### ABSTRACT

Reported are procedures used in a Wisconsin public school system to implement 1973 state legislation mandating education of all handicapped children and stipulating that a handicapped child should be educated according to his individual needs. Included are a description of the multidisciplinary team approach and an outline of screening, referral, assessment, staffing, and evaluation procedures. The second half of the document consists of sample forms for such purposes as referral, screening, multidisciplinary team assignments, and obtaining parent approval. (LS)

PROCEDURES FOR IMPLEMENTING CHAPTER 89, LAWS OF 1973 IN THE

MERRILL AREA PUBLIC SCHOOLS

Spring 1974

### LEGAL BASIS FOR THE PROGRAM AND SERVICES

A legal basis for the education of all children and adolescents with a handicapping condition is provided in the Wisconsin Constitution and specific Wisconsin Statutes.

Chapter 89 of the Laws of 1973 is intended to formulate a comprehensive legislative and public policy for the education of handicapped children or children with exceptional educational needs. Several basic tenets underlie this chapter:

- The concept that <u>all</u> handicapped children <u>must</u> be educated. This shifts Wisconsin's legislation for the provision of special education from permissive to mandatory.
- A handicapped child should be educated according to his individual educational needs. A handicapped child with exceptional educational needs means "any child who has a mental, physical, emotional, or learning disability which, if the full potential of the child is to be attained, requires educational services to the child to supplement or replace regular education:
  - (a) Physical, crippling or orthopedic disability.
  - (b) Mental retardation or other developmental disabilities.
  - (c) Hearing impairment.
  - (d) Visual disability.
  - (e) Speech or language disability.
  - " (f) Emotional disturbance.
    - (g) Learning disability.
    - (h) Pregnancy, including up to 2 months after the birth of the child or other termination of the pregnancy.
    - (1) Any combination of conditions named by the state superintendent or enumerated in pars. (a) to (h)."

### AN OVERVIEW OF ORGANIZATIONAL PROCEDURES

The organizational procedures of screening, referral, assessment, placement and evaluation are necessary aspects of the Special Education Program. They provide an orderly guideline for increasing the probability of delivery of service to the direct target, the child, and the indirect targets of family, school, and community.

The screening, referral, assessment, placement, and evaluation procedures used in the program for the education of handicapped children or children with exceptional educational needs will be implemented in a manner which is consistent with program policy. They will:

- 1) Recognize and utilize a multidisciplinary approach;
- 2) Recognize that special and regular education are inseparable and complementary services;
- 3) Recognize the need for continuous communication between special education teachers providing service, regular classroom teachers who will provide service, and parents of student's being served;
- 4) Recognize the need for a special education program which is more similar than dissimilar to a regular education program;
- 5) Recognize the need for documentation of procedures which provide educational alternatives.

### MULTIDISCIPLINARY TEAM (MDT)

The multidisciplinary team shall be appointed by the school board and composed of two or more persons who are skilled in assessing exceptional educational needs that a child may have and who are skilled in programming such children. The number and specialties of the team may depend on the exceptional educational needs which the particular child may have. personnel, regular class-Members of the team may include special education room teacher(s), special education supervisors, principal, school psychologist, speech therapist, counselors, and other specialists as appropriate. Personnel other than public school employees are utilized as consultants. Two members must be Merrill Area Public School employees. The specific implementation details are delegated by the Board of Education to the Director of Special Education, Frank Roskbs, who is responsible to the Superintendent of Schools, Roger G. Lowney. It will be the responsibility of the Junior and Senior High School principals to ascertain the members of the MDT at the secondary level and the Elementary principals and Coordinator at the elementary level to assign the members of the MDT as appropriate

for the evaluation of respective exceptional educational needs in cooperation with and under the supervision of the Director of Special Education.

Throughout the MDT process a continuous program of parent communication is maintained.

### SCREENING, REFERRAL, ASSESSMENT, STAFFING AND EVALUATION PROCEDURES

In implementing the program's screening, referral, assessment, placement, and evaluation procedures, decisions must be made and actions initiated. The primary multiple paths are: 1) the decision to provide service in a regular education setting with support services, 2) the decision to place the student in regular education with special education support, and 3) the decision to place the student in special education with regular education support implemented or temporarily delayed. The selection of either alternative does not restrain later selection of one of the remaining alternatives. Any one of the alternatives may be appropriate at a given time, but its appropriateness is dependent upon the needs of the student.

In this school district, screening is a formal procedure. All pre-kindergarten children are screened by a group process involving several specific readiness areas such as: 1) ABC Inventory, 2) Language Development, 3) Motor Development, 4) Auditory Perception, 5) Concept Development, and 6) Visual Perception. (Screening for children already enrolled or new students is done by utilizing the SRA Achievement Test during the third week of school, and review of past records at all levels as well as individual interviews.) Generally, it is performed by the regular classroom teacher or other school personnel. It is not a procedure which classifies or evaluates nor does it describe the cause of behavior. Screening attempts to identify students who are not performing well in a particular setting. They may not be meeting the expectations of the regular classroom teacher, family, and/or community, and a teacher or other significant individual accepts responsibility for stating that a problem appears to exist. Classroom teachers and guidance personnel are responsible for submitting a screening report on all new enrollees. All screening related to children with exceptional educational needs is done under the supervision of the Director of Special Education.

Following the formal or informal screening procedure is the referral procedure. All children identified through screening and outside referrals are assigned to the Referral Process Committee. This procedure may be initiated by, but not limited to:

- 1) Parents who wish their child evaluated;
- 2) Teachers, administrators, school psychologist, counselors, or other school personnel suspecting a handicapping condition;

- 3) Individuals representing community organizations such as, the Lincoln County Health Care Center, Social Services, or other agencies;
- 4) Individuals dealing professionally with the child, such as, physician, pastor, clinical psychologist, psychiatrist, or others.
- 5) Upon parental approval, referrals to the MDT from the private section are honored.
- I. Referrals are to be made to the principal of the school in which the student is in attendance. Prior to the principal authorizing a formal referral, the following procedures should have occurred:
  - A. A conference with the principal and other involved staff should have been held to discuss the student's problem;
  - B. As a result of the conference a decision to refer the student should have occurred;
  - C. The parent must have been informed of the decision to refer by phone and/or letter with indication from whom the referral was initiated/date.
  - D. The referral form should have been completed and signed by the individual initiating the referral and the principal and submitted to the Central Office -- Director of Special Education.
  - E. Referrals will be submitted to the Director of Special Education and will be reviewed by the Director and one instructional staff member in the suspected area of exceptionality plus additional appropriately involved staff.

### II. Assessment Procedure

Assessment of a student for a formal staffing will occur as a result of the suspicion of an exceptional educational need and when the student's parents have given written approval for assessment of their child (See Assessment Approval form). The assessment will be performed by a multidisciplinary team. This team will gather information and data in different skill areas and from various sources. Suggested areas are:

### A. History

- 1. Classroom teacher and school principal may provide a description of the student's school performance (i.e. academic and social-emotional behaviors).
- 2. Counselors may provide information from school records and

any up-to-date information regarding the student's home behavior, school behavior, and academic performance.

- 3. The school nurse may provide a pertinent health history.
- 4. A social worker may provide a social history of the child's background and home life.
  - 5. A parent description of the child's behavior at home will be solicited.

### B. Medical Information

- 1. The family physician or pediatrician may perform a physical examination if needed.
- 2. If suggested by the physician or indicated by test results, a neurological examination may be performed.
- 3. Additional vision and/or hearing examinations may be available from appropriate medical sources if they are indicated by earlier examinations.

### C. Education Evaluation

- 1. Individual achievement tests may be given by a special teacher, teachers, and/or licensed school psychologist.
- 2. Diagnostic tests and inventories in basic skill areas (i.e. reading, math, spelling, and writing) may be given by a special teacher or teachers.
- 3. The Illinois Test of Psycholinguistic Abilities may be given by a speech therapist and/or special teacher.
- 4. Further evaluation by a speech therapist may occur when warranted.
- 5. Parent perception of the student's school performance, both academically and socially, may be secured by the school psychologist and/or teacher.

### D. Psychological Evaluation

1. Tests and techniques utilized by a certified school psychologist to further assist in the evaluation of the student will be utilized when appropriate.

# III. Informal Staffing (No exceptional needs indicated)

If a decision is made to refer or provide the student appropriate services in a regular education setting with support services available (i.e., consultant teacher, social worker, school psychologist, nurse, or others), the following sequence occurs:

- A. Assessment of the student is made without involvement of the multidisciplinary team; communication channels with parents are established as necessary;
- B. A program is designed for the student within the regular education
   setting{
- C. The program is implemented to precipitate the desired change or changes in the student;
- D. The student's program is evaluated in terms of established goals and objectives; a non-successful program is revised and maintained within the regular educational setting with supportive services or a decision to refer occurs.

### IV. Formal Staffing (Exceptional needs indicated)

If the decision to refer the student is made to the MDT as an alternative to placement in regular education with support services, the sequence is as follows:

- A. A referral is made to the principal and a review of the student's problem is initiated with the Director of Special Education;
- B. The parents are informed of the decision to refer the student; information is provided regarding the student's problem and their written approval is obtained for the student's assessment and formulation of recommendations within 20 days. Parents will be informed if recommendations can not be formulated within 20 days. When parental approval is not given for extension, the district will request additional time from the Bureau for Handicapped Children;
- C. The assessment of the student is performed by a multi-disciplinary team with parents kept informed of what activities are taking place in terms of evaluation. They are allowed opportunities to interact with professionals involved in their child's evaluation;
- D. The parents are informed of the assessment results and consulted to enable them to have input in the decision making process at the coming staffing;
- E. A staffing is organized by the Director of Special Education and one of three possible decisions is made:
  - The decision is made to continue to provide services for the student in a regular education setting with expanded support services;
  - 2. The decision is made to provide service in a regular education setting with special education support;

 The decision is made to provide service in a special education setting with regular education support implemented or temporarily delayed.

If any of the above three decisions is made, the following procedures are followed:

- a. The MDT will submit a written report of findings and recommendations to the Director of Special Education;
- b. A parent conference is held to inform the parents in writing of the staffing decision, why the decision was made, and to secure the parent's written approval for implementation of the program of service if special education services are required;
- c. The student's program is implemented within 90 days from initial referral.

In providing an individually prescribed instructional program that develops appropriate emotional, social and academic behaviors, various content areas will be considered. They are:

- 1) Gross and fine motor skills;
- 2) Auditory, visual, and haptic perception;
- 3) Language;
- 4) Cognition;
- 5) Social-personal behaviors;
- 6) Reading, math, writing, and spelling skills;
- 7) Information skills.
- d. The student's program is evaluated, and the program is judged successful or not successful; a non-successful program is revised or another type of placement or program is implemented.

\*Approval for placement of the student in special education services is obtained from the Bureau for Handicapped Children as is appropriate.

### V: Placement Decision

The decision to provide a specific service to the student is an outcome of the staffing. This decision is predicated upon information and data derived from the assessment, discussion of the assessment results, and formulation of a program consistent with the student's needs.

While the multidisciplinary team may recommend a specific service, the suggested service will be subject to approval by the school's superintendent, the Bureau for Handicapped Children, and the student's parents, who must give written approval (see Placement Approval Form and Student Plan of Service Form). Placement is the responsibility of the local board of education.

### VI. Evaluation Procedure

The evaluation procedure is critical. It is a means of determining the outcome or product of each child's individually prescribed instructional program and of comparing the achieved outcome with the desired outcome. In the program, evaluation will be facilitated in the following manner:

- A. Each student's progress will be continuously evaluated, and a written record will be maintained by the special education teacher;
- B. The progress of all students will be determined at least once a year by the special teacher and involved administrators (See Student Evaluation Form);
- C. An annual review of the program will be conducted by involved administrators and a written report compiled;
- D. Parents will be requested to respond to a questionnaire regarding services to their child (See Parent Survey Form).
- YE. All MDT procedures, processes, and findings will be determined without regard to race, religion, color, sex or cultural background.

# SCREENING SUMMARY

Pursuant to s.115.80(2) and as required by s.115.85(3)(b) screening has been completed for children on their first enrollment. The Erreening process involved an interview with the parent, review of developmental records, and a meeting with each child. Specific reports and records on each child are available to teachers and parents.

The following persons and job titles were involved:

# APPROVAL FOR ASSESSMENT

Following a discussion with school personnel who are acquainted with my child, I authorize assessment of my child by a multi-disciplinary team. The assessment is to determine if any exceptional education needs exist and if special help is recommended in the best interests of the child.

I understand that if approval is given for assessment, the approval is only applicable for assessment, not placement. I further understand that after the assessment has been completed, I will be informed of the assessment results and consulted on recommendations prior to further decisions being made.

### MULTIDISCIPLINARY TEAM ASSIGNMENTS

Pursuant to s.115.80(3) multidisciplinary team assignments are provided as listed below. Specific teams of two or more persons shall be selected from the list according to the referrals and specific assessment needs.

Teams shall function under the superintendent and respective building principal as delegated by the board. Assessments shall be performed after written parental approval is on file.

The am shall consult with the child's parent prior to recommending a child for a special education program. Recommendations to the school board for special education must include a brief statement of reasons and recommendations for an educational program (plan of service) fitted to the individual child's needs.

# APPROVAL FOR EVALUATION AND THERAPY

Following a discussion with school personnel who are acquainted with my child, and realizing that my child has been referred, or will be referred to the speech clinician, I authorize an evaluation by a multidisciplinary team. (This team will consist of the speech clinician and others who are trained to deal with the child's problem, i.e. the classroom teacher.)

I further authorize the team to place my child in'a speech therapy program if such is needed.

I understand that after the evaluation has been made, I will be contacted before a decision is made to enroll or not enroll my child in speech therapy.

If my child is enrolled in a speech therapy program, I will be notified of the child's progress at the end of the series of therapy sessions.
