ABSTRACT

Investigating the Bureau of Indian Affairs (BIA) boarding schools, a survey team of researchers in law, accounting, education, and psychology gathered data from the 18 BIA off-reservation boarding schools (3 elementary, 12 secondary, and 3 post secondary schools). Data were utilized to examine: student characteristics; teacher-pupil ratios; operating costs for 1972-75; per pupil costs for each school (1975); operating costs for elementary, secondary, and post secondary schools (1975); dorm facilities; distribution of 1975 boarding school expenditures; annual operating costs vs consumer price index; major costs (total, education, facilities, and title programs); and construction costs. Major conclusions were: per pupil costs were not inordinate; post secondary admissions policies were based upon local rather than formal BIA policy; personnel costs were substantially fixed via Civil Service salaries; attempts to evaluate educational programs appeared minimal; uniformity of fiscal categories and program definition categories was minimal; development of long range career plans was not often accomplished; there was little cooperation between local colleges and boarding schools; teaching personnel were not always qualified; there was no systematic method of allocating funds; major recommendations from the 1969 Kennedy Report have yet to be implemented. Off-Reservation

Boarding School Survey

Dr. George W. Underwood dba/Underwood Research and Evaluation 5963 East 31st

Tulsa, Oklahoma 74135

MAY 76

OFF-RESERVATION BOARDING SCHOOL SURVEY

The following survey was made in response to a directive from a Congressional Appropriation Committee. The Committee, in reaction to a Bureau of Indian Affairs report on Off-Reservation Boarding Schools, sought to determine cost-cutting measures for these institutions. Specifically, the Committee sought recommendations for cost-cutting practices and procedures within the functioning of the institutions themselves, but also sought recommendations regarding possible closure appropriate data for the survey, a contract was letato an independent of facilities not being utilized efficiently. In order to gather contracting company. The company of Underwood Research and Evaluation, headed by Mr. George W. Underwood, CPA, attorney at law, was selected to conduct the survey. The survey team consisted of researchers with expertise in law, accounting, education, and psychology. All members of the predominantly Indian research team had had extensive experience in conducting surveys and evaluation studies for the Bureau of Indian Affairs, and for a diversity of other public and private agencies.

The research team gathered data on the Off-Reservation Roarding Schools from a variety of sources. In addition, the team sought comparative data from similar types of institutions not associated with the Bureau of Indian Affairs. These data were analyzed and were presented to a work committee in meetings in order to complete the survey. Composition of the work committee assured: representation of Indian people and those experienced in

the operation of Off-Reservation Boarding Schools. The work committee included, in addition to the research team described above, the following: a representative sample of the eighteen Off-Reservation Boarding Schools superintendents and their administrative staff members; school board members from several of the Off-Reservation Boarding Schools; and Bureau of Indian Affairs Central Office Education personnel, who coordinated the survey effort.

All members of the work committee participated in various phases of data collection, data analysis, policy discussion and implications, and in determining recommendations for incorporation into the final report.

History and Policy of Off-Reservation Boarding Schools

The first federally-funded boarding school was established in Yakima, Washington, in 1860. Ten years later, in 1870, Congress appropriated \$100,000 for the operation of federal industrial schools for Indian youth. Following years saw the establishment of the first of the larger non-reservation boarding schools such as Carlisle in Pennsylvania, Chemawa in Salem, Oregon, Chilocco in Oklahoma, and Haskell Institute in Kansas. By 1900, twenty-five such schools had been opened in different parts of the country. After the 1934 passage of the Indian Reorganization Act, in which Indians were supported in their efforts to retain their cultural ways and to form self-governing devices, the Bureau of Indian Affairs began training programs for personnel working in Indian programs. The curricular emphasis at that time was placed upon a development of reservation resources,

but the learning of a wide scope of trades was encouraged in Off-Reservation Boarding Schools. After World War II, Indian participation in school management became Bureau policy, and, in the years 1955-57, extensive Indian participation in revision of school curriculum occurred. The 1960's brought about new policies designed to strengthen "basic education effectiveness," and, for the first time, formal statements of support for Indian culture as an important factor in Indian education were made by Congress. At that time, Congress was charged by the Secretary of Interior to promote the production of arts and crafts of Indians on a national scale. The Santa Fe and Phoenix Boarding Schools had already begun the teaching of Indian arts in the 1930's. Such philosophies regarding Indian education are reflected in the Burea document "Indian Education," No. 423, October 15, 1965, which states, "To overcome educational and cultural lag to prepare Indians for life in the twentieth century, to preserve Indian self-dignity and pride in heritage, and to promote 'English as a second language, guidance and counseling to promote cultural adjustment." The publication further indicates that the 1960's reflected an increase in the number of Indian children completing school and in the number who went into higher education. Goals were set for the '70's. "High school education for 90% of Indian age youth, with all high school graduates continuing their education into colleges, universities, or technical and vocational schools." This period saw the establishment of three higher educational institutions within the system: the Institute of American Indian Arts in Santa Fe, N.M., Southwest Indian Polytechnic

Institute in Albuquerque, N. M., and the changeover of Haskell Institute to Haskell Indian Junior College in Lawrence, Kansas. Bureau Education Manual 62-IAM 2.5.2, November 2, 1964, further explicated the eligibility for admission of Indian youth to the federal boarding schools. This document defined both the educational and social criteria for admission.

A. Education Criteria

- (1) Those for whom a public or Federal day school is not available. Walking distance to school or bus transportation is defined as one mile for elementary children and 1-1/2 miles for high school.
- (2) Those who need special vocational or preparatory courses, not available to them locally, to fit them for gainful employment. Eligibility under this criterion is limited to students of high school grades 9 through 12, and post-high school grades 13 and 14.
- (3) Those retarded scholastically three or more years or those having pronounced bilingual difficulties, for whom no provision is made in available schools.

B. Social Criteria

- (1) Those who are rejected or neglected for whom no suitable plan can be made.
- (2) Those who belong to large families with no suitable home and whose separation from each other is undesirable.
- Those whose behavior problems are too difficult for solution by their families or through existing community facilities and who can benefit from the controlled environment of a boarding school without harming other children.
- (4) Those whose health or proper care is jeopardized by illness of other members of the household.
 (62-IAM 2.5.2)

Today the Bureau of Indian Affairs boarding schools exist for the expressed purpose of providing extraordinary education for those who, for various reasons, do not enter into the available channels of public education. It is this group which requires special services of schools designed to meet their specialized needs. The unique and specialized needs of this group of Indian children are described below. Student Profile

In order to determine the profile of Indian youth attending the Off-Reservation Boarding Schools, all eighteen institutions provided data in response to specific survey items. The Student Profile Table in the Appendix (see Table 1) presents a compilation of these data. The following narrative attempts to portray the present student body composition of the Off-Reservation Boarding Schools.

Most schools reflect recent changes in the composition of the student bodies. Such changes in composition include: an increase in the number of tribes served, a decrease in students from some certain tribes with increasing enrollment from other tribes, and an increased number of students from urban areas.

There are twelve Off-Reservation Boarding Schools at the secondary level. All twelve of these institutions report abuse of alcohol as a major problem affecting both school attendance and dormitory discipline. Some schools report alcohol education programs and specialized alcohol counselors. Drug usage reported by most schools reflects a decrease in hard drug usage and an increase in marijuana (this picture appears consistent with the national drug usage pattern for high school students).

Of the three elementary schools surveyed, alcohol is reported as a problem in one of these three. Of the three post-secondary Off-Reservation Boarding Schools, alcohol is reported as presenting a problem only when associated with disruptive behavior.

All schools have second-language students, with the range of second-language capability varying from 13% to 100% of the student bodies. Second-language students are reported to have built-in learning handicaps when taught by teachers who cannot understand or speak the students' primary Indian language.

referrals from juvenile courts and child welfare agencies. One school, for example, reports that 25% of the student body population represents either dependent or delinquent wards of the court. Boarding Schools in many instances are considered the most favorable, or only, Indian alternative by child welfare agencies and courts for students who cannot, for a variety of reasons, remain in their own homes.

Bureau admissions criteria exclude those Indian youth who have available and/or can successfully utilize public education programs. As a result of such criteria, the elementary boarding schools report 82% entering under social criteria; of the secondary boarding schools, four of them report an average of 25% entering under social criteria.

The average age-in-grade reflects students in near-normal age/grade placement at the secondary level (when compared with national averages). Elementary school statistics indicate that students are somewhat over-age in grade after the fifth grade. Students are

approximately one year over-age in grade when they graduate from elementary school.

In terms of intellectual capability, the secondary boarding schools report that entering students have average or above intellectual ability, but range from one to three years behind the level of basic skills involved in language and mathematics. One school reports 70% of its students entering the ninth grade at or below the fifth grade level in basic skill achievements.

Increased mobility of students in and out of boarding schools seems to have contributed to the basic skills deficiencies. Such great mobility is frequently associated with interrupted semesters and lost credits in the schools. These factors seem to contribute greatly to the lag in basic skills.

Instructional Personnel Ratios, Programs and Curricula

The ratio of instructional personnel to pupils for all eighteen boarding schools is one to twelve (see Table 2), computed on Average Daily Membership (ADM). This ratio is approximately half that of the ratios found in public schools, which are about one to twenty. However, when one examines various residential institutions such as juvenile correctional facilities, private boarding schools, and job corps facilities, one finds typical ratios of approximately ten to one. When the magnitude of learning deficiency students is considered (approximately 70% of all students), it appears that these institutions are more legitimately comparable to the boarding schools, and should be used to make such personnel-to— ident ratio comparisons.

Because of the educational and non-educational tasks that the boarding schools are asked to accomplish, the programs and curricula take variety of forms. Most of these schools are engaged in programs in the areas of home living, counseling, fine arts, cultural and social development, remedial learning, agriculture, and alcohol and drug Such and admixture of both academic and non-academic programs necessitates greater expenditures than public schools typically encounter, in order to provide facilities and personnel to fulfill these multifaceted services. In addition, many of the boarding schools, by virtue of their locations, are accessible to Indian populations, and are called upon to provide facilities and services to Indian groups other than to enrolled students, Such schools typically provide facilities for seminars and workshops for tribal councils and other tribal organizations, and some times serve as host to Indian organizations of national and local scope, governmental organizations concerned with Indian education, and municipal and state organizations with similar concerns. In addition, some schools are called upon to provide extension services for various tribal groups. Such a range of services to both students and to other Indian peoples require expenditures far beyond those required by non-Indian schools.

In order to permit a comprehensive picture of the boarding schools' functionings, brief descriptions of a number of programs at the elementary, secondary, and post-secondary levels are provided below.

Wahpeton Indian School, an elementary school for grades one through eight, is comprised of many students with great learning

deficiencies. In order to rectify the situation, the school has been called upon to develop special remedial p. grams in math, reading, speech therapy, and in areas of special education.

At the Concho Indian School, a full 90% of the students are attending the institution for social reasons. These students, considered a high-risk population, have required the addition of ten full-time teachers to deal specifically with the special educational and special social needs of this population.

While the program objectives of the Off-Reservation high schools are traditionally directed toward college preparation, greater efforts must be expended for diagnostic and remedial educational activities, than would occur in a typical public high school. An illustrative example of the unique needs and programs developed to fulfill these needs is at the Chemawa High School. Chemawa has extended the regular classroom day to allow evening groups and individual tutoring in night labs for deficient students. The success of this former Title I program permitted it to be incorporated into the regular academic program. A recently-implemented Computer Assisted Instruction Program has produced greater and more efficient gains in basic skills than previously noted in the history of the institution. A recent evaluation of the Computer Assisted Instruction Program has documented these dramatic gains in the areas of language arts, reading, and mathematics.

The Institute of American Indian Arts in Santa Fe, N. M., has recently been authorized to develop a program providing for retention of the eleventh and twelfth grades as a feeder program at the high

school level. The institution has further been authorized to grant an AFA (Associate of Fine Arts) degree at the junior college level, and to seek formal accreditation for both programs. The school further provides unique community service programs in the arts and in related fields.

The Southwest Indian Polytechnic Institute, fully accredited by the North Central Accrediting Association, has available the following programs: Business, secretarial, clerical, drafting, electronics, optical technology, numerical process, and offset lithography. In addition, and in conjunction with Public Health Service, a Dental Assistant and Dental Technician Program has been initiated. In addition, short courses are offened for the Indian community in many specialized areas such as Surveying and Head Start Cook. The Institute has just entered into a consortium agreement with the University of New Mexico at Albuquerque, to permit students who desire to receive credit for the Institute's courses, to receive an Associate of Arts degree granted by the University of New Mexico.

These above brief descriptions of unique programs at all educational levels of the boarding schools, is not comprehensive, but rather is illustrative of the variety of programs and unique services that are provided by these Off-Reservation Boarding Schools.

<u>Financial</u>

Statistical tables and charts in the Appendix present all financial data gathered for the present survey. Data are presented individually, for each of the eighteen Off-Reservation Boarding Schools (see Table 4),

and are compiled by the educational level (see Tables 5, 6, and 7) of elementary schools, secondary schools, and post-secondary schools. It was felt to be appropriate to examine individual schools with those other schools at that particular educational level, e. g., elementary, secondary, or post-secondary. By presenting the financial data in this manner, one can compare any of the eighteen individual schools with any other one, and one can also compare a school with those schools at its respective educational level.* Since student populations, needs, and programs may vary as a function of educational level, the most appropriate cost comparisons can probably be made within each given educational level.

The major statistics presented at each educational level are those of annual cost per pupil, and are contained in Tables 5-7. These per pupil costs are presented for school operation alone, for school operation and facilities management together, and finally, for all expenditures. The data indicate that the annual per pupil costs for all expenditures for the Elementary boarding schools for fiscal year 1975 is \$6,114. This figure represents the composite cost per pupil of the three Off-Reservation Elementary Schools included in the survey. For the twelve Off-Reservation Secondary Schools included in the survey, the annual cost per pupil, for all expenditures for fiscal year 1975 is \$6,486. For the three Off-Reservation Post-Secondary Schools, annual per pupil costs for all expenditures for fiscal year 1975 is \$6,606.

**However, Chart 1 presents percentages of school operations expenditures, for major categories, for all Off-Reservation Boarding Schools together.

It can be seen from these above annual per pupil costs, that, while costs for elementary schools are somewhat lower than secondary and post-secondary institutions, the differences are small (approximately 10% lower). However, when one examines the Table 4, which includes per pupil costs for all expenditures individually, for each of the eighteen institutions, there appears to be wide variations in per pupil expenditures in 1975. The lowest annual per pupil cost for 1975 is found at Sherman Institute (\$4,336), with the highest per pupil cost for 1975 being at Mt. Edgecumbe, Alaska (\$13,296). As can be seen from Table 4, most of the institutions have annual per pupil expenditures of between \$4,700 and \$6,700. Those institutions which rank highest in per pupil expenditure for 1975 are: Mt. Edgecumbe, the Institute of American Indian Arts, the Southwest Indian Polytechnic Institute, and Chilocco. A careful investigation and analysis of the reasons behind the large per pupil expenditures*at these institutions can be made by examining the data presented for individual categories and programs at these institutions, and by considering the geographic location, unique needs and functions at these institutions which may not exist at any of the other schools under consideration.

There are no institutions in the United States directly comparable to the Off-Reservation Boarding Schools. Consequently, indirect comparisons must be made by selecting those residential institutions which have populations somewhat similar to the populations found in the Indian Boarding Schools. Such institutions are state correctional institutions, schools for handicapped youth, and other types of

^{*}Charts 2-5 present data on the effects of recent inflationary trends on operations of Off-Reservation Boarding Schools. Chart 6 depicts increased cost of construction over the last 10 years--175% increase during this period of time.

residential training schools. A sample of such institutions is presented in Table 8, along with their per pupil cost for 1975. The sample includes, in Oklahoma, five youth correctional institutions, a school for the blind, and a school for the deaf. Another sample of institutions, from the state of Oregon, is presented for comparison purposes. The Oregon institutions include youth training schools, residential treatment centers for adolescents, a school for the deaf, and a school for the blind. The per resident costs for these comparison institutions vary from approximately \$5,000 to over \$15,000, with most of the institutions expending approximately \$10,000 per year per resident. While these diverse comparison institutions can only approximate those conditions and functions of the Off-Reservation Boarding Schools, they are probably the closest approximations that one can make today. It can be seen from examination of the annual per pupil costs of the Off-Reservation Boarding Schools (Table 4), that most of the comparison institutions in Oklahoma and Oregon far exceed the annual per pupil costs of the Off-Reservation Boarding Schools. When one examines the data from the National Association of Independent Schools (Table 8) one notes that these annual per pupil costs approximate those of most of the Off-Reservation Boarding Schools, despite differences in missions.

<u>Facilities</u>

In considering methods of cutting costs at the Boarding Schools, consideration has been given to the closing of facilities. However, it appears that only minimal savings result in closing facilities.

In many cases closing would require major costs for redesign and remodeling in order to meet the needs of the particular educational

Also, the closing of a given facility could impact upon other parts of the school or other specific programs, thereby possibly interrupting educational or other school programs. In view of the observation that many of the facilities in the Boarding Schools were designed many years ago, it would be difficult to close portions of a given facility and effect any great savings. Facilities built decades ago do not lend themselves to partial closings in order to cut costs.

For example, although heating is the largest item for operations and maintenance costs, a 25% reduction of the space by closing would result in far less than a 25% savings in heating costs.

Chemawa School represents an unusual situation with respect to facilities. The facilities at Chemawa are to be closed at the end of the summer school term. The school will be operating in temporary facilities until the new school is completed. Thirteen buildings have been demolished to date, and all buildings will be condemned after the summer session, with the exception of the gymnasium, vocational and auto mechanical buildings. Demolition will take place because of unsafe structural conditions.

When one considers facilities from a cost perspective, one must factor in the goals and missions of the particular institution of concern. For example, Haskell Junior College has been expanded over the past few years from basically an industrial arts and practical arts institution to a junior college. The facility requirements have changed to meet the new program thrust. The example of Haskell

to be tailored to the unique missions of the particular institution.

Further, it is quite likely that facilities must be tailored to the educational level of the institution concerned, since facilities required for a functioning elementary institution will no doubt differ from those required for a secondary, or post-secondary institution.

Dormitory facilities data are presented in Table 9 for each of the eighteen Boarding Schools. Available data permitted determination of average space per student for only twelve of the eighteen schools. Despite the fact that the recommended BIA standards are 110 square feet of dormitory space per student, only three out of the ten institutions for which there are data do achieve or surpass this recommended figure. Those other nine institutions have per pupil dormitory space ranging from 99 square feet down to 40 square feet. It appears clear from these data on average space per student that the recommended BIA standards in this regard are typically violated.

CONCLUSIONS

- 1. Cost per pupil does not appear inordinate when compared to per pupil costs of comparable institutions.
- 2. Admissions policies at the post-secondary institutions seem to be based upon local practice rather than upon formal Bureau policy.
- 3. The agency superintendent and his/her social worker do not appear to be forwarding total student records on to new or receiving schools. Such an omission inhibits diagnostic testing and placement at the receiving school.
- 4. Personnel costs are substantially fixed costs (constituting approximately two-thirds of total educational costs), since salaries are established by the Civil Service.
 - 5. Attempts to evaluate educational programs appear minimal.
- 6. Uniformity of fiscal categories and program definition categories is lacking.
- 7. Development of long-range career or vocational plans for students is not often accomplished.
- 8. There appears to be little cooperation between local colleges and universities and the Boarding Schools.
- 9. There is no apparent systematic method of allocating funds to the various institutions.
- 10. Dormitory space per pupil is inadequate at most institutions when compared to the stated Bureau standards.
- 11. There appears to be a number of teaching personnel who are qualified to teach at the elementary level, but who are currently teaching at the secondary level.

12. A number of the major recommendations in the 1969 Special Sub-committee Report on Indian Education (the Kennedy Report) have yet to be implemented. These recommendations include:

"There is at present no central authority that can relate educational expenditures to educational results. There is no standardized information on Indian student achievement or school profiles or teacher/student ratios or educational curriculum which is used to make the Indian school system a better school system." (Page 65)

Area Directors appear to have budgetary control over decisions affecting educational policy. The Kennedy Report contends that budgetary matters affecting educational policy and procedure should be in the hands of educational personnel rather than the hands of the Area Director.

"There is a tremendous lack of reliable data about the BIA educational program. There is no attempt made to relate educational expenditures to educational results; nor are there well-specified educational goals, objectives, or standards.

"Federal schools should develop exemplary programs and therapeutic programs designed to deal with the emotional, social and identity problems of Indian youth.

"A substantial investment should be made in sophisticated research and development activities serving a number of experimental programs and schools. Part of this can thus be done by contracting with outside agencies, but it is essential for Indian schools to be self-critical, self-evolving institutions. This requires local expertise and some research and development capability.

"The overall budget for Federal school system has been grossly inadequate. This in large part is due to the inability of BIA to establish appropriate educational standards and calculate the real costs involved in providing an equal educational opportunity for Indian students. The education budget of BIA needs a complete overhaul and adequate standards must be developed. It can be assumed that actual costs must double or triple if an effective program is to be developed."

RECOMMENDATIONS

- 1. Serious consideration should be given to those recommendations cited by the Kennedy Commission and described in the Conclusions section of the present Report. As noted above, these 1969 recommendations do not appear to have been implemented.
- 2. The overall missions or goals of the individual schools should be clearly established and should be appropriate to the uniquenesses of the populations served.
- 3. Policy must be determined as to whether specialized schools are needed for troublesome youth.
- 4. Policy should be established for admitting students for each type of school (elementary, secondary, post-secondary), with emphasis on policy for students transferring from one school to another during a school year.
- 5. The Employment Register currently used by schools is operated and administered by the Civil Service Commission. If the Area Office level maintains a register, teaching vacancies could be filled more efficiently.
- 6. Enrollment and withdrawal records should be kept more uniformly by the schools.
 - 7. Accounting procedures and fiscal reports should be standardized.
- 8. Formal policy of square footage of dormitory space per student for each educational level should be established and implemented.

Sufficient educational diagnostic personnel should be represented at each institution in order to assure efficiency of pupil placement.

- 10. Formulae must be established for equitable funding for each institution, considering such factors as:
 - 1. Unique geographical environment
 - 2. State of repair of the physical plant
 - 3. Local consumer price index
 - 4. Special programs and needs
- 11. Schools should make contact, where possible, with nearby colleges and universities to obtain assistance in program development and evaluation.
- 12. Each institution should designate one person on the educational staff as the program evaluation specialist for the institution. That person should be responsible for all program evaluation activities.

RESOLUTION FOR BOARDING SCHOOLS* HASKELL INDIAN JUNIOR COLLEGE Lawrence, Kansas

A STAN

May 7, 1976

WHEREAS, the United States Senate Appropriations Committee has requested the Bureau of Indian Affairs to provide documentation and justification of operational costs for Boarding schools, and;

WHEREAS, data prepared for said request evidenced a need for review by the affected Indian School Boards for an adequate reflection of such operational and educational programs being offered by said schools, and;

NOW THEREFORE BE IT RESOLVED, that the following recommendations be considered and implemented:

- Request extention of report date for 30 days to accommodate adequate review prior to submittal to the Senate Appropriations Committee by Indian School Boards of the requested information and failing such request, the support and endorsement by Indian School Boards shall be withheld.
- No Boarding School shall be terminated nor their operational budget funds reduced without consultation and approval by the affected Indian tribes.
- The operation of such boarding schools be adequately funded to meet the special needs of Indian students thereof.
- Indian school boards shall review and approve operational budgets of their respective schools.
- 5. There shall be established a National Association of Indian School Boards for the said boarding schools to address programs or policies of the Bureau of Indian Affairs for said schools. An interim committee will be established from the Indian representatives participating at the Haskell meeting.

^{*}Resolutions by participating Indian representatives presenting Recommendations for consideration and implementation.
