### ABSTRACT

Requests for evaluation instruments measuring program quality rather than program content have required the development of new measuring procedures. Two sets of materials are presented in this report -- the first to identify objectives and expected outcomes for school programs and persons in the school, and the second to identify the actual climate and learning opportunities provided by the school and the resultant school and student growth. Forms in Set I are: (1) Form for Relating Mission to School Program; (2) Form for Relating Objectives to Outcomes; and (3) Form for Describing Program. Set II contains four evaluation instruments: (1) Report of Program Offering; (2) Classroom Observation Schedule; (3) Form for Rating Students and School on Key Dimensions; and (4) Form for Community Rating. # MATERIALS FOR DOCUMENTING AND EVALUATING SCHOOL PRACTICE

Prepared By:

Roland Goddu

Fall 1976

### A. Introduction

Over the last six years, school people have been asking us for ways to evaluate what happens in schools in an on-going manner. The request focuses on monitoring program quality rather than tracking program content. While the two are related, the perspective of quality control suggests target sampling rather than detailed recording. One tends to develop procedures to identify the important and different things that happen in a school rather than procedures that identify the detail and its completeness. To record the important and different requires the development of other procedures also that identify the context, expectations, goals, and results that describe the norm.

What has evolved is an interrelated but distinct set of procedures and materials.

- Set I identifies the objectives and expected outcomes for the programs and persons in the school
- Set II- identifies the actual climate and learning opportunities provided by the school and perceived growth of students and school and key dimensions.

The materials remain in the process of development. They are collected here in one place to provide school people a sample of a practical way to measure the practice of education in a school.

### B. Set I

# IDENTIFYING OBJECTIVES AND EXPECTED OUTCOMES FOR PROGRAMS AND PERSONS IN THE SCHOOL

Schools usually have statements of philosophy, lists of goals and even objectives. These tend to be stated in rather general terms. They usually are reviewed and approved by the Board and the school faculty on some regular basis. Accreditation procedures usually ask those responsible for preparing the documentation for accreditation and approval to begin with the school's statement of mission or philosophy on a yearly basis.

The following form marked MISSION is designed to assist individuals as well as schools to relate the statement of philosophy, the goals statement or the mission statement to their particular job in the school or school system. It should be accompanied by the actual statement that people are being asked to examine and felate to (a sample is attached as Appendix I).

What is important to notice is that besides asking an individual to relate his activity to the statement of Mission (question 3), the form also does two other important things: (1) it identifies changes needed in the Mission statement from the point of view of people in the organization and (2) it identifies what people think is needed and important in the organization to assure that the mission is accomplished. Our experience shows that sorting out what needs to be changed in Mission and in Program assures a more targeted understanding of the events that occur in the school.

The form marked PERFORMANCE ANALYSIS CHART provides a way of comparing the objectives, outcomes and factors of influence in an organization. The forms assume that the persons working in the school or system have objectives they know they are trying to reach. These objectives may be intuitive or written. In either case, the purpose of the form is to describe the objective and to detail the actual outcomes with regard to that objective with some determination of degree of success in reaching the objective. Poor, fair, adequate, complete are terms often used to describe the degree of success. The Factors of Influence Column allows persons to note both positive and negative events or decisions that influenced performance so that the resulting outcomes occurred.

The form marked PROGRAM provides the principal or teacher in particular an opportunity to describe the important activities/programs that are on-going in support of the Mission or objectives of the school. The purpose of the form is to more accurately describe the important activities and events of the school as seen by those who make the school go. It is important to note that questions 2 and 3 provide the opportunity to describe needed improvements. We find these crucial in determining the difference between events that need to be changed and events that just didn't work well.

The examination of the information on these forms provides some insight into what the persons working in the organization day by day see the actual Mission, programs and objectives to be. The actual practice of people in the school tends to be described more realistically as they perceive it in an interrelated manner. What actually happens is that the important and the different or in need of change are quickly identified. The normal is left assumed or unexamined.

### C. Set II

# DENTIFYING ACTUAL CLIMATE AND LEARNING OPPORTUNITIES PROVIDED BY A SCHOOL AND PERCEIVED GROWTH OF STUDENTS AND SCHOOL ON KEY DIMENSIONS

Schools normally complete some kind of self evaluation procedure during their existence. In a few instances, school and personnel appraisal systems are scheduled on a regular yearly basis. In most instances, observation forms focus on the detail of classroom, the interaction between teacher and pupil, and the evidence of teacher performance of a certain technique. These materials focus rather on general climate and learning opportunities provided instead. As a result, they do not tie a causal relation between technique and student learning; they describe what is observed or perceived to occur. The Program Offering Report provides some control for the general program proposed. The Classroom Observation Report describes climate, observed behavior and observed practices. By completing the Classroom Observation Report at least every four months, one can identify the trends in actual practices in the classroom.

Learning opportunities often turn out to be those teachers plan (see Program Offering Report) and those actually practiced (see the Classroom Observation Report). One should limit observations drawn by comparing the information on these two reports and any others. Of more importance is the documentation over time of the trends of planned activity and actual performance.

Impact of classroom practice on students and the school is documented by the key dimensions form. It is important to note that items listed under key dimensions in any of the three questions should be those that apply actually to the school.

75 . 1144

One should review the earlier context setting forms on program mission and objectives to include on the list all that apply. In Question 3, in particular, appropriate programs need to be identified.

We have also found that collecting information from the community about program is often neglected. In many instances, structured response from parents is useful in identifying areas of need, concern, confusion or neglect from the perspective of the community and parents.

## D. Conclusion

Much remains to be done to validate the recording of practice as it is with simple tools which focus evaluation, not on application to learning heavy, but on implementation of a mission or program learning. The domain of the important and significant program events and the classroom behaviors and climate can lead to more accurate cortextual description which can assist in the responsible supervision of persons carected to accomplish school mission and programs.

### APPENDIX I

Mah-Sos School

## MISSION STATEMENT

The Tobique Board of Education sees the Mah-Sos School as the focus for education programs for the Reserve. The Board looks to the school as the meeting place for the Reserve's past and its future. There the young are educated in the rich heritage of the Maliseet Indians. There the old share their wisdom and experience to continue the traditions of the Maliseet Indians.

Recognizing that people are the most important resource in society, the

Tobique Band wishes to insure that each person on the Reserve is given the

opportunity to develop their potential to the fullest extent possible.

It is the major objective of the school to prepare Indian children to live

on the Reserve or elsewhere with competence and productivity and to provide

all ages with education programs to meet their needs.

The Tobique Band sees that tomorrow's decisions require vision and fortitude.

The community expects the school to serve as the center for developing the

Maliseet heritage using all available resources.

Tobique Board of Education (Spring 1975)
