ABSTRACT
                In order to assess the felt needs and interests of
the local population and business community relative to education and
training, a survey was designed and implemented in the four-county
area surrounding Waco, Texas. This volume, part two of a three part
series, documents the work done in developing and conducting the
business and industry employee-skill needs survey, and provides a
data base to be used by curriculum planners. The survey instrument
was used in 127 interviews with business and agency executives from
widely differing business, manufacturing, and human service concerns.
The survey instrument, which is appended to this report, consists of
33 questions to obtain data in each of the following categories: (1)
general information; (2) employee information, including the number
of full and part-time employees, sex, desirable education level, and
starting salary; (3) entrance requirements, including age and
educational prerequisites, and previous job experience; (4) problems,
including hiring problems, and skill training needs of new employees;
and (5) supportive educational programs. Responses are tabulated and
charted. Appendices include lists of the interviews conducted and a
code manual to aid in categorizing independent responses for data
processing purposes. (NHM)

THE ASSESSMENT OF BUSINESS AND INDUSTRY NEEDS

APPENDICES

PROJECT OVERVIEW

The U.S. Department of Health, Education, and Welfare, Office of Education (Adult Education), contracted with McLennan Community College Multi-County Needs Assessment Project (MAP) to design and initiate a survey to assess the felt and perceived needs and interest of the local population and the business community at the grass roots level relative to education and training.

The survey was developed and implemented in the four-county area (Bosque, Falls, Hill and McLennan Counties) surrounding Waco, Texas.

The Multi-County Needs Assessment Project (MAP) was directed toward the following goals:

A. A survey designed to solicit the opinions of the adult population relative to their educational and training needs and the obstacles that they perceive in meeting their needs and interest.

B. An analysis of the education and training needs of business and industry and other agencies.

C. Creation of an inventory of the extant adult education and training programs located within the four-county area.

D. Building a model adult education cooperative based upon the body of information gathered and having the capability of designing educational and career development programs and new delivery systems to meet the needs of adults.

A series of related reports has been prepared to describe the survey system and the results. The report series is made up of the following three volumes:

-i

Volume 1. The Assessment of Adult Needs
Volume 2. The Business and Industry Survey
Volume 3. Summarized Highlights of the Findings
in Volumes 1 and 2

The report in its entirety is intended to benefit other community areas in that they may transfer concepts developed during this project. Volumes 1 and 2 present the necessary steps for the conduct of this survey or its components in other communities. Volume 3 presents the highlights of the findings within the four-county Central Texas area surrounding Waco, Texas, that will be useful to many types of agencies in this geographical area and may be translatable and of utility to agencies in other geographic regions.

Goal C was deleted after a great quantity of data was gathered. The staff felt that such a publication would be outdated very quickly and hence not worth the concomitant expenditure of funds and manhours.

Goal D was predicated upon the effecting of a second year of project funding and did not become a reality during the project although this project has contributed materially toward this goal and the goal is being viably pursued by other means.

INTRODUCTION

The Business and Industry Survey is one component of the Multi-County Education Needs Assessment Project (MAP), a one-year project conducted within the Adult Education Cooperative area served by McLennan Community College. MAP has developed a survey instrument to identify employer needs in this four-county area. The survey instrument was used in 127 interviews with business and agency executives from widely differing business, manufacturing, and human service concerns. Information and data from these interviews will be used to establish resource files for local curriculum planning.

Purposes of this Report

This report has two major purposes:

1. To systematically analyze the employee-skill needs of the business, industries, and agencies in the local area.

2. To relate the information to local educators so that their curriculum would reflect courses designed to assure career opportunities and progression.

The reader will gain a better perspective of the role of the Business and Industry Survey in the MAP Project by reading the other reports in this undertaking. The Adult Education Needs Survey is described in Volume 1.

I BACKGROUND AND PROCEDURES

The Business Survey

Volume I of this series describes the survey of the felt
and perceived educational needs of adults and its application
in the MCC Adult Education Cooperative area which consists of
four component counties -- Bosque, Falls, Hill and McLennan.

As a part of the Multi-County Assessment Project (MAP),
the major function of the Business and Industry Survey is to
provide service resource information. Information must be
available that enables planning by educators, counselors, and
manpower agents which reflects the latest job-skill information.
Plans exist in the four-county Coop area for using the data
obtained in the survey for three purposes:

1. To compile reports for local educators and school
   administrators which point out skill training areas
   specified as necessary by business and agency concerns.

2. To compile reports for manpower agents so that planning
   efforts will be concentrated in specified skill training
   areas.

3. To outline the most-wanted skill area for local
   jobs, making counselors more knowledgeable when
   consulting with students about careers.

The Design and Implementation of the Business and Industry Survey Instrument

As previously mentioned, the primary users of information
produced by the Business and Industry Survey are local educators,

manpower planners, and school counselors. In this section we
discuss the design requirements which guided both the construction
of the survey instrument and the subsequent use of the instrument
in the business, industry, and agency survey process in Bosque,
Falls, Hill and McLennan counties.

Coding procedures followed in readying the survey data
for use are also presented in the section of this report on
Data Preparation.

Survey Design

The actual development of the business and agency survey
instrument was the result of several months of concentrated
effort by the MAP staff. Experts in various educational and
manpower areas reviewed preliminary drafts of the survey instru-
ment, and modifications of the instrument were based upon these
reviews and a limited pre-test. Implementation of the survey
was facilitated through the efforts of the chambers of commerce,
independent school districts, and service agencies. The admin-
istrators of McLennan Community College formally introduced
the survey to businesses and agencies via letter and thereby
helped to secure the cooperation and commitment of executives
and administrators in the survey process.

Design and Consideration

The survey instrument consists of questions to obtain data in each of the following categories:

1. General Information -- includes basic information about the business or organization such as name, address, telephone, contact persons, accessibility by public transportation, and classification.

2. Employee Information -- includes number of full and part-time employees, sex preferred, desirable education level, approximate starting salary.

3. Entrance Requirements -- contains information on age and educational prerequisites and necessity of previous job experience.

4. Problems -- includes information on typical hiring problems and skill-training needs of new employees.

5. Supportive Educational Programs -- includes programs mentioned by employers as necessary or helpful to success of business or agency.

Project Objective

Specifications in the MAP grant and discussions with educators and manpower planners provided the basis for the five objectives of the survey.

1. Determine the impact of educational and training programs on hiring policies for entry-level jobs.

2. Obtain statistics on numbers and types of entry level jobs.

3. Document whether educational and training programs are perceived to be adequate for entry-level positions.

4. Determine the expected increase or decrease in industrial and/or vocational-type jobs.

5. Explore what employers perceive as the most important and desired characteristics in new employees.

-3-

The utility of the survey for it's users should be based upon how well the questions elicited responses to meet the above objectives. The survey instrument developed and implemented in this project is an innovative tool and has pro.ed effective in generating information to satisfy its intended purposes. The reader will note that the questionnaire was not precoded, necessitating a transfer of information to code sheets. The diversity of information received was far greater than if a closed questionnaire had been used. The questionnaire and code manual are contained in the Appendices.

Data Preparation

When completed, the coding sheets were used for one major purpose. Survey information needed to construct a planning data base and planning report was keypunched from the code sheets. Bulky information was not disregarded but recorded separately and is interspersed throughout the data analysis. The organization of the survey data for analysis including transfer to the coding sheets involved a tedious but relatively uncomplicated process.

Because employers were allowed to supply their own answers to seventy percent of the questions, a code manual that would be applicable to every answer was necessary. The manual was finalized after a brief inspection of replies to various questions. It was at this time that the staff determined the utility of employing a range for several questions which allows for more flexibility while including every response.

Each questionnaire was numbered, and for the staff's purpose, this number supplied the respondent's identification on the IBM card. After the ID was keypunched into the first three columns on the IBM card, the next two columns code the city and county where the interview was conducted. The remainder of the columns, six through seventy-two, record the coded survey data.

Survey Implementation

Securing the commitment of businessmen and administrators to participate in the survey was facilitated by the efforts of several organizations in the counties of Bosque, Falls, Hill and McLennan, who were in agreement on the need for such a survey.

A major decision of the MAP staff was whether or not to limit the survey to a specific number. A random sampling technique was possible in the Waco metropolitan area, but the same technique in the rural counties would have been untenable. Therefore, an arbitrary cut-off of a minimum of fifty employees for every business in the four-county area was selected. The 1974 Directory of Texas Manufacturers[1] was used as the basis for selection of local industries to be interviewed. The Directory classifies industries according to size by county or metropolitan area. All industries coded as four (at least fifty employees) or greater were selected.

---

[1]The 1974 Directory is the twenty-fifth edition published by the Bureau of Business Research of the University of Texas at Austin. In the process of developing the entries, each manufacturer in the State was contacted from a list provided by city and regional chambers of commerce. Replies were received at UT from seventy percent of the manufacturers.

Size was not a consideration in selecting local agencies. The Waco Chamber of Commerce list was cross-checked with a listing of agencies in the four counties found in two Heart-of-Texas Council of Governments publications -- Regional Directory and A Link to the Outside World: A Regional Directory of Services for the Aged.

As a result of these qualifications, 142 businesses and agencies were selected. A total of 127 were actually used in the analysis. The missing interviews represent those employers who for their own reasons refused to participate and those businesses which had closed in the past year.

It must be noted here that because the survey did not employ a random sampling technique or interview the total population of businesses, industries and agencies in the four counties, statistical accuracy cannot be computed. Although validity can be questioned, the reader must keep in mind the survey's intent: to obtain general information for planning purposes. An assumption of the survey is that larger employers could provide the information trends.

Securing Interviewers

Survey interviewers were selected from men and women who conducted the Needs Assessment Survey in November. It was decided that seven interviewers could comfortably complete their assigned interviews in a two-week period because the interviewees were executives who in their business and agency settings operate from eight to five.

Training Interviewers

Because the survey instrument is highly structured, an extensive training session was not required. Also, the interviewers had each completed a two-day workshop in preparation for the previous survey.

The MAP staff did conduct a day long training session to acquaint interviewers with the differences between the two questionnaires (Adult Needs Assessment and Business and Industry) and the method for contacting executives and making appointments. As before, heavy emphasis was placed on role playing as a training method. Two staff members participated in the first role-playing interview, one playing the part of an executive.

Interviewer trainees observed and recorded responses of the executive. The exercise was frequently interrupted to instruct interviewers on the rationale for various questions and procedures.

The training process continued after the beginning of the survey. Careful review of initial recording forms provided the basis for feedback to interviewers so that procedural errors could be corrected.

Supervision and Administration

MAP staff provided supervision and management of the survey. These activities included assigning surveyors to industries and agencies, onsite checks, and telephone contacts with executives who had questions or reservations about the survey.

Data Processing

Electronic data processing was used in analyzing business,
industry, and agency survey data. Only minimal data processing
and programming costs were incurred since an already developed
package of programs was readily available. Needed frequency
counts and histograms were readily obtained.

Programs used are contained in the "Statistical Package
for the Social Sciences (SPSS)." SPSS provides for preparation
and editing of data, as well as descriptive and analytical
statistical analysis. Commands to the SPSS system were well
documented in a user's manual and the system allows for different
analyses (done sequentially) on a single data file.

II ANALYSIS

The following are factual statements about findings from the survey of industries and agencies. No attempt was made in the planning phase to make the survey comparative to previous industrial surveys in the area; the purpose was different from other research because the survey sought information for educational planning. Original data in chart form is provided in the Appendices for the reader's information and interpretation.

A total of 127 executives and administrators responded to the questionnaire. According to the following chart, the two categories of manufacturing groups and wholesale and retail trade accounted for the majority of respondents.[2] These three categories were evenly distributed through the urban and rural areas; therefore no bias should be created between rural and urban responses.

---

[2]Sixty-six percent of the urban and fifty-two of the rural businesses are engaged in hard or soft manufacturing and wholesale and retail trade.

CHART I
Manufacturing Product/Service Provided

Government (10.2%)

Medical, Health, Legal (15%)

Finance (1.6%)

Wholesale—Retail (18.9%)

Transportation, Communication,
Utility (3.9%)

Manufacturing—Hard (26%)

Manufacturing—Soft (18.9%)

Agriculture, Mining,
Construction (5.5%)

10%   20%   30%
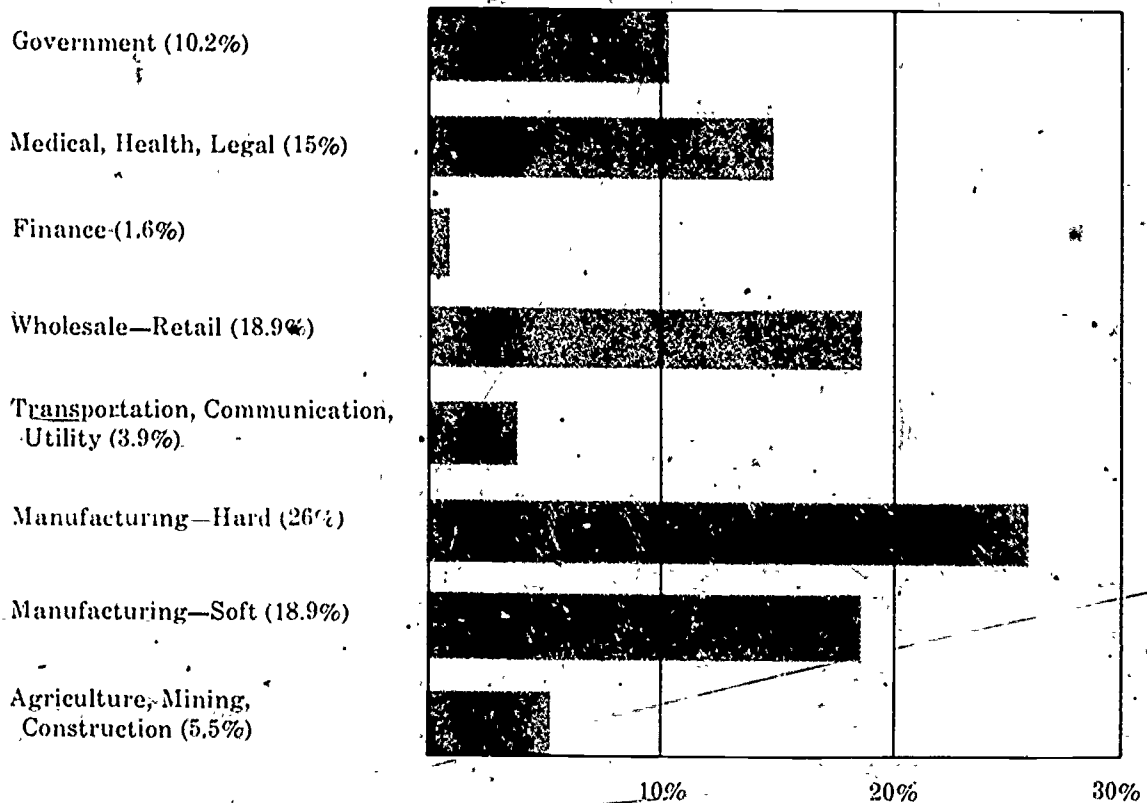

It was decided to use the standard classification, used
here by the chambers of commerce, to group agencies and industries
by size. Based upon approximations, the classification scheme
allows for a manageable reference of full-time employees.
Although a cut-off point of at least 50 employees had been
specified, interviewers in the field found that the Directory's
coding system was sometimes in error. The staff decided to
interview all predetermined businesses and agencies, regardless
of current size.

-10-

CHART II
Comparison of Full-Time Employees 1974 and 1975

A. less than 50
B. approximately 150

C. approximately 300
D. over 450

A
1975 (20.5%)
1974 (15.7%)

B
1975 (53.5%)
1974 (59.1%)

C
1975 (17.3%)
1974 (15%)

D
1975 (8.7%)
1974 (10.2%)

10%   20%   30%   40%   50%
Over the year in question, 1974-75, the category of businesses
and agencies with fewer than 50 employees and those with approxi-
mately 300 employees witnessed an increase. Meanwhile, the
categories of "approximately 150" and "over 450" saw a decline.
The movements seems to be a general decrease in overall employees
by agencies and industry. (Businesses which closed in 1974 and
1975 were excluded from this analysis.) Sixty-eight percent
of respondents employ part-time workers; thirty-two percent do
not have part-time help on their payrolls.

-11-

18

Responses to minimum hiring age ranged from 16 to 25 years of age. Sixteen and seventeen were mentioned 53 times, while eighteen was the minimum hiring age 68 times. This question is of particular interest to educators because 41.7% of employers hire school-age children. An age range of nineteen to twenty-five was indicated by 4.7% of employers.

When questioned about hiring practices, 94.5% of those interviewed indicated that they hired both males and females. The remaining 5.5%, those hiring either males or females exclusively, were in the manufacturing category.

CHART III
Minimum Educational Level

	0%	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%
Below High School (89%)											
High School Diploma (11%)											
Associate Degree (0%)											
College Degree (0%)											
According to the preceding chart, a majority of employers, 88.2%, indicated that they currently hire new employees without a high school diploma or equivalent. Only 11% set a high school diploma as an educational requisite for employment with their firm. A classification breakdown follows for those firms and agencies in this survey who stated they did not require a high school diploma for various entry level positions.

Agriculture, Mining, Construction	86%
Manufacturing, Soft	100%
Manufacturing, Hard	94%
Transportation, Communication, Utilities	80%
Wholesale and Retail Trade	96%
Finance	0%
Medical, Health, Education, Legal	68%
Government	84%

Employers were given the opportunity to express a desirable educational level for new employees. Because many businesses and agencies have various employment entrance levels, interviewees could select several educational levels as desirable.[3] The Appendices display the groupings mentioned and the following is a rank order, in the number of items specified, that an educational level was mentioned whether alone or in conjunction with at lease one other level.

High School Graduate	108
College Graduate (4 year)	23
Less than High School Graduate	16
Associate Degree	15

---

[3]For this reason, total percentage for question eight will exceed 100%.

In this area, the high school diploma appears to be the standard desired education as viewed by employers, especially when it is realized that a person possessing a high school education is mentioned 83 times alone as having the most desirable education level for employment.

Keeping in mind the minimum and desirable education levels, a question concerning previous work experience is interesting. An overwhelming majority of the employers interviewed (83.5%) required no previous work experience of new employees. Approximately one year's experience was required by 10.2% of employers while one to three year's work experience was requested by only 4.7% of the interviewees. A possible explanation for the gap in experience is the fact that 86.6% of the firms/agencies contacted provided on-the-job training for new employees.

CHART IV
Primary Source of New Employees

Advertising (11.8%)

Friends and Relatives (8.7%)

Employment Service (includes TEC) (26.8%)

Colleges and Jr. Colleges (4.7%)

Vocational Schools (.8%)

Walk Ins (11.7%)

Other (includes Civil Service and Merit System) (4.7%)

0   10   20   30   40   50
The overwhelming source of new employees was cited as walk-ins according to employers (41.7% of employers named this as the primary source). This in itself poses a question as to where the walk-ins received their job information. Could it have come from a friend or relative, through an advertisement, or some other source? Private employment agencies and the Texas Employment Commission accounted for 26.8% of new employees.[4] The various types of advertisements ranked third as primary sources while friends and relatives ranked fourth. Placement from colleges, junior colleges, and vocational schools ranked low in this tally. Civil service and the merit system were cited by several agencies as their only source of new employees.

Because so many of the businesses and agencies are located in the Waco Metropolitan area, a question on out-of-county employees was desirable. Only thirty-five (27.6%) respondents in the four counties had no out-of-county employees. Estimates by employers ranged from one percent to more than ten percent on employees who commuted from another county to work.

Only employees could respond to a question concerning job satisfaction, but job stability appears to be the key word for a low turnover rate in the survey area. Whether the reason is in fact job satisfaction or a narrow job market could not be ascertained from employers. Therefore, in order to solicit more information on turnover and its connection with education,

---

[4]In dividing this category, TEC was named twelve times as the primary source and employment agencies twenty-two times.

employers who indicated a turnover problem were asked if prior
training in a certain area would alleviate the turnover in
entry-level positions. A positive response was received from
almost 12% of employers. Technical and crafts training was
the type recommended most often by those who believed turnover
would decrease with training. Twenty-nine percent were un-
certain whether prior training would decrease turnover.

CHART V
Entrance Level Wage

| | 0% | 10% | 20% | 30% | 40% | 50% | 60% |

$330-429
(49.6%)

$430-529
(22%)

$530-629
(3.9%)

$630-729
(1.6%)

$730-over
(5.5%)
Interpretation of Chart V indicates that almost fifty percent (49.6%) of the executives and administrators interviewed considered a wage within the range of $330 - $429 as representative starting salary for a trained, new employee. This range is within minimum wage requirements. A higher salary range of $430 - $529 was named by 22% of respondents with the remaining 11% dispersed through higher entrance wages. In other words, more than 33% of employers believe a higher entrance wage to be representative of what a trained, new employee should receive. Seventeen percent of employers gave no estimate for various reasons, causing this question to have the greatest refusal rate in the survey questionnaire.

Almost sixty-five percent of the employers contacted had an employee retirement plan. The two types of plans described most often were profit sharing and/or optional retirement plans such as tax-sheltered annuities, etc. Because of the interest by senior citizens groups, employers who did have a retirement plan were asked whether that plan would be made available to new employees aged fifty-five and older. Seventy percent of those employers who had a plan stated that new employees aged fifty-five and older would be eligible for their retirement program.

Employers were asked to estimate the average age of current employees (see Chart VI, p. 18). The estimate reveals the average age to be high; ages between 30-39 and 40-49 years were cited over 80% of the time.

CHART VI
Average Age of Employees
A question pertaining to missed work days due to health problems appears to have caused misunderstanding when the data is examined. The estimates do not vary greatly from "below ten percent" to "one hundred percent," but are evenly dispersed. Perhaps the confusion was due to the fact that family-related illness was not excluded in the question, leaving it open for employer interpretation. Whatever the reason, confusion is apparent, making response validity questionable.

Accessibility by public transportation was a pertinent question in the Waco metropolitan area. Almost forty-two percent of the firms were served by public transportation; more than half of these were served within walking distance.

A substantial number of businesses and agencies (22%) within the metro area were not located near a bus route. This question also carries implications for senior citizens and potential employees without private transportation.

Fifty-one percent of employers interviewed indicated no problem finding qualified employees. The remaining 49% were given an opportunity to specify the job categories which were difficult to fill.[5] The following is a rank order of frequently mentioned categories:

Technical/Mechanical   48(38.5%)
Professional   8(6.3%)
Office Skills/Secretarial   7(5.5%)
Management   4(3.2%)
Social Service   4(3.2%)
Salesmen   3(2.4%)

Simple calculations will show that the technical/mechanical field was recognized as the area in which jobs are most difficult to fill since it was named by employers twice as many times as all other categories combined.

When asked whether prospective employees should be better trained in any skill, more than a third responded that better training was not necessary. The remaining seventy percent who believed new employees should have better skill training before coming to the job expressed training needs in much the same rank order as in the above listing.

---

[5]Because each employer could list more than one category, the job type percentages, when totaled, will exceed 49%.

Techncial/Mechanical	55(44.2%)
Office Skills/Secretarial	18(14.3%)
Professional	10(7.9%)
Management	8(6.4%)
Salesman	8(6.4%)
Social Service	6(4.8%)

The largest single category mentioned (not in conjunction with others) was the top ranked technical/mechanical field - 35.4%.

The previously discussed question of turnover and the lack of it is reflected in a response by eighty percent of local employers who could list no positions they were unable to fill from within their organization. "Under five positions" that could not be filled through promotion were open in each of eighteen industries and agencies. Four firms had less than 10 positions each that were open, and only one firm had more than fifteen open positions.[6] Those employers who had job openings were asked if they would be willing to help their employees meet tuition expenses for the necessary skill training. Six percent were positive on the suggestion while ten percent were negative.

An important question for curriculum planning was whether an employer would send or encourage an employee to attend a course in a necessary training area if one were taught at a convenient time and place. Fifty-seven percent would encourage the employee to enroll in the class; within the group, thirty-eight percent would agree to help with tuition expenses.

---

[6]A general listing of positions open in firms contacted is found in the Appendices.

Thirteen percent of those questioned would neither lend
encouragement—nor—help with expenses.

"After work hours" was considered the most convenient time
for class from the employer's standpoint (42.5%). Nine percent
had "no time preference" while four percent would have allowed
class attendance during working hours. .

Almost thirty percent of employer-respondents considered
training programs in colleges and technical schools adequate
for the competence required for their operations. A concentra-
tion of better programs in technical education locally was
requested by 48.8% of employers while 6.3% believed college
courses should be increased locally. Almost twelve percent
(11.8%) held that a combination of the two -- technical and
college courses -- should be increased in the area.

As stated previously, the majority of local industries
and agencies provide on-the-job training, for new employees.
Over forty percent who have OJT would prefer that presently
employed personnel receive formal training in a college or
technical school. Satisfaction of their on-the-job training
was voiced by 37.8% interviewed. Only 16.5% do not have OJT
of which almost 5% desired formal training for their employees
to improve job skills.

-21-

When asked about specific training courses that, if taught by a vocational school or college would benefit their firm, twenty percent replied there were none. The approximately 80% of employers who named courses were asked to list as many job categories as they felt would prove beneficial to their firm, if implemented and attended. A rank ordering of this list follows with a frequency count for number of times mentioned.

Higher Wages (5.5%)

Change Hiring Practices (4.7%)

Healthier Economy (4.7%)

Change Society's Morals (1.6%)

Impose Wage Ceiling (.8%)

Negative

0   10   20   ·30   40
The major problem voiced by employers in hiring new employees
was a lack of job qualifications by the applicant. Poor job
interest drew the second highest rating from employers. Ranking
as the third problem was lack of dependability and honesty of
prospective employees; job competition in the area ranked fourth.

The remainder of the problem received almost equal rating:
high salary expectations, a doubtful economic picture, job
turnover, and the current welfare and unemployment system.

Only 11% of local employers could summon to mind no problem
encountered in hiring.

One employer foresaw no solution to problems of hiring and
forty-nine employers could not identify a ready solution.

The solution to hiring problems most often cited -- an increase in pertinent training programs -- coincides with the major problem. A cut or revision of the welfare and unemployment compensation programs ranked as the second solution although it was the lowest-ranked problem.

Motivation training ranked as the third solution to the problems of hiring new employees while the need for higher wages paid to employees was rated a close fourth.

Tied for the rank of fifth solution were a healthier economy and changes of in-house hiring practices.

CHART IX
Five-Year Employment Projections

	1975	1976	1977	1978	1979
None	15	13	13	14	14
1-10	27	28	28	24	24
11-20	11	14	14	13	12
21-30	9	8	6	7	8
31-40	2	2	4	1	1
41-50	3	5	4	3	3
Over 50	13	9	8	9	9
Replacements only	27	28	28	28	28
No Estimate	20	22	22	28	28

Neither an increase or decline in employment can be projected
from Chart IX. Employers seem to estimate a status quo through
1979.

After employment projections were made, employers were
asked to estimate by percentages the proportion of their work
force without the high school diploma or equivalent. The
question asked for a percentage so that analysis between large
and small businesses were comparable. Answers from businesses
and agencies ranged as follows:

No employees without HSD	9
10% employees without HSD	41
20% employees without HSD	12
30% employees without HSD	9
40% employees without HSD	6
50% employees without HSD	15
Over 50% employees without HSD	13
Uncertain of employees' education	22

These figures coincide with the answers employers gave
to the questions on an applicant's necessary minimum educa-
tional level where it was found that almost 90% of employers
accept employees with less than a high school education or
equivalent.

When asked whether they would continue to hire employees
without a high school diploma, the above pattern was generally
continued:

No employees without HSD	20
10% employees without HSD	42
20% employees without HSD	14
30% employees without HSD	7
40% employees without HSD	1
50% employees without HSD	23
Over 50% employees without HSD	8
Uncertain whether hire without HSD	12

Since approximately 70% of employers will continue to hire
applicants without the high school diploma or equivalent, they
were asked to list the special skills that they would require
of these employees. Answers were ultimately grouped in six
broad categories and employers could list more than one entrance
skill.

Technical/Mechanical	32
Secretarial/Office Skills	11
Salesmanship	4
Social Service	4
Data Processing	2

"No special skills will be required if prospective employee
has no high school diploma" was the answer most often received
(40.9%). This response reflects a previous answer that no job
or skill experience is required of new employees by the majority
of employers.

Employers were asked to list training programs which they
felt contributed to the success of their operation and its employees.

-26-

Several named specific schools but in the final analysis, only
the category of the program offered was listed. The categories
are ranked below according to their absolute frequency by name.

On the Job Training	61
Technical/Mechanical	23
Business/Management	21
Social Service	11
Secretarial/Office Skills	9
Psychology/Interpersonal Relationships	8
Salesmanship	4
Data Processing	1

Apparently, employers esteem their on-the-job training programs
as having the essentials for a good training program since 48%
answered with on the job training, 39% giving this answer
exclusively.

Almost three-fourths of executives and administrators
interviewed felt that training by local educational institutions
was adequately meeting their employee needs. The remaining
twenty-five percent named skill categories in which they felt
employees should be better prepared to meet employment needs.
A rank order frequency again points out the need for additional
technical and mechanical programs:

Technical/Mechanical	26
Social Service	4
Management	3
Salesmanship	1
Secretarial/Office Skills	1

Those executives and administrators who felt more training programs were necessary were asked the amount of training they were prepared to provide. Four percent answered they would not provide any training while eight percent said they would provide 100% of the training. Only two other categories were answered: 3% would provide 10% of necessary training and 2% would provide fifty percent of training needs.

A concluding question provided Chart X. Employers were asked to list the most important characteristics of what they considered to be a good employee. They revealed that the top four characteristics were honesty, dependability, loyalty and dedication, and job interest and conscientiousness. Close inspection of replies to this question will be useful to educators, counselors, and manpower planners when considered with the total findings of this study.

CHART X
Most Important Employee Characteristics

Characteristic	Value

SURVEY INSTRUMENT

BUSINESS & INDUSTRY SURVEY II

FIRM NAME_____

ADDRESS_____

Name of Person Interviewed_____

Telephone_____Position_____

Manufacturing produce/service provided_____

_____

1. How many full-time employees were on your payroll a
    year ago (January, 1974)?

    _____

2. How many full-time employees are on your payroll at the
    present time?

    _____

3. How many part-time employees were on your payroll a
    year ago (January, 1974)?

    _____

4. How many part-time employees are on your payroll at the
    present time?

    _____

5. What is your minimum hiring age?_____

6. Do you hire only males, only females, or both?

    _____a. only males

    _____b. only females

    _____c. both

7. What is your minimum educational level (years school completed) for employees?

_____

8. What is the desirable educational level for <u>new</u> employees?

_____ a. Professional
_____ b. Some graduate school
_____ c. 4-Year college graduate
_____ d. 1-3 Years of College (business school, etc.)
_____ e. High School Graduate
_____ f. 10-11 Years of school
_____ g. 7-9 Years of school
_____ h. 4-6 Years of school

9. Is experience required of new employees? _____Yes _____No

If answer is yes, how many years experience is required?

_____

10. How do you obtain your employees?

_____Advertising   _____Colleges and Jr. Colleges
_____Friends and relatives   _____Vocational Tech. Schools
_____Employment service   _____Walk-ins
_____Public schools referral   _____Other (specify)_____

Which of the above is your primary source?_____

11. What percent of your employees are from outside your county?_____

12a. Do you have a high rate of turnover in your entry level employees?

Yes_____   No_____

12b. If yes, do you feel that prior training in a certain field would prevent the turnover?

Yes_____   No_____

12c. What training would you recommend?

_____

13. What do you think a trained employee in your field of employment should expect as an entry level wage?

$_____per month?.

14. Do you have a retirement plan for all employees?

Yes_____

No_____

If yes, explain:_____

_____

15. Will new employees age 55 and older be eligible for your retirement program?

_____Yes

_____No

If no, explain:_____

_____

16. What is the average age of your employees?_____years of age

17. In the past year, what percentage of missed work days was due to health problems?

_____%

18. Is your firm accessible by public transportation?

_____Yes

_____No

If yes, give proximity:_____

19. Does your firm have training for new employees?

Yes_____(Please list the kinds of training you have.) No_____

_____

_____

20. Does your firm have any problem finding qualified employees?

Yes_____ (What specific jobs are involved?) .   No_____

_____

_____

21. Would like to see your prospective employees better
    trained in any skill?

Yes_____ (In what specific way would you like   No_____
            to see them prepared?)

_____

_____

22a. Do you currently have a job opening that you have been
     unable to fill from within your organization due to lack
     of training?

Yes_____   No_____

22b. If yes, how many?

_____

22c. What is the type of training required?_____

_____

22d. If yes, would you be willing to help your employees meet
     the tuition expense?

Yes_____   No_____

23a. Would you send or encourage one of your employees to attend a course in the training areas you mentioned above if one were taught at a convenient time and place in (city)_____?

Yes_____   No_____

23b. If Yes, what do you consider a convenient time?_____

23c. If yes, would you be willing to help your employees meet the tuition expense?

Yes_____   No_____

24. Of the technical skills and professional competence required for your operations, which need better training programs in colleges or technical schools?

_____None

_____

_____

25. Does your firm train presently employed personnel for the purpose of promoting or advancing them?

Yes_____ (What jobs are involved?)   No_____

_____

_____

_____

(If the answer to the question was Yes, ask the following question.)

Would you rather have these people trained by a formal institution such as a college or technical school?

Yes_____   No_____

26. Are there specific training courses that if taught by a vocational school or college would benefit your firm?

Yes_____ (What specific courses do   No_____
            you have in mind?)

_____

_____

_____

27a. What do you think is the major problem for businessmen in the area of hiring new employees?

_____

_____

27b. How could this problem be solved?_____

_____

_____

28. How many new employees do you plan to hire each year for the next five years?

a. '75_____   d. '78_____

b. '76_____   e. '79_____

c. '77_____

29. How many of your present employees do not have a high school diploma or equivalent?_____

30a. Do you expect to hire employees with less than a high school diploma or equivalent in the future?

_____Yes   _____No

If yes, approximately what number of employees will you hire w/o high school diploma?

_____

30b. If yes, what special skills or training would you require of these employees?

_____

31. List present training programs which you feel contribute to the success of your operation and its employees:

_____

_____

32a. From your experience do you feel that the educational
institutions in this area are adequately preparing prospective
employees to meet your needs?

_____Yes _____No

If no, in what ways should they be better prepared?_____

_____

_____

b. If no, how much of this training would you do?_____

_____

_____

33. Would you please list the most important characteristics
of what you consider to be a good employee? Be as complete
as you possibly can and you are completely free in your
responses!

    1 - none
    2 - 1-10
    3 - 11-20
    4 - 21-30
    5 - 31-40
    6 - 41-50
    7 - over 50
    8 - replacements only
    9 - no idea/DK

29e. New employees in 1979?

    1 - none
    2 - 1-10
    3 - 11-20
    4 - 21-30
    5 - 31-40
    6 - 41-50
    7 - over 50
    8 - replacements only
    9 - no idea/DK

29. How many employees without High School Diploma

   1 - none
   2 - 10% approximately
   3 - 20% approximately
   4 - 30% approximately
   5 - 40% approximately
   6 - 50% approximately·
   7 - more than 50%
   9 - DK/NA

30a. Expect to hire employees without High School Diploma

   1 - no
   2 - yes, 10% approximately
   3 - yes, 20% approximately
   4 - yes, 30% approximately
   5 - yes, 40% approximately
   6 - yes, 50% approximately
   7 - yes, over 50%
   9 - DK/Na

30b. Special Skills if no diploma

   1 - salesmanship
   2 - secretarial/office skills
   3 - mechanical/technical
   4 - social service
   5 - data processing
   6 - none
   9 - DK/NA

31. Current company programs

    1 - secretarial/office skills
    2 - mechanical/technical
    3 - management/business
    4 - social service
    5 - psychology/interpersonal relationships
    6 - salesmanship
    7 - data processing
    8 - on-the-job training
    9 - DK/NA

32a. Adequacy of training by educational institutions

    1 - yes, educational institutions are adequately training
        employees
    2 - no, need training in management
    3 - no, need training in secretarial skills
    4 - no, need training in salesmanship
    5 - no, need training in technical area/mechanical area
    6 - no, need training in social service
    7 - no, need training in data processing
    9 - DK/NA

32b. Amount of training company would do

    1 - 10% (approximately)
