ABSTRACT

This study contains analyses of trends in the level of university research and development expenditures in the sciences and engineering from 1964 through 1973. The report is divided into three main sections: (1) current research and development expenditures in the sciences and engineering; (2) capital expenditures for research, development, and instruction in the sciences and engineering; and (3) current direct expenditures for instruction and departmental research in graduate-degree-granting institutions in the sciences and engineering. Statistical tables show current research and development allocations according to: (1) source of funds, (2) type of research and development activity, (3) field of science, (4) type of control, (5) type of institution, (6) geographic distribution, and (7) concentration of research and development expenditures. The study also distinguishes between universities and colleges and federally-funded research and development centers administered by universities and colleges in the reporting of data. (Author/CP)

FOREWORD

During the last several years institutions of higher education have experienced growing financial stress, changing attitudes of students and educators alike, and new demands by society on the educational system. As the Nation's most important source of basic research and scientific manpower, our universities and colleges are the subjects of many studies undertaken by Federal and State Government officials and private organizations designed to assess the general state of health of these institutions and to develop policies that will ensure their stability.

One area of major concern to university administrators is the decline in Federal support of sponsored research. During the sixties sponsored research, particularly on Federal projects, became an integral part of academic activities, and university staffs were expanded to meet the needs of Federal programs. With the recent decline in Federal funds, universities are experiencing difficulty in retaining those highly qualified scientists and engineers and, in some cases, have been forced to dip into nonresearch budgets to maintain their research capabilities.

This study contains analysis of trends in the level of university research expenditures in the sciences and engineering by source of funds and other characteristics from 1964 through 1973. Prior reports in this series contained analyses of both expenditure and manpower data and were published under the title *Resources for Scientific Activities at Universities and Colleges*. Beginning with this report, data on university and college R&D expenditures will be published separately from those on scientific and technical manpower. Studies of academic R&D activities comprise an integral part of NSF's continuing program of periodic surveys designed to produce information on the scope and character of the Nation's investment in science and technology. Under this program all major sectors of the U.S. economy are covered, including industry, government, independent nonprofit organizations and institutions of higher education.

The Foundation is grateful to officials of universities and colleges for their cooperation in the survey which resulted in an institutional response rate of 92 percent and participation by all of the 100 largest R&D performers.

The report was prepared in the Division of Science Resources Studies, Charles E. Falk, Director.

H. Guyford Stever
Director
National Science Foundation

July 1975

general notes

- R&D expenditure data presented in this report refer to *separately budgeted* research and development in the sciences and engineering and exclude departmental research expenditures which are analyzed separately as part of the instructional programs of universities and colleges. Excluded is research performed in the arts and humanities.
- Separately budgeted research and development includes all funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution.
- Departmental research (nonsponsored research) is "personal" or "faculty" research supported by General Funds of the department as a specifically assigned, departmentally planned, or mutually understood part of the faculty member's total activity.
- Current expenditures includes all expenditures made by the institution during the reporting period from both the unrestricted current fund and the restricted current fund. Included are direct and indirect costs. Direct costs include the salaries and wages of those working on a research project, expenditures for small equipment items, materials used, and other expenses specifically identified with the project. Indirect costs are those incurred by an institution in implementing and supporting the entire research project, including "unreimbursed indirect costs."

- The term expenditures differs from the terms awards or funds, which reflect actual awards of funds for a fiscal year (July 1 to June 30) regardless of when the funds are spent by recipient institutions. (See *Federal Expenditures on Research and Selected Nonprofit Institutions, Fiscal Year 1980*.)
- Statistics shown in this report may not add due to rounding.
- All percentage changes in trend statistics refer to the previous year.
- Figures shown in this report for fiscal year 1980 are universe totals for scientific and engineering research and development. The surveyed institutions responded include only those institutions that performed research. Estimates for nonresponding institutions account for less than 3 percent of the R&D.
- Unless constant dollars are specified, data are in current dollars.
- Additional information concerning survey methodology is available from Ronald Biggar (202-282-7790), Division of Science and Technology, National Science Foundation, Washington, D.C. 20540.

acknowledgments

This report was prepared in the University Studies Group by Ronald Biggar assisted by the staff. The survey was conducted and the report written under the supervision of the Director William L. Stewart, Head of the University Studies Group. He provided guidance and review.

In this report refer to separately budgeted sciences and engineering and exclude areas which are analyzed separately as part of universities and colleges. Excluded is humanities.

Development includes all funds expended to produce research outcomes and either external to the institution or separately within the institution.

Personnel (including sponsored research) is "personal" or "faculty" funds of the department as a specifically defined or mutually understood part of the faculty.

Expenditures made by the institution during unrestricted current fund and the restricted and indirect costs. Direct costs include the salary of personnel on a research project, expenditures for materials used, and other expenses specifically identified. Indirect costs are those incurred by an institution for the entire research project, including "un-

- The term "expenditures" differs from the Federal accounting term "obligations", which reflect actual awards of funds by the reporting agency during a fiscal year (July 1 to June 30), regardless of when these funds were actually spent by recipient institutions. (See *Federal Support to Universities, Colleges, and Selected Nonprofit Institutions, Fiscal Year 1973*) (NSE 75-304)
- Statistics shown in this report may not add to totals or subtotals because of rounding.
- All percentage changes in trend statistics represent compound annual rates.
- Figures shown in this report for fiscal year 1973 R&D expenditures represent universe totals for scientific and engineering disciplines. Over 92 percent of the surveyed institutions responded including all of the 100 largest R&D performers. Estimates for nonrespondents and nonsurveyed institutions account for less than 3 percent of the R&D total.
- Unless constant dollars are specified, data shown in this report are in terms of current dollars.
- Additional information concerning survey results should be addressed to Ronald Biggar (202-282-7790), Division of Science Resources Studies, National Science Foundation, Washington, D C 20550.

HIGHLIGHTS

- Between 1972 and 1973 R&D expenditures in the sciences and engineering increased 10 percent — an amount considerably higher than the rate of growth reported during the prior two years and more than three times the percent increase for 1974, as indicated by preliminary tabulations from the 1974 survey.¹
- The 1973 total represents an increase of 6 percent in constant 1967 dollars.² This was significantly higher than the 2-percent annual growth in constant dollars experienced in the 1970-72 period. One of the major reasons for the increase was a 7-percent constant dollar growth in Federal R&D support from 1972 to 1973 compared with a 1-percent annual increase in the earlier period.
- Basic research, despite a 2-percent increase between 1972 and 1973, declined as a percent of total separately budgeted academic R&D expenditures from the 76 percent reported in each survey from 1964 through 1972 to 70 percent in 1973. In constant 1967 dollars, basic research dropped 2 percent from the 1972 total. In contrast, applied research and development increased 30 percent and 53 percent, respectively (26 percent and 48 percent in constant dollars, respectively). Increased support from Federal, State, and industrial sources for R&D activities aimed at finding solutions to specific problems, contributed to the larger rates of growth in the areas of applied research and development.
- Over one-half of all academic research is performed in the life sciences. Between 1972 and 1973, such research increased 12 percent, second only to a 14-percent growth in the social sciences. The physical sciences increased only 2 percent during this period which, in constant dollars, resulted in the only decline among the major field categories.

¹Preliminary 1974 data published in National Science Foundation, *Science Resources Studies Highlights, Separately Budgeted Academic R&D Expenditures Decline in Real Terms in FY 1974* (NSF 75-306) (Washington, D.C. 20550 April 21 1975). Additional data for 1974 may be obtained by contacting the Division of Science Resources Studies, National Science Foundation, Washington, D.C. 20550 (202-282-7790).

²In the absence of a reliable R&D cost index, the gross national product (GNP) implicit price deflator was used to convert R&D expenditures to constant dollars. The GNP deflator includes the effects of the price changes of all goods and services in the economy and therefore can only indicate approximate changes in costs of inputs specifically related to R&D performance.

- Public universities and colleges reported income and development totaling 11 percent between 1972 and 1973, a rate of growth substantially higher in public institutions while reductions from local governments, foundation and institutions' own funds.³
- The top 100 R&D-performing universities in the United States received 90 percent of both total and Federal R&D funds in the 1970-72 period. The number of institutions declined steadily since a high of 90 percent in 1964. Government support was least concentrated among the largest R&D performers while all other sources were more concentrated.
- In the 1964-73 period, institutions granting doctorates accounted for approximately 98 percent of total R&D in the academic sector. More than one-half of the total R&D in the doctorate-granting institutions was less concentrated among the top 100 ranking first with 28 percent of the total R&D in the sciences, each accounting for an additional 10 percent.
- Capital expenditures for scientific and engineering research declined 18 percent between 1972 and 1973, while all other sources combined increased 19 percent. Since 1968, when capital expenditures for scientific and engineering research outlays have declined 9 percent per year in constant dollars.
- R&D expenditures in university-administered Development Centers (FFRDC's) totaled \$840 million more than the \$764 million reported in the 1970-72 period. The sciences accounted for five-sixths of total R&D in these centers.

³"Institutions' own funds" refers to expenditures from unrestricted sources during the accounting period from sponsors who made no stipulations as to the use of funds.

expenditures in the sciences and engineering amount considerably higher than the rate of two years, and more than three times the rate indicated by preliminary tabulations from the

U.S. national product (GNP) implicit price deflator was used. The GNP deflator includes the effects of the price changes of all goods and services and can only indicate approximate changes in costs of inputs

- Public universities and colleges reported increases in expenditures for research and development totaling 11 percent between 1972 and 1973, compared to an 8-percent increase in private institutions. All sources of support were substantially higher in public institutions while private institutions suffered sharp reductions from local governments, foundations and health agencies, and the institutions' own funds.³
- The top 100 R&D-performing universities in 1973 accounted for 83 percent of both total and Federal R&D funds in the academic sector. This share has declined steadily since a high of 90 percent was recorded in 1970. Local government support was least concentrated, with 66 percent going to the 100 largest R&D performers while all other sources ranged from 76 percent to 86 percent.
- In the 1964-73 period, institutions granting doctorate degrees in the sciences accounted for approximately 98 percent of all research performed each year in the academic sector. More than one-half of all research performed by doctorate-granting institutions was in the life sciences. Research in non-doctorate-granting institutions was less concentrated, with social sciences ranking first with 28 percent of the total, followed by life and physical sciences, each accounting for an additional 21 percent.
- Capital expenditures for scientific and engineering facilities and equipment declined 18 percent between 1972 and 1973. Federal support declined 13 percent, while all other sources combined reduced their capital funding by 19 percent. Since 1968, when capital expenditures peaked at \$1.1 billion, outlays have declined 9 percent per year in constant dollars.
- R&D expenditures in university-administered Federally Funded Research and Development Centers (FFRDC's) totaled \$817 million in 1973, or 7 percent more than the \$764 million reported in 1972. Engineering and physical sciences accounted for five-sixths of total R&D expenditures.

³Institutions' own funds refers to expenditures from unrestricted accounts, including funds expended during the accounting period from sponsors who made no stipulations as to how the funds were to be used

INTRODUCTION

This report presents the results of the National Science Foundation's ninth Survey of Scientific Activities of Institutions of Higher Education in fiscal year 1973. It also contains preliminary estimates for total R&D expenditures by universities and colleges during fiscal year 1974, which are based on early returns from the 1974 survey.⁴ Conducted annually since 1972, the survey of institutions of higher education collects data on current and capital expenditures for research, development, and instruction in the sciences and engineering.

The survey series was instituted in 1954 to assess the overall effectiveness of ongoing Federal R&D efforts to strengthen science and technology in universities and colleges. The information assists the National Science Foundation in fulfilling its responsibilities in supporting scientific research at academic institutions and in the formulation of recommendations on national science policy in keeping with the National Science Foundation Act of 1950 and subsequent amendments.

The 1973 survey was conducted by questionnaires sent to all universities and colleges that grant doctorate or master's degrees in the sciences or engineering and all other academic institutions believed to have R&D expenditures of \$50,000 or more. Figures shown in this report represent universe totals for science and engineering; estimates accounting for 3 percent of the separately budgeted R&D total were made for all nonrespondents and

⁴See footnote 1, page vii

nonresponding institutions. Over 92 percent responded, including all of the 100 leading university departments in terms of research performance.

Several changes were made from prior reports. Data are now collected on an annual basis, beginning in 1973, in a cycle established between 1964 and 1972. This report includes only research and development only and excludes instruction in the sciences and engineering. Section III includes data on departmental research. Total research and development were reported for the first time in 1973 by field of science. Earlier reports reported only field of science.

The following principal characteristics of the data are included in this report. Source of funds; distribution of R&D activity (basic research, applied research, development); are grouped by highest degree granted, type of institution, and ranked by total and Federal R&D expenditure. Separate data are summarized for Federal Research and Development Centers (FRDC's) administered by the National Science Foundation. Also included are separate chapters dealing with instruction and departmental research in the sciences and engineering. Regarding scope, coverage, methods of estimation, and other details are presented in the technical notes in appendix

of the National Science Foundation's ninth
institutions of Higher Education in fiscal year
estimates for total R&D expenditures by
fiscal year 1974, which are based on early

National Science Foundation Act of 1950 and

by questionnaires sent to all universities
for master's degrees in the sciences or
institutions believed to have R&D
figures shown in this report represent universe
estimates accounting for 3 percent of the
were made for all nonrespondents and

non-surveyed institutions. Over 92 percent of the surveyed institutions re-
sponded, including all of the 100 leading universities in terms of volume of R&D
performance.

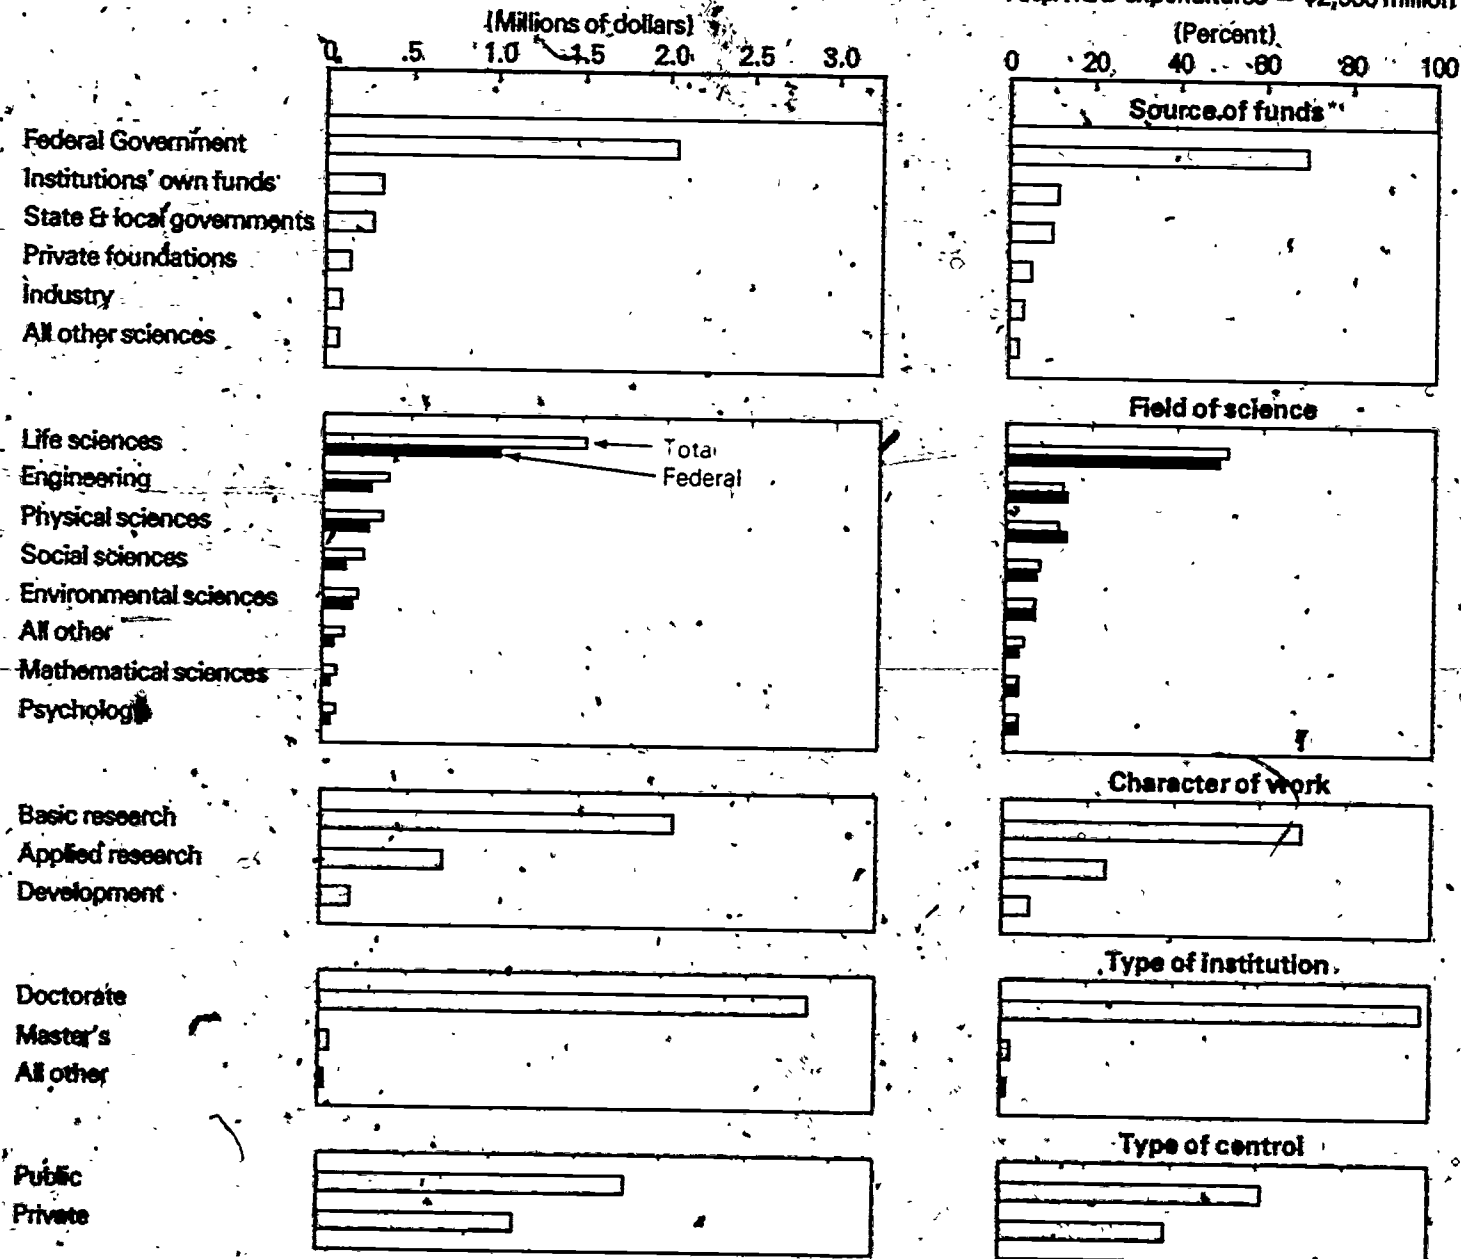

Several changes were made from prior reports. R&D expenditure data were
collected on an annual basis, beginning in 1973, rather than on the biennial
cycle established between 1964 and 1972. The data are for *separately budgeted*
research and development only and exclude *departmental* research expenditures
in the sciences and engineering. Section III deals with instruction and
departmental research. Total research and *development* was collected for the
first time in 1973 by field of science. Earlier studies only collected research by
field of science.

The following principal characteristics of R&D expenditures are examined
in this report: Source of funds, distribution among fields of science, and type of
R&D activity (basic research, applied research, and development). Institutions
are grouped by highest degree granted, type of control (public, private, etc.) and
ranked by total and Federal R&D expenditure size, with subtotals for every ten
institutions. Separate data are summarized for 23 Federally Funded Research
and Development Centers (FFRDCs) administered by universities and colleges.
Also included are separate chapters dealing with capital expenditures and
instruction and departmental research in the sciences and engineering. Details
regarding scope, coverage, methods of estimating, and limitations of the data
are presented in the technical notes in appendix A.

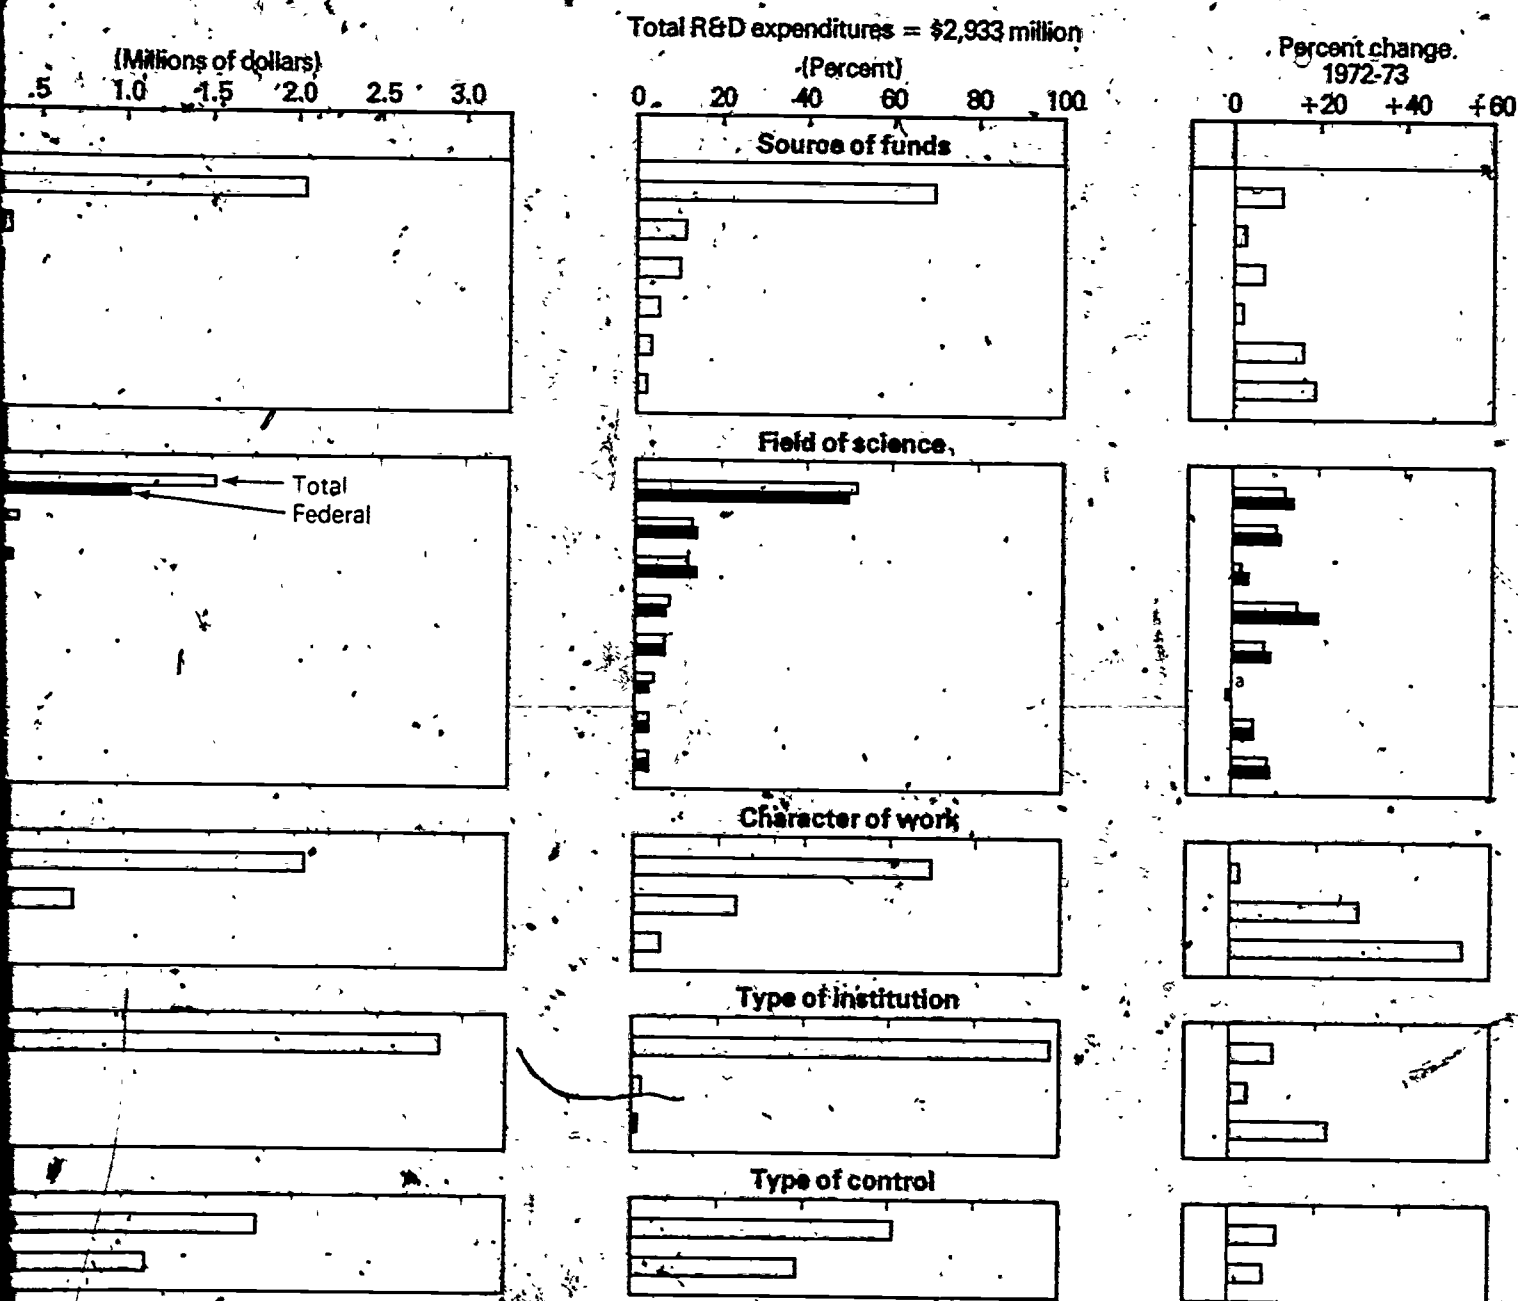

Part I
UNIVERSITIES AND COLLEGES

Characteristics of separately budgeted R&D expenditures in universities and colleges:

Total R&D expenditures = \$2,933 million

Characteristics of separately budgeted R&D expenditures in universities and colleges, FY 1973,

on 1 percent.
National Science Foundation.

Section I. CURRENT R&D EXPENDITURES IN THE SCIENCES AND ENG

During 1972-73, R&D expenditures at universities and colleges increased 9.7 percent, while the average rate was 5.6 percent during 1968-72 and 13.9 percent during 1964-68. In 1973 academic R&D expenditures reached \$2.9 billion — 10 percent over 1972. The impact of this increase over the average growth in prior years is somewhat dampened by the preliminary results of the 1974 survey which points to a sizable drop in the growth rate to 3 percent.⁵ Basic research expenditures, which averaged 6-percent annual growth between 1970 and 1972, and 2 percent in 1973, show a 5-percent increase in 1974 to \$2.1 billion. A significant factor in the small increase in total R&D

expenditures for 1974, compared with basic research, was the separation of MIT's Draper Laboratory (primarily involved in development projects) from the academic sector into the independent nonprofit sector.

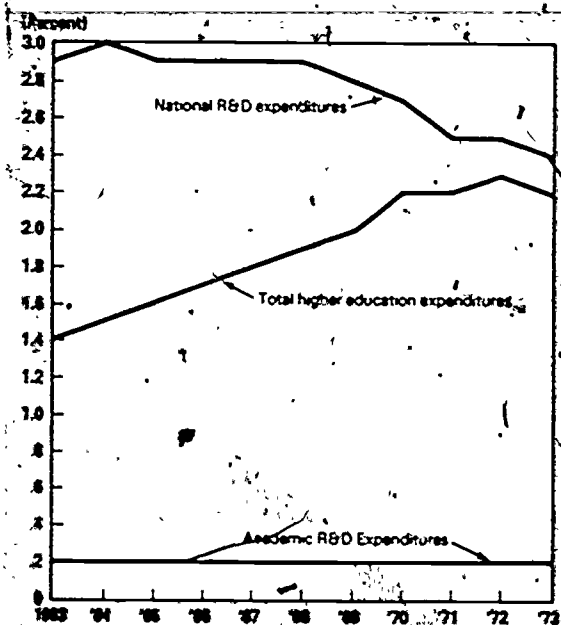

Over the last decade, several significant changes have occurred in academic R&D patterns when viewed in a national perspective and compared with other economic variables.

- The academic sector's share of national R&D expenditures has increased from 7 percent to 10 percent.
- National R&D expenditures as a percent of the gross national product (GNP), declined from 3.2 percent in 1963 to 2.4 percent in 1973.
- Academic research as a percent of total higher education expenditures has also dropped from 13 percent to 10 percent.

Variations in was mainly re patterns at univ period The sub (14 percent be quent curtailme period) and its 1972 to 1973) fluctuations

Academic R&D expenditures and other economic variables as percent of gross national product, FY 1963-73

SOURCES: Department of Commerce, National Science Foundation, and Office of Education.

Source of Funds

Current expenditures for research and development⁶ in universities and colleges amounted to \$2.9 billion or 10 percent of total R&D spending by all sectors of the economy in 1973, up 10 percent from 1972. From 1964 to 1973, R&D expenditures increased from \$1.3 billion to \$2.9 billion, or at an annual rate of 10 percent. When converted to constant 1967 dollars to discount inflation, however, annual R&D growth averaged only 6 percent.

Here and throughout this report the expression research and development refers to separately budgeted R&D expenditures in the sciences and engineering. Departmental research amounting to an annual \$1.3 billion in 1964 was viewed as an integral part of the institutional programs of science and engineering departments.

Over the last decade, several significant changes have occurred in academic R&D patterns when viewed in a national perspective and compared with other economic variables.

- The academic sector's share of national R&D expenditures has increased from 7 percent to 10 percent.
- National R&D expenditures as a percent of the gross national product (GNP), declined from 3.2 percent in 1963 to 2.4 percent in 1973.
- Academic research as a percent of total higher education expenditures has also dropped from 33 percent to 10 percent.

Source of Funds

Current expenditures for research and development⁶ in universities and colleges amounted to \$2.9 billion or 10 percent of total R&D spending by all sectors of the economy in 1973, up 10 percent from 1972. From 1964 to 1973, R&D expenditures increased from \$1.3 billion to \$2.9 billion, or at an annual rate of 10 percent. When converted to constant 1967 dollars to discount inflation, however, annual R&D growth averaged only 6 percent.

⁶Here and throughout this report the expression research and development refers to separately supported R&D expenditures in the sciences and engineering. Departmental research, amounting to an estimated \$2.5 billion in 1973, analyzed in section III as an integral part of the institutional programs of science and engineering departments.

Variations in the level of Federal sponsorship was mainly responsible for the R&D growth patterns at universities and colleges in the 1964-73 period. The substantial growth of Federal funding (14 percent between 1964 and 1968), its subsequent curtailment (4-percent growth in the 1968-72 period) and its current recovery (11 percent from 1972 to 1973) account for most of the major fluctuations.

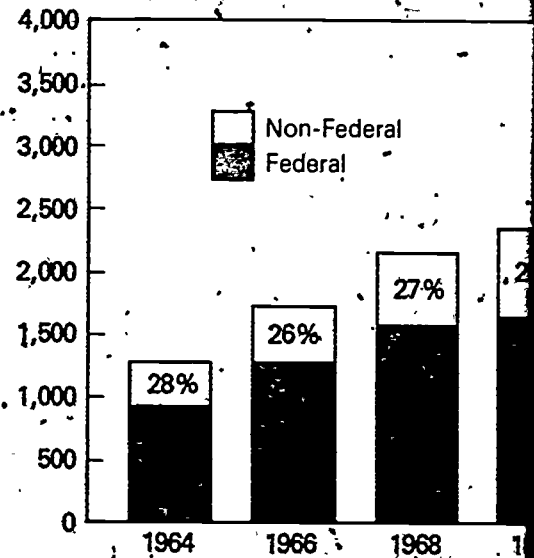

R&D expenditures in the sciences and engineering at universities and colleges, FY 1964-73

⁶Based on GNP implicit price deflator.
SOURCE: National Science Foundation.

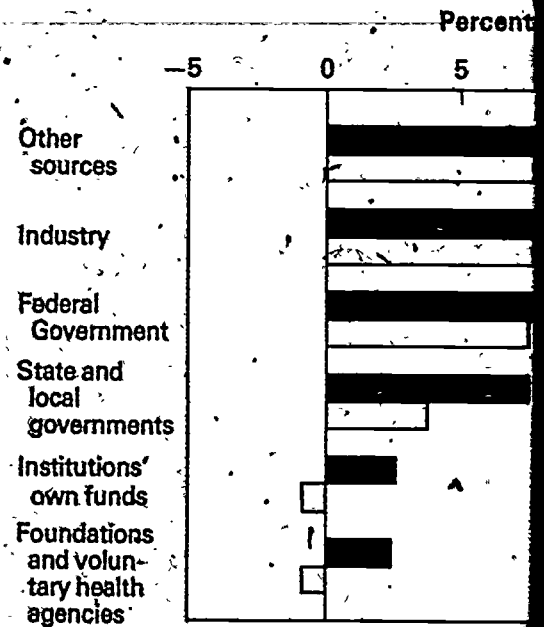

R&D expenditures in the sciences universities and colleges, by

(Millions of dollars)

In 1973 the Federal Government's share of R&D financing amounted to 70 percent of the total, down from a high of 74 percent in 1966. Non-Federal support, consisting primarily of institutions' own funds and State government support, increased in each period, but not enough to offset major fluctuations in Federal funding. From 1968 to 1972, non-Federal R&D funding recorded a 10-percent average growth — more than double the Federal rate.

In the 1972-73 period the increase in Federal R&D funding of 11 percent was significantly above the 6 percent increase reported from non-Federal sources. Adverse developments in the stock market and increasing operating costs have contributed to a substantially reduced growth in R&D support from private foundations, voluntary health agencies, and universities' own funds. R&D support from these sources increased 2 percent in the 1972-73 period, compared with annual rates of 8 percent and 13 percent, respectively, between 1970 and 1972. Industry and "other sources," including individuals and societies together increased their rate of support 10 percent over 1970-72 levels. Annual growth in State government R&D support has dropped steadily from a high of 13 percent between 1968 and 1970 to 8 percent in the 1972-73 period.

Type of R&D Activity

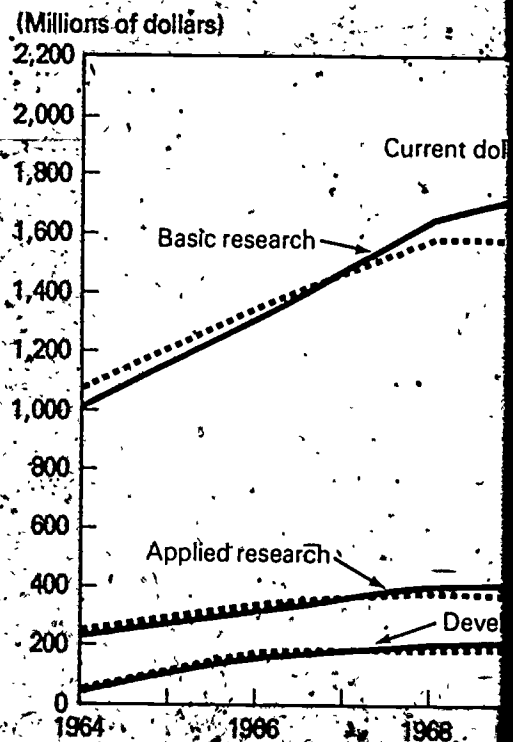

Universities and colleges are the largest performers of basic research in the economy, accounting for \$2.1 billion, or 54 percent, of the U. S. total in 1973. Growth in basic research performance, however, has slowed considerably in recent years.⁷ For example, between 1964 and 1968 university basic research expenditures expanded at a 13-percent annual rate, this growth dropped to 5 percent annually in the 1968-72 period and increased only 2 percent from 1972 to 1973. In constant 1967 dollars basic research *declined* nearly 2 percent in the 1972-73 period.

Applied research has shown a significant 30-percent annual growth for 1972-73. This sharp increase from the 8-percent annual rate established between 1968 and 1972 primarily reflects increased applied research in the environmental and life sciences and a shift in emphasis toward the practical application of available technology.

Development expenditures also increased dramatically between 1972 and 1973 — up 53 percent to \$170 million. Nearly one-fourth of this amount was concentrated in the Charles Stark Draper Laboratory Division of the Massachusetts Institute of Technology.

Field of Science

Another significant aspect of academic R&D expenditures is their heavy orientation toward the life sciences, which accounted for 52 percent of such expenditures in 1973. The Federal Government's share of academic R&D expenditures in the life sciences ranged from a high of 70 percent in 1968 to a low of 66 percent in 1972. Ranking next in terms of volume of expenditures was engineering with 14 percent. Federal support was most heavily concentrated in the physical sciences, accounting for 82 percent of the total.

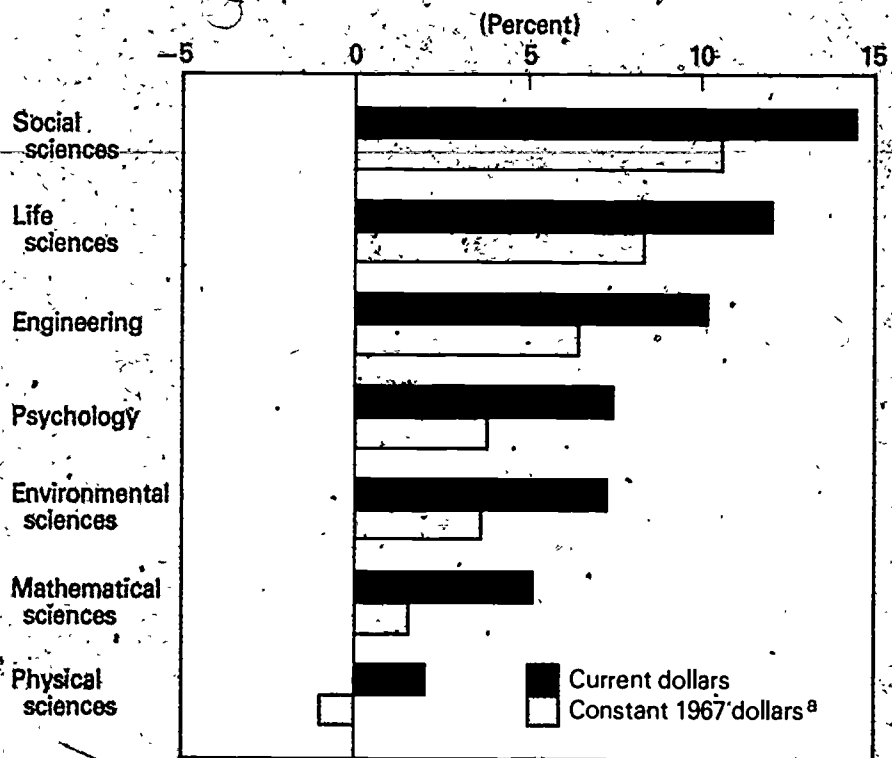

Although total R&D expenditures in universities and colleges increased 10 percent from 1972 to 1973 in terms of current dollars, this rate of growth varied significantly among fields of science. The social sciences experienced the largest increase, 15 percent, over seven times the 2-percent growth recorded by the physical sciences. The life sciences ranked second with a 12-percent annual growth, followed by a 10 percent growth in engineering. In constant 1967 dollars the social sciences actually increased 10 percent, compared with a 1 percent decline in the physical sciences.

Percent change in R&D expenditures in colleges, by field of science

academic R&D expenditures is their heavy reliance on government support, which accounted for 52 percent of such expenditures in 1972-73, down from a high of 70 percent in 1968 to a low of 40 percent in 1970. In terms of volume of expenditures, the largest amount of government support was most heavily concentrated in engineering, which accounted for 82 percent of the total.

Expenditures in universities and colleges increased 10 percent in current dollars, this rate of growth varied by field. The social sciences experienced the highest rate of growth, 14 percent, compared with the 2 percent growth recorded by mathematics, ranked second with a 12-percent annual increase in life sciences. Growth in engineering increased 10 percent compared with a 3-percent increase in physical sciences.

Within the life sciences, biological research (including agriculture) had a 13-percent annual growth rate between 1970 and 1973 compared to a 5-percent increase in the clinical medical sciences. Biology, therefore, increased in its share of life science R&D expenditures from 46 percent in 1970 to 53 percent in 1973. Non-Federal sources of medical R&D expenditures increased 10 percent per year between 1970 and 1973, while a 14-percent R&D growth rate of non-Federal funding occurred in the biological sciences.

Another significant change since 1964 has been the substantial increase in social science R&D expenditures. From 1964 to 1968 research and development in the social sciences increased 20 percent per year. Declines in other social science research, and also in political sciences, resulted in near-zero growth between 1968 and 1970. Since 1970, however, sharp increases in other social science research, sociology and political science, have led to an 11-percent growth from 1970 to 1972 and a 15-percent growth from 1972 to 1973.

Research and sciences increase 1964-73 period — science field. In case of physical sciences was less than 1964-73 annually from 1964 constant 1967 sciences," consists research, grew a percent average growth the academic sector.

Another significant change since 1964 has been the substantial increase in social science R&D expenditures. From 1964 to 1968 research and development in the social sciences increased 20 percent per year. Declines in other social science research, and also in political sciences, resulted in near-zero growth between 1968 and 1970. Since 1970, however, sharp increases in other social science research, sociology and political science, have led to an 11-percent growth from 1970 to 1972 and a 15-percent growth from 1972 to 1973.

Research and development in the physical sciences increased 5 percent annually in the 1964-73 period — the lowest rate of any major science field. In constant 1967 dollars, the amount of physical science research performed in 1973 was less than 1966 levels. Physics grew 4 percent annually from 1964 to 1973, or 0.4 percent in constant 1967 dollars. Only "other physical sciences," consisting mainly of multidisciplinary research, grew at a rate comparable to the 11-percent average growth of all R&D expenditures in the academic sector.

R&D expenditures at universities and colleges in the social sciences, FY 1964-73

SOURCE: National Science Foundation.

R&D expenditures at universities and colleges in the physical sciences, FY 1964-73

SOURCE: National Science Foundation.

Type of Control

Publicly controlled universities and colleges accounted for 61 percent of total R&D expenditures in the academic sector in 1973, an amount slightly over their 58-percent share in 1968. R&D expenditures reported by public institutions increased 8 percent annually, more than double the 4-percent annual growth for private institutions, during this 5-year period. In constant 1967 dollars, public institutions increased their R&D programs 3 percent annually, while private institutions recorded a 0.4-percent decline. This increased growth and concentration of R&D activities in public institutions primarily reflects the influence of large State universities, 65 of which are among the top 100 institutions in the country in terms of R&D expenditures.

The Federal Government supplied 79 percent of the R&D funds used by private institutions, compared with 64 percent for institutions under public control. Federal R&D expenditures in

private institutions increased 10 percent in the 1972-73 period, compared with a 12-percent increase in public institutions.

Type of Institution

Since doctorate-granting institutions accounted for 98 percent of all academic R&D expenditures, the distribution of these expenditures by source of funds or field of science is almost identical to that of all institutions. The dominant feature of the distributional pattern between the master's and bachelor's-level institutions is as follows:

- The federally financed share of R&D expenditures amounted to 80 percent in bachelor's-

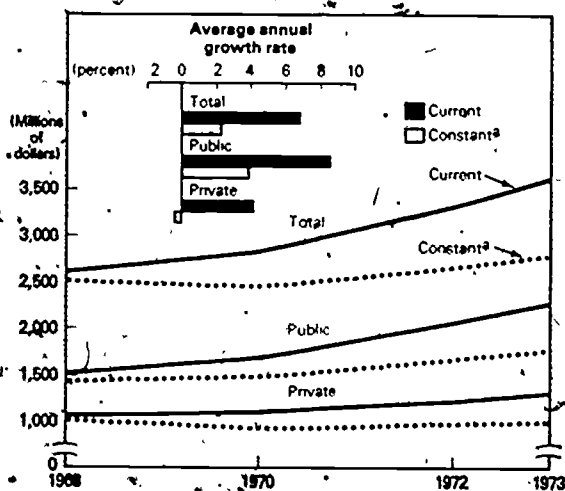

granting institutions

private institutions increased 10 percent in the 1972-73 period, compared with a 12-percent increase in public institutions.

Type of Institution

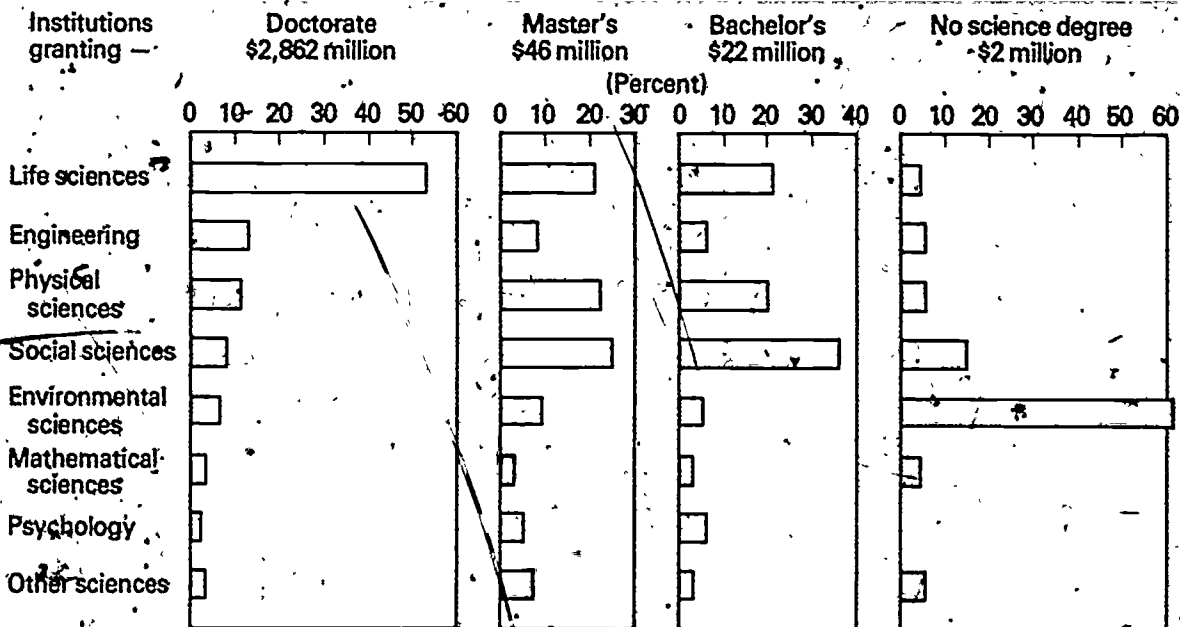

Since doctorate-granting institutions accounted for 98 percent of all academic R&D expenditures, the distribution of these expenditures by source of funds or field of science is almost identical to that of all institutions. The dominant feature of the distributional pattern between the master's and bachelor's-level institutions is as follows:

- The federally financed share of R&D expenditures amounted to 80 percent in bachelor's-

granting institutions and 65 percent in master's-granting institutions.

- Life sciences accounted for less than 25 percent of total R&D expenditures in nondoctorate-granting institutions since medical schools are associated with doctorate-granting institutions.
- The social sciences account for the largest share of R&D expenditures in both master's and bachelor's-granting institutions, followed closely by the physical and life sciences.
- Institutions not granting science degrees allocated three-fifths of their R&D expenditures to the environmental sciences. Virtually all of this environmental research is performed at Wentworth Institute under a contract with the Air Force involving the design of rocket systems to measure atmospheric conditions.

Geographic Distribution

Institutions in the Middle Atlantic States allocated more money — \$531 million — to research and development than did those in other geographic divisions. The Pacific States ranked second with \$529 million and experienced the most rapid growth rate of any division from 1966 to 1973. Since 1966 the Pacific States have grown at an annual rate of over 10 percent. In contrast, the Middle Atlantic States have grown at the slowest rate during this period — 6 percent. The East South Central States, however, led the Nation with a 20-percent growth in R&D activities in the 1972-73 period. The following tabulation shows the percent change for this period for all divisions.

Division	Percent change 1972-73
East South Central	19.7
Pacific	14.7
South Atlantic	11.9
East North Central	11.1
West South Central	10.8

The 10 leading States in terms of academic R&D performance in the sciences and engineering accounted for three-fifths of all R&D activity in the academic sector. This proportion has remained relatively constant since 1964, but there were significant changes among the leading States. Since 1970, California, the leading State, substantially increased its share of total while Pennsylvania, Massachusetts, and Ohio declined in relative importance. Institutions in North Carolina reported the largest increases of any of the leading States from 1972 to 1973, with 24 percent.

Concentration of R&D Expenditures

Academic research and development is heavily concentrated in a few institutions. In 1973 R&D expenditures in these top 100 institutions increased over 1972 and accounted for 83 percent of total R&D in the academic sector. Between 1966 and 1973, the top 100 institutions increased their proportion of total R&D expenditures from 63 percent to 83 percent. Since 1970 this proportion has declined to 77 percent. In 1973, 63 institutions reported expenditures greater than 20 percent, another 17 institutions reported expenditures between 10 and 20 percent. The median percent change for the top 100 institutions was 9 percent.

Concentration of R&D Expenditures

Academic research and development is heavily concentrated in 100 leading institutions. In 1973 R&D expenditures in these institutions increased 10 percent over 1972 and accounted for 83 percent of both total and Federal R&D funding in the academic sector. Between 1966 and 1970 these 100 leading institutions increased their proportion of total R&D expenditures from 87 percent to 90 percent. Since 1970 this proportion has declined steadily. Growth rates up to 20 percent were reported by 63 institutions, while 20 institutions reported increases greater than 20 percent, another 17 institutions reported declines in R&D expenditures. The median percent change for the 100 largest R&D performers was 9 percent.

SOURCE: National Science Foundation.

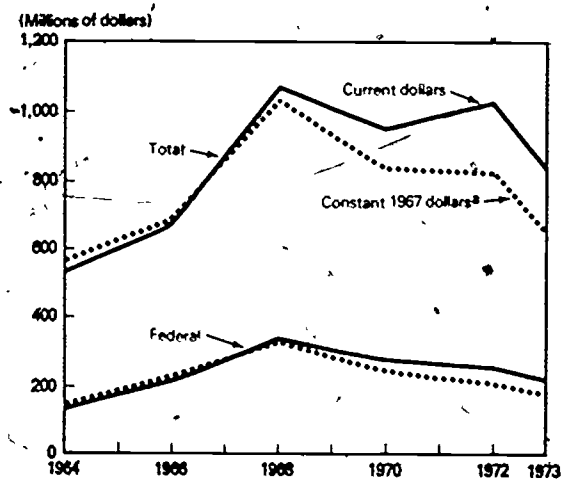

Section II. CAPITAL EXPENDITURES FOR RESEARCH, DEVELOPMENT AND INSTRUCTION IN THE SCIENCES AND ENGINEERING

The expansion in enrollment in the sciences and engineering in the early sixties and the greatly increased scale and complexity of scientific activities during the past decade resulted in relatively large outlays for facilities and equipment by academic institutions between 1964 and 1968. Since 1968, however, reduced Federal support, increasing interest rates, and a leveling off in enrollments has resulted in sharp reductions in expenditures for facilities and equipment. Capital expenditures for scientific activities at universities

and colleges totaled \$846 million in 1973, far below the \$1.1 billion spent in 1968. In constant 1967 dollars the 1973 expenditure level was nearly \$400 million below the capital acquisitions reported in 1968.

Universities and colleges rely principally upon their own resources for the financing of facilities and equipment in the sciences and engineering. This is especially true during 1968-73, as Federal support declined nearly 8 percent annually. In 1973 non-Federal support accounts for 73 percent of capital funding.

The distribution of capital expenditures by broad field of science was similar to that of current expenditures. The life sciences accounted for 58 percent of the total in 1973 — up substantially over the 44-percent share reported in 1964. In contrast, engineering dropped from 14 percent of the total in 1964 to 7 percent in 1973. Federal support is also becoming increasingly concentrated in the life sciences — up from 61 percent in 1964 to 71 percent in 1973 — with the remaining Federal funds primarily in the physical sciences and engineering.

Capital expenditures for research, development, and instruction at universities and colleges, by field of science and source of funds, FY 1973

SOURCE: National Science Foundation.

Similarly, capital expenditures of doctorate-granting institutions, with affiliated health science centers and agricultural experiment stations, were concentrated in the life sciences (61 percent of the total). In master's and bachelor's granting institutions, the largest shares of capital expenditures were also in the life sciences — 34 percent and 38 percent, respectively.

Capital expenditures for research, development, and instruction at universities and colleges, by type of institution and field of science, FY 1973

Section III. CURRENT DIRECT EXPENDITURES FOR INSTRUCTION AND DEPARTMENTAL RESEARCH IN GRADUATE-DEGREE-GRANTING INSTITUTIONS IN THE SCIENCES AND ENGINEERING

The largest single component of the scientific and engineering expenditures of universities and colleges was the amount allocated to instruction and departmental research. Current direct expenditures for such purposes in graduate-degree-granting institutions in the sciences totaled \$3.5 billion in 1973. This represents a 5-percent increase over the \$3.3 billion expended by these institutions in 1972. (See survey Instructions, p 109, Sec. B, for definitions of this section.)

In 1973 nearly two-fifths of all expenditures for instruction and departmental research were allocated to the life sciences. This reflects the influence of medical schools and schools of agriculture at doctorate-granting institutions. Between 1972 and 1973 instructional and departmental research programs in the life sciences increased 9 percent, the largest funding increase of any science field. Other sciences showed the largest percentage increase (15 percent), however, these programs only accounted for 4 percent of the total. Engineering and psychology each showed only a 1-percent increase, while social sciences declined 1 percent.

Direct costs for departmental research in graduate-degree-granting institutions amounted to an estimated \$434 million in 1973, down 3 percent from the \$447 million estimated in 1972. Departmental research, as a percent of instruction and departmental research, declined from 14 percent of the 1972 total to 12 percent of the 1973 total. In 1973 the relative distribution by field of science was fairly close with a high of 14 percent in life sciences and a low of 9 percent in other sciences.

The data on departmental research are subject to serious limitations. For example, imputation rates for departmental research by field of science ranged from 35 percent to 45 percent of the total

in 1973 Many institutions were not able to estimate expenditures for departmental research because they employ the concept of "teaching-research," indicating that a substantial amount of faculty time is spent in activities in which teaching and research are inseparably linked. These institutions consider it impossible or impractical for a central accounting office to determine the proper distribution of faculty salaries between teaching and nonseparately budgeted research. See appendix A for further details and imputation rates.

²Environmental sciences included with physical sciences in 1972; percent changes represent the changes in physical and environmental sciences combined.

Part II

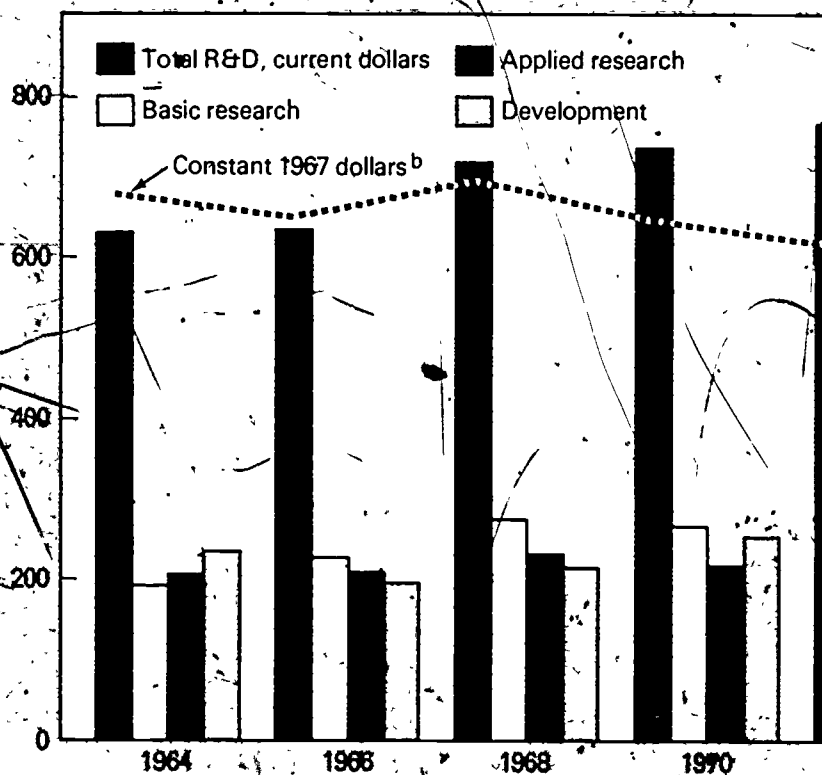

FEDERALLY FUNDED RESEARCH AND DEVELOPMENT CENTERS ADMINISTERED BY UNIVERSITIES AND UNIVERSITY CONSORTIA

Federally Funded Research and Development Centers (FFRDCs) are R&D-performing organizations substantially financed by the Federal Government to meet either a particular R&D objective or to provide major facilities at universities for research. Federal agencies' funds accounted for 99 percent of R&D expenditures by FFRDC's in 1973. Data presented here are excluded from those for universities and colleges shown in part I of this report.

Each FFRDC is a separate operational unit which conducts R&D work upon direct request of, or under a board charter from, the sponsoring Federal agency. Organizationally, the centers are separate from the administering institution, and are self-contained entities insofar as their R&D work is concerned.

R&D expenditures at university-administered FFRDC work, FY 1964-74

(Millions of dollars)

The 23 university-administered FFRDC's in this survey had \$817 million in current R&D expenditures in 1973, up 7 percent or \$53 million more than in 1972. Since 1964, when spending amounted to \$629 million, R&D expenditures by FFRDC's have increased at an annual rate of 3 percent to \$817 million in 1973. In constant dollars R&D spending declined 1 percent annually over this period. Outlays for basic research increased \$47 million in 1973 and now account for \$297 million, or 36 percent of the total R&D effort by FFRDC's.

R&D expenditures for applied research increased less than \$1 million in 1973, therefore, outlays for applied research as a portion of total R&D expenditures fell from 30 percent in 1972 to 28 percent in 1973. R&D expenditures for development amounted to \$294 million in 1973, or \$6 million more than 1972.

SOURCE: National Science Foundation.

Since 1968 R&D expenditures at NSF-sponsored FFRDC's have grown at an annual rate of 10-percent. AEC and DOD have had annual growth rates of 3 percent each, while R&D expenditures by NASA-sponsored FFRDC's have increased at an annual rate of only 1 percent. In constant dollars, only NSF-sponsored FFRDC's have shown an increasing growth rate — 5 percent. AEC and DOD have had average annual declines during this period of 2 percent, while NASA has had an annual decline of 4 percent per year.

Eleven AEC-sponsored FFRDC's accounted for \$505 million, or 62 percent of total R&D expenditures in 1973. Those sponsored by DOD ranked second with 19 percent, or \$156 million, while NASA and NSF supported 14 percent and 6 percent, respectively. AEC sponsored \$221 million, or 74 percent of all basic research spending. NSF-sponsored FFRDC's earmarked all of their expenditures — \$45 million for basic research — thus accounting for 15 percent of all basic research outlays. AEC supported 77 percent, or \$173 million, of applied research. DOD- and NASA-sponsored FFRDC's accounted for an additional \$35 million and \$18 million, respectively, in applied research support. DOD supported 39 percent, or \$115 million of all development outlays. AEC ranked second with \$110 million, or 37 percent.

R&D expenditures at FFRDC's were primarily in physical sciences and engineering. Of total R&D expenditures supported by AEC, \$110 million, or 31 percent, was in engineering and life science expenditures. NSF funded 55 percent

R&D expenditures by university-administered FFRDC's were primarily concentrated in the physical sciences and engineering. The physical sciences accounted for 52 percent, or \$427 million of total R&D outlays, 84 percent of which was supported by AEC. Engineering accounted for \$254 million, or 31 percent, of total R&D expenditures, of which 44 percent was spent in NASA-sponsored FFRDC's. AEC supported an additional 36 percent of engineering outlays as well as 95 percent of all life science expenditures. NASA supported 55 percent of mathematical science expenditures and NSF funded 55 percent of environmental spending.

R&D expenditures at university-administered FFRDC's,* by field of science and sponsoring Federal agency, FY 1973

Total = \$617 million

* Federally Funded Research and Development Centers.
SOURCE: National Science Foundation.

In 1973 expenditures by FFRDC's for research in the physical sciences dropped to \$427 million — 1 percent below 1972 levels. Outlays for engineering research increased \$56 million — or 28 percent — to \$254 million. R&D expenditures for the mathematical sciences totaled \$55 million, an increase of \$13 million, or 31 percent from 1972. In the social sciences R&D expenditures declined 84 percent in 1972, from \$9 million to \$1 million. This decline was caused by a reclassification of 10 Office of Education FFRDC's. Beginning in 1973, awards to these centers were on a competitive

^aFederally Funded Research and Development Centers.

basis, therefore, they were considered integral components of universities and are included in part I. Other fields of science that experienced declines in 1973 were psychology, which fell 36 percent to \$1 million, and the life sciences, which declined 6 percent to \$34 million.

R&D expenditures for engineering have grown at the greatest annual rate of any field of science since 1964. This 6-percent growth rate was primarily due to a large increase in 1973 outlays. Both the environmental and mathematical sciences increased 4 percent annually since 1964. Again, large expenditure increases in 1973 represent a major portion of the growth. Outlays for the physical and life sciences remained relatively stable since 1964. Psychology had the greatest annual decline — 17 percent — while R&D expenditures in the social sciences increased at an annual rate of 24 percent until 1972. From 1972 to 1973 R&D outlays for the social sciences declined 84 percent. This decline was due to the change in status of the OE-sponsored FFRDC's.

SOURCE: National Science Foundation.

In constant dollars, engineering increased at an annual rate of 2 percent from 1964 to 1973. Expenditures for the mathematical and environmental sciences remained relatively stable. All other fields of science declined in constant dollars, with psychology showing the greatest annual decline, 20 percent.

Capital expenditures for scientific and engineering facilities and equipment for research and development totaled \$121 million in 1973. This represented a decline from 1972 of \$7 million, or 5 percent. Since 1964 capital outlays have remained relatively stable for all fields of science except the physical and environmental sciences. In 1968 capital expenditures for these areas totaled \$89 million. Two years later, in 1970, this figure had increased 54 percent to \$137 million. But in 1973 R&D outlays to these fields totaled \$93 million, or one-third less than the 1970 figure. These fluctuations are primarily responsible for the sharp peak in total capital expenditures in 1970 — \$163 million — and subsequent decline by 1973 to \$121 million.

Technical Notes

Scope and Coverage

This report is based upon the National Science Foundation's (NSF) Survey of Scientific Activities of Institutions of Higher Education (Current and Capital Expenditures for Research, Development, and Instruction in the Sciences and Engineering, FY 1973).¹ Mail questionnaires were sent to 621 universities, including all institutions that grant doctorate or master's degrees in the sciences or engineering and all other academic institutions believed to perform \$50,000 or more in R&D expenditures.

Follow-up queries were mailed in September, November, and January; telephone contact was maintained with the 200 institutions believed on the basis of prior surveys to have spent the largest amounts on R&D expenditures. By July 31, 1974 (last date prior to computer tabulations), 571 academic institutions or 92 percent of the universe, returned usable questionnaires, including all of the 100 largest R&D performers.

¹Data obtained in earlier surveys in the series have been published by NSF in *Scientific Activities at Universities and Colleges*, 1964 (NSF 68-22), 1968 *Resources for Scientific Activities at Universities and Colleges*, 1969 (NSF 70-16), 1970 and *Resources for Scientific Activities at Universities and Colleges*, 1971 (NSF 72-315), 1972 (Washington D.C. 20402 Supt. of Documents, U.S. Government Printing Office). No separate reports were issued on the 1972 and 1966 surveys; however, results of these surveys are included in this report. Data collected in the three surveys conducted prior to the inception of the present series have been published in NSF's *Scientific Research and Development in Colleges and Universities — Expenditures and Manpower*, 1953-54; *Scientific Research and Development in Colleges and Universities — Expenditures and Manpower*, 1958, 1963, and *Scientists and Engineers in Colleges and Universities*, 1961-1965.

Limitations

The statistics presented in this report are subject to response and concept errors caused by several factors: differences between university concepts and survey definitions of R&D activities, and by variations in university accounting procedures. Consequently, the difficulty of defining R&D expenditures in the sciences and engineering adversely affects the accuracy of the data provided by respondents. As the survey series closes its sixth cycle, however, the magnitude of the error attributable to the inadequacy of institutional record-keeping procedures is constantly decreasing, as more institutions, especially the larger ones, revise their procedures to yield the information requested. Since the large universities account for the vast majority of R&D activities in the sciences and engineering, the quality of their statistical reports has significant impact on the overall reliability of the survey data.

Methods of Estimating for Nonresponse

In order to derive universe estimates of financial resources presented in this report, estimates were made for 50 institutions that failed to respond to the survey, as well as for nonsurveyed institutions. These estimates were based on three types of sources: first, other surveys such as the Higher Education General Information Survey, conducted annually by the U.S. Office of Education or NSF's CASE system; second, institutional sources such as treasurer's reports; and third, completed questionnaires from institutions that reported data in earlier surveys.

Totals from these sources were distributed (by field of science, function, etc.) by computer. At the heart of the imputation program is a deterministic/stochastic algorithm which involves the selection of a summary distribution based upon respondent characteristics by level of degree granted and type of control. The same system was used in those cases where institutions reported total values for particular items but were unable to give detailed breakdowns. The tabulation below shows that more than nine-tenths of all surveyed institutions responded. Table A-1 shows that R&D estimates

Type of institution	Number Surveyed	Respondents	
		Number	Percent of total
Total	621	571	91.9
Doctorate	280	259	92.4
Master's	228	211	92.5
Bachelor's and no science degree	16	101	87.1

for nonrespondents \$2.9 billion university-granting institutions; graduation rates for institutions to about 8 percent; rates for the departmentally higher (39 percent) of reporting.

The same system was used in those cases where institutions reported total values for particular items but were unable to give detailed breakdowns. The tabulation below shows that more than nine-tenths of all surveyed institutions responded. Table A-1 shows that R&D estimates

Type of institution	Number surveyed	Respondents	
		Number	Percent of total
Total	621	571	91.9
Doctorate	280	259	92.4
Master's	228	211	92.5
Bachelor's and no science degree	116	101	87.1

for nonrespondents totaled \$94 million, or 3 percent of the \$2.9 billion universe. Only 21 doctorate and 17 master's-granting institutions failed to respond to the survey. Imputation rates for instruction and departmental research amounted to about 8 percent of the total (table A-2). The imputation rates for the departmental research component were substantially higher (39 percent), reflecting the conceptual difficulties of reporting.

Table A-2. Estimated current expenditures for instruction and departmental research for nonrespondent graduate-degree-granting institutions in the sciences and engineering, by field of science; FY 1973

Other sciences	12,727	8.2	6,594	45.2

Changes in Reporting Concepts for Fields of Science

Total R&D expenditures were collected by field of science for the first time in 1973. Prior to 1973, only research expenditures (basic and applied) were collected by field of science. Estimates for development expenditures by field of science were made by NSF by (a) contacting major universities with large development expenditures to ascertain how their development expenditures were distributed by field of science, and (b) utilizing field of science growth patterns in these institutions to prorate development in earlier years. Between 1964 and 1972 estimates for development expenditures, accounting for approximately 3 percent of total R&D expenditures, were added to each appropriate field of science.

Separately budgeted R&D expenditures of nonrespondent institutions amounted to \$94 million, or 3.2 percent of the total universities and colleges, both respondents and nonrespondents.

Efforts to Improve Data Quality

The National Science Foundation as part of its program to measure the reliability and validity of its survey statistics contracted for three special studies to assess the abilities of institutions to provide accurate R&D statistics and to improve survey definitions and instructions. One such study consisted of a 1-year special assignment for Dr. Robert Wright, Director of Institutional Research of the Central Staff of the State University of New York. Dr. Wright² visited 50 colleges and universities across the United States and conducted in-depth interviews with university officials who were responsible for filling out the NSF forms. As a result of Dr. Wright's study, many recommendations were made for improving survey procedures and questionnaire format, most of which were incorporated by NSF in the 1973 university and college survey systems.³ Among the survey items showing systematic respondent problems were the following:

- Reporting information that distinguishes between basic research, applied research, and development
- Estimating expenditures for departmental research
- Identifying the sources of support of separately budgeted R&D funds
- Calculating indirect costs associated with separately budgeted R&D expenditures
- Determining how expenditures are classified by field of science

Of the 50 institutions included in Dr. Wright's study, many had difficulty reporting the breakout of separately budgeted R&D funds by activity: basic research, applied research, and development. About one-fourth of the institutions said that all of their research was basic research, by definition — which meant by administrative fiat or by what has previously been a high status trend rather than using survey definitions. A large number estimated the figures using such methods as ratios developed in past reporting periods. The difficulty in reporting these data is indicated by the fact that one-fourth of the universities and colleges in the 1973 survey did not report data on basic research expenditures, largely because of its unavailability from central records.

²Dr. Wright is now employed by the National Science Foundation as a staff associate in the Science Indicators Unit within the Division of Science Resources Studies.

³The principal findings of Dr. Wright's study were published by NSF in Evaluations of the NSF Survey of Scientific Activities of Institutions of Higher Education, September 1973.

Similarly, many institutions indicated difficulty in reporting the departmental research component of the Instruction and Departmental Research account. Of those respondent institutions, some described these reporting methods: assumed 5 percent for all fields, assumed one day's equivalent per week for departmental research, and requested that departmental chairmen estimate the proportion of time that faculty spent on departmental research.

Among the problems encountered in identifying the sources of R&D support, many questioned what kinds of expenditures are to be included in "Institution's Own Funds." About one-third indicated that they reported the unreimbursable indirect costs defrayed by their own institution. Others included State appropriations and allocations, endowment funds, and released time of faculty. In the Federal column as a source of support for research, the NSF instructions ask that Federal funds channeled through State agencies be reported as Federal, not State, funds. But, several institutions were not able to identify such Federal funds, resulting in underreporting for Federal sources and overreporting of State funds.

About one-half of the institutions had indirect cost data in the institution's financial records. For those without records on indirect costs, an estimate was made by using such methods as the federally audited indirect cost rate and applying it to research totals. Although most institutions indicated that "unreimbursed indirect costs" were real financial factors to them, very few had actual records on which to base statistical reports.

When asked how expenditures are classified by field of science, most institutions used the department, the account, or the principal investigator's departmental assignment as the indicator. This practice of using the sponsoring department to identify field of science leads to several problems. First, expenditures may be categorized incorrectly because of the seniority or other nonscience aspects of the principal investigator, the coincidental location of facilities, and the like. Second, the reporting of expenditures by fields of science is heavily dependent on the organizational makeup of the institution, and can change as reorganizations are effected. And, third, the distribution of scientific effort as defined on the NSF form might not correspond to departmental titles, especially in interdisciplinary fields.

In addition to the study conducted by Dr. Wright, the National Science Foundation engaged Columbia Research Associates to conduct a pilot study of institutional reporting to NSF expenditure and manpower surveys. The study was

designed to ascertain the extent of reporting at Harvard University, Yale University, Princeton University, and the University of California. Although a sample of these institutions are major research centers, they represent a small percent of the National Science Foundation's total. Although a sample of these institutions are major research centers, they represent a small percent of the National Science Foundation's total. Although a sample of these institutions are major research centers, they represent a small percent of the National Science Foundation's total. Although a sample of these institutions are major research centers, they represent a small percent of the National Science Foundation's total.

- (1) Overreporting
- (2) Difficulty in identifying basic, applied
- (3) Departmental research not identifiable

The overreporting caused by the inclusion and subcontracting survey requested to include equipment and facilities expenditures. Respondents to this instruction should include small equipment expenditures surveyed expenditures to include more than an institution.

Training grants of two schools. Although effort is accomplished by major grantor of training research minor and

A third study was conducted by the National Center for Higher Education Research and Statistics (NGHEMS) with the concepts more in mind. An accounting system was developed on the instructional framework of universities and colleges. The project and its associated reporting problems

Similarly many institutions indicated difficulty in reporting the departmental research component of the Instruction and Departmental Research account. Of those respondent institutions some described these reporting methods assumed 5 percent for all fields assumed one day's equivalent per week for departmental research and requested that departmental chairmen estimate the proportion of time that faculty spent on departmental research.

Among the problems encountered in identifying the sources of R&D support many questioned what kinds of expenditures are to be included in "Institution's Own Funds." About one-third indicated that they reported the unreimbursable indirect costs defrayed by their own institution. Others included State appropriations and allocations, endowment funds, and released time of faculty. In the Federal column as a source of support for research, the NSF instructions ask that Federal funds channeled through State agencies be reported as Federal not State funds. But, several institutions were not able to identify such Federal funds, resulting in underreporting for Federal sources and overreporting of State funds.

About one-half of the institutions had indirect cost data in the institution's financial records. For those without records on indirect costs, an estimate was made by using such methods as the federally audited indirect cost rate and applying it to research totals. Although most institutions indicated that "unreimbursed indirect costs" were real financial factors to them, very few had actual records on which to base statistical reports.

When asked how expenditures are classified by field of science, most institutions used the department, the account, or the principal investigator's departmental assignment as the indicator. This practice of using the sponsoring department to identify field of science leads to several problems. First, expenditures may be categorized incorrectly because of the seniority or other non-science aspects of the principal investigator, the coincidental location of facilities, and the like. Second, the reporting of expenditures by fields of science is heavily dependent on the organizational makeup of the institution and can change as reorganizations are effected. And third, the distribution of scientific effort as defined on the NSF form might not correspond to departmental titles, especially in interdisciplinary fields.

In addition to the study conducted by Dr. Wright, the National Science Foundation engaged Columbia Research Associates to conduct a pilot study of institutional reporting to NSF expenditure and manpower surveys. The study was

designed to ascertain whether it is feasible to measure the extent of reporting errors. Nine institutions were selected: Harvard University, Massachusetts Institute of Technology, Yale University, S U N Y -Albany, Columbia University, Princeton University, University of Maryland, Johns Hopkins University and the University of Virginia. Most of these nine are major research institutions which together account for 13 percent of the Nation's academic research and development. Although a sample of only nine institutions is clearly too small to permit statistical inferences for the population, consistent patterns among these nine institutions showed the following:

- (1) Overreporting of R&D expenditures
- (2) Difficulty in identifying expenditures by type of research (basic, applied, and development)
- (3) Departmental research expenditures generally not available

The overreporting of R&D expenditures was principally caused by the inclusion of capital equipment, training grants, and subcontracting expenditures. NSF instructions for the 1973 survey requested that current fund expenditures for all capital equipment and facilities be excluded from current R&D expenditures. Respondents found it difficult to comply with this instruction since their current fund accounts usually include small equipment purchases. NSF in its 1974 R&D expenditure survey modified the definition of current R&D expenditures to include equipment expenditures that cost less than an institutionally defined minimum around \$200 or \$500.

Training grants were included in the research expenditures of two schools. Although some contributions to the research effort is accomplished with training grant funds, NIH, the major grantor of training funds, considers their contribution to research minor and indeterminate.

A third study was conducted under a grant from NSF by the National Center for Higher Education Management Systems (NCHEMS) with the objective of bringing the NSF survey concepts more in line with academic recordkeeping and accounting systems. In the course of this project, a document was developed on the R&D expenditure survey format and instructional framework and widely reviewed by representatives of universities and colleges throughout the country. This project and its attendant review process served to identify reporting problems that confirmed the two earlier studies.

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

**SURVEY OF SCIENTIFIC ACTIVITIES OF
INSTITUTIONS OF HIGHER EDUCATION**

(Current and Capital Expenditures for Research,
Development, and Instruction in the Sciences and Engineering, FY 1973)

Organizations are requested to complete and return this form to:

NATIONAL SCIENCE FOUNDATION
1800 G Street, N.W.
Washington, D.C. 20550
Attn: UNISG

Name and address of institution:
(Please correct if name or address has changed)

Aggregate data from 621
universities and colleges.
Excludes 23 university
administered FFRDC'S.

This form should be returned by October 31, 1973.

Your cooperation in returning the survey questionnaires promptly is very important and will be appreciated.

Financial data are requested for the fiscal year which began on July 1, 1972, and ended on June 30, 1973, or your institution's equivalent fiscal year.

All financial data requested on this form should be reported in thousands of dollars; for example, an expenditure of \$25,342 should be rounded to the nearest thousand dollars and reported as \$25.

Please read the enclosed instructions before completing this form. Where exact data are not available, estimates are acceptable. Please complete all items; estimates by college officials will be better than NSF estimates. Enter "O" as an item total (lines 1100, 1200, 1300, etc., are item totals) rather than leave the total blank.

Include data for branches and all organizational units of your institution, such as medical schools and agricultural experiment stations. Also include hospitals or clinics owned, operated, or controlled by universities, and integrated operationally with the clinical programs of your medical schools. Exclude data for Federally Funded R&D Centers administered by universities. A list of these Centers is shown on page 3 of the Instructions and Definitions. A separate questionnaire will be mailed directly to each Center.

Please transfer the following data elements from your response to HEGIS Part B—Current Fund Expenditures FY 1973

Total Educational and General Expenditures	Instruction and Departmental Research	Total Separately Budgeted Research	Other Educational Expenditures

Please check the appropriate box so we can readily classify your organization.

1. Primary administrative control or affiliation of your institution:

11 Federal ; State ; Local ; Private
 12 Government ; government

2. Highest degree granted in the sciences or engineering by your institution during academic year 1972-73:
 (See fields of science on page 2 of the instructions)

1 Ph.D. ; M.D. ; Master's ; Bachelor's ; None in ; 2-year
 or D.D.S. ; or sciences or program
 2 Sc.D. etc. equivalent engineering

Please give an example of a science or engineering field for which the highest degree checked in item 2 above, was awarded

SECTION A
CURRENT EXPENDITURES FOR SEPARATELY BUDGETED RESEARCH AND DEVELOPMENT (R&D)
IN THE SCIENCES AND ENGINEERING

If your institution did not have any current expenditures for separately budgeted research and development in 1972-73 check "none" in the space provided here. None

Go to Section B for questions pertaining to instruction and departmental research and Section C for capital equipment and facility expenditures.

Current expenditures for separately budgeted research and development, by source, of funds, 1972-73

SOURCE OF FUNDS		THOUSANDS OF DOLLARS
a. Federal Government	1110	\$ 2,044,358
b. State government	1120	270,850
c. Local government	1130	14,386
d. Foundations and voluntary health agencies	1140	131,757
e. Industry	1150	86,385
f. Institution's own funds	1160	317,396
g. Other sources	1170	68,420
h. Total (sum of a to g) ^a	1100	\$ 2,933,552

equals 2e and 4i (Col 2)
 include State funds to agricultural experiment stations

equals 2e and 4i (Col 1)

Item 2
Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1972-73

COST ITEM	THOUSANDS OF DOLLARS	
	TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	\$ 1,473,414	\$ 994,060
b. All other direct costs (including materials and supplies)	902,754	647,950
c. Indirect costs reimbursed or reimbursable	455,638	402,348
d. Other indirect costs defrayed with institution's own funds (see instructions)	101,746	
e. Total (sum of a to d) ^a	\$ 2,933,552	\$ 2,044,358

Item 3
Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1972-73

TYPE OF R&D ACTIVITY	ESTIMATED PERCENT DISTRIBUTION (NO DECIMALS)	
	TOTAL (1)	FEDERAL GOVERNMENT (2)

equals 2e and 4i (Col. 2)

include State funds to agricultural experiment stations

equals 2e and 4i (Col. 1)

	1120	270,850
b. State government	1130	14,386
c. Local government	1140	131,757
d. Foundations and voluntary health agencies	1150	86,385
e. Industry	1160	317,396
f. Institution's own funds	1170	68,420
g. Other sources		
h. Total (sum of a to g) ^a	1100	\$ 2,933,552

Item 2 Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1972-73

COST ITEM	THOUSANDS OF DOLLARS	
	TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	1210	\$ 1,473,414
b. All other direct costs (including materials and supplies)	1220	902,754
c. Indirect costs reimbursed or reimbursable	1230	455,638
d. Other indirect costs defrayed with institution's own funds (see instructions)	1240	101,746
e. Total (sum of a to d) ^a	1200	\$ 2,933,552

Item 3 Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1972-73

TYPE OF R&D ACTIVITY	ESTIMATED PERCENT DISTRIBUTION (NO DECIMALS)	
	TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Basic research	1310	70 %
b. Applied research	1320	24 %
c. Development	1330	6 %
d. Total (sum of a to c) ^a	1300	100%

^aTotals in items 1h, 2e (Col. 1) and 4i (Col. 1) should be identical. Similarly, figures reported in items 1a, 2e (Col. 2) and 4i (Col. 2) should be identical. If figures for the foregoing items are not consistent, please give reasons in "Remarks" at the end of the questionnaire.

Item 4	Total and federally financed current expenditures for separately budgeted research and development, by field of science, 1972-73		THOUSANDS OF DOLLARS	
	FIELD OF SCIENCE	TOTAL (1)	FEDERAL GOVERNMENT (2)	
a.	Engineering (total)	1410	\$ 384,452	\$ 288,310
b.	Physical sciences (total)	1420	\$ 340,954	\$ 280,904
(1)	Astronomy	1421	24,128	17,704
(2)	Chemistry	1422	115,091	88,098
(3)	Physics	1423	171,267	149,282
(4)	Other physical sciences, NEC	1424	30,468	25,820
c.	Environmental sciences (total)	1430	\$ 200,376	\$ 149,296
d.	Mathematical sciences (total)	1440	\$ 74,683	\$ 56,308
(1)	Mathematics (exclude computer sciences)	1441	35,827	28,786
(2)	Computer sciences	1442	38,856	27,522
e.	Life sciences (total)	1450	\$ 1,517,994	\$ 1,012,830
(1)	Biological (include agricultural sciences)	1451	797,206	483,252
(2)	Clinical medical	1452	642,661	487,712
(3)	Other life sciences, NEC	1453	78,127	41,866
f.	Psychology (total)	1460	\$ 74,376	\$ 58,589
g.	Social sciences (total)	1470	\$ 235,607	\$ 135,781
(1)	Economics	1471	46,645	22,257
(2)	Political science	1472	25,768	10,405
(3)	Sociology	1473	61,089	41,497
(4)	Other social sciences, NEC	1474	102,105	61,622
h.	Other sciences, NEC (total)	1480	\$ 105,110	\$ 62,340
i.	Total (sum of a to h)	1400	\$ 2,933,552	\$ 2,044,358
a Totals in 4i (col. 1) should be identical to 1h, and 4i (col. 2) should be identical to 1a.				

SECTION B CURRENT EXPENDITURES FOR INSTRUCTION AND DEPARTMENTAL RESEARCH IN THE SCIENCES AND ENGINEERING			
Item 5	Current expenditures for instruction and departmental research in the sciences and engineering, by field of science, 1972-73 (direct expenditures only)	Total Instruction and Departmental Research (thousands of dollars)	Departmental Research as a Percent of Col. 1 (No decimals)
	FIELD OF SCIENCE	(1)	(2)
a.	Engineering	\$ 394,696	11%
b.	Physical sciences	381,798	13%
			14%

(4) Other physical sciences, NEC	1424	30,468	25,820
c. Environmental sciences (total)	1430	\$ 200,376	\$ 149,296
d. Mathematical sciences (total)	1440	\$ 74,683	\$ 56,308
(1) Mathematics (exclude computer sciences)	1441	35,827	28,786
(2) Computer sciences	1442	38,856	27,522
e. Life sciences (total)	1450	\$ 1,517,994	\$ 1,012,830
(1) Biological (include agricultural sciences)	1451	797,206	483,252
(2) Clinical medical	1452	642,661	487,712
(3) Other life sciences, NEC	1453	78,127	41,866
f. Psychology (total)	1460	\$ 74,376	\$ 58,589
g. Social sciences (total)	1470	\$ 235,607	\$ 135,781
(1) Economics	1471	46,645	22,257

		i. Total (sum of a to h)	1700 \$ 846,285	\$ 227,259	\$ 619,026

CHECK LIST

- Are expenditures in thousands (\$25,324 as \$25)? No Decimals.
- Do the data add?
- Are all items completed? YOUR ESTIMATE will be better than ours. Estimates may be noted in remarks.
- Are all branches and components such as medical schools and agricultural experiment stations included?
- Item 4 should include DEVELOPMENT
- If your indirect cost computation for line 2d differs from the method shown in the Instructions, please explain in the Remarks section.
- If you have any questions, please contact Ronald Biggar (202-282-7790).

REMARKS

(If additional space is needed, attach an extra page). Please compare your 1972-73 expenditure data with your response for 1971-72 and explain any significant changes from prior years. Where possible, indicate any required adjustments in data for prior years.

Please indicate the number of any item that should *not* be published with your institution identified.
 ITEM:

Prorate any expenditures intended for use in two or more fields of science. Include current fund expenditures for equipment and facilities as well as plant and other funds, but exclude any materials and supplies reported under current expenditures in Section A or Section B.

CHECK LIST

1. Are expenditures in thousands (\$25,324 as \$25)? No Decimals.
2. Do the data add?
3. Are all items completed? YOUR ESTIMATE will be better than ours. Estimates may be noted in remarks.
4. Are all branches and components such as medical schools and agricultural experiment stations included?
5. Item 4 should include DEVELOPMENT
6. If your indirect cost computation for line 2d differs from the method shown in the Instructions, please explain in the Remarks section.
7. If you have any questions, please contact Ronald Biggar (202-282-7790).

APPENDIX C

List of Federally Funded Research and Development Centers Administered by Universities and University Consortia¹

DEPARTMENT OF DEFENSE

Department of the Navy

- Applied Physics Laboratory (Johns Hopkins University)
- Applied Physics Laboratory (University of Washington)
- Center for Naval Analyses (University of Rochester)
- Applied Research Laboratory (Pennsylvania State University)

Department of the Air Force

- Lincoln Laboratory (Massachusetts Institute of Technology)

ATOMIC ENERGY COMMISSION

- Ames Laboratory (Iowa State University of Science and Technology)
- Argonne National Laboratory (University of Chicago and Argonne Universities Association)
- Brookhaven National Laboratory (Associated Universities, Inc.)
- Cambridge Electron Accelerator (Harvard University and Massachusetts Institute of Technology)

- Lawrence Radiation Laboratory, Berkeley and Livermore (University of California)
- Los Alamos Scientific Laboratory (University of California)
- Fermi National Accelerator Laboratory (Universities Research Association)
- Oak Ridge Associated Universities
- Plasma Physics Laboratory (Princeton University)
- Stanford Linear Accelerator Center (Stanford University)

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

- Jet Propulsion Laboratory (California Institute of Technology)
- Space Radiation Effects Laboratory (College of William and Mary)

NATIONAL SCIENCE FOUNDATION

- Cerro-Tololo Inter-American Observatory (Association of Universities for Research in Astronomy, Inc.)
- National Astronomy and Ionosphere Center (Cornell University)
- Kitt Peak National Observatory (Association of Universities for Research in Astronomy, Inc.)
- National Center for Atmospheric Research (University Corporation for Atmospheric Research)
- National Radio Astronomy Observatory (Associated Universities, Inc.)

Statistical

University-Administered Federally Funded Research Centers (Part II)

- C-1 Current R&D administered Federal Development Centers in field of science.
- C-2 Federally financed in university-administered Research and Development Centers of work for years 1964-73
- C-3 Current R&D administered Federal Development Centers for years 1953-73
- C-4 Selected financed activities in university-administered Federally Funded Research Centers 1973

¹All of the organizations listed here were designated by the Federal Council for Science and Technology to be FERDC's in academic year 1972-73.

1972 ^a	250	32.8	225	29.5	288	37.7
1973 ^a	297	36.3	226	27.7	294	36.0

^a Estimates derived from related information; no survey took place this year.

Table C-4. Selected financial characteristics of scientific activities in university-administered Federally Funded Research and Development Centers, FY 1973

Federal agency and geographic division	Number of FFRDC's ^a	(Dollars in thousands)				
		Research and development expenditures		Capital b expenditures		
		Total	Basic research	Applied research	Development	
Total	23	\$816,923	\$296,955	\$225,911	\$294,057	\$121,444
Sponsoring Federal agency:						
Atomic Energy Commission	11	504,559	220,694	173,419	110,446	90,313
Department of Defense	5	155,855	6,224	34,679	114,952	1,944
National Aeronautics and Space Administration	2	111,118	24,646	17,813	68,659	14,041
National Science Foundation	5	45,391	45,391	-	-	15,146

^a Includes \$2.7 million in non-Federal funds.

^b Includes \$1.1 million in non-Federal funds.

APPENDIX C.
Reproduction of Survey Form

NATIONAL SCIENCE FOUNDATION
Washington, D.C. 20550

**SURVEY OF SCIENTIFIC ACTIVITIES OF
INSTITUTIONS OF HIGHER EDUCATION**

(Current and Capital Expenditures for Research,
Development, and Instruction in the Sciences and Engineering, FY 1973)

Organizations are requested to complete and return this form to:

NATIONAL SCIENCE FOUNDATION
1800 G Street, N.W.
Washington, D.C. 20550
Attn: UNISG

This form should be returned by October 31, 1973. Your cooperation in returning the survey questionnaires promptly is very important and will be appreciated.

Financial data are requested for the fiscal year which began on July 1, 1972, and ended on June 30, 1973, or your institution's equivalent fiscal year.

All financial data requested on this form should be reported in thousands of dollars; for example, an expenditure of \$25,342 should be rounded to the nearest thousand dollars and reported as \$25.

Please read the enclosed instructions before completing this form. Where exact data are not available, estimates are acceptable. Please complete all items; estimates by college officials will be better than NSF estimates. Enter "0" as an item total (lines 1100, 1200, 1300, etc., are item totals) rather than leave the total blank.

Name and address of institution:
(Please correct if name or address has changed)

(Aggregate data from 23 universities administered Federally Funded Research and Development Centers)

Include data for branches and all organizational units of your institution, such as medical schools and agricultural experiment stations. Also include hospitals or clinics owned, operated, or controlled by universities, and integrated operationally with the clinical programs of your medical schools. Exclude data for Federally Funded R&D Centers administered by universities. A list of these Centers is shown on page 3 of the Instructions and Definitions. A separate questionnaire will be mailed directly to each Center.

Please transfer the following data elements from your response to HEGIS Part B—Current Fund Expenditures FY 1973

Total Educational and General Expenditures	Instruction and Departmental Research	Total Separately Budgeted Research	Other Educational Expenditures
\$.	\$.	\$.	\$.
HEGIS Part B Line 1	HEGIS Part B Line 2	HEGIS Part B Lines 4+5	HEGIS Part B Line 3, 6 - 10

Please check the appropriate box so we can readily classify your organization.

1. Primary administrative control or affiliation of your institution:

11 Federal ; State ; Local ; Private
 Government ; government ; government

Please check the appropriate box so we can readily classify your organization.

- Primary administrative control or affiliation of your institution:
 - 11 Federal ; State ; Local ; Private
 - 12 Government ; State government ; Local government ; Private government
- Highest degree granted in the sciences or engineering by your institution during academic year 1972-73:
 - (See fields of science on page 2 of the instructions)
 - 1 Ph.D. ; M.D. ; Master's ; Bachelor's ; None in sciences or engineering
 - 2 D.D.S. etc.
 - 3
 - 4 2-year program
 - 8

Please give an example of a science or engineering field for which the highest degree checked in item 2 above was awarded _____

SECTION A
CURRENT EXPENDITURES FOR SEPARATELY BUDGETED RESEARCH AND DEVELOPMENT (R&D)
IN THE SCIENCES AND ENGINEERING

If your institution did not have any current expenditures for separately budgeted research and development in 1972-73 check "none" in the space provided here. None

Go to Section B for questions pertaining to instruction and departmental research and Section C for capital equipment and facility expenditures.

Item 1
Current expenditures for separately budgeted research and development, by source of funds, 1972-73

SOURCE OF FUNDS	THOUSANDS OF DOLLARS
a. Federal Government	1110 \$ 812,854
b. State government	1120 1,352
c. Local government	1130 12
d. Foundations and voluntary health agencies	1140 526
e. Industry	1150 101
f. Institution's own funds	1160 1,643
g. Other sources	1170 435
h. Total (sum of a to g) ^a	1100 \$ 816,923

equals 2e and 4i (Col. 2)
 include State funds to agricultural experiment stations

equals 2e and 4i (Col 1)

Item 2
Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1972-73

COST ITEM	THOUSANDS OF DOLLARS	
	TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	1210 \$ 368,485	\$ 366,538
b. All other direct costs (including materials and supplies)	1220 291,724	290,417
c. Indirect costs reimbursed or reimbursable	1230 156,704	155,899
d. Other indirect costs defrayed with institution's own funds (see instructions)	1240 10	10
e. Total (sum of a to d) ^a	1200 \$ 816,923	\$ 812,854

Item 3
Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1972-73

TYPE OF R&D ACTIVITY	ESTIMATED PERCENT DISTRIBUTION (NO DECIMALS)

□ equals 2e and 4i (Col 2)
 □ include State funds to agricultural experiment stations

□ equals 2e and 4i (Col 1)

1110	\$	812,854
1120		1,352
1130		12.
1140		526
1150		101
1160		1,643
1170		435
1100	\$	816,923

Item 2 Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1972-73

COST ITEM	THOUSANDS OF DOLLARS	
	TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Direct wages and salaries	\$ 368,485	\$ 366,538
b. All other direct costs (including materials and supplies)	291,724	290,417
c. Indirect costs reimbursed or reimbursable	156,704	155,899
d. Other indirect costs defrayed with institution's own funds (see instructions)	10	
e. Total (sum of a to d) ^a	\$ 816,923	\$ 812,854

Item 3 Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1972-73

TYPE OF R&D ACTIVITY	ESTIMATED PERCENT DISTRIBUTION (NO DECIMALS)	
	TOTAL (1)	FEDERAL GOVERNMENT (2)
a. Basic research	36%	36%
b. Applied research	28%	28%
c. Development	36%	36%
d. Total (sum of a to c) ^a	100%	100%

^aTotals in items 1h, 2e (Col. 1) and 4i (Col. 1) should be identical. Similarly, figures reported in items 1a, 2e (Col. 2) and 4i (Col. 2) should be identical. If figures for the foregoing items are not consistent, please give reasons in "Remarks" at the end of the questionnaire.

Item 4	Total and federally financed current expenditures for separately budgeted research and development, by field of science, 1972-73		THOUSANDS OF DOLLARS	
	FIELD OF SCIENCE	TOTAL (1)	FEDERAL GOVERNMENT (2)	
a. Engineering (total)	1410	\$ 253,581	\$ 252,714	
b. Physical sciences (total)	1420	\$ 427,428	\$ 425,358	
(1) Astronomy	1421	28,055	27,728	
(2) Chemistry	1422	74,229	73,958

Reproduction of Covering
Letter and Instructions¹

Dear Sir:

The National Science Foundation requests your survey of scientific activities of institutions. Timely statistics from the survey are very important to the National Science Board in appraising the national efforts. Beginning this year, the survey will be on a new basis. Dr. H. Guyford Stever, NSF Director, announced this on May 7, 1973, and a copy of the message is enclosed for your information.

The few changes between the enclosed survey and those shown in the notice of modifications contained in the instructions. Please note that a postcard is enclosed that should be returned immediately upon receipt of the questionnaire has reached you and with the persons to be contacted if questions arise in any of the phases of the survey.

Please complete and return the form to us by the date indicated. Institutional responses are critical to the survey and will be processed as soon as they are received. The inclusion in the National Science Board's annual report, which highlights the latest "status of scientific research," in which survey data were used extensively in that report.

Please note that Item 5 requests estimates of mental research, even though we realize that it is difficult to report on. One of the recommendations of the recent NSF seminar on departmental research is that reporting be provided as part of our survey. The enclosed letter suggests three methods to estimate departmental research.

¹The questionnaires used in the survey are reproduced in appendices B and C

NATIONAL SCIENCE FOUNDATION

WASHINGTON, D.C. 20550

APPENDIX D

Production of Covering
Letter and Instructions

Dear Sir:

The National Science Foundation requests your cooperation in its eighth survey of scientific activities of institutions of higher education. Timely statistics from the survey are very important to NSF and the National Science Board in appraising the national and academic R&D efforts. Beginning this year, the survey will be conducted on an annual basis. Dr. H. Guyford Stever, NSF Director, notified your president of this on May 7, 1973, and a copy of the message is enclosed for your information.

The few changes between the enclosed survey form and last year's are shown in the notice of modifications contained on the last page of the instructions. Please note that a postcard is included in the package that should be returned immediately upon receipt. It will assure us that the questionnaire has reached you and will provide the names of persons to be contacted if questions arise in the follow-up and editing phases of the survey.

Please complete and return the form to us by October 31, 1973. Early institutional responses are critical to the success of the survey. We will be processing the data as soon as they are returned to us for inclusion in the National Science Board's annual report to the President which highlights the latest "status of science" indicators. Last year's survey data were used extensively in that report.

Please note that Item 5 requests estimates of expenditures for departmental research, even though we realize that many institutions have difficulty in reporting it. One of the recommendations of university business officers and institutional researchers who participated in a recent NSF seminar on departmental research was that guidelines in reporting be provided as part of our survey. The sheet attached to this letter suggests three methods to estimate departmental research funds.

Materials used in the survey are reproduced in appendixes B

ATTACHMENT

Guidelines to Report Expenditures for Departmental Research

Expenditures for departmental research are estimated at nearly \$680 million in 1972, or about one-fifth of total academic research. Departmental research, which is a concomitant to the teaching mission, is rarely identified in university record-keeping. Nearly one-half of the Nation's institutions of higher education are unable to estimate its volume in expenditures, including some of the most prominent university centers of advanced research.

A seminar on departmental research was held recently by the National Science Foundation. The participants consisted of about 20 persons drawn from major universities, government, and higher education professional associations.

Their discussion revealed three methods that institutions might use to estimate expenditures for departmental research, as follows:

1. Request that department chairmen give estimates of the percentage of time that their own faculty spend on departmental research. The survey coordinator then can combine the estimates and report those percentages in Item 5, column 2;
2. Either ask the department chairmen to estimate, or estimate departmental research from central records as a residual. First estimate the proportion of time spent by faculty on instruction, organized research, public service, and administration—the residual to departmental research;
3. For institutions that have faculty activity reporting systems, use the reports as a basis of estimating the proportion of time spent on departmental research.

Please note that revenues produced from charges for medical services and for user charges at agricultural experiment stations should be included as departmental research to the extent that they support research, even though these revenues may not be thought to be institutional resources and may not be included in your accounting records.

The detailed findings and recommendations from the NSF seminar on departmental research will be published and distributed at a later date.

NSF recognizes that some of the data including breakdowns of expenditures development, and departmental research percentage estimates rather than absolute only national aggregates for these statistics individual institutions will not be included.

We are enclosing a copy of a summary that it will demonstrate that NSF is statistics. A detailed report will be you would like to have any additional please let us know and we will try to

Your continued cooperation in reporting greatly appreciated. If you have questions or Mr. Ronald Biggar. We may be reached

Enclosures

Expenditures for Departmental Research

research are estimated at nearly \$680 million, or one-fifth of total academic research. Departmental research, concomitant to the teaching mission, is not included in the record-keeping. Nearly one-half of the total research for higher education are unable to estimate its expenditures, although some of the most prominent university

research was held recently by the National Science Foundation. Participants consisted of about 20 persons drawn from higher education, government, and higher education professional

Some of the methods that institutions might use to estimate departmental research; as follows:

1. Department chairmen give estimates of the amount of research that their own faculty spend on. The survey coordinator then can compare these estimates and report those percentages in

2. Department chairmen to estimate, or have their faculty estimate research from central records. 3. Estimate the proportion of time spent on departmental research, instruction, organized research, administration--the residual to

4. Have faculty activity reporting departments as a basis of estimating the amount of research on departmental research.

5. Charges for medical services and other departmental experiment stations should be included to the extent that they support research, even if they are not thought to be institutional resources. 6. Review accounting records.

7. Recommendations from the NSF seminar on departmental research are being prepared and distributed at a later date.

NSF recognizes that some of the data are "soft" estimates. These data, including breakdowns of expenditures into basic and applied research, development, and departmental research are requested in the form of percentage estimates rather than absolute amounts. NSF will publish only national aggregates for these statistics so that reports by individual institutions will not be identified.

We are enclosing a copy of a summary of last year's data with the hope that it will demonstrate that NSF is trying to provide early release of statistics. A detailed report will be published in a few months. If you would like to have any additional data from the survey listings, please let us know and we will try to provide them to you.

Your continued cooperation in reporting timely data to NSF will be greatly appreciated. If you have questions, please address them to me or Mr. Ronald Biggar. We may be reached on Area Code 202, 282-7790.

Sincerely yours,

Richard M. Berry

NATIONAL SCIENCE FOUNDATION
WASHINGTON D C 20550

SURVEY OF SCIENTIFIC ACTIVITIES OF INSTITUTIONS
OF HIGHER EDUCATION

(Current and Capital Expenditures for Research,
Development, and Instruction in the Sciences and Engineering, FY 1973)

INSTRUCTIONS AND DEFINITIONS

The National Science Foundation requests your cooperation in completing the attached questionnaire covering the financial characteristics of your institution as they relate to the sciences and engineering.

Your cooperation in returning the questionnaire by October 31, 1973, will be greatly appreciated.

Information on some items may not be available from records normally maintained by your institution. Reasonable estimates for such items will be satisfactory. Where it is not possible to identify expenditures for the year, revenues may be substituted. Enter "0" as an item total (lines 1100, 1200, 1300, etc. are item totals) rather than leave the total blank.

This survey is generally comparable to that conducted by this office in 1972, covering financial expenditures for academic year 1971-72. Where data reported in the current survey differ significantly from those reported in the previous survey, please indicate the reasons for the difference, such as the inclusion of unreimbursed indirect costs in the space provided for "Remarks," at the end of the questionnaire. Copies of your institution's earlier responses are available upon request.

If you have any questions regarding information requested on this form or if you need additional forms, write or telephone Mr. Ronald Biggar at the Universities and Nonprofit Institutions Studies Group (202-282-7790), National Science Foundation, 1800 "G" Street, N.W., Washington, D.C. 20550.

The financial survey covers the fiscal year beginning on July 1, 1972, and ending June 30, 1973, or your institution's equivalent fiscal year ending in 1973.

Include data for branches and all organizational units of your institution, such as medical schools and agricultural experiment stations. Also include hospitals or clinics owned, operated, or controlled by universities, and integrated operationally with the clinical programs of your medical schools. Exclude data for Federally Funded R&D Centers administered by universities. A separate questionnaire will be mailed directly to each Center. See page 3 for a list of Federally Funded Research and Development Centers (FFRDC's). FFRDC's, as designated by Federal agencies, are R&D organizations exclusively or substantially financed by the Government and administered on a contractual basis by educational institutions or other organizations.

In completing this form, respondents may find it useful to refer to principles of financial accounting for institutions of higher education presented in *College and University Business Administration* (Washington, D.C. American Council on Education, 1968).

All financial data requested on this form should be reported in thousands of dollars, for example, an expenditure of \$25,342 should be rounded to the nearest thousand dollars and reported as \$25.

Section A—Current Expenditures for Separately Budgeted R
(Expenditures for instruction and departmental research and facilities are to be excluded here but reported in Section B)

Definitions

Research and development includes basic and applied research in the sciences and in engineering, and design and development of prototypes and processes.

Research is a systematic, intensive study directed toward fuller knowledge of the subject studied. Research may be either basic or applied.

Basic research is directed toward an increase of knowledge; it is research where the primary aim of the investigator is a fuller knowledge or understanding of the subject under study rather

than a practical application. Applied research is basic research directed toward the investigation of knowledge.

Development is knowledge production devices, systems not included in testing.

Classification of Fields of Science

Listed below are illustrative disciplines included in engineering which separate data are requested in items 4, 5, and 6 of the questionnaire.

- ENGINEERING
 - AERONAUTICAL
 - Aerodynamics
 - ASTRONAUTICAL
 - Aerospace, space technology
 - CHEMICAL
 - Petroleum, petroleum refining, process
 - CIVIL
 - Architectural, hydraulic, hydrologic, marine, sanitary and environmental, structural, transportation
 - ELECTRICAL

ACTIVITIES OF INSTITUTIONS FOR EDUCATION

Expenditures for Research,
in the Sciences and Engineering, FY 1973

AND DEFINITIONS

The financial survey covers the fiscal year beginning on July 1, 1972, and ending June 30, 1973, or your institution's equivalent fiscal year ending in 1973.

Include data for branches and all organizational units of your institution, such as medical schools and agricultural experiment stations. Also include hospitals or clinics owned, operated, or controlled by universities, and integrated operationally with the clinical programs of your medical schools. Exclude data for Federally Funded R&D Centers administered by universities. A separate questionnaire will be mailed directly to each Center. See page 3 for a list of Federally Funded Research and Development Centers (FFRDC's). FFRDC's, as designated by Federal agencies, are R&D organizations exclusively or substantially financed by the Government and administered on a contractual basis by educational institutions or other organizations.

In completing this form, respondents may find it useful to refer to principles of financial accounting for institutions of higher education presented in *College and University Business Administration* (Washington, D. C., American Council on Education, 1968).

All financial data requested on this form should be reported in thousands of dollars, for example, an expenditure of \$25,342 should be rounded to the nearest thousand dollars and reported as \$25

Definitions

Research and development includes basic and applied research in the sciences and in engineering, and design and development of prototypes and processes.

Research is a systematic, intensive study directed toward fuller knowledge of the subject studied. Research may be either basic or applied.

Basic research is directed toward an increase of knowledge, it is research where the primary aim of the investigator is a fuller knowledge or understanding of the subject under study rather

than a practical application thereof.

Applied research is directed toward the practical application of knowledge. The definition of applied research differs from the definition of basic research chiefly in terms of the objectives of the investigator.

Development, is the systematic use of knowledge directed toward the design and production of useful prototypes, materials, devices, systems, methods, or processes. It does not include quality control or routine product testing.

Classification of Fields of Science

Listed below are illustrative disciplines included in engineering and the various fields of science for which separate data are requested in items 4, 5, and 6 of the questionnaire.

Survey Items*

Item 1 Current expenditures for separately budgeted research and development, by source of funds, 1972-73. Include indirect costs (see item 2).

Source of funds refers to immediate sources rather than ultimate sources of funds concerned. For example, funds received by your institution from a foundation should be reported under that source, even if industry was the original source of some or all of the foundation's funds.

Under *Federal Government* (item 1a) include grants and contracts earmarked for research and development by all agencies of the Federal Government. Exclude R&D contracts subcontracted by your institution to be performed by other organizations.

Under *State government* (item 1b) include funds designated for R&D by the State government and its agencies. Include here State

funds supporting research and development at agricultural experiment stations.

Under *local government* (item 1c) include funds designated for R&D by county, municipal, or other local governments and their agencies.

Under *Foundations and voluntary health agencies* (item 1d) include grants specified for research and development. Funds from foundations which are affiliated with or grant solely to your institution should be included under *Institution's own funds* (item 1f). Funds specifically designated for R&D and derived from a health agency that is a unit of a State or local government should be reported under *State or local government*. Funds from professional societies such as the American Medical Association and the American Dental Association should be reported under *Other sources* (item 1g).

Under *Industry* (including trade associations) (item 1e) include all grants and contracts allocated to R&D by profitmaking organizations, whether engaged in production, distribution, research, service, or other activities. Do not include grants and contracts from non-profit foundations, financed by industry, which should be reported under *Foundations*.

Under *Institution's own funds* (item 1f) include any funds which the institution was free to designate for R&D and which were in fact so budgeted. The sources of these funds may include endowment income, tuition and fees, general-purpose State or local government appropriations, and general-purpose grants from industry, foundations, health agencies or other outside sources, provided these were unrestricted funds and were utilized by your institution for separately budgeted R&D. Do not include any salaries or other expenditures which are budgeted as instruction or departmental research even though these salaries or other expenditures contribute to the performance of separately budgeted

R&D. Indirect costs of separately budgeted projects funded by the institution should be included as well as direct costs.

Under *Other sources* (item 1g) report any additional funds received from outside sources other than those already noted, and which were earmarked for R&D by the source. Examples include gifts, grants, or contracts received from private individuals or professional societies, and designated for R&D by them.

Item 2 Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1972-73.

The purpose of this question is to obtain a cost breakdown of the current expenditures associated with the performance of research and development at your institution. For each of the cost items indicate the amount funded by the Federal Government (column 2). The total shown in item 2e (column 1) should be the same as the totals in item 1h and item 3d (column 1). Similarly, the total shown for Federal Government in item 2e (column 2) should be the same as totals in item 1a and in item 3d (column 2).

In item 2a, report direct salaries and wages charged to separately budgeted R&D accounts of your institution. Include costs of fringe benefits only where they can be directly attributed to the costs of separately budgeted research and development, otherwise, include such costs under item 2c, indirect costs reimbursed or reimbursable.

In item 2b, report all expenditures for materials and expendable equipment.

In item 2c, report all indirect (overhead) costs attributable to separately budgeted R&D expenditures which were reimbursed or will be reimbursed by the sponsoring organization.

In item 2d, report all indirect costs associated with separately budgeted R&D expenditures which were incurred by your institution and which are not reported in item 2c. For example, item 2d should reflect 1) an estimate of the overhead costs associated with R&D financed by your own institution; 2) indirect costs associated with federally financed R&D projects but borne by your institution in accordance with cost-shar-

Item 2 Total and federally financed current expenditures for separately budgeted research and development, by major cost item, 1972-73.

The purpose of this question is to obtain a cost breakdown of the current expenditures associated with the performance of research and development at your institution. For each of the cost items indicate the amount funded by the Federal Government (column 2). The total shown in 2c (column 1) should be the same as the totals in item 1h and item 3d (column 1). Similarly, the total shown for Federal Government in item 2c (column 2) should be the same as totals in item 1a and in item 3d (column 2).

In item 2a, report direct salaries and wages charged to separately budgeted R&D accounts of your institution. Include costs of fringe benefits only where they can be directly attributed to the costs of separately budgeted research and development, otherwise, include such costs under item 2c, indirect costs reimbursed or reimbursable.

In item 2b, report all expenditures for materials and expendable equipment.

In item 2c, report all indirect (overhead) costs attributable to separately budgeted R&D expenditures which were reimbursed or will be reimbursed by the sponsoring organization.

In item 2d, report all indirect costs associated with separately budgeted R&D expenditures which were incurred by your institution and which are not reported in item 2c. For example, item 2d should reflect 1) an estimate of the overhead costs associated with R&D financed by your own institution, 2) indirect costs associated with federally financed R&D projects but borne by your institution in accordance with cost-shar-

ing agreements, or 3) the difference between indirect cost rates allowed by the sources of R&D funds and the indirect costs incurred by your institution. For example, an institution with a Federal audited indirect cost rate of 60 percent of wages and salaries which has spent \$1 million for wages and salaries would have \$600,000 in indirect costs. If the amount in item 2c is only \$400,000, the unrecovered and unrecoverable remainder, \$200,000, should be reported in item 2d. If your computation differs from the above method, please explain in the Remarks Section.

Item 3 Total and federally financed current expenditures for separately budgeted research and development, by type of R&D activity, 1972-73.

Types of R&D activity for which separate data are requested (basic research, applied research, and development) are defined on pages 1 and 2 of the Instructions. It is recognized that your records may not yield exact figures on amounts expended for each of the three categories. Therefore, percentage estimates of the breakdown will be satisfactory. The "100 percent" in item 3d refers to the total and federally funded R&D expenditures reported in 1h and 1a.

Item 4 Total and federally financed current expenditures for separately budgeted research and development, by field of science, 1972-73. Include indirect costs.

In column 1, include all current expenditures for total separately budgeted R&D, by field of science as shown on page 2, whether such expenditures derive from outside sources or your institution's own funds, and whether from contracts, grants, gifts, endowments (income or principal), State and local government appropriations, or other sources, provided the funds were separately budgeted for R&D and were expended in the fiscal year 1972-73. Also include any indirect costs reimbursed or reimbursable by outside sponsors of R&D projects.

In column 2, classify total separately budgeted R&D financed by the Federal Government, by field of science.

Totals in item 4, (columns 1 and 2) should equal 1h and 1a, respectively.

Section B—Current Expenditures for Instruction and Departmental Research in the Sciences and Engineering

(Expenditures for capital equipment and facilities are to be excluded here but reported in Section C.)

Current expenditures for instruction and departmental research include the salaries of department heads, faculty members, secretaries and technicians, office and laboratory supplies, and other expenses. All expenditures incurred for instructional programs in science and engineering subjects for students pursuing credit courses of study which lead generally to a certificate or degree should be included.

Item 5 Current expenditures for instruction and departmental research in the sciences and engineering, by field of science, 1972-73.

Report all current *direct* expenditures of the instructional departments, colleges, and schools of the institution in the sciences and engineering, by field of science.

In column 2, percentage estimates for departmental research will be sufficient. It is recognized that the accounting systems of institutions of higher education may not yield an exact breakdown between expenditures for

instruction and expenditures for departmental research. However, estimates of the proportion of faculty time devoted to departmental research may serve as a useful guideline in estimating the share of departmental expenditures allocable to departmental research.

Departmental research means research activities that are not separately budgeted and accounted for. It does not include externally funded or other separately budgeted research. Include institutional funds used to defray the direct cost of separately budgeted research, exclude such funds from the amounts reported in Section A.

Note The time spent by faculty or other staff members in supervising the thesis work of graduate students should be reported as an expenditure for instruction, not for departmental research. *If no departmental research is performed by your organization, please report zero in column 2.*

Section C—Capital Expenditures for Scientific and Engineering Facilities and Equipment for Research, Development, and Instruction

This section covers capital expenditures for scientific and engineering facilities and equipment for research, development, and instruction during 1972-73. Report funds expended during 1972-73 for facilities which were in process in that year and for facilities which were completed that year. Expenditures for administration buildings, steam plants, residence halls, and other such facilities should be excluded unless utilized principally for research, development, or instruction in engineering or in the sciences. Land costs should be excluded.

Facilities and equipment expenditures include the following: (a) fixed equipment such as built-in equipment and furnishings (hoods, fixed laboratory tables and benches, and ventilation equipment); (b) movable scientific equipment such as oscilloscopes, pulse-height analyzers,

spectrometers, and plasma and protein separators, (c) movable furnishings such as bookcases, desks, file cabinets, tables, and simple tools, (d) architect's fees, site work, extension of utilities, and the building costs of service functions such as integral cafeterias and bookstores of a facility; and (e) facilities constructed to house separate components such as medical schools, teaching hospitals and university-controlled research centers; and (f) special separate facilities used to house scientific apparatus such as hypersonic tunnels, accelerators, oceanographic vessels, and computers.

Current-fund expenditures for capital equipment and facilities should be reported in this section and should be excluded from Sections A and B. Expenditures from plant and other funds for facilities and equipment should likewise be included in this section.

Modifications since the 1972 Su

- 1) Separate data for medical schools are ~~not~~ required. Please include medical school expenditures as part of your institution total.
- 2) State funds that support research and development at agricultural experiment stations should be considered as State support rather than institution's own funds.
- 3) The foundation and voluntary health agency lines are now combined.
- 4) See page 4 for a more complete definition of unreimbursed indirect costs and an example of how such a figure might be developed.
- 5) A list of Federally Funded Research and Development Centers is provided on page 3.

- 6) "Com separa Scienc
- 7) "Envir separa

are to be excluded here but reported in Section C

instruction and expenditures for departmental research. However, estimates of the proportion of faculty time devoted to departmental research may serve as a useful guideline in estimating the share of departmental expenditures allocable to departmental research.

Departmental research means research activities that are not separately budgeted and accounted for. It does not include externally funded or other separately budgeted research. Include institutional funds used to defray the direct cost of separately budgeted research, exclude such funds from the amounts reported in Section A.

Note. The time spent by faculty or other staff members, in supervising the thesis work of graduate students should be reported as an expenditure for instruction, not for departmental research. *If no departmental research is performed by your organization, please report zero in column 2.*
