ABSTRACT

This report takes a look at libraries, their facilities and services in the South Western Oklahoma Development Authority (SWODA) district. To provide additional planning data, the population of the SWODA area is analyzed in terms of age, ethnicity, employment, income, education and growth trends. The results of inventory of all existing libraries are presented, along with recommendations. Library statistics are tabulated according to the library systems which cover the SWODA area. Data on collections, services, revenues, and expenditures are presented for each library, and totalled for each library system. The library system statistics are compared to Oklahoma's minimum guidelines for full service libraries. (Author/SL)

Documents acquired by ERIC include many informal unpublished * materials not available from other sources. ERIC makes every effort * to obtain the best copy available. nevertheless, items of marginal * reproducibility are often encountered and this affects the quality * of the microfiche and hardcopy reproductions ERIC makes available * via the ERIC Document Reproduction Service (EDRS). TITLE 1 INTRODUCTION

TITLE 1 INTRODUCTION

Library services have become an important factor in the lives of many people. Rapid, almost daily changes in society are increasing the need and value of library services and facilities. In order to meet these changes, libraries must also constantly change, adapting to new library techniques and to new demands of library patrons. This report takes a look at libraries, their facilities and services, within the SWODA District. An inventory of all existing libraries was conducted, data was gathered and studied, and recommendations have been made. It is hoped that the information contained in this report will be useful to those people actively engaged in providing and improving library facilities and services within the SWODA District. This report is intended to serve as a guide to library boards, librarians and staff members, and any other person interested in adequate libraries for the SWODA District. Areas included in this report include: (1) Analysis and Evaluation of Library Planning Data, (2) Findings, Conclusions, and Recommendations, and (3) Library Planning Data.

Chapter 2.1 Introduction

This title presents an analysis and evaluation of that data which can play a key role in library service and facility planning. In any planning activities, it is important that the social, economic, and geographical characteristics of the respective area be considered. In this way, the interests of the people, their wishes and desires, are fulfilled. Libraries can become a viable factor in the culture and education of the area residents if they are developed and expanded in relation to the characteristics of the area. The following chapters, therefore, deal with the social, economic, and geographical characteristics of the SWODA area, and the final chapter looks at existing library facilities and services.

Chapter 2.2 General Characteristics

One of the primary characeristics of southwestern Oklahoma is its agricultural nature. Agriculture plays a large role in the activities and growth of the area. The geographical make-up of the area lends itself to agriculture, and, in turn, agriculture has a strong effect on the social and economic characteristics of the area.

Historically, the area encompassed by the SWODA District is a pioneering land. One of this nation's last frontiers, southwestern Oklahoma was not opened to white settlement until the late 1800's. White men had lived in the area before that, but the land still belonged to the Indians. Tribes living in the area at that time were the Arapahoe, Cheyenne, Kiowa, Comanche, and Apache. Many other tribes had hunted in the southwestern Oklahoma area, for long before white men settled the area the Indians were well aware of the good hunting found here. Prairie grasses offered foliage for the animals, and salt found in the southern portion of the area was a tempting supplement to the animals' diets.

Exploration of the area began when Francisco Vasquez de Coronado led a large band of white men and Indians, over 1,200 in all, through western Oklahoma as they searched for the legendary "Seven Cities of Cibola." Although Coronado left no settlements in the southwestern Oklahoma area, his travels had other effects. It is believed that many of the wild horses and cattle later found in the area were descendants of animals which were lost from the expedition. These wild herds could very well have been the first contribution to the area left by the white man. Other countries which have laid claim to the area include England, France, Mexico, and the Republic of Texas.

During the pioneering years of the 1800's, small settlements were established and subsequently abandoned in the area. These early settlements by white men were primarily for missionary or military purposes.

Permanent white settlement began in the late 1800's and continued past statehood. In the early days towns were started overnight, and newcomers to the area hoped for a piece of land which would bring them new opportunities. The area became known as a wild, untamed area. It was typically western frontier, occupied by

families, outlaws, rustlers, cattle barons, and fledgling politicians. This western heritage continues today, and many of the people whose ancestors settled the country are proud of this pioneering heritage.

Early days of settlement were characterized by times of struggles. Newcomers battled against fierce plains Indians, outlaws, and seasons of unpleasant and often tragic weather. Droughts and floods were common. In times of favorable weather the land was productive; in times of drought the land became barren.

After statehood in 1907, the Oklahoma territory was divided into counties, and those counties finally established in southwestern Oklahoma were Beckham, Custer, Greer, Harmon, Jackson, Kiowa, Roger 1 11s, and Washita. The area continued to grow until the 1930's when the devastating "Dust Bowl" days landed a severe economic blow to all of western Oklahoma. This period of drought and blowing dust, however, resulted in this portion of the state becoming the nation's leading soil and water conservation area. Farmers and ranchers, working with the Soil Conservation Service, pioneered conservation techniques, many of which are still in practice today. These conservation techniques give assurances that the "Dust Bowl" days will probably never occur again.

Today, agriculture continues to lead the area. Residents find a great many jobs related directly or indirectly to agricultural production, and revenue derived from agricultural production provides for the economic base of the area.

Chapter 2.3 Population

Because of the SWODA District's basic agricultural characteristic, population is affected to a great extent by changes in the agriculture industry. In the early 1930's, when the depression caused a massive shortage of jobs in cities and towns, people returned to rural area to find jobs on the farms. This decade also was the time of the great "Dust Bowl," and agriculture in the SWODA District suffered; population of the district began a continuous decline during this decade.

In the following 10-year period, the population of the SWODA District declined. World War II began, and industries supporting the war effort offered job opportunities in the nation's larger cities and towns. Many depression-wrought

families moved away from the district in search of these new jobs. At the same time agriculture was entering the initial stages of the mechanical revolution. Although machinery was difficult to obtain during the war years, new developments and techniques were being developed. By the late 1940's, agriculture was needing fewer and fewer employees.

Continued agricultural developments in the 1950's and 1960's resulted in fewer agricultural occupational opportunities in the SWODA District. Population had reached a peak of 192,663 people in 1930, but outmigration resulted in a decline in population to 111,561 by 1970.

Almost one-half of the district population is located in Jackson county to the south and Custer county to the north. Altus Air Force Base and Western Oklahoma State College contribute a great deal to Jackson county's large population, and Southwestern Oklahoma State University in Weatherford is a major contributing factor to Custer county's dense population. These two counties and Beckham county, the next most densely populated county, account for 61.3 percent of the district's population. Harmon and Roger Mills counties have the least number of people and together total only 9.7 percent of the district's populace.

Most of the district's residents live in the nine largest cities. Just over 56 percent of the people live in the cities of Altus, Clinton, Weatherford, Elk City, Cordell, Hobart, Sayre, Mangum, and Hollis. These nine cities and the rest of the cities and towns account for 76.9 percent of the district's population with the remaining 23.1 percent of the people living in unincorporated rural areas. Of the eight counties of the SWODA District, only Jackson has experienced a continuous increase in population since 1910.

Chapter 2.4 Age Distribution

Population in the SWODA District is primarily made up of the very young or middle aged people. The largest age group represented is in the 15- to 19-year-old age group. After the age of 19, many young people begin moving away from the district. This trend continues until the age of 35 when in-migration begins once more. A graphic depiction of age distribution found in Title 5, Library Planning Data, illustrates this trend.

Loss of young people between the ages of 20 and 30 is generally attributed to their seeking employment related to their education. Most young people attend college or trade schools after high school. Upon completion of school, these young people, because they cannot find employment related to their education in the SWODA District, move to other areas in the state and nation, primarily to metropolitan areas. Later, as many of these people have grown to retirement age, some return, resulting in a broader expanse of population in the 50- to 60-year-old range.

Chapter 2.5 Ethnicity

The SWODA District has a smaller proportion of minority people than the state-wide average. According to the 1970 census survey, Oklahoma's population is 89.2 percent Caucasian; 6.7 percent Negro; 3.8 percent Indian, and .3 percent other. In comparison, the population of the SWODA District is 92.8 percent Caucasian, 4.8 percent Negro, 1.9 percent Indi 1, and .5 percent other. Washita county, at 97.7 percent, has the largest Caucasian population; Jackson county, at 7.9 percent, has the largest Negro population, and Roger Mills, at 6.6 percent, has the largest Indian population.

Chapter 2.6 Incomes

The average income per family for the SWODA District is below the state average. Presently, 20.4 percent of the district's families have an income of less than \$3,000 (1970 U.S. Census figures). This represents 6,169 families out of the district total of 30,266. A total of 5,889 families report incomes less than the poverty level. Over 70 percent of the families in the district depend on wages and salaries for their income. Some of these families are also among the almost 24 percent which are self-employed on farms and approximately 32 percent which rely on public assistance or social security.

The median family income for families in the SWODA District ranges from a high of \$6,939 in Custer county to a low of \$5,106 in Greer county. The state median income is \$7,725. Per capita income for the district ranges from a high of \$3,809 in Roger Mills county to a low of \$1,996 in Greer county.

Chapter 2.7 Occupations

Once again agriculture exerts its strong influence on the area comprised of the SWODA District. Over 12,000 people are employed in the agriculture industry, almost twice as many as the next largest employee group, government (city, county, state, and federal), with just over 7,000 workers. Other strong areas of employment include retail and wholesale trade, domestic services, and finance, insurance, and real estate.

One area which is increasing its influence in the SWODA District with respect to employment is that of light manufacturing and processing. Because of increased emphasis by cities in the area of "industrial prospecting," new firms have located within the area during recent years. Over 2,500 people were employed by this industry in 1972, and this number is increasing.

Chapter 2.8 Education

Southwestern Oklahoma's largest employer, agriculture, historically has tolerated workers with less education and trained skills than many other fields. For this reason, the educational level of the district's residents is below that of the state level. Many of the young residents receive college training, but most of these people leave the district area soon after receiving their additional education. With their training and college degrees, they seek more gainful employment in other locations, primarily metropolitan areas.

Just over 45 percent of the female residents of the district are high school graduates, compared with the state average of 51.7 percent. About 43 percent of the district's male population are high school graduates, compared with the state male average of 51.5 percent.

Slightly more than eight percent of the district's males are college graduates, and just over six percent of the district's females have college degrees. The state averages for college graduates are 12.6 percent for male and 7.7 percent for female.

Chapter 2.9 Existing Libraries: Facilities and Services

Libraries are found in all eight counties within the SWODA District. Primarily, these libraries can be classified as a system or non-system library. The two systems found in the SWODA District are the Western Plains Library System and the Southern Prairie Library System.

The Western Plains Library System includes three northern SWODA counties: Roger Mills, Washita, and Custer. In addition, one county not in the SWODA District, Dewey, is also a member of the Western Plains system. The Western Plains system began in 1966 in the counties of Washita and Custer with funds provided through a federal demonstration grant. Dewey county was added the following year under the demonstration program, and all three counties voted a two-mill tax levy in 1968 to fund operation of the system. That same year Roger Mills county joined the system under the demonstration program, and the county voted the tax levy in 1969. Western Plains Library System was the third multi-county library system established in the state of Oklahoma. When the system was established, libraries existed in Clinton, Cordell, and Seiling. Additional libraries have been established by the system in Weatherford, Sentinel, Thomas, and Cheyenne. (Cheyenne had a library facility, but it had not been in operation for two years.) One of the major accomplishments of the Western Plains Library System, in addition to its vast expansion of materials and services, has been the establishment of 46 bookmobile stops which serve small communities and rural areas. Through these bookmobiles, all residents within the system boundaries have readily available most library services.

The Southern Prairie Library System was organized in 1973 under a federal demonstration program in the counties of Harmon, Jackson, and Tillman. Residents of these counties voted in 1974 to fund the system by a two-mill tax levy in 1974; however, Tillman county has since withdrawn and will no longer be a member county of the Southern Prairie Library System after June 30, 1975. This system, although merely an infant, has contributed greatly to improved library services in its area. Hollis, located in Harmon county, had no library until one was established by the Southern Prairie System. A total of 22 bookmobile stops have been designated, although those in Tillman county will soon be discontinued.

Both systems have greatly expanded the services which library patrons may receive. All libraries, system and non-system, may take advantage of the Oklahoma Teletype Interlibrary Loan System (OTIS), but it has traditionally been the organized systems which have made this service work and have made it valuable to library patrons. Through this service, books from practically every library in the state, including the state's two major libraries at the University of Oklahoma and Oklahoma State University, can be obtained from a local library. The local librarian can, through the teletype system, locate a book in another state library, receive it from its permanent location library, and lend it to the requesting party. After the patron returns the book, the local librarian then sends the book back to its permanent location. Through this valuable service, a local library's services are greatly increased, and books not normally available to local patrons are merely a few days wait away.

The systems also eliminate burdenous and often expensive functions on the part of a local library and its staff. All books are processed and system financial records are maintained at the system service center by service center staff members. Educational programs are coordinated by this basic staff group, and much other assistance is provided because the system is in existence. If these functions were provided on each local library level, the financial burden would be greatly increased. Funds saved through the system method can then go toward expanding library services and purchasing additional materials and supplies.

This study was not large enough in magnitude to allow for a comprehensive inventory of services available through a system operation; however, it is obvious that many services, books, and materials can only be provided through a system. Local libraries cannot economically provide these expanded services and materials.

Non-system libraries in the SWODA District fulfill a valuable role in serving their local patrons, even though local non-system libraries cannot offer the magnitude of books, materials, and services as can a system library. Non-system libraries include Elk City, Sayre, and Erick in Beckham county; Mangum in Greer county, and Hobart and Snyder in Kiowa county. No bookmobile stops are found in counties where no library system exists.

TITLE 3 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

Chapters:

- 3.1 Introduction
- 3.2 Findings and Conclusions
- 3.3 Recommendations

Chapter 3.1 Introduction

This title sets forth the findings and conclusions reached by researchers in the preparation of this study and outlines recommendations which are based on these findings and conclusions. Findings, conclusions, and recommendations are based on the analysis and evaluation of data (Title 2), interviews and discussions with library staffs, and by general observation of planners. Because system and non-system libraries are governed by a variety of boards of directors, recommendations contained in the final chapter are not directed toward any one group. Rather, recommendations are general in nature and are directed toward a desired result in expanding existing library services.

Chapter 3.2 Findings and Conclusions

In 1969, the Oklahoma Department of Libraries published "Oklahoma Public Library Goals for '75." This pamphlet outlined desired minimum standards for libraries within the state of Oklahoma. These goals were used as a basis for evaluating the existing libraries within the SWODA District.

It should be noted, however, that strict application of these goals is not entirely logical when evaluating libraries which belong to a system. The fallacy of such strict application of goals is that system libraries rely upon system staff members and system owned books. Therefore, most libraries meet the state

goals when the system service center and staff is taken into consideration. Judged individually, however, these libraries fail to meet the goals. This illustrates one point in favor of district library systems. Sharing materials and services allows libraries to meet goals without facing undue expense.

This study considered, also, only quantitative evaluation of libraries within the SWODA District. No evaluation was made as to the quality of services and materials. For example, a library which meets the state minimum for volumes of books may not, however, meet state minimum guidelines for quality of books.

The outstanding deficiency of all libraries within the SWODA District is that of space. Most facilities tend to be overcrowded in space for books, readers, and staff. System libraries, once more, do not necessarily need to meet the state minimum guidelines since many library functions are performed at the service center, reducing the amount of space needed at the local library level.

The preliminary analysis made in this study indicates that system libraries more adequately meet patron needs than do non-system libraries. Certain services, such as the periodic film packets, are not available to non-system libraries. In addition, rural areas in non-system counties are not served by either book-mobiles or branch libraries. The Western Plains Library System has apparently made the greatest improvements to library facilities and services because it has been in existence for the longest period of time. The Southern Prairie System, in its two-year operation, has also made significant improvements in the counties it serves.

The economic and physical characteristics of the SWODA District lend themselves toward jointly organized and operated library systems. The rural nature of the area points to the need of bookmobile and branch library facilities in order to meet the needs of library users. Cost-sharing provided by system organizations allow for these types of services without placing burdenous expense on a community or one small area. Communities which could not ordinarily operate a library may qualify for a branch system, as in the case of Thomas or Sentinel. In addition, the town of Cheyenne, because of its geographic location, can be operated as a branch library where otherwise adequate library services could not feasibly be provided.

21.

One area not covered by this report is that of institutional libraries. These types of facilities found in the SWODA District include libraries at Southwestern Oklahoma State University in Weatherford, Western Oklahoma State College at Altus and the Altus Air Force Base library, and the Sayre Junior College library. Ordinarily, these facilities are not available for general public use, except through the services of OTIS. However, population figures for these communities include people connected directly with these institutions. Library inventories can thus be misleading in comparison with state recommended minimums. For example, the city of Altus has a population (1970 U.S. Census) of 23,302 people. This tally includes the personnel assigned to Altus Air Force Base and the resident student body at Western Oklahoma State College. State goals recommend a minimum of 93,000 books for the Altus library instead of the existing 20,000 volumes. Much of this deficiency, however, can be accounted for in the institutional libraries.

Chapter 3.3 Recommendations

Non-system counties (Beckham, Greer, and Kiowa) should join an existing library

In order to expand and improve library facilities and services, Beckham, Greer, and Kiowa counties should join an existing library system. apparently favorable manner, geographically, would be for Beckham county to join the Western Plains Library System, and for Greer and Kiowa counties to join the Southern Pcairie Library System. A less desirable but still feasible approach would be for these three counties to organize a new system.

* In the event non-system counties join a library system, branch libraries should be established or maintained in Granite in Greer county, Erick in Beckham county, and Mountain View and Snyder in Kiowa county.

> Cities and towns under population of 2,000 are not recommended for fullservice libraries (in accordance with "Oklahoma Public Libraries Goals for '75"), but these communities are large enough or already have established libraries so branch operations would be desirable and feasible.

* Libraries, both system and non-system, should develop a building program so space needs may be met.

An inventory of existing facilities is the first step in developing a short- to long-range building program. State guidelines should be used to determine needed minimum space, and a program should be developed to determine means of providing additional space through relocation, renovation, or new construction.

* All existing and any new libraries should adopt the Oklahoma goals as a desired minimum requirement for providing materials and services.

Oklahoma goals for libraries will periodically be updated in order to assure that the needs and desires of library users are continuously met. In some cases, existing libraries may not be feasibly able to meet the state minimums in a short period of time. However, adopting the state goals will provide guidelines for continuous growth which will eventually provide for the desired end result.

* Non-system libraries should, until they become system associated, develop a method by which library materials and services can be continuously improved.

An important function of any organization is self-evaluation and self-improvement. Organized library systems provide this important function, but non-system libraries do not have this service. Therefore, non-system libraries must determine the best means at their disposal for eliminating non-useful materials and for continuously adding new, current services and materials. Only in this way can the needs and desires of library users be met.

* Non-system libraries should join and become active in the Oklahoma Library Association.

The Oklahoma Library Association offers a variety of services geared to improving library services and helping librarians and library board trustees in the performance of their duties. Librarians should become active in the Public Library Division of this organization, and library board members should become active in the Trustee Division. Various workshops and the association's quarterly publication are just two examples of the many services available to librarians and board members.

* Non-system librarians should consult with professional staff members at the Oklahoma Department of Libraries for any type of assistance.

A full range of specialists are available at the Oklahoma Department of Libraries who can give assistance to library staffs in many areas. These professionals can assist local library staff members in such areas as children's material, audio-visuals, building construction, and many more. Services provided by these specialists are available to all libraries at no cost.

(1) Table 34, Race by Sex for Counties 1970 PC(1)B38 Oklahoma, U.S. Census (2) Table 119, Social Characteristics for Counties 1970 PC(1)C38 Oklahoma, U.S. Census SOURCE:

*The category "White" includes persons who indicated their race as white, as well as persons who did not classify themsclves in one of the specific race categories on the questionnaire, but entered Mexican, Puerto Aican, or a response suggesting Indo-Buropean stock. NOTES:

**Spanish heritage in this report, Social and Economic Characteristics are presented for the population of Spanish heritage which is identified in various ways using information from the 15 percent sample in 1/2 states and the District of Columbia. The Spanish Language population is identified as persons of Spanish mother tongue and all other persons in families in which the head or wife reported Spanish as his or her mother tongue.

ORGANIZED LIBRARY SYSTEMS WESTERN OKLAHOMA

GENERAL SERVICES PROVIDED BY LIBRARY SYSTEMS

- * Operation of Oklahoma Teletype Interlibrary Loan System (OTIS)
- * Material processing (preparation of books, catalog cards, etc.)
- * Book ordering -
- * Maintenance of all financial records
- * Coordination of educational and cultural programs
- * Preparation of book lists, special bibliographies, etc.
- * Administration of bookmobile services
- * Radio programs, news releases, newsletters, and other public relations work
- * Rotation of books and materials within system for full circulation to patrons
- * Special interest programs upon request (schools, civic clubs, etc.)
- * Technical assistance on building, remodeling, and planning for growth
- * "Books by Mail" to rural patrons
- * Preparation of reports and statistical information
- * Conduct staff meetings, coordinate staff training

A REPORT ON LIBRARIES SWODA DISTRICT

EXPLANATORY NOTES FOR SUMMARY TABLES

- 1/ Story-time programs for young children.
- 2/ Hobart's library is the only city-county library in the SWODA District. Funds received by the library include \$8,722 from the city of Hobart and \$5,100 from Kiowa county. In addition, memorial contributions and donations (purchase of memorial books included) totaled \$2,000. The surplus figure shown on the chart was originally designated for a renovation project which, to date, has not been started.
- 3/ Snyder's library is privately sponsored by the Snyder Study Club. The city contributes \$360 per year (\$30 per month) to the library. Memorials and donations from the Snyder Study Club constitute the balance of funding for this facility.
- 4/ Films are provided to all Western Plains Library System and Southern Prairie Library System member libraries through the system organizations. Each library in the systems has a projector and screen for loan purposes. Western Plains Library System owns 28 films and 42 filmstrips. Southern Prairie Library System owns 148 films. In addition, each system received from the Oklahoma Department of Libraries a periodic film packet for loan purposes.
- 5/ Story-time programs are held at each Western Plains library, and various special adult programs are held on a non-scheduled basis. Southern Prairie libraries hold pre-school picture book hours for youth programs, and Hollis holds a monthly topic program.
- 6/ Non-fiction books in the Southern Prairie Library System are not broken into adult and juvenile categories. In addition, 16,149 books in the Altus library are not classified as these were original books in the Altus library before the system was organized. System owned books in the Altus library include 514 adult fiction books and 843 juvenile fiction books.
- Art collections (reproductions) are not available on a loan basis. However, local and area artists are featured in revolving displays at each library.
