#### ABSTRACT

The document contains the detailed tabulation of the data collected in an investigation of the degree to which social and mobility factors are important for the success of secondary and postsecondary students in vocational and technical training programs. Chapter 1 presents information on the relationship of social competency to mobility factors in the form of 122 5x4 matrices for the nine geographic zones of Mississippi, categorized in the following occupational areas: trade and industry, technical education, business and office, marketing and distribution, and health education. Matrices for each area contain data for secondary and postsecondary students and a zone composite of the students. Matrices are also presented for State composites of each occupational area, secondary and postsecondary students, and a State total for all students. Chapter 2 presents information on the relationship of mobility and social factors to personal and contextual factors. Data were derived from questionnaires completed by students. Mobility and social data are tabulated and discussed separately for secondary and postsecondary students. Twenty-two general conclusions from the study are outlined. The questionnaires used are appended. (Author/EC)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from

#### CHAPTER I

THE MATRICES PATTERNS OF THE RELATIONSHIP OF SOCIAL COMPETENCY TO MOBILITY FACTORS OF VOCATIONAL AND TECHNICAL STUDENTS

The relationship of social competency and mobility factors of vocational and technical students is shown in matrix pattern form. Each of the nine zones within the state, as shown in Figure I, is exhibited separately. The matrices are categorized into occupational areas in the following chron-logocial order, per zone:

Trade and Industrial Programs

Secondary Trade and Industrial Students:

Post Secondary Trade and Industrial Students

· Zone Composite of the Trade and Industrial Students

Technical Education Programs

Secondary Technical Students

Post Secondary Technical Students

Zone Composite of Technical Students

Business and Office Programs

Secondary Business and Office Students

Post Secondary Business and Office Students

Zone Composite of Business and Office Students

Marketing and Distribution Programs

Secondary Marketing and Distribution Students

Post Secondary Marketing and Distribution Students

Zone Composite of Marketing and Distribution Students

Health Occupation Programs

Post Secondary Health Occupation Students
Zone Composite of Health Occupation Students.

After each occuaptional category is exhibited, in a matrix pattern, a zone composite for secondary students and a zone composite for post secondary students is exhibited.

After the composite of secondary students and post secondary students per zone, a zone composite is given in matrix form.

The last section of Chapter III is devoted to State Composite, per occupational area, A State composite for Secondary Vocational and Technical Students, A State composite for Post Secondary Vocational and Technical Students, and a State total for all students.

Student representation is not present in all of the above mentioned occupational categories in each zone. Zone I has student representation in all of the occupational areas. Zone II had no Marketing and Distribution student representation. Zone III had no Marekting and Distribution student representation. Zone IV has no Secondary Business and Office student representation nor any Health Occupation student representation. Zone V has no Business and Office student representation nor any Post Secondary Marketing and Distribution student representation. Zone VI had no Business and Office student representation.

representation nor any Marketing and Distribution student representation. Zone VII had no Business and Office student representation nor and Secondary Marketing and Distribution student representation. Zone VIII had no Post Secondary Business and Office student representation nor any Health Occupation student representation. Zone IX had no Secondary Technical student representation nor any Secondary Marketing and Distribution student representation.

The data presented in this section is presented in grid form. A sample grid for interpretation purposes is shown in Figure I. The grid blocks are numbered in the sample form to enhance interpretation. The interpretation of each block is as follows:

Block number 1 indicates the number of students who will live and work in the community but need little or no social change.

Block number 2 indicates the number of students who will not move but commute and need little or no social change.

Block number 3 indicates the number of students who will move away but plan to return and need little or no social change.

Block number 4 indicates the number of students who will relocate as employment indicates but need little or no social change.

Block number 5 is the total of block 1, 2, 3, and 4 who need little or no social change.

TABLE

#### CHAPTER II

The Relationship of Mobility Factors and Social Factors of Post Secondary Students and Secondary Students to Personal and Contextual Factors

The vocational students in secondary institutions and post secondary institutions are representative of various mobility factors and social factors that tend to cluster around certain groups of people within various geographical locales.

Various types of data for students who participated in this section of the study were extracted from question-naires completed by the students; therefore, the total factors represented in Volume II will not agree with total factors represented in Volume I. Volume I data was taken from the faculty information gird cards:

The tables in this Volume are given in %/Yes, %/T, %/No, and %/T. The %/Yes indicates the percentage of those who answered yes to the various questions in relationship to the mobility factors and social factors. The %/No indicates the percentage of those who answered no to the various questions in relationship to the various mobility factors and social factors. The %/T's indicates the percentages in relationship to the total responses on the tables.

The mobility factors and social factors for secondary students and post secondary students are in separate sections on this chapter. The secondary section is located in Part I and the post secondary section is located in Part II.

PART I

#### Secondary

This part includes the mobility and social data for secondary vocational students.

Ninety three per cent (1665) of 1802 secondary students indicated that they lived with their parents, as shown in Table CXXIII. Of the 1665 students, who indicated that they intended to live and work in the community, 16 per cent of the 1665 students were willing to commute to work but not move their residence from the community. Nineteen per cent of the 1802 students, who lived with their parents, indicated that they would move away for employment but planned to return, and twenty five per cent of the 1665 students would relocate as employ-Seven per cent of the 1802 students did not re-. ment demanded. side with their parents. Of the 1665 students who indicated that they lived with their parents fifty two per cent indicated that they would not move out of the home community to work. Of the 137 students who did indicate that they did not live with their parents fifty four per cent indicated that they would not move out of the community to work. ...

As shown in Table CXXIV, ninety three per cent (1679) of 1803 secondary students indicated that they liked for people to know the kind of carear for which they were training. Thirty one per cent of the 1803 students, who liked for people to know the kind of career for which they are training, indicated that they

would live and work in the community, while 21 per cent of
the 1803 students planned to live in the community but planned
to return to the community, and twenty three per cent of the
1803 students indicated that they would relocate as employment demands. Seven per cent (124) of the 1803 secondary students did not like for people to know the kind of career for
which they (the students) were training. Fifty three per cent
of the 1679 students who indicated that they liked for people
to know the kind of career for which they (the students) were
training were not willing to move outside of the community to
work. Fifty two per cent of the students who indicated that
they did not like for people to know the kind of career for
which they (the students) were training indicated that they
would not move their residence outside of the community to work.

Ninety four per cent (1694) of 1804 students indicated that their parents felt that the career for which the students were training was important, as shown in Table CXXXV. Fifty six per cent of the 1694 students who indicated that their parents felt that the career for which the students were training was important were not willing to move their residence away from the community to work. Six per cent (110) of 1804 students indicated that their parents felt that the career for which the students were training was not important. Sixty nine per cent of the 110 students were not willing to move their residence away from the community to work.

Seventy four per cent (1318) of 1805 secondary students indicated that they had received secondary vocational counseling, as shown in Table CXXVI. Twenty three per cent of the 1805 students indicated that they planned to live and work in the community, while fifteen per cent of the 1805 students indicated that they would commute out of the community to work but would not move. Fifteen per cent of the 1805 secondary students planned to move away with the idea of returning to the community, and twenty one per cent of the (1318) students who received, vocational counseling at the secondary level will relocate as employment demanded. Twenty four per cent (487) of 1805 students did not receive secondary vocational counseling. Thirty two per cent of the 487 students, who did not receive vocational counselint, indicated that they intended to live and work in the community, and twenty eight per cent of the 487 students indicated that they were willing to commute to work outside of the the community but would not move out of the community to live. teen per cent of the 487 students indicated that they would move away from the community with the idea of returning, and 24 per cent indicated that they would relocated as employment demanded. Forty eight per cent of the 1318 students, who received vocational counseling at the secondary level, indicated that they would not move their residence outside of the home community to work, while 60 per cent of the 487 students who indicated that they did not receive any vocational counseling at the secondary level,

indicated that they would not move their residence outside of the community to live and work.

Twenty nine per cent (509) of 1789 secondary students indicated that they were between 12 years and 16 years of age, as shown in Table CXXVII. Seventy one per cent (1280) of 1789 secondary students indicated that they were between 17 years of age and 22 years of age. Fifteen per cent of the 509 students, who were between the ages 12 years and 16 years, indicated that they would not move away from the community to live; while 39 per cent of 1280 students, who were between the ages of 17 years and 22 years, indicated that they would not move away from the community to live.

Seventy five per cent (1313) of 1772 secondary students indicated that their parents owned their home; while 25 per cent (459) of the secondary students indicated that their parents did not own their home, as shown in Table CXXVIII. Sixty seven per cent of the 1313 students whose parents owned their home, indicated that they would not move their residence outside of the community to live; while 52 per cent of 459 students whose parents did not own their home indicated that they would not move their residence outside of the community.

Forty three per cent (773) of 1788 secondary students indicated that their parents had considerable influence on the students' choice of career; while fifty seven per cent (1015) of 1788 students indicated that their parents had little or no influence on the students' choice of career, as shown in Table

CXXVIX. Twenty four per cent of the 773 students, who indicated that their parents had considerable influence on the students' choice of career, indicated that they would not move outside of the community to live; while fifty two per cent of the 1015 students, who indicated that their parents had little or no influence on the students' choice of career, indicated that they would move outside of the community to live.

Thirty eight per cent (708) of 1793 secondary students indicated that they owned a car; while 62 per cent (1085) of the 1793 secondary students indicated that they did not own a car, as shown in Table CXXX. Fifty six per cent of the 708 students who owned a car indicated that they would move outside of the community to live; while fifty four per cent of the 1085 students, who indicated that they did not own a car, indicated that they would not live outside of the community.

Twenty three per cent (418) of 1803 secondary students worked part-time in the occupational area for which they were training. Seventy seven per cent (1385) of the 1803 secondary students did not work part-time in the occupational area for which they were training, as shown in Table CXXXI. Sixty eight per cent of those who worked part-time in their occupational area, indicated that they would not move their residence outside of the community; while fifty per cent of those who indicated that they were not working part-time in their chosen occupational area, indicated that they would not move their residence outside of the dicated that they would not move their residence outside of the

#### PART II

#### Post Secondary

The post secondary vocational students, who complete a post secondary career training program are expected to become productive members of society and to function within the intricate system of personal, social, and mobility factors that relate directly and indirectly to everyday living. Personal, social and mobility data of post secondary vocational students of Mississippi bring into view various related aspects of personal social, and mobility factors.

Twenty eight per cent of 2089 respondents did take vocational training in high school, and 30 per cent of the 2089 respondents remembered receiving vocational counseling in the high school program, and 21 per cent of those receiving high school counseling felt that the counseling had an influence on their choice of training program.

A total of 2088 students responded to the question about whether or not students liked for people to know about the kind of career for which the student was training.

Ninety eight per cent of the students liked for people to know the kind of career for which the student is training. The highest percentage of those who like for people to know the kind of career for which they are training will relocate as employment demands.

Ninety eight per cent (2055) of 2088 post secondary students indicated that they liked for people to know the kind of career for which they (the students) were training, as shown in Table CXXXV. Two per cent (33) of the 2088 post secdonary students indicated that they did not like for people to know the kind of career for which they (the students) were training. Fifty three per cent of the 2055 students, who indicated that they liked for people to know the kind of career for which they were training, indicated that they would not move their residence out of the community, while 51 per cent of the 33 students, who did not like for people to know the kind of career for which they were training, indicated that they would not move their residence out of the community.

Ninety seven per cent (1996) of 2043 post secondary students indicated that their parents felt that the career for which they (the students) were training was important, while three per cent (47) of the 2043 students indicated that their parents felt that the career for they (the students) were training was not important, as shown in Table CXXXVI. Fifty three per cent of the 1996 students, whose parents felt that the career for they (the students) were training was important, indicated that they would not move their residence out of the community, while 53 per cent of the 47 students, who indicated that they would not move their residence out of the community.

Ninety nine per cent (2051) of 2065 post secondary students

#### CHAPTER III

#### Conclusions

The conclusive factors of the matrices of the relationship of social competency to mobility factors of vocational (
students should be taken from the composite section of Chapter
I, Volume II.

#### Secondary students

- Ninety three per cent of the secondary vocational students. lived with their parents; living with the parents while in career training did not tend to influence the mobility patterns of the students.
- Ninety three per cent of the secondary vocational students liked for people to know the know the kind of career for which they were training; their attitude toward wanting people to know the kind of career for which they were training did not tend to influence mobility patterns.
- 3. Ninety four per cent of the students' parents felt that the career for which the students were training was important;

  There was a slight tendency for those students, whose parents did not feel that the career for which the students were training was important, to be more mobile than those whose parents felt that the career for which the students were training was important.
- 4. Seventy four per cent of the secondary students received vocational counseling at the secondary level.

- 5. Age categories of 12 years to 16 years and 17 years to 22 years did not tend to influence mobility.
- 6. Home ownership did not tend to influence the mobility pattern of the students.
- 7. Forty three per cent of the secondary students had considerable influence of the students choice of career training; this influence did not tend to affect the mobility patern of the students.
- 8. Thirty eight per cent of the secondary students owned cars; however car ownership did not tend to influence the mobility pattern of the students.
- 9. Social competence in the students did not tend to relate to the students' positive or negative concept that he has in the career for which he is training.
- 10. Part time employment within the occupational area for which the student is training, while in the training program, does not tend to affect social competence.

#### Post Secondary Students

- 11. Ninety eight per cent of the post secondary students liked for people to know the kind of career for which they were training; however this concept did not affect the mobility patterns of the students:
- 12. Ninety seven per cent of the post secondary students' parents felt that the career for which the students were training was important; parental attitude did not tend to affect mobility.

- 13. Mobility does not tend to relate to the students' concept.

  of the career for which he is training.
- There is a tendency for the single students to be slightly more mobile than the married students; thirty two per cent of the post secondary students were married.
- Property ownership within the family or business ownership within the family does not tend to affect the mobility pattern of the students.
- 16. Student membership within a club or lodge within the community tends to affect the mobility patterns of students; students who are active in a club or lodge within the community are less likely to move from the community than those students who are not active in a club or lodge.
- 17. Active church membership within the community does not tend to affect the mobility patterns of the students.
- 18. Students' interests in hunting and fishing tends slightly to influence mobility patterns in that those students have an interest in hunting and fishing slightly tend to be less mobile.
- 19. Car ownership does not affect the mobility of the post secondary student.
- 20. Living with parents while in a career training program does not tend to affect the mobility of the students.
- 21. The post secondary students whose parents felt that the career for which the students were training was important

- tended to be more socially competent than those students who parents felt that the career for which the students were training was not important.
- 22. Students who have a postive concept about the career for which they are training tend to be more socially competent than those students who do not have postive concepts about the career for which they are training.
