ABSTRACT

This activity is one of a series of 17 teacher-developed instructional activities for geography at the secondary-grade level described in SO 009 140. This activity employs a simulation approach to investigate factors influencing industrial locations. Students design proposals intended to attract specific industries to specific cities. The flow chart provided for the four-day game strategy suggests that the students be divided into several groups. Each group assumes the role of a city Chamber of Commerce and designs a proposal to attract an industry. This involves students in designing their own city in order to attract the industry. After proposals are written, groups assume different roles--they become manufacturers. Students then develop criteria for a manufacturer's location. After proposals are ranked, students engage in an evaluative discussion. (DE)

Through involvement in an evaluative simulation, students will develop insights into the factors influencing manufacturing locations. In addition, thinking and group skills are developed by organizing and designing a proposal for industrial location. This activity goes beyond most simulations in that the evaluation of students is an integral part of the activity. Evaluation serves not only its regular functions but also increases motivation and the sense of achievement.

Strategy for Teaching.

The activity can involve two or more classes. In this discussion Class 1 will be a chamber of-commerce group seeking a printing plant, and Class 2 will simulate the industry judging the proposal. Concurrently Class 2 will be writing proposals to attract an automobile factory, and Class 1 will simulate the manufacturer judging the proposals.

Class Guide:

Day 1

- Divide class into five groups. Each group is a city Chamber of Commerce.
- Each group designs a proposal to attract an industry specified by the teacher.
- The students design their own city (i.e. size, population, industrial factors...) in order to attract the industry.

Day 2

- Completion of proposals.

Day 3

- Student groups assume a different role...they will be manufacturers.
- Teacher leads the class in developing criteria for manufacturer's location.
- Groups rank the proposals from the other class... 1 - 5.
- By adding all rankings for each proposal an over-all ranking is

possible.

Day 4

- Return proposals as ranked by the other class;
- Follow-up as desired.

POST EVALUATIVE SIMULATIONS DISCUSSION

1. Dynamics of evaluative simulations.
2. Benefits of evaluative simulations.

- Motivation benefits.
- Directs attention to specific area.
- Expansion beyond areas normally evaluated.
- Provides greater degree of realism.
