ABSTRACT

A questionnaire was mailed to all 1,020 students who graduated from Montgomery College during the 1974-75 academic year to determine the employment and educational circumstances of the graduates as well as to gather information regarding the graduates! attitudes toward their college experience. Usable responses were received from 635 (62%) graduates. Among the findings were: (1) almost two-thirds of the respondents were employed full- or part-time, while 62% were enrolled in educational institutions at the time of the survey; (2) 44% of the transfer students reported that they had changed their major; (3) of the respondents who were employed full-time, over half reported earnings of more than \$8,000 per year, while 47% reported earning more than \$9,000 per year: (4) 51% of the respondents who were employed full-time perceived a direct relationship between their program of studies and their job; (5) 17% of the respondents reported they were unemployed, half because they were not looking for a job; (6) over two-thirds felt they had benefitted from contact with instructors outside of class, while 99% felt they had benefitted from classroom instruction; and (7) 98% were satisfied overall with the college. Findings are compared to those of previous graduate surveys and trends are noted. The survey instrument is appended. (JDS)

INTRODUCTION

Each year since 1970, all graduates of Montgomery College have been surveyed to determine their employment and educational circumstances approximately six months after graduation. These annual surveys provide information regarding the graduates' attitudes toward their experiences at Montgomery College and supply data through which comparisons among classes may be made. Any trends in either circumstances or attitudes may be discerned and, in turn, may be used either to validate current programs and practices at Montgomery College or serve as a catalyst for change.

Remarkably, comparisons among the 1970-1975 graduates have revealed few major changes in either activities or attitudes toward the College.

Yet, the findings add understanding and perspective to the services offered at Montgomery College.

As in previous years, the report of findings will follow the format of the questionnaires and will be preceded by a description of the population. Where applicable, comparisons with data from previous years are presented and relationships among items discussed.

1. THE POPULATION

A questionnaire was mailed to all 1020 students who graduated during the 1974-1975 academic year. Usable responses were received from 635 (62%) graduates. Thus, the results presented in this report could be biased if the 38 percent of the graduates who did not respond were significantly different from those who did. The researchers have assumed that no such significant difference exists.

There was variation observed in the proportion of responding graduates from the various curricula. As shown in Table I, the career
curricula produced the largest number of graduates and responses, but the
response rate of graduates in transfer curricula was highest.

2. THE FINDINGS

Graduates were asked what they were doing at the time of the survey and were requested to check as many activities as applied to them. This led to the recording of 367 more responses than there were respondents, an overlap due primarily to respondents who were both employed and pursuing further education at the time of the survey.

Of the 635 respondents, almost two-thirds were employed either fullor part-time, while an almost equal number (62%) were enrolled in
educational institutions at the time of the survey. The proportion of
respondents in school represents a significant (p=.002) increase over
the proportion of 1974 graduates who were in school at the time of the
1974 survey. (Table II.)

Graduates in Institutions of Higher Education

Those graduates continuing their education either full- or part-time were asked to indicate the general category of institution which they were attending. A summary for 1975 graduates is presented in Table III, along with comparative data for the 1974 and 1970 graduates.

From Table III it may be seen that the greatest number of students who continue their studies do so at the University of Maryland. In last year's graduate report it was noted that the proportion of students who transferred to the University of Maryland decreased significantly from 1970. This year, the proportion of students who transferred to the University of Maryland increased over last year, but was still significantly lower than in 1970. A significant increase over 1974 in the proportion of students who continue their education at Maryland state colleges is also apparent in Table III, accompanied by a proportionate decrease in the number of students who continue their education at a university or college in Washington, D.C. (See Appendix C.)

Altogether, the proportion of graduates who are continuing their education at state-supported institutions increased by 11 percent. There is little chance that these changes are due merely to differences among the samples, but reflect real differences between the populations of 1974 and 1975 graduates. Apparent differences in proportions between 1974 and 1975, other than those discussed here, such as for Maryland private colleges and universities, are apparently due to chance differences in the samples and may not reflect real change.

The 1975 graduates, numbering 395, who indicated that they were continuing their education represent 62 percent of those responding, as

noted previously. In 1974, this proportion was 54 percent; in 1973, it was 58 percent; in 1972 it was 61 percent; in 1971 it was 59 percent and in 1970 it was 69 percent of the respondents. Although there was a smaller proportion of students who continued their education in 1975 than in 1970, the proportion in 1975 was significantly greater than in 1974. Thus, the trend for proportionately fewer graduates to transfer that was noted in last year's report seems to have reversed with the class of 1975.

Loss of Credit

Of the graduates who transferred, 44 percent report that they changed majors when they transferred, 55 percent report not having changed majors, and 1 percent gave no reply. Those who changed majors lost an average of 4.8 credits upon transferring, while those who did not change majors lost an average of 2.3 credits. Although the average number of credits lost appears greater for those who changed majors, the difference between the means may be due to sampling error rather than a real difference between the two groups of students. A somewhat different comparison gives another result, however. Examination of the data reveals that, of those students who changed majors upon transferring, 43 percent report that they lost at least one credit; while of those who did not change majors, 36 percent report having lost one or more credits. This difference in proportions is marginally significant (p=.06).

A comparison of the numbers of students who lost at least one credit among types of receiving institutions (Table IV) demonstrates that a significantly greater proportion of transfer students (56%) lost credit by transferring to the University of Maryland than to all ou er insti-

tutions combined. Thus, it appears that loss of credit is related at least as much to the type of institution to which credits are transferred as to whether or not the student changed his or her major.

Employed Graduates

The 293 respondents who were working full-time were asked to indicate their current weekly salaries without overtime and before deductions.

More than half of those answering this question earn more than \$8,000 per year, and 47 percent earn more than \$9,000 per year. (Table V.) However, of those 1975 graduates who reported earnings in excess of \$9,000 per year, only 20 percent earn that much on jobs held for less than one year (Table VI), and there is a significant relationship (p<.01) between earnings and length of time a job is held. (See Appendix D.)

The majority of the respondents have held their current jobs for less than one year, which indicates that most jobs were found either just prior to graduation or after graduation from Montgomery College. (Table VII.) The 21 percent, of this group who have held their current jobs from one to two years, probably worked in conjunction with their attendance at Montgomery College, while the 25 percent who have held their current jobs for more than three years probably entered a program at Montgomery College for the purpose of upgrading their skills on existing jobs.

Fifty-nine percent of the full-time employed graduates work in Montgomery County and 6 percent work in other Maryland districts. Twenty-four percent work in the District of Columbia. (Table VIII.) The percentage of graduates employed in these various locales follows quite closely the employment patterns set by the 1970-1973 graduates, but differs significantly from that set by the 1974 graduates, 67 percent of whom were employed

in Montgomery County at the time of the 1974 survey. (Table VIII.)

Finding a Job (Full-Time Employees)

Of those responding to the question concerning where they secured help in locating their first job, more than half (55%) indicated that they held the same job while attending Montgomery College. Another 30 percent were helped by their family or a friend. Only 9 percent were helped in locating their first job through a source connected with Montgomery College. (Table IX.)

Studies Related to Job (Full-Time Employees)

The perceived relationship between program of studies of graduates and their present position was also investigated. Of those responding, 51 percent perceived a direct relationship, and 16 percent felt that their studies and their jobs were somewhat related. On the other hand, 22 percent perceived no relationship at all between their studies and their jobs. (Table X.)

Of those who felt that their programs of study and their present positions were unrelated (Table XI), 45 percent either opted out of the field for which they had prepared or were not involved in a job-related curriculum at Montgomery College. Twenty-nine percent of the respondents whose studies and job were unrelated reported they could not find a job in their field of study. This is down from the 33 percent of the 1974 graduates who indicated they could not find a job in their field. (Table XI.)

Montgomery College graduates have consistently indicated satisfaction

with both their current jobs and the preparation provided by Montgomery College. (Table XII.) This is true for 1975 as well, with 86 percent of the respondents indicating satisfaction with their jobs and 89 percent indicating satisfaction with their preparation at Montgomery College. This general level of satisfaction, moreover, is spread throughout every curriculum where the modal index is based on more than two responses. (See Summary Table in Appendix B.)

Unemployed Graduates

A total of 108, or 17 percent of the graduates who responded to the 1975 survey, were unemployed at the time of survey. Those who listed themselves as unemployed were asked what they felt was the major reason for their not being able to find a job. Of those who responded to this question, 48 percent indicated they were not looking for jobs, while 26 percent felt they needed more education to quality for the jobs they wanted. Only 16 percent indicated that the lack of openings prevented them from finding jobs, down significantly from the 56 percent of the unemployed 1974 graduates who indicated that the lack of openings was the major reason for not being able to find jobs. (Table XIII.)

General Information

All of the graduates were asked to reply to a series of questions concerning how they felt about the instructional and counseling services they received at Montgomery College. Over two-thirds felt they had benefited from contact with instructors outside of class, and over 99 percent felt they had benefited from classroom instruction. (Table XIV.) Fewer than 1 percent indicated that they had little benefit from

19

classroom instruction.

As for the difficulty of the courses at Montgomery College, 61 percent found them somewhat difficult, indicating that a majority of the respondents found the courses challenging but not overwhelming. (Table XV.)

Over 60 percent of the 1975 graduates sought counseling from the counseling staff at some time during their matriculation at Montgomery College. (Table XVI.) Of the 385 respondents who sought counseling, 77 percent felt they had benefited from it. The 136 students who apparently received no benefit from counseling services, along with 110 non-respondents to this question, account for those who said they had never sought counseling services. (Table XVII.)

When the graduates were asked to indicate the major reason they chose to attend, almost one-third (32%) indicated that they chose Montgomery College because the program of their choice was offered. Low cost and convenient location were other important reasons for choosing Montgomery College. In 1974, however, proportionately more graduates had chosen to attend Montgomery College because of its low cost rather than because of its program offerings. This reordering of reasons for attending Montgomery College is a strong indication that Montgomery College is meeting both the needs and desires of its constituency. (Table XVIII.)

As an overall indication of satisfaction with Montgomery College, graduates were asked if they would advise a close friend or relative to attend Montgomery College. Of the 612 respondents to this question, an

overwhelming 98 percent indicated they would issue such advice.

(Table XIX.) It may be concluded from this that Montgomery College is very successful in providing positive educational experiences for its graduates.

3. SUMMARY

A follow-up survey of 1975 graduates was conducted as part of the program evaluation system. The aim of this survey, as in the past, was to determine the present circumstances of the 1975 graduates and their attitudes toward their educational experiences at Montgomery College. Almost equal numbers of graduates were employed as were in school at the time of the survey. Of those in school, the majority was in attendance at the University of Maryland. Of those employed, the majority was earning in excess of \$8,000 per year and graduates were primarily employed in Montgomery County.

As in the past, 1975 graduates were extremely satisfied with their jobs, their programs of study at Montgomery College, the level of instruction, and the counseling services at Montgomery College. In addition, an overwhelming proportion of respondents indicated that they were satisified enough with their experiences at Montgomery College to recommend Montgomery College to a close friend or relative.

OIRA Report No. 6-22

STARTING SALARIES OF MONTGOMERY COLLEGE GRADUATES

FALL 1975

As part of the follow-up of graduates, data relating to beginning salaries are gathered. The students are asked to indicate if their employment is related to their program of studies at the College and how long they have held their present position. Weekly salaries before deductions are also reported.

In the attached table the beginning salary range of graduates who are working full-lime in a curriculum-related field are reported. The survey was conducted in the fall of 1975 and includes 108 of the 204 (53%) of the employed graduates who were working full-time in a related field.

Salaries in almost half of the curriculums exceeded the \$176.00 per week range suggesting the salary categories on the questionnaire were not broad enough and must be extended next year.

Students who graduated during the year ending June 30, 1976 will be surveyed in January of 1977.

WEEKLY SALARY RANGES OF 1975 GRADUATES OF CAREER CURRICULUMS

CURRICULUM*	NUMBER OF STUDENTS IN JOBS RELATED TO CURRICULUM**	TOTAL WEEKLY SALARY RANGE	MOST COMMON WEEKLY SALARY RANGE
Computer Science and Business	2	\$161 to over \$176	\$161 to over \$176
