable about the relation-15 ship any national network, particularly of the 8 private law libraries. MISS HAMMOND: Yes. 111 MISS SCCTT: Can you comment on that? MISS HAMMOND: The many private law libraries include in their library the work product of their lawyers, which is their briefs, their memoranda of law, and this they consider very highly 1.5 proprietary and in some cases privileged documents, so they have these problems of these files which are included. DR. BURKHARDT: There would be no requirement that that should be put into any national system? MISS HAMMOND: Beyond that I don't know.

DR. BURKHARDT: I don't understand the

worry.

libraries.

Q

1.3

problem and I again don't know how far this goes but most of the law firm libraries have only one or two people. I know of one law firm library that has four people, four full time librarians for 50 lawyers, and we think she has done a great selling trip.

MR. BECKER: In Jack's statement he describes how law libraries are beginning to serve the general public in helping them in the solution of social problems.

The medical library community, if I am not mistaken, has indicated that they feel, for example, that health information should be provided by the public library and not by the specialized medical libraries.

How do you foresee this, the trend in the development of the general public's relation-ship to law libraries?

MISS HAMMOND: It may be very knavish on my part, but most law librarians feel that this service of the legal materials in public libraries is extremely poor. Part of it is, so much of it is government documents that it leaves a great deal to be desired. Legal reference work is not all

that it might be in the public library. The problem with law libraries and with the public libraries acquiring legal materials is the tremendous upkeep cost.

Now Mr. Hess in his comments, in his statement about the problems of the ten libraries, notes that 80 to 90 percent of their budget is for continuations. In other words, mortgaged money. And this is something that every library looks at very hard.

MR. BECKER: Are you saying then that the law libraries you feel will be willing to support the public?

MISS HAMMOND: The law libraries I am not sure are willing to serve the public and this we see as one of the great problems. The governing agenices in many of these law libraries are people who do not see the public needs.

If you have the law library in the county courthouse the judges think it is theirs and are not terribly receptive to having someone else come in and use it and certainly not the bar. This is a problem I illustrated with the one state I mentioned.

The County commissioners are unwilling

you have got to find it, because there are after all about 150 law schools in the country that have this kind of law library, and there are only about five or ten cities that have city libraries that are really decent collections, Philadelphia, Chicago, Boston, Los Angeles and New York.

MISS SCOTT: Are they primarily supported by the bar associations in these areas?

MISS HAMMOND: It varies a great deal.

Many of the county libraries are supported by fees.

Every paper that is filed in the court house there
is an extra dollar added. This goes to support the
libraries. Some of them are supported directly from
the bar association. Some of them are supported from
the county commissioners. Some of them have a wierd
collection and you start out to find out.

I have asked for it in Pennsylvania and it has been difficult to find out at all. They don't have a librarian who knows enough to tell you. It is the judge's secretary.

DR. BURKHARDT: Okay.

Thank you, Miss Hammond.

21

25

DR. BURKHARDT: Would you introduce yourself, then? You are Mr. Hunt, are you?

MR. HUNT: Yes. I am Donald Hunt, deputy director of the Free Library of Philadelphia.

MR. MONTGOMERY: I would like to make a preliminary statement, Mr. Chairman.

My name is James Allen Montgomery, Jr.; I am president of the Board of Trustees of the Free Library of Philadelphia.

Mr. Dunn would be here but he is

presently at the International Association of Metropolitan Libraries and they are having their meeting
in Africa. I believe they are opening a new
branch of a library there this week in Nigeria, so
I asked Mr. Hunt, as our deputy, to come with me.

I have submitted a written statement.

I do not know if the members of the Commission have had a chance to read it or not. It is addressed to a narrow but to my fine mind's eye very basic point which is simply this: That the metropolitan libraries such as the free libraries do work which transcends not only city, county and even state lines, but I suggest if you come up with a realistic solution to this problem there should be some form of subsidy granted to that type of library.

Now this is not explicitly stated in your statement of assumptions which I read this afternoon, Mr. Chairman, but I think it directly bears on the problem. To be realistic something will have to be done if the announced goals of getting all possible information in the country to our citizens and readily available to form the monetary resources of libraries such as metropolitan regional libraries, all of this will have to be fleshed out in some way. You simply can't expect a city like Philadelphia, let alone New York, to come up with the necessary funds to do a job which basically is not only serving Philadelphians but the surrounding counties and a good many people from other states.

DR. BURKHARDT: I think it is fair to say that we have been aware of this problem almost since the very first day of this Commission. These jurisdictional lines have got to be transcended if we are going to have a national plan.

Now what has to be done economically and financially in order to get that done is, I think, a tough problem but it has got to be faced.

But the first thing is to see that it can't go on having these jurisdictional lines blocking communications and access to information.

١,

1:

- -

You would simply have to transcend them. Fat is where we are now.

1

: 1

. 1

17

1 -

What we will do about it or what can be done about it is something else again, and whether it will be accepted once we do recommend it is still another problem.

MR. MONTGOMERY: Yes.

I am here not as a technician or a professional but I am here to urge again that in your presentation to the Congress that you do recognize this problem as one necessary facet in solving the whole larger problem of getting this information to citizens that you simply can't ignore.

You can't expect the city to do it, even if you think of such homely things as expanded surgical system that the library -- I am taking into account the greater amount of available materials that you are talking about. That means more clerks, more librarians, more terminals, this, that and the other. And while I don't want you to think that we are just one more municipal agency here asking for a federal handout, I do want to stress that there is representation and it is suggested in my mind, I don't know of any more valuable contribution that can be made in this country than to achieve

your goal of getting infomation to citizens.

As a matter of fact, I think I have suggested in my statement with the possible except that I don't know anything mo. a basic in the country than to do just what you have set out to do.

DR. BURKHARDT: Thank you.

Mr. Hunt, do you want to add to Doms! paper?

MR. HUNT: I think I cannot add to it but merely to re-emphasize that in using Philadelphia as an example, Mr. Doms intended to present a picture of the library situation in the large city today, and as he says in his statement, particularly in the northeastern part of the United States.

DR. BURKHARDT: Are there any questions from the commission?

John?

MR. LORENZ:. Mr. Montgomery, how much is your assistance from the State level of Government, State aid for the Philadelphia Free Library and what percentage would that be of your total budget?

MR. MONTGOMERY: In terms of dollars -Mr. Hunt, you help me guess -- is that our total
tudget overall from state and local is in the area

5

8

10

11

12

13

11

15

11,

17

15

of perhaps \$12,000,000.

1

ń

12

1:

1 1

15

14,

17

18

1 1

113

11

٠,

Is that correct?

MR. HUNT: Total budget this year.

The state funding would be something in the area of \$1,500,000, which amounts to about 15 percent of the budget.

MR. MONTGOMERY: Now the State of Pennsylvania, Mr. Commissioner, does recognize the need to help fund local libraries and meet certain standards. They have a much better system than they used to but still in all they do not have the resources of the United States of America. They have a great many other local needs and I think if you are going to have a system which, as I understand, ideally envisages getting all possible information, collating it, assembling it in a way that can be disseminated, then disseminating it, this is a staggering thing and you are simply going to have to assist to some extent the larger regional libraries which are dealing much more in depth than the local libraries.

I am not suggesting the Federal
Government take over the local library systems in
various states, but this is a very big thing. We have
not only all sorts and types of people here, literate,

ERIC

Full Text Provided by ERIC

3. K.

Illiterate, but we have people coming from New Jersey and Delaware, and this is the location where a lot of information can only be obtained on a regional basis. It is the most accessible point.

MR. LORENZ: Is there assistance from the county level to the free library?

MR. MONTGOMERY: The Count of
Philadelphia is the City of Philadelphia. We don't
get it. It is co-terminus with the County and
therefore we don't get an additional source of funds
for that purpose.

But like all municipal agencies, with inflation the budget has been hard pressed. The services have been curtailed. As a matter of fact, the last few years we are not getting caught up and if we do anything like the job that you recommend and make this information available, we are simply going to need more assistance, otherwise it won't work.

MR. LORENZ: Is there a charge to use this outside of the Philadelphia area?

MR. MONTGOMERY: The only charge we make, sir, is that purely nominal one: If you are not a resident of Philadelphia you pay a \$3.00 library fee to get a card but as far as I know

1

anyone can walk into the library and get free information.

DR. BURKHARDT: Mr. Casey.

MR. CASEY: Mr. Montgomery, first I want to commend you for serving your Board of Trustees.

You are performing a valuable civic service as a volunteer and I think as a matter of record the trustees should be so recognized and the fact that you are here in my mind indicates a symbol of a very fine group of people in our communities.

And I am very hopeful that you will encourage the trustees in this community and elsewhere to participate in the White House Conference on Libraries, which will take place in 1977 or '78 in Washington, D.C., and I often wonder how can we generate citizens' support for our libraries, because the greater demand for library services results in greater support from our municipalities.

Can you share with us any ideas in terms of generating greater citizen demand for better library service?

MR. MONTGOMERY: Well, that is a multifaceted question. I suppose that you approach it from all sorts of levels.

<u>, † ",</u>

Our staff, I think, to the best of its ability approaches it at the branch library level by exhibits of books, notices of special functions, special courses.

For example: Free Library in Philadelphia,
I suppose in other libraries, is not only an information center and a circulation center but it is a school. We are doing a great many things that if not ideally the Board of Education should be doing, it is not doing. We are providing special services for the Spanish people. We have an enormous group of people in this City who are adults who can't read or write still. It is a horrible thing to envisage.

who do not have the cultural and economic advantages of the top level of the citizenry and so on. They are trying to do it at that level. They are trying to do it through cooperation with the newspapers.

We get a certain amount of TV support, an amount of announcement programs and so on, and I pat them on the back. I think the Free Library staff has been the very nature in trying to bring into existence some of these resources to the attention of the people.

MR. CASFY: We thank you very much.

You are a very well-trusted trustee.

MR. MONTGOMERY: I wonder if I could

I happen to be a lawyer. I have a partner named Bill Klaus who founded Community Legal Services in this city. I suppose that he is one of the two or three foremost exponents of that system in the country. He has spent a great deal of non-compensated time in going around the country and trying to get a viable program with federal support, with the least possible federal interference. This is a very growing program related to these public interest law firms. people are functioning for free. They are not charging for their services.

But in a given case they may need a great deal of legal backup to do their work. It may be a lot of resource materials. It may be copies of recent cases. It may be references to decisions which they would never hear about in another part of the country unless this were made easily available through a service of this type and with all due respect to the previous witness I don't think she indicated the full extent of that problem.

DR. BURKHARDT: Thank you.

We thank you very much.

٠, 1

MR. MONTGOMERY: I appreciate being here and I would like to repeat again, and I don't

.5

know of any more important fundamental service that

6

can be served in seeing this commission with some

7

viable scheme.

8

Thank you for having us.

9

DR. BURKHARDT: Thank you.

10

Now, Miss Fletcher. Thank you again

for waiting. Will you introduce yourself again, please?

MISS FLETCHER: I know you commented on my patience but I have been impressed with the patience and intelligence of this very unusual commission today.

I am Marjorie Fletcher. I am the special librarian for the American College of Life Underwriters. However, I am here today to represent special libraries.

A special librarian has particular characteristics which we feel make it necessary to give some explanation of what we do so that we can help the Commission and the Commission can help us

We have an interchange.

21

Special librarians are specialists. They pride themselves in providing a specialized service that is particularly here on a one to one basis.

Frequently they are known for the speed of information retrieval, they are known for sharing their information and resources, and they are known for knowing where to get the information which the librarian may not have in the library so that the special librarian needs to be well-versed in many fields.

Generally speaking, the special librarian is a sub-specialist in addition to being a librarian.

One of the concerns that we have particularly is to make accessible through a microfilm of some sort particularly perhaps microfiche, a union library catalog by subject area expanded for all media.

Earlier this afternoon you heard
Eleanor Campion from the Union Library Catalog. We
use the catalog in the Philadelphia area and
obviously from what she said we are privileged.

Just yesterday I had occasion to need a book that was published in 1725 and within three

or four minutes I knew exactly where I could get that information and read that book. This is the sort of thing that a special librarian needs to know and if we could have a national network or a regional network and a state network, which was also mentioned today, perhaps we would be able to expand our services and work with the Commission.

We have suggested that this microfiche or microfilm Union Library Catalog would be subsidized and so that it would also provide duplication of equipment; that the special librarians would be able to go to it, it would make available all sorts of special collections such as picture collections, rare books such as the one that I was looking for yesterday that was published in 1725.

There was a management conference and paper at MIT a few years ago where there was an estimate that by 1985 or 1995, over 50 percent of the libraries' holdings would be in microfilm rather than print. This in no way indicates that we should not continue to read. This also was brought up today. I have an advantage of being later. We talked in our meeting in preparing our report about cataloging and the necessity to provide special subject headings in the court catalogs.

PIC .

ij

) )

The special librarian needs a much broader subject classification than the usual librarian. We talked about curriculum. We feel that the library school curriculum should be expanded particularly in the area of management, the human behavior sciences and making provision for subspecialists, for making provision for para-professionals that would help in the library. More and more the special librarian has two degrees, and we feel this is important. We feel that the special librarian needs access to a computer data base. This is being provided in the Philadelphia area at the present time through OLC and Palnet, and again the Union Library Catalog.

We asked how much should the special library be provided with a tax advantage perhaps for making available a collection to a corporation. I represent an academic library, but special librarians are both company librarians and academic librarians. They are academic librarians in that they are the librarians for a special subject collection, but in an industry the special librarian is a sub-subject specialist for this industry so that we have a two pronged effort in interchange.

1.

1 +

The academic must preserve the nonprofit status of her librarian, but she wants to
interchange her information for the corporation's
benefit.

I

1.3

One of the needs that we felt was particularly evident in Philadelphia was that there are few public funded collections to which both industrial and academic librarians especially can turn. We did have a wonderful department of the commerce library here with a line to Washington and that was closed down. It curtailed our information.

DR. BURKHARDT: Why was it closed down, if you know?

MISS FLETCHER: I understand it was funds. The librarian at that library was an exceptional person in being able to retrieve information quickly. She had reached the top of the Government salary range. She was retired and the library was closed down, and I understand it was strictly funds.

One other area that we did not discuss in our paper that seemed to come up today was the profit in publishing. We had a publisher here.

It seems to me that if library services are curtailed it affects everybody all the way down the line. The publishing houses right now are being affected. They

don't know how many books to publish because they don't know what the library's budget is going to be. So while the president of the publishing company represented a specialized collection, large publishing houses are being affected too.

DR. BURKHARDT: Would you like us to -MISS FLETCHER: I would very much
like you to question me.

DR. BURKHARDT: Any questions from the commissioners?

MR. BECKER: Miss Fletcher, your colleague, Ed. Strable of J. Walter Thompson Agency, who you may know did a paper for the Commission, one of our papers of amplification, a real fine job in terms of laying out all of the issues that relate to the special libraries in their relationship to a national program.

He described three problems which he said were germane to this issue: One was the concern or the fear that the special library would be stampeded with requests if they were part of a national network and program, and that any library could call upon them anywhere in the country.

The second was the concern expressed earlier today around proprietary information and

6

 $\mathbf{s}$ 

10

11

12

1 1

1,

1 5

20

21

its inadvertent release to a public network.

And then the third thing was management' concern that they would be giving more than they would be getting from such a program.

Being stampeded, proprietary concern, giving more than they are getting, can you think of others or can you amplify a little bit about these three?

MISS FLETCHER: I don't feel that they would be stampeded. We have in the Philadelphia area a large membership in the special libraries. We have a directory in which all the various subject specialized collections are listed, and we have a very good inner library loan system which I do not believe has been taxed beyond its capability of providing information.

So I don't feel it is justified to say the library will be stampeded. Should the situation arise where there are too many requests I think of the library beginning to think in terms of charging, for example, for a search, which one organization in this area does now.

As far as the proprietary rights are concerned, there was a conference in New York in January at which the vice president of Merck, who

111

11

12

11

1 ,

1.

is in this area, and one of the special librarians there commented at some length to the effect that the proprietary information could be classified, marked as classified material, but it was not Merck's feeling that being a proprietary or a non-proprietary would have any effect.

So there was a large corporation that didn't feel that way and --

MR. BECKER: That you would be giving more than you would be getting?

MISS FLETCHER: In our experience in general in this area in talking to both the librarians who work for industry and the librarians who are non-profit don't think this has really arisen. I think it has been more a question of a need for more resources.

MR. BECKER: Well, I should say, at the end of your summary Ed himself points out in the paper that he personally doesn't believe that these are serious problems and he goes on to say from experience in Illinois where the special libraries are associated with the state-wide network, noce of these three have served as inhibitions or restraints.

DR. BURKHARDT: Miss Scott.

113

11

12

MISS SCOTT: Thank you for coming today, and I am a special librarian, too. I just want to ask you one thing about paraprofessionals in the role in the special library.

Can you tell me more about the educational opportunities in this area?

MISS FLETCHER: The University of
Pittsburgh has a program but that is quite a distance
from us. Philadelphia Community College has a
program. I don't believe the public schools particularly are orienting their graduates to a realization
that this exists. The librarians that I worked
with on this committee mentioned the fact that they
tried to make it evident to their staff that
this opportunity exists. My own organization will
pay the tuition for someone who wishes to take this
program, so it does exist in the Philadelphia area.

MISS SCOTT: Does it lead to certification as a library technician?

MISS FLETCHER: Yes. It doesn't lead to a library degree.

MISS SCOTT: No guarantee of salary?

MISS FLETCHER: Well, it has been
brought up earlier today not everybody needs to have
a master's degree in library science. Your sub-

15

<u>:</u>1

.1+

- ' - ' DR. BURKHARDT: I call on Mr. Lawrence

Will you introduce yourself, Mr. Berul?

MR. BERUL: I am Lawrence Berul. I
am executive vice president of the Aspen Cystems Corporation.

I would first like to thank you, Dr. Burkhardt, and the other Commissioners, for the opportunity to be here today.

Aspen Cystems Corporation is an information company. We are involved in really two different businesses. One business is in the information management design of systems primarily in the full text area. We design, implement and operate information

centers in clearing houses for government agencies, and that is one half of our business. That includes such things as litigation, management for law firms and for government agencies and corporations, et cetera.

.5

b

. ŧ

The other half of our business is similar to Mr. Coleman. We are a publisher. We are publishers of loose leaf reference services, journals, books, and seminars, and we are the company that was mentioned by Jane Hammond a little while ago.

11

1.

11

We are the offshoot of the University of Pittsburgh working in the health field. We did have a very major investment, many millions of dollars, in building a legal data base of state statutes as a proprietary venture. It did not succeed as a proprietary venture. However, we did sell a number of states, I think 19 to be exact, licensed them in the use of that data base, another eleven or thereabouts used the data base at our facility and we still maintain on a contract basis updating these data bases for those state \_egislators.

<u>.</u> ŧ

23

\* \*

My comments are really totally nonproprietary and not related to our own company when

I wrote the testimony. They were really related to

ERIC Full Text Provided by ERIC

not sufficient concern over the relationship

10

1.1

12

11

11,

1 ' 1

the -- I wouldn't say lack of concern, but perhaps between the industry portion, the "profit sector" publishers and other facilitators and distributors of information, the government and the libraries.

When a commercial firm such as ours establishes an information product, take, for example, loose-leaf product, it may invest several hundreds of thousands of dollars in building that product. If it is successful it is going to get subscriptions and it will survive. Its measure of success is the number of people pump down real dollars, a hundred dollars, two hundred dollars a year, or something along that line for its product. If it doesn't reach the number of subscriptions that it needs to survive, it drops a product or goes out of business.

We have had a sufficient number of successes in the publishing side and from that we have survived. We have had our failures, too.

My concern is that when the government establishes information programs or activities it doesn't have the same measure. The user, if they can't get it for free, you really can't tell whether its value is worth the cost and this will become more so, as there will be a tendency to push government funding of programs because of networking, the reduction of the number of customers that might buy an original product because of the desire to share services, et cetera.

I made the suggestion in my testimony of subsidizing users. I came up with a handle that I simply said there have been precedents in other progrems: Welfare, food stamps, and I simply suggested the concept of information stamps furnished the user, the researcher or the student or others with some credits, a form of statement that he can use and buy that service which he needs, then the producers of those services will be measured in terms of the value they provide to those users which they can trade in for real money, and he has to provide the service.

That is not to say that some services should not be funded but the users ought to be funded too and it is going to be a problem. We had it with the data base. The data base is that very terminal in many libraries now. Some of them are free if the agency has seen fit to make the service available for \$8.00 an hour, or \$4.00 an hour, or whatever, and it is going to be naturally

1

11

12

1:

11

15

16

17

1 ~

10

the user who can get those data bases for free are going to try and use the free data base first before they will use the commercial data bases, like the Institute for Scientific Information, et cetera.

So my suggestion is that if the information profit sector who have competitive data base with many of the free data base might be given a fairer shake, not in funding them directly but by funding the users who are using the information product they might still be directed to the library.

abstract service. Okay. I don't know what it sells for now, but it is a thousand dollars a year, something like that, maybe more. To the extent that they use that publication in the library it was free. To the extent that they used it on line it is now no longer free and the question is will that user now be cut out from the use of that kind of system, because he has no access to it he cannot afford it.

And the suggestion as made, if you gave him some kind of subsidy so he could use information services he could turn in his chit and somehow or

12

1 ;

another Chemical Abstract would get its portion of the royalty for the use of its data base and continue to survive. That's one aspect of my testimony that I wanted to sort of amplify and I am willing to answer questions about any portion thereof.

DR. BURKHARDT: Any questions?

MR. BECKER: Larry, in the one point you made was that the supply and demand and the marketplace dictates the successful continuation of an information profit service.

By providing statements and incidentally the analogy to food statements, many librarians find very offensive for some reason. We have got to find some other one if we are going to promote that idea. With the subsidization of the user, wouldn't that change the picture and essentially the marketplace wouldn't be a measure for it because of this form of subsidation?

MR. BERUL: I don't know. You know, a few years ago I think the whole basic problem is one of reduced funding. Across the board libraries are funded, et cetera.

A few years ago the publishers were living fat and happy because, I guess it is ESEA or something along that line. There was more money

Now with the food stamps or information stamps or information credits or some other form of subsidy in the user's hands, I think it would have a positive effect and it would have some kind of a discriminatory effect also, so that you would be able to weed out those services which weren't performing as useful a function as the other. That is my premise.

> DR. BURKHARDT: Andy.

COL. AINES: Larry, I have a typically simple question to you. Just who do we give information stamps to, under what circumstances, what kind of an operation, who gives it to them, and what are the conditions under which they get them?

What I am really saying over here is, while it sounds like a very possible way to say "Let's give the support to the user," who will then determine on a marketplace basis he wants to purchase, she wants to purchase. Let's agree for fun that that's what we are going to do. Now we have to implement the program, criteria, mechanics.

MR. BERUL: Well, I don't want to get into the specific analogies, but we are running

1

ŧ

1 . 1

11

12

1:

11

15

14,

17

15

1 1

20

21

some centers now. The question hasn't fully been addressed to what users get, what services are free, what users are going to have to pay.

There is a user community, however, for each of these centers, and if a half million dollars or a million dollars has been allocated to support those users, and this is sort of a counterproductive because I am running the centers, the alternative mechanism may be to take that same money and give it to the user who might spend it how they would.

Now it so happens in these particular cases there is no corpus literature to scatter and it would be a real service to pull it together for them.

I have studied the needs and I have certified that this is the case but there is the problem of defining which user gets it for free and which user, you know, gets the stamp and et cetera, but you have that problem in every single human services program, the blind, the aged, the disadvantaged, you know, et cetera, the low income.

I have just studied an area which involves this whole human services program and how they can be better delivered and they are beginning

to relax the criteria so that the states can better decide who they are going to provide services to.

COL. AINES: But do come back and tell us who the information deserving people are and how we get to them.

MR. BERUL: I use one example and say, for example, that the university students who are attending, whether it be a state university or a private university, might get support in the form of information. The government supports teachers' salaries, they support other kinds of activities, research is directed in some cases to universities. There is quite a few people who are doing scholarly research. The university student could be given a certain number of dollars worth of information credits they could use. That is, you know, one specific example.

There may be the same thing with the disadvantaged or minorities or whatever other group that you want to favor, but perhaps the public at large.

DR. BURKHARDT: We have three more questions.

John.

MR. LORENZ: We do have a basic premise

\_'1

in the national program document which is that everybody should have access to information and I think
this is while Col. Aines has had difficulty in
getting you to pin down the people who should have
information and those who don't need it, our
premise is that potentially everyone needs information
and I think you didn't go to the question specifically
of who would issue the stamps.

I mean, what level of financing are you thinking of? Is this a federal operation in the issuance of these stamps?

MR. BERUL: This could be issued similarly to federal programs such as food stamps would be issued through federal, state and local government, with possibly matching formulas, et cetera, but, you know, this perhaps was given as an example or a handle. I am not saying the stamp program is the way to go. What we are saying is to establish greater bureaucracy of having the public sector provided information service with different kinds of measures which would perhaps force out of business those organizations that are currently serving and serving well user communities is something to be avoided and a mechanism for making it possible for making libraries who are currently providing

free information services in traditional form, access to books, lending the books or photocopying, network and other mechanisms that will reduce even the number of subscriptions that a library buys requires some heavy attention as to how the subsidy must be, if there is to be one which can be implemented as capital, is another approach which I am sure you are aware of is another mechanism to implement subsidy to pay the producer of information for the use of his information.

MR. TREZZA: In trying to cope with the problem, you must be aware that we have received a fair amount of criticism, constructive and otherwise, about the fact that there are national programs documented, aimed at the intellectual elite, the haves, and we are ignoring the people in the urban areas. The people in the inner city who need different kinds of information, a network for them is superfluous, so you have got that to cope with.

Then you have got another problem to cope with, which is a difference of opinion as to whether the network enhances the subscriptions or hurts them, and then there is a definite school that can show you statistics on the other side. So

O

111

11

1.1

1 1

15

17

18

14

741

11

\_' 1

you have got that problem to deal with. So it is a complex one from that standpoint.

I guess maybe the reason it is irritating is because the people look at the food stamp program and see all the abuses and can only imagine how much worse it would be with the information.

MR. BECKER: Larry, before we let you go, I remember about fifteen years ago you did one of the first surveys. This was an entirely different subject on information technology which still stands on library shelves.

Has it met your expectations? Can you tell the commission about that and what you see of it in terms of its future?

MR. BERUL: What is surprising, I have gone back. I presume you are talking about the State of the Art Report in '65 or '64.

It is amazing that the predictions
that I made ten years ago have pretty much all come
true. Some have come true that I didn't predict,
but the networking, the on-line information retrieval
services, selecting dissemination of microfilms
and a number of those things are sort of heartwarming
to me. Many of these loose ideas are actually here

111

11

12

today.

I think that Carlos' activity at SDC and Roger Summit of Lockheed are really an amazing kind of operation of a networking faction, and they have coped with the free and the for-profit segment by allowing the surcharge.

Carlos' concern, if information is given away and people come to expect it for free, then these things are going to fail. Information has value. It clearly has value. Our company is driving at the moment with information where there is a reasonably stiff charge for information. However, there are many users who may not be able to afford to pay and there must be a mechanism to help them pay if they need it and deserve it and cannot afford it otherwise.

DR. BURKHARDT: All right. We thank you very much.

DR. BURKHARDT: Now finally we get to Miss Taylor. Nettie B. Taylor.

MISS TAYLOR: Thank you, Dr. Burkhardt.

I feel like I should apologize for still being here. You have had a long day.

DR. BURKHARDT: Did you know I had any idea when you would be on?

MISS TAYLOR: I didn't know but I was interested. We got here about 10:00.

 $ext{DR. BURKHARDT:}$  That makes me feel a little better.

MISS TAYLOR: That's quite all right.

I won't keep you any longer than you want to be kept.

I made some very general statements in my written testimony to you and the basic thing it seems to me I was saying that what I would hope was a plea for the National Commission to take a strong leadership role in helping to enunciate federal, state and local responsibilities in terms not only of the national network where you have built into this a great deal to address this kind of problem but over the whole range of some of the objectives and some of the problems that you have identified in your total program.

To speak just a minute about Maryland and the national network, we are the state library agency for the State of Maryland and our law enunciates a number of functions that we are to perform. The first one being to provide leadership and

1

guidance for the planning and coordinating development of libraries and information centers within the state.

4

we do consider this a very appropriate and a very actual charge to each agency in carrying out its responsibilities.

s

..

10

12

13

11

15

111

17

į.,

20

21

2.2

<u>.</u>2.3

21

25

And I mentioned this because it seems to me appropriate that the Commission has addressed appropriately within the national network the role that the state and the state library agency should play and could play within the development of a national network program and I am very much in support of this idea and I think that in our state we will be able to play a strong and appropriate role in this total program as it comes into being.

problems. It doesn't mean that we may not have to move further than we have certainly in total cooperation and in working with the total library and information community within that state, but I wanted to say this because it doesn't come out very strongly in the paper that I feel this is entirely appropriate and one that I think he look forward to trying to fulfill.

At the same time I think that the whole

ERIC

range of objectives that have been addressed only briefly by the commission, if you look at them as I look at them, are pretty much the same kind of objectives that we state library agencies are concerned with, and that we have for the development of our services within the state. And I think we are very much operating in the dark sometimes because we can never get a handle on what the federal role is in almost any of these things, and I realize, too, that even a group as smart as this to try to come up with any enunciation of federal role, and many of these problems serving specialties entails a special population, a special type of library is a pretty awesome task, but it makes a lot of difference to us who are trying to plan state programs to know what we can or cannot depend upon in terms of the Federal Government, and to know what relationship the federal role is to the state role, to the individual local responsibilities in various communities and various types of library agencies.

We heard a little bit just a few minutes ago from the Philadelphia Free Library and you have heard this, I am sure, many, many times about the responsibilities of the Federal Government for the plight in which particularly urban libraries find

5

themselves at this time or in which the big
cities find themselves. It is certainly not isolated
to the library, public library itself, and it seems
to me that if you even take that as an example
you have got to have some enunciation of federal
responsibility, state responsibility, and local
responsibility, and it is very difficult to try to
tackle this problem in isolation from one jurisdictional

So my main plea is that I think that the things that the commission can do in some of these things are already things that no other agencies that I see on the national scene could do for us in trying to resolve some of these responsibilities and real problems among the various jurisdictions.

level of government to the other.

DR. BURKHARDT: Thank you.

Mr. Lerner and then Mr. Velde.

MR. LERNER: As a state librarian, what do you expect out of the White House Conference on Libraries other than either a feeling of well being or a feeling that everybody has got the same problems you have?

What do you really expect out of it in the long run, and not just cosmetically?

MISS TAYLOR: I don't have a great deal of feeling at the moment about what you can expect. I think if you can expect some kind of consensus among the people there, the federal role that they want the Federal Government to assume And the state role, that you have gotten quitea ways forward of whether you get nationally administrated support for this kind of position at that conference At least if we can have some cohesion in 111 what our thinking is and the ways we want to move 11 I think we would have accomplished a great deal 1. and I think that if the citizens are involved in 1: his as well as the education library information 1.1 centers and communities, you are going to be 15 addressing, I would expect, many more problems about 11, the needs for libraries and information services 17 than just the national network, so you may be talking 15 about the urban cities, you may be talking about 151 the disadvantaged people with other kinds of special needs and special handicaps that are not now getting the kinds of information services that they 4-3 need.

> MR. LERNER: Thank you.

DR. BURKHARDT: Mr. Velde.

MR. VELDE: Yes. I noticed in your

11

. 1

paper where you believe that the state has more responsibilities for urban libraries than has been generally recognized, and this is something new. Very few have had that view and I would like to have you expand on it.

MISS TAYLOR: Well, I suppose I am using
my own state as an example. I think that when I
gave Baltimore City Library all the support that the
city thinks the state should give them, and I am not
sure we will ever be able to satisfy that kind of
posture fully, but I do think that the urban
library, as it has been developed over the years,
does serve a much broader base, as you have heard,
than just the local needs of the city, and I think
in order to compensate them for this the state has
a responsibility to step in and do this.

I think the area of where the state

also has a responsibility to in a sense overcompensate

the city because of its diminishing tax base and

conomic base. This is somewhat a fuzzier problem

but I tend to feel that the state has some responsi
bility in this area as well.

We have in Maryland a state aid program that has a fair amount of equalization built into the formula so that the counties in Baltimore City is

17

1 1

considered as one of the 44 sub-divisions of the State, so that as the tax base decreases their amount of state aid might increase proportionately, so there is a slight equalization factor built into that program that helps to compensate the poor communities and the city is getting into that category.

DR. BURKHARDT: Mr. Lorenz.

MR. LORENZ: Nettie, would you comment on your concept of federal aid which would be of most assistance to Maryland in the overall development of libraries?

I realize that you may have a responsibility for the public libraries, the ESEA Title Two, which is the school library resource and the NDEA Title Three, which is the equipment library in school systems, and I think, John, I would hate to make some priorities.

I think we are going to need support for the network. I have problems in my own state in trying to determine priorities at budget time and at the development of planning, plans between what we want to do with the network which we do, the region, and the Pratt Library as the nead of the state network and bringing the academic libraries and other specialized collections into that mix, and

I have a difficult time in saying: "Is this a high priority issue so I can get another million dollars, or should the million dollars go to increase the state aid to the public libraries?"

The thing is, if I knew what you could count on the Federal Government for you would know better where to set your priorities in relation to where you think other kinds of support are going to come in. At the moment I certainly would not want to lose the kind of support we have been getting under LSCA, at the same time I suppose my personal opinion is that we need a great deal more money and interlibrary cooperation in what is now the Title 3 of LSCA, and I think that that would address many of the kinds of problems we have discussed this morning about cooperation and sharing of resources at the local level, which is part of what we are trying to accomplish.

MRS. WU: I am just curious to know what the relationship is between your department and the division of library services.

MISS TAYLOR: Yes.

Well, Mr. Bender --

MRS. WU: Are you the same one.

77.

MISS TAYLOR: Yes.

MRS. WU: So you are his boss?
MISS TAYLOR: Yes.

I am the head of that division which is one division in the State Department of Education and then there is an Office of Public Libraries and there is an Office of School Libraries, and there is a community of Mental Libraries for Cooperation and Planning.

MRS. MOORE: Nettie, I want to pose a serious problem that I think is a serious problem to you, because I have long considered you to be one of the wisest heads in the library field. I think that opinion is shared by many people.

If a White House Conference is to deliver what you hope it will and what we hope it will, you hit on the very important point a while ago when you said that you hoped that we fitted it in well.

Now with the support that the White House Conference has among librarians over the country, unless there is great care exercised in the states and wide leadership, we are going into that with an ALA convention in Washington, which in my point of view would be highly disastrous. I have nothing against the ALA, you understand. I am

AREA-WIDE FEDERAL REPORTING, INC.

I

a member of it, but the point is that we must have citizen participation in very active and large amounts at that conference to do what we want to do as a necessity.

getting citizen participation in the numbers that we need?

MISS TAYLOR: Well, I think the states are going to have to do that and I think the states are going to have to resolve the same kind of problems at the state level if you are going to

states at the national level and I don't think that is all that easy and I --

get the participation of the citizens from these

MRS. MOORE: That's why I am asking you the question.

MISS TAYLOR: I don't think I have the answer. We tried at the education conference in our state to be sure that citizens are invited or that the local communities are required to bring a certain number of citizens for every educator that comes in. You have three citizens or something so that they have been identifying people in the local communities through that mechanism.

Now, you know I wouldn't guarantee that

24 25 they are the most that enables you to get the range that you need, but I think that you do get people who are interested in the program.

You must have the same problem here, though, with the Commission when you have your hearings and, you know, you get all loaded with people like us and you don't get an awful lot of substance type of answers. I know that you ask them.

I am not answering your question because I don't know the magic formula for doing this.

MRS. MOORE: Well, it is a problem that everybody is going to have to be conscious of and be willing to forego attendance and maybe in behalf of some things which is not going to be easy because everybody is going to want to come.

I think as an appropriate closing to this, if the chairman allows me the valedictory, I think to read from Miss Taylor's testimony and her aspirations for this commission might give us some inspiration and some direction.

You have already read it but I think it bears reading again, and let me read the last two paragraphs:

"State library agencies strongly support the establishment of the national commission in the

belief that they are needed to be a strong articulate national spokesman for libraries and for the needed development of systems and programs for the effective delivery of library and information services at all levels to all people.

"The Commission is our best hope if
we are to develop together rather than as separate
disparate states or groups. I am confident that
the National Commission will provide the leadership,
the forum and the action that will help develop
national cohesion and will strest in our capacity
and resources to carry out our state and local
responsibilities."

And I think that is a fine valedictory and we thank you for your hopes.

MISS TAYLOR: Well, I believe that.

DR. BURKHARDT: Thank you very much.

That concludes the hearing.

(Hearing concluded)
