ABSTRACT

This project was designed to collect information on the types of skills common to the appliance repair, refrigeration, and air conditioning service areas. A single task inventory was constructed from available course materials, revised by consultants, and administered to a random sample of 30 incumbent workers in each of the two service areas in two counties of Arizona. Completed task inventory forms were analyzed by computer with the tasks ranked according to percent of sample performing each task and time spent by workers performing each task. A report of the analyzed data was distributed to teachers in Arizona to be used as a basis for, curriculum revision. This report defines the problem area and describes the goals and objectives, procedures, design and methodology, selection of sample, administration of inventory, and data analysis. Tables provide information about distribution of respondents by job title and years of experience, mean years of experience in service area by job title, and frequency of responses to the question of where training was received by service area. Also included are the task inventory instrument and the task analysis which indicates percentage of respondents performing task and time spent ratings. (NJ)

ABSTRACT

PROJECT TITLE: A Survey of Common Elements in Appliance Repair, Refrigers

tion and Air Conditioning

AGENCY: Northern Arizona University

Flagstaff, Arizona \\86001

PROJECT DIRECTOR: Clair S. Hill, Ph.D.

Industrial Education Department

DURATION: May 17, 1976 to June 30, 1976

COSTS: RCU \$4,335.00 TOTAL \$4,335.00

DESCRIPTION OF PROJECT: 'This project was designed to collect information on the types of skills which were common to the Appliance Repair, Refrigeration and Air Conditioning service areas. These skills along with skills from the Automotive service areas, which have been identified in previously conducted task inventories, could be merged together to form common skill elements for a Mechanical Service cluster course at the high school level.

> A single task inventory was constructed from available course materials, This initial task inventory was then revised under the supervision of two consultants who were employed in each of the two service areas. '..

The revised inventory was administered to a random sample of thirty incumbent workers in each of the two service areas in Maricopa and Coconino counties. '

OUTCOMES:

Completed task inventory forms were analyzed utilizing the computer at Northern Arizona University. Tasks were ranked according to percent of sample performing each wask and time i spent by workers performing each task.

A report of the analyzed data obtained from the task inventory was distributed to teachers in Arizona who were teaching or planning to teach one of the mechanical service areas. This material could he used as a basis for curriculum revision and be further validated by local advisory committees.

BODY OF THE REPORT

Problem Area

The 1975-76 Arizona State Plan for Vocational Education in Arizona indicated that there was a basic need for research to identify common skill and knowledge competencies in various occupational areas. It specifically stated that there was a need to identify or develop a task inventory for the mechanical services cluster. These competencies, when derived from workers on the job, could be used by instructors to keep their course content up-to-date and relative to current job skills and knowledge.

Arizona Department of Economic Security estimated that approximately five hundred twenty new job opportunities would develop for air conditioning and refrigeration servicemen in the state between 1975 and 1978. Four hundred eighty new job opportunities would develop for appliance servicemen. Through the 1970's it was projected that Arizona could expect a "faster than average" growth among service workers.

At the time of this project there were three high school programs for refrigeration and air conditioning in the state. Programs for appliance repair were non-existant at the high school level.

A search of the literature revealed that only a single task inventory was available from the Ohio State Department of Education in air conditioning and refrigeration. No task inventories had been developed for appliance repair. Several states including Missouri, New Jersey, Florida, Mississippi and Texas have developed curriculum materials for the air conditioning and refrigeration area. A few states had also developed curriculum materials for the appliance repair area. A course outline developed by the Association of Home Appliance Manufacturers was also useful for developing the initial task inventory. These curriculum materials were utilized for producing the initial task inventory. Only those tasks which were thought to be performed by incumbent workers were included.

Goal and Objectives

The goal of this project was to provide instructors with an up-to-date analysis which shows the <u>common</u> skill and knowledge elements in the appliance repair, refrigeration and air conditioning service occupations so that job preparation for a number of the job areas in the mechanical services cluster may result.

Objectives were as follows:

1.1 On or before June 1, 1976, the Project director and a consultant in each of the two service areas compiled an initial task inventory which contained at least 200 common elements from the appliance repair, air conditioning

and refrigeration service areas. The initial task inventory was revised by two consultants who were employed in each of the service areas.

- 1.2 On or before June 15, 1976, the Project director selected a random sample of thirty incumbent workers from each of the two service areas in Maricopa and Coconino counties and administered the revised task inventory. Follow-up procedures were employed to insure a 70% return of completed survey forms.
- 1.3 On or before June 30, 1976, the Project director supervised the analysis of the data and distributed a report to each mechanical service teacher in the state. The report ranked tasks according to percent of sample performing each task and time spent by workers in performing tasks.

Procedures Followed

- 1.1.1 An initial task inventory was constructed from available published source materials. Revision of the initial inventory was conducted by two consultants employed in each of the two service areas. They reviewed and helped revise the initial inventory so that workers on the job could readily interpret the inventory.
- 1.2.1 From the roster of electrical contractors and associated firms provided by the Electric League of Arizona, a total of three major air conditioning firms was selected. A random sample of thirty incumbent servicemen was selected from each of the two service areas. Task inventories were delivered to the supervisors in charge of the sixty workers. These supervisors were given verbal and written instructions as to the administration of the task inventory. A telephone call and personal visit were used to insure a 70% return completion.
- 1.3.1 The procedure for conducting a task inventory as advocated by the Center for Vocational and Technical Education at the Ohio State University was followed in the survey and the analysis of the data. Computer programs developed at the Northern Arizona University were utilized. A report of the analyzed data obtained from the task inventory was distributed to teachers in the mechanical service areas who attended the fall Vocational Education Conference on August 13 and 14, 1976. Additional copies were delivered to the Arizona Department of Education, Division of Vocational and Career Education for further dissemination.

Project Design and Methodology

An initial task inventory was developed by searching existing

ERIC

appliance repair, air conditioning and retrigeration text books. curriculum guides and courses of study. Only the tasks that were thought to be performed by an incumbent worker in these service areas were included. The primary sources of task statements were:

- (1) An Analysis of the Air Conditioning, Refrigeration and Heating Occupations (1975)
 Frass, Melvin R.; Krause, Marvin Ohio State Department of Education
 The Ohio State University
 Columbus, Ohio 43210
- (2) Course Outlines for: Refrigeration, Air Conditioning and Appliance Repair (1973)

 Dade County Public Schools

 Miami, Florida
- (3) Air Conditioning and Refrigeration-Instructor's Guides (1973) University of Missouri Instructional Materials Laboratory Columbia, Missouri 65201
- (4) Training the Home Appliance Technician (1971 Curriculum Guide)
 Association of Home Appliance Manufacturers
 20 North Wacker Drive
 Chicago, Illinois 60606
- (5) Instructional Texts & Materials Appliance Repair
 Whirlpool Corporation
 Benton Harbor, Michigan 49022
- (6) Curriculum Guide Levels III & IV Appliance Repair (1971)

 Westinghouse Area Vocational High School
 City of Chicago Board of Education
 Chicago, Illinois
- (7) Modern Refrigeration and Air Conditioning Laboratory
 Manual (1968)
 The Goodheart-Willcox Co., Inc.
 South Holland, Illinois

After the initial identification, the tasks were grouped into areas called duties. The duty categories for the project were identified as:

- A. Working with the Public & Customer Relations
- B. Using Hand and Power Tools
- C. Soldering, Brazing & Welding
- D. Testing, Electrical Circuits & Components
- E. Making Mechanical Repairs

- F. Repairing Refrigerators and Freezers
- G.* Repairing Ranges
- H. Repairing Washing Machines -
- I. Repairing Dryers
- J. Repairing Dishwashers
- K. Repairing Disposals
- L. Repairing Window Air Conditioners
- M. Troubleshooting Refrigeration and Air Conditioning Equipment
- N. Servicing & Repairing Refrigeration & Air Conditioning Equipment

Task statements were then assigned to duty statements in the sequential order in which they were normally performed on the job. These task statements were listed in sequential order under each duty so that the incumbent service technician could follow the sequence of servicing an appliance or a unit in his mind as he completed the task inventory.

The initial task inventory was then reviewed and revised by two consultants from each of the two service areas. Mr. Kenyon P. Whitney, Service Manager, Climate Control Co. Inc., and Mr. Chic Hope, owner of Hope's Appliance & T.V. Service Served as the final evaluators for the final task inventory.

Each consultant was asked to respond to each task statement individually and comment on its clarity, appropriateness and order in the sequence. One major duty statement was eliminated and two other duty statements were combined. Many task statements were changed or added to make the final inventory of two hundred sixty-seven task statements.

Selection of the Worker Sample

Because this study was conducted during the busy season of a very seasonal type of service work, a minimum number of companies was utilized. Six major companies were used which were recommended by the Executive Director of the Electric League of Arizona.

A random sample of thirty incumbent workers in each service area was selected for the study. These workers were employed by the six companies as service technicians. The majority of the technicians worked but of service trucks. A few of the technicians worked in the shop.

Administration of Inventory

Task inventory forms were personally delivered to the immediate supervisor in charge of the servicemen in each company. The purpose of the study was briefly explained to the supervisor as follows: Each respondent was to complete the four background information questions on the cover page of the inventory form. Next he was asked to read the directions on the first page of the inventory. At this point, if there were no questions, he then checked the tasks which he

performed and tated the tasks which he had checked on a five (5) point relative time-spent scale. A rating of one (1) indicated that he spen4 very little time on that task compared with other tasks he performed. A rating of tive (5) indicated that he spent an above average amount of time on that task.

The supervisor was to administer the inventory to his workers at the weekly or monthly service meeting. Only those workers who had been chosen in the random sample completed the inventories. The completed forms were then mailed by the supervisor to the University for processing. Examples of the cover page and inventory are included in Appendix A.

A total of twenty-three inventories was completed and returned from appliance repair servicemen. Three of these were not completed properly or only completed partially. Twenty of these inventories were used in the final analysis of the data...

Twenty-one inventories were returned which had been completed by air conditioning and refrigeration servicemen. Twenty of these were used in the final data analysis.

Data Analysis .

In order to make comparisons between incumbent workers on specific tasks, the relative time-spent ratings were converted to percentage values. These values were regarded as estimates of the percentage of work time spent by the respondent on each task. It was assumed that the sum of the respondent's raw ratings represented 100 percent of his work time. Based on this assumption, each raw rating was expressed as a percentage of that total. The following formula was used in converting the raw ratings to percentages of time spent on each task:

Percentage of time = <u>individual raw rating</u>
for each task

sum of all raw ratings
by that individual

Background Information Summary

An analysis of the data from the background information cover page presented some interesting findings. The distribution of respondents by job title and years of experience (Table 1) indicated that 39.6 percent of the respondents were employed as appliance repair servicemen. Fifty-one percent were employed as refrigeration and air conditioning repair servicemen. Almost two percent were employed as a supervisor. About 7.5 percent indicated the job title of "other." "Other" was specified as: office, owner, dispatcher and accredited technician. The total number of respondents was forty. However, several respondents marked more than one job title on their inventory. Six respondents marked both appliance repair and refrigeration and air conditioning as a dual job title.

TABLE 1. DISTRIBUTION OF RESPONDENTS BY JOB TITLE AND NUMBER OF YEARS OF EXPERIENCE

| YFARS | C OF | | • | | JOB TETEL | | | |
|---------|------------|---|-------------|------|------------------------------|---|----------|-----------------|
| EXPERT | ENCE | ı | AppHance Re | patr | Refrigeration Conditioning R | | Superv1s | or Othe |
| 1-2 | (N) | | 1 | į | 1 2 | | 0 | 0 0 |
| 3-5 | (N) (7) | | 6 11 | | 4 7 | | 0 | · 2 |
| 6-10 | (N) (Z) | • | . 5 | | 12 23 | | 1 . | 1 2 |
| 11-15 | (N) | | 4 7 | • | 5 9 | | 0 0 | a 1 2 |
| 16-20 | · (N) | | 2 4 | | 1 2 | | . 0 | . 0 |
| over 20 | (N) (L) | | 3 6 | , | 4 7 | 1 | 0 | 0 - 0 |

NOTE: The total number of respondents was forty (40). However, several respondents marked more than one job title on their inventory.

The largest proportion of the refrigeration and air conditioning repair servicemen had an average of six to ten years of work experience. The largest proportion of appliance repair servicemen had three to five years of work experience.

The respondents were a stable group with a number of years in the service area as indicated by Table 2. The overall mean years of experience for the total sample of forty was 10.44 years. Appliance repairmen averaged 11.0 years of experience. Refrigeration and air conditioning repairmen averaged 9.9 years of experience.

TABLE 2. MEAN YEARS OF EXPERIENCE IN THE SERVICE AREA BY JOB "1TLL

| JOB TITLE | MEAN YEARS WORKED IN SERVICE AREA |
|---|--------------------------------------|
| | |
| Appliance Repairman | 11.0 |
| Refrigeration & Air Conditioning Repairman | 9.9 |
| Overall Mean | 10.44 |

The workers' responses by job title to the question of where they received their training are given in Table 3. It should be noted that a respondent could have checked more than one source of training.

The largest proportion (80 percent) of respondents in all positions received training on-the-job; 43.4 percent received training in private vocational schools. Most of these private schools are sponsored by the large manufacturers of appliances and air conditioning units. Thirty-four and a half (34.5) percent obtained at least part of their training through an apprenticeship program; 21.1 percent received training in the military. These were the major sources of training.

TABLE 3. FREQUENCY OF RESPONSES TO THE QUESTION OF WHERE THEY RECEIVED THEIR TRAINING BY SERVICE AREA

| TYPE OF | | | JOB | TITLE | | - *** | |
|-----------------------------------|------------|------------|-----|-------|---------------------------------------|----------------------|-----|
| TRAINING . | Applia | nce Repair | 1,1 | | | eration & ioning Rep | |
| | | <u>*</u> . | ٠. | | - | - | |
| On-the-job (self-learned) | (N) ° (%). | 14 46.7 | | • | t . | 12 33.3 | |
| Military School | (N) (%) | 3 10.0 | | | | 4 11.1 | |
| Private Vo- cational School | (N) (%) | 8 26.7 | , | • | · · · · · · · · · · · · · · · · · · · | . 6 16.7 | . • |
| Apprentice- ship Program | (N) · (%) | 2 6.7 | | | | 10 27.8 | |
| High School Program | (N) (%) | 1 6.7 | • | | | 1 2.7 | |
| Community College Program | (N) (%) | 1 3.3 | | | | 2 5.6 | |
| Aduļt Educa- tion Program | (N) · (%) | 41 3.3 | | | | 1 2.8 | |
| TOTAL | (N) (%) | 30 100 | | • | | 36 100 | |

NOTE: Any single respondent may have indicated more than one training program.

Task Analysis

The task analysis for all respondents employed in the two service areas is given in Table 4. The letter and number in the column labeled D-TSK (duty-task) refers to the location of the task on the task inventory which was administered to the respondents. The letter refers to the duty heading under which the task was categorized and the number indicates the placement of the task under that duty heading. A complete list of the duties and task statements is given in Appendix A.

The four columns of figures to the right of the task statements have been calculated to show: (1) percent of members performing each task, (2) average relative time spent by the members performing the task, (3) average relative time spent by all members, and (4) cumulative sum of the average percent time spent by all members.

Examination of the task analysis revealed that a variety of tasks were performed by both groups of service workers as a part of their normal job. The tasks are listed in order of the percent of members performing as shown in the first column. Although many of the tasks received a rather low rating, these tasks are rather specialized and are performed by only one of the service areas. These tasks would be taught in a specialized course.

Recommendations

This study indicates the common tasks related to appliance repair, refrigeration and air conditioning. The analysis provided in Table 4 should be further validated by local advisory committees. After validation it can be merged with the tasks from the automotive service area and used as a basis for a mechanical service cluster program at the high school level.

APPLIANCE REPAIR, REFRIGERATION & AIR CONDITIONER TASK INVENTORY

BACKGROUND INFORMATION

| 1. | Check your present job title: |
|-----|--|
| | Appliance Repatirman Supervisor |
| | Refrigeration & Air Other (specify) |
|) | |
| 2 | How many years have you worked as a repairman? |
| | years |
| | |
| 3. | Where did you receive your training? (check one or more |
| ** | On-the-job (self-learned) |
| | Military school |
| | , Private vocational school • |
| | Apprenticeship program |
| | High School program |
| , · | Community College Program |
| | Adult Education Program |
| | |
| 4. | Are you specialized in a mechanical service area? (e.g. washing machines & dryers or four ton A/C units) |
| | YesNo |
| | |

APPLIANCE REPAIR, RETRIGERATION AND AIR CONDITIONING TASK INVENTORY

INSTRUCTIONS FOR COMPLETING TASK INVENTORY

Capefully read each of the lask Statements and place a check mark (*) in the column labeled <u>Check</u> for each task which you perform on your present job.

After checking all tasks which you perform, then rate only the tasks you have checked by placing a number 1, 2, 3, 4 or 5 in the column labeled Time Spent which most closely estimates the amount of time you spend in performing the task.

lime spent means the total time you spend on each task you are rating, compared with the time you spend on each of the other tasks you do.

At the bottom on any-page, write in and rate any tasks you do which are not listed.
