ABSTRACT

Basic educational data, for fall 1974, on all public elementary and secondary day schools in the United States, the District of Columbia, and some outlying areas under U.S. jurisdiction are presented in this report. National trend data since fall 1970 are included for selected items. Detailed data, by state or other area, are provided on the numbers of local school districts, staff, pupils, and high school graduates in fall 1974, as well as estimated expenditures for school maintenance and operation and average salaries of professional instructional staff for the 1974-75 school year. Also included are data on the numbers of public elementary and secondary day schools for 1973-74. Most of the data are also shown separately for the 20 most populous cities. The information presented here was gathered in a survey of public elementary and secondary day schools conducted by the National Center for Education Statistics in cooperation with education officials of the individual states. Descriptions of survey procedure, other methodology, and coverage are included in the report, and a replica of the report form and instructions sent to respondents is presented in the appendix. HIGHLIGHTS

School districts.—The number of local school districts continued a decline to an estimated 16,561 in fall 1974 from 16,730 reported in fall 1973.

Instructional and noninstructional staff.—More than 3.7 million employees (full-time equivalents), professional and nonprofessional, were serving public elementary and secondary day schools in the United States in fall 1974.

Classroom teachers.—An estimated 2.2 million classroom teachers, in full-time equivalents, were employed in public schools in fall 1974, an increase of approximately 1.2 percent over those in fall 1973.

Enrollment.—For the third consecutive year enrollment decreased for elementary and secondary schools. From fall 1973 to fall 1974 enrollments decreased by approximately 373,000, or 0.8 percent.

Pupil-teacher ratio. -- Because the number of classroom teachers continued to increase, the number of pupils per teacher decreased to the lowest on record-20.9.

High school graduates.—An estimated 2.8 million students completed the 12th grade in regular day schools during the 1973-74 school year, representing 75.6 percent of the 9th-grade enrollment 4 years earlier.

Expenditures.—Of the estimated \$61.6 billion dollars in total expenditures for public school purposes for 1974-75, \$52.0 billion was for current expenditures for elementary and secondary day schools, \$2.4 billion for current expenditures for other programs, \$5.5 billion for capital outlay, and \$1.8 billion for interest on school debt.

Estimated current expenditures per pupil.—In 1974-75, the estimated current expenditure per pupil in average daily attendance amounted to \$1,255. Based on average daily membership, the estimated per-pupil expenditure was \$1,175.

Average salary.—The estimated average annual salary of the total professional instructional staff in public elementary and secondary schools in 1974-75 was \$12,070. The estimated average salary for classroom teachers was \$11,595.

INTRODUCTION

Basic educational data on all free public elementary and secondary day schools in the United States, the District of Columbia, and some outlying areas under U.S. jurisdiction for fall 1974 are presented in this report. National trend data since fall 1970 on selected items of information are included. Detailed data, by State or other area, are also provided on the numbers of local school districts, staff, pupils, and high school graduates in fall 1974 as well as, for the 1974-75 school year, estimated expenditures for school maintenance and operation and the average salaries paid to professional instructional staff. Data on the numbers of public elementary and secondary day schools for school year 1973-74 are also included. Most of the data are also shown separately for the 20 most populous cities.

The information was gathered in the 21st consecutive fall survey of public elementary and secondary day schools conducted by the National Center for Education Statistics (NCES) in cooperation with education officials of the States, the District of Columbia, and U.S. outlying areas. Descriptions of survey procedure, other methodology, and coverage appear in the section on "Nature and Conduct of the Survey." A replica of the report form, including totals for the 50 States and the District of Columbia, and instructions to respondents are shown in the appendix.

LOCAL SCHOOL DISTRICTS

The number of school districts (local basic administrative units) continued to decline primarily as a result of reorganization laws, the consolidation and annexation of school districts, and the elimination of nonoperating school districts. The number of school districts decreased from 16,730 in fall 1973 to 16,561 in fall 1974, down 0.8 percent. From fall 1970 to fall 1974, the number of local basic administrative units decreased by 1,434, or more than 7.8 percent (table 1).

California, Illinois, Nebraska, and Texas reported more than 1,000 school districts each, accounting for 27.0 percent of all the districts in the Nation (table 2). Seven States reported from 500 to 999 (505 to 758) school districts; 38 States and the District of Columbia reported 499 or fewer (1 to 450) operating and nonoperating school districts. New Jersey did not report.

Of the estimated 16,600 districts in fall 1974, the number performing their prescribed function by operating schools was 16,300, or 98.2 percent. The other 300 districts did not operate schools but provided for their pupils by other means, such as transferring them to nearby operating districts on a tuition basis.

ERIC

PROFESSIONAL AND NONPROFESSIONAL STAFF

In addition to the traditional collection of the full-time-equivalent (FTE) $\frac{1}{2}$ numbers of classroom teachers, the fall 1971 survey was expanded and continued in fall 1974 to include all other instructional and noninstructional staff (also FTE), both professional and nonprofessional. Combined, they amounted to about 3,745,000 FTE school employees in the United States(table 3).

The professional instructional staff includes principals, assistant principals, supervisors of instruction, classroom teachers, teachers of the homebound, radio and television instructors, librarians, guidance staff, psychological staff, and audiovisual staff. The nonprofessional instructional staff includes teacher and library aides, secretarial and clerical assistants, and other nonprofessionals directly assigned to support instruction.

The professional noninstructional staff is composed of administrative and health personnel, social workers, attendance personnel (including visiting teachers), and other noninstructional professional personnel. The nonprofessional, noninstructional staff includes staff such as health aides; clerical and secretarial 'aff; operation and maintenance personnel; bus drivers; and food service workers.

Instructional Staff

In fall 1974, an estimated 3.7 million (FTE) instructional and noninstructional professional and nonprofessional persons were serving elementary and secondary public day schools in the 50 States and the District of Columbia (table 3). The reported total instructional staff was estimated to be 2.8 million, which represents 73.8 percent of the total working force of elementary and secondary public school systems in the United States. Of the total instructional staff, classroom teachers accounted for 2.2 million, or 78.2 percent. Other professional instructional staff amounted to 257,000 persons, or 9.3 percent. The nonprofessional staff serving instruction amounted to 346,000, or 12.5 percent of the instructional staff.

Classroom Teachers

The estimated 2.2 million (FTE) public elementary and secondary school teachers in fall 1974 represented an increase of approximately 26,000, or 1.2 percent, over the number in fall 1973 (table 3). Since 1970, the total number of classroom teachers increased by 5.1 percent (table 1), for an average annual

Full-time employees plus the estimated full-time equivalent of part-time employees. See the instructions for part A-1 of the report form in the appendix.

rate of 1.2 percent (compounded). Historical records of NCES indicate that for any 5-year period beginning during the first half of the 1960's the percentage increase was greatest for the employment of teachers. These increases ranged from 17.1 to 18.7 percent. The 5-year comparison rates declined in the latter half of the 1960's beginning in 1966-70 with 14.9 percent and going down to 6.0 percent during 1969-73. Probable reasons for the reduction in the rate of increase are decreases in enrollment, budgetary problems, and the fact that some districts have met their quota of teachers needed.

Noninstructional Staff

The estimated FTE total noninstructional staff (professional and non-professional) amounted to 983,000 employees (table 3), representing 26.3 percent of the persons employed in public elementary and secondary school systems. The professional segment of the noninstructional staff was estimated to be 108,000 persons, or 11.0 percent of the total noninstructional staff; the "other" nonprofessional group accounted for the remaining 875,000 persons, or 89.0 percent.

PUPILS

School-Age Population2/

From October 1, 1973, to October 1, 1974, the estimated school-age population (ages 5-17 years, inclusive) declined from 51,352,0003/ to 50,814,000, a decrease of 538,000, or 1.0 percent. During this period the estimated total resident population increased from 210,331,000 persons to 211,872,000 persons, or 0.7 percent. The total school-age population represented a little less than one-fourth of the total population.

Enrollment

Almost 45.1 million pupils were enrolled in public elementary and secondary day schools in fall 1974, a decrease of approximately 373,000, or 0.8 percent, from the number in fall 1973 (table 4). The decrease from fall 1972 to fall 1973 was 315,000, or 0.7 percent (table 1). While enroll-enrollments continued to increase until fall 1971, the amount of annual increase had diminished from year to year. Records of NCES indicate that in fall 1972, for the first time since school year 1943-44, enrollments in public schools decreased. Since the first biennial survey, begun in 1869-70, reports show that enrollments increased until 1933-34; decreased, 1935-36 through 1943-44; and increased again, 1945-46 through fall 1971. (The annual fall survey began in fall 1954.)

^{3//} Revised from earlier estimates.

^{2/} Estimates based on data published by the U.S. Bureau of the Census in Current Population Reports, P-25 series, Nos. 519, 529, and 545, and unpublished data.

In fall 1974, a total of 34 States and the District of Columbia reported enrollment decreases, ranging from 0.2 percent in Louisiana to 6.6 percent reported for Arizona. For the current year, Alaska reported the largest increase in enrollment of 4.9 percent over fall 1973, whereas the other 14 reporting States reported smaller increases ranging from less than 0.05 percent to 2.1 percent. Fall 1974 data for New Jersey were not available for comparison.

While enrollment in the public elementary and secondary levels combined had increased in recent years until fall 1972, the percent relationship between levels has been changing. As percent of total enrollment, elementary enrollment has continued to decline while the secondary enrollment has increased, except for a slight reversal in fall 1971 and fall 1974. This slight deviation may have been due to changes in State reporting methods and reclassification of the seventh and eighth grades between elementary and secondary levels (table 1).

Table 4 gives enrollment by organizational level of the school. Grades 7 and 8 were to be reported either in the elementary or secondary level, depending upon the organization of the school of which they were a part.

Table 5 shows enrollment by grade arranged within the traditional grade groups of preprimary (including nursery and kindergarten) through grade 8 and grades 9 through 12. Beginning in fall 1971, the survey requested data on the number of elementary and secondary pupils enrolled in special education. The total number of special education pupils in fall 1974 accounted for approximately 1.8 percent of the total number of pupils in membership.

Enrollments in Grades 7 and 8 by Organizational Level

In the fall 1974 survey, 27 States reported seventh and eighth graders as being in elementary and secondary schools (table 6). Enrollment in this group of States comprised 44.9 percent of the Nation's total enrollment; 66.8 percent of their seventh graders and 69.2 percent of their eighth graders were reported in secondary schools.

Pupil-Teacher Ratios

In recent years, teaching staffs have been growing at a slightly higher rate than enrollments. Consequently, the national pupil-teacher ratio based on enrollments has decreased to 20.9 pupils per teacher in fall 1974 (table 1) from 27.7 reported for fall 1954. Data in table 7 for fall 1974 show the national ratio based on average daily attendance (ADA) to be 19.2 pupils per teacher.

At the national level and even at the State level, pupil-teacher ratios have only limited value and should be used with caution. The average number of pupils per classroom teacher, often used as a measure of teacher workload, is not a valid measure of average class size. Furthermore, pupil-teacher ratios do not reflect the educational services provided in varying degrees by staff outside the classroom. The ratios shown in table 7 serve only as rough guidelines in studying the State-by-State situation, and more detailed information on other aspects of school staffing would be needed in order to make valid judgments.

HIGH SCHOOL GRADUATES

Approximately 2.8 million public high school graduates from regular day school programs were reported for the 1973-74 year—a gain of approximately 32,000, or 1.2 percent over the preceding year (table 8). States also reported 40,204 graduates from all other public school programs (e.g., evening schools and adult education programs) and a total of 175,210 persons receiving high school equivalency certificates. Data were not available for some States on graduates from other programs and those receiving high school equivalency certificates.

In 1973-74, girls represented 50.6 percent of the total number graduated from regular public high school programs. A slight excess of female over male high school graduates has been noted over a period of years.

Although the retention rate of public high schools remains high, the percentage ratio of 1972-73 high school graduates (reported in fall 1973) to students enrolled in the ninth grade 4 years earlier was greater than the similar ratio for 1973-74 graduates. The 1972-73 graduates represented 76.5 percent of the class that entered the ninth grade in fall 1969. But the 1973-74 graduates represented 75.6 percent of the ninth-grade class in fall 1970, which may indicate a coming change in trend. Five years earlier, the 1968-69 high school graduates represented 78.5 percent of the fall 1965 ninth-grade class.

ELEMENTARY AND SECONDARY DAY SCHOOLS BY LEVEL

In fall 1970, the survey was expanded to include the number of public elementary and secondary day schools by level. In this survey, definitions of schools by type and grade were prescribed by Handbook I, The Common Core of State Educational Information. 4/ "A school is defined as a division of

...

^{4/} U.S. Office of Education, Bulletin 1953, No. 8, Washington, D.C.: U.S. Government Printing Office.

the school system consisting of a group of pupils composed of one or more grade groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant, as is the case when the elementary and secondary programs are housed in the same school plant."

The fall 1974 survey collected data on elementary schools, which normally included any span of grades not above 8, and on middle schools, which generally included grades 5 or 6 through 8. Secondary schools included any span of grades above elementary or middle schools, but not above grade 12. Junior high schools generally consisted of grades 7 through 9. States vary in their classification of elementary and secondary schools. Grades 7 and 8 may be considered as elementary or secondary depending on how they are organized in the local school districts. However, for this report, middle schools were grouped in the elementary category and junior high schools were grouped in the secondary category.

Results of the survey show a total of 88,655 public elementary and secondary day schools, including 62,749 elementary, 23,585 secondary, and 2,321 combined elementary-secondary schools (table 9).

Of the 62,749 elementary schools reported, 2,627 were middle schools and 1,365 were one-teacher schools. The middle school, although a popular emerging classification, comprised only 4.2 percent of elementary schools.

There has been a constant reduction in the number of one-teacher schools, due mainly to school and school district reorganization. In fall 1974, these schools constituted just 2.2 percent of all elementary schools. Nebraska reported the largest number of one-teacher schools -- 546, or 40.0 percent of all one-teacher schools in the Nation.

Included in the count of secondary schools are 7,462 junior high, 11,205 senior high, 4,445 6-year or junior-senior high, and 473 separately organized vocational schools not included with other secondary schools.

Combined elementary and secondary schools, those organized and administered as a single unit, comprised 2.6 percent of the total number of elementary and secondary schools. Within the total 2,321 combined elementary and secondary schools shown in table 9, 125 special education schools are included. An additional 104 special education schools are also included among other elementary schools.

ESTIMATED EXPENDITURE AND SALARY DATA

Total Expenditures

Estimated total expenditures for all public school purposes in 1974-75 amounted to \$61.6 billion. Included in the grand total were current expenditures for elementary and secondary day schools (\$52.0 billion) and for other

programs (\$2.3 billion), capital outlay (\$5.5 billion), and payment of interest on debt (\$1.8 billion). Debt retirement was not included, since it would be a duplication of expenditures made and reported in preceding years (table 10).

Current Expenditures per Pupil in ADA and ADM

The average estimated current expenditure per pupil in average daily attendance (ADA) for school year 1974-75 was \$1,255 (table 10). Based on average daily membership (ADM), the estimated amount was \$1,175 per pupil.

Average Salaries of Classroom Teachers and Instructional Staff

For the United States, the average estimated annual salary of classroom teachers in 1974-75 was \$11,595 (table 10). In analysis of average salaries among States indicates wide differences, ranging from \$8,057 for Mississippi to \$16,387 for Alaska. In addition to the averages first mentioned, California, New York, and the District of Columbia reported salaries in excess of \$14,000 but not above \$14,530. In 3 States the average salary was in the range of \$13,000 to \$13,999; 5 States, \$12,000 to \$12,999; 5 States, \$11,000 to \$11,999; 13 States, \$10,000 to \$10,999; 13 States, \$9,000 to \$9,999; and 7 States, \$8,000 to \$8,999. Data for the State of New Jersey were not received.

The 1974-75 estimated average annual salary of the total professional instructional staff (supervisors of instruction, principals, teachers, and other instructional staff members) was \$12,070. Aside from \$16,906 reported for Alaska, the next highest average salary of \$15,000 was reported for New York, followed by 33 States and the District of Columbia reporting salaries from \$10,000 to \$14,999 and the remaining reporting States which reported less than \$10,000.

LARGE-CITY DATA

The problems of the Nation's large cities have been receiving increasing attention in recent years. Since 1962 the States have been requested to furnish separate data in the fall survey for the 15 cities with the highest total population in the 1970 Decennial Census. Beginning in fall 1971 the number of cities was expanded to include the 20 with the largest population in the 1970 Decennial Census. One of these cities, Washington, D.C., has always been included in this survey, as it is in other national surveys that cover all State jurisdictions. Data were requested from the 15 States in which the other 19 cities were located.

At the time of the 1970 Decennial Census (April 1970), the combined population of the 20 cities, ranging from 7.9 million in New York to 581,562 in Phoenix, comprised approximately one-seventh of the total population in the United States.

The 20 cities reporting for fall 1974 had 14.1 percent of the 1970 population and in fall 1974 had combined enrollment of 4.6 million, or 10.2 percent of the Nation's public school pupils. Reported data for each of these large cities appear below the outlying areas in the appropriate tables.

NATURE AND CONDUCT OF THE SURVEY

For 21 consecutive years a fall survey of public elementary and secondary day schools has been conducted, first by the U.S. Office of Education and now by the National Center for Education Statistics (NCES) assisted by education officials from the 50 States, the District of Columbia, and the outlying areas of the United States. This report is the latest in the annual series of fall statistics on public day schools dating from fall 1954.

Data are collected on the numbers of pupils, high school graduates, and staff. Prior to the 1971 survey, statistics on classroom teachers (in full-time equivalents) were the only staff data collected. This survey was expanded in fall 1971 to include total instructional and noninstructional staff, both professional and nonprofessional. Also included are estimated school expenditures by major purpose, average salaries of professional instructional staff and classroom teachers, and estimated average daily attendance and average daily membership. Data are also collected on the numbers of local school districts, operating and nonoperating. Since fall 1970, excluding fall 1972, the survey has collected data on the numbers of public elementary and secondary day schools.

To the extent available, data are shown for each State and the District of Columbia, and estimates for missing data are included in the national totals. Data are also shown for four outlying areas: American Samoa, Canal Zone, Guam, and the Virgin Islands. Data for Puerto Rico, the Trust Territory of the Pacific Islands, and the Department of Defense Overseas Schools were not received in time to be included in this report.

This survey also provides information on the school systems located in the 20 largest cities that ranked highest in total population according to the 1970 census. Data for Washington, D.C., are shown both in the State listing as one of the 51 jurisdictions comprising the total for the United States and with the large cities to facilitate intercity comparisons. Data shown for Phoenix, Ariz., are for all the schools located in the city limits of Phoenix and not just for those in the Phoenix Elementary and Phoenix Union High School districts.

Statistics for the outlying areas are shown separately and are not included in the national totals. In several tables, national and State totals for fall 1973 are provided for comparison. Some of the data differ

16A-8-

from those originally published in the fall 1973 report and the advance fall 1974 report 5/ because more complete data became available after those reports were issued.

The data in this report were furnished by the State education agencies on three report forms designed by the National Center for Education Statistics. One of the forms requested data on pupil membership, staff, and high school graduates; another provided for reporting the number of schools by type; and the third requested estimated data for the current year on expenditures, average salaries, average daily attendance, average daily membership, and operating and nonoperating local school districts. (See appendix for a facsimile of these forms.)

Each State report was reviewed for internal consistency and for comparability with information received in previous surveys, State publications, and related NCES studies. Letters and telephone calls were used as necessary to obtain data from respondents and to resolve outstanding questions.

As in any survey that employs the mail questionnaire, variations in interpretation of instructions and definitions by respondents may exist. Because public elementary and secondary education is a State and local responsibility, any statistical total for the Nation as a whole reflects a composite of the different educational practices existing in the United States. The use of standard forms and definitions in collecting the data tends to minimize these variations. To the extent that State deviations from prescribed definitions and instructions were known, they are indicated in the footnotes to the various tables.

The National Center for Education Statistics encourages each State to obtain the data for its report by conducting a fall survey of local school districts and by using an adaptation of the Federal form and accompanying instructions. Many of the States used adaptations of this form; however, some State education agencies find this approach impractical for a variety of reasons; e.g., funds and staff are not available for conducting the survey, or similar data for a recent period may already be available at the State level. Some States collected the data from regular annual reports, and a few submitted estimates based primarily on records. Financial estimates for 1974-75 were prepared in the State offices generally without recourse to survey efforts. However, State appropriations and budgets filed by local school districts often served as bases for these estimates.

Data shown in some of the basic tables may not always agree with data reported in other NCES publications. The "as of" reporting dates sometimes differ from one report to another, which may cause slight variations in published data.

NOTES

DOD Overseas Schools are elementary and secondary schools operated in foreign countries by the Department of Defense for minor dependents of military and civilian personnel in the Department who are stationed overseas.

The Trust Territory of the Pacific Islands is administered by the United States by agreement with the United Nations Security Council.

<u>Kansas</u> and <u>Wisconsin</u>: Data for vocational schools which are not a part of the regular public school system are not included.

Estimates are included in all columns except for column 5.
Ravised from previously published data.
Data for column 11 included in column 10.
Data estimated by raporting State.
Percant increase lass than 0.05 percent.
All columns axcapt column 5 were satimated by reporting State.
Includes food sarvica personnal for the first time.
Does not include any prakindergarten taachers, or any nonprofessional instructional and noninstructional staff.
Includes racrastional specialists as well as classroom teachers.

NA Not available.

Includes estimates for nonreporting States except for columns 5, 6, and 7.

Revised from previously published data.

Data for elamentary and aecondary are reported by specific grade group: K to 6 for elementary and 7-12 for secondary.

Data for elementary and aecondary are reported by specific grade group: K to 8 for elementary and 9-12 for secondary.

Data for elementary and secondary are reported by specific grade group: K to 7 for elementary and 8-12 for secondary.

Chicago school system has an ungraded 1-8 program. Reported enrollments on this form were derived by using age as the determining 1/ 2/ 3/ 4/ 5/ 6/

Contrago school system has an ungraded of factor for count by grade.

Data are estimated by reporting State.

Estimated by NCES.

Less than 0.05 percent.

Includes summer school.

Data include nursery echools and kindergertens operated as part of the regular public school system. Includes estimates for nonreporting States. Eavised from previously published data. Data for column 22 included in column 14. Elementary and secondary education pupils are distributed in other grades.

NOTE: -- Because of rounding, details may not add to totals.

Elementary and secondary aducation pupils are distributed in other grades.

Data setimated by reporting State.

Columns 14, 21, and 22 are included in column 13.

Distribution setimated by NCES.

Includes English-second-language pupils.

Includes enrollment for all kindergartens, State supported as well as Federally and locally funded. Kindergarten enrollment is not part of the official enrollment in South Carolina. Information provided is compatible with previous years' reporting.

Approximately 49,000 special aducation atudente other than those shown in columns 14 and 22 are included in the regular K-12 grades.

Data for column 13 included in column 14.

Data for column 13 included in column 22.

Deta for columns 5, 6 and 7 are included in column 13.

Deta for columns 13, 14, and 22 are included in the regular K-12 grades.

 $[\]underline{1}$ / Dete estimated by reporting States.

NOTE. -- Data are shown only for States that reported a division of 7th and 8th grades in wiementary and secondary enrollment. Some changes observed from year to year in pert reflect changes in organization of grades by lavel. Some States have indicated continuing reclassification of grades by level and report date as provided by the local achool districts.

INSTRUCTIONS FOR COMPLETING ELSEGIS VII, PART A.1, STATE FALL REPORT ON STAFF AND PUPILS

(OE Form 2350-5)

GENERAL

This report is due in the National Center for Education Statistics, Assistant Secretary for Education, on December 15, 1974. If complete data for all local reporting units are not available in the State department of education in time to meet the due date, please forward promptly the best figures for the whole State by including an estimate for non-respondents.

The information for this report should reflect the facts on or about October 1, 1974 or the nearest date thereto when membership can be considered stabilized.

It is important that the State incorporate in their own questionnaires all basic definitions contained in the Federal form. Where reported data do not conform to prescribed definitions, deviations should be explained.

If data have been estimated in whole or in part, please indicate the basis of the estimate.

The figures reported this year should be compared with those for last year. Reasons for unusual increases or decreases should be noted by attaching an explanation, e.g., change in method of reporting, change in standard used, etc.

Enter the number of staff by position. Reporting should be in terms of full-time equivalence, that is the amount of time employed in a part-time position expressed in proportion to that required in a full-time position, with "1" representing one full-time position. It is derived by dividing the amount of time employed by the time required in a corresponding full-time position. Please report in accordance with the following instructions:

- Include only filled positions; do not count vacant positions.
- o. Count part-time positions in terms of full-time equivalence. Full-time equivalence should be counted in tenths but the aggregate total for each line should be reported on the form to the nearest whole number. EXAMPLES: (1) A full-time teaching position is filled by two persons, each working a half-day count each at .5 (or the position at 1.0). (2) A French teacher works only 2 hours each day in a school system with a 6-hour day count at 2/6 or .3. (3) A small school system shares an Art teacher with 4 other systems. The teacher spends 1 day per week at each count at 1/5 or .2.
- c. A full-time instructional staff member working at more than one position or level should be counted as part-time in each of the different positions. For example, a person who teaches 3 days a week and serves as guidance counselor for 2 days should be classed as .6 in the former position and .4 in the latter.
 - d. An employee of the school system who devotes part-time to instruction and part-time to other duties should be

included here only for the portion of time devoted to instruction. For example, an employee who is a half-time teacher aide and half-time cafeteria worker should be counted only at half-time (.5) as a teacher aide and the other half should be counted as a cafeteria worker.

SPECIFIC

- Line 1. A classroom teacher is defined as a person employed to instruct pupils in a situation where the teacher and the pupils are in the presence of each other. Include all prekindergarten and kindergarten, elementary, secondary, special education teachers and other teachers whose regular assignments include teaching such as radio, TV, homebound, etc. Speech correctionist should also be included here.
- Line 2. Other professional instructional staff includes persons with assignments such as principals, assistant principals, librarians, curriculum consultants and/or supervisors of instrustruction, guidance staff, psychological and audiovisual staff.
- Line 3. Include all nonprofessional staff serving instruction such as teacher and library aides and secretarial and clerical assistants, etc.
- Line 4. Sum of lines 1 through 3.
- Line 5. Include professional noninstructional staff for school system administrative personnel such as superintendents, assistant superintendents, business managers, etc., responsible for system-wide management of the school district, health personnel, social workers, attendance personnel including visiting teachers and other nonlinstructional professional personnel. Speech therapists and pathologist should also be included here.
- Line 6. Include health aides, clerical and secretarial staff, operation and maintenance staff, bus drivers, food service. workers, and other nonprofessional/noninstructional staff.
- Line 7. Sum of lines 5 and 6.
- Line 8. Sum of lines 4 and 7.
- Line 9. Report the total number of 1973-74 school year high school graduates from the regular public day school program, include 1973 summer school graduates, exclude 1974 summer school. If 1973-74 high school graduates exceed the 12th grade enrollment reported for fall 1973, please explain.
- Line 10. Report the total number of graduates from all other public school programs, evening school, adult, etc. during the 1973-74 school year.
- Line 11. Report the total number of persons receiving high school equivalency certificates during the 1973-74 school year.
- Line 12. Pupils should be reported by grade as "elementary"

[•] THE ADA AND ADM FIGURES WILL BE USED TO COMPUTE THE AVERAGE CURRENT EXPENDITURE PER PUPIL - 1.0., ITEM IA WILL BE DIVIDED BY ITEM 6 AND ITEM 7.

OE FORM 2350-9, 10/74

GENERAL

- 1. This report is to be completed for each State, the District of Columbia, outlying areas, and the 20 largest cities at the time of the 1970 Decennial Census.
- 2. This report is due in the Office of the Assistant Secretary for Education, National Center for Education Statistics on or before December 15, 1974.
- 3. All data are to be estimated for the 1974-75 school year.
- 4. In estimating expenditure data, include disbursements from all funds (general fund, debt service fund, etc.) and from all sources (local and county, State and Federal). Estimated expenditures should be rounded to thousands of dollars.

INDIVIDUAL ITEMS

Item 1A. The following expenditures should be included here: (1) Expenditures for ADMINISTRATION by State board of education and State department of education /excluding expenditures for vocational rehabilitation and salaries for personnel for supplementary services such as State library, State museum, teacher retirement, teacher placement, etc.), (2) Expenditures for ADMINISTRATION by county or other intermediate administrative unit, (3) Total current expenditures by local school districts (i.e., expenditures for administration, instruction, attendance, health, transportation, and net food service [including value of commodities donated by the U.S. Department of Agriculture], and other net expenditures to cover deficits for extracurricular activities for pupils), and maintenance and operation, (4) Direct State expenditures for current operation (e.g., State [employer] contributions to retirement systems, pension funds, or social security on behalf of public school employees: State expenditures for textbooks distributed to local school districts, and all other expenditures made by the State on behalf of free public elementary and secondary schools). Include current expenditures made for vocational technical elementary or secondary education.

Item 1B. This will include vocational technical schools which do not have an elementary or secondary program (for adult education).

Item 2A. Enter the amount to be spent by the local education agencies to acquire and improve sites, construct and equip buildings, and purchase other equipment (classified as capital outlay).

Item 3A. Report here estimated interest on short term and long term debt (bonds or notes) to be paid by local educational agencies from all funds.

Item 3B. Report here estimated interest payments to be made by school-housing authorities or similar agencies,

and payments to be made directly by State, intermediate, county, city, or other local governmental agency, where such payments will not be recorded in the local education agency accounts.

Item 4. Report the estimated average salary for only those teachers reported on form Part A-1, item 1. The estimated average salary should include gross salary before deductions for social security, retirement, health insurance, etc. Average classroom teacher salaries will not normally exceed average instructional staff salaries.

Item 5. Report the estimated average salary for those professional instructional staff reported on form Part A·l, items 1 and 2. The professional instructional staff include teachers, principals, assistant principals, supervisors of instruction, guidance and psychological staff, librarians and audiovisual staff and other professional instructional staff.

Items 6 and 7. Refer to total number of pupils in membership reported on Part A-1 form, item 12s, before or when estimating ADA or ADM. The total amounts of estimated ADA and ABM should be for all public day school pupils enrolled in prekindergarten through grade 12, including postgraduates. Generally the ADM figure will be greater than the figure for ADA. The average daily attendance (ADA) is the aggregate days attendance divided by the number of days the school is actually in session.

The average daily membership (ADM) for a school year is the average number of pupils "belonging," whether present or absent, each day.

Report Average Daily Attendance and Average Daily Membership in elementary and secondary schools in accordance with the formulas given below; exclude students in summer schools, adult education, or junior colleges. Report to the nearest whole number.

ADA= annual aggregate day attendance actual number of days taught

annual aggregate days attendance plus

ADM= annual aggregate days absence
actual number of days taught

Half-day attendance at nursery school or kindergarten should be counted as full-time for purposes of determining average daily attendance and average daily membership. For example, if 100 pupils attended nursery school in the morning and a different group of 100 pupils attend in the afternoon, the aggregate attendance for the day would be 200.

OE FORM 2350-7, 10/74

INSTRUCTIONS FOR COMPLETING ELSEGIS VII, PART A-4 STATE FALL REPORT ON PUBLIC SCHOOLHOUSING

(OE Form 2350-7)

This report is due in the National Center for Education Statistics, Office of the Assistant Secretary for Education, on or before December 15, 1974. The report is to be completed for each State, the District of Columbia, the outlying areas, and the 20 largest cities at the time of the 1970 Decennial Census. Include only those schools operated by local educational agencies. If there is no entry for a field, leave blank. Avoid duplication of counting, e.g., do not count middle schools in line 2 and also include them in line 3.

For purposes of this report, a school consists of a group of pupils with one or more teachers who give instruction of a defined type in one or more grades, housed in a school plant of one or more buildings or in more than one school plant, and organized as one unit. More than one school may be housed in the same school plant, as in the case when separately organized elementary and secondary grade levels are housed in the same school plant; where this occurs, each level is considered as a separate unit, if administered separately. If both elementary and secondary grade levels are administered as a single unit, it should be considered as one school.

Special Education Schools. If a school serves only special education pupils, it should be classified according to the grade level of the pupils served. If the grade span of the school includes grades below 7 but not above 8, it should be included on line 3. If the school does not include grades below 7, it should be included on line 5, 6, or 7, as appropriate. If it includes grades below 6 and above 8 it should be included on line 10.

Item 1. A one-teacher school is a school in which one teacher is employed to teach all grades authorized in the school, regardless of the number of rooms in the building. These schools can consist of any grade grouping within grades kindergarten through grade 8.

Line 2. A middle school is a separately organized and administered school usually beginning with grade 5 or 6 or its equivalent and including at least three grades or years. Most middle schools presume, in ultimate plan if not in present reality, a 4 year high school for the grades or years which follow, as in a 4-4-4 or a 5-3-4 plan.

Line 3. Include those schools not reported in lines 1 or 2, regardless of grade span, but not above grade 8. (See line 10 for those schools which have grades lower than grade 8 and include grades higher than grade 8.)

Line 5. A junior high school is a separately organized and administered secondary school between elementary schools and senior high schools, usually including grades 7, 8, and 9. (as in a 6-3-3 plan) or grades 7 and 8 (as in a 6-2-4 plan).

Line 6. A senior high school is a secondary school offering the final years of high school work necessary for graduation and invariably preceded by a junior high school. Four-year and incomplete high schools are to be included.

- A 4-year high school is a 4 year secondary school immediately following the elementary school (as in the 8-4 plan) or a middle school.
- An incomplete high school is a secondary school which offers less than 4 years beyond grade 8 and normally ends with grade 11.

Line 7. A junior-senior high school is a secondary school which usually includes grades 7 through 12 and is administered as a single unit. Such a school would usually follow a middle or other elementary school with no intermediate school between.

Line 8. A vocational/technical high school is a separately organized school under the direction of an administrator (such as a principal) for the purpose of offering training in one or more skilled or semiskilled trades or occupations. High school offering vocational/technical as part of a comprehensive program should not be included here. (If it is possible to count these schools separately, please enter zero here, include them as appropriate in lines 6 or 7, and explain in the comments section.)

Line 10. Include here those schools which serve both elementary and secondary pupils, but which are organized and administered as a single unit and cannot be classified in any of the categories of elementary or secondary schools.
