## ABSTRACT

A 1975 cost analysis study of the Purdue University Library and Audio-Visual Center collected data to ascertain the cost of services and materials during the fiscal year 1975 and to identify the allocation of costs among user groups, among library functions (e.g., processing, client services), and among end uses (e.g., instruction, research). This report describes the methodology used and states the results in the form of written analysis, circle graphs, and tables. (EMH)

### SUMMARY

The estimated cost of providing library and audio-visual services at the West Lafayette campus in 1974-75 was \$3.8 million. Services to the public were 7% of the total or \$275,000 while services to the Purdue community represented 93% of the costs.

The cost of services for the nine Schools were:

Agriculture	\$ 324,432
Engineering	446,953
Home Economics	283,718
Humanities, Social Sciences, and Education	1,281,392
Industrial Management	196,897
Pharmacy	58,885
Science	524,922
Technology	111,468
Veterinary Medicine	34,050

Services to administrative and non-teaching departments cost \$282,351. These costs were based on a mixture of budgeted and actual expenditures and were distributed in proportion to the usage of services by each school.

## BACKGROUND

The Libraries and Audio-Visual Center cost allocation study was undertaken primarily for the purpose of supplying input data for the Program Cost Study being conducted by Purdue University's Office of Analytical Studies (OAS). Prior to the initiation of the present study, two previous cost studies were examined to determine whether they could be used to fulfill the data needs of the Program Cost Study. The Quatman Study, which was completed in 1961, was undertaken " . . . to determine the average costs of providing library services and facilities to members of the university community engaged in research supported by organizations outside the university."<sup>(1)</sup> The results of the study provided the basis and methodology to determine the indirect library costs which could be charged to outside research contracts. Quatman's results were found to be inappropriate for the following reasons: 1) costs were not attributed to teaching departments; 2) student and faculty populations were tallied on different bases; 3) basic data was old; and 4) there was no rational weighting system use to determine research usage of library facilities.

The 1971 Library Cost Study was the second study examined.<sup>(2)</sup> It was considered unsuitable to OAS's need because its focus was organizational rather than functional. In addition, the study did not attribute costs to user groups.

The study presented in this report was funded by the Office of the Provost and the Libraries and Audio-Visual Center.

Objectives

The objectives of the study were to:

- 1) Ascertain the costs of providing library and audio-visual services and materials to the Purdue West Lafayette campus for fiscal year 1975;
- 2) Allocate costs by user groups (e.g., undergraduate, faculty, etc.) and by academic department;
- 3) Allocate costs by library function (e.g., processing, client services, etc.); and
- 4) Allocate costs by end use (e.g., instruction, research, or public service).

The first and second objectives received the highest priority and closest attention. Objectives 3 and 4 have been completed to the extent that time and funds allowed.

In determining the costs of Library and Audio-Visual Center operations, the goal has been to obtain reasonably accurate data. It was not possible to determine all costs precisely; however, it is hoped that work in this area will continue and that refinements will be made in the data and collection methods.

Advisory Committee

Overall guidance for the study was provided by an Advisory Committee composed of the following persons: Frank Eikenberry, Head, Office of Analytical Studies, Ferdinand Leimkuhler, Professor of Industrial Engineering; Charles Lawrence, Professor of Cost Accounting; William

Corya, Head, Library Systems Development; Keith Dowden, Assistant Director, Reader Services; and Michael K. Buckland, Assistant Director, Technical Services. The committee met periodically with the study team to discuss methodological problems, review progress, and make suggestions. Each member of the Committee contributed ideas from different points of view. The Research Development Unit is grateful to Committee members for the time and effort they have contributed to this study.

## METHODOLOGY

Cost accounting was the basic technique used to determine and analyze costs in this study. Standard cost accounting procedures, which were designed for profit-making institutions, were modified to accommodate accounting procedures used at Purdue. The works of Leimkuhler and Cooper<sup>(3)</sup>, Shillinglaw<sup>(4)</sup>, Gross<sup>(5)</sup>, and Anthony, Deardon and Vancil<sup>(6)</sup>, were used as general reference works in the field.

The framework for measuring costs in the Libraries and Audio-Visual Center was based on functional units rather than organizational structure. The system was divided into responsibility centers and cost centers. A responsibility center is defined as a functional unit consisting of a variety of activities with a broad objective. The Libraries and Audio-Visual Center consists of two responsibility centers: materials acquisitions and processing, and client services. A cost center is defined as a unit which is relatively homogeneous but is directed toward defined activity. Figure 1 illustrates the relationship of responsibility and cost centers. Client related activities, such as reference, circulation, etc., take place in defined units which are the school and departmental libraries and the audio-visual service centers. These units are referred to as service locations in this study. Figure 2 illustrates the relationship of functional activities and the service locations.

Data collection difficulties precluded analysis of costs by desired cost center. For the purposes of this study, the Libraries and Audio-Visual Center were considered separate units. Selection, purchase, and

FIGURE 1  
LIBRARIES AND AUDIO-VISUAL CENTER  
RESPONSIBILITY AND COST CENTERS

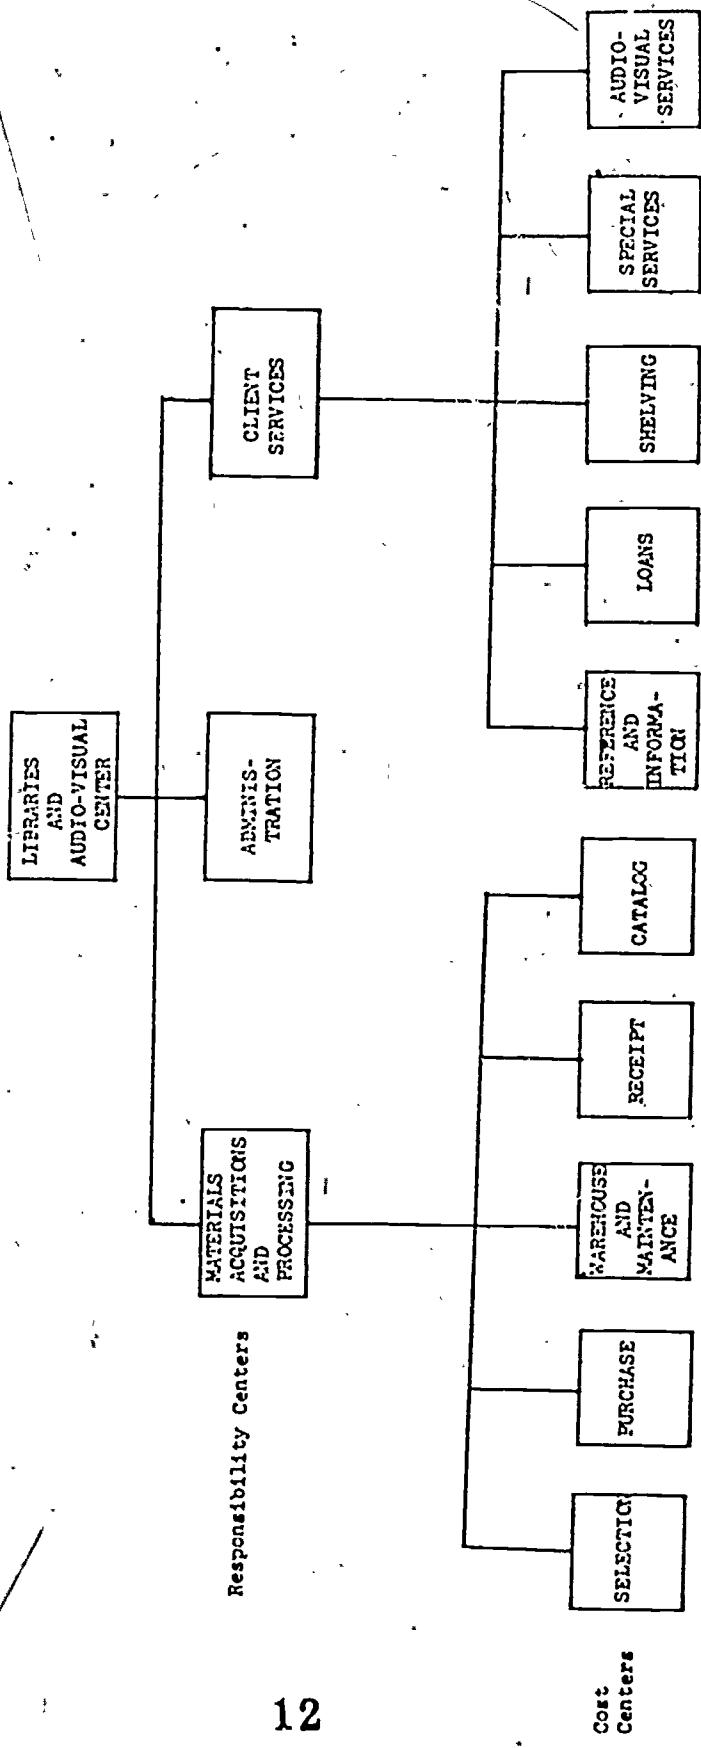

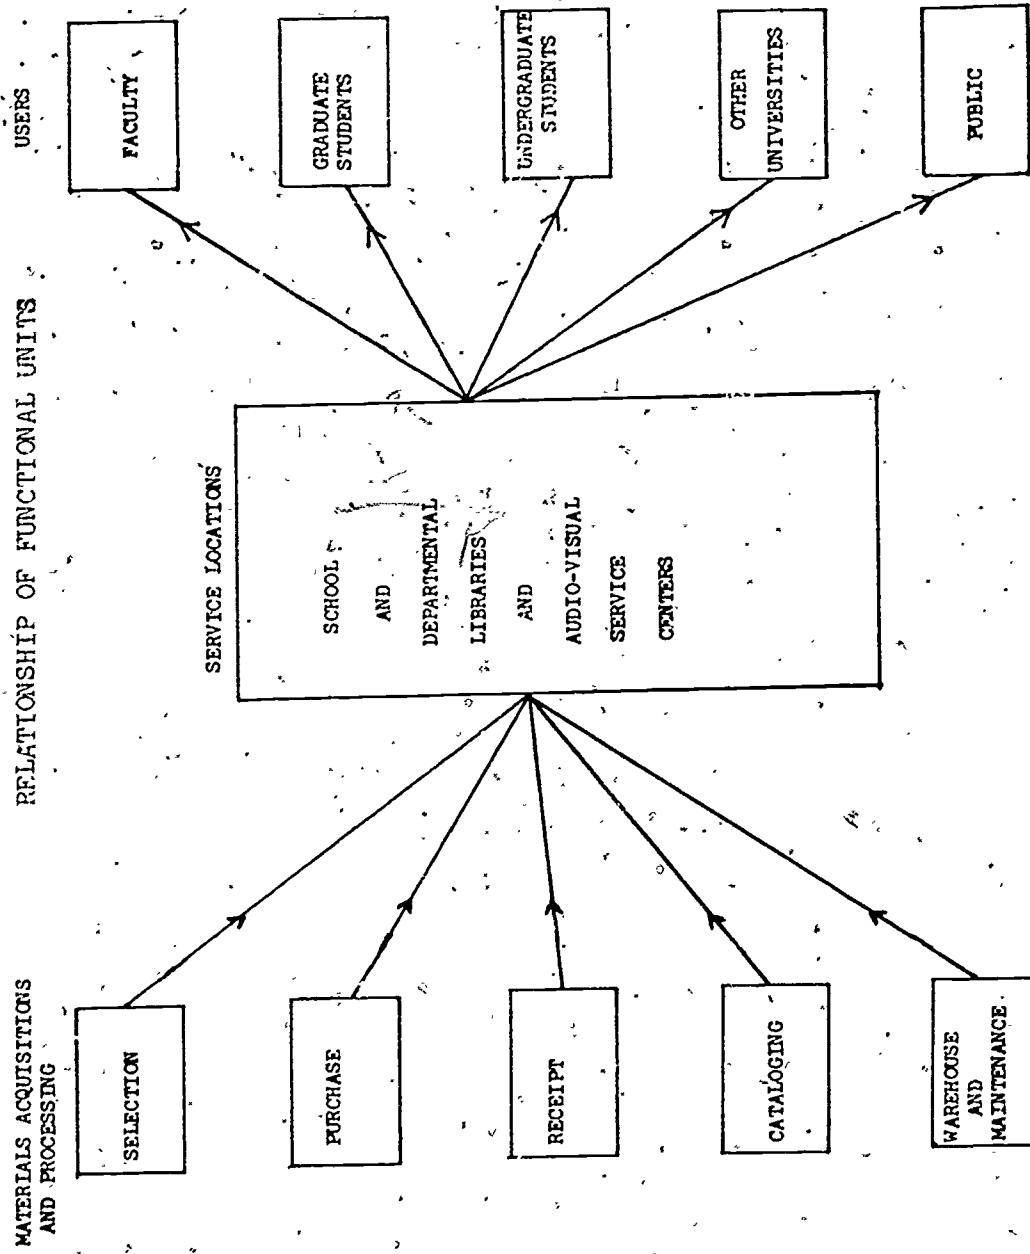

FIGURE 2  
LIBRARIES AND AUDIO-VISUAL CENTERS  
RELATIONSHIP OF FUNCTIONAL UNITS

receipt of library materials were grouped into a single cost center for acquisitions with a second center for cataloging and related activities. Identification of separate warehouse and maintenance costs was not possible. Library client services and audio-visual services could not be broken down into cost centers. The illustrations (Figures 1 and 2) are included in this report to provide a model for future studies.

In measuring costs for each functional unit, both direct and indirect costs were determined. Direct costs, that is those costs which are incurred as part of a specific activity include; salaries and wages, fringe benefits, equipment, materials, assignable supplies and expense, space, and utilities. Indirect costs, common to two or more cost centers, include; administration, fiscal office, personnel office, systems development unit, research development unit, mail delivery, xerox, telephone, travel, unassignable supplies and expense, and miscellaneous. Indirect costs have been allocated on the basis of professional salaries and wages for each functional unit.

#### Sources of Data

Salaries, wages, fringe benefits, and other expenses were based on budgeted data as actual expense data is not readily available. Equipment, materials, and assignable supplies and expense were based on actual expenditures. Assignable supplies and expense includes; order forms used by the Acquisitions Department, catalog card stock, and keysort circulation forms used by the Krannert and General Libraries. Equipment and supplies given to the libraries by the teaching departments

were not included in this study. The cost for space, utilities, and maintenance is based on estimates supplied by Physical Plant. The floor space assigned to Libraries and Audio-Visual Center activities was determined through computer printouts provided by Schedules and Space.

#### Staff Activities

Libraries staff working in service locations divide their time among a number of activities. In addition to the provision of direct client services, school and departmental librarians perform duties which are functionally related to materials acquisitions, such as book and serial selection, pre-order searching, order, and processing to make material readily available for users. In order to determine the proportion of salaries and wages that should be allocated to the various activities, professional staff were asked to estimate the time they and their support staff spend on specified activities. These proportions were applied to salaries, wages, and fringe benefits to determine the direct labor cost associated with the activities.

Library representatives and departmental library committee members, who are members of the teaching faculty, spend varying amounts of time on behalf of the library. The cost of their time was not included in this study because data concerning time spent were not readily available. Data contained in the Activity and Assignment Report issued by OAS were examined, but were found to be unsuitable because reporting of time spent on library committees by faculty members was incomplete, inconsistent, or not uniquely identified. For example, some departments

reported assignment of library committee members, others reported only the library representatives time, while others reported no library activity. Time spent by library representatives and committee members represent a significant cost to the University and a substantial portion of materials selection cost. University administration costs also have been excluded from this study because data were not readily available.

#### Libraries Allocation Techniques

The primary objectives of this study were to determine the cost of providing library and audio-visual materials and services and to allocate these costs to user groups. There are three basic approaches to allocation:

- 1) intended use, which is based on the idea that materials and services are provided with the intent that they be used by specific groups;
- 2) actual use, which is based on the measured usage of materials and services by defined user groups; and
- 3) the indirect cost approach, which views library and audio-visual services as an indirect support function with costs to be allocated according to faculty salaries and wages.

The National Center for Higher Education Management Systems recommends that library costs be allocated to programs according to compensation "adjusted by a faculty activity analysis," and audio-visual services be allocated according to actual usage. (7)

In this study, two allocations methods were applied to the cost data and compared. The first approach is a combination of actual use and intended use and is based on the idea that materials are purchased at the request of specific departments which intend to use them. Acquisitions and processing costs can be allocated on this intended use basis; however, it is not possible to allocate client services on this basis because they are offered to all groups. Client services, therefore, are allocated on an actual use basis.

The attribution of client service costs can be approached in two ways. The first method sums costs for all service locations and apportions the cost on the basis of actual usage of the whole system. The second method takes into account the variances in cost and usage among the different service locations. The cost of service provision in smaller libraries with one or two staff will not be the same as the operating cost of larger service locations with more staff. In addition, usage of each library location is not consistent among the teaching departments. Thus, it is necessary to divide the cost of service at each location according to the usage of that location and sum the usage cost for each department.

The second overall allocation method is based on actual usage of the total system. The underlying theory is that library services are offered to the total community and the groups which use the library should bear the burden in proportion to their actual usage of materials.

Usage Data

The allocation of costs according to actual usage necessitates having accurate data concerning library and audio-visual users. The most convenient library statistic to collect is recorded circulation. Librarians have raised two main objections to the use of this statistic as an indicator of usage:

- 1) in-house use and reserve book use are not taken into account; and
- 2) other services, such as reference are not segregated.

A study by McGrath at Louisiana State shows high positive correlation between the subjects of books used inside the library and books which are circulated outside. McGrath concluded "... that circulation totals, when grouped into self delineating spans, can be reliable indicators of the subjects being used within as well as out of the library." (8)

Densmore and Bourne (9) in their cost study at Stanford indicated that over-the-counter circulation data appear to provide a good estimate of the use of library services.

Purdue does not collect data on the use of library services by user group; therefore, a special study of recorded circulation was undertaken to provide this data. A copy of the Circulation Study is appended to this report.

A similar study of Audio-Visual Center usage was undertaken for the period February 1 through April 30, 1975. The results of the study are presented in Appendix Tables A-1, A-2, and A-3 and indicate equipment and material checked out of the center and substations and material used within the center.

Research Vs. Instructional Uses

A lower priority objective of this study was to allocate costs by end use, i.e., instruction, research, and public service. The last category, public service, is easiest to estimate because the circulation study includes usage by persons outside Purdue through direct charges and interlibrary loans.

The Cost Study Advisory Committee discussed the problem of research and instructional uses of library and audio-visual services at length. There are no readily available or widely accepted methods of allocating library costs according to end use. The Advisory Committee considered and rejected three methods:

- 1) assign research usage according to time spent as indicated on the Activity and Assignment Report;
- 2) allocate research usage among graduate students and faculty according to the Payroll Report; and
- 3) survey library users.

The Activity and Assignment Report and Payroll Report methods were rejected because neither report accurately reflects the amount of research being done which requires use of the Libraries and Audio-Visual Center. A survey of library users was considered unsatisfactory because of the time and expense involved. In addition, the committee concluded that the results of such a survey would not be sufficiently accurate.

The allocation of costs according to end use is important for the following reasons:

- 1) the University needs to have reasonably accurate data in order to determine costs for its instructional programs;
- 2) the Office of Contract Administration, which is responsible for the Indirect Cost Study, needs data to determine the portion of cost which should be attributed to sponsored research and paid by the contracting agency; and
- 3) data on how library and audio-visual materials and services are used provide planning information for the Libraries and Audio-Visual Center Administration.

Time and funds available for this study precluded an in-depth examination of the issues involved in various end uses of the Libraries and Audio-Visual Center; therefore, it is recommended that these issues be studied further (see page 21).

#### Audio-Visual Costs

The Audio-Visual Center engages in a variety of activities in connection with the provision of services and material to its clientele. In addition to the selection, acquisition, processing, and loan of material, the center provides equipment which must be inspected and maintained and trained personnel who set up equipment configurations as well as operate the equipment.

Audio-Visual Center personnel were not asked to supply data regarding the distribution of hours spent performing their various jobs; therefore, it was not possible to gather cost data for specific functions. The total operating cost of the Audio-Visual Center was allocated to academic departments on the basis of usage data.

The direct and indirect cost items for the Audio-Visual Center are similar to those for the Libraries with the addition of depreciation for major equipment items, such as projectors, video tape playback units, tape cassette recorders, etc. Depreciation represents a major cost for the center because the equipment is essential to operations and has a limited life. Depreciation estimates were developed in a study undertaken by the Research Development Unit in 1975.<sup>(10)</sup> These estimates cover only major pieces of equipment and do not include films and other material which also have limited useful lives.

### COST FINDINGS

The estimated cost of providing library and audio-visual services to the West Lafayette campus for 1974-75 was \$3.8 million. This sum includes both budgeted and actual expenditures. As indicated earlier, this figure does not include the cost of teaching faculty time spent on behalf of the Libraries, the cost of equipment or supplies provided by the teaching departments, or the cost of University Administration. A summary of major items included in the total cost is presented in Tables 1 and 2.

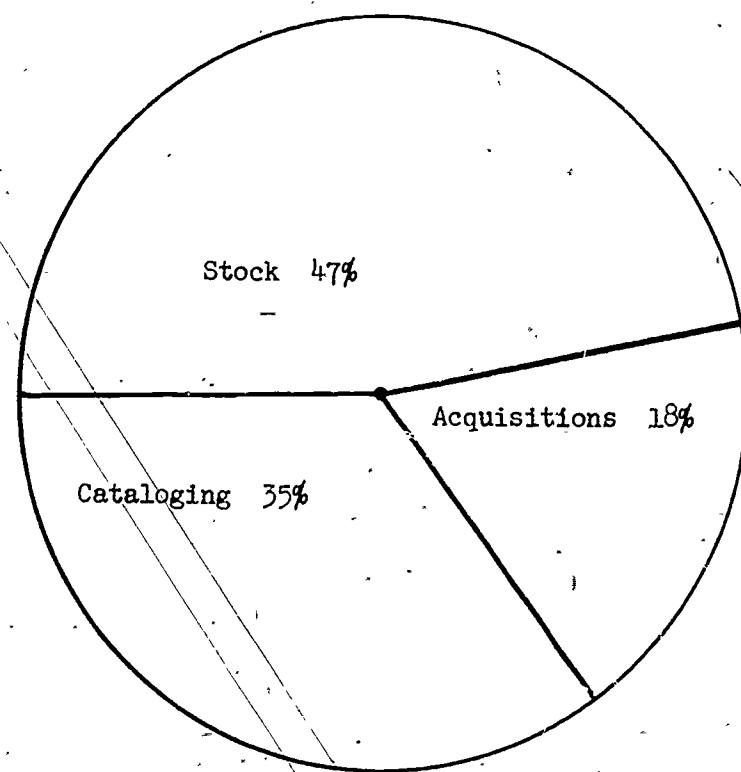

Details of libraries operating costs for fiscal year 1975 are presented in Appendix B. The cost of materials for the libraries was \$1,032,880 while the cost of selecting, ordering, and processing those materials was \$640,538. Processing costs represent 53% of the total cost of materials and processing books. Serials processing costs are substantially lower at 26% of the total serials cost. Percentage distributions for book and serials costs are showing in Figures 3 and 4. Direct services to users through school and departmental libraries cost \$1,660,854 in fiscal year 1975.

#### Cost Allocation

Allocation of costs to academic departments and classes of users is shown in Table 3. Approximately one-third of the cost of library and audio-visual services has been attributed to departments in the School of Humanities, Social Sciences, and Education. The Departments of Education and English, being the heaviest users of the system, have

Figure 3  
Libraries/Audio-Visual Center

BOOKS

SERIALS

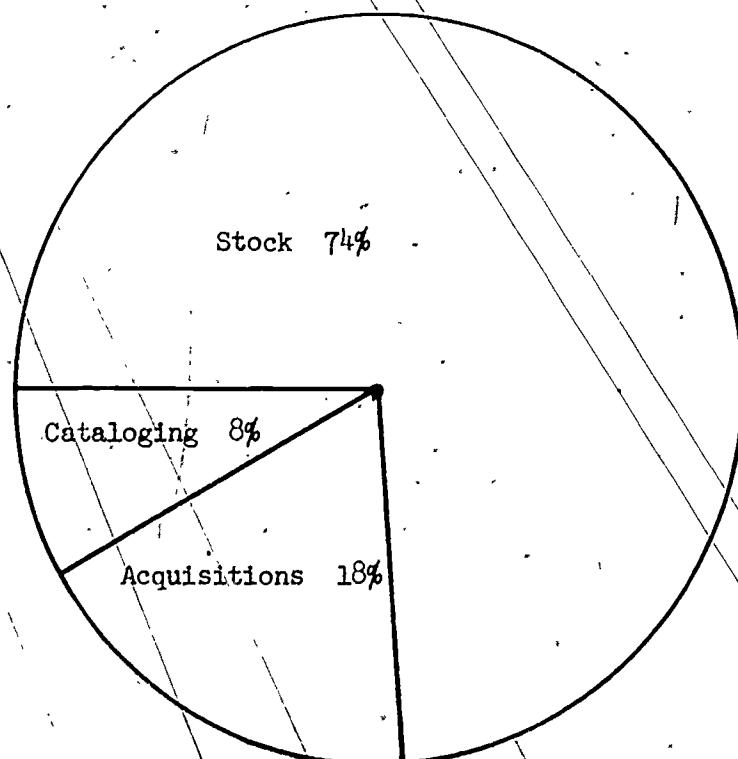

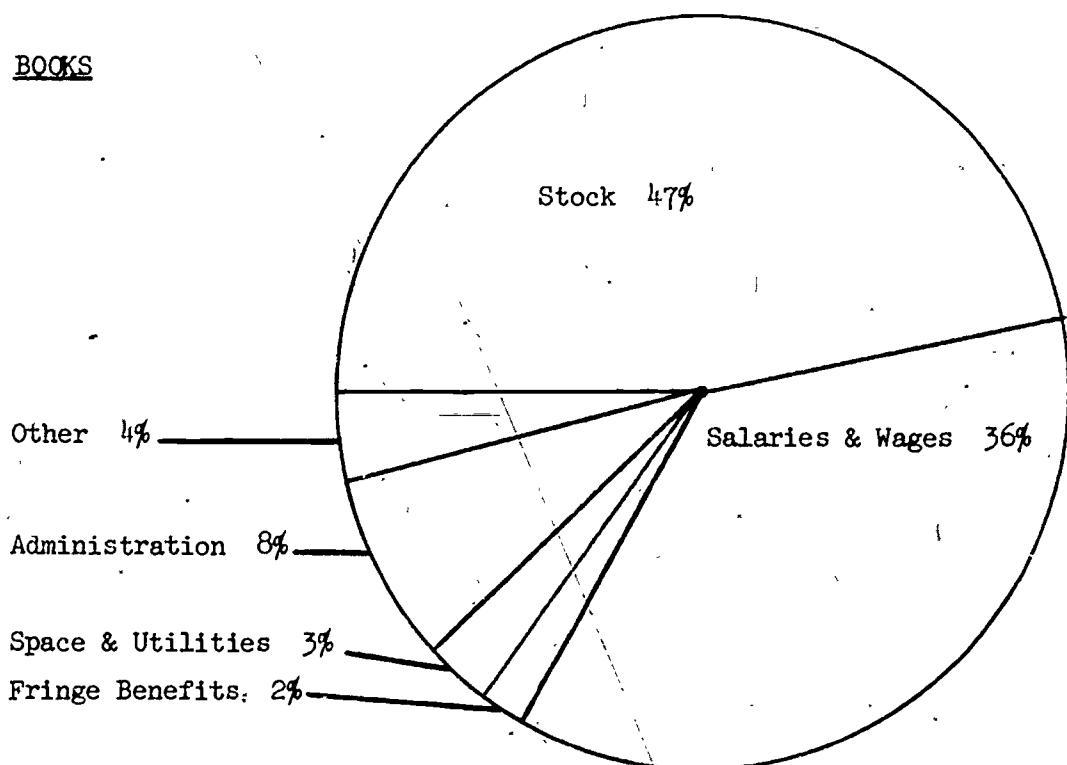

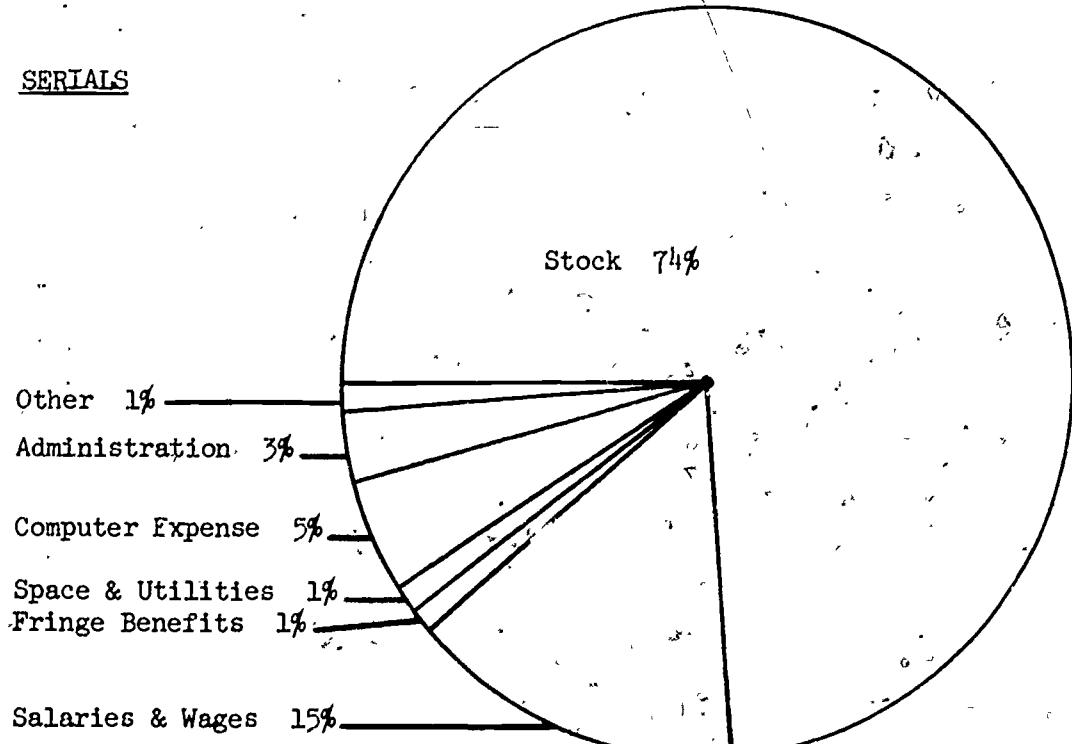

Figure 4  
Libraries/Audio-Visual Center  
Percent Distribution of Book and Serials Costs by Budget Component

BOOKS

SERIALS

been allocated the greatest proportion of the cost. Interlibrary loan and public service accounted for 7% of the cost.

The Instructional Program Cost Study relates instructional costs to population according to F.T.E. faculty and students. Table 4 shows a summary, by department, of Libraries and Audio-Visual Center costs per F.T.E. faculty and student. The highest per capita Libraries costs are incurred by graduate students in foreign languages and literature, history, and political science. Per capita costs range from \$.12 for undergraduates in statistics to \$1284.58 for graduate students in foreign languages and literature.

Because the allocation of library and audio-visual costs influences other cost studies being conducted by the University, it is useful to compare allocations which result from the application of different methods. Table 5 presents a cost allocation comparison based on usage, faculty F.T.E., and faculty salaries. The differences between allocations based on faculty F.T.E. and those based on faculty salaries range from 28% for the School of Technology to less than 1% for the School of Veterinary Medicine. A comparison of cost distribution based on usage with distribution based on faculty salaries produces significantly greater differences. For example, usage based cost for the School of Humanities, Social Sciences, and Education is 40% higher than cost based on salaries while the School of Agriculture's allocation is 93% greater if based on salaries rather than usage.

Cost allocation according to usage reflects the actual utilization of resources more accurately than indirect methods. Library and audio-

visual services are provided to the entire University community; however, the utilization of these services is not distributed equally among teaching departments and bears no direct relationship to the number of faculty and students in any department. In order for the University to have an accurate view of the resources utilized by academic departments, library and audio-visual services costs should be allocated on the basis of usage.

#### RECOMMENDATIONS

##### Depreciation of Audio-Visual Equipment and Materials

Audio-visual equipment and materials have limited useful lives due to wear and tear and obsolescence. The current study included an estimate of depreciation for major equipment items, but excluded costs associated with minor equipment, materials (e.g., films), and equipment which has been fully depreciated. The quality of service provided by the center is dependent upon equipment which operates efficiently and reliably and materials which are in good working order. The Center's program of inspection, maintenance, and repair has prolonged the useful life of equipment and materials resulting in cost savings for the University with small loss in the quality of service; however, as equipment ages through use, the cost of repair increases and becomes uneconomic. The standards of audio-visual service on the West Lafayette campus will suffer if equipment and materials are not replaced. It is recommended that an inventory be taken of films in the film library. The listing should include identification number, purchase date, replacement cost, number of uses, projected replacement date, and annual depreciation write-off. In addition, it is recommended that the University provide reserve funds for the periodic replacement of worn out equipment and films.

##### Depreciation of Library Materials

Most library materials lose value over time due to wear and tear from usage or obsolescence of content. Classic works and many out-of-

print works, however, appreciate in value over time. There have been many studies in the field of bibliometrics which provide a basis for determining loss of value due to obsolescence. As the value of physical space in libraries rises, it becomes increasingly important to weed obsolete or unused materials from library collections. In addition, library materials represent capital assets and should be adjusted in value over time. It is recommended that a study be undertaken to determine obsolescence patterns for major library collections, and to identify classic works, or out-of-print materials which are increasing in value. Procedures for weeding library collections should be developed. Also, storage facilities should be investigated.

#### Research Uses of the Libraries

As stated earlier, the study team was unable to produce a satisfactory methodology for the allocation of costs to research and instructional uses of the libraries. The primary difficulties with existing methods are the assumptions that: 1) library usage is in direct proportion to the time spent on research and instructional activities by faculty and graduate students; and 2) libraries services utilized for research by faculty and graduate students are equal to those utilized in instructional activities. Cost estimates based on the two assumptions could produce misleading results and overstate or understate the cost of providing library services to research and instructional programs.

The financial management section of the U. S. Department of Health, Education, and Welfare in its proposed revisions to Federal Management Circular 73-8 has stated that library resources and services are provided

primarily for the use of students and faculty with ". . . little or no services provided to Federally sponsored agreements . . .". Because library materials may be purchased with research funds, HEW is recommending that library services no longer be treated as an indirect cost. Their alternative is to treat library services as an "other institutional activity" or a special service facility. The cost of special service facilities, such as electronic computers, animal centers, and audio-visual centers are allowable provided that the amount charged, as a direct cost, to the project is based on actual usage of the services.

(11) The implication of the proposed revision is that library costs incurred in the provision of service to sponsored research can be recovered; however, the cost must be in proportion to the actual usage of services.

At the present time, the Libraries and Audio-Visual Center is not prepared to provide data for the implementation of direct costing of library and audio-visual services. It is recommended that a pilot study be undertaken in cooperation with the Schools of Engineering to determine the actual usage of library and audio-visual facilities for research purposes by faculty and graduate students in Engineering and to develop a methodology for the direct costing of these services.

APPENDIX A

AUDIO-VISUAL CENTER USAGE

The tables which follow present summary usage data for the Audio-Visual Center for the period February 1 through April 30, 1975. Table A-1 is a summary of the use of equipment and materials by students, faculty, and others in each teaching department. In-House usage, that is, use within preview rooms located in the Stewart Center is shown in Table A-2. Loans of equipment and material from the Stewart Center and sub-centers are presented in Table A-3.

## APPENDIX B

### LIBRARY COSTS

A summary of library costs by function and department is shown in Table B-1. Library stock purchased was based on fiscal records. Processing costs were based on average acquisitions costs and average cataloging costs. Service costs were based on each department's use of each library and are not comparable to service costs presented earlier which were based on each department's use of the entire library system.

Operating costs for each library service location are presented in Table B-2. Processing center operating costs are summarized in Table B-3.

(1) Allocations combines intended use for purchase of materials and actual use of services.

(2) Other processing includes incurred by the library in purchasing materials for the use of departments from departmental accounts.

(3) Allocated according to usage of each library, see discussion p. 10.

(4) Library fiscal system does not include breakdown by department for Home Economics, Pharmacy or Veterinary Medicine.

APPENDIX C

CIRCULATION OF MATERIALS FROM  
PURDUE UNIVERSITY LIBRARIES

By

Miriam A. Drake

RDU 75-06

Research Development Unit  
Purdue University  
Libraries and Audio-Visual Center  
West Lafayette, Indiana

September 1975

## INTRODUCTION

In March 1974, the Research Development Unit (RDU) began a cost allocation study of the Purdue Libraries and Audio-Visual Center. The objectives of the study are to: 1) ascertain the costs of providing library and audio-visual services and materials to the West Lafayette campus; 2) allocate costs by user group and academic department; and 3) allocate costs by library function. The second objective, allocation of library costs by user group, is the subject of this report. A final report for the entire study will be issued later in the year. Allocation data for the Audio-Visual Center will be included in the final report.

Before library costs could be allocated by user group and academic department it was necessary to determine the users of the Purdue Libraries. Data on user identification was not readily available; therefore, a circulation survey was undertaken. The survey was conducted during the busiest three months of second semester, February 1 through April 30, 1975.

#### METHODOLOGY

Since Purdue's library circulation systems are manual it was not feasible to include every library transaction in the survey. Individuals collecting data were asked to include materials borrowed for overnight or longer in the sample. In addition, libraries which offer photocopy service were asked to report their photocopy activity for the sample period. In-library use of materials, Bookstall, and reserve materials were excluded from the study due to the difficulty and expense of data collection. It is assumed that reserve book usage is highest among people involved with courses for which the books are reserved. It has been suggested that over-the-counter circulation counts are poor indicators of library usage. One study has shown that there is a high positive correlation between books used inside and outside the library. McGrath, in his study, concluded that total library usage could be estimated from over-the-counter loan records for both subjects used and department of borrower.\*

---

\*William E. McGrath. "Correlating the Subjects of Books Taken Out of and Books Used Within an Open-Stack Library." College and Research Libraries, July 1971.

Two libraries, General and Krannert, use a multi-part key sort transaction card for library loans. Copies of transaction cards were sent to the Research Development Unit after materials were returned to the library. The sample period for these libraries was extended one week in order to gather data on semester loans and other materials which were charged out before April 30 but returned before May 6.

Other Purdue libraries use a book card, on which the borrower signs his/her name, for circulation control. Duplication of these cards was precluded by time, convenience, and expense. In addition, book cards generally do not contain sufficient data to fully identify the borrower. Special forms and imprints to be used for data collection were issued to libraries using book cards. These forms, which were precoded for location, were sent to the Research Development Unit weekly during the study.

All libraries were instructed to ask every borrower for a passport (if Purdue student) or other means of identification, such as staff card, bursar's receipt, etc. All passports were imprinted on forms. Borrowers associated with Purdue but not in possession of a passport, were asked to present other identification and to give their status (faculty, student, staff) and department. These data were recorded on transaction cards or forms. There were two classes of borrowers not associated with Purdue; general public and interlibrary loan users. Public borrowers using the libraries were classified as "other". Interlibrary loans were classified separately by library location.

Identification of borrowers at each location was the prime purpose of the circulation survey; however, questions had been raised regarding the subject areas of materials borrowed by different groups from specific libraries. For example, it would be of interest to know how many Industrial Engineering students were using the Mathematical Sciences library for books on statistics. In order to answer these questions, libraries were asked to record the Dewey class number up to two places beyond the decimal point on forms to be included in the sample.

When forms were received by RDU a notation was made on a master control list to indicate that forms had been received for the specific library and week. In addition, each packet of forms was given a batch number which was used to maintain control between RDU and keypunching. Forms were examined for errors, presence of social security number or other means of identifying the borrower and presence of Dewey class numbers. After editing, forms were sent to keypunching.

The completed punched cards were sent to the Administrative Data Processing Center for processing. Social security numbers, which were punched from passport data, were matched against files from the Registrar's Office and Personnel Office to determine the status and department of the borrower. When a match could not be made, the transaction was labeled "error" and excluded from the final tabulation. All records containing social security number in RDU's files were destroyed to protect the privacy of individuals. Data were summed by level, department, and library location.

## FINDINGS

The survey sample includes 100,240 items loaned directly from 23 libraries and 4361 photocopied items made by 8 libraries. The General library circulated 48.6% of the items in the sample (Table 1). It was believed that this figure was somewhat inflated because items which are part of school and departmental collections are stored in the attic of the General library and the 9th Street Warehouse and are charged out through the General library. Statistics maintained by the circulation staff indicate that approximately 85 items, less than 1% of General's total for the period, circulated from the General library were items from school and departmental collections.

Circulation in the school and departmental libraries ranged by 6460 items (6.2%) in the Krannert library to 63 items (.1%) in the Agricultural Engineering library. There were 13 libraries with less than 2000 items circulated. This group includes 4 engineering libraries which are scheduled for consolidation and 4 libraries associated with the School of Agriculture. The latter 4 libraries together circulated 2768 items during the survey period. Photocopies provided by Biochemistry represented 18% of the total circulation of the 4 libraries and 52% of the loans made from the Biochemistry library.

Undergraduates charged out the greatest number of items while graduate students received the greatest number of photocopies (Table 2). The

General library loaned the greatest proportion of items to each group on the campus (Tables 3 and 3A). Libraries receiving greatest use by faculty were General (38.1%), Chemistry (8.8%), Mathematical Sciences (8.8%), and Krannert (7.7%). The patterns of library use were similar for graduate students except that they used the Psychology library more heavily than the faculty. Undergraduates used General (62.2%), Home Economics (7.5%), and Life Science (5.2%) most heavily.

Interlibrary loans during the sample period were more evenly distributed throughout the system. Lending was greatest from General (19.0%), Life Science (13.4%), Pharmacy (12.0%), and Veterinary Medicine (11.3%). This distribution is not surprising in view of the specialized nature of these collections and their uniqueness in the State.

Purdue students and faculty borrowed 87.1% of items included in the sample (Table 4). Usage by School ranks as follows:

1. Humanities, Social Science, and Education	33.0%
2. Science	15.6%
3. Engineering	11.8%
4. Agriculture	8.2%
5. Home Economics	7.7%
6. Industrial Administration	5.3%
7. Technology	2.6%
8. Pharmacy	2.1%
9. Veterinary Medicine	.8%

Circulation by school provides only a gross indication of usage among different disciplines and users. More meaningful information can

be derived by combining circulation and population data to produce per capita usage and distributions of usage compared to population (Tables 5.1, 5.2, 5A.1, 5A.2, 6.1 and 6.2). The figures below were calculated on the basis of head count data provided by the Registrar's Office for second semester and the University Personnel Office.

Per Capita Loans by School

School	Faculty		Graduate Student		Undergraduate	
	Per Capita Loans	Rank	Per Capita Loans	Rank	Per Capita Loans	Rank
Agriculture	3.2	7	5.2	9	1.6	4
Engineering	4.6	5	6.5	7	1.3	6
Home Economics	3.0	8	10.0	1	3.5	2
Humanities, Social Science & Education	7.1	2	8.5	5	3.9	1
Industrial Admin.	5.1	4	5.7	8	1.4	5
Pharmacy	5.5	3	9.0	4	.9	8
Science	7.3	1	8.4	6	2.2	3
Technology	1.0	9	9.5	3	1.3	7
Veterinary Medicine	3.8	6	9.9	2	0	9
Total	5.2	-	7.7	-	2.1	-

Per capita loans to faculty were greatest in Science; Humanities, Social Sciences, and Education (HSSE); and Pharmacy. Graduate student use was greatest in Home Economics, Veterinary Medicine, and Technology, with HSSE ranking fifth. Undergraduate use was greatest in HSSE, Home Economics, and Science. Library usage in relation to population can be seen by comparing the percentage distribution of loans and population

for each population group. Tables 5A.1 and 5A.2 show the percentage distribution for schools and departments.

**Distribution of Library Loans and  
Population Groups--West Lafayette Campus**

School	Faculty		Graduate Student		Undergraduate	
	% of Population	% of Loans	% of Population	% of Loans	% of Population	% of Loans
Agriculture	19.9	12.3	9.5	6.4	15.0	11.4
Engineering	16.1	14.1	18.2	15.4	19.9	11.7
Home Economics	3.8	2.2	4.4	5.7	7.9	13.1
Humanities, Social Science & Education	25.0	34.3	36.7	40.6	19.7	36.4
Industrial Administration	3.7	3.6	7.6	5.6	11.1	7.2

Technology	5.8	1.1	.9	1.1	8.3	5.1
Veterinary Medicine	3.4	2.5	1.2	1.6	1.3	0
Total	100.0	100.0	100.0	100.0	100.0	100.0

#### ALLOCATION METHODS

The cost study will utilize two methods to allocate library costs.

The first method will divide library costs into two general categories; processing and service. Processing costs are all costs associated with the purchase decision, order, receipt, classification, cataloging, and marking of materials. Under this technique, the cost and number of materials purchased are determined for each department fund. The processing cost is then divided among the departments on a unit basis.

$$P_i = M_i + T_i$$

where  $P_i$  = total processing and material cost for any department

$M_i$  = cost of materials for the department

$T_i$  = processing costs

$$T_i = \frac{A_i}{A}(C_1) + \frac{D_i}{D}(C_2)$$

where  $A_i$  = number of items purchased for the department

$A$  = total number of items purchased

$C_1$  = acquisitions costs

$D_i$  = number of items cataloged for the department

$D$  = total number of items cataloged

$C_2$  = cost of cataloging, classification, marking, etc.

Acquisitions and cataloging costs will be further subdivided into serials and monographs.

The costs of providing service to library users is not expected to be uniform throughout the system. Service costs which are allocated to user groups will vary among libraries in proportion to space, equipment, staffing, etc. The cost of operating public facilities, reference, circulation and other services is determined and allocated on the basis of recorded circulation. In order to determine average costs for library system services to a department the following formula will be used:

$$S_i = \frac{X_i}{X}(Y)$$

where  $S_i$  = service cost for a department

$X_i$  = number of loans by faculty and students in the department

$X$  = total number of loans

$Y$  = total service costs

This formula does not account for the differences in operating costs among the school and departmental libraries; therefore, a separate allocation will be made for each department's use of each library location.

These costs will be summed to show the total cost of providing services to each department.

$$S_1 = \frac{u_{1.1}}{U_1} (L_1) + \frac{u_{1.2}}{U_2} (L_2) + \dots \frac{u_{1.23}}{U_{23}} (L_{23})$$

where  $S_1$  = cost of providing service to one department

$u_{1.1}$  = number of loans to users in one department from library 1

$U_1$  = total loans from library 1

$L_1$  = operating costs of library 1

$u_{1.2}$  = number of loans to users in one department from library 2

$U_2$  = total loans in library 2

$L_2$  = operating cost of library 2

The two elements of processing and service are combined to give a total cost for providing materials and service to a department

$$L_i = T_i + S_i \text{ or } L_i = T_i + S_l$$

where  $L_i$  = total costs of library service to a department

The second allocation method combines all costs associated with the libraries and attributes them to departments on the basis of usage. The gross allocation percentages are in the last column of Table 4. After costs have been attributed to specific departments both techniques further subdivide costs on the basis of usage by level. For example, if the total cost of operating the libraries were \$1,000,000, 5.3% or \$53,000 would be attributed to the School of Industrial Administration. This cost would be further attributed as follows:

Faculty	6.6%	\$ 3,498
Graduate Students	37.8%	20,034
Undergraduates	<u>55.6%</u>	<u>39,468</u>
Total	100.0%	\$53,000

The allocation of faculty usage to instructional programs will be made by the Office of Analytic Studies.

#### RECOMMENDATIONS

The circulation study has fulfilled its primary objective of providing data on which to base the allocation of library costs. The basic data has been preserved on magnetic tape providing a data base for further analysis.

Each departmental or school librarian has received a printout showing usage of appropriate libraries and departments. These data need further analysis to show travel patterns by borrowers on the campus. It is suggested that Industrial Engineering students be invited to analyze the data from a logistics point of view. This type of study could yield information which could be used in future considerations of new facilities or combined collections.

Further consideration should be given to consolidation of collections from which circulation is small. For example, small collections in Agriculture, such as Forestry-Horticulture, Entomology, Biochemistry, and Agricultural Engineering are maintained in four separate facilities. Each library circulates a small number of items.

Additional study should be given to the use of materials in special subject areas. The circulation study indicated that libraries such as Mathematics and Psychology, are serving substantial number of students and faculty from outside their home departments. The Dewey class numbers of materials used by outsiders should be analyzed to determine their

general subject areas, and the extent of use by the home department and outsiders. Duplication of heavily used items through departmental or other funding should be considered where appropriate.

There are two important circulation data needs which were not satisfied by this study. The first need is the determination of the number of individual users relative to the population. At present, there is no convenient method of estimating the number of individual faculty members or students who actually use the library and the number who do not use the library. This data would be useful in planning future library services.

The second information need relates to the distribution of loans of material in each location. Specifically, a study should be undertaken to determine the number of books and journals which actually circulate, the number of times each piece is loaned and the proportion of each collection which is seldom or never used. This data would provide the basis for weeding collections and facilities planning.
