ABSTRACT

Documents announced in the Volume 9, Number 6 issue of "Abstracts of Instructional and Research Materials in Vocational and Technical Education" (AIM/ARM) and not available under individual ED numbers are included in this microfiche set. Microfiche availability for these documents is shown in the VT-ED Number Cross Reference List included in AIM/ARM, Volume 10, Number 3. The microfiche set is arranged in the following sequence: (1) A VT number list of those documents in the microfiche set for Volume 9, Number 6, and (2) the full text of documents listed, in ascending VT-number order. The documents are filmed continuously. (Author)

 * Documents acquired by ERIC include many informal unpublished *
 * materials not available from other sources. ERIC makes every effort *
 * to obtain the best copy available. Nevertheless, items of marginal *
 * reproducibility are often encountered and this affects the quality *
 * of the microfiche and hardcopy reproductions ERIC makes available *
 * via the ERIC Document Reproduction Service (EDRS). EDRS is not *
 * responsible for the quality of the original document. Reproductions *
 * supplied by EDRS are the best that can be made from the original. *

INTRODUCTION

This set of microfiche consists of the documents which are announced in Abstracts of Instructional and Research-Materials in Vocational and Technical Education (AIM/ARM), Volume 9, Number 6, 1976 and are not available individually by ED number. These documents are grouped in VT-number sequence and filmed continuously as a microfiche set (AIM/ARM, VT-ERIC SET).

Microfiche availability of documents in this set is shown in the VT-ED Number Cross Reference List in Volume 10, Number 1 of AIM/ARM.

Microfiche copies of individual documents in this set may be obtained by reproducing the appropriate microfiche on microfiche reproduction equipment.

Hardcopy of individual documents in this set may be available from the sources listed in the resume for each document.

This publication was prepared pursuant to a contract with the Bureau of Occupational and Adult Education, U.S. Department of Health, Education and Welfare. Contractors undertaking such projects under Government sponsorship are encouraged to express freely their judgement in professional and technical matters. Points of view or opinions do not, therefore, necessarily represent official Bureau of Occupational and Adult Education or U.S. Office of Education position or policy.

ABSTRACT: THE PURPOSE OF THE PROJECT WAS TO RESTRUCTURE THE HEALTH ASSISTANT AND PRACTICAL NURSING CURRICULUMS TO ENABLE GRADUATES OF SECONDARY PROGRAMS TO ENTER AT A SPECIFIED ADVANCED LEVEL. THE DOCUMENT CONSISTS OF THREE PARTS. PART I IS THE FINAL REPORT DESCRIBING PROJECT GOALS AND ACTIVITIES. PART II, THE PROPOSED PLAN FOR CURRICULUM REVISION, CONTAINS THE RATIONALE FOR PROPOSED CHANGES AND A COMPARISON OF THE PRESENT PROGRAM WITH THE REVISED ONE ON SEVERAL FACTORS, INCLUDING PHILOSOPHY, PROGRAM OBJECTIVES, SUMMARY OF HOURS, COURSE DESCRIPTIONS, AND ARTICULATION PLAN. PART III IS A CURRICULUM GUIDE (387 PAGES), THE PRELIMINARY VERSION OF THE 1600-HOUR COURSE OF STUDY IN PRACTICAL NURSING. THE PROGRAM OFFERS SEQUENTIAL LEVELS OF LEARNING AND EXPERIENCE WHICH PERMIT INDIVIDUALS TO PROGRESS THROUGH THESE LEVELS WITHOUT DUPLICATING PREVIOUSLY ACQUIRED KNOWLEDGE AND SKILLS. THE THREE LEVELS ARE: FUNDAMENTALS OF HEALTH CARE, HUMAN HEALTH CARE I, AND HUMAN HEALTH CARE II. HUMAN HEALTH CARE I CONSISTS OF TWO MODULES, MEDICAL AND SURGICAL NURSING, AND MATERNITY-CHILD HEALTH NURSING. THE TWO MODULES AT THE THIRD LEVEL ARE ADVANCED MEDICAL-SURGICAL NURSING AND SPECIALIZED NURSING OPPORTUNITIES. EACH INSTRUCTIONAL UNIT INCLUDES AN INTRODUCTION, OBJECTIVES, RESOURCES, LEARNING ACTIVITIES AND DEVELOPMENTAL CONCEPT FOR EACH OF THE STATED OBJECTIVES, AND AN EVALUATION. AN INTRODUCTORY SECTION, BIBLIOGRAPHY, AND LIST OF AUDIOVISUAL AIDS ARE INCLUDED IN THE GUIDE. (RG)

- Practical Nursing Program Course of Study
- Proposed Plan for Curriculum Revision

ABSTRACT

I. INTRODUCTION

The purpose of this project was to plan and develop a Health Assistant - Practical Nursing Articulation Pattern which would enable high school health assistant students to enter the practical nursing program at a specific advanced level without the vast duplication and repetitious teaching now required to train in separate programs.

While there has been continuing evidence of commitment to the concept of open-ended career development, very limited action has been taken for the provision of an articulation pattern between secondary and post-secondary health occupations skill training. Hopefully, the proposed curriculum plan of the Pittsburgh Public Schools will serve as a model for meaningful program articulation that will encourage other health occupation educators in the Commonwealth to consider for adoption.

The specific project objectives were to:

1. Establish a teacher coordinating committee comprised of faculty members from both the secondary and post-secondary health occupation programs.
2. Strengthen the existing practical nursing program by developing a correlated curriculum based on level objectives.
3. Present a health assistant program which will offer the graduate options as well as assuring marketable skills at the high school level.

4. Plan a program that will afford educational opportunities for program articulation for the health assistant student and advanced standing placement for career mobility from other health occupations.

This project began with a workshop involving state health occupations supervisory personnel and the total faculty. This initial meeting resulted in an acute realization that the present practical nursing curriculum would have to undergo a total revision based on level objectives before an articulation pattern could become more than an idea. More importantly perhaps, this meeting generated enthusiasm among the faculty which continued throughout the project.

II. * CURRICULUM REVISION

A series of workshops was conducted in which the involved personnel were concerned with identifying the rationale for the curriculum change. The first step in the curriculum revision was to re-examine the present philosophy. Through thoughtful analysis and considerable discussion a new philosophy, which the faculty finally agreed reflected their beliefs as well as those of the Pittsburgh Board of Public Education, was proposed. Then, general program objectives were developed.

Early in the project the faculty, divided into groups according to individual interests and strengths, began to work with more concrete aspects of the curriculum. These aspects included general curriculum design, levels of learning experiences, and specific objectives for each level. Each group then identified the

content essential to each area; then, comparisons were made and concepts rearranged which would permit students to progress through the levels without duplicating previously acquired knowledge and skills.

Several intense workshops were provided during the project in which committee progress reports were circulated to all faculty for their review and comment.

After meaningful content appropriate to the specific levels of learning was identified, five faculty members were selected to finalize level objectives and student learning experiences. Sequential content had already been specified by the total faculty; however, the writing committee had the tasks of developing unit objectives, specific student learning activities and a built-in unit evaluation system which clearly stated the competencies the student was expected to acquire after completing the program.

Upon completion of the actual curriculum writing phase, which at times seemed an endless enterprise, copies were given to each faculty member to examine. Suggested changes were discussed and adaptations made. The curriculum presented is a preliminary one. Upon approval from the State Board of Nurse Examiners, the plan will be to implement and work with this curriculum for a year before a final edition is printed.

III. ARTICULATION AND ADVANCED STANDING PATTERN

As an important goal of the newly designed curriculum is to present the vehicle and stimulus for continued personal and professional growth; therefore, the next phase of the project was to develop a method by which adequate provi-

sion for articulation and advanced placement was clearly identified.

Having arrived at consensus about articulation and advanced standing differentiation, the faculty concentrated their efforts on the criteria essential for applicants electing to either articulate or be granted advanced standing in the practical nursing program.

Each of the three levels of the newly developed curriculum is designed to offer career opportunities indicated as spin-in and spin-off areas of achievement. Certainly the emphasis of the proposed curriculum is to have the student enter the program, complete the course, and become a licensed practical nurse. In addition, the proposed plan allows individuals from various health programs such as nursing assistants, practical nurses license by waiver, and corpsmen who wish to qualify for advanced standing at the first or second entry level to do so by applying and meeting the standards of the level best suited for the individual.

The secondary health assistant program was adapted to Level I of the practical nursing program. The objectives and content of both programs are identical in the first level, although placement and presentation differ. Students completing the high school course have the option of entering the health industry with entry-level skills or articulating into Level II of the practical nursing program.

Conversely, students who are enrolled in the practical nursing program could voluntarily or by recommendation of the faculty, withdraw from the program at the end of the first or second level and be qualified to find employment

in specific health agencies in a role other than that of a practical nurse.

The requirements established for articulating and first and second level entry applicants represents the thinking and endeavor of the total faculty.

Recently an intense two-day workshop was provided to develop written comprehensive examinations and selected skills situations to be administered to applicants desiring advanced placement in the practical nursing program. These testing materials are nearly completed and should be reviewed and finalized in the near future.

IV. CONCLUSION

The proposed curriculum and articulation pattern has been previewed by the state health occupations personnel and has been sent to the State Board of Nurse Examiners for review and approval at their July, 1976 meeting. Hopefully, initial implementation of the plan will begin in September, 1976.

V. RECOMMENDATIONS

Upon implementation, the faculty should make a concerted effort to seek answers to the following questions: will the newly developed practical nursing curriculum based on level objectives (1) afford educational opportunities for program articulation for the health assistant student, (2) advanced placement for career mobility from other health occupations, (3) and articulation with advanced nursing education programs? In addition, does this curriculum offer educational reinforcement through vocational skill competencies at spin-out portals leading to employment in the health industry? If so, what is the nature of these opportunities and to what extent

do these opportunities exist?

For total implementation of the newly designed curriculum and articulation pattern the following recommendations are suggested:

1. A long range organizational plan for implementation procedures should be developed.
2. In-service workshops for the total faculty should be provided at specific intervals in the implementation process.
3. Newly designed comprehensive written and practical examinations to be administered to applicants seeking advanced standing should be evaluated to check reliability and validity adequacy.
4. Measurement and evaluative techniques should be selected and employed in the maintenance of careful records of student theory, skills, and attitudes. These findings should be described, analyzed, and interpreted.
5. Evaluation forms should be developed and given to both teachers and students upon completion of each major unit of the curriculum to indicate progress of the program.
6. As each level of the curriculum is implemented, strengths and weaknesses should be identified. If sequential learning is taking place, then the students will be able to achieve the established objectives of each level and upon completion of the course, the student should achieve the total program objectives.
7. Evaluation of the health assistant and advanced placement student's

progress as compared to the regularly enrolled practical nursing students should be a continual process. Comparison studies should be employed.

8. Active feedback from professionals in health care facilities should be collected, analyzed, and recorded.
9. Results of the practical nurse state licensure examination should be utilized as an evaluative measure of the adequacy of the curriculum from the point of view of how well the graduate met the legal requirements for nursing practice at the licensed practical nurse level.
10. Questionnaires should be developed and sent to employers and graduates after six months and one year of employment in the health industry in order to provide a meaningful basis for curriculum evaluation.
11. An "exchange of ideas" meeting with community college personnel should be initiated for the purpose of establishing a coordinating committee to adapt specific criteria for articulation of the practical nurse/registered nurse associate degree programs.
12. The program design, curriculum outline, educational and instructional materials, and relevant data should be distributed to interested Pennsylvania school districts through the curriculum department of the Pittsburgh Board of Public Education in accordance with the established policy.

Finally, additional recommendations should be formulated which will furnish a basis for further implementation, including modifications revisions, so that optimal progress of students and effectiveness of the total program can be realized.

Note: Reference materials will be available; however, if you have preferred textbooks etc., please bring them.

12:00-1:00 p.m. Lunch

1:00-3:00 p.m. Continuation of Area Curriculum
Development

Saturday, November 1, 1975

Board Room,
Administration Building

9:00 a.m.

Group Sessions

12:00 p.m.

Content: Curriculum Coordination

GROUP	PROGRAM AREA	MEMBERS
Group I	Curriculum Review	P. Basial, B. Burgwin, A. Donovan, K. Evans, W. Majors
Group II	Philosophy and Objectives	J. Abbott, M. Abel, J. Ferraro, P. Honus
Group III	Clinical Experiences	J. Albert, M. Capalbo, M. Cattley, C. Gardini, B. Hughey
Group IV	Advanced Standing Requirements	F. Dreibelbis, A. Varriano, L. Kaib, R. O'Keefe, L. Pears

12:00-1:00 p. m. Lunch

1:00-3:00 p. m. Continuation of morning assignments

Curriculum Writing Sessions
Board Room,
Administration Building

8:30 a. m. - 3:30 p. m.

Group I - 1 H.A. Teacher
2 P.N. Teachers

September 29, 30 October 1, 2, 3 1975
October 6, 7, 8, 9, 10 1975

Group II - 2 P.N. Teachers

October 13, 14, 15, 16, 17 1975
October 20, 21, 22, 23, 24 1975

Saturday Sessions

1 H.A. Teacher
4 P.N. Teachers

October 25, 1975

THANK YOU FOR YOUR COOPERATION.

PITTSBURGH PUBLIC SCHOOLS
DIVISION OF OCCUPATIONAL, VOCATIONAL, AND TECHNICAL EDUCATION

MEMORANDUM

TO: All R.N. Faculty Members
FROM: H.A./P.N. Articulation Pattern Committee
DATE: October 22, 1975
SUBJECT: REVISED ASSIGNMENTS FOR WORKSHOP

Date, Time and Location: Saturday, November 1, 1975
9:00 A.M. - 2:00 P.M.
(Brown Bag)
Board Room, Administration
Building

Important: In order for the successful completion of our overwhelming task, WE NEED YOU.

In addition to you and your brown bag, in your briefcase should be materials pertinent to your new assignment.

Curriculum Areas

Committee

Philosophy & Objectives Revision	* J. Abbott, K. Evans, M. T. Honus
Curriculum Review (Investigate and bring newest films, slides, booklets, periodicals, etc.)	M. Abel, J. Albert, * P. Basial, B. Burgwin
Clinical Experience Summary and 3 Examples of Master Rotations	* M. Capalbo, A. Donovan, J. Ferraro
Introduction, Overview of Courses	K. Gardini, A. Varriano
Advanced Standing Requirements	L. M. Kaib, M. R. O'Keefe, * L. S. Pears
Orientation to Medical/Surgical Nursing - Clinical Area	* D. M. Cattlely, B. Hughey
Hours * General Format	* L. Allayaud, F. Toman, K. Nagg

PITTSBURGH PUBLIC SCHOOLS
DEPARTMENT OF SECONDARY SCHOOLS
DIVISION OF OVT EDUCATION/CONNELLEY SKILL-LEARNING CENTER

Practical Nurse Curriculum Revision
In-Service Workshop
Wednesday, November 19, 1975

AGENDA

Advanced Standing Requirements (Include "Spin-ins and Spin-outs")	L. Pears, D. Kaib, R. O'Keefe
Clinical Experience and Area Overviews	M. Capalbo, A. Donevan, J. Ferraro, F. Dreibelbis
Level Objectives First Level (Fundamentals)	K. Evans, W. Major, B. Burgwin, M. Abel
Second Level (Human Health Care I and II)	A. Varriano, B. Hughéy, J. Albert, D. M. Cattley
Third Level (Human Health Care III and IV)	M. T. Honus, P. Basial, K. Gardini
Rationale for Curriculum Change	J. E. Abbott
General Format	L. Ailayaud, F. Toman, K. Nagg

PITTSBURGH PUBLIC SCHOOLS

DIVISION OF OVT EDUCATION
CONNELLY SKILL-LEARNING CENTER

Practical Nursing Curriculum Implementation Planning
In-Service Workshop
Saturday, June 5 and June 12, 1976
Location: Connelly, Room 408 Time: 8:00 a.m. - 2:00 p.m.

AGENDA

Development of a Comprehensive
Examination for Level I Fundamentals
of Human Health Care
(1st Level Entry Applicants)

Kathryn Evans, Myra Abel,
Anita Donovan, Joan Ferraro,
Wanda Major, Anne Varriano,
Linda Kaib.

Development of a Comprehensive
Examination for Level II
Human Health Care I
(2nd Level Entry Applicants)

Margaret Honus, Jane Abbott,
Margaret Basial, Margaret Capalbo,
Catherine Gardini, Ruth O'Keefe

Determination of Selected
Nursing Skills to be demonstrated
by 1st and 2nd Level Entry Applicants
(Development of forms to be utilized)

Frances Toman, Laura Pears,
Elizabeth Burgwin, Dale Cattley,
Florence Dreibelbis,
Elizabeth Hughey

Development of an Implementation
Schedule, Spin-in and Spin-out
Procedures (1st and 2nd levels),
and level certificates

Louise Allayaud, Nora Douglas,
Faye Nastico, Kristin Nagg

Please review the curriculum area of your specific assignment
and have available any materials which will be helpful to you. Your
cooperation is greatly appreciated.

PITTSBURGH PUBLIC SCHOOLS
DEPARTMENT OF SECONDARY SCHOOLS/CONNELLY SKILL-LEARNING CENTER
PRACTICAL NURSE PROGRAM COURSE OUTLINE

	<u>Hrs.</u>		<u>Hrs.</u>
LEVEL I	480 hrs.	D. HEALTH CARE DELIVERY SYSTEM	
FUNDAMENTALS OF HEALTH CARE		1. Hospital Departments	
BASIC SCIENCES		2. Extended Care Facilities	
I. THE FIRST STEP	30 hrs.	3. Health Maintenance Organizations	
A. GENERAL ORIENTATION		4. Home Health Services	
1. Handbook		E. STUDENT ROLE AND RESPONSIBILITIES ON THE HEALTH TEAM	
a. Regulations		1. Hospital Relationship and Attitudes	
b. Policies		a. Integrity	
c. Requirements		b. Answering Phone	
2. Courses Offered		c. The Health Team	
3. Administration and Faculty		(1) Members	
a. Introductions		(2) Relationships	
b. Lines of Authority		d. Lines of Authority with Team Nursing	
4. Student Funding		2. Legal and Ethical Aspects	
5. Tour of School		a. Confidentiality	
6. Safety Aspects		b. Introduction to Legal Aspects of Health Care	
B. INTRODUCTION TO THE LEARNING PROCESS		(1) Code of Ethics	
1. Definition		(2) Negligence and Malpractice related to Basic Health Care	
2. Responsibilities of Student in the Learning Process		(3) Malpractice Insurance	
a. Accepting		(4) Witnessing Consent Forms	
b. Problem Solving		(5) Permission for Observation	
c. Class Participation		F. INTRODUCTION TO THE NURSE-PATIENT RELATIONSHIP	
d. Classroom Behavior		1. Cultural Differences	
3. Studying		a. Family	
a. Requirements for Effective Study		b. Community	
(1) Environment		2. Common Courtesies in Patient Relationships	
(2) Organization of Time		a. Introductions	
(3) Self-discipline		b. Addressing Patients	
b. SQ3R Technique		c. Knocking on Closed Doors	
c. Use of Reference Materials		d. Explanation of Procedures	
(1) Textbooks		e. Listening to the Patient	
(2) Periodicals			
4. Pre-test for Math Review			
C. PROFESSIONAL APPEARANCE			
1. Classroom			
2. Hospital			
a. Uniform Standards			
b. Shoes and Hosiery			
c. Hair and Cap			
d. Make-up			
e. Hygiene			

II. THE HEALTHY INDIVIDUAL

126 hrs.

B. INTRODUCTION TO THE ORGANIZATION OF THE HUMAN BODY

A. THE BASIC NEEDS OF ALL INDIVIDUALS

1. Physical Needs
 - a. Food and Water
 - b. Oxygen
 - c. Rest and Sleep
 - d. Shelter and Body Care
 - e. Elimination
2. Emotional Needs
 - a. Mental Health
 - (1) Self-approval
 - (2) Acceptance
 - b. Personality
 - (1) Traits
 - (2) Defense Mechanisms
 - (3) Habits
 - (4) Handling Stress
3. Social Needs - Group Membership
 - a. Family
 - (1) Development
 - (2) Cycle
 - (3) Trends
 - b. Peer Group
 - (1) Definition
 - (2) Methods of Communication
 - (a) With fellow students
 - (b) With co-workers
 - c. Health Community - Introduction to Bacteriology
 - (1) Protection
 - (a) Differentiating between pathogenic and nonpathogenic
 - (b) Preventing disease spread
 - (2) Community Health Problems
 - (a) Pollutants
 - (b) Communicable disease
 - (3) Food Safety
 - (a) Organizations that protect food supply
 - (b) Sanitary principles of storage and preparation of food
 - (4) Government Agencies
4. Spiritual Needs
 - a. Personal Philosophies
 - b. Organized Religions

1. The General Plan of the Body

- a. Body Cavities or Divisions
- b. Body Directions and Planes
- c. Basic Cell Structure and Functions
- d. Tissues
- e. Membranes
- f. Organs
- g. Systems - Gross Structure and Functions
 - (1) Skin
 - (2) Musculo-Skeletal
 - (3) Digestive - Food Digestion
 - (4) Circulatory
 - (5) Respiratory
 - (6) Nervous
 - (7) Endocrine
 - (8) Reproductive
 - (9) Urinary

C. MAINTAINING A HEALTHY BODY

1. Posture - Body Mechanics
 - a. Standing
 - b. Sitting
 - c. Walking
 - d. Exercising
2. Foot Health
 - a. Arch Trouble
 - b. Proper Shoes
 - c. Foot Care
3. Eating for Good Health
 - a. Normal Nutrition
 - (1) Relationship of Good Nutrition
 - (a) Definition of good nutrition
 - (b) Signs of poor nutrition
 - (c) Basic four group
 - (d) Recommended daily allowance
 - (e) Sources and functions of six basic nutrients
 - (f) Deficiency condition and how corrected
 - (g) Use of Calorie Tables
 - (h) Psychological importance of food

Hrs.

Hrs.

- (2) Meal Planning
- b. Principles of Planning and Buying Food
 - (1) Menu Planning
 - (2) Evaluating Menus for Nutrient Content
 - (3) Values in Planning and Buying Food
 - (4) Factors that Affect Food Choice
 - (5) Difficulties in Changing Food Habits
 - (6) Household Measurements
- c. Principles of Storing and Cooking Food
 - (1) Methods of Storage
 - (2) General Principles of Cooking Food
 - (3) Preparation of Simple Nutritious Food
- 4. Dental Health
 - a. Tooth Decay
 - b. Effects of Food
 - c. Toothbrushing
 - d. Fluoridation
 - e. Choosing a Dentrifrice
 - f. Simple Dental Disorders
 - (1) Caries
 - (2) Peridental Disease
- 5. Personal Hygiene
 - a. Care of the Skin
 - b. Care of the Hair
 - c. Elimination
 - d. Menstrual Hygiene
- 6. Eye Care
 - a. Proper Light
 - b. Prevention of Eye Strain
 - c. Preventing Eye Injuries
 - d. Removal of Foreign Bodies
- 7. Addiction - Habits
 - a. Drugs
 - b. Alcohol
 - c. Tobacco
 - d. Coffee, Tea
- 8. Diversion and Recreation
 - a. Relief of Nervous and Physical Tension
 - b. Relief of Mental Fatigue

- 9. Simple First Aid Measures
 - a. Accident Prevention
 - b. Simple Wounds (cuts, abrasions)
 - c. Fainting
 - d. Bleeding
 - (1) Locating Pressure Points
 - (2) Application of Pressure to Pressure Points
 - e. Shock
 - (1) Positioning
 - (2) Warmth
 - f. Fractures
 - (1) Symptoms
 - (2) Immobilization
 - (3) Application of Sling
 - g. Burns
 - (1) Recognizing Levels of Severity
 - (2) Immediate First Aid
 - h. Poisoning
 - (1) Emergency Treatment
 - (2) Chart
- 10. Periodic Physical Examination

III. THE NATURAL PHENOMENON OF ADVANCING AGE

15 hrs.

- A. INTRODUCTION TO AGING
 - 1. Terminology
 - a. Aging
 - b. Senescence
 - c. Senility
 - d. Geriatrics
 - e. Gerontology
 - 2. Lifespan
- B. INDIVIDUAL CHANGES
 - 1. Physical
 - 2. Mental
 - 3. Emotional
- C. FAMILY RELATIONSHIPS
 - 1. Role Changes
 - 2. Family Acceptance
 - 3. Family Substitute

Hrs.

Hrs.

D. SPECIAL GERIATRIC NEEDS

1. General Hygiene
2. Nutrition for the Aged
 - a. Food Problems
 - b. Diets
 - c. Meal Patterns
3. Safety
4. Housing Facilities
5. Division and Rehabilitation
 - a. Social
 - b. Physical
 - c. Economic

E. COMMUNITY RESOURCES

1. Community Responsibilities
2. Nursing Homes
 - a. Selection
 - b. Legal Aspects
 - (1) Social
 - (2) Governmental Control
 - c. Types of Care

F. ATTITUDES TOWARD DEATH

1. Emotional Aspects
2. Adjustment

IV. INTRODUCTION TO THE PROCESSES OF DISEASE

30 hrs.

A. NORMAL BODY DEFENSES

1. Skin and Mucous Membrane
2. Lymphocytes
3. Leukocytes
4. Natural Body Secretions
5. Immunity
 - a. Types
 - (1) Inherited
 - (2) Acquired
 - (a) Active
 - (b) Passive
 - b. Antigen - Antibody Reaction

B. CLASSIFICATION AND ETIOLOGY

1. Hereditary
2. Congenital
3. Deficiencies
4. Infectious
5. Metabolic
6. Neoplastic
7. Traumatic
8. Occupational

C. PREDISPOSING FACTORS

1. Genetic
2. Dietary Deficiencies
3. Ignorance
4. Emotional Problems
5. Inadequate Production

D. COURSE OF DISEASE

1. Acute
2. Subacute
3. Chronic

E. INFLAMMATION

1. Definition
2. Symptoms
3. Related Causes of Symptoms

F. REGENERATION OF BODY TISSUE

1. First Intentions
2. Second Intentions
3. Granulation
4. Scar Tissue

G. COMMON SIGNS AND SYMPTOMS

1. Classification of Observation
 - a. Objective
 - b. Subjective
2. Observations
 - a. Cough
 - b. Dyspnea
 - c. Cyanosis
 - d. Jaundice
 - e. Edema
 - f. Emesis
 - g. Hemorrhage
 - h. Diarrhea
 - i. Fever
 - j. Fatigue
 - k. Anorexia
 - l. Changes in Vital Signs
 - m. Inflammation and Infection
 - n. Pain
 - (1) Location
 - (2) Description
 - o. Emotional and Mental Reactions
 - (1) Orientation
 - (2) Responsiveness
3. Nursing Measures to Help Alleviate the Symptoms

H. BASIC DIAGNOSTIC PROCEDURES

1. Urinalysis
2. CBC Differential
3. Electrocardiogram
4. Chest X-ray
5. G.I. Series

F. METHODS OF ADMINISTRATION

1. Local (Topical)
 - a. Skin
 - b. Mucous Membrane
2. Systemic
 - a. Oral
 - b. Sublingual
 - c. Parenteral
 - (1) IM
 - (2) Subcutaneous
 - (3) IV
 - (4) Intradermal
 - d. Rectal
 - e. Vaginal
 - f. Inhalation

V. PRINCIPLES OF PHARMACOLOGY
INTRODUCTION

30 hrs.

A. UNITS OF MEASUREMENT

1. Apothecaries
2. Household (review)
3. Metric
 - a. Symbols
 - b. Equivalents
 - c. Conversion

B. DRUG STANDARDS

1. U.S.P.
2. N.F.
3. New and Non-official Remedies
4. Enforcement of Standards

C. LEGAL ASPECTS OF MEDICATION

1. Federal Controls
 - a. Harrison Narcotic Act
 - b. Controlled Drug Act of 1972
 - c. F.D.A.
2. Individual Responsibilities
 - a. Physician
 - b. Pharmacist
 - c. Nurse
 - d. Patient
 - (1) Hospital
 - (2) Home

D. SOURCES OF DRUGS

1. Plant
2. Animal
3. Synthetic

E. DRUG PREPARATIONS

1. Pill
2. Capsule
3. Tablet
4. Suppository
5. Ampule
6. Vial
7. Liquid
 - (1) Suspensions
 - (2) Emulsions
8. Powders
9. Aerosol

G. DRUG DOSAGE

1. Range of Effectiveness
 - a. Minimum
 - b. Maximum
 - c. Toxic
 - d. Lethal
2. Factors that Affect Drug Dosage
 - a. Age
 - b. Sex
 - c. Weight
 - d. Patient's Condition
 - e. Disposition of Patient
 - f. Method Used
 - g. Distribution
 - h. Elimination

PURPOSES OF DRUGS

1. Preventive
2. Diagnostic
3. Therapeutic
4. Curative
5. Palliative or Symptomatic
6. Supportive
7. Substitutive
8. Restorative

I. ACTION OF DRUGS

1. According to Location
 - a. Local or Topical
 - b. Systemic
 - c. Selective
 - d. General
2. According to Expected Results
 - a. Stimulation
 - b. Depression
 - c. Irritation
 - d. Demulcent
 - e. Salt Action

Hrs.

Hrs.

3. According to Condition of Patient
 - a. Physiologic
 - b. Therapeutic
4. Terms to Describe Actions
 - a. Side Effects
 - b. Idiosyncratic Action
 - c. Toxic Action
 - d. Cumulative Action
 - e. Antagonistic
 - f. Synergistic

J. ABBREVIATIONS AND SYMBOLS

K. THE WRITTEN ORDER

1. Prescription
2. Patient's Chart
3. Kardex
4. Medicine Card

L. INDIVIDUAL DRUG DATA FOR ADMINISTRATION

1. Purpose
2. Indications
3. Usual Dosage
4. Method of Administration
5. Contradictions
6. Toxic Reactions

M. COMMON DRUG CLASSIFICATION WITH EXAMPLES

1. Stimulant - Dexadrine
2. Analgesic - Aspirin
3. Narcotic - Demerol
4. Sedative - Phenobarbital
5. Hypnotic - Seconal
6. Tranquilizer - Valium
7. Vasodilators - Nitroglycerin
8. Vasoconstrictors - Adrenalin
9. Cardiotoxic - Digitalis
10. Antihistamine - Allerest
11. Expectorant - Benylin
Expectorant
12. Bronchodilator - Tedral
13. Antacid - Maalox
14. Cathartic - Milk of Magnesia
15. Diuretic - Lasix
16. Hormone - Insulin
17. Antiseptic - Alcohol
18. Antibiotic - Penicillin

VI. HEALTH CARE SKILLS RELATED TO THE PATIENT'S BASIC NEEDS

114 hrs.

A. GENERAL ENVIRONMENTAL NEEDS

1. Introduction to Medical Asepsis
2. Handwashing
3. Care of the Patient's Unit
 - a. Cleanliness
 - b. Safety

B. ADMISSION PROCEDURES

1. Application of Communication Skills
2. Height and Weight
3. T.P.R.
4. B.P.
5. Simple Physical Observations
6. Introduction to Medical Terminology
7. Elementary Charting of Observations
8. Introduction to Kardex
9. Reminder Sheets
10. Assignment Sheets

C. PHYSICAL NEEDS OF THE PATIENT

1. Types of Hospital Beds
 - a. Electric
 - b. Manual
 - c. Circo-electric
 - d. Stryker Frame
2. Bedmaking
 - a. Closed Bed
 - b. Open Bed
 - c. Occupied Bed
 - d. Modification for Special Needs
 - (1) Anesthetic Bed
 - (2) Orthopedic Bed
3. Proper Body Alignment
 - a. Positioning
 - b. Lifting
 - c. Moving
 - (1) Wheel Chair
 - (2) Cart
4. Personal Hygiene
 - a. Bath
 - (1) Assisting
 - (2) Partial
 - (3) Complete

Hrs.

Hrs.

- b. Back Care
 - (1) General Back Rub
 - (2) Special Back Care
- c. Oral Hygiene
 - (1) Assisting
 - (2) Special
- d. Care of the Hair
 - (1) Daily Care
 - (2) Shampoo
- e. Shaving
- f. Nail Care
- g. Special Considerations
 - (1) Catheter Care - Patency
 - (2) I.V.
 - (3) Observations
- 5. Assisting with Bowel and Bladder Functions
 - a. Observation of Stool and Urine
 - b. Charting Observations and Output
 - c. The Helpless Patient
 - (1) Incontinence and Retention
 - (2) Bowel and Bladder Training
 - d. Use of the Fracture Pan
- 6. Assisting with Meals and Feeding
 - a. Recognition of Individual Differences
 - b. Care of the Environment for Meal Time
 - c. Preparation of the Patient
 - d. Assisting with Meals
 - e. Feeding a Helpless Patient
 - (1) Strained food
 - (2) Asepto syringe
 - (3) Dropper
 - (4) Cup
 - f. Charting Fluid Intake

- (2) Clean catch
- (3) 24 Hour
- b. Stool
- c. Sputum
 - (1) Wet
 - (2) Dry
- d. Observations
- e. Reporting and Recording
- 2. Urine Reductions
 - a. Methods
 - (1) Clinitest
 - (2) Tes-Tape
 - (3) Acetest
 - (4) Ketostix
 - (5) Diastix
 - b. Reporting for Insulin Coverage and Recording
- 3. Assisting with Physical Examinations
 - a. Equipment
 - b. Body Positions
 - (1) Horizontal Recumbent
 - (2) Dorsal Recumbent
 - (3) Prone
 - (4) Sims
 - (5) Fowlers
 - (6) Knee Chest
 - (7) Dorsal Lithotomy
 - c. Draping

B. BASIC TREATMENTS

- 1. Support Measures
 - a. Binders
 - (1) Scultetus
 - (2) Straight
 - (3) T-Binder
 - b. Ace Bandages
 - c. Elastic Hose
- 2. Applications of Heat and Cold
 - a. Ice Cap
 - b. Hot Water Bottle
 - c. Sitz Bath
 - d. Unsterile Moist Compresses
 - e. Heat Lamp
- 3. Enemas - Flatus Tube
 - a. Types
 - (1) Cleansing
 - (a) Tap water
 - (b) Soapsuds
 - (c) Fleets
 - (2) Retention
 - b. Procedure
 - c. Observations and Charting
 - d. Care of Equipment

VII. HEALTH CARE SKILLS RELATED TO THE PATIENT'S SPECIAL NEEDS 135 hrs.

A. ASSISTING WITH DIAGNOSTIC PROCEDURES

- 1. Collection of Specimens
 - a. Urine
 - (1) Routine
 - (a) Voided
 - (b) Foley drainage

C. ADVANCED PROCEDURES

1. Problem Oriented Charting (SOAPIE)
 - a. Introduction to Nursing Care Plan
 - b. Progress Notes - SOAPIE
2. Post Mortem Care
 - a. Signs of Impending Death
 - b. Spiritual Needs of Dying Patient
 - c. Family Support
 - d. Post Mortem Care Procedure
3. The Surgical Patient
 - a. Pre-Op Care
 - (1) Physical preparation
 - (2) Emotional preparation
 - b. Post-Op Care
 - (1) Observations
 - (a) Complications
 - (b) Patency of drainage tubes
 - (c) Dressings
 - (2) Positioning
4. Protective Care
 - a. Purposes
 - b. Preparation of Unit
 - c. Applying and Removing Mask and Gown
 - d. Transfer of Food and Expendibles
 - e. Care of Linen
 - f. Handling of Non-expendibles
 - g. Collecting Specimens
 - h. Transporting
 - i. Terminal Cleansing
5. Introduction to Surgical Asepsis
 - a. General Principles
 - b. Methods of Sterilization
 - c. Handling Sterile Equipment
 - (1) Opening sterile package
 - (2) Applying sterile gloves
 - d. Changing Simple Sterile Dressings
6. Range of Motion Exercise
 - a. Active
 - b. Passive
7. Use of Safety Devices
 - a. Restraints
 - b. Posey Equipment
8. Meeting the Needs of the Long-term Patient
 - a. Hygiene
 - b. Nutrition
 - c. Positioning
 - d. Rehabilitation
9. Meeting the Physical Needs in Home Environment
 - a. Improvising with Home Facilities
 - b. Safety Aspects
 - c. Community Resources
 - (1) Meals on Wheels
 - (2) V.N.A.
 - (3) Public Health
 - d. Independence
10. Preparing and Administering Medication
 - a. The Five (5) Rights of Administering Medication
 - (1) Right Patient
 - (2) Right Medicine
 - (3) Right Dose
 - (4) Right Time
 - (5) Right Method
 - b. Oral Medications
 - (1) Liquid
 - (2) Pill, capsule, tablet
 - (3) Powders
 - (4) Special considerations
 - (a) Cough medications
 - (b) Unpleasant tasting medications
 - (c) Acid or iron preparations
 - c. Parenteral Medication
 - (1) Syringe and needle
 - (a) Types
 - (b) Sizes
 - (c) Handling a sterile syringe.
 - (2) Subcutaneous
 - (a) Purposes
 - (b) Areas for injection
 - (3) Intramuscular
 - (a) Purposes
 - (b) Areas for injection
 - (4) Insulin.
 - (5) Skin preparation
 - (6) Safety factors

Hrs.

Hrs.

LEVEL II

630 hrs.

HUMAN HEALTH CARE I

A. INTRODUCTION TO BASIC CONCEPTS OF HUMAN HEALTH CARE 9 hrs.

1. Identification of policies
 - a. School
 - b. Clinical facility
 - c. Nursing service department
2. Organization of clinical facility
 - a. Functions
 - b. Lines of authority
 - c. Personnel
 - d. Specific departments
3. Role of the student practical nurse
 - a. Learning experiences
 - b. Nursing team member
4. Tour of physical facility

B. NURSING THE PATIENT WITH PROBLEMS OF LOCOMOTION I 50 hrs.

1. Anatomy and physiology
2. Common deviations
 - a. Traumatic injuries
 - b. Inflammatory conditions
3. Preventive measures
4. Medical and surgical management
5. Nursing implications
 - a. Diagnostic procedures
 - b. Diet therapy
 - c. Drug therapy
 - d. Psychosocial aspects
 - e. Nursing care and related skills
 - f. Community resources
6. Rehabilitative therapy
7. Clinical experience

C. NURSING THE PATIENT WITH CARDIOVASCULAR IMPAIRMENT I 70 hrs.

1. Anatomy and physiology
2. Common deviations
 - a. Arterial degeneration
 - b. Blood dyscrasias
 - c. Varicosities
3. Preventive measures

4. Therapeutic management
 - a. Common symptoms
 - b. Laboratory tests
 - c. Diagnostic procedures
5. Nursing responsibilities
 - a. Diet therapy
 - b. Drug administration
 - c. Psychosocial support
 - d. Related nursing care and skills
 - e. Community resources
6. Rehabilitation therapy
7. Clinical experience

D. NURSING CONCEPTS IN THE CARE OF RESPIRATORY EMBARRASSMENT I 50 hrs.

1. Anatomy and physiology
2. Common conditions
 - a. Colds
 - b. Bronchitis
 - c. Pneumonia
 - d. Tuberculosis
3. Preventive measures
4. Therapeutic management
 - a. Common symptoms
 - b. Laboratory tests
 - d. Diagnostic procedures
5. Nursing implications
 - a. Drug therapy
 - b. Emotional support
 - c. Nutritional needs
 - d. Nursing care and related skills
 - e. Socio-economic aspects
6. Rehabilitative therapy
7. Community resources
8. Clinical experience

E. BASIC CONCEPTS OF NURSING APPLIED TO PATIENTS WITH NEUROLOGICAL SYMPTOMS I 50 hrs.

1. Anatomy and physiology
2. Common conditions
 - a. Cerebrovascular accident
 - b. Epilepsy
3. Preventive measures
4. Medical management
 - a. Common symptoms
 - b. Diagnostic tests
5. Principles of nursing care
 - a. Patient with seizures
 - b. Unconscious patient

Hrs.

Hrs.

6. Nursing responsibilities
 - a. Diet adaptations
 - b. Drug therapy
 - c. Psychosocial support
7. Rehabilitative factors
8. Community resources
9. Clinical experience

F. THE IMPACT OF AUDIO-VISUAL IMPAIRMENT ON THE INDIVIDUAL I

28 hrs.

1. Anatomy and physiology
2. Preventive emphasis
3. Common conditions of the eye and ear
 - a. Inflammatory disorders
 - b. Injuries
4. Therapeutic assessment
 - a. Common symptoms
 - b. Diagnostic tests
5. Nursing implications
 - a. Medication administration
 - b. Psychosocial support

G. CONCEPTS BASIC TO THE CARE OF PATIENTS WITH COMMON GASTROINTESTINAL DISTURBANCES I

50 hrs.

1. Anatomy and physiology
2. Common deviations
 - a. Appendicitis
 - b. Gastroenteritis
 - c. Hemorrhoids
 - d. Hernias
3. Preventive aspects
4. Medical-surgical intervention
5. Common symptoms
6. Laboratory tests
7. Diagnostic procedures
8. Nursing responsibilities
9. Diet modifications
10. Drug therapy
11. Nursing care and related skills
12. Psychosocial support
13. Community resources
14. Clinical experience

H. NURSING THE PATIENT WITH GENITO-URINARY DYSFUNCTION I

69 hrs.

1. Anatomy and physiology
2. Common disorders
 - a. Renal calculi
 - b. Urinary tract infections
 - c. Hysterectomy

3. Preventive factors
4. Therapeutic management
 - a. Etiology
 - b. Common symptoms
 - c. Laboratory tests
 - d. Diagnostic procedures

 - c. Physical care
 - d. Psychosocial aspects
 - e. Special nursing procedures
4. Convalescent care
5. Community resources
6. Patient education
7. Clinical experience

H. NURSING THE PATIENT WITH METABOLIC IMBALANCES II

30 hrs.

1. Thyroid dysfunction
 - a. Causes and symptoms
 - b. Diagnostic procedures
 - c. Medical management
 - d. Surgical intervention
2. Nursing responsibilities
 - a. Diet modifications
 - b. Medication therapy
 - c. Specific nursing care
 - (1) Preoperative
 - (2) Postoperative
 - d. Psychosocial aspects
3. Rehabilitative patterns
4. Patient teaching
 - a. Discharge instructions
 - b. Home care
5. Community resources
6. Clinical experience

I. NURSING THE PATIENT WITH PROBLEMS INVOLVING DISFIGUREMENT

18 hrs.

1. Advanced conditions
 - a. Skin disorders
 - b. Burns
2. Dermatology terminology
 - a. Conditions
 - b. Examples
3. General skin care
 - a. Bathing
 - b. Special baths
 - c. Specific treatments

4. Drug therapy
 - a. Topical medications
 - b. Corticosteroids
 - c. Systemic medications
5. Psychosocial aspects
6. Classification of burns
 - a. Depth
 - b. Percentage

7. Nursing responsibilities
 - a. Emergency care
 - (1) General first aid
 - (2) Hospitalization
 - (3) Burn centers
 - b. Immediate care
 - (1) Breathing
 - (2) Fluid therapy
 - (3) Renal function
 - (4) Care of burns
 - (5) Medications
 - (6) Nutritional needs
 - c. Emotional support
8. Rehabilitative patterns
 - a. Long-term care
 - b. Emotional support
 - c. Socio-economic factors
 - d. Patient education
9. Community resources
10. Clinical experience

J. SPECIALIZED NURSING

140 hrs.

1. Specialty areas
 - a. Emergency room
 - b. Intensive care
 - c. Recovery room
 - d. Psychiatric concepts
 - e. Home care
 - f. Additional medication administration
 - g. Principles of leadership
2. Nursing responsibilities
 - a. Surgical patient follow-through
 - b. Nursing care plans
 - c. Observations and assessment
 - d. Emotional aspects
 - (1) Patient
 - (2) Family
 - e. Complication preventive measures
 - f. Medication administration

Hrs.

- g. Adaptation of nursing techniques for home care
 - h. Mental health promotion
 - i. Nursing action priorities
 - j. Team leader role
3. Community resources
4. Clinical experience

K. NURSING OPPORTUNITIES 70 hrs.

- 1. Health care trends
- 2. Nursing trends
- 3. Ethical and legal responsibilities
- 4. Nursing organizations
 - a. Alumni Association
 - b. National League of Nursing
 - c. National Association for Practical Nurse Education and Service

I. RATIONALE FOR PROPOSED CHANGES IN THE PRACTICAL NURSING PROGRAM

The faculty of the Pittsburgh Public Schools Practical Nursing Program, recognizing:

1. Trends in health care delivery toward health maintenance,
2. Trends in nursing toward professional mobility and flexibility,
3. Trends in education for continuing development of every individual throughout life,
4. Trends in career opportunities as affected by the state of our national economy; therefore, proposes a comprehensive curriculum change for the Practical Nursing Program. The faculty believes this change in curriculum design will integrate those progressive learning opportunities which follow the trends above and which offer greater relevance for our students.

The changes for the curriculum reflected a need to:

1. Develop a new theoretical framework to give direction to the construction of a comprehensive curriculum design.
2. Formulate program and level objectives to carry forward the program design.
3. Proceed from a traditional curriculum pattern to a developmental curriculum pattern facilitating both student and faculty growth.
4. Move from a curriculum framework which is subject oriented to one which integrates theory and practice.
5. Develop a curriculum pattern which avoids fragmented learning experiences and stresses correlation of learning and continuity of education.
6. Provide a way of meeting family and community health needs by emphasizing normal health maintenance.
7. Stress theoretical concepts rather than factual content.

I. RATIONALE FOR PROPOSED CHANGES IN THE PRACTICAL NURSING PROGRAM-continued

8. Provide a meaningful basis for curriculum evaluation.
9. Develop a curriculum to afford educational opportunities for program articulation for the Health Assistant student, advanced standing placement for career mobility from other health occupations, and articulation with advanced nursing education programs.
10. Implement a program which offers educational reinforcement through vocational skill competencies at spin-out portals leading to employment.
11. Create a curriculum which offers the student greater ease through the learning process by affording more individualized progress and counseling.

53

II. COMPARISON OF PRESENT PROGRAM CURRICULUM WITH PROPOSED REVISED CURRICULUM

A. PRESENT PHILOSOPHY

The faculty believes that:

Nursing is a multi-level profession which serves the comprehensive health needs of the public.

Nursing is viewed on a continuum, i.e., auxiliary, Vocational/Practical Technical, profession which enables the individual to develop to the optimum of his/her potential while progressing according to his/her learning abilities.

This level of instruction affords a foundation to successive levels of nursing.

A. PROPOSED PHILOSOPHY

The faculty of the Pittsburgh Public Schools Practical Nursing Program postulates this theoretical construct for the program curriculum and asserts that:

Nursing is a health profession.

Health is viewed as the person's normal state of well being throughout human development.

The concept of human development is a life gestalt, i.e., prenatal life through death.

Fundamental to the integrity of the life cycle are developmental, family, and health needs.

The practice of nursing derives its impetus from these concepts of human needs and the family.

Nursing recognizes the right of every individual to an optimum health state in the process of human development.

The nursing profession is responsible for the promotion of normal health maintenance among individuals and for health state stabilization in physical and mental dysfunction.

The nursing profession is viewed as a whole, developed along an educational continuum with a multi-entry system for progressive competency positions, i.e., paraprofessional, vocational/practical, technical, and professional.

Each nursing locus of the continuum affords mobility to another locus, enabling an individual to develop full

A. PRESENT PHILOSOPHY-CONTINUED

Vocational/Practical Nursing is the level of this educational continuum which would prepare the individual to provide all general nursing care and to assist the health team in critical and complex care situations under the direction of the professional nurse and/or physician.

Education is a continuous process evidenced by expected behavioral changes in skills, knowledge, and attitudes.

Education effectively takes place in a climate which provides stimulation, enhances motivation, and develops the student to fullest potential.

We believe learning proceeds from the simple to the complex and from directed to more self-directed experiences.

A. PROPOSED PHILOSOPHY-CONTINUED

potential, while progressing according to his/her learning abilities is a continuing process for professional and personal development.

Vocational/practical nursing is the level of the nursing continuum which prepares the practitioner to promote the maintenance of an individual's normal health state and to assist in stabilization of the health state during physical and mental dysfunction.

The vocational/practical nurse functions as an integral member of the health team under the direction of a health professional in a variety of settings, such as hospitals, homes, and community agencies.

Education is a progressive process of self-growth throughout one's human development.

The student has a right to an educational opportunity which will enhance personal growth.

The faculty is the facilitator of the educational process, providing a learning climate which stimulates and motivates the student to fullest development.

Learning is characterized by expected behavioral changes in skills, knowledge, and attitudes. These behavioral changes are the competency/learning objectives required by the educational process of the curriculum.

Achievement of curriculum competencies through increasing self-direction by the student is under the guidance of the faculty.

A. PRESENT PHILOSOPHY--CONTINUED

This occurs in an atmosphere where individual worth is the foundation of purposeful activities and where a close correlation between classroom instruction and clinical experience is maintained.

It is the aim and responsibility of this faculty to provide an educational milieu for the student to acquire and apply knowledge and specialized skills essential to the practice of vocational nursing.

We believe the instructional program should assist the student:

1. To develop an attitude of self-discipline through personal responsibility toward the learning experiences.
2. To develop the capability of self-direction through personal confidence gained from the learning experiences.
3. To develop the faculty of good nursing judgment through personal diligence exercised in the learning experiences.
4. To develop a capacity for objectivity in regard to self, others, and to life situations through personal acceptance of

A. PROPOSED PHILOSOPHY--CONTINUED

Learning evolves from the fundamental level to the complex. It develops progressively from directed activities to more self-directed experiences.

Learning develops in an atmosphere where individual worth is the hallmark of learning activities.

Close correlation between classroom instruction and clinical experiences is essential to effective competency achievement by the student.

It is the aim and responsibility of the faculty to provide an educational milieu for the student to acquire and apply the knowledge and specialized skills essential to the practice of vocational nursing.

We believe the instructional program should assist the student to:

1. Develop an attitude of self-discipline through personal responsibility toward the learning experiences.
2. Develop the capability of self-direction through personal confidence gained from the learning experiences.
3. Develop the faculty of good nursing judgment through personal diligence exercised in the learning experiences.
4. Develop a capacity for objectivity in regard to self, others, and to life situations through personal acceptance of evaluative measures, assignments, and

A. PRESENT PHILOSOPHY-CONTINUED

evaluative measures, assignments, and interpersonal relationships entailed in the learning experiences.

A. PROPOSED PHILOSOPHY-CONTINUED

interpersonal relationships entailed in the learning experiences.

5. Develop a quest for self-actualization through personal action for continuing human and professional growth.

51

B. PRESENT PROGRAM OBJECTIVES

The faculty through the planned program of the Pittsburgh Public Schools Practical Nursing Program, aims to provide learning experiences that will assist the student to:

1. Demonstrate competent individualized nursing care by:
 - a. Assessing the basic physical, emotional and spiritual needs of the patient and his family in the community.
 - b. Applying the elementary scientific principles and concepts of nursing.
 - c. Organizing plans of nursing care for selected patients.
 - d. Identifying the normal physiological processes and their deviations.
 - e. Performing the skills essential to vocational/practical nursing.
2. Recognize the Vocational/Practical Nurse's role as a contributing member of the health team by:
 - a. Demonstrating good interpersonal relationships.
 - b. Functioning as an integral member of the team.
3. Grow emotionally, socially and professionally as an individual by:

B. PROPOSED REVISION OF PROGRAM OBJECTIVES

Upon completion of the Pittsburgh Public Schools Practical Nursing Program, the students will be able to:

- Utilize new knowledge and skills to assist individuals in maintaining their health state.
- Communicate effectively with patients and their families, and maintain effective interpersonal relationships.
- Demonstrate personal and professional growth by utilizing opportunities to their fullest potential.
- Assume the responsibilities necessary for a career in nursing.
- Demonstrate good citizenship and a professional spirit of cooperation.

LEVEL OBJECTIVES

LEVEL I

Upon completion of Level I, the students will be able to:

- Identify the needs of a healthy individual and explain how the disease process alters these needs.
- Demonstrate the skills required for giving health care to adult patients having both short- and long-term nursing needs.
- Communicate effectively with patients and members of the health team on a therapeutic level, make and report observations accurately to the appropriate persons and record necessary data.
- Establish positive interpersonal relationships.
- Utilize basic problem solving techniques.
- Assist the professional nurse in a variety of situations.
- Accept guidance and criticism graciously, and with a professional attitude.

B. PRESENT PROGRAM OBJECTIVES-continued

- a. Applying reasonable judgment.
- b. Identifying personal limitations and accepting constructive evaluation.
- c. Building on educational and professional foundations.
- d. Conducting continuous self-evaluation.
- e. Displaying a code of personal and professional behavior based on ethical principles.

B. PROPOSED REVISION OF PROGRAM OBJECTIVES-continued

LEVEL II

Upon completion of Level II, the students will be able to:

- . Provide safe and effective health care for the mother and infant, as well as for children and adults who have simple or moderately complex nursing needs.
- . Utilize appropriate theory in developing a plan of health care based on priorities.
- . Obtain required data from a patient and make valid observations.
- . Record and report relevant data and effectively utilize non-verbal communications.
- . Respond in a positive manner to the emotional and social needs of patients, families, peers, and hospital personnel.
- . Interact in a positive and effective manner with peers, hospital personnel, patients, and families, and cope with sources of stress in these interrelationships.
- . Administer selected medications competently and safely.
- . Accept responsibility for personal behavior, and accept guidance and criticism in a professional manner.
- . Demonstrate initiative in seeking additional learning experiences.
- . Identify the normal physiological and psychological processes, and explain any deviations in terms of the patient, the family, and the community.

LEVEL III

Upon completion of Level III, the students will be able to:

- . Provide appropriate nursing care for patients of all ages.
- . Assist the professional nurse in moderate and complex situations.
- . Make accurate and objective observations and use the information to make assessments and to plan a course of action.

B. PROPOSED REVISION OF PROGRAM OBJECTIVES-continued

- . Administer medications to adult patients.
- . Continue to build upon theory learned in the classroom to enhance professional qualifications.
- . Recognize personal responsibilities and act accordingly in terms of the patient, the family, and the community.
- . Develop and adhere to a professional code of ethics.
- . Function effectively as an important member of the total health team.
- . Utilize theory and skills to solve problems related to health care.
- . Perform self-evaluations, and use the results to further professional growth and development.

Upon completion of Level III, the student should achieve the program objectives.

Total: 1600 hrs. 48 wks

E. PRESENT COURSE OVERVIEW

Phase I: Pre-clinical, 16 weeks at
30 hours per week

Phase I of the Practical Nursing Program is divided into three periods of time. There are approximately twenty-six hours of classroom instruction a week during the first period of the program. The student is introduced to the concept of practical nursing as defined by present social needs. The beginning instruction is designed to aid the enrollee in the transition to a hospital environment and in the orientation as a member of the hospital's health team. The classroom content stresses the basic health needs and the normal development of an individual from infancy to old age with an emphasis on the health needs of one's self, the family, and the community.

63
During the second period, the teachers stress deviations from normal conditions and related nursing care. The student is given limited, closely supervised exposure to the clinical laboratory. The clinical experiences are correlated with classroom instruction and emphasize individual patient care at a simplistic, uncomplicated level.

The third period of the *Phase I* program is an extension of the classroom instruction with added and progressively more complicated interrelated clinical assignments. The information and nursing skills pertaining to the preparation and the administration of medicines and treatments are integrated with the diversional and rehabilitative principles.

E. PROPOSED COURSE OVERVIEW

This program design defines three sequential levels of learning and experience which permit individuals to progress through these levels without duplicating previously acquired knowledge and skills.

Level I, Fundamentals of Human Health Care, stresses basic nursing attitudes, knowledge, and skills, and is sixteen weeks in length. Clinical experience is provided two days a week in a health care facility beginning the third week. The final two weeks of this level provides an evaluation period in which the individual student's comprehension of health care is measured by written tests and skills performance.

Level II, or Human Health Care I, comprises eighteen weeks of the total course and is divided into *Modules A* and *B*. These modules of learning are flexible and are constructed in such a way that each can be lifted from the scheduled sequence and taught at anytime throughout the second level ensuring optimal correlation of theory and practice. *Module A* consists of twelve weeks of medical-surgical nursing and presents the knowledge and conditions of dysfunction. The underlying principles of nursing are brought out in the care of general types of patients and in the care of selected conditions, with the idea that application of the learned principles can be made easily to other specific conditions. *Module B* is a six week continuum of *Level II* and introduces the student to maternal child health care with emphasis on the healthy family unit.

Level III, Human Health Care II, consists of fourteen weeks and also is divided into an *A* and *B Module*. In *Module A*, moderately complex medical-surgical nursing

E. PRESENT COURSE OVERVIEW-continued

Phase II: Clinical, 32 weeks at
35 hours per week

Phase II is a combination of classroom instruction and supervised clinical experience. The instructional program is largely conducted in one of the cooperating hospitals and is based on a thirty-five hour work week. There are no trainees scheduled for evening or night instructional experiences. Weekend experiences may be arranged only if the work experience is correlated with the instructional program. Relevant observations or minimal experience includes Central Service, Operating Room, Recovery Room, Inhalation Therapy, Intensive Patient Care, and Related Clinical duties. Visits to community organizations and agencies are arranged to enable the trainees to become knowledgeable about mental health facilities, geriatric nursing care facilities, home care for individuals, and rehabilitation programs for the blind, deaf, and physically disabled.

E. PROPOSED COURSE OVERVIEW-continued

needs are presented in this eight week session. Module B of Level III offers a four week experience in various specialty areas within the clinical facility. The final two week period of the course is an evaluation process which allows the student to make the transition from student to graduate practical nurse.

Health care experiences during Levels II and III consist of three days in a clinical facility and two days in a classroom setting each week.

Each of the three levels is designed to offer career opportunities indicated as spin-in and spin-off areas of achievement. An important goal of this program is to present the vehicle and stimulus for continued personal and professional growth; therefore, adequate provision for articulation and advanced placement based upon demonstrated competencies and validated previous and present education and experience is essential.

F. PRESENT COURSE DESCRIPTIONS

Nursing Principles and Practices

The 214 hours devoted to principles and practice are comprised of 150 hours of classroom instruction (50 hours of theory and 100 hours of laboratory practice) and 40 hours of supervised clinical practice in *Phase I* with 24 additional hours of advanced nursing theory and laboratory practice given in *Phase II*. The instruction is designed to give the student understanding of basic scientific principles on which nursing care is based and insights into individual nursing needs of patients. Theory and skills proceed from the relatively simple tasks to the more complex nursing skills.

Personal and Vocational Relationships

This is a 35 hour course which presents the personal and vocational standards of practical nursing. *Phase I* offers 30 hours of content in which the student views herself as an individual with a role on the health team with responsibilities to the patient, the team, and the vocation. She is introduced to her personal, ethical, legal and vocational responsibilities. At the latter part of *Phase II* this course offers 5 hours in which the responsibilities to identify with practical nursing through membership in organizations and the continuing education process are stressed.

Structure and Function

The basic organization of the body structure and the interdependency of its units comprises the content of the 61 hours of instruction in this area of the training. This knowledge is gained by studying the functional make-up of the

F. PROPOSED COURSE DESCRIPTIONS

Level I

Fundamentals of Human Health Care

Length: 16 weeks

Theory: 264 hours

Practice: 216 hours

TOTAL: 480 hours

This level stresses basic nursing attitudes, knowledge, and skills.

The first two weeks includes an orientation to the program, the learning process, and the student's responsibilities as a member of the health profession.

The course progresses from a healthy individual, the needs of that individual, and the methods of maintaining the individual's health, to an introduction to the processes of disease. Anatomy and physiology is introduced at this level but only the very basic structures and their functions are included.

The student is introduced to the natural phenomenon of advancing age which includes all of the changes, needs, and responsibilities of care, families, and society.

In addition, principles of interpersonal relationships, communications, and personal and community health are presented. Normal nutrition is integrated throughout this period.

Health care skills related to the patient's basic and special needs are emphasized with correlated theory and practice in giving basic health care to adult patients with simple short- and long-term care. Beginning the third week, clinical experience is provided two days a week in a health care facility.

F. PRESENT COURSE DESCRIPTIONS-continued.

body from the simplest unit of the cell to the complex body system.

There are forty-five hours of Structure and Function content in *Phase I*. In *Phase II*, there are 16 hours of related content taught in Medical-Surgical and Obstetric Nursing.

Nutrition and Diet Therapy

This is a sixty hour course and is designed help the student acquire a practical knowledge of good nutrition and its relation to health. It includes basic knowledge of diet therapy and the modifications of diets as a contribution to the total nursing care of patients. In *Phase I*, 33 hours of Nutrition and 12 hours of Diet Therapy are taught. In *Phase II*, there are 15 hours of related diet therapy taught in Medical-Surgical, Obstetric, and Pediatric Nursing.

Personal and Community Health

The thirty-hour course given in *Phase I*, stresses principles related to the maintenance of optimum personal, physical, and mental health and its value to all people. It includes the prevention and the control of disease on the local, national, and international levels. It gives the student an insight into existing community health problems and the availability of resources to alleviate the problems. Community health issues and agencies for the prevention and control of health problems are correlated with nursing content in *Phase II* instruction.

Drugs and Solutions

There are a total of forty-seven hours of

F. PROPOSED COURSE DESCRIPTIONS-continued

Level II

Human Health Care I

Length: 18 weeks
Theory: 252 hours
Practice: 378 hours

TOTAL: 630 hours

Module A of this level consists of twelve weeks of medical-surgical nursing and presents the knowledge and skills essential in caring for persons with intermediate conditions of dysfunction. The emphasis in this level is on anatomy and physiology, pharmacology, nutrition, and the emotional and social factors which are directed toward the patients' positive rehabilitation.

Module B is a six week continuum of Level II and introduces the student to maternal child health care. The healthy family unit is stressed and includes the study of normal child bearing, rearing from infancy through adolescence, common childhood health problems, and mothers with special needs. Normal nutritional, psychosocial, and economic needs of the family, as well as the availability of community resources are all an integral part of this learning module.

Health care experiences consist of three days in a clinical facility and two days in a classroom setting each week.

Level III

Human Health Care II

Length: 14 weeks
Theory: 196 hours
Practice: 294 hours

TOTAL: 490 hours

This level also is divided into an A and B

F. PRESENT COURSE DESCRIPTIONS-continued

Drugs and Solutions and Drug Therapy taught in Phases I and II. In Phase I, fifteen hours of Drugs and Solutions which include sources, use and action of drugs, and basic mathematics that apply to the preparation and administration of medications are taught. Also, fifteen hours of introductory Drug Therapy as it relates to the human body are part of the content in Phase I, Drug Therapy in Medical-Surgical, Obstetric, and Pediatric Nursing.

Family Living

This thirty hour course in Phase I stresses the importance of the family as the basic unit of our society. It gives the student an understanding of normal individual growth and development from infancy through adulthood in relation to family life and development. It includes many of the problems associated with the aging process and the aged.

Introduction to Conditions of Illness

This 30 hour instructional course in Phase I introduces the student to the processes of illness in the body and to the deviations from normal health. Broad concepts and simple medical-surgical adult conditions of illness are taught. This includes the direct nursing care that may be essential for the diagnosis, treatment, and optimum recovery of the individual. Content of related courses that contribute to meeting the total needs of the patient and that assist the student in her understanding, observation, and care of the patient are emphasized.

Medical-Surgical Nursing

The content in Medical-Surgical Nursing is a

F. PROPOSED COURSE DESCRIPTIONS-continued

Module A In *Module A*, moderately complex medical-surgical nursing needs are presented. This eight week session includes advanced anatomy and physiology, dietary modifications, drug therapy, psychological, and socio-economic factors which influence the patient's progress toward recovery and/or rehabilitation.

Module B of Level III offers a four week experience in various specialty areas within the clinical facility. In addition to principles of emergency room, intensive care, and recovery room nursing, the student assesses and implements patient care plans, leadership principles, and teaching responsibilities as a health team member. Administration of medications is continued in total patient care assignments. The role of the vocational/practical nurse in giving first aid and home nursing is taught. Current legislative issues and legal aspects of nursing as they relate to the changing role of the health team are discussed. Career opportunities are explored.

Level III health care experiences consist of three days in a clinical facility and two days in a classroom setting each week.

The final two week period of the course is an evaluation process which allows the student to make the transition from student to graduate practical nurse.

NOTE:

Adequate audio-visual materials and guest speakers from health specialties are utilized throughout the course. Field trips to various health care facilities, institutions, schools, and professional meetings provide additional opportunities to blend theory with practice. The extent to which the use of remedial and enrichment activities are utilized

F. PRESENT COURSE DESCRIPTIONS-continued

continuation of the course Conditions of Illness given in *Phase I* of the instructional program. It involves 168 hours of increasingly complex nursing theory and includes Rehabilitative Therapy in addition to the following correlated theory: Nursing Principles and Practice, 19 hours; Structure and Function, 14 hours; Drug Therapy, 15 hours; and Diet Therapy, 12 hours. To supplement the 22 weeks of clinical experience, the instructor plans 12 hours of related patient-centered clinical conferences. During this course, it is expected that the student's role as a practical nurse and as a vital member of the health team, will be crystalized. Previously learned broad subject material will take on specific meaning and the giving of total patient care on the practical nurse level will become a reality.

Obstetric Nursing

88 This 32 hour course is taught in *Phase II*. In addition, eight hours of Nursing Principles and Practice, Structure and Function, Drug Therapy and Diet Therapy are correlated into the content as well as four hours of planned, patient-centered clinical conferences. There are six weeks of related clinical experiences; four weeks in the case of the mother, which includes labor and delivery, and two weeks in the care of the newborn. Although, the student is introduced to the major complications of the maternity patient, a broad knowledge of nursing in the care of the mother during normal pregnancy and the care of the newborn infant is emphasized.

Pediatric Nursing

This is a 24 hour course taught in *Phase II* of the program. There are eight hours of additional

F. PROPOSED COURSE DESCRIPTIONS-continued

is dependent upon the individual student's background and potential capacities.

Also, this curriculum includes provisions for student counseling and tutoring, faculty preparation time for teaching responsibilities, and participation in meetings.

F. PRESENT COURSE DESCRIPTIONS—continued

related theory and four hours of planned patient-centered clinical conferences. The related theoretical instruction includes Nursing Principles and Practice, Drug Therapy and Diet Therapy. There are four weeks of related clinical experiences, normal growth, development and management of the well child, as a basis for understanding the problems of the sick child in relation to common childhood diseases is stressed. Throughout the course, the child is considered as an individual and as a vital member of the total family.

69

G. HEALTH ASSISTANT PROGRAM ADAPTATION TO LEVEL I OF THE PRACTICAL NURSING PROGRAM

At the present time there is no articulation pattern with these two programs. The objectives and content of both the Health Assistant and Practical Nursing Program are identical in the first level, although placement and presentation differ. Students completing the high school course and those completing *Level I* of the proposed Practical Nursing Program have the option of entering the health industry with entry-level skills or proceeding to *Level II* of the Practical Nursing Program.

G-1. PROPOSED PRACTICAL NURSING PROGRAM

Hour Summary: 6 hours per day

Level I	Theory	264 hours
	Clinical Experience	<u>216</u> hours
	TOTAL	480 hours

Level II	Theory	252 hours
	Clinical Experience	<u>378</u> hours
	TOTAL	630 hours

Level III	Theory	196 hours
	Clinical Experience	<u>294</u> hours
	TOTAL	490 hours

GRAND TOTAL 1600 hours

G-1. PROPOSED HEALTH ASSISTANT PROGRAM

Hour Summary: 90 minutes per day - Eleven and Twelfth Grades

Health Assistant I	Theory	174 hours
	Clinical Experience	<u>96</u> hours
	TOTAL	270 hours

Health Assistant II	Theory	150 hours
	Clinical Experience	<u>120</u> hours
	TOTAL	270 hours

PROGRAM TOTAL	THEORY	324 hours
	CLINICAL EXPERIENCE	<u>216</u> hours
	TOTAL	540 hours

NOTE: Graduating high school students electing *Level II* of the Practical Nursing Program must be present a minimum of 480 hours.

Level II	Theory	252 hours
	Clinical Experience	<u>378</u> hours
	TOTAL	630 hours

Level III	Theory	196 hours
	Clinical Experience	<u>294</u> hours
	TOTAL	490 hours

GRAND TOTAL 1660 hours

H. PRESENT OPPORTUNITY FOR ARTICULATION AND
ADVANCED STANDING

At present there is no opportunity for granting advanced standing.

H. PROPOSED OPPORTUNITY FOR ARTICULATION AND
ADVANCED STANDING

The nursing profession is viewed as a whole, developed along an educational continuum with a multi-entry system.

The individual has a right to an educational opportunity which will enhance personal growth and develop full potential, and previous educational foundations.

The faculty of the Pittsburgh Public Schools Practical Nursing Program believes that this theoretical construct for the program curriculum allows, individuals from various health programs such as nurses' aids, practical nurses licensed by waiver, and corpsmen who wish to qualify for advanced standing at this first or second entry level may do so by applying and meeting the standards of the level best suited for the individual. The graduate from the Health Assistant II program articulates into Level II of the Practical Nursing Program.

Conversely, students who are enrolled in this program could voluntarily or by recommendation of the faculty, withdraw from the program at the end of the first or second level and would be qualified to find employment in specific health agencies in a role other than that of a practical nurse.

H.1 ARTICULATION STANDARDS FOR HEALTH ASSISTANT II
APPLICANT

Graduates of the Health Assistant II program who wish to apply for articulation in the Practical Nursing Program must meet the following requirements:

1. Must have a high school diploma.
2. Be 18 years of age before or upon completion of the Practical Nursing Program.

H. PROPOSED OPPORTUNITY FOR ARTICULATION AND
ADVANCED STANDING

3. Evidence of good mental and physical health as determined by a complete physical examination.
4. Satisfactory competency rating in nursing skills; attainment of an 80 percent proficiency in theory.
5. Demonstrate aptitude and interest in practical nursing as evidence by conscientious nursing care, good interpersonal relationships with hospital personnel; seeks initiative in new learning experiences.
6. Present and punctual for a minimum of 480 hours.
7. No personal responsibilities which place limitations on the student's performance.

H.2 ADVANCED STANDING REQUIREMENTS FOR FIRST LEVEL
ENTRY APPLICANTS

The faculty of the Pittsburgh Public Schools Practical Nursing Program proposes that the following criteria be adopted to grant advanced standing to an applicant who wishes to enroll in the program beginning with Level II of the Practical Nursing Program.

The applicant must meet all regular requirements that apply to any applicant who wishes to enroll in this program.

1. Resident of Pennsylvania
2. Minimum age 17 years
3. High school diploma or its equivalent as evaluated by the Department of Education

H. PROPOSED OPPORTUNITY FOR ARTICULATION AND
ADVANCED STANDING

4. Evidence of good mental and physical health as determined by a complete physical examination.
5. Satisfactory rating on pre-entrance aptitude tests.
6. Personal qualifications evaluated through written references and personal interview by faculty. These include a genuine interest in people and aptitude for nursing.
7. No personal responsibilities which place limitations on the student's performance.

The applicant must meet these additional requirements:

1. Show evidence of having worked with adult patients in giving nursing care for a minimum of 480 hours prior to date of application. The 480 hours of experience must have been obtained within two years prior to application.
2. Have satisfactory personal references from employers, supervisors and/or school officials which demonstrate to the faculty satisfactory achievement of Fundamentals of Health Care objectives. The type of experience shall be similar to those offered in Level I of the Practical Nursing Program.
3. Receive a satisfactory score in a written comprehensive examination and demonstrate selected nursing skills taught in Fundamentals of Health Care.
4. The applicant for advanced standing shall be given a copy of the course outline in Fundamentals of Health Care prior to the examination.

H. PROPOSED OPPORTUNITY FOR ARTICULATION AND
ADVANCED STANDING

5. The applicant shall be granted advanced standing only if the faculty believes that such a decision is educationally sound for the applicant concerned.

H.3 ADVANCED STANDING REQUIREMENTS FOR SECOND LEVEL
ENTRY APPLICANTS

1. The applicant must meet all of the regular requirements which apply to an applicant who wishes to enroll in the program.
2. This applicant must meet these additional requirements:
 - (1) Show evidence of having worked with patients of all ages in giving nursing care of a minimum of 1100 hours, prior to the date of application. Also, this experience must have been obtained within two years prior to the date of application.
 - (2) Have satisfactory personal references from employers, supervisors, and/or school officials.
 - (3) Demonstrate to the faculty satisfactory achievement of the Fundamentals of Health Care and Human Health Care I objectives. The type of experience shall be similar to those offered in the above areas. Receive a satisfactory score on a written comprehensive examination and a demonstration of selected skills that are taught in these areas. Questions shall be taken from the final examinations of the previous two levels.

H. *PROPOSED OPPORTUNITY FOR ARTICULATION AND
ADVANCED STANDING*

- (4) Each applicant will be given the course outline with recommended reading prior to taking this examination.
- (5) Recieve a satisfactory score on the NLN National League for Nursing three units of content standardized achievement test.
- (6) The applicant shall be granted, advanced standing only if the faculty believe that such a decision is educationally sound for the applicant concerned.
- (7) In order to qualify for graduation from the Pittsburgh Practical Nursing Program, students with advanced standing must complete a minimum of fourteen weeks in the program.

J. **PRESENT INFORMATION AVAILABLE TO POTENTIAL
PRACTICAL NURSING STUDENTS**

Pittsburgh Public Schools
PRACTICAL NURSING PROGRAM
FACT SHEET

Approved: Pennsylvania Department of Education
Pennsylvania State Board of Nurse Examiners

Program: The Practical Nursing Program is a full-time,
12 month course.

In the first phase, 16 weeks are spent mainly
in classroom instruction with a gradual in-
troduction to the hospital environment and
nursing practice. Classes are held from
8:00 a.m. to 3:00 p.m., Monday through Friday
at Connelley Skill Learning Center, 1501
Bedford Avenue, Pittsburgh, Pennsylvania
15219. Among the subjects studied are nursing
principles and practice, body structure and
function, personal and community health, drugs
and their uses, family living, nutrition and
foods.

During the second phase, 32 weeks are spent
in supervised clinical experience with class-
room instruction in a cooperating hospital..
In the hospital, the student's experience
days are from 7:00 a.m. to 2:30 p.m. and
35 hours per week. Instruction and related
practice are given in Medical-Surgical Nursing,
Obstetric Nursing and Pediatric Nursing.
Seven legal holidays, plus vacation amounting
to four weeks, are permitted during the
length of the program.

J. **PROPOSED INFORMATION AVAILABLE TO POTENTIAL
PRACTICAL NURSING STUDENTS**

Upon approval of proposed changes, a brochure will
be developed.

J. *PRESENT INFORMATION, AVAILABLE TO POTENTIAL
PRACTICAL NURSING STUDENTS-continued*

Entrance Requirements:

The course is open to men and women who are seeking employment in the health services.

Each applicant must:

Be 17 years of age or over.

Be a high school graduate with a diploma from an accredited school or its equivalent.

Have a sincere interest in nursing and a desire to serve people.

Provide good character references.

Manifest suitability for learning as indicated by personal interviews and aptitude tests.

Be in good health as evidenced by physical examination, including immunizations.

Cooperating Hospitals:

Allegheny General Hospital
Montefiore Hospital
Sewickley Valley Hospital
Shadyside Hospital
South Side Hospital
St. Margaret Memorial Hospital
Western Pennsylvania Hospital

Costs: Students must purchase textbooks, uniforms, shoes, other supplies, and are responsible for their own immunizations. The cost of books and uniforms is approximately \$150.00

Je 009 542

J. PRESENT INFORMATION AVAILABLE TO POTENTIAL
PRACTICAL NURSING STUDENTS-continued

Tuition: All students will pay approximately \$70.00
per month tuition for the 12 month course.

Applications:

Application must be made in person at the
Pennsylvania State Bureau of Employment
Security Office. Offices are open Monday
through Friday, 8:30 a.m. to 5:00 p.m.;
closed holidays.

For more complete information regarding
applications, please call 565-2622.

PRACTICAL NURSING

Course of Study
(Preliminary Version)

DEPARTMENT OF EDUCATIONAL PROGRAM DEVELOPMENT

THE BOARD OF PUBLIC EDUCATION

Jerry C. Olson, Superintendent

PITTSBURGH, PENNSYLVANIA

March, 1976

PREFACE

This publication is a part of the evolving design for teaching and learning that the professional staff of the Pittsburgh Public Schools is creating.

The curriculum is the central skeleton upon which the teacher builds the planning for learning. It gives constancy and structure to the educational process, never inhibiting or containing the freedom of the teacher, but rather encouraging him to teach creatively and innovatively within its framework.

Curriculum development in a good school system never stops. As our society changes, and as our body of academic knowledge changes, and as our knowledge of the learning behavior of children changes, so must curriculum respond. It is in this spirit that this document has been thoughtfully and conscientiously developed by our colleagues, for the good of all children and teachers in Pittsburgh. It represents the legal authority of the people through the Board of Education, in declaring what children should learn, and it represents the best judgment of our faculty in declaring the processes through which these ends are achieved.

But no curriculum guide, no matter how close to perfection it may aspire, is of any value until it is wholly possessed by all the teachers who come within its scope. Accordingly, I commend this guide to all teachers concerned, and ask that you make it a product of your own individual commitment, and contribute to its continued improvement over the years.

INTRODUCTION

The Licensed Practical Nurse is a trained person who, after completion of an approved educational program, is prepared to apply human health care skills to patients in hospitals, extended care facilities, offices, industries, and homes under the supervision of a licensed physician and/or a registered professional nurse.

This curriculum design defines sequential levels of learning and experience which permit individuals to progress through these levels without duplicating previously acquired knowledge and skills.

68
The program is developed on three levels. *Level I, Fundamentals of Human Health Care*, stresses basic nursing attitudes, knowledge, and skills, and is sixteen weeks in length. Health care skills related to the patient's basic and special needs are emphasized with correlated theory and practice. In addition, the student is introduced to principles of interpersonal relationships, communications, personal and community health and the phenomenon of aging. Normal nutrition is integrated throughout this period. Clinical experience is provided two days a week in a health care facility beginning the third week. The final two weeks of this level will be an evaluation period in which the individual student's comprehension of health care is measured by written tests and skills performance.

Level II or Human Health Care I comprises eighteen weeks of the total course and is divided into Modules A and B. These modules of learning are flexible and are constructed in such a way that each can be lifted from the scheduled sequence and taught at any time throughout the second level ensuring optimal correlation of theory and practice. *Module A* consists of twelve weeks of medical-surgical nursing and presents the knowledge and skills essential in caring for persons with intermediate conditions of dysfunction. The emphasis in this level is on anatomy and physiology, pharmacology, nutrition, and the emotional and social factors which are directed toward the patients' positive rehabilitation. The underlying principles of nursing are brought out in the care of general types of patients and in the care of selected conditions, with the idea that application of the learned principles can be made easily to other specific conditions.

Module B is a six week continuum of *Level II* and introduces the student to maternal child health care. The healthy family unit is stressed and includes the study of normal child bearing, rearing from infancy

through adolescence, common childhood health problems, and mothers with special needs. Normal nutritional, psychosocial, and economic needs of the family, as well as the availability of community resources are all an integral part of this learning module.

In *Level III, Human Health Care II* consists of fourteen weeks and also is divided into an A and B Module. In *Module A*, moderately complex, medical-surgical nursing needs are presented. This eight week session includes advanced anatomy and physiology, dietary modifications; drug therapy, psychological, and socio-economic factors which influence the patient's progress toward recovery and/or rehabilitation.

Module B of Level III offers a four week experience in various specialty areas within the clinical facility. In addition to principles of emergency room, intensive care, and recovery room nursing, the student assesses and implements patient care plans, leadership principles, and teaching responsibilities as a health team member. Administration of medications is continued in total patient care assignments. The role of the vocational/practical nurse in giving first aid and home nursing is taught. Current legislative issues and legal aspects of nursing as they relate to the changing role of the health team are discussed. Career opportunities are explored.

The final two week period of the course is an evaluation process which allows the student to make the transition from student to graduate practical nurse.

Health care experiences during *Levels II and III* consists of three days in a clinical facility and two days in a classroom setting each week.

All units in this course of study follow the same general pattern in order to form good habits on the part of the student and ease in teaching. Many areas of information have not been made separate units in the belief that they should be thought of as a part of each nursing situation and should be integrated into the thinking about each patient.

Adequate audio-visual materials and guest speakers from health specialties are utilized. Field trips to various health care facilities, institutions, schools, and professional meetings provide additional opportunities to blend theory with practice. The extent to which the use of remedial and enrichment activities are utilized will be dependent upon the individual student's background and potential capacities.

Each of the three levels is designed to offer career opportunities indicated as spin-in and spin-off areas of achievement. An important goal of this course of study is to present the vehicle and stimulus for continued personal and professional growth; therefore, adequate provision for articulation and advanced placement based upon demonstrated competencies and validated previous and present education and experience is essential.

Philosophy

The faculty of the Pittsburgh Public Schools Practical Nursing Program postulates this theoretical construct for the program curriculum and asserts that:

- Nursing is a health profession.
- Health is viewed as the person's normal state of well being throughout human development.
- The concept of human development is a life gestalt, i.e., prenatal life through death.
- Fundamental to the integrity of the life cycle are developmental, family, and health needs.
- The practice of nursing derives its impetus from these concepts of human needs and the family.
- Nursing recognizes the right of every individual to an optimum health state in the process of human development.

The nursing profession is responsible for the promotion of normal health maintenance among individual and for health state stabilization in physical and mental dysfunction.

The nursing profession is viewed as a whole, developed along an educational continuum with a multi-entry system for progressive competency positions, i.e., paraprofessional, vocational/practical, technical, and professional.

Each nursing locus of the continuum affords mobility to another locus, enabling an individual to develop full potential, while progressing according to his/her learning abilities and previous education foundations. Nursing education is a continuing process for professional and personal development.

Vocational/practical nursing is the level of the nursing continuum which prepares the practitioner to promote the maintenance of an individual's normal health state and to assist in stabilization of the health state during physical and mental dysfunction.

The vocational/practical nurse functions as an integral member of the health team under the direction of a health professional in a variety of settings, such as hospitals, homes, and community agencies.

• Education is a progressive process of self-growth throughout one's human development.

• The student has a right to an educational opportunity which will enhance personal growth.

The faculty is the facilitator of the educational process, providing a learning climate which stimulates and motivates the student to fullest development.

Learning is characterized by expected behavioral changes in skills, knowledge, and attitudes. These behavioral changes are the competency/learning objectives required by the educational process of the curriculum.

Achievement of curriculum competencies through increasing self-direction by the student is under the guidance of the faculty.

Learning evolves from the fundamental level to the complex. It develops progressively from directed activities to more self-directed experiences.

Learning develops in an atmosphere where individual worth is the hallmark of learning activities.

Close correlation between classroom instruction and clinical experiences is essential to effective competency achievement by the student.

It is the aim and responsibility of the faculty to provide an educational milieu for the student to acquire and apply the knowledge and specialized skills essential to the practice of vocational nursing.

We believe the instructional program should assist the student to:

1. Develop an attitude of self-discipline through personal responsibility toward the learning experiences.
2. Develop the capability of self-direction through personal confidence gained from the learning experiences.
3. Develop the faculty of good nursing judgment through personal diligence exercised in the learning experiences.
4. Develop a capacity for objectivity in regard to self, others, and to life situations through personal acceptance of evaluative measures, assignments, and interpersonal relationships entailed in the learning experiences.
5. Develop a quest for self-actualization through personal action for continuing human and professional growth.

-v-

GENERAL OBJECTIVES

Upon completion of the Pittsburgh Public Schools Practical Nursing Program, the students will be able to:

- . Utilize new knowledge and skills to assist individuals in maintaining their health state.
- . Communicate effectively with patients and their families, and maintain effective interpersonal relationships.
- . Demonstrate personal and professional growth by utilizing opportunities to their fullest potential.
- . Assume the responsibilities necessary for a career in nursing.
- . Demonstrate good citizenship and a professional spirit of cooperation.

LEVEL I

Upon completion of Level I, the students will be able to:

- . Identify the needs of a healthy individual and explain how the disease process alters these needs.
- . Demonstrate the skills required for giving health care to adult patients having both short- and long-term nursing needs.
- . Communicate effectively with patients and members of the health team on a therapeutic level, make and report observations accurately to the appropriate persons, and record necessary data.
- . Establish positive interpersonal relationships.
- . Utilize basic problem solving techniques.
- . Assist the professional nurse in a variety of situations.
- . Accept guidance and criticism graciously, and with a professional attitude.

LEVEL II

Upon completion of Level II, the students will be able to:

- Provide safe and effective health care for the mother and infant, as well as for children and adults who have simple or moderately complex nursing needs.
- Utilize appropriate theory in developing a plan of health care based on priorities.
- Obtain required data from a patient and make valid observations.
- Record and report relevant data and effectively utilize non-verbal communications.
- Respond in a positive manner to the emotional and social needs of patients, families, peers, and hospital personnel.
- Interact in a positive and effective manner with peers, hospital personnel, patients, and families, and cope with sources of stress in these interrelationships.
- Administer selected medications competently and safely.
- Accept responsibility for personal behavior, and accept guidance and criticism in a professional manner.
- Demonstrate initiative in seeking additional learning experiences.
- Identify the normal physiological and psychological processes, and explain any deviations in terms of the patient, the family, and the community.

LEVEL III

Upon completion of Level III, the students will be able to:

- Provide appropriate nursing care for patients of all age groups, with a variety of illnesses.
- Assist the professional nurse in moderate and complex situations.
- Make accurate and objective observations and use the information to make assessments and to plan a course of action.

LEVEL III (Continued)

- .. Administer medications to adult patients.
- .. Continue to build upon theory learned in the classroom to enhance professional qualifications.
- .. Recognize personal responsibilities and act accordingly in terms of the patient, the family, and the community.
- .. Develop and adhere to a professional code of ethics.
- .. Function effectively as an important member of the total health team.
- .. Utilize theory and skills to solve problems related to health care.
- .. Perform self-evaluations, and use the results to further professional growth and development.

95

SAFETY RULES

Safety is a major concern in every type of work, but it is of particular importance in health occupations as this field is primarily people oriented. The patient has a right to expect a safe environment. Everybody in the hospital is involved in the patient's safety. Specific safety rules are stressed throughout the curriculum and should be reinforced with each lesson as well as mention of the legal aspects which are involved.

General Safety Rules:

1. Two general principles related to safety
 - a. accidents can be prevented by alertness and planning
 - b. safety rules protect every individual
2. Orientation to fire extinguisher and fire drill directions with practice sessions.
3. Do not work with a piece of equipment until you learn how to use it.
4. Check electrical equipment for frayed cords, broken plugs and wall socket over-usage.
5. All electrical cords or machines are handled with dry hands.
6. In disconnecting machines from electric outlets; grasp pulling the electric plug. Do not pull or jerk cord.
7. Electric cords can trip you. Place them out of the way. Remove when not needed.
8. If motor on an electric machine jams or sticks, disconnect electric cord from machine or wall outlet at once.
9. In case of fire or accident turn off any electric machine and off the power at the master switch.
10. Do not make adjustments or clean machine while machine is in motion.
11. Dispose of contaminated materials per strict procedure.
12. A spill is treacherous. Clean up immediately or block off area until clean.
13. Wash hands thoroughly and frequently to prevent infection.
14. Keep cleaning fluids and disinfectants in metal cabinets.
15. Dispose of broken glass and sharp objects in appropriate container. Handle carefully.

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

Safety Rules (cont'd.)

Specific Safety Rules:

1. Hair must be pulled back and secured at all times.
2. No jewelry, except wedding band and watch.
3. Practice good posture and effective body mechanics at all times.
4. A uniform should be clean and complete at all times.
5. All equipment coming in contact with patient should be clean; practice good cleansing methods.
6. Check equipment and inspect it for breaks, cracks, or rough places. Replace broken or damaged equipment. Do not try amateur repairs.
7. Align beds correctly. Gatch bed cranks should be always left in correct position.
8. Use bed rails on both sides whenever conditions warrant.
9. Place call bells within reach of patient at all times.
10. Do not use torn linens.
11. Respect patient's personal possessions.
12. Record and report pertinent observations accurately, completely, and carefully.
13. Respect confidential information regarding patient.
14. Use sound judgment in caring for patients.
15. Know hospital's fire procedure and emergency plan. Be able to assist in evacuation of helpless patients.
16. Specific procedures are to be performed under teacher supervision only
 - a. the administration of medications
 - b. all sterile techniques

FUNDAMENTALS OF HEALTH CARE-BASIC SCIENCES
UNIT I THE FIRST STEP

Introduction: In this unit, the student is introduced to the health care profession, the program, and the facilities for experience. The learning process is included with emphasis placed on student responsibility, study techniques, and pretesting for mathematics review. The student will also be informed of the responsibilities that must be accepted upon entering the health care profession: hospital attitudes, confidentiality, legal and ethical aspects interpersonal relationships.

Specific Objectives:

The student will be able to:

1. Adjust to the facilities and recognize lines of authority within the program.
2. Develop a pattern of behavior that will be conducive to learning.
3. Identify areas of weakness in mathematical skills.
4. Develop positive attitudes as they relate to personal appearance in school and the health care facility.
5. List the various types of health care facilities and the departments within.
6. Identify attitudes to initiate and maintain good interpersonal relationships.
7. Begin to interpret the ethical and legal responsibilities in administering health care.
8. Begin to recognize his/her role in the nurse-patient relationships.

Stevens, Marion K. Personal and Vocational Relationships of the Practical Nurse, Second Edition, Philadelphia: W.B. Saunders, 1975.

Thompson, Ella M. and Caroline Bunker Rosdahl. Textbook of Basic Nursing, Second Edition Philadelphia: J.B. Lippincott Company, 1973.

Audio-Visual

Mimeographed materials
School physical facilities

Objective 1: The student will be able to adjust to the facilities and recognize lines of authority within the program.

Developing Core

The student will adjust more readily to the learning situation if given a good orientation to the health care profession, the program, and the facilities.

Student Learning Activities

1. Review student handbook.
2. List courses offered and instructions responsible for each.
3. Meet administrators and faculty members.
4. Make a diagram showing lines of authority as it relates to the student.
5. Tour the school facilities.
6. Identify emergency equipment.
7. Follow directions for fire drill.
8. Discuss the nursing as a whole.

115

Objective 2: The student will be able to develop a pattern of behavior that will be conducive to learning.

Objective 3: Identify areas of weakness in mathematical skills.

Developing Core

Learning is development through experience, practice, and insight. This active process is self initiated and self motivated. The student will gain more if he/she knows how to participate in an educational setting.

Student Learning Activities

1. Review the phases of the learning process.
2. Submit a sample outline from the textbook.
3. Practice problem solving: problem defined, collecting data and alternate solutions, draw conclusions.
4. Review the requirements for effective study.
5. Evaluate own study habits for areas of improvement.
6. Review the distributed SQ3R study technique.
7. Become oriented to the use of the library and available reference material.
8. Complete the arithmetic pre-test in textbook.
9. View film strip-"Fractions and Decimals."
10. Solve the practice problems in fractions and decimals-give as an outside assignment in textbook.
11. Read related material in assigned textbook.
12. Review Film strip-"Effective Listening."

Objective 3-continued

Remedial

- Submit class notes to instructor for review.
 Plan additional help for those students who fail the arithmetic pre-test.
- a. assigned study periods
 - b. after class
 - c. additional outside assignments

Enrichment

Assign those students who performed well on the pre-test to offer additional help for those who failed.

Objective 4: The student will be able to develop positive attitudes as they relate to personal appearance in school and hospital.

Developing Core

Standards of cleanliness and appearance must by nature be higher for nurses than for people in most other professions; and every nurse should make an effort to achieve perfection in this area.

Student Learning Activities

1. Assess own appearance by using a class developed check list of personal qualities.
2. Identify the articles and clothing that make up the complete uniform.
3. Review the student handbook as to proper appearance for classroom and hospital.
4. Display the student cap and emblem and demonstrate how each is worn.

Objective 4-continued

Remedial

Identify individual problems and refer to the counselor.

Objective 5: The student will be able to list the various types of health care facilities and the departments within.

Developing Core

The health care system of today is a technological marvel. The average person is seldom aware of the many other responsibilities and lesser known activities that occur both within and outside of the institution.

Student Learning Activities.

1. Classify the health care delivery system as to service and function.
2. List the hospital departments and the services rendered by each department.
3. Discuss some of the changes that have taken place in our health care delivery system. Over the past decade, ie Insurance, Admissions, length of Hospital stay.
4. Read related material in assigned textbook.
5. View Film Strips-"Orientation."
6. Tour available health care facilities.

Objective 6: The student will be able to identify attitudes to initiate and maintain good interpersonal relationship.

1. List the personal qualities that are necessary to be a success in the health profession.

The success of a student or a graduate depends on the proper interpretation of his/her roles and re-

Objective 6-continued.

Developing Core

sponsibilities within the health team.

Student Learning Activities

2. Give examples of hospital situations which require unquestionable integrity.
3. Demonstrate the proper method of answering the unit phone and follow up with practice.
4. Identify the members of the health team and discuss their working relationships.
5. Draw a diagram showing the lines of authority as they relate to the student.
6. Identify important aspects in establishing satisfactory interpersonal relationships within the health team.
7. Read related textbook material.

Remedial

Compare and contrast the nursing care patterns; functional, progressive, team, and specialized.

Enrichment

Refer to Kron "Communications in Nursing."

119

Objective 7: The student will be able to begin to interpret the ethical and legal responsibilities on administering health care.

Developing Core

The conduct and duties of the health care professional are controlled by a code of ethics and laws which act as a protection for both the nurse and the public.

Student Learning Activities

1. Identify types of information that must be kept in confidence.
2. List some examples of what might be called "shop talk."
3. Discuss why the basic rule of medical ethics is concerned with the preservation of life.
4. Review the Codes of Ethics set up by the NAPNES and the NFLPN.
5. List examples of negligent and malpractice acts as they relate to the administration of basic health care.
6. Read related material in textbook.
7. Review Film Strip "Legal Implications in Nursing."

Objective 8: The student will be able to begin to recognize her role in the Nurse-Patient relationship.

Patients have biological and cultural differences which make them individuals. They are not isolated individuals but members of families who have moved from environments of customary comforts to those of discomfort with fears and anxieties.

1. Identify some of the common variations in culture that will be observed in patients.
2. List many of the anxieties and fears patients may experience with hospitalization.
3. Role play methods of extending common courtesies to patients by health care members.

Objective 8-continued

Student Learning Activities-cont.

4. Review Film Strip "Nurse-Patient Interaction", #2 The Nurse.
5. Review Film-"Mrs Reynolds Needs a Nurse."
6. Consider some personal experiences and evaluate how these experiences can be used to give more understanding to patients.
7. Discuss and review the list of patient's rights.

Enrichment

Refer to Kron "Communications in Nursing."

Evaluation:

1. The student will identify the various departments within the program and follow the proper lines of authority.
2. The student will list the requirements for establishing good study habits.
3. The student will be able to use the library and available reference material.
4. The student will begin to correct his/her weakness in mathematical skills.
5. The student will make a satisfactory appearance when in street clothes and complete uniform.
6. The student will identify, with examples, five common legal problems that may be encountered when administering health care.

Evaluation-continued

7. Given a code of ethics the student will describe what each principle means in personal life and in the health care profession.
8. The student will identify five ways of initiating and maintaining good interpersonal relationships.
9. The student will demonstrate that he/she can satisfactorily establish a nurse-patient relationship.
10. The student will name eight facilities available for patient care.
11. Given a health care organization chart, the student will explain the lines of authority of the facility.
12. The student will receive a satisfactory grade on written examinations.

Total: 126 hours
Theory: 110 hours
Conference/Study: 16 hours

FUNDAMENTALS OF HEALTH CARE-BASIC SCIENCES
UNIT II THE HEALTHY INDIVIDUAL

Introduction: Good health is a state of homeostasis within the organism- a balance between man's body, mind and emotions. In order to help maintain this balance, a knowledge of the following is essential: man's basic needs, normal structure and functions of the organism, measures of health maintenance and normal nutrition.

Specific Objectives:

The student will be able to:

1. Identify the four basic needs of man and how these are met.
2. List the nine body systems and the major organs of each.
3. Describe the major functions of each body system.
4. Discuss the personal grooming habits needed to maintain a healthy organism.
5. Carry out basic first aid procedures.
6. Plan a well-balanced diet using the Basic Four Food Groups.

Audio-Vistal

Spiritual Needs of the Patient
Film Strip--(Concept Media)
Infection Control Series I.

- Objective 1: The student will be able to identify the four basic needs of man and how these are met.

Developin Core

Physical needs, of food, water, oxygen, shelter, body covering, rest, sleep, and elimination are necessary for life.

Man has physical needs which must be met in order to live.

Emotional needs are also necessary for a healthy organism.

Personality is unique for each person and it is constantly changing.

Habits make up a large portion of our personality.

How we handle tensions has a definite effect on our personality.

Student Learning Activities

1. List the basic needs of man.
2. Classify the physical needs in order of their importance beginning with the most important.
3. Define mental health.
4. Discuss if the need for self approval, acceptance and security is important for mental health.
5. Role play a person who is insecure, one who is not accepted by others, and one who does not have a positive self image.
6. Discuss how a person's insecurity can effect his self image.
7. Discuss why maturity is a sign of good mental health.
8. Define emotions and feelings and describe how you act when angry and happy.
9. List emotions that are considered negative and positive i.e., hate, fear, love.
10. Define personality and list the traits displayed in a pleasant personality.
11. Given a list of situations, the student will identify the defense mechanisms being used i.e., compensation, conversion, fantasy, identification, rationalization, sublimation, regression.

Objective 1-continued

Developing Core

Man is by nature a social being. These social needs are met through membership in groups such as the family, peer groups, and the community.

The family is the most basic source of meeting one's social needs.

The peer group also is important in socialization of the individual.

The community also meets the socialization needs of individuals. In order to do this, the community must be a healthy one.

The source of disease within a community is actually some form of microorganism.

Student Learning Activities

12. Define the word habit and discuss methods used to break bad habits and establish good habits.
13. Discuss some physical symptoms that a person may experience when he is upset or concerned about something.
14. In groups of four share with each other how you handle stress.
15. Beginning with the family, list social groups to which the student belongs.
16. Define the family and its developmental tasks i.e., supplying physical needs, bearing children, guidings.
17. Discuss the types of families that have evolved through the ages i.e., paternalistic, materialistic, democratic.
18. Compare and contrast via discussion the family of yesterday and the family of today.
19. Identify the effects that women's lib. has had on the family unit.
20. Discuss the stages of the family life cycle including advantages and disadvantages of each stage, the possible expenses of each stage and a person's individual reactions to each stage.

Enrichment

Discuss Maslow's "Hierarchy of Needs"

Objective 1-continued

Student Learning Activities

21. In a panel discussion discuss problems that are facing the family today.
22. Discuss the peer group and how they can affect a person's behavior.
23. Compare and contrast the influences exerted upon an individual through the family and through the peer groups.
24. Demonstrate how early peer group exposure is important in later interrelationships with fellow students and co-workers.
25. Discuss methods of communication and how these can be achieved.
26. Discuss how a healthy community is needed to effectively contribute to the social needs of a group.
27. Direct student to read related material in textbook.
28. Define a microorganism and list its characteristics
29. Differentiate between pathogenic and nonpathogenic microorganisms. Give three examples of each.
30. Discuss the factors needed for the growth of microbes.
31. Define antiseptic and disinfectant. Give three examples of each.

Objective 1-continued

Developing Core

In order to maintain a healthy community, various governmental agencies are concerned specifically with the control of pathogenic microorganisms.

Voluntary organizations provide educational and special services to community members.

Student Learning Activities

32. Classify the microorganisms into protozoa, fungi, bacteria, and viruses and give an example of each.
33. Draw a picture depicting the three groups of bacteria.
34. Describe the methods used to kill or inhibit bacterial growth.
35. Explain how to disinfect thermometers, bandages, and scissors.
36. Prepare a list of ways in which bacterial growth can be inhibited in the home and in the community.
37. Define a communicable disease and prepare a chart listing the means of spread and the methods of prevention of the common communicable diseases.
38. View the film Microorganisms that Cause Disease. MP 450.6
39. Identify portals of entry and exit of bacteria.
40. View the Filmstrip on Infection Control.
41. Student will read related material in textbook on community health.
42. List the governmental agencies that help to control or prevent the spread of disease; describe some of their activities.

Objective 1-continued

Developing Core

Pollutants have adversely affected the lives of many community members. It is, therefore, important to recognize some of the major pollutants and what the average citizen can do about them.

Every individual has some basic philosophical or spiritual needs. These beliefs must be recognized as an integral part of man.

Student Learning Activities

43. Invite a Public Health Inspector to discuss the department's responsibilities regarding inspection of food, sewage and waste disposal, and housing inspection.
44. List four voluntary health agencies and the roles they play in community health.
45. Identify some common pollutants, what the ordinary citizen can do, and the industries and governmental agencies established to control these pollutants.
46. Describe how man's spiritual needs affect his total being.
47. Discuss your feelings about euthanasia. Should terminally ill patients be permitted to die with dignity?
48. View the filmstrip on the spiritual needs of the patient.
49. Discuss the right of every person to observe his/her own religious beliefs.

Enrichment

Do a research paper on "Typhoid Mary."

129

Objective 2: The student will be able to list the nine body systems and the major organs of each.

Objective 3: The student will be able to describe the major functions of each body system.

Developing Core

The body is divided into dorsal, ventral, cranial, thoracic, abdominal, and pelvic cavities.

A knowledge of body directions is important in order to describe the location of the organs.

Another method of dividing the body is into planes.

The basis for all other structures within the human body is the cell. It is important to know the properties of all cells in order to study the relationship between all body structures and functions.

Cells which are grouped together according to their function are known as tissue.

Membranes are sheets of tissue with specialized functions.

Student Learning Activities

1. Using the torso model, locate the various body cavities and identify the principle organs found in each cavity.
2. List the body directions and compare one direction to its corresponding opposite.
3. Locate principal organs and classify them according to body direction.
4. Name and locate the body planes.
5. Using the torso model identify the body planes.
6. Read the chapter Textbook of Basic Nursing.
7. Diagram the cell and label the structures found within the cells.
8. List and discuss the major properties of all living cells.
9. Describe the types of body tissue and the function of each.
10. Identify the two basic types of membranes.
11. List the two types of epithelial membranes and the two types of connective tissue membrane.

Objective 3-continued

Developing Core

The organs of the body are formed from tissues and membranes and perform a definite function.

Groups of organs form systems which specialize in carrying out a particular function within the body.

The skin or integumentary system is the largest organ within the body.

Student Learning Activities

12. Discuss the function of the various types of tissue.
13. Discuss how tissues and membranes form organs.
14. List some of the major organs and the various types of tissue that make up that organ.
15. Using the torso model or chart, identify as many organs as possible and discuss their functions.
16. Identify the nine body systems.
17. List the major functions of each system.
18. Using a torso model or chart identify the organs within each system.
19. Read related material in textbook.
20. Discuss how the skin performs its basic functions of protection, excretion, and temperature.
21. Draw a diagram of the skin and label the parts. Include a sweat gland and a hair follicle.
22. Discuss why it is important to prevent injury to the skin.
23. Explain why hair, nails, sebaceous glands, and sweat glands are included in the integumentary system.

131

Objective 3-continued

Developing Core

The musculo-skeletal system offers the body form and movement.

The skeleton offers support, gives shape, protects vital organs, and anchors the muscles.

The joints allow for changes in body position.

Muscles are needed for movement.

Student Learning Activities

24. Demonstrate how activities regulate body temperature. Discuss the role skin plays.
25. Explain the major functions of the skeletal system.
26. Using a skeletal model, locate the major bones of the body: skull, mandible, maxilla, clavicle, scapula, ribs, humerus, pelvis, vertebrae, femur, tibia, fibula, phalanges).
27. Classify the major bones into categories of long, short, flat and irregular.
28. Locate a bone and identify the organ or organs protected by the bone.
29. View the flimstrip on the skeletal system.
30. List the three kinds of joints and give an example of each.
31. Identify some types of movable joints and give examples of each.
32. Using a skeletal model point out as many bones and joints as possible within a certain period of time.
33. Differentiate between cartilage and ligaments.
34. Using the skeletal model or a fellow student, demonstrate flexion, extension, abduction, adduction, circumduction, rotation, pronation, supination, inversion, eversion, protraction and retraction.

132

Objective 3-continued

Developing Core

Tendons are also responsible for movement of the bones.

As with all living things, man needs food to survive. The gastrointestinal system changes food into energy through digestion,

Student Learning Activities

35. Read the related material on the musculoskeletal system in the textbook.
36. Describe types of muscle and give an example of each: skeletal, smooth, cardiac.
37. Distinguish between voluntary and involuntary muscles.
38. Using a class chart identify the major muscles: trapezius, latissimus dorsi, gluteus maximus, hamstring group, biceps, triceps, deltoid, diaphragm, anal sphincter.
39. Discuss the special characteristics of contractility and extensibility.
40. Classify the major muscles as abductors, adductors, levators, depressors, flexors, extensors, rotators, and sphincters.
41. Recognize by flexing and extending an arm or a leg how muscles work in pairs and opposite to each other.
42. View Trainex #28 (Muscular System).
43. Locate the calf muscle and slowly move hand toward ankle. The Achilles tendon can be felt as a tough, ropelike fiber.
44. Read related material in textbook.
45. Define the following terms: enzyme, bolus, epiglottis, peristalsis, feces, bile.

183

Objective 3-continued

Developing Core

The circulatory system is responsible for taking oxygen and nourishment to all cells and removing waste products.

The heart acts as a double pump.

Student Learning Activities

46. Using the torso model identify the major structures of the gastro-intestinal tract. (Mouth, teeth, tongue, pharynx, esophagus, stomach, small intestine, large intestine, anus)
47. Discuss what happens to the foods as they pass through the various structures.
48. Using the torso model identify the accessory organs (liver, gallbladder, pancreas) and discuss their function.
49. Trace a piece of food through the digestive system.
50. Describe the normal color and consistency of stool.
51. View Trainex #28. (Digestive System).
52. Analyze what might happen within the gastro-intestinal system if there has been an emotional upset before eating.
53. Trace a piece of meat with some fat on it through the digestive system. (Include enzyme actions)
54. Examine wall charts that depict the heart and blood vessels.
55. Read "The Circulatory System" in textbook.
56. Using a heart model locate and name the four sections of the heart.

134

Objective 3-continued

Developing Core

Food, oxygen, and waste products are transported to every living cell in the body via the blood vessels.

Arteries, veins, and capillaries are the main types of blood vessels.

Pulse and blood pressure are directly related to the blood vessels.

Blood is responsible for carrying food and oxygen to the cells and carrying waste products away from the cells.

Student Learning Activities

57. Trace the flow of blood through the right side of the heart to the lungs and then trace the flow of blood through the left side of the heart. (Use of the names of the valves is necessary)
58. Explain how the heart acts as a double pump.
59. View Trainex #28 (The Cardiovascular System)
60. List the types of blood vessels and the functions.
61. Discuss why the arteries are depicted in pictures as red and why the veins are depicted as blue.
62. Make a drawing showing how blood flows from the arteries to the capillaries and to the veins.
63. Describe the differences in structure of arteries and veins.
64. Practice taking the pulse of a fellow student.
65. Take pulse of a fellow student after they have run in place for 30 seconds.
66. Practice taking another student's blood pressure.
67. Explain the relationship of pulse and blood pressure to the blood vessels.
68. Describe the function of the blood.
69. List the four types of blood cells and the main function of each.

135

Objective 3-continued

Developing Core

The chief function of the lymphatic system is filtration. Another function is production of lymphocytes and monocytes.

The organs of the respiratory system bring oxygen into the body and remove carbon dioxide.

Student Learning Activities

70. Identify the four blood types and determine which is the universal donor and which is the universal recipient.
71. Discuss the parts of the blood that aid in fighting infection.
72. List the basic structures and functions of the lymphatic systems.
73. Using a torso model or wall chart point out the major organs of the respiratory system (nose, pharynx, larynx, trachea, bronchi, alveoli, lungs).
74. Discuss the function of the respiratory center.
75. Trace the passage of air through the organs of the respiratory system.
76. Differentiate between internal and external respiration.
77. Practice counting the respirations of a fellow student.
78. Explain the relationship between the circulatory and respiratory systems.
79. View Trainex #28 (The Respiratory System).

136

Objective 3-continued

Developing Core

The urinary system filters wastes from the blood.

The menstrual cycle occurs about every twenty-eight days and is brought about by changes in the hormonal levels in the female.

Student Learning Activities

80. Read related material in Thompson.
81. Identify the major structure of the urinary system (kidneys, ureters, urinary bladder, urethra, urinary meatus) by using a torso model or a wall chart.
82. Discuss the main function of the urinary system.
83. Explain the normal color of urine.
84. Describe the composition of normal urine.
85. Discuss the function of each structure within the urinary system.
86. Compare and contrast the structure of the male and female reproductive systems according to their functions.
87. Discuss the menstrual cycle and what causes it to occur.
88. View a diagram showing the physiological changes that occur during the twenty-eight day cycle.
89. Explain the hormonal levels and their changes with the menstrual cycle by using a chart.
90. Set up a calendar depicting the first day of menstruation, the next expected menstrual period, and the expected time of ovulation.

137

Objective 3-continued

Developing Core

The nervous system directs all body activities; it receives stimuli and sends messages by means of a network of nerve cells.

Student Learning Activities

91. Read chapter in text on "The Nervous System."
92. Identify the major structure of the nervous system (brain, spinal cord, nerves) by means of a wall chart.
93. Describe the functions of the nervous system.
94. Draw and label a nerve cell.
95. Differentiate between the three types of nerve cells. (Sensory, motor, connecting)
96. Give some examples of reflex acts.
97. Trace the pathway of a stimulus (right arm is itchy).
98. Make a chart showing the subdivisions of the Autonomic Nervous System; the sympathetic and the parasympathetic and list as many examples as possible.
99. List the three divisions of the brain (cerebrum, cerebellum, medulla) and the function of each.
100. Draw a diagram of the brain; include the three divisions of the brain, the lobes, and the hemispheres.
101. View Trainex #28-"The Nervous System".
102. Describe the meninges and their function.
103. Explain what the cerebrospinal fluid is and what its function is.

138

Objective 3-continued

Student Learning Activities-cont.

104. Identify the peripheral nervous system.

Enrichment.

Research some basic religious philosophies and report to the class.

Have one student mention a body organ and have another student identify the body cavity in which it is found and the body direction.

Draw a bone and label its parts.

Diagram the types of bone fractures.

Research a bone disease or condition, discussing the cause, treatment, and preventive measures.

Identify the principle blood vessels of the body.

Review technique of taking pulse or blood pressure and practice.

139

Objective 3-continued

Enrichment-continued

View Trainex on Blood Pressure.

Explain some laboratory tests that might be done on urine sample.

Discuss the signs and symptoms of venereal disease, methods of treatment, and the emotional impact it might have on an individual.

041

Objective 4: The student will be able to discuss the personal grooming habits needed to maintain a healthy body.

Developing Core

Prevention of disease and maintenance of a healthy body should be the primary concern of all people.

In order to maintain a healthy body there are a number of measures that should be observed. Correct body posture and correct body mechanics prevents many problems to the musculo-skeletal system.

The feet which are so important for mobility are probably one of the most neglected structures.

A person only notices his feet when they are hurting. It is essential to take care of the feet in order to maintain painless mobility.

Developing proper eating habits is also important in health maintenance.

Student Learning Activities

1. Demonstrate correct standing, setting, and walking posture (shoulders pulled back; abdomen tucked in, knees not crossed).
2. Discuss what problems can be caused by not observing correct posture.
3. Discuss the importance that exercise plays in good body posture and in the maintenance of a healthy body.
4. Explain how good posture can affect one's personality.
5. Demonstrate the proper way to lift a heavy object.
6. Explain why it is easier to push or pull an object it is to lift it.
7. Demonstrate proper foot care-include trimming of nails, care of skin.
8. Explain what shoes would be proper and why. Also explain why proper fitting is important.
9. Describe arch problems and what could be done to alleviate them.
10. Discuss the saying "When your feet hurt, you hurt all over."

171

Objective 4-continued

Developing Core

Care of the gums and teeth is necessary to maintain a healthy body.

Personal hygiene measures are based on good health habits.

An attractive and healthful appearance can be maintained by good skin care.

Student Learning Activities

11. Keep a record of everything that you consume during a twenty-four hour period.
12. Evaluate your food record to determine if you are eating sensibly.
13. Demonstrate the proper method of brushing the teeth.
14. Explain the terms caries and pyorrhea and what can be done to prevent them.
15. Relate how diet can effect the teeth.
16. Debate whether fluoridation is the best method of preventing caries.
17. Discuss what you should consider when selecting a dentifrice and list them.
18. List some causes of bad breath and methods of prevention.
19. Explain what can be done to prevent body odor.
20. List examples for the following statments:
 - (1) You should wash your hands before...
 - (2) You should wash your hands after...
21. Demonstrate nail care and explain why it is an important aspect of personal hygiene.

142

Objective 4-continued

Developing Core

Particular attention must be given to the skin care of adolescents and the elderly.

Hair care contributes to the well-groomed appearance of an individual and to his feeling of well-being.

Elimination is another important aspect of personal hygiene.

Student Learning Activities

22. Make up a skin care routine for an adolescent with an oily complexion.
23. Differentiate between a pimple, blackhead, and cyst.
24. Form a panel to discuss the psychological effects of acne in the adolescent.
25. Discuss what modifications in a skin care routine are needed for an elderly person.
26. Discuss how you feel about an individual who has dirty, greasy hair. How might that person feel about himself?
27. Define dandruff and list some methods of treatment.
28. Give examples of hair and scalp problems that you feel should be seen by a doctor.
29. Define terms elimination, urine voiding, micturition, bowel movement, feces, stool, constipation, diarrhea.
30. Relate how constipation can affect a person's personality and discuss ways of correcting the problem.
31. Discuss some common methods of treating diarrhea.
32. Give some signs or symptoms of possible problems within the urinary system.

143

Objective 4-continued

Developing Core

Menstruation is a normal occurrence in the female. There is no need for special precautions except to pay particular attention to personal cleanliness.

The eyes are extremely sensitive organs and medical treatment should be sought at the first sign of difficulty.

Student Learning Activities

33. Explain why a person should have an adequate fluid intake.
34. Define dysmenorrhea, amenorrhea, menses, gynecologist.
35. Review the female anatomy.
36. List some lay terms that are used to refer to menstruation and discuss their significance. (i.e. "The Curse")
37. Discuss the importance of cleanliness especially during menstruation.
38. Debate whether moodiness before menstruation is actually caused by the menstrual cycle.
39. Explain what happens to the uterus during the menstrual cycle.
40. Discuss common methods that might be used to relieve menstrual cramps.
41. List some menstrual irregularities in which female should consult her gynecologist.
42. Differentiate between ophthalmologist, optician, optometrist, and oculist.
43. Form a panel and discuss what eyestrain is and how it can be prevented.

Objective 4-continued

Developing Core

All work and no play does not contribute to the overall health of the individual.

Addicting substances cause physical dependence and can lead to bodily harm.

Student Learning Activities

44. List ways in which a person can prevent eye injuries.
45. Demonstrate the various methods used to remove a foreign body from the eye.
46. Debate whether a person should have periodic eye examinations or wait until he has signs of vision problems.
47. Describe some warning signs of eye problems.
48. Decide if sunglasses are useful and why.
49. Discuss ways in which nervous and physical tensions and mental fatigue can be relieved by engaging in some form of recreation.
50. Engage in some form of recreation after class and determine how you feel after the activity.
51. Differentiate between addiction and habits.
52. Set up four panel discussions with each group selecting one of the following topics: drugs, alcohol, tobacco, coffee or tea, and discuss the effects of the substance on the body and the withdrawal symptoms if any.

145

Objective 5: The student will be able to carry out basic first aid procedures.

Developing Core

Another phase of maintaining a healthy body includes knowledge of simple first aid procedures.

Most accidents can be prevented.

Lacerations and abrasions are some of the most common accidents.

In order to control severe bleeding it is important to know where to apply pressure.

Shock might be the result of a severe loss of blood.

Fainting is another common occurrence.

Recognition and first aid treatment of fractures is important to prevent further damage.

It is essential to correctly treat burns immediately in order to prevent infection.

Student Learning Activities

1. Form a panel discussion and discuss the saying "An ounce of prevention is worth a pound of cure."
2. List some of the safety hazards within the home and outside of the home.
3. Differentiate between an abrasion, laceration, incision, avulsion.
4. Describe first aid treatment for each.
5. Point out the pressure points that are used to stop bleeding.
6. Demonstrate the correct method of applying pressure to stop bleeding.
7. Describe what happens to the body when it goes into shock and discuss the first aid measures. (Position and warmth)
8. Explain what fainting is and the first aid treatment.
9. Define fracture and its types (simple, compound, comminuted).
10. Describe the symptoms of a fracture.
11. Discuss why a fracture should be immobilized. Practice applying a sling to a fellow student.

147

Objective 5-continued

Developing Core

Poisoning is a medical problem in which immediate first aid care is imperative.

Just as a car needs periodic inspections to spot potential problems, so does the human body. The physical examination is the most effective method of spotting potential health problems.

Student Learning Activities

12. Draw diagrams of the types of fractures.
13. Distinguish between a first degree, a second degree, and a third degree burn.
14. Explain the immediate first aid treatment.
15. Form a panel and discuss the emergency treatment for ingestion of a poison.
16. Given a list of poisonous substances, determine when vomiting should be induced and when it should not be.
17. Correctly identify the instruments commonly used by a physician during a physical examination. (Ophthalmoscope, otoscope, percussion hammer, tongue depressor, stethoscope, sphygmomanometer, vaginal speculum, nasal speculum, and proctoscope).
18. Describe what should occur during a physical examination.
19. Using the Chase doll practice positioning and draping used during a physical examination.
20. List the common diagnostic tests usually done during a physical examination. (Urinalysis, chest x-ray, blood test, and EKG).
21. List some of the specialists in the medical profession (gynecologist, proctologist, urologist, orthopedic surgeon, neurologist, dermatologist).

Light

Objective 6: The student will be able to plan a well-balanced diet using the Basic Four Food Groups.

Developing Core

Good nutrition practices are necessary for maintenance of bodily functions.

Physical appearance and mental outlook reflect, in part, the nutrition habits of the individual.

The Basic Four Food Groups and the caloric requirements are two means of determining an individual's nutritional requirements.

A knowledge of the anatomy and physiology is important before studying the enzymes and their action.

In order to get the necessary daily nutrients, it is important to plan menus.

Student Learning Activities

1. Read related textbook material.
2. Discuss the meaning of nutrition.
3. List ten signs of good nutrition and ten signs of poor nutrition.
4. Classify a list of foods according to the Basic Four Food Groups.
5. List the six basic nutrients, the sources and function of each.
6. Identify some deficiency diseases and what could be done to correct it.
7. Using a calorie table, determine the caloric values of a list of foods.
8. Debate whether food has psychological importance or not.
9. Review the major digestive organs and their function.
10. Identify enzymes and their purpose in the digestive process.
11. List some factors that can affect digestion.
12. Debate whether it is necessary to plan menus.

81

Objective 6-continued

Developing Core

Knowledge of correct food preparation and storage is helpful in preventing unnecessary loss of valuable nutrients.

Inspections of foods and food preparation plans protect the consumer from disease and from attacks of food poisoning.

Foods must be adopted for family members of various ages.

Student Learning Activities

13. Evaluate some sample menus for nutrient content.
14. Form a panel discussing factors that affect food choice. (Values)
15. Drawing from personal experience within their families, have students relate the difficulties in changing food habits.
16. Review the common household measurements.
17. Plan menus to feed family of four for three days spending \$5 per day.
18. List the methods of storing food.
19. Identify some basic principles of cooking food.
20. Each student will bring in and share with the class a recipe for a simply prepared nutritious food.
21. List the agencies that are responsible for inspecting and protecting food supplies.
22. Form a panel to discuss the sanitation principles in preparing and storing food.
23. Discuss the major factor that lead to food poisoning.
24. Discuss the diets for people of various age groups.

149

Objective 6-continued

Student Learning Activities

25. Role play a family with members of various age ranges. (Include an infant, a toddler, a school age child, an adolescent, and a grandparent)
26. Describe various meal patterns.

Evaluation:

1. The student will identify the four basic needs of all people and how these needs are met.
2. The student will recognize some of the common defense mechanisms used by all people.
3. The student will explain the various types of families, how the family has changed through the ages, the stages that occur within the family and the individual's reaction to each stage.
4. The student will list some of the governmental agencies that help to control the spread of disease.
5. The student will explain the difference between pathogenic and nonpathogenic bacteria.
6. The student will classify fifteen substances as antiseptics or disinfectants.
7. The student will identify portals of entry and portals of exit of bacteria.
8. The student will demonstrate on a model how the body is divided into cavities, planes, and body directions.
9. The student will identify the major properties of all living cells.
10. The student will explain the relationship between cells, tissues, membranes, organs, and systems.

150

Objective 6*continued

Evaluation-cont.

11. The student will identify the nine body systems and the major organs of each.
12. The student will describe the major functions of each body system.
13. The student will identify six or more health maintenance factors and how these can be carried out.
14. The student will carry out basic first aid procedures.
15. The student will correctly use household measures.
16. The student will evaluate a meal for nutritional and caloric content.
17. The student will explain the diet modifications necessary for the various age ranges.
18. The student will take periodic examinations with a proficiency of 70% or better.

151

Total: 15 hours
Theory: 13 hours
Conference/Study: 2 hours

FUNDAMENTALS OF HEALTH CARE-BASIC SCIENCES
UNIT III THE NATURAL PHENOMENON OF ADVANCING AGE

Introduction: This unit deals with the aspects of natural aging and it gives emphasis to the increasing health, social, and emotional needs of the individual elderly person.

Specific Objectives:

The student will be able to:

1. Recognize the significance for studying the aging process and define related terminology.
2. List the characteristics an individual develops as he/she reaches advanced age.
3. Begin to understand the mental and emotional needs of the elderly.
4. Describe the changes that have taken place in the family's relationship with its elderly members.
5. Demonstrate his/her ability in providing for the general hygiene of the elderly.
6. Identify the problems faced by the senior citizens of today's society.
7. Identify the characteristics of a good nursing home.
8. Define his/her role in assisting the elderly individual to cope with impending death.

Written

Caldwell, Ester and Hegner, Barbara. Geriatrics, Albany, New York: Delmar Publishers, 1975.

Hassler, Doris. The Practical/Vocational Nurse and Today's Family, New York, New York: The MacMillian Company, 1972.

Stevens Marion Keith. Geriatric Nursing for Practical Nurses, Philadelphia: W.B. Saunders Company, 1965.

Thompson, Ella M., and Rosdahl, Caroline B. Textbook of Basic Nursing, ed. Philadelphia: J.B. Lippincott, 1973.

152

7

Developing Core

Aging is a natural, progressive process beginning at birth. It is an inevitable, universally shared experience.

Developing Core

In the natural process aging, there are changes in both physical appearance and functional efficiency.

The emotional needs for all humans are common regardless of age. The methods of obtaining satisfact-

Objective 1: The student will be able to recognize the significance for studying the aging process and define related terminology.

Student Learning Activities

1. Define terminology distributed: aging, senility, geriatrics and gerontology.
2. Identify the periods of life from infancy to old age.
3. Write a short paragraph on what "old" really means.
4. Compare the life expectancy today with the period before 1900.
5. Working in groups, list some of the people who have made major contributions to society in their later years.
6. Read related material in textbook.

Objective 2: The student will be able to list the characteristic an individual develops as he/she reaches advanced age.

Objective 3: The student will be able to begin to understand the mental and emotional needs of the elderly.

Student Learning Activities

1. Observe a series of pictures or films of elderly people and list the signs of natural aging that can be identified.
2. Complete a chart indicating the systemic changes in advancing age.
3. Discuss the complications that may occur with these systemic changes

153

Objective 3-continued

Developing Core

ion and gratification of these needs, however, are narrowed greatly for older people.

Student Learning Activities

4. Role play an elderly teacher who is admitted to a home for the aged and a young, disrespectful practical nurse.
5. Describe three circumstances which may cause the elderly to lose self-esteem.
6. Relate the personality traits of the elderly to the problems in adjusting emotionally to aging.
7. Read related material in textbook.

Objective 4: The student will be able to describe the changes that have taken place in the family's relationship with its elderly members.

1. List the four periods of crises in the middle years.
2. Define the term "role" as it relates to family relationships.
3. Identify the role changes that occur as an individual gets older.
4. Contrast the attitude of today's family toward its senior members with that of the early 1900's.
5. Visit a home for the aged to gain experience in relating to older persons.
6. List the qualities needed for the health care professional to give adequate care to the elderly person.
7. Describe the feelings families experience when confronted with a health problem of an elderly member.

Responsibilities and life roles are altered as people grow older. A sense of security is provided for role changes in a healthy family relationship and the need for a satisfying family relationship continues to be important, regardless of age.

154

Objective 5: The student will be able to demonstrate his/her ability in providing for the general hygiene of the elderly.

Developing Core

The ability to provide for one's personal needs is a necessary part of independent living. With advancing age, it may be difficult for the individual to meet these needs alone and the aging process itself may modify the methods used.

Student Learning Activities

1. Assist in providing for the personal care of an elderly person.
2. Describe the skin care necessary for an elderly person and indicate how this differs from that of a younger person.
3. List some chronic illnesses that often begin in middle age and may be prevented or arrested by regular health consultation.
4. List the nutritional problems that may beset an elderly person and develop a plan for solving these problems.
5. Produce a safety chart. Indicate on the chart safety hazards of the elderly and infirmities of age which create such hazards.

Objective 6: The student will be able to identify the problems faced by the Senior Citizens of today's society.

The majority of elderly persons prefer to live in familiar surroundings and remain self directed and self reliant for as long as possible. A crisis occurs when the individual must give up this independence.

1. Describe the various types of living facilities available to the elderly person.
2. In small groups, discuss the present day problems in housing that face the elderly.
3. List the nine Rights of the Senior Citizen from the White House Conference on Aging.
4. Name five activities which can help the elderly person feel needed.
5. Describe the recreational opportunities observed on the nursing home visit.

Objective 6-continued

Developing Core

Student Learning Activities

6. List some of the problems faced by the individual at the time of retirement.
7. Identify some of the considerations needed in planning for retirement. (Finances, etc.)
8. In small groups, discuss the problems a sedentary life can create for the aged and offer some solutions to these problems.
9. In small groups, discuss the need for rehabilitation in the elderly: social, physical, economic.

Objective 7: The student will be able to identify the characteristic of a good nursing home.

1. List the typical community facilities and services that are offered to the elderly.
2. List the nursing homes that are available in your community.
3. Identify the features to investigate when looking for a good nursing home.
4. Discuss the factors that are helping to improve the standards of nursing homes.

Objective 8: The student will be able to define his/her role in assisting the elderly individual to cope with impending death.

1. Invite a clergy man to discuss his experiences with elderly people and their views of death.
2. List the specific steps which may lead to the acceptance of terminal illness and death.

ISC

A United Community Action is required to solve the major problems facing the elderly today. Provisions for adequate nursing home facilities is part of a Community Action program.

With a spouse gone and friends lost, the realization of death comes in to sharper focus.

Objective 8-continued

Student Learning Activities-cont.

3. Discuss the attitude and role the health professional should assume when working with elderly patients who may be terminally ill.

Enrichment

Discuss some of the arguments given in favor of and against compulsory retirement.

Read Koeber-Ross "One Death and Dying".

Evaluation:

1. The student will define: aging, senescence, senility, geriatric, gerontology.
2. The student will list the systems changes that occur with aging.
3. The student will relate satisfactory with an elderly person.
4. The student will explain fully the role changes that occur with a senior member of a family.
5. The student will provide for the hygienic needs of an elderly patient.
6. The student will plan a diversional and recreational activity for an elderly person.
7. The student will list ten community facilities for the elderly.
8. The student will identify five major problems facing senior citizens today.
9. The student will list ten characteristics of a good nursing home.
10. The student will receive a satisfactory grade on written examinations.

157

Total: 30 hours
Theory: 26 hours
Conference/Theory: 4 hours

FUNDAMENTALS OF HEALTH CARE-BASIC SCIENCES
UNIT IV INTRODUCTION TO THE PROCESSES OF DISEASE

Introduction: This unit is designed to introduce the student to the processes of illness, deviations from normal, and common diagnostic procedures. Emphasis is also placed on the basic signs and symptoms of illness with simple related nursing measures.

Specific Objectives:

The student will be able to:

1. Identify the normal body's defenses against illness and disease.
2. Define and give examples of classifications of disease conditions with their related causes.
3. Follow the course a disease may take and describe the process of healing.
4. Classify symptoms and list the common ones to be observed.
5. Describe the simple nursing measures used to alleviate these symptoms.
6. Describe the common diagnostic procedures.

Written

Burke, Shirley R. Human Biology in Health and Disease, New York: John Wiley and Sons Inc., 1975.

Smith, Dorothy W., and Germain, Carol P. Nursing of Adults, Philadelphia: J.B. Lippincott Company, 1972.

Thompson, Ella M. and Rosdahl, Caroline B. Textbook of Basic Nursing, Second Edition, Philadelphia: J.B. Lippincott Company, 1973.

Audio-Visual

Equipment for Demonstrations
Examples of Laboratory Requisitions
Mimeographed Material
Filmstrip: Concept Media
Nurse-Patient Interaction

158

Objective 1: The student will be able to identify the normal body's defenses against illness and disease.

Developing Core

The healthy body is a complex mechanism with its own built-in defenses against disease condition.

Student Learning Activities

1. Review the structure and function of the skin.
2. Identify areas that are protected by mucous membrane.
3. Review the lymphatic system.
4. Locate the origin of the leukocytes and discuss how they function as one of the body's defenses.
5. Define the term leukocytosis and leukopenia.
6. Define: immunity, antibody, antigen.
7. Discuss the antibody-antigen reaction.
8. Classify types of immunity: acquired, inherited, active, passive.
9. Read related textbook material.

Objective 2: The student will be able to define and give examples of classifications of disease conditions with their related causes.

The body as a complex machine is affected by many factors which may result in a disturbance of body function and change in body tissue.

1. Define illness, disease, and pathology.
2. Differentiate between an organic disease and a functional disorder.

159

Objective 2-continued

Developing Core

Student Learning Activities-cont.

3. Discuss the classification of diseases as to cause, system affected, and method acquired.
4. Define and give some examples of the following classifications: hereditary, congenital, infection, deficiency, metabolic, neoplastic, traumatic, occupational.
5. Define the term predisposing.
6. Discuss the five predisposing factors to disease:
 - a. genetic
 - b. deficiencies
 - c. ignorance
 - d. emotions
 - e. inadequate protection
7. Divide the class into five groups and have each produce examples of these factors.
8. Read related textbook material.

Objective 3: The student will be able to follow the course a disease take and describe the process of healing.

The progression of a disease from onset will vary with disease, treatment, and individual. The repair or regeneration of tissue is an attempt by the body to return to a healthy state.

1. Define: acute, subacute, chronic, and granulation.
2. Using the common condition of bronchitis to illustrate how this may progress from acute to chronic.
3. List other common conditions that may progress from acute to chronic.

110

Objective 3-continued

Developing Core

Student Learning Activities

4. Define inflammation and list the symptoms.
5. Define: exudate, serum, fibrinous, purulent, suppuration, slough, ulcer.
6. Compare the healing process of a simple wound with clean cut sharp edges (incised) to an irregular jagged wound. (lacerated)
7. Differentiate the following types of scar tissue: contractrix, adhesions, keloid.
8. Read related textbook material.

Objective 4: The student will be able to classify symptoms and list the common ones to be observed.

Objective 5: The student will be able to describe the simple nursing measures used to alleviate these symptoms.

Objective 6: The student will be able to describe the common diagnostic procedures.

Illness and disease conditions are manifested in a variety of ways. A few basic measures can be instituted in alleviating these discomforts.

1. Define objective and subjective signs and list some examples of each.
2. Select several students to discuss the observations made on their assigned patients and classify them as either subjective or objective.

191

Objectives 4,5,6-continued,

Student Learning Activities-cont.

3. List the common signs and symptoms to be observed and discuss the simple nursing measures used to alleviate these symptoms.
4. Role play a nurse-patient relationship dealing with acute abdominal pain, with emphasis placed on information needed.
5. Observe film strip-"Nurse and Patient Interaction." (#2)
6. Discuss the varied emotional and mental reactions to be observed orientation, responsiveness.
7. Define: urinalysis, CBC differential, ECG chest x-ray, GI series.
8. Define the term diagnosis and discuss the purpose of these common procedures.
9. Read related textbook material.

Evaluation:

1. The student will list four means by which the body may defend itself against disease conditions.
2. The student will list eight classifications of disease conditions and give an example of each.
3. The student will define: acute, subacute, and chronic.
4. The student will define granulation and explain healing by first intention and healing by second intention.

Evaluation-continued.

5. The student will recognize the common signs of disease conditions and apply simple nursing measures to alleviate these symptoms.
6. The student will explain the purposes of a urinalysis, CBC differential, ECG, chest x-ray, and GI series.
7. The student will receive a satisfactory grade on a written exam.

163

Total: 30 hours
Theory: 26 hours
Conference/Study: 4 hours

FUNDAMENTALS OF HEALTH CARE-BASIC SCIENCES
UNIT V PRINCIPLES OF PHARMACOLOGY

Introduction: This unit is designed to introduce the student to the basic principles for administering medications. The course includes the units of measurements, use and action of drugs, and the skills necessary for the preparation and administration of medications. The student will also be oriented to the common drug classifications and examples of each.

Specific Objectives;

The student will be able to:

1. Identify the metric, apothecaries, and household measurements as used in drug-dosages, and calculate conversions within and between the systems.
2. Discuss the importance of and methods for establishing drug standards and control.
3. Explain the legal aspects involved in the administration of medications.
4. List the sources of drugs and types of preparations.
5. Recognize the various methods of drug administration and explain their purpose.
6. Define minimum, maximum, toxic, and lethal dose and discuss the factors that affect drug dosage.
7. Prepare a list of general purposes for which drugs are used.
8. Identify the various actions of drugs.
9. Accurately interpret a written order.
10. Classify drugs according to their actions, use, and type and discuss in detail data on the medications they are to administer.
11. Prepare, administer, and chart prescribed medication; oral, sublingual, subcutaneous, and intramuscular.

Philadelphia: J.B. Lippincott Company,
1973.

Wood, Lucille A. Nursing Skills for Allied
Health Services, Vol. I, II, and III,
Philadelphia: W.B. Saunders Company, 1972.

Objective 1: The student will be able to identify the metric, apothecaries, and household measurements as used in drug dosages, and calculate conversions within and between the systems.

Developing Core

Drugs are measured by both dry and liquid measures. Two systems are used—the metric and apothecaries system. In addition to these systems household measuring equivalents are sometimes used.

Student Learning Activities

1. View film strips on metric, apothecaries, and household measurements.
2. Review the table listing metric, apothecaries, and household equivalents and compare them.
3. Observe demonstration for computing drug dosage using proportion method, and practice assigned problems.
4. Compute conversion problems within the metric system.

165

Developing Core

A drug is any substance which by its chemical nature influences the structure of function of the living organism. Such a definition includes medications which are used in preventing, diagnosing, treating diseases and restoring or maintaining normal functions.

Standards and controls are imperative. The regulation of the strength and purity of the drugs are essential to protect the public from the dangers of misuses or adulteration.

Objective 1-continued

Student Learning Activities

5. Compute conversion problems between the metric and apothecaries system.
6. Secure measuring equipment and practice measuring dry and liquid measures using the three systems.
7. Using medicine cards written with each of the three systems of measuring equivalents, practice measuring dry and liquid measures.

Objective 2: The student will be able to discuss the importance of and method for establishing drug standards and controls:

Objective 3: The student will be able to explain the legal aspects involved in the administration of medications:

Student Learning Activities

1. Name the two groups into which drugs may be classed.
2. List examples of the official and non-official publications.
3. Define: trade name, official or generic name.
4. Review the acts of legislation which control preparation and use of drugs.
5. Interpret how these acts affect the administration of medications.
6. In small groups, discuss the individual responsibilities of those involved in administering and consuming drugs: M.D., pharmacist, nurse, patient.

166

Objective 4: The student will be able to list the sources of drugs and types of preparations.

Developing Core

Although drugs are prepared in pharmaceutical laboratories they are secured from organic or enorganic sources. The drug is prepared in the form the patient will use, often in the exact dose to be given.

The method of administration depends on the nature of the drug and the effect that is wanted.

In prescribing the dosage of any drug, the doctor always considers certain individual differences that are known to affect drug dosage.

Student Learning Activities

1. Investigate the organic sources and list the drugs obtained from plants and animals.
2. Define the term synthetic and give an example of a synthetic drug.
3. View the various types of drug preparations that are available and become familiar with terms used to describe them.

Objective 5: The student will be able to recognize the various methods of drug administration and explain their purpose.

Objective 6: The student will be able to define minimum, maximum, toxic, and lethal dose, and discuss the factors that affect drug dosage.

Student Learning Activities

1. Define posology.
2. Differentiate between local and systemic.
3. Identify those methods used for rapid absorption and slow absorption.
4. Determine the best methods of drug administration to an unconscious patient.
5. Define minimum, maximum, toxic, and lethal dose.
6. Determine the differences in drug dosage: child and adult, oral medication and I.V., obese and thin patient, disposition, distribution, elimination.

171

Objective 7: The student will be able to prepare a list of general purposes for which drugs are used.

Objective 8: The student will be able to identify the various actions of drugs.

Developing Core

Medications are used in preventing, diagnosing, treating diseases, and restoring or maintaining normal functions. Drugs act differently on different individuals but the action of most drugs can be predicted.

Medications are only given upon the order of the physician. An order should always include the name of the drug, the exact dosage, the route of administration, and the frequency of administration.

All medication orders include abbreviations and symbols and if the order is to be interpreted correctly the nurse must be familiar with these abbreviations and symbols.

Student Learning Activities

1. Prepare a list indicating the purposes for which drugs are given and give an example of each purpose.
2. Prepare a chart showing the action of drugs according to location, expected results, and condition of patient.
3. Define the following terms and give examples:

a. side effects	d. cumulative
b. idiosyncratic	e. antagonistic
c. toxic	f. synergistic

Objective 9: The student will be able to accurately interpret a written order.

Student Learning Activities

1. Memorize the commonly used abbreviations and symbols.
2. Examine carefully the forms that will contain the written order: prescription, doctor's order sheet, kardex, and medicine card.
3. Compare the forms that are used in various hospitals.
4. Practice interpreting sample medication orders.
5. Differentiate between a self-terminating order and a standing order.
6. Name two types of drugs that are ordered on a self-terminating basis: (narcotic and antibiotic).

188

Objective 9-continued

Developing Core

Student Learning Activities

7. List the parts of a prescription.

Objective 10: The student will be able to classify drugs according to their actions, use and type, and discuss in detail data on the medications they are to administer.

Student Learning Activities

1. Prepare a list of individual drugs and give information that is needed before administering the drugs.
2. Prepare a chart indicating drug classification, definition, and example.
3. Given a list of drugs, research these drugs using available reference material: P.D.R., hospital formulary etc.
4. Practice classifying drugs by naming them and the effect they have on the body.
5. Make a chart of commonly used drugs found in a personal medicine chest and classify them according to the type of medication they represent.

Objective 11: The student will be able to prepare, administer, and chart prescribed medication: oral, sublingual, subcutaneous and intramuscular.

Student Learning Activities

1. Determine the five "rights" in giving medications.
2. Determine the methods or routes of administration in giving medications.
3. List the different forms of oral medications i.e.,

Drugs are classified according to type or particular action and according to the system of the body they affect.

For safe drug administration, the practical nurse must be knowledgeable on the actions of the drugs that are administered.

Preparing and administering medications involves a given set of rules which have been set up to protect the patient and to protect the person preparing the medication from mistakes which

169

Objective 11-continued

Developing Core

could have serious results.

Oral administration of medicine is only one of many ways of giving drugs. Other methods include parenteral, local, rectal, vaginal, and sublingual.

Some drugs, in order to be effective, must be given rectally, vaginally, or locally.

Parenteral medication can be administered in slightly different manners such as subcutaneously and intramuscularly.

It is important to know what parts of the needle and syringe should not be touched in order to prevent transmission of microorganisms.

Student Learning Activities

special considerations with preparations such as cough medicines, unpleasant tasting medicines, and liquid acid or liquid iron preparations.

4. Practice pouring oral medication solid and liquid, and identifying label three times.
5. Role play a situation in which oral medications are given to a patient.
6. Observe a demonstration of administration of drugs given vaginally, rectally, and locally.
7. Differentiate between the various methods of administering parenteral medication: intradermal, subcutaneous, intramuscular, and intravenous.
8. Examine various needles and syringes and determine their use.
9. Draw a needle and syringe and label its parts.
10. Identify the parts of the needle and syringe that should not be touched.
11. Practice handling a sterile syringe taking care not to contaminate the parts that are to remain sterile.
12. Recognize the various gauges of needles and when to use a particular size.
13. Observe the various types of syringes: insulin, TB syringe, 3cc and 5cc.

170

Objective 11-continued

Developing Core

Subcutaneous injections are used when rapid action of a drug is desired, when a patient cannot take oral medications or when the gastric juices would change the action of a medication.

An intramuscular injection is introduced into a muscle, therefore, a longer needle is used.

To prevent introduction of an infection, the skin is cleansed with an antiseptic.

Student Learning Activities

14. Observe technique of drawing up medication from a vial and an ampule.
15. Using proper technique practice drawing up medication from a vial and ampule.
16. Practice charting medication on graphic sheet.
17. Determine when the subcutaneous route is used.
18. Draw a diagram of a person and indicate the areas when a subcutaneous injection is usually given.
19. List some factors that should be considered when selecting a site for subcutaneous injections.
20. Discuss when and why the intramuscular route is used.
21. Explain the various sites for intramuscular injections.
22. Practice selecting the sites for an intramuscular injection (upper outer quadrant, ventrogluteal site) on the Chase doll.
23. List important points when giving an intramuscular.
24. Discuss the dangers of intramuscular injections.
25. View a demonstration on preparing the skin before parenteral administration of medication.
26. In groups of two, practice cleansing the skin for an injection.

Objective 11-continued

Developing Core

As with any procedure there are certain safety factors that must be observed.

Before administering a medication, the nurse should know specific information about that particular drug.

Student Learning Activities

27. List some antiseptics that are commonly used.
28. Make a poster depicting some of the safety factors that should be observed.
29. In groups of four, list the safety factors that should be kept in mind when giving parenteral medicines and compare the list with other lists.
30. Identify the drug information that the nurse should know before administering a drug i.e., purpose, indications, contraindications, toxic reactions.
31. List the sources that are available in obtaining the drug information.
32. Using the available source, look up ten assigned drugs and list the drug data for each.

Evaluation:

1. The student will accurately identify the units of measurement in the metric and apothecaries system.
2. The student will by oral examination, convert within and between the measuring systems.
3. The student will accurately compute dosages by using proportion and solving for X.
4. The student will be tested by written and practical methods on how to accurately prepare, administer, and chart medications.
5. The student will be tested by written exam on related principles of pharmacology.
6. The student will accurately match twenty-five drug abbreviations with their meanings, in a given written test.
7. The student will accurately classify fifteen common drugs according to type and action in an oral or written test.
8. The student will accurately interpret an order.

Total: 114 hours
Principles and Practice: 44 hours
Clinical Experience: 70 hours

FUNDAMENTAL OF HEALTH CARE-SKILLS
UNIT VI

Introduction: A knowledge of basic skills is needed in order to meet the physical needs of the patient.

Specific Objectives:

The student will be able to:

1. Demonstrate correct handwashing technique.
2. Describe the general environmental needs of the patient such as medical asepsis and safety.
3. Recognize and practice good interpersonal skills in admitting a patient.
4. Accurately take temperature, pulse, respiration, and blood pressure.
5. Correctly make the four types of hospital beds using proper body mechanics and safety devices.
6. Properly position a patient.
7. Assist a patient with transfer activity using correct body mechanics.
8. Prepare a patient and his environment at mealtime.
9. Assist a patient at mealtime.
10. Properly feed a helpless patient and accurately measure and record fluid intake.
11. Correctly administer and remove a bedpan or urinal, properly cleanse after use, and accurately measure and record output.
12. Bathe a patient correctly.
13. Properly carry out personal hygiene measures for patients such as back care, oral hygiene, hair care, nail care, and catheter care.
14. Display some proficiency in basic observation skills.
15. Carry out active and passive range of motion exercises on patients.
16. Properly use safety devices on patient when needed.
17. Identify and practice meeting the basic needs of the chronically ill patient.
18. Demonstrate methods of adapting home equipment to meet the physical needs of patients in the home.

hwl

Objective 1: The student will be able to demonstrate correct hand-washing technique.

Objective.2: The student will be able to describe the general environmental needs of the patient, such as medical asepsis and safety.

Developing Core*

Disease can be transmitted from person to person, from animal to person and from object to person. The practice of medical asepsis is important to prevent this spread of disease.

~~Student Learning Activities~~

1. List the four ways in which disease is spread and give examples of each.
2. Review the proper technique of handwashing and explain its purpose.

Objective 1, 2-continued

Developing Core

Safety is another important aspect of patient care.

Student Learning Activities

3. View trainex on Medical Asepsis.
4. Keeping the principles of medical asepsis in mind, list the methods and reasons for cleaning the patient's unit. (Daily damp dusting, etc.)
5. Identify safety factors that must be observed when caring for the patient and his unit. (Handwashing, use of side rails, etc.)
6. Role play a nurse who observes safety rules in caring for her patient. (Another student can be the patient)
7. Make a poster depicting safety factors to be observed when giving patient care.

Objective 3: The student will be able to recognize and practice good interpersonal skills in admitting a patient to the hospital.

The first impression a patient gets upon admission can set the stage for his/her entire hospital stay.

Upon admission, the patient is apprehensive and fearful; a friendly, calm manner on the part of the nurse does much to allay the patient's fears.

1. View Trainex on Admission, Transfer, and Discharge.
2. Role play a patient admission (one student acting as nurse and one acting as patient).
3. Role play an admission procedure using poor interpersonal relationships; role play the same admission procedure using good interpersonal relationships.
4. Practice balancing the scale.
5. Practice weighing and measuring ten fellow students.

175

Objective 3-continued

Developing Core

For many procedures the height and weight of the patient are necessary in calculating dosages of medicine.

Student Learning Activities

6. Chart the results of the height and weights on a graphic sheet.
7. Discuss why accurate height and weight of a patient is needed.

Objective 4: The student will be able to accurately take temperature, pulse, respiration, and blood pressure.

Developing Core

176
The temperature, pulse and respirations make up the vital signs.

Deviation in vital signs influence medical treatment and nursing care.

Body temperature is the balance between the heat produced and heat lost by the body.

Student Learning Activities

1. View trainex film on T.P.R.
2. Practice reading centigrade and Fahrenheit clinical thermometers.
3. Given a list of ten temperatures, draw diagrams depicting the temperature.
4. Practice taking oral temperatures on five students.
5. Practice taking an axillary temperature on another student.
6. Using the Chase doll view a demonstration of taking a rectal temperature and then return the demonstration.
7. List indications for using the oral, rectal, and axillary methods of taking temperatures.
8. Practice recording the temperatures on clinical sheets from a variety of hospitals.

Objective 4-continued

Developing Core

Pulse is the pressure felt against the wall of an artery as blood is forced through it by contraction of the heart.

Pulse is best felt at a superficial artery which can be compressed against a bone.

Respirations are closely related to the pulse and are usually taken together.

Student Learning Activities

9. Clean thermometers in the approved manner.
10. Observe a demonstration of taking the pulse at the radial site.
11. Practice taking the pulse of five other students. (Using various sites for one minute including apical)
12. Practice counting a fellow student's respirations for one minute.
13. Discuss whether people can actually control their respirations.
14. Demonstrate how the pulse and respiration are affected by exercise. (Have a student jump in place twenty times). Take pulse and respiration before and after.
15. Describe abnormalities in pulse and respiration.
16. List conditions which might be indicated by: rapid pulse and respiration, slow pulse and respiration.
17. View the trainex on Blood Pressure.
18. Distinguish between the systolic and diastolic pressures and list the normal ranges of each.
19. Practice reading the Blood Pressure manometer following a blackboard demonstration.

Objective 4-continued

Developing Core

The blood pressure is the force of blood against the arteries caused by contraction and relaxation of the heart.

The systolic pressure is the greatest pressure exerted by contraction of the heart. The diastolic is the least pressure exerted occurring during relaxation of the heart.

The patient's chart is a legal document.

Recorded and reported observations influence the physician's assessment and treatment of the patient.

Pertinent, accurate, descriptive, and legible notes are meaningful.

Medical record forms vary widely from institution to institution.

Student Learning Activities

20. Discuss and list factors which affect blood pressure.
21. Practice manipulation of air release valve by wrapping cuff around a rolled bath towel.
22. Take blood pressures on ten different students and record them on a clinical sheet.
23. Take blood pressure on a student "Patient" while he is lying down, sitting, and standing.
24. View trainex on "Observations and Charting".
25. Given a list of medical terms, prefixes, suffixes, and medical abbreviations, find the meaning of each.
26. Interpret meanings of a prepared list of medical terms from knowledge of the prefixes and suffixes.
27. Direct students to identify and define the medical terms from knowledge of the prefixes and suffixes.
28. Supervise practice of recording on graphic sheet, vital signs sheets, and nurses' notes (use descriptive charting format) from various local hospitals.
29. Observe samples of reminder sheets, assignment sheets, and kardex.
30. Provide students with information about patients, and have them practice using the reminder sheets.

178

Objective 4-continued

Developing Core

Student Learning Activities

31. Observe the use of the Kardex and the assignment sheets.
32. Given questions about hypothetical patients, practice using the Kardex to find the answer.
33. Practice charting patient admission using descriptive method.

Objective 5: The student will be able to correctly make the various types of hospital beds, keeping good body mechanics and safety factors in mind.

Physical needs are the most basic needs of all individuals and patients have additional needs because of their illness.

A well-made bed will do much to add to the comfort and well-being of the patient.

1. Discuss the various types of hospital beds and their uses (electric, manual, Stryker, Circo-electric).
2. Practice operating an electric and manual bed.
3. Explain the principles and safety factors related to bedmaking.
4. Identify the various bedmaking methods (open, closed, anesthetic, occupied, modifications for special needs such as a bed cradle).
5. View trainex or demonstration on Bedmaking.
6. Return demonstrations of bedmaking, using principles of good body mechanics.
7. Practice making a bed with some modifications. (Orthopedic bed, bed cradle)

179

Student Learning Activities

Objective 6: The student will be able to properly position a patient.

Objective 7: The student will be able to assist a patient with Transfer Activities using correct body Mechanics.

Developing Core

Proper positioning prevents contractures, bed sores, and respiratory complications.

Proper use of the muscles used in lifting and moving the patients will minimize fatigue and prevent strain in the nurse.

Student Learning Activities

1. View Trainex on Lifting and Moving Patients.
2. View Trainex "Transfer Activities and Ambulation".
3. View a demonstration of:
 - a. Positioning a patient in side lying, back lying, and face lying positions.
 - b. Assisting a patient to sit up in bed.
 - c. Getting a patient out of bed into a chair.
 - d. Transporting a patient from bed to carrier.
 - e. Using assistive devices in positioning.
 - f. Moving a patient up in bed.
 - g. Assisting with ambulation.
4. Return the demonstration of above.
5. View Trainex "Positioning to Prevent Contractures".
6. Make hand rolls and trochanter rolls and demonstrate their use.

Objective 8: The student will be able to prepare a patient and his environment for mealtime.

Objective 9: The student will be able to assist a patient at mealtime.

Objective 10: The student will be able to properly feed a helpless patient and accurately measure and record fluid intake.

180

Objectives 8,9,10-continued

Developing Core

Nourishment is essential to building and repairing body tissues.

Mealtime should be a relaxed, cheerful, pleasant, experience.

A desire for independence is natural and should be encouraged.

The dangers of burning a patient and of causing aspiration must be avoided.

Student Learning Activities

1. Give examples of when a patient may need assistance with meals and when a patient may need to be fed.
2. Discuss the preparation of the patient and his/her environment before mealtime. (Include positioning)
3. View Trainex on "Feeding the Patient".
4. Demonstrate assisting a patient at mealtime and demonstrate feeding a helpless patient.
5. View the use of special equipment that might be used in feeding a patient: cup with spout, asepto syringe, dropper, straws, plate guards, larger or curved handled utensils.
6. List special measures to be followed in feeding a patient who has difficulty in swallowing, a blind patient, a patient with chewing difficulties, a child.
7. Discuss some safety measures that should be observed (prevent aspiration).
8. List all liquids which are included on the intake record.
9. View trainex on Intake and Output.
10. Practice measuring liquids in calibrated containers.
11. Convert measurements from apothecaries to metric system.
12. View a variety of intake-output forms used at local hospitals.

181

Objectives 8,9,10-continued

Developing Core

Student Learning Activities-cont.

13. Teach a (student) patient how to accurately measure intake.

Objective 11: The student will be able to correctly administer and remove a bedpan or urinal, properly cleanse after use, and accurately measure and record output.

Wastes are primarily eliminated from the body through the urinary and digestive systems and the skin.

The bedpan and urinal are used for elimination by the bed patient.

Privacy, good position, and a warm bedpan enhance elimination.

Recording accurate observations of urine and feces eliminated contributes to the assessment of the patient's condition.

Cold water is used to remove organic matter since heat coagulates it.

1. Define the following: Foley catheter, straight catheter, incontinence, retention, tarry.
2. View Trainex on "Urinary Care".
3. View a demonstration of placing a patient on a bedpan and offering him a urinal. (Use student volunteer)
4. Practice giving, removing, and receiving a bedpan and urinal by working in groups of two.
5. Practice using the fracture pan.
6. List measures used to promote good bowel and bladder elimination.
7. Record observations of normal and abnormal urine and feces on the blackboard.
8. View a demonstration of proper cleansing of a bedpan using bedpan flusher and disposable mop heads over a mop handle.
9. Using a graduated cylinder practice measuring urine output.

182

Objective 11-continued

Developing Core

Student Learning Activities

10. Demonstrate emptying the continuous drainage bag.
11. Practice recording on I&O sheet and nurses' notes. (Observations and amounts)
12. View Trainex on "Bowel and Bladder Training".
13. Discuss how incontinence can emotionally affect an individual.
14. Explain why bowel and bladder training is more desirable than incontinence or the use of a Foley catheter.

Objective 12: The student will be able to bathe a patient correctly.

Bathing promotes comfort and cleanliness and stimulates circulation.

The intact skin is the body's first line of defense against infection.

1. View Trainex on the "Bedbath" or view demonstration of a complete bed bath.
2. Demonstrate a complete bedbath on a student and receive a return demonstration.
3. Discuss the nursing care in giving a partial bedbath.
4. Discuss the importance of perineal hygiene not only during the bath, but also in caring for incontinent patients.
5. By role playing, demonstrate procedure and safety measures involved in assisting with a tub bath and shower.
6. Identify equipment needed.

183

Objective 13: The student will be able to properly carry out personal hygiene measures for patients such as, back care, oral hygiene, hair care, nail care, and catheter care.

Developing Core

Massage improves circulation. The use of emollient lotions keeps the skin soft and pliable.

Frequent, thorough oral hygiene is necessary to keep patient's mouth healthy.

Hair care helps improve the patient's feeling of well-being, gives the nurse a chance to observe for scalp disorders and stimulates circulation to the scalp.

Exercise of the shoulder joints can be accomplished by encouraging the patient to comb his hair.

Hair should be kept clean.

Student Learning Activities

1. View a demonstration of back care.
2. Return the demonstration of back care.
3. Discuss the causes of decubite, the signs and symptoms, and nursing care (special back care) and prevention.
4. List measures used to prevent decubiti.
5. List the equipment necessary for routine oral hygiene and for special mouth care.
6. View demonstration of routine and special oral hygiene including denture care.
7. Practice giving oral care to fellow student.
8. Practice giving hair care to another student.
9. List ways to remove tangles from the hair.
10. Discuss why patients should be encouraged to brush and comb their own hair.
11. List the equipment needed for a shampoo.
12. Discuss the factors that should be considered before shampooing a patient's hair.
13. Role play a nurse shampooing a patient's hair.

184

Objective 13-continued

Developing Core

Being clean shaven elevates self image.

Frequent nail care eliminates a source of infection.

In giving patient care, there are certain factors that require special attention; one of these is the Foley catheter.

To be effective, I.V. infusions must be patent. It is the nurse's responsibility to observe for patency and signs of a reaction to the substance being infused.

Student Learning Activities

14. View a demonstration of shaving a male patient and return the demonstration.
15. View a demonstration of nail care and return the demonstration.
16. By role playing, relate to a patient the dangers of improper cutting of nails.
17. Discuss why special perineal hygiene should be given to a patient with an indwelling catheter.
18. List what observation should be made by nurse while caring for a patient with an indwelling catheter. (Patency, tubing taped to leg, no kinks in tubing)
19. Practice turning and transporting a patient with a Foley catheter (use the Chase Doll as the patient).
20. Define what an intravenous infusion is and list the substances that can be given in this manner.
21. View Trainex on "Nursing Care During Intravenous Therapy".
22. Discuss what observations the nurse should make in caring for a patient with an I.V.
23. List the signs of I.V. infiltration.
24. Practice counting the number of drops per minute in an I.V., how to control the flow and how to turn it off.

185

Objective 14: The student will be able to display some proficiency in basic observation skills.

Developing Core

Observations are an important part of nursing care. Noticing and reporting even a minor change can many times prevent serious problems.

Student Learning Activities

1. List some observations that the student nurse should notice and report. (Change in skin color, change in vital signs, drainage from surgical wound, etc.)
2. Discuss the importance of immediate and accurate reporting.

Objective 15: The student will be able to carry out active and passive range of motion exercises.

986
It is necessary to exercise a patient's limbs to prevent the formation of contractures.

If a patient is unable to actively move his limbs then the nurse must do so by using passive range of motion exercises.

1. Define contractures.
2. Review flexion, extension, abduction, circumduction, rotation.
3. Explain why range of motion exercises are so important.
4. View Trainex "Range of Joint Motion Exercise".
5. Differentiate between active and passive exercises and discuss which one is most effective.
6. Practice doing active and passive range of motion exercises on a fellow student.
7. Role play a nurse teaching a patient how to do active range of motion exercises (another student can be the patient).
8. Review proper patient positioning.

Objective 16: The student will be able to properly use safety devices on patients when needed.

Developing Core

Protective restraint is necessary to prevent injury, but could have harmful psychological and physical effects if improperly applied.

Posey devices, restraints, side rails, and the geriatric chair are just a few of the safety devices that are used to prevent injury to the patient.

The basic needs of a chronically ill person are identical to the needs of any patient except that, because of the patient's incapacitation, more emphasis on the maintenance of body functions is required.

Student Learning Activities

1. View a demonstration on the use of commercially available safety devices and return the demonstration (all students should have the opportunity to be both a patient and nurse).
2. Improvise various types of safety devices and demonstrate their use in a bed and in a chair. (Sheet restraints, mits)
3. Form a panel and discuss how patients might feel when they are restrained.

Objective 17: The student will be able to identify and practice meeting the basic needs of a chronically ill patient.

1. View the trainex "Personal Care in Long Term Illness".
2. Discuss why conscientious nursing care must be given to the chronically ill patient.
3. View trainex "Positioning to Prevent Contractures".

Objective 18: The student will be able to demonstrate methods of adapting home equipment to meet the basic needs of patients in the home.

187

Objective 18-continued

Developing Core

Most patients with a chronic or long-term illness can be cared for at home and actually prefer to be at home, where family and friends are close by and where they can still contribute something to family life.

The comfort of the patient is directly related to the nursing care he receives and is to be strived for because it promotes his recovery and feelings of well being.

The student be aware of available community resources and their activities in order to refer the patient to the proper agency.

The most important contributions to his rehabilitation are made by the patient himself. Everyone wants to be independent and should be encouraged to do whatever he can do for himself.

Student Learning Activities

1. Improvise a backrest fashioned out of a cardboard box.
2. Improvise common household items for patient care (old shower curtain as rubber sheet, etc.)
3. The student will list the safety measures involved with each process of keeping the patient clean and comfortable.
4. List some methods of maintaining sanitation in the home.
5. Students will visit a "meals on wheels" within their community and describe to the class their function toward safety, economy, comfort, and aesthetics of the individual.
6. Other students will visit YNA and Public Health Agency and determine what services are provided.
7. Student will visit and report to the class the equipment that is available through rental agencies and the cost of common patient care equipment (such as a hospital bed, wheelchair, potty chair).
8. Have the student visit an individual on home care and report how he can:
 - a. Feed self
 - b. Bathe self
 - c. Walk
 - d. Toilet self
 - e. Prepare a simple meal for self

Evaluation:

1. The student will demonstrate correct handwashing technique.
2. The student will describe the general environmental needs of the patient, including medical asepsis safety.
3. The student will admit a patient using good interpersonal skill.
4. The student will accurately take temperature, pulse and respiration, and blood pressure.
5. The student will correctly make the four types of hospital beds using proper body mechanics and safety devices.
6. The student will properly position a patient.
7. The student will assist a patient using transfer activities, using correct body Mechanics.
8. The student will prepare a patient and his environment for mealtime.
9. The student will assist a patient at mealtime.
10. The student will correctly feed a helpless patient.
11. The student will accurately record fluid intake and output.
12. The student will correctly administer a bedpan or urinal to patient and cleanse after use.
13. The student will give special back care.
14. The student will give routine back care.
15. The student will carry out oral hygiene correctly.

189

Evaluation, continued

16. The student will give denture care, remembering the correct method of caring for dentures.
17. The student will give hair care to a patient.
18. The student will give nail care.
19. The student will demonstrate knowledge of principles of catheter care.
20. The student will observe I.V. infusions and note signs of infiltration.
21. The student will display proficiency in basic observation skills.
22. The student will carry out active and passive range of motion exercises.
23. The student will use safety devices on patients when needed.
24. The student will identify ways of meeting the basic needs of chronically ill patients.
25. The student will demonstrate methods of adopting home equipment to meet the physical needs of patients in the home.
26. The student will pass tests of performance for proficiency.
27. The student will pass written tests with 70% accuracy.

190

Total: 135 hours
Principles and Practice: 23 hours
Clinical Experience: 104 hours
Conference/Evaluation: 8 hours

FUNDAMENTALS OF HEALTH CARE-SKILLS
UNIT VII

Introduction: This unit is designed to familiarize the students with those fundamental skills necessary to meet the therapeutic needs of the patient. The course will include assisting with diagnostic procedures and a few of the more advanced skills that will help prepare the student for his/her hospital experience.

Specific Objectives:

The student will be able to:

1. Collect specimens of urine, feces, and sputum.
2. Perform urine reductions and record results.
3. Assist with a physical examination: position and drape a patient, identify equipment used for a physical examination and discuss its care after use.
4. Apply abdominal and perineal binders, elastic hose and elastic bandages to the extremities.
5. Fill an ice cap and hot water bottle, give a sitz bath, apply unsterile hot and cold moist dressing, use a heat lamp.
6. Give a cleansing and retention enema.
7. Record observation following S.O.A.P.I.E. technique, participate in completion of nursing care plans.
8. Give post mortem care.
9. Give pre and post operative care.
10. Give care and perform treatments on an infection control unit: i.e., put on and remove gown, transfer non-expendable items, transport a patient from the unit, demonstrate good handwashing technique.
11. Open a sterile package and apply sterile gloves without contamination.

- Pre and Postoperative Care
- Sterile Technique and Dressing Change

Film:

- I Dress a Wound

Objective 1: The student will be able to collect specimens of urine, feces; and sputum.

Developing Core

Laboratory examinations of body discharges are an extremely valuable part of diagnosis and treatment.

Application of the principles of infection control in the collection of specimens is imperative to prevent outside contamination of the specimen and to protect personnel.

Proper collection, accurate labeling and prompt delivery to the lab are essential if examination of specimens is to be meaningful.

Student Learning Activities

1. View a variety of equipment used in the collection of specimens i.e., urine, feces and sputum.
2. List the normal characteristics and constituents of urine, feces, and sputum and compare this with lab reports which might be found in specific conditions.
3. Simulate collection of urine and feces specimens from Chase doll, and sputum from a student "patient".
4. Label specimen containers and complete lab requisition forms used at local hospital.
5. View samples of lab requisition and report forms.

193

Developing Core

Laboratory examinations of body discharges are an extremely valuable part of diagnosis and treatment.

Application of the principles of infection control in the collection of specimens is imperative to prevent outside contamination of the specimen and to protect personnel.

Proper collection, accurate labeling and prompt delivery to the lab are essential if examination of specimens is to be meaningful.

Objective 1: The student will be able to collect specimens of urine, feces, and sputum.

Student Learning Activities

1. View a variety of equipment used in the collection of specimens i.e., urine, feces, and sputum.
2. List the normal characteristics and constituents of urine, feces, and sputum and compare this with lab reports which might be found in specific conditions.
3. Simulate collection of urine and feces specimens from Chase doll, and sputum from a student "patient".
4. Label specimen containers and complete lab requisition forms used at local hospital.
5. View samples of lab requisition and report forms.

Objective 1-continued

Developing Core

Interruption of the closed drainage system affords a portal of entry for bacteria.

Student Learning Activities

6. Demonstrate on chalk board recording of specimen collection.
7. View a demonstration, on chase doll, collection urine specimen from catheter drainage.
8. View a demonstration for the use of clean catch equipment.
9. Discuss the purposes and procedures for the 24 hour urine collection.

Objective 2: The student will be able to perform urine reductions and record results.

Student Learning Activities

1. View demonstration of various models of testing urine for sugar and acetone.
 - a. clinitest
 - b. testape
 - c. acetest
 - d. ketostex
 - e. diastix
2. Collect a specimen of student's own urine and test for sugar and acetone.
3. Record results of urine reduction on a variety of forms used by local hospitals.

Sugar and acetone are abnormal constituents of urine commonly found in the urine of a diabetic patient.

Presence or absence of sugar and acetone in the urine influences treatment of the diabetic.

hb1

Objective 3: The student will be able to assist with a physical examination, position and drape a patient, identify equipment used for a physical examination, and discuss its care after use.

Developing Core

The physical examination plays an important part in the doctor's assessment of health.

The practical nurse can allay apprehension, embarrassment, and fear of the examination by her attitude and manner.

An alert nurse will anticipate the needs of the physician.

Binders serve to support a part and to hold dressings in place and must not constrict circulation or impair respirations.

Elastic hose give support and prevent the formation of blood clots.

To prevent circulatory constriction, elastic hose must fit properly.

Student Learning Activities

1. Identify and collect equipment needed by the physician.
2. View demonstrations of positions and draping used in a physical examination and return the demonstration on the Chase doll.
3. By role play, in groups of three, demonstrate the practical nurse's role in the physical examination.

Objective 4: The student will be able to apply abdominal and perineal binders, elastic hose, and elastic bandages to the extremities.

Student Learning Activities

1. View a demonstration of the application of a scultetus and straight binder and return demonstration. (Use Chase doll for T-Binders)
2. View demonstration of application of elastic hose and return demonstration on a student "patient".
3. View a demonstration of application of an elastic bandage from foot to groin, and hand to elbow, and return demonstration.

195

Objective 4-continued

Developing Core

Bandages serve to support, immobilize, and hold dressings in place.

Observation of neuro-vascular impairment must be made regularly.

Objective 5: The student will be able to: fill and ice cap and hot water bottle, give a sitz bath, apply unsterile hot and cold moist dressing, use a heat lamp.

Student Learning Activities

1. View a demonstration of filling and ice cap and a hot water bottle and return the demonstration.
2. View a demonstration of the use of disposable sitz bath equipment.
3. View a demonstration of application of unsterile hot and cold moist dressings and return demonstration.
4. View the demonstration of the use of a heat lamp and return the demonstration.
5. Make a poster depicting the safety factors involved in hot and cold treatments.

Heat dilates blood vessels increasing blood supply to a part, relaxes muscles, and localizes infection.

Cold contracts blood vessels thereby preventing and controlling hemorrhage, prevents and reduces swelling and relieves pain.

Neuro-vascular checks must be made frequently when using heat and cold.

Objective 6: The student will be able to give a cleansing and retention enema.

Developing Core

A cleansing enema is the introduction of fluid into the colon through the rectum to remove feces and flatus.

An oil retention enema is to be "retained" and may precede a cleansing enema.

Giving an enema involves principles of physics and chemistry and requires a physician's order.

The flatus tube is inserted into the rectum to relieve the symptoms of abdominal distention.

Student Learning Activities

1. View the film strip "Cleansing Enema".
2. View a demonstration of cleansing and retention enema on the Chase doll and return the demonstration.
3. Discuss the reasons for giving a cleansing enema and the importance of reporting and recording the results.
4. Draw a diagram of the lower intestinal tract and identify the structures involved in an enema.
5. List the temperature, amounts, and effects of solutions used for enemas.
6. View a commercially prepared enema solution units and read the directions for administration.
7. Prepare a list of precautions in giving enemas.
8. View a demonstration of the use of a flatus tube.
9. Demonstrate on the chalkboard an example of recording the results of an enema and the effects of the flatus tube.

Objective 7: The student will be able to: record observations following S.O.A.P.I.E. techniques, participate in completion of the nursing care plan.

1971

Objective 7-continued

Developing Core

The problem-oriented system consists of four components: (1) the data base, (2) problem list, (3) patient-care plans, and (4) progress notes for follow up on each problem and plan, along with a discharge or transfer summary.

The problem oriented system eliminates the indecisiveness and the ambiguities in charting. It provides a tool to evaluate nursing performance as well as patient care.

The nursing care plan serves not only to direct the activities personnel, but it also serves as an integrative force between the patient and nursing staff.

An understanding attitude and a sincere consideration will assist patient and family to accept death.

Medical personnel must assess their own feeling about death if they are to assist others.

Student Learning Activities

1. View the various forms used in problem-oriented charting.
2. List on the chalkboard those situations that would be considered patient problems.
3. Plan a nursing situation with problems and record observations and activities following the S.O.A.P.I.E. format.
4. Submit sample charting from hospital experiences.

Objective 8: The student will be able to give post-mortem care.

Student Learning Activities

1. View film strip "Care of the Dying".
2. Discuss, in groups of ten, feelings about death and dying.
3. Interview clergy of various faiths and present an oral report on religious requirements on death and dying.

198

Objective 8-continued

Developing Core

Respect for the human body continues after death.

The physician certifies death. Disposition of the body and valuables is a legal responsibility.

199
Conscientiousness and efficiency in carrying out all routine and special pre-operative responsibilities, promote optimum safety in surgery, and an uneventful recovery.

Fear and apprehension can be minimized by informing the patient about what is being done and why, in terms he can understand.

Post-operative care is directed at keeping the patient comfortable, preventing complications and returning him to as near normal a state of health possible.

Local and general anesthetics are used after careful assessment of the individual patient.

Student Learning Activities

4. Demonstrate the physical care of the body after death, using the Chase doll.
5. By role play, demonstrate approach to the family of the deceased.
6. Compile a list of the physical signs of impending death.

Objective 9: The student will be able to give pre and post-operative care.

Student Learning Activities

1. View the film strip "Pre and Post-operative Care".
2. By role play, admit a surgical patient and demonstrate pre-operative physical, psychological, and spiritual preparation.
3. Review a variety of pre-operative check lists from local hospitals, and devise one which will encompass the best features of each.
4. Review, by demonstration, a surgical bed.
5. By role play, demonstrate reception of a patient from recovery room, and immediate care.
6. Make a chart indicating types of anesthesia, their merits, and dangers.
7. View film strip "Operating Room Skin Preparation".
8. In groups of two practice shaving legs.

Objective 9-continued

Developing Core

Student Learning Activities

9. Prepare a list of the common post-operative complications and the nursing measures used to prevent them.

Objective 10: The student will be able to give care and perform treatments in an infection control unit i.e., put on and remove gown, transfer non-expendable items, transport a patient from the unit, demonstrate good handwashing technique.

Student Learning Activities

1. View film strip on "Isolation Technique".
2. Prepare a list of infectious diseases and group them as to control and mode of transmission.
3. View a demonstration of gowning and masking and return demonstration.
4. Set up an infection control unit and discuss the function of each piece of equipment. Label contaminated areas red.
5. Demonstrate the transfer of urine specimen.
6. Demonstrate obtaining vital signs.
7. Demonstrate "double bagging" and "tearing down" a protective care unit.
8. Present a demonstration of the measures used in caring for a patient with: infectious hepatitis, staph infection in a leg wound, pulmonary tuberculosis.

Infection control units are established to protect patients and personnel.

The type of control is dependent upon the specific disease and its mode of transmission.

The set up may vary from one institution to another, but the principles of transmission and control remain the same.

Disposables afford a greater margin of safety.

002

Objective 10-continued

Developing Core

Surgical asepsis is accomplished by making and keeping objects free of all microorganisms.

There are various methods of sterilization.

When a sterile object is touched by an unsterile object it becomes contaminated and is no longer sterile.

Student Learning Activities

9. Discuss the psychological effects of "isolation".

Objective 11: The student will be able to: open a sterile package, apply sterile gloves without contamination, change a simple sterile dressing.

Student Learning Activities

1. Review general principles of surgical asepsis.
2. Differentiate between surgical asepsis and medical asepsis.
3. View film strip "Sterile Technique and Dressing Change".
4. Discuss the concept of surgical asepsis and identify situations in which it is used.
5. View a demonstration of opening a sterile package and return the demonstration.
6. View a demonstration of the application of sterile gloves and return the demonstration.
7. View a demonstration of the changing of a simple sterile dressing and return the demonstration.
8. View film "I Dress a Wound".

Evaluation:

1. The student will receive a satisfactory grade on periodic written examinations.
2. The student will be evaluated on the accuracy and proficiency in carrying out the procedures demonstrated.
3. The student will be evaluated on manner and attitudes displayed in role play.
4. The student will submit samples of problem-oriented charting from prepared situations and will be evaluated on legibility, construction, accuracy, and clarity.

202

203

HUMAN HEALTH CARE I

MODULE A
MEDICAL-SURGICAL NURSING I

Recommended time
 Theory: 3
 Practice: 6
 Total: 9 hrs.

INTRODUCTION TO BASIC CONCEPTS OF HUMAN HEALTH CARE

Introduction: This unit acquaints the student with the organization and administration policies and the physical facilities of the health care facility to which he/she is assigned. This orientation includes an introduction to working relationships and fundamental information necessary to achieve specific responsibilities.

Specific Objectives:

The student will be able to:

1. Identify school, hospital, and nursing service policies.
2. Explain the functions and interrelationship of specific departments and personnel within the hospital.
3. Interpret the role and responsibilities of the student practical nurse in learning experiences and on the Nursing Team.

Written

Clinical Charts and Forms
 Policy and Procedure Manuals
 Student Handbook
 Diet Manual
 Laboratory Manual

Audio-Visual

Equipment on Unit
 Library facilities

Objective 1: The student will be able to identify school, hospital and nursing service policies.

Developing Core

Policies are regulations formulated for continuity of operations within a given institution.

Student Learning Activities

1. Present the overview and objectives of the program. Discuss each objective thoroughly.
2. Using the student handbook, reinforce the clinical policies on: attendance, dress code, professional

205

Objective 1-continued

Developing Core

Student Learning Activities

manner, grades evaluations. Discussion and role playing.

3. Distribute rotation sheets, calendar, evaluations, and anecdotal forms. Explain each.
4. Identify pertinent hospital policies that are applicable to the student.
5. Present general plan of the specific health care facility, including size, specialties etc.
6. Explain the hospital organization chart the channels of communication and the fire drill regulations.

Objective 2: The student will be able to explain the functions and interrelationships of specific departments and personnel within the hospital.

Specific departments within a hospital, perform certain functions which are interrelated for effective patient care.

1. Accompany students on a guided tour of the specific physical facilities.
2. Introduce students to the health team personnel.
3. Encourage comments and clarify and questions.
4. Accompany students to individual assigned units and explain equipment and facilities.
5. Explain hospital forms. Include kardex, chart, clinical sheets, requisitions, and student nursing care plan.

Objective 3: The student will be able to interpret the role and responsibilities of the student practical nurse in learning experiences and on the nursing team.

Objective 3-continued

Developing Core

The student practical nurse functions as a integral member of the health team. In performing her duties he/she is cognizant of the criteria needed for human health care.

Student Learning Activities

1. Reinforce the role of the student practical nurse. Discuss the roles of the members of the nursing team.
2. Discuss ethical and legal responsibilities in the health care facility.
3. List the qualities necessary for personal and professional adjustment in the patient care setting-Role play.
4. Give examples of hospital situations which require unquestionable integrity.
5. Observe specific examples of student's ability to follow directions, e.g., addressograph, central supply requisition.

Evaluation:

1. The student will be able to function as a team member on his/her assigned unit.
2. The student will be able to adjust from the Fundamentals of Human Health care to assigned health facility with minimal guidance.
3. The student will be able to accept responsibility for helping to fulfill needs of specifically assigned patients, in addition to accepting responsibility to other patients on the unit.
4. The student will be able to identify ways of initiating effective interpersonal relationships.
5. The student will be able to professionally adhere to policies of the health facility.
6. The student will be able to name and locate departments pertinent for patient care.

207

Recommended time
 Practice: 30
 Theory: 20
 Total: 50 hrs

NURSING THE PATIENT WITH PROBLEMS OF LOCOMOTION I

Introduction: This unit includes the normal structure and function of the musculoskeletal system and the effects of deviations. Emphasis will be placed on physical and psychosocial effects of immobility, prevention, relief of pain and prevention of disability. Total nursing care of a patient with traumatic injuries and inflammatory disorders will be discussed. The student will be assigned care of these patients on the clinical unit.

Specific Objectives:

The student will be able to:

208

1. Identify, define, and describe musculoskeletal structures and their functions.
2. Discuss the ~~common~~ ^{most} common physical problems faced by the patient with musculoskeletal conditions, assist in their prevention and formulate solutions.
3. Discuss the psychological and social needs and how they can be met of patients with common short and long term musculoskeletal conditions including traumatic injuries and arthritis.
4. Assess the presence of pain, identify causes, and use measures to prevent and relieve it.
5. Identify and discuss common drugs used in the treatment of musculoskeletal conditions including their classification, desired results, toxic symptoms, mode of administration, and nursing implications.
6. Adapt principles of dietary therapy essential in providing optimum nutrition to the patient with a musculoskeletal condition.
7. Describe the disease process, diagnostic tests, medical and surgical management, and related nursing.

Objective 1: The student will be able to identify, define and describe musculoskeletal structures and their functions.

Developing Core

The normal functioning of the

Student Learning Activities

1. Prepare and distribute a study guide outlining objectives,

269

Objective 1-continued

Developing Core

musculoskeletal system depends upon all component parts functioning well and together. Knowledge of normal structure and function is essential to understanding the effects of deviations.

The composition and construction of bone are partly dependent upon the presence of mineral salts, especially calcium and phosphorus. The periosteal provides nutrients essential to bone growth. The growth of bones occurs longitudinally and in diameter. The hematopoietic function of bone occurs in the red bone marrow.

Joints bear weight and provide motion. Ligaments hold bones together. Tendons attach muscle to bone.

Key words of the muscular system are contraction and movement. When muscles contract they effect movement.

How skeletal muscles are arranged in relation to joints and the innervation they receive determine what movements are possible.

Student Learning Activities

1. required readings and suggested references, content, assignments due and the dates, and evaluation procedures.
2. Compile and give to the student a list of words, relating to structure and function of the musculoskeletal system, to define, learn to spell and pronounce.
3. Using disarticulated and articulated skeleton, identify a prepared list of individual bones and their parts; note their classification and describe their function; show the relationship of physical characteristics to function and the relationship of the part to the whole.
4. Prepare and provide the student with diagrams of the skeletal system for proper labeling, using a given list of terms.
5. Obtain various bones from a butcher shop. Have them sawed longitudinally and medially to demonstrate the difference in composition, to observe pattern of growth, and to show the relationship of internal structure of bone to its function.
6. Secure beef or pig knee joints from a butcher shop. Have students identify cartilage, synovial membrane and fluid, joint capsule, and demonstrate their function.
7. Using the parts of a chicken have students demonstrate the gross structure and action of joints, tendons, ligaments, and cartilage.
8. Secure X-ray films of joints, and with the use of the articulated and disarticulated skeleton compare the three types of articulation.
9. Using volunteer students, locate and demonstrate the function of the principal skeletal muscles.

916

Objective 1-continued

Developing Core

Student Learning Activities

10. Using the torso model, charts, and transparencies study the important muscles of the body.
11. Using a muscle from any lab animal, tease it apart to separate one fiber from the bundle to demonstrate the make-up of a muscle.
12. Show slides and have students draw diagrams of the three types of muscle tissue.
13. Select specific activities for students to perform, and have them identify the muscles used in each.
14. Using their own muscles, have students demonstrate contractility, extensibility and elasticity. Demonstrate muscle tone.
15. View and compare transparencies of normal and atrophied muscles.
16. Discuss the rationale and technique for giving I.M. injections. Delineate the preferred sites on the Chase doll.

Objective 2: The student will be able to discuss the common physical problems faced by patients with musculoskeletal conditions, assist in their prevention, and formulate solutions.

Imobility due to musculoskeletal conditions can cause many hazards.

The patient with a musculoskeletal disability must make many adaptations to perform the activities of Daily Living. The rehabilitation

1. Have student explore and discuss the hazards of immobility including contractures, decubiti, and inability to perform activities of Daily Living. (urinary problems such as calculi)
2. Review Trainex: "Positioning to Prevent Contractures" and discuss how body alignment affects musculoskeletal function.

118

Objective 2-continued

Developing Core

nurse teaches, guides, supervises, and motivates, but the patient must DO.

The best treatment for decubiti is prevention.

Student Learning Activities

3. Arrange for the student to observe the physical therapist performing range of motion exercises and other types of activity to keep the patient functional.
4. Under the supervision of the physical therapist the student will practice range of motion exercises on each other.
5. Direct students to make a display of devices used to provide temporary maintenance of good functional anatomical position of joints and demonstrate their application.
6. Have the students demonstrate the use of: footboard, bedboard, trochanter roll, hand roll, and a posterior leg splint among devices used to prevent contractures.
7. Role play teaching a patient and his family how to check his position for alignment and how to perform range of motion exercises.
8. Demonstrate how improper placement of pillows and use of a gatch bed can cause hip and knee flexion contractures.
9. Arrange for students to observe the occupational therapist teaching patients to perform activities of Daily Living.
10. Have students report on available assistive devices and modifications that can be made in the home to allow the patient to be more independent.
11. Review Trainex:
"Prevention and Treatment of Decubiti."
12. Discuss the relationship of skin care, pressure, and tissue nutrition in the prevention of decubiti.

212

Objective 2-continued

Developing Core

Student Learning Activities

13. Illustrate the areas which are most vulnerable to decubiti, and reinforce method of message of these areas using a student.
14. Demonstrate and permit students to practice use of special equipment used to prevent decubiti: Include: turning frames, oscillating bed, alternating pressure mattress, floatation devices, and other available equipment.
15. Direct student to plan a 24 hour decubitus prevention schedule for a patient indicating type of activity and time.
16. Discuss how a decubitus affects the nursing care plan of a patient with a musculoskeletal condition.
17. Assign students to research prevalent remedies used in the treatment of decubiti and explain the rationale for their use.

Objective 3: The student will be able to discuss the psychological and social needs and how they can be met of patients with musculoskeletal conditions.

The nurse must understand the patient's reactions to disability so that she can help him/her achieve self-sufficiency within his/her capabilities. The acceptance of limitation and motivation to take part in a rehabilitation program is necessary.

A patient develops a sense of security when on a regular program of activity.

1. Lead a group discussion on the stages of emotional reactions a person experiences when informed of a serious disability.
2. Assign the students to plan an activity program for a patient with a specific musculoskeletal condition and incorporate it into his/her nursing care plan. Allow the patient to participate in the planning.
3. Have student discuss how he/she will assist the patient and his/her family to adjust to disability.
4. Arrange for students to sit in on a rehabilitation team conference on his/her assigned patients.

213

Objective 4: The student will be able to assess the presence of pain, identify causes, and employ measures to prevent and relieve it.

Developing Core

Most patients with musculoskeletal conditions experience pain. Pain consumes energy; all measures must be directed to its relief or prevention.

Student Learning Activities

1. List the possible causes of pain in musculoskeletal conditions and measures to prevent or relieve it.
2. Identify common drugs used in the relief of pain including analgesics, sedatives, soporifics, and ataractics.
3. Discuss the use of heat and cold applications in the relief of pain.

Objective 5: The student will be able to identify and discuss common drugs used in the treatment of musculoskeletal conditions including their classification, usual dosage, desired results, toxic symptoms, mode of administration, and nursing implications.

Chemotherapy is an important part of the treatment of musculoskeletal conditions.

1. Direct the student to compile an index file containing an individual information card on common drugs used for the treatment of musculoskeletal conditions. The file will be kept current, adding drugs ordered on patients he/she cares for. Among the classification filed should be: muscle relaxants, anti-inflammatory agents, salicylates, hormones, antispasmodics, analgesics, antimalarial compounds, antibiotics, antineoplastic, anticholine compounds.
2. Supervise the student in the administration of medications for his/her patients.

Objective 6: The student will be able to adapt the principles of diet therapy in order to provide optimum nutrition to the patient with a musculoskeletal condition.

Throughout his/her career the practical nurse will be

1. Reinforce the essentials of good nutrition. Explain what effect the diet has on muscles and activity.

Objective 6-continued

Developing Core

reminded of the direct relationship of good nutrition and optimum health. By constantly using his/her basic knowledge of the essentials of good nutrition, the practical nurse will find that the ability to adopt foods and nutrients to the individual patient will be facilitated.

Student Learning Activities

2. From a week's menus in the school cafeteria, have the student point out foods high in calcium and phosphorus.
3. List ways of coping with the statement: "Patients with arthritis are frequently victims of advertising and fad diets."
4. Discuss self-help devices for patients with physical disabilities. Allow students to examine these. Encourage suggestions for newer techniques.
5. Discuss specific vitamins and minerals that encourage positive return of musculoskeletal function.

Objective 7: The student will be able to describe the disease process, diagnostic tests, medical and surgical management, and related nursing measures of common short and long term conditions of the musculoskeletal system.

Trauma to the musculoskeletal system causes fractures. Fractures can also occur because of weakening or disease of the bones.

Traction may be used to reduce a fracture, immobilize a fracture after reduction, to lessen muscle spasm and prevent or overcome deformities.

Casts are applied to immobilize a fractured bone in proper alignment during the healing process.

1. Provide the student with a terminology list including diseases and disorders of the musculoskeletal system. He/she will define, learn to spell, and pronounce them.
2. Using diagrams and selected X-rays have student define, identify, and discuss the types of fractures.
3. Have the student list the symptoms of fracture and demonstrate emergency treatment of a suspected fracture.
4. Discuss fracture reduction. Include closed reduction, use of traction and open reduction, and the nursing management following these procedures.
5. Review Trainex:
"Care of a Patient in Traction"
"Care of the Patient in Cervical Traction"

Objective 7-continued

Developing Core

Arthritis is the nation's No. 1 crippling disease. The term "arthritis" includes over a hundred conditions which cause aching and pain in joints and connective tissue.

Of all forms of arthritis, Rheumatoid is the most dangerous, destructive and disabling.

Student Learning Activities

6. Arrange for students to view and handle equipment needed to apply traction and to become familiar with it.
7. Have students observe the application of traction and view as many types of traction as clinically available.
8. Instruct all students to develop a nursing care plan for a patient with reduction of a fracture by traction.
9. Have the student prepare a chart indicating principles and safety precautions in the care of a patient in traction.
10. View and discuss Trainex: "Care of the Patient in a Cast."
11. Assign the student to make a nursing care plan for a patient in a body cast.
12. Arrange for students to visit the "Cast Room" to observe and assist in the application and removal of a cast.
13. Explain evaluation of neurovascular function of a patient in an arm or leg cast.
14. Demonstrate and have students practice petaling of a cast.
15. Demonstrate preparation of bed to receive a cast patient and technique in turning a patient in a cast. Allow students to practice.
16. Review Trainex: "Crutch Walking."
17. Name and explain the differences in the five most common kinds of arthritis.

916

Objective 7-continued

Developing Core

Student Learning Activities

18. Direct students to make a poster listing the warning signs of arthritis.
19. Secure and show films on arthritis supplied by The Arthritis Foundation.
20. Identify, explain tests and examinations which are useful in diagnosis of rheumatoid arthritis.
21. Discuss two theories concerning the etiology of rheumatoid arthritis.
22. Obtain charts of selected rheumatoid arthritis patients and have students study them to ascertain symptoms, course, treatment, and frequency of remissions and exacerbations.
23. Instruct students to develop a nursing care plan for a patient with rheumatoid arthritis including a plan for home care following discharge.
24. Demonstrate transfer activities, ambulation using canes, walkers, and crutches. Provide practice sessions for students.
25. Assign students to accompany patients to the physical therapy and occupational therapy departments to observe the patient's planned program of activity.
26. Role play teaching a patient the principles and precautions of self medication.
27. Discuss the psychological needs of a patient with rheumatoid arthritis and how he/she can assist the family in meeting these needs.

217

Objective 8: The student will be able to demonstrate the expertise necessary to care competently for patients with fractures and arthritis.

Developing Core/

In order for the student practical nurse to play a responsible role in the care of the patient with traumatic injuries and arthritis, he/she must have some underlying knowledge of the disease processes that are involved. In addition, he/she must be aware of what the total health team is trying to accomplish for the individual patient.

Student Learning Activities

- 1. Assign students to care for patients with common musculo-skeletal conditions.
- 2. Review plan of care developed by the student. Question student in order to ascertain his/her knowledge of underlying nursing principles.
- 3. Direct students to review charts and discuss various facets with them. Appraise students understanding comment on weaknesses and strengths.
- 4. Supervise medication techniques.

Remedial

Review and study individually the Trainex film strip "The Skeletal and Muscular Systems."

Direct student to draw and cut out paper muscle shapes and attach them to the articulated skeleton with tape.

Observe students participating in a team conference. Direct students to review notes and assign additional reading in areas of individual weakness.

Enrichment

To demonstrate the chemical composition of bone direct students to:

soak a long bone of a pig in 10% nitric acid for 24 hours. (This removes inorganic salts which produces soft flexible bones).

218

Enrichment (cont.)

bake a similar bone in a 250° oven for 2 hours. (This removes organic constituents - a lack of which produces hard and brittle bones).

The student will record and report results.

Assign the student to review the functional capabilities (according to the rehabilitation team's assessment) of a patient and prepare a plan with adaptations for performing self-care activities: eating, toileting, grooming, transfer, and ambulation.

Observe and report on the various forms of heat used in the physical therapy department including parafin baths, hydrocolator packs, whirlpool, Hubbard Tank, and lamps.

Present a clinical conference on the patient with arthritis.

Evaluation:

1. The student consistently uses nursing principles which promote good musculoskeletal function in all patients.
2. Given a list of 30 bones, the student will be able to correctly identify 20 of them, using the articulated skeleton.
3. Given a diagram of the body illustrating 20 common muscles, the student will be able to label 15 of them correctly.
4. The student will be able to list three functions of the musculoskeletal system.
5. Given a written quiz on drugs used in musculoskeletal conditions, the student will achieve 70%.
6. The student will be able to demonstrate skillfully and safely transfer activities involving patients with musculoskeletal disabilities.
7. The student will be able to demonstrate ambulation techniques using a cane, a walker, and crutches.

219

Evaluation (cont.):

8. Given 5 pieces of special equipment used to prevent or correct deformities, the student will be able to demonstrate properly their use.
9. The student will be able to demonstrate attitudes consistent with rehabilitative nursing.
10. The student will be able to perform range of motion exercises skillfully.
11. The student will be able to give safe care to a patient with a cast and/or traction.
12. Given a summary of a patient's condition, the student will be able to develop a nursing care plan which incorporates principles of physical, psychosocial, and rehabilitative care.
13. The student will demonstrate the ability to teach patients and their families adaptations in the performance of self-care activities in home management of disability through discharge planning.

220

Recommended time
Theory: 25
Practice: 45
Total: 70 hrs.

NURSING THE PATIENT WITH CARDIOVASCULAR IMPAIRMENT I

Introduction: Cardiac diseases affect more people in the United States than any other illness. This unit encompasses normal anatomy and physiology and the more common deviations occurring in the cardiovascular system. Etiology, symptoms, medical management, drug and diet therapy are discussed and appropriate nursing measures are stressed. Preventive measures are emphasized. The student has an opportunity to care for these patients on the clinical unit.

Specific Objectives:

The student will be able to:

1. Explain the functions of the circulatory system and describe the four major component parts: heart, blood, blood vessels, and lymph.
2. Trace with accurate explanations, systemic, and pulmonary circulation.
3. List five important factors in the prevention, or at least the delay, of the onset of heart disease.
4. Define common symptoms associated with circulatory impairment.
5. Discuss the major laboratory tests and diagnostic procedures used to determine the presence of heart disease.
6. Describe common short and long-term disorders of the cardiovascular system, including arterial degeneration, blood dyscrasias, varicosities; identify deviations in structure and function, discuss symptoms, therapeutic management, related nursing care and rehabilitative therapy.
7. Adapt the general diet to a patient with cardiovascular impairment.
8. List the general classifications of cardiovascular drug therapy and recognize common drugs, dosages, actions, potential side effects and responsibilities in administering these drugs.
9. Demonstrate the ability to care effectively and safely for the patient having common short and long-term circulatory disorders.

Body Torso

Trainex:

1. Care of the Patient with Leukemia
2. Electrolyte Balance
3. Functions of Electrolytes
4. The Normal Heart

Pamphlets: American Heart Association

Developing Core

The vital functions of the circulatory system are many and the tragic increase in heart disease indicates the need for the student's sound knowledge of the cardiovascular system.

Objective 1: The student will be able to explain the functions of the circulatory system and describe the four major components parts: heart, blood, blood vessels, and lymph system.

Student Learning Activities

1. Introduce the circulatory system generally and how it relates to the other systems.
2. Discuss fully the many functions of the cardiovascular system.

622

Objective 1-continued

Developing Core

Student Learning Activities

3. Using models and diagrams, explain the anatomy, physiology, and functions of each component part: heart, blood, blood vessels, and lymph system.
4. Explain the control of the heart beat. Illustrate the conduction system of the heart. Describe normal heart sounds and murmurs. Differentiate between a functional and an organic murmur.
5. Assign reading material from related textbook and review this information with students. Clarify any questions.
6. Review systole and diastole and discuss how these phases are related to each other in the four chambers of the heart.
7. Demonstrate the effects of physical activity on the pulse. Discuss these effects as well as that of emotional disturbances on the circulatory system.

Objective 2: The student will be able to trace, with accurate explanations, pulmonary and systemic circulation.

It is essential that the student fully understand the normal circulatory process in order that he/she may apply this knowledge in relation to recognizing deviations indicating impairment of the cardiovascular system.

1. Allow students to examine models and diagrams of the circulatory system. Each should practice verbal and written related medical terminology.
2. View and discuss the Trainex "The Normal Heart."
3. Discuss and compare pulmonary and systemic circulation.
4. Illustrate the circulation of blood through the heart and lungs, clearly identifying structures and oxygenated points.
5. On a body circulatory chart, trace the route of circulation

223

Objective 2-continued

Developing Core

Student Learning Activities

of blood throughout the body, clearly naming the major blood vessels.

6. Allow students adequate time to practice circulatory tracing. Assist those having difficulty.

Objective 3: The student will be able to list five important factors in the prevention, or at least the delay, of the onset of heart disease.

Through proper health education, the development of heart disease can be prevented in many persons; also many of those who already have heart disease can be helped to live satisfying and useful lives.

1. Discuss predisposing factors that are thought to contribute to heart disease. Obtain student responses as to how each contributes to impairment of the cardiovascular system.
2. Have students bring to class related information and research articles from newspapers and magazines and give "mini" reports to group.
3. Assign bulletin board display "Prevention of Heart Disease."
4. Direct students to read, review, and comment on pamphlets from the American Heart Association.
5. Collect information on associations and community resources concerned with prevention of cardiovascular disturbances.

Objective 4: The student will be able to define the common symptoms associated with circulatory impairment.

The practical nurse should realize that certain symptoms can be expected to appear in almost every form of heart disease. Frequently, it is he/she

1. Discuss and list body responses indicative of impending cardiovascular impairment. Have students differentiate true circulatory symptoms from those caused by other body disturbances.

Objective 4-continued

Developing Core

who can help persons with undiagnosed heart disease obtain medical attention.

Student Learning Activities

2. Allow students to relate own personal or family experiences about cardiac symptoms and resultant cardiovascular conditions.
3. Direct students to analyze the most common symptoms: dyspnea, edema, angina, color, in relation to the body responses occurring. Discuss what happens when the body can no longer compensate.

Objective 5: The student will be able to discuss the major laboratory tests and diagnostic procedures used to determine the presence of heart disease.

225
Explanations of the many laboratory tests and diagnostic procedures performed to determine cardiovascular disturbances will lessen the anxiety and fear that can hinder the recovery of the patient with heart disease. The practical nursing student will be assisting in patient preparation for these tests and should be able to explain what will be done and why it must be done.

1. Describe the most common laboratory tests and why they are used. Include blood count, sedimentation rate, prothrombin time, blood urea nitrogen; cholesterol, enzymes, blood gases, electrolytes, urinalysis.
2. Show and summarize Trainexes: Electrolyte Balance, Function of Electrolyte Balance.
3. Direct students to obtain laboratory tests results from patient's clinical charts and compare these with the book "norms." Have students recognize which cardiac disturbances cause elevated readings in the specific diagnostic tests.
4. Allow students to examine electrocardiogram tracings. Compare a normal tracing with an abnormal one.
5. Discuss common diagnostic procedures utilized in circulatory disturbances. Include chest x-ray, circulation time, central venous pressure, angiography, lymphangiograms. If possible, show examples.

Objective 5-continued

Developing Core

Student Learning Activities

6. Divide class into groups have students practice by role playing; explanations given to patients prior to diagnostic tests.

Objective 6: The student will be able to describe common short and long-term disorders of the cardiovascular system, identify deviations in structure and function, discuss etiology, symptoms, therapeutic management, related nursing care and rehabilitative therapy.

226
The disease of the blood are numerous and may affect any of the component parts of the blood. One of the most frequently occurring blood dyscrasias is anemia.

1. Review functions and integral components of the blood.
2. Introduce specific diagnostic procedures used to determine blood disorders. Include bone marrow aspiration and capillary fragility test. Have student role-play patient explanations regarding these tests.
3. Define the types of anemias, etiology, and course of each. Discuss common symptoms.
4. Discuss general nursing care of the patients with anemia. Include acuity and chronicity of the disease, fatigue, hemorrhage, infections, diet, drugs, and therapeutic management.
5. List the nursing responsibilities in assisting with a blood transfusion and the observations necessary while blood is being given.
6. Discuss changes in the composition of blood occurring with leukemia.
7. Show and summarize trainex: Care of the Patient with Leukemia.

Another blood dyscrasia the practical nurse will encounter with increasing frequency is leukemia.

Objective 6-continued

Developing Core

Student Learning Activities

8. Direct students to develop a nursing care plan for the patient with leukemia.
9. Briefly describe Hodgkin's Disease and Hemophilia.

Objective 7: The student will be able to adapt the general diet to a patient with cardiovascular impairment.

Most patients with blood disorders should have a diet high in protein, vitamins, and minerals.

1. Review the basic four nutrient groups and have students develop a sample diet.
2. Discuss food types high in vitamins and minerals, emphasizing those that are excellent sources of iron.
3. Direct students to list as many high protein foods as they can without references. Assess strengths and weaknesses.
4. Allow students to respond to the question, "Why should roughage frequently be avoided in the diet of the patient with a blood dyscrasia?"
5. Direct the students to adapt their sample diets to a high protein, vitamin, and iron diet.
6. Discuss the underlying factors necessitating the restriction of sodium in the diet of the patient with a circulatory disturbance.
7. Allow students to become familiar with low sodium content foods by examining food lists, heart association pamphlets, and additional readings.
8. Direct students to adapt their sample diets to a low sodium one.

The diet primarily given to patients with cardiovascular diseases is one that is low in sodium content.

227

Objective 7-continued

Developing Core

Student Learning Activities

9. Discuss "disguised" sources of sodium i.e. antacids, food preservatives, etc. and the use of salt substitutes.
10. Divide class into groups and practice patient education emphasizing food likes and dislikes.

Objective 8: The student will be able to list general classifications of cardiovascular drug therapy and recognize common drugs, dosages, actions, potential side effects and responsibilities in administering these drugs.

222
Although cardiovascular disease is the leading cause of death today, research efforts continue to develop more effective drugs used in the control of these disturbances enabling the patient to live a relatively normal life.

1. Discuss and list the general classifications of cardiovascular drug therapy, including cardiac stimulants, depressants, vasodilators, vasoconstrictors, antihypertensives, diuretics, coagulants, anticoagulants, vitamin, and mineral therapy.
2. Give the class a list of commonly used cardiovascular drugs representing all classifications and have students develop a drug chart showing actions, dosages, potential side effects, and specific nursing responsibilities.
3. Have students record drugs from clinical charts given to specific patients with circulatory impairment and compare these drugs with textbook drug therapy for that particular disease.
4. Supervise students to safely administer cardiovascular drugs on the clinical unit. Have students prepare drug cards.

Objective 9: The student will be able to demonstrate the ability to effectively and safely care for the patient having common short and long-term circulatory disorders.

Objective 9-continued

Developing Core

The student practical nurse should be well aware of the general nursing considerations utilized in caring for patients with cardiovascular impairments as he/she will encounter persons with these disease conditions frequently.

Student Learning Activities

1. Assign students to give total care to patients with common cardiovascular disorders.
2. Discuss plan of nursing care developed by students, including knowledge of underlying scientific principles.
3. Appraise actual nursing care given and individually counsel each student.

Remedial

Assist students to relate drug therapy given with symptoms presented by the patient.

Direct student to compare nursing care given by him/her with textbook description of nursing care measures and determine ways of improvement. Schedule learning conferences with students who need additional assistance.

Enrichment

Direct students to dissect a sheep's heart and identify all structures.

Have students research theories on the circulation of blood prior to Harvey's discovery.

Have students role-play patient teaching in the prevention of heart disease.

Debate Resolved: That the fatalistic attitude toward heart disease prevents persons with early circulatory symptoms from seeking medical attention.

229

Enrichment-cont.

Direct students to keep a record of 24 hours personal food intake; then calculate sodium content.

A patient with Congestive Heart Failure is to be discharged on Aldactone 25 mg. tid., Lasix, 40 mg. qd. and Gitaligen 0.5 mg. qd. Find out the price of these drugs from a local pharmacy and determine the yearly expense for this patient's drug therapy.

Allow a student to observe a cardiac catheterization and orally report observations to the class.

Evaluation:

1. The student will be able to describe the anatomy and fully explain the functions of the four major components of the cardiovascular system.
2. The student will be able to differentiate between the systemic and pulmonary circulation by graphically tracing each.
3. The student will be able to list five important factors in prevention of heart disease.
4. Given four common symptoms associated with circulatory disease, the student will be able to explain the cardiovascular impairment occurring.
5. The student will be able to list ten common laboratory tests and diagnostic procedures used to determine the presence of heart disease.
6. The student will be able to describe all aspects of the care of three patients who have common disorders of the cardiovascular system, including arterial degeneration, blood dyscrasias, and varicosities.
7. Given a general diet, the student will be able to readily adapt this to a high vitamin, high iron, a low sodium, and a low cholesterol diet.

230

Evaluation-continued

8. The student will be able to identify and classify ten commonly used drugs administered to patients with cardiovascular disturbances.
9. By her/his actions on the clinical unit, the student will demonstrate the ability to effectively and safely care for the patient with uncomplicated circulatory disorders.

231

Recommended time
Practice: 30
Theory: 20
Total: 50 hrs.

NURSING CONCEPTS IN THE CARE OF RESPIRATORY EMBARRASSMENT -I

Introduction: Common respiratory diseases present a major loss of time and productivity to students and their families. Since many respiratory diseases are preventable, the practical nurse should be acutely aware of hygienic measures. This unit provides the learning opportunity for the student to obtain the knowledge, skills, and attitudes essential in caring for patients with common respiratory impairment.

Specific Objectives:

The student will be able to:

1. Identify and define the normal structure and function of the respiratory tract.
2. Tell and interpret the use of preventive measures in the maintenance of a healthy respiratory system.
3. List and describe deviations from the normal structure and function occurring in colds, bronchitis, pneumonia, and tuberculosis.
4. Recognize indiscriminate use of cold remedies and inadequate nutrition as precursors of respiratory complications.
5. Demonstrate the knowledge indicated to give safe nursing care to patients with common respiratory diseases.
6. Prepare and administer, in a lab situation or to select patients, drugs used in the treatment of respiratory diseases.
7. Identify and explain the use of protective care procedures for the patient and his family.
8. Recognize the new trends in tuberculosis.
9. Appraise the patient's need for coughing, deep breathing, positioning, and oxygen therapy.

Developing Core

It is essential that the student understand and can identify the structure and function of the body before progressing to deviations from the normal.

Objective 1: The student will be able to identify and define the normal structure and function of the respiratory system.

Student Learning Activities

1. Locate the respiratory organs and explain their function.
2. Assign selected reference readings.
3. Direct students to take one another's vital signs and record them; note the respiratory rate. Compare these to a student with a cold or minor respiratory illness.

234

Objective 2: The student will be able to tell and interpret the use of preventive measures in the maintenance of a healthy respiratory system.

Developing Core

It is necessary for students to maintain good health so that as members of the health team, they can teach and interpret hygienic measures to patients and families.

Student Learning Activities

1. From students' personal experience relate preventive measures used to avoid upper respiratory infections.
2. Students class project: check these measures with textbook measures of hygiene of the respiratory system. Make a comparative study.
3. As a class project, make a diagram or poster depicting preventive measures that could be utilized in the activities of daily living.

Objective 3: The student will be able to list and describe deviations from the normal structure and function occurring in colds, bronchitis, pneumonia, and tuberculosis.

The common cold is one of the chief causes of absent days due to illness in industry in the U.S.

The practical nurse should know the hygiene of respiration to prevent complications which might lead to more serious diseases of the respiratory tract.

1. Develop a chart starting with a cold and show how a respiratory disease, can progress, if untreated. Include causative organisms, transmission modes, preventive measures.
2. List the progressive symptoms as the respiratory organs become involved from upper to the lower respiratory tract. Show the progression from a cold to bronchitis; to pneumonia; and tuberculosis.
3. Use a nurses notes form to chart subjective and objective symptoms showing progression of a cold to bronchitis, pneumonia, and tuberculosis. Use S.O.A.P.I.E. format.
4. Present a group discussion-"Feed a cold; Starve a Fever".

Objective 4: The student will be able to recognize indiscriminate use of cold remedies and inadequate nutrition as precursors of respiratory complications.

Developing Core

Poor nutrition and patent medicines often lead to inadequate treatment of common respiratory illnesses.

Student Learning Activities

1. Form a panel discussion and debate the pros and cons of the use of patent medicines.
2. Discuss the relationship of good nutrition in preventing respiratory infections.
3. Obtain student responses to the high vitamin C theory in the prevention of colds.

Objective 5: The student will be able to demonstrate the knowledge indicated to give safe nursing care to patients with common respiratory disease.

Respiratory rate and rhythm change with disease.

1. Direct students to observe a student or a family member with symptoms of a cold, coryza, or bronchitis. A patient situation would be preferable. Discuss appropriate nursing measures to meet the patient's needs as well as the means of preventing spread to other persons. Note any particular respiratory changes.
2. Discuss the preventive measures which might have been employed to prevent contracting the disease.
3. Assign students total care to patients with common respiratory disorders.
4. Appraise plan of care developed by student and actual care given. Compliment strengths. Identify and convey weaknesses to the student.

236

Objective 6: The student will be able to administer drugs to selected patients with respiratory diseases or prepare these in a laboratory situation.

Developing Core

Prescribed medications are an important part of treatment in respiratory illness.

Protective care is used in preventing the spread of respiratory infections.

New drugs have changed tuberculosis hospitalization and the community reaction toward the disease.

X-ray is one of the main diagnostic procedures used to detect tuberculosis of the lung.

Student Learning Activities

1. Prepare medicine cards for the following: expectorants, antitussives, antihistamines, antibiotics, and specific drugs used to treat tuberculosis. Discuss uses and precautions prior to administration.

Objective 7: The student will be able to identify and explain the use of protective care procedures for the patient and his/her family.

1. Demonstrate special health teaching and nursing procedures vital in the care of patients with common respiratory disturbances. Include patient teaching on how to use a kleenex, collection of sputum, performing a nose and throat culture and preparing specimens for laboratory tests.

2. Reinforce by role play the procedure for protective care. Include handwashing, gown, mask, care of contaminated linen, dishes, and waste disposal.

Objective 8: The student will be able to recognize the new trends in tuberculosis management.

1. Direct students to compare, from reading reference books, nursing magazines and periodicals, the changing trends used in treating the tuberculosis patient. Present a controlled discussion on the following: drugs, diet, emotional and rehabilitation support, sputum and x-ray evaluation, role of the Health Department and preventive measures.

2. Evaluate from personal experience preparation for a chest x-ray. Contrast this to a hospital patient experience. Student will prepare and observe a patient for chest x-ray.

237

Objective 8-continued

and fluoroscopic examination.

Objective 9: The student will be able to appraise the patient's need for coughing, deep breathing, positioning, and oxygen therapy.

Developing Core

Respiratory patients must learn how to cough, deep breathe, and attain the correct position for expectoration. Oxygen therapy is a part of treatment for these patients.

Student Learning Activities

1. Role play in the laboratory the need for oxygen, positioning, coughing, and deep breathing.
2. Create a nurse-patient situation in which class uses terminology in relation to vital sign changes.
3. View and summarize trainex: Oxygen Administration

Remedial

Review literature, trainex, x-rays. Counsel and assist individual students.

Enrichment

Visit or contact T.B. League for literature on respiratory diseases. Report the rôle of this organization to the class. Distribute brochures.

Evaluation:

1. The student will be able to take a pre-test on the respiratory system to determine previous knowledge of the respiratory system.
2. The student will be able to label and describe normal anatomy and physiology of the respiratory system.
3. The student will be able to demonstrate knowledge of deviations from normal function in respiratory illnesses such as a cold, bronchitis, pneumonia, and tuberculosis by effectively carrying out safe nursing measures in the care of patients with these or related diseases.

238

Evaluation-cont.

4. On a written test, the student will be able to exhibit by analysis and selection, the knowledge of structure and function, drugs, protective care, diagnostic procedures, diet, and nursing skills.
5. The student will be able to explain and demonstrate safe, effective measures of protective care.
6. The students will complete adequately written assignments and drug care information.

239

Recommended time

Practice: 30

Theory: 20

Total: 50 hrs.

BASIC CONCEPTS OF NURSING APPLIED TO PATIENTS WITH NEUROLOGICAL SYMPTOMS I

Introduction: This unit is designed to introduce the student to the concepts of neurology. Using epilepsy and CVA; the common disorders affecting the nervous system, the student is acquainted with the principles of nursing the "Unconscious Patient", and the "Patient with Seizures". Methods of prevention of disease is stressed and community resources available to patient and family.

Specific Objectives:

The student will be able to:

1. Describe organs of the nervous system; list and explain their function; list and explain divisions.
2. Define neurology and neurologic nursing; recognize skills required for this speciality.
3. List common causes of disorders and diseases; methods of prevention.
4. List and explain common diagnostic test; describe psychological effect on patient.
5. List classification of drugs affecting the nervous system; identify those commonly used; give purpose and side effects.
6. Identify and explain common symptoms of neurologic disease.
7. Identify and adjust nursing skills to meet the needs of a neurologic patient.
8. Give effective nursing care to a patient with seizures and the unconsciousness patient.
9. Recognize importance of all aspects of rehabilitation.
10. Identify community resources available.

Lumbar Puncture
Nursing Care of Seizure Disorders. Part I and II

Trainex:

Drug Dependency..Stimulants, Depressant, and Psychedelics
Drug Dependency..Narcotics, Analgesics

Objective 1: The student will be able to describe organs of the nervous system; explain functions; list and explain functions of divisions.

Developing Core

The nervous system acts as the communications center in the body. It aids in the control and coordination of other systems.

Student Learning Activities

1. Administer pretest to determine the individual needs of students and adjust assignments.
2. Using anatomical charts have students identify and describe organs of the nervous system and list their functions.
3. List divisions of the nervous system; compare functions of each.

146

Objective 1-continued

4. Discuss the action of the autonomic nervous system when a person is served their favorite foods.
5. Describe the components of "knee jerk reflex".
6. List and describe the protective structures of the brain and spinal cord.
7. Define and describe cerebrospinal fluid; explain function.
8. Identify results if pressure is applied to the following regions of cerebrum:
 - a. frontal lobe
 - b. occipital lobe
 - c. temporal lobe
9. Show film: Review and summarize the structure and function of the nervous system.

Objective 2: The student will be able to define neurology and neurologic nursing; recognize nursing skills required for this specialty of nursing.

Developing Core

The field of neurologic nursing is an interesting one, offering the nurse opportunity to utilize her powers of observation.

Student Learning Activities

1. Invite nurse specialist in Neurology to discuss with students: "The Challenge of Neurologic Nursing".
2. Discuss and summarize with students the following:
 - a. special knowledge needed in this area of nursing
 - b. adjusted nursing skills
 - c. list methods to increase powers of observation practice these skills.

Objective 3: The student will be able to list common causes of disorders and diseases; select from this list those which frequently affect the nervous system; discuss methods of preventing these diseases.

Developing Core

In order for the nurse to assume her responsibilities for prevention of disease she must first learn the causes of disease.

Student Learning Activities

1. Comprise a list of the general causes of disease; identify those which most frequently produce disorders and disease in the nervous system.
2. Encourage the students to identify measures which may decrease the incidence of these conditions.
3. Report the leading causes of death in the United States and analyze it in relation to neurological disorders and diseases.
4. List measures to prevent disorders of the nervous system.

Objective 4: The student will be able to list and explain the common diagnostic tests; describe psychological effect on patient.

The patient with neurologic disease is often more fearful of diagnostic examinations and tests than other patients.

1. Compare fears of neurologic patient regarding diagnostic tests with those of a cardiac patient.
2. Identify differences and similarities of what or who?
3. Comprise a list, through group discussion, of methods to reduce these fears.
4. Assign student to demonstrate and explain neurologic examination; discuss how practical nurse may assist with this exam.
5. Assign students to report on the following tests including pre and post examination care and the nurses' responsibilities:

Objective 4-continued

- a. myelography
 - b. pneumoencephalography
 - c. electroencephalogram
6. Assign student to observe lumbar puncture and report to the group including:
 - a. position of patient
 - b. reaction of patient
 - c. questions asked
 - d. explain diagnostic significance of cerebrospinal fluid
 7. Discuss the following statement: "I don't want that test; I may become paralyzed".
 8. Show Trainex: "Lumbar Puncture" and summarize with group.

Objective 5: The student will be able to list classifications of drugs affecting the nervous system; identify those commonly used; tell the purpose and side effects.

Developing Core

Expected changes from medications usually ordered for patients with neurologic disorders maybe very important to the physician. The nurse must know their actions to report changes promptly.

Student Learning Activities

1. Schedule individual student conferences to review drug cards.
2. Assign student patients receiving these drugs and have students know the patient's diagnosis, purpose of the drug and observe the patient's reaction.
3. Summarize drugs with the following Trainex: Drug Dependency: Stimulants, Depressants, and Psychodelics.

Objective 6: The student will be able to identify and explain common symptoms of neurologic disorders.

774

Objective 6-continued

Developing Core

As part of a Medical treatment for many diseases the student will become aware of the phrase "treat symptomatically". The student should be aware of symptoms resulting from neurologic disorders.

Student Learning Activities

1. Direct students, from assigned references and knowledge of the structure and function of the nervous system, to compile a list of symptoms common to neurologic disorders:
2. Compare with symptoms of other systems of the body; summarize.
3. Explain cause of each symptom.

Objective 7: The student will be able to identify and adjust nursing skills to meet the needs of a patient with a neurologic problem.

245
The nurse will face several general problems in nursing the patient with neurologic disorders.

1. Review symptoms of neurologic disorders.
2. Identify through student discussion and list on chalkboard the nursing care problems related to symptoms as:
 - a. loss of motor function
 - b. aphasia
 - c. loss of bladder and bowel control
3. Develop a nursing plan of care in relation to the above; include:
 - a. modifications of hygiene
 - b. special nursing care including skin, eye, mouth care and observations.

Objective 8: The student will be able to define epilepsy; discuss etiology and predisposing factors; describe seizures and give effective nursing care.

Every one person in fifty in the United States has seizures. This symptom accompanies many medical con-

1. Show Trainex: "Introduction to Seizures" parts I-II. Define epilepsy; discuss predisposing factors; incidence; methods of diagnosing and prevention.

Objective 8-continued

ditions. The most common cause of convulsive seizures is epilepsy.

2. From personal experiences have students describe reactions to a seizure.
3. Identify and describe patient's and family's reaction to the diagnosis; list possible reasons for this reaction.
4. Discuss kinds of seizures.
5. Describe nursing assessment during a seizure; discuss nursing support and care following a seizure.
6. Show Trainex: "Nursing Care of Seizure Disorders" parts I and II. Follow by class discussion.

Objective 9: The student will be able to identify good hygiene practices for the epileptic patient; reinforce instruction to the patient regarding medications; list community resources available for the patient and his/her family.

Student Learning Activities:

1. Discuss modifications of daily living for a patient with epilepsy including exercise, diet, fluids, and work.
2. Discuss the Ketogenic diet and its use.
3. List the common drugs used in treatment and have students role play instructions given to the patient regarding medications.
4. Direct students to contact the local branch of the National Epilepsy League and investigate services; report to the class.

246

Objective 10: The student will be able to access levels of consciousness; recognize needs of the unconscious patient; give effective nursing care to the unconscious patient.

Developing Core

The most common dysfunction nervous system is cerebrovascular accident. When the patient regains consciousness his condition is a great shock to him/her.

The greatest challenge for the nurse occurs after the patient is past the point of danger. Now the patient must face the slow process of learning to use the abilities that remain and adjust to his limitations.

Student Learning Activities

1. Create a sociodrama depicting having a CVA. Observe student reaction.
2. Discuss: definition; etiology and symptoms; classifications; methods of prevention.
3. Show and summarize Trainex: "Rehabilitation of a Patient with a Stroke".
4. Completely discuss all aspects of nursing during the acute phase including:
 - a. nursing assessments
 - b. respirations
 - c. elimination
 - d. body temperature
5. Write a nursing care plan for the patient after the acute phase noting:
 - a. levels of consciousness
 - b. communication
 - c. physical therapy
 - d. diet adjusted to level of consciousness
6. "Rehabilitation Begins Immediately". Discuss above list and demonstrate methods of implementing this.
7. Have speech therapist attend conference with students.
8. Accompany patient to physical therapy department and discuss observation with group.

247

Objective.10-continued

9. Write a nursing care plan for the patient with a C.V.A. encompass all aspects of patient care, including:
 - a. adjustments of nursing care
 - b. rehabilitation
 - c. activities of daily living

Remedial

1. Schedule individual teacher-student conferences.
2. Have student outline textbook chapters related to theory.
3. Repeat demonstrations of nursing procedures.
4. Second showing and summary of Trainex films.
5. Review test questions, after test is given.

Enrichment

Trace flow of a drop of cerebrospinal fluid from lateral ventricles to the subarachnoid space.

Select student to visit a neurologic unit and report to the group the purpose and physical facilities of the unit. Also the preparation of the nursing staff.

Assign student to observe brain scan or cerebral angiography and share observation with the class.

Evaluation:

1. The student will be able to describe and list the functions of the nervous system.
2. The student will be able to define neurologic nursing.
3. Given a list of causes of disease, the student will be able to identify those most commonly affecting the nervous system.

848

Evaluation-cont.

4. The student will be able to classify the drugs affecting the nervous system; giving five examples of each.
5. The student will be able to completely define seizures, types and causes. The student will describe and give effective nursing care of the patient with seizures.
6. The student will be able to list and describe the levels of consciousness.
7. The student will be able to list the needs of the unconscious patient and give effective nursing care.
8. The student will be able to name three community agencies available to patients and his/her family confronted with neurologic disorders.
9. The student will be able to explain and illustrate prevention of C.V.A and epilepsy.

649

Recommended time
 Practice: 16
 Theory: 12
 Total: 28 hrs.

THE IMPACT OF AUDIO-VISUAL IMPAIRMENT ON THE INDIVIDUAL. I

Introduction: The student practical nurse must have a sound understanding of the sensory system, particularly the eye and ear, in order to assist effectively in the promotion of eye and ear health and the prevention of impairment in these vital senses. Although the emphasis of this unit is on preventive measures, general nursing care, special nursing procedures or common disease conditions are discussed.

Specific Objectives:

The student will be able to:

1. Recognize the senses and the sensory mechanism.
2. Identify and describe the structures of the ear and discuss the function of each using related terminology.
3. Trace the process that occurs with a sound wave activating the tympanic membrane to the registration of sound in the brain.
4. Identify and describe the structures of the eye and discuss the function of each using related medical terminology.
5. Trace the path of a light ray from the outside of the eye to the brain.
6. Explain the essential factors in the prevention of eye and ear impairment.
7. Explain and assist with common diagnostic tests used to determine impairment of hearing and vision.
8. Describe the disease course, therapeutic management, special nursing procedures and related nursing care of the patient with inflammatory disorders and injuries of the eye and ear.
9. Summarize the drug therapy employed in conditions of the ear and eye including action, dosage, potential side effects, and nursing responsibilities.
10. Demonstrate the ability to perform effective and safe care to patients with inflammatory disorders and injuries of the ear and eye.

Eyes and Their Care
The Ears and Hearing
Our Wonderful Ears and Their Care

Trainex:

Emergency Eye Care
Anatomical Charts
Diagnostic Equipment
Ophthalmoscope
Otoscope
Snellen Chart

Objective 1: The student will be able to recognize the senses and the sensory mechanism.

Developing Core

The sensory system contains the

Student Learning Activities

1. Define a sense and list each sense.

251

Objective 1-continued

Developing Core

structures that inform the person of the state of things in his/her environment. Any defect in the sensory structures, pathways to the brain or the brain itself causes a defect in the sensory system.

Student Learning Activities

2. Differentiate between general and special senses.
3. Define gustatory, olfactory, adaptation, tactile, referred pain.
4. Discuss special sense organs and the receptors of each. Include taste, smell, hunger and appetite, thirst.
5. Divide class into groups and have them practice identifying the location of the most sensitive taste buds in relation to the four tastes-sweet, sour, salty, and bitter.
6. Discuss the general sense organs and the receptors of each. Include pressure, temperature, touch, pain and balance. Further discuss adaptation found in the temperature sense. Have students reason why the pain sense does not have this characteristic.

Objective 2: The student will be able to identify and describe the structures of the ear and discuss the function of each using related medical terminology.

The ear is an especially adapted apparatus for collecting sound waves from the air and transmitting this energy to the brain for interpretation as sound.

There are two sets of receptors in the ear: one set is concerned with hearing and the other with position sense.

1. Present the main functions of the ear. Include purpose other than appropriate glasses holders, earring wearing, or for the convenience of boxing.
2. Illustrate the major structures of the ear. List these structures as to their location in the three main sections of the ear. Practice pronunciations with students.
3. Explain function of the structures and allow students to examine charts, diagrams, and models of the ear.

252

Objective 2-continued

Developing Core

Student Learning Activities

4. Have students read assigned material in textbook. Distribute a diagram of the ear and have them label the structure without the use of reference material.

Objective 3: The student will be able to trace the process that occurs with a sound wave activating the tympanic membrane to the registration of the sound in the brain.

Hearing is the sense by which sounds are appreciated and position sense refers to the orientation of the head in space and the movement of the body through space.

1. Hearing is called the watchdog of the senses. Discuss this statement with the class. Emphasize the reason for health personnel to remember this fact.
2. Define: frequency, pitch, intensity, cps, dB. Describe the nature of sound. Clarify concept by using examples.
3. Discuss balance and equilibrium.
4. Using an ear model or chalkboard diagram, identify the process of hearing by tracing sound energy through the hearing apparatus to the brain for interpretation.
5. Divide class into groups and allow them to practice this process. Correct mispronunciations and incorrect sequence.
6. Show and summarize film:
The Ears and Hearing

Objective 4: The student will be able to identify and describe the structures of the eye and discuss the function of each using related medical terminology.

253

Objective 4-continued

Developing Core

The eye is the sense organ which is stimulated by light rays. There are many structures involved in the sensation of seeing; however, the basic units for vision are the retina, optic nerve, and the visual center in the brain.

Student Learning Activities

1. Using the chalkboard illustrate the sensory mechanism for vision. Label and define each structure. Give students time to practice pronunciations and purposes to the eye parts.
2. Allow students to examine models and diagrams of the eye and locate and identify the structures. Be available to clarify questions or correct errors.
3. Require students to read related assignment in textbook. Distribute diagrams of the eye and have students label the structures without the use of references. Pay attention to spelling.

Objective

The student will be able to trace the path of a light from the outside of the eye to the brain.

The mechanism for vision is often compared with a camera because of the corresponding functions of many of the parts. There is, however, one gross difference in that the Kodak camera records one image and the human camera registers two images.

1. Direct students to compare the structures of the eye with that of a camera. Contrast the differences.
2. Define: accommodation, adaptation, binocular vision.
3. Discuss in detail the receptors for vision, the cone and rod cells of the human retina. Explain the chief difference of the seeing apparatus of the human and an animal.
4. Using a chalkboard diagram or an eye model, identify the path of light from the outside of the eye to the brain for interpretation.
5. Divide class into groups and allow them to practice this process verbally. Correct mispronunciations and errors in sequence.

Objective 5-continued

Developing Core

Student Learning Activities

6. Show and summarize film:
Eyes and Vision

Objective 6: The student will be able to explain the essential factors in the prevention of ear and eye impairment.

Hearing is one of the chief means of communication and is necessary for the person's reality concept.

Vision is essential in countless experiences that make life enjoyable and meaningful. These two senses are probably the most priceless possessions of man and every effort should be made to develop, protect, and preserve them.

1. Discuss the great advantages of having adequate sight and hearing. Allow students to respond to what an absence of either or both would mean to an individual.
2. Have students relate family or personal experiences in an ear or eye impairment.
3. List ways of promoting eye and ear health and preventing impairment of these important senses.
4. Explain the role of the student practical nurse in health education in the care of the ears and eyes.
5. Define: orthoptist, optician, optometrist, oculist, ophthalmologist.
6. Stress the recognition of early signs of ear and eye disorders and the need to seek medical attention.
7. Show and summarize films:
Eyes and Their Care
Our Wonderful Ears and Their Care

255

Objective 7: The student will be able to explain and assist with common diagnostic tests used to determine impairment of hearing and vision.

Developing Core

Audio-visual testing equipment ranges from the simple to the sophisticated.

Public health education has resulted in hearing and visual screening tests being administered routinely throughout the United States. Undoubtedly the practical nurse, at some time in his/her career will be asked to assist in these tests.

Student Learning Activities

1. Discuss common diagnostic exams used to test hearing. Include watch or whisper test, tuning fork, audiometric testing, and insufflation.
2. List and interpret decibel ranges. Show examples of normal and abnormal audiograms.
3. Explain noise pollution. Talk about ways of lessening or eliminating it.
4. Allow students to examine a aural speculum and otoscope.
5. Discuss common diagnostic exams used to test vision. Include vision screening tests-Snellon and ishihara charts, fluorescein dye, refractive studies. Allow students to practice performing and charting these tests.
6. Demonstrate refraction by placing a straw to partially filled glass of water and allow students to observe the apparent bending of the straw when it meets the water.
7. Define: emmetropia, ametropia, myopia, hyperopia, presbyopia, and astigmatism, and strabismus.
8. Allow students to examine an ophthalmoscope and tonometer and discuss function of each.
9. Mention the purpose of the slit lamp exam and perimetry. Discuss tunnel vision.
10. Give students topics on eyeglasses, sunglasses, tinted glasses and contact lenses, (including all aspects; types, cost, care) and then form a panel discussion to present

256

Objective 7-continued

this information.

Objective 8: The student will be able to describe the disease course, therapeutic management, special nursing procedures, and related nursing care of the patient with inflammatory disorders and injuries of the eye and ear.

Developing Core

Any of the eye and ear structures can be affected by infection or inflammation due to microorganisms, mechanical irritation, or allergic reactions.

Student Learning Activities

1. Reinforce preventive measures.
2. Discuss common traumas of the eye and ear and general emergency care. Mention sympathetic ophthalmia.
3. Show and summarize trainex:
Emergency Eye Care
4. Vocabulary list: hordeola, chalazion, conjunctivitis, blepharitis, keratitis, mastoiditis, labyrinthitis, myringotomy, impacted cerumen, enucleation.
5. Direct students to develop a nursing care plan for acute otitis media. Stress patient teaching to prevent this condition from becoming chronic.
6. Generalize care given to patients with inflammatory conditions of the eye and ear.
7. List eye and ear injuries and have students explain his/her responsibility in each. Clarify or correct any weak or faulty responses.
8. Identify purposes and demonstrate on chase doll, special nursing procedures associated with eye and ear conditions. Include compresses and irrigations. allow students to return demonstration and conclude special facts to remember.

257

Objective 9: The student will be able to summarize the drug therapy employed in conditions of the eye and ear including action, dosage, potential side effects, and nursing responsibilities.

Developing Core

258
Some of the most frequently encountered diseases that annoy the human body affect the eyes and ears and yet the public carelessly considers these disorders minor. It must be remembered that these "minor ailments" can lead to irreparable damage to vital sense organs. Proper treatment must be sought early. Drug therapy plays a large and important role in preventing complications in eye and ear conditions.

Student Learning Activities

1. Discuss and list the general classifications of eye and ear drug therapy including miotics, mydriatics, cycloplegics, and antibiotics, ointments. Stress precautionary measures.
2. Distribute to the class a list of commonly used eye and ear drugs and have students develop a drug chart showing actions, dosages, potential side effects, and specific nursing responsibilities.
3. Demonstrate the procedure for administering eyedrops and ointments, explaining important aspects.
4. Repeat the above for eardrops and ointments.
5. List key points in these procedures and have students analyze underlying scientific principles involved in each.

Objective 10: The student will be able to demonstrate the ability to perform effective and safe care to patients with inflammatory disorders and injuries of the eye and ear.

The majority of patients with inflammatory conditions and injuries of the eye and ear are treated in the emergency room and on an out-patient basis.

Occasionally the student practical-nurse will care for a patient

1. Assign students to give total care to patients with common eye and ear disorders or uncomplicated injuries.
2. If the above experience is not available seek patients who may have an eye or ear disorder secondary to their primary reason for hospitalization.
3. Supervise students to safely administer eye and ear drops

Objective 10-continued

with a specific illness who also has a coexisting disease of the eye and ear.

and/or ointments on the clinical unit. Have students prepare drug cards.

4. Appraise care plan developed by students and evaluate actual nursing care given.
5. If the clinical facility has an eye clinic, investigate the possibility of student observations.

Remedial

Check students notes and drug charts; assist student in concluding important factors to be remembered.

Enrichment

Have students ponder the philosophical question-"If a huge tree in the forest crashes to the ground and no human is about, is sound produced?"

Allow group of more advanced students to dissect a sheep or beef eye.

Have students respond to the question, "Is there any harm in using Visine everyday?"

Have student accompany a patient to the ophthalmologist for an "eye consult" or to the otologist for an "ear consult". Share experience with the class.

Evaluation:

1. The student will be able to list the general and special senses and define the receptors of each one.
2. Given a diagram of the ear, the student will be able to locate and label the structures as well as explain the function of each.

259

Evaluation-cont.

3. The student will be able to trace in proper sequence the hearing sensory mechanism.
4. Given a diagram of the eye, the student will be able to locate and label the structures as well as explain the function of each.
5. The student will be able to trace in proper sequence the seeing sensory mechanism.
6. The student will be able to explain eight essential factors in the prevention of eye and ear impairment.
7. The student will be able to explain seven/major diagnostic tests used to determine impairment of hearing and vision.
8. The student will describe the disease course; therapeutic management; special nursing procedures, and related nursing care of the patient with inflammatory disorders and injuries of the eye and ear.
9. The student will be able to identify and classify five commonly used drugs administered to patients with eye and ear disturbances in addition to properly instilling eye and eardrops.
10. By her actions on the clinical unit, the student will be able to demonstrate the ability to effectively and safely care for the patients with common eye and ear disorders.

Recommended time	
Theory;	20
Practice:	<u>30</u>
Total:	50 hrs.

CONCEPTS BASIC TO THE CARE OF PATIENTS WITH COMMON GASTRO-INTESTINAL DISTURBANCES I

Introduction: Gastroenteritis is responsible for more absences from work than any other disease condition. In this unit, the student realizes how important this system is the maintenance of normal balance within the body and how to provide effective care to patients having short-term, uncomplicated digestive disturbances,

Specific Objectives:

The student will be able to:

1. Identify, locate, and describe the major and accessory organs of the gastrointestinal system as well as explain the function of each, using related terminology.
2. Summarize the functions of enzymes in digestion by: the major enzymes, stating where they enter the digestive tract, and indicating the action, of each.
3. List the most common digestive symptoms, utilizing proper medical terminology and related nursing measures effective in dealing with these symptoms.
4. Conclude the importance of maintaining an acid-base balance within the body.
5. Identify and assist with the common diagnostic procedures used to determine the presence of a gastrointestinal impairment.
6. Describe the disease course and related nursing care of patients who have common disorders of the gastrointestinal tract including appendicitis, gastroenteritis, hemorrhoids, and hernias.
7. Demonstrate the ability to provide effective and safe nursing care to patients who have uncomplicated, short-term gastrointestinal disturbances.
8. Adapt a general diet to a modified diet for the patient with a specific gastrointestinal disturbance.
9. Define the gastrointestinal drug therapy classifications and identify the commonly used drugs in each classification including actions, dosage, potential side effects and the responsibilities involved in administering these drugs.

Body Torso
Diagrams
Trainex:
Acid-Base Balance
Body's Regulations of pH
Preparation Procedures

Objective 1: The student will be able to identify, locate, and describe the major and accessory organs of the gastrointestinal system as well as explain the function of each using related medical terminology.

Developing Core

The efficient machinery the body uses to process food for supplying nourishment to body cells is called the gastrointestinal system.

Student Learning Activities

1. Discuss the relationship of the gastrointestinal system to the other systems of the body.
2. Using a model of the human torso, locate and describe the digestive organs.
3. Distinguish between the main organs and the accessory organs of the digestive system.
4. Discuss the functions of individual gastrointestinal organs.

Objective 1-continued

Developing Core

Student Learning Activities

5. Have students examine charts and diagrams of the gastrointestinal organs.
6. Using a chart, point to various organs and have students identify specific organs, practicing saying and writing related medical terminology.

Objective 2: The student will be able to summarize the functions of enzymes in digestion by listing the major enzymes, stating where they enter the digestive tract, and indicating the action of each.

263
Digestion is a process which combines chemical and mechanical means to provide nourishment for the body.

The chemicals that accomplish most of the digestive process are called enzymes.

1. Differentiate between chemical and mechanical digestion. Give examples of each.
2. Review chart prepared from normal nutrition class involving digestive secretions, enzymes, and actions.
3. Prepare a diagram illustrating the chemical and mechanical breakdown of various foods. Working in teams, choose different foods and trace the process for each. Describe the process of absorption.
4. Trace, graphically, the digestive process of a piece of meat, containing fat from its entry into the mouth through the various gastrointestinal organs.
5. Examine the nine major functions of the liver and relate each in the digestive and absorption process.

Objective 3: The student will be able to list the most common digestive symptoms utilizing proper medical terminology and demonstrate effectiveness in dealing with these symptoms.

Developing Core

At some time in their lives, most persons experience gastrointestinal disturbances. Generally these conditions are of short duration and may not require medical attention.

Student Learning Activities

1. Discuss common digestive complaints and have students relate, informally, experiences in one's own family which were related to the gastrointestinal system. Determine possible causes of disturbances.
2. Have students match common terms with appropriate medical terminology. Practice pronunciations.
3. List and discuss important factors in the prevention of digestive disturbances.
4. Role play a patient with specific digestive complaints, have students seek pertinent information and decide when medical attention should be sought for each common symptom.

Objective 4: The student will be able to conclude the importance of maintaining an acid-base balance within the body.

In order that all the normal body processes may take place; a certain proportion of acids and bases must be maintained. Electrolytes account for most of the osmotic pressure of the body fluids thus establishing great importance in maintaining acid-base balance within the body. The student must know how normal fluid and electrolyte balance is maintained if he/she is to assist in this vital part of medical management.

1. Present a lecture on normal fluid balance and normal electrolyte balance. Explain pH.
2. Define intracellular, interstitial, and intravascular.
3. Discuss the normal exchange of body fluids and electrolytes. Explain loss and replacements.
4. Have students relate from personal experience what symptoms they observed during vomiting or severe diarrhea.
5. List common causes for fluid and electrolyte imbalances.

Objective 4-continued

Developing Core

Student Learning Activities

6. View and summarize trainex:
Acid-Base Balance
Body's Regulation of pH
7. Describe the general nursing care related to fluid and electrolyte balance including loss determination and replacement provision.

Objective 5: The student will be able to identify and assist with the common diagnostic procedures used to determine the presence of a gastrointestinal impairment.

265
There are many common diagnostic and laboratory tests available to help determine the presence or absence of gastrointestinal disease.

1. Present to the students each diagnostic test including name, purpose, and preparation. Have students analyze the reasons for the specific preparations. Include Ba. Enema, G.I. series, endoscopy procedures, gastric analysis, tubless gastric analysis, and cholecystogram.
2. Allow students to ~~view~~ examine sample X-rays of the entire gastrointestinal tract. Include both normal and abnormal examples.
3. Obtain from cooperating hospital examples of patient prep procedures and allow students to role play patient-nurse relationships both pre and post examinations.
4. Direct students to read and review charts of patients with suspected or confirmed gastrointestinal disease.
5. Discuss emotional support for the patient awaiting results of diagnostic procedures.

Objective 6: The student will be able to describe the disease course and related nursing care of patients who have common disorders of the gastrointestinal tract including appendicitis, gastroenteritis, hemorrhoids, and hernias.

Developing Core

266
Nursing needs of patients with gastrointestinal disturbances can be categorized in three areas: prevention of anorexia, nausea and vomiting; maintenance of normal functioning of the total body; and providing for comfort and hygiene of the patient.

Student Learning Activities

1. Direct student to read related material in assigned textbook. Discuss this information in general and answer or clarify students questions.
2. Discuss the major aspects of selected common gastrointestinal disorders-appendicitis, gastroenteritis, hemorrhoids and hernias. Emphasize general nursing measures.
3. Assign students to review charts on patients with common gastrointestinal conditions and compare findings with textbook description.
4. Initiate a medical terminology bee. Give small prize to winner (uniform companies often have pocket sewing kits).

Objective 7: The student will be able to demonstrate the ability to provide effective and safe nursing care to patients who have uncomplicated short-term gastrointestinal disturbances.

The student practical nurse encounter many patients with disturbances of the gastrointestinal tract. He/she should realize that a great number of these patients are awaiting the results of diagnostic procedures and require emotional support in their apprehension of the not yet determined diagnoses.

1. Assign students total patient care to patients with common gastrointestinal symptoms or disorders.
2. Review nursing care plan developed by student. Discuss the criteria by which he/she can evaluate the effectiveness of her nursing care.
3. Observe students actual nursing care given to his/her assigned patients.

Objective 7-continued

Developing Core

Student Learning Activities

- Evaluate communication skills, interpersonal relationships, reporting and recording. Offer suggestions.

Objective 8: The student will be able to adapt a general diet to a modified diet for the patient with a specific gastrointestinal disturbance.

267
Diet is an integral part in the treatment of many gastrointestinal disorders. The prime purpose of therapeutic diets in these conditions is to avoid foods which irritate the digestive tract.

1. Review with the class, normal nutrients, the basic four, and examples of each. Then have each student develop a one day normal diet plan.
2. Have students recall personal or family experiences of diet therapy for digestive conditions.
3. Discuss therapeutic diets as related to patients with digestive disorders. Include the bland, high fiber, and low-residue diet explaining the purpose and examples of foods particular to each.
4. Allow students to examine "foods permitted" lists for each diet. Then practice adapting the general diet to a modified one.
5. Working in groups of two, have students interview one another as to food "likes" and "dislikes" and adapt each G.I. diet accordingly.

Objective 9: The student will be able to define the gastrointestinal drug therapy classifications and identify the commonly used drugs in each classification including actions, dosage, and potential side effects and the responsibilities involved in administering these drugs.

Objective 9-continued

Developing Core

The majority of diseases of the gastrointestinal tract can be treated effectively by drug therapy.

268
Of all the "over the counter" drugs sold today, the gastrointestinal group is probably the most widely self prescribed and abused.

Student Learning Activities

1. Describe general classifications of drug therapy used in disturbances of the G.I. system and examples of each including antacids, digestants, antispasmodics, cathartics, fecal softeners, and antidiarrheics.
2. Give students a list of commonly used G.I. drugs and have them complete chart on classification, dosage, action, side effects, and nurse's responsibility.
3. Review the G.I. drugs with students on the clinical unit using the Kardex.
4. Have students debate resolved: That individuals who habitually overeat can lessen problems of digestion by the regular use of antacids.
5. Obtain students answers to patient question of "Nurse, what's a good laxative?"
6. Illustrate by examples the dangers of self prescribed medications.

Remedial

Review students notes and assist them in eliciting essential facts.

Recognize weaknesses of individual students and summarize essential factors of electrolyte balance and its importance.

Review students notes. Assess students knowledge and assist with apparent weaknesses.

Remedial-cont.

Give Kardex test in order to assess students knowledge. Compliment strengths. Assist with weaknesses.

Enrichment

Have students dissolve cracker in their mouth until the digestive process begins. Note observations. Experiment with hydrochloric acids upon marbilized meat and milk. Record observations.

Give students a list of electrolyte imbalances ie; sodium deficit and excess, potassium depletion and excess, calcium deficit and excess, and have them research causes, symptoms, and therapeutic action.

Allow students to accompany patient who is having a digestive tract procedure to the x-ray department. Discuss observations.

Select student to care for a patient with appendicitis and observe an appendectomy and report observations to class.

Have selected students teach a patient who is ordered a therapeutic gastrointestinal diet.

Ask students to watch T.V. commercials for a specific time interval and compile the number and type of gastrointestinal patent medicines advertised. Share findings with entire class.

659

Evaluation:

1. The student will be able to pass a written exam on the anatomy and physiology of the gastrointestinal system.
2. The student will be able to identify the major enzymes and explain their relationship to the process of digestion.
3. Given a list of common digestive symptoms, the student will be able to discuss nursing measures effective in alleviating these discomforts.
4. The student will be able to summarize the importance of maintaining an acid-base balance within the body.
5. Given text common gastrointestinal diagnostic procedures, the student will be able to identify the purpose of each and discuss his/her role in assisting in the patient preparation of these tests.
6. Using proper medical terminology, the student will be able to discuss major aspects in the disease course, medical management and related nursing care for patients who have appendicitis, gastroenteritis, hemorrhoids, and hernias.
7. The student will be able to demonstrate the ability to provide effective and safe nursing care to patients who have short-term, uncomplicated gastrointestinal disturbances.
8. The student will be able to adapt a general diet to a bland, high fiber, and low-residue diet.
9. Given a list of fifteen commonly used gastrointestinal drugs, the student will be able to classify them properly and discuss the actions, dosage, potential side effects, and responsibilities involved in administering these drugs.

270

Recommended time
Practice: 44
Theory: 25
Total: 69 hrs.

NURSING THE PATIENT WITH GENITO-URINARY DYSFUNCTION I

Introduction: The renal system must function precisely so that the body will remain in good health. In the male, several organs of reproduction are also part of the urinary tract. In this unit the most common disorders of the genito-urinary tract are presented to enable the student practical nurse to give safe, effective care to these patients.

Specific Objectives:

The student will be able to

1. Describe and identify the normal structure and function of the urinary system.
2. Describe the common deviations from the normal structure and function of the urinary system, then discuss these in relationship to the kidneys and the circulatory system.
3. Demonstrate the ability to catheterize a patient of the same sex as the nurse using the necessary safety precautions and demonstrate the care of the catheter after insertion.
4. Identify the selected nursing procedures employed in diagnosing urinary disorders and demonstrate the ability to perform these.
5. Describe the means of maintaining good hygiene to prevent urinary tract infections.
6. Discuss the medical and nursing care of patients with renal calculi and demonstrate the ability to give safe, effective nursing care of these patients.
7. Evaluate the need for patient education upon discharge from the hospital relative to diet, fluid intake, and medications.
8. Identify the causes of urinary tract infections and discuss preventive measures.
9. Explain the function of the male and female reproductive organs and the hormonal influence in the production of secondary sex characteristics.
10. Describe the production and role of sperm and seminal fluid in reproduction.
11. Describe the function of the ovaries, fallopian tubes, uterus, and breasts in reproduction; menstruation; menarche; and climacteric.
12. Assist with the routine gynecological exam; including the pap and vaginal smear.
13. Demonstrate the ability to assist the patient with a douche and perineal care.
14. Explain common medical and nursing care in disorders of the female reproductive system and demonstrate the ability to assist or give nursing care to meet the patients physical and emotional needs.

Objective 1: The student will be able to describe and identify the normal structure and function of the urinary system.

Developing Core

The kidneys and their drainage structure are the vital parts of the urinary tract. The health of these structures is important to life.

Student Learning Activities

1. From previous knowledge, have students draw a simple diagram of the urinary tract and label the major organs.
2. Compare this to an anatomical chart; textbook model; correct and enlarge or enhance diagram to include: renal fascial, hilum, cortex, and medulla.
3. Identify the functions of the individual organs.
4. Class project-make a collage of organs of the urinary tract.

Objective 2: The student will be able to describe the common deviations from the normal structure and function of the urinary system. Discuss these in relationship to the kidney and circulatory systems.

The kidneys are responsible for extracting inorganic salts from the

1. List the characteristics of normal urine; abnormal components; and the amount of normal daily excretion.

273

Objective 2-continued

circulating blood, and regulating the water content and electrolyte composition of the body fluids.

2. Discuss what is meant by the relationship of the kidneys to normal circulation and to normal hemostasis.
3. Have students record individual fluid intake and output for a twenty-four hour period, then compare their results with the "norm".

Objective 3: The student will be able to demonstrate the ability to catheterize a patient, of the same sex as the nurse using the necessary safety precautions, and demonstrate care of the catheter after insertion.

Developing Core

Sterile technique is necessary to insure the patient's safety and to protect him/her from infection during and after catheterization.

Student Learning Activities

1. Review structure and function of male genito-urinary system and female urinary system.
2. Discuss reasons for catheterization.
3. Demonstrate catheterization procedure stressing underlying scientific principles.
4. Demonstrate the ability to catheterize a Chase doll using aseptic technique. Follow up by charting this procedure.
5. Assign students to demonstrate the ability to transfer this technique to a patient situation and do appropriate charting.
6. Demonstrate catheter irrigation. Reinforce principles, clarify questions.
7. Assign students to demonstrate ability to transfer the catheter irrigation procedure to a patient and chart results.

474

Objective 3-continued

- 8. Discuss the means of preventing urinary tract infections following catheterization and review special catheter care. Elicit from class answers to "Why do many physicians prefer clean catch today?"

Objective 4: The student will be able to identify the selected nursing procedures employed in diagnosing urinary disorders and demonstrate the ability to perform these.

Developing Core

Most patients are embarrassed and fearful of having urologic tests. The nurse should therefore endeavor to allay these feelings by being able to discuss tests and carry out procedures without causing anxiety or embarrassment.

Student Learning Activities

- 1. Demonstrate and describe specific gravity and transfer this technique to the hospital situation. Use hospital procedure manual.
- 2. Demonstrate and discuss the Bili-Labstix and transfer this technique to the hospital. Use hospital Labstix.
- 3. Class discussion-"What would an I.V.P. reveal?" What is a flat plate? What is a cystoscopy, and retrograde pyleogram? What is a P.S.P.?
- 4. Allow students to examine hospital patient explanation forms for interpretation. Using role play, practice patient explanations for each diagnostic procedure.

Objective 5: The student will be able to describe the means of maintaining good hygiene to prevent urinary tract infections.

Prevention of infections and use of sterile technique in catheterization procedures are important aspects of maintaining good hygiene.

- 1. Describe the nursing function for each procedure.
- 2. Role play: instruction of a patient for a clean catch and culture and sensitivity.

275

Objective 5-continued

3. Class discussion-Emotional impact of urologic disease on the male and female.
4. Panel discussion: 1. Public education in hygiene and health. 2. Early detection of urinary disease. 3. Encouragement of prompt and adequate medical treatment of systemic or upper respiratory diseases. 4. Catheter contamination and sterile, non-traumatic technique in catheterization.

Objective 6: The student will be able to discuss the medical and nursing care for patients with renal calculi and demonstrate the ability to give safe, effective nursing care to these patients.

Developing Core

The causes for formation of renal calculi are not clearly known but there are nursing interventions which can be employed to safeguard their formation.

Student Learning Activities

1. Tell reasons for calculi formation. How can calculi be prevented? List preventive means.
2. Direct students to screen urine for stones.
3. Role play using chase doll, various means of applying dressings over operative site-flank kidney incision in order to keep patient dry.
4. Discuss hemorrhage signs and symptoms. List preventive and emergency care.
5. Discuss emotional support and diversional therapy for this patient.
6. Tell ways of detecting paralytic ileus postoperatively.
7. Describe appropriate fluids and diet for these patients. Seek underlying reasons.

276

Objective 7: The student will be able to evaluate the need for patient education upon discharge from the hospital relative to diet and fluid intake and medication.

Developing Core

Since renal calculi are very apt to recur, prophylactic measures are important to maintenance of good health.

Student Learning Activities

1. List and discuss prophylactic measures-include food and liquid intake.
2. Discuss diet needs relating to medication.
3. Present acid ash and alkaline ash diet. Direct students to use hospital diet manual and plan a menu for a patient.
4. Use textbook to find medications used to maintain acidity and alkalinity of urine and write medicine cards.

Objective 8: The student will be able to identify the causes of urinary tract infections and discuss the preventive measures.

Cystitis is a common urinary tract infection particularly prone to occur more frequently in women.

1. Have student develop a poster identifying sources of infection.
2. Role play an outpatient situation with a complaint of cystitis, listing all of the symptoms.
3. Allow student to practice health teaching the patient on relief of symptoms before doctors appointment to make her/him comfortable.
4. Compare the symptoms and preventive measures to textbook and magazine articles.
5. Discuss in class the reason for fluid intake 5000 to 4000 cc daily and the use of cranberry juice.

277

Objective 8-continued

6. From pharmacology text, develop medicine cards of urinary antiseptics, antibiotics, and sulfonamides used in treatment.
7. Discuss in class the outpatient care of a person with cystitis. Include all aspects.
8. Describe the complications of cystitis.
9. Allow student to observe a cystoscopy and report observations to class.

Objective 9: The student will be able to explain the function of the male and female reproductive organs and the hormonal influence on the production of secondary sex characteristics.

Developing Core

During the pubescent stage of development, the endocrine system stimulates the reproductive system to produce the secondary sex characteristics in the male and female.

The reproductive organs of the male and the urinary system are joined by the passageway for urine, the urethra; which joins the ejaculatory ducts through the penis and serves as an outlet for urine and semen.

Student Learning Activities

1. Review the anatomy of the male and female reproductive tract, (transparencies) and the endocrine function as it influences growth, development, and reproduction.
2. Allow time to review hygiene and developmental tasks.

Objective 10: The student will be able to describe the production and role of sperm and seminal fluid in reproduction.

1. Describe the glandular production of sperm; the function of seminal fluid; and trace the mature sperm through the reproductive tract.
2. Discuss the function of the prostate gland.
3. Discuss the function of the penis.

Objective 11: The student will be able to describe the function of the ovaries; fallopian tubes, uterus, and breasts in reproduction; menstruation; menarche; and climateric.

Developing Core

During pubescence the female secondary sex characteristics appear because of hormonal function in the endocrine system. These hormones stimulate the ovaries which in turn stimulate the uterus and the menarche is established.

279
Fear and embarrassment often deter women, young and old, from seeking medical advice concerning gynecological problems.

Student Learning Activities

1. Discuss and describe the function of the fallopian tubes and uterus in reproduction; menstruation; menarche; and climateric.
2. Discuss the mammary glands as reproductive organs.
3. Discuss and describe hormone activity in menstruation; reproduction; and the climateric.

Objective 12: The student will be able to assist with the routine gynecological exam; including the pap and vaginal smear.

1. Review positioning and draping for gyne examination.
2. Discuss the emotional aspects of a gynecological exam. Students relate personal feelings.
3. Describe a pap (papanicolaou) smear procedure.
4. Discuss the reasons for encouraging a pelvic exam on all women 18 years and over on a yearly basis.
5. Define the terms: culdoscopy, dilitation of the cervix and curettage of the uterus and biopsy.
6. Show the Film-"Breast self Examination" and interpret the teaching points.
7. Allow students to demonstrate the ability to assist the patient, allay her fears, and to assist the physician with a vaginal exam, pap smear, and breast exam.

Objective 13: The student will be able to demonstrate the ability to assist the female patient with a douche and perineal care.

Developing Core

Douches and perineal care are ordered for cleansing and healing purposes.

Student Learning Activities

1. Review the structure and function of the vaginal tract.
2. Discuss and describe the solutions used in a douche and temperature of solution.
3. Discuss types and reasons for doctor's order both pre and post-operative.
4. Demonstrate procedures to class.
5. Have students return demonstration in laboratory setting and chart the observations.
6. Discuss safety factors in the event of patient infections.
7. Allow student to demonstrate the ability to carry out the procedure using safe and accurate techniques and perform the necessary charting.
8. Direct student to demonstrate perineal care to a patient and discuss method of clean catch-review from previous learning.
9. Direct student to demonstrate insertion of vaginal suppository, if experience is available.

Objective 14: The student will be able to explain the common medical and nursing care in disorders of the female reproductive system and demonstrate the ability to assist or give nursing care to meet the patient's physical and emotional needs.

280

Objective 14-continued

Developing Core

Malignant tumors of the reproductive organs of the female rank third in cause of death according to the 1970 census.

Student Learning Activities

1. Show trainex: "Cancer of the Uterus". Summarize important aspects.
2. Using trainex, literature from American Cancer Society, and textbook form a discussion group of the following: cancer of the cervix, fundus, and ovary.
3. Discuss the treatment; include x-ray, chemotherapy and surgery.
4. Describe the precautions used in the hospital for radiation implant. Use procedure book.
5. Discuss fibroid tumor and treatment.
6. Describe vaginal hysterectomy and abdominal hysterectomy; include reasons for douche and/or catheterization prior to surgery.
7. Discuss patients' feelings and family views of surgery.
8. Allow students to observe a patient with either type of surgery and write a nursing care plan for the patient; include diet, drugs, and nursing intervention.
9. Evaluate the ability of the student to assist or give safe, effective nursing care to the patient pre and post-operatively.
10. Define the terminology: oophorectomy; radical hysterectomy; fibroid tumor; and endometriosis.
11. Contrast the incidences and symptoms of a fibroid tumor to cancer of the uterus.

281

Remedial

1. Schedule individual student-teacher conferences.
2. Outline textbook chapters related to theory.
3. Repeat demonstrations of nursing procedures.
Reinforce principles organ and ask questions.

Enrichment.

Visit Women's Health Services. Discuss literature with class.

Show and discuss films:

1. Abdomino-Vaginal Approach to Stress Incontinence
2. Laparoscopy: The View Within.

Evaluation:

1. The student will identify and describe the normal structure and function of the urinary system.
2. In a written examination, the student will select correct answers to questions analyzing the need for medications, diet, specific nursing techniques, appropriate safety precautions in the care of patients with common urologic disturbances.
3. The student will discuss in detail the relationship of circulatory and kidney diseases.
4. The student will demonstrate the ability to catheterize a patient of the same sex as the nurse and properly care for the indwelling catheter.
5. The student will collect and label specimens and perform common procedures used in diagnosing renal disorders.
6. The student will demonstrate the ability to maintain good hygiene thereby assisting the patient in preventing additional infection.
7. Using sterile technique, the student will demonstrate the ability to change a dressing.
8. The student will reflect competency in recording fluid intake and output and charting pertinent information.
9. The student will explain the function of the male and female reproductive organs and the hormonal influence on the production of secondary sex characteristics.

Evaluation-cont.

10. The student will show proficiency in assisting the patient and physician in a routine gynecological examination, including a pap test and vaginal smear.
11. The student will demonstrate effective, safe technique in administering a douche, perineal care, vaginal suppository or cremes.
12. The student will demonstrate the ability to meet the needs of the patient, physically and emotionally, in giving nursing care to patients with surgery of the female reproductive system.

283

Recommended time
 Practice: 16
 Theory: 12
 Total: 28 hrs.

NURSING THE PATIENT WITH METABOLIC IMBALANCES I

Introduction: The effects of the endocrine glands upon the body are as yet under investigation. Much public effort has been placed upon backing research in the area of diabetes mellitus in the United State, due to the increased number of this disease. This unit is designed to assist the student in meeting the needs of these patients.

Specific Objectives:

The student will be able to:

1. Define; locate; and explain the function of the endocrine glands.
2. Discuss dysfunction of the pituitary gland; parathyroids; and adrenal glands.
3. Explain in detail, diabetes mellitus, including the following: predisposing factors, types, symptoms, diet, drugs, exercise, and prognosis.
4. Demonstrate the ability to give safe, effective, nursing care to patients with diabetes mellitus.
5. Determine the effects of medication and diet in the treatment of diabetes mellitus.
6. Discuss the approaches in meeting the patient's needs at home, at work, and in his/her community.
7. Explain the special problems of the diabetic patient.

Film: The Secretion of Insulin

Trainex:

Care of the Patient with Diabetes Mellitus
Diabetic Meal Planning
Diabetes Mellitus Pathophysiology
Teaching the Patient with Diabetes
What is Diabetes
Metabolic Acidosis and Alkalosis

285

Objective 1: The student will be able to define; locate; and explain the function of the endocrine glands.

Developing Core

The endocrine glands or ductless glands are located in various parts of the body. The secretions of these glands are called hormones.

286
The hormones are released into the bloodstream. Oversecretion or undersecretion causes a dysfunction of that particular endocrine gland.

The child diabetic has been given an opportunity to live longer with discovery of insulin.

Persons with mature onset diabetes are

Student Learning Activities

1. Locate and describe the function of the endocrine glands. Use flip chart and textbook.
 2. Explain the action of the glands upon one another. Develop a chart (or class poster) to show the relationship and list each gland secretion.
 3. Differentiate the terms endocrine and exocrine.
- Objective 2: The student will be able to discuss briefly the dysfunction of the pituitary gland; parathyroid; and adrenal glands.
1. Tell or give examples of dysfunction of the pituitary, parathyroid and adrenals. Have students complete charts.
 2. Site from life situations, textbooks; magazines, examples of dysfunction. Allow students to examine pictures of these.
 3. Discuss the specific drugs used as replacement. Make medicine cards for each drug.
 4. Direct students to practice reciting indications and management of over or under secretion of each gland.
- Objective 3: The student will be able to explain in detail diabetes mellitus including the following: predisposing factors, symptoms, diet, drugs, exercise, and prognosis.
1. Explain the relevance between age and the diabetic and the Mendelian Theory.
 2. Discuss in class, persons outside the hospital who have diabetes and tell the predisposing factors of their illness.

Objective 3-continued

in many instances able to be controlled by diet or a combination of diet, insulin and/or oral hypoglycemic agents.

3. Express or relate the emotional impact of the disease upon the person and his family.

Show and summarize trainex: What is Diabetes? Diabetes Mellitus Pathophysiology.
5. Tell how the physician is attempting to control the disease. Describe the patient's means of controlling his disease.
6. Discuss the family's methods of giving emotional support to the patient.
7. List the person's signs and symptoms and compare these to the textbook. Contrast these to diabetic people known to members of the class.
8. Differentiate each individual's diet and drugs used to control his/her disease.
9. Evaluate these drugs and diet as a means of controlling the symptoms and effect upon urine reduction and blood sugar.
10. Compare the work or exercise different persons with diabetes do daily.

Objective 4: The student will be able to demonstrate the ability to give safe, effective, nursing care to patients with diabetes mellitus.

Developing Core

The practical nurse should understand the signs and symptoms of diabetes as these relate to diet, drugs, and activity.

Student Learning Activities

1. Show trainex "Care of the Patient with Diabetes".
2. Discuss the results of physical inactivity due to hospitalization on a diabetic patient.
3. Determine what an infection might do to make this patients

Objective 4-continued

condition worse.

4. Decide the relationship of the emotional impact of hospitalization upon the patient's illness.
5. Evaluate and determine how well the patient knows and understands his illness. Appraise students' knowledge.
6. Describe the symptoms of insulin shock and diabetic coma. Contrast the textbook symptoms to the possible or probable ones of the patient. Take time to reinforce this aspect.
7. List the methods used to control shock and coma.
8. Tell what the patient does if either occurs at home. Use role play for patient teaching.
9. Allow students to assist in the collection of urine for G.T.T., I.T.T. (insulin tolerance test), and 24 hour urine.
10. Appraise the means by which the student is promoting exercise and skin care to his/her assigned patients.
11. Describe the changes in the nervous system, circulation, and localized insulin reaction that have occurred to patients with this condition.

Objective 5: The student will be able to determine the effects of medication and diet in the treatment of diabetes mellitus.

Developing Core

Diabetic patients are treated and controlled by diet and/or by insulin and oral hypoglycemic agents.

Student Learning Activities

1. Show trainex: "Diabetic Meal Planning".

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS 1963-A

ERIC

Full Text Provided by ERIC

Objective 5-continued

2. Have student simulate that he/she has just discovered he/she has diabetes and has to choose a diet that fits the doctor's prescription. Discuss feelings and problems encountered with planning this diet.
3. Design a one-day meal plan for an adolescent using 4,500 calories. Contrast this to a diet for an elderly patient on the nursing unit.
4. Describe the possible urine reduction and blood sugar outcome for the adolescent on the above diet and compare these to the elderly patient.
5. Evaluate the probable times both these patients might need a dietary supplement.
6. Compare the types of drugs which would be effective in the control of the adolescent and elderly patient. Use the patient's kardex for a list of drugs.
7. Supervise students to administer drugs to the diabetic patient.
8. Explain and demonstrate the method of mixing two types of insulin in one syringe. Allow students to practice this technique.
9. Direct students to collect information on the types of insulin and discuss in class. Prepare a chart.

Objective 6: The student will be able to discuss the approaches in meeting the patients' needs at home, at work, and in his/her community.

286

Objective 6-continued

Developing Core

People who have diabetes must learn to live with the disease and to accommodate diet, exercise, and medications to meet their individual needs.

Student Learning Activities

1. Show trainex: "Teaching the Patient with Diabetes".
2. Discuss the hygienic measures which are needed by all diabetics on a daily basis.
3. Debate the following: How can diabetes be used as an excuse, a threat, or as an asset?
4. Assist the student to discuss with the patient his diet, medicines, and activities. Does he understand these in relation to his needs?
5. Discuss the patient's work plans. What hours does he work? Will this interfere with his diet regime and medication?
6. List and discuss the community resources which are available to him/her.

Objective 7: The student will be able to explain the special problems of the diabetic patient.

Diabetic patients have complications of early arteriosclerotic changes and neuropathy. Yet, with proper care and control they can live normal, useful lives.

1. Define and discuss neuropathy. Explain its relationship to long-standing diabetes.
2. Describe the early arteriosclerotic changes in diabetes.
3. Read from a nursing journal and present to the class an article on neuropathy or arteriosclerotic changes occurring in diabetes.
4. Select a student to attend a diabetic teaching class and discuss his/her experience with the class.

290

Objective 7-continued

5. Allow students to help a new diabetic plan a meal with the exchange list and to choose foods from a menu.
6. Encourage students to assist the registered nurse in teaching self administration of insulin and urine reductions to a new diabetic.
7. Show and summarize the trainex: Metabolic Acidosis and Alkalosis.

Remedial

1. Teacher/student conference to discuss evaluation results.
2. Review textbook assignments, retest and discuss results.
3. Provide the student with a list of questions that he/she will write out and discuss the student's comprehension at a teacher/student conference.

Enrichment

From nursing magazines, report to class a nursing situation and care of a Cretin or Myxedema patient.

Go to pharmacy and ask for literature on care of the diabetic, insulin, and oral hypoglycemic agents and present this information to the class.

Have students research the history of insulin and its discoverers.

Evaluation:

1. Given a pretest on basic facts of the endocrine system, the student will be able to demonstrate adequate comprehension.
2. The student will be able to complete a chart on the endocrine glands, hormones, and evidences of over and under secretion of each.
3. The student will be able to correlate the signs and symptoms, diagnostic tests, diet and drug therapy, and complications with appropriate nursing management in a successful written examination.

168

Evaluation-cont.

4. The student will be able to recognize easily the signs and symptoms of diabetic coma and insulin shock, thereby assessing the patient's immediate need for nursing and medical intervention.
5. The student will be able to assist satisfactorily the diabetic patient in obtaining accurate urine reductions, taking prescribed chemotherapy and individual diet selection.
6. The student will be able to readily recognize community resources that are available to the patient and his/her family confronted with endocrine disturbances.
7. On the clinical unit, the student will be able to demonstrate giving competent, comprehensive nursing care to the patient with a common long-term endocrine impairment.

292

Recommended time	
Practice:	5
Theory:	5
Total:	10 hrs.

NURSING THE PATIENT WITH ALLERGIC REACTIONS-I

Introduction: In some people an allergy manifests itself from birth, in others, the allergy develops suddenly and remains fairly constant for the rest of one's life. One of the striking features of allergy is that even a minute amount of the substance to which the person is allergic can cause a reaction. The allergic reaction in human beings evidently is due to some such antigen-antibody reaction. Most substances that cause allergic reaction are proteins.

Specific Objectives:

The student will be able to:

1. Define allergy, related medical terminology, and utilize these terms correctly in recording and reporting.
2. List and describe diagnostic tests; symptoms; treatment; and demonstrate effectiveness in assisting the patient with an allergy by meeting his individual needs.
3. Discuss anaphylactic shock, describe symptoms and list emergency measures.

h68

Objective 1: The student will be able to define allergy; list symptoms and treatment and plan appropriate nursing care.

Developing Core

The human body has a defense mechanism against pathogenic organisms and foreign proteins known as antigenic substances.

About twenty percent of our population become hypersensitive to these antigenic substances and will develop an allergy.

Student Learning Activities

1. Compare immunization and allergic reaction.
2. Compile and give to students a vocabulary relating to allergies.
3. Review anatomy and physiology of the circulatory, digestive, and respiratory system in relationship to allergic reactions.
4. Assign students into groups of two to develop a history, between patient and nurse. Give an Allergy Survey Sheet. (Detailed history) listing of complaints, family allergies, physical agents and habits.
5. Define and discuss methods by which allergies are diagnosed with emphasis on the nurses role.
 - a. Scratch test
 - b. Patch test
 - c. Intradermal skin test
 - d. Conjunctival test (use textbook pictures)
 - e. Food allergy-diary of food one week elimination diet.
6. Discuss various treatments:
 - a. Avoid allergen (ex: food)
 - b. Environmental
 - c. Seasonal
 - d. Desensitization
 - e. Drug therapy
7. Have students compile drug list and return to class for discussion. Include the antistamines, local vasoconstrictors, decongestants, corticosteroids, antibiotics, sedatives, and tranquilizers.

295

Objective 1-continued

Developing Core

Student Learning Activities

8. Develop with students a nursing care plan-allergic condition:
 - a. Immediate care Home and Hospital
 - b. General care
9. Plan for each student to have an experience in the clinical laboratory caring for a patient with an allergy.
10. Have students develop with team members in conference a nursing care plan for each patient in clinical laboratory.
11. Have students set up a bedroom in the home situation environmentally controlled but pleasing to the eye.
12. Plan diets for one week-avoiding milk, wheat products, eggs.
13. Group positive statements of Do's for people suffering from hay-fever.
14. Have students visit and assist in allergy clinics and/or medical office.
15. All students will write a paper and return for round table discussion either/or
 1. "Desensitize the Patient-Time and Cost"
 2. "Psychological Problems of Children with Allergies"

Objective 2: The student will be able to recognize symptoms and initial emergency efforts in anaphylactic shock.

1. From previous discussions have students define anaphylactic shock.

Anaphylactic shock is a condition that should be considered a true emergency. It is a reaction that occurs when a person

296

Objective 2-continued

Developing Core

contacts something to which he is extremely allergic. Initial emergency care efforts should be directed towards life support.

Student Learning Activities

2. List causes and site examples:
 - a. Insect stings-bees
 - b. Ingested substances-shellfish
 - c. Inhaled substances-pollen
 - d. Injected substances-penicillin
3. Develop with students signs and symptoms of shock-discuss time element in relationship to reaction.
4. Discuss treatment: emphasizing life-support measures and transport to the hospital.
5. Show and summarize trainex: "Anaphylactic Shock"
6. Complement trainex by presenting additional measure of management and care.
7. Develop a Nursing Care Plan-Anaphylactic Shock, Situation: Reception room M.D.'s office, Mattie, age 8 years, had an injection of pencillin, within three minutes time the following occurred: itching of skin, hives, and edema of face and tongue. Plan action-have students select a leader and role play.

Objective 3: The student will be able to differentiate the various types of allergies and identify appropriate nursing measures in caring for the individual patient.

Knowledge of allergies and acquired skills are helpful in developing specific nursing care pertaining to the patient's individual needs.

1. Identify three specific allergies. Include pollens, foods, and drugs.
2. Without benefit of references, direct students to describe

294

Objective 3-continued

Student Learning Activities

the reaction and anatomy in relation to the system, state symptoms, treatment, nursing care plan, immediate and long-term-home situations. Select three student leaders to chair the above.

3. In a round table discussion develop three nursing care plans.
4. Provide for each student to have an experience caring for patient's with an allergy-clinical laboratory.
5. Encourage student responsible for nursing care plan to discuss with team members in conference.

Remedial

Review anatomy of the respiratory system. List common symptoms of upper respiratory tract and compare to symptoms of seasonal allergies.

Review anatomy of the digestive tract and develop a comparative study including symptoms of G.I. upset and food allergies.

- Review
- Assist individual as indicated.

Enrichment

Have students research, develop and return for discussion "Community Resources" include: Booklets, Films, and Slides.

Have student plan with family member discussion; How to avoid allergens and environmental treatment, and home care.

866

Evaluation:

1. The student will fully explain an allergic reaction.
2. The student will define terms related to allergies, and utilize these terms correctly in recording and reporting.
3. The student will explain structure and physiology of digestion, respiratory, circulatory systems in relationship to allergic reactions.
4. The student will describe methods by which allergies are diagnosed and assist with these procedures.
5. The student will list five important factors in preventing an allergic reaction.
6. Given a list of allergic foods, the student will plan a diet that will adequately meet the nutritional needs of the individual.
7. The student will discuss anaphylactic shock; describe the symptoms and list five emergency measures which must be taken immediately.
8. Given a list of three specific allergies, the student will describe symptoms and treatment and demonstrate effectiveness in appropriate nursing measures.

299

360

MODULE B
MATERNAL CHILD HEALTH NURSING

Total 105 hrs.
Theory: 42 hours
Practice: 3 hours

MATERNITY-CHILD HEALTH NURSING

Introduction: Family centered maternity and child nursing should develop within the student a philosophy of patient care. The focus of both maternity and child nursing is the family. Opportunities for observation and application of the principles of growth and development are offered in both areas of nursing. Growth and development of the child take place first within the mother; then within the family.

Specific Objectives:

The student will be able to:

1. Define obstetric and pediatric nursing; discuss the interrelationships of these areas of nursing.
2. Describe development of the concept of maternal-child-health.
3. List the leading causes of maternal, infant, child morbidity and mortality; discuss prevention emphasizing role of practical nurse and available community resources.
4. Explain philosophy of maternal-child health nursing.

Written

Wiedenbach, Ernestine, Family Centered Maternity Nursing, Second Edition, New York: G.P. Putnam's Sons, 1967.

Developing Core.

Obstetrical nurses and pediatric nurses have much in common.

Objective 1: The student will be able to define obstetric and pediatric nursing; discuss interrelationships of these areas of nursing.

Student Learning Activities

1. Define: obstetric and pediatric nursing; maternity and child health nursing. Compare and analyze definitions.
2. List desired qualities of nurses specializing in maternity-child-nursing.
3. Identify nursing skills specific to nursing of children; of maternity patients.
4. Formulate from the group a definition of maternal child nursing.

Objective 2: The student will be able to describe development of the concept of maternal child health.

1. Visit the maternity and childrens department of the hospital. Discuss observations.
2. Compare the experience of a friend with that of your mother or grandmother in obstetrics and pediatrics in relation to:
 - a. physical description of unit
 - b. duration of hospitalization
 - c. visiting hours and restrictions
3. Identify from assigned reading, factors following World War II which contributed to changes in maternal child health care.

After World War II many changes took place in maternity and child health nursing.

362

Objective 2-continued

Discuss changes and summarize.

4. List significant changes; describe how nursing has responded.

Objective 3 The student will be able to list leading causes of maternal, infant child morbidity and mortality; discuss methods of prevention emphasizing role of the practical nurse and available community resources.

Developing Core

Maternal child health nursing is concerned with prevention of disease and the promotion of optimum family health.

Student Learning Activities

1. List functions of the United States Public Health Service.
2. Define following terms: mortality; morbidity, birth rate, neonatal, stillbirth, perinatal, infant, maternal mortality.
3. Graphically illustrate leading causes of maternal, infant, and child, mortality.
4. Identify modern trends in maternal-child health nursing which have contributed to reduction of this figure.
5. List community resources concerned with promotion of health of mothers and children.
6. Write a paragraph describing how you personally can contribute to continued decrease of maternal and infant deaths.

Objective 4 The student will be able to explain the philosophy of maternal-child health nursing.

1. Review definition of family; discuss the changing nature of 20th century american family.

Mother and baby or child cannot be separated from each other nor can they be separated from the family.

363

Objective 4-continued

The child's growth and development occurs within the family.

2. Role-play the changing roles of family members. Identify effect on maternity-child nursing.
3. Report on the new research available on the father's role.
4. Research the development of maternal-child health concept beginning with the establishment of Children's Bureau in 1912.
5. Explain and discuss: "The application of principles of growth and development unifies maternity and child nursing".

Enrichment

Interview a pediatric nurse practitioner and nurse midwife--note: educational background; duties; legal aspects; report to group.

Graphically compare maternal and infant mortality of the United States with other countries.

Discuss possible explanation for these statistics--prepare a panel discussion.

Evaluation:

1. The student will be able to define maternity and child health nursing.
2. The student will be able to list three nursing skills specific to the nursing of children and maternity.
3. The student will be able to list and explain three factors following World War II which affected maternity and child health nursing.
4. The student will be able to explain changes in nursing in response to changing family needs.
5. The student will be able to list three causes of maternal, infant, child mortality; explain responsibility of nurse to help reduce these figures.
6. The student will be able to identify the significant changes which have occurred in twentieth century American family; discuss the impact on maternity and child health nursing.

304

PREPARATION FOR PARENTHOOD

Introduction: This unit is designed to help the student understand the physical and psychological impact of pregnancy not only on the expectant mother but on the entire family including grandparents.

Specific Objectives:

The student will be able to:

1. Describe organs of reproduction; list their functions; explain interrelated process of ovulation and menstruation; hormonal influences; fertilization.
2. Recognize the importance of female pelvis as the passageway from fetus during labor.
3. Relate the physical and psychological changes of the expectant mother in each trimester of pregnancy including: fetal development; health and hygiene; nutrition, common discomforts and nursing measures and prenatal care.
4. Describe essential components of good prenatal care; list community resources available for the expectant family.
5. Compare fetal circulation with infant circulation.

Films

1. The Menstrual Cycle: Lilly Education
Resources Program
Dept MC-340

2. After You go Home

3. The Rh-Negative Mother Eli Lilly & Company
P.O. Box 100 B
Indianapolis, IN 46207

Objective 1: The student will be able to describe organs of reproduction;
list their functions; explain interrelated processes of
menstruation and ovulation; fertilization.

Developing Core

Understanding and appreciation of
the maternity cycle are acquired
through knowledge of the anatomy and
physiology of the reproductive systems.

Student Learning Activities

1. List and locate on an anatomical chart male and female organs of re-
production.
2. Discuss structure; explain functions of these organs.
3. Define ovulation and menstruation; explain inter-
relationships of these processes. Give pamphlet:

306

Objective 1-continued

"The Doctor Talks about Menstruation".

4. Draw a chart to illustrate hormonal influence on the menstrual cycle.
5. Review anatomy and physiology of the female breast; discuss statement: "A large breast indicates mother will have a large milk supply".
6. Draw a male and female gamete. Explain fertilization and heredity. List common hereditary traits and resultant dysfunctions.
7. Differentiate between hereditary disease and congenital defects.

Objective 2:

The student will be able to recognize the importance of the female pelvis as the passageway for the fetus during labor.

Developing Core

One of the goals of labor is the safe passage of the passenger (the fetus) through the passageway (the pelvis).

Student Learning Activities

1. Using a model or chart, compare the male and female pelvis.
2. Identify on a pelvic model: false and true pelvis; pelvic-inlet, cavity, and outlet.
3. Explain and demonstrate with a pelvic model and doll the importance of the pelvis during labor.

307

Objective 3: The student will be able to relate the physical and psychological changes of the expectant mother in each trimester of pregnancy including: fetal development, health and hygiene, nutrition, and common discomforts and nursing measures.

Developing Core

After fertilization the one-celled ~~ovum~~ develops into a multi-trillion celled baby ready to be born. This complex change normally follows a progressive course, during which the expectant mother undergoes profound changes which affect her whole being.

Student Learning Activities

1. Develop a chart indicating significant embryonic and fetal growth and development during each trimester of pregnancy.
2. Indicate on a chart the relationship of fetal growth and development with physical changes of the mother.
3. Use a descriptive phrase to summarize expectant mother's psychological reaction to each trimester.
4. Prepare a diet for a family; adjust this to meet changing needs of expectant mother and baby. Discuss the nutritional needs of the expectant mother.
5. Modify this diet plan for the obese, or teenage, expectant mother.
6. Prepare a plan for an individual mother in a prenatal clinic for each trimester of pregnancy in relation to: discomforts such as morning sickness and nursing measures; hygiene and health care; plans for feeding a baby; and breast care.
7. Role play family members reaction to mother's pregnancy; include the father, two children, ages 4 and 16.
8. Arrange observation of parent classes and prenatal care in clinic or obstetrician's office.

368

Objective 3-continued

- 9. Talk with friend or relative who is a new mother. Have her share some of her prenatal experiences with you. Compare experiences in class.

Objective 4: The student will be able to describe essential components of good prenatal care, list community resources available for expectant family.

Developing Core

Family-centered maternity care is concerned not only with the maximum safety of mother and baby but with the promotion of health and prevention of complications.

Student Learning Activities

- 1. Define prenatal care; describe the essential components of good care.
- 2. Discuss the following:
 - a. How early should women seek care?
 - b. If woman is new in community how would she proceed to get care?
 - c. How could she evaluate care?
 - d. Describe how you would motivate mother to seek medical care.
- 3. List community resources available for the expectant family.
- 4. Investigate premarital and prenatal tests required by law in Pennsylvania. Follow with a class discussion.
- 5. List all danger signals of pregnancy and role play the method of giving expectant mother information without alarming her.

Objective 5: The student will be able to compare fetal circulation with infant circulation.

- 1. Using the fetal circulation chart from Ross, trace oxygen from the placenta to the fetus; carbon dioxide from the fetus to the placenta.

Immediately after birth the new baby can no longer rely on the placenta for its oxygen needs.

309

Objective 5-continued

2. List special fetal structures and explain their function.
3. Compare fetal circulation with that of an infant or adult.
4. Obtain a placenta: identify fetal vessels, membranes; fetal and maternal surfaces; Discuss and compare.

Enrichment

Determine through literature or observation what anatomy and physiology is included in parent classes. Discuss depth of content.

Make a chart of your basal metabolic temperature. Discuss purpose and key points to note.

Observe x-ray pelvimetry and report to the group. Discuss purposes and preparation of patient.

Show x-ray examples; identify fetal head and pelvic inlet. Discuss sonar scan as a method for determining baby's size.

Using a textbook as reference, design models to demonstrate four types of female pelvises.

Investigate the cost of pregnancy including: medical care, mother's clothing, layette, furniture, and cost of bottle feeding.

Assign a student to a new patient to antepartal clinic. Admit patient and remain with her/him during visit. Write a report of observation; discuss in class.

Instruct expectant mothers in relation to: hygiene and health, weight, diet, discomforts, and nursing measures.

310

Evaluation:

1. The student will be able to describe and list the functions of male and female organs of reproduction.
2. The student will be able to define menstruation and ovulation; explain the hormonal control of these processes.
3. The student will be able to explain "cephalopelvic disproportion".
4. If given a list of significant growth and developmental changes of the fetus, the student will be able to identify the fetal age.
5. Without the use of a chart, the student will be able to trace fetal circulation.
6. The student will be able to explain causes of common discomforts of pregnancy; list common nursing measures.
7. From a sample menu, the student will be able to modify it in relation to maternal needs.
8. The student will be able to identify the physical and psychological changes of the mother in relation to trimesters of pregnancy.
9. The student will be able to explain the importance of early and continuous medical supervision of the expectant mother.
10. The student will be able to identify the essential components of good prenatal care.
11. The student will be able to list all of the danger signals of pregnancy.
12. The student will be able to name three community resources available for the expectant family.

311

THE LABOR EXPERIENCE FOR THE EXPECTANT FAMILY

Introduction: In this unit emphasis is placed on the normal physiological process of labor. The physical and psychological changes which occur in the mother as she progresses through each stage of labor is explained and effective nursing measures which the student may give to contribute to the comfort of the mother and safe arrival of the baby.

Specific Objectives:

The student will be able to:

1. Define labor as well as explain the stages and mechanisms of labor.
2. List kinds of obstetrical anesthesia and analgesia, including natural childbirth; compare advantages and disadvantages.
3. Identify and compare physical and psychological changes as the mother progresses in labor; recognize needs of the mother supportive person.
4. Recognize and give effective nursing care to the mother during labor.

Written:

Fitzpatrick, E. et al. Maternity Nursing, ed 12, Philadelphia: J.B. Lippincott, 1971.

Wiedenbach, Ernestine. Family-Centered Maternity Nursing, ed. 2, New York: G.P. Putnam's Sons, 1967.

Objective 1: The student will be able to define labor as well as explain the stages and mechanisms of labor.

Developing Core

The third trimester of pregnancy can be described as the: "Time of Watchful Waiting." The expectant parents are occupied with the onset of labor.

Student Learning Activities

1. View film: "From Generation to Generation"; review the antepartal period; preview labor, signs and symptoms; mechanisms
2. Observe two patients in prenatal clinic near the expected date of confinement. List questions asked by patients and information given by whom.
3. Discuss response to patient's question: "When should I come to the hospital?"

Objective 2: The student will be able to list three kinds of obstetrical anesthesia, including natural childbirth; compare their advantages and disadvantages.

Although the present philosophy of childbirth stresses that it is a completely normal, natural process, there are times when anesthesia and analgesia are needed.

1. Observe class for expectant parents on: "pain relief during labor." List the following: question asked; kinds of anesthesia and analgesia described and conclusions reached.
2. Have students demonstrate "Parent Teacher", exercises for childbirth; explain purpose of each exercise.

313

Objective 2-continued

Developing Core

Student Learning Activities

3. View film: "Normal Delivery". Discuss observations and reactions; compare with actual birth followed by a group discussion.

Objective 3: The student will be able to compare physical and psychological changes as mother progresses in labor; and recognize needs of supportive person concerned with her welfare.

1. Direct students to observe admission of a patient in labor, observe the following; explain the purpose of each and report to the group: reaction of mother, reaction of father or other supportive person, questions asked, and nursing measures instituted.
2. Contrast the first stage of labor of "normal primip" with "multip" in relation to length; dilatation patterns; general tolerance, patient's reactions to the nurse and family.
3. Contrast the second stage of labor of the same patients in relation to: signs of onset, both early and latter; patterns of contraction; physical appearance.
4. Observe father's: physical appearance, location in the room, and questions or comments.
5. List the methods by which fetal condition can be determined before birth. Illustrate and determine students' understanding of each method.

Many physical and psychological changes occur in the expectant mother as she progresses through each stage of labor.

314

Objective 3-continued

Developing Core

Student Learning Activities

- 6. Contrast the third state of labor continuing with the same patients identify: signs of onset; mechanism, and the importance of this stage.
- 7. List methods of keeping the father informed of his wife's progress if he is not present in labor room.
- 8. Compare obstetrics with the surgical recovery room; discuss observations and care based on the patient needs.
- 9. Describe methods of meeting the mother's need if the recovery room not available.

Objective 4: The student will be able to recognize and give effective nursing care to the mother during labor.

Nursing the mother in labor is both a privilege and challenge.

Enrichment

Arrange for a speaker from the Lamaze method of preparation for childbirth to speak to the students.

Compare the Lamaze method with "Childbirth without Fear" by Grantly Dick Read. Report to class.

Assign student to a patient having a breech; presentation persistant occiput posterior. Contrast with patient with the occiput anterior in relation to: length of each stage; dilatation patterns; general tolerance; and nursing care adjusted to meet the specific needs of the patient.

315

Evaluation:

1. The student will define labor and list the causes.
2. The student will list and explain the stages of labor.
3. The student will list and explain three kinds of obstetrical anesthesia including natural childbirth.
4. The student will recognize the physical and psychological changes of the mother as she progress in labor.
5. The student will identify the principles of effective nursing care for the patient in labor; and needs of the mother's supportive person.

316

CARE OF NEW MOTHERS AND BABIES

Introduction: Postpartum nursing family-centered is challenging and creative. its primary focus is on the mother and baby but it includes the father in its sphere of responsibility. The purpose of this unit is to help the student to identify the physical and psychological needs of the mother and baby and then examine ways to meet this need.

Specific Objectives:

The student will be able to:

1. Discuss the baby's initial adjustment to birth and explain nursing measures to meet these needs.
2. Describe characteristics of the newborn and recognize individual differences.
3. Identify physical needs of the newborn; give effective nursing care.
4. Lists and explain physical and psychological changes in the new mother and give effective nursing care.
5. Demonstrate the ability to give basic instructions to the new family.

Williams, Sue Rodwell. Mowry's Basic Nutrition and Diet Therapy, Saint Louis: C.V. Mosby Company, 1975.

Objective 1: The student will be able to identify the baby's initial adjustment to birth; explain nursing measures to meet these needs.

Developing Core

After birth the baby must make many adjustments to extrauterine life

Student Learning Activities

1. Arrange for students to observe a baby immediately after birth. Prepare for class discussion by writing a description noting color, muscle tone, cry, apgar score.

318

Objective 1-continued

2. Identify immediate care given to the infant; explain the purpose of these measures.
3. Compare reports of students then identify the differences and similarities.
4. Review fetal circulation. Explain the results of "clamping the cord".
5. Discuss the Leboyer method of delivery.

Objective 2: The student will be able to describe characteristics of the newborn; recognize individual differences.

Developing Core

The baby is not a miniature adult: He/she has individual physical and psychological needs and his own patterns of growth and development.

319

The need for food is basic for life. The question of "How should I feed my baby?" causes concerns for the new mother. She often measures her success or failure as a mother by the baby's success of feeding.

Student Learning Activities

1. Refute or prove the statement: "All newborns are the same". Compare two infants in the normal newborn nursery in relation to physical characteristics and behavior.

Objective 3: The student will be able to identify physical needs of newborn; give effective nursing care.

1. Discuss and describe how nursing care routine in newborn nursery are based on "Adjustments of Baby" to extrauterine life in relation to observations of respiration and circulation, excretion, warmth, food and cord care.

Objective 3-continued

2. Assign student to take a breast fed baby to mother; observe the following: position of the mother; handling of the baby and method of "bubbling".
3. Debate: "Breast Feeding vs. Bottle Feeding". Investigate community resources available in assisting mothers interested in breast feeding.
4. Discuss the nutritional needs of the lactating mother.
5. Describe the possible effects on the mothers to have "wrong baby" brought to her.

Objective 4: The student will be able to identify and explain physical and psychological changes in new mother; give effective nursing care.

Developing Core

During labor the mother has directed all her physical effort in giving birth to her baby. Although she requires mental and physical rest the nurse must realize this is a critical time for her.

Just imagine an organ normally two ounces increasing in size to accommodate a seven pound baby. This is only one of the many changes which must take place within the mother's body.

For nine months the baby has been a close part of the mother. Now it is her job to make the baby a part of the family.

Student Learning Activities

1. Discuss the admission of newly delivered mother to the postpartum unit in relation to observations, nursing care and areas of teaching
2. Compare an admission of the mother and indicate how the above routines were adjusted to meet this patient's needs.
3. Assign students two postpartum patients. One, first; the other second day postpartum. Compare patients follow with class discussion include physical and psychological.

320

Objective 4-continued

4. Describe and give illustrations of "taking in", "holding on", and "postpartum blues".
5. Discuss the following statement: "Postpartum care is so routine. The mothers are well and most of the time I have nothing to do".
6. Identify and describe how methods of maternity nursing can be family centered on the "traditional" postpartum units.
7. Make a chart of the drugs used in postpartum. Include classification, purpose and dosage.
8. Direct a student to plan a menu for one week for the breast feeding mother.
9. Assign students to visit planned parenthood. Discuss services offered.

Remedial

Review in the nursery with individual students, the general characteristics of the newborn.

Enrichment

Have students compare extra-uterine behavior with intra-uterine. Assign selected students to observation in the premature nursery and write a comparison of the premature baby with normal newborn and report to group.

- Assign students to give a mother initial instructions on breast feeding. With teacher's assistance invite speaker from Leche League to explain to group the organization's philosophy and objectives.

321

Enrichment-cont.

Allow student to visit a rooming-in unit and compare with traditional unit.

Evaluation:

1. The student will be able to explain the essential adjustments to birth.
2. The student will be able to explain nursing measures to meet these needs.
3. The student will be able to list the five general characteristics of newborns.
4. The student will be able to give effective nursing to newborns.
5. The student will be able to identify and explain the progressive physical and psychological changes of the mother:
6. The student will be able to demonstrate the ability to give basic instructions to new family.

393

THE SPECIAL NEEDS OF THE FAMILY

Introduction: The emphasis of maternity nursing is placed on the normal physiological and psychological processes of the child-bearing experience. Although complications belong to the area of obstetrics, some of these should be understood by the student to recognize her responsibilities to the expectant family.

Specific Objectives:

The student will be able to:

1. Identify the major complications of the antepartum period and explain methods of prevention.
2. Discuss pertinent needs and concerns of unwed parents, teenage parents, the unwanted baby.
3. List four complications of the laboring mother including forced delivery and caesarean section.
4. Recognize that postpartum hemorrhage and infection are the most common postpartum complications, and identify methods of prevention.
5. Identify common complications of the newborn including common congenital malformations and prematurity.

323

and Child Health Nursing, Third Edition,
Saint Louis: C.V. Mosby Company,
1975. (Study Guide

Developing Core

The two major complications for
the expectant mother are bleeding
and toxemias. These can be prevented
by early and continuous prenatal care.

Student Learning Activities

1. Discuss the causes of bleeding in the early and later trimesters of pregnancy.
2. Describe symptoms, medical treatment, and nursing care.
3. Describe methods of prevention.
4. Prepare clinical conference of patient with bleeding and compare with textbook.
5. Prepare clinical conference of patient with toxemia of pregnancy including causes, predisposing factors, symptoms, medical treatment, drugs, diet modifications and prevention.

Objective 2: The student will be able to recognize pertinent needs and concerns of unwed parents, teenage parents, unwanted baby.

1. Prepare clinical conference and compare teenage parents with older parents.

The expectant mother cannot be
separated from the family and cannot
be isolated from the community. The
student practical nurse must be aware
of the needs of teenage parents, unwed
parents and unwanted babies.

324

Objective 2-continued

2. Invite social worker to a conference on the unwed mother. Have her discuss the following: function and preparation of medical social worker; incidence of unwed parents; reactions of parents; and community agencies available.
3. Summarize the above conference and have students discuss their observations.
4. Research community agencies available and policies of Pennsylvania in relation to adoption and discuss "Black Market Babies".

Objective 3: The student will be able to list four complications of the laboring mother including forcep delivery and section.

Developing Core

Following a C-section the mother has physical needs of any other surgical patient but also physical and psychological needs of the new mother.

Sometimes a forcep delivery is necessary for the welfare of mother and baby. Without knowledge of purpose and technique this frequently frightens a student.

Student Learning Activities

1. Discuss C-section to include cause, purposes, incidence and anesthesia.
2. Have students develop a nursing care plan for the mother who has had a section: Discuss in total group. Including the following; relationship with baby; surgical needs; compare mother and baby who had vaginal delivery.
3. Obtain forceps and with model and doll demonstrate the mechanisms of labor; discuss purposes and possible complications and observation of mother following delivery.

325

Objective 3-continued

4. Define dystocia, list a few common causes and discuss methods of prevention.

Objective 4: The student will be able to recognize that postpartum hemorrhage and infection are major complications of postpartum patients; identify methods of prevention.

1. Review causes of maternal mortality. Discuss methods of prevention during the postpartum period.
2. List and discuss causes, symptoms, treatment and nursing care.

Objective 5: The student will be able to identify common complications of the newborn including some congenital malformations and prematurity.

Developing Core

Newborn is the period of complete dependency. The nurse caring for the infant is often the first person to identify problems.

Student Learning Activities

1. Review "Nursery, Routines" and relate how these provide an opportunity for the nurse to observe problems for newborn.
2. Make a list of problems and discuss each fully. Include causes, diagnosis, treatment, and prevention of each.

Enrichment

Direct students to investigate the intensive care nursery; discuss the modifications of nursing care, diagnosis, feeding problems and convey these observations to classmates.

Develop a comparison chart between the normal and premature infant. Examine pictures and identify specific differences.

326

Evaluation:

1. The student will be able to identify three major complications of the antepartal period and explain prevention measures of each.
2. The student will be able to discuss the pertinent needs and concerns of each of the following: unwed parents; teenage parents; and the unwanted baby.
3. The student will be able to list four complications of the laboring mother including forced delivery and caesarean section.
4. The student will be able to recognize that postpartum hemorrhage and infection are the most common postpartum complications and identify the methods of prevention of each.
5. The student will be able to identify common complications of the newborn including two congenital malformations and all major aspects of prematurity.

327

Total 105 hrs
Theory 42 hours
CL Experience 63 hours

INTRODUCTION TO GROWTH AND DEVELOPMENT

Introduction: In this unit the student is introduced to the general principles of growth and development which the student should know in order to adapt his/her nursing care to the needs of children in different age groups.

Specific Objectives:

The student will be able to:

1. Define and illustrate with examples the terms growth, development, maturation, and intelligence.
2. Identify the internal and external factors which affect growth and development.
3. List the stages of growth and development and explain the major physical and psychological characteristics of each stage.

Maternal and Child Health Nursing, 3rd Edition,
Saint Louis; C. V. Mosby Company,
1975

Objective 1: The student will be able to define and illustrate with examples growth, development, maturation, and intelligence.

Developing Core

329
Normal growth from birth to adulthood is characterized by certain principles. Development is a highly individualized process, and a comparison of a child with him/herself and others is helpful in evaluating progress.

Student Learning Activities

1. List the general characteristics of growth and development. Present specific examples of each characteristic.
2. Differentiate between growth and development. Reinforce this difference by eliciting from students various examples of each.
3. Explain and give examples of maturation and intelligence.
4. Using charts and diagrams, illustrate the measurement of growth, development, and intelligence quotient.

Objective 2: The student will be able to identify the internal and external factors which affect growth and development.

Developing Core

Every child's growth and development is governed by genetic and environmental forces.

Student Learning Activities

1. Define the terms internal and external. Ask students to list internal and external factors which affect growth, development, maturation, and intelligence quotient.

Developing Core

Student Learning Activities

- 2. Debate: "Heredity versus Environment"
- 3. Elicit from students examples of how these factors may be utilized to promote normal growth and development.

Enrichment

Assign students to further research projects concerning the effects of heredity and environment. Appraise findings.

Objective 3: The student will be able to list the stages of growth and development and explain the major physical and psychological characteristics of each stage.

Student Learning Activities

- 1. Present the principles of child development. Include the physical, social, emotional, and intellectual factors.
- 2. Discuss the question: "Why is a sound understanding of growth and development essential to the practical nurse?"
- 3. Present an overview of the theories of past and present child psychologists. Mention the works of Freud, Piaget, Jung, and Erikson.
- 4. List the stages of growth and development. Identify the physical characteristics of each stage.
- 5. Show and summarize trainee: Normal Patterns of Development.

Developing Core

Growth and development is divided into stages. These stages enable the student to readily identify normal patterns and deviations apparent in the child for which they are caring.

330

Developing Core

Student Learning Activities

6. Assign students to read related material in relationship to Erik Erikson's psychosocial developmental theory. Identify the outstanding physical characteristics of each stage as given by Erikson.
7. Allow time for students to review and assimilate major aspects of physical and psychological growth and development..

Enrichment

Assign student groups to patients who represent the various stages of physical growth and psychological development.

Form a panel discussion to summarize what the "average child" does.

Contrast Carl Jung's and Erik Erikson's approach to growth and development.

Evaluation:

1. The student will be able to differentiate between growth and development.
2. The student will be able to define and illustrate with examples the terms growth, development, maturation, and intelligence.
3. The student will be able to list and explain three characteristics of growth and development.
4. The student will be able to identify three internal and external factors which affect growth and development.
5. The student will be able to explain how these internal and external factors can be utilized to promote normal growth and development.

3/31

Evaluation (cont'd.):

6. Given a list of the major physical and psychological characteristics, the student will be able to identify the developmental stage.

332

**MATERNAL-CHILD NURSING
PEDIATRICS**

Introduction: In the past century we have seen drastic changes in the attitudes of society toward children. We live in a highly complex society, demanding stronger and more resolute individuals. Nursing care of children entails an understanding of the child as a developing person with unique ways of feeling and thinking with his own individual methods of coping with his environment.

Specific Objectives:

The student will be able to:

1. Recognize and describe normal growth and development of infancy, toddlerhood, pre-school, school age, puberty, and adolescent stages of life.
2. Identify the nutritional requirements throughout various stages of development.
3. Demonstrate competency in performance of simple nursing in minor illnesses.
4. Give safe, effective nursing care to the child with short-term, moderately complex nursing needs.
5. Perform safe, effective nursing care to the child with long-term, moderately complex nursing needs.

MATERNAL CHILD HEALTH
INFANT (ONE MONTH TO ONE YEAR)

Objective 1: The student will be able to recognize and describe normal growth and development during infancy.

Developing Core

In infancy there are wide variations in size and speed of postnatal growth. To interpret measurements, a standard for allowable deviation from the average is necessary.

Student Learning Activities

1. Have the student discuss height and weight changes during the first year. Illustrate by charts and diagrams.
2. Direct students to develop a chart in pattern changes of both physical, motor, and psychosocial characteristics of the infant.
3. Divide students into groups of two to discuss and differentiate the average infant in various levels of growth and development.
4. Have the students report in a panel discussion the changes in cephalocaudal and proximo-distal direction.
5. Have the students design a recommended schedule for medical supervision, active immunization, and tuberculin testing of normal infants.
6. Have students collect information on the purpose of Child Health Conference and its personnel.

335

Objective 1-continued

Remedial

Allow stronger students to work with weaker student-question and answer session in growth and development of the infant. Schedule individual teacher-student conferences.

Enrichment

1. Supervise students assisting in Child Health Conference.
2. Allow students to visit and assist in immunization program.
3. Assign students to develop a comparative study "Sense of Trust vs. Mistrust" report round table discussion with all students with the teacher as a resource person.

Objective 2: The student will be able to identify the nutritional requirements of the infant.

Developing Core

Good nutrition amounts to sufficient protein, carbohydrates, fats, vitamins, and minerals to support life and to provide the best opportunity for growth and maintenance of health. They have particular importance for the infant whose rapid growth and skimpy stores make him/her more vulnerable to nutritional disease.

Student Learning Activities

1. Discuss nutritional requirements of infancy at various levels i.e., first three months, three-six months, six-nine months, and nine to twelve months.
2. Discuss fluid intake of infant in relationship to fluid balance.
3. Interpret flouride requirements for strengthening calcification of teeth.
4. Have student collect information and return to class for discussion in the following areas: adding solid foods, preparing foods, and feeding at various levels.
5. Have a student discuss and demonstrate with a doll; bottle and solid feeding at various levels. Encourage other students to expand on self-feeding.

Remedial

Review: Offer individual help.

336

Objective 2-continued

Enrichment

Assign students to design a plan for weaning the infant, followed by question and answering session with group participation.

Role play the childless woman versus a mother's thoughts on thumb sucking and feeding.

Objective 3: The student will be able to demonstrate competency in the performance of simple nursing in minor illnesses.

Developing Core

The infant is unfamiliar with the world needs and wants guidance.

The parent sees the infant as an individual with a developing personality who needs opportunity and encouragement to develop and grow according to his own pattern.

Student Learning Activities

1. Have the student discuss current theories concerning the manner in which infections arise and spread. List factors done by these pathogens that determine the amount of damage.
2. List recent advances in regard to illnesses and/or accidents.
3. The teacher and students will develop a nursing care plan and treatment of the common cold in the home situation.
4. List preventive measures in avoidance of secondary illnesses.
5. Develop a chart showing common mechanisms of accidental injury emphasizing preventive measures and potential hazards.
6. Explain the role of the pediatrician, extended health services, pediatric clinics and the visiting nurse as consultants enabling the mother to be able to care for the infant herself.

337

Objective 3-continued

Remedial

Review: Offer Assistance to individual students.

Enrichment

Assign students to expand on complications such as otitis media and the prophylactic measures utilized available.

Assign students to collect information on Homemaker Services followed by a discussion with all students participating.

Objective 4: The student will be able to give safe, effective nursing care to infant with short-term, moderately complex nursing care.

Developing Core

Diarrhea is a common symptom of a variety of conditions. It implies an excessive number of liquid stools. The infant has a rapid loss of fluid and electrolytes leading to dehydration and acidosis.

Student Learning Activities

1. Have students review the anatomy and physiology of the digestive tract.
2. Discuss the total effects of hospitalization:
 - a. separation from mother
 - b. parents feelings
3. Identify the three phases of adjustment to hospitalization.
 - a. protest, b. despair, c. denial.
4. Discuss the nurse's role:
 - a. mother substitute
 - b. support to the whole family
 - c. team member.
5. Summarize meeting the daily basic needs of the infant.
 - a. physical (bath, feeding, environmental)
 - b. psychological (supportive, safety)

338

Objective 4-continued

6. List and explain nursing treatments to meet special aspects of pediatric nursing. Include vital signs, weight, specimens, restraints, and tepid sponge baths.
7. Direct students to develop a nursing care plan for the infant with diarrhea and compare this infant with the textbook picture of diarrhea.
8. Allow students to care for an infant with diarrhea in the clinical laboratory. Have them assume responsibility for a nursing care plan and participate in discussion with team members.

Remedial

Individual re-teaching as indicated.

Enrichment

Select a student to develop a specific discharge plan and present this plan to the infant's mother.

A second student should be selected to research community agencies that might assist the parents and convey this information to them.

The above students will role-play this information to all students.

Objective 5: The student will be able to give safe, effective nursing care to an infant with long-term, moderately complex nursing needs.

Developing Core

Cleft palate is a fairly common congenital malformation. It constitutes a failure in the embryonic

Student Learning Activities

1. Have students review the anatomy and physiology of the digestive tract stressing the oral cavity and teeth formation.

339

Objective 5-continued

development of the child. A cleft palate may involve lack of fusion of only part of the hard palate or may extend along the entire roof of the mouth. A cleft palate is repaired to the child's individual needs.

2. Review the first trimester embryonic development.
3. Review hospitalization of the infant. Meeting the physical and psychological needs should be outlined.
4. Discuss at length preparation of the parent and infant for hospitalization.
5. Have students develop a pre-operative nursing care plan. (Ideally the infant should enter the hospital several days prior to operation)
 - a. prophylactic measures
 - b. special aspects of pediatric nursing
 - c. nursing care meeting daily basic needs
6. Analyze the role of the mother involved in assisting the nurse in the care of her infant.
7. Assign students to develop an immediate postoperative nursing care plan for the infant having this surgery.
 - a. positioning-purpose
 - b. constant nurse attendance
 - c. immediate complications
 - d. restraints
 - e. treatments (equipment)
8. Direct students to develop a postoperative nursing care plan. Stress the role of the parents. Discuss the nurses role as a substitute mother.

Remedial

Review material. Offer help to individual students where needed.

Enrichment

Select one student to research and discuss handicaps of the child with a cleft palate.

340

Objective 5-continued

Select a student to develop a discharge plan for this infant and discuss this plan with his/her mother.

Have students research community agencies-local, state, and national, which are available to families confronted with this condition. Summarize information in a class discussion.

TODDLER (ONE TO THREE YEARS)

Objective 1: The student will be able to recognize and describe normal growth and development of the toddler.

Developing Core

The toddler stage which is the transition from baby to child is an unsettled and disorderly period. Physical growth is erratic and psychologically, the big discovery for the child is being an independent person from his/her mother.

Student Learning Activities

1. Have the student discuss growth and development changes in the toddler.

Physical

- a. height and weight
- b. general body proportions
- c. changes in bones, skin, and teeth

Motor

- a. locomotion (walking)
- b. manual dexterity (play)
- c. communication (speech)

Psychosocial

- a. ritualism
- b. dawdling
- c. temper tantrums

2. Discuss the role of parents in the guidance and discipline of the toddler.
3. Discuss the toddler's strivings for autonomy in relation to parents, siblings, and peers.
4. Divide students into three groups. Assign:
Group I-Bowel control
Group II-Bladder control-day and night

241

Objective 1-continued

Group III-Temper tantrums

Lead discussion, compare textbook to mothers' experience. Summarize information.

5. Discussion group-teacher and students, "When a New Baby Arrives." Review reference readings. Emphasize common sense.

Remedial

Schedule teacher and student conferences.

Enrichment

Select two or three students to research parent plan for enrichment of the toddler i.e. excursions, home environment.

- Assign two students to research:
Nursery for the toddler of the-working mother
Nursery for the toddler who is a gifted child.
Present these reports in a class discussion.

Objective 2: The student will be able to identify the nutritional requirements of the toddler.

Developing Core

This is the age period when most feeding problems appear. The child's growth slows down and yet a balanced diet including proteins, carbohydrates, minerals, vitamins is essential for health and a sense of well being.

Student Learning Activities

1. Discuss nutritional requirements of the toddler at various levels. Reinforce the strong drive for independence in relationship to the child's appetite. Include serving food, eating with the family, and finger eating foods.
2. Discuss relationships of adequate nutrition to good teeth.
3. Have students plan a menu for the day. List foods and amounts. Evaluate assignment and reinforce essential nutrients.

342

Objective 2-continued

4. Discussion group-Teacher and students "Weaning to Solid Foods" stress approaches to the problems most likely to occur i.e. nutrient deficiencies, economic, and psychological factors.
5. Assign students to read the Dairy Council's pamphlet on Problems of Feeding. Discuss and summarize this material.

Remedial

Review material. Offer individual help to students encountering difficulties.

Enrichment

Select students to visit Pediatric Dental Clinics. Share these observations with the total class.

Objective 3: The student will be able to demonstrate competence in identifying and evaluating the extent and mechanisms of mild injury.

Developing Core

Few toddlers escape the early years without suffering some variety of head injury.

Student Learning Activities

1. Have each student list on mild injury and first aid measures taken.
2. Develop with students an imaginary head injury. Evaluate extent and treatment (home preferred). Suggest bruising or lacerations and simple concussion.
3. Discuss the statement "Accidents kill more children than any single illness."
4. Assign students to report on accidental poisoning. Expand on incidence, safety, and public education.

Remedial

Review material. Offer individual help.

343

Objective 3-continued

Enrichment

Assign two students to report on local Poison Centers.
Assign two students to report on available books, or pamphlets on prevention of accidents and/or poisoning.

Objective 4: The student will be able to give safe, effective nursing care to a toddler with short term-moderately complex nursing needs.

Developing Core

Inflammations of larynx may cause hoarseness, barking cough, obstruction to breathing, or a combination of these. In young children these inflammations tends to cause spasmodic laryngitis. Also, these have a tendency to recur in children during a respiratory infection.

Student Learning Activities

1. Have student review the anatomy and physiology of the respiratory system.
2. Explain to students how a catarrhal inflammation of the larynx causes spasmodic contraction of the larynx-resulting in etiology, signs and symptoms, diagnosis, and treatment.
3. Develop with students a nursing care plan-"croup"
Home-Room humidifier
Hospital-Croup tent
4. Identify hospitalization of the toddler.
5. In clinical laboratory plan for student to have a child with croup.
6. Nursing care plan discussed with team members in conference. Record on Nursing Care Plan-Peds Unit.
7. Discussion-Teacher and Students "Illness and Resulting Regression" and "Contunity of Nursing Care".

Enrichment

Assign students to discuss "How to keep your cool during the toddlers spasmodic attack".

344

Objective 4-continued

Reinforce: Inspiration and expiration, accessory muscles, ribs diaphragm.

Objective 5: The student will be able to give safe, effective nursing care to a toddler with long term moderately complex nursing needs.

Developing Core

Mental retardation refers to children who as a result of inadequately developed intelligence are significantly impaired in ability to learn and adapt to society demands.

Student Learning Activities

1. Define mental retardation..
2. Discuss testing physical and intellectual measures.
3. Review etiological factors including prenatal, perinatal, and postnatal causes.
4. Define and discuss preferred terms denoting mental retardation i.e. mildly, moderately, severely, and profoundly.
5. Discuss ways of meeting needs of mentally handicapped child. Include the roles of parents, siblings, relatives, and friends.
6. Present major aspects of hospitalization of the mentally retarded child. Include the nurses role, stress knowing the normal in order to have an understanding of abnormal, and the parents role,
7. Direct students to develop a plan of teaching self-help to the child. Allow students to choose specific age levels and problems. i.e. Fifteen month old child and bowel training.
8. Investigate and summarize federal and local resources available to these children and their families.

Enrichment

Debate Resolved: That home care of the profoundly retarded child is superior to institutional care.

345

MATERNAL CHILD HEALTH
PRE-SCHOOL CHILD (THREE THROUGH FIVE YEARS)

Developing Core

946
The pre-school child's growth and development is characterized by plateaus and spurts. The average child of three is a fairly independent person who changes from a chubby toddler to a thinner child. He/she develops motor control, skill in finer movements, and is able to control the environment enabling him/her to be more confident.

Student Learning Activities

1. Discuss with students the growth and development occurring in the child on three levels: 3 to 4 years, 4 to 5 years; and the 5 year old. Allow students to respond with examples.
2. Have students develop a plan on "Language Development" occurring in the three levels. Present these plans in a class discussion.
3. Discuss sex differences including aspects of the child's curiosity, sex play, masturbation, and sex education. The role of the parents in these areas should be stressed.
4. Have students research the development of social relationships occurring during this age period. Summarize major aspects.
5. Assign students to develop a social interaction and an educational experience for the pre-school child.

Enrichment

Select students to visit and interact with children in nursery schools, day care centers, and head start programs. Share observations with total class.

SCHOOL AGE CHILD (SIX TO ELEVEN YEARS)

Objective 1: The student will be able to recognize and describe normal growth and development of the pre-school child.

Objective 2: The student will be able to recognize and describe normal growth and development of the school age child.

Objective 2-continued

Developing Core

The school age child has a slow but steady growth ending with a pre-adolescent growth spurt. Most school age children enjoy good health during these years.

347

Student Learning Activities

1. Discuss with students growth and development of this age period. Include physical and emotional aspects.
2. Have students develop a plan to be discussed in a round table discussion on "School Days". Allow students to select a specific topic i.e.

a. parents role	e. readiness
b. teachers role	f. sex education
c. physical health	g. guidance and discipline
d. mental health	h. peers role
3. Discuss with students the topics "The Secretive Years" and "Climate of Security" apparent in this age period.
4. Assign students to develop a comparative study on growth and development during the school age years. Select specific age levels and sex for each student ensuring that all areas are included.
5. Have students develop a plan on preventive health services for school-age children. Summarize this plan.

Enrichment

Have students who are mothers and have visited the classroom of "Johnny", share experiences. Have students develop ideas on "Sense of industry versus inferiority."

Objective 3: The student will be able to identify the nutritional requirements of the pre-school and school age child.

Developing Core

A summary of the nutritional needs of this period follows: cal-
orie intake increases water intake
diminishes, mineral and vitamins

Student Learning Activities

1. Discuss specific nutritional requirements of pre-school and school age children.
2. Have students discuss school lunches including school served lunches and packed lunches.

Objective 3-continued

requirements are unchanged. The child's appetite is more reasonable and he/she enjoys companionship during meal time.

3. Have students discuss during and after school snacks. Stress nutritional aspects as well as individual likes and dislikes.
4. Reinforce the relationship of adequate nutrition to good dental health.
5. Have students plan a menu for a day listing specific foods. One half the group should be assigned menu development of the pre-school child and the other half the school-age child.

Enrichment

Have students visit and/or participate in nursery schools and day care centers. Have students visit and if possible, participate in serving school lunches. Have students who are mothers share cooking of foods that appeal to children. List preferences at various age levels.

Objective 4: The student will be able to demonstrate safe, effective, nursing care to the pre-school child with short term-moderately complex nursing care.

Developing Core

When tonsils are to be removed, a period of two or three weeks following an acute infection should pass. The child should be free from infection and emotionally prepared.

Student Learning Activities

1. Review the upper respiratory system with emphasis on the anatomy and physiology of the tonsils and adenoids.
2. Discuss at length the etiology of tonsillitis and adenoiditis. Mention the pros and cons of surgical excision.
3. Discuss the effects of hospitalization on the pre-school age child. Present methods of preparing the child for this experience. Emphasize the supportive role of the nurse in relation to the child and his/her family.
4. Develop with students a nursing care plan on the child having a tonsillectomy. Include pre-operative (home and hospital), immediate post-operative, and post-operative care.

343

Objective 4-continued

5. Assign students in the clinical laboratory to care for a child with a tonsillectomy. Appraise care given.
6. Discuss student developed nursing care plan with team members in conference, and then apply to the nursing care plan on the department.

Enrichment

Assign students to discuss with the doctor and team leaders parent discharge instructions, appointments, and convalescent care. Present possible complications and approaches to each.

- Objective 5: The student will be able to demonstrate safe, effective, nursing care to the school age child with long term-moderately complex nursing care.

Developing Core

Rheumatic fever is a chronic disease of childhood. It occurs between the ages of six and twelve years. It is a leading cause of acquired heart disease in childhood. The highest incidence is among poor families living in crowded, unsanitary conditions.

Student Learning Activities

1. Review the anatomy and physiology of the respiratory, cardiovascular, and musculoskeletal systems.
2. Discuss clinical aspects of rheumatic fever and its manifestations.
3. Develop with students a nursing care plan with emphasis on prevention of residual heart disease.
4. In the clinical laboratory, assign students to care for Child with rheumatic fever.
5. Share classroom developed nursing care plan with team members in conference on the clinical unit.
6. Develop with students a home nursing care plan. Stress necessary adaptations.
7. Discuss the nurse's role in the child's acceptance of hospitalization.

349

Objective 5-continued

- 8. Present etiology and incidence of recurrences, the purpose of prophylactic programs, and the need for continued medical supervision. Elicit from students how these three aspects would differ with the school age child, adolescent, and adult.
- 9. Direct students to investigate community resources available to the child with a long-term illness and his/her family.

Enrichment

Assign students to obtain information about homebound teachers and two-way closed T.V. circuit classroom instruction. Assign students to discuss "Overindulgence of a Chronically Ill Child."

350

MATERNAL CHILD HEALTH
PUBERTY AND ADOLESCENCE (ELEVEN TO EIGHTEEN YEARS)

Objective 1: The student will be able to recognize and describe normal growth and development during puberty and adolescence.

Developing Core

Puberty is the stage of growth at which the biological changes reach a climax. It is marked by the appearance of menarche in girls and the production of spermatozoa in boys. During puberty and adolescence the child is being transformed into an adult. It is a confused and unpredictable time. The teenager is struggling with the problems of transition and is frustrated frequently.

Student Learning Activities

- 1. Assign students to complete a comparative study on the growth and development of boys and girls during puberty and adolescence.
- 2. With emphasis on physical, intellectual, and psychosocial development, discuss fully the changes occurring in this age period.
- 3. Divide the class into four groups assigned to investigate these topics in relation to the adolescent

Self-image	Peer acceptance
Parental guidance	Adjustment to society
- 4. Form a panel discussion to present findings in these areas of adolescence.

Objective 1-continued

5. Ask students to demonstrate Erickson's developmental stage of "identity versus role confusion."
6. Discuss the role of the adolescent physician.
7. Elicit student responses on the advantage of an adolescent unit in a general hospital.

Enrichment

Encourage students who are mothers of adolescents to share their experiences with the class.
Arrange for students to attend adolescent clinics.

Objective 2: The student will be able to identify the nutritional requirements of adolescence.

Student Learning Activities

1. Discuss the nutritional requirements of the adolescent in relationship to the stage of sexual maturation, rate of physical growth, and the amount of athletic and social activity.
2. Obtain student suggestions of substitute basic food snacks for candy, pop, and potato chips in the school environment. Reinforce the relationship of good nutrition and healthy teeth and gums.
3. Assign students to plan a one-day menu for a fourteen year old football player. Adapt this menu to a low income family.
4. Encourage students to collect information on the latest thinking on the role of diets in the common adolescent condition of acne.
5. Discuss the hazards of fad diets during adolescent.

Developing Core

Because this age period is marked by great individual differences, it becomes impossible to set uniform nutrient requirements. The factors influencing nutritional requirements are the stage of sexual maturation, rate of physical growth, and amount of athletic and social activity.

351

Objective 2-continued

6. Allow students to assist the dietitian in adolescent nutrition teaching on the clinical unit.

Enrichment

Encourage students to visit the National Dairy Council Inc. to gather information on the latest trends in the nutrition of the adolescent.

- Objective 3: The student will be able to demonstrate competence in the performance of simple nursing in minor illnesses.

Developing Core

Adolescents have an increased interest in illnesses because of their absorption in the body image and its changes. This intensified interest, coupled with the alert and curious nature of the teenager, provides a fine opportunity for sound health teaching.

Student Learning Activities

1. Present an overview of the physical problems and diseases commonly occurring during adolescence.
2. Discuss the predisposing factors and general management of adolescent acne. Reinforce the nurse's role in emotional support.
3. Role play situations in which the nurse is interacting with an adolescent girl who has a menstrual disturbance.
4. List the overt and covert causes of obesity. Include the latest theories such as:
 - a. number of fat cells in infants may predispose to adult obesity.
 - b. quality-quantity-frequency theory which states that food intake needs to be spread out during the day with no large quantities consumed at one time.
 - c. behavior modification effectiveness
5. Ask students to interview an overweight teenager, analyze the individual, and determine the probable cause of his/her weight problem.

352

Objective 3-continued

6. Directs students to develop a plan of management for the obese adolescent. Include such factors as mental attitudes, cultural background, parents' role, style of living changes, peer approval, appetite control, medical supervision, and balanced diet.
7. Invite a speaker from "Weight Watchers" or have students who are members of this group share their experiences with the class.
8. Assign students to care for adolescent patients on the clinical unit. Appraise individual nursing care plans developed and evaluate actual care given.
9. Discuss and summarize the nursing care of the hospitalized adolescent using the problem-approach method.

Remedial

Counsel students concerning individual strengths and weaknesses.
Offer positive suggestions to improve weak areas.

Enrichment

Show and discuss the film:

Medical Care of the Adolescent

Merck, Sharp, and Dohme Drug Company, Philadelphia, Pa.

Objective 4: The student will be able to give safe, effective nursing care to the adolescent with short-term moderately complex nursing needs short-term moderately complex nursing needs.

Developing Core

Venereal disease is the most common communicable disease in major cities of the world. Syphilis and gonorrhoea, the two

Student Learning Activities

1. Review anatomy and physiology of the reproductive system.
2. Have students develop a comparative study on gonorrhoea and syphilis in men and women.

353

Objective 4- continued

main venereal diseases, affect the reproductive tract primarily. Every socioeconomic level is affected and the incidence of these diseases is increasing. One case of VD does not confer immunity. Persons may be re-infected. The practical nurse should understand the epidemiology of venereal disease, how it is spread, and how it can be controlled

3. Prepare nursing care plan on venereal disease, add pertinent contributions to the clinical unit care plan.
4. Direct students to determine factors in caring for themselves and in protecting others. Teach preventive measures.
5. Review preferred treatments including douche and sitz bath.
6. Discuss drug therapy used in treatment. Mention increasing resistance of the organism to penicillin.
7. Discuss long-term residual effects of gonorrhea and syphilis and how these can be eliminated.

Remedial

Have students outline related material; then offer individual assistance.

Enrichment

Arrange for selected students to attend a venereal disease clinic in a hospital or health department. Share observations with the class.

Invite a guest speaker to discuss contact finding and interviewing.

Objective 5: The student will be able to give safe, effective nursing care to the adolescent with long-term moderately complex nursing needs.

Developing Core

Alcoholism is a major health problem affecting ten million Americans. There has been an enormous increase in alcoholic consumption among middle and secondary school students.

Student Learning Activities

1. Discuss alcoholism. Define incidences, causes, symptoms, stages of illness, treatment, and complications.
2. Have available free pamphlets to alcoholism. Encourage students to write for personal copies.

354

Objective 5-continued

It is an illness that hurts others as well as the person with the disease.

3. Discuss television's approach to alcoholism. What more can be done?
4. Review the body absorption of alcohol in relationship to effects on the central nervous and respiratory systems.
5. Discuss resultant complications of prolonged alcohol usage including malnutrition, vitamin deficiency, anemia, brain and liver damage, and infections. Mention delirium tremens.
6. Instruct students to develop a nursing care plan; discuss with classmates or team members in a clinical conference. Add to involved patient's care plan.
7. Direct students to research available agencies to aid in the rehabilitation of the person with this problem.

Enrichment

Arrange for selected students to visit an alcoholic clinic or an alcoholics anonymous meeting and share experiences with classmates.

Invite a speaker from an alcoholic clinic to discuss the role of this agency.

Evaluation:

1. The student will be able to identify the individual needs of children in order to grow and develop into mature adults.
2. The student will be able to describe the usual patterns of each stage of child growth and development in terms of both physical and psychosocial characteristics.
3. The student will be able to identify the role of parents throughout various stages of development as well as their role when the child is hospitalized.
4. The student will be able to discuss the effects of heredity and environment upon physical and psychosocial development.
5. The student will be able to care effectively for children of varying ages with various conditions; demonstrate knowledge of pediatric safety, illnesses common to children, and empathy toward children and their families.

355

Evaluation (continued)

6. The student will be able to discuss the general concepts of deviation from normal behavior in children; identify and describe several specific conditions; and demonstrate effectiveness in dealing with children who have behavior disorders.
7. The student will be able to list congenital and chronic disorders of various body systems; disorders of metabolism and nutrition describe each condition in relationship to normal body structure and function as well as normal growth and development using medical terminology properly.
8. On the clinical unit, the student will be able to demonstrate competent, comprehensive care to pediatric patients.

356

-E-

HUMAN HEALTH CARE II

MODULE A
MEDICAL-SURGICAL NURSING II

Total Hours: 35
2 class days
3 experience days

NURSING THE PATIENT WITH PROBLEMS OF LOCOMOTION II

Introduction: Care of the patient with complex conditions of the musculoskeletal system is presented in this unit, including arthroplasty and amputation. The principles of physical and psychological care of these patients are applicable to other areas of nursing. The restoration of the patient to optimum mobility and independence through rehabilitation will be emphasized.

Specific Objectives:

The student will be able to:

1. Define the purposes and types of internal fixation and explain the special nursing considerations involved in caring for this patient.
2. Describe the major aspects of medical and surgical management and related nursing measures in the care of patients with complex musculoskeletal impairment including arthroplasty and amputation.
3. Develop a nursing care plan for effective emotional support to patients facing major musculoskeletal surgery or the loss of a limb.
4. Determine the community resources available to the patient and his/her family confronted with a complex long-term musculoskeletal condition.
5. Develop a complete plan of care, emphasizing rehabilitation patterns, for the patient with an arthroplasty and amputation.
6. Demonstrate the ability to give competent, comprehensive care to patients with complex musculoskeletal disorders.

Objective 1: The student will be able to define the purposes and types of internal fixation and explain the special nursing considerations involved in caring for this patient.

Developing Core

Some types of fractures require an operation, internal fixation, for restoration of the fracture fragments into anatomic position for better alignment.

Student Learning Activities

1. Have students review principles of care in treating fractures.
2. Review with students various methods used to maintain fracture fixation. Include casts, splints, continuous traction, pin and plaster technique and internal fixation.
3. Define internal fixation. Explain aligning bone fragments with fixation devices nails, plates, screws, wires, and rods. Also, additional fixation with or without casts and/or splints.

360

Objective 1-continued

4. Review pre-operative care and fully discuss immediate postoperative care.
5. Develop with students nursing management. Stress important aspects as preparation of unit, nursing observations, drug therapy, medical management, specific nursing care, rehabilitation, patient teaching, and home referrals.
6. Plan for student to care for a patient with internal fixation on the clinical unit.
7. Develop with team members during conference, a nursing care plan to meet the needs of the individual patient.
8. Conduct a clinical conference for a selected patient with internal fixation.

Enrichment

Develop a comparative study of internal fixation between the child and the geriatric patient. Discuss in a group session noting differences.

Remedial

Visit a patient with internal fixation to observe nursing management.

Objective 2: The student will be able to describe the major aspects of medical and surgical management and related nursing measures in the care of patients with moderately complex musculoskeletal impairment including arthroplasty and amputation.

Developing Core

The student practical nurse will encounter many situations which will

Student Learning Activities

1. Review the medical management of arthritis. Discuss reasons necessitating surgery.

321

Objective 2-continued

Developing Core

362
require much understanding of human nature in caring for patients with long-term, complex, musculoskeletal impairments.

Student Learning Activities

2. Define and explain: arthrodesis and arthroplasty.
3. Have students examine x-rays or pictures of the vitallium cup.
4. Discuss special nursing care considerations related to the care of this patient. Stress observation of patient for symptoms of pulmonary or fat emboli.
5. Assign students to present a short research paper on recently developed surgical techniques including synovectomy, arthroplasty, arthrodesis, joint replacement, and total hip replacement.
6. Discuss reasons for amputations and ways in which the underlying condition could have been prevented.
7. Identify types of amputation procedures.
8. Present pre and postoperative care, emphasizing special management including rigid plaster dressings and immediate post surgical fittings, care of the stump, and exercise programs. Mention phantom limb sensation.
9. Fully explain the prosthesis, including prescription, fitting, cost, and care. Discuss patient's adjustment to it.
10. Conduct a clinical conference for a selected patient with amputation.
11. Visit physio-therapy department to observe rehabilitation of a patient with amputation.

Enrichment

Arrange for students to observe joint replacement or amputation procedure in the operating room.

Objective 2-continued

Remedial

Visit a patient with amputation to observe nursing management.

Objective 3: The student will be able to summarize effective emotional support to patients facing major musculoskeletal surgery including the loss of a limb.

Developing Core

The student practical nurse must examine his/her personal feelings on the loss of the limb before there can be full understanding on the part of the nurse of the emotional distress expected in these situations.

Student Learning Activities

1. Discuss the emotional impact of an impending amputation. Give students sufficient time to express personal feelings.
2. Divide the students into groups and direct each group to list problems and suggested approaches for necessary amputation occurring in the infant, child, adolescent, adult, and geriatric person. Conclude differences and similarities after class presentations.
3. Present the statement: "Most patients can return as useful members of society." Elicit from students the components necessary to achieve this. Have them identify factors which could slow this progress.

Enrichment

Have students talk with patients and their families about personal thoughts on impending surgery for an arthroplasty and amputation. Encourage students to relate this experience to the class.

Objective 4: The student will be able to determine the community resources available to the patient and his/her family confronted with complex long-term musculoskeletal conditions.

363

Objective 4-continued

Developing Core

In the United States many services are available to patients who find themselves in unfortunate health circumstances. One of the chief responsibilities of the practical nurse, particularly in the comprehensive care of the patient with musculoskeletal impairments, is to become familiar with appropriate agencies and services available in the community.

Student Learning Activities

1. Present ramifications of long-term musculoskeletal conditions.
2. Direct students to compile a list of local agencies providing services to disabled persons with musculoskeletal disturbances. Mention national, state, and local agencies.
3. Assign students to prepare a report on the Arthritis Foundation.
4. Direct student to investigate the referral procedure for patient vocational counseling and job placement.
5. Give students time to peruse booklets from the Arthritis Foundation. Encourage questions and comments.

Remedial

Assess students' weak areas and counsel them accordingly. Review notes, assign reading material.

Enrichment

Invite a person from the Bureau of Vocational Rehabilitation to discuss this organization's role in assistance to the patient and his/her family.

Write a report after visiting a local rehabilitation agency.

Objective 5: The student will be able to develop a complete plan of care, emphasizing rehabilitation needs for the patient with an arthroplasty and amputation.

1. Develop with students guidelines of nursing management in assisting patient to restore function to maximal extent in an arthroplasty. Include continuous management.

The nurse and other members of the rehabilitation team have a responsibility to help the patient to become functionally

364

Objective 5-continued

Developing Core

independent in activities of daily living.

Student Learning Activities

crutch walking, balanced suspension with traction, lying and sitting exercises.

2. Repeat guideline development in the nursing management of the patient with an amputation.
3. Present the role of the rehabilitation team: orthopedic surgeon, prosthetist, physical therapist, occupational therapist, social case worker, vocational counselor, family and nurse.
4. Form a panel discussion to discuss complications to avoid in later years. Possible subject areas: obesity, circulatory insufficiency, and hypertension.

365

Objective 6: The student will be able to demonstrate the ability to give competent, comprehensive care to patients with complex musculoskeletal disorders.

A major role of the health team is to make the maximum application of existing knowledge and resources to reduce the incidence of long-term residual effects of musculoskeletal disturbances.

1. Assign student to patients with relatively complex nursing care requirements. Observe student-patient interaction.
2. Assess nursing care plan developed by the student. Question unclear statements and make suggestions-check assignment.
3. Question student on patient's individual Kardex: drugs, treatment, and diagnostic tests. Compliment strengths. Identify weaknesses and suggest ways of improvement.
4. Evaluate individual student's reporting and recording.
5. Review assigned patient's chart-discuss information pertinent to formulation of the nursing care plan.

Enrichment

Allow student to assess pain of his/her patient and administer nursing measures and medication to alleviate this situation.

Evaluation:

1. The student will be able to define internal fixation; list types; explain purposes.
2. From a nursing care plan, the student will be able to specify adjustments to be made in caring for this patient.
3. The student will be able to describe two primary dangers for the patient following amputation.
4. The student will be able to identify four emotional reactions to amputation.
5. The student will be able to list and explain the care of the stump and management of prosthesis.
6. The student will be able to name three community agencies to refer patient and family requiring long-term care.
7. The student will be able to demonstrate ability to give competent, comprehensive nursing care to patient with musculoskeletal problems.
8. The student will be able to assist the patient and his/her family to make the transition from hospital to home management less traumatic by exploring possible problems and their solutions.

366

Total Hours: 35
2 class days
3 experience days

NURSING THE PATIENT WITH CARDIOVASCULAR DISORDERS II

Introduction: In this unit the student becomes acutely aware of the responsibilities involved in caring for patients who have more complex cardiovascular disorders, chiefly coronary artery disease. These diseases are discussed in all aspects with the emphasis on appropriate nursing considerations and the utilization of community resources.

Specific Objectives:

The student will be able to:

1. Describe coronary artery disorders including angina, myocardial infarction, and congestive heart failure, including etiology, symptoms, therapeutic management, diet and drug therapy, nursing care, and rehabilitation.
2. Demonstrate the ability to carry out the appropriate nursing measures to assist the patient with coronary artery disease in meeting his individual needs.
3. Summarize infectious heart conditions, including causes, incidences, symptoms, medical management and nursing care.
4. Explain the need for heart surgery, recognize the advances occurring in this area, and discuss the emotional aspects involved.
5. Identify the community resources available to assist the patient with a cardiovascular disorder and his/her family in achieving optimal rehabilitation.

Mitral Commissurotomy

Objective 1: The student will be able to describe and discuss the etiology, symptoms, therapeutic management, diet and drug therapy, nursing care and rehabilitation of coronary artery disorders, including angina, myocardial infarction, and congestive heart disease.

Developing Core

368
Coronary artery disease is the number one heart disease today and there are strong indications that the incidence is continually increasing. It is estimated that by the age of thirty, twenty-five percent of the coronary arteries are occluded.

Student Learning Activities

1. Review the structure and physiology of the heart. Discuss the deviations occurring in this disease and the resultant damage.
2. Although the causes is unknown, present the various research theories of possible causes of coronary heart disease. Have student compile a common characteristics list and develop a "high-risk" profile.
3. Discuss the association of coronary artery disease and a high-fat diet. Have students list high-fat, high-cholesterol foods without aid of reference materials. Appraise each student's knowledge and give additional sources.
4. Present all aspects of angina pectoris and myocardial infarction. Assign related reading material and review.
5. Show and summarize Trainex:
Myocardial Infarction
Nursing Care

Objective 1-continued

6. Illustrate initial first aid administered to the victim of a coronary heart attack.
7. Show and summarize Trainex:
Cardiac Emergency Care
8. Diagram the physiology of congestive heart failure. Explain left and right sided failure.
9. Show and summarize Trainex:
Congestive Heart Failure
10. Complement trainex by presenting additional measures of management and care.
11. Give the students a list of specific drugs used in the treatment of coronary artery disease and congestive failure, and have them determine the physiological action occurring that will help control the disease.

Enrichment

Present a clinical conference on "The Patient with a Myocardial Infarction."

Objective 2: The student will be able to demonstrate the ability to carry out the appropriate nursing measures to assist the patient with coronary artery disease to meet his needs.

Developing Core

The practical nurse should keep in mind that the major objective in caring for the patient with a serious cardiac condition is to provide him/her with physical and emotional rest.

Student Learning Activities

1. Assign students to give total care to patients with moderately complex cardiovascular disorders.
2. Discuss plan of nursing care developed by student. Question student on underlying principles and make suggestions.

369

Objective 2-continued

3. Appraise actual nursing care given by students.
4. Direct students to read and compare histories, tests and medical management of patients with cardiovascular diseases.

Remedial

Assign additional reading material and counsel individual students.

Provide students with special constant observation.

Enrichment

Allow student to assist with critical care of patients with coronary disease.

- Objective 3: The student will be able to summarize infectious heart conditions, including causes, incidences, symptoms, medical management, nursing care, and rehabilitation.

Developing Core

Organic heart disease frequently results from microorganisms invading the entire heart. An acute attack can produce residual effects that abruptly change the life style of the patient who is often in his/her most productive period.

Student Learning Activities

1. Discuss all aspects of rheumatic fever, subacute bacterial endocarditis, and cardiovascular syphilis.
2. Have students relate ways of eliminating predisposing factors that contribute to infectious heart disease.
3. Direct students to choose appropriate diversional activities for the patient with chronic rheumatic heart disease.
4. Role-play a situation in which the adult patient must limit his/her activity. Anticipate emotional responses and respond to each.

370

Objective 4: The student will be able to explain the need for heart surgery, recognize the advances occurring in this area, and discuss the emotional aspects involved.

Developing Core

Heart surgery is viewed as a new chance at life for many persons, because often there is no other treatment which can help them. Patients and their families facing impending cardiac surgery are very apprehensive and the practical nurse most likely will encounter the patient preoperatively. He/she and the family should know the patient as well as possible in order to offer the necessary support and understanding.

Student Learning Activities

1. Discuss the common conditions necessitating heart surgery.
2. Differentiate between open and closed surgical techniques.
3. Allow students to examine pictures of heart-lung machines. (Pump oxygenator). Summarize use of these machines.
4. Direct students to collect information from newspapers, magazines, and periodicals on the latest advances in heart surgery.
5. Have each student respond to the statement, "I have to have heart surgery and I feel..." by writing a paragraph expressing the emotional responses occurring.
6. Describe ways of anticipating supportive needs of the patient and his/her family.
7. Discuss the ethical aspects of transplants.

Enrichment

Show film: Mitral Commissurotomy
Source: American Heart Association

Objective 5: The student will be able to recognize the community resources available to assist the patient and his/her family in achieving optimal rehabilitation.

Cardiovascular disease can be prevented in many persons through proper health education and many

1. Discuss public education measures designed to prevent cardiovascular diseases. Obtain student responses as to effectiveness of these programs.

Objective 5-continued

of those who have circulatory impairments can be helped to live long, useful lives.

2. Develop a brochure on local community resources available to the patient. Direct students to collect information from phone directory and United Way materials. Include agency, address, and chief functions.
3. Invite a speaker from the American Heart Association to discuss latest trends and research in cardiovascular disturbances.
4. Divide class into groups and direct students to create diversional activities and develop rehabilitation plans for patient with cardiovascular impairment. Include specific diseases and family situations.

Enrichment

Encourage students to volunteer assistance in local Health-O-Ramas.

Visit a Cardiac Club meeting at a local hospital. Relate experiences to class.

Evaluation:

1. The student will be able to describe all aspects of the care of patients having coronary artery disorders including angina, myocardial infarction, and congestive heart failure.
2. On the clinical unit, the student will be able to demonstrate the ability to carry out appropriate nursing measures and therapy assist the patient with coronary artery disease in meeting his individual needs.
3. The student will be able to summarize infectious heart conditions, including etiology incidences, symptoms, medical management, and appropriate nursing care.
4. The student will be able to explain two common indications for heart surgery and emotional ramifications involved.
5. The student will be able to identify the community resources available to assist the patient and his/her family in achieving optimal rehabilitation.

372

Total Hours: 35
2 class days
3 experience days

NURSING CONCEPTS IN THE CARE OF PATIENTS WITH RESPIRATORY EMBARRASSMENT II

Introduction: Chronic respiratory diseases are a serious health hazard. The disability and loss of productivity of these patients present a great national loss in manpower and increased disability benefits. The objective of health education is based on prevention; early diagnosis; treatment; and rehabilitation. This unit provides the student an opportunity to assist or give nursing care to patients with chronic respiratory disturbances.

Specific Objectives:

The student will be able to:

1. Explain fully internal and external respiration and interpret the use of the accessory organs of respiration.
2. Demonstrate the ability to give safe nursing care to patients with advanced respiratory problems.
3. Assist in the preparation of patients for diagnostic procedures and interpret these to patients.
4. Recognize and use appropriate measures in the care of patients receiving oxygen and physiotherapy.
5. Determine the effects of medicine and diet in the treatment of patients with advanced respiratory diseases and accurately record and report these observations.
6. Assist the registered nurse in the evaluation of the patient and his/her family needs in preparation for discharge.
7. Discuss predisposing factors and common medical treatment of cancer of the lung; and demonstrate the ability to assist the patient to meet his/her individual needs.
8. Demonstrate the ability to give nursing care or assist the registered nurse in the care of patients with lung surgery.
9. Assist the registered nurse in giving nursing care to patients with respiratory insufficiency and respiratory failure.

References-cont.

Written

Wood, Lucille A. Nursing Skills For Allied Health Services, Vol. I, II, and III Philadelphia: W.B. Saunders Company, 1972.

Objective 1: The student will be able to explain fully internal and external respirations and interpret the use of accessory organs of respiration.

Developing Core

Due to the high incidence of air pollution and smoking, the number of patients with chronic respiratory diseases has increased.

Student Learning Activities

1. Review structure and function of the lungs diaphragm and intercostal muscles.
2. Describe the effect of lack of lung function upon the diaphragm and thoracic cage. Use the vital capacity apparatus to demonstrate function.
3. Draw a diagram to show the exchange of oxygen and carbon dioxide in normal respiration.
4. List the body need for oxygen and contrast this to the affect of carbon dioxide respiration. Use a flow chart to show high concentration effects on the body function of these two gases.
5. Compare the vital capacity of smoking and non-smoking students. Discuss differences.

Objective 2: The student will be able to demonstrate the ability to give safe nursing care to patients with advanced respiratory problems.

Chronic obstructive lung disease

1. As a class project have students develop a poster showing

Objective 2-continued

includes a group of conditions associated with chronic obstruction of air entering or leaving the lungs. The conditions are: chronic bronchitis; emphysema; and asthma.

signs and symptoms of C.O.L.D. or C.O.P.D. demonstrating obstructed air passages.

2. Allow students to compare x-ray films of patients with C.O.L.D. with normal x-ray films of the chest. Emphasize differences:
3. From previous classes on disposal of secretions, apply principles of preventive care to these nursing situations.
4. Assign students to give total patient care to patients with moderately complex respiratory impairment.
5. Appraise nursing care plans developed by students. Seek the "whys" of their priorities.
6. Evaluate nursing care, patient-student and staff-student interaction, recording and reporting actually done by the student. Conference individual students on findings.

Objective 3: The student will be able to assist in the preparation of patients for diagnostic procedures and interpret these to patients.

Developing Core

The objective of treatment is to slow the disease progress.

Assisting in the preparation of patients and obtaining of laboratory specimens is an essential part of nursing management.

Student Learning Activities

1. Direct the student to assist the technician or registered nurse with the collection of blood gases and then report to class preparation of equipment, laboratory requisitions, patient's preparation, and response to specific treatment.
2. Have students assist in the collection of sputum specimens for culture and sensitivity 24 hour sputum culture.
3. Lead a class discussion: select a patient experience, or text from clinical with C.O.L.D., students will present the medical and nursing management emphasizing the following:

376

Objective 3-continued

- A. prevention and treatment of infection.
- B. management of secretions of the bronchi.
- C. use of I.P.P.B. and physical therapy.
- D. environmental control in facilitating ventilation.
- E. psychological support.
- F. education of patient and his/her family

Objective 4: The student will be able to recognize and use appropriate measures in the care of patients receiving oxygen and physiotherapy.

Developing Core

Physiotherapy and inhalation therapy are an important part of treatment for C.O.L.D. patients.

Advanced C.O.L.D. patients need frequent clearing of air passages.

Student Learning Activities

1. Allow students to visit the Inhalation Therapy Department with a patient and observe treatment. Report observations to class.
2. Observe physiotherapist or nurse doing cupping, clapping, and postural drainage exercises. Follow up by assisting patient with exercises on the patient unit.
3. Make a list of patient observations, noting hypoxia and discuss nursing management, emphasize patient need and family response.
4. From inhalation therapy and patient care observations demonstrate throat suctioning and intubation, emphasize safety precautions. Use trainex.
5. Have students assist in the preparation of a patient for bronchoscopy and follow through with observation of the procedure. Write a brief nursing care plan for his/her patient, include pre and post-operative care.

3.77

Objective 5: The student will be able to determine the effects of medicine and diet in the treatment of patients with advanced respiratory diseases and accurately record and report these observations.

Developing Core

Chemotherapy is essential in the management of C.O.L.D. Restricted sodium in the diet is an important part of treatment in order to prevent fluid accumulation.

Student Learning Activities

1. Explain from a C.O.L.D. patient's chart the list of drugs that he is taking in treatment. Have students develop medication cards and administer these drugs if possible. In discussion, compare these to suggested chemotherapy in textbooks, emphasizing patients' needs and effectiveness of drugs in recording and reporting.
2. Discuss the patient's reaction to diet and explain low sodium in relation to patient needs. Show in summary: effects of drugs and diet on patient.

Objective 6: The student will be able to assist the registered nurse in the evaluation of the patient and family needs in preparation for discharge.

C.O.L.D. patients must learn to live within prescribed limitations.

1. Assign students to assist in the preparation of a patient with C.O.L.D. for discharge. Identify the following observations:

- A. patient response to using equipment
- B. understanding use of equipment
- C. emotional response of family to equipment and medication
- D. diet (low sodium or salt restricted)
- E. patient awareness of activity tolerance
- F. information given to family to provide support and promote patient health

Enrichment

1. Assign student visit to the pulmonary function laboratory with a patient and share observations with class.
2. Visit a teaching class for C.O.L.D. patients and report

Enrichment-cont.

to class.

View Trainex I.P.P.B. I and II
Ultrasonic Nebulizer

Objective 7: The student will be able to discuss predisposing factors and common medical treatment of cancer of the lung; and demonstrate the ability to assist the patient to meet his/her individual needs.

Developing Core

Cancer of the lung has increased remarkably during the last twenty years.

Patients undergoing chest surgery need a great deal of physical and psychological support. A tour of the operating room and recovery room and explanation of chest tubes is a part of patient and family teaching.

Student Learning Activities

1. Make a diagram showing the increase in number of reported cases of cancer of the lung over past twenty years.
2. From a patient's chart (history sheet) list signs and symptoms of cancer of lung. Compare these with the text-book picture.
3. Encourage students to discuss from respective communities their experiences with persons having cancer of the lung.
4. Identify and explain the possible surgical procedures for cancer of the lung patients.
5. Explain patients and family's reaction to diagnosis and how their needs can be met by the health team.
6. Obtain students responses to meeting these needs.

Objective 8: The student will be able to demonstrate the ability to give nursing care or assist the registered nurse in the care of patients with lung surgery.

Patients undergoing chest surgery most frequently have chest tubes.

- 1: Demonstrate and discuss the safety precaution which must be observed in the care of patients with chest tube drainage.

379

Objective 8-continued

2. Differentiate after viewing trainex the application of principles applied to the patient.
3. Distinguish differences in equipment used in trainex and that which is used in the cooperating hospital.

Objective 9: The student will be able to assist the registered nurse in giving nursing care to patients with respiratory insufficiency and respiratory failure.

Developing Core

Respiratory insufficiency occurs because the exchange of oxygen and carbon dioxide is not sufficient to meet body needs.

This occurs in many conditions such as chronic obstructive lung disease and cancer of the larynx.

Student Learning Activities

1. Contrast the need for ventilation of a patient with C.O.L.D. to that of a patient with cancer of the larynx.
2. Demonstrate and discuss the safety precautions which must be observed in the care of a patient with a tracheostomy.
3. After viewing the trainex contrast the application of principles applied to the patient.
4. Evaluate the patient needs with C.O.L.D. and cancer of the larynx. Include all physical aspects. Differentiate the emotional needs of these patients and their families.
5. Direct students to develop a plan of care for the patient with a permanent tracheostomy after discharge from hospital. Orally discuss these plans.

Enrichment

Arrange for a speaker from "Lost Cord Club" to speak to the class and/or encourage students to attend a meeting of this group.

380

Evaluation:

1. The student will be able to review the pretest from previous knowledge of the respiratory system and retake the written exam from Human Health Care I.
2. The student will be able to determine recall of previous instruction and knowledge.
3. The student will be able to demonstrate knowledge of advanced respiratory diseases in meeting patients individual needs by applying nursing principles and practices with safety.
4. On a written test, the student will be able to exhibit by analysis and selection, knowledge of deviations from normal structure function, drugs, pre and postoperative care for patients with C.O.L.D. and cancer, diagnostic procedures, diet, and nursing skills.
5. The student will be able to demonstrate and explain safe, effective nursing measures utilized in meeting the needs of patients with a tracheostomy.
6. The student will be able to demonstrate the ability to function in the team concept when giving nursing care to patients with advanced respiratory diseases.
7. The student will be able to satisfactorily complete written assignments.

381

Total Hours: 32
2 class days
2.5 Experience days

BASIC CONCEPTS APPLIED TO PATIENTS WITH NEUROLOGICAL CONDITIONS II

Introduction: This unit is designed to help the student identify and give effective nursing care to the patient with neurologic injuries and surgery.

Specific Objectives:

The student will be able to:

1. Explain pathology resulting from injury or disease of the nervous system.
2. Identify causes of injury to spinal cord and brain; recognize and list emergency measures.
3. Give effective nursing care to the patient with neurosurgery.

322

Audio-Visual

Trainex

Care of the Patient with a Head Injury
Surgical Treatment of Herniated Lumbar Disk

Stryker Frame

Objective 1: The student will be able to explain pathology resulting from disease or injury to organs of the nervous system.

Developing Core

A sound knowledge of normal anatomy and physiology is a prerequisite to the understanding of the deviations occurring from disease conditions and injuries. Perhaps these underlying principles are even more essential in the care of the patient with neurologic impairment than in other disturbances.

Objective 2: The student will be able to identify causes of injury to the spinal cord.

Head injuries most often result from automobile accidents. Injuries vary from minor scalp wounds to open fractures with severe damage to brain tissue.

Student Learning Activities

1. Review anatomy and physiology of the nervous system.
 2. List and discuss symptoms a patient may have resulting from destruction of the dorsal columns of the white matter of spinal cord.
 3. Elicit from students' explanations why an injury above the C-3 level of the spinal cord will cause death.
-
1. Create a sociodrama of a patient with head injury including:
 - a. care at scene of accident
 - b. hospital care
 2. Show Trainex: "Care of Patient with head injury". Group discussion and summarization.
 3. Within the class develop a nursing care plan for patient including:
 - a. observations
 - b. rest
 - c. dehydration and output
 - d. diet
 - e. self-evaluations of his/her nursing care plan
 4. List and discuss emergency treatment. Include the "pack in ice" theory including precautionary measures in emergency room.
 5. Role play the emergency care of an accident victim with a possible head injury.

Objective 3: The student will be able to give effective nursing care to the patient requiring neurosurgery.

Developing Core

A craniotomy is a very frightening experience for both patient and family. The student can assist in reducing these anxieties if she understands pre and postoperative care of patient facing this surgery.

Injury and disease to the spinal cord demonstrates the interrelationship between orthopedics and neurology.

Pressure on the spinal cord is treated by identifying the cause of pressure and removing the cause.

Student Learning Activities

1. Compile a list of causes for performing craniotomy.
2. Students give report of the following: diagnostic tests; including physical and psychological preparation:
 - a. pneumoencephalogram
 - b. ventriculogram
 - c. electroencephalogram
 - d. neurological testing
3. Review the principles of preoperative nursing care and illustrate adjustments made for patient requiring brain surgery including verbal communication.
4. Direct students to develop a nursing care plan for post-operative nursing management. Modify to meet the specific needs of a patient following a craniotomy.
5. Have group list common causes of injury to spinal cord and discuss symptoms and list preventive measures.
6. Review and discuss pertinent diagnostic tests.
7. Discuss the principles of nursing adjusted to the needs of patient with injury to spinal cord including: position, movement, observation, hygiene, diet, pain, and observation of reaction to pain medication.
8. Assign students to visit the physical-therapy department. Compare rehabilitation of patient with spinal cord injury with a patient having a musculoskeletal disorder. Report to group.
9. Have students explain term "slipped disk"; discuss causes; predisposing factors; methods of prevention; symptoms; diagnostic tests.

384

MICROCOPY RESOLUTION TEST CHART
 NATIONAL BUREAU OF STANDARDS-1963-A

Objective 3-continued

10. Clinical Conference: assign students a patient with a ruptured disk. Compare patient's background with above. Justify differences.
11. Discuss conservative medical management and emphasize nurses' responsibility. Discuss correlation between neurology and orthopedics.
12. Have students practice being "patient" and turning on Stryker frame.
13. Show Trainex: "Surgical Treatment of Herniated Lumbar Disk".
14. Compare a laminectomy with a spinal fusion. Stress major limitations of spinal fusion.
15. Describe the postoperative nursing care and compare with conservative methods of treatment.
16. Summarize all aspects of patient care with a clinical conference.

Evaluation:

1. The student will be able to describe completely emergency treatment of a patient with head injury.
2. The student will be able to list significant observations of patient with brain injury.
3. The student will be able to give effective nursing care to patients with brain surgery.
4. The student will be able to discuss the interrelationship between orthopedics and neurology and give five illustrations.
5. The student will be able to give complete description of emergency treatment of patient with spinal cord injury.
6. The student will be able to give effective nursing care to patients with surgery of spinal cord.

385

Total Hours: 25
1 class days
2.5 Experience days

THE IMPACT OF AUDIO-VISUAL IMPAIRMENT IN THE INDIVIDUAL II

Introduction: Degenerative conditions of the eye and ear are tragically increasing each year despite greater emphasis on public education and preventive measures. The purpose of the unit is to alert the student to the many facts involved in the care of the patient with these impairments and assist him/her in attaining the knowledge, skills, and attitude necessary in providing these patients with optimal physical care and emotional support.

3/8/6

Specific Objectives:

The student will be able to:

1. Describe the disease course, medical and surgical management, and related nursing care of the patient who has degenerative disorders of the eye and ear including cataracts, detached retina, glaucoma, Meniere's Syndrome, and otosclerosis.
2. Discuss general nursing considerations in the pre and postoperative nursing care of the patient having eye and ear surgery.
3. Explain the special nursing needs of the patient who is partially sighted or blind.
4. Explain the special nursing needs of the patient who has a hearing loss or is deaf.
5. Apply principles of dietary management in the care of the patient with a sensory impairment.
6. Recognize the effectiveness of community resources available to the patient and his/her family in long-term rehabilitation.
7. Perform the skills necessary to give effective, safe, and supportive care to patients with degenerative disorders of the eye and ear.

Field Trips

School for the Blind
School for the Deaf

Objective 1: The student will be able to describe the disease course, medical and surgical management, and related nursing care of the patient who has degenerative disorders of the eye and ear including cataracts, detached retina, glaucoma, Meniere's Syndrome, and otosclerosis.

Developing Core

The danger of procrastination must be stressed in seemingly minor eye and ear conditions since some of these diseases progress rapidly, and permanent damage may occur quickly.

Student Learning Activities

1. Discuss deviation from normal structure and how vision is affected with a cataract disorder. List chief symptoms. Present types and incidences of occurrence and etiology.
2. Discuss how the surgery for congenital and adult or senile

Objective 1-cont.

Developing Core

The student practical nurse will encounter patients who have developed degenerative disorders of the eye and ear and will require competent physical care and emotional support.

Student Learning Activities

- cataracts differ. Define and discuss cyrosurgery.
3. Obtain student responses to the statement-"A cataract can only be operated on when it is ripe." Explain a nurse's responsibility in answering this question.
 4. Discuss nursing care, prognosis, and follow up care of the patient who has had a cataract extraction. Mention the prosthetic lens.
 5. Review function of the retina and explain what happens when it becomes detached. List possible causes of this occurring.
 6. Demonstrate immediate care for this condition. Relate symptoms.
 7. Conservative treatment for this disorder has not been effective. Mention several techniques of surgical management available and more fully explain the laser beam technique.
 8. Discuss related nursing care, follow-up plan and prognosis. Discuss the use of pinpoint glasses.
 9. Define glaucoma, its increasing incidence and possible causes of both primary and secondary types.
 10. List the symptoms. Define tunnel vision. Differentiate medical management for acute and chronic glaucoma.

388

Objective 1-cont.

Student Learning Activities

11. A patient with glaucoma needs assistance in accepting his/her disease. Role play this situation. Stress the necessity of medical care for the rest of life.
12. Conclude the essential factors in the successful control of glaucoma. Define iridectomy.
13. Identify the disease course of Meniere's Syndrome and the typical symptoms associated with this disorder. Explain caloric test.
14. Discuss therapeutic management, related nursing care and prognosis of this disorder.
15. Mention the work of Temporal Bone Banks Program for Ear Research.
16. List and define the kinds of deafness.
17. Introduce disease course, incidence, etiology and symptoms of otosclerosis.
18. Summarize operative procedures for otosclerosis. Include stapes mobilization, stape-ectomy, fenestration and Shea procedure. Define the use of otomicroscope.
19. Discuss related nursing care, patient teaching, and prognosis.
20. Divide class into groups and have each group develop a complete nursing care plan for patients with each disorder discussed. Present this care plan to total class.

Remedial

Review material in textbook and seek teacher assistance in summarizing important factors.

389

Enrichment

Seek further information in reference books and periodicals.

Objective 2: The student will be able to discuss general nursing considerations in the pre and postoperative nursing care of the patient having eye and ear surgery.

Developing Core

390
It is impossible to outline specific routines for pre and postoperative management of the patient who is having eye or ear surgery as this care varies greatly with the location, hospital, eye surgeon, and newer techniques being developed. Therefore, general principles of nursing care should be presented.

Student Learning Activities

1. Lead an oral review of pre and postoperative care in general.
2. Allow students to express their thinking on how pre and postoperative care might differ for the patient having eye or ear surgery.
3. Review common types of eye and ear operative procedures.
4. Direct students to summarize from notes the commonalities of nursing care for each surgical condition.
5. Have the total class develop general nursing considerations for pre and postoperative care of the patient having eye and ear surgery. Encourage participation from entire group. Seek the "why" for each point expressed.
6. List activities of daily living and develop adaptations for the patient with eye and ear impairment. Encourage creative thinking i.e. How does deaf person living alone hear the alarm clock.

Objective 3: The student will be able to explain the special nursing needs of the patient who is partially sighted or blind.

Despite the best medical and nursing care available, some patients

1. Discuss statistics on blindness. List causes. Once again, reinforce preventive measures. Define legal blindness.

Objective 3-continued

will become partially or totally blind. Unfortunately the incidence of blindness is tragically increasing each year. The student practical nurse will discover that the emotional reactions to threatened or actual loss of sight are often severe and the psychological support required is most challenging.

2. Obtain students reactions as to the differences in adjustment for the congenitally blind and for the person who loses his/her sight. Conclude thinking in each instance.
3. Allow students to experience blindness by blindfolding them for a short period of time.
4. Fully discuss the psychological aspects in adjusting to blindness and ways of coping with these emotional reactions. Mention "mistaken kindness."
5. Present a general rehabilitation plan for the newly blinded person keeping in mind that two thirds of blind persons lose their sight after the age of twenty. List handicaps present and how they can be greatly lessened.
6. Discuss artificial eyes. Include types, cost, care, and if available demonstrate this care. Invite a speaker from the Guild for the Blind to discuss newer techniques and trends in coping with blindness.
7. Mention Eye Banks and Corneal transplants.

Objective 4: The student will be able to explain the special nursing needs of the patient who has a hearing loss or is deaf.

Developing Core

It is estimated that over fifteen million persons in the United States have a hearing defect. For the majority of these people, this impairment began in childhood and for the most part these losses could have been lessened or even prevented with prompt, effective medical attention and proper health teaching.

Student Learning Activities

1. Discuss statistics on deafness. Review causes. Reinforce preventive measures.
2. Allow students to express thoughts on deafness and experience what it must be like. Have students cover ears and try lip reading.
3. List the handicaps that would be present and ways in which to cope with these.

391

Objective 4-continued

4. Research studies have proven that the deaf person has far more difficulty in adjusting to reality than the blind person. Discuss reasons for this as well as all psychological aspects involved in the adjustment to deafness.
5. Present a general rehabilitation plan for the deaf person. Differentiate between habilitation and rehabilitation.
6. Discuss hearing aids include use, effectiveness, care, cost, and maintenance. If available present an example of one, explain mechanism and demonstrate care.

Enrichment

Invite someone experienced in working with the deaf person to discuss newer techniques and trends in caring for these persons.

Objective 5: The student will be able to apply principles of dietary management in the care of the patient with a sensory impairment.

Developing Core

Apparently there is a direct relationship between good nutrition and eye health. Deficiencies in vitamins A, B, and C can cause pathological changes in the eye structure. Many doctors have instituted vitamin therapy as one aspect in the medical management of eye and ear conditions.

Student Learning Activities.

1. Present the relationship between good nutrition and the sensory system.
2. List diseases that most frequently cause pathologic changes in the eye and ear. Relate the role of nutrition in these diseases.
3. Review the functions of the A, B, and C vitamins and relate how a deficiency of each can cause eye and ear manifestations.
4. Demonstrate teaching the blind patient to independently feed him/herself using the clock position technique.

Objective 5-continued

Developing Core

Student Learning Activities

5. Assign students to eat a meal blindfolded. Present a class discussion to relate individual reactions, problems, and solutions.
6. Discuss ways of ensuring adequate nutrition to the person who has impairment of the taste and smell senses. List most appetizing foods.
7. Discuss food preparation adaptations for the person with visual or hearing impairment.

Objective 6: The student will be able to recognize the community resources available to the patient and his/her family in long-term eye and ear impairment.

Treatment of some diseases of the eye and ear is often long and can periodically recur. This prolonged treatment, necessary especially in glaucoma and Meniere's Syndrome, may prove a serious financial and psychological burden to the patient and his/her family. Much support is provided by the health team and the available community resources.

1. Distribute copies of Braille examples and summarize the system. Explain "talking books." Discuss sign language.
2. Fully discuss the mobility of the patient. Mention Seeing Eye Inc. and their procedures. Show or describe the specially constructed cane used by the blind.
3. List types of jobs available to the blind person and explain where they might acquire the skills necessary to compete for these positions. Do the same for the deaf person.
4. List the local, state, and ^{national} ~~national~~ associations and resources available to assist the blind or deaf individual. Have information on each available.
5. Direct students to develop a complete rehabilitation plan, including diversional activities for the blind and deaf persons. Have subsequent class presentations.

393

Objective 6-continued

Enrichment

Accompany students on a field trip to the School for the Blind. Discuss observations (individual) in a total class setting.

Repeat this experience at the School for the Deaf.

Objective 7: The student will be able to perform the skills necessary to give effective, safe, and supportive care to the patients with degenerative disorders of the eye and ear.

Developing Core

It is hoped that the student practical nurse will be able to transfer the underlying scientific principles and special nursing considerations learned in the classroom to the clinical unit without difficulty.

Student Learning Activities

1. Assign students to give total care to patients with more complex eye and ear disorders.
2. Discuss plan of nursing care developed by student. Question students about underlying principles and make suggestions.
3. Appraise actual nursing care given by students. Convey this to the student.
4. Direct student to utilize time on clinical unit to allow for reading and comparing histories, tests, and medical management of patients with eye and ear disturbances.

Remedial

Provide student with special constant observation. Offer positive suggestions.

Enrichment

Allow student to care for and accompany to the operating room a patient having eye or ear surgery. Share observations with class.

394

Evaluation:

1. The student will take a written examination in relation to disease courses, medical and surgical management, and related nursing care of the patient who has degenerative disorders of the eye and ear.
2. The student will explain and summarize general nursing considerations involved in the pre and postoperative care of patients having eye and ear surgery.
3. The student will discuss fully the special nursing needs of the patient who is partially sighted or blind.
4. The student will identify and cope with special nursing needs of the patient who has a hearing loss or is deaf.
5. Given situations in which the patient has a sensory impairment, the student will apply principles of dietary management ensuring proper nutrition.
6. The student will recognize the effectiveness of the community resources available to the patient and his/her family in long term rehabilitation.
7. On the clinical unit, the student will perform the skills necessary to give effective, safe, and supportive care to patients with degenerative disorders of the eye and ear.

395

Total Hours: 35
2 class days
3 experience days

CONCEPTS BASIC TO THE CARE OF PATIENTS WITH GASTROINTESTINAL DISTURBANCES II

Introduction: The student will encounter many patients who have moderately complex, relatively long-term gastrointestinal disturbances. These persons will deserve and expect competent, effective nursing care. This unit is designed to assist the student in providing this care.

Specific Objectives:

The student will be able to:

- 396
1. Discuss medical management with emphasis on nursing care of patients who have a disorder of the mouth or have had oral surgery.
 2. Describe the disease course, medical management, and related nursing care of patients who have complex, long-term gastrointestinal disturbances including cancer, peptic ulcers, and ulcerative colitis.
 3. Discuss the psychological and physical aspects in the care of a patient with a colostomy or ileostomy.
 4. Describe the disease course, medical and surgical management, and related nursing care of patients with disorders of the accessory organs including cancer, cholecystitis, cirrhosis, hepatitis, pancreatitis, and peritonitis.
 5. Demonstrate effective and safe nursing care to patients who have complex long-term gastrointestinal disturbances including competency in performing special nursing procedures.
 6. Identify the community resources available to the patient and his/her family with long-term gastrointestinal disturbances.

- Oral Cancer-#3748
- Nursing Management of the Patient with Head and Neck Cancer-#3780 PE

Objective 1: The student will be able to discuss medical management with emphasis on nursing care of patients who have a disorder of the mouth or have had oral surgery.

Developing Core

Because of the emotional significance of the mouth, severe psychological reactions frequently occur when medical and nursing care involving the mouth is necessary. Many disease conditions affecting the mouth many not appear dangerous, but that can be uncomfortable, painful, and at times unattractive or even disfiguring.

Student Learning Activities

- 1. Discuss the emotional significance of the mouth.
- 2. Present major structures and their function. Include teeth, tongue, salivary glands, oral mucosa, and bone structures.
- 3. Using a model or diagram allow students to examine and identify the ~~integral~~^{interior} of a tooth.
- 4. List ways of preventing dental disease. Discuss general care of the teeth. Establish the correlation between good

397

Objective 1-continued

Developing Core

It is imperative that the student practical nurse be knowledgeable in this area in order that he/she may best benefit the patient.

Student Learning Activities

nutrition and dental health. Have students demonstrate proper toothbrushing and dental flossing.

5. Identify causes of specific diseases of the mouth. Emphasize preventive measures.
6. Define stomatitis, parotitis, leukoplakia, edentulous, prosthesis.
7. Present major aspects of tumors of the mouth and subsequent surgery. Mention radical neck dissection. Also fractured jaw and wiring. Use drawing to explain intricate wiring.
8. Discuss nursing care related to oral surgery and the special considerations involved.
9. Assign student to read related material in textbook.
10. Explain radiation therapy and nursing responsibilities in providing care. Stress precautions.
11. Discuss prognosis, follow up and rehabilitation for the patient with cancer of the mouth. Discuss psychological impact on family of patient in terminal cases.
12. Present nutritional aspects involved in these diseases.
13. Show and summarize Trainexes:
Nasogastric Intubation
Gavage Feeding
14. Identify purposes of a gastrostomy and explain feeding and modified care related to this patient management procedure.
15. Summarize pertinent nursing care measures of the patient with mouth disorders and oral surgery.

398

Objective 2: The student will be able to describe the disease course, medical management, and related nursing care of patient who have moderately complex, long-term gastrointestinal disturbances including peptic ulcers, cancer, and ulcerative colitis.

Developing Core

The student practical nurse will have frequent experiences in providing care and comfort to patients with rather complex gastrointestinal disturbances. An acute awareness of the major disorders affecting this system is essential in identifying the nursing needs needed to assist the patient in reestablishing optimal health.

Student Learning Activities

1. List and discuss the three factors that greatly influence the development of a peptic ulcer.
2. Compare and contrast gastric and duodenal ulcer factors. Explain how medical management might differ.
3. Discuss medical management of ulcers include rest, diet, drugs and preventive health teaching.
4. List probable complications requiring surgery. Define operative procedures i.e. gastric resection, vagotomy, gastrojejunostomy, gastroenterostomy, anastomosis.
5. Acquaint students with special procedures associated with gastrointestinal disturbances.
6. Show and summarize Trainex:
Gastric and Gastrointestinal
Decompression
7. Allow students to examine pictures or actual examples of nasogastric tubes including Levin, Cantor, Blakemore. Discuss differences.
8. Summarize diet therapy principles in peptic ulcers—have students give rationale for each principle.
9. Allow students to respond to the question "Which dietary approach is more valid—the traditional conservative treatment or the liberal individual approach?" Seek evidence to support each response.

399

Objective 2-continued

Developing Core

Student Learning Activities

10. Present recent statistics on the incidence of cancer of the gastrointestinal tract.
11. Discuss special nursing procedures in the care of the cancer patient pre-operatively, including special enemas and removal of fecal impaction.
12. Present major aspects of medical and surgical management to the patient with cancer or ulcerative colitis.
13. Discuss prognosis and follow up care of the above conditions. Include patient health education.
14. Summarize total patient care of these patients by developing a chalkboard nursing care plan with content supplied by student verbal responses. Assess methods of evaluation of nursing care.

Objective 3: The student will be able to discuss the psychological and physical aspects in the care of the patient with a colostomy or ileostomy.

1. Elicit from students responses that may be expected from patients who have been told that their condition warrants a colostomy or ileostomy.
2. From their knowledge of basic psychology, discuss which defense mechanisms might be employed and which would be the best way to cope with these reactions.
3. Assign student s to present a profile to the patient with ulcerative colitis, then explain how characteristics of this basic personality will be greatly intensified when an ileostomy is inevitable.

Nursing care of patients requiring an ileostomy or colostomy requires perhaps more understanding and acceptance by the nurse than the majority of other disease conditions. Acceptance of the patients behavior along with interested, intelligent care greatly assists the nursing staff in gaining the patient's confidence and will increase his/her adjustment to essentials of treatment.

4.66

Objective 3-continued

Developing Core

Student Learning Activities

4. List anticipated problems and suggested approaches for solving these. Summarize pre and postoperative psychological aspects of the patient and family having a colostomy or ileostomy.
5. Discuss specific nursing considerations to be expected in caring for the patient with ostomies.
6. Show and summarize Trainex:
Colostomy Irrigation
7. Allow students to view pictures or examples of ostomy equipment.
8. Give students a list of patient physical needs and have them, without the aid of references, explain how they would assure that the patient was getting proper care.

Objective 4: The student will be able to describe the disease course, medical and surgical management, and appropriate nursing care of patients with disorders of the accessory organs including cancer, cholecystitis, cirrhosis, hepatitis, pancreatitis, and peritonitis.

The accessory organs of the gastrointestinal system are affected by a variety of disease, many of which need not necessarily occur if the public were better informed in good health and hygiene practices.

A. sound knowledge of the

1. Describe common symptoms associated with diseases of the accessory gastrointestinal organs. Emphasis should be placed on the alleviation of problems associated with jaundice including pruritus, hemorrhage, and emotional ramifications. Have students discover why each of these problems occur and how to make the patient more comfortable.
2. Reinforce preventive factors in lessening the incidences

10h

Objective 4-continued

Developing Core

common diseases of these structures as well as the medical and nursing care essential to alleviating problems is essential in satisfactorily assisting the patient to regain optimal health.

Student Learning Activities

of these disorders.

3. Discuss medical and surgical management of cancer of the liver, cholecystitis, cirrhosis, hepatitis, pancreatitis, and peritonitis.
4. Differentiate viral and serum hepatitis and the etiology of each. Discuss reasons why this disease is greatly increasing.
5. Discuss complications occurring in cirrhosis of the liver and the management of these complications.
6. Show and summarize Trainex:
Abdominal Paracentesis
7. Direct student to outline related material in their textbook.
8. Discuss nutritional therapy for the patient with cirrhosis: Discuss ways in which to increase his/her appetite.
9. Define operative procedures in biliary tract surgery: cholecystectomy; cholecystostomy; choledocholithotomy. Have student practice pronunciations and spellings.
10. Mention T-tube and its purpose and care.
11. Divide class into four groups and have each develop nursing care plans on a patient with:
 - a. cholecystitis with subsequent cholecystectomy
 - b. cirrhosis of the liver with esophageal varices
 - c. viral hepatitis
 - d. cancer of the pancreas

452

Objective 4-continued

Developing Core

Student Learning Activities

Make copies of each plan and have the groups present their care plan to the class. Encourage students to make additions and corrections to the plans and access underlying principles.

Objective 5: The student will be able to demonstrate the ability to provide effective and safe nursing care to patients who have moderately complex, long-term gastrointestinal disturbances including competency in performing special nursing procedures.

403
The student practical nurse should have ample opportunity to correlate underlying scientific principles with actual patient care on the clinical unit.

His/her care plan should include all essential facts in providing comprehensive care to patients with complex gastrointestinal conditions, and his/her performance should reflect competency in administering this care.

1. Assign students to give complete care to patients having relatively complex disorders of the gastrointestinal system.
2. Assess students developed priorities plan and obtain rationale for their thinking.
3. Encourage reading of patient's charts by students and his/her researching or questioning drugs, treatments, laboratory tests, and terminology new to him/her.
4. Assess the initiative of the student in seeking new procedures and suggesting additional ways to meet the patients individual needs. Evaluate participation in team conference.
5. Supervise administration of related drug therapy and evaluate students knowledge transferred from the classroom.

Objective 6: The student will be able to identify the community resources available to the patient and his/her family with long-term gastrointestinal impairment.

Objective 6-continued

Developing Core

Throughout the patient's hospitalization, the student practical nurse must be aware that he/she is a member of a family and of a community to which he/she will return. The prime objective in health care is to return the patient to the community as a useful citizen.

The health team has a responsibility to maintain channels of communications with others who may be better prepared to meet his/her needs.

Student Learning Activities

1. Assist class in developing a list of concerns for the patient with long-term gastrointestinal conditions. As each concern is introduced, discuss the rationale for it.
2. Provide students with reference materials, then working individually, direct them to identify specific agencies who would be of particular assistance in each concern.
3. Compare individual lists and compile a complete listing of these resources.
4. Encourage students to communicate with the home care liaison person concerning the progress of patients for whom they have cared.

Enrichment

Invite a speaker from the Odontological society to discuss effective ways to prevent dental caries and periodontal disease.

Select student to observe a major operative procedure related to the gastrointestinal system: bowel resection, colostomy, gastric resection. Share experience with total class.

Invite a member of an "Ostomy Club" to discuss personal experiences.

Allow student to assist with a liver biopsy and care for the patient after the procedure.

Invite a representative of the American Cancer Society to

4.04

Enrichment-cont.

discuss this organizations role in assisting the patient and his/her family.

Evaluation:

1. The student will be able to list major disorders affecting the oral cavity.
2. The student will be able to discuss nursing care related to oral surgery and the special considerations involved.
3. Given a written test, the student will be able to demonstrate satisfactory knowledge in the major aspects of medical management and nursing care involved in the treatment of patients with peptic ulcers, cancer, and ulcerative colitis.
4. Without the use of reference materials, the student will be able to develop a complete nursing care plan for the patient with a colostomy or ileostomy and evaluate her/his nursing care plan.
5. The student will be able to summarize the major factors in the care of the patient with diseases of the gastrointestinal accessory structures including etiology, symptoms, medical and surgical management, and related nursing measures.
6. The student will be able to demonstrate the ability to provide the patient who has a moderately complex gastrointestinal impairment with effective and safe nursing care.

405

Total Hours: 35
2 class days
3 experience days

NURSING THE PATIENT WITH GENITO-URINARY DYSFUNCTION II

Introduction: Kidney disease can progress very rapidly and become fatal. The symptoms are very often insidious and require prompt medical attention. In addition, diseases of the reproductive system, in particular cancer, take many lives of both men and women. Research has contributed to making patients lives more comfortable and added to their longevity. This unit should help the student recognize his/her role in the prevention and treatment of these diseases.

Specific Objectives:

The student will be able to:

1. Explain the cause, preventive measures, and nursing management of the patient with glomerulonephritis.
2. Identify the diet needs of the patient in relation to the patient's symptoms and correlate this with chemotherapy.
3. Describe the convalescent care needed by the patient and the psychosocial aspects of the disease.
4. Discuss the concept of renal failure in relation to kidney disease, including acute, chronic, and tumor conditions and describe the surgical and non-surgical treatment including dialysis and transplant.
5. Demonstrate giving safe, effective, nursing care to patients with complex kidney disease.
6. Demonstrate assisting or giving safe effective nursing care to patients with mastectomy.
7. Discuss and describe the common medical and nursing care in disorders of the male reproductive system including the emotional needs of the patient and his family and demonstrate assisting or giving pre- and post-operative care.

Vol. I, II, and III. Philadelphia: W.B. Saunders Company, 1972.

Objective 1: The student will be able to explain the cause, preventive measures, nursing management of the patient with glomerulonephritis.

Developing Core

Glomerulonephritis is an inflammation of the renal glomeruli which affects both kidneys.

Student Learning Activities

1. State, from previous information of prevention, the hygienic measures which aid in the prevention of nephritis.
2. Discuss the progressive disease as adverse to the acute form.
3. Identify the two common organisms which are the causative agents.
4. List the symptoms of an inflammation and contrast these to the progression of the disease. Describe the nursing intervention correlating these.
5. Discuss the major aspects of medical and nursing management.
6. Individually assess students ability to apply previous knowledge to this patient.

458

Objective 2: The student will be able to explain the diet needs of the patient in relation to the patient's symptoms and correlate this with chemotherapy.

Developing Core

Treatment for patients with nephritis depends upon medication and diet.

Student Learning Activities.

1. Present the low, sodium, low protein, and restricted fluids diet regime. Obtain from students the underlying principles involved in this therapy.
2. Instruct students to plan a one day sample menu for the patient whose diet includes these three restrictions.
3. Spend some time discussing innovative ways of improving the appetite of this patient.
4. Discuss drugs used to treat or prevent edema, cardiac failure, antibiotics for specific organisms, tranquilizers, anti-convulsants. Drug cards from previous units may be used-add any new drugs and complete cards.
5. Review laboratory and diagnostic tests. Have students compare test results from patients charts with the clinical "norms". Note differences.

Remedial

Have students reread and outline assigned material. Tutor those still having difficulty.

Objective 3: The student will be able to describe the convalescent care needed by the patient and the psychosocial aspects of the disease.

The patient and his family encounter many problems due to threatened life expectancy and economic strain.

1. Review and discuss a nursing care plan for a nephritic patient or formulate one as a class project.
2. Describe the patient's feelings about the disease. Use direct quotes, if possible. Analyze each.

409

Objective 3-continued

3. Discuss the family's emotional reaction to hospitalization. Include financial aspects.
4. Each student should briefly write his feelings toward the patient-how did the student handle personal emotional reaction to the disease.
5. Describe teaching necessary for the family and the patient-relate it to stages or advancement of disease process.

Enrichment

Discuss with social worker family plans for a patient with glomerulonephritis and report to class.

Objective 4: The student will be able to discuss the concept of renal failure in relation to kidney disease, including acute, chronic, and tumor conditions and describe the surgical and non-surgical treatment including dialysis and transplant.

Developing Core

Renal failure is a serious malfunction of the kidneys in which they cannot excrete waste products, maintain fluid and electrolyte balance, and therefore sustain life.

Student Learning Activities

1. Show trainee-"Acute Renal Failure". Summarize filmstrip.
2. List the causes of renal failure both acute and chronic. Discuss the signs and symptoms and prognosis.
3. Class discussion on prevention:
 - a. drugs that are controlled by federal government
 - b. obstruction
 - c. pyelonephritis
4. Describe the general treatment and nursing care include fluid balance, prevention, and recognition of symptoms.

410

Objective 4-continued

5. Discuss complications and nursing intervention.
6. Discuss non-surgical treatment-hemodialysis and peritoneal dialysis.
7. Class discussion-feelings on legality of transplant and nursing care in chronic renal failure.
8. Discuss use of blood, donors, and cost to family. Reinforce nursing responsibilities during transfusion procedures.
9. Discuss "How can you contribute to the patients and family's emotional support?"

Enrichment

Visit a renal unit in hospital or ask for guest speakers to visit and discuss personal experiences in dialysis. Write to National Kidney Foundation for information about programs, education, and donor registration.

Objective 5: The student will be able to demonstrate the ability to assist and/or render safe nursing care to patients with complex kidney disease.

Developing Core

Patients with advanced kidney and/or bladder diseases need close nursing supervision and management. The practical nurse should be an effective participant on the health team caring for such patients.

Student Learning Activities

1. Have students describe observations, concerning urinary drainage, diet, emotional support, and treatments for these patients. Practice reporting and recording pertinent facts.
2. Develop a nursing care plan for a patient with advanced kidney or bladder disease. Class should evaluate one another's nursing care plan by using textbook. Present these evaluations during clinical conference.

Objective 5-continued

3. Assist the class to write an evaluation of what they have learned or would like to learn about the patients and their families that will be helpful to them in giving or assisting with nursing care of patients with kidney problems. Each student should actively participate in this project.
4. Instruct students to prepare and present to the class a discussion on surgery for cancer of the bladder, ileal conduit, or other types of urinary diversion.

Objective 6: The student will be able to demonstrate the ability to assist or give safe, effective nursing care to patients with a mastectomy.

Developing Core

Cancer of the breast is the most common malignancy in women. It is the leading cause of death in women in their early forties.

Student Learning Activities

1. Show trainex: "Cancer of Breast and Mastectomy". Summarize and stress key points.
2. Discuss from trainex, textbook, and American Cancer Society literature, statistics and the estimated number of deaths due to cancer of the breast in women.
3. Assist students to formulate a plan for helping women in their neighborhood to do self breast examinations.
4. Allow student to accompany patient having a mammogram, accompany patient and share observations with class.
5. Discuss the emotional impact upon learning a diagnosis of cancer of the breast. Include all aspects. Relate common defense mechanism used and how to cope with these.
6. Debate the supportive care given by magazine articles on the reaction of Mrs. Ford to breast cancer and the image she and Mrs. Rockefeller have portrayed to American women.

Objective 6-continued

7. Have a "Reach for Recovery" volunteer speak to class on emotional preparation for surgery and post-operative assistance with prosthesis and exercise at home.
8. Differentiate between a radical and simple mastectomy. Present latest research and trends.
9. With the total class involved, develop a nursing care plan, including pre and postoperative aspects, for a patient with breast surgery. Interpret the nursing intervention to meet the patient's needs in diet, drug, physical, emotional and rehabilitative care.
10. Discuss the cause of lymphedema and the nursing care involved.
11. Describe hormone therapy in the treatment of metastasis.
12. Mention additional surgical treatment to prevent spread of disease.
13. Define: fibrocystic, fibroadenoma.
14. Evaluate the students ability to assist and/or care for a patient with a mastectomy. Demonstrate the care of drainage utilizing the hemovac.
15. Have the student assist the registered nurse with the discharge preparation of a patient. Note and clarify his/her observations.
16. Describe to class the patient's reaction to discharge and husband's acceptance of the patient's post-surgical appearance. Discuss the emotional support given to the patient and her family by the health team!

413

Enrichment

Allow students to visit physiotherapy with a patient for exercise therapy and report observations to the class.

Encourage students to read the article: Easing the Shock of a Radical Vulvectomy.. Source: Nursing Magazine, August, 1975; Vol. 5, No. 8 (pp. 26-31)

Objective 7: The student will be able to discuss and describe the common medical and nursing care in disorders of male reproductive system including the emotional needs of the patient and his family.

Developing Core

h/h
It is estimated that approximately half of all men over fifty years of age have some prostatic enlargement and that 15 to 20% of all men over fifty-five have microscopic cancer of the prostate gland.

Student Learning Activities

1. Define medical terminology of the male reproductive organs.
2. Show trainex: "Cancer of Prostate". Summarize key points.
3. Discuss from trainex, textbook, and American Cancer Society literature, statistics and estimated number of deaths due to cancer of the prostate. Note decreased or increased incidences.
4. Class discussion-"How can cancer of prostate be prevented?"
5. Describe the common symptoms of cancer of the prostate and hypertrophy.
6. Discuss and show from literature three different approaches to prostatic surgery.
7. Describe chemotherapy for inoperable cancer or metastasis. Research newer drugs.
8. Assess the student's ability to assist the patient pre and postoperatively, by giving safe, effective nursing care to meet his physical and emotional needs.

Objective 7-continued

9. Allow students to assist with a Kelly Infusion.
10. From patient observation discuss: Patient's reaction to surgery and his/her family's reactions. How can the male nurse offer emotional support.
11. Develop a nursing care plan for the pre and postoperative patient including diet, drugs, nursing intervention and emotional support.
12. Instruct students to formulate a plan of care for the home patient (postoperative with incontinence). Discuss the practical nurse's role in meeting the wife's needs in giving her husband both physical and emotional care and support.

Evaluation:

1. The student will be able to explain fully the cause, preventive measures, and nursing management involved in the care of the patient with glomerulonephritis.
2. The student will be able to identify the dietary needs of the patient in relation to the patient's symptoms and correlate these needs with chemotherapy.
3. The student will be able to describe fully the convalescent care needed by the patient with glomerulonephritis emphasizing the psychosocial aspects.
4. The student will be able to develop a comprehensive nursing care plan for patients who have renal failure, cancer of the breast and prostatic impainment.
5. The student will be able to identify nursing needs of patients with complex disorders of the genitourinary system and formulate a plan to meet these needs.
6. The student will be able to work effectively as a team member on the clinical unit.
7. The student will be able to demonstrate the ability to assist or give nursing care to patients with complex disturbances of the urinary and female and male reproductive systems in a competent, effective manner.

415

Total Hours: 30
1 Class day
3.5 Experience days

NURSING THE PATIENT WITH METABOLIC IMBALANCES II

Introduction: The precision of the human body is controlled by the endocrine system. Its regulation is automatic and initiated by specific chemical signals. The dysfunction of these glands, in particular the thyroid gland, results in the need for medical and/or surgical treatment. The student assists in effective care by helping these patients to cope with their illness.

Specific Objectives:

The student will be able to:

1. Discuss and assist a patient in at least five tests for thyroid dysfunction.
2. Contrast the symptoms of Myxedema and Cretinism.
3. Describe the symptoms of hyperthyroidism and interpret the nursing intervention.
4. List three forms of hyperthyroidism treatment and discuss the medical and nursing management of each method.
5. Demonstrate pre-operative and post-operative teaching of the patient having a thyroidectomy.
6. Assist the registered nurse in patient teaching in relation to discharge and home care.

Townsend, Carolyn E. Nutrition and Diet Modifications for the Nurse, Albany, New York: Delmar Publishers, 1972

Objective-1: The student will be able to discuss and assist a patient in at least five tests for thyroid dysfunction.

Developing Core

Thyroid dysfunction, over or under secretion, presents symptoms for assessment. Prior to a diagnosis a physician determines, through physical examination and laboratory tests, the extent of hypo or hyper secretion.

Student Learning Activities

1. Define and explain Basal Metabolic Rate, Radioactive Iodine Uptake, Proteinbound Iodine, T3 Red Cell Uptake, Thyroid Scan.
2. Allow students to examine sample results on each test.
3. Relate from personal experience or from hospital patient experience preparation for a thyroid scan.
4. Discuss nursing responsibilities for each test. Using role

4/17

Objective 1-continued

play, direct students to instruct patients on prescribed tests.

Objective 2: The student will be able to contrast the symptoms of Myxedema and Cretinism.

Developing Core

Hypothyroidism affects both children and adults. The advanced symptoms present a picture of a dull slow-moving obese person.

Student Learning Activities

1. Define the terms myxedema and cretinism.
2. Have students examine pictures in texts depicting myxedema and cretinism. Emphasize key factors.
3. Have students list observations in the pictures and make a textbook comparison. In a group discussion, summarize the symptoms.
4. Present a panel discussion to include medical supervision and family support for these patients. Include special schooling for children, public reaction, acceptance and rejection of these patients and the need for life-long medications.

Enrichment

Select a student to accompany a patient to the isotope laboratory, observe a thyroid scan, and share observations with the class.

Objective 3: The student will be able to describe the symptoms of hyperthyroidism and interpret the nursing intervention.

Hyperthyroid patients overreact to all stimuli. A calm, quiet atmosphere is vital for their wellbeing.

1. Role play the symptoms of hyperthyroidism. Direct students to chart the objective symptoms in the SOAPIE format and discuss in class the appropriate nursing intervention.
2. Reinforce the key symptoms which impair the patient's wellbeing.

4/16

Objective 4: The student will be able to list the three forms of hyperthyroidism treatment and discuss the medical and nursing management of each method.

Developing Core

The prescribed medical approach for the hyperthyroid patient can be chemotherapy control, radiation, or surgery. It is essential that the student practical nurse be knowledgeable of the responsibilities involved in patient care whichever approach is employed.

Student Learning Activities

1. Using reference books, direct students to complete drug cards on common antithyroid drugs. Discuss the drug therapy commonly utilized.
2. Locate in the hospital procedure book, the general rules for observation of patients' receiving radioactive iodine and discuss these guidelines in class.
3. Discuss the pre-operative nursing management.
4. Assist students to prepare a kardex nursing care plan for the management of a post-operative patient.
5. Define: endemic, nodular goiter; and thyroid storm or crisis.
6. Appraise individual students' participation in a clinical conference on a selected patient.
7. Comprehensively evaluate actual care given to the patient by the student. Counsel individual students. Stress strengths; assist in improving weaknesses.

Objective 5: The student will be able to demonstrate the pre-operative and post-operative teaching of the patient.

Patients who are going to have a thyroidectomy require teaching to avoid strain on the suture line.

1. Role play teaching the patient to raise his head post-operatively; lifting and moving.
2. Observe students charting and reporting. Appraise effectiveness of both.

419

Objective 5-continued

3. Direct students to prepare a patient's room for post-operative care.
4. List and describe the appropriate nursing management of post-operative complications. Discuss these in detail.

Objective 6: The student will be able to assist the registered nurse in patient teaching in relation to discharge and home care.

Developing Core

A patient's responsibilities and home environment may have caused the tension that contributed to thyrotoxicosis.

Student Learning Activities

1. Have students develop a nursing care plan to include rest, relaxation, and nutrition for the patient and his/her family.
2. As a class project design a program of relaxing activities for the post-hospital period.

Enrichment

Present a clinical conference on a patient with a complex endocrine disturbance.

Evaluation:

1. Given a list of endocrine diagnostic tests, the student will be able to explain and assist the patient in at least five preparation procedures.
2. The student will be able to contrast the symptoms of myxedema and cretinism.
3. The student will be able to describe the symptoms of hyperthyroidism and interpret the nursing intervention.
4. The student will be able to list three forms of hyperthyroidism and discuss the medical and nursing management of each method.

420

Evaluation-cont.

5. The student will be able to demonstrate pre and post-operative teaching of the patient having a thyroidectomy.
6. On the clinical unit, the student will be able to give safe, effective nursing care to patients with moderately complex endocrine disturbances.
7. The student will be able to assist the registered nurse in patient teaching in relation to discharge and home care.

421

Total Hours: .18
1 Class day.
1.5 Experience days

NURSING THE PATIENT WITH PROBLEMS INVOLVING DISFIGUREMENT

Introduction: The skin is one of the most important components of the human body. Its primary function is to serve as a protective envelope for all the underlying tissue. It also serves as an organ of excretion and is largely responsible for the regulation of body temperature. The skin is subject to infections and/or injuries but has an amazing recuperative power.

Specific Objectives:

The student will be able to:

422

1. Define dermatitis, relate medical terminology, and utilize it correctly in recording and reporting.
2. Describe skin disorders, including etiology, symptoms, therapeutic management, diet and drug therapy, nursing care, and rehabilitation.
3. Demonstrate appropriate nursing measures to assist patients with skin disorders.
4. Demonstrate administering and/or assisting with appropriate nursing measures in the care of a patient with burns.
5. Involve the patient's family in the task of rehabilitation, utilizing the community resources available.

Vol. I, II, and III Philadelphia: W.B. Saunders Company,
1972.

Objective 1: The student will be able to identify symptoms and causes of the most common skin disorders and plan appropriate nursing measures.

423

Objective 1-continued

Developing Core

The skin is the first line of defense against injury and disease. Not all people have the same resistance to skin disease. Many factors influence the general condition of the individual's skin.

Student Learning Activities

1. Discuss the anatomy and physiology of the primary tissues. Include the skin and mucous membrane lining of the respiratory, gastrointestinal, and genitourinary tract.
2. Compile and give to student a vocabulary list relating to dermatology.
3. Have students review general skin care and treatments proceeding from the simple to the complex. Include daily bathing; special bathing; care of burns.
4. Discuss classifications of dermatitis and have students produce examples:
 - a. contact dermatitis (eczema)
 - b. secretory disorders (acne)
 - c. systemic (lupus)
 - d. infections and inflammatory (carbuncles)
 - e. ulcers, tumors, and skin lesions
 - f. plastic reconstructive surgery
5. Review and introduce drugs:
 - a. topical medications
 - b. corticosteroids
 - c. systemic medications
 1. antibiotics
 2. antihistamines
 3. sedatives and tranquilizers
 4. analgesics and antineoplasticsMedication cards should include specific action, dosage, side effects, and nursing responsibilities.
6. Have students analyze the psychological effects of dermatitis.
7. Select and have students develop a nursing care plan.

hch

Objective 1-continued

Contact dermatitis, "Eczema". Assign both a hospital and home care plan.

8. Plan an experience in the clinical laboratory for students to care for a patient with skin disease.
9. Student to present with team members, a conference and a nursing care plan on a patient with a skin disturbance.

Objective 2: The student will be able to administer and/or assist in caring for patients with burns.

Developing Core

Burns may be classified according to three major causes: thermal, chemical, and electrical burns.

Student Learning Activities

1. Discuss in great length classifications of burns. Include the depth and percentage of body surface involved using the "rule of nine's".
2. Develop with students the patho-physiology of fluid shifts. Include shock and post-burn acidosis.
3. Discuss emergency care according to burn classification. Students will plan with teacher general first aid, and hospitalization and/or burn centers.
4. Identify burn centers and units in Pittsburgh. Discuss transportation and environmental set-up.
5. Develop with students two nursing care plans:
 - a. administering nursing care
 - b. assisting with nursing care
 - (1.) Classification
 - (a.) degree
 - (b.) body surface
 - (2.) Immediate care
 - (a.) breathing
 - (b.) fluid therapy

yes

Objective 2-continued

227

Nutrition; must meet the increased metabolic needs of the burned patient. We need to plan for repairing and replacing tissue destroyed or injured by the burn.

- (c.) renal function
- (d.) observations
- (e.) prevention of acquired infection
- (f.) pain medications
- (g.) treatment: exposure, topical ointments, dressings and soaks
- (h.) debridement

- (3.) Nutrition and methods to increase supply in:
- (a.) calories
 - (b.) proteins
 - (c.) fluids
 - (d.) vitamins
 - (e.) mineral intake

Have students select three of the above nutrients, write briefly why increased amounts are needed in the severely burned patient.

4. Long term care (hospital) role of: (meeting physical and emotional needs) physician, physio-therapist, social worker, nurse, occupational therapist, clergyman, family.
5. Prevention of complication of contractures
 - a. positioning
 - b. range of motion exercises
 - c. circo-electric bed
 - d. Stryker frame
 - e. Foster bed
6. Rehabilitation; medical supervision; emphasize referrals: include visiting nurses association, rehabilitation centers, social workers and family.
7. Discuss agency available to assist in financial problems
Include:
 - a. Private agency
 - b. Public agency program
 - c. Children's Bureau-Program for Crippled Children

Objective 2-continued

- d. Industries, Compensation Insurance
 - e. Purchasing special equipment, buying and renting
8. Present drug therapy
- a. Topical chemotherapy
 - b. Antibiotics
 - c. Tetanus Prophylaxis
 - d. Pain medications
9. Mention complications:
- a. anemia
 - b. gastrointestinal disturbances-ulcer.
 - c. depression: aspects including problems, fears, delirium and disorientation
 - d. deformities
 - e. skin changes
 - f. malignant degeneration
10. Have students select four complications and plan appropriate nursing measures. Written assignment.
11. In clinical laboratory direct students to utilize the nursing process to administer and/or assist with care of the burned patient.
12. Have students write a one week diet plan for a burn patient. Eat what he likes, as much as he likes, often as he likes, and encourage him/her to eat more.
13. Assign students to develop a comparative study on two types of skin grafts.

Remedial

Review normal structure and physiology of skin, tissues,

437

Remedial

mucous membrane linings. Relate to a loss of a large area of skin and list harmful effects.

Show Trainex:

1. Sterile Technique and Dressing Change
2. Positioning to Prevent Contractions
3. Range of Joint Motion Exercise

1. Review above trainexes
2. Student-teacher conference to evaluate comprehension
3. Teacher will prepare a list of questions which students will write and discuss in conference

Enrichment

Guest speaker "Fire Control and Prevention"

Guest speaker-Burn Center

"Role of Professional Team"

Plan field experience at Harmarville Rehabilitation Center

Evaluation:

1. The student will explain anatomy and physiology of the primary tissues.
2. The student will define and use correctly the terms used in connection with skin disorders.
3. The student will demonstrate the awareness of nursing responsibilities toward the patient and the diagnostic procedures by assuming responsibility for the preparation of the patients for these procedures specific to skin disorders.
4. The student will recite, write, and institute plans of nursing care relating to the simple skin disorders.
5. The student will write and identify the clusters of symptoms related to the complex disorders of the skin.
6. The student will be aware and thereby observe carefully the patient's reaction, of the medications most frequently used for the simple and more complex disorders of the skin.
7. The student will differentiate the various types and degrees of burns.

4.28

8. The student will discuss the patho-physiology of fluid shifts which occur during the shock and diuretic phases of post-burn.
9. Given four nutrients, the student will write briefly why they are needed in increased amounts by the individual who has been severely burned.
10. In the clinical laboratory, the student will utilize the nursing process to administer care and/or assist a burn victim.
11. The student will identify community resources available to assist patient and his/her family in achieving optimal rehabilitation.

HUMAN HEALTH CARE II

Introduction: The student is oriented to areas of specialized nursing including: intensive care, emergency and recovery rooms, and psychiatric nursing. Concepts of home nursing are presented and an extended opportunity to give medications is provided. Also, principles of leadership are introduced. Two to three days of clinical observations will be given to each student. This assignment will be arranged to meet the individual needs of the student with the availability of health care facilities.

Specific Objectives:

The student will be able to:

1. Demonstrate administering care and /or assisting with an immediate postoperative patient.
2. Assist the professional nurse in intensive care nursing of various patients learning to meet their individual needs.
3. Demonstrate dealing effectively with common emergencies in and out of the health care facility.
4. Show proficiency in giving medications as well as correlating drug therapy with medical treatment of the patient.
5. Adapt nursing skills to the home environment and recognize increasing opportunity for practicing nursing in this area.
6. Define mental health and explain methods of promoting mental health.
7. Discuss principles of psychiatry including etiology, prevention, and treatment of common mental illnesses.
- * 8. Recognize three areas in which the practical nurse would be able to assume a leadership role.

Field trip
Saint Francis Hospital

Film:
Mental Health

Guest Speaker:
Civil Defense
Red Cross

Trainex:
Cardiopulmonary Resuscitation
Hypothermia
Introduction to Shock, Parts I, II
Rotating Tourniquets

Plan: One day introduction class to 3 specialty nursing units—remaining 3 weeks is experience.
One day introduction class to leadership and mental health remaining week is experience.

Objective 1: The student will be able to demonstrate administering care and/or assisting with an immediate post-operative patient.

Student Learning Activities

1. Review general aspects of preoperative care.

432

Objective 1-continued

Developing Core

The recovery room is a suite, usually located close to the operating room. There is a concentration of especially trained nurses, surgeons, and anesthesiologists, special equipment, medications, replacement fluids, and patients under or recovering from anesthesia.

Student Learning Activities-cont.

2. Develop with students intra-operative care concepts.
3. Discuss purposes of recovery room "Immediate Post-operative Orientation".
4. Identify role of team members including anesthetists, professional, vocational and student nurses, assistants, and escorts.
5. Elicit student responses of the statement "Never leave a recovery room patient alone!"
6. Teacher and students working together, will identify and explain the action taken in essential nursing techniques involved in the recovery from anesthesia. Include these activities:
 - a. airway maintenance
 - b. stat orders involving oxygen and medications
 - c. vomiting observations
 - d. cardinal sign observations involving TPR, BP, CVP, and blood gas monitoring
 - e. drainage apparatus patency
 - f. I.V. therapy check solution and rate of flow
 - g. positioning, deep breathing, coughing
 - h. dressings-check and reinforce
 - i. reporting and recording
 - j. post-operative treatment follow through
 - k. promoting comfort and safety.
7. Discuss in detail postoperative symptoms. Differentiate important and unimportant signs. Convey concept "when in doubt call the physician".

433

Objective 1-continued

8. Introduce Trainex: Introduction to Shock. Parts I and II
Discuss important points and summarize.
9. Discuss transport of patient.
10. Have student select one subject and write a paper on:
 - Common post-operative complications
 - Shock-observation of post-operative discomforts or complications
 - Hemorrhage-identifying symptoms
 - Hypoxia-treatment and nursing carePresent this paper to the class.
11. Plan for each student in clinical laboratory to have experience:
Select a surgical patient for follow through-written nursing care plan. Include:
 - Pre-operative care
 - Operating room-observation
 - Recovery room-assist in care
 - General post-operative care

Objective 2: The student will be able to assist the professional nurse in intensive care nursing of various patients learning to meet their individual needs.

Developing Core

In this area persons are critically ill. Nurse's must have an understanding of acute problems in order to provide optimum care.

Student Learning Activities

1. Discuss purposes of Intensive Care Unit.
2. Present a general orientation to this unit.
3. Review and discuss with students their role in nursing care of the individual patient. Include the following: activities, meeting basic needs: bathing, feeding, positioning, elimination, exercises, and ambulation.

434

Objective 2-continued

Review with students the signs and symptoms of:

- a. observations and assessment
respiratory failure
cardiac distress
fluid accumulation
kidney output

Discuss discomforts and action to be taken

- b. stress: reporting to professional nurse periodically
- c. treatments: assist students to perform irrigations, enemas, intake and output records, and observations of intravenous therapy.

Convey the important concept of simple treatment that become complex because of this type of patient.

Introduce Trainex:

Cardiopulmonary Resuscitation; Initial Phase

Review and Summarize

- c. Complications-observations and reporting
- Reinforce that when in doubt-REPORT

4. Plan for each student in clinical laboratory to care for one patient so that he/she may learn to meet the nursing needs of the very ill patient. Assignment will be at the discretion of the teacher and registered nurse in charge of the Intensive Care Unit.
5. Discuss the results of intensive care. Review transfer and post mortem procedures.
6. Discuss emotional support of the patient's family.
7. Assign students the opportunity to observe cardiac monitors. Assess their knowledge of purposes and interpretations.
8. Develop with students, a plan of making provision for meeting the patient's physical and spiritual needs in an unconscious state.

435

Objective 3: The student will be able to demonstrate dealing effectively with common emergencies in and out of the health care facility.

Developing Core

Before one can initiate emergency care for the sick or injured one must make a rapid but effective examination of the patient to determine the seriousness of his illness or the extent of his injuries. Not only must the nurse use previously learned basic skills but one must be educated in diagnostic skills in advanced technique of emergency care.

Student Learning Activities

1. Have students list common causes of accidents occurring in the home, community, and the health care facility.
2. List precautions to prevent accidents, identify and discuss safety factors, and available educational programs.
3. Present an orientation to the emergency department including the purposes and personnel.
4. Develop with students emergency care plans on first aid techniques and the nurse's role in assisting the physician.
5. Principles of emergency management will be developed by students with teacher's assistance.
6. Plan for Red Cross Worker to discuss and demonstrate resuscitation techniques. Allow students to practice mouth to mouth resuscitation.
7. Invite a guest speaker to discuss Civil Defense.

Objective 4: The student will be able to show proficiency in giving medications as well as correlating drug therapy with medical treatment of patient.

The role of the practical nurse is constantly changing with expanding areas of responsibilities. One such area is the administration of medications.

1. Schedule a week for this experience. Select three or four patients receiving various kinds of medications as diuretics, antihypertensives, narcotics, antibiotics, etc.

Objective 4-continued

2. The first day have student give total patient care, list and review medications patients are receiving.
3. The following days have students give all medications to these patients; instruct them to keep observation notes of patient's reaction to drug.
4. Accompany this experience with daily individual conferences with students to help them correlate drug therapy with medical management.
5. The student will have an increased opportunity to give medications using the various routes: oral, intramuscular, suppositories, nose, ear and eye drops.
6. The teacher may assign two to three students for advanced experiences; if facilities are suitable.
7. Have students research the new trend of "self-medication kits" which are being used on maternity units including:
 - a. medications types
 - b. methods of recording
 - c. nurses responsibilities
 - d. patient teaching

Objective 5: The student will be able to adapt nursing skills to the home environment and recognize increasing opportunity for practicing nursing in this area.

Developing Core

Due to the increased cost of hospitalization and nursing home care more families are considering the possibility of home care.

Student Learning Activities

1. Debate: "Nursing Home Care vs. Home Care".
2. Compose a list of all community resources available to provide nursing care to patients in their home.

437

Objective 5-continued

3. Assign student to invite practical nurse engaged in this area of nursing to speak to the group.
4. Discuss and demonstrate improvised techniques made to:
 - a. give a bath
 - b. sterilize equipment
 - c. change dressings
 - d. common treatments

Objective 6: The student will be able to define mental health and explain methods of promoting mental health.

Developing Core

Before the practical nurse can help the person with a psychological problem he/she must first understand mental health.

Student Learning Activities

1. Define mental health and elicit from class examples of behavior of a mentally healthy person.
2. Show and summarize film: Mental Health.
3. Develop criteria for emotional maturity. Discuss each factor suggested.

Objective 7: The student will be able to discuss principles of psychiatry including etiology, prevention, and treatment of common mental illnesses.

There are many misconceptions about mental illness and a certain stigma still exists about the person who is "crazy".

Because of the increasing incidences of mental illness, it is essential that the practical nurse student be familiar with basic concepts of psychiatry.

1. Have students express their own ideas relating to the following questions:
 - a. What is psychiatry?
 - b. What do you think causes a person to have a "Nervous breakdown"?
 - c. Define: "bad nerves".
 - d. Why are people reluctant to admit to mental illness, even when giving a physician their medical history?

Objective 7-continued

2. Review defense mechanisms or coping devices with class.
Use examples of each.
3. Clearly differentiate between neuroses and psychoses.
4. Discuss mental illness in relation to prevention, etiology, predisposing factors, symptoms, medical management, and appropriate nursing care.
5. Define: psychoneurosis, schizophrenia, manic depressive, toxic psychoses, involuntional melancholia, and paranoia.
6. Assign students two days observation at Saint Francis Hospital. Discuss observations.
7. Present a conference with the group to summarize their experience including:
Role of Practical Nurse in Psychiatry
Medical treatment of patients including therapies as:
recreational and occupational
Community resources available for continued medical supervision of patient.

Objective 8: The student will be able to recognize three areas in which the practical nurse would be able to assume a leadership role.

Developing Core

Trends in practical nursing show an increased demand for the nurse to be aware of the principles of leadership and to act upon these concepts.

Student Learning Activities

1. Assign students to assist the team leader in establishing priorities of nursing action related to several patients, with special regard to their individual needs.
2. Direct students to obtain a history and develop a nursing assessment for a new admission.

439

Objective 8-continued

3. Evaluate individual students management of progressively complex patient assignments. Communications, rapport established, and choice of information to record, should be included in this evaluation.
4. Allow students to assume the role of team leader in a selected assignment and transcribe physician's therapeutic prescriptions, complete the kardex, and develop a nursing care plan.
5. Reinforce specific legal aspects in the team leader role of the practical nurse. Include written and verbal orders, confidentiality of patient's record, accident and incident reports, proper identification, delegation of responsibilities, and public relations.

Remedial

Teacher must identify student's individual needs and plan review to meet his or her particular needs.
Review pre and post operative care.

Teacher must identify student's individual needs and plan review accordingly.

Enrichment

The student will report on follow through with other students.

Research new material on "Meeting the family's emotional and spiritual needs". Give written assignment: "Identify needs of your patient and how these needs were met."

Plan for student to spend one to two days with agency and give home care. Report experience to the group.

Ohh

Evaluation:

1. The student will be able to define the purposes of the recovery room and discuss the principles of recovery room nursing.
2. From a list of significant observations, the student will be able to explain the nursing action to be taken in each situation.
3. The student will be able to discuss the purpose of the intensive care unit and the concepts involved in this type of nursing management.
4. The student will be able to discuss principles of emergency management.
5. The student will state three causes of accidents and discuss methods of prevention.
6. The student will be able to demonstrate proficiency in giving medications and relate specific drug therapy to the medical management of the patient.
7. Given a written examination on mental health and illness, the student will be able to demonstrate adequate knowledge by satisfactorily passing it.
8. The student will be able to recognize three areas in which the practical nurse would be able to assume a leadership role.

Total hours: 70
2 class days
8 experience days

NURSING OPPORTUNITIES

Introduction: This unit introduces the student practical nurse to the realization that soon he/she will graduate. Ethical and legal responsibilities are stressed as well as the ever expanding role of the licensed practical nurse. In addition trends of health care, nursing organizations, and career opportunities are presented.

Specific Objectives:

The student will be able to:

1. Discuss the trends of nursing in relationship to total health care.
2. Interpret ethical and legal responsibilities of the licensed practical nurse.
3. Determine the role of the practical nurse on the total health team.
4. Identify nursing organizations and describe the chief functions of each.
5. Evaluate job sources for employment opportunities in the total health care delivery system.
6. Demonstrate to correctly applying for or resign from a job.
7. Recognize the importance of personal and professional growth.

Plan: 4 Class days,
1. NLN test, graduation rehearsal
2. Job applications, Nursing organizations
3. Job opportunities, interview and resúme etc.
4. Final evaluation conference

chh

Objective 1: The student will be able to discuss the trends of nursing in relationship to total health care.

Developing Core

The issues, problems, and opportunities in health care demand positive action if high quality care is to be achieved while at the same time costs are kept at reasonable levels and services made available to the total population.

Student Learning Activities

1. Present a brief historical review of health care stressing the integral role of nursing.
2. Obtain students personal experiences and feelings on what constitutes good health care. Emphasize promotion of health.
3. From a class developed list, direct students to select a problem in health care and decide how it can be solved.
4. Form a panel discussion on the pros and cons of a national health insurance plan.
5. Discuss nursing in the 70's. Conclude apparent direction. Appraise this direction.
6. Encourage students to read new trend articles in professional periodicals and participate in a related class discussion.
7. Discuss the statement "As health needs change so must health care."

Objective 2: The student will be able to interpret ethical and legal responsibilities of the licensed practical nurse.

The National Federation of Licensed Practical Nurses adopted a code of conduct by which and through which its members should govern their personal lives and nursing careers. Each graduating student inherits the responsibility to adhere to these standards.

1. Differentiate between ethical and legal responsibilities. Obtain from students several examples of each.
2. Role play "situation ethics."
 - (a) classmate charts a procedure that wasn't done
 - (b) a staff nurse is observed pocketing a discharged patient's leftover Darvon.

443

Objective 2-continued

Developing Core

Student Learning Activities

(c) a co-worker wipes spilled water from the floor and without washing his/her hands begins to diaper a baby.

3. Discuss the legal role of the State Board of Nurse Examiners.
4. Define: mandatory, permissive, waiver.
5. Explain the procedure by which a graduating student becomes licensed.
6. Discuss renewal and interstate licensure.
7. Present an overview of the Nurse Practice Act. Allow students to participate in a class discussion of causes for revoking or suspending a license.
8. By using several examples, differentiate between negligence and malpractice.
9. Reinforce legal aspects including patient's consent, assault and battery, child abuse, invasion of privacy, defamation of character, abortions, euthanasia, drug abuse, organ transplants, wills, patient's chart, contracts by having students participate in a panel discussion.
10. Illustrate by examples the importance of liability insurance. Encourage students to compile information on medical litigation cases publicized in newspapers and magazines.

h.h.h

Objective 3: The student will be able to determine the role of the practical nurse on the total health team.

Developing Core

Today's practical nurse has become one of the most integral and valuable members of the total health care team. This expanding role provides flexibility in the functions of the licensed practical nurse who has obtained further knowledge and skills through education and experience.

Student Learning Activities

1. Hand out copies of the NFLPN's Statement of Functions of the Licensed Practical Nurse and present an introduction to its purpose.
2. Allow students adequate time to read and study it. Discuss and summarize each area: role, education, legal status, personal qualifications, functions in total health care system, continuing education and utilization.
3. Assign students to write a short paper entitled "Who is the Licensed Practical Nurse?" or "The Role of the LPN on the Health Team."
4. Thoroughly discuss the role of the licensed practical nurse on the total health team.

Objective 4: The student will be able to identify nursing organizations and describe the chief functions of each.

The graduating practical nurse should be aware of his/her responsibility in joining professional organizations that will not only assist him/her in becoming a better practitioner but can advance the interests of the vocation.

1. Present an introduction to nursing organizations and stress active participation.
2. Obtain from students examples of how the progress of any organization depends on the support and cooperation of individual members. Summarize membership responsibilities.
3. Invite a guest speaker from the school's Alumnae Association to present an overview of this organization.
4. Discuss the origin, purposes, functions, and publications of each organization including: NLN, NAPNES, NFLPN, and ANA.

Objective 4-continued

Developing Core

Student Learning Activities

5. Distribute Journal examples to students for their perusal.
6. Review parliamentary procedure, prepare an agenda and simulate a professional meeting.
7. Hand out copies of the NFLPN's "Practical Nursing in the Nineteen Seventies-A Position Paper." Thoroughly discuss the twelve recommendations. Encourage students to attend professional organization meetings.

Objective 5: The student will be able to evaluate job sources for employment opportunities in the total health care delivery system.

1. Discuss the avenues opened in a job-hunting campaign.
2. Examine examples of job sources-what sources are most promising?
3. Identify the advantages and the disadvantages of a job in:
 - a. a hospital
 - b. a nursing home
 - c. a doctor's office
 - d. private duty
 - e. the visiting nurse service
 - f. the Peace Corps, VISTA
 - g. industrial organizations
 - h. psychiatric nursing
 - i. military service
4. List and discuss fringe benefits include salary, vacations, sickleave, leaves of absence, holidays, transportation, reputation of employer, insurance benefits, working conditions, inservice education and promotional opportunities.
5. Direct students to write a short paragraph on "Finding the Right Job for Me." (Should reflect individual priorities)

446

The licensed practical nurse has become a valuable health team member and his/her opportunities for employment vary greatly. The decision as to what kind of job to look for is an important one, and should be given careful consideration.

Objective 6: The student will be able to demonstrate correctly apply for or resign from a job.

Developing Core

A résumé is a record of qualifications, training, and experience. No matter which avenue of job hunting is chosen it is necessary to present this record. The résumé must be accompanied by a letter of application.

The purpose of the job interview is to secure the job. Thorough preparation for this interview is essential.

Student Learning Activities

1. Discuss the process of finding a position.
2. Define résumé. Distribute several examples for students to examine.
3. List and discuss information included in a résumé.
4. Direct students to practice writing personal resumes in a logical, concise, and interesting manner.
5. Discuss the pertinent facts included in a letter of application.
6. Have student practice writing a letter of application.
7. Allow students to review application forms from various institutions.
8. Discuss good grooming, personal appearance, and the code of behavior necessary for a successful job interview. Name some of the ways in which good manners could be shown during an interview.
9. Have students make a list of the items in personal wardrobe that might be worn to an interview.
10. List the credentials to be taken on a job interview.
11. Listen to tapes of sample interviews or role-play job interview situations.
12. Direct students to construct a list of questions pertinent to the job which at the close of the interview might be asked.

447

Objective 6-continued

Developing Core

All aspects of a job should be carefully considered before the licensed practical nurse plans to resign his/her present position; however, there are several valid reasons for terminating a position.

Chances for promotion in the nursing world vary greatly and the opportunities are virtually unlimited.

In addition to moving ahead in a career, the personality as a whole should be further developed.

Student Learning Activities

- 13. Have students practice writing letters of thanks and regret.
- 14. List reasons for resigning from a job.
- 15. Discuss the essential facts included in a letter of resignation.
- 16. Have students practice writing a letter of resignation.
- 17. Discuss the resources and process of a terminal interview.

Objective 7: The student will be able to recognize the importance of personal and professional growth.

- 1. Make a list of the important qualifications for getting ahead.
- 2. Discuss ways of preparing for promotion.
- 3. Review lists of sure ways to earn promotion. Personally evaluate strengths and weaknesses in each area.
- 4. Discuss avenues of continuing formal education. Review the health career ladders. Encourage students to research areas which are of most individual interest.
- 5. Assist students to identify personal self-improvement needs and have them develop a definite plan for an individual self-improvement program.
- 6. Describe areas in which personal growth can be achieved.

848

Enrichment

Suggest reading of Michael Creighton's Five Patients.

Encourage students to read professional magazine articles on the expanding role of the licensed practical nurse.

Evaluation:

1. The student will be able to discuss the trends of nursing in relationship to total health care.
2. Given a list of ethical and legal responsibilities, the student will be able to differentiate between them.
3. The student will be able to explain the role of the State Board of Nurse Examiners, the procedure for becoming licensed, and the Nurse Practice Act.
4. The student will be able to summarize the "Statement of Functions of the Licensed Practical Nurse" and relate this information to the role of the practical nurse on the total health team.
5. Given the name of five pertinent nursing organizations, the student will be able to describe the chief functions and publications of each.
6. Given several employment opportunities, the student will be able to evaluate fully each one.
7. The student will be able to compile a resume and write a letter of application and resignation.
8. The student will be able to state eight essential factors in a job interview.
9. The student will be able to explain fully why professional and personal growth are essential and how this growth can be achieved.

CLINICAL EXPERIENCE

The supervised clinical experience of the Practical Nursing Program, totaling 888 hours in health care facilities is designed to provide the individual student with the opportunity to put into practice those skills acquired during the course.

Practical Nursing, by its very nature, cannot be learned only in a classroom. Certainly, the knowledge and skills can be acquired in the classroom setting, but an immense strengthening of these learned concepts will be realized only through actual observation and practice within a clinical facility. The real-work setting provides the students with a clearer understanding of the total health team and a more realistic evaluation of the levels of skill required.

429
Another benefit of selected clinical learning experiences is the development of more effective work habits, and the flexibility to be gained by organizing health care assignments subject to the type of interruptions not experienced in the previous classroom laboratory sessions.

Actual utilization of communication skills related to the health field as well as personal and social skills essential for the successful practical nurse will be greatly enhanced by the interpersonal relationships between health team members and patients.

APPENDIX

463

PITTSBURGH PUBLIC SCHOOLS
PRACTICAL NURSING PROGRAM

OPPORTUNITY FOR GRANTING ADVANCED STANDING

The nursing profession is viewed as a whole, developed along an educational continuum with a multi-entry system.

The individual has a right to an educational opportunity which will enhance personal growth and develop full potential, while progressing according to his/her learning abilities and previous educational foundations.

The faculty of the Pittsburgh Public Schools Practical Nursing Program believes that this theoretical construct for the program curriculum allows individuals from various health programs such as nurses' aids, practical nurses licensed by waiver, corpsmen who wish to qualify for advanced standing at this first or second entry level may do so by applying and meeting the standards of the level best suited for the individual. The graduate from the Health Assistant II program articulates into Human Health Care I.

Conversely, students who are enrolled in this program could voluntarily or by recommendation of the faculty, withdraw from the program at the end of the first or second level and would be qualified to find employment in specific health agencies in a role other than that of a practical nurse.

h9h

STANDARDS FOR HEALTH ASSISTANT II APPLICANT

Graduates of the Health Assistant II program who wish to apply for articulation in the Practical Nursing Program must meet the following requirements:

1. Must have a high school diploma.
2. Be 18 years of age before or upon completion of the Practical Nursing Program.
3. Evidence of good mental and physical health as determined by a complete physical examination.
4. Satisfactory competency rating in nursing skills; attainment of an 80 percent proficiency in theory.
5. Demonstrate aptitude and interest in practical nursing as evidence by conscientious nursing care, good interpersonal relationships with hospital personnel; seeks initiative in new learning experiences.
6. Present and punctual for a minimum of 480 hours.
7. ~~United States citizenship or have first papers.~~
8. No personal responsibilities which place limitations on the student's performance.

ADVANCED STANDING REQUIREMENTS FOR FIRST LEVEL ENTRY

The faculty of the Pittsburgh Public Schools Practical Nursing Program proposes that the following criteria be adopted to grant advanced standing to an applicant who wishes to enroll in the program beginning with Human Health Care I.

The applicant must meet all regular requirements that apply to any applicant who wished to enroll in this program.

1. Male or female, single or married
2. Resident of Pennsylvania
3. Minimum age 17 years
4. High school diploma or its equivalent as evaluated by the Department of Education.
5. Evidence of good mental and physical health as determined by a complete physical examination.
6. Satisfactory rating on pre-entrance aptitude tests.
7. Personal qualifications evaluated through written references and a personal interview by faculty. These include a genuine interest in people and aptitude for nursing.
8. ~~United States citizenship or have first papers.~~
9. No personal responsibilities which place limitations on the student's performance.

The applicant must meet these additional requirements:

1. Show evidence of having worked with adult patients in giving nursing care for a minimum of 480 hours prior to date of application. The 480 hours of experience must have been obtained within two years prior to application.
2. Have satisfactory personal references from employers, supervisors and/or school officials which demonstrate to the faculty satisfactory achievement of Fundamentals of Health Care objectives. The types of experience shall be similar to those offered in Fundamentals of Health Care.
3. Receive a satisfactory score in a written comprehensive examination and demonstration of selected nursing skills taught in Fundamentals of Health Care.
4. The applicant for advanced standing shall be given a copy of the course outline in Fundamentals of Health Care prior to the examination.
5. The applicant shall be granted advanced standing only if the faculty believes that such a decision is educationally sound for the applicant concerned.

SECOND LEVEL ENTRY APPLICANTS

1. The applicant must meet all of the regular requirements which apply to an applicant who wishes to enroll in the program.
2. This applicant must meet these additional requirements:
 - (1) Show evidence of having worked with patients of all ages in giving nursing care of a minimum of 1110 hours, prior to the date of application. Also, this experience must have been obtained within two years prior to the date of application.
 - (2) Have satisfactory personal references from employers, supervisors, and/or school officials.
 - (3) Demonstrate to the faculty satisfactory achievement of the Fundamentals of Health Care, Human Health Care I. The type of experience shall be similar to those offered in the above areas. Receive a satisfactory score on a written comprehensive examination and a demonstration of selected skills that are taught in

these areas. Questions shall be taken from the final examinations of the previous levels.

- (4) Each applicant will be given the course outline with recommended reading prior to taking this examination.
- (5) Receive a satisfactory score on the NLN three units of content standardized achievement test.
- (6) The applicant shall be granted advanced standing only if the faculty believes that such a decision is educationally sound for the applicant concerned.
- (7) In order to qualify for graduation from this program each student must complete Human Care II.

CURRICULUM

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 116P.

ABSTRACT: THIS CATALOG OF TELECOURSES PROVIDES DESCRIPTIONS OF TELEVISION COURSES WHICH ARE AVAILABLE IN A VARIETY OF SUBJECT AREAS FOR ALL EDUCATIONAL LEVELS FROM THE AGENCY FOR INSTRUCTIONAL TELEVISION (AIT). THE COURSES WERE DEVELOPED BY POOLING THE RESOURCES OF MANY EDUCATIONAL AND BROADCASTING AGENCIES IN A COOPERATIVE EFFORT. A GENERAL DESCRIPTION OF EACH TELEVISION COURSE APPEARS ALONG WITH BRIEF DESCRIPTIONS OF THE INDIVIDUAL LESSONS AND INFORMATION ABOUT PRODUCER, TIME, AND EDUCATIONAL LEVEL. THE COLLECTION IS INDEXED BY SUBJECT AREA AND BY GRADE LEVEL, AND INFORMATION IS PROVIDED CONCERNING RENTAL POLICIES, PROCEDURES, AND PRICES. INFORMATION IS ALSO PROVIDED ABOUT THE HISTORY AND DEVELOPMENT OF AIT, PROJECT DEVELOPMENT, AND NEW PROJECTS. (N3)

Essential Learning Skills Television Project

Design of a major classroom television project to strengthen instruction in the essential learning skills is now in progress.

A consortium of state and provincial agencies is supporting the \$300,000 design phase, which began July 1, 1976, and will continue through June 1977. The production phase, with a budget of \$3,500,000, is scheduled to get underway immediately after and continue through 1979.

To be developed over this three-and-a-half-year period is a series of sixty 15-minute programs for the fifth and sixth grades that will emphasize the critical thinking and study skills and include review of the communication and mathematics skills. The programs are to be available for American and Canadian classrooms beginning in September 1979.

The instructional design is focusing on materials for grades five and six, but it also will provide a general approach for possible series for grades one through four. These later series would emphasize the communication and mathematics skills.

A cooperative television project in the essential learning skills has been in the planning stages since the spring of 1974. The broad subject was given highest priority by educators and educational broadcasters at a 1973-4 series of meetings conducted by the Agency for Instructional Television to identify curriculum areas where television could be most helpful.

Further information on the project can be obtained from AIT.

Economic Education Television Project

A cooperative classroom television project in economic education for nine-to-eleven-year-olds is being developed by the Joint Council on Economic Education, the Canadian Foundation for Economic Education, and the Agency for Instructional Television.

Participating in the project are some forty state and provincial agencies. These agencies will fund the content development of the series. Additional funds for production and utilization will come from other sources.

The series of fifteen 20-minute programs and related materials will be completed and available to schools across the United States and Canada by September 1978.

The aims of the project are to increase student knowledge of economics, build skills in using economic principles to make decisions, and motivate further study of the subject. Each program in the series will consider a fundamental economic problem relevant to the daily life of the child, emphasize the economic principles and reasoning involved in dealing with the problem, and introduce a similar but unresolved problem to stimulate classroom follow-up activity.

Further information on the project can be obtained from AIT.

[The main body of the page is a large, vertical rectangular area that is almost entirely blacked out, obscuring any text or graphics that might have been present. Only a few faint, illegible white specks are visible within this area.]

About AIT Programming

The Agency for Instructional Television is a nonprofit American-Canadian organization established to strengthen education through television and other technologies. AIT develops joint program projects involving state and provincial agencies, and acquires and distributes a wide variety of television and related printed materials for use as major learning resources. It makes many of the television materials available in audio-visual formats.

Development of Projects

In the development of cooperative projects, AIT works closely with educational administrators, teachers, curriculum supervisors, educational broadcasters, and authorities in various subject matter fields, and with professional organizations in the U.S. and Canada. The AIT Board of Directors establishes areas for project exploration on the basis of needs expressed by representatives of the states and provinces at periodic regional meetings conducted by AIT. Study teams organized by AIT then determine how television can make a significant contribution to the classroom in these areas. Projects are refined through a series of reports distributed to all interested persons and through discussions at subsequent regional meetings.

State and provincial agencies pool resources to finance projects. The consortium of agencies involved in a project provides overall guidance through the production period. At various times during the course of production, representatives of the consortium agencies meet with AIT staff members, members of the project's curriculum design team, and other consultants to review the development of the television and related materials, plan information activities for proper introduction of the series, and plan effective utilization of the series. Actual production of the programs is done by selected agencies under the direct supervision of AIT and the project's consultants.

AIT also organizes smaller cooperative efforts to finance and guide the production of exceptionally promising classroom series conceived by individual agencies and the production of new versions of existing series that have proved their effectiveness over the years.

Consortium Projects to Date

The process of cooperative production enables state and provincial agencies to come together to develop programming of a kind and quality that will significantly strengthen education. By the fall of 1976, six consortium projects had been completed under the direction of AIT or its predecessor organization, National Instructional Television, and a seventh project was nearing completion. Forty-seven states and three provinces have been part of one or more of the seven consortia. (See Consortia Profile on opposite page.)

During the summer of 1976, instructional design began on two more cooperative projects—in economics education and the essential learning skills. Information on these projects is given on pages 2 through 5.

Acquired Programming

Most of the telecourses offered by AIT were produced by local, state, or regional agencies primarily for their own use. AIT constantly seeks out and reviews new materials, selecting from them for acquisition on the basis of content, instructional design, production quality, and appropriateness for wide distribution. Assisting in this process is a Program Advisory Committee that includes users of AIT materials.

Origin of AIT

AIT was created in 1973 in response to the need for a permanent American-Canadian organization whose structure would enable it to work closely with the states and provinces to expand and improve the cooperative production activity originated by the National Instructional Television Center (NIT). NIT was then a nonprofit self-supporting activity of the Indiana University Foundation in Bloomington.

At a meeting called by NIT in Atlanta in October of 1972, delegates from forty-five states, the District of Columbia, Puerto Rico, and four Canadian provinces recommended the establishment of the new organization. With the cooperation of the Council of Chief State School Officers, a seventeen-member organizing committee worked through the winter months. The incorporation of AIT took place on April 11, 1973.

On July 1, 1973, NIT became a division of AIT. The transfer included the entire NIT operation—existing staff, headquarters facilities and regional offices, and all NIT services.

History of NIT

National Instructional Television evolved from a small organization financed for its first five years (1962-67) by the U.S. Office of Education. Known initially as the National Instructional Television Library, it had been created to demonstrate whether a national clearinghouse for recorded instructional television programs was educationally desirable and economically feasible.

For the first three years of the demonstration, the organization was administered by National Educational Television (NET) in New York City. In 1965 it became the National Center for School and College Television and began operation under the Indiana University Foundation in Bloomington. When the USOE demonstration was completed in 1967, the Foundation provided partial support. In 1968 NCSCT changed its name—to National Instructional Television Center. In 1970 NIT became self-supporting, though it remained a project of the Indiana University Foundation until its transfer to AIT in 1973.

In the late 1960's, working with educators and broadcasters across the country, NIT began the effort to identify curriculum areas where television could be most useful and to develop new materials in these areas. Out of this activity came the idea of the consortium—in which many educational and broadcasting agencies pool their resources to create major classroom series beyond the means of any one agency. The success of these cooperative efforts led directly to the establishment of the Agency for Instructional Television.

Course Descriptions

- The process of classroom evaluation and revision has been a part of the development of some of the series described in this catalog. See page 111 for a list of research publications related to AIT series. For further information on evaluation components, please write to: Director of Research, AIT.
- The post secondary courses developed by the Harvard University-based Commission on Extension Courses and the U.S. Navy were intended originally to make college-level education available to Navy personnel at sea and at various naval installations. Designed to supplement the work of on-campus instructors, they can be used independently for non-credit programs.
- For each course description, the date following the producing agency indicates the year the course was released for distribution.

About Safety

Forty-two 5-minute color lessons
Primary
6-page combination teacher's guide
and fact sheet

Produced by the Mississippi Authority for
Educational Television (1973).

For purchase only—ABOUT SAFETY is offered
on fourteen videotape reels with three units per
reel. Users can purchase the entire series or
individual reels.

Price per reel—\$130 plus tape

The series is also available on videocassette.

Using a cast of puppets, this course teaches basic concepts in traffic, fire, outdoor play, vacation, school, and recreation safety. The featured puppet in the series is Clyde Frog, a careless, carefree schoolager whose ignorance and disregard for safety rules continually get him into trouble. This series of short, open-ended programs encourages the child to develop a positive and responsible attitude towards the safety of himself and others.

LESSONS

Reel One

- Clyde Learns School Bus Rules (4:00)
- Clyde Gets Off the School Bus (3:39)
- Clyde Discovers Winter Safety (4:35)

Reel Two

- Clyde Finds His Way to School (4:33)
- Clyde on the Safety Patrol (3:53)
- Clyde Walks from School (4:29)

Reel Three

- A Bike Ride with Clyde (4:37)
- Clyde Rides in a Car (4:33)
- Clyde Learns About Reflective Tape (3:32)

Reel Four

- Clyde on the Playground (4:17)
- Clyde Learns Classroom Safety (4:06)
- Clyde Gets in Trouble at School (4:11)

Reel Five

- Clyde Learns About Fire Safety (3:55)
- Clyde Learns About First Aid (4:17)
- Clyde and the Tornado (5:36)

Reel Six

- Clyde Takes a Hike (4:22)
- Clyde Goes Trick or Treating (4:15)
- Clyde Files a Kite (3:47)

Reel Seven

- Clyde Learns About Germs (5:13)
- Clyde at Home (4:37)
- Clyde Learns About Gun Safety (2:47)

Reel Eight

- Clyde on the Safety Council (3:39)
- Clyde Reads Traffic Signs (4:34)
- Clyde Explores the Way to School (4:35)

Reel Nine

- Clyde Gets a Taste of Kitchen Safety (6:01)
- Clyde Discovers Bathroom Safety (3:32)
- Clyde Learns About Water Safety (5:00)

Reel Ten

- Clyde on Halloween (3:50)
- Clyde and the Firecracker (4:55)
- Clyde Learns Safe Sledding (4:22)

Reel Eleven

- Clyde Goes Hitch-Hiking (4:45)
- Clyde on the Railroad Tracks (4:41)
- Clyde at the Bus Stop (4:38)

Reel Twelve

- Clyde Reads About Clothing Fires (5:20)
- Clyde Examines Medicine Cabinet (4:14)
- Clyde Reports His Accident (4:08)

Reel Thirteen

- Clyde Takes a Swim (4:18)
- Clyde Visits the Farm (5:26)
- Clyde Walks the Halls (4:40)

Reel Fourteen

- Clyde Tests His Bicycle Knowledge (4:54)
- Clyde Enjoys Bicycle Safety (4:19)
- Clyde Learns Some Responsibility (4:22)

About Science

Forty 5 to 8-minute color lessons
Intermediate, junior high, senior high
43-page teacher's guide

Produced by the Mississippi Authority for
Educational Television (1972).

For purchase only—ABOUT SCIENCE is offered
on nine videotape reels with three to five units
per reel. Users can purchase the entire series or
individual reels:

Reels 1-6—\$240 plus tape

Reel 7—\$230 plus tape

Reels 8-9—\$220 plus tape

The series is also available on videocassette.

This course actively engages the viewer in the process of scientific inquiry. Each lesson focuses on a single concept, providing a body of knowledge that is manageable for both teacher and student. The viewer sees only the hands of the person performing the laboratory experiment while an off-camera narrator describes the action step by step. A light, original jazz score complements the narration.

LESSONS

Reel One

- Preparation of Oxygen (5:41)
- Physical Properties of Oxygen (5:06)
- Chemical Properties of Oxygen (5:18)
- Preparation of Carbon Dioxide (4:51)
- Properties of Carbon Dioxide (5:08)

Reel Two

- Dry Ice (5:28)
- A Flame Test (5:40)
- Distillation (5:25)
- Combustion and Weight Changes (5:13)
- Electroplating (4:45)

Reel Three

- Conductivity (5:04)
- Acids (4:58)
- Bases and Neutral Compounds (4:59)
- Mixtures and Compounds (5:06)
- Electrolysis (5:31)

Reel Four

- Conservation of Matter (4:16)
- A Mercury Barometer (4:16)
- Carbohydrates: Sugars and Starches (5:50)
- Fats and Proteins (6:20)
- The Effects of Air Pressure (4:11)

Reel Five

- Electroscope (7:24)
- An Electric Circuit (4:24)
- A Series Circuit (4:16)
- A Parallel Circuit (4:34)
- Static Electricity (5:27)

Reel Six

- Understanding Magnets (5:10)
- Magnetic Behavior (4:34)
- Electromagnets (5:12)
- Making a Telegraph: An Electromagnet (6:13)
- An Electric Motor (4:49)

Reel Seven

- Wet Cell (5:42)
- Dry Cell (4:35)
- Short Circuits and Fuses (6:25)
- Producing an Electric Current (5:52)

Reel Eight

- An Electric Bell (5:21)
- Expansion and Contraction (5:30)
- The Mineral Kingdom (7:31)

Reel Nine

- Mass and Weight (6:35)
- Volume (6:45)
- Density (11:07)

All About You

Thirty 15-minute color lessons
Primary
84-page teacher's guide

Produced for AIT by Massachusetts Educational
Television (21 Inch Classroom) at WGBH-TV,
Boston (1974).

Film clips, models, microscope slides, and a lively cast of puppets are a few of the devices used to introduce first and second graders to the marvel of the human body, in a series that focuses on physical growth and development, and the importance of good health habits. Based on the newest advances in science and health, ALL ABOUT YOU explores children's emotions, individual differences, and cultural influences in lessons designed to stimulate inquiry and generate active viewer involvement.

Louise McNamara, the television teacher, involves the viewing students, encouraging them to reply to her questions and participate actively in the lessons. Playful, whimsical, or deeply serious, she creates an atmosphere of interest and inquiry that is particularly helpful to the classroom teacher.

Ada B. Litchfield, principal consultant and scriptwriter for the course is the author of a number of books for children. Ms. Litchfield has been a first-grade teacher and an editor for the Houghton Mifflin Company.

LESSONS

1. **What Are You Anyway?**—Helps children think about their minds and bodies (14:48)
2. **What Holds You Up?**—Demonstrates how the skeleton is constructed (14:28)
3. **No Strings on You**—Demonstrates how muscles and tendons hold the skeleton together (14:34)
4. **Move Those Muscles!**—Discusses the importance of exercising everyday. (14:22)
5. **What's Your Fuel?**—Shows how the body changes food into fuel (14:02)
6. **It's What You Eat**—Explains the four basic food groups, and discusses a balanced diet. (14:11)
7. **Good Mouthkeeping**—Illustrates good tooth care. (14:14)
8. **What Are You Made Of?**—Explains the parts and functions of cells. (14:25)
9. **Take a Deep Breath**—Demonstrates the body's need for oxygen. (14:20)
10. **Your Heart: The Mighty Muscle**—Shows how heart, blood, and blood vessels work together. (14:30)
11. **Getting Rid of Waste**—Shows how food becomes fuel, then a waste product. (14:29)
12. **Your Birthday Suit**—Discusses skin structure and color (13:38)
13. **Getting the Message**—Illustrates how messages are received and interpreted by the brain. (14:25)
14. **Your Busy Brain**—Demonstrates how the brain is like a control center, constantly receiving and sending messages. (14:14)
15. **Listen, Look, and Learn**—Looks at the structure and function of the eye and ear (14:10)
16. **Handy Hands**—Demonstrates how hands help people work, play, and communicate (14:24)
17. **Talk, Talk, Talk**—Illustrates man's need for language (14:28)
18. **What Keeps You Alive?**—Considers what it means to be alive (14:10)
19. **In the Beginning**—Traces the development of a human baby from a single cell. (14:02)
20. **Secrets in Your Cells**—Illustrates that some things, like physical traits, are determined by genes (14:08)
21. **Look At You Now**—Helps youngsters consider their own development. (14:10)
22. **No Two Alike**—Emphasizes the role of experience in shaping personality. (14:32)
23. **Sneezles, Wheezles, and Measles**—Tells how germs cause disease. (14:28)
24. **Watch Out!**—Emphasizes that children must sometimes watch out for their own safety. (14:34)
25. **If You Go to the Hospital**—Tells the story of a child's stay in Boston Children's Hospital. (14:10)
26. **You and Your Feelings**—Talks about feelings and how people react to them. (14:17)
27. **Everybody Is Afraid Sometimes**—Discusses real and imaginary fears. (14:09)
28. **What Are Families For?**—Discusses family relationships, including animal and human families (14:13)
29. **Everybody Needs a Friend**—Suggests right and wrong ways of making and keeping friends. (14:40)
30. **Everybody Else and You**—Examines family life in other countries. (14:39)

American National Government

(Government I)

Fifteen 30-minute black and white lessons
Post-secondary
2-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University
Produced by WGBH, Boston (1967)

This course introduces the development of the three main institutions of American national government—Congress, the Presidency, and the Supreme Court. Each is traced historically from the Constitutional Convention to the present and is thoroughly analyzed in terms of its power, influence, and function. These lectures have been prepared and presented by Professor Carrol F. Miles, Chairman, Social Science Department, Simmons College, formerly Professor of Government, Simmons College.

LESSONS

1. **Fundamentals of American Government**—Introduces eight principles of American government. (28:50)
2. **The Founding Fathers**—Deals with the Constitutional Convention and its participants. (27:10)
3. **The Functions of Congress**—Examines the basic legislative functions of Congress. (28:54)
4. **Congressional Reform**—Asks how well Congress performs its functions as a democratic and representative body. (28:49)
5. **Congress and the President**—Emphasizes the importance of the Supreme Court decision in Baker vs. Carr. (28:52)
6. **The Roles of the President**—Studies the United States Presidency as an institution of government. (28:55)
7. **Presidential Leadership**—Discusses the five constituencies of the Presidency, executive officialdom, Congress, party leaders, citizens, and officials from other nations. (28:55)
8. **Limitations on the Presidency**—Reviews the function of the Electoral College. (28:56)
9. **Political Parties**—Analyzes political parties as a means through which citizens organize themselves to control government. (28:53)
10. **The Supreme Court**—Studies the responsibilities of the Supreme Court members. (28:54)
11. **The Law and Desegregation**—Interprets the 14th Amendment as a guarantee of certain civil and political liberties. (28:48)
12. **The Changing Court**—Surveys some decisions handed down by the Supreme Court since 1937. (28:52)
13. **The First Amendment**—Emphasizes the first ten amendments to the Constitution as checks on the national government. (28:54)
14. **The New Federalism**—Studies the principle of federalism, frequently invoked in defense of states rights. (28:50)
15. **The Bureaucracy: General Conclusions**—Makes the distinction between the bureaucracy and the executive branch. (28:54)

Animals & Such

Sixteen 15-minute color lessons in four modules
Intermediate
28-page teacher's guide

Produced by Hampton Roads Educational
Television Association, WHRO-TV, Norfolk
(1972).

Field trips to zoos, to an animal shelter, and to terrestrial saltwater and fresh-water habitats acquaint students with the life processes of many animals. Specialized photographic techniques allow viewers to see an amoeba capturing a stentor, blood rushing through a tadpole's tail, and other microscopic events, in a series of lessons that explores ecological relationships, stresses the need for conservation, and emphasizes the importance of observation and other scientific techniques in problem-solving. **ANIMALS & SUCH** is a companion course to **MATTER & MOTION**.

Larry Crum, producer, designer, and narrator for **ANIMALS & SUCH**, has been studio teacher and producer for the Hampton Roads Educational Television Association since 1968. Before that he taught biology and earth science in Virginia public schools.

Stewart Harris, cinematographer for the series, has film credits for more than a hundred projects in instructional and public television. He received several awards for excellence in photography for **COMMUNITY OF LIVING THINGS**, another Crum-Harris series.

LESSONS

Module Blue: HABITATS

1. **Life on a Rotting Log**—Examines a rotting log as the habitat of countless creatures, each with its own means of survival. (14:34)
2. **Microscopic Pond Life**—Demonstrates that microscopic life is complex despite its smallness, shows amoeba, paramecia, and volvox. (14:30)
3. **Ocean Animals**—Considers characteristics of a host of marine creatures, including starfish, sea slugs, and octopi. (14:27)
4. **Birds of Fisherman's Island**—Looks at the variety of birds which exist along the Atlantic flyways, and examines their dependence on wild areas for survival. (14:30)

Module Brown: TYPES OF VERTEBRATES

1. **Snakes and the Like**—Investigates a variety of reptiles: turtles, snakes, lizards, and crocodiles. (14:25)
2. **Fish**—Discusses how various fresh-water and saltwater fish breathe, swim, feed, and reproduce. (14:39)
3. **Frogs, Toads, and Salamanders**—Examines amphibians in relation to their life cycle and adaptations for survival. (14:35)
4. **Animals with Hair**—Focuses on the types, features, and behavior of mammals, from cats to man. (14:30)

Module Green: ANIMALS AND PLANTS

1. **About Pets**—Visits an ASPCA shelter, and discusses animal survival and proper treatment of pets. (14:31)
2. **A Visit to the Zoo**—Gives detailed information about zoo dwellers and endangered species. (14:30)
3. **Plants or Animals**—Considers the similarities of and differences between animals and plants, pointing out that some creatures have features of both. (14:30)
4. **Kinds of Plants**—Investigates the two groups of plants—those with chlorophyll and those without. (14:33)

Module Red: LIFE PROCESSES

1. **What Animals Eat**—Examines the feeding processes of animals, including parasites. (14:32)
2. **Movement within Life**—Studies internal movement and how it is accomplished in both plants and animals. (14:30)
3. **Living Things Grow and Change**—Shows how insects develop through a series of stages, and how markings reveal age in trees and clam shells. (14:30)
4. **Living Things Reproduce**—Observes how living things reproduce, and compares simple and complex methods of reproduction. (14:33)

Art for the Day

Eighty 3 to 4-minute color lessons
 Intermediate, junior high, senior high
 6-page combination teacher guide and fact sheet
 Produced by the Mississippi Authority for Educational Television (1972).

For purchase only—ART FOR THE DAY is offered on ten videotape reels with eight units per reel. Users can purchase the entire series or individual reels:
 Price per reel—\$270 plus tape

The series is also available on videocassette.

Each lesson in ART FOR THE DAY is an opportunity to explore a single work of art. The camera focuses on specific elements in a painting or sculpture, guiding the viewer from one set of experiences to another, and a brief narration provides information and suggestions that help him to see the work as the sum of its interdependent parts. Encountering artworks in this fresh light encourages the student to experience the unique vitality of each work, and to interpret it for himself. Each program is approximately 3 minutes in length.

LESSONS

Reel One

People and Dog in the Sun, Joan Miró (Spanish, 1893-)
 Room at Arles, Vincent van Gogh (Dutch, 1853-1890)
 Head of Two Clowns, Georges Rouault (French, 1871-1958)
 Landscape (Les Chaumières), Maurice Vlaminck (French, 1876-1958)
 I and My Village, Marc Chagall (Russian, 1887-)
 The Three Masks, Carl Holer (1878-1955)
 The Old King, Georges Rouault (French, 1871-1958)
 A Girl with a Watering Can, Pierre Auguste Renoir (French, 1841-1919)

Reel Two

The Spirit of 1776, Solomon Willard (American, 1783-1861)
 Nat Werner (1907-)
 Egyptian Cat, (Sculpture), Ancient Egypt
 Dempsey and Firpo, George Bellows (American, 1882-1925)
 At the Circus, Toulouse-Lautrec (French, 1864-1901)
 Weathervane Horse, Early American Craft Item
 Zapatlitas, José Orozco (Mexican, 1883-1949)
 Boys in a Pasture, Winslow Homer (American, 1836-1910)
 Nefertiti (Sculpture) Ancient Egypt

Reel Three

Fog Warning, Winslow Homer (American, 1836-1910)
 Woman with a Cat, Pierre Auguste Renoir (French, 1841-1919)
 Palazzo da Mula, Venice, Claude Monet (French, 1840-1928)
 Starry Night, Vincent van Gogh (Dutch, 1853-1890)
 The Laundress, Honoré Daumier (French, 1808-1879)
 Head of a Clown, Bernard Buffet (French, 1928-)
 The Bath, Mary Cassatt (American, 1844-1928)
 Man in a Golden Helmet, Rembrandt van Ryn (Dutch, 1606-1669)

Reel Four

The Rabbit, Albrecht Dürer (German, 1471-1528)
 A Peasant Wedding, Pieter Bruegel (Flemish, 1525/30-1569)
 The Cook, Jan Vermeer (Dutch, 1632-1675)
 The Peaceable Kingdom, Edward Hicks (American, 1780-1849)
 Child Holding a Dove, Pablo Picasso (Spanish, 1881-1973)
 Breazing Up, Winslow Homer (American, 1836-1910)
 Le Gourmet, Pablo Picasso (Spanish, 1881-1973)
 The Squirrels, Albrecht Dürer (German, 1471-1528)

Reel Five

Red Horses, Franz Marc (German, 1880-1916)
 Adoration of the Shepherds, Giorgione (Italian, 1476/8-1510)
 The Laughing Cavalier, Frans Hals (Dutch, 1581/5-1668)
 Still Life with Flowers, Georges Rouault (French, 1871-1958)
 The Fifer, Edouard Manet (French, 1832-1883)
 Dancing Class, Edgar Degas (French, 1834-1917)
 Soap Bubbles, Jean Baptiste Chardin (French, 1699-1779)
 Trafalgar Square, Piet Mondrian (Dutch, 1872-1944)

Reel Six

Gare Saint-Lazare, Edouard Manet (French, 1832-1883)
 Young America, Andrew Wyeth (American, 1917-)
 Mardi Gras, Paul Cézanne (French, 1839-1906)
 The Little Dancer Aged Fourteen (Sculpture) Edgar Degas (French, 1834-1917)
 Spring (Sculpture) Ellen Lord (American, 20th Century)
 The Copley Family, John Singleton Copley (American, 1738-1815)
 Ground Hog Day, Andrew Wyeth (American, 1917-)
 American Indian Duck (Pottery) (400-1200 A.D.)

Reel Seven

The Gates of Jerusalem, Sharaga Weil (Israeli, 1918-)
 Gypsy Woman with Baby, Amedeo Modigliani (Italian, 1884-1920)
 Young Raven with Open Mouth (Sculpture) Eskimo Primitive
 Bodhisattva in Meditation (Sculpture) Chinese (400 A.D.)
 Dancers, Zeshin Shibata (Japanese, 1807-1891)
 Portrait of His Son, Nicholas, Peter Paul Rubens (Flemish, 1577-1640)
 L Acrobats, Marc Chagall (Russian, 1887-)
 Menorah, David Palombo (1920-1966)

Reel Eight

The Plantation, Anonymous American (early 1800's)
 Woman with Red Hair, Amedeo Modigliani (Italian, 1884-1920)
 Fur Traders Descending the Missouri, George Caleb Bingham (American, 1811-1879)
 Still Music, Ben Shahn (American, 1898-1969)
 Seven A.M. 1948, Edward Hopper (American, 1882-1967)
 Creekbed, Lou Eckerl (American, 20th Century)
 The Scout: Friends or Enemies, Frederic Remington (American, 1881-1909)
 William the Hippo (Sculpture) Ancient Egypt

Reel Nine

Nude Descending a Staircase No. 2, Marcel Duchamp (French, 1887-1968)
 Mount Fuji Behind the Wave Off Kanagawa, Hokusai (Japanese, 1760-1849)
 Horse Frightened by the Storm, Eugene Delacroix (French, 1798-1863)
 Rebus, Robert Rauschenberg (American, 1925-)
 Sampler Embroidered on Linen, American Folk Art
 Las Meninas, Diego Velazquez (Spanish, 1599-1660)
 Candelstick, Early American Craft Item
 The Midnight Ride of Paul Revere, Grant Wood (American, 1892-1942)

Reel Ten

Venus de Milo (Sculpture) Ancient Greece (Discovered 1920)
 The Moneylender and His Wife, Quentin Massys (Matsys, Flemish, 1484/65-1530)
 Persian Helmet, c. 1600 A.D.
 The Gulls, Jan Horton (American, 20th Century)
 Hacha, Pre-Columbian
 Dog with Flowers, Anonymous American (early 1800's)
 Guernica, Pablo Picasso (Spanish, 1881-1973)
 The American National Game of Baseball, Nathaniel Currier (American, 1813-1888) James M. Ivas (American, 1824-1895)

Book, Look, and Listen.

Thirty 10-minute color lessons
Primary
Teacher's guide

Produced by the Maryland State Department of
Education (1977).

J. Worthington Book, Hector Projector, and Ethel Earphone are the stars of this series, created to arouse the interest of very young children in all forms of storytelling. Together they personify the reading of print, pictures, and sound. Meeting in a fanciful woodland setting, the three resolve situations related to the lesson concepts, through stories, filmstrips, book illustrations, songs, dance, and pantomime.

The series has an interdisciplinary structure, with emphasis on literature and reading (print and non-print), early childhood education, understanding of cultural and ethnic minorities, career education, and environmental education. As children enjoy the lessons, they develop an appreciation of reading as an interesting activity.

LESSONS*

The lessons help children to develop:

1. **I Can Read** — the ability to read or interpret sounds, pictures, or stories without words.
2. **I'm Glad I'm Me** — an appreciation of themselves as unique individuals, each with different features and characteristics
3. **Talent Show Today** — an awareness of individual talents and physical skills.
4. **Places, Pplaces, Special Places** — the realization that children, as well as adults, often need a special place where they can be alone.
5. **Just Plain Rain** — ways of adapting to real, changing, and sometimes disappointing environmental conditions.
6. **Voice Your Choice** — the knowledge that some methods of solving social problems are more positive than other methods.
7. **Happy, Sad, Mad, Glad** — the ability to identify feelings as a first step in learning to manage emotions successfully
8. **Sometimes Sad, But Mostly Glad** — the ability to recognize feelings in others.
9. **Paint Me a Mood** — the realization that moods can be created or induced by external forces.
10. **Find Out Fast** — an awareness of information sources and knowledge of how to locate information independently
11. **Need It? Make It!** — the ability to create useful items from a wide range of materials.
12. **Fly a Kite!** — the ability to create toys from a variety of resources.
13. **Album of Families** — positive feelings and an appreciation of their own families and other families.
14. **House, Sweet Home** — the insight that, different as each may be, everyone's home is special to the individual
15. **Peet? Racer? Dragon Chaser?** — some knowledge of the various occupations in which people are engaged.
16. **Do Not Feed the Animals?** — information about positive relationships with animals.
17. **Games, Games, Games** — an awareness of the literacy and cultural roots of many games.
18. **Pandas and Applesauce** — the ability to differentiate between fantasy and reality, and an appreciation of the need in life for fantasy and imagination.
19. **Imaginel** — a lasting appreciation of imaginary, fictional characters.
20. **Oh, What a Zany Zoo** — imagination through exposure to a collection of fanciful animals.
21. **All Time Favorites** — an understanding of why tables and folktales have been handed down and appreciated by many generations.
22. **The Wonderful Word and Wordless Story Wagon** — the ability to respond to language games with one word, a phrase, or complete sentence stories.
23. **Let's Pretend It** — the skills to create stories from a variety of sources.
24. **Rub-A-Dub-Dub** — the realization that one story may be illustrated in many ways.
25. **Sing a Song and Work Along** — the knowledge and skill to recognize and interpret the story lines in songs
26. **Tone Tales** — the ability to associate stories and characters with orchestral music and single instruments.
27. **Dance Me a Story** — the ability to interpret stories told through dance.
28. **Mime Time** — the ability to interpret actions and expressions, of a pantomimist as a storyteller.
29. **The Play's the Thing** — the skill to interpret story dramatizations and to follow the story line of a play
30. **Stories, Stories, Stories** — a sense of personal accomplishment regarding their ability to read or interpret sounds, pictures, and stories.

bread & butterflies

Fifteen 15-minute color lessons
Intermediate
136-page curriculum guide

20-minute teacher program
15-minute informational program
Student Activities Workbook
Workshop Training Package

Developed through the resources of a consortium of thirty-nine agencies, organized and managed by AIT. Produced for AIT by NVETA, Annandale; KETC-TV, St. Louis; UNIT Productions, Salt Lake City; WHRO-TV, Norfolk; and Georgia Department of Education, Atlanta (1974).

Rental Fees: The complete course, including informational program and teacher's program, is offered for \$1675.00 plus \$28.75 for each 10,000 students.

Available for purchase on film and videocassette.

For related materials, see pages 107-110

In programs that present situations from the child's perspective, **BREAD & BUTTERFLIES** gives children a clearer understanding of successful work behavior and the connection between school and the real world. It also encourages each child to develop his own special capabilities and goals. Winner of Certificate of Creative Excellence, U.S. Industrial Film Festival, 1974, Silver Award, International Film & TV Festival, 1975; and Ohio State Award, 1976.

Chief Consultants to AIT, James E. Bottoms, Ed.D., Director, Division of Program and Staff Development, Georgia State Department of Education, and W. Wesley Tennyson, Ed.D., Professor of Educational Psychology, University of Minnesota.

LESSONS

1. **Treasure Hunt (Self Independence and the Economic System)**—Ernie, Monica, and Bill want to go to a carnival, but each must earn money to pay for it. (14:40)
2. **Work Means (Why People Work)**—A junior high school girl, doing research for a report, discovers that work means different things to different people. (14:25)
3. **Me, Myself & Maybe (Self-Clarification)**—DeAnne overcomes her lack of self-confidence at school when her Aunt Cathy helps her learn some new skills. (14:30)
4. **Decisions, Decisions (Decision-Making)**—Tommy must decide whether he wants to continue his friendship with Joey, a misfit shunned by the other boys. (14:17)
5. **School & Jobs (Relationship—School, Work, and Society)**—This program looks at activities, roles, and personalities in a hospital, a factory, and a general store, and compares them to those of a school. (14:32)
6. **Taking Care of Business (The Responsible Self)**—David begins to neglect his responsibilities at home when he starts mowing lawns to earn extra money. (14:43)
7. **I Agree . . . You're Wrong! (Interpersonal Skills)**—Mattie, a movie director, and Vince, a cameraman, have a hard time seeing eye-to-eye about how a certain scene should be filmed, and communication ceases. (14:35)
8. **Success Story (What Is Success?)**—This is a true story about Dave, who owns a leather shop where he makes and sells his work, and who has learned to define success in his own terms. (14:31)
9. **The Way We Live (Life Styles)**—In this documentary, the members of a West Virginia family reveal the values that shape their lives—their attitudes toward work, home life, and leisure activities. (14:28)
10. **Planning Ahead: The Racer (Shaping One's Destiny)**—Johnny's dreams of building a soap box racer are not realized until he learns to use equipment properly and to plan ahead. (14:18)
11. **Things, Ideas, People (People at Work)**—Three children who think their father has lost his job make lists of job possibilities, classifying them as jobs working with things, people, or ideas. (14:33)
12. **People Need People (Interdependency of Workers)**—From trapeze artists to construction workers, this documentary shows examples of positive dependent and interdependent relationships in work and leisure activities. (14:30)
13. **Our Own Two Hands (Human Dignity)**—Members of the Holland family, who live on and work a small pig farm, are enthusiastic about having a farm that thrives by "our own two hands." (14:26)
14. **Power Play (Power and Influence)**—In this fantasy, a group of rebels create confusion after the school principal announces that the adults will leave the building and the students will take over all responsibilities. (14:20)
15. **Choosing Changes (Freedom To Hope, To Choose, and To Change)**—This is the true story of Barbara, an engineer in oceanography, who had the confidence in herself to overcome challenges that others thought would be too difficult for her. (14:24)

Breakthru

Ten 17 to 23-minute color lessons in two modules
Intermediate

20-page teacher's guide

Produced by TRAFCO, Program Council,
United Methodist Church (1971).

Cheating, insecurity, sibling-rivalry, conflicting codes of behavior, and stealing are some of the social or moral problems dealt with in this series of thought-provoking dramatizations. Viewers are invited to identify with the characters and project themselves into the situations. The series helps students gain a clearer perspective on their personal experiences, look seriously at the kinds of choices available to them in their own lives, and seek values that promise positive satisfaction and fulfillment.

LESSONS

Module A

1. **Big Deal**—Pete and a friend consider hiding another boy's model boat so that their entry will have a better chance of winning first prize in the hobby show. (16:52)
2. **Feud on Third Avenue**—When a rivalry for the class presidency develops into a destructive feud, Lissa begins to understand the infectiousness of hatred. (21:48)
3. **New Neighbors**—When Buck befriends new neighbors from the country despite the taunts of the neighborhood gang, the members of his family realize their own attitudes have been narrow. (18:23)
4. **Nightmare Chaser**—Moving to a new home causes three children to become uneasy about their surroundings. A cat helps them deal with fear and insecurity. (17:05)
5. **The Plain White Envelope**—Steve finds an envelope containing the words for the sixth-grade spelling bee, and must decide either to go ahead and cheat or to disqualify himself. (19:20)

Module B

6. **Goof**—Henry seems to have the knack of doing things the wrong way. When Pam's favorite hamster is missing, she assumes that Henry is responsible. (17:24)
7. **The Haunted House**—Jo, Cynthia, and Jennie sneak into a vacant house and find themselves locked in. When rescued, the girls are convinced of the need for authority and guidance. (21:46)
8. **Talking Hands**—Ruth learns hand language to converse with her deaf aunt, and discovers an important lesson about developing one's talents. (22:48)
9. **The Thief**—Mike's claim that taking books from the school library is not stealing because "nobody's getting hurt," is challenged when Frank dares him to steal a transistor radio. (19:54)
10. **The Trouble With Eunice**—Eunice, who dyed her hair red because her gang decided that was the thing to do, learns how to resist when group pressure and personal standards conflict. (18:00)

Children of the World

Six 30-minute color lessons
Intermediate

20-page teacher's guide

Produced by NET, in cooperation with the
Canadian Broadcasting Corporation and UNICEF
(1969).

Journeys into the homes and personal lives of children in Brazil, Guatemala, Dahomey, Somalia, Nepal, and Thailand introduce American youngsters to the customs, problems, and challenges faced by people in different nations. The series fosters tolerance, empathy, and the ability to generalize as it explores cultural similarities and differences. In addition to increasing children's awareness of the world around them, CHILDREN OF THE WORLD can be used to help improve their writing, speaking, and observation skills.

LESSONS

1. **Brazil**—Takes a journey with Giardel Francesco Andrade, a thirteen-year-old boy who searches for his father in the mountains and jungles of Brazil. (27:22)
2. **Guatemala**—Accompanies Norberta and Herlinda on an adventure in the highlands of Guatemala. Shows the activities surrounding a festival. (27:20)
3. **Dahomey**—Examines various African life styles while exploring the people's struggle to survive and their desire for change. (28:29)
4. **Somalia**—Focuses on nomadic life in Somalia. Discusses the traditions of family and religious life there. (28:09)
5. **Nepal**—Tours Nepal, with a young boy, Uttum Baniya Chhetri. Investigates the changing religious concepts of the people. (28:27)
6. **Thailand**—Follows the experience of Lahor, a twelve-year-old boy. Shows life aboard a barge on the Chao Paya River. (28:29)

Code / English

Fifteen 20-minute black and white lessons
Intermediate, junior high
90-page teacher's guide

Produced by KQED Educational Services,
San Francisco (1970).

Concrete and practical questions about language ("Who messed up our spelling and why don't we change it?" "What's such a big deal about the dictionary?" "Which language is the best?") are discussed from the perspective of English as a code—a system of signals and rules for sending and receiving messages. Programs cover the history and dynamics of written and spoken English, introduce the study of linguistics without technical jargon, promote greater awareness of language, and demonstrate the importance of clear language for effective communication.

Bob Smith, author and teacher of CODE/ENGLISH, has taught linguistics, English, Philosophy, psychology, education, Latin, and mathematics. His own educational background includes advanced degrees from Gonzaga University and the University of Michigan.

LESSONS

1. **OWR/Our DUH-BL/Double KOHD/Code**—Codes rely on signals and rules for meaning. The movement from thought to speech to writing is illustrated with the use of a simulated computer. (19:45)
2. **Three (To-Two-Too)'s in English**—This program emphasizes the basic principles of the English code system. (19:32)
3. **Codes for Communicators**—An addition to the computer makes it possible to extend the recoding of written forms of language into Braille, semaphore, Morse code, and shorthand. (19:22)
4. **The Perfect Letter (Alphabet)**—The alphabet works as a set of code signals to represent sounds of spoken English. (19:25)
5. **Smashup! (Puns & Homophones)**—What effective communication owes to clear language is evident in problems caused by conflicting code signals. (19:39)
6. **Bellows, Reed, & Stoppers (Phonetics)**—Human physical equipment works as a code machine to produce the sounds of speech. (19:36)
7. **Magazine & Magglebean (Spelling)**—Despite the fact that parts of English spelling are disorderly, learning to spell is by no means hopeless. (19:29)
8. **Chop . . . Drop . . . Mark (Abbreviations)**—Many parts of written English are recoded into abbreviated forms. (19:26)
9. **Logograms R = 2 Words**—The study of word-signs introduces a form of English that is not spelled—numbers and other symbols. (19:30)
10. **Cowboys & Codebooks—The Language Library**—All kinds of language books are useful—the dictionary in particular. (19:15)
11. **The Alphabetical Everything (Dictionary)**—A good dictionary can provide practical information at each level of the English code system. (18:29)
12. **Music! Music? Music.. (Punctuation)**—Forms of punctuation translate into writing the "music" of speech—the patterns of stress, pitch, and timing. (19:28)
13. **gnitirW fo yrotsiH/History of Writing**—This program reviews the major steps in the history of writing—from Egypt to Asia Minor, to Greece, to Rome, and through France to Britain. (19:38)
14. **Wryte It Rihte! (Spelling History)**—A brief history of the English language introduces the troublesome discrepancies of spelling. (19:29)
15. **Code/English Clinic Quickie Contest**—The potential of the "Code/English" approach is explored in a wide-ranging exchange about the nature of language. (19:39)

Common Cents

Five 15-minute color lessons

Primary

Teacher's guide

Produced by KETC-TV, St. Louis (1977).

Available on videocassette.

People depend on one another in many ways; this series focuses on the economic interdependence of people. It presents economic concepts in terms that young children can relate to their own lives. The lessons use a variety of techniques, puppets, skits, animation, songs and film segments to explain basic economic concepts and to stimulate classroom discussion and activities.

LESSONS*

1. **Trading** — Introduces the concept of trading, defines goods and services, and discusses barter and money as systems of exchange.
2. **Producers and Consumers** — Compares the roles of producers and consumers, defines income, and discusses the value of productive work.
3. **Choices** — Explores the concept of economic choice; examines decisions involved in spending, use of resources, and saving; and emphasizes the idea that wants and needs must be balanced against a cost factor.
4. **Prices** — Looks at the elements that determine how much goods and services cost; introduces the concept of expenses, supply and demand, and competition; and considers how prices change.
5. **How Money Works** — Shows many ways that money circulates; explains the use of checks, credit cards, and bills; and points out how taxes provide public goods and services.

*Time for programs in this series were unavailable at the time of publication

Community of Living Things

Thirty-two 20-minute black and white lessons
in five modules
Junior high
60-page teacher's guide

Produced by Hampton Roads Educational
Television Association, WHRO-TV, Norfolk
(1970).

By means of field trips, close-up photography, and microphotography, this series transports viewers to remote regions where they can inspect at close range more than 150 species of living organisms. Programs explore the ecology of various natural habitats, studying the environmental adaptations of organisms, the interdependence of living things, and the ways in which man has upset this balance. By tracing the energy flow within several habitats and examining the characteristics of the living things found in each, students also develop scientific skills of observation and analysis.

Larry Crum is the teacher for COMMUNITY OF LIVING THINGS and the author of its teacher's guide. Mr. Crum holds a master's degree from the College of William and Mary. Before becoming a studio teacher and producer for the Hampton Roads Television Association, he taught biology and earth science in the public schools.

LESSONS

Module 1: EXPLORING OUR ENVIRONMENT

1. **Techniques for Exploration**—Emphasizes sight, hearing, and the reasoning process. Introduces graphs as a means of making data more meaningful. (19:31)
2. **Life and Nonlife**—Compares living things with non-living materials. Introduces viruses as possible bridges between life and nonlife. (19:32)

Module 2: EXPLORING DIFFERENT ENVIRONMENTS

3. **Ecology of a Lake: Its Microorganisms**—Introduces single-celled life found in a lake—diatoms, euglena, stentors, and vorticellids. (19:30)
4. **Ecology of a Lake: In and Out of Water**—Considers organisms that exist on land or in air as well as in the lake—dragonflies, mayflies, algae, and turtles. (19:30)
5. **Ocean Bottoms**—Examines life found on ocean bottoms—sea slugs, starfish, sea urchins, and sea cucumbers. (19:29)
6. **Salt Marsh Ecology**—Examines life in a salt marsh. Looks at mud flats inhabited by fiddler crabs, mussels, sandworms, and sea anemones. (19:30)
7. **Marshy Terrain**—Explores life that bridges land and fresh water—liverworts, mosses, salamanders, and frogs. Outlines the moisture demands of marsh life. (19:32)
8. **Bogs, Carnivorous Plants**—Investigates life that has adapted to the hydrogen-deficient soil of a bog. Examines carnivorous plants. (19:33)
9. **Life within the Topsoil**—Examines life in the soil by looking at soil organisms: snails, slugs, spiders, millipedes, and earthworms. (19:30)
10. **Desert Terrain**—Contrasts dry with moist land. Presents the desert tortoise, tarantula, cacti, and various lizards. (19:30)
11. **Community Changes**—Investigates community changes, succession, and climax, as well as adaptations to change of seasons. (19:30)

Module 3: DYNAMICS OF LIVING THINGS

12. **Leaves and Photosynthesis**—Examines the way leaves adapt to capture the sun's energy. Describes briefly the process of photosynthesis. (19:31)
13. **Food Getting**—Shows how animals directly or indirectly rely on the energy captured through photosynthesis. Considers the process of ingestion. (19:30)
14. **Activity of Life**—Considers the utilization of energy in animal and plant life. Illustrates locomotion and inconspicuous energy utilization. (19:33)
15. **Inactivity of Life**—Investigates organic inactivity caused by lack of moisture. (19:32)
16. **Decomposers: Mushrooms**—Investigates the value of decomposers. Stresses mushrooms and their role in the decomposition process. (19:32)

17. **Types of Cells**—Investigates plant and animal cells, and searches for differences between them. Shows that cells have specific features for specific functions. (19:30)
18. **Transportation in Living Things**—Investigates how the needs of life are sustained in the most simple and most complicated organisms. (19:31)
19. **Growth and Life Span**—Considers growth in a variety of organisms. Discusses regeneration of parts and death. (19:31)
20. **Sensitivity**—Observes plant and animal reactions to three specific stimuli—light, gravity, and touch. (19:29)
21. **Reproduction: Asexual**—Examines budding in hydra and yeast, gemmules in sponges, and spores of ferns. (19:30)
22. **Reproduction: Sexual**—Considers sexual reproduction in both plants and animals. Compares the fertilization process in plants to that in animals. (19:28)

Module 4: INTERRELATIONSHIPS

23. **Internal Parasites; Worms**—Concerns the relationship between parasitic worms and their hosts. Examines liver flukes, hookworms, and miscellaneous round and flat worms. (19:33)
24. **Saprophytes and Scavengers**—Considers the plant and animal life that cleans up the environment. Investigates various saprophytes and observes scavengers vital to various habitats. (19:30)
25. **Colonial Organisms**—Surveys a variety of colonial organisms, from colonial protozoans to bryozoans and coral, to social insects. (19:31)
26. **Eater and Eaten**—Shows how the hunter adapts to catch the prey. Stresses population balance. (19:30)

Module 5: MAN AND HIS ENVIRONMENT

27. **Water Pollution**—Shows the effects of various water pollutants on living things and investigates what can be done to alleviate the pollution problem. (19:31)
28. **Air Pollution**—Explores the pollutants in the atmosphere, and discusses why some places have a more serious air pollution problem than others. (19:32)
29. **Land Pollution: Garbage**—Examines trash garbage for most common items. Visits disposal areas and considers careful planning to alleviate future problems. (19:30)
30. **Noise Pollution**—Centers on the increasing problem of noise in the environment. Shows the damage that sound can cause. (19:32)
31. **Use and Replacement of Trees**—Visits a lumber company and papermill. Shows conservation methods of tree replacement. (19:30)
32. **Endangered Species**—Studies the various vertebrates whose existence has been or is being threatened. Discusses ways to protect wildlife habitats. (19:30)

Contemporary Poetry

Six 20-minute color lessons
Junior high, Senior high
24-page teacher's guide

Produced for VITA by KCRA-TV, Sacramento
(1972).

Rock music and neon lights, bumper stickers and billboards—these are some of the modern forms poets use to explore and express themselves. This series focuses on contemporary poetry and the social forces which have engendered it. The poetic devices of ambiguity, paradox, imagery, and symbolism are discussed, the functions of poetry and science are compared; and the relationship between self-expression and mental health is examined. A rock group (Redwing) tells how its songs are born, and rock music authority Ralph Gleason comments.

LESSONS

1. **A Happening**—A light, quickly-paced look at poetry, and an introduction to the concepts of ambiguity, paradox, and imagery. (18:32)
2. **Four Poets and Other Ideas**—A comparison of poetry and science, exploring the relationship between science, poetry, and human experience. (19:23)
3. **Other Ideas and Four Poets**—A discussion of the relationship between self-expression and mental health, built around the experiences of four student poets, a psychologist, and an English professor. (19:35)
4. **Rock Poetry**—A lively investigation of the poetry of contemporary rock music with Redwing, a rock group, and Ralph Gleason, music editor of the San Francisco Chronicle. (19:29)
5. **Different Means to the Same End**—A survey of contemporary poetic expression and communication—from billboards and bumper stickers to modern dance and film. (19:26)
6. **Symbols**—A survey of familiar American sights and sounds that help students relate symbolism to their own lives. (19:03)

Contract!

Fifteen 20-minute color lessons
Junior high, high school
Teacher's guide

Produced by Kentucky Educational Television
(1977).

This series is presented in a game show format, but it is no ordinary game show. The contestants are not housewives or salesmen, they are young teenagers with reading problems. There is no competition for vacations or other big prizes, instead there is practice in basic reading skills. Contestants and the classroom audience answer questions that require them to practice comprehension and study skills and help them with vocabulary development.

Each program features a host, two teams, and a studio audience. The host asks questions based on reading materials covering topics of interest to the students. Reading passages introduce ideas on how to deal with real-life situations — like budgets, legal problems and family relations.

LESSONS*

1. Fact
2. Fiction
3. Reference (Find It)
4. Hobbies
5. Sports
6. Driving
7. Accidents
8. Legal or Illegal
9. Money
10. Drugs & Alcohol
11. Health
12. Marriage
13. Family Relationships
14. Music
15. Careers

Creative Dramatics

Nine 20-minute student lessons
Nine 30-minute teacher programs
Intermediate
Teacher's guide

Produced by NEWIST, Green Bay (1977).

Available on videocassette.

This series, which emphasizes drama as a communications skill rather than an art form, is designed to improve the quality of instruction in many subject areas, especially language arts and social studies. It is a developmental, process-oriented series that helps students become more self-aware and creative through the stimulation of ideas and feelings. Each title has both a student lesson and a teacher lesson. Student lessons provide a wide variety of stimuli that involve children in creative and dramatic processes; teacher lessons concentrate on showing examples of actual classroom responses to the student lessons.

LESSONS*

1. **Relaxation and Imagination** — Introduces drama as a means of communication, begins the relaxation process, and provides several imagination-stretching experiences. Teacher program shows actual classroom demonstrations of beginning techniques. (Teacher program — 28:31; student lesson — 18:28)
 2. **Pantomime — Large and Small Action** — Shows some of the actions pantomime can express and involves students in their own pantomimes. Teacher program demonstrates activities and suggests possible uses for pantomime in language arts and social studies. (Teacher program — 26:37; student lesson — 18:33)
 3. **Senses — "Do You Remember?"** — Introduces a game called Do You Remember? as an aid to exploring the senses. Teacher program demonstrates sensory exercises and the use of sensory recall as a classroom tool. (Teacher program — 26:14; student lesson — 18:30)
 4. **Emotions — "Do You Remember?"** — Focuses on using imagination and pantomime to recall certain sensory and emotional experiences. (Student lesson — 18:28)
 5. **Improvisation** — Pulls together previously learned techniques to invent reactions to dramatic situations.
 6. **Dialogue** — Concentrates on expanding the verbal dimensions of dramatic situations. (Student lesson — 18:30)
 7. **Characterization** — Uses improvisation and dialogue to create character.
 - 8&9. **Dramatization 1 and 2** — Emphasize the uses of dramatization in language arts and social studies.
- (Lessons 4-9 were still in production at the time this publication went to press.)

Discussing Controversial Issues

Four 20-minute color lessons
Senior high, teacher in-service
146-page teacher's handbook, coordinator
handbook, student handbook

Produced by the Far West Laboratory for
Educational Research and Development,
San Francisco (1976).

Available on film and videocassette.

Group discussion is a central teaching technique for helping students come to grips with issues and the differences in values that underlie them. DISCUSSING CONTROVERSIAL ISSUES simultaneously trains high school teachers and their students in discussion skills and techniques. For the teacher, the goal is to become an effective discussion moderator, able to stimulate open exchange of views in the classroom without indoctrinating or imposing value judgments. For the student, the goal is to become an active discussion participant—to develop insights into his own opinions, understand the opinions expressed by others, and form a rational basis for choosing between alternatives. The series can be integrated into the regular curriculum (in English, or social studies, for example) or handled as a separate unit, and is appropriate for use in both pre-service and in-service training.

LESSONS

1. CREATING AN OPEN DISCUSSION (18:24)
2. THE IMPORTANCE OF LISTENING (18:20)
3. UNDERSTANDING DIFFERENT POINTS OF VIEW (18:55)
4. EVALUATING YOUR DISCUSSION (15:57)

The Draw Man

Thirty-two 15-minute color lessons
Intermediate, junior high
6-page combination teacher's guide
and fact sheet

Produced by KOKH-TV, Oklahoma City
Public Schools (1975):

A few well-placed lines on a sheet of clean white paper, and what emerges? A lumbering dinosaur, a glowering gorilla, an enormous crowd, a silly cartoon character, or any of a host of other objects, each intended to motivate children to get into the drawing act. Individual lessons demonstrate useful techniques for drawing specific kinds of things. Some viewers can't resist drawing along, while others prefer to watch first and create later. Since art is a personal activity, viewers are encouraged to experiment and to develop their own unique styles.

Paul Ringler, professional artist, provides students with clear and uncomplicated demonstrations in the art of drawing. Currently the Director of Broadcasting for the Oklahoma City Public Schools, he has extensive experience as a television art teacher, a graphics consultant, and a classroom art teacher. Mr. Ringler was the artist for "Exploring Our Universe," a nationally syndicated cartoon strip about elementary science.

LESSONS

1. **Introduction to Drawing**—The history and uses of drawing. (13:13)
2. **Building a Picture**—Conceptualizing and drawing a picture. (13:28)
3. **Birds**—Drawing birds. (13:30)
4. **Faces**—Drawing faces. (13:51)
5. **Expressions**—Shaping features to express emotion. (13:50)
6. **Halloween**—Creating atmosphere. (13:50)
7. **Figure Drawing**—Dividing the figure into simple parts. (13:30)
8. **Blips**—Creating simple action silhouettes. (13:50)
9. **Figures in Action**—Suggesting action by changing the placement of body parts. (13:50)
10. **Thanksgiving**—Developing an illustration by arranging people, settings, and costumes. (13:36)
11. **Crowds, Groups, Herds, and Flights**—Creating the illusion of many. (14:05)
12. **Deer**—Drawing deer as they stand, run, and walk. (14:13)
13. **Christmas**—Drawing or painting an outdoor Christmas scene. (13:30)
14. **Distance—Overlapping—Shadow**—Creating the illusion of depth. (14:09)
15. **The Basic Shapes**—Geometric forms used to visualize objects. (12:29)
16. **The Sphere**—A shape frequently found in common objects. (13:52)
17. **The Cylinder and the Cone**—Two shapes often hidden in common objects. (13:42)
18. **The Block and Pyramid**—Square or rectangular shapes found in familiar objects. (13:50)
19. **Cartoon Faces**—Creating lunny faces and bodies in funny situations. (13:53)
20. **Cartoon Figures**—Telling funny stories with funny drawings. (13:43)
21. **Dinosaurs**—Drawing dinosaurs. (13:53)
22. **Elephants**—Drawing elephants. (13:47)
23. **The Gorilla**—Drawing a present-day "monster." (13:46)
24. **Cars**—Designing a regular car or a racer. (13:52)
25. **Cars, Three-Quarter View**—Drawing three-dimensional cars. (14:08)
26. **Horses**—Drawing horses. (13:42)
27. **Horses in Action**—Creating drama in pictures featuring horses. (14:13)
28. **Figures in Costume**—Adding period costumes to figure drawing. (14:01)
29. **Lions**—Drawing a lion's head. (13:56)
30. **Water**—Drawing water. (13:51)
31. **Shadow**—Forming shadows. (13:59)
32. **Westward Ho**—Applying many of the preceding lessons to a "Western" scene. (13:47)

Drugs: The Children Are Choosing

Seven 30-minute color lessons
Teacher in-service
40-page manual

Produced by KQED Educational Services,
San Francisco (1970).

Drug experts, school administrators, psychiatrists, ministers, teachers, and students come together to present vital information about drugs and drug abuse, and to stimulate awareness and understanding of drug use today. These programs describe efforts at drug education and stress the importance of open communication with the young. Designed for parents, teachers, and other concerned adults, the course looks at all sides of the drug question, allowing each viewer to reach his own conclusions.

Dr. James Fadiman, past president of the Transpersonal Institute, Alternative University Model, Palo Alto, California, has worked as a consultant, lecturer, writer, and teacher. He has been assistant editor of the *Journal of Transpersonal Psychology* and associate editor of the *Journal of Humanistic Psychology*. Dr. Fadiman received his doctorate in psychology from Stanford.

LESSONS

1. **Understanding the Issues**—Presents a variety of expert opinions and student viewpoints about today's drug problem. Examines accessibility of drugs, and legal implications of possession and use. (28:48)
2. **The History and Allure of Drugs**—Investigates the value placed on drugs by primitive and modern civilizations. Defines selected drugs. (24:07)
3. **Drugs and Drug Effects**—Discusses the misuse of glue, marijuana, barbituates and alcohol. Describes drug classifications and the physiological, psychological, and social factors of drug use. (28:28)
4. **Cultural Factors in Drug Use**—Simulates situations in which children sniff glue, smoke, see adults take drugs, and experiment with marijuana. Comments on the effectiveness of drug education for children. (24:55)
5. **The Need for a Dialog**—A group of students, a psychiatrist, a minister, two school administrators, and several teachers discuss drug abuse. (30:00)
6. **What Some Are Doing**—Describes the efforts of two school districts to develop drug education programs. Emphasizes the need for community commitment. (28:22)
7. **Toward More Effective Communication**—Stresses that communication between social, civic, and educational groups and young people is the priority point in the issue of drug abuse. (29:25)

Economics and the Public Interest (Economics I)

Fifteen 30-minute black and white lessons
Post-secondary
8-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

The course introduces economic analysis and its application to the major economic issues confronting The United States and the world. The purpose is to give students tools for making informed judgments about such vital matters as unemployment, inflation, competition, and growth.

The lectures have been prepared and presented by Dr. Richard T. Gill, author of *Economics: a Text with Readings* (Pacific Palisades, Goodyear Publishing Co., 1973), and member of the New York Opera Company; formerly Lecturer on Economics, Harvard University.

LESSONS

1. **The Economic Problem**—Introduces the study of Economics, describes economic problems in terms of the scarcity of resources, and illustrates uses of a production-possibility-curve. (29:02)
2. **The Market Economy**—Describes the workings of a market economy, and explains the relationship between demand and supply curves. (28:45)
3. **Marxist Economics and the Planned Economy**—Reviews Marxist criticism of the market economy, and describes the planned economy in Russia and China today, noting its advantages and its inefficiencies. (28:45)
4. **The Mixed Economy: Public Sector**—Investigates the role of government in the mixed economy of the United States. (28:30)
5. **The Mixed Economy: Private Sector**—Studies the roles of oligopolistic industries and organized labor in the American economy, and describes how anti-trust laws and labor legislation help protect the public interest (29:19)
6. **Unemployment and the Keynesian Revolution**—Discusses the general problem of how the aggregate level of economic activity in an economy is determined in the short-run, noting in particular unemployment. (28:47)
7. **The Concept of GNP**—Defines the Gross National Product and considers each of its components, Consumption, Investment, and Government Expenditure. (28:45)
8. **Theory of National Income Determination**—Explains and illustrates a theory for determining the national income. (28:56)
9. **Fiscal Policy**—Describes how various combinations of tax and governmental expenditure policies make up a country's "fiscal policy" (28:55)
10. **The National Debt**—Explores the relationship of the indebtedness of the federal government to the American economy as a whole. (28:53)
11. **Money and Monetary Policy**—Considers how the actions of government in affecting the supply of money and the conditions of borrowing in the economy influence the short run level of national income. (28:50)
12. **Inflation**—Discusses causes and effects of moderate inflation and suggests employing all useful measures—monetary policy, fiscal policy, and wage-price guide posts—when inflation threatens. (28:55)
13. **International Trade**—Investigates how the operation of monetary and fiscal policies becomes complicated when balance of payments regarding imports and exports must be taken into account. (28:55)
14. **Economic Growth**—Considers factors contributing to long-run expansion of national income, population growth, capital accumulation, and technical change. (29:00)
15. **Underdeveloped Countries**—Studies the special problems faced by underdeveloped countries in achieving an industrial revolution. (28:55)

En Français

Twenty-six 15-minute color lessons
Senior high, post-secondary

Teaching package—including teacher's manual,
student manual, supplementary reading
material, filmstrip, student records
and audio tapes

Produced by the Ministry of Foreign Affairs,
France (1970).

Produced and filmed in France, this series is designed for college and high school students with one to one-and-a-half years of French instruction, and for those reviewing their knowledge of French. Using authentic French costumes and decor, the course presents a series of humorous vignettes depicting contemporary middle-class life and values, that help viewers develop a working knowledge of conversational French. Speech constructions and vocabulary taught in the series were chosen as a result of a study commissioned by France's Ministry of National Education to determine essential language skills needed by the average foreigner.

LESSON FORMAT. Each lesson consists of four parts, two short sketches, an interlude between the sketches and a concluding dialog. The first sketch, usually a situation comedy in a bourgeois setting, introduces the vocabulary and grammatical constructions emphasized in the lesson. An interlude follows, in which a school boy describes a picture using the grammar and vocabulary introduced in the first sketch. The second sketch repeats the vocabulary and constructions in a new context. The concluding dialog is a review.

LESSONS

Part One: ESSENTIAL ELEMENTS

1. **The Bridge**—Tours a countryside bridge and the bridge at Tancarville, Europe's largest suspension bridge (13:00)
2. **Black and White**—Features a typical market place and the studio of a great fashion designer. (14:01)
3. **Rose**—Takes place in a small country restaurant and in an elegant restaurant along the Seine. (12:45)
4. **The Head and the Legs**—Contrasts physical education at a small country school and at the Ecole Supérieure d'Éducation Physique at Châtenay-Malabry. (13:00)
5. **Women Do Know About Mechanics**—Involves a housewife whose car and vacuum cleaner break down and a woman engineer at the Center of Nuclear Studies at Saday. (14:12)
6. **Smile! Don't Move!**—Shows a photographer at a village fair and a cameraman shooting a historical film at the fifteenth century castle at Pierrefonds. (13:51)
7. **Who Broke It?**—Features a glassmaker's studio in which a country priest's broken stained glass window is fixed. (12:43)
8. **For Rent**—Tours a country farm and a new skyscraper apartment in Paris. (13:26)
9. **Here Is Some Fruit**—Reveals the secret of French jam and shows how orchards are cared for. (13:01)
10. **By Car**—Contrasts an antique car enthusiast with a test driver (13:27)
11. **By Plane**—Contrasts a small private plane and a commercial airliner at Orly Airport in Paris (12:12)
12. **Writing and Speaking**—Involves two feuding neighbors and a dramatic sequence at the French Space Telecom munications Center at Pleumeur-Bodou in Brittany (14:01)
13. **Good Weather Follows the Rain**—Contrasts a garden on a small country estate with the magnificent gardens of Versailles. (13:23)

Part Two: TEMPORAL RELATIONSHIPS; LOGICAL RELATIONSHIPS

14. **Animals**—Concerns a family home which is becoming a menagerie and the park of the Chateau de Thoiry. (13:39)
15. **Antiques**—Features the Vaison-la-Romaine, an old Roman town and an antique shop near the Louvre. (14:47)
16. **A Little Boat**—Contrasts a pond on the Ile-de-France and a school near Grenoble where the world's most un-navigable waterways are reconstructed in miniature. (14:01)
17. **Music**—Shows a traditional dance in a country town and tours a recording studio at the Office de Radio et Television Française. (16:12)
18. **Masculine and Feminine**—Presents two humorous sketches involving the opposite sexes. (14:44)
19. **Telescopes**—Visits a hilltop overlooking the countryside and the Observatory of Saint-Michel-de-Provence. (15:27)
20. **Practice Makes Perfect**—Concerns an engineer in the Atleward steel works and a village blacksmith who has run out of horses to shoe. (13:16)
21. **Bowling and Balls**—Shows a game of "boules," and a golf game near Paris. (14:36)
22. **Perfumes**—Lead a young couple to the altar and provide an anniversary present. (14:15)
23. **Dividing the Water**—Takes place in the upper valleys of Comtat Venassin and the pumping station at Pichegrug. (14:55)
24. **Notice to the Public**—Occurs on Bastille Day. (14:56)
25. **On the Roof**—Involves a chief electrician and a chimney repairman. (15:40)
26. **Let's Dance**—Features a folklore dance company and a rehearsal at the Maison de Culture at Grenoble. (13:50)

Explorers Unlimited

Thirty-three 15-minute color lessons
 Primary, intermediate
 36-page teacher's guide

Produced by WVIZ-TV, Cleveland (1971).

There is nothing like a field trip to develop new concepts and broaden vocabulary. In this series the camera transports youngsters to seldom available or even inaccessible locales, where they can do such things as explore the inner workings of a skyscraper, tour the Cuyahoga River on a fireboat, watch batting practice and other preparations for a major league baseball game, wander through Death Valley, or see the step-by-step production of a magazine or movie. The programs are intended to enrich, but not to replace, personal experience.

Ruth Kotila, the television teacher, has been teacher-producer of several field trip series for WVIZ-TV, Cleveland, including OTHER FAMILIES, OTHER FRIENDS, a companion series to EXPLORERS UNLIMITED. Ms. Kotila is a graduate of Allegheny College and has taught elementary grades in the Bedford, Ohio, city schools.

LESSONS

1. **Skyscraper**—Explores the inside operation of a skyscraper in Cleveland. (14:31)
2. **Port of Call**—Summarizes the role of the Great Lakes as a transportation link. (14:26)
3. **City River**—Tours a city river aboard a fireboat. (14:15)
4. **Maize in Metal**—Visits a food canning company to show the complexity of the food industry. (14:21)
5. **Arch of Coal**—Observes coal handling at the Penn Central docks in Ashtabula, Ohio. (14:18)
6. **A Phoenix Rises**—Demonstrates the value of the scrap metal industry as it conserves and reclaims waste material. (14:43)
7. **Salt of the Earth**—Visits a salt mine in Cleveland to examine methods of extracting salt. (14:37)
8. **Community Hospital**—Offers a behind-the-scenes look at a community hospital. (14:25)
9. **Frontier Shoemaker**—Watches an experienced shoemaker as he demonstrates how shoes were made by hand in colonial times. (14:29)
10. **From Sand to Glass**—Visits a glass factory to see how raw materials are transformed into glassware. (14:34)
11. **In the Heart of the Rock**—Travels to Zane Caverns to learn how a cavern is formed by natural water action. (14:45)
12. **Basic Oxygen Furnace**—Examines a basic oxygen furnace used in making steel. (14:32)
13. **Cars, Cars, Cars**—Visits a Chevrolet plant to demonstrate the importance of the assembly line to modern industry. (14:30)
14. **Sugarbush**—Goes to a sugarbush to observe the old-fashioned method of making maple syrup. (14:30)
15. **A Fish Tale**—Visits a fish hatchery to see how fish are raised for stocking lakes and streams. (14:30)
16. **Play Ball**—Observes preparations for a major league baseball game at Cleveland Stadium. (14:25)
17. **A Whale of a Friend**—Looks on while trainers work with dolphins and with the whale Shamu at Sea World of Ohio. (14:19)
18. **Sounding Brass**—Observes the assembly of a trombone at the King Instrument Company. (14:21)
19. **Big Muskie**—Visits a coal strip mine in southern Ohio where the largest dragline in the world uncovers the coal. (14:19)
20. **Sugar Campaign**—Inspects the complex operation of producing sugar from sugar beets. (14:29)
21. **In a Jam**—Watches how jams and jellies are produced at the Smuckers plant in Orrville, Ohio (14:33)
22. **The Animal Crackers of Roger Bollen**—Demonstrates the art of creating, writing, and drawing a syndicated cartoon. (14:31)
23. **Moving the Earth**—Demonstrates three steps in manufacturing earth-moving equipment—fabricating, machining, and assembly. (14:29)
24. **Candy and Gum**—Visits a plant in Holland, Michigan, to find out how gum and candy are made. (14:33)
25. **Papermill**—Journeys to the Hammermill Company to learn how paper is made from pulpwood. (14:30)
26. **Publish and Print**—Shows the complex process of preparing and printing a magazine. (14:30)
27. **Polyester Yarn**—Visits an American Cyanamid plant to learn how polyester yarn is made. (14:30)
28. **Hydrasposal/Fibreclaim**—Studies the methods of waste disposal and recycling employed at a reclamation plant in Ohio. (14:30)
29. **A Hollywood Wax Museum**—Visits a Hollywood wax museum to watch a wax sculptor at work. (14:26)
30. **Movie Factory**—Tours Universal City Studio to learn about some of the illusions used in making movies. (14:30)
31. **Intelligence Park**—Travels to the San Diego Zoo to observe the business of zoo-keeping. (14:26)
32. **Wild Animal Park**—Visits the San Diego Wild Animal Park to learn about an alternative type of animal keeping. (14:27)
33. **Death Valley**—Focuses on some of the natural and historical features of Death Valley. (14:26)

Expository English I (English I)

Fifteen 30-minute black and white lessons
Post-secondary
28-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University,
Produced by WGBH-TV, Boston (1967).

This series is designed to strengthen the student's writing abilities and increase his reading comprehension. The elements of formal prose and the structural, stylistic, and thematic devices of selected essays and fictional pieces are discussed.

The lectures have been prepared and presented by Professor Shaun O'Connell, Associate Professor of English, University of Massachusetts at Boston.

LESSONS

1. **Patterns of Order**—introduces the elements of order in formal composition: author, subject, and audience. (28:56)
2. **The Paragraph: Essentials**—Discusses the topic sentence, supporting material, and transitional elements—components of well-formed paragraphs. (28:47)
3. **The Paragraph: Unity, Coherence, Emphasis**—Considers the paragraph as a relationship of sentences which all bear on a central point. (28:47)
4. **The Paragraph and the Whole Essay**—Examines the development of the paragraph as a reflection of the development of the essay. (28:55)
5. **The Sentence I**—Introduces basic sentence elements—subject, predicate, complement; illustrates how phrases, clauses, and sentences are constructed from them. (28:55)
6. **The Sentence II**—Considers how elements within sentences are modified to create precise statements. (28:22)
7. **Diction I**—Defines "diction" and illustrates how the writer controls his subject through choice and pattern of words. (28:55)
8. **Diction II**—Discusses figurative language and how the writer uses it to delineate his subject and extend the significance of his statement. (28:56)
9. **Diction III**—Examines narrative "voice" and explores the particular characteristics of irony, parody, and satire. (28:54)
10. **Interview With a Professional Writer, the Essayist I**—Interviews Dan Wakefield, contemporary American prose writer and author of *Between the Lines*. (28:35)
11. **Writing from Personal Experience**—Illustrates by examples that good writing is based on personal experience. (28:35)
12. **Argument**—Contrasts arguments that are sound and convincing with arguments that are weakened by pseudo-logical tactics. (28:55)
13. **Analysis**—Considers the esthetic, historical, and biographical approaches to literary analysis, noting that the purpose of analyzing a work is to better understand and evaluate it. (28:55)
14. **Interview With a Professional Writer, the Biographer II**—Interviews Justin Kaplan, author of *Mr. Clemens and Mark Twain*, a psychological portrait and a social analysis of the Gilded Age. (28:59)
15. **The Essay, "Notes From a Native Son" by James Baldwin**—Cites Baldwin's essay as a near perfect blending of personal experience, diction, analysis, and argument. (28:55)

Expository English II

(English II)

Fifteen 30-minute black and white lessons
Post-secondary
57-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

A continuation of EXPOSITORY ENGLISH I, this series makes more demanding writing assignments and analyzes more sophisticated problems in writing style. Representative works in the novel, the essay, drama, and poetry are discussed.

These lectures have been prepared and presented by Professor Shaun O'Connell, Associate Professor of English, University of Massachusetts at Boston.

LESSONS

1. **The Journal**—Discusses the kinds of entries noted journal-keepers have recorded in their journals. Includes selections from Thoreau, Camus, Katherine Mansfield, and F. Scott Fitzgerald. (28:56)
2. **The Fact or the Fiction In Fact**—Examines the success of Truman Capote's *In Cold Blood* as a "non-fiction novel," a form that brings together factual material, and the skill of the novelist. (28:55)
3. **The Fact in Fiction**—Explores how the author's vision influences the subject by comparing the treatment of the same subject matter in Flannery O'Connor's "A Good Man Is Hard To Find," and Truman Capote's *In Cold Blood*. (28:57)
4. **The Confessional Essay**—Examines how the personal experiences expressed by an author become relevant to his audience. Considers three connected essays by F. Scott Fitzgerald— "The Crack-Up," "Pasting It Together," and "Handle With Care." (28:55)
5. **The Autobiographical Essay**—Uses the example of George Orwell's "Such, Such Were the Joys . . ." to show how the autobiographical essay extends the scope and significance of the confessional essay. (28:42)
6. **The Political Essay**—Considers how one author, George Orwell, confronted the men, ideas, and institutions of power in his age, in two political essays. "How To Shoot an Elephant," and "Politics and the English Language." (28:58)
7. **The Essayist/Novelist**—Interviews author Brock Brower concerning his views about contemporary expression, its problems, and its possibilities. (28:55)
8. **The Writer's World**—Explores "description"—the translation of scenes, characters, ideas, and feelings into words. Examines two works by Ernest Hemingway, "By-Line: Ernest Hemingway," and *A Movable Feast*. (28:20)
9. **The Historical Novel**—Discusses the historical novel as an attempt to reconstruct life in a previous era. Uses as an example William Styron's *The Confessions of Nat Turner*. (28:55)
10. **Academic Prose**—Interviews writer Michael Zuckerman about the stylistic requirements of academic writing, and about his own successes in academic prose. (28:53)
11. **Prose Styles**—Concerns the establishment and maintenance of the writer's "voice." Explores the range of "voices" contending for attention and emulation in prose today. (28:16)
12. **Poetry and Prose**—Presents contemporary poet Anne Halley reading and discussing two of her poems, "My Two Grandfathers," and "Dear God, the Day Is Grey." (26:55)
13. **The Editor**—Interviews Jules Crametzky, professor, writer, and editor for *The Massachusetts Review* about his experiences in each of these roles. (28:58)
14. **The Review**—Discusses the work of the reviewer. Cites many examples, among them several film reviews written by James Agee. (28:52)
15. **The Engaged Writer**—Discusses James Agee's *Let Us Now Praise Famous Men* as a model of successful non-fictional prose writing in which the author's total engagement is evident. (28:55)

First Films on Science

Ten 15-minute color lessons
Primary, intermediate
24-page teacher's guide

Produced by the Mississippi Authority
for Educational Television (1975).

Small children bubble with curiosity and questions about the world around them. Familiar objects and common experiences are used to explore and explain basic concepts of physical science in this series, which is designed to introduce youngsters to the general principles of matter and energy. The programs make extensive use of models, demonstrations, macrophotography, and time-lapse photography to make these sometimes difficult concepts comprehensible and fascinating.

LESSONS

1. **Solar Energy**—Demonstrates man's dependence on the sun. Shows how the sun's light and heat provide energy for survival and growth. (13:30)
2. **Energy and Motion**—Explains that energy is present when any object moves. Emphasizes that energy takes many forms. (13:03)
3. **Changes in Classes of Energy**—Explores the difference between potential and kinetic energy. Points out that energy sometimes changes from one class to the other. (13:53)
4. **Changes in Kinds of Energy**—Focuses on relationships between various forms of energy. Shows that they often change from one kind to another. (13:12)
5. **Matter**—Discusses the three states of matter. Illustrates that all matter has weight, takes up space, and is composed of molecules. (11:46)
6. **Matter Is Made Of . . .**—Considers the properties of molecules. Shows how, with different arrangements of molecules, matter takes different forms. (11:30)
7. **Mass and Volume**—Introduces mass and volume. Demonstrates that objects can have the same volume but different masses and the same mass but different volumes. (12:17)
8. **Physical Changes in Matter**—Shows that matter changes form according to the forces acting on it. Traces water from solid to liquid to gas. (14:24)
9. **Chemical Changes in Matter**—Explains the process of chemical change that occurs when one kind of matter is changed into another. (13:37)
10. **Measurement**—Presents measurement as a process used every day. Demonstrates things that need to be measured and the instruments used to measure them. (13:30)

Getting the Word

Thirty-one 20-minute color lessons
Junior high, senior high
369-page book, including teacher's manual,
student guide, student worksheets, and
student source book

Produced by South Carolina
Educational Television (1974).

Some students miss the message because of faulty word-attack skills. Using a reading club format and contemporary themes to engage and sustain interest, these programs approach the problem sympathetically and eclectically, employing a combination of phonic, linguistic, and language-experience approaches. While the development of reading skills is one goal of the series, the programs also seek to enhance each viewer's individuality, self-confidence, and feeling of self-worth. Winner of Ohio State Award, 1973.

Margaret Lippitt Rorison, creator of and teacher for GETTING THE WORD, is on the staff of the South Carolina State Department of Education's Office of ITV. She has been an elementary and corrective reading teacher in New York City and a member of the staff of the School of Education Reading Clinic at the University of South Carolina. Ms. Rorison holds a master's degree from Teachers College, Columbia University, and is completing a doctorate at the University of South Carolina.

LESSONS

Unit I: Single Consonant Sounds

1. Review of Capital Letters (18:42)
2. Using the Sound of Letters (17:45)
3. Using the Sense of the Sentence (15:12)
4. Using the Spelling Pattern of the Word (19:20)
5. Combining and Advancing in the Skills Presented (18:03)
6. Using the Shape of the Word (19:21)
7. Initial and Final Letter Substitution (16:44)

Unit II: Consonant Blends and Digraphs, Short Sound of the Vowels

8. Using a Source: Review of Letter Sounds: "Jet-Stop" (18:01)
9. Applying "Ways To Get Words" to the Reading of a Story (17:12)
10. Employing the Short Vowel Sounds of A, I, O (19:38)
11. The R-Blends: "Brooms and Crutches", Using the Structure of the Word (17:39)
12. L-Blends: "Climbing the Cliff" (19:50)
13. S-Blends: "Stars and Stripes in Scouting" (19:47)
14. Employing the Consonant Digraphs CH, SH, WH, TH (18:52)

Unit III: Long Sound of the Vowels, Beginning Syllabication

15. The Double Role of Y (19:32)
16. Using Spelling Pattern and Rhythm as Clues (short vowel I-I) (19:18)
17. Some R-Controlled Vowel Sounds (20:04)
18. The Addition of Final, Silent E Changes the Medial Vowel Sound of a Word (19:50)

19. When To Double a Final Consonant Before an Ending (19:46)
20. Visual Clues That Help To Determine Whether a Vowel Sound Will Be Long or Short (Emphasizing: Vowel Pairs) (20:03)
21. C Before E, I, Y Usually Says "S;" G Before E, I, Y Usually Says "J" (19:57)

Unit IV: Syllabication, Accent, Vowel Combinations and Diphthongs, Dictionary Aids

22. Review: Six Word-Attack Skills: Consonant Combinations, Short and Long Vowel Sounds, R-Influenced Vowel Sounds, Beginning Syllabication (19:20)
23. Certain Times When O and I Have the Long Sound (18:55)
24. Two Sounds of OO; Ways To Break Words Into Syllables (19:45)
25. Further Ways To Break Words into Syllables, Accenting Two-Syllable Words (18:30)
26. Accented and Unaccented Syllables, the Schwa (ə), Contractions, Ways To Spell the Sound "ō" (19:56)
27. Silent Letters; Different Ways To Spell the Sounds "ō," "SH" in the Medial Position of Words, "N" (19:50)
28. Dictionary Aids: Chart of Initial Consonant Sounds; Guide Words; Entry Words; Word Meaning (17:19)
29. Diphthongs OI, OY, OU, OW; PH=F Dictionary Aids: Pronunciation Key, Phonetic Respelling (19:30)
30. Forming Plurals; Forming a Separate Syllable with -ED (19:50)
31. The Sounds of IE, EI, Syllabication Review, Careers Club (19:45)

Hands On

Grade I
Ten 15-minute color lessons
Primary
16-page teacher's guide

Grade II
Twelve 15-minute color lessons
Primary
20-page teacher's guide

Grade III
Fourteen 15-minute color lessons
Primary
22-page teacher's guide

Grade IV
Twelve 15-minute color lessons
Primary
23-page Teacher's guide

Grade V
Twelve 15-minute color lessons
Primary
Teacher's guide

Produced by WHRO-TV with funds provided by the Commonwealth of Virginia (1975).

This series, based on the idea that "to do science is to learn science," provides an introduction at the elementary level to process skills — observing, measuring, classifying, inferring/predicting, and experimenting. The lessons illustrate diverse applications of each skill, and the activities set out in the curriculum guide for each level form a frame of reference within which students can develop the skills for themselves. The process skills of observation, measurement, and classification are the areas of concentration in Levels One and Two. Levels Three and Four continue to develop these skills but also include lessons in hypothesis-building and inference. Level Five advances the same skills and adds experimentation. Because many of these lessons can be integrated into language arts or mathematics programs, suggestions for activities that fall into these two areas are included in the curriculum guides.

Teacher-producer for Grades One and Two is Patricia Brooks, an elementary teacher for eight years. Teacher-producer for Grades Three and Four is Virginia Varner, teacher in the Norfolk schools for five years. Larry Crum and Andrea Lacey are teacher-narrators for Grade Five.

LESSONS*

GRADE ONE: MARBLES, MACARONI, ETC.

Unit 1: Observing

1. Size, Shape, Color, Texture (14:40)
2. Movement (14:07)
3. Recording Observations (14:29)
4. Observing and Classifying (14:43)

Unit 2: Measuring

5. Equal Length (14:18)
6. Shortest—Longest (14:32)
7. Greatest—Least (14:29)
8. Heaviest—Lightest (14:32)

Unit 3: Classifying

9. Animals (14:10)
10. Seeds and Nonseeds (14:10)

GRADE TWO: LOLLIPOPS, LOOPS, ETC.

Unit 1: Observing

1. Observing Spatial Arrangements (14:24)
2. Light and Shadows (14:19)
3. Change (14:30)
4. Relative Position (14:25)

Unit 2: Measuring

5. Measuring Change (14:30)
6. Measuring Time (14:30)
7. Measuring Area (14:30)
8. Following Recipes (14:30)

Unit 3: Classifying

9. Solids—Liquids (14:22)
10. Sink—Float (14:22)
11. Sets—Empty Sets (14:22)
12. Living—Nonliving (14:36)

Hands On (contd.)

GRADE THREE: METERSTICKS, MEALWORMS, ETC.

Unit 1: Observing

1. Observing Sounds (14:22)
2. Observing Change (14:39)
3. Observing Motion (14:20)
4. Recording Observations (15:04)

Unit 2: Measuring

5. Measuring Weight (14:25)
6. Measuring Volume (14:54)
7. Recording and Measuring Lengths (14:47)
8. Constructing Bar Graphs (14:30)

Unit 3: Classifying

9. Classifying Objects (14:30)
10. Classifying Sand Mixtures (14:35)
11. Classifying Systems (14:25)

Unit 4: Inferring-Predicting

12. Predicting Shadow Lengths (14:32)
13. Predicting Weather (14:32)
14. Predicting Plant Growth (14:27)

GRADE FOUR: CARS, CARTOONS, ETC.

Unit 1: Observing

1. Observing Camouflage (14:30)
2. Observing Animal Feeding Behavior (14:23)
3. Observing Drips and Drops (14:25)

Unit 2: Measuring

4. Measuring Speed (14:25)
5. Making Maps (14:27)
6. Interpreting Maps (14:27)
7. Making Line Graphs (14:21)

Unit 3: Classifying

8. Classifying Insects (14:25)
9. Classifying Cars

Unit 4: Inferring/Predicting

10. Predicting Tracks
11. Predicting Electric Circuits
12. Predicting Here, There, and Everywhere (14:48)

GRADE FIVE: OUR ENVIRONMENT

1. Water: What Happens to It
2. Earth: Is It All the Same
3. Air: When is It Good
4. Plant Population
5. Animal Population
6. Food Chains
7. Animal Evidence
8. Animal Communication
9. Animal Migration
10. A Look at a Community: The Dismal Swamp
11. Communities Under Water
12. Another Kind of Community: The City

The Heart of Teaching

Five 15-minute color programs and
one 30-minute color program
Teacher in-service
8-page viewer's guide
27-page discussion leader's guide
Applications Handbook
Video training tape

Developed through the resources of a consortium of fourteen agencies, organized and managed by AIT. Produced, under the supervision of AIT at the facilities of the Educational Film Center (formerly NVETA), North Springfield, Virginia; and the facilities of KETC-TV, St. Louis. Post-production service in St. Louis was provided by D.H. Editorial Services (1976).

Available on film and videocassette

For related materials, see pages 107-110.

THE HEART OF TEACHING is an in-service series designed to meet a specific need identified by teachers, to understand themselves and their own emotional responses to the daily experiences of their professional lives. The open-ended dramatizations focus on teacher reaction to the isolation and loneliness of teaching, professional change, the frustrations of teaching, individual differences in the classroom, and difficulties of communication with parents and others. **THE HEART OF TEACHING** encourages teachers to think about themselves as persons and professionals, and to develop or improve the skills they need to cope with their own concerns.

PROGRAMS

1. **The Parent Crunch (Communication)** — Fourth-grader Sandy McNaughton gets A's on his homework and C's when he does the same work in class. The A's confuse his teacher, Margaret Paslowski, and the C's confuse his father. The futile efforts of father and teacher to convince each other that each has Sandy's best interest at heart illustrate one of the most common stress-producing events in the lives of teachers — the encounter with an angry parent. (14:26)
2. **An Eye for Change (Professional Growth)** — When the principal at Trudy Bowman's school institutes a project for professional development, she agrees to video-tape her American History class for faculty evaluation. Intellectually she supports what she is doing, but during the actual taping, Trudy becomes uncomfortably aware of her unseen jury of peers. The program focuses on the mixed feelings, worries, and personal risks involved in a teacher's professional growth. (15:15)
3. **Last Hour Clash (Frustration)** — Whit Jefferson can't understand why Sidney constantly disrupts his class, and Sidney can't understand why the teacher always picks on him. This program uses humor and exaggeration to bring out the best and worst of a concerned but bungling teacher, his "helping" friend, and the student, Sidney. (14:27)
4. **Every One Is Something Else (Individual Differences)** — This semi-documentary program shows an elementary class of fifty students and an infinite number of individual differences—cultural, racial, intellectual, creative. The various scenes demonstrate how these differences complicate the teacher's work, but at the same time make teaching the very special kind of creative profession that it is. (14:10)
5. **A Faculty Feeling (Loneliness)** — In this program, a faculty meeting to discuss the exam schedule suddenly turns into a discussion — sometimes vehement, sometimes humorous — of whether teachers are a collection of isolated individuals under one roof or a unified faculty whose members work together. (14:22)
6. **Teachers' Meeting (Loneliness)** — This is a 30-minute version of "A Faculty Feeling." (29:11)

How Can I Tell You?

Fifteen 15-minute color lessons
Primary, intermediate
28-page teacher's guide

Produced for Massachusetts Educational
Television (21 Inch Classroom) by WGBH-TV,
Boston (1971).

Thoughts and feelings can be expressed in many different ways, both verbal and nonverbal. Professional storytellers, mimes and improvisers, children, and music come together in this series intended to stimulate viewers to "tell it" through creative writing or dramatics, gestures or body language, facial expression, art, music, or group discussion. Use of the imagination and development of sensory perception are other goals of the series, which offers students lively models of what they themselves might do with their own talents and creativity.

LESSONS

1. **Sam the Giant**—Presents the story of Sam, a giant of the South Seas, who is taken to the North Pole. (14:13)
2. **Brothers and Sisters**—Shows children drawing stories that express their feelings toward a brother or sister. (13:20)
3. **Sarah**—Tells the story of a girl with a big question, who decides one winter day to find the answer. (13:11)
4. **Bonaparte**—Presents the story of a car named Bonaparte, who moves to the country to escape the problems of city life. (12:43)
5. **Toomph**—Tells the story of Philip and his 3,000 pound dog, Toomph, who take a boat ride to a mysterious island. (14:09)
6. **The Tribal Players with Teachers**—Demonstrates general warm-up exercise games, and simple improvisations. (14:08)
7. **The Tribal Players: Sight**—Shows the creation of real and imaginary visual stimuli. (14:22)
8. **The Tribal Players: Sound**—Presents a performance that consists of a warm-up exercise game and the reenactment of a story. (13:41)
9. **The Tribal Players: Smell, Taste, and Touch**—Demonstrates by body expression what the players smell, taste, and feel as they pretend to eat different foods. (13:58)
10. **The Proposition: Make-Believe**—Introduces a group that specializes in improvisation as they pretend to be animals and toys. (14:10)
11. **The Proposition: Pantomime 1**—Demonstrates how people can express themselves with their bodies. (14:42)
12. **The Proposition: Pantomime 2**—Shows how one can tell what a person is feeling by just looking at his face. (12:01)
13. **The Proposition: Music Festival**—Presents improvised songs for a musical festival. (12:37)
14. **The Proposition: Story Telling**—Presents an improvised story about a hero and a magic place. (12:39)
15. **The Proposition: Fairy Tale Opera**—Presents an improvised opera on the theme of "Rumpelstiltskin." (14:02)

If You Live in a City, Where Do You Live

Five 30-minute color lessons
Intermediate

27-page teacher's guide

30-minute teacher program

Produced by WGBH-TV, Boston (1970).

The quality of life in modern cities is the central topic of this series. Documentary films and follow-up activities give students a balanced and positive look at what city life can offer, while stimulating thought and discussion on subjects such as urban conservation, city-planning to meet diverse individual needs, and methods of effecting change. Through active participation, students come to appreciate the complexity of urban issues and the difficulty of making wise choices.

LESSONS

Teacher Orientation Program—Mike Wallace introduces the series, explains the curriculum unit, and presents the program objectives. (29:29)

1. **On Winthrop Street (Exterior Environment)**—The games children play in alleys, yards, and on sidewalks help to reveal the nature of the outdoor urban environment and what children think about it. (28:39)
2. **Inside places, Inside things (Interior Environment)**—A number of city homes are visited to explore how children use interior spaces for games and other play activities. (28:54)
3. **In Time (The Changing Environment)**—Environmental change is illustrated as a group of children and an urban archeologist explore a derelict house, and an ex-boxer talks about the changing site and function of Madison Square Garden. (27:48)
4. **People Watching (Designing a Place for Needs)**—Individuals try to satisfy diverse needs within the urban environment—a man exercises in a playground, and a high-rise dweller cultivates a garden. (29:25)
5. **Among Priorities (Making Choices)**—A group of children investigate the question of land development when a vacant lot they use as an adventureland is marked as a construction site. (28:59)

Images & Things

Thirty 20-minute color lessons
Intermediate, junior high
138-page teacher's guide

Three 30-minute teacher programs
Learning Resources Kit

Developed through the resources of a consortium of twenty-six agencies, organized and managed by AIT. Produced for AIT by the Kentucky Authority for ETV, Lexington; KETC-TV St. Louis; and WNVU, Annandale (1971).

Available for purchase on film and videocassette.

For related materials, see pages 107-110

This series focuses on the arts as they speak about life through a variety of themes—the land, the sea, people at work, people celebrating, events in urban, suburban, and rural life, the images and sounds of nature, the ways man forms and reforms objects, his rituals, his dreams, his dress, the things he builds, and the things he envisions. The programs lead, through the experience of art, to a better understanding of the self, of other people, of the environment, and of other times and cultures. Winner of CINE Golden Eagle Award, 1972.

Dr. Alice M. Schwartz, Professor of Art Education, Pennsylvania State University, is the principal consultant and author of the teacher's guide. Other consultants include Dr. John W. Cataldo, Professor of Art and Dean of the Massachusetts College of Art, Dr. Edmund Burke Feldman, Professor of Art, University of Georgia, Jerry Tollifson, Supervisor of Art Education, Ohio Department of Education.

LESSONS

Module Blue

101. **Sea Images** — Natural and artistic images related to the sea and to man's fascination with and reliance on it. (19:23)
102. **Street Furniture** — The design and location of benches, lights, markers, trash receptacles, and mailboxes. (19:28)
103. **People Working** — Making art as a form of work. (19:44)
104. **Everyone Makes Things** — Similarities and differences in artistic and industrial forming processes. (19:31)
105. **The Human Image** — Ways the human image has been represented in art to reveal social concepts and attitudes. (19:29)

Module Green

201. **Spaces to Live In** — The organization and characteristics of planned spaces for community living. (19:25)
202. **All Kinds of Houses** — Architectural solutions to problems of providing harmonious, functional human shelter. (19:24)
203. **Buildings for Work and Play** — Architectural design in office buildings, air terminals, schools, and cultural centers. (19:24)
204. **Plazas, Malls and Squares** — The relationship between the purposes and the design of outdoor spaces. (19:23)
205. **Here to There** — Moving from place to place, physically and mentally. (19:21)

Module Red

301. **Houses for Worship** — The relationship between architectural design and religious philosophy and liturgies. (19:21)
302. **Pageants, Parades and Festivals** — The idea that people have designed celebrations, and have created the objects, costumes, and rituals that are integral parts of festivities. (19:17)
303. **Remembering Happy Times** — The images artists have created to portray happy, exciting, and tender moments. (19:24)
304. **Groups of People** — The interaction of groups as a source of imagery for artists. (19:25)
305. **Stars and Heroes** — Some of the ways that art has been used to honor deities, legendary figures, and champions. (19:32)

Module Brown

401. **How About a Spoon** — The evolution of a useful object. A comparison of handcraft and machine manufacture. (19:28)
402. **Signs of the Times** — The development of signs and symbols in various times and cultures. (19:31)
403. **Things to Use** — Manufactured objects used for daily tasks in the house and at work. (19:30)
404. **Make Yourself Comfortable** — Solutions to the problem of the design of chairs and other objects for sitting. (19:31)
405. **Play's the Thing** — Toys and playthings — objects revealing the customs, skill, and whimsy of their makers. (19:28)

Module Yellow

501. **Faces of Nature** — The aesthetic qualities of natural phenomena examined visually in nature and in art forms. (19:20)
502. **Making the Unseen Visible** — Various kinds of photography and cinematography as used for scientific research and as a source of imagery for the artist. (19:19)
503. **Birds, Bees, and Bugs** — Natural forms that have continuously served as sources of ideas for artists and designers. (19:21)
504. **Man: Friend and Enemy of Nature** — The wonders of the natural world as depicted by artists. What man has done both to care for and harm the earth. (19:29)
505. **Land Images** — The variety of ways people respond to the same natural setting and express this response in individual media and personal style. (19:30)

Module Orange

601. **Wrappings and Trappings** — How people have used costumes to create special images of themselves. (19:25)
602. **Changing Your Looks** — The ways people in different times and cultures have used body decoration and adornment. (19:41)
603. **Getting the Message** — Art as communication, and artistic forms for transmitting messages. (19:19)
604. **Dreams and Fantasy** — Man's inner world revealed through art. (19:37)
605. **Devils, Monsters and Dragons** — Demonic art images used to ward off harm and destruction. (19:19)

Imagine That . . .

Fifteen 15-minute black and white lessons
Primary
60-page teacher's guide
30-minute teacher program

Produced by Massachusetts Educational
Television (21 Inch Classroom)
and WGBH-TV, Boston (1968).

"Let's pretend" is a natural and unselfconscious play activity of small children. This series helps them develop and begin to evaluate their budding dramatic skills, as they try on characters or act out ideas and feelings inspired by children's literature. Starting with simple group pantomime, the lessons progress to more complicated scenes with dialogue and interpretation. While viewers take part in creative physical and verbal activity, they also learn to plan and work cooperatively, and begin to develop appreciation for traditional and modern literature.

Marcia Chellis, television teacher for IMAGINE THAT . . . , has been actively involved in the development of childhood education in literature and in the performing arts. She has been both a master teacher and a team leader for the Milton, Massachusetts, schools. Ms. Chellis is a graduate of Northwestern University.

LESSONS

1. **Mother Goose**—Considers the idea of "character" in different rhymes. (14:58)
2. **The Three Billy Goats Gruff**—Explains the evolution of folk tales, and invites children to act out characters. (14:19)
3. **Peter Rabbit**—Concentrates on rabbits and how they move. (14:19)
4. **Poetry**—Introduces rhythm, movement, and an appreciation of the sense of touch. (14:25)
5. **Winnie the Pooh: (Bees)**—Leads children into a discussion of the senses of smell and taste. (14:25)
6. **Aesop: The Country Mouse and the City Mouse**—Stimulates children's awareness of hearing by engaging them in games. (14:27)
7. **The Little Engine That Could**—Offers an opportunity for simple characterization. (14:30)
8. **The Grimm Brothers: Hansel and Gretel**—Involves children in characterization using the whole body. (14:20)
9. **Aesop: The Hare and the Tortoise, The Lion and the Mouse**—Discusses the morals of the two fables and invites children to act them out. (14:00)
10. **Winnie the Pooh: Piglet Meets a Heffalump**—Explores the ways that imagination is related to the senses. (14:25)
11. **Nonsense Poetry**—Presents nonsense poetry for pure enjoyment and for ear training. (14:47)
12. **The Shoemaker and the Elves**—Invites children to act out the characters in the story. (14:16)
13. **Caps for Sale**—Lets children identify and characterize people by the hats they wear. (14:25)
14. **Millions of Cats**—Focuses attention on cat movements. (14:03)
15. **Make Way for Ducklings**—Helps children put characters together and act out a busy city scene. (14:31)

Inside/Out

Thirty 15-minute color lessons
Intermediate
80-page teacher's guide

30-minute teacher program
15-minute informational program
Workshop Training Package

Developed through the resources of a consortium of thirty-five agencies, organized and managed by AIT. Produced for AIT by Kentucky Authority for ETV, Lexington; KETC-TV, St. Louis; WVIZ-TV, Cleveland; NVETA, Annandale; and OECA, Toronto (1973).

Available for purchase on film and videocassette.

For related materials, see pages 107-110

This interdisciplinary series, developed by health educators and learning specialists, is designed to help eight-to-ten-year-olds understand and cope with their emotions. Using dramatizations and documentaries to portray experiences common to young lives, the programs deal with social, emotional, and physical problems. The purpose of INSIDE/OUT is to help young people achieve and maintain well-being, by developing life-coping skills that can serve throughout adult life. Winner of Emmy Award, National Academy of Television Arts and Sciences, for outstanding children's programming, 1974; and Distinguished Service Award, Association for the Advancement of Health Education, 1975.

Chief consultant to AIT, Orvis A. Harrelson, M.D., M.P.H., Director of Health Services, Tacoma Public Schools. National Consultant to AIT, Wallace Ann Wesley, Hs.D., Director, Department of Health Education, American Medical Association.

LESSONS

Module Blue

101. **Because It's Fun**—Bill thinks winning is the only thing that counts. He can't understand playing just for fun. (14:44)
102. **How Do You Show?**—Boys of different temperaments express or hide feelings about things that happen to them. (14:43)
103. **Strong Feelings**—Edgar discovers how love, fright, embarrassment, and confusion can affect the body. (14:38)
104. **Must I/ May I**—Debbie and Bobby try to deal with situations that give them too much or not enough responsibility. (14:41)
105. **Travelin' Shoes**—Stuart's family has mixed feelings about a move from the country to Washington, D.C. (14:57)

Module Green

201. **Just Joking**—David gets his kicks from playing pranks on others until some of his "jokes" start to backfire. (14:23)
202. **But ... Names Will Never Hurt?**—A boy comes to realize how prejudice affects everyone involved. (14:35)
203. **Home Sweet Home**—Eddie, whose parents abuse him, and Steve, whose parents are strict, run away from home. (14:38)
204. **Jeff's Company**—A neighbor helps Jeff discover the value of solitude at his mountain home. (14:20)
205. **Buy and Buy**—Pete and Joe must decide whether to buy a gimmicky toy with money saved for something else. (14:12)

Module Red

301. **Can I Help?**—Lisa finds that really helping people can be more difficult than pretending to help. (15:00)
302. **Living With Love**—Mrs. Dorothy Smith and the children who live in her foster home express genuine family love. (15:01)
303. **Can Do/Can't Do**—Wishing she were somebody else, Doty imagines herself as her brother and sisters. (14:44)
304. **Breakup**—Becky's parents are separated, she imagines the consequences of divorce. (14:43)
305. **Love, Susan**—Susan's father, home from work, rejects her pleas to look at the portrait she just painted. (14:40)

Module Brown

401. **Brothers and Sisters**—David promises his sister that he will attend her class play, but fails to show up. (14:14)
402. **Someone Special**—David is hurt when he realizes that his teacher cares for her students equally. (14:43)
403. **I Want To**—In an imaginary scene, Patricia tries to prove she is old enough to take on greater responsibilities. (14:34)
404. **When Is Help**—Karen, Roger, and Pete have decidedly different ideas about giving and receiving help. (14:16)
405. **Bully**—Adrian, a new boy in school and an outstanding student, becomes the object of the class bully. (14:11)

Module Yellow

501. **But They Might Laugh**—Becky's teacher discovers that Becky is afraid to try ice skating. She suggests they go to the ice rink together. (14:11)
502. **Lost is a Feeling**—After a move from Puerto Rico to Washington, O.C., Amador feels lost in the new city. (14:33)
503. **Donna (Learning To Be Yourself)**—Donna (Pugh) who is blind, is learning independence and self-worth. (14:30)
504. **You Belong**—"You are part of all you see" is the message of this visual essay. (14:29)
505. **Just One Place**—Kevin and his friends must decide whether to replant a garden after some older boys tear it up. (14:32)

Module Orange

601. **In My Memory**—When her grandmother dies, Linda tries to understand what this event means to her own life. (15:05)
602. **I Dare You**—Clarissa has to decide whether or not she should take a potentially dangerous dare. (14:30)
603. **Yes, I Can**—David encounters an unexpected problem when he goes on his own "overnight" at summer camp. (14:31)
604. **A Sense of Joy**—Chuck and his sister take different routes to the beach; she hurries, while he wanders leisurely. (14:39)
605. **Getting Even**—Three children form a secret club. Friends who were left out try to get even. (13:56)

Integration of Children with Special Needs in a Regular Classroom

(Lexington Teacher Training Project)

Ten 20 to 30-minute color programs

Teacher in-service

24-page discussion leader's guide

Teacher's guides for individual programs

Produced for the Lexington, Massachusetts, Public Schools with funds from the U.S. Office of Education through Title III (ESEA) and Title VI (Education of the Handicapped Act) grants, by WGBH-TV, Boston (1975).

Available for purchase on videocassette.

This project is designed to help teachers recognize and work with individual differences that affect children's learning development and to help special education teachers apply their skills in the setting of the regular classroom. The programs show a variety of teaching techniques as they are practiced in actual classrooms. These include early assessment and diagnosis as well as activities devised to treat specific problems in handwriting, reading, and mathematics. The emphasis is on practical, effective techniques that any resourceful teacher can use on a step-by-step basis. Teachers are helped to identify problems accurately and then to solve them through carefully designed and monitored methods.

PROGRAMS

1. **Early Assessment: Step to Planning**—A kindergarten teacher plans activities that will allow careful and valid observation of four basic learning skills: visual-perceptual-motor, language, body awareness and control, and behavioral organization. (26:06)
2. **Diagnosis and Educational Planning**—A teacher, a physician, and a psychologist cooperate in evaluating a student. Together they produce a comprehensive diagnosis and an appropriate educational program. (29:22)
3. **After Assessment**—A kindergarten classroom is arranged in groups for auditory, motor, visual-motor, and visual-perception skills. The teacher assists one group or one child while the others work independently. (23:29)
4. **Every Child Can Learn**—A teacher uses special techniques with a group of fourth and fifth grade students who need a more structured approach to math. A learning disabilities specialist drills students in vocabulary, sequencing, and auditory training using the kinesthetic mode. (18:46)
5. **Together They Learn**—A special educator, the regular teacher, and an aide offer retarded primary level children opportunities to work independently, in small groups, or in individual tutoring situations. (26:08)
6. **Correcting Handwriting Problems**—A teacher applies a variety of teaching techniques to assist students with problems in visual-perception. Samples of work are alternated with demonstrations of corrective activities. (18:48)
7. **Reading and Learning Styles**—First and second grade children are grouped for a reading lesson. Detailed examples show how reading approaches are matched to learning styles. (28:13)
8. **Developing Children's Languages**—First grade students of diverse backgrounds receive help with auditory discrimination, English concepts and vocabulary, visual memory, and more advanced skills. (29:58)
9. **Mastering Math Skills**—The results of a regularly given timed math test are graphed to show progress. Then third and four grade students are arranged in groups for treatment of specific problems. (26:58)
10. **Every Student is Different: The High School**—Dramatic sequences show various teaching techniques in action and the responses they elicit. Individualized instruction provides another dimension to teaching. (29:18)

Introduction To Sociology (Sociology I)

Sixteen 30-minute black and white lessons
Post-secondary
7-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

This course presents the basic terms of sociology and the sociological view of "men in groups." It considers major sociological institutions, various types of groups (categorical, territorial, and purposeful), and basic social processes (public opinion, deviance, control, and social change).

The lectures have been prepared and presented by Dr. Norman W. Storer, Chairman, Sociology and Anthropology Department, Bernard M. Baruch College, City University of New York, formerly Assistant Professor of Sociology, Harvard University.

LESSONS

1. **The Field of Sociology**—Defines sociology, surveys the sociologist's assumptions about the nature of man, and introduces examples of sociological perspective" (28:55)
2. **Basic Concepts**—Develops the concepts of *interaction, status, group, norm, role, status-set, and role-set* (28:56)
3. **The Concept of Culture**—Discusses the nature of symbols, defines culture, and distinguishes culture as an independent phenomenon in social life. (28:55)
4. **Social Institutions and Social Exchange**—Explores universal cultural needs, names major social institutions of society, and suggests basic principles governing all social institutions. (28:58)
5. **The Economic Institution**—Analyzes the concepts of property and economic exchange, and takes up the relationships between the economic system and other parts of the society. (28:56)
6. **The Political Institution**—Analyzes the concept of power into three specific types: inducement, influence, and authority, and examines consequences of basing a government on rational-legal grounds. (28:50)
7. **The Family**—Examines the basis for the family unit, discusses types of marriage relationships and family organization, and considers historical changes in family structure. (28:55)
8. **The Religious Institution**—Explains the sociologist's analytical approach to religion, explores the need to develop religious practices, and discusses major forms of religious organization. (28:57)
9. **Social Stratification**—Questions why people rank each other, discusses money, power, and esteem as determinants of a person's social position, and considers social mobility in America. (28:56)
- 9-A. **Intergroup Relations**—Explores the relations between socially-defined groups of people, introduces the concepts of social distance, prejudice, and discrimination, and traces the development of the civil rights movement in America. (28:58)
10. **Communities**—Discusses the nature and study of territorial groups, contrasts "quality of life" between rural and urban areas, and explains relationships between density and heterogeneity. (28:55)
11. **Formal Organizations**—Discusses the nature of rules in formal organizations, considers basic types of control, and introduces the criterion of organizational "health." (28:56)
12. **Public Opinion**—Defines public opinion, outlines ways of determining current public opinion, and explains the importance for totalitarian governments of controlling mass media. (28:42)
13. **Deviance**—Defines deviance, illustrates ideal-types of motivation for deviance, and outlines different types of deviant behavior. (28:53)
14. **Social Control**—Illustrates major types of social control, and introduces the relative economic and social costs of control. (28:50)
15. **Social Change**—Discusses the internal and external sources of social change, examines earlier theories, and points out the importance of studying social change today. (28:50)

It's All Up To You

Thirteen 15-minute color lessons
Intermediate, junior high
Teacher's guide

One 30-minute teacher program

Produced by the Cooperative Educational Service
Agency No. 13, in cooperation with WHA-TV, and
the Wisconsin Department of Public Instruction
(1977).

IT'S ALL UP TO YOU is designed to help students develop political understanding and decision-making skills and to provide an introduction to history and the social sciences, with emphasis on political science. The concepts of laws, government, democracy, decision-making, citizenship, institutions, interdependence, and ideology form the base of the programs.

LESSONS*

1. **Tell Me Who You Are**—Promotes a recognition and acceptance of other world views.
2. **Friendly Persuasion**—Illustrates how human beings function in political ways to meet their individual group needs. (14:30)
3. **Who's In Charge?**—Discusses government as an institution established by groups of people for themselves. (14:50)
4. **Who Needs It?**—Analyzes the conditions necessary for government to function, different types of past and present governments, and the relationship between the ruler and ruled. (14:56)
5. **The Shopping Trip**—Illustrates how institutions, governmental and nongovernmental, vary in form and function. (13:45)
6. **A Dog's Life**—Discusses local governments and the limits of their authority. (12:40)
7. **What a State You're In**—Concentrates on the "in-between" jurisdiction of state governments.
8. **We the People**—Looks at national governments and their functions.
9. **The Country of One Person**—Discusses the increasing need for international government.
10. **Lost In Space**—Shows how future societal alternatives may be predicted by a better understanding of our present society.
11. **What in the World's Come Over You?**—Analyzes historical events as they influence present societies and act as clues to future ones.
12. **Who Cares**—Examines the rights and responsibilities, personal involvement, and needs of citizens and how these may cause institutions to change.
13. **State of the World Report**—Illustrates the opportunities and responsibilities of individuals to participate in politics and government.

Let's Draw

Thirty-four 15-minute color lessons

Primary

80-page teacher's guide

Produced by KOKH-TV, Oklahoma City
Public Schools (1976).

This course is based upon the philosophy that drawing is a way of communicating one's thoughts and feelings to others and, sometimes, to one's self. It encourages children to express themselves graphically and gives them suggestions for doing so. The series is similar in scope and approach to THE DRAW MAN but with special appeal to younger children. Subjects are chosen from those young children enjoy most. Presentations are slow-paced and simple.

Paul Ringler is a professional artist and is currently the Director of Broadcasting for the Oklahoma City Public Schools. He has had extensive experience as a television art teacher, and also has been a graphics consultant and a classroom art teacher.

LESSONS

1. Cats (13:39)
2. Ovals (13:47)
3. Birds (13:51)
4. Elephants (13:44)
5. Faces-Expressions (13:38)
6. Boats-Water (13:59)
7. Halloween—Haunted House (13:48)
8. Halloween—Symbols (Witches, etc.) (14:12)
9. People (13:48)
10. Small Animals (13:54)
11. Forest—Outdoor scene (cabin) (14:02)
12. Thanksgiving (13:56)
13. Deer (13:51)
14. Santa Claus (13:52)
15. Christmas (13:59)
16. Shapes — In Building (13:57)
17. Shapes — Geometric (14:05)
18. Cartoon Faces (13:48)
19. Cartoon Bodies (13:50)
20. Dinosaurs (14:03)
21. Lions (13:48)
22. Horses (13:47)
23. Hats (13:51)
24. People (Figures in action) (13:54)
25. Shapes, Surface (13:52)
26. Rabbits — Easter (13:54)
27. Squiggles (13:49)
28. Cars (13:52)
29. Shadows (13:50)
30. Trees (13:53)
31. Distance in Pictures (13:50)
32. Outer Space (13:31)
33. Underwater (13:52)
34. Wild Animals (13:49)

Let's See America

Twenty-six 30-minute black and white lessons
intermediate
20-page teacher's guide

Adapted for classroom use by AIT
from the NET series WHAT'S NEW (1969).

Field trips by camera to American landmarks—from the country's oldest city, St. Augustine, to one of its newest wonders, the Houston Astrodome—give viewers a perspective on their heritage and a sense of the rich diversity of American life today. The programs, whose themes range from the pursuit of a giant whale to a workday aboard a modern Georgia shrimp boat, stimulate youngsters to seek further information. In addition, this series is designed to help students interpret facts, make better generalizations, and—through related activities—improve their speaking and writing skills.

LESSONS

1. **Our Oldest City**—Accompanies a swashbuckling captain of yesteryear through St. Augustine, Florida. (27-38)
2. **Plymouth Revisited**—Explores the history of colonial America beginning at Plymouth, Massachusetts. (26-46)
3. **Master Spy of the Revolution**—Focuses on the spying activities of Paul Revere. (27-57)
4. **Concord: Days of Preparation**—Examines the colonists' preparation for the Revolutionary War and the events of April 19, 1775. (27-05)
- 4a. **Fort Ticonderoga**—Tours the historic Revolutionary War site and witnesses reenactments of famous battles. (28-14)
5. **Home of Yankee Whaling**—Shows the pursuit and capture of a giant whale. (26-49)
6. **Old Ironsides**—Visits the frigate "USS Constitution." (27-13)
7. **Saugus Ironworks**—Explores the Saugus Ironworks in Saugus, Massachusetts. (28-00)
8. **Adventure with Longfellow**—Recreates some of Henry Wadsworth Longfellow's poems. (27-59)
- 9.&10. **Washington, D.C.: Hub of Our Nation**—Visits the Senate, the House of Representatives, the President's Room, Statuary Hall, and the Crypt. (27-52 & 27-54)
11. **At the United Nations**—Accompanies a United Nations guide on a VIP tour of the U.N. Headquarters in New York City. (26-07)
- 12.&13. **From the Potomac**—Views the nation's capital from the Potomac River aboard a U.S. Navy launch. (26-14 & 26-34)
- 13a. **Where Lincoln Grew Up**—Recreates Lincoln's years in New Salem, Illinois. (25-48)
14. **Oketenokee Journey**—Follows a boat into the mysterious Oketenokee Swamp. (26-56)
- 14a. **The Great Swamp**—Explores New Jersey's Great Swamp with a boy from the city. (29-55)
15. **Day on a Shrimp Boat**—Shows a workday aboard a shrimp boat. (27-20)
16. **The Mighty Mississippi**—Focuses on the history and special features of the Mississippi River. (25-19)
- 16a. **Stone Mountain**—Visits Stone Mountain near Atlanta, where a huge granite dome rises 600 feet above the surrounding park. (27-04)
17. **Along the Rio Grande**—Explores the way of life, past and present, along the Rio Grande River. (27-00)
18. **Desert Adventure**—visits a living museum of mountain lions, jaguars, vultures, and other creatures of the Sonoran Desert. (28-14)
19. **Unusual Patients**—Follows a veterinarian on his rounds at the zoo in Washington, D.C. (27-02)
- 19a. **The Eighth Wonder**—Follows a boy through the Astrodome in Houston. (27-34)
20. **Behind the Scenes**—Takes a field trip to Bracketville, Texas, where a permanent western village is used for making movies. (28-28)
- 20a. **Circus Parade**—Visits the Circus World Museum at Baraboo, Wisconsin. (26-46)

Life World 2000

Twelve 15-minute color lessons
Junior high, senior high
64-page teacher's guide

Produced by KETC-TV, St. Louis, under
a grant from the Sunnen Foundation
of St. Louis (1973).

Available for purchase on videocassette.

This series, using a magazine format and a variety of techniques, focuses on the relationship between population and the quality of life, and population and the development of public policy. Included are humorous and dramatic sketches, documentary sequences, interviews, songs, and animation. Several of the programs feature Dr. Barry Commoner and Dr. Paul Ehrlich, who present their sometimes divergent views on population problems. The series is open-ended and invites students to examine their own values and the consequences of the decisions they may make about population.

Chief Consultant, Stephen Viederman, Assistant Director of the Demographic Division of the Population Council, New York City.

LESSONS

1. **Overview**—Offers a comprehensive view of the population phenomenon, pointing out that the study of population is the study of people, not just numbers. (14:18)
2. **Optimum Level**—Makes clear that what is considered optimum varies according to human values, and is more a social issue than a scientific matter. (14:27)
3. **Trends**—Considers factors of population change and the power of geometric growth including its impact on future generations. (14:44)
4. **Migration**—Depicts the United States as a nation on the move. Probes into the reasons for the population decline in small towns, and the possibility of interstellar migration. (14:32)
5. **Pollution**—Considers all sides of the question, then concludes with a humorous silent movie, "The Throwaway Society." (14:30)
6. **Feeling Crowded?**—Compares the scientific measure of density with an individual's perception of crowding. Points out that density of population is only one cause of urgent social problems. (14:53)
7. **Metropolitan Areas**—Focuses on urban problems and on the real challenge to metropolitan planners—how to make cities livable again. (14:30)
8. **Families and Babies**—Explores the changing roles and sizes of American families. Points out that family size has often been determined by economic need. (14:50)
9. **Zero Growth?**—Investigates the possible consequences of a stabilized population on the economy, society, business, education, and the environment. (14:34)
10. **Attitudes**—Visits a museum exhibit on population and discovers a variety of individual and group attitudes towards population issues. (13:57)
11. **Population Policy**—Emphasizes the need in the United States for coordinated policies to guide population change. (14:30)
12. **Alternative Futures**—Emphasizes the need for long-range planning, as a visitor to earth in the year 2727 learns that humanity has survived, but that the planet is depleted of its resources. (14:00)

Magic Pages

Thirty 15-minute color lessons
Primary
34-page teacher's guide

Produced by KLVX-TV, Las Vegas (1976).

The diversity and depth of children's literature are reflected in this series of highly enjoyable stories for second and third-graders. The stories draw on a variety of topics—from moral dilemmas as ancient as Aesop to the contemporary voyage of a small, hand-carved Indian and canoe from the high Nipigon country of Canada to the Atlantic Ocean. A wide range of techniques—pantomime, drama, reading, poetry, and song—add vitality to programs that are intended to encourage children to become frequent and enthusiastic readers.

Judy Wimmer, Instructional Television Resource Advisor for KLVX-TV, is the teacher/hostess for the series and also the author of the teacher's guide. Ms. Wimmer received her bachelor's degree in elementary education from Utah State University in 1971, taught second grade for two years in Las Vegas, and has been involved in many civic, school, and community theater productions.

LESSONS

1. *Ira Sleeps Over* by Bernard Waber (12:10)
2. *Messy Sally* by Galdys Yessayan Cretan (12:39)
3. *A Pair of Red Clogs* by Masako Matsuno (14:45)
4. *The Eggs and Three Gold Pieces*, Greek folk tales retold by Alike (15:02)
5. *Paddle to the Sea* by Holling C. Holling (14:17)
6. *Do You Move As I Do?* by Helen Borton (12:43)
7. *Twice Upon a Time* by Irwin Shapiro (13:52)
8. *A Selection of Fables* by Aesop (13:58)
9. *You Look Ridiculous Said the Rhinoceros to the Hippopotamus* by Bernard Waber (12:23)
10. *The Bears on Hemlock Mountain* by Alice Dalgliesh (15:13)
11. *The Green Machine* by Polly Cameron (14:54)
12. *The Duchess Bakes a Cake* by Virginia Kahl (12:45)
13. *The Ainal* by Lorna Balian (13:41)
14. *Sphero, the Reluctant Snowball* by Lisa Sannazzaro (16:19)
15. *The Case of the Hungry Stranger* by Crosby Bonsall (11:25)
16. *The Fish from Japan* by Elizabeth K. Cooper (13:52)
17. *Jim and the Beanstalk* by Raymond Briggs (14:47)
18. *The Troll Music* by Anita Lobel (14:56)
19. *The Seamstress of Salzburg* by Anita Lobel (14:30)
20. *The Stone Soup* adapted from a French folk tale (11:54)
21. *The Five Chinese Brothers* by Clair H. Bishop and Kurt Wiese (14:35)
22. *My Father's Dragon* by Ruth Stiles Gannett and *The Hundred Dresses* by Eleanor Estes (14:58)
23. *The Singing Trilogy, Three American Folk Ballads* (14:27)
24. *Billy Goat in the Chili Patch* by Leo F. Lazarus (13:38)
25. *Hansel and Gretel* adapted from the Brothers Grimm story (14:42)
26. *The Book of Giant Stories* by David L. Harrison (14:43)
27. *The Dragon in the Clock Box* by M. Jean Craig (14:53)

HOLIDAY LESSONS

- A. *Sometimes It's Turkey, Sometimes It's Feathers* by Lorna Balian (13:37)
- B. *How Six Found Christmas* by Trina Scharl Hyman (14:56)
- C. *The Adventures of Egbert the Easter Egg* by Richard Armour (13:02)

Major American Books

(English III)

Fifteen 30-minute black and white lessons
Post-secondary
2-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

Individual works of fifteen of America's great authors are surveyed. The course considers many ways of analyzing a book in order to better understand and evaluate it, as an example of a literary tradition, as a reflection of the author's milieu, and as a writer's personal search for identity.

The lectures have been prepared and presented by Dr. Harold C. Martin, President, Union College; formerly Lecturer on General Education, Harvard University.

LESSONS

1. Nathaniel Hawthorne (1804-1864): *The Scarlet Letter*. (28:56)
2. Herman Melville (1819-1891): *Bartleby the Scrivener*, *Benito Cereno*. (29:03)
3. Henry David Thoreau (1817-1862): *Walden*. (29:00)
4. Walt Whitman (1819-1892): *Selected Poems*. (28:54)
5. Mark Twain (1835-1910): *Huckleberry Finn*. (28:55)
6. William Dean Howells (1837-1920): *Rise of Silas Lapham*. (28:56)
7. Henry James (1843-1916): *The Portrait of a Lady*. (28:55)
8. Stephen Crane (1870-1900): *Red Badge of Courage*. (28:54)
9. Willa Cather (1876-1947): *Death Comes to the Archbishop*. (28:55)
10. F. Scott Fitzgerald (1896-1940): *The Great Gatsby*. (28:56)
11. Ernest Hemingway (1898-1961): *A Farewell to Arms*. (28:57)
12. Eugene O'Neill (1898-1953): *Desire Under the Elms*. (28:55)
13. Thomas Wolfe (1900-1938): *Look Homeward, Angel*. (28:56)
14. William Faulkner (1897-1962): *As I Lay Dying*. (28:44)
15. Robert Frost (1874-1963): *Selected Poems*. (28:55)

Man and His Motives (Psychology II)

Fifteen 30-minute black and white lessons
Post-secondary
8-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

This course explores the subject of human motivation, introducing basic theories and research findings that bear on the "why" of man's thought and action.

The lectures have been prepared and presented by Professor Kenneth J. Gergen, Associate Professor of Psychology, Swarthmore College.

LESSONS

- 1. Stop Him! He's About to Jump: The Study of Motivation**—Introduces and evaluates several of the methodological approaches used in the study of motivation. (28:55)
- 2. The Body's Wisdom: The Biology of Motivation**—Examines three biologically based motives: hunger, sleep, and sex. (28:46)
- 3. Like Father, Like Son: The Instinctual Basis of Motivation**—Discusses inherited patterns of behavior as they exist in various animal species. (28:16)
- 4. Plastic Fantastic Man: The Learning of Motives**—Deals with acquired motivation—those motives which develop through socialization. (28:55)
- 5. The Struggle Within: Basic Concepts of Freudian Theory**—Sketches out a number of key concepts in psychoanalytic theory: the ego, superego, and id. (28:55)
- 6. The Dark Passage: Freudian Theory of Development**—Discusses the various stages of psychosexual development and the relationship of the particular experiences one has at these stages to later motivational patterns. (28:46)
- 7. Reducing the World to Pint Size: The Need for Consistency**—Examines dissonance theory, one particular theory dealing with consistency. (28:55)
- 8. Expanding the World to Giant Size: Exploration and Novelty Seeking**—Reveals through a series of laboratory demonstrations that individuals seek stimulation and that novelty itself is rewarding. (29:23)
- 9. Getting Somewhere: Achievement Motivation in Persons and Societies**—Describes a way of measuring differences in the need to achieve. Visits with Professor David McClelland, authority on achievement motivation. (28:53)
- 10. Some Men Are Islands: The Need for Social Approval**—Demonstrates one major way of measuring the approval need, and discusses experimental studies documenting important ways behavior is affected by approval need. (28:52)
- 11. The Ghost from Within: Anxiety**—Discusses various points of view concerning the nature and origin of anxiety. (28:52)
- 12. Living to the Hilt: The Psychology of Self-Actualization**—Deals with a set of ideas about human striving which suggest that man has the innate capacity to live in a full-functioning and self-fulfilling way. (28:35)
- 13. Obstacles to Action: The Thwarted Motive**—Considers environmental obstacles and internal or psychological blocks that thwart motives. Discusses conflicting motives and forms of conflict resolution. (28:50)
- 14. The World through Rose Colored Glasses: Motivation and Perception**—Examines a series of studies demonstrating how a person's motives influence his perception of the environment. (28:50)

Math Matters

Twenty 15-minute color lessons in two modules
Intermediate, junior high
45-page teacher's guide

Produced by KLRN-TV, Austin-
San Antonio (1975).

The concepts are basic and timeless, but the approaches are fresh and often zany, in this series designed to inspire students turned off by traditional approaches to mathematics. Lessons range from a group therapy session for victims of "fraction phobia" to the adventures of a "counter" spy in search of large numbers. A deft combination of humor and concrete situations, these programs are useful not only for individual or small-group remediation, but also for large-group introduction or review of basic mathematical concepts.

LESSONS

Blue Module

101. **Large Numbers** — A variety of concrete, often zany situations illustrate the written forms, punctuation, and reading of large numbers. (14:13)
102. **Doing and Undoing**—"Doing" (an operation) and "undoing" (its inverse) are demonstrated in commonplace activities as well as mathematically. The program also considers operations with no inverse, one example being multiplication by zero. (14:43)
103. **Triangles** — Executives of Prolific Polygons, Inc., see presentations of the firm's three basic types: the equilateral, the isosceles, and the scalene. A short sequence defines the triangle in set theory terms. (14:37)
104. **Quadrilaterals**—Cecily Snoop visits a Quadrilateral factory to learn the definitions of squares, rectangles, and rhombi, parallelograms, and trapezoids. A Venn diagram shows the relationship of polygons in set theory terms. (14:33)
105. **Metric System—Linear Measure**—Newscaster Graham Meter reports on the metric system and discovers the relationships between millimeter, centimeter, meter, and kilometer. (14:18)
106. **Metric System—Weight and Capacity**—Gomez the Gourmet explains grams and liters, Dita provides information on kilograms, and Graham Meter narrates film clips showing commercial uses of the metric system. (14:54)
107. **Symmetry**—Symmetry about a line, two lines and a point illustrated through a series of visuals and short vignettes. (14:24).
108. **Fraction I**—Therapy for fraction phobia includes building meanings for the terms "numerator," "denominator," and "congruent." Examples of two types of fractions—"how much" and "how many"—are demonstrated. (14:34)
109. **Fractions II**—B.J. Toddy recounts the tale of a friend's inheritance to show the relationship between numerator and denominator in fractions. He uses coins to demonstrate equivalence. (14:35)

110. **Properties of Zero and One**—As Clarence and friends watch TV, "Stellar Voyage" presents properties of zero, properties of one, and other related mathematical concepts. (14:53)

Green Module

201. **Percent**—The meaning of "percent" is illustrated in the context of commercials, newscasts, a quiz show, and a "consumer tips" feature. (14:27)
202. **Probability I**—A gumball machine, a gypsy fortuneteller, and a probability counseling booth are used to present the basic concepts of probability. (14:25)
203. **Probability II** — The possibility of winning a free meal at a restaurant called Fat Chance draws the characters into a challenging probability exercise. (14:22)
204. **Area I**—A wall covered with graffiti and a doghouse to be carpeted provide the incentive for learning how to find the area of squares and rectangles. (14:17)
205. **Area II**—Constructing pup tents for a school play introduces the need for finding the area of a triangle. (14:15)
206. **Data Graphs**—An awards ceremony honors a detective show in which graphs—line, bar, and circle—provide the incriminating evidence. (14:44)
207. **Unit Pricing**—A robot housekeeper is sent to the factory for an adjustment in his circuitry which will equip him to do comparison shopping. (14:41)
208. **Volume I**—A detective format centers around the investigation of a construction company, where the basics of volume must be learned in order to compute cubic yards of dirt and cubic yards of concrete. (14:59)
209. **Volume II**—This program has characters computing the volume of cylinders, pyramids, and cones. (14:30)
210. **Estimation**—The difference between a wild guess and an estimate is examined, with an emphasis on the usefulness of estimation in a variety of situations. (14:40)

Matter & Motion

Seventeen 15-minute color lessons
In four modules
Intermediate
24-page teacher's guide

Produced by Hampton Roads Educational
Television Association, WHRO-TV, Norfolk (1973).

In this visually rich series, specialized photographic techniques allow youngsters to see volcanoes and mountains being formed, to inspect Jupiter's red spot and the rings of Saturn, to watch a year of days and seasons pass in a few short minutes. Such memorable experiences help make physical science topics important and understandable. Ecologically-oriented, the lessons encourage students to take a personal interest in their environment. The series is a companion course to ANIMALS & SUCH.

Larry Crum is the producer, designer, and narrator for MATTER & MOTION, and also the author of its teacher's guide. Before becoming a studio teacher and producer for Hampton Roads Educational Television Association, he taught biology and earth science in Virginia public schools.

Cinematographer Stewart Harris is a professional illustrator, animator, cartoonist, and still photographer with film credits for more than a hundred projects in instructional and public television.

LESSONS

Module Blue

101. **Something in the Air**—Surveys the causes and the development of air pollution. (14:30)
102. **Our Polluted Waters**—Introduces plants, plant-like organisms, and sea animals that thrive in polluted water. (14:30)
103. **Radioactivity and the Environment**—Explores the properties of radioactive materials. (14:34)
104. **Sounds around Us**—Investigates the origin of sound and how it is received by the human ear. (14:32)

Module Green

201. **About Energy**—Studies the origins and physical characteristics of energy. (14:34)
202. **Simple Machines**—Uses toys, games, recreational facilities, and tools to illustrate how simple machines work. (14:34)
203. **Machines That Move People**—Visits Transpo '72 to see past, present, and future modes of transportation. (14:30)
204. **Magnetism and Electricity**—Considers the relationship between magnets and electricity. (14:33)

Holiday Lesson (order separately)

About Christmas Trees—presents a visual study of trees, cut and uncut, artificial and real, unadorned and magically decorated with lights and ornaments — set to the music of antique music boxes. (14:34)

Module Red

301. **Earth Resources**—Considers the use and misuse of our natural resources and emphasizes the value of natural resources to man. (14:30)
302. **Thinking About Rocks**—Looks at the way rocks are broken down by the forces of nature. (14:34)
303. **The Earth's Past**—Studies the evolution of the earth and of life forms that have existed on its surface. (14:33)
304. **The States of Matter**—Introduces the states of matter—solids, liquids, and gases—and the concept of a plasma state. (14:35)

Module Brown

401. **Days and Seasons**—Illustrates the changes that occur during a single day and during the four seasons. (14:28)
402. **It's About Time**—Uses special effects photography to study the dimension of time. (14:40)
403. **The Solar System**—Uses advanced photographic techniques to explore the sun, planets, moons, asteroids, and comets of our solar system. (14:34)
404. **Weather**—Considers how the weather influences our lives. (14:28)

A Matter of Fact

Fifteen 20-minute color lessons
Junior high, senior high
16-page teacher's guide

Produced by WETA-TV, Washington, D.C.
and AIT (1973).

Available for purchase on film
and videocassette.

Focusing on works of non-fiction, A MATTER OF FACT reveals to young people how literature can recreate the excitement of man's struggles and achievements. With each program featuring a single work or a single theme, the series explores man's curiosity and zest for adventure, his creativity, and his capacity for strength, dignity, and compassion, as well as for cruelty and oppression. On-location film segments, dramatizations, and personal interviews add visual impact to this series, which is designed to stimulate the student viewer to read the featured works and to develop interest in non-fiction literature. The series is a companion course to A MATTER OF FICTION. Winner of Bronze Medal, Atlanta International Film Festival, 1974, Learning Magazine Award, 1974, and CINE Golden Eagle Award, 1976. John Robbins, one of the most popular and effective teachers ever to appear on television, is the creator of and host for the series. An elementary school teacher and a studio teacher of language arts, Mr. Robbins is also a writer, a painter, an actor, and a musician. He uses each of his talents to enhance these television presentations.

LESSONS

1. **Search and Serendipity**—Explores how man's discoveries on earth and in space have come about through deduction, through mathematics, and sometimes by accident. (19:43)
2. **In a Violent Time**—Dramatizes the struggles of two 17th century American women, Ann Hutchinson and Mary Dyer, against religious and political oppression. (19:52)
3. **Last Stand**—Examines the Roman siege of Masada, a mountain fortress held by Jewish partisans in the first century A.D., as an historic event and as a living symbol. (19:35)
4. **It Will Happen Again**—Investigates why people persist in building houses in dangerous places, despite the recurrence of natural disasters. (19:49)
5. **Man's Inhumanity**—Reflects on the experiences of several persons whose courage and endurance enabled them to survive humanely through the atrocities of World War II. (19:50)
6. **Man in a Paper Boat**—Interviews Thor Heyerdahl and his crewmate Erik Hesselberg about their discoveries and experiences on the sea voyages of the Kon Tiki and the Ra II. (19:34)
7. **And There Were No More**—Looks at animal species near extinction, and considers the conservation work of zoologist Gerald Durrell, and the national effort to save the whooping crane. (19:16)
8. **The Creative Person**—Illustrates how the artist reveals the spiritual dimension of the human experience, spotlighting actress Julie Harris and the work of artist Marc Chagall. (19:43)
9. **Diggers and Finders**—Examines man's attempt to make clear his kinship with his predecessors by means of archeological exploration. (19:35)
10. **Black Wealth**—Illustrates the spiritual richness of black artists involved in the black struggle for freedom and recognition, spotlighting writer/photographer Gordon Parks and actress Margo Barnett. (19:56)
11. **As the World Plays**—Explores how play activities reflect the nature of man. (19:40)
12. **Trait of Tears**—Focuses on the Indian's struggle to maintain his identity and his heritage by following the forced exodus of the Cherokees from their homeland to the West. (19:29)
13. **White Magic, Black Magic**—Dramatizes how people have attempted to gain special power over persons and things by manipulating symbols of good and evil. (19:38)
14. **Action/Reaction**—Examines how ethology, the study of pure animal behavior, has enabled man to learn more about his own behavior. (19:11)
15. **To a Different Drum**—Studies the struggles of Henry David Thoreau and American Revolutionary "soldier," Deborah Sampson, against social conformity. (19:24)

A Matter of Fiction

Fifteen 20-minute color lessons
Junior high, senior high
46-page teacher-student guide

Produced by WETA-TV Washington, D.C.
in association with AIT (1969).

Focusing on contemporary works that feature children in problem situations, A MATTER OF FICTION stimulates young people's interest in reading. The lessons present excerpts from the books but never reveal the endings. Documentary films, illustrations, pantomimes, and film segments shot on location provide visual support. The series is designed to help young people develop an appreciation for a variety of literary forms and styles and an awareness of social differences and similarities in various cultures. The series is a companion course to A MATTER OF FACT. Winner of Ohio State Award, 1970.

John Robbins is a distinguished and multi-talented teacher in the field of instructional television. He received a National Educational Television award for an earlier series, COVER TO COVER, and an award for excellence from the American Association of University Women for the series ROAMING THE SMITHSONIAN, produced for NET. Mr. Robbins has also performed piano recitals and has exhibited paintings at his alma mater, East Carolina University.

LESSONS

1. **Across Five Aprils** (Irene Hunt)—Describes how the Civil War splits a family and causes a boy to understand some less admirable traits of men. (19:35)
2. **All the Dark Places** (J. Allan Bowers) and **Five Boys in a Cave** (Richard Church)—*All the Dark Places* tells how a boy who gets lost exploring a cave finds his way back. *Five Boys in a Cave* centers on five boys who rescue two of their group from a deep pit. (19:36)
3. **Ash Road** (Ivan Southall)—Focuses on several families who live in the path of an unstoppable forest fire. (19:30)
4. **Bookbag**—Describes and analyzes themes of the books, *The Black Pearl* (Scott O' Dell), *White Fang* (Jack London), *Boy Alone* (Reginald Otley), *The Mutineers* (Richard Armstrong), *Leon* (Helen Griffiths), and *The Bushbabies* (William Stevenson). (19:30)
5. **The Day of the Bomb** (Karl Bruckner) and **The Little Fishes** (Erik Christian Haugaard)—*The Day of the Bomb* concerns the story of a Japanese girl dying of radiation sickness. *The Little Fishes* tells how three children survive in the war-torn rubble of Naples. (19:33)
6. **Donbas** (Jacques Sandulescu) and **The Endless Steppe** (Esther Hautzig)—*Donbas* tells the story of how the author escaped from Russian coal mines. *The Endless Steppe* tells of a Polish girl's life among Russian peasants after she and her family are sent to the Siberian mines. (19:29)
7. **Durango Street** (Frank Bonham)—Set in Watts, California, concerns a boy who is forced to join a gang in a ghetto called "The Flats." (19:33)
8. **The Faraway Lurs** (Harry Behn)—Tells the story of a girl in the Bronze Age who falls in love with a boy from a rival tribe. (19:38)
9. **The Innocent Wayfaring** (Marchette Chute) and **A Traveler in Time** (Alison Utley)—*The Innocent Wayfaring* tells about a girl of the Chaucerian Era who escapes from a convent to join a circus. *A Traveler in Time* concerns a modern day girl who travels into the past and becomes involved in a plot to save the life of Mary, Queen of Scots. (19:30)
10. **The Outsiders** (Susan E. Hinton)—Focuses on warring gangs in a Midwestern city whose conflicts result in the death of a boy. (19:30)
11. **The Pit** (Reginald Maddock) and **Smoke** (William Corgin)—*The Pit* centers on a boy who strikes back after enduring the beatings of his drunken father. *Smoke* describes how a boy finds a lost dog and then begins to cooperate with his stepfather. (19:18)
12. **A Slave's Tale** (Erik Christian Haugaard)—Concerns the sailing misadventures of a slave girl's youthful master during the Viking Age. (19:55)
13. **Undertow** (Finn Havrevold) and **Count Me Gone** (Annabel and Edgar Johnson)—*Undertow* tells about a young boy's idolatry for an older boy who has stolen a sailboat. *Count Me Gone* describes how a boy becomes disillusioned after his brother uses him as a scapegoat. (19:34)
14. **The White Mountains and The City of Gold and Lead** (John Christopher)—Tells about extraterrestrial beings who plan to replace the earth's atmosphere with their own which would destroy the human race. (19:38)
15. **The Year of the Jeep** (Keith Robertson)—Concerns two boys who try to earn money to buy a jeep they have restored to working order. (19:35)

MeasureMetric

Twelve 15-minute color lessons
intermediate, junior high
Teacher's guide

Developed through the resources of a consortium of twenty-five agencies, organized and managed by AIT. Produced for AIT by OECA, Toronto; UNIT Productions, Salt Lake City; and the South Carolina Department of Education through its Office of ITV and Radio, and the South Carolina ETV Commission (1977).

Available on film and videocassette.

This is a series for middle- and upper-elementary students that uses the metric system in dealing with the process of measurement. The programs employ engaging characters and a variety of production techniques to help students understand better the process of measurement, accurately employ measuring instruments, and report and interpret measurements using metric units.

LESSONS*

1. **Measuring**—A carnival barker, Smiling Bob O'Shea, deals with a heckler who asks, "Why do we measure?" In doing so he introduces a variety of measuring instruments used in everyday life, and also gives the crowd "sneak previews" of the measurement show to follow.
2. **Length 1: Who Measures?**—A pizza is one of the objects that Murray (the wizard of metric measurement) employs to help his cousin Randolph learn to use metric measuring devices. In the process, Randolph discovers how millimetres, centimetres, and decimetres relate to one another and to the metre.
3. **Length 2: A Thousand Clicks**—Murray helps Randolph learn to use tools to measure round objects and distances longer than the measuring device. Randolph finds out how long a kilometre is — by running around a track!
4. **Length 3: The Final Test**—Randolph learns to estimate the size of large and small objects, and discusses with Murray the meaning of "approximate" measurement.
5. **Area 1**—In a dream, Barbara is led by a 12 cm high rabbit to Arealand, where she explores the concept of area in a series of fanciful adventures.
6. **Area 2**—In the Gallery of Hanging Squares, a walrus helps Barbara learn to measure the areas of squares and rectangles, using a grid.
7. **Area 3**—Barbara's adventures in Arealand continue. She learns from a swan how to use a formula for determining area, she converses with a talking hectare, and she proves her measuring abilities "in court."
8. **Volume 1**—Joey, whose grandfather is Doc of "Doc Cranshaw's Wild West Medicine Show," learns about litres and how to measure volume indirectly. Later he goes to the store for Widow Brown and becomes interested in a contest to guess the number of pieces of candy in a jar.
9. **Volume 2**—After helping his grandfather with the magic show, Joey puts his mind to the problem of estimating the number of pieces of candy in the jar. At school, his teacher explains how to use a formula to compute the volume of rectangular objects.
10. **Volume 3**—Joey discovers how to use the displacement technique to measure the volume of an egg and a crystal ball. He helps a prospector plan a dam, and then wins a puppy in the candy estimating contest.
11. **Mass 1**—Anna Clark and her friend Inspector Hector become involved in a case that requires weighing evidence — peanuts, carrots, and an elephant. She discovers that identical mass does not necessarily mean identical volume.
12. **Mass 2**—Inspector Hector shows Anna how to use appropriate beam balance scales to measure the mass of the clues. Together they solve the mystery of the disappearing elephant.

Meet the Arts

Fifteen 30-minute black and white lessons
Intermediate
85-page teacher's guide
Produced by Massachusetts Educational
Television (21 Inch Classroom) and
WGBH-TV, Boston (1967).

From prehistoric times to the technological twentieth century, western man always has expressed his hopes, values, fears, and fancies through the arts. This series focuses on the evolution of art forms, and on the basic elements common to all: rhythm, shape, mood, form, and message. Through diverse artistic languages—music, dance, theater, literature, architecture, sculpture, painting, and photography—viewers come to appreciate the arts as means of communication, present not only in museums, but also in the familiar objects and experiences of everyday life.

Sonya Hamlin, the television teacher, is an experienced choreographer, performer, television writer, and producer. She has directed dance departments at Radcliffe College and the City University of New York. Ms. Hamlin received an M.A. in Education from New York University and has done graduate study at the Julliard School of Music, Dalcroze School of Eurythmics, Colorado College, and the Connecticut College for Women.

LESSONS

1. **Introducing**—Music, dance, theater, literature, architecture, sculpture, painting, and photography, as the languages artists used to express experience and emotion. (28:03)
2. **Shape and Line**—Considers the shape of straight lines and curved lines in architecture, painting, music, and dance. (28:45)
3. **Rhythm**—Explores rhythm as the artist creates it and as the audience responds to it in architecture, painting, and musical composition. (28:13)
4. **Form**—Investigates the inner structure of a work of art and illustrates how material influences form. (28:43)
5. **Content**—Demonstrates through a fable, a mime performance, and sculptured lions from different periods, how an artist's meaning can be discovered. (28:56)
6. **You Decide**—Proposes three basic steps in evaluating art works: a general view, a specific view, and a conceptual view. (28:45)
7. **It's All Around You**—Looks at common things and shows how art transforms them into beautiful, meaningful experiences. (29:00)
8. **Since Man Began**—Relates how primitive peoples embody their hopes, fears, and lights of imagination in artistic works. (28:55)
9. **Greece**—The Greek ideals of proportion and balance are examined in pottery, sculpture, and legends of the Golden Age. (28:38)
10. **The Middle Ages**—The mysticism, anonymity, and superstition of the period are illustrated by an illuminated prayerbook, a suit of armor, and a Gothic cathedral. (28:30)
11. **The Renaissance**—Renaissance Man's desire and ability to explore and change his world as shown in a Commedia dell'Arte scene, in examples of Italian painting, and in the inventive designs of da Vinci. (29:18)
12. **The Age of Baroque**—The correlation between lifestyle and its expression in art is highlighted by an investigation of the splendid and opulent architectural style of Versailles. (28:33)
13. **The Romantic Age**—This period's quest for individuality is expressed by its poets and musicians in their artistic response to nature and portrayal of emotions. (28:52)
14. **The Twentieth Century**—Modern art is explored as a reflection of the achievements of technology and the search for new insights. (28:33)
15. **America Now**—Considers art forms representative of our age—Op and Pop art, structural sculpture, electronic music, and experimental film. (28:45)

The MeTooShow

Four 20-minute color lessons
Primary
4-page combination teacher's guide
and fact sheet

60-minute teacher-parent program

Produced by Three-Prong Television Productions
in cooperation with the Erikson Institute for Early
Education in Chicago, with grants from the Harris
Foundation and the Corporation for Public Broad-
casting (1970).

Just sitting down can be a lively experience—if you do it like a monkey or a kangaroo, if you choose a unique chair (like maybe a fire hydrant), if you're playing a sitting-down game. This series of four programs is designed to stimulate just such curiosity and active, imaginative play in preschoolers. Moving through fantasy and reality, the series looks at rain, at city streets, at animals, and at games and activities, with follow-up suggestions for use in the classroom or at home.

LESSONS

1. **If I Were an Animal**—Children invent ways of expressing the movements and sounds of their favorite animals. (19:41)
2. **Sit Down!**—Sitting down becomes a lively experience when children imitate different sitting styles of animals and people. (19:29)
3. **Water Is Wet**—A rainy day inspires children to imagine "watery" fun—from paper sailboats to mud-pie baking. (19:34)
4. **Where Does My Street Go?**—Children discover that a walk down the street can be a magical journey of constantly changing sounds, shapes, and moods. (19:30)

Metrify or Petrify

Eight 30-minute color lessons
Teacher in-service
Viewer's guide

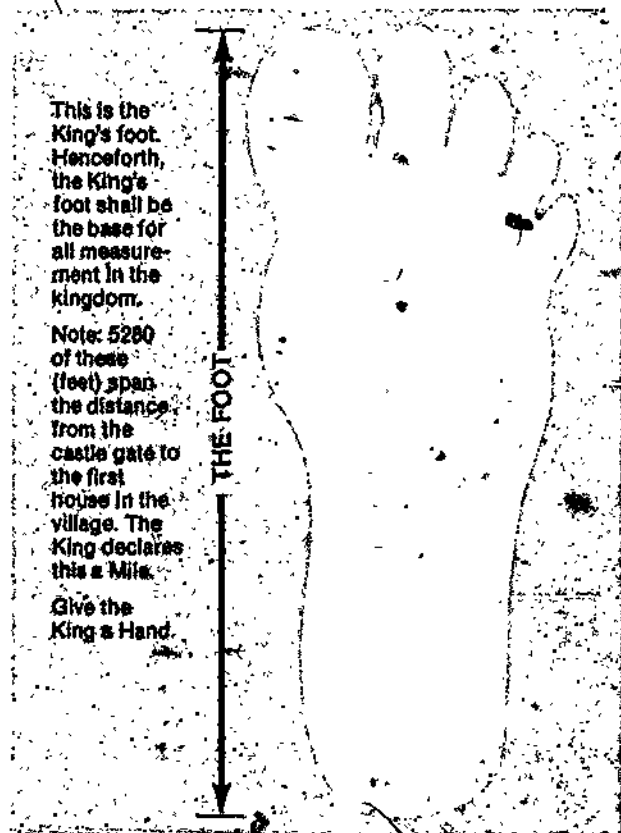

Produced by KLCS-TV, Los Angeles, for the
Los Angeles Unified School District and
The California State University and Colleges
(1975).

This series introduces SI Metrics (Système International d'Unités—The International System of Metric Measurement Units), the system of measurement that is gaining support in the United States. The course is designed to develop an awareness of all units of SI metric measurement and a working knowledge of many of those units.

LESSONS

1. **An Introduction to Metrics**—Explores broad-gauged metric concepts. (28:30)
2. **Linear Measurement**—Defines linear metric measurement and introduces the first derived unit. (28:34)
3. **Area Measurement**—Examines area concept and measurement in the metric system. (28:30)
4. **Volume Measurement**—Considers volume concept, volume measurement, and capacity measurement in the metric system. (28:36)
5. **Mass vs. Weight**—Defines mass and explores the measurement of mass in metric units. (28:10)
6. **Temperature**—Deals with the measurement of temperature, heat, and heat energy in metric units. (28:23)
7. **Time—And Additional Derived Units**—Explores time, velocity, acceleration, force in newtons, and pressure in pascals, and exposes the entire range of base and derived SI metric units. (28:11)
8. **A Decision Whose Time Has Come**—Provides an overview of metric units of measurement, extends the prefix lineup to its present limits, and shows part of a day in metric America. (28:30)

Natural Science Specials

Fourteen 20-minute color lessons in two modules
Intermediate
6-page combination teacher's guide and fact sheet

Produced by UNIT Productions,
Salt Lake City (1973).

Filmed in the Western United States, with its varied environments and spectacular geological formations, this series captures the grandeur of mountain peaks and plunging canyons, and the dignity and tenacity of animals and plants struggling to survive in a world of constant change. Some of the programs, like those on glaciers and fossils, focus on how the earth and its creatures have developed and changed over millions of years. Others, like those on mountain water and bighorn sheep, stress man's need to concern himself with the environment. The series can be used to support the regular curriculum or as a special interdisciplinary unit of study.

Producer-director: Dean Bradshaw.

LESSONS

Module Blue

101. **Canyonlands**—Discusses the prehistoric events that created the Canyonlands, a world of cliffs and canyons, continually reshaped by wind and water. (18:25)
102. **The West: Land of Many Faces**—Focuses on the topography, beauty, and geologic history of the live physiographic provinces that make up America's western uplands. (12:57)
103. **Volcanoes: Vulcan's Forge**—Explores the development of volcanic eruptions, shows island chains formed by volcanic activity, and demonstrates uses for volcanic materials. (18:05)
104. **Fossils: A Book from the Past**—Explains how fossils are formed, where they are found, and what they tell us about prehistoric life on earth. (18:01)
105. **The Great Salt Lake: America's Inland Sea**—Discusses the economic and industrial activity around the lake and speculates on its future as a recreational area. (18:03)
106. **Mountain Water: A Key to Survival**—Deals with the management of water in mountain regions, including dams, reservoirs, treatment, plants, and the process of terracing. (15:51)
107. **Pond Succession: A Circle of Life**—Traces the history of a pond, from the creation of a basin to its disappearance, as sediment causes the pond to become more and more shallow. (18:25)

Module Green

201. **Glaciers: Nature's Big Bulldozers**—Studies the development of glaciers and land formations resulting from glacial movement. (17:51)
202. **Mountains and Mountain Building: Nature's High Rise**—Explores various kinds of "mountain building," and considers the theories of isostasy and continental drift. (18:54)
203. **Lake Bonneville: History's High-Water Mark**—Creates an evolutionary picture of this prehistoric lake, including the explorers and geologists who have studied its shoreline and fossils. (18:18)
204. **Dinosaurs: The Thunder Lizards**—Studies fossils and visits the Dinosaur National Monument to view reconstructions of these Mesozoic lizards. (19:25)
205. **Marshlands: Where the Action Is**—Examines the interrelationships and interdependencies of plants and animals within the marsh community. Suggests improving marshland management. (19:25)
206. **Plant and Animal Life Distribution: The Natural World**—Examines factors that influence plant and animal growth and distribution. Visits different geological regions where various forms of life flourish. (18:01)
207. **The Desert Bighorn Sheep**—Traces the forced migration of the bighorn from the grasslands to the canyon slopes. Emphasizes the need to preserve both desert and Rocky Mountain bighorns. (13:43)

1977

Thirty-two 20-minute color lessons
Intermediate, junior high
Produced by Georgia Educational Media Service,
Georgia Department of Education (1976).

This weekly contemporary affairs series presents issues and events of relevance to students at the middle and junior high school levels. The programs are intended to develop in students a critical approach to the study of contemporary affairs and to help them become more skillful in analyzing the issues that affect their lives.

Each program focuses on a single topic. A host-commentator discusses the issue in detail, sometimes presenting various sides of a controversy. When appropriate, documentary film footage, graphic illustrations, and interviews with experts are used to explore the subject more thoroughly. Typical of the subjects are these from past series—TV violence, the jury system, marriage, divorce, women's rights, the food crisis, My Lai, space exploration, the right to privacy, money and sports, and the sea. Among the topics to be presented this year are government regulation of auto safety, TV news, organized sports, manners, and modern vigilantism. A synopsis of the content of each program is sent in advance of the program itself.

This series was recently awarded an Emmy in the Best Children's Program category by the Atlanta Chapter of the National Academy of Television Arts and Sciences. It is a past winner of an Ohio State Award for educational television programming.

Once Upon a Town

Fifteen 20-minute color lessons
Primary, Intermediate
Teacher's guide

Produced by Maryland State Department of
Education (1977).

ONCE UPON A TOWN explores literary selections that deal with universal themes—self-discovery, social issues, the relationship between the human world and the animal world, and fantasy versus reality. Each lesson examines one of these concepts with the congenial assistance of four characters. Appearing two or three at a time, David, Charlee, Nancy, and Carolyn contribute variety and flexibility to each lesson by sharing their experiences. The overall intent of the series is simple but important—to give students the skills and encouragement needed to read and to enjoy reading.

LESSONS*

1. **Who Am I?**—Self discovery as a part of growing up.
2. **Where Do I Live?**—The affect of geographical, cultural, and environmental settings on the way people live.
3. **Is My Way Better?**—Conflict and its resolution as a function of adjustment, compromise, and maturity.
4. **It Makes Me Laugh**—The importance of humor in fact and fiction.
5. **Hobbles Happening**—Personal interests as important avenues of self-development.
6. **Because I Am Different**—The positive and negative aspects of feeling alone.
7. **Scare Me!**—The excitement of fantasy and the supernatural.
8. **Me Alone, On My Own**—Personal problems and the need to face them.
9. **All Kind of Animals**—The special relationship between humans and their pets.
10. **Mind and Muscle Power**—Physical health and discipline as crucial to achievement in many fields.
11. **Earth Care**—Ecology as a social issue that affects us and is affected by us.
12. **How Do I Do It?**—A variety of books to stimulate leisure-time activities.
13. **Caring and Sharing**—Trust, understanding, and the common bonds among people.
14. **Beyond Words**—Nonverbal communication in art, music, ballet, mime, and film.
15. **A Matter of Time**—Adventures in time and space, and a look at the world of tomorrow.

Other Families, Other Friends

Thirty-two 15-minute color lessons
in four modules,
Primary

79-page teacher's guide

Produced by WVZ-TV, Cleveland (1971).

Trips to a Cree fishing camp in Quebec, a Bedouin tent in Israel, a wooden shoe factory in Holland, a coffee plantation in Nicaragua—these are a few of the adventures viewers will share as they meet and learn about families in fifteen foreign lands, plus our own state of Maine. Each program emphasizes the influence of culture, climate, and terrain on the lives of families at home, at school, at work, and at play. Famous landmarks of the past and present provide a background, but the focus is on people and their rich and varied heritage.

Ruth Kotila, teacher for the series, is the teacher-producer of several field trip series, including EXPLORERS UNLIMITED, a companion course. Ms. Kotila has developed lasting friendships with many of her television families. She corresponds with them regularly and encourages the student viewers to correspond with them, too.

LESSONS

Blue Module

MAINE

101. Steve & Kathy & Al—The Thibodeau family of Five Islands, Maine. (14:30)
102. "Said the Whiting to the Snail"—The process of commercial fishing. (14:30)
103. Lobsterman—How to catch, cook, and sell lobster. (14:29)

MEXICO

104. A Long Way from Home—A visit to Acapulco and Teotihuacán. (14:27)
105. Maria and the Coconuts—Mexico City, Tula, and Taxco (14:28)

ARUBA

106. Little Dutch Island—Unusual features of the island Aruba (14:30)
107. Bon Bini—An evening of music. (14:30)
108. Visit to Aruba—White sand beaches, and a sunken ship viewed through a glass-bottomed boat. (14:30)

Green Module

LONDON

201. Amanda—Family life in suburban Beckenham. (14:30)
202. Amanda's Adventures in London—The Thames River, the Tower of London, Big Ben, and the market in Petticoat Lane (14:30)

QUEBEC

203. Watchie—Family life on Cape Jones. (14:30)
204. The Weather Is Out—Cree culture on Cape Jones (14:30)
205. School Days—A tour of carpenter, guide, and cooking schools established by the Canadian Government. (14:30)
206. Jane and Suzanne—Plant, animal, and social life of the Cape. (14:30)

HAWAII

207. Aloha!—Treasures from the sea on Honolulu beaches (14:30)
208. Land of the Pineapple—A pineapple field, a sugar cane field, and the Polynesian Cultural Village (14:30)

Red Module

GREECE

301. Vassilis of Athens—The ancient Palace of Knossos on Crete and modern Athens. (14:30)

TURKEY

302. City of 500 Mosques—Explores the Blue Mosque and a five-hundred-year-old castle. (14:31)

ISRAEL

303. Shalom Aleichem—A Roman fortress, a Bedouin family, the Dead Sea, and a modern kibbutz. (14:30)
304. Jerusalem the Golden—Modern skyscrapers and ancient ruins of Jerusalem. (14:30)

EGYPT

305. The Gift of the Nile—A camel ride from Cairo to the pyramids. (14:30)

HOLLAND

306. Windmills and Wooden Shoes—A tour of Madurodam, a windmill, and a wooden shoe factory. (14:30)
307. Monique of Amsterdam—A visit to the Anne Frank home and a diamond polisher at work. (14:30)

FRANCE

308. A Little Bit of Paris—Notre Dame Cathedral, Montmartre, and the Eiffel Tower. (14:30)

Brown Module

ICELAND

401. Land of Frost and Fire—The Icelandic countryside. (14:30)
402. City of the Smoky Bay—Contemporary culture and the Arbaer Folk Museum in Reykjavik. (14:30)

JAMAICA

403. Island in the Sun—Kingston, Spanish Town, and Ounns River Falls (14:27)
404. Out of Many, One People—Preparations for Christmas—a fair and a concert. (14:28)

PANAMA

405. Crossroads of the World—The Panama Canal, ancient ruins, and the Bridge of the Americas. (14:30)
406. At Home on San Blas Island—Traditional costumes, needlework, and occupations of the Cuna Indians. (14:30)

NICARAGUA

407. Land of a "Kapriška Purara"—A park, a market, and the Presidential Palace in Managua. (14:30)
408. Nicaraguan Countryside—Lava fields, an Indian settlement, and a coffee plantation. (14:30)

Picture Book Park

Sixteen, 15-minute color lessons in
four modules
Primary
27-page teacher's guide
Produced by WVIZ-TV, Cleveland (1974).

Storyteller Ann McGregor, aided by resident poet Wise Willie the Owl, offers warm and interesting reflections on a variety of children's books. Childhood joys and heartaches, whimsy and humor, all have place in PICTURE BOOK PARK, where several special visitors, including an artist and a guitarist, help relate children's literature to the real world. Colorful line drawings and miniature stage settings reinforce each story experience.

Ann McGregor has been a teacher of the primary grades and has worked as an elementary school librarian in Berea, Ohio.

LESSONS

Blue Module

101. *Sylvester and the Magic Pebble*—*Sylvester and the Magic Pebble* by William Steig. Poetry Selection "How Many 'Ers' Are You" by Marcie Hans. (14:28)
102. *That's Right, Edie*—*That's Right, Edie* by Johanna Johnston (14:18)
103. *Bedtime for Frances*—*Bedtime for Frances* by Russell Hoban Poetry Selections "Questions at Night" by Louis Untermeyer from *Rainbow in the Sky*. "Bedtime" by Eleanor Farjeon from *Over the Garden Wall* (14:32)
104. *What Mary Jo Shared*—*What Mary Jo Shared* by Janice Udry (14:27)

Green Module

201. *Mighty Hunters*—*Good Hunting Little Indian* by Peggy Parish. *The Mighty Hunter* by Berta Bader. Poetry Selection "Indian Children" by Annette Wynne from *For Days and Days*. (14:27)
202. Folktales—"The Three Billy Goats Gruff" and "The Three Little Pigs" from *Chimney Corner Stories* by Minton Baich. (14:37)
203. *Mice are Nice*—*Henry the Uncatchable Mouse* by Sidney Simon. *Frederick* by Leon Lionni. Poetry Selection: "The City Mouse and the Country Mouse" by Christina Rossetti. (14:27)

204. *From Japan*—*A Pair of Red Clogs* by Massako Matsuno. (14:26)

Red Module

301. *Lovable Lyle*—*Lovable Lyle* by Bernard Weber. (14:30)
302. *Friends*—*I Need a Friend* by Shirley Kafka. *My Friend John* by Charlotte Zolotow. *Robbie's Friend George* by Shirley Estes. Poetry Selection "Doodle-Dee-Do, Find Me a Friend" by Elaine Sobocks. (14:25)
303. *Alfred*—*Alfred* by Janice Udry. (14:30)
304. *Spotty*—*Spotty* by Margaret Rey. (14:27)

Brown Module

401. *Happy Birthday*—*Tree for Rent* by Richard Shaw. *Birthday Presents* by Eugene Fern. (14:24)
402. *Zoo*—*May I Bring a Friend* by Beatrice DeRegniers. *Zoo, Where Are You?* by Ann McGovern. (14:23)
403. *Benjie*—*Benjie on His Own* by Joan Lexau. (14:20)
404. *Presents*—*Ask Mr. Bear* by Marjorie Flack. *Mr. Rabbit and the Lovely Present* by Charlotte Zolotow. (14:25)

Pilgrims to the West

Six 20-minute color lessons
Junior high, senior high
6-page combination teacher's guide
and fact sheet

Produced by KLRN-TV, Austin-San Antonio
(1972).

A common misconception in American history is the belief that the colonization of the United States began on the Atlantic Coast and moved steadily westward toward the Pacific. This series stresses the multi-directional and multi-cultural settlement of North America, in six dramatic vignettes, it depicts the exploration and colonization of the Southwest by Spaniards, long before the first Massachusetts pilgrim arrived in the New World. The influence of Spanish explorers and Catholic missionaries on American Indian culture also is examined. The series can be used as a companion course to PROJECT HISTORY.

LESSONS

1. **A Second World**—Focuses on the early confrontations between Indian culture and Spanish culture which resulted in a war lasting over four hundred years. (19:34)
2. **Sailors on Horseback**—Concerns the expeditions of early Spanish explorers who looked for "Cities of Gold" and explored New Mexico and Texas, often lying about what they saw in order to get money for further explorations. (19:32)
3. **Altars on the Sand**—Examines the early role of priests in America, when each Spanish conquest was also a crusade to convert Indians to Catholicism. Priest-explorers often dispelled the tall tales of the earlier explorers. (19:46)
4. **The Fourteenth Colony**—Considers the differences between the Spanish Colonies of the Southwest and the English colonies of the East, and examines the role of the Rio Grande River as a sustaining factor in early colonial development. (19:46)
5. **After Cortez**—Describes Mexico City, as an Aztec cultural center (Tenochtitlan) and as it was destroyed and rebuilt by the Spaniards. (20:00)
6. **Tomorrow Mexico**—Looks at the fading of the Spanish Colonies in North America, the Mexican Revolution, and the legacy of Spanish culture. (20:00)

Primary Art

Thirty 15-minute color lessons

Primary

86-page teacher's guide

Produced by KRMA-TV, Denver, in association with AIT (1969).

This series introduces first and second graders to the meanings and methods of art—by illustrating basic artistic concepts and by presenting a variety of examples and methods for achieving self-expression through art. Young viewers visit artists' studios, museums, and galleries to see works in many different media. They observe art in the everyday environment—in the changing seasons, in houses, in hats, and in the differences in people. The course balances observation and understanding with the making of art by encouraging children to create their own art in follow-up classroom activities.

Julie Sassaman has taught at the primary level in the Denver Public Schools for more than twelve years. She holds master's degrees in special education and in art from the University of Denver.

LESSONS

1. **Color All Around Us**—Considers primary colors, the mixing of colors, and how colors evoke feelings. (13:53)
2. **Follow a Line**—Illustrates how lines make designs and create movement and mood. (14:46)
3. **Shapes**—Shows the characteristics of shape through an investigation of common objects. (14:57)
4. **Meeting Artists**—Visits the studios of a sculptor, a weaver, a potter, and a painter. (14:38)
5. **Paint**—Demonstrates the use of various painting tools and techniques. (14:18)
6. **Paint to Music**—Explains how musical rhythm and movement can be expressed by line, color, shape, and texture. (14:40)
7. **Deep Down**—Discusses the ocean as a subject for the artist. (14:47)
8. **Bugs, Bees, and Butterflies**—Considers insects as a subject for art. (14:30)
9. **Paper**—Examines paper as a versatile medium for the artist and child. (14:45)
10. **Hats**—Looks at how hats are made and used, and examines hats as artistic forms. (14:46)
11. **Cloth, Yarn and Stitches**—Explores stitchery as a medium for creative expression. (14:21)
12. **What Do You See?**—Shows how artists see the same things but from different points of view. (14:21)
13. **Art in Motion**—Illustrates design in motion by examining moving space designs (mobiles). (14:20)
14. **Let's Really Look!**—Looks at patterns and colors in nature and man-made things. (14:22)
15. **Finding Design**—Explains that design is the way things are put together. (14:28)
16. **Crayon**—Demonstrates how crayons can be used in drawing, engraving, and painting. (14:31)
17. **Tough and Feel**—Shows how artists use line, shape, color, and pattern to create texture. (14:42)
18. **Odds and Ends**—Shows how old scraps of wood, plastic, and other materials can be used to make art. (14:36)
19. **Printmaking**—Discusses printmaking and demonstrates some printing techniques. (15:10)
20. **Designers**—An architect, an artist, and an industrial designer illustrate that good design is functional and pleasing. (15:07)
21. **House of Dreams**—Illustrates how architects use imagination in the design of functional buildings. (14:32)
22. **Come to the Circus!**—Considers the circus as a subject of art. (14:37)
23. **Portraits**—Looks at portraits from many eras, and of different styles and media. (14:39)
24. **Puppets**—Shows puppets in performance and explains how people use puppets to tell stories. (14:27)
25. **Changing Faces**—Focuses on the magic of masks and how they can be worn for disguise, play, and protection. (14:07)
26. **Collections**—Examines an art museum, showing a sculpture exhibit, art classes for children, and restoration activities. (14:20)
27. **Fantasy**—Explores the role of the imagination in creating art. (14:10)
28. **From the Earth**—Demonstrates how clay is used to make pottery and sculpture. (14:22)
29. **Animals**—Discusses animals as one of man's favorite subjects for art. (14:30)
30. **Make It Your Way**—Scans art from prehistoric times to the present day. (14:40)

Principles of Behavior (Psychology I)

Fifteen 30-minute black and white lessons
Post-secondary
6-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

This series considers the complexity of the seemingly simple question, "Why do organisms do what they do?" The course discusses some categories of behavior such as motivation, perception, and learning, and the techniques used to study behavior. It also focuses on principles of behavior central to an understanding of man's purpose, intentions, and goals.

These lectures have been prepared and presented by Professor Bernard W. Harleston, Dean of Faculties, Arts and Sciences, Tufts University, formerly Associate Professor of Psychology, Tufts University.

LESSONS

1. **Doing What Comes Naturally**—Seeks to underscore the various dimensions of behavior and the complexity of the seemingly simple question: Why do organisms do what they do? (29:00)
2. **Putting Square Pegs in Round Holes: The Talents of Man**—Concerns the nature of human talent. Focuses on four basic questions: What is talent? How is talent measured? How do individuals differ in what they can do? How does talent develop? (28:50)
3. **Twixt Choice and Certainty: The High Noon of Behavior**—Focuses on decision-making and conflict—how and why decisions are made. (28:56)
4. **There's More to Vision Than Meets the Eye**—Deals with the selectivity of our perceptions of the world around us. (28:54)
5. **The Habit's Habitat: How We Learn**—Explores the nature of learning. (28:53)
6. **Habits in the Bank: How We Remember and Why We Forget**—Considers what we do with what we have learned. (28:55)
7. **The Nature of Human Motivation**—Attempts to answer two questions: Why do we act at all? Why do we become involved in a particular activity? (28:56)
8. **Getting a Feel for Our Feelings: Our Motives and Emotions**—Explores the relation of our emotions to our motivation and identifies factors that influence the development of each. (28:55)
9. **The Thinking Man's Thought: Problem-Solving and Creativity**—Attempts to analyze the problem-solving process and to relate problem-solving to creativity. (28:55)
10. **The Thinking Man's Thoughts: The Role of Motivation and Curiosity in Thinking and Problem Solving**—Examines the effects of various conditions on problem-solving. (28:40)
11. **The Physiology of Behavior**—Examines features of the nervous system that permit us to process the environment and organize the world. (28:55)
12. **The Nature and Development of Personality**—Defines "personality" and explores various theories of personality development. (28:55)
13. **Personality and Adjustment**—Discusses the problem of relating personality to adjustment. (28:55)
14. **The Individual in Social Relations**—Views social relations as dynamic expressions by the individual of needs to affiliate, identify, and develop. (28:55)
15. **The Control of Behavior**—Directs attention to the dual question: What are the effective techniques for controlling behavior and can we escape being controlled? (28:55)

Project: History

Ten 20-minute black and white lessons
Junior high, senior high
24-page teacher's guide

Produced by KLRN-TV,
Austin-San Antonio (1967).

This series explores ten major themes in American history, from the Quaker "holy experiment" in tolerance to the development of Atomic Age internationalism. In each lesson a combination of still photographs, dramatic vignettes, and narrative helps bridge the gap between the printed record of the present and the living event of the past. The course is intended to generate student questions and class discussion. PROJECT. HISTORY can be used as a companion course to PILGRIMS TO THE WEST.

Glen D. Phillips, host of the series, brings to PROJECT. HISTORY a rare combination of academic and radio-television experience. Currently Assistant Professor of Journalism and Radio-Television-Film at the University of Texas in Austin, he has traveled extensively in Central and South America, the Caribbean, and Canada conducting interviews with leaders in education and government for national broadcast. Mr. Phillips holds a Ph.D. in Radio-Television Journalism from the University of Michigan.

LESSONS

1. The Colonial Period: William Penn and The Holy Experiment. (19:55)
2. The Federal Government: The Whiskey Rebellion. (19:58)
3. The Age of Jackson: The Inauguration of 1829. (19:34)
4. Manifest Destiny: Fremont in California. (20:00)
5. The Reconstruction Era: The Impeachment of Andrew Johnson. (20:02)
6. The Age of Corruption: Boss Tweed. (19:56)
7. America—World Power: "I Took Panama." (19:57)
8. The Industrial Revolution: Henry Ford. (20:00)
9. Riches, Ruin, Recovery: The Three Pied Pipers: Long, Coughlin, Townsend. (20:03)
10. Age of the Atom: Senator Arthur H. Vandenberg. (20:03)

Puppets and the Poet

Four 20-minute color programs
Junior high, senior high
6-page combination teacher's guide
and fact sheet

Produced by the Mississippi Authority
for Educational Television (1974).

Since the Middle Ages, puppets have portrayed both comic and tragic characters in Western drama. By scaling down the on-stage action, puppet performances can create greater clarity and intensity of focus. This is apparent in PUPPETS AND THE POET, as the National Theater of Puppet Arts presents excerpts from the plays of William Shakespeare. Each dramatic moment is reduced to its essential elements, heightening the beauty of the poet's language and underscoring the impact of his message. From the anguished Lady Macbeth to the malevolent Richard III, puppets sensitively capture the nuances of situation and character, providing an educational and entertaining introduction to Shakespeare's work. Host Carl Davis gives background material on the plays and the Elizabethan period from which they evolved. Carol Fijan and Paul Vincent Davis are the featured puppeteers.

PROGRAMS

1. The opening from *Henry V* the sleepwalking scene from the fifth act of *Macbeth* . . . Richard III's monologue in which he plots his marriage to Lady Anne. (19:38)
2. A scene from the second act of *The Taming of the Shrew* on the often touchy subject of courtship and marriage. (19:26)
3. The "Dumb Show" scene from *Hamlet* (Act III, Scene II). (19:23)
4. The conclusion to the scene from *Richard III* presented in the first program: Richard's wooing of Lady Anne. (19:40)

Readers' Cube

Fifteen 20-minute color lessons
Intermediate
Teacher's guide

Produced by Maryland State Department of
Education (1977).

This series concentrates on developing selection skills and a positive attitude toward reading. The programs present dramatizations of literary works that deal with universal feelings and experiences. Among the themes are those of self-awareness, personal concerns, social concerns, human relations, environmental education, and career education. Included also are interviews with authors and illustrators that give students a better understanding of the creative process.

LESSONS*

1. **The Me of the Moment**—The search for self-knowledge and self-understanding.
2. **My World**—The community and how it influences the lives of its people.
3. **The Trouble With Life**—Conflict as part of the experiences of life.
4. **A Touch of Humor**—Humor as a mode of perceiving, and the underlying seriousness of some humor.
5. **One Can Be a Lonely Number**—People who are alone, by choice or circumstance.
6. **Something To Do**—Personal interests and their contributions to growth and development.
7. **Sorcerers! Spells! Suspense!**—Finding pleasure in ghosts, witches, and eerie settings.
8. **Troubles and Triumphs**—The universal problems that people share.
9. **Under the Sky**—The interdependence of people and nature.
10. **Winning Combination**—Success as a combination of mind and muscle.
11. **The Scene Now**—How involvement in social issues can effect change.
12. **Here's How**—Leisure-time activities that may lead to career choices.
13. **Be a Friend**—Friendship and the traits that inspire trust.
14. **Dimensions**—Today's fantasy and tomorrow's reality.
15. **Without Words**—Images without words in art and music.

Ready? Set... Go!

Two courses—each consisting of thirty
20-minute black and white lessons
Primary
105-page teacher's guide for Level I
134-page teacher's guide for Level II
Four 30-minute teacher programs
Produced by AIT at WHA-TV, Madison
(Level I—1969) (Level II—1970).

These courses, developed by leading physical educators and reflecting current trends in the field, teach basic movement as a foundation for effective body control. The courses are designed to be used in sequence. At level I, the lessons guide children in exploring and discovering how the body moves, what the body does, where the body moves, and the various relationships involved in movement. At Level II, this basic knowledge is refined and extended. **READY? SET . . . GO!** also engages children in intellectual processes, problem solving, inquiry, and the learning of concepts. It emphasizes the development of the individual child as he derives satisfaction from accomplishing tasks he has set for himself and from devising effective patterns of movement.

Jane Young, an elementary physical education teacher in Middletown, Ohio, public schools at the time this series was produced, is now a member of the faculty of the University of South Florida. Ms. Young also has taught at the Bishop Strachan School for Girls in Toronto, has been director of athletics and physical education at the University Settlement of the University of Toronto, and has lectured for the Ontario Board of Education.

Consultants, Dr. Kate R. Barrett, associate professor at the University of North Carolina, Greensboro; and Dr. Bette J. Logsdon, professor at the Bowling Green State University, Bowling Green, Ohio

Lesson Numbers and Times

Level I	Level II
1. (19:26)	1. (19:34)
2. (19:30)	2. (19:33)
3. (19:29)	3. (19:41)
4. (19:32)	4. (19:50)
5. (19:20)	5. (19:38)
6. (19:27)	6. (19:40)
7. (19:03)	7. (19:33)
8. (19:35)	6. (19:38)
9. (19:37)	9. (19:42)
10. (19:31)	10. (19:53)
11. (19:32)	11. (19:50)
12. (19:22)	12. (19:42)
13. (19:27)	13. (19:26)
14. (19:20)	14. (19:44)
15. (19:21)	15. (19:36)
16. (19:34)	16. (19:25)
17. (19:22)	17. (19:36)
18. (19:26)	16. (19:37)
19. (19:25)	19. (19:24)
20. (19:29)	20. (19:28)
21. (19:34)	21. (19:40)
22. (19:33)	22. (19:31)
23. (19:36)	23. (19:31)
24. (19:10)	24. (19:30)
25. (19:52)	25. (19:36)
26. (19:50)	26. (19:33)
27. (19:30)	27. (19:42)
28. (19:32)	28. (19:30)
29. (19:39)	29. (19:22)
30. (18:54)	30. (19:29)

Rights and Responsibilities

Eleven 20-minute color lessons
Junior high, senior high
16-page teacher's guide

Produced by WHRO-TV, with funds provided by
the Commonwealth of Virginia (1975).

Available on videoCassette.

This series examines the duties and the privileges of the individual in a free and stable society. Case studies and examples of real situations help young people understand the complex legal interplay of privileges, obligations, and limitations inherent in citizenship. The lessons deal with rights and responsibilities in the school, at work, and in society as a whole. Winner of San Francisco State University Broadcast Media Award, 1975; and SECA Certificate of Merit, 1975.

LESSONS

1. **I Didn't Care**—Larry, an ex-convict, tells the true story of his life from age nine to nineteen. He discusses his law violations and his attitude toward his parents and school. (19:59)
2. **Dead Path**—Larry continues his story, relating his experiences from the time of his arrest for common-law burglary, through his stay in jail, to the day he was sentenced in court. (19:55)
3. **Change**—Larry recalls the five years spent living and working at Southampton Correctional Farm, and tells how he changed from a person full of bitterness to a young man eager to live responsibly in a free society. (20:11)
4. **An Interview with Larry**—Four junior high school students question Larry about his past experiences and his present feelings. (19:49)
5. **Police Officer**—As a part of their daily routine, two truant officers cruise the city and record daily encounters with juveniles involved in burglary, truancy, a marijuana violation, and driving without a license. (19:35)
6. **An Open Mind**—Student comments about police and laws in general are contrasted with the thoughts of three police officers as they work through their daily routines. (19:38)
7. **In-School, Part 1**—After a kinesthetic treatment of social changes that have affected students from 1914 to the present, an administrator, teachers, and students express themselves on issues of truancy, due process, and corporal punishment. (19:43)
8. **In-School, Part 2**—Point-counterpoint is heard from students, teachers, and an administrator on the issues of smoking, assault, dress, privacy of lockers, student records, vandalism, and anti-authoritarian attitudes. (19:35)
9. **At Work**—Four young people, an apprentice welder, a machinist apprentice, a photo-offset trainee, and a young man who has held many different jobs, talk about work experiences and express feelings about work. (19:29)
10. **Sign Here**—This examination of contracts considers types of contracts, contracts and minors, implications of reaching the age of majority, credit and commercial employment contracts, wage garnishment, and the marriage contract. (19:00)
11. **The Voting Machine**—Film segments showing a young person registering to vote and using an electronic voting machine precede a question-and-answer session between students, a professor of political science, and the chairpersons of the local Democratic and Republican parties. (19:45)

Ripples

Thirty-six 15-minute color lessons
in six modules

Primary

Discussion leader's guide

36-page teacher's guide

Three 30-minute teacher programs

Developed through the resources of an consortium
of thirteen agencies, organized and managed by
AIT. Produced for AIT by NVETA, Annandale
(1970).

Available for purchase on film and videocassette.

Like a pebble dropped into still water that sets the water gently swirling, each encounter in RIPPLES sets a child's thoughts and feelings in motion, sparks his curiosity and interest in himself and his world . . . Unique in its approach to learning, the series presents a variety of encounters intended to develop a child's aesthetic feelings, and human values, his sense of inquiry, his ability to cope with change, and his capacity for creating and understanding relationships. Winner, Ohio State Award, 1971.

Chief Consultant, Rose Mukerji, Brooklyn College of the City University of New York. Other consultants, Milton E. Akers, National Association for the Education of Young Children, Bertha Campbell, New York State Education Department; and Elizabeth Ann Liddle, Wheelock College.

LESSONS

Module Blue

101. **Going to the Hospital**—Chris is taken to the hospital where he is treated by understanding adults. (14:35)
102. **Overnight at the Hospital**—Chris learns to swallow a pill, and to cope with loneliness at night. (14:35)
103. **You're Ill**—Visiting an art museum, seven year olds learn to "feel" with their eyes. (14:15)
104. **Talking around the World**—American children share games, food, and music with foreign children. (14:25)
105. **Fire!**—A rookie fireman handles a pumper and hose in a training drill and at a fire. (14:35)
106. **Caring for the World**—The balance of nature can be restored and maintained if everybody begins caring. (14:30)

Module Green

201. **Checkup**—While the doctor gives him a check up, Jeffrey remembers how a mechanic checked the family car. (14:25)
202. **Eyes and Lenses**—Special lenses allow the eye to see beyond its natural limits. (14:13)
203. **Friends**—Children describe "being friends" in terms of their own experiences. (14:25)
204. **Millions of Pies**—Machines illustrate specialization in automation. (14:20)
205. **People Make Music**—Music springs from the activities and feelings of people. (14:31)
206. **Body Talk**—Children explore how body talk can express familiar emotions. (14:25)

Module Red

301. **I Found It**—Four friends view art made from "found" materials. (14:38)
302. **Movement**—A child, an athlete, and a dancer express the excitement of human movement. (14:27)
303. **Take a Good Look**—A magnifying glass helps Lynn discover the richness of her bare toes. (14:07)
304. **Out to the Moon**—NASA films and models help explain survival needs, rocket stages, and weightlessness. (14:25)
305. **Going Home to Earth**—John Bannister of NASA demonstrates equipment used on the moon. (14:35)
306. **Dad and I**—Steve and his father enjoy an afternoon of fishing. (14:46)

Module Brown

401. **How Do You Know?**—A NASA physicist discusses scientific thinking. (14:15)
402. **Shadows**—Children explore shadows—outdoors, on a wall, and as a set for a play. (14:17)
403. **To Make a Dance**—A dancer experiments with different ways to clap, turn, and skip. (14:40)
404. **55 To Get Ready**—Five people working together prepare a jet for flight. (14:20)
405. **How Did I Get To Be Me?**—Tommy wonders how it would be to live somewhere else and in a different family. (14:25)
406. **Sounds of Myself**—Children discover that their own bodies can be used to tell a story. (14:50)

Module Yellow

501. **All By Myself**—Susie bakes a birthday cake for her four-month-old puppies—all by herself. (14:31)
502. **Rhythms from Africa**—The African Heritage Dancers and Drummers introduce tribal chants and African instruments. (14:32)
503. **Seeds**—Through time-lapse photography, viewers see a lima shoot out roots, stem, and leaves. (14:20)
504. **Hands**—Man's hand is different from a hoof or a paw because a man can do and say things with his hands. (14:26)
505. **Feeling Spaces**—A meadow and a cathedral help Andrew and Susie understand how spaces influence feeling. (14:18)
506. **Animals Need You**—A sick elephant? . . . a homeless hippo? These situations are explored on a visit to the zoo. (14:30)

Module Orange

601. **Touching the World**—Children explore feeling with their fingers, toes, and skin. (14:30)
602. **Playing Where You Are**—In winter some children sled down snowy hills, while others play on sandy beaches. (14:30)
603. **Lost**—At the zoo and lost from his big sister Hilary, Andy pauses to think his way out of the problem. (14:30)
604. **How Will I Grow?**—Children talk about what it means to be a boy or girl. (14:30)
605. **Everybody's Different**—The idea that people are people is developed through an intermingling of many people. (14:30)
606. **How It Used To Be**—At an annual folk festival, craftsmen celebrate older ways of doing things. (14:30)

The Science Shed

Fifteen 20-minute black and white lessons
Intermediate

163-page teacher's guide

Produced by the Nebraska Council for
Educational Television (1970).

Helping students develop and apply scientific method and critical thinking is the goal of this series. The lessons emphasize the process of data collection, the development of facts and hypotheses from observation, and the application of knowledge in controlling or modifying the environment. Fundamental and functional concepts derived from everyday science are considered in an atmosphere of inquiry, designed to motivate viewers to seek answers through individual experimentation.

The studio teacher for THE SCIENCE SHED is V. T. Miller, science coordinator of the Nebraska Council for Educational Television. He has been a junior high school science teacher and a science coordinator in the Nebraska public schools. Mr. Miller also helped to develop and edit the teacher's guide for the series.

LESSONS

1. **Measurement Topics and Techniques**—Considers the presence of error in measurements and appropriate techniques to minimize it. (14:48)
2. **A Study of a Pond**—Demonstrates skills used to record data, to make inferences about probable causes of the conditions observed, and to make predictions of future changes. (19:51)
3. **A Study of a Stream Valley**—Reconstructs, with the use of a stream table, the probable series of events in the formation of a river valley. (19:47)
4. **Between the Lines**—Demonstrates the use of appropriate scales on a graph to arrange information in a significant pattern. (19:49)
5. **Measuring Time**—Illustrates the necessity for measuring systems that can record information and communicate it to others. (19:50)
6. **Pegboard Balance**—Distinguishes between systems in balance and those not in balance, applies the law of the lever, and demonstrates how to locate the center of gravity of a thin piece of material. (19:49)
7. **Density**—Demonstrates density as a mathematical relationship between weight and volume. (19:50)
8. **Chemical Reactions**—Studies the identification and classification of materials by their properties. (19:50)
9. **Relative Motion**—Explains that motion can be detected and identified only within a specific frame of reference. (19:52)
10. **Planets**—Considers how theories and models that help man understand, organize and explain his universe are based on observations. (19:50)
11. **Heat Transfer**—Determines the relationship of heat and temperature by observing the natural flow of heat energy from regions of high temperature to regions of low temperature. (19:44)
12. **Force**—Demonstrates that all material objects are constantly subject to the actions of various forces. (19:48)
13. **Design of an Experiment—Plants**—Illustrates the design factors of an experiment studying plant growth. (19:48)
14. **Reactions to Stimuli**—Considers how human behavior involves stimuli, impulses, and muscular responses. (19:50)
15. **Hidden Properties**—Demonstrates how to formulate and evaluate a hypothesis, to reject or modify a hypothesis that does not agree with test results, and to make a statement expressing a degree of confidence in a hypothesis. (19:48)

Search for Life

Three 15-minute color lessons
Junior high, senior high

Produced by WHRO-TV, Norfolk, with funds from
NASA (1977).

This series acquaints students with the search for life on Mars. Produced before the Viking landing, the three programs discuss the importance of the mission, the equipment and experiments that were to sample life on the planet, and the implications of discovering life on other planets. The series compares life as we know it with what life-forms may be possible on the Martian surface.

Larry Crum, producer of SEARCH FOR LIFE, has been a studio-teacher and producer for the Hampton Roads Educational Television Association since 1968. Stewart Harris, cinematographer for the series, has film credits for more than a hundred projects in instructional and public television. The Crum-Harris team is the recipient of numerous awards for educational and film excellence.

LESSONS

1. **Life?**—Students are introduced to the concept of life as we know it on earth. A number of evolutionary changes illustrate how life has adapted from aquatic to terrestrial conditions, and how certain individuals are able to withstand environmental insults. A description of the environmental conditions on Mars raises questions about life's existence there. (14:27)
2. **Mars: Is There Life?**—This program discusses the topography of Mars—volcanoes, ice caps, stream beds, impact craters, canyons, and wind-eroded surfaces—and speculates about the possible past history of the planet. The Viking lander and its biology experiments are presented in relation to the search for life on Mars. Students are asked to consider life forms that might be able to survive on Mars and the potential significance of discovering them. (14:10)
3. **Mars and Beyond**—This program analyzes the possibility of life in the solar system, from Mercury to Pluto, with emphasis on Mars and the Viking mission. The organic analysis instrument is specifically discussed; how it functions and the implications of its findings. The program also considers the possibility of life elsewhere in the universe. (14:30)

Secondary Developmental Reading

Thirty 25-minute black and white lessons
Junior high
26-page teacher's manual and reading list
Produced by WQED School Services,
Pittsburgh (1970).

This series is designed to assist students who are fairly capable readers (those reading at grade level) by reinforcing basic reading skills, developing comprehension in content area reading, and increasing ability in critical and analytical reading. Each lesson also introduces new and related concepts appropriate to the students' maturity and background experience. Consideration of plot structure, character development, various literary forms, and the beauty of language help to expand awareness and increase reading versatility.

Mary Alice Miklancie Meli is a teacher of reading, language arts and social studies in Pittsburgh, Pa. She has taught reading and language arts in the classroom and on television. She received her B.A. degree in English from Seton Hill College and has done graduate work at Stanford University, Catholic University, and Duquesne University.

LESSONS

1. Course Overview (24:40)
2. Recognizing Main Ideas (24:30)
3. Introduction to SQ3R Study Method (24:27)
4. Outlining and Notetaking (24:30)
5. SQ3R Method Related to Social Studies (24:35)
6. Introduction To Skimming (24:15)
7. Library Functions and Skills (24:37)

Self Incorporated

Fifteen 15-minute color lessons
Junior high
36-page teacher's guide

In-service kit
School/Community Awareness Kit
20-page Family Discussion Booklet

Developed through the resources of a consortium of forty-seven agencies, organized and managed by AIT. Produced for AIT by NVETA, Annandale; KETC-TV, St. Louis; UNIT Productions, Salt Lake City (1975).

Rental fees. The complete course is offered at the following rates:

Population	Base Rate	Additional/10,000 students
0-500,000	\$1,840.00	\$11.50
500,000-		
1,000,000	\$2,070.00	\$11.50
over 1,000,000—available on request		

Available on film and videocassette.

For related materials, see pages 107-110.

This series, planned and developed by leading health educators, learning specialists, and educational broadcasters, is designed to help young adolescents cope with the problems that arise as a result of the physical, emotional, and social changes they are experiencing. Each program is a dramatized exploration of one of the day-to-day problems common to eleven-to-thirteen-year-olds. Taking the child's point of view, the programs deal with topics like peer-group pressure, dating readiness, cliques, privacy, achievement, and ethical decision-making. The open-ended format provides teachers and other adults with an effective means of stimulating youngsters to talk candidly about their concerns, to become aware of the choices available to them, and to understand the consequences of chosen actions. Winner of Red Ribbon, American Film Festival, 1976; and CINE Golden Eagle Award, 1976.

LESSONS

1. **Trying Times (Making Decisions)**—When Meg visits her cousin Julie in the city, she must decide whether to smoke and drink in order to fit in with Julie's group. (14:42)
2. **Who Wins? (Morality)**—Lenny's best negative for a photography contest is destroyed in a scuffle with his competitor, and Lenny must decide whether to submit his second-best, cheat, or give up. (14:47)
3. **No Trespassing (Privacy)**—Alex, who lives with his family in an apartment in the city, is so fed up with his lack of privacy that he takes refuge in an abandoned building. (14:45)
4. **Getting Closer (Boy-Girl Relationships)**—When Greg, shy and anxious about his relationships with girls, finally makes up his mind to ask Laurie to dance, Louie whisks her away, and Greg is left alone, embarrassed and disappointed. (14:28)
5. **Down and Back (Failure and Disappointment)**—Terri is bitterly disappointed when she is not chosen as a cheerleader, but she copes with her failures in a reasonable way. (14:34)
6. **Pressure Makes Perfect (Pressure to Achieve)**—At her recital, Nan rebels against parental pressure to excel by playing a short simple piece, banging her fists on the keyboard, and shouting at the audience. (14:56)
7. **Two Sons (Family Communication)**—Because Greg's parents have unconsciously molded him into a bad boy and his brother Jim into a good one, the family faces a crisis as they ride home from the county jail where Greg has been held. (14:43)
8. **The Clique (Cliques)**—Janet faces a choice when the group she is in demands that she give up some of her independence, including her friendship with Tina. (14:40)
9. **Different Folks (Sex Role Identification)**—Matt Barnum is uneasy and rebellious because his mother provides most of the family income, while he, his father and sister do the housework. (14:45)
10. **What's Wrong With Jonathan? (Everyday Pressures)**—Jonathan angrily explodes at his mother for no reason after a day when everything has gone wrong. (14:30)
11. **Family Matters (What is a Family?)**—When Andy, a teen-aged girl who feels her family is failing her, invites her divorced parents to watch her swim in a race, a series of unpleasant confrontations results. (14:38)
12. **My Friend (Ethnic/Racial Differences)**—Virgil, a young Navajo, and Eddie, a young Caucasian, are best friends until they begin junior high school and each is pressured by his ethnic group to stay away from each other. (14:30)
13. **By Whose Rules (Systems and Self)**—Matt Cole, a candidate for student government president, is suspended from school when he violates the normal election procedures as the principal interprets them. (14:35)
14. **Changes (Physiological Changes)**—David and Susanna are twins who mature at different rates and are uncomfortable with the social aspects of growing up. (14:37)
15. **Double Trouble (Family Adversity)**—Delia's well-meaning family increases her distress about her mother's serious stroke by withholding information and not giving her responsibilities. (14:27)

Spinning Stories

Fifteen 15-minute color lessons

Primary

Teacher's guide

Produced by Maryland State Department of Education (1977).

Gathered on the front steps of a house, children listen to a storyteller who has many interests—among them, music, art, literature, outdoor activities, and crafts. Within an interdisciplinary structure, the series aims to instill in six- and seven-year-olds positive reading habits and desires. It uses a variety of production techniques, including dramatization, animation, and mime. The lessons and literary selections focus on such concepts as understanding ethnic minorities, career education, and the environment.

LESSONS*

1. **I Can, I Can**—Introduces the print and non-print materials to be used in the series.
2. **That's Me**—Explores through literature the process of developing self-awareness.
3. **Oo Something**—Shows how circumstances presented in books are sometimes like those in the student's own experience.
4. **My Feelings**—Presents stories depicting feelings that most young people experience.
5. **Making Moods**—Illustrates a wide variety of moods in literature.
6. **Tell a Tale**—Demonstrates the use of art, music, and drama as forms of storytelling.
7. **It's My Own**—Poses the question of how stories are created; and deals with the concept of authorship and its satisfaction.
8. **Giggles and Grins**—Presents humorous materials—jokes, riddles, cartoons, stories—that use absurdity, exaggeration, caricature, and specialized language to achieve their effects.
9. **Look Around You**—Shows how information can be acquired by observing the places and things in one's environment.
10. **Look It Up**—Focuses on the variety of resources available for the pursuit of special interests.
11. **What's So Different?**—Examines the differences in environment and life-style in various parts of the world.
12. **What To Do**—Shows how special interests may be related to career opportunities.
13. **Bubbles and Beanstalks**—Focuses on types of imaginary characters and situations and how these are created.
14. **Once There Was . . .**—Introduces examples of folklore from various cultures.
15. **Reading On, and On**—Reviews the kinds of print and nonprint material presented in the series, and relates student growth to independence in reading.

Stepping into Melody

Thirty 15-minute black and white lessons
Primary
68-page teacher's guide

Produced by WVIZ-TV Cleveland (1968).

Appealing to children's love of music, these lessons turn natural inclination into musical awareness, appreciation, and performance. Children are invited to act out songs, beat out rhythms, and participate in singing games. The series develops such musical skills as learning song notation, distinguishing the various elements of music, using the singing voice well, and developing pitch-matching skills. It also introduces youngsters to a variety of instruments and compositions, and considers the role of music in Western culture. STEPPING INTO MELODY is an appropriate extension of STEPPING INTO RHYTHM.

Brenda Veal is both a performer and a teacher. She has taught at the University of Cincinnati, and in public schools in Cleveland, Detroit, and Rochester, New York. Ms. Veal is a graduate of Baldwin Wallace Conservatory of Music and holds a Master of Music Education degree from the University of Cincinnati.

Consultants: Betty Jane Lahman, an elementary music specialist in the Shaker Heights, Ohio, Public Schools, and Judith Willour, supervisor of elementary music in the East Cleveland, Ohio, City Schools.

LESSONS

1. Music High and Low—Reviews some basic musical concepts (high-low, loud-soft, fast-slow). (14:50)
2. Quarters and Eighths—Reviews the concept of high-low through scale wise progressions. Introduces the quarter and eighth notes. (14:28)
3. "It's My Bone"—Reinforces the concepts of loud-soft, fast-slow, and high-low. (14:31)
4. "Baba Yaga"—Introduces A B A form through Russian music and folklore. (14:06)
5. "Witches, Ghosts and Goblins"—A Halloween lesson that reviews A B A form. (15:05)
6. The Piano—Acquaints children with the piano and the history of its development. (14:25)
7. Indians—Introduces the pentatonic (whole tone) scale and the concepts of melody and accompaniment. (14:45)
8. Thanksgiving Day—Reviews the pentatonic scale and melody and accompaniment. (15:10)
9. The Sixteenth Note (My Pretty Little Miss)—Reinforces the learning of the pentatonic scale. Introduces the sixteenth note. (14:21)
10. Why Do We Celebrate?—Explains the custom of celebrating, through music of many cultures. (14:13)
11. Christmas Is Here!—Leads children in the singing and dramatization of songs. (14:30)
12. & 13. Winter Is . . . —Relates singing, listening, and the creative interpretation of music to the winter season. (14:31 & 14:24)
14. Music in 2's and 3's—Develops an understanding of meter in music. (14:31)
15. Claude Debussy, Composer—Introduces children to the French composer and his music. (14:30)
16. Abraham Lincoln—Acquaints children with the instruments of the marching band. (14:20)
17. The Organ and the Woodwinds—Relates the organ and the "wind" instruments. (14:48)
18. Washington—Uses patriotic songs to introduce the interval of the third. (14:27)
19. The Third—Reviews the third. (15:03)
20. The Harp—Introduces the harp and its music. (14:33)
21. The Piano and the Harp—Compares the similar construction of the two instruments. (14:30)
22. Spring—Introduces the instruments of the "string" family. (14:28)
23. "Seven Jumps"—Introduces the grand musical staff. (13:50)
24. "Skips and Steps"—Concentrates on directed listening experience. (14:00)
25. Ring, Bells, Ring—Relates good music to good art work. (14:34)
26. Reading Music—Teaches music reading; the association of musical sounds with written symbols. (14:44)
27. "The Bridge of Avignon"—Acquaints children with an "art" song. (14:30)
28. Hello! (hello!)—Reviews the concept of the echo. Teaches listening with discrimination. (14:33)
29. I Love My Rooster (Orchestra or Band?)—Reviews the songs and concepts learned during the year. (14:36)
30. Things We Know—Reviews the instruments of the orchestra and the band. (14:40)

Stepping into Rhythm

Thirty 15-minute color lessons
Primary
56-page teacher's guide

Produced by WVIZ-TV, Cleveland,
in association with AIT (1975).

This entirely new production of a successful series is designed to help children discover the joy of music. STEPPING INTO RHYTHM helps children realize that music lives inside and all around them, that rhythm resides in the sounds of home, of the playground, of nature, of the city. Through guided experiences that include rhythm, singing, movement, and a variety of musical styles, students begin to develop musical preferences and to relate music to their own special interests.

Brenda Veal, television teacher, is a graduate of Baldwin Wallace Conservatory of Music and holds a Master of Music Education degree from the University of Cincinnati. She is both a performer and a teacher and has taught in the Cleveland, Detroit, and Rochester, New York, school systems, and at the University of Cincinnati.

Music consultants, Dr. Simon V. Anderson, Associate Professor of Music Education, University of Cincinnati, Betty Jane Lahman, elementary music specialist and teacher curriculum associate, and Sandy Hexter, talent/writer/producer at WVIZ.

LESSONS

1. Hello Ev'rybody—illustrates the contrast between fast and slow rhythms and encourages children to clap and move as they sing. (14:27)
2. Things to Do—introduces high and low tones and distinguishes them from low and soft sounds. (14:28)
3. Para Diddle—Associates high with small and low with large in a story about two drums. (14:26)
4. Oh, I Saw a Fox—Demonstrates playing tone bells and singing with various accompaniments. (14:26)
5. Black and Gold—Compares major and minor scales and considers the different qualities of sound in Halloween songs. (14:28)
6. Autumn Leaves Now Are Falling—Teaches two songs which children sing with bell set, glockenspiel, xylophone, and metalophone. (13:59)
7. The Magic Vine—Encourages children to respond to the parts of a song—words, rhythm, and melody—through body movement. (14:30)
8. Gracious Blessing—introduces the flute and the eighth note through the music of Thanksgiving. (14:33)
9. Beautiful Home, Sweet Home—Explores body movement as a vehicle for the creative interpretation of rhythm. (14:25)
10. My Twenty Pennies—introduces the eighth note as a beat and teaches a song with Spanish words in it. (14:18)
11. Hear the Bells Ringing—Reviews eighth note rhythm and introduces the ABA form. (14:27)
12. Merry Christmas—introduces hand bells and heralds the Christmas season with favorite holiday songs. (14:26)
13. Happy New Year—Celebrates the new year by singing and moving to half, quarter, and eighth note rhythms. (14:24)
14. Winter Is—Relates rhythm to winter experiences like shoveling snow. (14:42)
15. Walkin' Blues—Continues the winter theme with an ice skating demonstration to 3/4 time and a song in 2/4 meter. (14:48)
16. The Note Machine—invites students to make up their own quarter and half note sounds and to "play" them with the note machine. (14:29)
17. The Harpsichord—introduces the harpsichord and the music of Mozart. (14:25)
18. Of Thee I Sing—Teaches patriotic songs and introduces a brass ensemble. (14:36)
19. Hop Old Squirrel—Teaches children to recognize changes in the melodic line. (14:30)
20. Nothing But Sing—Features a classical guitar and an electric guitar as solo instruments and as accompanying instruments. (14:38)
21. Country Road—introduces folk instruments and folk music, and points out simple two-part form. (14:36)
22. The Moon Is Coming Out—Features Japanese music and introduces the music staff. (14:25)
23. The Violin—introduces the violin and visits the string section of an orchestra. (14:16)
24. A Circle Story—Sets the growth cycle of plants to music. (14:27)
25. Major or Minor—Encourages children to distinguish between major and minor modes through ear training. (14:27)
26. I Like to Sing—Illustrates solo, duet, and descant singing. (14:11)
27. Percussion Family—Demonstrates a number of percussion instruments. (14:29)
28. Gerald McBoing, Boing—Tells the story of a little boy who makes sounds instead of words. (14:37)
29. City Rhythms—Focuses on the sounds and rhythms of the city. (14:25)
30. A Bowl Full of Cricket—Reviews songs and concepts learned in the series through the sounds and rhythms of nature. (14:26)

Stories of America

Thirty-two 15-minute color lessons

Primary

32-page teacher's guide

Produced by WVIZ-TV, Cleveland, for the Ohio State Department of Education (1976).

Available on videocassette.

This series introduces youngsters to American history from Columbus to Theodore Roosevelt through the medium of storytelling. Some of the stories are purely fictional and are intended to give the flavor of the life style of a period. Others are based on factual events and real people. All are derived from existing children's literature.

The series features Ann McGregor, popular storyteller of the primary literature series PICTURE BOOK PARK.

LESSONS

1. **Our Country's Birthday**—Presents an overview of the events that preceded the signing of the Declaration of Independence. (14:32)
2. **Discover America**—Points out significant events that led to the forming of the nation, from the crossing of the Bering Sea to the first battle against England. (14:30)
3. **America Is Named**—Tells how Amerigo Vespucci studied the heavens, met Christopher Columbus, and became an explorer himself. (14:30)
4. **Pocahontas**—Traces the childhood of Pocahontas, her contributions to Colonial Virginia, and later life in England. (14:30)
5. **Children of the Mayflower**—Tells the story of the famous Atlantic crossing and how the children occupied their time. (14:29)
6. **John Billington and Squanto**—Introduces Squanto as a true friend of the Pilgrims. (14:31)
7. **New Amsterdam**—Relates some of the problems encountered by Peter Stuyvesant and the Indians on the island of Manhattan. (14:28)
8. **Ben Franklin**—Traces Franklin's life, ideas, inventions, and contributions to the development of our country. (14:30)
9. **George Washington**—Spans Washington's life from his early days as a courier to the presidency. (14:34)
10. **Daniel Boone**—Takes a look at how Daniel's first experiences as a hunter prepared him for later wilderness adventures. (14:26)
11. **The Start of War**—Gives a fictionalized account of what life was like on the eve of the Revolutionary War. (14:25)
12. **Needles and Bread**—Presents two stories based on Revolutionary War incidents that show how sewing and baking bread helped the war effort. (14:25)
13. **Indian Summer**—Shows what life was like for the wife and children of a Kentucky frontiersman while he was off fighting the war. (14:27)
14. **The Growers**—Features the contributions of John Chapman (Johnny Appleseed) and George Washington Carver. (14:30)
15. **Lewis and Clark**—Tells how Indian maiden Sacajawea helped the famous explorers cross the Rocky Mountains. (14:30)
16. **Davy Crockett**—Uses puppets to tell a delightful yarn about five-year-old Davy's experience with a pop gun. (14:30)
17. **Robert Fulton**—Illustrates how America's master craftsman developed his early interest in painting and boats. (14:33)
18. **The Oregon Trail**—Spins a couple of adventures of Moses the cat who traveled the Oregon Trail by wagon train. (14:26)
19. **Gretchen Goes West**—Recalls one of the many legends of the Western migration, the story of a lost girl and a white steed. (14:30)
20. **The California Gold Rush**—Presents the story of teenage twins Carlos and Carlotta who catch "gold fever" from hearing about the strike at Sutter's Mill. (14:30)
21. **The Pony Express**—Relates the unexpected adventures of one boy on a Pony Express ride. (14:26)
22. **Runaway Slave**—Tells the true story of the life of Harriet Tubman. (14:32)
23. **The Underground Railroad**—Focuses on the contribution of one young boy to the Underground Railroad. (14:34)
24. **Martin and Abraham Lincoln**—Recounts a Civil War incident involving Lincoln and the son of an Andersonville prisoner. (14:33)
25. **Clara Barton**—Traces Clara Barton's life from her childhood in New England to Civil War battlefields. (14:35)
26. **The Transcontinental Railroad**—Focuses on two Irish immigrants, father and son, who worked on the first transcontinental railroad. (14:31)
27. **Pecos Bill**—Spins a few yarns about Pecos Bill and early cowpunching days in the Southwest. (14:31)
28. **Tom Edison**—Spans Edison's life from his first failing experiment at four to his many adult successes. (14:20)
29. **Annie Oakley**—Tells about the life and marksmanship of the world-famous "Shooting Star." (14:30)
30. **The First Car**—Presents two stories that show how Henry Ford's dream of an engine that would do the work of horses led to an exciting change in America's life-style. (14:26)
31. **Little Yellow Fur**—Focuses on a young homesteader who makes friends with her Sioux neighbors. (14:32)
32. **Father as President**—Tells an amusing story by Teddy Roosevelt's son Quentin, who felt that his father had only one fault—that of being President! (14:32)

TV Today

Eight 30-minute black and white lessons
High school, college, adult
11-page teacher's guide

Produced by KOGO-TV, San Diego, in
association with the University of California,
San Diego (1970).

A tour of a radio-television complex, an investigation into the rating game, an examination of commercials, and a look at the history of television news highlight this series. Designed to provide a general background of the broadcasting industry, the lessons enable viewers to understand many of the technical, organizational, legal, commercial, and creative factors at work in the medium.

The writer-producer for this series is the late Burke Ormsby.

LESSONS

1. **Tour of a Broadcast Facility**—Tours a radio-television complex to show how it is staffed and how it operates. (28:45)
2. **TV Programming and How It Grew**—Looks at the industry's history through the 1950's and 60's, and at the question of who watches and when. (29:05)
3. **The Networks and the Ratings Game**—Focuses on the networks and their importance to local stations and examines the federal laws that affect stations and networks. (28:50)
4. **Which Public? Which Interest?**—Considers what people want to see, how a station can best serve its community, what critics say about TV shows, and what organizations say about children's programming. (29:00)
5. **They Don't Make Commercials Like They Used To**—Examines the contents of a commercial, how it is made, and what it costs, and includes an interview with a producer of commercials. (28:55)
6. **The Front Porch Is Steady**—Deals with the technical aspects of television and the common causes of trouble in television sets. (28:40)
7. **What's Going On in the World?**—Explores the history of television news—from the first news broadcast to today's news specials and documentaries. (28:51)
8. **Our Kids Watch, But . . .**—Considers the sociological impact of television. (28:57)

Tell Me a Story

Thirty 15-minute black and white lessons
Primary
61-page teacher's guide
30-minute teacher program
Produced by WQED School Services,
Pittsburgh (1966).

This series is a response to the universal plea of young children to TELL ME A STORY. It combines the appeal of the gifted storyteller with the universality of folktales from around the world. The result is a happy introduction to group listening and classic children's literature. Each program finds the storyteller in a setting that suggests the story's time and place. The camera seldom wanders, so that intimacy is retained and young viewers are not distracted from their personal imaginings.

Margaret Hodges, professor at the Graduate School of Library and Information Sciences, University of Pittsburgh, is a well-known author of children's stories. Ms. Hodges holds a Master of Library Science degree from the Carnegie Institute of Technology.

LESSONS

1. **Puss in Boots**—The fortune of a cat can be great, if the cat is clever. (14:31)
2. **Hansel and Gretel**—Two children meet a cruel witch in a gingerbread house. (14:38)
3. **The Cock, the Mouse, and the Little Red Hen**—The Little Red Hen assists her friends in escaping from the fox. (14:32)
4. **Cinderella**—A poor young girl goes to the ball, but her finery lasts only until midnight. (14:35)
5. **The Three Sillyies**—The silly behavior of others makes our own mistakes seem less embarrassing. (14:03)
6. **Stone Soup**—The recipe for an amazing soup makes enough for a whole village. (14:48)
7. **Lazy Jack**—The solution to one problem does not necessarily solve another problem. (14:22)
8. **The Shoemaker and the Elves**—An old shoemaker and his wife reward the Little People who help them. (14:47)
9. **The Fisherman and the Genie**—This is the tale of a wily but stupid genie, and a humble but wise fisherman. (14:41)
10. **The Adventures of Pinocchio—Begin**—A father loves his child, even though that child is made only of wood. (14:35)
11. **The Blind Men and the Elephant**—To know anything completely is to know all of its parts. (14:45)
12. **My Mother Is the Most Beautiful Woman in the World**—People are not loved for their beauty, but they are beautiful to those who love them. (14:38)
13. **The Fire Bringer**—A coyote helps an Indian boy protect his people from the cold. (14:31)
14. **Dick Whittington and His Cat**—A cat rids Barbary of rats and mice and brings a fortune to his master. (14:40)
15. **Androcles and the Lion**—A slave in ancient Rome receives a reward for befriending a wounded lion. (14:34)
16. **Noah's Ark**—Noah builds an ark and the animals go in, two by two. (14:33)
17. **Jack and the Bean Stalk**—Jack's quick climb to fame and fortune is done on his own magical bean stalk. (14:48)
18. **Gone Is Gone**—A man who wanted to do housework changes his mind. (14:41)
19. **The Bremen Town Musicians**—Four animals run away from home and come to a little house in the woods. (14:49)
20. **Snow White and the Seven Dwarfs**—A princess hides from her wicked stepmother and finds a home in a wooded glen. (14:58)
21. **Hereafterthis**—This is the tale of an old man's wife who could do nothing right. (14:48)
22. **The Little Girl Made From Snow**—A strange child comes to live with a lonely old couple and then disappears. (14:55)
23. **The Sorcerer's Apprentice**—An apprentice magician encounters problems when he tries to use magic to clean house. (15:00)
24. **The Elephant's Child**—A brand-new elephant goes to the great grey-green greasy Limpopo River, and gets a new nose. (14:35)
25. **The Twelve Dancing Princesses**—A garden boy solves the mystery of twelve pairs of shoes that are danced to pieces each night. (14:33)
26. **The Cat and the Parrot**—This is a folk tale concerning a cat with an unbelievable appetite. (14:42)
27. **The Ugly Duckling**—This story tells of the trials and tribulations of a swan hatched in a duck's nest. (13:52)
29. **The Tiger, the Brahman, and the Jackel**—A trusting Brahman is rewarded for his kindness by a sly jackel. (14:41)
29. **The Emperor's New Clothes**—The innocence of a child reveals the pretentiousness of adult vanity. (14:35)
30. **The Wave**—The love of a child and the wisdom of an old man save a village from a tidal wave. (14:49)

A Time of Your Life

Fifteen 20-minute black and white lessons
Intermediate
67-page teacher's guide

17-page administrator's handbook
Two 30-minute teacher programs

Produced by KQED Educational Services,
San Francisco (1969).

A TIME OF YOUR LIFE is offered as a ten-lesson or a fifteen-lesson course. The first ten lessons consider interpersonal relationships, self-understanding, and family structure, the concluding five lessons deal with sex education. Designed to help children form a solid foundation for understanding and appreciating their own development, the programs stress individual worth and the need for controlled self-expression. Sex education is included as a natural part of the study of family life.

William H. Ayres, M.D., the television teacher, holds faculty appointments at Stanford Medical School, Palo Alto, and Mt. Zion Hospital and Medical Center, San Francisco. Dr. Ayres completed his pediatric internship and adult psychiatry training at Yale New Haven Medical Center and child psychiatry training at Harvard's Boston Children's Medical Center.

Marilyn McCurdy, an experienced television teacher, has taught in California public schools since 1962. She received her B.A. degree at the University of Southern California and studied guidance and counseling on the graduate level at San Francisco State College.

LESSONS

1. **Who Are You?**—Considers the ways individuals are alike and different. Emphasizes the importance of mutual respect. (20:14)
2. **Who Runs Your Life?**—Relates self-control to freedom in directing one's own life. (19:52)
3. **Decisions, Decisions, Decisions**—Discusses the many bases on which a person may make a decision. (19:56)
4. **How Does a Family Get Along?**—Establishes the naturalness of conflict within a family and the necessity of rules and compromise. (20:00)
5. **Different Kinds of Families**—Discusses the many variations of family compositions. (19:56)
6. **How Do We Get Through To Each Other?**—Considers the many ways we communicate with each other. (20:02)
7. **What Makes a Friend?**—Examines the elements of friendship. (19:09)
8. **Marriage**—Expands the ten-year-old's understanding of marriage to include the commitment of husband and wife apart from parenthood. (19:56)
9. **Being a Boy—Being a Girl**—Discusses masculinity and femininity as part of personality. (19:40)
10. **Time Of Your Future**—Stimulates discussion of sociological and technological changes likely to take place in the children's lifetime. (19:57)
11. **The Male**—Establishes the importance of children understanding how their bodies function and change. Discusses and illustrates the physiological changes of boys at puberty. (19:57)
12. **The Female**—Follows the pattern set in Lesson 11. Discusses and illustrates the physiological changes of girls at puberty. (19:49)
13. **A New Life**—Relates sex biologically, psychologically, and spiritually to marriage. Traces the development of the baby from conception to birth. (19:55)
14. **Questions, Please**—Shows a panel of children asking questions on the subject matter of the three previous programs. (19:57)
15. **Growing Up**—Establishes the concepts that sex can and should be controlled and that sex should be secondary in male-female relationships. (20:20)

The Tune-Up Shop

Twenty 15-minute color lessons
Primary

80-page teacher's guide

Produced by Georgia Educational Media
Services, Georgia Department of
Education (1974).

Repairman Ben and his amazing Music Machine teach many things, from basic music concepts—grouping steady beats, tempo, dynamics—to the importance of creativity. And they do it in lively, often humorous, and always entertaining ways in lessons designed to complement and expand existing classroom music programs. To explore the magic of music, Ben and his friends occasionally venture away from the shop—to a pirate ship, a circus, and even into a monster-ridden dream. Each lesson uses original music to illustrate and reinforce a single basic concept, and to motivate children to make their own music.

LESSONS

1. **The Sound of Moving**—Promotes attentive listening. (14:30)
2. **Steady, To Beat the Band**—Deals with recognizing and executing a steady beat. (14:30)
3. **Raining Two's and Three's**—Illustrates the ordering of steady beats into groups. (14:30)
4. **Harold's Dream**—Develops the concept of grouping steady beats. (14:30)
5. **Knights of the Earth**—Involves the use of rhythm patterns. (14:30)
6. **Pirates, High and Low**—Deals with high and low points of a melody line. (14:30)
7. **Matches and Candles**—Considers whether or not tones match. (14:30)
8. **Moving Fast and Slow**—Illustrates the concept of tempo. (14:30)
9. **A Tale of Loud and Soft**—Demonstrates the concept of dynamics. (14:30)
10. **The Even & Uneven Bros. Circus**—Presents the concept of even and uneven contrasts. (14:30)
11. **The Secret Message, Part I**—Deals with the rhythm symbols used in music notation. (14:30)
12. **The Secret Message, Part II**—Demonstrates how tone symbols can be recognized on the staff by their relative sound and position. (14:30)
13. **The Secret Message, Part III**—Expands the tone syllable concept by taking up dictation. (14:30)
14. **The Secret Message, Part IV**—Illustrates that combinations of rhythm symbols and tone symbols form notes, which make up melodies. (14:30)
15. **SuperMusicMan**—Illustrates how duration of sounds is determined through the counting of rhythms. (14:30)
16. **Harold's Song**—Emphasizes the difference between composer and performer, band and orchestra. (14:30)
17. **Finding Alike and Different**—Considers the concepts of repetition and change. (14:30)
18. **The Chord-O-Bobble**—Explains chords and illustrates chord changes. (14:30)
19. **Let's Make a Show**—Deals with the importance of creativity in music. (14:30)
20. **The "I Love Music" Show**—Explores the many dimensions of creativity. (14:30)

Two Cents' Worth

Fifteen 15-minute color lessons

Primary

44-page teacher's guide

30-minute teacher program

Produced by the Wisconsin Educational Communications Board and AIT at WHA-TV, Madison (1976).

Using a variety of formats, including dramatizations and documentaries, this social studies series is intended to help children acquire the skills they need to grow into well-informed, effective citizens. Programs introduce fundamental concepts of the major social studies disciplines—history, political science, geography, economics, anthropology, sociology—and relate these concepts to everyday community life. The series illustrates the interrelatedness of all aspects of society and encourages students to draw some conclusions from their own experiences.

LESSONS*

1. **Lost and Found—Spatial Relationships (Geography)**—With help from a mime Tracy and Ronnie learn to locate their favorite carnival rides using spatial directions. (14:29)
2. **Which Way?—Mapping (Geography)**—Free movie passes are the objective of a neighborhood treasure hunt in which two groups of children must interpret and follow simple maps. (13:45)
3. **Changes—Causality (History)**—Sandy's and David's visit to the blacksmith's shop becomes an exploration of the past, as Mr. Thier reminisces about the railroad that once passed through their community. (13:18)
4. **It's Not the Same—Change (History)**—When her family moves back to the old hometown, Enca visits places she once knew and observes many kinds of change. (14:30)
5. **I Need Somebody—Interdependence (Economics)**—Children in a little theater group work together on a lemonade stand to earn money for costumes—all except Lee, who thinks he can make more money working alone. (14:37)
6. **Work, Work, Work—Income (Economics)**—Lisa and Peter pool spending money, piggybank savings, and their earnings to buy a sweater for their father's birthday. (14:30)
7. **Buy, Buy, Buy—Economic Choice (Economics)**—At the shopping center, Lisa and Peter find a way, with the help of a sympathetic clerk, to buy the sweater for their father and a game they want for themselves. (14:51)
8. **We're In This Together—Scarcity and Economic Choice (Economics)**—When Kathy brags about walking home from school to save energy and money, her mother and brother point out how she doesn't always practice what she preaches. (14:34)
9. **Why Can't I?—Laws (Political Science)**—Joel discovers the value of rules and regulations when he plays hooky from school and has a brush with a lawbreaker. (14:35)
10. **Don't Feed the Animals—Law Enforcement (Political Science)**—Sunny and B. G. stop their father from feeding peanuts to the animals after the zookeeper takes them on a tour of the zoo animal hospital. (14:38)
11. **Play Fair—Voluntary Compliance (Political Science)**—When Johnny and his sister Dionne accidentally break a window playing baseball, their first impulse is to run. (14:04)
12. **Your Choice—Decision-Making (Anthropology-Sociology)**—Pat decides to go hiking alone rather than help his family set up camp. When he does not return, a search party is organized. (14:48)
13. **What I Like—Spatial Interaction (Geography)**—Deon travels from his city home to his uncle's rural farm and notices how the landscapes, buildings, vehicles, and activities change along the way. (14:32)
14. **Let's Get Together—Culture (Anthropology-Sociology)**—Stuart, a Winnebago Indian, teaches his friend Chip about the colorful ceremonial dances his family does to make a living.
15. **It Belongs To You and Me—Cultural Change (Anthropology-Sociology)**—Sherry is unexpectedly rewarded when she sacrifices the chance to earn a merit badge in hiking to stay with her partner Pam, who is on crutches.

Universe and I

Twenty 20-minute color lessons
Junior high
Teacher's guide

Produced by Kentucky Educational Television with assistance from the Kentucky Council of State Science Supervisors, the Kentucky State Department of Education, and NASA (1976).

Student activity sheets are available from the producer. Write Kentucky Educational Television, 600 Cooper Drive, Lexington, KY 40502, for information.

Available on film and videocassette.

Simulations of the universe and space travel, animation, futuristic techniques, drama, comedy, and fantasy make this integration of earth and space sciences an absorbing, stimulating experience for students—and teachers.

The series focuses on earth as a member of the interdependent solar system and of the universe, similar to the other members in origin and composition, governed by the same laws, and undergoing similar processes. Basic science concepts—discovery, perspective, interrelationships, change, balance, development, and application—form threads of continuity through the lessons.

Each program, however, is different in format and treatment. For example, man's survival in a hostile environment is illustrated by actual documentary footage of the 1911-12 Amundsen-Scott race to the South Pole, and position and motion are taught by a brilliantly flashing, futuristic pinball machine. Prominent in the cast are several celebrated actors. Leonard Nimoy appears as a familiar pipe-smoking detective who solves mysteries from his cluttered Victorian flat, Robert Lansing portrays a meteorologist caught in a unique weather event in the New Hampshire mountains, and Jesse White becomes a twenty-first century real estate agent dealing in stars.

LESSONS*

1. **I and the Universe**—A trip through the vastness of space, with views of nebulae, black holes, and binary stars.
2. **Half-life**—A fanciful demonstration of the actions of atoms and molecules.
3. **Jake's Gate**—A look at the use and misuse of natural resources. (17:53)
4. **A Visit to Spectrum II**—An exploration of the electromagnetic spectrum. (16:12)
5. **Star Salesman**—A look at the life cycle of the sun as an example of a main sequence star.
6. **Mind-Slaughter**—A look at the atmosphere of the earth and other planets as oceans of gasses.
7. **Incident of Cannon Mountain**—An adventure in coping with the forces of a unique weather event. (17:30)
8. **Sea Search**—An introduction to the complexity of the ocean and its vast scientific and economic potential.
9. **The Solar System**—A trip through the planets and their moons, with comparisons and questions about the forces that shape their surfaces.
10. **The Ballad of Ramblin' Willy**—A look at the dynamic forces at work on the earth, constantly changing its surface.
11. **The Interior Motive**—A process approach to the study of the interiors of things, particularly the interior of the earth, moon, and other planets. (16:15)
12. **The Atlantis Connection**—A demonstration of the theory of plate tectonics.
13. **Victoria**—Demonstrations developing the notions that determination of position is dependent upon a point of reference and that all motion is relative to a certain point of view. (16:10)
14. **Luna the Lovely**—An introduction to concepts derived from the theory of relativity.
15. **Gravity Drag**—An introduction to basic concepts concerning the nature of gravity.
16. **Bulletin**—A presentation of the basic principles of orbital mechanics.
17. **The Changing Scientist**—A demonstration of how scientific ideas are formulated, modified, revised, and discarded. (17:25)
18. **City of Fossils**—A look at the way scientists go about reconstructing the origin and development of the earth.
19. **Freezing Point**—A study of the problem of man's survival in a hostile environment.
20. **The Future**—A projection of possible future developments in science and technology. (15:05)

MULTIPLY REPLICATION TEST

What's My Thing?

Six 6-10 minute black and white lessons
Intermediate
12-page teacher's guide

Produced for Massachusetts Educational
Television (21 Inch Classroom) by WBGH-TV,
Boston (1971).

For Purchase Only—WHAT'S MY THING is
offered on one videotape reel containing all six
programs

Price is \$300 plus tape

The series is also available on videocassette

WHAT'S MY THING? Focuses on the antics and personalities of the Fantastic Six, a group of boys who live in the South End of Boston. The general subject of the series is how children react to various forms of authority. Although the setting of the programs is a city neighborhood, these open-ended episodes can be used meaningfully in urban, suburban, and rural classrooms. Winner, Ohio State Award, 1972

LESSONS

1. **Don't Walk**—An intersection with a broken traffic light encourages the boys to find different ways to cross the street (6:39)
2. **Swing**—Two members of the Fantastic Six are playing with a rope swing in the park. When a bully comes along and takes over the swing, one of the boys tries to resist and is hurt. (5:58)
3. **On The Bus**—The boys play a game of catch on a public bus. The driver says nothing until a passenger complains; then he demands that the boys get off the bus. (6:09)
4. **Escaped Cat**—When one of the Fantastic Six rescues a kitten from a window ledge, he falls and is hurt. Possible sources of help are shown quickly, but their responsiveness requires testing. (6:05)
5. **Clean-Up Crew**—The Six join a group of older boys on their way to clean up the park. At the park the older boys try different methods of authority to keep the younger boys at the task (9:11)
6. **A Find**—The Fantastic Six quickly decide how to divide a package of five doughnuts between six boys—one of them does not get one (7:44)

Why?

Thirty-two 15-minute color lessons
Primary, intermediate
40-page teacher's guide
Produced by WDCN-TV, Nashville (1976).

Helping students become independent learners by providing practice in solving problems is the goal of this science series. "Why?" focuses on three broad areas—life science, earth science, and physical science—using the investigative approach and capitalizing on the child's natural curiosity and quest for explanations. Special film techniques, such as split screen, help to demonstrate, clarify, analyze, and compare.

Producer, teacher and writer for the series is Faye Carter Wilmore. She taught and developed science programs on the elementary school level before becoming a studio teacher.

LESSONS

1. **Living Things and Their Environment**—Compares different environments and identifies living and nonliving things (14 50)
2. **The Lawn and Vacant Lot Community**—Examines living things in a lawn and vacant lot community and shows how they interact (14 46)
3. **A Lake Community**—Describes a lake community and how the inhabitants interact (14 52)
4. **A Stream Community**—Describes a stream community and discusses the adaptations of living things to flowing waters (14 50)
5. **A Woodland Community**—Points out the many kinds of living things that thrive in the woodland (14 50)
6. **A Seashore Community**—Compares the living things in the seashore community to those in a lake or pond community (14 50)
7. **Animals from Different Environments**—Shows animals that live in different habitats and discusses how an animal's appearance can suggest the type of habitat in which it lives (14 50)
8. **What Is Air?**—Discusses the properties of air and demonstrates evidence of the presence of air even though it cannot be seen (14 50)
9. **Air Presses on Things**—Demonstrates several effects of air pressure, using everyday objects (14 52)
10. **What Happens When Air Is Heated and Cooled?**—Experiments with the contraction of cooled air and expansion of warm air (14 50)
11. **Light and Heat**—Identifies light sources and discusses how light and heat are alike (14 50)
12. **Reflected Light**—Explores what happens when light hits various surfaces (14 50)
13. **Light and Color**—Examines the color properties of light (14 38)
14. **What is a Machine?**—Introduces the lever, inclined plane, pulley, and wheel and axle (14 50)
15. **Lever—A Simple Machine**—Defines the lever and discusses fulcrum, force, and resistance (14 50)
16. **Pulley—A Simple Machine**—Demonstrates how fixed and moveable pulleys make work easier (14 54)
17. **The Wheel and Axle—A Simple Machine**—Shows how effort and resistance vary as the relationship of the wheel to the axle is changed. (14 52)
18. **Inclined Plane—A Simple Machine**—Defines the inclined plane, and demonstrates that the screw is a special kind of inclined plane (14 51)
19. **Wedge—A Simple Machine**—Demonstrates how the wedge increases force (14 53)
20. **Making Work Easier**—Views complex machines and identifies the simple machines within them. (14 51)
21. **Measuring Distance**—Instructs students in using metric units of measurement meter, decimeter, centimeter, and millimeter. (14 37)
22. **Measuring Weight**—Introduces common metric units of weight gram, kilogram, and milligram (14 30)
23. **Measuring Time**—Discusses the units of time and their relationships (14 52)
24. **Measuring Temperature**—Compares Celsius and Fahrenheit scales (14 48)
25. **Static Electricity**—Demonstrates how like charges repel and unlike charges attract (14 48)
26. **How Does an Electric Current Flow?**—Discusses and demonstrates the materials needed to make electricity travel (14 48)
27. **Electricity into Light**—Analyzes the workings of a light bulb (14 32)
28. **Electricity into Heat**—Introduces resistance as a cause of heat (14 50)
29. **Electricity into Motion**—Shows how current flowing through an electromagnet produces motion (14 51)
30. **What the Earth Was Like**—Illustrates ways the earth's surface is constantly changing. (14 50)
31. **How Do We Know?**—Focuses on erosion, the movement of the seas, and the fossil remains of plant and animal life. (14 49)
32. **Fossils Tell the Story**—Discusses how fossils were formed in rock (14 51)

Word Workers, Inc.

Twenty-five 15-minute color lessons

Primary

58-page teacher's guide

Produced for Massachusetts Educational Television (21 Inch Classroom) by WGBH-TV, Boston (1971)

Larry Lizard, Warty Winnifred, and other alliterative characters help children recognize the relationship between sounds in words and letters in words in this series for beginning readers. Designed to supplement the classroom teacher's instruction in phonics, the course uses techniques compatible with the many different approaches to teaching this subject. Lessons provide drill on letter-sound associations, enlivened by activities such as "Name Game," "Rhyme Time," and "Word Wheels," that make unlocking the language code an entertaining activity.

Louise McNamara, who is also the studio teacher for the series ALL ABOUT YOU, is a former acting director of the Twenty-One Inch Classroom and a former elementary science teacher. She has served as science editor for Ginn & Co. and as consultant to the children's library of Boston's Museum of Science. Frank Lane has been a member of the staff of WGBH-TV, Boston, since 1968. A native of Boston, he was educated in the schools of that city.

LESSONS

Unit I. Sounds in words, consonant-vowel-consonant pattern of letters in words

- 1 Introduction to writing as communication, words in speech, sounds in words, letters in words (14-35)
- 2 /s/ and /m/ as initial sounds, /s/ and /m/ as initial letters, rhyming words with am and m, orally classroom activities for b (14-36)
- 3 /l/ as initial sound, /l/ as initial letter, rhyming am and m, and associating rhymes with letters (14-32)
- 4 /t/ as initial sound, /t/ as initial letter, rhyming classroom activities for t (14-36)
- 5 /t/ and /m/ as final sounds represented by t and m, rhyming at and m words, classroom activities for /k/ represented by t and m (14-34)
- 6 Medial a and i representing the vowel sounds in bat and bit, classroom activities for /e/ representing vowel sound in lot (14-37)
- 7 /h/ and /p/ as initial sounds, /h/ and /p/ as initial letters, classroom activities for /g/ represented by h (15-04)
- 8 Review (15-00)
- 9 /p/ as final sound represented by p, rhyming ap and ip words, classroom activities for w (14-32)
- 10 /f/ as initial sound, /f/ as initial letter, rhyming classroom activities for /r/ (14-40)
- 11 /d/ as initial and as final sound, /t/ as initial and as final letter, rhyming ad and id words, classroom activities for /e/ representing the vowel sound in bell (14-30)
- 12 /n/ as initial and as final sound, /n/ as initial and as final letter, rhyming in and an words, classroom activities for /e/ and /y/ (14-40)

- 13 /r/ representing /r/, /k/ and /s/ /g/ representing /g/ and /l/ classroom activities for /u/ representing the vowel sound in bud (13-39)
- 14 Review (13-53)

Unit II: Short and long vowel sounds in consonant-vowel-consonant and consonant-vowel-consonants patterned words

- 15 a representing the vowel sound in both mad and made, rhyming (14-18)
- 16 e representing the vowel sound in both pin and pine, rhyming, classroom activities for /u/ representing the vowel sound in both cut and cute (14-17)
- 17 o representing the vowel sound in both rot and rope, rhyming (14-20)
- 18 Review of short and long vowels and all consonants (13-55)

Unit III. Additional initial consonant sounds and letters

- 19 Digraphs th, sh, and ch, classroom activities for /d/ and /w/ (14-36)
- 20 Blends st, sp, br, sr, cr, tr, cl, fl, dr, /s/ classroom activities for ow, oi, ce, fr, pl (14-26)
- 21 Review (14-32)

Unit IV. Additional vowel sounds and letters

- 22 Other representations of long a (ea, ay), and long o (oa, oe, ow), classroom activities for /r/ and /h/ and /y/ (14-20)
- 23 ea as representing the vowel sound in both head and bead, ow as representing the vowel sound in both cow and low, classroom activities for /e/ (14-48)
- 24 v as a vowel / following a vowel (13-26)
- 25 Review (14-45)

Words Are For Reading

Ten 10 to 15-minute color lessons

Primary

36-page teacher's guide

Produced by the Mississippi Authority for Educational Television (1972).

Dramatic scenes with strong appeal to children are used in this series to build reading vocabularies and related language skills. Non-sequential lessons include trips to the zoo and the state fair, a day at school, and a look at the daily work of the policeman and the fireman. Words to be taught, chosen from vocabulary lists of standard basal textbooks, appear on the screen frequently and are used in a variety of ways. Original songs reinforce the presentations, which are designed to encourage viewer participation.

LESSONS

1. **Our Friend the Policeman**—Shows policemen directing traffic, helping a lost child, and stopping a speeding motorist. (10:24)
2. **Bicycles**—Follows four boys as they bicycle from a park, to a service station, to the woods. (9:14)
3. **Zoo**—Shows the various ways that different animals move, eat, and sleep. (12:10)
4. **A Day at School**—Shows activities of a school day—a reading lesson, a game of kickball, and the adventures of a rabbit that escapes from his cage. (14:05)
5. **Trees**—Shows the parts of a tree and aspects of its growth, and emphasizes the need for forest conservation. (13:32)
6. **Houses**—Teaches the mechanics of compounding words, and the concept of "home". (11:48)
7. **Fair**—Explores the sights, sounds, smells and tastes a child experiences on a visit to the state fair. (12:20)
8. **One or Two: What To Do?**—Develops the concept of singular and plural nouns through images of brushes, babies, and bubbles. (10:45)
9. **How We Move**—Presents words that describe movement, illustrated by scenes of a football game, an egg race, and a Boy Scout outing. (11:17)
10. **Fireman, Fireman**—Shows the activities and responsibilities of a fireman, from battling a blaze to caring for his uniform and equipment. (14:37)

Wordsmith

Thirty 15-minute color lessons
in six modules
Intermediate
24-page teacher's guide
Produced by AIT at KLCS-TV,
Los Angeles (1975)

This new production of a popular series is based on contemporary concepts of vocabulary and linguistic theory. Each WORDSMITH program centers on a theme like food, size, or communication. But from then on, anything goes—wordcells cavort about to instruct and entertain, anticked characters get their words in edgewise, word lore of all kinds lights up the nooks and crannies of the English language. Designed to arouse students' curiosity about words and to sharpen their awareness of language, the series includes standard vocabulary development and incorporates terms from specialized vocabularies, foreign languages, and slang.

Bob Smith, wordsmith and author of the teacher's guide, has taught English, philosophy, psychology, education, Latin, and mathematics at levels from the seventh grade to post-graduate study. His television work began in 1962. Mr. Smith holds a Bachelor of Arts degree from the University of Chicago, and three advanced degrees in philosophy and linguistics from Gonzaga University and the University of Michigan.

LESSONS

A conventional accounting of what goes on in a WORDSMITH program can't really do justice to the lively proceedings as Bob Smith conjures up a variety of short features (several of which appear in each program) to stimulate, reinforce, and sustain the attention of the viewer.

MR. HOMONYM has endless problems with the words that sound alike but are not.

MS. HYPERBOLE can't open her mouth without exaggerating.

MR. ALLITERATION'S statements seem strangely similar.

MR. REDUNDANT repeats himself needlessly and in the process becomes twins.

MS. ONOMATOPOEIA offers *splash* and *crunch*—each is a word and a sound too.

THE DEPARTMENT OF USELESS INFORMATION tells more than anyone needs to know about our language.

SUPERWORD takes a light-hearted look at some of our more impressive—and sometimes stuffy—words.

I SAY YOU SAY reminds us that we do not all speak the same English. Is it quarter to ten, quarter till ten, or quarter of ten?

DOUBLE-TAKE is an eye-opener. Look around you—What do you see? Words and wordcells. Don't take one, take both. That's a double-take. And it's one of the big, big goals of each WORDSMITH lesson.

Module Blue

- 101. Sound (14 30)
- 102. Body I (14 32)
- 103. Body II (14 30)
- 104. Fire (14 31)
- 105. Looking (14 30)

Module Green

- 201. Numbers I (14 30)
- 202. Numbers II (14 37)
- 203. Numbers III (14 35)
- 204. Walk and Run (14 30)
- 205. Water (14 34)

Module Red

- 301. Time (14 35)
- 302. Cutting (14 35)
- 303. Animals I (14 33)
- 304. Animals II (14 32)
- 305. Serendipity (14 31)

Module Brown

- 401. Nature (14 31)
- 402. Leading (14 30)
- 403. Transportation I (14 34)
- 404. Transportation II (14 30)
- 405. Position (14 30)

Module Yellow

- 501. Form (14 34)
- 502. Size (14 30)
- 503. Talking (14 31)
- 504. Polypour (14 31)
- 505. Food (14 33)

Module Orange

- 601. Twist and Turn (14 32)
- 602. Relatives (14 30)
- 603. Connection (14 32)
- 604. Measure and Metrics (14 31)
- 605. Communication (14 37)

World History (History I)

Fifteen 30-minute black and white lessons
Post-secondary
10-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University.
Produced by WGBH-TV, Boston (1967).

This course presents a comprehensive pictorial overview of world history from the fall of Rome to the Napoleonic Era. It covers the great movements, the men that led them, and the consequences of their work.

The lectures have been prepared and presented by Professor Robert G. Albion, Gardiner Professor of Oceanic History and Affairs, Emeritus, Harvard University, formerly Professor of History, Emeritus, Harvard University.

LESSONS

1. **The Fall of Rome**—Centers on barbarian culture, particularly that of the Franks and Anglo-Saxons. Considers Greeks in Eastern Europe and the spread of Arabs around the Mediterranean. (28 52)
2. **Feudalism and National States**—Discusses how leading warriors received land in exchange for military service to the king, and thereby acquired most of the wealth, power, and prestige in their societies. (28 25)
3. **The Medieval Economy**—Describes the structure and function of the manor, the principle economic and social unit in the Middle Ages. Notes the revival of trade and the growth of craft guilds after 1000 A.D. (28 56)
4. **The Medieval Church**—Investigates the wide-spread cultural and political powers of the Roman Catholic Church in Western Europe. Considers its eventual conflict with the growth of national states. (28 37)
5. **Exploration and Early Empires**—Discusses the exploring voyages of Vasco da Gama, Columbus, and Magellan in the 15th and 16th centuries. Studies the establishment of colonies and the development of trade by the Spanish and Portuguese. (28 57)
6. **Renaissance and Reformation**—Considers the art and literature of Renaissance Italy. Describes the establishment of Protestant sects in Northern Europe under the leadership of Martin Luther and John Calvin. (28 57)
7. **16th Century Rivalries**—Studies the emergence of England, France, and Spain as strong national states, and considers two powerful empires: the Hapsburg family and the Ottoman Empire. (29 00)
8. **Seventeenth Century Expansion**—Concerns the expansion of trade and colonies by the Dutch, French, and English after the defeat of the Spanish Armada in 1588. (28 50)
9. **The Age of Louis XIV**—Contrasts the growth of the absolute monarchy in France with the defeat of the Stuart kings and royalist supporters by Puritan--Parliamentary forces in England. (28 50)
10. **The Duel for Empire**—Discusses the years between 1609 and 1763 when England and France were at war four times (League of Augsburg 1689-97 Spanish Succession, 1701-13 Austrian Succession, 1740-48 Seven Years 1756-63). (28 55)
11. **The American Revolution**—Explores the conditions leading up to England's conflict with the American colonies. Reviews the major events of the Revolutionary War. (28 58)
12. **Colonial Changes**—Considers colonial experiences of European countries in the South Seas and Pacific Northwest. Examines British political influence and policy in India and in Canada. (28 55)
13. **The Industrial Revolution**—Examines how the change from handwork to power machinery drastically transformed society, politics, and economic life beginning in the 1760's. (28 55)
14. **The French Revolution**—Describes how a moderate movement for constitutional government and breaking down old privileges grew into a violent and radical revolution. (28 50)
15. **Napoleon and Sea Power, 1798-1815**—Reviews the career of Napoleon Bonaparte from his early victories in Italy to his unsuccessful invasion of Russia in 1812, to his final exile on St. Helena. (28 47)

World History (History II)

Fifteen 30-minute black and white lessons
Post-secondary
8-page syllabus

Developed for the U.S. Navy by the Commission
on Extension Courses, Harvard University
Produced by WGBH-TV, Boston (1967).

This survey begins with the Peace of Vienna in 1815 and probes the revolutions of 1830 and 1848, which led to reform in England, Italy, and Germany. Also covered are America's westward expansion and Civil War, the rise of capitalism and socialism, imperialism in Africa and Asia, politics before and after the World Wars, the end of empire after the wars, the Cold War and the detent power of the Polaris.

The lectures have been prepared and presented by Professor Robert G. Albion, Gardiner Professor of Oceanic History and Affairs, Emeritus, Harvard University, formerly Professor of History, Emeritus, Harvard University

LESSONS

- 1 Reaction and Revolution 1815-1848** Describes the Metemich Era when European nations reinstated ousted monarchs and for a time successfully suppressed revolutionary movements. (28 55)
- 2 The Opening of China and Japan** Traces Britain's diplomatic and military efforts to open Chinese ports to trade and America's success at establishing trade relations with Japan. (28 55)
- 3 British Reform and Free Trade** Examines in Britain the rise of the capitalist and labor parties to political power, the humanitarian policy changes in the British empire, and the transition from old forms of mercantilism to free trade. (28 54)
- 4 The Second Empire and Unification** Describes the period between 1848 and 1870 when France was under the leadership of Napoleon III and Germany and Italy became unified nations. (28 57)
- 5 America's Westward Expansion** Follows expansionist efforts in the United States from the extension to the Mississippi after the Revolution to the acquisition of California and the Southwest as a result of the Mexican War. (28 54)
- 6 Capitalism, Socialism, and Communism** Traces the growing influence of private capital, the rise of movements to improve the lives of the laboring class, and the development of Marxism and Communism in Russia. (28 54)
- 7 The Scramble for Africa** Follows the sudden expansion of European nations into Africa in the late 19th century. (28 58)
- 8 Imperialism in Asia** Considers the Japanese defeat of China in 1895, the subsequent European take-over of Japanese gains in China, and the Japanese victory over Russia in 1905. (28 55)
- 9 Alliance and Entente** Describes the alignment into two groups of the major powers of Europe between 1897 and 1907: the Triple Alliance (Germany, Italy, Austria) and the Triple Entente (France, Britain, Russia). (29 20)
- 10 World War I** Discusses the armed conflict between the alliances which resulted in a four year siege at the Western Front, German use of submarines against England, and American intervention in 1917. (28 41)
- 11 Between the Wars** Examines the self-determination spirit of the Paris settlement, the creation and failure of the League of Nations, and the transformation of Russia into a radical Communist state. (28 28)
- 12 World War II, 1939-1941** Deals with German victories in Europe, the Battle of Britain, the campaign in North Africa, and Hitler's attack on Russia in mid 1941. (28 56)
- 13 World War II, 1942-1945** Deals with the Japanese attack on Pearl Harbor, the major efforts in Europe and the Pacific, the surrender of Germany in 1945, and the Japanese capitulation following atomic attacks on Hiroshima and Nagasaki. (28 50)
- 14 The End of Empire** Considers the breaking up of the overseas empires of Britain, France, Holland, and Belgium into independent nations. (28 55)
- 15 The Cold War** Examines the Cold War contest between the United States and Russia, the arms race, and the rivalry for political influence throughout the world. (28 55)

Zebra Wings

Fifteen 20-minute color lessons
Intermediate
40-page teacher's guide

20-minute teacher program

Produced by the Mississippi Authority for
Educational Television, in association
with AIT (1976)

This creative writing course is intended to bring out the creative abilities latent in each child. The series aims to stimulate children to think, to feel, to imagine, — and then to write. The lessons are concerned with style and form in various types of writing—fables, poetry, humor, fiction, newspaper writing, drama. Each program begins with a sight-and-sound experience related to one or more pieces of writing. A variety of techniques are used, such as film dramatization on location, puppetry, and animation. Afterwards the series host guides children in the studio in a creative writing encounter session. Together they explore ways in which they might express their experiences in writing. Winner of Gold Medal, Virgin Islands International Film Festival, 1975.

Lee Bennett Hopkins, teacher for the series, is a former curriculum and editorial specialist for *Scholastic Magazine*. He is the author of children's books, professional texts, and curriculum materials for elementary education.

LESSONS

1. **Words, Words, Words**—introduces writing as a building process, investigates words as tools for individual expression (19 30)
2. **Myths and Fables**—Considers the role of culture and imagination in the evolution of myths and fables (19 30)
3. **Poetry I**—Presents poetry as a pleasurable way to express feelings and describe experiences (19 28)
4. **Poetry II**—Familiarizes children with figurative language. introduces the haiku form of poetry (19 30)
5. **Humor I**—Explores three types of written humor—take off surprise, and character, encourages children to draw humor from personal experience (19 47)
6. **Humor II**—Shows children creating a humor magazine. considers the humorous qualities of jokes, cartoons, comics, riddles, puns, and a tall tale (19 30)
7. **Short Story I**—Discusses the characters, setting, and plot of a short story. invites viewers to write an ending (19 31)
8. **Short Story II**—introduces several mystery writing components—aliteration, mood, and setting, challenges students to write an original mystery story (19 40)
9. **The Writer's Tools**—illustrates the steps in writing a report or article, emphasizes the importance of research and creative organization and presentation of non-fiction material (19 02)
10. **Persuasive Writing**—Considers persuasion and defines propaganda, analyzes letters to the editor, public service announcements, and political persuasive writing (19 32)
11. **Advertising**—Explores, by means of television commercials, the types and techniques of advertising, pointing out the difference between legitimate information and the huckster's pitch (19 48)
12. **Newspaper Writing**—illustrates various forms of newspaper writing, stresses the skills a newswriter must use to deal accurately with facts (19 30)
13. **Plays**—Presents the elements of playwriting, shows children critiquing three original plays (19 51)
14. **Scriptwriting**—Provides an introduction to a study unit on filming and videotaping, explains and illustrates camera movements, sound and picture alignment, and the addition of music and sound effects (19 40)
15. **Journal**—Describes the journal as a sourcebook of ideas that later may take a variety of forms, shows that revision is a necessary process (19 37)

THE JAPAN PRIZE Circulating Library

The Japan Prize has been awarded since 1965 by NHK, the Japanese national broadcasting service, to radio and television programs of singular excellence. The international competition has helped to stimulate interest in the field and has served to foster understanding and cooperation among broadcasters and educators of the participating nations.

Made up of prizewinners in both radio and television, the Japan Prize Circulating Library has been assembled for the purpose of making the best use of the educational materials entered in the contest. The materials are especially useful for demonstrating the state of the art in educational-broadcasting in seminars, symposia, conferences, and classrooms.

The Agency for Instructional Television is one of ten repositories around the world for the circulating library. A second repository in the continental United States is the Communication Center of the University of Texas in Austin.

- Programs are available for non-broadcast use only on 16mm film and audio tapes. Service charges are \$15 for each television program and \$5 for each radio program. Programs may be kept one week.
- Printed materials, including scripts in English, instructional objectives, and comments on production and utilization, accompany most programs.

PROGRAMS

1972 Television

Twenty-One Days in the Life of an Egg,

Science (Secondary Education)

Produced by NHK, Japan (20:00)

Tick Tock Goes the Clock

Education for the Mentally Retarded (Primary Education)

Produced by PBC, Pakistan (20:05)

Hullo Pals, No 7

Language (Foreign) (Secondary Education)

Produced by ABC, Australia (19:24)

The AIT repository also includes 16mm film anthologies that contain excerpts from outstanding programs in earlier competitions. Anthologies for the following contests are available: 1966, 1967, 1968, 1969, 1971. These can be rented for \$10 each.

Rental Policies, Procedures, Prices

AIT television courses are available on a rental basis to educational institutions for instructional use over open-circuit broadcast stations, 2500 MHz (ITFS) systems, closed-circuit (CCTV) systems, and community antenna (CATV) systems

Previewing

Pre-selected lessons are available for preview without charge except for return postage. Lessons other than those pre-selected are available for previewing at a charge to cover special preparation and handling. The charge varies depending on the preparation required.

- Preview materials can be provided in various formats
- Preview materials should be requested at least three weeks in advance of use date. At least one alternate use date should be specified
- Preview materials are for one week's use. If necessary, arrangements can be made for longer preview periods; this must be done when the order is placed
- Confirmation of preview date is sent by mail and includes shipping instructions
- Preview materials may be broadcast if permission is obtained in advance

Telecourse Use

The rental fee authorizes one use over any type of electronic system when lessons are provided on AIT tapes (A "use" is defined as unlimited transmission of each lesson during a school week). The rental fee authorizes an unlimited number of uses for a period of one school year when lessons are recorded on the user's tape stock.

School rerecording of public and instructional television programs

With the increased capability for off-air rerecording of educationally useful television programs for replay at times convenient to classroom scheduling, it is important to school systems that public and instructional programs be available for classroom playback, closed-circuit display and other school exhibition modes contemporaneously with local station broadcast. Content copyright and other legal limitations, however, often demand that the use of such program rerecordings be controlled in a manner consistent with original television broadcast authorization.

Accordingly, the Agency for Instructional Television, the Great Plains National Instructional Television Library, the Public Broadcasting Service, and the Public Television Library have jointly agreed on the general policy of authorizing supplemental school rerecordings of public and instructional television programs distributed by them for local ETV and other educational broadcast, solely on condition that

- 1 School rerecordings may be made only by students, teachers, and faculty or staff members in an accredited nonprofit educational institution.
- 2 School rerecordings will be used solely for classroom, auditorium or laboratory exhibition in the course of classroom instruction or related educational activities;
- 3 School rerecordings will be used only in the educational institution for which made, and will not be given away, loaned or otherwise made available outside that educational institution,
- 4 School rerecordings will be used only during the seven-day period of local ETV and other educational broadcast licensed by the distribution agency, and will be erased or destroyed immediately at the end of that seven-day period except to the extent specifically authorized in writing in advance by the distribution agency.

This supplemental school rerecording authorization is applicable to all public and instructional programs distributed by these agencies, excluding only those prohibited by reason of production or distribution rights restrictions.

THE FOLLOWING TELECOURSES ARE NOT AUTHORIZED FOR RERECORDING UNDER EITHER THE SEVEN-DAY SCHOOL RERECORDING POLICY OR THE EXTENDED INSTRUCTIONAL USE EXPERIMENT:

**BOOK, LOOK AND LISTEN
ONCE UPON A TOWN
READERS' CUBE
SPINNING STORIES**

Extended instructional use of AIT telecourses

In response to numerous requests from school districts across the country, AIT has taken a further step toward making its telecourses even more accessible to schools. Agencies authorized to use AIT telecourses may, on an experimental basis, permit their participating school systems to retain rerecordings for repeated use as desired during the entire school year, September through June.

The aim of this experiment is to test the extent to which unrestricted broadcast rerecordings will be used in classrooms. A further objective is to determine if such an extended use will increase school support for instructional broadcast services. Finally, it is hoped the experiment will provide insight into the effect of advances in recording and playback technology upon instructional broadcasting.

The AIT experiment is for a three-year period (September, 1976, through June, 1979). It is confined to telecourses for which AIT controls distribution rights in all formats (i.e., film, videotape, reel-to-reel, videocassette, videodisc, etc.) and for all exhibition methods (i.e., television transmission, classroom playback, film projector, closed-circuit systems, etc.). The experiment also is limited to school systems specifically identified as participants in the instructional television services of agencies authorized to use AIT telecourses. Non-participating school systems are still not authorized to exceed the seven-day recording retention limit of the Joint Policy on School Rerecording of Public and Instructional Television Programs.

Rental Fees

Rental fees are based on the premise that there should be a relationship between the amount paid and the number of students who can be served by the television system. The amount of the telecourse rental fee is determined by the size of school enrollments, the length of the lessons, the number of lessons in a course, and whether the lessons are provided on AIT tapes or are recorded on the user's tape stock.

Users are encouraged to record lessons on their own tape stock because this procedure offers economies for the user, provides for greater flexibility in scheduling, eliminates many shipping and handling problems, and makes possible unlimited repetitions during a school year. To assure technical quality and for reasons of logis-

tics, it is recommended that the user buy the tape to be dubbed through AIT. Should the user supply tape from his own inventory, it must be new unrecorded stock ready for dubbing (3M-400 or equivalent).

Computing costs—single licensee operating one or more stations: (base rate + school enrollment cost) x (number of lessons in a series) + total rental fee

Base Rates

- 1 10-min lesson—\$28.50
15-min lesson— 34.50
20-min. lesson— 40.50
30-min lesson— 52.50

- 2 Base rates are reduced when lessons on user's tape stock are used in second and successive years. The reduced base rate is:
10-min lesson—\$23.50
15-min lesson— 24.50
20-min lesson— 25.50
30-min lesson— 32.50

School Enrollment Cost

\$1.50 per 10,000 students up to 250,000; \$50 for each additional 10,000 students

TO FIND THE TOTAL FEE FOR A COURSE— AN EXAMPLE

ITV Director Jones wants to order ALL ABOUT YOU for television broadcast to his school system. Since his K-12 enrollment is 167,320, he computes his rental fee to be \$60.00 per program (base rate of \$34.50 for a 15-minute lesson, plus \$1.50 for each increment of 10,000 students). Since there are 30 lessons in the series, Jones' total rental fee for the use of ALL ABOUT YOU is \$1,800.00.

(base rate + school enrollment cost) x (no. of lessons) = rental cost

$$(\$34.50 + \$25.50) \times (30) = \$1,800.00$$

Prices effective for courses scheduled for starting dates in September or October, 1977.

107

Computing costs—multiple licensees operating tape or interconnected regional or area networks

The multiple license fee provides for one set of AIT tapes to be transmitted or circulated among network participants. A network may retain an AIT tape for three weeks. Additional AIT tape copies are available, if required, at a cost of \$2.00 per minute.

- 2-3 participants
each pays 90% of single license fee
- 4-6 participants
each pays 85% of single license fee
- 7-9 participants
each pays 80% of single license fee
- 10-15 participants
each pays 75% of single license fee
- 16 or more participants
each pays 70% of single license fee

- Late-coming agencies to network contracts will be served at the network discount rate already established, whether or not the total number of participants goes up to the next level when they join.

Fees for the following telecourses are not based on the standard rental fee structure. (Consult individual course descriptions for specific costs.)

- ABOUT SAFETY
- ABOUT SCIENCE
- ART FOR THE DAY
- BREAD & BUTTERFLIES
- THE HEART OF TEACHING
- MEASUREMETRIC
- SELF INCORPORATED
- WHAT'S MY THING?

When user purchases tape stock from AIT

AIT's standard tape format is quadruplex 15 ips. However, most helical formats are available by special arrangement and possibly at additional charge.

Prices for quadruplex tape stock are indicated below. All tape is packaged in plastic impact cases. (Prices for tape used with helical and videocassette machines are available on request.)

Quad tape	15 ips
15-min	\$ 46 50
20-min	64 50
30 min	86 00
60-min	174 00

(10-min lessons require 15 min tape stock).

NO IMMEDIATE PRICE INCREASES ARE ANTICIPATED, BUT BECAUSE THE COSTS OF TAPE STOCK AND DUBBING ARE BEYOND AIT'S CONTROL, THESE PRICES ARE SUBJECT TO CHANGE.

When user supplies tape stock:

- All user tape stock must be new, unrecorded stock ready for dubbing (3M-400 or equivalent).
- All user tape must be shipped in plastic impact cases.
- A separate tape must be supplied for each lesson.
- Minimum tape lengths for quadruplex recordings:

	15 ips
15-min	1240
20-min	1615
30-min	2410

(10-minute lessons require 15-min tape stock).

- Tape stock should be shipped to:
AIT
1111 West 17th Street
Bloomington, Indiana 47401
- All tape should be identified. (A great deal of tape is received from many sources; inadequate identification creates obvious problems.)

Dubbing Charge:

A charge is made to partially cover the cost of having lessons dubbed on user tapes. The charge is assessed whether tapes have been purchased from AIT or are sent to AIT from the user's own stock.

All tape formats

10-min	\$13 50
15-min	15 00
20-min	18 00
30-min	25 00

Replacement Costs.

Lesson tapes that have been worn, damaged, or lost can be replaced by AIT. The cost includes tape stock, dubbing, shipping and handling.

Quad tape

10-min	\$ 85 00
15-min	95 00
20-min	130 00
30-min	170 00

TAPES TO BE DUBBED WITH COURSES SCHEDULED FOR STARTING DATES IN SEPTEMBER OR OCTOBER 1977 MUST REACH AIT BY JULY 5, 1977.

158

Scheduling

Most AIT courses are designed to be used at the rate of one lesson per week, in sequence, during consecutive school weeks. Variations in this use pattern are possible only when arrangements are made to record lessons on the user's tape stock.

Some AIT courses in which the lessons are not sequential are distributed in modules of from two to eleven lessons. The order in which the modules are scheduled may vary, but the program sequence within the modules does not.

NOTE: When placing an order, users must include a proposed transmission schedule. This schedule will be confirmed by AIT. Because of possible unavoidable changes, users are advised to publish broadcast schedules after receiving confirmation from AIT. The shipping schedule attached to the Telecourse Authorization constitutes the confirmed broadcast transmission schedule.

Ordering

All orders with September or October 1977 starting dates must reach AIT no later than July 5, 1977. To be sure that desired telecourses are available, users are urged to place orders early. Orders are processed on a first-come, first-served basis.

NOTE: It may be impossible for AIT to honor orders or schedule changes received after July 5, 1977 except at additional cost to the user.

The following must be supplied with an order:

- Proposed transmission schedule, including lesson titles, lesson numbers, and transmission dates.
- Purchase order number, name of the person to receive bill, and special billing instructions (payment is due upon receipt of invoice).
- Desired tape format.
- Complete shipping address for film and tape. (P.O. box number is not sufficient.)
- Name and telephone number of person who is to receive shipping information and instructions.
- Mailing address for general correspondence.
- Identification of transmission facilities (call letters, CCTV, ITFS, CATV).

Shipping

AIT's shipping procedure is designed to facilitate the movement of tapes to serve a number of users. Please follow it carefully.

1. The user is authorized to use lessons for one week, Monday through Friday, unless lessons are recorded on user's tape stock.
2. Tapes must be forwarded immediately following use—no later than Friday of the week in which they are used.
3. Shipping instructions are sent by mail from AIT and include the appropriate shipping labels. Shipping instructions include the transmission schedule of the next user if the lessons are to be bicycled.
4. Rental fees include outgoing surface shipping charges, but not return shipping charges. (If shipments are sent by air or otherwise expedited, extra charges may be necessary.)
5. Shipments made outside of the continental United States are subject to additional charges. Costs are available on request.

Confirmation:

A signed AIT Telecourse Authorization is confirmation of your order.

WHAT TO DO IF:

Tape does not arrive on schedule (three working days before use date):

1. Check shipping instructions to determine origin of shipment.
2. Call shipper.
3. Call AIT Distribution if tape is lost. (812) 339-2203

Tape is unusable:

1. Call AIT Distribution at least three working days before use date. (812) 339-2203
2. Complete and return (by separate mail) service card that accompanies tape.

Related Materials

Teacher's Guides

Teacher's Guides include overviews of the series indicating objectives and the classroom techniques that will help achieve them, descriptions of the content of each lesson, and suggestions for pre-lesson and post-lesson activities. Many of the guides contain bibliographies for teachers and students.

Student workbooks, discussion leader's guides, separate bibliographies, and activity cards for learners also are available for some courses.

Related Materials for Consortia-Developed Series

BREAD & BUTTERFLIES

- *My BREAD & BUTTERFLIES Career Book* that supplements the television series is published and sold by Houghton Mifflin Company, Educational Division, One Beacon Street, Boston, Massachusetts 02107. Using the principle of active student involvement, the workbook provides opportunities for application of self and career awareness skills in exploring new ideas. The price is \$1.95
- A parent-teacher guide with recommendations for using the workbook in classrooms and in home settings is also available from Houghton Mifflin Company. The price is \$1.50
- A self-contained *Workshop Training Package* includes materials to help educators become familiar with the concepts and goals of the series. It suggests ideas for related classroom activities. The price is \$65.

THE HEART OF TEACHING

- An *Applications Handbook* includes detailed suggestions and resource materials for conducting an intensive 20- to 40-hour human relations skill development workshop (or college course) for pre- or in-service teachers and counselors. The price is \$45.
- A special program, *Demonstrations Enhancing Human Relations Skills*, illustrates through role-playing preferred ways of handling issues posed in the series programs. It is intended for use in human relations training courses or workshops. The price is \$91 for videocassette, and \$167 for quad tape.

IMAGES & THINGS

- A *Learning Resources Kit* is designed to stimulate visual and aesthetic experiences. It can be used independently by individual students or by groups, with or without the programs. The kit contains 180 color slides of art images appearing in the series, 10 slide viewers, and a guide. The price of the complete kit is \$130.

INSIDE/OUT

- *Stories from INSIDE/OUT* is a paperback book of stories for young children adapted from the television series. The book is available from Bantam Books, Inc., School and College Division, 666 5th Avenue, New York, New York 10017. The price is \$1.25.
- A free discussion guide for parents and teachers, also available from Bantam Books, helps adults share the experiences of *Stories from INSIDE/OUT* with children.
- A self-contained *Workshop Training Package* includes materials to help educators become familiar with the concepts and goals of the series, and suggests ideas for related classroom activities. Available from AIT, the price is \$65.

SELF INCORPORATED

The following materials are all available from AIT:

- A *Packet of Background Readings* that consists of articles for AIT that deal with the physical, psychological, and social issues of early adolescence and the ways in which the emotional health of adolescents can be fostered inside and outside the classroom. The price for 10 sets is \$15.
- A *Family Discussion Booklet* for adults and teenagers to use in discussions of SELF INCORPORATED programs and related issues. The price is \$.50 per single copy.
- A *School/Community Awareness Kit* that includes a complete community preview format, reading lists, posters, and an article by Dr. Maria Piers, Dean of the Erikson Institute of Early Education, on the parent-child relationship. The kit is designed to help schools inform parents and the community about SELF INCORPORATED and to provide suggestions for involving parents and other adults in the use of the series. Single copies are free.
- A self-contained *Workshop Training Package* includes materials to help educators become familiar with the concepts and goals of the series, and suggests ideas for related classroom activities. The price is \$14.50.

Films and videocassettes

A complete catalog describing audiovisual policies, individual programs, and resource packages will be sent on request

Series available on film and videocassette

BREAD & BUTTERFLIES

- Fifteen 15-min. color lessons:
 - 16mm film—\$180 per program
 - videocassette—\$110 per program
- One 20-min. teacher program
 - 16mm film—\$100
 - videocassette—\$115
- One 15-min. informational program:
 - 16mm film—\$90
 - videocassette—\$80

DISCUSSING CONTROVERSIAL ISSUES

- Four 20-min. color lessons.
 - 16mm film—\$650 for all four programs
 - videocassette—\$450 for all four programs

THE HEART OF TEACHING

- Five 15-min. color programs
 - 16mm film—\$250 per program
 - videocassette—\$175 per program
- Teachers' Meeting 30-min. color program
 - 16mm film—\$400
 - videocassette—\$290

IMAGES & THINGS

- Thirty 20-min. color lessons.
 - 16mm film—\$230 per program
 - videocassette—\$130 per program
- Three 30-min. teacher programs:
 - 16mm film—\$150 per program
 - videocassette—\$130 per program

INSIDE/OUT

- Thirty 15-min. color lessons:
 - 16mm film—\$180 per program
 - videocassette—\$110 per program
- One 30-min. teacher program:
 - 16mm film—\$150
 - videocassette—\$130
- One 15-min. informational program
 - 16mm film—\$90
 - videocassette—\$80

A MATTER OF FACT

- Fifteen 20-min. color lessons:
 - 16mm film—\$230 per program
 - videocassette—\$130 per program

MEASUREMETRIC

- Twelve 15-min. color lessons
 - 16mm film—\$180 per program
 - videocassette—\$110 per program

RIPPLES

- Thirty-six 15-min. color lessons:
 - 16mm film—\$180 per program
 - videocassette—\$110 per program
- Three 30-min. teacher programs:
 - 16mm film—\$150 per program
 - videocassette—\$130 per program

SELF INCORPORATED

- Fifteen 15-min. color lessons:
 - 16mm film—\$180 per program
 - videocassette—\$110 per program

UNIVERSE AND I

- Twenty 20-min. color lessons.
 - 16mm film—\$230 per program
 - videocassette—\$135 per program

Series available on videocassette

ABOUT SAFETY

- Forty-two 5-min. color lessons:
 - Three programs per videocassette
 - \$110 per videocassette

ABOUT SCIENCE

- Forty 5-8-min. color lessons:
 - Three to five programs per videocassette.
 - \$180 per videocassette

ART FOR THE DAY

- Eighty 3-4-min. color lessons:
 - Eight programs per videocassette
 - \$180 per videocassette

COMMON CENTS

- Five 15-min. color lessons:
 - One program per videocassette
 - \$110 per program

CREATIVE DRAMATICS

- Nine 20-min. color lessons:
 - One program per videocassette
 - \$135 per program
- Nine 30-min. teacher programs:
 - One program per videocassette
 - \$180 per program

INTEGRATION OF CHILDREN WITH SPECIAL NEEDS IN A REGULAR CLASSROOM (Lexington Teacher Training Project)

- Ten 20-30-min. color lessons:
 - One program per videocassette
 - \$180 per program

LIFE WORLD 2000

- Twelve 15-min. color lessons:
 - One program per videocassette
 - \$110 per program

METRIFY OR PETRIFY

- Eight 30-min. color lessons:
 - One program per videocassette
 - \$180 per program

RIGHTS AND RESPONSIBILITIES

- Ten 20-min. color lessons:
 - One program per videocassette
 - \$135 per program

WHAT'S MY THING?

- Six 6-8-min. B&W lessons:
 - All six programs on one videocassette. \$250 per videocassette

NO IMMEDIATE PRICE INCREASES IN RELATED MATERIALS ARE ANTICIPATED BUT BECAUSE THE COSTS OF CERTAIN GOODS AND SERVICES ARE BEYOND AIT'S CONTROL, ALL PRICES ARE SUBJECT TO CHANGE.

ORDERING

- Order all related materials or obtain reprint rights through your regional office.
- All orders should be in writing, and should be submitted either in the form of a purchase order or on the institution's letterhead. Orders totalling less than ten dollars must be accompanied by remittance or institutional purchase order.
- Allow four to six weeks for delivery. Normal surface shipments are prepaid. Special orders and expedited shipments are F.O.B. Bloomington, Indiana.
- AIT publications are not sold on consignment. All purchases are final. Reprint rights for most printed materials can be obtained for a modest fee.

The following should be supplied with an order:

1. Purchase order number, special billing instructions, and name of person to receive billing.
2. Complete shipping address (P.O. box number is not sufficient.)
3. Name and telephone number of person to receive shipping information.

In recognition of their intellectual and financial participation in consortia that developed BREAD & BUTTERFLIES, THE HEART OF TEACHING, IMAGES AND THINGS, INSIDE/OUT, A MATTER OF FACT, MEASUREMETRIC, RIPPLES, and SELF INCORPORATED, agencies within consortium areas are given discounted prices for print materials, films and videocassettes. These rates are available on request.

Research Publications

These research reports, of particular significance in the field of instructional television, are from AIT and its predecessor organizations, NITL, NCSCT, and NITC. Most were widely distributed. However, some were written for internal documentation and are generally unavailable to a larger audience. Publications may be obtained from AIT and from the Educational Resources Information Center (ED numbers are included). Many out-of-print reports (marked with an asterisk) are available through the ERIC system.

- The Evaluation of Instructional Television* NITL, December 1963.
- The Status of Instructional Television* NITL, March 1964.
- An Assessment of Instructional Television 1966-1968* \$2.00 per set, 40 each (ED 083 800)
- Instructional Television in Art Education
- Instructional Television in Music Education
- Instructional Television in Foreign Language Education
- Television in Health and Physical Education
- Television in Language Arts Education
- Television in Mathematics Education

- Responses to the Essential Skills Television Project Orientation Program (Research Report Number 39)* August 1976
- An Evaluation of "The Heart of Teaching Leadership Training Institute (Research Report Number 40)* August 1976
- Responses to the Questionnaire included in The Essential Skills Television Project A Working Document (Research Report Number 41)* September, 1976

Educational Resources Information Center (ERIC)

The Educational Resources Information Center (ERIC) is a nationwide information network for acquiring and disseminating research and other literature in American education. It consists of a coordinating staff in Washington, D.C., and sixteen clearinghouses located at universities or with professional organizations across the country. Each of these clearinghouses is responsible for a particular educational area. For more information and to order documents write to, Educational Document Reproduction Service, Box 190, Arlington, Virginia 22210. Include the ERIC ED number when ordering if available.

Learning with a Purpose

**AUDIOVISUAL LIBRARY
CAREER EDUCATION PROJECT**

**STATE FAIR COMMUNITY COLLEGE
SEDALIA, MO 65301**

SEPTEMBER 15, 1975

BEST COPY AVAILABLE

The establishment of audiovisual library is included as a part of the Career Education Project housed at State Fair Community College. It is to be developed throughout the three-year span of the project. After this time, it will continue to operate for school personnel in the community college district.

The library is housed in the Learning Resources Center at State Fair Community College. All school personnel in the Career Education Project and the community college district have lending privileges. A handbook containing complete check-out information along with necessary forms are available through each principal, counselor and librarian as well as from those teachers who were designated to work with the project during the 1975-76 school year.

The Career Education Resource Library has been reorganized to better meet your needs. It has been divided into the three following levels:

Elementary materials will be recognized by the use of a yellow dot over the catalog number. In addition ELEM will be included in the catalog number. Example: KT
ELEM
CE1

Junior High/Senior High materials will be recognized by the use of a green dot over the catalog number. In addition JRSR will be included in the catalog number. Example: KT
JRSR
CE2

Elementary-Junior High/Senior High will be recognized by the use of both a yellow and green dot. In addition both ELEM and JRSR will be included in the catalog number. Example: KT
ELEM
JRSR
CE3

For your convenience we have color coded the sections included in this resource list. The color codes are as follows:

(1)

3

		<u>PAGES</u>
Elementary Materials	Yellow	5 - 32
Junior High/Senior High	Orange	33 - 73

Please refer to the appropriate section for a list of materials that may be used in your area.

Recommendations and evaluations of materials in the Career Education Resource Library are available to anyone interested. The Assistant Librarian in the CERL and AV Specialist will always be available to assist all teachers with the use of the library.

OK

4

If you visit the Career Education Audiovisual Library in the Learning Resources Center, you will be able to locate materials more quickly by noting the color-coded labels. All of the materials other than books and periodicals are color-coded. The color and code is as follows:

<u>Item</u>	<u>Code</u>	<u>Color</u>
Kit (a combination of two or more media designed to be used as a unit)	KT	Black
Cassettes	CT	Red
Posters, Charts	.PA	Orange
Filmstrips	FS	Green
Games, Puzzles	GA	Blue
Realia (actual objects or specimens)	RE	Brown

PROCEDURE FOR CHECKING OUT MATERIALS FROM CAREER ED. RESOURCE LIBRARY

To Reserve:

1. Reservation cards will be available in all school offices.
 - A. Be sure to state desired material in order of preference.
 - B. Be sure to send cards to Career Education, State Fair Community College, Sedalia, MO. 65301; or give cards to component specialists on their visits.
2. All reservations received will be posted up on a three month rotating calendar which will be placed in the Career Education Resource Library in SFCC.
3. Reservations made more than three months in advance will be filed with the Resource Library Assistant and will be transferred to the three month calendar at the appropriate time.
4. Reservations may also be called in to the SFCC Library, , phone 826-7100, ext. 28. (Ask for Career Ed. Resource Library Ass't or Career Ed. AV Specialist)
5. Confirmation of dates will be sent to teachers immediately upon booking.

To Checkout

1. Use checkout form available
2. When materials are due, make arrangements to have this returned as close to due date as possible.
3. When the extension of any of the materials is desired, please call Resource Library Assistant or Career Ed. AV Specialist to check to see whether or not it has been previously reserved, or inquire at component specialists.

To Return

1. Return all materials to Career Ed. Resource Library by:
 - A. Component specialist or any Career Ed. staff member
 - B. Mail
 - C. Bringing material to SFCC Career Ed. Resource Library
 - D. Student enrolled in area Vo-Tech school program at SFCC.

To Evaluate

1. Evaluation forms are sent with the material requested. Please fill out and return with materials.
2. If Student Reaction Forms are sent, please have your students complete them and return them with materials.

Overdue Materials

Reminders will be sent to all teachers with overdue material.

TITLE: ENVIRONMENT. JUNIOR HIGH CAREER EDUCATION HANDBOOK.

DESCRIPTOR: *CAREER EDUCATION; *JUNIOR HIGH SCHOOLS; SECONDARY EDUCATION;
*LEARNING ACTIVITIES; *CONSERVATION (ENVIRONMENT); *SCIENCE EDUCATION;
*CURRICULUM GUIDES; BEHAVIORAL OBJECTIVES

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 200P.; RELATED DOCUMENTS VT 103 467 AND VT 103 470 AND VT
103 471 AND VT 103 552 AND VT 103 575 IN THIS ISSUE.

ABSTRACT: DEVELOPED BY A COMPREHENSIVE CAREER EDUCATION PROJECT IN THE DES
MOINES INDEPENDENT SCHOOL DISTRICT, THIS HANDBOOK FOR THE JUNIOR HIGH LEVEL
PROVIDES ACTIVITIES FOR THE STUDY OF CAREERS IN THE ENVIRONMENT CLUSTER. THIS
COLLECTION OF CAREER-RELATED IDEAS IS INTENDED AS AN OPEN-ENDED TOOL TO BE USED
WITH INDIVIDUAL STUDENTS, A SMALL GROUP, OR AN ENTIRE CLASS. THE IDEAS MAY BE
EITHER IMPLEMENTED AS A UNIT OR INCORPORATED INTO THE LIFE SCIENCE CURRICULUM.
BEHAVIORAL OBJECTIVES, LISTED FOR EACH OF SEVEN MAJOR AREAS OF ENVIRONMENTAL
STUDY, INCLUDE RESOURCE ACTIVITY CODE NUMBERS WHICH REFER TO LEARNING
ACTIVITIES IN THE HANDBOOK. THE CODE NUMBER DESIGNATES THE TYPE OF
ACTIVITY--STUDENT, CLASSROOM, CLASSROOM SPEAKER, FIELD TRIPS, OR SAMPLE LESSON
PLANS. IN ADDITION, A SEPARATE UNIT ON HORTICULTURE CONSISTING OF A VARIETY OF
ACTIVITIES IS INCLUDED. THE HANDBOOK CONTAINS NUMEROUS STUDENT ACTIVITY SHEETS
AND TRANSPARENCY MASTERS IN ADDITION TO THE SAMPLE LESSON PLANS AND OTHER
LEARNING ACTIVITIES. (NJ)

PREFACE

Career Education is a continuing goal of the Des Moines Public Schools that will assist in making education more meaningful for our junior high students by helping them acquire the knowledge, attitudes and skills necessary for making wiser career choices and understanding their roles in society.

This Handbook was developed and revised to provide instructors with additional insight into the implementation of activities in the career cluster of Environment. This Handbook merely suggests objectives, activities and resources that can be incorporated into the classroom. Instructors need to adapt the material to their specific classroom and student needs.

There is a wealth of materials and resources available in the community that instructors should become aware of and utilize to assist them in implementing Environment activities.

We would like to thank the following instructors and business people for their contributions in the development and revision of the Environment Handbook.

Instructors

1973

Charles Spain	Science	Callanan Jr. High
John Snider	Science	Franklin Jr. High
Joan Overton	Science	Hoyt Middle School
Ray Langland	Science	Merrill Jr. High
Bill Hughes	Science	Brody Jr. High
John Hines	Science	Harding Jr. High
Harold Rathert	Supervisor of Science	

1975

Charles Spain	Science	Callanan Jr. High
Granville Williams	Science	Kurtz Jr. High
Mark Phillips	Science	Harding Jr. High
Harold Rathert	Supervisor of Science	

Business and Industrial Participants

1973

William Mills	Soil Conservation Service
Lloyd Huff	Iowa Conservation Commission
Duane Toomsen	Department of Public Instruction
Don Wetter	
Bill Wyer	Environmental Sanitation

It is intended that these materials be utilized by the junior highs as they continue to implement career education. Through in-service and additional workshops, these materials will be revised and updated.

D. M. Wetter
Executive Director
Secondary Education

Environment

INTRODUCTION

Careers Related to Our Environment

Man, in making an attempt to control his environment, has persistently endangered his own species. An awareness must be made to the students of the urgent need to pursue careers in fields relevant to the continuance of our species.

This collection of career-related ideas is intended to be an open ended tool which a teacher might use with one student, a small group, or an entire class. They may be implemented as a unit or incorporated into your regular curriculum. It is hoped, however, that individual teachers in each building will coordinate their activities so that they do not become repetitive as the students change grade levels. It is the recommendation of the committee that this material be incorporated into the existing 7th grade Life Science program.

The basis for organization was to use the seven major classifications of a career interest survey as the major goals. Under each major classification, sample behavioral objectives were selected. The major emphasis was identifying the various careers and correlating resources and activities. The resources are divided into 4 sections: (A) Student Classroom Activities, (B) Classroom Speakers, (C) Field Trips, and (D) Sample Lesson Plans, printed matter, and films.

A Sample Lesson Plan for Goal 1
School Lunchroom Waste Analysis

GOAL 1: To explore operational organization and procedures.

Rationale:

The primary purpose of this activity is to explore operational procedures using an investigative approach to an environmental problem. It is also designed to accomplish the following:

- (1) provide an example of basic research and data research and data-gathering,
- (2) provide an example of quantitative approach to an environmental problem,
- (3) provide an insight into the division of labor by active involvement, and
- (4) provide a format that could be used for other areas of this cluster.

Behavioral Objectives:

As a result of participating in this activity, the student will be able to:

- (1) identify the division of labor necessary to analyze school lunchroom waste.
- (2) demonstrate a quantitative approach to data-gathering and problem-solving.
- (3) recognize an environmental problem in which he plays an active role.

Implementation:

- (1) Approval of the school administration and the lunchroom personnel is essential.
- (2) It may be used as a class or small-group activity.
- (3) Each food item in the school cafeteria is to be measured (by weight) as it pertains to:
 - a. The amount served. (This data may be obtained from the school lunchroom personnel).
 - b. The amount wasted. separate collection receptacles will be needed for each item. (plastic dishpan, for example.)

- weigh each container and record the weight on the outside with a marker.
- the receptacles for collecting the wasted food should be placed in such a position as to allow students to move freely through the line.
- one or two students should be in attendance at each receptacle and see that only one food item is collected per container.
- plastic scrapers and aprons should be provided.

(4) A scale for weighing should be available.

(5) A practice run should be carried out before the actual project is attempted.

A. Management: Three students selected by the class or by the teachers. One student may act as chairman (research scientist) and the others may serve as "research assistants". Perhaps the management would like to select a secretary to assist.

1. Planning and Administration:

- general design of the investigation
- equipment needed
- job layout

2. Communication:

- contact administration
- contact lunchroom personnel
- provide information to the student body

3. Personnel and Labor Relations:

- job description
- personnel selection -- assignment of jobs

4. Data Interpretation:

- how data is to be processed
- tabulate daily reports
- figure daily cost analysis
- provide graphic presentation of data
- summary and conclusions

B. Supervision and Mid-Management:

1. Operational techniques and procedures.

- how will collecting and measuring materials be set up and arranged
- provide a traffic flow chart for the student body
- be sure that all personnel know just what they are supposed to do

2. Data collecting and handling:
 - supervise collection and weighing
 - record results on the daily report sheets
3. Task analysis.
 - analyze each job as the operation is in progress to determine if job efficiency could be improved
4. Personnel relationship.
 - keep the team working together efficiently
 - arbitrate disputes
 - make each person feel important
5. Communication skills.
 - keep in close contact with the lunchroom personnel
 - keep the student body aware of the purpose of the project
 - elicit cooperation of the student body

C. Personnel

1. Personnel practices.
2. Communication skills.
3. Skill Development.
4. Career Orientation.

7/15

Suggested Follow-Up Activities:

- (1) *A variety of graphs can be made using the data tabulated on Forms 2 and 3.
- (2) The class can be asked to summarize and make inferences with respect to the data on Forms 2 and 3.
- (3) *As a result of the information gained in this activity, what recommendations could be made that might reduce the amount of food wasted in the school lunchroom.

Goal II: To explore careers related to soil and mineral conservation and control.

BEHAVIORAL OBJECTIVES	CAREER AREAS	RESOURCES		
<p>The student will recognize different types of soils.</p>	<p>Farming Agronomy Animal Husbandry Civil Engineering General Contracting Chemistry Forestry Horticulture Landscape Architecture Minerology Conservation. Statistics Earth Science Teaching Mining Engineering Jewelry Gemology Geography Mineral Shortage Research - Pure, Applied, Administration Mechanical Engineering Nuclear Physicist Power Plant Supervisor Teaching</p>	<p>A1 A2 A3 A4 A5 A6 ABC22 A23 C29 C30 AB31 CD32 AB33 B34 AC35 C37 BC42 C43 C44 C45 C46 C47 B48 BC49 C54</p>	<p>C55 C56 C57 BC58 ABC60 D62 BC63 C64 C65 AC66 C67 ABC70 AC71 ABC72 ABC73 AB74 AC76 BC77 BD78 ABCD79 BCD80 ABCD81 BC82 BC83 AD84</p>	<p>D85 BD86 BC91 C93 CD94 BCD96 BCD97 D107 D109 BC111 D112</p>

81

Goal III: To explore careers related to space and atmospheric monitoring and control.

BEHAVIORAL OBJECTIVES	CAREER AREAS	RESOURCES		
<p>The student will be able to utilize meteorological instruments: barometer, thermometer, psychrometer, etc.</p> <p>The student will be able to interpret a weather map.</p> <p>The student will be able to demonstrate the difference between convection, conduction, and radiation.</p> <p>The student will be able to visually observe and measure existing weather conditions.</p> <p>The student will be able to correlate raw meteorological data with general atmospheric conditions.</p>	<p>Meteorology Weather Observation Instrument Designing and Maintenance Climatology Radar Operation Aircraft Piloting Civil Engineering Military; surface and air operations Navigation Astronomy Photography Teaching Optics Mathematics Computer Science Aeronautical Engineering Mechanical Engineering Combustion Engineering Environmental Engineering Metallurgy Cryogenics Weather Engineering Aeronomy</p>	<p>A5 A6 A7 A8 A9 A10 A11 A12 A13 A14</p>	<p>A16 A17 A18 A19 A20 A21 D52 C53 ABC60 AD84</p>	<p>ABCD88 DI03 DI12 DI16 DI17</p>

1
6/19

Goal IV: To explore careers related to environmental health services.

BEHAVIORAL OBJECTIVES	CAREER AREAS	RESOURCES	
<p>The student will demonstrate a knowledge of the various functions and services of the local public health department.</p> <p>The student will recognize what constitutes a health problem.</p> <p>The student will demonstrate a knowledge of the many mass health services and their functions: i.e. TB Assoc., American Heart Assoc., Alcoholics Anonymous.</p> <p>The student will understand the differences in one career area such as nursing -- LVPN, RN, LPN, or medical technician versus medical technologist.</p>	<p>Health Services</p> <p>Communicable</p> <p>Disease Control</p> <p>Vital Records</p> <p>Environmental</p> <p>Sanitation</p> <p>Public Health Education</p> <p>Dental Hygiene</p> <p>Nursing -- LVPN, RN, LPN</p> <p>Medicine</p> <p>Social Work</p> <p>Hospital Administration</p> <p>Medical Technology</p> <p>Dietetics</p> <p>Food Inspection</p> <p>Industrial Health</p> <p>Engineering</p> <p>Pharmacy</p> <p>Chemistry</p> <p>Sanitation Engineering</p> <p>Bacteriology</p>	<p>A12</p> <p>A17</p> <p>A27</p> <p>C41</p> <p>A59</p> <p>ABC60</p> <p>AD84</p>	<p>ABCD88</p> <p>BD89</p> <p>BC90</p> <p>D108</p> <p>D112</p> <p>D116</p> <p>D117</p>

Goal V: To explore careers related to the development and control of physical man-made environments.

Wildlife Management Activities, p. p. 461-463, The World of Living Things

1. **Scats and droppings.** On your field trips to the forest, make a wildlife record from scats that you observe. You can tell a great deal about living things in a forest in this way.

Scats or droppings in an area mean, of course, that a bird or mammal was there. Their freshness may tell how long ago. Their contents may reveal just what the animal had been eating. From this information, an ecologist may know that the animal is starving—or fat—for animals, like humans, have favorite foods and others that they will not eat unless they have to. You, too, can learn what these signs mean.

You can also tell something about the numbers of animals from the scats. For example, scats of three different sizes might tell the wildlife scientist that two adult deer and a fawn passed that way.

2. **Feeding signs.** On the same or another field trip, study the different kinds of wildlife in your area and make a chart of the foods that each species eats. You will need to watch for the kinds of feeding signs described below.

Feeding signs are closely related to scat signs and give the ecologist additional data for his population estimates. By looking at the end of a twig which has been chewed down, he may be able to tell whether the feeder was a deer or a rabbit. Of course, the deer feeds at a much higher level. Since the teeth of these two animals are greatly different, the appearance of the chewed end gives him useful information. The deer is an ungulate, or hoofed animal. It has biting teeth (incisors) only on the lower jaw. Therefore, when it browses on twigs, it chews through the bottom part and then pulls, leaving a string of bark attached to the stem.

Browsed twigs at *different* levels are another indication that several animals passed by.

The rabbit, however, is a rodent, which has two large incisors in each jaw. It feeds by cutting off a twig or leaf and then eating it. Rabbits also feed on the bark of some trees, especially fruit trees, in winter—and they sometimes kill the trees by their feeding habits.

Among the most common signs in the woods are the chewed pine cones, nut shells, and acorns left by squirrels. You will note generally that the feeding signs are atop a stump or rock from which the squirrel can look around for possible enemies.

CODE NUMBER	ACTIVITY CODE
D-24	<p data-bbox="585 304 1293 339">Wildlife Management Activities (continued)</p> <p data-bbox="612 376 1183 596">Do you know what kinds of teeth other animals have? This would make an interesting question for research. As you visit the forest, collect signs of animal wildlife—browsed twigs, chewed nuts, barked branches. Arrange them in exhibit, carefully and clearly mounted and labeled.</p> <p data-bbox="612 632 1183 906">3. Evidences of work or play. Included among these wildlife signs are the claw marks left by bears on trees, slides made by playful otters on a muddy stream bank, dams and lodges built by beavers, and wood chips at the base of a tree in which a woodpecker has built a nest. There are many other signs. Keep your notebook handy to record each new sign as you observe it.</p> <p data-bbox="612 959 1183 1337">4. Evidences of struggle. The woods are full of the evidences of the struggle among the wildlife populations. These evidences are often overlooked, and often never encountered on a field trip. You should, however, watch for them so that your study of wildlife ecology may be more rewarding. Of course, one of the most memorable evidences of struggle is the battle itself—a flock of crows divebombing a great horned owl, a bird screeching at a snake which is stealing her eggs from the nest, a chipmunk scampering from an enemy.</p> <p data-bbox="1315 376 1885 531">Less dramatic, but more often seen by the keen-eyed observer, are the bits of fur and feathers that tell clearly a story of a battle lost—or won. But the winner may not be known. Look closely for these evidences on a field trip.</p> <p data-bbox="1315 563 1885 914">5. Tracks. Perhaps tracks should have been listed first, for they are the signs that are the best known and probably the most used by those who understand the ways of life in the wild. Certainly tracks are important signs for the hunter who is looking for game, and indeed, they give the wildlife scientist much information about populations. Tracks are especially useful in determining the direction in which wildlife is traveling; and, if there are enough of them, they mark the paths used by wildlife.</p> <p data-bbox="1315 914 1885 1007">Tracks may lead you to the homes of wildlife, especially in winter, when tracks can be most easily followed in the snow.</p> <p data-bbox="1315 1007 1885 1070">When you find clear tracks of animals, it is interesting to make plaster casts.</p> <p data-bbox="1315 1070 1885 1358">Making casts of animal tracks found in the mud or snow is easy and fun. All you need is a jar or tube of Vaseline, water, plaster of paris, and a sheet of heavy paper. First, clean out the track (it may have leaves, twigs, or a stone in it). Line the track with Vaseline. (This makes it easy to clean the dirt off the cast later.) Make a collar about 2 inches high around the track. Then pour the plaster of paris (which has been</p>

CODE NUMBER

ACTIVITY CODE

W
L
D-24

Wildlife Management Activities (continued)

soaked in water to make a thick soup) into the track. The collar will help to keep the plaster in bounds.

When the plaster has set (a few hours will do), lift it out of the track. You will now have a model of the animal's foot. Clean it off and label it.

6. **Nests, beds, or roosts.** The best evidences that certain wildlife species are living in the area you are studying are the nests they build. Nesting habits are the easiest way to determine the populations of many birds and of some mammals like the gray squirrel. There are two times of year when it is easy to locate the nests of birds. The first is the early summer season when parent birds are feeding their young in the nest. At this time, the parents will make hundreds of trips to the nest daily. The mother

bird will often help you by screaming at you as you get close. If you sit quietly at this time, the feeding will resume and you can locate the nest. The other time to locate nests is just after the first snow of winter. The nest will have snow forming a column above it and is easily seen. In winter, however, you will have to determine what kind of bird built the nest by noting the characteristics and looking in a bird book. Be sure to note the location, height above ground, type of tree in which the nest was built, and the materials used. Each of these items of information represents a species factor for some kind of bird.

As you watch the habits of birds and mammals through several seasons, you will discover from their nests and other signs, that some are found in your regions only at certain times of the year. Others live in the region the year round. Make a chart of birds and mammals that (a) live in your community, or (b) pass through during migration.

CODE NUMBER	ACTIVITY CODE
D-25	<p data-bbox="563 303 1521 343">Range Activities, pp. 463-466, <u>The World of Living Things</u></p> <p data-bbox="563 375 1138 598"><i>Grasses</i>, can be easily recognized by their hollow, jointed stems, and two rows of leaves which form a sheath around the stem. These "true grasses" are the most important range plants. Most common grasses are wheatgrass, cheatgrass brome, and buffalo grass.</p> <p data-bbox="563 598 1138 726"><i>Sedges</i> grow in areas that are very wet or where the soil is poor. They can be recognized by their triangular (three-sided), solid (not hollow) stems.</p> <p data-bbox="563 726 1138 877"><i>Forbs</i> are broadleaved herbs which grow among the grasses and sedges. Range flowers are found in this group. They include yarrow, dandelion, and many others. You will need a wildflower book to identify them all.</p> <p data-bbox="563 877 1138 973"><i>Shrubs</i> you will remember, are the small, many-stemmed woody plants like the sagebrush and mesquite.</p> <p data-bbox="563 1005 1138 1260">1. Making a range plant collection. To make a plant collection, you will need a trowel, dandelion digger, or shovel; a knife to trim plants; and a plant press. The plant press can be made from two 14" x 20" pieces of plywood (with several holes for ventilation), two straps, and several layers of newspaper or blotting paper for dryers.</p> <p data-bbox="1223 391 1798 646">Dig plants when they are in flower. Be sure to dig them with plenty of roots. A complete plant should have roots, stems, leaves, and flowers. Make a note of all information about each plant before you collect it, including where it is growing and the kind and condition of soil. Remove carefully all soil and dead material from your specimen.</p> <p data-bbox="1223 646 1798 805">Place your plant on a herbarium sheet, 11½" x 16½". If your plant is too tall to fit on the sheet of paper, the plant can be bent into an N. Glue the plant to the paper, holding the plants down with weights until the glue dries.</p> <p data-bbox="1223 805 1798 965">-Now put your specimen in the plant press (before it wilts) between two layers of porous paper for drying it. If you use newspapers, they should be changed daily to prevent fading of your specimen.</p> <p data-bbox="1223 965 1798 1053">A plant label should be placed in the lower right-hand corner of the specimen sheet. It should have the following information:</p> <ol data-bbox="1244 1053 1574 1212" style="list-style-type: none"> 1. name of plant 2. location, habitat 3. forage value 4. your name 5. date plant was collected <p data-bbox="1223 1212 1798 1372">After all the plants you collected have dried, they may be mounted in a book or on an exhibit board. Photographs of the range or pasture community where they were collected will add a great deal to your exhibit.</p>

3

D-25

Range Activities, (continued)

2. **Range plant groups.** Range ecologists group range plants into three main groups, depending on their food value, desirability to livestock, and toughness (resistance to grazing by animals). These groups are labeled according to the colors of a traffic light—green, yellow, and red.

Green group plants are the very desirable native plants. They are tender, tasty, and not resistant to heavy grazing. They are called "decreasers" because they tend to decrease as grazing becomes heavy. As the green group plants decrease, they are replaced by *yellow group plants*, other native grasses which are less tender, less tasty, or shorter. They are called "increasers" because they increase in numbers as grazing becomes heavy and green group plants decrease.

The *red group plants* are "invaders," usually outsiders which move in when green and yellow plants decrease. Their presence in the range or pasture means trouble—overgrazing, loss of protection for the soil and water, loss of range plant production.

The range ecologist must know his plants in order to watch for signs of change in his range. He must keep a constant record of the percentages of each plant group on his range. If you live in a range state, you must know the following range plants in order to keep a record of the range condition.

1. **Decreasers**—western wheat, needle and thread, side oats gramma, prairie clover, little blue stem.

An excellent range condition rating (a climax community) must have at least 15 per cent of these decreasers.

2. **Increasesers.** In excellent range, the percentages should be as follows: blue gramma, 70 per cent; buffalo grass, 10 per cent; perennial forbs, 5 per cent; sedges, 5 per cent.

3. **Invaders.** There should be none in excellent condition range. Among the invaders that may be found are Texas crabgrass, snakeweed, sage, and annual forbs.

The range condition, then, may vary all the way from the excellent "climax" to poor, depending on the percentage of climax plants:

Excellent	75-100 per cent climax plants
Good	50-75 per cent climax plants
Fair	25-50 per cent climax plants
Poor	0-25 per cent climax plants

CODE NUMBER

D-25

ACTIVITY CODE

Range Activities (continued)

It is interesting to measure and make a record of the relative numbers of range plants in the three plant groups (green, yellow, and red) on excellent, good, fair, and poor ranges. You can do this in any number of ways, from throwing a dozen stones and finding out what kind of plant they fall near, to using the famous "10-point stick" used by range clubs in the West.

To make a 10-point stick, take a board 4 feet 7 inches long and 4 inches wide. Drive ten sixteen-penny nails through the board 1 inch from one edge and 5 inches from the end and 5 inches apart, and your stick is finished.

Now all you need is a notebook to record your data and a piece of range or pasture to study. If you do not own one, ask a local rancher or farmer if you can study on his land.

Pick out areas of excellent, good, fair, and poor range. Prepare a sheet of notebook paper for each one, listing all the plants of the green, yellow, and red groups. You are now ready to start your investigation.

In each range area, go to a place that looks typical. Drop the 10-point stick and record the plants which are touched by a point. Repeat ten times, keeping on a straight line just as in the timber cruise in the forest. Keep a record of the number of times each species of plant is touched. Now you can add up the total for each plant species.

Repeat this procedure for each range condition.

3. Estimating forage yield on an acre. Range ecologists often need to know how much food (forage) is being produced per acre of rangeland. This is a good indicator of general range condition. To find out what the forage yield is, all you need is two nails, a string 1 foot 8 inches long, a pillow case, and a pair of lawn clippers. Look at Fig. A-8. Doesn't it remind you of the forest cruise plot? It should, because the technique is the same. You will use a small sample (or several) to estimate the whole acre area.

Push one nail into the ground. Keeping the string tight, mark a circle on the ground with the other nail, which is tied 1 foot 8 inches from the anchor nail. You may need to use chalk dust or powdered limestone to make the circle clearly visible on a grassy surface.

CODE NUMBER	ACTIVITY CODE
D-25	<p>Range Activities (continued)</p> <p>With the lawn clippers, cut all the plants inside the circle at the height at which animals would normally graze. (Do not include plants which the animals would not eat.) Stuff the cut plants into a pillow case or place them on a sheet. Weigh the sample, less the weight of the pillow case. Multiply the weight of the sample by 500 to get the forage yield in pounds per acre. Check several sample plots and divide the total results by the number of plots to be sure of a good average sample.</p>

ACTIVITY CODE

Water Community Activities - pp. 466-470, The World of Living Things

I. The ecologist studies a stream.

At first glance, the stream may appear to be almost lacking in living things. Then you notice a water strider skimming over the surface and a school of tiny minnows in a quiet portion of the water. To make a real study of a stream, you will need to examine it more closely. A few pieces of homemade equipment will be helpful. You will need:

boots (or sneakers if the water is warm)

o thermometer

o seine.

Most states allow you to use a seine up to 4' x 8' in size—a standard minnow seine. You can make one (Fig. A-9) by sewing several opened burlap bags together. Attach a pole on each end and put weights on the bottom to keep the seine in contact with the bottom of the stream.

o bottom rake. This can be easily made by tying a burlap bag to a garden rake so that the tines of the rake hold the bag open.

o sieve. This can be as small or as large as you wish. A good one can be made by putting wire mesh over one end of a box and letting the water run through the box.

Fig. A-9

o nylon plankton net. The open end of one of your mother's stockings can be sewed to a circular wire and the wire tied to a string. The stocking will stay open like a net as you hold it in the stream. Any animals so small that they would pass through your sieve will be held in the stocking.

o watch with a second hand

assorted bottles and cans for carrying your catch.

Once you have assembled or made your equipment, you are ready to explore a stream. Your first discovery will probably be that the rocks on the bottom of the stream are very slippery. Place a small rock in a jar of water. You will see that the rock is covered with algae. Look closely! There are several tiny animals clinging to the algae. The water is not lacking for life at all. It is alive with all kinds of living things. Now you will use some of the equipment.

38

CODE NUMBER

ACTIVITY CODE

D-28

Water Community Activities (continued)

The stocking and the sieves can be set up just below where you are exploring. Then any animals you dislodge as you pick up rocks and sticks from the bottom of the stream will be caught as they float downstream.

At first you will just want to turn over stones to see what is living on the bottoms. You should find many insect larvae (including the caddis fly which makes a fine case of sticks or sand grains in which to live), sponges, flatworms, and many other animals.

Rake the bottom with the bottom rake, making sure that the burlap bag is always downstream from you so that any animals carried by the current will be caught in the bag.

After you have captured specimens of the animals living on the bottom of the stream, you will want to try the big seine. Two of you can use the seine. Pick out a quiet stretch of stream and walk *upstream*, making sure that the seine is touching the bottom as you go. You will notice that many insects and minnows are moving along ahead of the seine. When you are ready for a catch, lift the seine quickly, angling it toward the shore. A little practice will make you an expert seiner.

What have you caught in your net and sieves downstream from where you have been working? Turn the net inside out and dip it up and down in a can of water. This will wash off any tiny plants and animals that you caught. Be sure there is enough water (taken from the stream)

for all the animals and plants. You will want to return all the organisms to the stream after you have studied them. Therefore, take care of them.

If you plan to take them to the classroom, remember that animals living in a stream need an aquarium into which air is constantly being pumped. A small aerator will do.

These tiny plants and animals are plankton. They are the beginning of a food chain for the trout and other fish—and for man. You can see now why the stream ecologist is interested in them. He knows that without the tiny plankton, there would be no food chain, no trout—no fishing for man.

The burlap bag will also prove interesting when turned inside out. Many of the tiny plankton have passed through it, but you should have many larger animals. Did you catch a crayfish? a clam? a dragonfly larva? Was there much mud in the bag? How is this important to the insects and fish in the stream? What lives on the crayfish? The other animals you found? Ecology is really the science of relationships among living things, as you are continually seeing.

What do the stream banks tell about living things? Were there any frogs, snakes, adult dragonflies, muskrat scats, raccoon tracks, or other evidence to show that other animals besides you came to the stream to look for the kinds of living things you found in your investigation?

39

CODE NUMBER

ACTIVITY CODE

D-28

Water Community Activities (continued)

Before you leave the stream, look under any wet log or stone along the shore. You should find some salamanders and beetles to add to your collection.

While this may have been fun, it was also a valuable lesson in ecology. The fisheries biologist who is interested in trout populations knows that if he finds many aquatic insect larva, there will be plenty of food for trout. He also knows that the stream is not polluted with wastes, pesticides, or detergents which kill the insects in the stream.

2. **How much water is flowing?** The stream ecologist is also interested in the supply of water in his stream. Measuring the flow of water tells the scientist about the water supply. Measuring the flow is not hard to do, and the only equipment you will need is a watch with a second hand (a stopwatch would be better) and a yardstick.

Pick out a place in the stream where the sides are straight for about 20 feet and the bottom is fairly level.

The first step is to measure the volume of water in a section of stream. Look at Fig. A-10. You will see that the section of the stream is like a box.

Its volume will be equal to 20 feet times the average width of the stream measured along several lines, times the average depth along several lines.

Volume = length x width x depth
Cubic feet = ft. x ft. x ft.

Now all you have to do is find out how long it takes your box of water to pass from A to B. Have a friend drop a leaf at point A. When the leaf has moved to point B, all the water in the box will have moved from A to B. How long did it take? Divide your volume (cubic feet) by the number of seconds it took for the leaf to move from A to B. Your answer will give the rate of flow of the stream in cubic feet per second. If you multiply the number of cubic feet by 7.5, you will have approximately the stream flow in gallons per second.

You can keep a year-long record of the flow of water in the stream. How fast does the stream flow after a rain? How long does it take it to return to normal? Does it carry mud or silt? These are data and information a stream ecologist must know.

3. **The ecologist studies a pond.**

The equipment you will need is about the same as that you used in studying the stream. You can also make good use of a few old kitchen strainers. Tie one or two to a long pole if the pond is deep.

OK

D-28

ACTIVITY CODE

Water Community Activities (continued)

Fig. A-10

As you approach a pond, always go quietly. Of course, you should do this on any field trip, but it seems especially important on the way to a pond. Many kinds of birds and wildlife come to a pond for water and food and, if you go quietly, you may see some of them. You may see a deer—or heron, blackbirds, kingfishers, or ducks, or muskrat or hawks. As you come near the pond, stop and look for turtles sunning themselves on a grassy bank or floating log.

The pond is indeed a different kind of community. The water is still and deep and quiet.

Refer to the section on plant succession in water in Chapter 11. Now you can see the various zones of vegetation—the floating plants, duckweed, and algae; the emergent plants which have their roots in the water but their

leaves above water, such as the arrowheads, pickerelweed, and cattails; the grasses and sedges of the water's edge; and the alder and willow shrubs along the shore. Each one adds a little to the filling of the pond, and its transformation to a marsh and then to the forest or grassland community.

Look at the surface of the pond! There you may see the water striders, which do indeed stride over the water; the whirligig beetles; the backswimmers which swim along upside down, using their hind legs as oars; and water boatmen, which also use their hind legs as oars but do not swim upside down. You may also see mosquito larva if you carefully take water from the surface in a white cup.

Floating leaves, either alive or dead, are excellent collecting places. Take a submerged leaf, put it in a jar of water, and watch it. It may have hydra attached, or water snails, or

14

CODE NUMBER

ACTIVITY CODE

D-28

Water Community Activities (continued)

water mites. Look for the eggs of insects and snails. Take some of these back to the school for examination with a microscope. With the microscope, you will be able to see the eggs clearly, and also any larvae developing in them. Do you find any small masses of jelly in which you can see individual animals under the microscope? These are probably colonies of Bryozoan (bry-uh-zoh-un) animals.

You may want to try your seine or net in the pond too. You will find many animals swimming about below the surface of the pond. Many of them will be feeding on the living things you just discovered on the floating leaves. Among the animals you may find are many small crustaceans, water fleas, insect larvae, crayfish, beetles, giant water bugs, and snails. Once again, it is easy to see that there are some complicated food chains in the pond for the ecologist to work out.

You should drag up a scoop of mud from the bottom of the pond in a pail or sieve. Empty the contents of your pail on the shore and watch. As the water drains out, the mud and leaves may seem to be alive with animals. Here you may find the large dragonfly larvae, salamanders, snails, clams, leeches, and worms. If you dump one handful of bottom mud and leaves into a large glass pickle jar, you may see what is meant by the dependence of living things upon one

another in a community. The dragonfly larvae, if there are any, will be seen eating everything in sight. If you have a large water bug, it will attack fish and frogs, driving its long piercing mouth parts into the animals and feeding on them.

4. **Cycles in a pond.** There are other inhabitants of the pond which you will probably not see, unless you see a dead fish or frog. Even then, you will need to use a microscope. These inhabitants are the bacteria which feed on the wastes of the pond. Yes, every animal takes his energy from the pond; every animal contributes something to the pond. The cycle of energy goes on and on, through one body after another, then back to the bottom mud to be used again. The energy may leave the pond when a frog hops onto the bank and is eaten by a heron. Or energy may be carried into the pond when the toad leaves the woods in the spring to mate and lay its eggs.

The pond ecologist is interested in more than the inhabitants of the pond community. He is interested in the water itself, and especially in what the water is holding. Water is a solvent as you have learned; it dissolves many substances and holds them in solution. Water in an average pond may contain 150 parts per million of calcium, potassium, sodium, and mag-

87

CODE NUMBER

ACTIVITY CODE

D-28

Water Community Activities (continued)

nesium salts. You know also that many substances that do not dissolve in water may be carried in suspension. For example, clay may be suspended in water and affects its color and the amount of sunlight that will penetrate through it to the plants under the surface.

Water absorbs gases, as you know. Fish and other aquatic plants and animals get their oxygen and carbon dioxide from the water. The relationship of the oxygen and carbon dioxide is of great interest to the ecologist. He knows that plants giving off oxygen as they carry on photosynthesis during the day increase the oxygen near the surface. This extra oxygen is used to form bicarbonates in the water, making the water more alkaline during the day.

At night, the tiny animals move to the surface to feed on the plants. So do the fish which feed on them. They use up the oxygen and increase the carbon-dioxide in the water at the surface. This makes the pond water more acid at night.

Lack of plants in very deep water means that there will be little oxygen at great depths in a pond. This lack of oxygen may explain why it takes so long for an old submerged stump or log to decompose on the bottom. The action of bacteria that are able to decompose organic substances without oxygen is very slow.

Water has one more property which is most important in the ecology of a pond. That is its density. Density is the weight per unit volume,

as the weight per cubic foot. The density of water is greatest at 4° C. Because of this peculiar property, the water in a pond is turned over and mixed twice a year, redistributing its nutrients and oxygen. Here is how this works.

As water cools in the winter, it gets heavier, and at 4° C. drops to the bottom of the pond. As the top cools to 0° C., it remains above the denser water at the bottom, and finally freezes into ice. This forms an insulating blanket over the pond and keeps the pond from freezing solid. This warmer water (4° C.) at the bottom of the pond is most important. It provides a relatively warm environment for the frogs, salamanders, insects, and other pond animals which spend the winter on the bottom of the pond or in the mud beneath it.

In the spring, the top layer of the pond warms up first. When it has warmed to 4° C. (becoming heavy again), this surface water sinks to the bottom, turning over the water in the pond again. Thus, the water in the bottom of a pond is warm in winter and cold in summer in relation to the water at the surface.

43

INTRODUCTION

In recent years home gardening has become more important as an economic factor in many households and decorating with indoor plants has become increasingly popular. Agri-business and vocational agriculture courses are being implemented in many school systems in response to this trend.

As a result of this upsurge of interest in plants, the revision committee felt that a goal dealing with horticulture and related career areas should be added to the Career Education Handbook for Environment. The basic idea is to involve and interest the students in learning how to grow and care for their own flowers or vegetables, both aspects of which have career potential or at least potential for an important part of the students' leisure time activities. The new unit dealing with Goal VIII has been arranged differently from the rest of the materials found in the handbook. It is felt that this presentation will be more workable as the problem of finding the coded pages has been eliminated by grouping all materials together in each subsection.

GOAL VIII: To explore Horticulture as it relates to: (a) specific career opportunities and (b) areas of personal value.

BEHAVIORAL OBJECTIVES: As a result of this particular teaching activity, the student will:

1. Demonstrate an understanding and knowledge of basic plant physiology and anatomy
2. Successfully propagate plants from seed cuttings and demonstrate knowledge of other forms of plant propagation
3. Demonstrate an understanding of soil types and soil components and their relationship to good plant growth
4. Demonstrate knowledge of horticultural principles and techniques by caring for plants in the classroom
5. Be able to list and describe at least five careers that utilize horticulture
6. Identify five different common house plants and five different common trees
7. Demonstrate knowledge of the inter-relationships of green plants with the environment

CAREER AREAS:

- | | |
|----------------------|-----------------------|
| - Horticulture | - Truck Gardener |
| - Nursery Management | - Turf Management |
| - Farmer | - Landscape Architect |
| - Geneticist | - Plant Scientist |
| - Agronomist | - Interior Decorator |
| - Forester | - Home Gardening |

Suggested Student Activities

1. Identify basic soil components (litter, duff, humus, sand, etc.) and investigate the importance of each to the development of a rich, productive soil.
2. Study the different kinds of potting soil ingredients and formulas and prepare a large supply for future class use or for sale.
3. Study the formation of soils, the relationships of the horizons, what each horizon contributes to overall fertility. Students should bring in samples from various areas to be examined.
4. Perform simple soil tests from available test kits (e.g., pH, temp). Prepare a micromonolith as outlined in the Forest Service Guide Book, included in the appendix of this section.
5. Study the various organisms found in the soil and their importance to soil formation. This activity can be used in conjunction with insect study, microscope use, and invertebrate studies. Have students try to determine what each organism contributes to the formation of the soil.
6. Conduct various plant growth experiments using soil and light variations.
7. Conduct plant growth experiments to determine the effects of fertilizer. Find out what the contents of commercial fertilizers are and determine their role in plant growth.
8. Develop a garden plot using organic techniques for pest control and fertilizing.
9. Incorporate the study of plant anatomy and basic photosynthesis while students are growing their plants so that they will have a basic working vocabulary.
10. Study and develop working compost pile either outdoors or indoors in large plastic pails or garbage cans.
11. Conduct individual plant growth activities using several different methods of plant propagation, e.g., seeds, slips, bulbs.
12. Groups of students may be interested in trying hydroponic techniques (soil-less plant growth).

13. Conduct plant growth experiments as related to variations in moisture, fertilizer, light and other environmental factors.
14. Develop a garden plot for the production and sale of flowers or vegetables.
15. Take neighborhood field trips to identify common trees using keys.
16. Obtain Wildlife Packet of trees and shrubs for planting on school grounds.
17. Develop a suitable area of the school grounds into an outdoor classroom.
18. Start a "horticulture" or "gardening" club for those students who are highly involved.

SAMPLE LESSON PLAN

- INVESTIGATION:** To investigate the growth rate of plants grown in sand, clay, topsoil and a prepared potting soil.
- MATERIALS NEEDED:**
- soil samples
 - milk cartons or other containers
 - metric rules
 - graph paper
 - seeds (bean or corn)
- SPECIFIC OBJECTIVE:** To demonstrate that good soil is essential to vigorous plant growth.
- ANTICIPATED OUTCOME:** (prediction) A difference in plant size and quality will become more apparent as the investigation progresses.
- PROCEDURE:** (allow a minimum of two weeks for this activity)
- use as a teacher demonstration with one set on materials or with lab groups of 2, 3 or 4 students per group with a separate set of materials for each group.
 - set up materials so that the following factors are constant for each set; light, temperature, water and depth of planting.
 - discuss with the students the need for controlling the above-mentioned factors.
 - take time to make some predictions about the expected results (make a record of your predictions).
 - prepare tables for recording your measurements and observations.
 - record observations before the plants emerge.
 - after emergence, make measurements and observations every other day and record the data.
 - graph the growth in centimeters of the plants in the different pots, using the average height of the plants in each container.
 - graph all four growth curves on the same sheet of paper for the purpose of comparison.
 - after the first week, predict the height of the plants in each container (based on the growth rate curves on the graph).
 - continue this investigation as time permits to show more long-range effects.
 - variations of this investigation may be used to show the effects of different amounts of light, water temperature and fertilizer.

EVALUATION:

- discuss the results, especially as they relate to proper care of plants.
- discuss the accuracy of the predictions of growth rates that were obtained.

53

A LESSON PLAN FOR SOIL INVESTIGATIONS IN LAND USE PLANNING

Set the stage for this investigation by reviewing quickly what will take place in the allotted time. For example: In the next four hours, we will develop some skills and apply them to collecting and interpreting data about the soil environment and then apply that data to making some decisions about what the best uses of this land might be. (You might want to read the behavioral objectives at the end of the lesson and refer back to them as an evaluation of the session.)

I. DESCRIBING SOIL

When you first meet the group, have them sit down and do Task A:

TASK A: (5 minutes) work by yourself

Describe in writing your own description of soil.
Keep this description for your own reference at the end of the session.

II. OBSERVING AND RECORDING THINGS IN THE SOIL

Distribute Task B cards and have class work in groups of 3 or 4 and report findings in 15 minutes.

TASK B: (15 minutes) work in small groups

1. Predict what things you will find in the top few inches of this forest floor. List your predictions.
2. Stake out an area 2 or 3 feet square on the forest floor and sift through the top 3 inches of the soil, recording the evidence of plant and animals you observe.

Name or Description of Item in the Soil	Quantity	Possible Effect on Soil

3. The following three terms are used to describe organic matter at the top of the soil - litter, duff, humus. From your study above, complete the following chart:

Term and definition	Describe the Feel	List the identifiable parts of plants and animals you found
Litter (identifiable dead things on surface)		
Duff (partially decomposed organic matter - compacted)		
Humus (almost completely decomposed non-identifiable organic matter)		

Questions and discussion:

1. What did you find?
2. When would you expect to find more organisms? different organisms?
3. How do the organisms you found benefit the soil?
4. What are some reasons for odors in the soil?

III. DEVELOPING THE SKILLS TO COLLECT SOIL DATA

Questions and discussion:

1. Move group around to the soil profile.
2. What can we see as we look at this cross-section or profile of soil?
3. What are some things that would be important to find out about it? (accept all comments)

The observable characteristics of color, texture, structure, temperature and the acidity or alkalinity (pH) of a soil are indications of some soil conditions important in land use planning.

We are going to collect and record some of this information. For the next few minutes, we will stay together as a group to develop skills in collecting soil data. After that, you will be working on your own.

Note to instructor: Quickly (10 minutes) go over the techniques for collecting the data with the participants. This instructional session is extremely important. The participants will use the skills they develop in this session when they collect data for the micromonolith.

Examples: (not necessary to discuss in this order)

1. Soil layers (Horizons)

Mark where the soil changes color and look. Many soils have 3 major layers or horizons, i.e., top soil, subsoil and parent material; because soil formation has many variables you may find more or less. (Measure and record the depth of each major layer).

2. Color

Describe and record the texture of each major layer.
(Have participants pick their own description of color.)

3. Texture (How the Soil Feels)

Determine and record the texture of each major layer.

Texture is determined by feel (push and rub moistened sample between thumb and forefinger. Spit on sample to moisten.)

If it feels gritty..... sand

If it feels smooth and slick, not very sticky..... silt

If it feels smooth, plastic, very sticky..... clay

Note: Have samples of sand, silt, clay in cans. Have participants practice with these samples to find out what the textures feel like before determining textures of the soil profile.

4. Structure (How the Soil is Put Together)

Determine the structure of each major layer. Carefully break apart a shovelful of soil from each layer and match its characteristics with one of the structure words on the lab sheet.

5. Temperature

Determine and record the temperature of each layer. Plant's growth depends upon soil temperatures during the growing season. Find out your growing season before lesson.

6. pH (Acidity or Alkalinity)

Determine and record the pH of each major layer. Plants need many soil nutrients to grow well. The degree of pH affects how plants grow.

Note to instructor: Demonstrate how to use pH kit in front of whole class. Use some foreign material like cigar ashes. Mention not to compact the sample in the porcelain dish, just use enough pH reagent to saturate soil sample, match color at the end of the soil sample and porcelain dish with pH color chart.

IV. CONSTRUCTING A SOIL MICROMONOLITH

We are going to use the skills we just developed to construct a soil micromonolith. (Explain: a micromonolith is a small cross section of this profile. You can make one by just sketching the layers on the profile sketch in Task C, or putting samples of each layer in a baby food jar, etc.

Notice there is a place to check or record the data you collect, and a place to sketch what the soil looks like.

TASK C: (20-30 minutes) Work in small groups or by yourself

Using the skills you have just developed, and the available equipment, construct a soil micromonolith of this soil profile.

Record your observations on the soil micromonolith lab sheet.

You may want to make a micromonolith using the cards and jelly cups, if so, ask your instructor.

When finished with this task, report to the instructor to receive TASK D.

Air temperature 3 ft. above soil surface	
Air temperature just above soil surface	

Sketch your soil profile, label the layers or horizons and record the data.

PROFILE SKETCH

DATA

Contents of material above soil:
 _____, Depth _____" to
 _____"

A. Topsoil (Horizon): Depth _____"
 to _____", Color _____
 Texture: Sand _____, Silt _____,
 Clay _____
 Structure: Columns _____,
 Blocky _____,
 Platey _____,
 Granules _____,
 pH _____, Temp _____,
 _____ F, Plant Roots
 Visible _____

Record below the same information
 above for the rest of the layers.

Describe type of rock in the bedrock
 (if present) _____

V. ANALYZING YOUR SOIL DATA

TASK D: (20-30 minutes) Work in small groups or by yourself.

Use the soil data you collected and the following tables. Answer the following questions:

Effect of Soil Depth on Plant Growth and Water Storage

Deep Soil (over 42") Excellent water storage and plant growth
 Mod. Deep Soil (20"-42") Good water storage and plant growth
 Shallow Soil (20" & under) Poor Water storage and plant growth

The potential of my soil for water storage and plant growth is:
 excellent _____ good _____ poor _____
 Why? _____

Some Relationship of Color to Soil Conditions

Top Soil Condition	<u>Dark</u> (dark grey, brown to black)	<u>Moderately Dark</u> (dark brown to yellow-brown)	<u>Light</u> (Pale brown to yellow)
Amount of organic material	Excellent	Good	Low
Erosion factor	Low	Medium	High
Aeration	Excellent	Good	Low
Available Nitrogen	Excellent	Good	Low
Fertility	Excellent	Good	Low

Subsurface Soil Color (B Horizon)	Condition
<u>Dull Grey</u> (if in low rainfall soils)	Water-logged soils, poor aeration
Yellow, red-brown, black (if in forest soils)	Well drained soils
Mottled grey (if in humid soils)	Somewhat poorly to poorly drained soils

a. What can you say about the following, based on the color of the top soil, or A Horizon?
 amount of organic material _____
 erosion factor _____
 fertility _____

b. What can you say about the drainage in the B Horizon, based on color?

Effect of texture on Texture	Water holding capacity	Looseness of soil
Sand	Poor	Good
Silt	Good to excellent	Good
Clay	High (plants can't use it in clay)	Poor

My soil texture Soil water-holding capacity Looseness

Topsoil (A)

Subsoil (B)

Effects of structure of soil conditions

Type	Penetration of water	Drainage	Aeration
Columns 	Good	Good vertical	Good
Blocky 	Good	Moderate	Moderate
Granular 	Good	Best	Best
Platey (low rainfall soils) (like stack of plates) 	Moderate	Moderate	Moderate

Using the structures you recorded, and the chart, "Effects of Structure", what can you say about the drainage properties of your soil for:

Topsoil (A) _____

Subsoil (B) _____

1 4.5 6.5 7 8.5 14
 (1. to 4.5 is too acid for most plants) (Most plants do best here) (8.5 to 14 is too alkaline for most plants)

Example of plants in pH range:

- pH 4.0 - 5.0: rhododendrons, camellias, azaleas, blueberries, fern, spruce
- pH 5.0 - 6.0: pines, firs, holly, daphne, spruce, oaks, birch, willow, rhododendron
- pH 6.0 - 7.0: maple, mountain ash, pansy, asters, peaches, carrots, lettuce, pines, firs
- pH 7.0 - 8.0: beech, mock orange, asparagus, sagebrush

Using the pH ranges you recorded and the table, "Examples of Plants in pH Range", complete the following chart:

Some Plants That Could Grow Here Based on the pH and Chart	Some Plants Actually Observed Growing Here

Did your inferences about the soil pH-plant relationships check out?

Yes _____ No _____ Explain: _____

Describe in a short paragraph how you would set up an experiment to collect data and construct your own soil pH-plant relationship chart.

Soil temperature

Soil Temperature	Conditions during growing season
Less than 40°F	No growth, soil bacteria and fungi not very active
40°F to 65°F	Some growth
65°F to 70°F	Fastest growth
70°F to 85°F	Some growth
Above 85°F	No growth

The growing season for my area is _____

What does the soil temperature chart tell you? _____

In the space below, convert the soil temperature table to a line graph. (5-10 min.)
(Work by yourself.)

VI. DETERMINING SOME LAND USES

Questions and discussion: We have all the information we need except the slope of the land, to discuss some land uses here.

TASK E

Determining the Slope of the Land

1. Select a place that represents the average slope of the land being studied or take several measurements and average them.
2. Place one end of a 100" stock on the slope you want to measure. Hold outright to be about level.
3. Place a level or jar with some liquid in it on the outright stock. Raise or lower the stock until level.
4. Measure the number of inches the free end of the stock is off the ground.
5. The number of inches is the slope of the land in per cent.

If you use a different length stock, then correct by using the conversion table below.

Conversion Table

<u>Length Stick Used</u>	<u>No. inches the end of the stick is above the ground</u>	<u>Multiply by conversion factor</u>	<u>% Land</u>
100"	_____	1	=
50"	_____	2	=
25"	_____	4	=

Land Use Chart

This is a chart for soils in one kind of land, climate and plants. Other areas may require a different set of criteria.

<u>Agriculture Uses</u>	<u>Slope</u>	<u>Erosion Hazard</u>	<u>Soil Depth</u>	<u>Drainage</u>	<u>Texture</u>
Farm crops-cultivation good soil mgmt. practices	0-3	None	Deep	Well Drained	Loam or silt loam
Farm crops-few to several special cultivation practices	3-20	Slight to moderate	Mod. deep	Somewhat poorly	Sandy loam or silty clay
Occasional cultivation many special practices	20-30	Severe	Shallow	Poor	Sand or clay
Pasture-woodland culti- vation, no machinery can be used	0-2	None to slight	Deep	Well to Poor	Stoney
Pasture, timber growing, woodland, wildlife, no cultivation machinery	30-90	Very severe	Deep to shallow	Well to poor	Sandy, silty, claying or rocky
Wildlife, recreation	all	None to extreme	Deep to shallow	Excessive to poor	Rockland, river wash, sand dunes

The most limiting soil factor will determine the best agricultural use of the land.

Occupancy land uses by man--

Man's valued uses of land has demanded criteria, in addition to agricultural uses, to determine proper management practices for living on the land. (Ex-amples of others include: prescriptions for aesthetic management, soil site indexes for growing timber, criteria for greenbelts, etc.)

<u>Some Uses & Factors Affecting That Use</u>	<u>Slight Limitation</u>	<u>Moderate Limitation</u>	<u>Severe Limitation</u>
Roads and Streets			
Slopes	0-12%	12-30%	Over 30%
Depth	Over 40"	20-40"	Less than 20"
Watertable	Over 20"	10-20"	Less than 10"
Building Sites			
Slopes	0-12%	20-20%	Over 20%
Depth	Over 40"	20-40"	Less than 20"
Watertable	Over 30"	20-30"	Less than 20"
Septic Tank Filter Fields			
Slope	0-7%	7-12%	Over 12%
Depth	Over 6'	4-6'	Less than 4'
Watertable depth below trench	Over 4'	2-4'	Less than 2'

Picnic and Camp Areas			
Slope	0-7%	7-15%	Over 15%
Stones	0-20%	20-50%	Over 50%
Watertable during season of use	Over 30"	20-30"	Less than 20"

TASK F: (20 minutes) work in small groups

Using the data from Task D, Task E, and the Land Use Chart, answer the following questions:

According to the agriculture and occupancy land use charts, this land could be used for:

Agriculture use: (list and explain why)

Occupancy (yes or no and with what limitations)

Roads and streets

Building sites

Septic tank filter fields

Picnic and camp areas

I feel the best uses of this land would be: (justify your answer)

What types of community action can we take to identify and help solve soil and land management problems in our community? How do these relate to zoning laws, planning commissions, local and state political discussion-making?

SUMMARY QUESTIONS

1. What did we find out about the environment in our study today?
2. How are soil characteristics important in environmental management?
3. How can we summarize our discussions and investigations?
4. What processes and methods did we use in our investigation today?
5. Let's review the behavioral outcomes for this session to see if we achieved our objectives. (Read list and have group comment.)

(Point out that the evaluation and testing was built into the task-oriented jobs that demanded the learner to do something.)

TASK I:

Describe in writing how you feel about our session today. (Evaluation)

BEHAVIORAL OUTCOMES IN KNOWLEDGE

As a result of these activities, you should be able to:

Describe 3 ways in which the living organisms in the top part of the soil affect the soil.

Construct a soil micromonolith of an assigned soil profile, determine and record texture, structure, pH, temperature, and color of each layer.

Construct a written description of a soil you studied, using the words you recorded about that soil on your micromonolith.

Demonstrate the ability to determine the best uses of the land in this area, using the data from your soil micromonolith and the land capability charts.

Describe 3 things that man does to determine the proper management of the soil resource.

BEHAVIORAL OUTCOMES IN FEELINGS, AWARENESS, VALUES AND ACTION

As a result of these activities, you should be able to:

Describe how you feel about man's effect on this soil environment.
Describe how you feel about man's effect on the soil environment where you live.

Describe what you can do to improve the use of the soil:
in your backyard:
in your community:

EQUIPMENT NEEDED: (for a class of 30 people)

6 Le Motte soil pH kits	100 jelly cups and lids	3 staplers
30 micromonolith cards	3 soilthermometers	1 box staples
6 tape measures	2 #10 cans of water	2 shovels
30 sets of lab sheets	30 hand lenses	3 yardsticks
3 stocks (50" or 100" long)	3 baby food jars, 1/2-full of water	
labels to differentiate soil horizons		

This lesson plan was developed for use in teacher workshops by:

Phyllis Enger, Seattle, Washington
Dave Kennedy, Olympia, Washington
Don Cannard, Vancouver, Washington
Ernie McDonald, Portland, Oregon
George Otte, Willsboro, Oregon

The lesson plan was revised in November 1971. It is suggested by the writers that continuous revision take place by people who use the ideas.

KEY TO THE MORE IMPORTANT IOWA TREES
 Prepared by Pauline L. Sauer

- 1a. Trees with needle-, scale-, or awl-like leaves
- 2a. Leaves needle-like
- 3a. Needles in bundles or tufts
- 4a. 2-5 needles per bundle (pines)
- 5a. 5 needles per bundle White pine
- 5b. Fewer than 5 needles per bundle
- 6a. 2-3 needles per bundle, stout, dark yellow-green
 5-11 inches long Western yellow pine
- 6b. 2 needles per bundle
- 7a. Needles over 3" long
- 8a. Needles 4-6" long, flexible, slender, straight,
 from sheath $\frac{1}{2}$ -1 $\frac{1}{2}$ " long Norway (red) pine
- 8b. Needles 3-5" long, stiff, stout, incurved, from
 sheath about $\frac{1}{2}$ " long Austrian (black) pine
- 7b. Needles 3" or under
- 9a. Needles 2-3" long, flat, twisted Scotch pine
- 9b. Needles $\frac{1}{2}$ -1 $\frac{1}{2}$ " long, thick, spreading Jack pine
- 4b. Needles in tufts of 10 or more on short, stout lateral shoots;
 needles flat, slender, pale green, about 1" long, dropping in
 autumn Tamarack (larch)
- 3b. Needles borne singly along the twig
- 10a. Needles flat, flexible
- 11a. Needles with two white lines on lower surfaces, cones drooping
- 12a. Needles stalked, $\frac{1}{2}$ " long, leaving twigs rough after falling;
 cones about $\frac{3}{4}$ " long Hemlock
- 12b. Needles arrowed at base, $\frac{3}{4}$ -1 $\frac{1}{2}$ " long, cones 2-4 $\frac{1}{2}$ " long
 with 3-pointed bracts Douglas fir
- 11b. Needles without two white lines on lower surface, leaving
 flat circular scars on twig after falling; cones upright
- 13a. Needles $\frac{1}{2}$ - $\frac{3}{4}$ " long, crowded, silvery beneath Balsam fir
- 13b. Needles mostly $\frac{1}{2}$ " long, not crowded, pale green
 or silvery White fir
- 10b. Needles 4-sided, stiff, leaving twig rough after falling,
 cones drooping (spruces)
- 14a. Twigs drooping; needles $\frac{1}{2}$ -1" long, stiff, dark
 green; cones 5-7" long Norway spruce
- 14b. Twigs not drooping
- 15a. Needles $\frac{1}{3}$ -1" long, pointed but not sharp,
 whitish green; cones to 2" long White spruce
- 15b. Needles to $\frac{1}{2}$ " long, stiff and sharp-pointed,
 light gray-blue; cones to 4" long Colorado blue spruce
- 2b. Leaves scale-like or awl-like (cedars)
- 16a. Leaves all scale-like, flat; twig appearing as if pressed;
 fruit a small cone White cedar (arbor vitae)
- 16b. Leaves often of 2 kinds on the same plant, some overlapping
 and scale-like, others spreading and awl-like; fruit
 berry-like, blue-gray Red cedar (juniper)
- 1b. Leaves broad and flat
- 17a. Leaves fan-shaped, usually 2-lobed, usually clustered on short
 stout, spur-like shoots Ginkgo
- 17b. Leaves not fan-shaped nor 2-lobed
- 18a. Leaves whorled; 3 at a node, blades 5-12" long, heart shaped,
 pointed Catalpa
- 18b. Leaves not whorled

- 19a. Leaves opposite, 2 per node
- 20a. Leaves simple, lobed; fruit a 2-winged samara (maples)
- 21a. Leaf notches round (hard maples)
- 22a. Leaves 3-5 lobed, thin, green above, paler beneath; wings of fruit almost parallel or slightly spreading Sugar maple
- 22b. Leaves 5-7 lobed, thick, deep green above and beneath, with milky juice, hair-like tips on lobes; wings of fruit spreading in almost a straight line Norway maple
- 21b. Leaf notches acute, margin much-toothed, leaf silvery beneath (soft maples)
- 23a. Leaf lobes 3-5, short and broad; notches shallow, broad Red maple
- 23b. Leaf lobes 5, long and slender; notches deep, narrow Silver maple
- 20b. Leaves compound
- 24a. Leaves pinnately compound
- 25a. 3-5 leaflets, irregularly shaped Boxelder
- 25b. 5-11 leaflets, all similarly shaped (ashes)
- 26a. Leaflets 7-11, not stalked. Black ash
- 26b. Leaflets 5-9, stalked
- 27a. Leaflet margins only slightly and sparsely toothed White ash
- 27b. Leaflet margins noticeably toothed Green ash
- 24b. Leaves palmately compound
- 28a. Leaflets usually 5, light green, broadest at middle, tapering at both ends Ohio Buckeye
- 28b. Leaflets usually 7, dark green, broadest near the tip Horse chestnut
- 19b. Leaves alternate, 1 per node
- 29a. Leaves compound
- 30a. Some leaves bipinnately compound (legumes)
- 31a. Leaflets rounded at tips, 3/4-1 1/2" long; trees often with branched thorns Honey locust
- 31b. Leaflets pointed at tips, 2-2 1/2" long; trees thornless Kentucky coffeetree
- 30b. All leaves once pinnately compound
- 32a. Leaflets 5-11, terminal ones conspicuously larger than others (hickories)
- 33a. Petiole smooth; leaflets usually 5 (5-7); bark shaggy Shagbark hickory
- 33b. Petiole hairy; leaflets usually 9 (7-13); bark smooth Bitternut hickory
- 32b. Leaflets 11-23, all about the same size
- 34a. Leaflets even; twigs with paired thick short spines Black locust
- 34b. Leaflets toothed; twigs without spines or thorns
- 35a. Leaflets toothed only near the base; leaf base swollen and exuding milky juice when picked; crushed leaflet rank smelling Ailanthus
- 35b. Leaflets toothed throughout
- 36a. Leaflet tips bluntly pointed, teeth very regular, leaflets dull green above, woolly below; fruit a cluster of scarlet berries European mountainash
- 36b. Leaflet tips acute; twigs with chambered pith; fruit a nut (walnuts)
- 37a. Leaflets 11-17, downy, especially beneath; fruit an oblong, clammy, pointed nut; pith chocolate-colored Butternut
- 37b. Leaflets 13-25, terminal one often missing, smooth above, very slightly downy beneath; fruit a globular, roughly dotted nut; pith cream-colored Black walnut
- 29b. Leaves simple

- 38a. Leaf margin even and unlobed
- 39a. Leaves broadly heart-shaped Redbud
- 39b. Leaves longer than broad
- 40a. Leaves silvery Russian olive
- 40b. Leaves not silvery
- 41a. Leaves ovate; stout spine on twig at base of leaf; fruit size of orange, green Osage orange
- 41b. Leaves not ovate, 4-6" long, green above, pale downy beneath; leaves with stout, hairy petioles; fruit an acorn Shingle oak
- 38b. Leaf margin wavy, lobed, or toothed
- 42a. Leaf margin coarsely wavy to lobed
- 43a. Leaf margins coarsely wavy
- 44a. Leaves obovate, base wedge-shaped, leathery green above, whitish downy beneath; bark on young branches with curling scales Swamp white oak
- 44b. Leaves ovate, shiny dark green above, densely white downy beneath White poplar
- 43b. Leaf margin definitely lobed
- 45a. Leaves about as broad as long
- 46a. Leaf lobes rounded; leaves dark green above, densely white woolly beneath; tree columnar White poplar
- 46b. Leaf lobes pointed; leaves not densely woolly beneath
- 47a. Terminal lobe rather square but indented Tulip-tree
- 47b. Terminal lobe tapering acute
- 48a. Leaf lobes shallow; entire lower surface or leaf scurfy-downy below till old; older bark on upper part of tree pulling away revealing greenish or whitish inner bark Sycamore
- 48b. Leaf lobes deep, more than half-way to midvein; twigs with clustered terminal buds; fruit an acorn Pin oak
- 45b. Leaves longer than broad
- 49a. Leaves somewhat triangular in outline, toothed; twigs drooping Weeping birch
- 49b. Leaves not triangular in outline
- 50a. Twigs without clustered terminal buds (mulberries)
- 51a. Leaves smooth or rough above, somewhat downy beneath Red mulberry
- 51b. Leaves glossy above, nearly smooth beneath White mulberry
- 50b. Twigs with clustered terminal buds; fruit an acorn (Oaks)
- 52a. Leaf lobes rounded (white oaks)
- 53a. Leaf notches shallow, less than $\frac{1}{2}$ way to midvein Swamp white oak
- 53b. Some or all of leaf notches deep, more than $\frac{1}{2}$ way to midvein
- 54a. Leaf notches usually all deep and somewhat similar in size and shape White oak
- 54b. Some leaves with only 1 pair of very deep and wide notches, almost to the midvein; notches above and below shallower Bur oak
- 52b. Leaf lobes bristle-pointed (red or black oaks)
- 55a. Leaf notches shallow, usually less than $\frac{1}{2}$ way to midvein
- 56a. Leaf not hairy below, thin, dull green above; acorn with broad shallow cup Red oak
- 56b. Leaf soft-hairy below; thick, leathery, glossy above; acorn cup covering about $\frac{1}{2}$ of nut Black oak
- 55b. Leaf notches deep, more than $\frac{1}{2}$ way to midvein Pin oak
- 42b. Leaf margin toothed

- 57a. Tree with thorns or thorn-like stunted twigs
- 58a. Thorns smooth, tapering, sharp; twigs gray; leaf veins straight Hawthorne
- 58b. Thorns more like stunted twigs
- 59a. Leaf veins straight Wild crab
- 59b. Leaf veins curved, strongly so near margin, prominent on both sides of leaf; raised light spots on twigs Wild plum
- 57b. Trees thornless
- 60a. Leaf base usually decidedly lopsided
- 61a. Leaves broadly heart-shaped Basswood (linden)
- 61b. Leaves not broadly heart-shaped
- 62a. Leaves lanceolate, base untoothed Hackberry
- 62b. Leaves ovate
- 63a. Leaves 1-3" long Chinese elm
- 63b. Leaves 3-6" long
- 64a. Branches with corky ridges Cork Elm
- 64b. Branches without corky ridges
- 65a. Leaves very harsh and rough on both surfaces Slippery (red) elm
- 65b. Leaves somewhat rough above, smooth or hairy below American (white) elm
- 60b. Leaf base usually essentially symmetrical
- 66a. Leaves long, narrow, usually several times as long as broad, with bitter quinine taste when chewed; twigs slender, shiny, flexible Willows
- 66b. Leaves broader
- 67a. Petiole flattened at right angles to leaf blade (poplars)
- 68a. Leaves ovate to circular (aspens)
- 69a. Leaves 2-4" long, circular, finely toothed Trembling aspen
- 69b. Leaves 3-5" long, ovate to circular, coarsely toothed (about 9 teeth on each side) Large-toothed aspen
- 68b. Leaves triangular (poplars)
- 70a. Marginal teeth not conspicuously incurved, fine throughout Lombardy-poplar
- 70b. Marginal teeth conspicuously incurved, larger near base Cottonwood
- 67b. Petiole approximately circular
- 71a. Leaf veins straight
- 72a. Only one marginal tooth per vein Chestnut
- 72b. Several marginal teeth per vein; trees with shreddy or peeling bark
- 73a. Bark shreddy with $\frac{1}{2}$ " almost vertical strips; leaves thin and papery, leaf base heart-shaped Ironwood
- 73b. Bark peeling horizontally
- 74a. Bark white White (paper, canoe) birch
- 74b. Bark bronze, peeling in thin, glistening curls; twigs with wintergreen flavor Yellow birch
- 71b. Leaf veins curved
- 75a. Leaves with milky juice
- 76a. Leaves smooth or rough above, somewhat downy beneath Red mulberry
- 76b. Leaves glossy above, nearly smooth beneath White mulberry
- 75b. Leaves without milky juice

77a. Smooth dark twigs with light-colored horizontal raised dots (cherries)

78a. Widest part of leaves 1/3 way from tip; teeth flare outward slightly

78b. Leaves widest near center, tapering at both ends. Teeth incurved

79a. Twigs white-dotted, pith brown

79b. Twigs brownish-dotted, pith white, twig bright red

77b. Twigs without light-colored raised dots; leaves large, ovate, fragrant, smooth-petioled, bright green above, whitish beneath

Choke cherry

Black cherry

Pin cherry

Balsam poplar

For two years, the following project has been implemented as extra-curricular at Kurtz Junior High. It could be incorporated into the secondary curriculum or replace an existing unit. Many modifications are also possible to meet individual classrooms, teachers, and students.*

Included are:

1. How this project was initiated
2. A list of activities involving students
3. Interdepartmental co-operation
4. Sample order blanks

The implications for careers are numerous and varied, including:

1. Farmer
2. Nursery management
3. Interior decorator
4. Home gardening

PLANT PROJECT REPORT FOR KURTZ JUNIOR HIGH SCHOOL

8TH GRADE SCIENCE REPORT

submitted by Mrs. Frieda Griffin

A plastic covered tent on a wood frame was placed on three tables bolted together - total area - 24 square feet - this was lighted with a four tube flourescent light and two red incandescent bulbs.

In late January, stem cuttings were taken from plants already in classrooms at Kurtz and placed in the greenhouse for rooting. When these were ready for planting, they were made available to the faculty free of charge if they would bring their own containers and pay for the potting soil.

When students finished their physical science labs, they would assist in a variety of responsibilities.

As more plants were available, students wanted them, also, so we began charging a nominal fee of 25c per plant - the interest was fantastic - within a month, it became evident we needed more room. One class of students went through catalogs to obtain prices on various types of lighted plant shelves - cost was a factor so the students obtained permission from the principal to expand the project and grow tomatoes, peppers and geraniums for their parents and take orders for these. The success of the project and the enthusiasm of the students far exceeded anyone's expectations.

The following activities were carried out by students:

1. A science notebook was ruled and established as a financial record of all transactions.
2. All financial transactions were recorded and kept current by students.
3. Orders were recorded and numbered by two students in each class as they were received.
4. Seed medium mixed.
5. Potting soil mixed.
6. Seeds planted.
7. Pots washed.
8. Styrofaom cups perforated for draining.
9. Trays lined for placement of transplanted plants.
10. All trays labelled.

11. Daily watering.
12. Planting scoops made out of detergent bottles.
13. Orange juice glasses from cafeteria washed and perforated for planting.
14. Card board boxes cut off for plant trays.
15. Ice cream sticks washed for plant labelling and price markers.
16. 1/2 pint milk cartons washed and cut off and perforated for planting containers.
17. Plants carried to and from the roof daily for "hardening".
18. Orders filled by numerical order in which they arrived.
19. Orders cross-indexed and alphabetized so customers could know their number immediately.
20. Made posters for advertising.
21. Built storage shelves.
22. Made labelling signs and directions for mixing potting soil and placed in the "dirt room" so anyone could mix potting soil any time without supervision.
23. Made bulletin board.
24. Ran the market days and totalled all orders.
25. Kept a current financial standing on the board daily so progress was a public reality.
26. Set up Mothers' Day Sale displays in various parts of the building.
27. Took care of plants in various parts of the building.
28. Made deliveries.
29. Cleaned, cleaned, and cleaned.

There were also students who contacted merchants and received donations of wicker baskets which were made into hanging baskets and sold.

The Art Department gave the Science Department a tremendous assist by making terrariums with bottles donated by many different people and some of the plants donated and some furnished by the Science Department. Profits from the terrariums were added to the Plant Project.

The co-operation of the administration, the entire faculty and the entire student body has been exceptional. Student volunteer help both before and after school was an important factor in getting all the jobs finished on schedule.

This was not a full-time class project. Not more than seven full school days were used - all other work was done by students as they finished their physical science labs and had time remaining in a period. (This project has been the most motivating factor I have ever experienced in terms of students having a high level of desire to complete their regular classwork.)

A survey of all adults attending the market days shows 100% want the project carried on again next year.

No student has expressed, to me, any negative reaction to the entire project. Even one boy with a severe allergy still wants to stay in the classroom.

We filled 145 orders and I would estimate that since February 1, 1974, to date, May 20, we have probably sold approximately four thousand plants.

There was at least equal interest between boys and girls. If the interest was weighted at all, it would be my opinion that the boys' interest was slightly higher than the girls.

When the students began taking orders, we were already in debt -- at one time the debt was \$131.00. Our goal was to earn \$300.00 to get the shelf the students wanted. As of today, May 20, our present financial standing is:

Total Expenditures	\$ 852.05
Total Income	1237.36
	<hr/>
Total Profit	\$ 385.31

The profit listed is monies remaining after the shelf (\$345.60) is paid for and in use. Since we now have monies on hand and can order soil supplies in bulk quantities, we have been offered a 20% discount so we will be buying some soil supplies for next year, probably within the coming week.

Your order number is _____

You ordered _____ tomatoes

Would you indicate your choice of varieties in any combination you wish, you may increase the size of the order if you like as we have planted extra.

_____ Rutgers - medium-late, very meaty type tomato

_____ Hines - very popular canning tomato

_____ Big Boy Hybrid - semi-early

_____ Marglobe - medium early

_____ Earliana - early tomato

_____ Tiny Tim - small cherry salad tomato, suitable for garden or patio pot

_____ Sub arctic - very early small cherry salad tomato

_____ Yellow pear tomato - a yellow very meaty tomato

_____ Variety of other hybrids

DETACH AND RETURN ABOVE PORTION ONLY

If you ordered peppers or geraniums, you need not make a variety selection. Please return this immediately to make our work easier. Our selection of other plants increases each day.

We are looking forward to seeing you when you pick up your plants on Market Days. We will have the Market open from 8:00 a.m. through 6:00 p.m. on May 14 and May 15. There will be signs directing you to room 203 and students to carry out your plants for you and to give you information on the progress of our project.

Please bring visitors who have not placed previous orders, we would like to make as many people as possible aware of this fine project by our Kurtz students, and we plan to have plenty of extra plants.

Thank you for your cooperation.

Sincerely,

Mrs. Griffin and Students

TO INTERESTED PARTIES:

In addition to the regular Physical Science course being offered to 8th grade students at Kurtz Junior High, Mrs. Griffin and the second semester science students have been operating a small indoor greenhouse. The interest in this project has been tremendous. The student work has been volunteer and our supplies limited.

We would like to add a large tiered, lighted shelf to our science department, and we feel we could easily do this with funds obtained by selling plants to parents.

Since our space is limited, we would need to have your orders by March 25. In the event of large numbers of orders, we would have to fill these in the order in which they arrive.

We will sell individually potted plants. These plants will be started in seed trays and then transplanted to individual containers, ready to plant outdoors. We will have the plants ready by May 15th.

We would use old pots if you have any you do not want - any type or size for planting - they do not have to be clean - we have good help here!!

1. A variety of tomato plants at 25c each
2. Green sweet peppers - 25c each
3. Geraniums - 25c each

There will be a limited supply of other plants - some house plants, some bedding plants and some plants suitable for gifts. We welcome visitors, so if you have personal inquiries, visit us in room 203 anytime between 8:00 a.m. and 4:00 p.m. or send inquiries by way of students. Please do not call the office, since the office staff would probably not be able to answer your questions concerning supplies on hand.

More detailed information will be given out later regarding different varieties, but for now if you would complete the blank below with just the number of each of the plants, it will be a help to us.

Mrs. Griffin and Students

Plants	Number of each	Price
Tomatoes	_____	25c each
Green sweet peppers	_____	25c each
Geraniums	_____	25c each

The purpose of this exercise is to acquaint you with the concept of the local water budget. Learning how to organize certain data given will enable you to account for moisture income, storage and outgo at a particular area. In order to accomplish this goal we will first use as an example data concerning Houston, Texas and then follow the identical steps to learn about our own area.

There are three steps in each part of this exercise. They are A) filling in the data table on the attached sheets, B) constructing a graph to visualize the data from the table, and C) interpret the graph by answering a series of questions concerning the graph.

Part I

A. Directions for filling in the top table -

Definition of symbols -

P - precipitation (rain, snow, sleet, hail)

PE - Potential evapotranspiration, this is the amount of moisture that will evaporate from surfaces combined with the moisture given off by plants.

P-PE - difference between P and PE is larger then the result will be a - number

AST - change in the soil moisture storage since the previous month. If water is added this will be a number, if water is withdrawn this will be a number.

ST - soil moisture storage at the end of the month. This cannot be more than 100 or less than 0.

AE - actual evapotranspiration

D - water deficit

S - water surplus

To start the Calculations:

1. Remember numbers are in mm moisture. (There are 25.4 millimeters in one inch.) Scientists use 100mm. as the average storage capacity but could vary depending on soil porosity and other factors.
2. Place the P (precipitation) and PE (potential evaporation) numbers in the proper boxes. (This has already been done for you in the example tables.)

3. Subtract the PE number from the P number and place this difference in the P-PE box. If the P number is smaller than the PE subtract it and indicate the difference by putting a - in front of the number.
4. Add up all the positive P-PE numbers.

A. If the number is 100 or greater - Put 100 in the ST box for the month before the first negative P-PE value.

Put whatever the number is in the ST box for the month before the first

Start calculations with the first month that shows a negative P-PE number. Example - since there is 100mm of stored in April when you subtract the -6 for May you now have -6 in the Δ ST box indicating change and only 94 left in the storage (ST). In June you subtract -30 the change (Δ ST) -30 and now your storage has dropped to 64 (ST). In July when you see the -84 to be subtracted, realize that there is only 64 left stored so that if all the change possible for the Δ ST number and the storage (ST) is now 0. Continue the same steps for the other months.

Important to Remember

- A. The most you can store (ST) is 100 and least there can be is 0
- B. Withdraw from storage (ST) means Δ ST is -
- C. Deposit to storage means Δ ST is +

6. You are now ready to compute the AE or actual evapotranspiration. This number will be equal to the potential in any month where the P number is larger than the PE. In other words, if there is enough rain to evaporate that much moisture. In any month when there is not enough rain PE to evaporate the PE amount, all the rain that falls will evaporate plus any that is stored in the ground (ST). (If none is stored then only the P amount will be evaporated.)

7. The deficit (D) number is the shortage in the soil. This number would 0 anytime the P is larger than the PE. If the PE is larger than the P number the deficit (D) will be the difference between the two.

8. To obtain the S (surplus) it is necessary to look at the amount stored (ST). Anytime 100 is stored then the surplus would be the difference between the P and the PE (left over rain). When the storage (ST) is 0 there can be no surplus (S) until the full 100 is stored. Anything left over after

B. Directions for completing the graph:

1. Place P numbers on the graph putting a dot in the center of each month's column. Connect the dots with a colored pencil. Make the January and December lines go up or down whatever the case may be to show that they would be continuous.
2. Repeat the procedure for the PE numbers only connect these dots with a different colored pencil.
3. Label each line at its beginning and end with its letter so you can remember what each line stands for.
4. The recharge markings should be used whenever the P line is higher than the PE until such time that a surplus occurs.
5. The usage markings are to be used whenever the PE line is above the P line until such time that a deficit occurs. In the middle of the deficit month begin using deficit markings.

C. Interpretation:

After completing the graph for the Houston area, answer the following questions.

1. How well does the precipitation pattern match the PE curve through the year?
2. Why is PE so low in January and so high in July?
3. During what months does a water surplus occur? Mark this on your graph.
4. How do you know when to end the water surplus period? What causes the surplus period?
5. When did a period of water deficit begin? Mark this on your graph.
6. During what months is stored moisture drawn from the soil by plants and evaporation?
7. During what months would you say that irrigation is most likely to be needed?

RECHARGE

Part II

After completing the information for Houston, Texas, use the data on the attached pages and fill in the top table and construct a graph for the Phoenix, Arizona, area. If time permits, you may want to study some other part of the country. Compare all of your graphs and interpret your findings using the list of questions as a guide.

SUMMARY

Water on the land can be considered in terms of income, storage, and outgo. Precipitation is the important source of income. Its distribution on the earth varies widely and depends on the season and geographic location.

Water reaching the land through precipitation may infiltrate, run off, or evaporate and transpire. Water may be stored on the land in snowfields, ice caps, lakes, and streams. Or water may be stored in the soil as capillary water in the root zone or as gravity water at low levels. Water is removed from the land largely by evapotranspiration. Two-thirds of the precipitation falling on the continents as run off in surface streams and ground water.

The local water budget is a convenient model to account for income, storage, and outgo at a particular place. By the means a value for deficit or surplus may be derived for each month. In adjusting to his environment and altering it for his convenience, man sometimes finds it necessary to change the patterns of water on the land.

Water Pollution Investigation

This enrichment unit is designed to provide some insights into the health aspects of water - its supply, pollution and re-use.

The Nature of Pure Water (c. DOW Chemical Company)

- Materials: eye droppers
drinking water
one quart of:
- a) fresh tap water
 - b) tap water after setting for 24 hours
 - c) well water (safe for drinking)
 - d) river or lake - label sample jars with letters only; don't tell students what they are.
 - e) rain water
 - f) distilled water
 - g) diluted vinegar
 - h) diluted NaOH (caustic) solution - 1 pellet/quart

Before you start! Two or three drops applied directly on the tongue from an eye dropper provide an adequate taste sample. Sip the water; DO NOT swallow it. Have students rinse out their mouths with water after each taste. Each student should see, smell, taste and feel each sample and then describe it. Fill in the following chart, answering "yes" or "no".

Sample	A	B	C	D	E	F	G	H
does it look good?								
does it feel good?								
does it smell good?								
does it taste good?								

Conclusion:

1. Which sample looks, smells, feels and tastes best?
2. Which is the best for drinking?
3. Which is worst?

Explain what each sample was and how it can be improved by treatment?
The vinegar (acid) feels "squeaky". Bases are slippery. If it isn't either, it is generally neutral.

Answer to Question #3

Water treatment for the various samples. (Samples A-G)

- a. none
- b. none
- c. Chlorination and/or aeration and action.
- d. Chlorination plus settling, aeration and action,
- e. Chlorination usually is necessary.
- f. Add mild basic salts to neutralize acid - allow to settle and neutralize, chlorinate.
- g. Add mild acid to neutralize base; allow to settle and neutralize, chlorinate.

Water Pollution Investigation - The Effect of Sunlight And Time On Water Purification. (c. 1971, Dow Chemical Company)

Materials: One quart of a soapy dish of water and a dish of tap water for each group.

- Procedure:
- a) Note the appearance and odor of both samples at the beginning of the investigation.
 - b) Place both jars in a quiet area out of the sun.
 - c) Let students hypothesize as to what will happen in each of the jars by the end of the hour and in 24 hours. Record observations next to the hypothesis.

	1 hour	24 hours
	Hypothesis/Observation	Hypothesis/Observation
A		
B		

- 1. Has anything settled out?
- 2. What does this mean to the community?
- 3. Is dish water good for people to drink? Why or why not?
- 4. Any grand conclusions?

Water Pollution Investigation - The Effect of Aeration And Filtration On Water Purification

Materials: previous samples of soapy dish and tap water
filter paper (paper towels will do)
funnel
2 aerators from a fish aquarium
empty container for each sample

Procedure: Pour water into separate containers from each jar through the filter paper shaped into the funnel. Put the aerator tube into this filtered water for one hour, 24 hours. Note any changes in appearance or odor.

Conclusions: What effects does settling, filtration and aeration have on the appearance of each jar of water? Any grand conclusions?

Soil Management and its Contribution to Water Pollution (c. 1971, Dow Chemical Company)

Materials: 2 pie tins
enough soil to fill 2 pie tins evenly
grass seed
2 containers to catch run-off water

Procedure:

- a) Sprinkle grass seed on one pie tin with the soil in it. Press the seed into the soil and moisten well. Place in sunlight and water twice daily. Let it grow 2-3 weeks. (As an alternate to actually growing the grass, use a piece of sod approximately the size of a pie tin.)
- b) Set pie tins (one with soil and grass and the other with soil alone) on a slant on the edge of a table with the catch basins on the floor under them. Sprinkle equal amounts of water on the two pie tins. Compare the amount and quality of water in each catch pan.

Conclusions:

1. How can environment contribute to water pollution?
2. Is the logging or construction industry at fault in this?
3. What are some possible solutions to this problem?
4. How can you apply these results and problems to the desert?

Investigation on the Effectiveness of Methods of Water Treatment**

Sample	Total Phosphorous (mg/liter)	Total Nitrogen (mg/liter)	Degree of Algae Growth	
			10 days	30 days
a. lake water alone	0.01	0.42	11	111
b. lake water + filtered raw sewage	0.07	1.18	111	1111
c. lake water + 4 ml. treated sewage from secondary sewage plant	0.14	1.18	11	111
d. lake water + 4 ml. sewage + special removal of phosphorous compounds	0.02	1.13	1	11

e. same as d except phosphorous compounds added back after treatment	0.14	1.13	1	111
--	------	------	---	-----

(** It will be necessary to discuss with class various methods of water treatment).

Polluted lakes usually have a heavy growth of algae. This often looks like a green scum on the water. The many live algae and dead and decaying algae give off a rotten, fishy smell.

The exact cause of heavy growths of algae have been discussed and argued for years. Scientists don't yet agree on the cause. Man has polluted water with many substances. Two chemicals are usually blamed for the great increase in algal growths: nitrogen and phosphorous compounds. The data in the above figure is from a laboratory experiment. It was designed to test the importance of these compounds. Algae were grown in the test containers in the light at 22 degrees Centigrade. One set was grown for 10 days and the other for 30 days. The colors indicate the colors of the filters through which the algal growths were passed after 10 and 30 days. If only a few algae grew in the water, the filter was light-colored. If many grew, the filter was a bright green.

1. How do steps b and c relate to specific types of water treatment?
2. How effective are b and c in removing nitrogen and phosphorous from the water?
3. How is the nitrogen and phosphorous content of the water related to algal growth? Explain completely. You will probably have to do some outside research to come up with the answer.
4. Is nitrogen dangerous as it leaches (look it up) down through agricultural soils? If so, how? How much nitrogen based fertilizers are used on agricultural fields yearly in the area?
5. Where does the majority of phosphates in polluted water come from?
6. Does step d successfully remove the phosphates? What happens to algal growth after phosphate removal? Why?
7. Check with Water Sanitation People. How important is phosphate pollution of city waters? Will it continue to be this kind of problem or is it getting bigger? What can be done to stop this problem?
8. Tertiary water treatment (step d) is expensive. Suggest a better alternative to phosphate removal from polluted waters.

Many times when data is collected it is pictured on a graph. By the use of graphs, it is easy to see how one factor is related to another. This exercise is designed to help you make and read one type of graph, the line graph.

HOW TO USE THIS PROGRAM

You will learn a great deal from this program if you use it properly. Cover all of the page with a sheet of paper. Then pull down the sheet of paper until you come to the first "frame" (information and blank spaces for you to write in.) Look at the first frame: carefully study the information. Try to answer the question by filling in the blanks. Then pull down the sheet of paper until you can see the correct answer (to the left.) Of course it is easy to simply look at the correct answers and copy them but you would not learn very much: In a program you learn from answering questions, not from copying answers. A program is not a test! There is no penalty for wrong answers. If you do get an answer that doesn't agree with the program, go back to the previous frame and find out where you went wrong.

1. The drawing below shows a line graph.

A line graph has three basic parts. They are

A. _____ B. _____
C. _____

- A. vertical axis
- B. horizontal axis
- C. line

2. The arrow in this drawing points to the _____ axis.

vertical

3. In this drawing the arrow points to the _____ axis.

horizontal axis

4. The _____ axis runs from the bottom to the top of the graph.

vertical

5. The arrow in this drawing points to the _____

line

6. Label the parts of a line graph

1. _____

2. _____

3. _____

- 1. vertical axis
- 2. line
- 3. horizontal axis

7. When one constructs a graph, one places a dot at the intersection of the correct vertical and horizontal line. In order to show increase of a quantity, you place the dot higher on the graph. If you want to show a _____ of a quantity you place the dot higher on the graph.

decrease

8. The lines on either the vertical or horizontal axis should be evenly spaced with the same value between each line. If a vertical axis began 0, 2, 4, 6, the next line should be marked _____

8

9. If the horizontal axis begins 0, 5, 10, 15, 20, the next number would be _____

25

10. If you connect the dots on your graph, the line will go up, down, or stay at the same level. If the line goes up, it shows an increase; and if it goes down, there is a _____. If there is no change, the line would _____

decrease
stay the
same

11. If one were reading a graph and saw two lines, as in the figure below, which line is showing the fastest increase? _____

A

12. In the following graph, the line shows first a _____ then a _____ followed by a _____

103

Making a Graph

decrease
increase
decrease

13. Is the following line showing an increase, decrease or no change?

Ans. _____

no change

14. The amount of material to be presented on a graph will determine what value is given to each line. In order to make the graph easy to read, the entire space available should be used if possible. The graduations (spaces between the lines) can be any convenient value. If you had the numbers 2 8 14 and 18 to put on a graph that had to be placed vertically on a graph with 25 lines, what value would you give each line?

1

15. IF you had 20 lines and you had to show the numbers 15 30 45 60 and 85, what value would you give each line? _____

5

16. Unless unusual data is to be presented, both the horizontal and vertical axis should start at the complete absence of any of the quantity to be shown. What value would you give the very bottom line? _____

0

17. What number would you give the line to the extreme left? _____

0

18. Observe the graph below:

What was the temperature at 12 o'clock? _____

5 degrees

19. Between 12:00 and 1:00 did the temperature rise or fall?

rise

20. How much did it change? _____

5 degrees

21. Often due to lack of enough lines on the vertical axis, each line represents more than one unit. How many degrees does each horizontal line represent?

Making a Graph

5 degrees

22. If the number you are trying to show on a graph is not shown on the vertical axis, you must place the dot between two lines. You should imagine that there are smaller invisible horizontal lines between the two shown. For example, where would you place a dot to show the number 6 on line 1?

23. To show the number 3 on line 2 - where would the dot be placed?

24. Concerning the graph in frame 18, what was the temperature at 5 o'clock?

22 degrees

25. Between which two hours did the temperature rise the most?
_____ AND _____

3 and 4

26. At what hour was it the hottest? _____

4 o'clock

27. When was the coldest temperature recorded? _____

12 o'clock

28. An hourly record was kept of the average temperature and relative humidity for the month of August in Phoenix. The data is on chart on following page (39).

Legend: _____ Temperature

----- Relative Humidity

Making a Graph

28. cont'd.

Hour AM	T	RH	Hour PM	T	RH
12	81	46	12	96	33
1	79	48	1	98	30
2	78	50	2	100	28
3	77	53	3	101	26
4	76	56	4	101	25
5	75	57	5	100	26
6	74	58	6	98	27
7	76	56	7	95	29
8	79	50	8	91	32
9	85	45	9	88	35
10	90	40	10	86	39
11	94	37	11	83	44

29. At what hour is it the coldest? a.) _____
 When is the humidity the lowest? b.) _____

a. 6 A.M.
 b. 4 P.M.

30. The range of temperature was from a low of a.) _____ to a high of b.) _____

a. 74
 b. 101

31. The range of relative humidity is from a low of a.) _____ to a high of b.) _____

a. 25
 b. 58

32. At 7:00 P.M. the temperature was _____

95

33. At 11:00 A.M., the relative humidity was _____

37

34. At 4:00 P.M., the relative humidity was _____

Student Study Sheet
 (one per Student)

107

25	35. Sometimes more than one line is shown on a graph. In order to show the meaning of each line a "legend" is included. The legend in frame 34 tells you that the two different lines show _____ and _____.
Temperature Relative humidity	36. The hour of the day is shown on the _____ axis.
Horizontal	37. The temperature and humidity rate is shown on the _____ axis.
Vertical	38. The dotted line represents the _____.
Relative humidity	39. The temperature is represented by the _____ line.
Solid	40. At what time was the temperature the highest? _____.
3 or 4 o'clock	41. When was the day the coldest? _____.
6 a.m.	42. At what time was it the most humid? (highest relative humidity) _____.
6 a.m.	43. When was the air the driest? _____.
4 p.m.	44. At 12 a.m. the temperature was _____ degrees and the relative humidity was _____ percent.
81, 46	45. According to the graph was the temperature rising or falling between 12 a.m. and 4 a.m.? _____.
falling	46. What was the humidity doing during this same time period? _____.
rising	47. In the evening does the temperature rise or fall? _____.
fall	48. During the same time period did the humidity rise or fall? _____.
rise	49. Based on this graph, one can say that as the temperature increases, the humidity _____.

decreases	50. It should also be noted that as the temperature falls, the humidity _____
rises	51. Using what you know about constructing graphs, place the following information on the blank graph concerning "Percent of sunny days per month in Des Moines.

TITLE _____

ABSTRACT

Man is separated from all other animals in his unique ability to affect his environment. He is not forced to withstand the hardships of adverse weather, endure prolonged periods of hunger and thirst, and in constant peril from disease or predators. Man alone can create his own environment and since he is a gregarious creature he has developed a unique establishment called a city.

At the present time 70% of the people in the United States live in an urban situation and trends indicate that this percentage will increase. If man is to achieve harmony with his fellow man and with nature, then the concept of city living with all its many facets, both physical and sociological, must be studied, understood and perfected to the highest degree.

Des Moines, a mere youngster among cities in its 100 years is on its threshold of a second century of growth. It may follow the course that other cities have followed leading to decay and urban blight or it may begin to grow and prosper in an orderly fashion. Desirable growth will be the result of the influence of an educated populace, aware of all the problems a city environment poses. It is to this end that the following program is aimed.

INTRODUCTION

SAVE is an educational simulation program designed for use as part of most high school courses. The program portrays, in simplified form, some serious environmental problems, confronting students with some of the dimensions of these problems and engaging them in an effort to develop their own solutions.

SAVE provides exciting and practical classroom learning experiences, as students propose and decide on alternate ways of structuring a new city. The class's final plan is compared with the actual city of Des Moines.

The simulation provides a foundation to build upon and develop into a much larger unit of study and time period, or preferred parts may be used independently.

A focus on environmental education is needed, one that will bring the student and his environment into a "real life" encounter for understanding.

Therefore this program is an attempt to provide a framework of important ideas which may be helpful to educators at all school levels in developing meaningful classes concerned with environmental education.

The student completing this activity should be better able to transfer data about city problems from abstract form to practical application. The experience of building a model city should result in a subtle change in a students' outlook. Instead of being overwhelmed by the city's complexity, he should see the city as a whole in relationship with the environment.

We propose that if the student acquires particular broad environmental understanding he will develop social conscience that will affect his behavior toward the total environment. Therefore SAVE has developed this

INTRODUCTION (Cont'd)

integrated, interdisciplinary instructional program in environmental education, designed to promote an environmental awareness.

The learning is achieved not only through the use of written materials but mainly by communication among the students. The teacher has the important task of encouraging and motivating participants to become involved in the program. The teacher will want to participate actively in the simulation, encouraging discussion and bringing up questions that have a relationship on the program. SAVE is an opportunity for teachers and students to join in the excitement often sought in an educational experience.

SPECIAL NOTE TO TEACHERS

There are no evaluation devices included in the SAVE program for the following reasons:

1. The training and background of the teachers using the materials will vary.
2. The maturity and subject matter understanding of the students will differ depending upon the group using the materials.
3. Due to the flexible nature of the program, a teacher may wish to delete any portion or portions he desires or add supplementary units.

If a teacher so desires he may wish to employ outside assignments such as reading, question sheets or written reports. Tests, both objective or subjective, may easily be constructed if the teacher so chooses. One should keep in mind that creative thinking, attitudinal changes, openmindedness and group cooperation are not easily graded by a series of exams and homework.

It will be necessary for the teacher to duplicate certain materials for distribution to students as needed.

KNOWLEDGE OBJECTIVES

- A. To be aware of the problems involved in providing an adequate water supply for industrial, recreational areas and uses.
- B. To become familiar with the physical features of the land such as topography, climate, soil conditions, and natural drainage areas.
- C. To recognize the various types of wastes produced in an urban area such as sewage, solid trash and air pollution and suggest steps to be taken for their proper disposal and control.
- D. To conduct an investigation of the current land utilization within the city and appreciate the need for an orderly pattern of growth.
- E. To be able to predict future population growth and distribution patterns based on present trends and past data.
- F. To develop an appreciation for the aesthetic value of developing a city that harmonizes within the natural environment around it showing how such things as green belts and architectural design play a role in achievement of this goal.
- G. To be aware of the problems involved in moving people and goods based on present population distribution and existing traffic facilities.
- H. To be aware of the vast array of services such as health, police and fire protection-education and recreation that the city has a responsibility to maintain.
- I. To recognize that a dynamic consumer market is vital for the economic well-being of an urban community--
- J. To know that every human activity depends on the integrity and proper functioning of the ecosystem.
- K. To know the causes and characteristics of problems of the deteriorating environment and be able to suggest realistic solutions.
- L. To know that protection of the environment must be a cooperative effort between the people and their government.
- M. To encourage participation in the community through social, economical, recreational and political action.
- N. To provide alternatives of choice, both practical and idealistic, in the decision making process.
- O. To relate school life to real life.

CONDUCT OF THE SIMULATION

How you use the activity and which, if any, parts you eliminate, will depend on the needs of your class, your time limitations, the length and schedule of class sessions in the school, as well as discussion generated by the students involvement. The teacher may want to devote more than one class session to a particular phase of the program in the event that the students need more time or leave out some of the program in favor of other parts.

The teacher's role is that of a guide and adviser.

The class should be divided into groups of 3-6 students. The final objective of each group is to develop a model city.

Students should be shown the Des Moines, 1980 map and given some orientation to it before they begin to use it as a base for constructing their model city. (See Fourth Lesson.)

On the first day, SAVE is introduced and explained to students. They receive materials and assignments, ask questions and discuss procedures.

A flexible attitude should be encouraged so that students do not judge the solutions of others as wrong because they do not conform with their own solutions. If students can justify their decisions, their solutions should be accepted.

The learning experience will be most successful when the class has acted on its own responsibility, and when the teacher has been flexible in adjusting to the project as it progresses.

CLASSROOM LAYOUT

If only a single classroom is available the playing area should be divided into sections by grouping desks together, or chairs around work tables. Players should be allowed as much freedom of speech and movement as possible without interfering with the work of other groups. No special student preparation is required, as much of the education value of a simulation like this is the result of students learning from each others ideas and from the resource materials.

FIRST and SECOND LESSON:

Aim: To provide an innovative approach to stimulate the students thought in relation to the urban environment. This will serve as an informal method of gaining student confidence and participation for subsequent introduction of the SAVE program.

Approach: Students will play "Conflict".

Materials: The game "Conflict", is found on the next fourteen pages.

Time Allotment: Two class sessions (Minimum)

Supplementary Materials: None

Assignment: None

CONFLICT

Principles Involved in this Exercise:

CONFLICT is designed to teach students this principle of ecology:

"All elements of the environment are interrelated and interdependent. When a man changes the environment; it has consequences not only for himself, but for other forms of plant and animal life, and for the soil, air, and water."

CONFLICT will help the students in your class understand this interdependence of man with his environment. Equally important, it will enable the student to weigh the advantages and disadvantages of changing the environment and to make decisions about what kind of environment they want for themselves.

A brief description of the Exercise:

CONFLICT is played using a land use map of Des Moines which shows listing physical and man-made features.

At the beginning of the exercise, each student is assigned a role. It may be a human role, such as commercial interests or a farmer, or it may be a natural role such as an oak tree or pheasant, or it may be a basic resource role, such as air or soil.

The students are presented with a series of proposals about adding various man-made features to the map, such as an airport expansion or a shopping center. The students discuss the possible consequences from the viewpoint of the roles they are playing.

If a majority of the class votes to add the feature, a model of it is placed on the map, along with the given number of "Population Units." These units represent additional people moving into Des Moines because of the construction.

Throughout the exercise and after it is over, the teacher can initiate discussion about the interrelationships of man with his environment. For example, if the group has voted to build everything proposed, all the farmland will have been erased. Where is the oxygen to come from? Are there any natural areas for wildlife and outdoor enthusiasts?

HOW MUCH TIME WILL IT TAKE

If the class were to play straight through from beginning to end, it would probably consume a minimum of one hour and a maximum of four to five hours depending on the amount of discussion you stimulate. Some teachers may wish to plug in a unit on industry, agriculture, or economics before a vote is taken on each feature.

MATERIALS USED TO PLAY CONFLICT

- 1 land use map of Des Moines
- 10 Project Proposal Sheets (see score sheet for their names)
- 13 Team Identification Cards (see score sheet for their names)
- 1 pad of score sheets
- 20 drawings of the Project Proposals along with a dump, sewage disposal plant and eight population units.

HOW TO PLAY CONFLICT

1. Explain that the class is going to participate in an exercise called CONFLICT. In the exercise they're all going to have a chance to decide on what kind of city they'd like to live in.
2. Place the Des Moines land use map in front of the class so everyone can see it. Point out some of the existing physical and man-made features.
3. Explain that the map represents a complete, self-contained world. Food, air, and water must come from the immediate area and no solid liquid or gaseous waste may be taken off the map.
4. Show the students the Project Proposal Drawings and put the name of each on the chalkboard so they may decide which project they will discuss first.
5. Divide the class into thirteen (13) teams: farmland, farmers, unemployed workers, etc., and distribute the cards to the teams. Remind them that they are to think and respond as they feel the role they are representing would respond. Explain that each team will meet and will have one vote when the time comes.
6. Hold up the Project Proposal Drawing that the students have selected to discuss and place it on the map. The location of many of the pieces is not critical and the students could actually help decide its placement.
7. Read the material on the Project Proposal sheet including the "Effect of Population" portion explaining to the students that Population Units represent additional people attracted to Des Moines by the construction of the proposed project. Your students may want to add other facts about the project concerning what effect the project would have on them.
8. Next, have the teams discuss among themselves whether or not they're in favor of building the project. Set a time limit of three or four minutes for discussion although after a while they probably will not need that much time.
9. When the time is up have a spokesman for each team tell how his team is voting and a brief comment as to why they are voting that way.

HOW TO PLAY CONFLICT (Cont'd)

10. Appoint someone to be record keeper and call out each team's name before they vote and to record and add the votes. If a majority of the teams want the project, leave its drawing on the map along with any population units that may go along with it. If they decide not to have the project, remove the pieces from the map.
11. Show the next Project Proposal Drawing and proceed as before. At this point you may wish to choose a student to be a monitor and take your place. The rest of the game can be run by students.
12. Whenever a total of three Population Units have been added to the map then a Dump and Sewage Treatment Plant must be added to take care of the added population. It's up to you to decide whether to surprise them with this when they have reached this point or warn them beforehand. If you do not warn them and they become disturbed about adding these features, this is a good time to discuss the need for adequate advanced planning for the city's future growth. Remind them that as the exercise continues an additional Dump and Sewage Treatment Plant will be added for every three Population Units.
13. Continue with the exercise until you reach "the end." The end may come when a) the students tire and lose interest, b) all of the projects have been considered.

Supplementary Ideas.

- A. After a few rounds of voting, some students will probably note that certain groups always tend to vote "Yes" while others consistently vote "No." To add interest, have the students change cards and assume a new role.
- B. Before too long, some student or perhaps you will mention "Who ever heard of a oak tree voting?" or "Teenagers aren't old enough to vote!" At this time you can take away the non-human role cards and permit only real people to vote. It will be quite evident what trend will now occur. This will be a good time to ask who does. Look out for the Air or Soil or the farmland.
- C. This exercise may be extended to last for several weeks. Outside reports and research may be done concerning each of these projects. Surveys among the members of the class as to their own personal feelings can be taken. These surveys may be enlarged to sampling other students in the school or a neighborhood sampling. The imagination and ingenuity of the class and teacher are the only limitations as to how far one can go.

PRO FOOTBALL STADIUM

Description and Environmental Impact Facts:

1. The stadium will provide recreation for the people who enjoy watching football games.
2. It will create new jobs for people providing services for the fans.
3. On game days traffic will be heavy in the area. There will be a lot of noise and litter.
4. A farmland will be replaced by the stadium.
5. On game days students can work as vendors and earn extra money.
6. The stadium will be paying taxes to the city. The money can be used for many purposes.
7. Many more tourists will be visiting the city and spending money in our local stores.

Effect on Population:

People who enjoy sports will be attracted to the area and make their homes here. Add one population square.

AIRPORT ENLARGEMENT

Description and Environmental Impact Facts:

1. The enlargement will enable more people and products to enter and leave Des Moines faster and easier.
2. Because we will be tied closer to the major cities on the West Coast our commerce will increase.
3. New industries will be attracted to the area creating more jobs.
4. Tourism-trade will increase since more people will be visiting.
5. Many houses in the immediate vicinity will be torn down and the people living there will have to be relocated.
6. Businesses and residents in the area will be bothered by the increased noise.
7. Air pollution will increase not only from the additional planes but with all the extra cars in the area.
8. The city jail will have to be moved to some other part of town.
9. Some farmland will be paved to make runways and parking lots.
10. Additional tax money will be coming into the city not only from the airport facility but from the other industry it will attract.

Effect on Population:

Due to the increased commerce and industry in the area, more people will be seeking their homes here. Add two population squares.

INDUSTRIAL PARK

Description and Environmental Impact Facts:

1. The industrial park will be an area where many manufacturing plants and warehouses will be located. These industries will make a variety of products.
2. The city will grow through the many jobs created and more money will be spent.
3. The new businesses will be paying taxes to the city.
4. The unused land around or outside of the city will be cleared and paved for the location of the buildings.
5. Products and goods made locally may be cheaper and more plentiful because they are not shipped a long way.
6. Cars and trucks in the area, in addition to the industries, will add to the air pollution.

Effect on Population:

These industries will attract many new residents. Three population squares must be added.

SHOPPING CENTER

Description and Environmental Impact Facts:

1. The additional businesses will create more money; city stores can branch out into new areas.
2. The shopping center will need store managers, clerks, and many other kinds of people to run it. Many jobs will be created.
3. The stores in the shopping center will be selling many kinds of products to people in the area. Without the shopping center it would be difficult for people in the area to buy these products.
4. People in the area will go to the shopping center instead of driving to the city. This means that they will be driving less, burning less gasoline and so there will be less air pollution.
5. The area taken up by the shopping center will replace many acres of crops.
6. Traffic will be quite heavy and residents near the area will be annoyed by the additional noise and litter.

Effect on Population:

The shopping center will be a great convenience for many people. Because of this, local real estate men and land owners will build nearby. This housing will attract new people to the area. If you build a shopping center, add one population square.

NEW FREEWAY SYSTEM

Description and Environmental Impact Facts:

1. It will be easier to travel to the several large metropolitan areas.
2. It will provide a safe, efficient, fast, economical and convenient method for transporting people and goods from one place to another.
3. It will take the strain off our present system of streets and highways, therefore, people traveling short distances will be able to do so in a more relaxed manner.
4. One lane of a freeway will carry three times as much traffic at twice the speed and three to five times safer than one lane of a major street.
5. There will be more jobs in the city. People will be hired to build the highway and after completion people will be needed to work in the motels, gas stations and restaurants near it.
6. People owning land where the freeway is to be built will be able to sell it for a good price. Many slum homes will be torn down and the people will have to be relocated.
7. The highway will cut through some nice areas of town. Some cropland will be replaced but there will be landscaping alongside the highway.
8. People living near the freeway will be annoyed with the noise and litter that will be associated with the increased traffic in their neighborhood.
9. With more cars and trucks moving about air pollution will increase.

Effect on Population:

People who enjoy our low density, low profile city will be attracted to move into our city since they can move about easily. Add one population square if you decide to build it.

HIGH RISE APARTMENTS

Description and Environmental Impact Facts

1. The high-rise apartments will permit a lot of people to live in a small area.
2. They will provide newer and better homes for more people.
3. The high density population units will not require a large amount of area thereby allowing the nearby land to be used for other purposes such as parks, stores, and industry.
4. With many people living in one general area mass transit can become a practical means of moving people from place to place. There will be less automobiles on the highways and thereby less air pollution.
5. Children living in the apartments will have no yards to play in and parents will not have to spend time cutting grass and other home maintenance work.
6. Building and servicing the apartments will create many new jobs.
7. The new residents will be spending a lot of money in the local stores and the city will get tax money from the residents and apartment owners.

Effect on Population:

Since the people will be living in the apartments they will not take up space outside of the apartments. If you decide to build them, add no population units.

CENTRAL DES MOINES PLAN

Description and Environmental Impact Facts:

1. High rises development will be restricted to the Grand Avenue corridor and the downtown area.
2. This project will revitalize the downtown area and attract businesses into the center of town.
3. Many new jobs will be created with the building and maintenance of new structures.
4. Traffic may be congested with people working and shopping in the downtown area.
5. Single family residences, many of which are good examples of early architecture in the area, will be torn down to make way for parking lots and modern buildings.
6. The downtown area will be noisy and dirty with increased usage.
7. Fire and police protection may become difficult with the high density of people in one general area.
8. Mass transit could become a possibility since we will have a large number of people going to one area.
9. New business will be attracted to the Valley because of the convenience of everything being located close by.

Effect on Population:

If you decide to build this project add one population square since more businesses will be moving into the area.

THIRD LESSON

Aim: To provide a general understanding of the simulation process and to familiarize students with Des Moines' sites.

Approach: The teacher will introduce the unit, select the groups and describe the rules or any changes. (See page ____)

At this time the teacher may wish to introduce the simulation by use of a film(s).

A large Des Moines map should be in view for the entire class to view from the very first session. Each group will need the same type map to complete this exercise.

Groups should be asked to locate the following on their individual maps.

1. Des Moines River
2. Raccoon River
3. MacVicar Freeway
4. Municipal Airport
5. Grand Avenue
6. East 14th Street
7. State Capitol Complex
8. State Fair Grounds
9. Railroad Truck Lines
10. Your high school

Materials: Des Moines Map
Student hand-out listing site features to be found on map.

Time Allotment: One class session

Supplementary Materials: None

Assignment: None

FOURTH LESSON

Aim: To acquaint students with Des Moines' site features.

Approach: In preparation for developing a new city, the students should be asked to examine the characteristics of Des Moines relating them to ideal city features. In order to stimulate class discussion, the teacher will list the following features and ask the students to suggest their own ideal conditions and compare them with the existing Des Moines conditions. In doing this exercise, the students will be considering disadvantages and limitations in developing their own city.

The following suggestions will serve as a guide.

Water Source

Ideal - river? spring? reservoir?
Des Moines - rivers

Climate

Ideal - changing seasons? rain?
Des Moines - changing seasons

Vegetation

Ideal - forest? grassland? mountains?
Des Moines - farmland

Wind

Ideal - prevailing wind of moderate rate?
Des Moines - variable winds

Flood Control

Ideal - well drained area with channel to carry
excess run-off?
Des Moines - subject to flash flood from heavy
rains

Location in Country

Ideal - close to major market for products and
recreation
Des Moines - fits

Transportation

Ideal - easy access to other city with freeway
going around city mass transit.
Des Moines - poor mass transit, freeway cuts
through city

Population

Ideal - Zero Population Growth, self supporting
Des Moines - low rate of growth

Materials: Same as preceding lesson.

Time Allotment: one class session.

Supplementary Materials: None

Assignment: None

FIFTH LESSON

Aim: To have students begin designing their own city.

Approach: In this activity the students will start working in groups, and are asked to transfer the insights gained from the previous day's class discussion to their local setting. They will demonstrate their full ability to do this by the final development of the map of their new city.

Keeping in mind environmental considerations, each group is asked to formulate one or two general goals they wish to achieve in designing their city.

Examples:

To help all city dwellers to enjoy decent, meaningful, and independent lives in the cities of the future.

To help people realize that earth is an island, a spaceship and there is only so much land, water, and air.

To help people prepare emotionally, psychologically, technologically for the future.

The remainder of the class session will be spent developing group decisions on one or both of the following questions.

1. What conditions of life do you want to preserve and what do you want to eliminate?
2. What will be the effect of your city as a whole on man's social institutions, organizations, and individual behavior?

Materials: Players Manual

Time Allotment: One class session

Supplementary Materials: None

Assignment: None

129

SIXTH LESSON

Aim: To understand the concept of change.

To learn why people move and what they look for in a new environment.

To realize that there is a variety of dwelling types necessary to respond to the variety of man's needs.

Approach: This assignment is a continuation of the previous day's study and the purpose is to give the students a framework or base to work from, a deeper awareness of their city as it exists, what changes would be desirable to provide for future growth, and to understand the concept of change. This may take more than one class period.

Questions for Discussion:

1. Students are asked to discuss why change takes place in the city. Consider such things as: population density, street paving, high-rise apartments, freeways, shopping centers, blighted areas, urban sprawl.
 2. Discuss how changes in a society lead to changes in the man-made environment, creating new forms and making others obsolete. The persistence of some forms, such as the churches or schools can be used to illustrate that use of a building can remain somewhat constant and modifications can reduce the need for extensive change.
 3. Discuss what changes are going on in the immediate environment.
 4. Students can list things which have not changed and speculate why.
 5. Students may discuss some of the reasons for living where they do. Have they moved recently? Why?
 6. Discuss the limitations imposed by our society affecting our choices about where and what we build, how tall, how big, what style, how many families per acre, animal (pet) privileges, etc. (This discussion could include ideas about the economic and racial restrictions in our city.)
- Discuss the idea of people being able to move based upon need and choice rather than upon restrictions and limitations of circumstance, in your city plan you will develop.
7. Students are asked to discuss changes that might occur to the environment between now and the next 50 years.

130

SIXTH LESSON (Cont'd)

8. Place the following chart on the chalkboard or have a student act as a recorder and keep a record of student responses to the following questions:

How many years has your family lived in Des Moines?
1 2 3 4 5 6 7 8 9 10 11 12 13

Why did your family come to Des Moines?
Climate Better other

How long have you lived at your present address?
1 2 3 4 5 6 7 8 9 10 years

If you did not always live in your present home, why did you move there?
Closer to job
Closer to school
Better neighborhood
Good buy on house
Other

Materials: Same as preceding lesson.

Time Allotment: One to two class sessions.

Supplementary Materials: None

Assignment: Life Style Questionnaire (Optional)

Life Style Questionnaire

This problem investigates what different people in your city might look for in choosing a place to live. Think about what each one needs and put an X in the column under which you think they would prefer.

	What should be nearby	What kind of street	What kind of house	Where should it be
farmer with a wife and two children	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Junior High School student living with mother and father, brother and sister	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Factory worker and his wife	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Doctor, 70 years of age, alone and no longer practicing medicine	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
A mother with six children and her husband is a fireman	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- super market
- factory
- elementary school
- junior high school
- high school
- movie theater
- playground
- swimming pool
- drug store
- department store
- railroad station
- bus stop or subway
- fire station
- police station
- restaurant

- no cars allowed
- many houses
- few houses
- quiet
- busy

- one bedroom
- two bedroom
- three bedrooms
- four bedrooms
- five bedrooms
- row house
- semi-detached
- single detached
- ground floor apartment
- 12th floor apartment

- Lake shore
- city
- suburbs
- center city
- country

SEVENTH LESSON

Aim: Study population make-up of Des Moines.

Approach: The following questions may be discussed in small groups or the class as a whole to better understand the population make-up of Des Moines.

1. The Des Moines population has increased slowly over the last few years. What is the present population of Des Moines? How has the population of Des Moines changed over the past 10 or 20 years? What are projections for future growth?
2. Compare Des Moines population growth with selected cities over the past 10 to 20 years.
3. What do you suppose are some of the reasons for this somewhat stable growth rate? Support your answer.
4. The city has not only grown in numbers, but also in direction. In which direction has the city grown in the past? Why? Which areas of the city are the most densely populated now? The fastest growing now?
5. Demography
 - a. Birth rates are an important index of population growth. The birth rate is figured on the number of live births per 100,000 population. How has the birth rate changed in Des Moines in the past 10 or 20 years?
 - b. Larger families are often condemned as ecologically unsound. Minority groups are often said to have larger families. Is there any basis for these two statements? If so, what? Can you say that large families are the problem? Or is it the total number of children? If this is the case, is there any general conclusion to be reached?

SEVENTH LESSON (Cont'd)

- c. Children yet to reach the child-bearing age can be a factor. Why is this so? What is the percentage of children under the age of 15 in the city of Des Moines. What are the socio-economics and ethnic percentages? Is this significant? Why?

The teacher will introduce Neighborhood Study Projects at the conclusion of class population discussion, as an assignment.

6. Neighborhood Study Projects

- a. What do homeowners in the area think are the neighborhood's three biggest problems?

What might be done to solve these problems?

Conduct your study as a scientific random sampling to get an adequate cross-sample of ideas and opinions.

Survey 3-5 homes in the neighborhood attempting to get as much variety as possible.

- b. Run a comparison of the city area and suburb area - size, amount of open space, number and kind of people, density, cultural and recreational activities, problems, etc. How do they differ; how are they similar? (Optional)
- c. Conduct field trips to other similar areas and note how they are similar and different. (Optional)
- d. Conduct an extensive survey and mapping expedition of a two square mile radius around the school. Map the area block by block. Use symbols and drawings to designate different types of land usage.

7. Zoning

- a. Determine major land usages within the community by percentages and major concentrations within the city and the study area -
 - 1) residential
 - 2) commercial
 - 3) industrial
 - 4) public lands
 - 5) semi-public lands
- b. Conduct a survey as a City Planning Committee to determine the various types of housing available.

- c. Investigate city ordinances - zoning, building, subdivisions, health. What are the purposes behind each? How were they arrived at? Which ones need to be changed? Does the method of arriving at them need to be changed? Prepare alternative ordinances to the ones that you think are weak and work out a plan to put these changes into effect.
- d. Appoint study groups to examine small land areas (3-4 blocks) with which the group is familiar and plan for and develop a plan for future land use in the area.
 - 1) sketch the area with all existing buildings and land use.
 - 2) consider future land use that will be compatible with present land use.
 - 3) sketch future land use proposals and justify your actions to a mock city council and homeowners in the area.

Materials: None

Time Allotment: One class session

Supplementary Materials: A Des Moines Street Map (for use in 6d)

Assignment: Neighborhood Study Project

EIGHTH LESSON

Aim: To develop land use for the model city,

Approach: The teacher will ask each group to review information in the data bank. (approximately 5-10 minutes)

Refer to the Data Bank and the Materials section on Page 4 of this guide to supply the statistical information needed in this lesson.

The teacher should ask the class to keep in mind the limitations of the project, such as current population, income level of different groups, and that students' plans should consider the size of Des Moines' labor force for 1990. These people will require a certain amount of land in various categories of use.

Each group will develop a list of services, organizations, facilities, and land use that they wish to plan and provide for in their model city. Toward the end of the period the teacher should write the following list on the board as a comparison. (The students may or may not want to include all in their plans.)

schools	parks
police	recreation areas
hospitals	footpaths
fire houses	bicycle paths
streets and alleys	single-family units
flood prevention	multi-family units
agriculture areas	commercial areas
mobile home concentrations	industrial areas
freeways	landfill operations
post office	airports
factories	water and sewer system
banks	sanitation
truck docks	street maintenance
railroads	lake
subway	trees - landscaping
bus routes	fire hydrants
office space	vehicle parking
libraries	green belt - open space

Materials: Data Bank

Time Allotment: One class session

Supplementary Materials: None

Assignment: Using the list of features the groups compiled in class, the students are to rate their own neighborhood as to the availability of the feature. If they are within 2 miles of their home they are to place a check after that feature. (Optional)

NINTH LESSON

Aim: To develop the model city.

Approach: This is the principal part of the simulation and should last for 5-10 days, or however long the groups take to successfully complete the activity. It can be adapted to the teacher's lesson plans, or interest generated by the students.

During the remainder of this part of the simulation the students will work in groups to construct the city as they visualize it, using information they have worked out in the group discussions.

By mapping and considering land uses, it is possible to plan intelligently for city development. This methodology is indispensable in city-planning as it reveals city problems and the potentials for correcting them. By the application of generalizations to the city he knows, the student begins to see that some sort of order does exist in a city.

Students will construct a land use map using materials furnished in class and their list developed in Lesson 7.

There are several ways to construct this map. For example, the city areas can be filled in with patterns or colors that indicate how they are used, which can be interpreted from the legend. Only the dominant land use should be shown for each area.

Students should indicate what the different colors on their maps stand for. They should realize that when they color an area they are identifying only the major land use (residential, industrial, or other) because the scale of the map does not permit them to show details.

A color key can be developed to show each category of land use. This could make the comparison of the group's map much simpler at the end of the project. A typical one is as follows:

Manufacturing - Red
Commercial - Light Red
Public buildings - Yellow
(church, school, university, hospitals)
Parks, cemeteries - Dark Green
Residential:
 single-family -- Purple
 multi-family -- Orange
Landfill - Black dots
Transportation System - Black
Agricultural - Light Green
Unused - Brown
Water - rivers, lakes -- Blue

The finished map developed by the students may show:

Limits of urban settlement
Downtown commercial core
Important shopping centers
Major Industrial sections
Major transportation arteries and facilities
Major areas of public land uses (buildings, parks, university)

At the conclusion of this activity, the students should realize that the solution to our environmental crises involves individual action and a cooperative effort between the people and their government.

They should be able to explain the different kinds of land use and why they located it where they did.

They should be able to explain why a city grows or declines.

They should be able to infer that man is part of an eco-system that has a delicate balance and that preservation and improvement of our environment may involve a commitment to a change of attitudes and life styles.

Materials: Des Moines Comprehensive Plan
Colored pencils or map marking crayons.
Large sheets of white paper. (newsprint, butcher paper, etc.)

Time Allotment: Five to ten class sessions.

Supplementary Materials: None

Assignment: Continue work on model city development.

ENVIRONMENTAL CHECKLIST: Rate Your Community

This form may be used to survey the degree of pollution in your community. After rating the community in the various categories of pollution, you can use the third column to indicate whether government, private business, or individuals are responsible for the problem. In the fourth column you can suggest possible remedies.

POSSIBLE SOURCE OF POLLUTION

RATE PROBLEM IN YOUR AREA*

WHO OR WHAT IS RESPONSIBLE?

HOW CAN PROBLEM BE ALLEVIATED?

Sewage Disposal

Industrial Pollution of Streams

Air Pollution by Factories, Incinerators, etc.

Motor Vehicle Exhausts

Auto Junkyards

Dumping in Vacant Lots

Garbage Disposal

Agricultural Pollution

Construction/Mining Projects

Traffic Noise

Aviation Noise

Other Forms of Pollution

139
86

*Serious, getting worse, minor problem, or no problem

ENRICHMENT UNIT 10 - NOISE

Some Qualities and Kinds of Sounds (c. 1971, Dow Chemical Company)

1. Go with the class to several different areas of the school. Listen...
2. Have students do a similar exercise on sounds in their homes.
3. Have students describe in an essay the sounds they hear. Have them be very descriptive.
4. Make comparisons of sounds which are pleasant and which are unpleasant. Explain why they are pleasant or unpleasant.
5. Does Iowa have any standards or regulations on noise? If so, what are they?
6. Make a tape of acceptable and unacceptable sounds - city-wide.
7. Are noise-abatement regulations in effect at the municipal Airport? What are noise-abatement regulations. Why or Why not? Obtain opposing viewpoints.
8. Do construction, traffic, people contribute dangerously to the noise levels in Des Moines? Why or why not? Back up your answer.

ENRICHMENT UNIT 10 - SOLID WASTE DISPOSAL

INVESTIGATION - The Biodegradability of Different Materials.

Materials: 1-2" deep plastic trays
earth to cover collected items

Procedure:

1. Collect items you consider important to the solid waste disposal problem in Des Moines.
2. Bury them in the pans under an equal layer of sod.
3. Investigate the condition of the materials at 1, 2 and 3 week intervals. Describe their condition completely in chart form.
4. Explain the reasons for the condition for each type of material. How can this be applied to the solid waste disposal problem in Des Moines. What implications do your conclusions have for sanitary landfills and recycling programs?
5. If the materials you tested are found in the city dump, do you think that the cities will be able to use dumps over and over? Why or why not?

Additional Activities

1. Collect data from the Des Moines Sanitation Department as to the amount of garbage and refuse collected in the cities also indicating types and percent of garbage and refuse.
2. What are sanitary landfills? Where are they located? Draw up a list of factors to be considered in the planning, development, and ultimate use and re-use of sanitary landfill sites.
3. Project the needs, land, time, money, manpower for Des Moines for solid waste disposal.
4. Recycling is just beginning to be a factor in solid waste disposal. Formulate a city-wide program for the Sanitation Department to participate in a recycling program.
5. Gather information from the cities Sanitation Department on the technique they are implementing in solid waste disposal innovations. What are some ecologically sound methods of dealing with the solid waste disposal problem?
6. Compost building - what is it? How could it be implemented with individual families, on a city-wide basis?

Student-Family Survey on Improving our Environment in the City

Instructions:

Many people express a great concern for our environment. All too often, however, they feel they can do nothing about it and it's someone else's problem. But each of us can do our part to help improve our environment. Following is a list of suggested ways we can help our environment and conserve our resources. With the help of your family complete this questionnaire by using the following responses.

1. We think this a good idea and are presently practicing this.
2. At the present time we are not doing this but we'll give it a try.
3. We don't do this and don't plan to either because it's foolish, we don't agree with the idea or don't think it's important enough to matter.
4. This item doesn't apply to us.

Water

1. ___ Repair leaky faucets (a slow drip can waste 15 gallons a day). To check for a leak in a water system, turn off all faucets and other outlets and watch the hand on the meter for 10 to 15 minutes. If it continues to move, there is a leak.
2. ___ Take showers instead of baths.
3. ___ Turn off water while shaving, brushing teeth, etc.
4. ___ Reset flush-o-meter toilets to use $3\frac{1}{2}$ gallons instead of the normal 5 to 8 gallons per flush. Reset float or put one or two bricks in your tank.
5. ___ Run dishwasher only when you have a complete load.
6. ___ Keep water heater setting at 140 degrees F. (normal)
7. ___ Keep a bottle of drinking water in your refrigerator. Running water until it is cold could waste a gallon or more.
8. ___ Wait until you have a full nine-pound wash before running your washing machine.
9. ___ Follow manufacturer's instructions for detergent or soap. If you have a septic tank, using too much detergent may cause problems. Phosphates cause pollution. Encourage use of low phosphate detergents.
10. ___ Avoid using disposable diapers. If you must use them, follow disposal instructions carefully.
11. ___ Avoid buying colored toilet tissue or paper towels. The dyes are not an excessive problem in the city but cause pollution at the paper mills and the water supply in those areas.

12. ___ Don't use paper towels where washable, reusable items will do the job.
13. ___ Don't flush away what you can put in the garbage, especially unsuspected cloggers such as cooking fat (give it to the birds), coffee grounds or tea leaves.
14. ___ Drain oil from power lawn mowers into a container and dispose of it. Don't hose it into the sewer system. It could be used as a weed killer in alleys and along fences..

Air

1. ___ Report any air pollution source.
2. ___ Motor vehicles are the major contributors to air pollution in the City. Keep your car in tune and in good working order.
3. ___ Ride a bike or walk short distances.
4. ___ Take mass transportation where available or form car pools if feasible.
5. ___ Show auto salesmen that you are concerned about the pollution the car you might buy will cause. (Be sure the car burns fuel efficiently (rates high in miles per gallon.)
6. ___ Limit smoking or stop altogether. It's a source of air pollution.
7. ___ Since fires, charcoal and gas barbecues add to air pollution, you should cease these practices.
8. ___ Burning leaves or garbage is illegal in many towns, including Des Moines. Don't do it. As a citizen, you can swear out a summons and bring a garbage-burning or noisy neighbor to court. Or, if you can gather a group of people, you can file a class-action suit against a noisy airline or negligent public anti-pollution official.
9. ___ Use appliances in off-peak hours. In summer avoid ironing, washing, etc., in the late afternoon when air-conditioning drains the most electricity. Using only the power you need helps conserve natural resources and minimizes pollution.

CHEMICALS

1. ___ Use pesticides and herbicides only when necessary, and follow manufacturers' instruction. Avoid DDT, lingering poisons, compounds of leads, mercury and arsenic. If your garden has water, sun, shade, and fertilizer, it may not need pesticides at all.
2. ___ Make sure fertilizer is worked deep into the soil. Don't hose it off into the water system.

3. ___ Patronize stores that specialize in food grown without pesticides. Campaign in your supermarket for the sale of foods grown without pesticides, using organic fertilizers.
4. ___ Don't dispose of chemicals or medicines in the sewer system.
5. ___ Use biodegradable household cleaners, for example, vinegar and water for window cleaning.

RECREATION

1. ___ Do not litter, and don't tolerate it from others. A polite remark, I think you dropped something, should do the trick. If there is no trash receptacles where you are, pack up your garbage and bring it home.
2. ___ Try sailing, rowing or canoeing instead of motor boating. Use only the horsepower you need and don't dump leftover fuel in the lake or ocean.
3. ___ When hunting, don't leave shell cases or other remnants.
4. ___ Motorcycles and four-wheel-drive vehicles should remain on existing roads and trails. Hikers and horseback riders should remain on trails, too.
5. ___ Make cleaning up an area a part of the outing. Leave the area in better condition than when you found it.

NOISE

1. ___ Fight to keep noise at a minimum at all times, especially between 11 p.m. and 7 a.m. Suggest that your local radio and television stations remind listeners at night to turn down volume. To reduce noise of trash collection, buy a plastic garbage can instead of a metal one.

POPULATION

1. ___ Limit family size by producing only two children. If more children are wanted, adopt them or request that a foster child be placed in your home. (Information on birth control can be obtained through PLANNED PARENTHOOD ASSOCIATION. Answer this question first as it presently pertains to your family and secondly as you personally feel about the matter in your future.
2. ___ My own personal feelings about limited family size. (This answer would either be 2 or 3)

LEGISLATION

1. Write letters to your governor, state senators, congressmen and other national legislators to let them know how you stand on environmental issues.
2. Support legislation for vehicle inspection for auto emissions.

CONTAINERS

1. Don't throw anything away that can be used again. When you shop, take a reusable bag (wicker, cloth, plastic) with you and don't encourage excess packaging and paper bag use. Don't take an unnecessary bag for a loaf of bread or a can of soup. Tell the supermarket checkers you don't want double bags if it is unnecessary. Reuse all supermarket bags for garbage disposal.
2. Participate in a recycling program if you know of a club or organization collecting materials.
3. Plastic produce bags are offered in many markets. If you don't have a use for paper bags, take plastic bags and bring them with you for reuse the next time you go shopping.
4. Avoid plastic bottles when possible. They do not decompose and some give off poisonous fumes when incinerated. Reuse the ones you have by filling them from glass containers, which can be recycled. If the product doesn't come in a glass container, complain to the manufacturer. When possible, use biodegradable pasteboard, cardboard or paper containers.
5. Avoid using plastic trash bags because they never completely decompose but are a minimal problem in landfill sites. They are broken into pieces and liquify due to the heat of decomposing organic matter.
6. Hangers can be returned to the cleaners for reuse. Boycott a cleaner who won't take them back.
7. Start a compost pile or bury biodegradable garbage. It improves the soil and reduces the amount of solid waste to be collected, and disposed of by the city sanitation department.

SELECTION AND USE OF AQUARIUM PLANTS

The large number of plant species available for aquarium use makes selection difficult. This Culture Leaflet offers a few suggestions that may guide the instructor in making a choice of plants for class aquaria.

Actually, the importance of plants to an aquarium has been greatly overrated. They are quite unnecessary for the culture and growth of most fish and invertebrates. Furthermore, unless the plants receive adequate light and are kept at a sufficiently high temperature, they will not contribute to the oxygen content of the water or otherwise benefit the aquarium. When conditions for growth are adverse, excess carbon dioxide and decomposition products can seriously interfere with the normal balance and activity of the aquarium. Unless light and temperature conditions permit the aquarium plants to photosynthesize above their compensation points for sufficient periods of time, they actually decrease the oxygen content and increase the carbon dioxide content of the water.

Direct, strong light is not needed for the growth of invertebrates and fishes. Therefore a school aquarium set up for studies on animals, or purely to retain living specimens in the laboratory, need not be illuminated nor furnished with plants.

One major misconception should be corrected initially--the "balanced aquarium" in the sense of an indefinitely sustained and self-contained equilibrium between plants and animals does not exist. The best we can do with an aquarium tank is develop a compatible environment in which the aquarium plants and animals may survive and grow for a long period of time with relatively little care or alteration of the environmental conditions.

There is also some misunderstanding as to the role of plants in the aquarium. Plants are not required to "oxygenate" aquarium water. If a quantity of water is exposed to the air, it will absorb oxygen from the air up to its saturation point at a given temperature. Oxygen produced by plants over and above the saturation point merely goes out of solution into the air. Plants can, however, bring about a higher concentration of oxygen by removing carbon dioxide from the water during photosynthesis, which permits more oxygen to go into solution. The importance of plants is thus as carbon dioxide removers rather than as oxygen producers.

Wherever possible, natural waters in which plants and animals are living is to be preferred for aquarium use over tap water or that from other sources. This is especially to be considered when plants and animals are collected from local bodies of water and brought into the laboratory.

Ideal aquarium plants are those that tolerate aquarium conditions, have a high photosynthetic rate (light and temperature requirements being met) and do not require to be rooted in soil for normal growth. The use of soil in an aquarium is generally to be avoided because of the extra care required and additional problems involved in preparing the aquarium. *Elodea* (*Anacharis*), *Myriophyllum*, *Cabomba* are all good aquarium plants--bushy, rapid growers that do not need to be rooted, and good carbon dioxide consumers.

Of rooted plants, *Vallisneria* and *Sagittaria* are best suited to aquaria. They can be rooted in gravel and do not require soil. In rooting, they should be carefully pushed down into the substratum so that the crown of the plant remains at the surface. They may be securely anchored with small lead weights, stones, or other heavy inert material, until they have secured themselves by root growth.

Vallisneria is generally tall and should be planted in the back of the aquarium and in large and relatively deep tanks. The Corkscrew *Vallisneria*, with twisted leaves, is a shorter form better suited for the smaller aquarium.

Sagittaria has wider leaves than *Vallisneria*. The typical species need space for normal growth, and should be separated by several inches from other plants and from the aquarium sides.

The members of the genus *Cryptocoryne* are narrow-leaved plants that do well in aquaria that are not in direct sunlight. They can stand a temperature range of 72° to 80° F and endure acid water. The typical variety, *C. willisi*, the one usually planted. Equally as good is the dwarf *C. beckettii*, which is a small glossy green species. Color may be added to the aquarium with *C. cordata* which has broad leaves that are red on the underside.

Some species of *Ludwigia*, the false loosestrife, are inhabitants of wet places and do well in the aquarium. The leaves vary from green to red in color.

Ceratophyllum, the hornwort, is an easily grown plant that does well under almost any aquarium circumstances. A species of *Myriophyllum* known as Parrot's Feather is a bushy plant with soft green feathery shoots that are very attractive. It is a rapid grower and usually does well in the aquarium.

The water fern *Ceratopteris* is one of the more interesting aquarium plants and can be either planted or floating. As it propagates at the leaf margins, it shows an interesting method of reproduction as well as being a satisfactory plant for aquaria. At times it may be difficult to get this species to adjust to aquarium existence and overpopulation should be avoided.

The use of algae in the aquarium leads only to trouble. Most of the coarse algae such as *Cladophora* and *Pithophora* do so well in the aquarium that they become pests. When these plants find their way into an aquarium it is usually necessary to start over again. It pays to discard all of the contents of the old aquarium as the algae will develop rapidly from the smallest portions that may be left behind. Slimy scums and foul odors may be produced by other algae that grow on the sides of the aquarium when there is too much light. Sometimes toxic materials harmful to other aquarium life will result. In these cases, the aquarium should be cleaned and the sides scraped with steel wool or a razor blade. It may be necessary to clean the aquarium with a 2% solution of HCl for thorough sterilization. After thorough washing with distilled or boiled water, the aquarium tank may be used again.

The only chemical control of algae in an aquarium that is recommended is the use of potassium permanganate (1 grain to 1 gallon of water). Used with care, this method

will open clear an aquarium of unwanted algae.

The complex green alga *Nitella* is an exception, as it is often profitably used in aquaria to form thickets for small fish and other fragile and defenseless species. Usually *Nitella* may be kept under satisfactory control.

Floating surface plants are not always desirable. In many cases such vegetation forms a heavy cover that serves no useful purpose and restricts gaseous exchange with the atmosphere. In special cases, such a cover may be desirable for protection of smaller forms, feeding of some other animals or for demonstration purposes and a source of the plants concerned.

Of the floating plants usually available, *Lemna* (duckweed) and *Riccia* (a liverwort) are the most satisfactory. These plants are usually rapid and satisfactory growers, and excess material can be readily removed if the cover becomes too thick. If both are used together, *Lemna* may tend to overgrow *Riccia*. At intervals during the year *Lemna* will appear to die out and disappear, however, in

a few weeks it will return to its original or even greater abundance.

The use of *Salvinia* and *Azolla*, two water ferns, requires recognition of the fact that they are essentially plants of warm, relatively stagnant water. Planted in a relatively shallow aquarium with a high organic content and given adequate light and warm temperature they will do well. In a large, relatively sparsely inhabited aquarium that is well aerated and cool, either form will die out in a short time.

The selection of aquarium plants, whether rooted or floating, should be based on the use which is to be made of the aquarium, a consideration of the temperatures that will prevail, the other inhabitants of the aquarium, and the size of the tank. In all cases, avoid overcrowding, poor planting, and lack of cleanliness. Contamination, regardless of the source, should be dealt with immediately, before conditions deteriorate to the point where a complete reconstruction of the aquarium planting becomes necessary.

AQUARIA IN THE SCHOOL LABORATORY

One of the most useful and interest-producing teaching aids for the school laboratory is a well-designed and satisfactorily operating aquarium. Many aspects of community relationships, feeding habits, predator relationships, and growth and development of both plants and animals can be observed and demonstrated. Interesting forms that would otherwise be studied only as preserved material or slide mounts can also be kept alive for periods of days or weeks.

It is not recommended that the school aquarium attempt the "balanced aquarium" concept, as the necessity for a fairly precise ratio of plants to animals and the need to leave the aquarium undisturbed does not allow the teacher to make full use of material at hand. It is more realistic to develop an aquatic environment to which many different plants and animals may be added and subtracted from time to time so as to use the aquarium as a teaching aid that may be constantly modified to accommodate the teaching program.

It is well to dispose at the outset of one major misconception regarding aquaria—the "balanced aquarium", supposedly the ideal of the aquarist, does not really exist. The theoretical ideal of an indefinitely sustained equilibrium between plants and animals in the restricted environment of an aquarium is impossible of fulfillment, as some sort of imbalance, sooner or later occurs. Actually we should design our aquaria with the idea of providing a compatible environment in which the plants and animals in the aquarium may survive and grow for some weeks or months with little care or alteration of the environmental conditions, but we must realize that this condition cannot in the nature of things be permanent.

In planning an aquarium, it is well to consider at the outset that the larger the tank, within practical limits, the better for most purposes. Fishbowls, ornamental containers, battery jars, and small tanks of ten gallons capacity or less are generally useful only for short times for the display of one or a few specimens under rather unnatural surroundings.

The aquarium for the school laboratory should be at least of 15 gallons capacity, and usually one of 20 to 25 gallons capacity will be more satisfactory. The aquarium supplies section of Ward's Catalog offers a variety of sizes.

Regardless of the uses to which an aquarium may be put, satisfactory results nearly always demand some equipment in addition to just the tank. The teacher must be able to control evaporation, light, and temperature, both to prevent harmful wide fluctuations in environmental conditions and to manipulate these conditions for experimental uses.

To reduce evaporation, an aquarium cover is recommended. For lighting, it is best not to place the aquarium where it is dependent solely on natural daylight, which at a given location may be too strong, too weak, and will vary considerably from day to day. An aquarium illuminator is recommended so that both the intensity and the daily length of illumination may be regulated.

Certain aquarium animals are restricted in their temperature requirements and thrive only at certain temperature ranges. Some combination of heater, thermostat, and thermometer should be used for temperature control. Of course, the heater should be of adequate capacity for the size of the tank. Five watts of heater per gallon of tank capacity is a handy rule, e.g., a 75 watt heater for a 15 gallon tank.

A heater fitted with an automatic thermostat is a great convenience, but a thermometer should also be used to check on the efficiency of the heater and for direct readings in keeping records of experimental set-ups.

A final piece of equipment that you will find useful is an aerator. This is an electrically powered pump that forces air through (usually) plastic tubing to an "air stone". The air stone is usually placed resting on the bottom of the tank in an inconspicuous location. The air stone is made of some porous material, natural or artificial, and its function is to break up the air stream into numerous tiny bubbles, which results in less agitation of the water and a greater surface of contact between the air passing through and the water. The aerator keeps the water in gentle motion throughout the tank, and the large air-water interface provided by the myriad of fine bubbles permits oxygen saturation to be quickly achieved and constantly maintained up to the limit imposed by temperature and the carbon dioxide concentration.

Because of the great variety and constant flux of aquarium aids on the market, and the necessity of making choices based on many variables, we have not suggested specific items here. A good source of information on available supplies is the aquarium section of Ward's Catalog. The descriptions of the items themselves will inform you of their varying capacity and applicability.

The use of filters is left largely to the teacher's preference. Filters are generally of value only when a particular aquarium set-up is to be left undisturbed for long periods of time. If an aquarium is being used for a variety of applications, with changes of water, contents, and arrangement between, a filter is of less assistance. However, if an aquarium is re-arranged without a thorough cleaning, a filter may be of help in clearing the water of the detritus that will inevitably be stirred up.

In setting up an aquarium, the first thing to do is to decide what the aquarium is to be used for. If the purpose is to demonstrate reproduction or heredity in fish using some easily maintained species such as the guppy, a simple set-up will serve. A quantity of floating aquarium plant such as *Elodea* or *Cabomba* to serve as a carbon dioxide consumer and a shelter for the young fish is all that is required in the way of plants. Sand or gravel in the bottom of the tank is not essential but adds greatly to the appearance. A few snails, such as the red ramshorn, are interesting and attractive subordinate inhabitants of the aquarium, but are probably of little real value as scavengers, it is not likely that snails can control a really thick growth of algae on the glass, for example, while their own ejectamenta adds to the accumulation of organic waste in the tank.

Many fresh-water invertebrates may be kept in aquaria with little in the way of preparation. In these cases it is necessary only to be sure that predators are not present, that some suitable food is present or can be added, and that some vegetation, rooted or floating or both, is included to give the animals some sense of protection so that they can be better observed and their behavior more nearly normal. The general rule is, the simpler the better.

The source of water for the aquarium can cause problems. Sometimes tap water will do, particularly for tropical fish, snails, and most aquatic plants. The water should be allowed to stand for several days in non-metal containers before added to the aquarium. This will allow the chlorine to leave

the water and the temperature to adjust. If the water runs through copper pipes or if it is high in minerals the use of Water Conditioner Solution (Ward's catalog number 88 W 7100) is recommended, particularly for invertebrates. Natural pond or spring water is probably the best water for aquaria. Well water is often useful and is to be preferred over highly treated, additive-containing tap water.

The importance of plants to an aquarium has been greatly overemphasized, as they are quite unnecessary for the culture and growth of most fish and invertebrate species. Furthermore, unless plants receive adequate light and are kept at a sufficiently high temperature, they will rapidly become a detriment and a source of contamination. Too little light results in sickly, spindly plants if they survive at all, too much light promotes an over-growth of plant life. Extremes of temperature can be similarly destructive. The chief use of plants in an aquarium is esthetic.

There is much misunderstanding in regard to the "oxygenating" role of plants in an aquarium. Actually, plants are not required to "oxygenate" water. If a quantity of water is exposed to the air, it will absorb oxygen from the air up to its saturation point at a given temperature. Oxygen produced by plants over and above the saturation point merely goes out of solution into the air. Plants can, however, bring about a higher concentration of oxygen by removing carbon dioxide from the water during photosynthesis, permitting more oxygen to go into solution. (Carbon dioxide is more soluble in water than oxygen, and its presence reduces the ability of water to dissolve oxygen.) The chief importance of plants is thus as carbon dioxide removers. But in the dark, or under unsatisfactory conditions of light and temperature, the plants actually compete with the animals for the available oxygen and do more harm than good. Even in the best aquaria, whenever the aquarium is in the dark, the plants are consuming, not producing oxygen. An aerator, as mentioned above, keeps the water in gentle motion and provides a large air-water interface so that oxygen saturation is quickly achieved and constantly maintained, but no more than plants can as aerator "oxygenate" water above its saturation point.

Light, except very diffuse light, is unnecessary in an aquarium for the growth of invertebrates and fishes, and is needed in strength only for the welfare of plants. Under natural conditions, most animal forms are capable of living and feeding in fairly dark conditions, and is the preferred condition for the activity of many. Therefore, an aquarium set-up for the purpose of studies on animals, or purely to retain living specimens in the laboratory, need not be lighted.

There is, however, no doubt about the attractiveness of plants in an aquarium, or their necessity in simulating natural conditions. In planting an aquarium, simplicity is the key to success unless you are a real expert. Plants should be chosen for ease of growth, hardiness, and ability to stand fluctuating conditions (see Ward's Culture Leaflet No. 18). Easy-to-grow plants such as *Elodea* (*Anacharis*), *Vallisneria*, *Cabomba*, and *Sagittaria* are recommended.

Of the above, *Elodea* and *Cabomba* can be left free floating but *Vallisneria* and *Sagittaria* require to be rooted. The simplest method for rooting plants is to place two or three inches of average sized gravel on the bottom of the tank. Gravel that is too fine or too coarse should be avoided—a subjective evaluation but one that is really not too difficult! Before placing the gravel in the tank, it should be thoroughly rinsed to remove all silt and other fine particles that will tend to cloud the water. Add water to the aquarium to a depth of several inches and work the plants' roots down into the gravel. The plants can be held down by small lead weights, stones, or other heavy inert material until they have secured themselves by root growth.

Some rooted plants, more particular in their requirements, require soil for proper growth and cannot merely be rooted in gravel. This is especially likely to be the case in aquatic plants collected locally that are growing on muddy bottoms.

You may wish to add such plants to your aquarium in an attempt to simulate a local environment, for features of their appearance or interest, or for some particular experimental purpose. In such event, one to one and a half inches of good rich garden soil should cover the bottom of the aquarium. Try to get soil that has not been recently treated with commercial fertilizers. The soil should then be covered with a layer of small rocks and a layer of clean sand. The sand should be thoroughly rinsed to remove all silt and dirt and then heated thoroughly, as by baking in an oven, to destroy any associated microorganisms. Cover the sand with a layer of gravel of an intermediate size, one that could neither be called fine or particularly coarse. This layer should have a depth of one to two inches and serve to stabilize the other components.

Place a piece of cardboard on the surface of the gravel, to prevent disturbance by water currents, and slowly pour water onto the cardboard, filling the tank to a depth of a few inches. If the bottom remains stable, continue to pour water until the tank is between 1/3 and 1/2 full. The plants may now be introduced by carefully working their roots into the bottom, repairing afterwards such disturbance as must be made of the surface layer. Do not place the plants too close together, as normal growth will soon fill the gaps. Use judgement in positioning the plants, placing your tall plants at the back and sides, with the smaller plants closer to the front and center. To the best of your knowledge, avoid plants that will become too large for your tank.

See Ward's Culture Leaflet No. 18 for additional remarks and information on aquarium plants.

The choice of plants and animals to go into an aquarium depends on the use that is to be made of the population. If tropical fish are to be used, the plants should be familiar aquarium plants that will survive the conditions required for tropical fish culture. If you are using native fish such as minnows, small sunfish, catfish, etc., the plants may either be "standard" aquarium plants or native aquatic plants collected from the same habitats that yielded the fish specimens. Many native aquatic plants do well in aquaria.

In adding fish, whether tropical or native, do not overstock the aquarium. A rough rule of thumb is one inch of fish (length) to one gallon of water. If more fish are added, trouble will develop sooner or later. Goldfish make very poor aquarium specimens, unless they are being used for specific purposes such as physiological or behavioral studies. As aquarium occupants, goldfish are generally uninteresting, dirty in they they constantly stir up the bottom and uproot the plants, and they also require considerable space.

Snails are usually added to aquaria to serve as scavengers (although their presence does not really seem to provide an effective control of contamination) and as subjects of interest for study. However, snails too must be selected with some care. Some fish attack snails and young specimens at least will be destroyed. Certain snails, such as the Striped Columbian Ramshorn Snail (sometimes available from dealers) are voracious plant feeders and unless provided with supplementary plant food will destroy aquarium vegetation. Some species are too shy or sluggish to offer much of interest. Other ramshorn snails, "mystery" snails, and common pond snails such as *Physa* and *Lymnaea* do well under most aquarium conditions and are about as interesting and attractive as any.

In feeding fish, several types of food may be used. Prepared dry fish food from a reputable source or manufacturer will serve as a basic diet for many fish and often will be consumed by other aquarium inhabitants such as some snails and tadpoles. For continued health, though, most fish need to have this diet supplemented with some live food. For this purpose, the white worm *Enchytraeus* is perhaps the most generally satisfactory. Small insect larvae may also be introduced. The brine shrimp, *Artemia*, may be used for many aquarium inhabitants provided care is used to wash all of the

salt from the *Artemia* before feeding. At times feedings of crustacea such as *Cyclops* and *Daphnia* will be helpful and mixed cultures of Protozoa such as ciliates and flagellates are often useful in feeding invertebrates and small fish. Feeding should be done at regular intervals, if possible at the same time of day, and small amounts rather than excess food should be supplied. It is less dangerous to underfeed than to overfeed, since the latter always results in decay of uneaten food and contamination. As far as practical, uneaten food should be removed after about half an hour after feeding with a suction pipette or similar device.

In all cases, regulation of the aquarium should strive to approximate natural conditions. Perhaps the most important single factor is temperature. For native fish and invertebrates, the temperature should not rise above 70° F and should remain between 65° and 70° F. For most tropical fish a temperature of 73°F is satisfactory. Lower than optimum temperatures usually result in less damage than excessively high temperatures. Of course, before initiating any aquarium operation, you will want to find out as much as you can about the environmental requirements of the species, both plant and animal, that are to be the inhabitants of the artificial environment.

In developing aquaria as teaching aids, experience and ingenuity are more important than any series of directions. Various environmental niches may be reproduced to some extent in the laboratory for periods of up to a few weeks by collecting material from a natural habitat and attempting to duplicate the habitat in the aquarium. As a teaching aid, a static aquarium set-up is of little value. Even the dullest member of the class will eventually tire of staring at tropical fish swimming back and forth. Aquaria may be used to hold specimens for experimentation, investigation of metamorphosis in frogs and other amphibia, demonstrating various types of ecological niches, and for performing experiments on predation, feeding habits, reactions to environmental stimuli, and as many other applications as the teacher's ingenuity will allow. Many aspects of biology may be demonstrated in an aquarium well planted with vegetation and stocked with a few minnows, tadpoles and frogs, and one small pickerel.

The above remarks apply, as is perhaps self-evident, only to fresh-water aquaria. A marine aquarium represents an entirely different set of requirements, challenges, and materials. You are invited to write to Ward's for currently available information on marine aquaria.

WARD'S

Culture Leaflet No. 21

SEED GERMINATION EXPERIMENTS

Seed germination studies offer an excellent opportunity for examining the early growth of plants and for investigating the effects of important environmental factors on plant growth processes. Certain conditions must be met before the germination of seeds will occur. The most important requirements are the presence of (a) water, (b) oxygen, and (c) favorable temperature, and sometimes (d) the presence or absence of light, depending on the species.

Most mature seeds contain less than 15% of water, an important factor in keeping the seed dormant. The protoplasmic and nutritive constituents of the seed are highly concentrated. Under these conditions, the physiological activity of seeds is reduced to the vanishing point.

For growth of the embryo to be resumed, water must be absorbed. It is not necessary to immerse the seeds in water for this purpose, and actually it is preferable not to do so (except for short periods as later described), since immersion limits the amount of oxygen available to the seed. Best results are obtained by placing the seeds in a moist atmosphere. Many seeds have a remarkable ability to absorb water and can obtain a sufficient supply from an apparently dry soil. Therefore, generally speaking, an air-dry soil will furnish sufficient moisture for germination.

The absorption of water by the seed does several things. If the seed coat contains hydrophilic colloids, they will absorb water, swell, and weaken, allowing the growing embryo to break through. If seed coats do not absorb water, the expansion of the tissues interior to the coats will break them. Water also provides a medium for the digestion of insoluble stored food materials in the seed. The availability of these materials for growth and metabolism is responsible for the increase in respiration that occurs during germination. Respiration is the oxidation of food and for this a supply of oxygen is needed. This is why moist air is a better situation for seed germination than immersion in water. Some seeds are known that will begin germination in the absence of oxygen, but few if any are able to complete the process under such conditions.

The third cardinal factor for seed germination is proper temperature. What constitutes an optimum temperature varies with the species, but in general terms, most seeds germinate readily between 25° and 30° C (76° to 86° F).

Light is an important factor in some cases. Many small grains, corn, and legumes will germinate as well in darkness as in light. Mistletoe and a few others will not germinate at all in the complete absence of light. Germination of some seeds (e.g., chives, garlic, some Liliaceae) is inhibited by light, but about 70% of all species investigated, including grasses, require or are favored by light.

To provide materials for studying seed germination, Ward's offers a selection of twenty different seeds (Catalog no. 86W 8000). In addition, a special germination set 86W 9200 consists of five types of seeds selected to provide certain comparisons and contrast in modes of seed germination.

To see the earliest stages of seed germination and the appearance of root hairs, Ward's Seed Germination Chambers (20W 8200 and 20W 8300) are very convenient. Other experiments to investigate the effects of environmental conditions on germination and early growth are better carried out with the seeds planted in soil or sand in which normal growth and support of the seedling is possible. The Plant

Science section of Ward's Catalog lists a variety of trays, plants, pots, and starters that are practical and convenient to use. The nesting plant trays (20W 8270 series) are the most generally useful for germination studies. Unless otherwise instructed, it may be taken for granted that the seeds are to be planted in any good potting soil, top soil, or light loam soil.

The importance and effect of water on the germination process may be demonstrated simply in the following way. Select seeds of one species and divide them into five groups of 10 or 20 seeds each. Soak the different groups of seeds in water for different periods of time as follows: (a) control, do not soak, (b) 12 hours, (c) 24 hours; (d) 48 hours; (e) 96 hours. In arranging the soaking periods start with the 96 hour period and work towards the shorter so that all the seeds can be planted at the same time. Plant them in clean dry sand to avoid complicating the situation with other factors such as fertilizer, type of soil, etc. Plant all of the seeds at the same depth, using a series of uniform containers to attempt to keep all environmental factors, except the time of soaking, the same for all. After planting, water the first container until the sand is wet, measuring the amount of water used. Then use the same amount of water for each of the other containers. At intervals throughout the experiment, water the germinating seeds so as to keep the surface of the sand moist, and being careful that all containers receive the same amount at each watering. For a period of 10 to 15 days, note the number of seeds that germinate in each group. By plotting the number of seedlings that appear against time and method of treatment, observations of some significant value may be obtained.

The relationship between moisture and seed growth may be demonstrated in a number of ways. By using a series of planting trays, seeds may be planted in a variety of different substrates such as sand, peat, and top soil. Water in measured amounts may be added to some and not to others. In this way a series of experiments may be set up in which the student may be able to study rate of germination and subsequent rate of growth or cessation of growth in the seedling as influenced by moisture, type of substrate, etc. It must be remembered that available nutrients will also enter into such an experiment when different types of planting media are used.

The influence of temperature may be investigated by germinating seeds under various temperature-controlled conditions, as in refrigerators, controlled-temperature rooms, and laboratory ovens, where range of constant temperatures can be obtained, or by keeping a careful temperature record with a maximum-minimum thermometer. Comparison of growth at different temperatures and temperature ranges can be worked out.

Data on the role of light may be obtained by the use of darkness and graded degrees of illumination, both length and intensity, using artificial light and a timer. Experiments on length of days related to growth may be carried out. Such experiments aid students in gaining an insight into the importance of environmental factors in determining plant distribution and practical economic botany. Very often it is profitable to state a problem and have the students work out a suggested experimental approach to the solution.

One of the most interesting experiments with seeds is that which shows the need for oxygen for germination and

growth, and the giving off of carbon dioxide in the respiratory process. A simple means of demonstrating this is here suggested.

The type of seed used is of little importance. Soak the seeds overnight in water to hasten germination. Soak an additional group of seeds in 10% formalin for the same length of time so that the embryos will be killed and germination will not take place.

The following morning, place a quantity (see below) of viable seeds and a similar quantity of dead seeds separately in the bottoms of two 100 ml burettes. Place a piece of moist cotton on top of each group of seeds to hold them in place. The cotton and seeds in each case should occupy the area between the bottom of the burette and the 100 ml mark. Then invert the two burettes over two large test tubes containing 10% potassium hydroxide. The burettes may extend down into the KOH solution for a short distance. In order to adjust the level of the KOH in the burette, open the stopcock of the burette so that the KOH solution rises to the zero mark on the burette. Close the stopcock. Upon completion of the set-up you will have two burettes containing 100 ml of air each and a small number of either germinating or dead seeds. Allow the set-ups to remain at room temperature for a few days.

As the experiment proceeds, the amount of oxygen used by the developing seeds may be observed by the rise of KOH solution in the burette. Since we are starting with an initial volume of 100 ml the results may be interpreted in approximate percentages. This type of procedure may also be used to compare respiratory rates in different species of seeds, and in seeds that have been retreated in various ways.

In determining the release of carbon dioxide, methods that are also applicable to many small aquatic animals may be used. The apparatus consists of a small mouthed laboratory bottle with a capacity of between 500 and 1000 ml. Place limewater in the bottom of the bottle to a depth of about 1½ inches.

Choose seeds such as wheat and disinfect to destroy

kill microorganisms by placing the seeds in a 5% Clorox solution for 10 minutes (to make a 5% Clorox solution, place 5 teaspoons of Clorox in 2 cups of water). Soak seeds overnight. Take a teaspoonful of seeds, place loosely in cheesecloth, and suspend in the bottle over the limewater. Stopper the bottle effectively airtight. After 48 hours, shake the bottle to mix the air contained therein with the limewater. The presence of carbon dioxide will be indicated by a white precipitate. A control may be set up in exactly the way but omitting the seeds.

Measurement of respiration based on the loss of weight is theoretically possible but difficult to carry out in practice. However, a satisfactory class demonstration can be made by using germinating seeds of rather large size, such as peas, beans, or corn. Treat seeds as previously indicated including sterilization to remove microorganisms. By careful weighing before and during germination, it can be shown that germinating seeds can and do lose weight.

Production of heat represents another measure of respiratory activity. Plants with a high metabolic rate, such as germinating seeds, will give off easily detectable amounts of heat. This may be demonstrated by placing two identical quantities of germinating, sterilized seeds and dead sterilized seeds in separate thermos bottles. In the case of the living germinating seeds the temperature will rise as high as 40° to 45° C, while the dead seeds will remain at the normal room temperature of about 22° C. The thermos bottles should be plugged with tight-fitting cork stoppers through which a thermometer has been inserted. In this way the thermometers may be read without opening the thermos bottles. All connections should be airtight.

Reference to texts and laboratory manuals of plant physiology will provide many refinements of the basic investigations suggested here as well as many more sophisticated experiments using various chemical and physical techniques. The experiments in this leaflet are intended to present simple demonstrations of some of the most basic factors in seed germination.

WARD'S

CULTURE OF BACTERIA AND MOLDS IN THE CLASSROOM

This leaflet provides a brief outline of procedures and techniques by which even the beginner can successfully grow and maintain pure cultures of bacteria and molds. Methods of working with the cultures is covered in Part I, Media is discussed in Part II.

PART I. GENERAL TECHNIQUE

CAUTION Do not work with pathogenic (disease-causing) organisms unless you have had sufficient training and experience in their handling. Treat all bacteria as being pathogenic, both to establish proper work habits and because of the chance (however small) of a culture inadvertently becoming contaminated by a pathogen.

1. Sterilization
 - a. Media and glassware: Use an autoclave or pressure cooker at 15 lbs. for 15 min. (121°C, 250°F).
 - b. Glassware: Dry heat in oven at 160°C (320°F) for at least two hours.
2. Wear a clean lab coat, smock, or apron to protect clothing and to reduce possible contamination of cultures.
3. While in the lab, avoid any hand to mouth operations, such as eating, smoking, or licking adhesive labels.
4. Wash hands thoroughly with soap and water, both before and after working with cultures.
5. Keep work surface clear of any unnecessary objects (i.e., books, purses, etc.).
6. Wash work surface with a capable disinfectant, such as 5% Lysol or 70% alcohol, both before and after working with cultures.
7. Culture transfers

The only articles of equipment needed to make a transfer from the initial culture to a tube of sterile medium are a Bunsen or similar gas burner, and an inoculating loop or needle.

 - a. Hold both tubes in the left hand (fig. 1).
 - b. With the needle in the right hand, pass the entire length of the wire through the flame until it has all been red hot (fig. 2).

FIG. 1

FIG. 2

FIG. 3

FIG. 4

FIG. 5

- c. While still holding the needle, QUICKLY remove the caps or plugs from the tubes, holding them between the fingers of the right hand (fig. 3). Flame the mouths by passing them two or three times through the burner flames (fig. 4). Hold these tubes almost parallel to the table top if they contain a solid medium, or at a slight angle if they contain a broth. This will reduce the possibility of air-borne contaminants.
 - d. Touch the needle to the medium in the culture tube to be sure it is cooled, and then to the culture mass. Apply the needle to the sterile medium in the other tube (fig. 5). (This may be either by streaking the surface of a slant, making a stab into a semi-solid media, or swirling the needle in a broth.) It should be noted that it is not necessary to attempt to remove a large volume of the culture mass with the needle. A slight touch will place more than enough on the needle to make the inoculation.
 - e. Flame the mouths of the tubes and cap them.
 - f. Flame the needle.
 - g. If petri plates are used, place them on the table and lift the cover only enough to maneuver the needle when inoculating.
8. If screw cap culture tubes are used, the cap should be kept loose to allow the aerobic cultures to get oxygen. (Most common bacteria and molds fall into this category.)
 9. If cultures are to be kept for an extended period, however, they should be sealed tightly to prevent dehydration of the media, and then refrigerated to slow the metabolic processes of the organisms.
 10. Discarding cultures
 - a. Autoclave.
 - b. Discard contents of containers. (Note. Do not dump melted agar down the drain. It may solidify and block the flow.)
 - c. Wash the glassware in hot water and rinse well.
 11. Broken culture containers
 - a. Pour disinfectant on all broken glass and contaminated surfaces.
 - b. Let this remain undisturbed for at least 30 min.
 - c. Carefully pick up all glass or residue and place in a container provided for the purpose, incinerate.
 - d. Disinfect area and wash hands thoroughly.

The recommended medium and the optimum temperature for each bacteria and mold are given on the tubes of the cultures supplied by Ward's: THE ABOVE MENTIONED TECHNIQUE IS USED FOR ALL BUT THE FOLLOWING MEDIA:

1. *Physarum polycephalum* (85 W 4750) and *P. gyrosium* (85 W 4745) plasmodium. These are supplied in a large test tube with a slant of plain agar and a few added grains of uncooked oatmeal. The best method that we have found at Ward's for culturing these slime molds is to use a moisture chamber.
 - a. Place a 150 mm. dia. petri dish half face up in the center of a large piece of coarse or "rapid" grade filter paper.
 - b. Wrap the filter paper around the dish.
 - c. Invert this inside a large (8-1/4" x 3-1/4") culture bowl to form a platform.
 - d. Add distilled water to a joint just below the top of the platform.
 - e. Using a small spatula or similar piece of equipment, lift an oat grain which is covered with the yellow or pink (depending on species) plasmodium. If the plasmodium is wandering from the oats in the tube, a fresh oat grain may be placed in contact with the mass, and it will soon be covered.
 - f. Place several of these encrusted grains in the center of the moisture chamber.

- g. Cover the chamber with either another culture bowl or piece of glass.
- h. As the plasmodium begins to wander and abandons the oat grains, remove them and place fresh ones in contact with the advancing plasmodial front. Moisten each grain with a drop of water from the chamber.
- i. Fresh cultures should be started on a weekly basis.
- j. It is extremely important that the oatmeal used be the uncooked variety (i.e., "Old Fashioned," not "Minute" oats.
- k. The temperature is also of vital importance. It should be kept as close as possible to "room temperature," 22 C (72°F).

2. *Physarum polycephalum* from dried sclerotium (85 W 4751).
 - a. The orange-colored incrustations on the slips of filter paper are the sclerotial stage of *Physarum polycephalum*. To activate the *Physarum*, prepare a moisture chamber as described. However, after moistening instead of adding water to a point just below the top of the plate, drain off the excess water and add a dropper full of distilled water daily to prevent drying.
 - b. Place a piece of the sclerotium (sclerotial side up) in the center of the moisture chamber's platform and contact with three flakes of uncooked, rolled oats. Cover the dish and keep at room temperature. The dish should not be exposed to direct sunlight. Within 24 hours the plasmodium should have become active and will be seen to be crawling over the oats. As the plasmodium advances from the initial oat food, new flakes should be placed in its path. At this stage the instructions for the culture of the plasmodial stage can be followed.
 - c. As only a small piece of sclerotium is needed to start the culture, the other pieces can be kept for future use at room temperature or placed in the refrigerator for longer viability.
 - d. All of these slime molds are, of necessity, grown in the presence of certain bacteria and molds. Experience has shown that, if kept in a pure state, the *Physarum* sp. do poorly. Thus, it is not necessary (in fact, it is undesirable) to use completely sterile techniques in the culturing of these organisms. Occasionally, some undesirable molds will be seen to be growing on oat grains which the *Physarum* has abandoned. This can be easily controlled by removing the contaminated material.

3. *Saccharomyces cerevisiae* (Brewer's Yeast) (85 W 5000).
 - a. This culture is supplied in a tube of liquid medium. It is the only yeast present, although there may be some bacteria in the culture.
 - b. An excellent medium may be made for the growth of this organism through following this formula:

Glucose	40g
Peptone	5g
Yeast extract	2.5g
(NH ₄) ₂ SO ₄	6g
KH ₂ PO ₄	.2g
CaCl ₂ · 2H ₂ O	.34g
MgSO ₄ · 7H ₂ O	.5g
Sodium lactate, 60% Merck	6ml.
Distilled water	1000 ml.

4. *Saprolegnia* sp. (85 W 5050)
 - a. The following solid medium is recommended by the American Type Culture Collection for the culturing of *Saprolegnia ferax*:

Blend 50 gm of water-ground white cornmeal in 1 liter of tap water. Let stand over-night in refrigerator. Add 7.5 gm of agar and heat at 60°C for 1 hour. Add 50 ml. of soil extract. Raise pH to 6.8-7.0 with Ca₃CO₃ if necessary.
 - b. Dispense in 4 or 5 ml. portions, including some solid meal in each tube. Autoclave for 25 min. at 15 psi. (Heat and cool gradually to avoid bubbling

up in tubes.) Slant.

- c. If a liquid medium is desired, the simplest way to grow *Saprolegnia* is by inoculating it into autoclaved distilled water containing a few sterilized rice grains.
5. Sexual reproduction of *Rhizopus nigricans* (85 W 4900 and 85 W 4901).
 - a. Using Sabouraud dextrose agar or potato dextrose agar in a petri plate, inoculate plus and minus strains on opposite sides of the agar. Be careful not to mix the two strains when inoculating.
 - b. A line of mature zygospores should result within a few days in the center of the plate where the hyphae of opposite strains have met.

PART II. MEDIA

Culture work is simplified by using Ward's prepared media, available in slant tubes, deeps, and 125 ml. bottles. Solid media are also available plated in 4 oz. prescription bottles (a Ward's innovation) which combines the large surface area of a petri plate with the ease of culture tube handling.

Certain media, due to the nature of the solidifying agent (coagulated protein), cannot be handled like the agar base media. These are supplied only in the slant and plated forms. Other agar-based media are of the semi-solid type and are available only in tubes and bottles.

Ward's media in bulk containers (bottles & deeps) may be distributed into petri dishes by the following method.

1. Use aseptic technique as outlined under Part I.
2. Arrange the number of petri dishes required (15-20 per bottle of medium) on the work area.
3. Remove the seal and loosen the cap on the bottle slightly.
4. Place the bottle in a large beaker. Pour water into the beaker until it is slightly above the level of the medium in the bottle.
5. Place a thermometer in the beaker. Heat the water, using a burner or hot plate until it boils.
6. Boil gently for several minutes until the medium is completely liquified. This can be tested by swirling the bottle slightly.
7. Turn off the heat and allow the temperature of the water bath to drop to between 45° and 50°C (114° - 122°F.)
8. Pick up the bottle, remove the cap, and flame the mouth of the bottle.
9. Lift the lid of the petri plate just enough to admit the neck of the bottle.
10. Pour the first petri plate, using just enough medium to slightly more than cover the bottom of the plate. Replace the lid.
11. Swirl the plate slightly to distribute the agar.
12. Immediately flame the mouth of the bottle and pour plates as needed.

If additional information is required, it is recommended that any good text or lab manual on the subject be consulted. The following are only a sample of what is available:

1. Alexopoulos, Constantine, *Introductory Mycology*. New York: John Wiley & Sons, 1952.
2. Breed, Robert S., Murray, E.G.D., Smith, Nathan R. *Bergey's Manual of Determinative Bacteriology*. Baltimore. The Williams & Wilkins Co. 1957.

USE OF TERRARIA IN THE SCHOOL LABORATORY

The terrarium as a teaching aid may be a vital means of awakening interest in biology, as well as having practical teaching applications. For the terrarium is a means of focusing attention on a microcosm of animal and plant life. Unfortunately, all too often the uses for a terrarium is some type of container holding a few ill-assorted plants or discouraged-looking reptiles. Actually, by using care in the organization of the terrarium and the selection of its occupants, the terrarium can provide both knowledge and pleasure.

Almost any sort of container with transparent sides may be made into a terrarium of some sort—a large jar, an aquarium tank, a small cage—but specially designed and constructed terraria are usually the most satisfactory (Ward's No. 21W1710 Series). Such terraria are built with a slanted glass front that gives it a variation in height from front to rear. A water-tight metal frame provides strength and permits a variety of habitat set-ups to be made. A choice of sizes is available.

Of course, terraria may also be constructed at home or in the school, with or without student help. Various types of pans or trays can serve as the base. Frames may be made of wood or light metal such as aluminum stripping while transparent sheet plastic is useful to cover the terrarium. This method permits the teacher to have terraria of various shapes and sizes not commercially available, which may be desired for special purposes. The use of plastic or cellophane sheeting of various colors can be used to test the response of plants and animals to different parts of the visible spectrum. (Colored cellophane can of course be used for the same purpose with commercially-built glass terraria.) Many dark-active animals are insensitive to red light and the use of red plastic or cellophane permits such animals to be observed as they carry out their usually nocturnal activities undisturbed by the observer.

TERRARIA FOR ZOOLOGY STUDIES

Representatives of certain animal groups are suited for study in various terrarium situations.

Amphibians usually do well in terraria if a few simple conditions are met. A layer of soil should be placed on the bottom of the terrarium, and this should be woods soil or some equally soft soil mixed with a few leaves and fragments of bark and wood. The soil should be sloped or hollowed out to provide a small area of standing water. To be held in a small dish, its edge flush with the soil surface. Small woodland plants, planted in the soil of the terrarium, provide an attractive and natural setting.

For typically terrestrial amphibians such as the common lungless red-backed salamander *Plethodon cinereus*, a few pieces of broken tree branches of sufficient size to form a place for cover is desirable. Toads will often burrow in the soil or take cover beneath leaves and sticks and may be seen with just their snout and eyes showing. The general environment should be moist without being actually wet, a humid atmosphere is essential to the normal respiratory activities of these amphibians.

The feeding of amphibians is always a bother. Some will eat small earthworms and mealworms, others will catch flies and other moving objects, and liver may be fed if necessary. However, most of these creatures will not eat anything that does not move, so if bits of meat or liver

are used, they must be moved in such a fashion as to simulate a living insect, this does not always seem to be successful and the animal may refuse to take the "bait" no matter how artfully it is agitated. Of course, any such material not eaten must not be allowed to remain in the terrarium.

The "wingless" mutant of the fruit fly *Drosophila* has been recommended as a good live food for small insectivorous amphibians and reptiles and might be tried. It can be raised in colonies in large numbers with frequent generations, and while the adults can walk actively, their greatly reduced wings prevent them from flying.

Certain reptiles make valuable terrarium inhabitants. In general, the most satisfactory reptiles for general observation are horned toads or other xeric reptiles. The soil should be sandy and dry, at least five or six inches deep, as these lizards like to burrow. Some burrowing activity is a response to temperature fluctuations and will occur if the temperature is too low or too high. (Temperatures in the seventies (F) are generally satisfactory.) They also burrow for concealment when alarmed. These species should be provided at all times with water, placed in shallow dishes flush with the surface of the sand. This will enable the lizards to drink when necessary.

It is not necessary and often undesirable to place cacti and other desert plants in the terrarium, although when first set up they are very attractive. However, the plants are often disturbed and overturned by the reptiles in their feeding and burrowing activities.

Horned toads and other arid-land lizards require food of considerable variety. They will feed on a variety of walking insects and other Arthropoda, including sow bugs, and the horned toads are especially partial to ants. Many of these lizards will consume mealworms, but an exclusive diet of mealworms will eventually prove fatal.

Finally, these desert lizards should be treated with care, and rapid movements around the terrarium avoided. They are shy creatures and can be best observed at a distance of about ten feet from the terrarium.

Other types of lizards generally do not do well in terraria, either because of the difficulty of providing a sufficiently accurate re-creation of their natural habitat or the inability to provide proper food. The American Chameleon or Anolis lizard is often available from pet dealers and can be kept for various periods of time. They can be maintained in a terrarium that includes a few leafy plants for them to crawl on. While they will eat mealworms, a better diet is fruit flies and other small flies that can be introduced into the terrarium. The wingless *Drosophila* may be helpful in this application.

Other types of lizards may be maintained for a time on mealworms and cockroaches.

Certain small snakes are suitable for the woodland type of terrarium. Such species are the ring-necked snakes (*Diadophis* sp.), DeKay's snake (*Storeria dekayi*), and the red-bellied snake (*Storeria occipitomaculata*). Any of these may be kept in a typical woodland environment with a small dish of water and a large enough area for the snake to coil up in. Food may be supplied in the form of mealworms, cockroaches, earthworms, and other miscellaneous small insects.

Larger snakes require too much space and their diet and general care are too difficult for the average school laboratory.

Other reptiles do not lend themselves readily to terrarium life. Turtles are often regarded with affection but show few interesting activities in captivity and are generally not suited to the terrarium. Most of the land-dwelling species are too large except when very young. The aquatic turtles or terrapins are best kept in an aquarium suited to their size, containing a few inches of water and a place where they can crawl out of the water and sun themselves. However, no reptile should be placed in direct sunlight without a shaded area to which it can retreat should its body temperature become too high.

For reasons which should be self-evident, vertebrates other than reptiles and amphibians are not suited to terraria.

Many invertebrates can be established in terraria. Ants are sometimes used, although they can be better observed in one of the more specialized "ant nests" that are commercially available, such as Ward's No. 14W7510 and 14W7520. Surface living woodland arthropods and mollusks, such as various beetles, millipedes, land snails, and slugs, will live satisfactorily if placed in an environment as nearly natural as possible, preferably material collected from the same site as the specimens. The habitat materials usually supply these creatures with sufficient food for some time, and the use of supplementary food materials is usually not practical.

TERRARIA FOR BOTANY STUDIES

The use of the terrarium for the observation and culture of many plant associations of small size is an interesting biological activity. Typical bog-like and marsh environments may be set up in the terrarium and will last for a considerable part of the school year.

Liverworts, mosses, and small ferns may be kept indefinitely in well organized terraria. They require fairly high humidity and moderate light intensities (avoid strong light). The occasional use of nutrient (fertilizer) solution is recommended. Such a terrarium can be developed by obtaining soil and humus from a woody area, preferably from where the specimens were collected, or from any such typical moss-fern habitat if using purchased specimens. Enough water should be present to produce the normal damp condition, and the terrarium kept covered to insure high humidity. However, the plants, particularly thallose liverworts such as *Conocephalum*, should be watched carefully to prevent the growth of mold resulting from too high a humidity. Humidity may be controlled by raising the cover of the terrarium slightly for a few hours during the day.

Under these conditions, small moist woodland plants will survive and show some growth throughout the year.

For details on the culture of specific plant study types and the use of nutrient solutions, see the appendix to H.C. Bold's very useful *Morphology of Plants*, published by Harper & Row, New York, 1957.

Terraria may also be profitably used for maintaining the interesting insectivorous plants, Venus's-flytrap, pitcher plant, and sundew. The bottom of the terrarium should be filled with a mixture of sphagnum moss and either sand or vermiculite. The plants may be rooted in this mixture and the terrarium placed where it will receive some sun. Under these circumstances, the plants should do well and even produce flowers. In the case of all, the amount of sunlight will determine the depth of color in the leaves. In subdued light, the leaves of all three will be a light green; in strong sunlight reddish hues appear in various patterns. Insects may be placed in the terrarium with the plants and the insect-catching activity of the plants observed.

Small cacti and other desert succulents can make an attractive desert terrarium although as mentioned earlier, it is better here not to attempt to combine plants and animals. The terrarium can be filled to a couple of inches with some good light soil, the plants rooted, and the soil then covered with a thin layer of white tinted sand for esthetic effect. Water sparingly and infrequently but regularly. However, such a set-up is generally more useful for its decorative value than as representing any actual ecological facies.

The use of the terrarium with plants is generally restricted to suggesting certain types of small-scale ecological conditions and associations. For the general raising of plants for other uses, conventional methods of pot and field culture are best.

GENERAL SUGGESTIONS ON PROCEDURE

As permitted by the limitation of space inside the terrarium, almost any sort of natural habitat can be represented. Bog, moist woodland and desert are usual types more or less successfully recreated in the terrarium. In the inevitable appeal of the exotic, do not neglect the possibilities inherent in local ecological facies. The terrarium can become a useful tool for learning and teaching more about the natural history of your own locale. Naturally, the more you know about the ecological requirements of specific plants and animals, the greater your chances of success. The number of variables is so great that this Leaflet can do no more than hint at a few basic principles that you can underly your efforts, and on which you can build a number of activities based upon your own knowledge and skill and the resources available to you.

Lesson Plan - Student Activity

FORESTRY.

Rationale: This activity is designed to provide the student with first-hand experience in the area of forestry. When combined with a tree planting experience, plus an exposure to some basic management technique, such as pruning and thinning, the student should be able to grasp the idea of what a forester does.

In order to understand a forest community the forester should know certain things about it, such as: (1) the number of each kind of tree (species) in the area, (2) how fast the trees are growing, (3) how much wood (in board feet) is contained in the trees, and (4) how healthy are the trees (evidence for disease and insect damage).

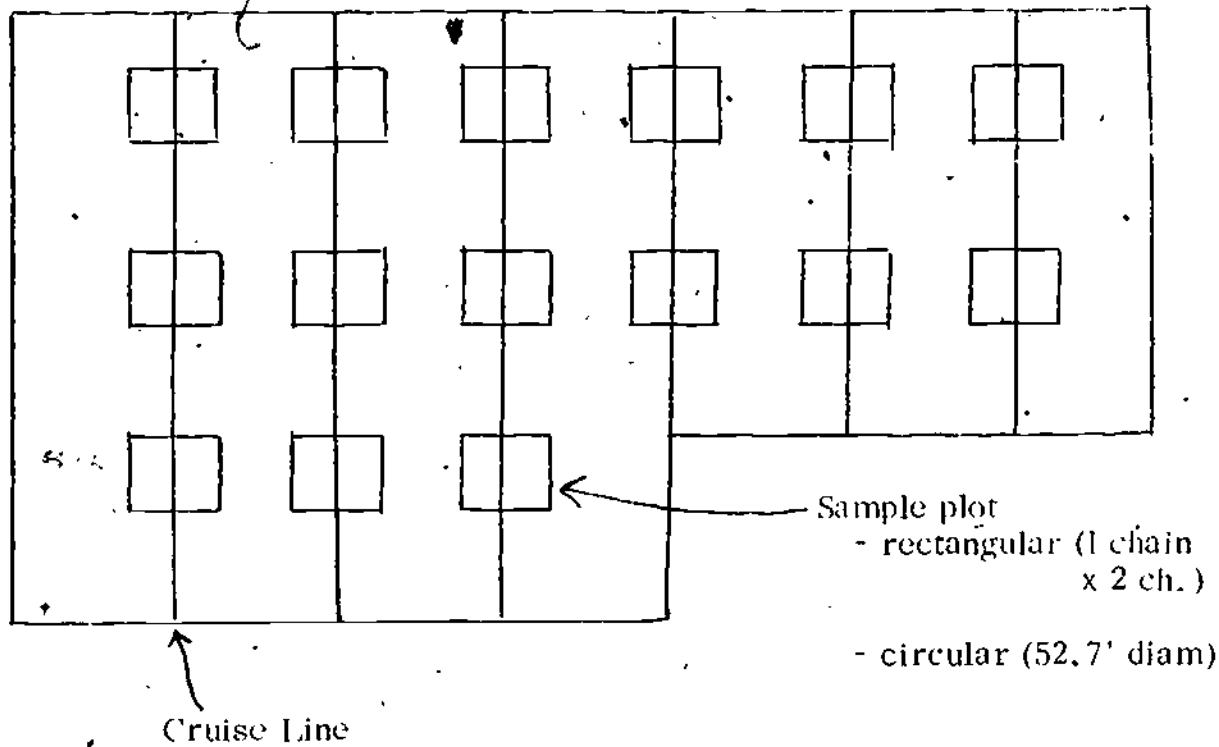

Materials: compass heavy cord
 stakes measuring tape
 string

The Action:

1. Small group or class activity.
2. "Cruising" Timber. This refers to taking a sample of the timber growing on an area by measuring trees on each of a series of 1/5 acre plots along a "cruise line" projected by a compass. These cruise lines are located at certain intervals in order to provide a good cross-sectional sample of the timber on the area. (see illustration - Figure 1).
 - a. Draw or obtain a map of the area to be cruised. Locate the cruise lines and plots on the map as shown in Figure 1.
 - b. Using an old tape measure such as used in tailoring and sewing, construct a diameter tape as shown in Figure 2.
 - c. Construct a "chain" of 66' in length using a rope or clothesline. (the surveyor's chain is 66' in length)
 - d. When measuring the trees on the sample plot, the cruisers move clockwise, measuring the trees over 5" in diameter. Any tree more than half outside the plot is not counted.

- e. For each tree measured, estimate the number of 16' logs in each tree.
- f. Record the information from "d" and "e" in a table as shown in Figure 3.
- g. You do not count any logs below 8" at the smallest end as saw timber. This is recorded as cordwood. (see table 2).
- h. The volume in board feet may be obtained by using Table 1.
- i. Calculate the total volume of saw timber and cordwood on the timber tract. Do this by determining what percent of the total volume was actually sampled, then converting to the total volume.
- j. If the local forester is available for assistance, an increment borer (instrument) may be obtained for the purpose of determining ages of the trees. This could be included in the tabulation of data.
- k. If a permanent plot can be established, growth rate studies, etc. can be carried out over a period of several years. The local forester can be of assistance in this case.

(Locating the Cruise Lines)

Cruise lines are separated by an interval of 132' and plots are located on the cruise lines at 132' intervals. (Two chains intervals).

Figure 1

(Constructing a Diameter Tape)

Using the back of an ordinary tape measure, mark off intervals of $3\frac{1}{7}$ " as shown.

Every $3\frac{1}{7}$ " on this tape equals 1 inch of diameter. This tape will be placed around the circumference of the tree at 4' above the ground (breast height). This measurement will be the diameter at breast height (DBH).

Lesson Plan

School Environmental Impact Study

Rationale: The school is a kind of community unto itself and consequently reflects an impact on the environment that is somewhat typical of other communities.

The Action:

1. This activity is designed for an individual or small group project.
2. Data is collected on the total school impact on the environment. This includes the water usage, kilowatt hours of electricity, fuel, paper, cleaning supplies, etc. Information about these items can be obtained from a number of sources.
3. The data may be used in a variety of ways, such as graph charts to make others aware of the demands placed on the environment by the school itself.

Lesson Plan
Auto Transportation Survey

Rationale: The automobile has been identified as a major source of air pollution especially in urban areas. This activity is designed to help the student gain insight into some of the reasons why this is so.

The Action:

1. This activity may be used as an individual or small group project.
2. Students might wish to explore the possible things that they could observe about people in autos that might be an indicator of why the automobile is such an efficient air polluting device. A suggestion would be to count the number of passengers per auto passing a given point in a certain length of time.
3. Prepare a tally sheet. See Figure 4.
4. Select areas such as intersections, etc., where observers could be stationed for a certain time interval each day, such as a 15 minute period during the class time, 7:45 to 8:00 a. m., etc. Number of days would be optional.
5. Use the tally sheet to tally the number of autos with one passenger, two passengers, etc.
6. The data could be handled in several ways, such as charts, graphs, etc.
7. The inferences to be drawn from this data is left up to the personnel involved.
8. What does the data suggest to you about career areas that might be related to the traffic problems in a city?

Lesson Plan

Neighborhood Environmental Depreciation Survey

Rationale: That an intensified study of the environmental depreciation in the school community can help us become more aware of the environmental needs of this area. This could be the basis for a community-awareness program to deal with these needs.

The Action:

1. Make a map of the area where you live. Include from one to several blocks in your study, depending on the time that you wish to spend on this activity.
2. Do a study of the environmental depreciation in this area. Include such things as:
 - sidewalks in need of repairs
 - streets in need of repairs
 - vacant lots that don't look good
 - vacant houses that are showing signs of destruction
 - houses with paint peeling, etc.
 - lawns in need of more grass
 - places where soil washes out into the sidewalk or street
 - places where trash and garbage accumulate
 - places where parked cars are a problem
 - junk cars
 - places where trees are needed
 - lack of proper street lighting
 - noisy places
3. Locate things on your map... do not include names of any individuals.
4. We will attempt to compile these into a large map of the community.
5. Make a list of the eco-environmental needs of the school community as you see them.
6. How might a class at school help make the people in the community more aware of these needs?
7. Do a similar study of the school complex.

Lesson Plan

Student Activity: Air Particulate Sampling

Materials: Paper punch
note cards
transparent tape

Procedure:

1. Construct sample as shown on Figure 5.
2. Place samplers at previously selected places.
3. Leave samplers for designated length of time.
4. Examine under microscope.
5. Record number of particulates per hole.
6. Group particulates by size, shape, color, etc., (sketch).

Interpretation:

1. Cut a 2½ inch by 3-inch card.
2. Crease center for guide.
3. Punch 3 holes where indicated.

4. Place strip of transparent tape over holes, sticky side down.
5. Write information on lower half of card.

Lesson Plan
Air Monitoring and Analysis Project

Representatives: Des Moines Independent Community School District and the Air Pollution Laboratory of the Des Moines - Polk County Health Department (Bill C. Wyer, Chemist).

Project Duration: Approximately October 1, 1973 through the end of the school year.

Equipment Provided by the Air Pollution Laboratory: Equipment to be used for the duration of the project will include ten dustfall buckets, ten bucket holders, and ten sulfation plate holders.

Equipment to Be Furnished by the Schools: This will include the purchase of the sulfation plates and any mounting devices needed to attach the two holders.

Project Description: The Air Monitoring and Analysis Project would be conducted by ten junior high schools throughout Des Moines with the cooperation of the Air Pollution Laboratory of the Des Moines-Polk County Health Department. Interested students in each of the ten schools would operate and maintain two separate air pollution monitoring devices.

The devices would include a dustfall station and a sulfation or sulfur dioxide plate. Each device would be placed on the second story roof of each school and the samplers would be collected every thirty days and brought to the Air Pollution Laboratory. During the initial set-up of each dustfall bucket, 1000 ml of distilled or demineralized water will be placed in each bucket and that volume should be checked and maintained by the students daily. However, because of weather conditions the volume may be exceeded but should never be allowed to go below the 1000 ml mark. During warm weather distilled or demineralized water can be used to replace any needed volume, but during the cold months an antifreeze solution must be used to prevent sample from freezing. There is no daily maintenance needed for the sulfation plates.

Because the schools lack the equipment needed to perform the analysis, the samples will be analyzed by the Air

Pollution Laboratory and the data would then be returned to each school to be used by the students to make their own charts, graphs, and conclusions. In addition to providing the analysis of the samples for the schools, the Air Pollution Laboratory would be available to small groups of interested students who would like to see an air pollution laboratory in operation.

Any additional assistance or information can be provided to the schools at any time throughout the duration of the project by Mr. Bill C. Wyer.

SUMMARY

It is hoped that inservice time will be used to help develop and enlarge this guide. Because the committee found that the exchange of ideas in developing the guide was very informative, it would emphatically suggest that time be made available to continue this work.

FILMS (Department of Adult Education, Des Moines Schools)

738	<u>National Parks - Road for Future</u>
739	<u>Automobiles; The Great Love Affairs</u> 54 min. Setting aside the many serious problems created by cars, this presents instead a survey of our society with the

automobile and its involvement. In Parts I and II we see everything from drive-in churches to teen-age drag racing; from parking lots to motion pictures about cars, and from automobile advertising to old car collecting. Clever script helps prove what we all know is true... Americans love automobiles. (Part I may be used alone or with Part II). 1965

649

Rise and Fall of the Great Lakes, The
16 min. Color, A folk singer tells the story of the Great Lakes; how they were created by four glacial ages and how, when the sun finally came out melting the glaciers, rivers and streams were formed. Viewers see a woodsman paddling his canoe in the lake and trick photography provides humorous illustrations of the natural changes through the ages. Brings the viewer up to the present as the canoeist's way is obstructed by canals, locks, dams and lake ships - and ends on a shocking view of man-made pollution and thousands of dead fish. Has wide appeal and general audience usage - and is educational as well as thought provoking.

526

Too Thick to Navigate -- Too Thin to Cultivate
N/C 30 min. Color - Throughout America there is growing concern that slowly but surely we are polluting one of our nation's most valuable natural resources -- our priceless water supply. Polluting our very environment, in fact. To aid in a better understanding of the problems of water (pollution, and to better inform our citizens, this film was produced by WBBM-TV, Chicago, in conjunction with CBS-TV. It's a graphic and "eye-opening" documentary of the pollution that is taking place in Lake Michigan. Excellent color and a factual report for use by youth, students and adults alike, for it may well be America's #1 conservation problem in years ahead. Excellent

1052

Man's Influence on His Environment (J-H) 20 min.
Color Man's control over his environment daily becomes more absolute. This film shows why he must eventually decide how far to extend this control.
MLA Instructional Media Center

FILMS Des Moines Instructional Media Center

- 3212 Population Ecology (AIBS Series) 28 min.
Illustrates nature's orderliness despite migrations, immigrations, competition, and predation. Demonstrates use of population growth curves illustrating increases in size of population. Uses models to illustrate effects of competition and predation.
- 2329 What is Ecology? Color (H) 11 min.
Introduces the study of ecology by illustrating the wide variety of interrelationships between plants, animals and their environment. Shows how biologists study these interrelationships and explains the importance of such studies to mankind. The major biomes of the world are introduced. E. B. F.
- 3915 The Changing Forest (J-H) 19 min. Color
A brief essay on the ecology of a deciduous forest area of the type found along the southern fringes of the Laurentian Shield. We see the forest as an integrated community of living things, both plant and animal, balanced by conflict as well as harmony in the never-ending struggle for survival. We see too how and why the maple, its flaming reds and yellows of autumn so characteristic of this type of forest, is best able to survive the struggle for supremacy. Canadian Film Board.
- 97 Conservation of Natural Resources (I-C) 11 min.
98 Three natural resources are discussed in this film: water power, forests and farm lands. Early wastes in lumbering and agriculture are shown followed by an explanation of steps taken to conserve these resources. The effects of wind and water erosion and unwise farming are outlined and local and federal efforts to check these abuses are shown. E. B. F.
- 4455 Conserving Our Natural Resources (I-H) 17 min. Color.
Man takes from his environment materials which he uses to make his life easier. These are natural resources.

4375
1109

Dust Bowl (J-H) 26 min. The story of neglect of the land, neglect of the people who farmed the land, exploitation, speculation and complacency which resulted in a mass migration from drought-ridden areas of the southwest to California. McGraw.

3240

Forests and Conservation (I-J) 15 min. This important study of forest conservation shows our government and a progressive lumber camp joining forces to save trees through a program of selective logging, reforestation, and fire prevention. An exciting fire-fighting sequence shows the forest's most deadly enemy at its devastation work. Coronet.

191

Guardians of the Wild, (I-C) 10 min. Forest Ranger at work; reveals the ideals of public service that motivate him and some of the benefits that Americans receive from his activities. U. S. Government.

2231

Harvest for Tomorrow (I-C) 27 min. Shows the basic need for soil conservation and the use of soil building practices in the northeastern states. A documentary type picture on rural New England. U. S. Government

2284

Living City, The (J-H) 25 min. Produced in cooperation with the Twentieth Century Fund. Vividly reveals the necessity for urban redevelopment in a cross section of American cities.

3000

Living in a Metropolis (I-H) 20 min. (Greater New York) New York, one of the world's largest cities, is a nerve center of manufacturing, trade, and research, in this growing industrial world.

2566
2567
2673

Man Makes a Desert (color) 10 ½ min. (I-J) The film illustrates the changes that can occur when man upsets the delicate balance between the plants and animals that inhabit an area. A grassland in the southwestern U. S. was plowed and overgrazed. The grass gave way to desert plants, the life the grass supported disappeared, and a desert was created.

3232

Meaning of Conservation, The (I-J) Preserving what we have, and rebuilding what has been lost are two of the central ideas behind conservation. In this film we see what is being done to maintain our country's resources and natural beauty by limiting hunting and fishing, etc.

- 3044 New Paul Bunyon (I-II) Color. 29 min. The film relates the progress in growing trees and in obtaining better use of the tree crop. Intimate close-ups of wild life at play in their natural forest habitat. Dramatic on-the-spot scenes of Pacific Northwest logging operations.
- 546 Seeds of Destruction (J-I) 11 min. Reveals the alarming extent to which man is depleting the soil and forest resources upon which his very survival depends.
- 492 Soil and Water Conservation (I-H) 10 min. Shows briefly how conservation farming methods may prevent further destruction of the nation's soil and water resources. It emphasizes proper land use as the basis for conservation farming.
- 2329 What is Ecology? Color (H) 11 min. Introduces the study of ecology by illustrating the wide variety of interrelationships between plants, animals, and their environment. Shows how biologists study these interrelationships and explains the importance of such studies to mankind. The major biomes of the world are introduced. E. B. F.
- 3542 ABC of Internal Combustion (J-H) 13 min. Color- Shows with animated cartoon characters how the three basic ingredients - air, fuel, and ignition work together to create power in the internal combustion engine. General Motors.
- 491 Birth of an Oil Field (I-H) 30 min. Color. This film catches the suspense of drilling a "wildcat" a well sunk in unproved territory. Live action shots show oil men building a derrick and drilling crews moving with split-second timing as they operate heavy equipment. Models show the technique of fishing when the drill pipe breaks and the use of the whipstock in by-passing the break. Animated sequences show how natural underground forces make oil flow and how pumps or special drives are used when natural forces slacken. Shell Oil.

1193

The Diesel Story. (I-II) B & W 19 min.

The versatile, efficient diesel is an early result of the designer's effort to burn fuel inside the cylinder instead of under a boiler nearby. Development of the diesel is traced from the Otto "silent" gas engine to 1877 to the machines that now drive ships, trains, tractors, trucks and even cars. Shell.

TITLE: MARKETING AND DISTRIBUTION. JUNIOR HIGH CAREER EDUCATION HANDBOOK.

DESCRIPTOR: *MARKETING; *CURRICULUM GUIDES; *CAREER EDUCATION; SECONDARY EDUCATION; *JUNIOR HIGH SCHOOLS; *BUSINESS EDUCATION; GRADE 9

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 108P.; RELATED DOCUMENTS VT 103 467 AND VT 103 469 AND VT 103 471 AND VT 103 552 AND VT 103 575 IN THIS ISSUE. PAGES 109 THROUGH 112 CONSISTING OF A PUBLICATIONS LIST FROM CAREERS, INC. WAS REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION.

ABSTRACT: DEVELOPED BY A COMPREHENSIVE CAREER EDUCATION PROJECT IN DES MOINES INDEPENDENT SCHOOL DISTRICT, THIS HANDBOOK FOR THE JUNIOR HIGH LEVEL PROVIDES ACTIVITIES FOR A STUDY OF CAREERS IN MARKETING AND DISTRIBUTION. IT IS SUGGESTED THAT THE MATERIALS BE INTEGRATED INTO THE EXISTING GENERAL BUSINESS TRAINING COURSE AT THE LEVEL OF GRADE NINE. THE AREAS OF MARKETING AND DISTRIBUTION COVERED IN THE HANDBOOK ARE THE DEPARTMENT STORE, THE FAST FOOD INDUSTRY, THE PETROLEUM INDUSTRY, ADVERTISING, AND BANKS AND INSURANCE. EACH OF THE LESSONS IN THE DEPARTMENT STORE, FAST FOOD, AND PETROLEUM INDUSTRY UNITS CONSISTS OF STUDENT STUDY SHEET AND TEACHER'S GUIDE. THE TEACHER'S GUIDE SUGGESTS MEDIA TO BE USED, DISCUSSION QUESTIONS, STUDENT ACTIVITIES, AND ADDITIONAL RESOURCES. STUDENT STUDY SHEETS PROVIDE INFORMATION FOR VARIOUS OCCUPATIONS ABOUT WORK PERFORMED, WORKING CONDITIONS, WAGES, REQUIREMENTS, OUTLOOK, ALONG WITH SUGGESTED LEARNING ACTIVITIES. THE UNIT ON BANKS AND INSURANCE CONSISTS OF GENERAL JOB INFORMATION FOR SEVERAL OCCUPATIONS IN THE FIELD PLUS SUGGESTED ACTIVITIES. THE ADVERTISING UNIT PROVIDES GENERAL JOB INFORMATION AND LISTS THE DUTIES OF SIX SPECIFIC OCCUPATIONS. APPENDED TO THE HANDBOOK ARE SUGGESTIONS FOR INDIVIDUALIZED INSTRUCTIONAL UNITS AND A LIST OF USEFUL EQUIPMENT AND MATERIALS. (NJ)

PREFACE

To further assist in making education more meaningful, a workshop was set up for one week (Summer, 1975) to either delete or add material to the Handbook for Junior High Career Education in Marketing and Distribution.

The committee decided not to delete anything from the existing materials and instead to add some units dealing with the distribution of services. Since Des Moines is a financial center, the new units deal largely with banking and insurance. Perhaps units can be developed in the future on such topics as grocery stores, small specialty shops, legal services, etc.

We would like to thank the following people for their initial contributions to the development of these materials in 1973 as well as those people in 1975 who developed the supplemental curriculum materials in Marketing and Distribution.

1. GOALS AND OBJECTIVES

PROGRAM GOALS FOR 1973-74 SCHOOL YEAR

1. Career exploration for students in the Ninth grade General Business Training course in the area of "Marketing and Distribution" with emphasis on careers in department stores, the petroleum industry and the fast food industry. (Lack of time limited the workshop participants to these three specialties.)
2. Development of activities that will reach students of all economic and intellectual levels.
3. Helping students become acquainted with the short and long term potentials in "Marketing and Distribution."

LONG RANGE GOAL FOR THE FUTURE

Development of a complete program in "Marketing and Distribution" to be taught on the Junior High School level. Other specialties to be added may include supermarkets, discount houses, specialty stores, warehousing, wholesaling, service occupations, etc.

PRIME OBJECTIVE

At the end of the 1973-74 school year, the student will be able to list the qualifications, opportunities, fringe benefits, working conditions, and entrance level for five of the careers explored.

00007

11. SUGGESTED USE OF MATERIALS

As previously indicated, it is suggested that Marketing and Distribution be integrated into the already existing General Business Training course. Instead of setting aside a block of time for the concentrated and exclusive study of Marketing and Distribution, it is suggested that various topics be spread over the entire two semesters of the regular General Business Training course. The exact placement and time allotment for each topic is left to the discretion of the teacher.

The General Business Training text currently in use is Crabbe, General Business, Ninth Edition. The following suggestions are made:

1. Introduce the Department Store Unit after the completion of the textbook's Unit 3, Buying by the Consumer. The sections on Credit Manager and Advertising may be delayed for use after other directly related units, see paragraphs 2 and 3.
2. Introduce the Credit Manager section after the textbook's Unit 4, Using Credit Wisely.
3. Introduce the Fast Food unit after the textbook's Unit 7.
4. Introduce the Petroleum unit after the textbook's Unit 10, Transportation and Shipping Services.
5. The list of "Career Opportunities in Marketing and Distribution" should be referred to frequently throughout the course.

00008

III. INTRODUCTION TO THE WORLD OF MARKETING AND DISTRIBUTION

An excellent method of introducing the many facets of marketing and distribution would be to show the slide presentation "The World of Marketing and Distribution". See Appendix for suggested items for purchase. Each school should have its own copy so that it may be referred to frequently in whole or in part throughout the course. The teacher should preview the presentation and determine whether it should be shown to the students in one sitting or broken into parts. If it is shown in one sitting, it should be later shown again in small segments.

So as to meet the goals for the 1973-74 school year, the 1973 workshop elected to study only three areas of marketing and distribution--the department store, the petroleum industry, and the fast food industry. Lack of time prevented inclusion of more of the many other areas of marketing and distribution. The three areas selected were not chosen because they were the most important, but for a combination of other reasons:

1. Requirements for entrance into these areas can be met by many of our students.
2. Students are familiar with these areas.
3. Representatives from these areas were on the advisory committee and gave excellent cooperation in their specialty.

Since retail selling is one of the largest, if not the largest, field of marketing and distribution, the department store was analyzed in depth. Sample lesson guides and teacher guides were prepared for the use of the teachers. There was no attempt to prepare day-by-day outlines for the entire course. In fact, the petroleum and fast food industries were covered only in general outline form, leaving the preparation of daily lessons plans to the discretion of the individual teachers.

00009

IV. CAREER OPPORTUNITIES IN MARKETING AND DISTRIBUTION
WITH D. O. T. NUMBERS

A. SALES PROMOTION

- 1. Marketing Research Worker 50.088
 - a. field interviewer
 - b. tabulator
 - c. analyst

- 2. Advertising 132.088, 141.081, 141.168, 164.068-164.168
 - a. account executive
 - b. artist
 - c. copywriter
 - d. layout artist
 - e. paste-up man

Use the unit on Department Store for the following jobs in advertising:

- f. sales promotion manager
 - g. sign machine operator
 - h. display director

- 3. Public Relations 164.068
 - a. tour guide
 - b. customer relations specialist
 - c. employee relations

B. INDUSTRIAL SALES

- 1. Manufacturers level 260.000 -289.458
 - a. manufacturers sales representative
 - b. sales engineer
 - c. sales manager
 - d. wholesale salesman

C. BUYER

- 1. buyer and assistant buyer
- 2. merchandise manager
- 3. purchasing agent 162.158
- 4. fashion coordinator

D. PHYSICAL DISTRIBUTION

- 1. receiving and stock clerk
- 2. warehouse manager
- 3. inventory control
- 4. forklift operator
- 5. delivery
- 6. dock workers--truck loaders and unloaders
- 7. packers

00010

E. RETAILING

1. Automobile Dealerships
 - a. counterman
 - b. salesman
 - c. service salesman
2. Restaurant Franchises
 - a. cooks and chefs
 - b. waiters and waitresses
3. Fast Food
 - a. production work
 - b. counter work
 - c. assistant manager
 - d. manager
 - e. supervisor
4. Speciality or Limited line shop
 - a. retail trade sales workers
5. Chain Stores
 - a. supermarket
 - b. discount department store
 - c. variety
 - d. department store

F. RETAIL SELLING

1. Salesclerk 260,000 - 298,877
 - a. apparel
 - b. hardware
 - c. housing
 - d. food products and services
 - e. automotive
 - f. intangibles (insurance)

G. NON-SELLING RETAIL

1. See department store on non-selling occupations--personnel manager, receiving clerk, price marker, inventory control, controller, switchboard operator, tailor, delivery, installation, repair, parts counterman, cashier and bagger, department manager.

H. NON-STORE RETAIL

1. Mail order and catalog
2. Door to Door
3. Vending machine routemen

00011

I. SERVICE TRADES

1. Hotel-Motel
 - a. maintenance
 - b. maid
 - c. housekeeper
 - d. desk clerk
 - e. reservationist
 - f. supervisor
 - g. night auditor
 - h. assistant manager
 - i. manager
 - j. bookkeeper
2. Restaurant
 - a. host or hostess
 - b. manager
 - c. waiter and waitress
 - d. busboy and busgirl
 - e. cook
 - f. counterman
3. Service station
4. Barbershop
5. Beautician
6. Dry cleaning
7. Employment Agency
8. Bowling alley
9. Movie theater
10. Travel Agency

J. REAL ESTATE AND INSURANCE

1. Real Estate
 - a. salesman
 - b. broker
2. Insurance
 - a. life sales
 - b. accident and health sales
 - c. property and liability sales
 - d. underwriter
 - e. claims adjustor
 - f. claims examiner

K. FINANCE AND CREDIT

1. Banks
 - a. teller
 - b. general clerk
 - c. loan officer
 - d. branch manager

00012

2. Stock Market
 - a. stock and securities salesman
 - b. accountant
 - c. statistical analyst
 - d. economist
 - e. business administrator
 - f. account executive

3. Loan Agencies
 - a. credit check clerk
 - b. billing clerk
 - c. bookkeeper
 - d. collections clerk
 - e. credit manager

Refer to Occupational Outlook Handbook for descriptions, etc., for each occupation listed.

00013

department store

00014

V. THE DEPARTMENT STORE

As stated under Goals and Objectives, lack of time forced the workshop committee to limit its study of Marketing and Distribution to only three areas--the department store, fast foods, and the petroleum industry. The department store was chosen as the major area for study because department stores include such a wide variety of occupations, many of which are common to other types of retail operations as well as other areas of marketing and distribution.

The study of the department store has been divided into eight lessons, each of which may take one class period, but the teacher may choose to take more or less time on each lesson as seems appropriate. Each lesson has been divided into two parts: (1) the Teacher's Guide and (2) the Student Study Sheet. The Student Study Sheets should be duplicated in classroom sets, one set for each teacher. The sets should be bound in a protective cover and kept in the classroom rather than being checked out to the individual students. For easy identification, everything that is intended to be duplicated for student use has been put on blue paper.

00015

Lesson 1: Department Store Organization

MEDIA FOR PRESENTING MATERIAL TO STUDENTS:

Area XI media center-Film "Opportunities in Sales and Merchandising" #20988
Transparency- "Organizational Chart for Department Stores"

SUGGESTED USE BY TEACHER:

Present organizational chart transparency to students.
Identify some of the specific jobs to help students realize the opportunities in the Department Store.
Show film "Opportunities in Sales and Marketing"

QUESTIONS FOR DISCUSSION

1. Have students identify jobs in film from the organizational chart.
2. Discuss what individual students know about jobs identified in the film:
 - a. What is a department store?
 - b. Do you think you are involved in a department store?
 - c. Can you name any department stores?
 - d. How are you involved in them?
 - e. How does the merchandise reach the store?
 - f. Show how the merchandise reaches the consumer.
 - g. How much of the retail store is floor space and how much is office and storage? (Example-Sears 250,000 sq. ft. total
116,000 sq. ft. used for selling)
 - h. What is the space not used for selling used for? credit offices, customer service, training-rooms, office, storage, employee cafeteria.
3. What characteristics and attitudes are necessary for promotion in sales and marketing occupations in Department Stores?

"Retail Selling"

"Retail Salespeople"

"Should You Be A Salesperson"

00018

Lesson 2: Being a Sales Clerk

INTRODUCTION

The sales clerk is a very important person in merchandising for the sales clerk not only makes the sales, but wins friends for the store. Customers often return to a store because of a favorite salesperson, and in the dress and millinery sections, in particular, some customers lean heavily upon the advice of a particular salesperson.

The sales clerk not only waits on customers, but keeps track of the stock at the counter, covers it or puts it away at night and re-dresses the counter in the morning.

Because the salesclerk has such direct contact with the customer, no one is more aware of customer wants and preferences. Buyers often consult with the senior sales clerk before ordering a doubtful item and in many stores it is customary for the sales clerk to fill out a "want slip" of customer inquiries at the end of the day, or a "complaint slip" listing complaints.

WORKING CONDITIONS

1. Usually clean, well-lighted and air-conditioned store
2. Working with people-some friendly, others unpleasant
3. On your feet much of the time
4. Year-round work with slack and busy seasons

HOURS WORKED

1. Usually 37-40 hours per 5-day week
2. May include some evening and week-end work

EARNINGS

1. Range depends on experience and education
2. Usually starts at minimum wage (presently \$1.60 per hour)
3. After completion of probation period, the base salary can be \$2.00 to \$5.00 per hour depending on the experience
4. In addition to base salary, an employee may work on a commission basis earning him as much as \$40,000 per year in unusual situations

PERSONAL QUALIFICATIONS

1. A liking for and an interest in people
2. Ability to get along with people
3. Be courteous and patient
4. Willing to learn
5. Be well-groomed

00019

Lesson 2: Sales Clerk (Continued)

TRAINING

Through distributive education programs in the senior high school, a student can enter a sales training course as early as his sophomore year. A student can begin his on-the-job paid experiences as early as his junior year which results in a two year on-the-job marketing program. Future education in this field is available in institutions of higher learning.

PROMOTIONAL OPPORTUNITIES

Many ambitious and qualified salespeople have advanced from sales clerk to head of stock, then to assistant buyer or buyer. This form of advancement has probably been the most common path to well-paid and responsible positions.

FUTURE OUTLOOK

It is expected that more than 150,000 job openings will occur annually through the 1970's.

CASE STUDY

Customer: Can you help me?

Salesclerk: (Cheerfully) Sure, just a minute. (Finishes conversation with friend and approaches customer silently.)

Customer: (Fingers merchandise, but drops it.) Never mind. Walks away.)

Salesclerk: (Calls over to other salesclerk.) Now what's the matter with her?

Questions for discussion:

1. What is the problem revealed in this sales dialogue?
2. Identify the selling errors made by the salesclerk.
3. How should the customer have been treated?
4. State the impression you think the customer now has in her mind of the employees in the entire store.
5. When should personal conversations be held at work?

00020

Lesson 2: Sales Clerk (Continued)

ACTIVITIES

1. Conduct an interview with a salesclerk in a local department store.
2. Prepare a one-minute presentation of a product sold in a department store.
3. Select an object in the room (or several objects) and list 4 or 5 selling points of that object.

00021

Lesson 3: Shipping and Receiving Clerk

READING MATERIAL: Chronicle Occupational Brief (Shipping and Receiving Clerk)

QUESTIONS FOR DISCUSSION:

1. Why should the young person who wants to make a career of retailing begin in the receiving department of a store?
2. Under what circumstances should merchandise that is received in the store be checked for quality as well as quantity?
3. If you were a receiving clerk of a wholesale hardware operation, would you give retailers the privileges of returning unsold stock? If so, under what conditions would you do so? Would your answer be the same if the product were bread? If it were women's ready-to-wear?
4. Discuss the advantages and disadvantages of paying bonuses to checkers for discovering and reporting shortages and overages in shipment.

SUGGESTED STUDENT ACTIVITIES

1. Select two items of merchandise sold by your store. For each item list the safety precautions that must be observed in receiving and unpackaging (a) to prevent damaging the goods (b) to prevent personal injury to yourself.
2. Assume that you are the manager of a department store in our community. Draw a chart and discuss how the products you sell reaches the sales floor from the receiving dock area.

00072

Lesson 4: Buyer

QUESTIONS FOR DISCUSSION FROM STUDENT STUDY SHEET

1. The buyer's choice of merchandise is based on his observation of customers as they shop, on what they say, on how well the merchandise is moving, on what sales records show, on what goods the trade papers and other sources indicate that customers are buying, on what new products are on the market, and on what other stores are selling and at what prices.
2. Finding out what the customers want; knowing where to buy what they want; knowing how much and when to buy; selecting goods to fit the image, budget, and policy of the store; and keeping records of sales and stock turn.
3. When a customer fails to make a purchase, the buyer wants to know whether the merchandise was unsatisfactory as to size, quality, or price; as well as whether or not the caliber of salesmanship or other store services contributed to the loss.

ADDITIONAL RESOURCES AVAILABLE

Speaker: Ashby N. Baldock 244-3231 Buyer, Purchasing

Films: "The Care and Handling of Buyers" (Free Loan)
Modern Talking Picture Service
1212 Avenue of the Americas
New York, New York 10036

Phamplet: "Careers for Retail Merchandise Buyer"
Institute for Research
537 S. Dearborn Street
Chicago, Illinois

00023

Lesson 4: Buyer

INTRODUCTION

The buyer sometimes has the dual job of buyer and department manager, immediately responsible for the entire merchandise which the department carries. This is an important job and a difficult one. Equally as much, if not more than the merchandise manager, the buyer must be able to anticipate public wants and understand likes and dislikes, because orders are placed many weeks before the merchandise appears on the sales floor.

WORK PERFORMED

1. Secure merchandise that will sell at a profit
2. Build toward satisfied customers
3. Know qualities of merchandise and attend style shows
4. Know the competition
5. Know the public and what they want

WORKING CONDITIONS

1. Usually works in pleasant offices and showrooms
2. Possibility of a great deal of traveling
3. Working with people

HOURS WORKED

1. Usually not a set number of hours
2. Good possibility of choosing hours and time off
3. Could be much time spent traveling

WAGES AND BENEFITS

1. Range from \$100 per week to \$13,550 per year in smaller stores
2. \$9,000 to \$30,000 in larger stores
3. 10-20% discount on merchandise that you purchase for your personal use.
4. Paid vacations and holidays

PERSONAL REQUIREMENTS

1. An ability and aptitude for trading
2. Leadership, imagination, aggressive
3. Well-groomed
4. Good physical condition

00024

Lesson 4: Buyer (continued)

TRAINING REQUIREMENTS

1. Without a college degree a buyer starts out on a job.
2. A buyer can start out as part-time in a high school distributive education program.
3. College graduates start out in store training program.

PROMOTIONAL OPPORTUNITIES

1. Excellent for one with good personality.
2. With good intelligence and hard work, can be promoted to merchandise manager, or vice-president in charge of merchandising, or possibly to store president.

FUTURE OUTLOOK

1. Good opportunity for both men and women.
2. Great competition in the buying area.

QUESTIONS FOR DISCUSSION

1. How does the buyer know what to buy?
2. What are some responsibilities of the buyer?
3. What does a buyer want to know about a customer's failure to purchase?

SUGGESTED STUDENT ACTIVITIES

1. Bring in three records that are presently on the list of top ten tunes. Play the three records in class. You are allotted \$1000 for the purchase of records. How many of each record would you buy? Why?
2. Visit a store buyer of your acquaintance. Request him to explain to you the basic stock list used in his department or store. How was this list prepared? In what ways is it used as a basis for buying? Try to obtain a copy of this list.
3. Estimating customer demand is quite difficult. Give illustrations from your experience or by guessing from advertising, of merchandise for which local stores have either underestimated or overestimated demand.
4. By interviewing retail managers or buyers, find out what career opportunities are open in merchandising management. Prepare a report of your findings, showing the routes of advancement and positions open to beginners.

Lesson 6: Fashion Designer

ANSWERS TO QUESTIONS FOR DISCUSSION FROM STUDENT STUDY SHEET

1. A style includes the characteristics of an item and does not change. However, a given style can be liked at one time--be in fashion--but fall into disfavor at other times, when it is still a style but is not fashion. For example, two-story colonial houses, no of a style that was in disfavor for many years--now that they are in favor again, they are therefore fashionable.
2. Rapid communication today allows everyone to know of new styles and causes styles to become fashionable faster. Also, there is a modern emphasis upon the use of designers by manufacturers who feel that one of the best ways to capture the market and maintain sales is to develop new styles.
3. The basic American contribution has been the democratization of fashion, through mass production, mass advertising, and mass distribution. Style is within the reach of most people, at a low price.

ADDITIONAL RESOURCES AVAILABLE

Speaker: Marjorie Stiles (Younkers) 244-1112 Interior Decorating

Pamphlets: "Careers in Fashion Designing"

"Fashion Designer"

"Fashion Designers"

Refer to Part II, Suggested Equipment and Materials for Purchase

Lesson 5: Fashion Designer

INTRODUCTION

The designer must observe and analyze fashion trends as set at fashion centers all over the world. These include the wear of men, women, and children as well as accessories that go along with the clothing.

WORK PERFORMED

1. create original designs for new styles
2. supervises showings of their design
3. special designs for holidays and seasons
4. sketching, pattern making

WORKING CONDITIONS :

1. some work in noisy, cluttered rooms with a small office
2. others in neat, well-ventilated areas
3. many spend a great deal of time traveling

HOURS WORKED

1. in the clothing industry 40 hours per week
2. self-employed or specialist would work many more during season changes and special events

WAGES

1. depends on experience and reputation
2. beginners \$100 per week to \$600 per week depending on experience
3. specialists earn to \$26,000 per year and more

PERSONAL QUALIFICATIONS

1. creative ability
2. interest in style and fashion
3. be well-groomed
4. ability to work with people
5. be a salesman

0067

Lesson 5: Fashion Designer (Continued)

TRAINING REQUIREMENTS

1. 2-4 years of formal education
2. courses in design, painting, art, costume history, anatomy, pattern making
3. on-job-training on a very limited basis

PROMOTION

1. since one does not usually start out as a designer the opportunity to reach that level is good
2. start as copyist or sketcher
3. work up to assistant and then to designer after 2-3 years experience

FUTURE OUTLOOK

1. a very competitive field for both men and women
2. room for top level ability people
3. looking better with increased changes in style and fashion

QUESTIONS FOR DISCUSSION

1. What is the difference between "style" and "fashion"?
2. Why do present-day fashion tastes change more rapidly than in the past?
3. What has been the American contribution to fashion?

SUGGESTED STUDENT ACTIVITIES

1. Hang a dress and/or suit in front of the classroom.
Write a paragraph on how you would redesign this wearing apparel to fit into today's design market.
2. Develop a pattern for sports wear.
3. Make a design that could be used as a school emblem.

00028

Lesson 6: Credit Manager

ANSWERS TO QUESTIONS FOR DISCUSSION FROM STUDENT STUDY SHEET.

1. Credit is widely used, and about a third of the retail volume is done on credit. Credit helps more people buy and helps make mass production and mass distribution possible.
2. Credit: (a) makes regular customers, (b) encourages more buying and with less "price-shopping," (c) builds confidence in the store. (d) often attracts a higher class of trade, (e) smooths business peaks. (on the other hand, credit: (a) ties up capital, (b) is costly, and (c) may cause some customers to go to other stores.
3. The store investigates the "three C's": Character, Capital, and Capacity.
4. Credit increases a store's expenses, and thus higher prices are necessary. But, if credit raises sales volume considerable lower prices are possible.

ADDITIONAL RESOURCES AVAILABLE

Speaker: John Robb 243-2161 Credit Manager

Pamphlets: "Careers in Collection" American Collectors Association Inc.

"Credit Workers" Science Research Association

Also "Credit Collectors" Science Research Association

00029

Lesson 6: Credit Manager

INTRODUCTION

The Credit Manager is the person responsible for the supervision and directing of credit and collection activities. This means that the credit manager investigates the credit record and reputation of potential credit customers, approves or disapproves requests for credit and maintains records of accounts and the collection of these accounts.

PERSONAL QUALIFICATIONS

1. Honesty
2. Courtesy
3. Able to deal effectively with people
4. Ability to handle details
5. Good numerical ability

WORKING CONDITIONS

Generally works in a clean, well-lighted, air-conditioned private office.

EDUCATIONAL QUALIFICATIONS

1. College degree preferred in business administration with emphasis on (a) economics (b) finance (c) accounting (d) marketing
2. Two years experience in credit and collection work

HOURS WORKED

Depends on nature of credit work (general rule is 40-hour week with no work on weekends).

SALARY RANGE

Usually from \$7800-\$25,000

PROMOTIONAL OPPORTUNITIES

Credit managers may advance to positions as treasurers or comptrollers in some firms or general management positions in others.

Lesson 6: Credit Manager (Continued)

QUESTIONS FOR DISCUSSION

1. What part does credit play in our distribution system?
2. Compare the advantages of cash and credit methods of store operations. What are the disadvantages of each?
3. What information about the personal characteristics of the prospective customer should a merchant consider before granting credit?
4. How does the adoption of a credit policy affect the retail prices of a store?

SUGGESTED STUDENT ACTIVITIES

1. Collection letter: You, as the credit manager, are faced with the following problem. One of your charge customers has become two months behind in his payments. This person has been a charge customer for a period of 3 years and has always been prompt with his monthly payment. You, as the credit manager, must draft a collection letter to be sent to this customer. How will you draft this letter? Will you demand payment in full? Begin repossession procedures? Let him get by with this? Or just what will you do?
2. Credit Application: You as the credit manager have been given a credit application for an individual who wishes to purchase merchandise on the time payment plan (this means a certain payment for a given number of months). The application has the following information:
 - a. Person is married with one child.
 - b. Person has job which pays \$8400 per year.
 - c. Total indebtedness is \$2300 (Includes car, insurance etc).
 - d. Person is renting a home not buying.
 - e. Person has savings account and checking account at a local bank.
 - f. Person maintains charge cards for 3 major oil companies.
 - g. Person has not applied for credit at your store before.Would you extend credit to this person? Why?
3. In a written report, discuss the advantages and disadvantages of installment-credit selling from the standpoint of the credit manager.
4. Obtain credit application blanks from two or more stores. Explain why each item of information is needed by the store. Then compare the blanks for the kind and amount of information required.

00031

Lesson 7: Personnel Manager

ACTIVITIES:

1. Have students secure sample application blanks from various businesses. Practice filling in the application blanks. ~~Blanks.~~ (Instead of using actual application blanks, teacher may prepare dummy application blanks and have them mimeographed for each member of the class.

2. Have two students conduct a mock interview in front of the class. Instead of having two students "perform" for the rest of the class, teacher may choose to divide entire class into groups of two (interviewer/interviewee), thus giving all class members a chance to participate. The interview situation might be something like this:

The personnel manager is interviewing an applicant for a position as shoe salesperson in the men's shoe department of a department store. The applicant should have an application blank which he has filled out. The applicant may assume that he has just finished working at an A. & W Drive-In as a car-hop. He should answer all of the interviewer's questions as realistically as possible. See next page for a list of suggested questions which the interviewer may choose to ask the applicant. The interviewer may choose what action he wishes to take as a result of the interview. Upon the completion of the interview, the class should discuss their reactions.

3. As a variation of the foregoing mock interview, have two interviews--one the "right" way to apply and one the "wrong" way to apply for a job.

ADDITIONAL RESOURCES AVAILABLE:

<p>Speakers: Robert Kilstrom, Personnel Director, Younkers Phillip O'Brien, Personnel, Meredith Corp. Ray Russell, Personnel, Hawkeye-Security Ins. Co.</p>	<p>244-1112 288-8517 243-2121</p>
---	---

00032

Lesson 7: Personnel Manager (Continued)

SUGGESTIONS FOR THE INTERVIEWER

Questions the interviewer may ask:

1. What are your future vocational plans?
2. In what school activities have you participated? Why? Which did you enjoy the most?
3. Why do you think you would like to work for our company?
4. What jobs have you held?
5. What are your ideas on salary?
6. How do you feel about your family?
7. How much money do you expect to earn when you are 30 or 35 years old?
8. What characteristics are necessary for success in being a salesperson in a shoe store?
9. What interests you about selling shoes?
10. How do you feel about overtime work?
11. What disadvantages do you see in selling shoes? What are some of the advantages?
12. Do you like routine work?
13. Are you eager to please people?
14. What job in our store would you like if you had the freedom to choose and the ability to perform the job?
15. Have you saved any money?

It is suggested that these questions be used only as a guide and that the interviewer adapt these questions and his own to the person being interviewed.

00033

Lesson 7: Personnel Manager

INTRODUCTION

The personnel field evolved during the last fifty years out of the employment function and management's concern for a more efficient and cooperative working force. The growth of personnel administration has paralleled the expansion of business and industry. There was little or no need for personnel specialists when most enterprises were small with a handful of employees hired, directed, and fired by the owner or manager.

DUTIES PERFORMED

1. Maintain adequate labor force.
2. Develop a cooperative, productive employee attitude.
3. Develop conditions for each individual to produce effectively.
4. Select and recommend people for jobs at all levels.
5. Administer employee evaluation program and deal with problems.
6. Develop sound job classifications and wage plan.
7. Develop and administer retirement benefit plans.
8. Terminate (fire) unsatisfactory employees.

SALARIES

Generally ranges from \$12,500 to \$22,000 depending on size of store and experience of individual.

WORKING CONDITIONS

Office is well-lighted, and usually air-conditioned.

HOURS WORKED

1. Generally 40 hours per week over a 5-day period.
2. Hours can be longer depending on the responsibilities.
3. There is also some travel involved.

00034

Lesson 7: Personnel Manager (Continued)

QUALIFICATIONS

1. Need general education--broad cultural background
2. Understand purpose, policies, and structure of organization he serves
3. Know characteristics of all jobs in organization
4. Knowledge of human characteristics--aptitudes, interests, and personality factors

EDUCATIONAL REQUIREMENTS

General Business Administration degree from college.

00035

Lesson 8: Public Relations

ANSWERS TO QUESTIONS FOR DISCUSSION FROM STUDENT STUDY SHEET

1. A company must consider its physical appearance and its relation with employees, unions, similar groups, government agencies, customers, community, and civic groups, and the business community (including competitors) of which it is a part.
2. A company may treat its customers as guests and find ways of making shopping more pleasurable and convenient; for instance, by installing "magic eye" door openers, by offering check cashing services, by welcoming newcomers, and by providing special guides for shoppers.
3. A department store holding a sewing school; a manufacturer of water skis lecturing on water safety; or several companies guaranteeing the costs of a special concert.
4. Answers will vary. As construction progresses, news releases describing the company, announcing the appointment of local people to important jobs in the store, and emphasizing the importance of the store to the community might appear frequently. Previews for the press and leading citizens are held; the formal opening is a brief, impressive ceremony to which the public is invited.
5. To get the company's name, people, and products mentioned favorably wherever and whenever he can.

ADDITIONAL RESOURCES AVAILABLE:

Pamphlets: "Publicity Work as A Career" Institute for Research.

"Should you go into Public Relations"

New York Life Insurance

00036

Lesson 8: Public Relations

INTRODUCTION

A public relations man is responsible for developing and maintaining public opinion favorable to the organizations using their services.

WORK PERFORMED

A good public relations man develops favorable public opinion by using the following modes of communication:

1. Written material (i.e., magazine articles, promotion booklets, letters to editors, etc.)
2. Spoken material (making speeches at civic organizations, meetings, radio and TV announcements)
3. Graphic materials (billboard displays, photographs)

PERSONAL QUALIFICATIONS

1. Creative, Patient, Aggressive, Sympathetic, Understanding.
2. Must believe in the product or client he represents.
3. Should be able to communicate orally, but also be a good listener.

EDUCATION

College graduate--degree in one of three areas (Liberal Arts, Business, or Journalism)

SALARY AND HOURS WORKED

Hours are extremely flexible.

Salary ranges are extreme starting from \$6,000 per year to \$50,000. depending on responsibilities and size of organization.

FUTURE OUTLOOK

Public relations is a rapidly expanding field. Qualified "idea" people are in great demand. People employed in public relations are quite well paid. Men and women have great opportunity, both jobwise and salarywise.

00037

Lesson 8: Public Relations (Continued)

There is hardly any organization today that does not conduct some kind of public relations program. In future years, as businessmen become more sophisticated, there should be a tremendous growth of public relations services into the small company area.

QUESTIONS FOR DISCUSSION

1. What factors must a company consider in establishing good public relations?
2. In what ways might a company work toward establishing good public relations with customers?
3. Give three examples of how a business builds good community relations through special events.
4. What are some publicity efforts that might take place in opening a new retail store?
5. What is the job of a public relations man?

SUGGESTED STUDENT ACTIVITIES

1. Find an example of public relations as found in one of the following areas: TV, radio, newspaper, civic organizations, or your own personal experiences. After reviewing the source, write a report in 100 words or less evaluating and adding comments as to the effectiveness of the example.
2. You, as public relations person, must develop a brochure promoting your company to future employees. Draw up a dummy copy of this brochure ready to go to the printer. It should include all the good aspects of the store. Use good color scheme, pictures, and unique folding design of the brochure. It should catch the eye of the public.
3. You, as the public relations person, have been invited to Ankeny, Iowa for the opening of one of your new department stores. You have been advised that you will be asked to give a short speech on the advantages and benefits of having the new store located in the community of Ankeny. Prepare a 3-5 minute speech promoting the opening of a store in the community.

00038

fast
food
industry

00079

VI. THE FAST FOOD INDUSTRY

The following pages are intended to be only a starting point in the work that may be done relating to the Fast Food Industry. The teacher will need to enlarge upon the lesson sheets being provided.

Lesson 1: Introduction To The Fast Food Industry

The fast food industry is distinguished from other types of the food industry by these basic facts:

- a. The customers obtain their own food (they go up to a counter and order)
- b. Lower prices on food
- c. Fast food buildings are distinctive and quite small
- d. Limited menu
- e. Fast service and food is usually already prepared
- f. Large volume selling
- g. Great use of processed food

QUESTIONS FOR DISCUSSION:

1. Can you think of any fast food establishments in your area?
2. Why do you think the fast food business is such a large industry today?
3. Where would you prefer to eat? Fast food or restaurant?

ACTIVITIES:

The film "History of McDonald's" is available. This film gives an orientation to the fast food industry and is narrated by Mr. Fred Turner, the president of McDonald's. To obtain this film, contact Dean Sage McDonald's, 4812 S. W. Ninth, Telephone 284-9295.

00040

Lesson 2: Production and Counter Help

A. PRODUCTION: This area involves the production of the goods to be sold. This covers all grill work, making of french fries, making shakes, and also maintaining a clean area.

QUALIFICATIONS:

1. 16 years old (federal regulations limit the hiring of individuals under 16).
2. Willing to work varied hours
3. Maintain good personal hygiene
4. Have pride in self and in work
5. Enjoy working with all types of people
6. Work under pressure effectively

SALARY:

Begin at \$1.60 per hour--could advance to \$3.00 per hour.

HOURS:

- a. Full-time employee: 5 day week (Monday through Friday). Usually have an 8 hour shift. The time of the shift may vary e.g., 7-3, 11-7, etc.)
- b. Part-time employee: generally works during Rush periods--11:00 a.m. to 1:00 p.m., and from 5:00 p.m., to 7:00 p.m. The part-time worker also works nights, weekends, and holidays. This person will average between 25 and 30 hours per week.

B. COUNTER HELP: These persons are responsible for waiting on customers in the proper way--Fast and Courteous. These persons are the last ones to see the food before the customer gets it and it is their responsibility to make sure that it is done properly. They must also operate the cash register in an efficient manner.

QUALIFICATIONS:

Same as for Production workers plus:

1. Run a cash register and make change
2. Able to add quickly and accurately
3. Be courteous
4. Must have a consistently good disposition
5. Honesty
6. Be customer oriented

00041

Lesson 2: Production and Counter Help (Continued)

SALARY: Same as for Production workers.

HOURS: Same as for Production workers.

QUESTIONS:

1. What would you add to qualifications for these two jobs?
2. What would you do with a customer who is very obstinate when ordering his food?
3. Have you ever had an experience in which you could see these qualifications put to use?

ACTIVITIES:

1. Take a tour of a fast food business.
2. A film called "Six Steps to Success" is available. This film deals with the training of production and counter workers and is available by calling Dean Sage at McDonald, 4812 S. W. Ninth, Telephone 285-9295.

00042

Lesson 3: Assistant Managers

The assistant manager works closely with the manager. There is usually one assistant per shift, and it is his responsibility to run this shift. He will call out production and make sure that everyone is doing his job. This person will also help the manager with his book work. What he is really doing is learning how to be the manager.

QUALIFICATIONS:

1. He must be a motivator of other employees.
2. He must be a good customer relations man.
3. He must have at least a high school education.
4. He must have at least 1 year experience in production and counter work.

SALARY: \$9,000 to \$12,000 per year.

HOURS: -- 50 hours per week
-- hours vary due to shift work

QUESTIONS:

1. Why should an assistant manager be a motivator of people?
2. Do you think it is important to have at least 1 year experience in production and counter work before you become an assistant manager?

ACTIVITIES:

1. Invite a speaker from a fast food business to discuss his job.
2. Show a CASE STUDY: One of your employees to be "lost" on his job. What would you as the assistant manager do?

00013

Lesson 4: Unit Managers (Store Managers)

This person is responsible for everything in the store. He does all the ordering, hiring of new employees, and scheduling of work shifts. He also serves as the link between the store and the unit supervisor.

QUALIFICATIONS:

Same as for assistant manager plus:

1. 3 years experience
2. Know total operations of the store
3. Willing to work long and varied hours
4. Ready to accept great responsibilities

SALARY: \$12,000 to \$15,000

HOURS: 8:00 a.m. to 6:00 p.m.

QUESTIONS:

1. Why should the manager know the total operations of the store?
2. Why is it that if something goes wrong, regardless of who is at fault, the manager usually gets blamed?

ACTIVITIES:

1. Invite a store manager to your class.
2. Have the students set up a schedule for a certain number of employees.
3. Have the students "Train" another student in some area of fast food.
4. Give the students a set of circumstances and let them order materials for the store.

00044

Lesson 5: Unit Supervisor

This individual is really responsible for what happens at the store. His most important job is training the managers under him. He must check on the work of all people at the store. Make sure that quality food is being served. He must make sure that the managers are training employees properly. It is also his responsibility to make sure that all of his managers are doing the same thing. This person also will be involved in public relations. He is also responsible for volume building and ideas.

QUALIFICATIONS:

1. Successful unit manager for at least 1 year.
2. Good business knowledge (accounting, inventory, budgets, etc.)
3. Realize business as an on-going activity.
4. Know the unit inside and out.
5. Must be able to deal with people, communicate with them, and sense their needs.
6. Be good at public relations.

SALARY: \$15,000 -- \$18,000

QUESTIONS:

1. What do we mean that business is an on-going activity?
2. Why should this person be good at public relations?

ACTIVITY:

1. Have a speaker. Let him go through a personnel package with a student and a unit supervisor.
2. Develop a public relations case study: Suppose you sense that you have a lot of trade from one school. Discuss some possible public relations activities which will secure these customers for you.
3. Set up a new promotion for the business.

Lesson 2: Driveway Salesperson

SUGGESTED READING MATERIAL

"Automotive Service Station Attendant"

FILM

"Courtesy, Your Best Seller"

Mr. R. L. Johnson
Standard Oil Division, American Oil Co.
Room 250
3839 Merle Hay Road
Des Moines, Iowa 50310

ACTIVITY

Student simulation of how to service a car. The following 6 points must be covered by students participating in this activity:

1. Meet and greet customer. Ask for fill-up.
2. Ask if you can vacuum the car.
3. Check under the hood (oil, air filter, fan belt, etc.)
4. Clean windows.
5. Check tires.
6. Complete sale and ask customer to return.

Set up simulated car by placing chairs in the classroom accordingly. Have each student go through the six check points servicing a customer in the car.

Remind students that the basic reason for all service is to sell. The driveway attendant is a sales person and the way he services a car shows his ability to sell for his employer. His primary function is to sell all things needed on the car he is servicing. For example, when an attendant vacuums a car he is to look for the oil change sticker and check the odometer to see when the car was last serviced. If servicing is due or overdue, he is to recommend to the customer that his car needs servicing and asks whether an appointment date for servicing can be arranged. The same kind of thinking goes for each of the 6 service points.

00053

Lesson 2: ~~Driveway~~ Salesperson

WHY SERVICE STATION ATTENDANTS ARE NEEDED

In the United States today there are over 90 million automobiles, and the number keeps growing steadily. At one time or another every one of these automobiles is serviced at a service station. They need gasoline, oil, and lubrication, perhaps even repair. Attendants are needed to take care of these automobiles. You can see that service station attendants are in great demand today and that even more will be needed in the future.

FILL IN CORRECT WORK IN SPACES PROVIDED:

1. There are over _____ million automobiles in the United States.
2. _____ automobile is serviced at a service station at one time or another.
3. Automobiles need _____, _____, and _____.

INCREASE IN NUMBER OF AUTOMOBILES.

The number of automobiles on our highways keeps growing steadily for several reasons. In our prosperous society, many people can afford to buy cars. Also, our population keeps growing, and this has increased the number of drivers. By 1975 four million people will be reaching legal driving age each year, and this number will grow. Most people, too, have more free time to drive their automobiles, and they also find driving more enjoyable on our superhighways. And many people have moved to the suburbs where they have to have a car to get around. These are some of the reasons why the number of cars in use on our roads will continue to increase.

4. People have more free _____ to drive their automobiles.
5. By 1975 there will be approximately _____ million new automobile drivers every year.
6. Many people have moved to the _____ where it is necessary to own a car.
7. In our prosperous society many people can _____ to buy cars.

00054

Lesson 3: Service Station Mechanic

Locate the job on all 3 organizational charts

SUGGESTED READING MATERIAL

Career Brief, "Automotive Mechanic", D.O.T. 620.

Occupational Outlook Handbook, Bulletin 1700. Also check index under "Mechanics and Repairmen."

SUGGESTED ACTIVITIES

1. Make arrangements for class, small group, or mechanic to talk to class about job, scope, and job opportunities as a mechanic in a service station.
3. Have student bring in a motor bike and give the class a mechanical demonstration such as tune-up.
4. Contact station owner or station mechanic to give a demonstration of a typical repair before a class, such as the rebuilding of a carburetor.

00055

Lesson 4: Assistant Manager and Station Manager .

SUGGESTED READING:

"Salaried Service Station Personnel, Duties and Responsibilities"
"Personal Qualities Necessary for Good Service Station Operation and Management.

OPPORTUNITIES FOR DISCUSSION

Discuss pertinent points in the Suggested Reading Material.

SUGGESTED ACTIVITY

Explore the activities and duties of an assistant manager and service station manager through a check list that the student may take on his own time to a neighborhood service station. Before students call on a service station, they should contact Mr. Dallas Lewter, Phillips Petroleum Co., Phone 276-9261, and he will notify the station manager that a student will be calling on him. The following listed Phillips 66 stations will participate in the project (but check with Mr. Lewter first!):

Airport 66 Service, 2016 Army Post Road
Douglas Avenue 66 Service, 4402 Douglas
Euclid Avenue 66 Service, 2849 Euclid
Merle Hay 66 Service, 4151 Merle Hay Road
South-Vue 66 Service, 4000 S. E. 14th St.
Plaza 66 Service, 6400 Douglas
Urbandale 66 Service, 7500 Douglas
West Grand 66 Service, 6272 Grand
West-Vue 66 Service, 8540 Hickman Road
Windsor Heights 66 Service, 73rd and Buffalo Road

The check list, "Station Cleanliness Inspection Form", is to be filled out at the station and brought back to class for a written summary report to be discussed in class. Any "NO" answers on the form would suggest that there be a written recommendation for improvement.

00057

Lesson 4: Station Manager and Assistant Manager

PERSONAL QUALITIES NECESSARY FOR GOOD
SERVICE STATION OPERATION AND MANAGEMENT

There were several service stations in the area, but The Town Service Station was always the busiest. One customer gave a good reason for the success of The Town Service Station. He said, "I tried the other stations, but I found that I got much better service at The Town. I like the manager. He makes me feel that my business is important to him and that he will prove it by taking good care of my car." The customer was right. The Town Service Station was busy and prosperous because it had a good manager. What does it take to be a good service station manager?

1. INITIATIVE

Initiative is the ability to get things started or done without needing to be told what to do. The service station manager of The Town Station shows initiative when he makes customers feel that he wants their business and is glad to take care of their needs. You try to find new and better ways to do things by analyzing problems and investigating new ideas. You read magazines and books on service station operation and management so that you can improve your service.

Encircle the letter of the item that best completes each statement.

1. Initiative is defined as
 - a. a trust
 - b. the inability to make decisions
 - c. the ability to get things started or done without needing to be told
2. The manager with initiative
 - a. looks for helpful ideas
 - b. tries to find better ways to do things
 - c. investigates new ideas
 - d. all of these

2. FRIENDLY AND POSITIVE ATTITUDE

Customers keep coming back to The Town Station because of its "service". Service is the key word in service station operation. You usually give good service if you are friendly and have a desire to work with and help people. Your friendliness is shown by your interest in people and the respect you give them. You show the same interest and respect toward your employees as you do toward your customers.

00078

Lesson 4: Station Manager and Assistant Manager (Continued)

3. The key word in service station operation is

- a. gasoline
- b. tires
- c. service

4. Friendliness is shown by

- a. a desire to work with people
- b. an interest in people
- c. respect for people
- d. all of these

3. LEADERSHIP QUALITIES

Since as a manager you either own the service station or manage it for someone else, your job is to direct the work of the station employees. If you have the right attitude toward your duties and responsibilities, your attendants will want to do a good job, too. You know that teamwork is necessary for a station to succeed. You can make your attendants feel like members of a team by putting them at ease, making them feel important, and giving them a feeling of security.

5. As service station manager, you

- a. do nothing
- b. spend all your time repairing automobiles
- c. do all the work yourself

6. You should

- a. make the attendants feel like members of a team
- b. put the attendants at ease
- c. make the attendants feel important
- d. all of these

4. RESPONSIBILITY

You are responsible for the successful operation of your service station. You must account either to yourself as the owner or to those who own the station. You must show genuine interest and concern in every problem and try to solve each one as quickly and efficiently as possible. You must listen attentively to customer complaints and take care of them immediately.

7. As service station manager, you are

- a. responsible for the successful operation of the station
- b. spend all your time repairing automobiles
- c. neither of these

00059

Lesson 4: Station Manager and Assistant Manager (Continued)

8. You should

- a. not be interested in every problem
- b. immediately take care of customer complaints
- c. not try to solve problems

5. ABILITY TO ORGANIZE

To organize means to coordinate the functions of the station operation so that the work can be done in an orderly and efficient manner. To organize successfully, you must:

- a. Set up definite operating policies and procedures
- b. Plan and schedule work so that each employee is using his skills and abilities
- c. Display merchandise so that it will attract customers to buy
- d. Plan the most efficient use of equipment and supplies

9. The ability to organize involves

- a. coordinating the functions of the station operation
- b. operating without specific operating policies and procedures
- c. neither of these

6. ABILITY TO MAKE DECISIONS

In a busy service station things happen fast. There may be a rush of customers at a time when the station is short of help. An emergency call may come in when all the attendants are busy. Equipment may break down when there is a lot of work to be done. These and other problems arise frequently. Quick decisions must be made so that everything moves smoothly and customers are satisfied. You must approach problems calmly and rely on your judgment to make the right decisions.

10. To make the right decision, you must

- a. rely on your judgment
- b. put off decisions until the next day
- c. call the district manager

7. PERSISTENCE

Persistence means the ability to stick to a task or a purpose, no matter how hard or troublesome it may be. Your goal as a service station manager is to achieve success in the service station business. You have to develop the ability to stick to it even though you have many problems. You must accept personal inconvenience as part of your job, because the long hours often keep you at the station when you would like to be at home with your family. You must concentrate on building up your business by

Lesson 4: Station Manager and Assistant Manager (Continued)

gaining the confidence of the people in the community. While you attract and keep customers with the quality of your service, you must also be interested in people and their problems. If you have perseverance, you will find that a successful service station operation is an interesting and rewarding career.

11. Your goal as service station manager is

- a. to close early
- b. to be successful in the service station business
- c. to hire less help than he needs

12. You should

- a. have the ability to stick to the job
- b. accept personal inconvenience in your job
- c. gain the confidence of the people in the community
- d. all of these

00061

Lesson 4: Station Manager and Assistant Manager

SALARIED SERVICE STATION
PERSONNEL DUTIES AND RESPONSIBILITIES

SECTION 1

1 - 1. THE SERVICE STATION MANAGER WILL:

1. Serve as Manager of the station and the business in an aggressive manner by supervising the personnel to see that they maintain the proper appearance of the station, render service as prescribed in a friendly manner, and follow aggressive, but not high-pressure, sales practices. By personal example, perform sales and services and supervise others in their performance so as to create a favorable business climate for the station. Salary range-- \$10,000-\$13,000 year.
2. Personally solicit new business and require all employees to do likewise.
3. Be personally responsible for protection of company cash and credit card delivery tickets received by station until they are delivered to the bank or post office in the prescribed manner. Bank deposits are to be made daily.
4. Make physical verification inventory of tires and batteries, plus one additional product line daily and post verification on stock record card.
5. Make inspections of physical condition and cleanliness of station daily, or more often if necessary. Require all men to follow housekeeping and preventative maintenance schedules.
6. Make all required sales and inventory reports on schedule. Be responsible for all stocks and monies, make remittances on time, reporting any variations or unusual occurrences to Station Supervisor.
7. Maintain and submit all required employee work records, arrange work schedules so that all men are treated fairly.
8. Post tell-tale report and commission earnings daily. Keep men informed of commissions earned so as to keep work and sales incentives in mind at all times.
9. Prepare work and business flow charts as required and recommend changes of manpower and operation to Station Supervisor in accordance with work load and income.
10. Hire, supervise and, if necessary, discharge service station salesmen. The Station Supervisor should be consulted before terminating employees for reasons other than unsatisfactory work. Interview job applicants and maintain file of desirable potential employees.

1 - 1. The Service Station Manager Will: (Cont'd)

11. When a new employee is hired:
 - A. Give him a copy of the "Handbook for Employees of Phillips Petroleum Company Salaried Service Station Operations" and explain it to him.
 - B. Explain that he will be on probation for the first 90 days insofar as continued employment is concerned. During this 90 days the employee's references and previous work record should be checked. From this and an evaluation of his work performance, a recommendation as to his continued employment will be made to the Station Supervisor before he completes his probationary period.
12. Keep posted at all times:
 - A. Standards of personal conduct
 - B. Safety regulations
 - C. Hours of work and work schedules
 - D. Station commission sheets
 - E. Federal and State wage and hour regulations. (In stations doing \$250,000 gross annual sales only).
 - F. Equal opportunity employer posters.
 - G. Occupational Safety and Health Act Poster and Report
 - H. All other posters required by law.
13. Make a wage rate schedule available to employees at any time they may wish to see it. The wage rate schedule will not be posted for public view.
14. Make certain that all new employees follow the prescribed Vanguard salesman training and development program outline as follows, without exception:
 - Lesson #1 - the first day
 - Lesson #2 - the balance of the first week
 - Lesson #3 - the second week
 - Lesson #4 - the third week
 - Lesson #5 - the fourth week

A large part of the responsibility of a Station Manager is the training and development of the station people. It is the responsibility of the Station Manager to see that the above schedule is rigidly adhered to.
15. Maintain employment record for each service station salesman so as to recommend salary increases at specified time, or effect termination, if employee has not demonstrated proper interest or attitude, or is lacking in ability.
16. Propose to Station Supervisor promotional or business expansion program.

00063

1 - 1. The Service Station Manager Will: (Cont'd)

17. Supervise inventory and order merchandise regularly in manner prescribed.
18. Analyze turnover so as to recommend changes in minimum and maximum stocks of various types and sizes of merchandise.
19. Maintain a constant high standard of personal and uniform appearance among all station personnel.
20. Manage and operate the station efficiently, carefully controlling all expenses, and promoting sales so that the station operates profitably.
21. Be responsible for safety training, reporting, counseling, and safe working conditions.

1 - 2. THE ASSISTANT STATION MANAGER WILL:

1. Perform all of the functions of a Service Salesman plus directing their work so that the maximum output is achieved with a minimum of manpower and expense. Salary range \$7000 to \$9000 per year.
2. Instruct Service Salesmen how to perform services properly and to sell effectively. Assist them in developing their knowledge and ability.
3. Act as Station Manager in his absence.
4. Make necessary sales or other reports when instructed to do so by Station Manager.
5. Make, or assist Station Manager to make physical verification inventory of one product line daily.
6. Maintain cleanliness and appearance standards at high level by supervision and by personal effort.
7. Solicit new business for the station at every opportunity.

1 - 3. THE SERVICE STATION SALES PEOPLE WILL:

1. Perform the functions of a Service Station Sales Person, waiting on and servicing customers for all products sold and services offered. Salary range--\$5000 to \$7000 per year.
2. Learn the values, features, benefits and sales points of all merchandise and services offered for sale and develop the ability to present them in a favorable manner.

1 - 3. THE SERVICE STATION SALES PEOPLE WILL: (Cont'd)

3. Study "Code Sixty-six" and conform to all its standards and procedures.
4. Protect all stocks of merchandise from weather and loss. Properly account for all merchandise sold and services rendered.
5. Perform all necessary cleaning and minor maintenance work to keep station inviting and clean.
6. Solicit new business for the station at every opportunity.
7. Complete all lessons and tests as outlined in the development program for service station sales employees.

1 - 4. ALL EMPLOYEES

1. Employees are to be impressed with the fact that this is a Phillips Petroleum Company place of business, and no one has the authority to place therein any facilities, equipment, or merchandise not belonging to Phillips. Therefore all of the facilities, equipment, merchandise and money in the station belong to Phillips Petroleum Company and represents assets of the Company. No one individual or group of individuals, ever has the moral right, or is justified in turning to personal use or benefit, or otherwise misappropriating, the assets of the Company. It is the responsibility of each of us to protect, to the best of our abilities, the assets of our employer. This is one of the obligations we assume when we sell our services to an employer. If we cannot be absolutely honest in our dealings with the Company and our customers, then there should be no place in the organization for us as individuals.
2. Each employee, regardless of position is daily entrusted with Company equipment, property and products. It is the employee's duty to cause these assets to yield the greatest possible benefits to the Company. Only through designated channels, or after specific approval has been obtained may an employee dispose of Company materials or products. Negligence or carelessness in the handling of Company equipment, property or products, or the personal use or appropriation of such materials, is a direct breach of employee responsibility and evidence of inability to satisfactorily perform assigned duties.
3. The income of the Company originates in the sale of its products and services. Every employee's wages are the actual money which has been paid by people who believe that our workers can make products, and perform services good enough for them to buy, and better than those offered by our many competitors.

00065

Lesson 5: Field Marketing

MANAGEMENT PERSONNEL

Refer to Parent Organization Chart for Marketing Representative, Field Management, and Executive positions:

Marketing Representative
Field Marketing Management
Area Manager
District Manager
Division Manager
Regional Manager
Executive Positions
Vice-President of Marketing
Company President

SUGGESTED READING

"Parent Company Retail and Wholesale Sales Force Job Descriptions"

ACTIVITY

Use Parent Organization Chart to explore the realistic potential of the possible number of positions available in the field marketing positions of a representative company. (Estimated only.)

e.g. Marketing Representative. There would be approximately 4 for an Area Manager to oversee. There are 3 Area Managers per state. Therefore, $4 \times 3 \times 50 = 600$ Area Marketing Representative in the U. S. for a given company.

Go through each of the other job titles on the Parent Organization chart to realize the potential for the higher level jobs. This is important so that students will comprehend the degree of potential for higher level positions.

00066

Lesson 5: Field Marketing

PARENT COMPANY RETAIL AND WHOLESALE
SALES FORCE JOB DESCRIPTIONS

MARKETING REPRESENTATIVE

1. Must have demonstrated an ability to sell company's products and to offer business advice to station managers, dealers, and distributors
2. Personal Requirements
 - a. Satisfactory completion of a designated training program to act according to company policy
 - c. Neat appearance
 - d. Ability to organize his own work
 - e. Be a self-starter
3. Salary range--\$9,000 to \$15,000
4. Hours--Minimum 55 hours per week
5. Working conditions
 - a. Mostly field calls with some paper work reporting activities
 - b. Paid company expense account
 - e. Average 2 nights per week away from home

FIELD MARKETING MANAGERIAL POSITIONS

EXECUTIVE POSITIONS

Area Manager
District Manager
Division Manager
Regional Manager

Vice-President of
Marketing
Company President

1. Personal Requirements
 - a. Usually a college graduate
 - b. Outstanding achievement in lower level positions
 - c. A good communicator--oral and written
 - d. Adept in human relations
2. Salary Ranges
 - a. Area Manager - \$15,000-\$20,000
 - b. District Manager - \$20,000-\$25,000
 - c. Division Manager - \$25,000-\$35,000
 - d. Regional Manager -- \$35,000-\$50,000
 - e. Vice-President of Marketing - \$50,000-\$75,000
 - f. President of Company - \$200,000-\$300,000

00067

Lesson 5: Field Marketing (Cont'd)

3. Hours

55 hours per week plus whatever extra is needed to complete the assignment given

4. Working Conditions

Area, District, and Division Managers travel mostly by automobile. Those which cover more than one state quite often use plane travel. Usually these people are gone from home at least two nights per week. Benefits include: 3-5 weeks vacation, company expense account, company paid life insurance, retirement programs, hospital insurance, company shares in a stock purchase plan, and some companies provide a stock option purchase plan for advanced management personnel.

00068

ADVERTISING

00069

ADVERTISING

Advertising as an industry has flourished from ancient times when the seller would wander through a village shouting his wares in hopes that the inhabitants of the village would buy from him. Later on, the merchant placed pictures of the goods sold over the shop's door. In our modern age, advertising has spread to other types of media--newspapers, magazines, radio, television, etc. Today, advertising is a multi-billion dollar industry which employs over 200,000 people. Advertising careers are usually put into three major division--research, planning and execution. These divisions require workers with specialized skills. Also many people with a clerical skill are needed to support the specialists.

GENERAL WORKING CONDITIONS IN THE FIELD

1. Most jobs are performed in clean, comfortable, well-lighted and well-ventilated offices.
2. Some jobs may require considerable traveling to visit clients or plan and research surveys.
3. Often a great deal of pressure and tension is required to meet deadlines.
4. Working hours are often irregular, working evenings and weekends to complete assignments.
5. There is little job security in the field as it is highly competitive and layoffs occur if a major client doesn't renew a contract or if there is an economic slump.

PERSONAL QUALIFICATIONS

1. Imaginative, quick-thinking, and creative
2. Intelligent, resourceful, and able to express himself well
3. Tactful and able to get along with all types of people
4. Emotional stability
5. An analytical mind with ability to accept criticism

EDUCATIONAL REQUIREMENTS

1. High school courses in English, writing, art and salesmanship
2. College degree preferred by most employers with emphasis in English, advertising literature, history and sociology.
3. Bachelor's degree in marketing, journalism, or business administration is considered a minimum by some employers.

ADVANCEMENT

1. Advancement from beginning positions to creative, research, or managerial work is excellent for those with drive, talent, and training.

00070

2. Few advancements to top level jobs because of very limited number of positions available.

WAGES

1. Account executives--\$15,000 to \$25,000
2. Copywriters--\$8,000 to \$20,000
3. Art layout men and women--\$5,500 to \$9,000
4. Art directors--\$10,000 to \$20,000
5. Media buyers--\$10,000 to \$16,000
6. Research directors--Average of \$16,000
7. Advertising Agency Directors--\$18,000 to \$70,000

FUTURE

1. With economic expansion and development of new products, the employment growth in this field should continue.
2. Competition will remain keen, however, and workers will need to develop skills to maintain their positions.

KINDS OF ADVERTISING OCCUPATIONS.

Account Executives

Duties:

1. Direct work on advertising programs assigned to them
2. Develop over all plans for the account
3. Communicate wishes of client to agency staff and the plans of the agency to the client

Advertising Managers of Retail, Wholesale, and Manufacturing Plants

Duties:

1. Research and complete advertising campaigns
2. Determine operating and advertising budget
3. Purchase advertising time or space
4. Assign work and supervise staff members

Artists and Art Directors

Duties:

1. Create and design figures to illustrate advertising copy for the media

0-71

Broadcast Production Managers (Producers)

Duties:

1. Hire talent to produce advertisement
2. Provide advice on method, style, or technical procedures
3. Check finished product and submit it for approval

Copywriters

Duties:

Responsible for conceiving and composing original descriptive material explaining the merits of products or services

Direct Mail Specialists

Duties:

1. Write sales letters
2. Design printed advertising literature
3. Select mailing lists or maintain own lists
4. Decide upon where and when to send advertising materials

Layout People

Duties:

1. Conceive how an advertisement or TV commercial will appear in final form and prepare sketches of layouts to indicate this
2. Obtain knowledge of product so that visual presentation will be at its best

Print Production Managers

Duties:

1. Responsible for final copy and art work
2. Order typesettings and engravings, and order necessary materials and supplies
3. Contact media and determine how to put plan into effect

Research Directors

Duties:

1. Must be familiar with the location and characteristics of consumer markets
2. Estimate profit from sales in a given area and whether or not sales will be constant or seasonal
3. Knowledge of competitors and the market they control
4. Gather information on attitudes of consumers towards products or services, their advantages/disadvantages as compared to competing products, and how to reach the potential market

00072

Space and Time Buyers

Duties:

1. Purchase space or time in media for public presentation
2. Recommend types of media to be used

SUGGESTED ACTIVITIES

1. Invite a person from an advertising agency into the classroom to discuss the various jobs in his/her agency, what work is contracted to other firms, and some of the problems which occur when working with a client who depends upon advertising to develop a market.
2. Have the students divide into small groups, select a product or service (real or fictional), and prepare an advertising campaign for the product or service. The advertisements should be prepared for at least four types of media: newspaper, magazines, radio, TV, billboards, handbills, posters for windows. In addition to these forms, the group could make a cover for their product--label for a can or box.

BANKS AND FINANCING

00074

BANK CLERKS

INTRODUCTION

Banks offer a variety of services to meet the needs of their customers. With so many services being offered, the jobs of people in the large banks are highly specialized. In a smaller bank, the clerk may have to do many of these specialized jobs.

Bank clerks need to be honest and will have a relatively quiet clean place to work. A great deal of paperwork is required throughout the banking organization.

Some of the duties for the various banking clerks include sorting checks and deposit slips into groups and batching them. This may include working with adding machines or cancelling machines. Also there are bookkeeping machine operators who record financial transactions to the bank's ledgers. These clerks usually also do routine typing, calculating and posting. There are also mail sorter clerks and interest clerks who keep records on interest bearing items that are due to or from a bank. Mortgage clerks type legal papers dealing with real estate upon which money has been loaned and maintain records relating to taxes and insurance on these properties.

WORKING CONDITIONS

1. Well lighted, air-conditioned, attractively decorated and very pleasant, friendly place to work.
2. Must be a person who enjoys working in one specialized area.

HOURS WORKED

40 hour work weeks are common which include a 5-day week and sometimes Saturday mornings. In larger metropolitan areas, the work weeks are comprised of 35 to 37 hours.

EARNINGS

1. Range depends on experience
2. Ranges from \$87 to \$150 a week.

00075

PERSONAL QUALIFICATIONS

1. High school graduation required, with courses in bookkeeping, typing and business arithmetic.
2. Usually must pass test on ability to work rapidly and accurately.
3. Must be able to communicate effectively with others.

TRAINING AND PROMOTIONAL OPPORTUNITIES

1. Bank will train their employees.
2. Advancement takes place rapidly and especially so for outstanding clerks.
3. Additional education while employed such as from a business college or community college will help the worker advance. Many banks work cooperatively through their own training agency called the American Institute of Banking to provide in-service training for their employees.

FUTURE OUTLOOK

Employment of bank clerks is expected to increase rapidly through the 1980's. Replacement of workers is relatively high in banks since they employ so many women workers. Occupations related to electronic data processing will have the most rapid growth.

ACTIVITIES

Assume a role (for example, a mortgage clerk).

Do the transactions for each of the items below.

1. Dealing with real estate taxes
2. Mortgage interest
3. Insurance payment

Assume the role of Bookkeeper Machine Operator

Take a ledger card and see the effect of checks, deposits and service charge on an individual account.

28

36

MICROCOPY RESOLUTION TEST CHART

BANK TELLER

JOB DESCRIPTION

Bank tellers do many things. Their job is mostly receiving and paying out cash to customers. Customers who want to put money in the bank fill out a deposit slip like the following illustration:

FIRST NATIONAL BANK 123 Ainsworth Drive Des Moines, Iowa 50309		No. 000	<u>000</u> 000000
Date _____	Currency _____	Dollars	cents
Name _____	Coin _____		
Address _____	Checks _____		
	Total		

The teller takes the deposit slip and the amount of money the customer is depositing. The amount of the deposit will be recorded in the customer's account.

The bank teller is one of the most important members of the bank staff. Nearly three-fourths of bank customers do all of their banking business through the teller.

In some very large banks, tellers may specialize as Paying Tellers, Payroll Tellers, etc.

Customers can take money out of their account. They can give the teller a withdrawal slip or a check for the amount of money they want.

Some tellers work at counter windows and some work at drive-in windows where customers conduct their business directly from their automobiles.

The teller verifies the sum of money and records the deposit or withdrawal. In the case of withdrawal, the teller also verifies the identity of the customer and checks the balance of the account. Some banks issue identification cards to customers for the faster handling of transactions.

SIGNATURE CARD

You are opening a special checking account at the First National Bank of Des Moines.

Fill out this signature card. Print clearly. Print your name and Social Security number of the first line. Sign your name on the line above the words "Authorized Signature".

Where it says "Business" write your job and the name of the place where you work. Write the address after this.

Where it says "Residence" write your home address. Then write your phone number.

Leave the last line blank. The person in charge of new accounts will fill this out.

Most banks provide time-saving equipment to assist the teller such as a change-dispensing machine, a teller's machine which is a specially designed adding machine. It eliminates the use of passbooks by giving a customer receipt and it also records and totals daily transactions to aid in balancing records.

When customer banking hours are over, tellers count cash on hand and balance the day's accounts. Many banks have simplified clerical duties of the teller by installing electronic data processing equipment and centralized computers which store and update customer accounts.

REQUIREMENTS

1. Should be a high school graduate with experience in clerical work.
2. College or business school training is helpful.
3. Neat and well groomed.
4. Must be able to get along well with others, be emotionally stable.
5. Honesty and integrity are essential.
6. Able to accurately handle large sums of money and valuable financial documents.
7. Able to sit or stand for long periods of time.
8. General good health -- especially hear and see well.

WORKING CONDITIONS

1. Usually a 40-hour week (may vary)
2. Usually well-lighted, air-conditioned, attractively decorated, and pleasant places to work.
3. At times, may work under pressure
4. Not much physical effort required.

WAGES AND BENEFITS

1. Beginner salary - \$75 to \$85 per week.
2. Experienced - \$175 to \$250 a week.
3. Extra benefits include paid holidays and vacations, sick leave allowances, various forms of insurance, and retirement pensions.

00081

FUTURE OUTLOOK

1. Opportunities in cities and towns of all sizes.
2. Openings occur due to turnover.
3. At present, available mostly to women.
4. One may advance to an officer.
5. Related occupations are: Bank Clerk, Bookkeeper, Cashier and Accountant.

QUESTIONS

1. List several tasks performed by a bank teller.
2. What high school courses would be helpful to a bank teller?
3. Name occupations related to that of a bank teller.
4. What are some advantages and disadvantages to the work of a bank teller?
5. Does a person have a good future in this work?
6. Is this kind of job attractive to you? Why or why not?

ACTIVITIES

1. Write a check you would give to a bank teller if you wished to withdraw money from your checking account.
2. Fill out a check and a deposit slip you would give a bank teller if you were depositing money in your checking account.
3. Fill out a withdrawal slip you would present a bank teller if you were withdrawing money from your savings account in a bank.

0008?

BANK LOAN OFFICER

INTRODUCTION

The loan officer makes decisions regarding issuance of loans within the framework of policy set by the board of directors and existing laws and regulations. The officer must have a broad knowledge of business activities to relate to the operation of his department.

WORK PERFORMED

1. Evaluate the credit and collateral of individuals and business applying for a loan
2. Need to know business operations and be able to analyze financial statements
3. May take applications and process installments for commercial, real estate or agricultural loans

WORKING CONDITIONS

1. Usually works in pleasant surroundings
2. Much time spent working directly with people

HOURS WORKED

1. Generally works a 35-40 hour week
2. May work extra hours during peak load periods

WAGES AND BENEFITS

1. Bank officers, depending upon their responsibilities, earn from about \$10,000 to \$30,000
2. Benefits may be provided, as: pensions, hospitalization and medical insurance, vacations, paid holidays, life and accident insurance, bonuses, sick leave, profit sharing plans, etc.

PERSONAL REQUIREMENTS

1. Accuracy, intelligence, good judgement, willingness to work, confidence, ability to get along with others and personal neatness are some characteristics that banks prefer in their employees.

2. Honesty and discretion are very important qualifications since bank employees handle large sums of cash, securities, and confidential records.

TRAINING REQUIREMENTS

1. Basic requirement for many banking positions is high school graduation
2. Bank officers are generally expected to possess a college degree in business administration with a major in banking

PROMOTIONAL OPPORTUNITIES

1. Good promotional opportunities for employees who possess the required character traits
2. Banks often fill vacancies from own staff members

FUTURE

1. Good opportunity for both men and women
2. Growth through opening of branch banks and rapid industrial expansion provides additional jobs

QUESTIONS FOR DISCUSSION

1. How does the loan officer decide whether or not to grant a loan?
2. What responsibilities are required of the loan officer?

SUGGESTED STUDENT ACTIVITIES

1. Visit the loan department of a bank. Request them to explain what a credit rating is, what are some of the guidelines used to decide whether or not a loan applicant gets a loan, and how can a person improve a credit rating which has been damaged.
2. Invite a speaker in to explain the legal rights and responsibilities of both the lender and the borrower.

00084

BANK MANAGER (BRANCH)

JOB DESCRIPTION

Directs the activities of a branch bank following policies established by the main bank and the Board of Directors. Also there may be some state rules and regulations.

The manager is responsible for the complete operation of the bank and therefore has a variety of duties:

1. Evaluate all business activities of the bank
2. Appraise the character of a prospective borrower
3. See that records are properly kept for all banking services
4. Deposits and loans
5. Checking accounts
6. Safety deposit boxes
7. Travelers' checks
8. Special savings plans
9. Cashier's checks
10. Letters of credit

REQUIREMENTS

Educational - A college degree in business administration. A major in banking would be excellent. Sometimes employees with outstanding ability who have only high school education are considered for officers.

Personal - Honesty and discretion are very important personal qualifications since bank employees handle large sums of cash and/or securities and records containing confidential information about individuals and business concerns. Other personal qualities include mental alertness, leadership ability, accuracy, dependability, neatness, good manners, ability of expression (oral and written). Equally important is the ability to get along well with people and make a favorable impression upon groups as well as individuals. Should also be considerate, patient, understanding and able to inspire confidence.

WORKING CONDITIONS

Indoors, clean, comfortable, well-lighted and air-conditioned buildings. The work requires very little physical effort and most time is spent at a desk.

WAGES AND BENEFITS

\$12,000 to over \$20,000 annually. Usually work from 35 to 40 hours a week. Some evening and Saturday work may be necessary.

FUTURE OUTLOOK

New banks and bank branches (offices) have been created in many areas. Best employment opportunities will be for those with college training.

INVESTING IN STOCKS AND BONDS

INTRODUCTION

Investing in stocks and bonds is not difficult. You do not have to be rich to buy securities.

Before investing, ask yourself these three basic questions:

1. Can I cover living expenses comfortably--food, clothing, shelter?
2. Do I have adequate insurance to protect my family?
3. Do I have enough ready cash to meet any emergency that may arise?

If you can answer yes to these three questions, then you should think properly about investing surplus funds.

In analyzing your financial situation, you should take pen and paper and list in two parallel columns, what your regular income and expenses are now and what you expect them to be five years from now. Be sure to include all your regular living expenses--food, clothing, housing and household operation, automobile expenses, recreation, taxes--as well as savings and insurance.

From this projected study, you will have an idea of where you will stand financially in the future.

COMMON STOCK

People invest to make money.

If you had put \$500 into a savings account 24 years ago, collecting 3% interest compounded quarterly, your balance would now be about \$1,000. Your \$1,000 would now buy even less than your \$500 would have bought 24 years ago. You could have done better had you invested in good common stock. Of course, you could buy and sell at the wrong time and not do as well, but a good common stock investment would have realized much more for you.

Major Investment Objectives

1. Liberal dividend income will be the primary aim for those investors who have retired.
2. Steady growth of capital will be the primary aim for those investors interested in long term investment.
3. Quick growth of capital will be the primary aim of those investors who can afford to speculate or gamble for quick profits or possible losses.

There is no such thing as the all-purpose stock--one that's completely safe, sure to pay a handsome return and guaranteed to go nowhere but up. It does not exist. You have to sow in order to reap, but deciding what seeds to plant is the step that really counts.

As a common stockholder, you are part owner of a company and have several privileges. Your share of profits, in proportion to your holdings, is dividends declared by the directors. You may vote for the directors who appoint the officers who manage the affairs of the company. The value of a share of common stock can increase indefinitely as a company thrives, and so can dividend payments, which are limited by company's earnings and directors' decisions. Common stock prices are likely to fluctuate more rapidly and frequently than prices of other securities.

What Are Stocks Worth?

The price of a stock, like the price of food or clothing, depends on how much other buyers are willing to pay for it and how cheaply those who own it are willing to sell it.

Where To Find Information About Stocks

1. Read the financial pages of your newspaper.
2. Read the leading newspaper of the financial world, The Wall Street Journal.
3. Study stock-market barometers such as the Dow-Jones Average, and the Standard & Poor's 500-Stock Index.
4. Magazines carrying news of interest to investors are Barron's Commercial and Financial Chronicle, S & P Outlook, Forbes, Money and Fortune, Business Week and Nations Business.
5. Copies of the foregoing listed publications are available by subscription and also in the City Library.

Opening a Brokerage Account

The procedure is very much like opening a charge account at a department store. You provide such routine information as name, address, occupation, Social Security number, citizenship, and age, plus a bank or other satisfactory reference. That's about all there is to it. Once your account is opened, you can buy and sell securities merely by telephoning your order to your broker, making settlement within the five business days specified by rules of the financial community.

When To Invest

There is never a time when every stock in the market is either good or bad to buy.

Stock prices change as opinions change. Opinions may be influenced by general conditions or world affairs or hope of change in the company's earnings, or for no discernible reason.

When To Sell

There are several reasons for selling stocks. Obviously, one is because you have to--because you need money. And if you have to sell when the price of your stock is down, you may be forced to take a loss. That is why one is urged to invest only if you have surplus cash.

Another reason for selling is to take a profit when you think a stock has reached its limit, or when you could earn more investing elsewhere.

Never stay with a bad stock for too long. It is better to take a small loss and make a change to something better.

Don't be panicked into selling without good reason. If you have invested with care, and for the long term, you should not let every change in the price of your stocks be a signal for gaiety or gloom. Keep your perspective, and remember that it is the nature of the market to fluctuate. It's the gain--or the loss--over the long haul that counts.

Lending Your Money--Bonds

When you buy stocks, you are buying a share of ownership in the corporation--you own a part of the business. The corporation is under no obligation to pay back the money you invested in the stock and the only way you can recover the money you have paid is to sell the stock to someone else. Bonds, on the other hand are like promissory notes--you merely loan your money to the company or governmental agency with the understanding that the money will be repaid to you at the end of a stated period of time. During this period of time, interest will be paid you at regular intervals and if you wish, you may sell the bond and recover your investment before the bond's due date. One difference between bonds and ordinary promissory notes is that bonds generally run for relatively long periods of time--10 years, 99 years, etc. Another difference is that promissory notes are usually printed forms that have the amount, name of payee, date, period of time, etc. filled in either by hand or by typewriter while bonds are usually completely printed in a more elaborate style so as to look much more impressive and valuable. Even the signatures on a bond may be printed instead of written by hand.

Bonds may be classified as registered and coupon. With registered bonds, the name of the owner is registered with the issuer and the owner automatically receives a check when the interest is due. When a registered bond is lost or destroyed, it can be replaced so that the owners do not lose their investment. Coupon bonds, sometimes called bearer bonds, are not registered and whoever is in possession of them is presumably the owner. When a coupon bond is lost or destroyed, the owners lose the same as if they lost a \$5 bill. When interest is due on a coupon (Bearer) bond, the owner's clip a coupon from the bond and collect interest by taking or sending the coupon to the issuer's pay agent or to their bank.

Bonds also may be classified as mortgage and debenture bonds. Mortgage bonds pledge certain described property such as real estate and/or heavy equipment which may be sold and the proceeds used to pay off the bond and/or interest in case the issuer fails to live up to the terms stated in the bond. Debenture bonds are secured only by the issuer's good reputation. U. S. Savings Bonds are of this type.

Bonds are usually issued in \$1,000 units, U. S. Savings Bonds being a notable exception. Since bonds are usually considered one of the safer kinds of investment, the interest rate is usually low. If a bond bears 5% interest when the going interest rate is 8%, the bond will be sold at a discount so that the effective yield will be 8%. On the contrary, if the bond carries a higher rate of interest than what is common in the market, the bond will be sold at a premium so as to yield the market rate. (Problems can be set up for the students to figure market prices of bonds bearing different interest rates and with varying market interest rates.)

CONCLUSION

No advice could possibly be complete or conclusive. Investing is not an abstract idea but something that you may do with any surplus funds you may have available.

Whenever you are ready to invest see a brokerage firm. Then tell them about your situation. They will respect your confidence. And the more you tell them, the more helpful they will be in supplying you with an information you need and in assisting you in working out an investment program to suit your particular objectives and the sum of money you have.

ACCOUNT EXECUTIVE, STOCKS AND BONDS

JOB TITLE -- Account Executive.

JOB DESCRIPTION

WORK PERFORMED

1. Initiates buying or selling transactions
2. Notifies clients of completed transactions
3. Explains to new investors the meaning of stock market terms and trading practices
4. Gives suggestions and advice on the purchase of securities or sale of that particular security
5. Keeps abreast of broad overall trends as well as specific trends of certain companies so that he can advise his clients in the most advantageous way
6. Specializes in handling certain kinds of securities

WORKING CONDITIONS

1. Works in a well-lighted, air conditioned, excellently decorated office
2. Will have many direct contacts with people
3. Must be very familiar with figures and be willing to learn a great deal of specialized vocabulary

HOURS WORKED

1. Normally works a five day 40 hour week but must be willing to put forth extra time and effort as necessary

WAGES

1. Average \$21,000 a year (1972 figures)
2. Some earn more than \$30,000 per year with an unlimited ceiling when commission is considered
3. Trainees earn \$500 to \$700 per month while on their training program. When licensed, their earnings depend on a commission and a base salary.

PERSONAL REQUIREMENTS

1. Well groomed
2. Able to motivate people
3. Ambitious
4. Ability to work independently
5. Successful sales or managerial experience helpful

00091

TRAINING REQUIREMENTS

Course in Business Administration, Economics and Finance are helpful.
Must pass a state licensing examination.
Most employees provide training to meet requirements for registration.

PROMOTIONAL OPPORTUNITIES

1. The principal form of advancement for securities sales workers is an increase in the number and the size of the accounts they handle.
2. Some advance to positions as branch office managers and some become partners in the firm.

FUTURE

The number of security sales workers is expected to grow moderately through the mid 1980's.

00092

ACTIVITIES

1. Take a class tour to Merrill Lynch, Pierce, Fenner and Smith, Inc. Classes will need to be extremely well informed on stock market vocabulary and all parts of the stock industry. Constantine G. Nicholson is an excellent resource person who will give good tours which are pretty much on the students' level. Groups of students should be limited to not more than fifteen. The tour will take approximately one hour.
2. Get a group of brochures of individual companies and have students study the company and its short term and long term outlook. Have the students informed about their companies before going on to Activity 3.
3. After the students have learned some things about different companies and are making a somewhat informed decision on what stocks they are interested in, give individual students a hypothetical \$1,000. Allow the students, individually, to make a complete portfolio of stocks out of their \$1,000. The students can either buy all of one stock or vary their investment as much as they want. This should be done very near to the beginning of the year. Then every two weeks, perhaps on a Friday, take 10 minutes or so and review the prices of the stocks and see the progress or loss that the individual stocks have made. It is very important to do this over a long period of time such as the full 9 months of the school year. In this way, the students will get a more realistic picture of what the stock market does. It is as realistic a picture of the stock market as can be given the student. If it is done over a short two or four week period, little dips in the economy or spurts in the economy or changes in interest rates or other short term factors may give the student a distorted view of investments.

To promote interest in this area, have not only individual competition among people within a class, but then combine complete portfolios of each class and have classes compete against each other for total net profit or loss.

4. When making the selection of stocks, go to Merrill Lynch, Pierce, Fenner and Smith, Inc. and get the sheet of their own market selections. Study the difference between investment grade stocks, good quality stocks and speculative stocks. Then make a few hypothetical selections in each area and also look at each of these stocks when you review the portfolios of the students during the year.

00093

SUGGESTED VOCABULARY

Assets	Everything a person or company owns (cash, investments; building and machinery) and money due it;
Bear	Someone who believes the market will decline.
Bear Market	A declining market.
Big Board	A popular term for the New York Stock Exchange, Inc.
Broker	An agent who handles the public's orders to buy and sell securities, commodities, or other property. For this service, a commission is charged.
Bull	One who believes the market will rise.
Bull Market	An advancing market.
Common Stock	Securities which represent an ownership interest in a corporation and has no preference over other shares in payment of dividends.
Liabilities	All the claims against a corporation. Liabilities include accounts and wages and salaries payable.
Net Change	Change in the price of a security from closing price on the following day on which the stock is traded.
Par	Face value of the stock when stock was issued.
Preferred Stock	A class of stock with a claim on the company's earnings before payment may be made on the common stock. Preferred stock has a preference in the payment of dividends.

00094

INSURANCE AGENT

JOB DESCRIPTION

The Life Insurance Agent is a person who sells life insurance, services policies, and provides continuing insurance advice for policyowners. The agent's prime responsibility is to sell life insurance. Sales are made to individuals or to groups, such as factory employees, office workers, members of special clubs, etc. Agents work from their homes or from agency offices and by use of the telephone, mail or personal contacts, develop and maintain an active prospect list. They add to this list through participation in community organizations, clubs, fraternal orders, etc.

The agent makes appointments to talk to these individuals or groups and suggests a plan and must be able to explain in simple language the various policies, costs and benefits. If a prospect decides to buy, the agent assists in filling out the application, and arranges for physical exam, if required.

Agents sell life insurance, health, accident, and property insurance. They must be accurate with figures, keep records, interpret rates, etc.

This career requires endless study and reading because laws and policies are constantly changing.

WORKING CONDITIONS

1. Agents usually work in clean, comfortable surroundings -- well lighted, air conditioned.
2. Agents are not usually under direct supervision and have considerable freedom in planning day-to-day work. Sometimes they are required to make late evening calls.
3. Lots of travel throughout the area in all kinds of weather.
4. May be subjected to all kinds of people, from the most kind to very rude and irritable ones.
5. Active in civic, social or fraternal activities to keep in contact with potential clients.
6. This can be a full-time or a part-time job.

REQUIREMENTS

1. Most insurance companies seek college graduates who have degrees in liberal arts or business administration. A high school graduate may be chosen after a certain amount of on-the-job training.

2. Be interested in people and able to deal with all types of personalities.
3. Be able to work without supervision--a good organizer and be able to reach new prospects.
4. Have good command of oral and written English.
5. Be accurate with simple mathematical computations.
6. Have a pleasant personality, neat appearance, tact, poise, and integrity.
7. Most states require agents to pass examinations to obtain licenses.

WAGES AND BENEFITS

1. Many companies supplement on-the-job training with courses and instruction at home office schools or local colleges.
2. Some companies offer salary increases as incentives to attend these courses.
3. A forty-hour week--although many agents work longer.
4. Receive a base salary and commission on premiums paid by policyholders.
5. Income increases as clients continue to pay premiums and new clients are sold policies.
6. Average starting salary - \$700 per month; ranging from \$500 to \$1400 per month.

EMPLOYMENT OUTLOOK

1. All phases of insurance are expected to expand.
2. A high turnover rate among beginning insurance agents.
3. Some start their own agency.
4. About 15,000 job openings per year should occur because of retirement, turnover, and the increasing need for insurance agents.
5. Some agents become managers of offices at the regional district, or national level.

QUESTIONS

1. Tell briefly what an insurance agent does. How are contacts made? To whom are sales made?
2. What are the many kinds of insurance sold? /
3. What are some major differences in the working conditions of an agent to most other types of jobs related to an insurance agency?
4. Why is it necessary for an agent to have a good command of oral and written English?
5. Do you think you would be interested in the career? Why or why not?

ACTIVITIES

1. List the advantages and disadvantages of setting up one's own agency.
2. Study a particular insurance policy and then try to sell this to another member of the class.
3. Interview your parents, a business executive, and a housewife and discover what kind of insurance they carry. Explain why there is a difference in the kinds and amounts of insurance carried by different individuals.
4. Interview an insurance agent. Determine the name of the company he represents. What have been some of his most interesting experiences?

RESOURCES

1. Occupational Outlook Handbook, 1974-75 Edition, U. S. Department of Labor, Bureau of Labor Statistics
2. Careers, Inc., Largo, Florida 33540 -- Career Summary S-199, and Insurance Agent B-35
3. State of Iowa, Department of Public Instruction, Career Information Systems of Iowa, Grimes State Office Building, Des Moines, Iowa 50319

INSURANCE ADJUSTER

INTRODUCTION

Insurance Adjusters are often called Field Claim Representatives. They are responsible for settling insurance claims to the satisfaction of both the insurance company they represent, as well as the insured customers. Some adjusters handle all types of claims concerning damage to or loss of property. Other adjusters specialize in settling claims on homes or business buildings or automobiles or accident or health claims.

DUTIES

1. Determine policy coverage, investigate the amount of damages, determine the extent of liability of the parties involved, negotiate settlements, and satisfactorily settle the claims. Adjusters use reports, physical evidence, and testimony of witnesses in investigating claims.
2. Prepare and submit reports of findings and the action taken on each claim.
3. Cooperate with attorneys in preparing claims for legal proceedings, and inform supervisors of developments.
4. Maintain good relations with the general public, including policy holders, claimants, the insurance agency staff, physicians, hospitals, attorneys, law enforcement agencies, and other insurance companies.
5. Assist in training other claims personnel.
6. Keep abreast of new methods, procedures, and practices in relation to claims adjustment.

WORKING CONDITIONS

Some of the work day is spent in a clean, air-conditioned office, but much of the work day is spent with working with claimants wherever the loss may have taken place. When one is inspecting a claim and gathering information about that claim, a great deal of walking, standing and traveling may be required. While inspecting the claims, one meets all kinds of people. These people of course, vary in their type of personalities, going from the very demanding and hard to satisfy to the person who is very cooperative and willing to work well with the adjuster.

PERSONAL QUALIFICATIONS

An absolute in qualifications is that adjusters be able to work well and be courteous to all kinds of people. They should be able to express themselves well orally and in writing. They should be observant, attentive to details, and have an understanding of human nature. Other qualifications include having a good memory, a great deal of patience, honesty and perseverance. Common sense, initiative and resourcefulness are other important personal qualifications. Finally, sound judgment is also extremely important for the insurance adjuster.

EDUCATION AND TRAINING

High school education would be required with preferably subjects in the area of typing, business law and business arithmetic. Courses in public speaking would be very beneficial. Also required are at least two years of college. A trend has been seen as of late where an increasing number of companies are requiring a bachelor's degree in liberal arts, accounting, business administration or law.

Beginners usually receive some on-the-job training. This is usually given through home study or evening courses. Trainees start by working on small claims and then work their way up the ladder getting increasingly difficult assignments.

EARNINGS AND HOURS

Adjusters usually have a beginning salary of around \$7,500 per year, but after they acquire some experience, their earnings usually jump to somewhere between \$10,000 and \$12,000 per year. Some of the highly experienced adjusters have a salary of \$16,000 and more a year.

Benefits that employees usually receive include paid vacations, sick leave allowances, medical insurance, retirement plans and the use of a company automobile.

Hours worked by adjusters are very irregular and depend upon the claims assigned to them. At busier times, they may need to work evenings and even weekends and holidays to obtain all of the necessary information on some claims.

OUTLOOK

Employment outlook appears to be fairly favorable through the rest of the 70's. However, after that time, chiefly due to new processing methods and due to no-fault insurance, employment competition may become fairly keen.

ACTIVITIES

Role Play: Pick out about five members of the class. Have two people act as the insurance adjusters. Have another person act as the owner of the damaged insured item (typewriter, for example) and then have a couple of people as witnesses as to original cost or wear of the machine before the damage took place. Act out the entire adjusting process and see whether the client and the company can come up with a settlement through the adjuster. If a settlement cannot be made privately, have the rest of the class act as members of a jury and ballot to see what the court settlement will be.

00100

REAL ESTATE AGENT

JOB DESCRIPTION

An agent works under the supervision of real estate brokers in selling, renting, leasing, managing properties (homes, farm, offices, apartments, retail stores, etc.) or specializes in one category.

An important part of handling real estate is locating prospective clients. The agent generally keeps a file on each piece of property he is responsible for regarding its description, rental fee, price, number of showings, names, of interested clients, and other facts. In selling, renting, or leasing properties agents talk to interested clients and often accompany them to the properties to point out advantages and features. They must be able to answer questions about water supply, zoning, taxes, construction, market values of surrounding properties. Agents must have a knowledge of schools, churches, stores, public transportation and other community activities.

REQUIREMENTS

Educational - No specific educational requirements, however, all states require a state license (pass a written test). College courses in real estate, law, salesmanship, business methods, finance, economics are recommended to give a complete background in this highly competitive field.

Personal - Pleasant personality, ability to get along well with people, honesty, and a neat appearance are important. Agents need tact, enthusiasm, good memory for names and faces and business details such as prices and local regulations.

WORKING CONDITIONS

Brokers provide office space, but agents generally furnish their own cars (at agents' expense). Hours of work are irregular. Agents often work in the evening and during weekends to suit the convenience of customers.

WAGES AND BENEFITS

Most real estate agents are paid a commission on all transactions they complete. However, some receive a salary plus a commission. Commissions are usually 5 to 6% of the selling price of homes and up to 10% on land and other transactions. Full time agents may earn between \$10,000 and \$18,000 per year with many earning more.

Some firms, especially the large ones, furnish life, health, and accident insurance. The agent has very little supervision and also there is often free time during the day.

FUTURE OUTLOOK

The demand for real estate agents is expected to be good. Competition will be keen. Some growth areas, such as Florida, California, Arizona, and Colorado may provide more than average employment possibilities while other areas will probably have fewer.

ACTIVITIES

1. Visit some houses that are for sale or rent in the area if possible. Have the students write up details as though they were the agent giving advantages, features, availability to stores, schools, etc.

Then have students work in groups (depending on size of class and time available) and have "sellers" and "buyers".

Visit the houses that are built by the high school students.

3. Have a real estate agent visit to talk of the different aspects of his job.

00102

SUGGESTIONS FOR UNITS

ON

INDIVIDUALIZED INSTRUCTION

00103

SUGGESTIONS FOR UNITS ON INDIVIDUALIZED INSTRUCTION

By the end of the school year, students and teacher are getting a little tired. It might be time for a change. The entire class has studied by now several careers which should have acquainted each student with many phases of the marketing and distribution field. Why not at this point let each student branch out into the field that he or she is interested in.

The "Business Careers Kit" from Largo, Florida has wide variety of careers to choose from. The material is written in a clear concise way which is interesting to the students. Allow each of the students to pick their own career and present a short oral report about it. It is surprising how much more interesting the material becomes when one of the class's peers is presenting it. Also, if the students are allowed to choose a career that they are specifically interested in, they will dig into the material because they like it. Students would present the material in an impressive way because they want to show their classmates why they chose this profession.

Also, if an instructor is inclined to lean toward extra credit, this is excellent material because the students are looking into something they are interested in. Oral or written short reports are good for extra credit and very beneficial to the students.

00104

APPENDIX

00105

XI. SUGGESTED EQUIPMENT AND MATERIALS

It is recommended that the following equipment and materials be purchased so that the teacher will have at his immediate disposal all pertinent items relating to the work. Quotas and costs are indicated per school.

<u>Item</u>	<u>Estimated Cost</u>
1. Tape player, cassette (1 each school)	\$ 40.00
2. Slide projector, carousel (1 each school)	100.00
3. Projection stand	20.00
4. Storage cabinet with adjustable shelves, double doors, approximately 70-78" high, 36" wide, 18" deep	65.00
5. Funds for chartering a city bus for 3 field trips for each class. "City bus" is suggested since it is understood that school buses are too tightly scheduled already.	?????
6. Kit (Slides, carousels, and pre-recorded tape) "World of Marketing and Distribution" (1 each school)	90.00
Order from: Career World 1560 Vesta Drive Harrisburg, Pa. 17112	
7. Set of 18 wall charts, 11" x 14" posters "Opportunities in Retailing" (1 set each school)	3.50
Order from: J. Weston Walch Portland, Maine 04104	

00106

8. "Occupational Outlook Handbook" 18.75
 (1 ea Student--35 @ \$6.25 each)
 Order from: Superintendent of Documents
 U. S. Government Printing Office
 Washington, D. C. 20402
9. a. Career Briefs-Summaries-Job Guides as indi- 85.00
 cated on attached order blank (10 copies of
 each marked title for each school)
- b. Business Careers Kit (1 per school) 37.50
- Order from: Careers, Inc.
 P. O. Box 135
 Largo, Florida 33540
10. a. Occupational Brief 12.25
 "Automotive Mechanics" D.O.T. 620
 1 ea Student--35 @ 35c each)
- b. Occupational Brief 12.25
 "Driveway Salesperson" D.O.T. 915.867
 (1 ea Student--35 @ 35c each)
- c. Occupational Brief 12.25
 "Department Store Occupations"
 (1 ea Student--35 @ 35c each)
- Order from: Chronicle Guidance Publications, Inc.
 Moravia, New York 13118
11. a. "Merchandising as a Career" 12.25
 (1 ea Student--35 @ 35c each)
- b. "Careers for Retail Merchandise Buyer" 10.00
 (10 each school @ \$1.00 each)
- c. "Careers in Fashion Designing" 5.00
 (5 each school @ \$1.00 each)
- d. "Publicity Work as a Career" 5.00
 (5 each school @ \$1.00 each)
- e. "Retail Selling" 20.00
 (20 each school @ \$1.00 each)
- Order from: Institute of Research
 537 S. Dearborn Street
 Chicago, Illinois 60605

00107

12. a. "Retail Sales People" \$ 7.00
 (20 each school @ 35¢ each)
- b. "Fashion Designer" 3.50
 (10 each school @ 35¢ each)
- c. "Credit Workers" 3.50
 (10 each school @ 35¢ each)
- d. "Credit Collectors" 3.50
 (10 each school @ 35¢ each)

Order from: Science Research Associates
 259 E. Erie Street
 Chicago, Illinois 60611

13. "Fashion Designers" 2.00
 (10 each school @ 20¢ each)

Order from: Ontario College of Education
 University of Ontario
 371 Bloor St. W.
 Toronto 5, Ontario, Canada

14. "Careers in Collection" 1.50
 (10 each school @ 15¢ each)

Order from: American Collectors Association, Inc.
 5011 Ewing Avenue South
 Minneapolis, Minnesota

The following listed materials may be obtained free of charge:

15. a. "Should You Go Into Public Relations" (Pamphlet)
 (35 each school, free)
- b. "Should You Be A Salesperson"
 (35 each school, free).

Order from: New York Life Insurance Co.
 Career Information Service
 Box 51
 Madison Square Station
 New York, New York 10010

00108

16. "Opportunities in Sales and Merchandising" (Film)
Catalog No. 20988, Area XI-Media Center, free
17. "Career in Direct Selling" (Pamphlet)
(35 each school, free)

Order from: Direct Selling Companies
165 Center Street
Winona, Minnesota

PREFACE

Career Education is a continuing goal of the Des Moines Public Schools that will assist in making education more meaningful for our junior high students by helping them acquire the knowledge, attitudes and skills necessary for making wiser career choices and understanding their roles in society.

This Handbook was developed and revised to provide instructors with additional insight into the implementation of activities in the career cluster of Communication and Media. This Handbook merely suggests objectives, activities and resources that can be incorporated into the classroom. Instructors need to adapt the material to their specific classroom and student needs.

There is a wealth of materials and resources available in the community that instructors should become aware of and utilize to assist them in implementing Communication and Media activities.

We would like to thank the following instructors and business people for their contributions in the development and revision of the Communication and Media Handbook.

00006

INTRODUCTION

The intent of the following material is to provide objectives to be utilized in the implementation of the Communications and Media cluster of Career Education in the junior high schools. Since the field of Communication and Media is very broad, it must be recognized that few individuals will have the background, knowledge and skills to teach everything in this package. Thus an interdisciplinary approach to teaching and planning is desirable to present a more effective program.

It was not the committee's intent to present a detailed study of skills of equipment operation, but rather to approach the communication careers on a broad concept basis.

In order for these materials and activities to be workable, it will be necessary to modify and adapt them to the particular school situation. It is the feeling of the committee that the content and material in the Communication and Media cluster is so encompassing that it would be difficult to include the material and activities within one existing junior high subject. This material is not proposed to be conclusive or a finished product. Further revision and expansion will naturally follow as the individual teacher seeks additional objectives, activities and resources.

00017

GENERAL GOALS

1. The student will develop ability to send and receive messages more effectively through writing, illustrating, reading, speaking and listening as he explores careers in the communications.
2. The student will develop understandings of the variety of careers in the principles, practices, problems and strategies in the communication field and how they relate to one another.
3. Through a variety of activities, the student will explore a wider range of recreational activities, including reading, photography, films, television, radio and art.
4. The student will be exposed to the hardware, production, genre, message interpretation and presentation of the media as it relates to the various careers in communication.
5. The student will have the opportunity to improve his sensitivity to and interpretation of the media, and the implications for himself and for society.
6. The student will have experiences which will help him assess his potential for careers within the communications cluster.
7. The student will have an opportunity to learn new skills in the areas of language arts, art, media technology, broadcasting, recording, graphic and line communication, as they pertain to careers in these fields.

00008

THE EVOLUTION OF COMMUNICATIONS

Man has always communicated. Although the types of communicative devices have become more sophisticated throughout the years, the basic need to relate to others has been evident since the beginnings of man. Language and writing had not been developed 28,000 years ago, but through a system of grunts, screams, facial expressions and gestures, man could make his message known to others. This, then, was the first form of communication. Its obvious limitation, of course, was the inability to transmit the exact meaning of the sender's message. There was also no way for man to record information for future use.

In moving around the land, early man developed a new means of communication. Piles of rocks or cuts on trees could mark a trail to follow on the return trip. Man learned to control fire and thus sent smoke signals to communicate different messages, such as danger or the discovery of food. Primitive man also studied the star clusters and the full cycle of the moon and noticed a pattern of reoccurrence. He could keep track of time in relation to days, months and seasons by making notches of sticks. The messages in these new forms of communication gave ideas more exact meanings.

Approximately 8,000 years ago, man discovered that seeds grow into plants and plants into food. This made it possible for him to settle in one place rather than move constantly about in search for food. Men formed communities and although they began to record experiences through pictures and carvings on pottery, it became necessary to develop some sort of language.

The success of a community is based on the ability of its members to communicate within the group. Only through the means of a spoken language could man share ideas and set up institutions necessary to his survival. Since each community developed its own language, the group members were unified and outsiders were immediately recognized as such.

Communication took its next step up with the development of writing. Although man had been drawing pictures for quite some time, these were merely to record ideas and not specific sounds. In the beginning of this form of communication, the ideas expressed, which were mainly religious in content, were recorded on hides, pottery, walls and clay tablets. Later, papyrus (reeds pressed together in thin sheets) was discovered by the Egyptians and this proved to be a better writing material.

With the onset of writing, man was able to record his history for future generations. He was also able to write down instructions for making wheels, plows and weapons, so others could benefit from and improve on such things. In the beginning, not everyone, of course, could read or write. Also, books copied by monks or scribes (writers) were very expensive and took months to turn out. Thus, only a very few people benefited from the recordings of man's early knowledge and history.

Man's limitations on his communicative abilities were eliminated by discoveries made down through the years. The Chinese developed paper, replacing expensive parchment. They also discovered wood-block printing,

00009

which enabled man to produce one whole page at a time. This was still a very tedious process, however, since each letter had to be carved by hand. Then, around 1450, Johann Gutenberg invented the moveable type printing press, allowing man to communicate with more people than ever before in history.

In the following centuries, more discoveries increased man's communicative abilities. Samuel Morse invented the telegraph in the 19th century, sending messages through a system of dots and dashes. In 1826, Alexander Graham Bell invented the telephone, thus transmitting the human voice over great distances. Shortly after World War I, the radio made its debut, permitting one man to speak to many people at the same time. Thomas Edison invented motion pictures and the TV, demonstrated by a man named Baud, was introduced in 1926. Today, computers record information at rates much faster than the human mind can work, thus eliminating those time-consuming chores.

Today, man has a rather sophisticated communications system. The visual system was the first to develop to the point where we know it today. Cheaper paper, the printing press and the discovery of minimum electrical expense through steam power, provided people with books they could well afford. Newspapers began to grow in size and scope with the inventions of Monotype and Linotype, thus setting type from a keyboard. Advertising also helped lower the prices and today nearly everyone buys a copy of a daily newspaper.

In 1839, photography was introduced as another means of visual communications. Although its use was limited to family portraits in the beginning, today pictures supply newspapers with exact recordings of events and its extended use involves posters, books, advertising, as well as providing many people with an interesting hobby.

The audio communication system began in the mid-19th century with the invention of the telegraph. Wires were strung from one side of the U.S. to the other. The telephone, though, was the major breakthrough in the audio area. Businessmen were the prime users of the telephone in the beginning, but again with the discovery of cheaper power, the telephone found its way into the majority of American homes. An underwater cable eventually linked nations together through telephone use. The phonograph machine recorded music and voices and after World War I, the broadcasting system began.

The newest area of communication is the audiovisual field, which was developed only 50 years ago. The audiovisual concept employs the universal language of sight along with sound. The first "talking" film emerged in 1929, starring Al Jolson in "The Jazz Singer". Pretty soon, a movie house was built in nearly every U.S. town. The only demand on the people was they had to gather at one place to see the movie. Television in the home brought entertainment to anyone by simply turning a dial. This media communication is probably the most powerful form ever known to man.

INTRODUCTORY CREATIVE ACTIVITIES

Before the student is ready to explore the various careers included in the Communication and Media cluster, the teacher may wish to provide activities such as those described here. The purpose of these exercises is to help the student sharpen his sensory powers, expand his thinking processes to include divergent thinking and to stimulate creative imagination, all of which will prepare him for careers in communications:

I. Improving Sensory Powers - Sense: Observation

Behavioral Objective: The student will demonstrate his power of observation by recording such things as similarities, differences, emotions, gestures, colors, details and conflicts in pictures, objects or situations.

Exercise #1

Look at any available object (book, writing object, a piece of material). Concentrate on it completely. Look at its pattern, shape, color and texture, but do not touch it. Close your eyes. Can you remember what it looks like? Change the appearance of the object in some way without touching it (shade it or cover it with a see-through material.) What are the similarities and differences? What are the special identifying marks? Record your observations.

Exercise #2

Look at any picture involving people. Study it carefully and write down everything you see. Write as if you had been watching the scene and wanted to relate the circumstances to someone. The emphasis here is not how to write, but on what to write as a result of observation.

Exercise #3

This exercise can be used spontaneously to teach the student to always be observant. When someone has entered the room and then left (a messenger, fellow teacher or custodian), ask the student to write down everything he remembers about that person, such as type and colors of clothes, physical description and facial expressions. This exercise can also be used within class. What was on the bulletin board last week? What did the teacher wear yesterday?

II. Improving Sensory Powers - Sense: Touch

Behavioral Objective: The student will describe the sensations of touch by noting the texture, temperature and volume of objects.

Exercise #1

Close your eyes. Touch something - sand, clay, moss, wood. Feel the texture, the temperature and the volume. What does your object feel like? What does it remind you of? Compare several objects, Record your reactions.

Exercise #2

Put your hand into a bag of objects without looking at its contents. Take several minutes to feel the different objects, again noting the temperature, volume and texture. Record as many items as you can remember, giving detailed descriptions of how they felt.

III. Improving Sensory Powers - Sense: Smell

Behavioral Objective: The student will record descriptions of different smells as he encounters them throughout the date. (outside, kitchen, basement.)

Exercise #1

Smell the air. Find different odors in it. Record the different things you smell at different times and different places throughout the day. Choose descriptive words to record your smells (i.e. don't write: "It smells good." Write: "It smells tart, limey, rancid, fresh, etc.")

Exercise #2

Record your descriptions of smells at different stages. Examples: 1. Cut into an orange in the morning. What does it smell like. Smell it again at night or the following day. How has the odor changed? 2. Record the different odors at various stages of making a cake or a dinner. 3. What does wax smell like as it's melting? As it hardens? As it burns?

IV. Improving Sensory Powers - Sense: Taste

Behavioral Objective: The student will record descriptions of various tastes of food and objects.

Exercise #1

Taste several objects and foods - water, fruit, cinnamon, thread, stone. What do they feel like on your tongue? Does the texture affect the taste? Concentrate on the taste. Is there any relationship between smell and taste? Do any of the objects taste the same?

Exercise #2

Taste the same food at different stages and record your description. Examples: What does a can of cool pop taste like when it's opened? What does it taste like after it sits out for awhile? What does ice cream taste like cold? warm? with cake? What does raw hamburger taste like? cooked? with a sauce of some kind?

V. Improving Sensory Powers - Sense: Hearing

Behavioral Objective: The student will record descriptions of sounds that he encounters through various experiences.

Exercise #1

Listen to the different sounds you encounter at various times throughout the day. Describe your impressions. Shut your eyes and just listen. What do you hear? Do the sounds run together? Choose specific words to describe the different sounds.

Exercise #2

Listen to a sequence of recorded sounds. After listening to the recording a couple of times, write a paragraph or two relating a description of events that could have happened from the beginning to the end of the recording. (Example of a possible series: closing a closet door, yawn, turning off a lightswitch, sounds of easy breathing while sleeping, creaking door, slow footsteps, heavier breathing (fright), scream, footsteps running away.)

00013

VI. Developing Divergent Thinking Processes

Behavioral Objective: The student will employ divergent thinking or write lists of items.

Exercise #1

The teacher asks the students to list in a two minute period all the ways he can think of to use a:

1. brick
2. newspaper
3. paper clip
4. other material

Exercise #2

The teacher will ask each student to list all the words he can in a two minute period that:

1. Start with s and end with t.
2. Start with c and end with n.
3. Start and end with the same letter.

Exercise #3

The teacher will ask each student to list all the:

1. colors
2. languages
3. TV shows
4. Magazines

he can think of in a short time period.

Exercise #4

The teacher will ask the student to list in a two minute period all the ways he can think of that human beings can use to communicate with each other.

Exercise #5

The teacher will ask each student to list all the tasks he can think of in a two minute period that would go into the production of:

1. a newspaper
2. a magazine
3. a radio broadcast
4. a T.V. show
5. a movie
6. a recording

VII. Brainstorming Activities

Behavioral Objective: Each student will work in a group of from five to seven members to brainstorm lists of creative items.

00011

Exercise #1

Students will work in groups of from 5 to 7 members to orally brainstorm (that is, to generate ideas in rapid succession, building on one another's thinking, not stopping for evaluation) while one recorder jobs down all suggested possibilities for:

1. Ways man can communicate with his fellow man.
2. Ways the telephone can be improved.
3. Ways movies could be improved.
4. Ways television could be improved (and any others).

VIII. Developing a Creative Vocabulary to Improve Communication

Behavioral Objective: Each student will substitute more descriptive words for trite and worn out words in his vocabulary.

Exercise #1

Each student will list in a specified time period all the colorful words he can think of to describe:

1. a man walking
2. a child's facial expression
3. a quiet place - a noisy one
4. the countryside
5. a meal

IX. Creating a New Method of Communication

Behavioral Objective: Each student will invent a new method of communication and demonstrate its use to the class.

Exercise #1

Each student or group of students will design and construct a method of communication, no matter how ridiculous or strange. It can be visual, audio or both. Perhaps a fair or exhibit or film could be compiled from these inventions. Examples could range from a basic flag signal system to a fantastic machine which emits sounds to be decoded or a far-out space communications system which may be represented not actually constructed.

100015

Journalism

00016

INTRODUCTORY STATEMENT

The Story of Newspaper Production

The newspaper is one of man's most important sources of information. Through its news stories, features, and articles of opinion, the newspaper makes known to the public the important issues and events of the day. Since it first appeared in Germany in 1609, the newspaper has played a large part in man's increasing ability to communicate with others through visual messages.

There are over 25 billion copies of newspapers printed in the United States each year. While some are published daily and some weekly, all newspapers share certain things in common. Newspapers have a profit motive just as any other enterprise. They must make a profit in order to remain in business. A profit could never be made just from the 10¢ or 15¢ charged for the newspaper itself. A newspaper's income is achieved through selling space to businesses in which to advertise their products or services.

Newspapers have a format. The format states how many pages the newspaper will have, the number of columns on each page, where the advertisements fit in, the kind of news stories, features, photographs and articles of opinion to be contained in the newspaper, and how often the paper will be published.

Newspaper career opportunities are endless. This compilation of objectives, activities and resources will provide the teacher with opportunities to allow the junior high student to explore the various aspects of newspaper publication.

.00017

JOURNALISM CAREER DESCRIPTIONS

I. Reporters

- a. General Assignments - Collects and analyzes facts about new worthy events by interview, investigation, or observation, and writes stories to prescribed editorial techniques and format.
- b. News Correspondent - Reports stories, articles and news items by mail, telephone, radio, or telegraph from locations distant from publication.
- c. Feature Reporter - Writes stories of humorous, interpretative, narrative, or otherwise subjective character, usually with emphasis placed on writing style and personal point of view of the reporter.
- d. Rewrite Man - Writes news copy for publication from written or telephone notes supplied by reporters.
- e. News Specialist, Syndicate - Writes syndicated news articles for newspaper publication.

II. Copy and Proof Readers

- a. Copy Reader - Edits and corrects newspaper or magazine copy. Writes headlines preparatory to printing.
- b. Proofreader - Reads proof of type setup to detect and mark for correction of any grammatical, typographical or compositional errors.

III. Columnists and Critics

- a. Columnist - Writes feature column, appearing periodically in newspaper or magazine, based on personal experience with subject matter. May specialize in areas such as sports, fashions, politics, society.
- b. Editorial Writer - Writes comments on topics of current interest to stimulate or mold public opinion in accordance with viewpoints and policies of publication.
- c. Critic - Writes critical reviews of literary or artistic works for newspapers or periodicals. May specialize in areas such as drama, movies or music.

IV. Specialized Personnel

- a. Librarian - Keeps file of news items, microfilm and other material for use by editorial and reportorial staff.

V. Editors

- a. Editor, Managing, Newspaper - Negotiates with newspaper owners' representative to establish publication policies and direct editorial activities of newspaper departments.
- b. Editor, Department - Coordinates activities of publication news or feature departments and supervises reporters engaged in gathering, writing, and publishing one specific type of news.
- c. Editor, Trade or Technical Publication - Selects, writes, and reviews materials for publication, plans layout and supervises editorial staff.

00000

JOURNALISM TERMS

balance - to put equal amount of headlines, copy and illustrations in all quarters of a newspaper page.

banner - a three-column headline - the largest, boldest headline on the page. It announces the most important news in the issue.

body - the main part of a news story that follows the news lead.

by-line - a line with the writer's name below the headline of the story. This line tells the reader the name of the person who wrote the story.

caption - explanation or comment found under an illustration on a newspaper page.

circulation - distribution of copies of the newspaper to the readers.

column - a vertical line of copy on the newspaper page, or a space devoted to a particular writer in each issue of the paper, for example, a feature column.

columnist - a person who regularly writes a column usually on a particular subject such as T.V. or sports.

copy - any writing that reporters and columnists complete for the newspaper.

copyread - to check the copy for correct journalistic style and accuracy.

deadline - time when finished work must be turned in.

deck - a single line of headline, one or more columns wide.

dummy - a practice make-up page, or to work on fitting type to the page.

edit - to change copy to fit the available space to make it clearer to the reader.

editor - a person who heads a newspaper department (news, feature, sports,) and who edits and copyreads.

editor in chief - the newspaper manager with authority similar to that of the president of a company. He heads the editorial board.

editorial - copy written by an editor to express or tell newspaper staff opinion on an issue or school problem.

editorial board - a group consisting of the several newspaper editors who meet regularly to discuss news plans, newspaper opinion, and school issues and problems.

feature - copy which appears on the feature page, such as an editorial or an interview, or a column on a particular topic.

focus - to direct the reader's attention to a particular portion of the newspaper page, or a striking story that attracts the reader's eye. The focus of a news page could be the banner.

headline - a short description written in larger letters than the copy to explain the content of the story.

illustrations - pictures, cartoons, or any kind of drawing.

illustrator - a person who draws for the newspaper.

journalism - the science of managing, writing and editing a newspaper or magazine.

lead - the introduction to the body of a news story, usually the first paragraph.

make-up - the placement of copy on the page.

masthead - section giving publication information such as date, volume, names of the newspaper staff, and subscription information, located on the editorial or feature page.

nameplate - the name of the paper, who published it, and the date and volume, located on the top half of the front page.

news beat - the place or places a reporter goes regularly in search of news.

news plan - ideas for stories that will be included in the next issue.

opinion - the way one thinks about a subject.

persuade - to convince another by logic so that he may agree with you or do what you want him to do.

production - process of getting finished copy into print.

proofread - to correct errors in grammar, spelling, punctuation, capitalization, word usage, and sentence structure.

pyramid - the technique of news writing in which the most important facts are written first and the other facts follow in order of importance.

quotation - the exact words of a person, enclosed in quotation marks. An indirect quotation uses only the ideas of a person, not his exact words, and does not require quotation marks.

staff - the people who work together to put out a newspaper.

word count - the total number of words a story contains.

JOURNALISM OBJECTIVES AND ACTIVITIES

- I. Behavioral Objective: The student will recognize what is news and disregard what is not news for print.

Exercise #1

Bring to class three different issues of your daily newspaper. As preparation for intelligent class discussion, read thoroughly the stories on the front pages that received top display in all three issues. Make a list of the news elements that each story contains. Try to determine the possible reasons that the editors used to give these stories top display.

Exercise #2

Bring to class a recent issue of your local newspaper. Discuss the display given to the stories on the front page. Are some stories given to little display and others to much? Are there some stories on page 1 that should be on inside pages and some on inside pages that should be on page 1? Give reasons. Read several of the stories and discuss their content with the following questions. Did the reporter obtain all the important details of each story? What news elements (5 W's and 1 H) are contained in each story?

Exercise #3

Suppose that you are the news editor of your school newspaper and that you are in charge of preparing the assignment sheets for the next issue. List in the order of their importance the ten most important stories that should be covered for this issue. Be prepared to give reasons for your order.

- II. Behavioral Objective: The student will determine his possible success as a reporter by analyzing himself through the use of the personal inventory.

Exercise #1

To determine the students possible success as a career reporter, he may analyze himself on the chart "Personal Inventory". Then in class discuss the reasons why each of these personal characteristics is necessary to successful reporting.

00002

Personal Inventory

Personal Characteristics	Poor	Fair	Good	Excellent
1. Intense interest in people and in what happens to them				
2. Ability to meet people easily and to converse with them				
3. Ability to inspire confidence in others and make people feel easy in your presence				
4. Ability to speak and write good English				
5. Responsibility				
6. Punctuality				
7. Willing to respect confidences				
8. Ability to work quickly				
9. Accuracy				
10. Willingness to weigh evidence on both sides before arriving at a decision.				

00023

III. Behavioral Objective: The student will practice various methods of gathering news.

Exercise #1

The student will bring news clippings from each of the following sources and discuss how the information was gathered:

- a. local news story
- b. feature story
- c. foreign story
- d. UPI or AP story

Exercise #2

Appoint two students to conduct the following telephone interviews, one to act as the reporter and the other as the interviewer. Try to obtain two telephones to use in this assignment. After each phone interview, discuss the techniques used.

Exercise #3

Select several students to demonstrate before the class the proper and improper ways of conducting interviews. Determine the effectiveness of the interviewing done through class discussion which applies the following "Do's and Don'ts of Interviewing":

The Interview

Do:

1. set up an appointment in advance
2. dress neatly and wear a smile
3. take along a tablet or paper with something sturdy to write on
4. have an extra pen or pencil
5. be on time for the appointment
6. address adults as Mr. or Mrs. unless they have another title such as Dr.
7. have your questions well thought out ahead of time. If necessary, write them down
8. take notes. Most reporters develop their own system of note taking
9. write down the most important ideas
10. write exactly any of the speaker's words which you may wish to quote in your story
11. ask for a second appointment if necessary.
12. write the copy while the interview is still fresh in your mind
13. have the person you interviewed read the finished copy if you have any doubts about its accuracy

00024

Don't:

1. go to an interview unprepared
2. enter when the person is busy and expect to get a chance to interview him
3. be nervous, because this will be a very enjoyable visit for both of you
4. stay too long
5. ask for the spellings of words that you can find yourself in a dictionary
6. quote the person if you are not sure of his exact words

IV. Behavioral Objective: The student will write news stories.

Exercise #1

Using the pyramid technique, the students will write a news story containing the 5 W's and 1 H.

Who?

What?

Where?

When?

Why?

How?

The Rules of News Writing

1. Always write a lead to interest the reader.
2. Decide which facts are most important. Pyramid the copy with the important facts at the beginning of the story.
3. Use short sentences whenever possible. Avoid wordy sentences.
4. Use short paragraphs. Most news stories contain two or three sentences per paragraph.
5. Be sure that each paragraph has just one main topic.
6. If you quote what someone has said, do it accurately.
7. Tell things just as they happened, without expressing your own feelings.

00025

8. Reread your story. Is it well-organized? Is it clear? Usually the story will have to be revised and rewritten.

Exercise #2

The student will test the accuracy of the above news story by answering the following questions?

1. Do I have all the facts?
2. Did I verify these facts with my source?
3. Have I checked the spelling of all names and all names identified?
4. Have I verified the dates with the calendar so that Friday is September 26, for example?
5. Is the story written in the order of decreasing importance?
6. Is the first paragraph short - 25 to 30 words?
7. If there are too many 5 W's or H's for one paragraph are they relegated to the second and even third paragraph?
8. Does the lead merge smoothly with the first paragraph of the body?
9. Do all the paragraphs follow one another in logical order, each one blending with the one preceding?
10. Are the paragraphs short?
11. Is all editorializing avoided?
12. Are there any unnecessary details?
13. Have I obtained a direct quote or two, when possible to add variety and interest to the story?
14. Is the vocabulary simple and specific?
15. Are there no misspelled words or grammatical errors?
16. Are sentences short and clear?

Exercise #3

The student should rearrange the following paragraphs so they will be in proper pyramid order:.

A

In previous years girls were nominated in the home rooms. Those receiving the greatest number of votes were introduced later at an assembly, at which student speakers qualified their candidates. The following day senior girls cast their final ballot.

B

To explain the changes in the procedure for electing this year's DAR award winner, Mr. L. S. Michael, principal, will speak at an assembly for senior girls next Wednesday in social hall.

00026

C

The winner will be awarded a certificate and a pin at a chapter meeting sometime in April. She will also stand a good chance of having her name drawn as Illinois' "Good Citizen" and of receiving from the national DAR group a government bond of \$100 maturity value.

D

Previous winners were Joanne Hansen, '72, and Nancy Parsons, '71.

E

The following day the girls will vote for one senior girl whom they believe best exemplifies dependability, service, leadership, and patriotism. From the three girls receiving the highest number of votes, the faculty will select one to represent DHS as its DAR Good Citizen.

V. Behavioral Objective: The student will write feature stories.

Exercise #1

Write a feature story (sentences and paragraphs somewhat longer, with colorful, descriptive words) for the following sets of facts.

Freshman in your home economics classes one week before Christmas are asked what each most enjoyed cooking. Write the lead for a feature in which you intend to mention every student and her favorite dish. Feature the unusual in these opening lead paragraphs.

Note: Are there any common food items missing?

Butterscotch apple - Ruth Erfmeyer, Lucy Price
Coffee - Anna Pakoss
Candy - Chris Blake, Candy Orr, Lori Strarch
Cream puffs - Billie Booth
Baked apples - Sandy Yamer, Mary Metcalf
Lemon cream pie - Ann Taylor
Whole wheat bread - Chris Lytel
Eggs a la golden rod - Becky Shipley
Devil's food cake - Kim Kaylor, Carol Hogan,
Glenda Sager
Pumpkin Pie - Janet Lynn, Mary Patterson

Exercise #2

Students are to compile a list of names: prominent in national and local news. The instructor is to check this list and discard any names of doubtful prominence. Then read the selected names to the class for identification. Write a feature on the results.

Characteristics of Feature Stories

1. They usually entertain more than they inform, instruct or advise although they may do all four.
2. They may be of any length, ranging all the way from rather long magazine articles to the short human interest story.
3. They are factual and require reporting, but they are related to news stories in few other ways.
4. They may or may not be timely. If they are timely and related to a current news event, however, they are likely to be more appealing to a newspaper's readers.
5. They may be written in any form and in any style. The only criteria are that the form and style be appropriate to the content and to the purpose of the story.
6. They permit the reporter to use all of his knowledge and cleverness to write a story that is original in idea and treatment.
7. They are well-organized, always written from a carefully constructed plan or outline.
8. They rarely have a summary lead. Instead they more often have novelty leads.
9. They usually are not cut in makeup. Thus the reporter may use any devices of the fiction writer that he wishes: suspense, surprise, dialogue, description, narration, climax and the like.
10. They depend upon the writer to apply his imagination to the facts.
11. They are written with friendly simplicity.

00028

VI. Behavioral Objective: The student will write editorials.

Purposes and Types of Editorials:

1. Editorials of Interpretation

explains the significance or meaning of a news event or a current idea, condition or situation.

2. Editorial of Criticism

points out the good or the bad features of a problem or of some situation mentioned in the news and tells what should be done about it.

3. Editorial of Appreciation, Commendation or Tribute

praises, commends or pays tribute to a person or an organization that has performed successfully.

4. Editorial of Entertainment

takes for its subject a topic which readers are interested in and develops it lightly, evoking a smile, a chuckle, or a laugh, and often has a point gently and subtly suggested.

Exercise #1

The student will select one specific limited idea to develop, one that is of interest to readers and timely. Organize the editorial into three parts, the introduction, the body and the closing. Write simply. It is recommended that the student write his first editorials on school or local issues.

Exercise #2

The student will test the effectiveness of his editorial by asking the following questions:

00079

Checking Your Editorial

1. Are the form and style appropriate to the content and the purpose.
2. Does it have a purpose and does it accomplish that purpose?
3. Does it make the reader think?
4. Does it reflect the writer's originality?
5. Is the writing clear, vigorous, direct and simple?
6. Is the diction exact, not ambiguous?
7. Does the editorial reflect clear, logical thinking?
8. Does it give evidence of accurate knowledge?
9. Does it sound sincere?
10. Does the opening sentence employ the principles used in any good sales letter?
11. Is the editorial brief and pointed?
12. Does the editorial make its point without preaching?

00000

VII. The student will copyread stories from previous assignments, completing the following duties and employing standard proof marks:

Duties of a Copyreader

1. He marks copy for the printer, indicating exactly how each story is to be set in type.
2. He checks for errors in facts.
3. He reads to see whether all important information is given. If not, he sends back the story to the reporter or he himself inserts the needed facts.
4. He reads to see whether any irrelevant or improper material has been included. If so, he deletes it.
5. He checks the effectiveness of the lead.
6. He checks the organization of the body of the story. If any paragraphs need to be rearranged, he rearranges them.
7. He checks the writing of the whole story and improves it in any way he can.
8. He corrects any errors in grammar, spelling or style.
9. He adjusts stories to their prescribed length.
10. He writes headlines.

Exercise #1

Copyread the following story, using standard copyreading symbols. When you have finished the exercises, discuss in class the reasons for each change made.

00021

STANDARD PROOF MARKS

Punctuation	○	Insert period.	Spelling	at.	Pay no attention to.

PUNCTUATION

Insert period.
Insert comma.
Insert semicolon.
Insert colon.
Insert exclamation mark.
Insert question mark.
Insert hyphen.
Insert quotation marks.
Insert one-em dash.
Insert two-em dash.
Insert en dash.
Parentheses.
Brackets.
Insert star.
Superior or inferior.

SPACING

Start a paragraph here.
No paragraph; run in.
No paragraphs or short lines.
Carry over to next line.
Carry back to next line.
Something omitted; see copy.
Space evenly.
Close up; one word.
Insert space here.
Push down lead or space.
Indent one em quad.
Indent two em quads.
Move to the left; lines reset.
Move to the right.
Move up.
Move down.
Line up vertically.
Line up horizontally.
Start a new line.

SPELLING

Pay no attention to
Query; is this right?
Transpose letters or words.
Take out; kill.
~~Insert apostrophe.~~
Spell out words run; in display.
do not set this line.
Insert correction indicated.
Use ligature fi.
Upside down; reverse.

DISPLAY

Change to capitals.
Change to small capitals.
Change to lower case.
Change to italic.
Change to roman.
Change to bold face.
Wrong font.
One underline signifies italic.
Two underlines, small capitals.
Three underlines, capitals.
Change to bold type.
Change battered letter.

COPYREADER

Set in lower case.
Paragraph.
Period.
Spell out.
Separate.
Transpose words.
End of story.
End of last story for day.
Omit and close up.
Spell as written.
Add additional copy.
Print immediately.

Story for Copyreading

1 Glass, history and fundamentals, was the subject of the
2 talk in Tuesday's assembly, given by R.A. Melville, who spoke
3 here through the courtesy of the Madison theatre, where Mr.
4 Melville is giving a series of talks on glass and glass
5 blowing.

7 According to the speaker, United States has the largest
8 glass industry in the world, all the but the coloring of it.
9 Mr. Melville lives in Long Island, New York, but he received
10 his training abroad.

Story 2

1 That a banquet will be held at the Y.W.C.A. on May 2
2 it was decided at a meeting of the Spanish club at the home
3 of Jane Henry, president of the club.

4 The price of the banquet will be \$1.50 per plate. The
5 members of the Spanish club, their guests and the first year
6 pupils are welcome to attend this banquet.

7 A short play, Manana de Sol, will be given as part
8 of the program. Melvin Johnston has charge of the produc-
9 of the play.

10 The meeting was opened at 8 p.m. by the president, Jan
11 Henry. t being a strictly business meeting it was adjourned
12 at 9:30. There were about 20 persons present at this meeting.

00034

VIII. The student will write good headlines applying the rules of headline-writing.

Headline Guidelines

1. The head should be summary of the news story, not a mere label.
2. The headline should contain as many specific facts as it is possible to include. It should answer as many questions as a summary lead.
3. The content of a headline over a news story should be taken from the lead of the story. When additional facts are needed for minor decks, you may have to delve deeper into the story.
4. Each succeeding deck should contain new information.
5. Put a verb, expressed or implied in each headline. Strong verbs are more effective.

Exercise #1 Write the headline for the following stories

Story 1

David Crockett, famous backwoodsman and pioneer scout, will step from the pages of history in an impersonation to be given in Armstrong hall today during seventh hour.

Cloud Smith of the speech department of the University of Nebraska will present featuring a three-act play about David Crockett. Taking the part of six characters, Mr. Smith will dramatize this story of Tennessee romance without the aid of scenery, costumes or make-up.

The admission to the assembly is 5 cents and the proceeds will go toward re-establishing the Engle-booster organization.

*Copy intentionally has been left with some errors to practice copyreading.

00035

Story 2

Omaha, Neb. - (Exchange) Omaha South high school students are writing their own absence excuses under a new system which will be continued if it works well.

"We believe it is better psychology - we think it may stimulate students to give more exact reasons for their absences," says Principal R.M. Marrs.

Mr. Marrs said there seems to be no increase in absences and that students are "refreshingly frank in their replies." The old system, by which parents write the excuses, is being continued in other city schools.

Story 3

A scene from "Annie, Get Your Gun," starring four faculty members, will preview this fall's major production in a speech assembly at 8:35 next Thursday morning in social hall.

The faculty members composing this preview are....

alumni & fund raising publications

Governmental Agencies

write public information materials
publicity for programs
technical writer

Others

free lance writer (for any media)
greeting card writer
children's stories
professional speech writer
research writer
polling

00037

Introductory Statement

The Story of Magazines Today

Magazines, from the time they were first published in this country in the mid-1700's, have remained regional, even national, in distribution. In contrast, newspapers are mainly local in distribution. Magazines, coming out less frequently and making little pretense at carrying spot news, have managed to gain national acceptance and far greater circulation. A single magazine, then, is likely to have a wider influence than one newspaper.

An estimated 20,000 different magazines are published in the United States today. They come in all sizes, frequencies, formats, and subjects. There is no such thing as a "typical" magazine, as there is a "typical" newspaper.

Careers in the Magazine Field

Reporter
Copy Writer
Copy Reader
Proofreader

Terminology

(in relation to magazines)

Image - what magazines stand for in the public mind

Avant-garde - seemingly ahead of its time, daring to alienate the "average" reader

Format - physical aspects: its over-all dimensions, typography, layout, cover designs, and sequence of items (governed by capital and profits)

Formula - basic motif, the approach or the philosophical concept of what the management wants the magazine to stand for, what theme and purpose it is to have, what ideas are to be kept in focus (governed by a variety of factors, mostly the reading public)

Faddism - movement of support for something "new" or different, often unrelated to its value, but popular at the time

Magazine Circle - popular influence of a magazine due to efficient business office, capable editors and contributors, interests of the population (example: a woman reader, dressing to look like the sophisticated people in New Yorker ads.) Identification with a certain magazine.

House Organ - magazine created for employees of a given company

Free Lancer - one who writes for more than one magazine and sells his "stories", not his time

Pen. Name - (nom de plume) a fictitious name used by an author who wants to avoid identifying himself for the public

Ghost, Ghost Writer - one who does the actual writing of a story attributed to someone else, usually well-known in another field

"Secret Journalism" - the compilation of material, unauthorized, perhaps inaccurate (such as the Khrushchev Remembers book)

"New Journalism" - subjective writing whereby the writer injects his own reactions and views or applies fictional techniques to non-fiction (conversation, for instance) One writer describes it as (2 parts low down, 1 part corn, and a dash of obscenity)

Magazine Unit

Project 1

Find out if the public library has bound volumes of Life and Look, dating back to the 40's or 50's. Compare with those issues of 1971 or 1972 (Life), and of late 1960's (Look). What changes span those 20 or 30 years? What might have caused those changes? How might the impact of TV have contributed to these changes? Why these two magazines, in particular?

Project 2

Look at copies of magazines oriented toward minority groups. What is their content? Are they clearly meant for members of one group and no other people? What do their ads look like? What editorial positions do they take? Are they anti-other racial groups?

Project 3

Look in telephone Yellow Pages for the wholesale magazine distributors and ask them about sales for particular magazines.

Also check with owners of stores that have large newsstands (Dahl's, for instance). What are the ones that sell well in this community? Are they the same as those that are popular nationally? See Page 37 in Print Media.

Are there any rules about placement of magazines in various areas of the display racks? Whose rules? Why?

Project 4

Get two volunteers to interview fashion coordinators of local department stores and write about fashion trends.

Project 5

Get two volunteers to design a questionnaire to be administered to ninth grade home rooms, results compiled, and story written. Poll could be on current music or reading habits.

Project 6

Get volunteers to attend local concert and write a review.

Project 7

Group project - write an analysis of current films seen by students.

Project 8

Design a cover for a new magazine.

Project 9

Draw cartoons for a particular kind of magazine after looking at a variety of such cartoons in different types of magazines.

Project 10

Submit original fiction or nonfiction.

Project 11

Production of a One-Issue Magazine

Organizing Session

Students work with teacher to set up a staff to produce one issue of a magazine. Suggested departments and tasks might look like this:

Chief editor and staff	Preparing the magazine's masthead; writing the editorial
Managing editor and staff	Naming the magazine, determining the sequence of contents; preparing a table of contents; preparing the cover
News editor and staff	Writing the news stories
Features editor and staff	Writing the feature stories
Reviews editor and staff	Writing the reviews (movies, concerts, books, recordings)
Advertising editor and staff	Writing ads (if desired)
Graphic arts editor and staff	Creates art work to coordinate with articles or ads
Production staff	Typing, laying out, reproducing, and assembling the magazine

Graphic ART

CHRISTINE CAREER
COMMERCIAL ARTIST

00033

Introductory Statement

For most individuals, choosing a course of employment that offers continued progress is an act of singular importance. Therefore, it is important to choose a career that matches individual abilities and goals.

Identifying those learning experiences and basic skills in Graphic Art, which are related to careers in the visual communications industry, is a continuous developmental process. Furthermore, it is a process that is generated and supported by manufacturing interests, corporate enterprise, civic concerns, market and consumer demands. Publications, commercial advertisement, manufactured products, production media and technology (and job related enterprises) provide a continuing demand for the services of individuals who are skilled in graphic art and associated production media.

One of the main concerns in graphic art education - at this level - is how to maintain and increase the originality and inventiveness characterized by the expressions - and the act of expression - of the young adolescent. Challenging the creative powers of the adolescent can be done best when the implications of creative action prevail in all of the working procedures, in the room climate, in the graphic art materials and tools for expression, and in the motivation of students.

While it may be impossible to develop a formula for challenging adolescents creatively, it is desirable to recognize those procedures which will build for creative action, for example:

Sequential art activities must be flexible, yet involve a progression of challenging and demanding experiences.

Greater emphasis must be given to the correlation between the hand and eyes, the art media, and the tools for visual expression.

Line, value, space, color and texture manipulations must be explored and transferred into meaningful graphic expression.

The corresponding qualities of language art and graphic production media must be recognized and utilized in planning art activities.

Growth in craftsmanship and skill should refer to those things which are technical in nature, such as the increased ability to control and manipulate hand and power tools, i.e., using lettering and ruling pens, T-squares and triangles, drawing cartoons, illustrating, making posters, making a layout, making a simple paste-up, grouping and planning copy, applying the point system, scaling photographs and copy, hand composition paste-up.

Project assignments in graphic art should be shaped and guided by progressive levels or achievement. Thus, the identification and counseling of the skill directed and artistically gifted is based on both objective evaluations and

associations with the individual student and his work. A history of deep and continuous interest in graphic art and production techniques - and work that is marked by originality and quality - become therefore, determining criteria. Subsequently, they may combine to serve as a basis for making an intelligent career choice.

00016

OBJECTIVES

TO DEVELOP PERCEPTUAL AWARENESS AND AESTHETIC JUDGMENT

TO DEVELOP AN AWARENESS OF GRAPHIC ART WORK AND THE NEED FOR EFFECTIVE VISUAL COMMUNICATION

TO UNDERSTAND THE VARIOUS GRAPHIC ART AND PRODUCTION, MEDIA TECHNIQUES AND PRESSES

TO PRODUCE GRAPHIC ART WORK UTILIZING VARIOUS REPRODUCTION METHODS

TO DEVELOP AN UNDERSTANDING OF THE LANGUAGE EMPLOYED IN THE VARIOUS VISUAL COMMUNICATION MEDIA

TO HELP THE STUDENT EXPLORE THE VARIOUS CAREERS IN THE VISUAL COMMUNICATION INDUSTRY

Graphic Art Activity Planning

- I. In determining the format for a given activity, special attention may be directed at the following:

- Art media technique
- Production method
- Arrangement (horizontal - vertical)
- Composition specifications
- Relative content
- Layout aspect
- Type style
- Number of colors

- II. To obtain satisfactory results, graphic art should be the result of a plan. The student should be encouraged to develop the habit of making a plan or layout for each assigned activity. There are three types of layouts:

1. The thumbnail sketch: a small quick drawing
2. The rough layout: a generalized composition
3. Comprehensive layout: a precise, detailed plan

Layouts are necessary in order to show what the art work will look like before reproduction.

- III. Printing requirements determine in large part the appearance of the final mechanical layout which will contain all or part of the following:

- Photo copy
- Illustration or cartoon
- Heading - sub-heading
- Copy
- Lettering - Typography
- Symbols
- Logo
- Register marks

- IV. Meaningful message, effective design, form and content are brought together and finalized before work is actually begun on the printed piece. Mechanical layout is a synonym for the arrangement of copy - copy consisting of phrases, sentences, paragraphs and illustrations arranged in appropriate blocks. The quickest way to balance a layout is to treat all illustrations; border ornament and color masses as though they were building blocks, i.e. - group the word blocks into phrase blocks and then balance all pictures, spots of color or decorating masses with these phrase blocks according to their size and attraction. The most pleasing and effective layouts are balanced on a point that is about 5% above the actual center of a well proportioned pictorial plane. Since this point is usually measured by the eye, it is called the "optical center".

- V. Both Medieval and modern lettering can be separated into three basic groups: Roman, Gothic and Text styles. From these three, all alphabets originate. The simple elements from which they are

composed are easy to form with the speedball pen and lettering brush. All letters composed of uniform width elements are classified with the Gothics and are developed with the style "B" speedball point. Roman, text and italicized versions thereof are made with "C" or "D" pens. Time and effort are minimized by using the size and style of pen or brush which will form the different letters of any given alphabet without subsequent remodeling of strokes. The use of a T-square, ruler and compass in drawing the elements of Gothic block letters is necessary (penciled guide lines are recommended).

"Letter", "mechanical", and "typographical" spacing techniques should be learned via the printers point system and line gauge preliminary to work in layout and paste-up. The effective use of contrast, powerful headlines (with the rest of the copy arranged in subordinate groups), balance on optical center, and a generous use of blank space with liberal margins are the first aids to a good layout.

Using a "yard stick" in lettering to measure the width or distance between different letters seldom produces results and is generally detrimental to legibility. Optically equalized spacing and optically fitted letters produces pleasing results.

- VI. It is difficult to imagine a newspaper without a comic section, an editorial page without a central cartoon, television without animated cartoons, the theater without lively cartoon comedies, magazines and trade publications without gag panels or advertising without cartoons. The cartoon strip alone has created the largest and most abundant iconographical field in history. Its distribution is unequalled by that of any other form of expression, artistic or literary; not even the film can boast; as can the comic strip of reaching a third of humanity.

Any cartoon can be called a commercial cartoon when it is adapted for advertising and publicity purposes. It cannot be said that a commercial cartoon must have certain characteristics of itself, apart from the advertising copy. But if the drawing elicits affirmative answers to these two questions - Does the cartoon seize the reader's attention? Does it augment and support the message? - then it can be considered successful.

Cartoon instruction for production copy should include:

- Building the cartoon figure on the oval, triangle and stick
- Facial animation and caricature
- Cartoon design
- Ad eye-catchers
- Cartoon message bearers
- Line width in a cartoon
- Character and special attire
- Sports action and spot cartooning
- Editorial cartooning
- Gag panels
- Comic strip

00050

VII. Block printing and silkscreen printing are conventional relief and planographic processes that are used extensively in graphic art. Early introduction to designing and rendering in these media is both rewarding and necessary. Traditional drawing, design and composition techniques may be observed in developing individual art project assignment in this category of instruction.

VIII. Ben Day and Zip-a-Tone tint screens are widely used in graphic art to produce shading, background and other design effects for illustrations, cartoons, charts and graphs, etc. These screens are produced in a variety of densities (percentage of area covered by dots) and a variety of rulings (number of lines of dots per inch). A screen of any given density may be obtained in a variety of rulings. Estimating tint screen values by percentage with the aid of a linen tester (pocket magnifier) is necessary to graphic production. Therefore the student should learn to distinguish the characteristics of each screen value. Line shot and halftone process camera techniques, together with photographic copy and offset lithographic printing, should be studied in conjunction with tint screen value estimation.

IX. Graphic artwork for reproduction involves:

- Designing for specific audiences
- Creating ideas for utilitarian purposes
- Translating ideas and concepts into visual images through the use of design elements, design fundamentals, graphic and photographic techniques
- Spatial organization and optical message
- Character generations
- Integration of text and image
- Letterforms, lettering techniques, style of type
- Special effects - collage, montage
- Designing with the camera
- Exhibits, charts, posters, maps, diagrams, illustrations, storyboards, lettering techniques.

X. Media techniques and procedural methods to be observed in preparing graphic art for reproduction:

- Measurement (ruler and printers line guage)
- Scaling
- Grid reproduction and tracing
- Visuals (lettering styles, illustrative material)
- Copy preparation (marking up copy)
- Layout (center and off-center)
- Transfer
- Paste-up
- Mechanical layout
- Rendering (black and white techniques for line and half-tone reproduction):

Introductory Statement

It has become apparent in past years that a considerable change in graphic arts educational philosophy and application was beginning to affect both industry and educational programs on all levels. Greater industrial utilization of scientific techniques and socio-economic factors to produce both manufactured and custom made products was increasingly evident. Greater stress upon human elements; the element of design; management, including personnel selection and training programs; and recognition of the varied aspects of the graphic arts, all pointed toward a new and different interpretation of graphic arts - visual communication. Graphic Art educators are becoming cognizant of the need for broadened instructional programs. They now see printing, language arts and graphic arts as visual communication tools. These tools should be integrated into the general curriculum for all students, whether they intend to use them to communicate, use them to earn a living helping others to communicate, or as citizens in our society, use them in understanding and appreciation of communication.

The idea of graphic communication should start in the elementary grades. The communication concept should be planted early. It involves words, language, creative writing, drawing, learning to "see" with pictures, learning to convey ideas with these tools.

Many of these elements are already dangling loosely in the present school programs. The communication concept will give them relation and purpose. Further up in the grades, there should be greater involvement in graphics in display, with a deliberate attempt to convey specific ideas and communicate visually. The tie-in with language arts and art is obvious.

At the junior high school and high school levels, there should be an introduction to the processes of extending the prepared communication to many more people by printing methods. (See figure 1)

Graphic communication in the curriculum involves a creative writing tie with the language arts department. It involves a design - graphic tie with the art department. Graphic communication involves typing and office practice skills; layout and pasteup procedures and the technology of printing. (See figure 2)

Graphic communication is interlaced throughout the education processes; it is an essential part of the total career picture.

It is not the intent of the Graphic Production activity list to present procedures to develop skills in operating equipment, but rather to approach the Graphic Production communication field on a broad exploratory concept basis, so that the student may gain a better understanding of the careers in graphic communication.

PRINTING PROCESSES

Thumbnail descriptions here explain the popular printing processes in use today. Since this is not a textbook, no attempt is made at comprehensive explanations. However, beginners certainly will want to be familiar with the basic differences of these processes.

LETTERPRESS

Ink is transferred from a raised surface directly to the paper. The raised surface (printing "form") may be type which has been set, engravings of copper, zinc, other metal, wood, rubber, or a combination of materials.

There are three major kinds of letterpress equipment:

1. **PLATEN PRESS.** Paper is fed to a flat surface called a platen which contacts the inked form clamped against the bed of the press. Paper and form meet in a vertical position.

2. **FLAT-BED CYLINDER PRESS.** Paper is held on a cylinder by grippers and rolled over the printing form locked on a flat bed. Form moves horizontally, the paper revolves over it.

3. **ROTARY PRESS.** Both paper and plates are on cylinders rolling against each other. Plates (electrotypes or stereotypes) are curved. Paper can be in sheets (sheet-fed) or in rolls (web-fed).

OFFSET LITHOGRAPHY

Ink is transferred from a flat surface to a rubber "blanket" and finally to the paper. Each element—the plate, the blanket, and the paper—moves as a cylinder. The principle that grease and water do not mix is the basis of lithography. The word "offset" comes from the process of "offsetting" the image from plate to blanket before contacting the paper.

Thin grained metal (zinc or aluminum) is used for the plate, which contains all materials: type, illustrations, and photographs.

GRAVURE

Whereas letterpress uses a *raised* surface, and offset lithography a *flat* surface, gravure uses a *depressed* surface (called *intaglio*) for transferring ink. A copper cylindrical plate is etched with depressions or cells of different depths to hold the ink. Excess ink on the surface is wiped clean by a metal "doctor" blade.

As with the letterpress rotary, gravure presses are made for both sheets (sheet-fed) and rolls (web-fed) of paper. Contact is made directly from inked plate to paper.

SILK SCREEN

Considerably different from the other processes, silk screen printing uses a transfer of ink through the mesh of a silk (or other material) screen stencil directly to the paper, metal, wood, or other final product. The inks usually are deposited in a heavy layer.

00079

BASIC "INGREDIENTS"

Although all the component parts of different printed pieces are rarely identical, there are similar basic ingredients involved in the average commercial job.

The table indicates ten ingredients along with some of the usual sources or suppliers. Note that there is a choice of suppliers in several cases, depending on how the job is assigned.

For the beginner, a thumb-nail description of each of the ten ingredients follows:

1. COPY

This is the written part of the job: the text, descriptions, headlines, tabular matter, etc. Usually it is prepared before layout is made, although in some cases copy is written to fit a pre-conceived layout. Old-timers have their copy finalized before it leaves the typewriter to avoid changes that can cause unnecessary costs.

2. LAYOUT

This is the "blueprint" — an artist's conception of the finished job. Layouts are usually prepared on transparent paper with pastels or pencil, then mounted on opaque sheets. Layouts can be very rough, semi-comprehensive, or so comprehensive that nothing is left to the imagination. Normally they are the same size as the finished work.

Changes and corrections can be made easier and far more economically on the layout than in the more finished stages of the job.

3. FINISHED ART

This includes illustrations, hand lettering, charts, color blocks, etc. ready to be made into plates. It follows the layout as a guide. Finished art should be checked carefully, since any

changes made later will require new plates. Artwork usually is made larger than final size, in order to allow reduction for the sharpest possible reproduction.

4. PHOTOGRAPHS

Similar to finished art, photographs can be corrected if necessary by retouching, before plates are made. Glossy prints of black and white negatives are usually used. In the case of color photography, several types of originals are used.

5. COMPOSITION

This is copy set in type — either machine set, or hand set. Proofs are usually submitted in "galley" form to be read for corrections. It is important to make all corrections on these first proofs. Errors on the part of the typesetter are not charged to the customer. Changes made from original copy are called "alterations," and are charged for.

6. LETTERPRESS PLATES

Printing plates for letterpress are usually made on metal through a photo mechanical process. (Wood, plastic, and other materials are also used.) The quality of the engraving, obviously, determines the quality of the reproduction. Proofs are easily pulled for inspection

7. plates (lithography)

8. paper

9. presswork

10. processing

before the job is run, either in page form, or pasted up into a complete dummy.

7. LITHOGRAPHIC PLATES

In offset lithography, everything — type matter, photographs, art, etc. — is transferred to a thin flexible metal plate through a mechanical process of photo-chemistry. Proofs are available, in a somewhat more complex operation.

8. PAPER

Unlike some of the other ingredients, printing papers come in an astonishing variety of brands, types, weights, textures, colors, and prices. There is always the right paper for the specific job. It is important to know in advance what paper will be used because many of the other ingredients will be planned accordingly.

9. PRESSWORK

After plates are approved, the job finally is ready to be run. The size and type of press, inks, and method of running will have been determined. Once the press is started, no changes should be made by the customer.

10. PROCESSING

Finished press sheets go to the bindery or processor for any of a number of operations, depending on the job. These include laminating, die-cutting, embossing, cutting, folding, punching, stitching, collating, trimming, etc.

These highlights of some of the steps from conception to finished product indicate that a great deal of careful planning is required to make the final printed job an efficiently produced product, with quality tailored to fulfill the ultimate objective.

How To Make a Pressman's Hat

You and Your Friends Can Have Fun
With Your Des Moines Register and be
the Envy of your Neighborhood!

IT'S EASY! JUST FOLLOW
MY DIRECTIONS

1ST WE LAY A FOUR PAGE
SECTION OF YOUR DES MOINES
REGISTER DOWN WITH
THE FOLD AT THE TOP.

figure 3

2. LOCATE THE CENTER LINE AND FOLD TOP LEFT CORNER DOWN TO IT

3. DO THE SAME WITH THE RIGHT TOP CORNER

6. FOLD RIGHT EDGE $\frac{1}{2}$ INCH PAST CENTER LINE FOR FEWER; HEAD SIZE. FOR LARGER SIZE ONLY $\frac{1}{4}$ " OVER OR TO THE LINE. FOLD THE LEFT SIDE IN SAME MANNER TO RIGHT EDGE

4. FOLD UP EDGE OF TOP SHEET TO BASE OF TRIANGLE AND CREASE

5. NOW FOLD UP AGAIN TO FORM HAT BAND AND TURN HAT OVER

8. FOLD ENTIRE LOWER FLAP ABOVE HAT BAND

7. FOLD LOWER RIGHT AND LEFT CORNERS TO THE BOTTOM OF YOUR HAT BAND

9. NOW FOLD TOP OF FLAP DOWN AND TUCK INTO HAT BAND

150004

10. FOLD THE PERK DOWN TO THE BOTTOM OF HAT BAND AND TUCK UNDER THE BAND

11. PICK UP THE HAT. OPEN WIDE AND FLATTEN OUT THE TOP, FOLD THE PEAKS DOWN TO BOTTOM OF HAT, CREASE TOP EDGE AND TUCK ENDS INTO BAND

AND THERE YOU HAVE A GENUINE PRESSMAN'S HAT

For Mom and Dad

Much research has been done to establish the origin of this unique headpiece. It has never been determined when or where the first paper hat was worn, but records show that it was being worn in the United States as early as 1748.

The handmade hat is worn by pressmen as protection against ink, grease, oil and paper

lint which otherwise might get in their hair

Now that the family knows how to make the pressman's hat, Dad can have sonny fold him one if he has to work under the hood of the auto, or if he has a painting job to do. Mom could use one, in housecleaning, especially if she is handy with a paint brush

Graphic Production Activities

Equipment Used in the Graphic Production Area

Activity A: Distributing Leads and Slugs

Objective: To acquaint the student with the proper method of handling material, to encourage the use of judgment in storage methods, and to stress the necessity of care, neatness, and accuracy in production operations.

Equipment: Galleys, leads, slugs, storage racks or cases, lead cutter or saw.

Related

Information: For greatest efficiency, it is desirable that lead-and-slug racks be kept:

1. neat and clean
2. comfortably full at all times
3. free from bent, battered or inaccurate materials
4. with all leads and slugs resting on edge
5. separate racks for leads and slugs

- Procedure:**
1. Choose a galley of sufficient width to take longest lead or slug.
 2. Place galley of leads and slugs on sloping banks, head to right, and open end to left.
 3. Arrange leads and slugs snugly in upright position on galley, with even ends downward, but without regard to varying lengths.
 4. Push spacing material away from head of galley to allow space for assembling leads and slugs into graduated lengths.
 5. Raise the longest slug by means of a forefinger applied to upper end, and place at head of galley.
 6. Take the next longest slug and place it beside the first one.
 7. Continue to sort the slugs until all have been arranged in neat tiers according to length.
 8. If space on galley is limited, return slugs to rack, sorting according to length and checking with line gauge when in doubt.

9. If space on galley permits, place a large piece of metal furniture at foot of slugs and repeat operation with the leads.
10. Straighten bent leads and slugs if possible; otherwise, drop in hillbox.
11. Trim battered and inaccurate pieces to standard lengths.
12. Put galley and line gauge away.

Questions:

ERIC

Activity B - California Job Case

Equipment: Paper, pencil, mimeograph chart of California Job Case without letter, etc., identified.

Procedure: Practice locating the following:

1. Capital letters
2. Lower case letters
3. Punctuation
 - a. comma
 - b. apostrophe
 - c. semicolon
 - d. colon
 - e. period
 - f. hyphen
 - g. exclamation mark
 - h. question mark
 - i. quotation marks

4. Ligatures
 1. fi
 2. ff

3. fl
4. ffi

5: ffi

5. Spacing materials

a. Quads

d. 2-em Space

b. Em Quad

e. 1-em Space

c. En Quad

f. 5-em Space

Questions:

00068

LAYOUT OF CALIFORNIA JOB TYPE CASE

The Normal space steps are:

- Name of Quad and Spaces Point Size of Spacing Material
- 3 Em Quad
 - Em Quad
 - En Quad
 - 3-to-Em Space
 - 4-to-Em Space
 - 5-to-Em Space

- TO INCREASE:**
- (One) 3-to-Em Space
 - (One) En Quad (nut)
 - (Two) 3-to-Em Spaces
 - (One) 3-to-Em Space PLUS (One) En Quad

Don't forget, there are combinations between the above steps to tighten up a line.

- TO DECREASE:**
- (One) 3-to-Em Space
 - (One) 4-to-Em Space
 - (One) 5-to-Em Space

PRINTING SCALE:

- 72 points equal 1 inch
- 12 points equal 1 pica
- 6 points equal 1 nonpareil or slug
- 2 points equal 1 lead

Therefore there are:

- 6 picas to an inch
- 2 slugs or nonpareils to a pica
- 3 leads to a slug or nonpareil

How to Set and Distribute Type

Activity A - Setting Type

Objective: To acquaint the student with the best way of learning the case, setting type, and distributing type; also to familiarize him with the correct use of equipment and materials.

Equipment: Type, type cases, composing stick, leads, slugs and string.

Related

Information: 1. A knowledge of hand composition is essential to the success of the machine operator.

2. The careful graphic production worker never takes chances. Remember this when performing various operations in the production area.
3. The necessary operations cover such important essential of good graphic production as knowledge of tools, choice of type face, selection of type size, and decisions regarding correct measure, arrangement, capitalization, punctuation, indentation, spacing, justification and word division.
4. Because of the importance of establishing correct habits and skills at the beginning, no operation in type setting should be slighted.

- Procedure:**
1. Study copy and instructions.
 2. Place copy in position over type case.
 3. Set composing stick to proper measure.
 4. Place slug in composing stick.
 5. Hold stick in left hand at proper angle.
 6. Set first word of copy. Spot each letter, pick it up and turn nicks facing out.
 7. Continue to set as many words as will go in line, using 3-em spaces between words.
 8. Read line for errors and make corrections if necessary.
 9. If line is short, crowd in another word or syllable (with hyphen) if possible, by substituting 4-3m for 3-em spaces.
 10. If impossible to crowd in word or syllable and retain spacers, space out line by line adding thin spaces or substituting en quads or spaces.

11. If line is too tight, substitute thin spaces for regular spaces.
12. See that line of type is on its feet.
13. Equalize spacing between words.
14. Justify the line.
15. Test line for snugness by leaning it forward slightly.
16. Space out at end of each paragraph with quads (unless remaining space is less than an em when extra space should go between words.)
17. Place slug after last line in stick.
18. Remove type from composing stick carefully.

Questions:

00072

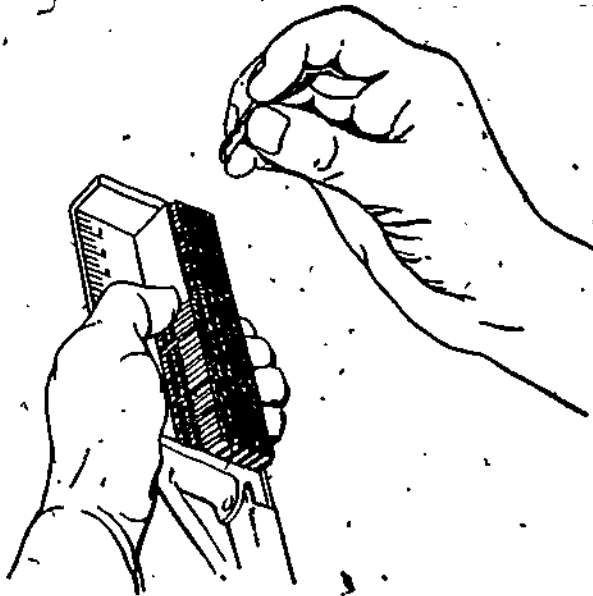

Transparency
&
Student Study Sheet
(One Per Student)

Showing correct position of stick in the hand when setting type. The last letter is supported by the thumb.

Front view, showing correct position of fingers when emptying stick.

Correct position of the hands, stick, and galleys, in setting type.

Correct position of thumbs and fingers in grasping type when emptying stick.

In changing spaces or making corrections in the stick the correct letter is used to push the wrong one slightly forward, so that it may be conveniently grasped.

Method of picking up a line to be placed in the stick for correction. The position of the fingers is practically the same as when emptying the stick. Note safe position of the stick when resting flat against the rim of the galley.

Front view of a type character.

Side view of a type character.

(A) Face, or printing surface. (B) Shoulder, or top of base. (C) Matrix depth, or distance from face to shoulder; the sloping side from face to shoulder is called the neck or beard. (D) Base: all metal below the shoulder. (E) Body: back to front of base, called the point size. (F) Width: from side to side, called the set by typefounders. (G) Feet. (H) Height: feet to face, .918 inch. (I) Nick: guide to compositor when setting. (J) Groove: the place where the metal enters mold; it is planed after casting. (K) Pin mark; not to be found on type cast on automatic machines; formed by a movable pin on Bruce casting machines, which aids in ejecting type from the mold; it assists in identifying its manufacturer. (L) Serifs: small projections at the ends of letters.

Anatomy of a Type Face

The upper rows show how the different characters look on the type when held nick up. The lower rows show the way the same letters look when printed.

00075

Transparency
&
Student Study Sheet
(One Per Student)

The space between tall buildings and tall letters appears to be less than between low ones. Printers overcome this optical illusion by adjusting the space according to the height and compactness of the letters.

It is sometimes desirable to mortise certain large letters to prevent unsightly gaps. This practice was followed by the ancient stonecutters on the Trajan column.

00077

Transparency

 (One Per Student)

The parts of a composing stick, including head, foot, end, bottom, gauge, notches, knee, and clamp.

Various parts of a platen-press form: (1) top, (2) bottom, (3) ends, (4) chase, (5) wood furniture, (6) quoins, (7) reglets, (8) type page, (9) solid parts of form, (10) places where furniture sometimes binds.

00073

I. Setting Regular Indentation

The indention of a paragraph is regulated by the width of the measure. The wider the measure, the more the paragraph should be indented. An em quad is used for the indention of paragraphs set 18 picas or less.

II. Setting Hanging Indention

In some compositions, set for easy reference, paragraphs are not indented in the usual manner, but the first line is set flush and subsequent lines are indented. This form of indention should not be overdone.

III. Setting Inverted Pyramid

The inverted pyramid is a gradual shortening of centered lines. It is useful in title pages and many kinds of jobwork. Lines should be indented uniformly, bring the matter as nearly to a point as it can be set.

IV. Setting Pyramid Indention

The only way to do a thing well is to do it over and over again, because habits are not made in a minute, all thoughts and actions, all arts and crafts, are founded upon habits; but facility is acquired only with repetition.

V. Setting Squared Indention

LINES SET IN CAPITAL LETTERS SHOULD HAVE MORE SPACE BETWEEN WORDS THAN LINES SET IN LOWER - CASE LETTERS.

VI. Setting Stairstep Indention

A stairstep indention is one in which the lines of type are so arranged that they follow each other diagonally in the above manner.

00080

Activity B - Distributing Type

Objective: To acquaint the student with the proper sequence of operations in distributing type.

Equipment: Type case, galley, dead matter

Related

- Information:**
1. Never distribute type until you have compared the face and nick.
 2. Clean, accurate distribution is evidence of a skilled operator.
 3. In picking up type, either from stick or galley, use the ball of the thumbs and lips of the first fingers, and keep them low on the type to prevent it from buckling.
 4. Never use leads to remove type from a stick or galley. Use slugs. They are firmer.
 5. Distribute slowly and carefully, correcting mistakes as they occur.

- Procedure:**
1. Place galley of dead type on bank, head to right.
 2. If tied, untie type form carefully, rolling string.
 3. Work from foot of galley, using only a few lines at a time for each lift.
 4. Support head and foot of lift with full-measure slugs.
 5. Lift type by gripping between thumbs and first fingers of both hands, while pressing ends of lines with sides of middle fingers and tilt into position with nicks up.
 6. Grasp lift in left hand, thumb at left, first two fingers at right, and remaining fingers acting as a support at bottom.
 7. Remove top slug.
 8. Always check face and nick of type before distributing.
 9. Remove last word or two between thumb and first two fingers of right hand, nick up.
 10. Read words removed, sight box and drop each letter singly into its proper place.

11. To separate letter, use trigger movement illustrated.
12. Repeat until all words in line have been distributed; then start on next line in same way.
13. When finished with distribution; return slugs, string and galley to their proper place.

- Questions:
1. Why does the printer compare the type he intends to distribute with that already in the case?
 2. Why is "dirty" distribution not tolerated?
 3. If a letter is dropped in a wrong box during distribution, when should it be retrieved?
 4. Why should leads not be used when distributing type?

Transparency &
Student Study Sheet
(One Per Student)

The position of the fingers
varies with the size of the lift,
when distributing type.

Proper method of releasing the
letters when distributing type.

0-2-3

How to Pull Proofs and Make Corrections

Objective: To explain the importance of good proofs, how they may be pulled and how corrected.

Equipment: Proof press, ink, proof paper, brayer, galley of type, string planner, mallet and tweezers.

Activity A - How to Pull a Galley Proof

Related

- Information:**
1. Good proofs make proofreading easier, show up minor defects, and may be the means of obtaining valuable orders for printing.
 2. Galley proofs are pulled on a proof press while the type is on a galley.
 3. Stone proofs, used occasionally, are pulled while the type is in direct contact with a stone.
 4. A small quantity of ink should be applied to the press or ink slab at a time and should then be distributed evenly and thoroughly.
 5. When inking type, the brayer should be rolled back and forth several times, applying only a very light pressure. To obtain better control and eliminate chance of damage to type or engravings, always hold brayer with handle perpendicular to type being inked.
 6. After proofs are pulled, type should be washed carefully with rag and cleaner.
 7. Keep open end of galley elevated when carrying type.
 8. Center proof paper on type form for uniform margins.
 9. Running roller from foot toward head of galley will prevent squabbling of tail lines.

- Procedure:**
1. Tie up type if there is any danger of piecing.
 2. See that bed of press is clean.
 3. Place galley on proof press, with open end toward cylinder.
 4. Center type sidewise on proof press by shifting galley.
 5. Ink brayer lightly.

6. Ink type by passing roller both directions of form.
7. In lifting brayer from form at the end of each stroke, do so gently to avoid the possibility of lifting type from the form.
8. Sag center proof paper onto inked type, releasing ends.
9. Take impression slowly.
10. Lift paper by end or corner, stripping gently from form.
11. Examine proof for results.
12. If proof is okay and only one copy is desired, wash type gently.
13. Remove galley from press, using both hands.
14. Return galley to storage rack.

- Questions:
1. Why is care necessary in inking the brayer.
 2. Why should type be centered sidewise on a proof press?
 3. Why must care be used in inking a form of small type?
 4. How may squabbled lines be avoided at foot of galley when pulling a proof?

Transparency
&
Student Study Sheet
(One Per Student)

The bottom corner illustrates in detail the approved shop method of tying up a page.

HOW TO PULL A GALLEY PROOF.

Several distinct operations are required to pull a galley proof. These various operations are illustrated and described step by step in the following pen-and-ink sketches:

Close press, then slide galley to center, just toward cylinder.

Roll trayer back and forth across lined slab for even distribution.

Ink the type by passing trayer back and forth across the type.

Activity B - How to Pull a Stone Proof

- Procedure:
1. Tie up a lock up type form securely.
 2. See that stone is free from grit or dirt.
 3. Slide type form onto stone with galley held as nearly flat as possible.
 4. Ink type moderately with up-and-down and side-to-side movements of brayer, applying only a very light pressure.
 5. Sag center of proof paper carefully onto the inked surface.
 6. Inspect face of proof planner to see that it is free from grit.
 7. Rest proof planner in center of page with left hand and fake impression by tapping center of planner with mallet.
 8. Lift the proof planner carefully in moving to a new position by raising one edge.
 9. Lay proof planner on its side on stone.
 10. Strip paper carefully from inked page by end or corner.
 11. Wash type with rag saturated with gasoline or other type wash.

Activity C - How to Make Corrections

Related

- Information:
1. Proof marks are a code used to save extensive writing or explanations. Every printer (student) should know these.
 2. Liberal margins on proofs add to appearance of typography and provide ample room for marking.
 3. Guide lines on proofs are used in locating corrections.
 4. Minor type corrections are best made on a galley placed conveniently on a type case or cabinet. Difficult corrections should be made in the composing stick.
 5. Corrections are started at the head of the galley.
 6. Tweezers, if carefully used, are a great convenience in making type corrections.

7. Minor corrections may be made in the form while on the stone or, in emergencies, directly on the press.

Procedures:

1. Place the galley of type to be corrected on a convenient case or cabinet.
2. Start at the head of the galley with the first line to be corrected.
3. To remove a letter from a line of type, raise the entire line by applying pressure to both ends. When slightly elevated, use the side of the galley as a support, while the left hand grasps the offending letter, the remaining letters being permitted to drop back on their feet.
4. If tweezers are used in making corrections, first loosen the type immediately surrounding the word containing the error, before attempting to grasp the word with the tweezers. Short words should be lifted in their entirety. Care should be exercised, when separating long words, to see that the tweezers do not scratch the face of adjoining letters.
5. After the correction is made, again justify the line by equalizing such spacing as is necessary.
6. Lines that promise difficulty in spacing on the galley should be lifted into a stick to be corrected. This, of course, applies to all run-over lines:

Mathematics for Graphic Arts and Production

Printer's System of Measurement

Activity A - The Point System

Objective: The knowledge of the printer's point system is important in understanding and handling many of the measurements necessary in graphic arts and production. This system is the accepted standard communicating dimension. It should be learned as one of the preliminary steps to any work in the graphic arts and production. This activity will familiarize the student with the point system, and enable him to understand it.

Related

Information: The printer's point system consists of the following measurements:

72 points - 1 inch.

12 points - 1 pica

6 points - 1 nonpareil or slug

2 points - 1 lead (Lead is always 2 points unless otherwise specified, 1 point lead, 3 point lead, 4 point lead.)

Therefore there are: 6 picas in an inch

2 slugs on nonpareils to a pica

3 leads to a slug or nonpareil

Newspaper advertisements are measured in AGATE lines which are $5\frac{1}{2}$ points high.

Equipment: Pencil, rubber cement, waxer, printer's line gauge, photographic print trimmer or other means of accurately cutting rectangles of paper to precise sizes, black paper, illustration board.

Activity B

- Procedure:**
1. Outline a paper area 9" x 12", and an image area of 8" x 10" on a piece of illustration board.
 2. Using the line gauge, trim seven squares of paper (black) to the exact dimensions specified in the rough layout. (See Illustration 18 A)

3. Paste these down in the position shown, and cover the completed paste up with a protective cover.

Activity C - Point System Applied to Spaces and Quads

1. The spacing materials are:

Em Quad

En Quad

3-em Space

4-em Space

5-em Space

Activity D - Linear Measurements

<i>Width in Points of Point-set Spaces</i>				
Body Size	3-em Space	4-em Space	5-em Space	Thin Space
6 point	2	1½	1¼	1
8 point	3	2	1½	1¼
10 point	3½	2½	2	1¼
12 point	4	3	2½	1¾
14 point	5	4	3	2

All spaces were formerly cast to fractions of an em, but this unit has now been displaced by the point.

<i>Various Combinations of Spaces</i>	
Name of Space	Comparative Width
3-em	
5-em+5-em	
5-em+4-em	
En quad (4-em+4-em)	
3-em+5-em	
3-em+4-em	
3-em+3-em	

Showing gradual increase in thicknesses of spaces when combined for use between words.

<i>The Point System</i>		
6 points	=	1 nonpareil
12 points	=	1 pica
6 picas	=	1 inch
therefore		
72 points	=	1 inch
72 picas	=	1 foot
Point	Nonpareil	Pica

Since 6 picas are only .996 of an inch, 72 picas really fall 96 of an inch (nearly 4 points) short of a foot. The slight difference will be readily apparent if the student will measure a foot rule with a pica line gauge.

The printers' system of measurement in brief.

Designing and Setting a Business Card

Objective: To analyze, copy, make layout and set a business card; to exercise judgment in the choice of type and arrangement of type groups.

Equipment: Pencil, paper, type, composing stick, galley, leads, slugs, ink string, stock and press.

Related

Information: To be acceptable, a business card should be:

1. Attractively arranged.
2. Carefully balanced.
3. Set in pleasing type.
4. Carefully printed.
5. Printed on good stock.
6. Printed with good ink.

Activity A - Designing and Layout of Business Card

- See Graphic Art Activities

Activity B - Setting Type and Printing Business Cards

1. Analyze copy.
2. Mark copy for measure, type, size, and type style:
3. Set type lines.
4. Empty composing stick and place type on galley.
5. Space out and carefully group related parts.
6. Measure for margins with folded card.
7. Place slug top and bottom; tie.
8. Pull proof, using care not to injure type by too heavy impression.
9. Make corrections needed.
10. Lock-up form for press and print.
11. Wash up equipment and replace material for future operations.

Designing and Setting Stationery

Objective: To acquaint the student with correct methods of designing and setting distinctive stationery (letterheads), and to give information concerning selection of stock and ink. (See appendix for letterhead ideas)

Equipment: Pencil, paper, type, composing stick, galley, leads, slugs, string, ink, stock and press.

Related

- Information:**
1. Type groups should not be scattered unnecessarily.
 2. The preferred width for wide-measure letterheads is 45 picas.
 3. Top margin should be at least $3\frac{1}{2}$ picas, preferably more.
 4. Select a stock which has the correct feel, color, and finish.

Activity A - Designing and Layout of Stationery

- See Graphic Art Activities

Activity B - Setting Type and Printing Stationery

1. Analyze copy.
2. Mark copy for measure, type, size, and type style.
3. Set type lines.
4. Empty composing stick and place type of galley.
5. Space out and carefully group related parts.
6. Measure for margins.
7. Place slug top and bottom; tie.
8. Pull proof, using care not to injure type by too heavy impression.
9. Make corrections needed.
10. Lock-up form for press and print.
11. Wash up equipment and replace material for future operations.

Careers in Graphic Communications

I. Production

A. Composing Room

1. Composition
2. Layout Man
3. Proofreader
4. Linotype-Intertype Operator
5. Monotype Operator
6. Imposition-Lock-up
7. Machinist

B. Letterpress

1. Pressroom Careers
 - a. Cylinder
 - b. Rotary
2. Platemakers
 - a. Photoengravers
 - b. Electrotypers
 - c. Stereotypers

C. Offset-Lithography

1. Pressroom Careers
2. Cameraman
3. Strippers
4. Platemakers

D. Bindery

E. Shipping and Receiving

Career Opportunities

A. High School Level

Check minimum age law of state...union...nonunion...inplant training...

Advertising - should have some background in art...will usually start out as a messenger, mailclerk, may advance to copywriter, artist paste-up.

Architecture - best to have taken drafting in high school... must have a 12 year apprenticeship for an architect's license, will usually get a junior drafting job...progress through senior draftsman to designer.

Commercial Art - (Graphic Design) present a portfolio at job application...helpful to have taken courses in art and drafting in high school...usually starts out at separating colors... ruling pen work...cutting mat...or mechanical work such as paste-up. As talent develops may become specialist in certain area...artist. renderer.

Drafting - should take courses in drafting in high school... will usually start out as tracer...correcting old drawings... specialization will occur as skill develops. May become a designer.

Graphic Arts - (Printing and Publishing) - apprenticeship required in all union shops...depending on high school training...5 main areas...composing...photoengraving...printing press man... lithographic...book binding.

Photography - previous experience through part-time jobs-best to take photography in high school...4 types of photography... documentary...industrial...commercial...portrait. All have many subdivisions...all starting jobs in fields similar...dark room assistant...set up lights...

Sales should have some background in economics and psychology. Found in all fields of visual communications - requires on the job training...learn about product to be sold...job areas... television...magazines...movies...newspapers.

Television - 4 main areas...programming...engineering...sales... general...based on potential...few jobs found at high school level...menial jobs.

Writers -- required in all fields of visual communication...must have knowledge of English and journalism...usually start out as office help...proceed to small assignments.

B. Technical or 2-Year College Level

Advertising - all jobs require art or technical school training... types of jobs available...art director...layout...lettering... paste-up...may advance to advertising manager...research director.

Architecture - to become licensed requires 2 years training and 5 years apprenticeship...usually start out as assistant draftsman in an architectural firm...proceed to senior draftsman...designer ...construction contract administrator.

Commercial Art (Graphic Design) - will usually take courses in art and design as well as courses in photography...present a portfolio...may become a renderer...letterer...illustrator... depending on ability...if especially talented...fashion illustrator...greeting cards...book illustrator...technical drawing.

Drafting - start out as junior draftsman...independent designer... whole visual communications field open.

Graphic Arts (Printing and Publishing) - apprenticeship required in all union shops...technical training cuts length of apprenticeship...5 main fields...composing...photoengraving...printing pressman...lithographic...book binding.

Photography - technical training will enable one to start out as an assistant photographer...required to present a portfolio... types of photography...documentary...industrial...portrait... commercial...each type has many different jobs within it.

Sales - study economics and psychology...have background in area of selling...each area of visual communications requires on the job training...learn about product to be sold.

Television - jobs available with minimum of 2 years technical training...transmitter technician...sound effects...lighting... video tape technician...jobs available with business school training...secretary...accountant...publicity specialist... stenographer.

Writers - all jobs require a high level of English and journalism... 2 main types of writers...technical; specifications writers... reports...nontechnical; script writer...ad writer...newspaper reporter.

B. 4-Year College Level

Advertising - start out as an assistant copywriter...move to management...may become research director...depends on type of college training.

Architecture - may start out with architectural firm as assistant draftsman...with time will probably start one's own firm after acquiring architect's license.

Communication Design - (Graphic Design) - most colleges offer a B.F.A. in commercial art...present a portfolio...starting jobs will be similar to those at 2 year college level...better chance for higher paying jobs...after working experience, may leave firm to do freelance work.

Drafting - college level are more design oriented usually start out as assistant draftsman...may become self-employed as design consultant.

Graphic Arts - (Printing and Publishing) most college level jobs in this area are of the managerial or editorial type...few college graduates become press operators.

Photography - college level usually specialize in one area of the field along with a broad background in the other areas... after some work experience may try freelance work.

Sales - most college graduates have been trained for managerial work...specialized sales which requires a vast knowledge of the product.

Television - may go into many fields such as: engineers, program directors, traffic managers, designers,, no defined areas of television...requires many different types of experiences and education.

Writers - requires a degree in journalism for newspaper work... technical as well as creative writing skills...technical writer; technical reports...script writing...survey and polls.

D. Professional

Foreman

Owner-Operator

Printing Engineer

Production Superintendent

Sales and Estimating

Graphic Communications Teacher

Radio

Types of careers and qualifications needed for careers in the radio industry are dependent upon the size and programming policies of a particular station or market. For instance, in a smaller station, an employee may be asked to fulfill the capacities of reporter, disc jockey, newsmen and sportscaster. In a larger station each of these may be a separate career in itself. Thus, the list below is not intended to imply either individual careers or clusters, but rather a listing of career functions at most radio stations.

Radio Careers and Descriptions

Program Director - determines and administers the station's programming policies, and plans the most effective program schedule for the station. He supervises work assignments and schedules, and budgetary matters. Many program directors are former-announcers who have acquired experience and who have demonstrated an ability for supervision or administration.

Staff Announcer - reads commercial copy, introduces programs and recordings, interviews guests, gives station identification and time signals, and makes promotional and public service announcements. He often writes announcements and script material. He may also operate the studio controls, turntables, tape recorders, and other technical equipment. He has a voice which conveys warmth, sincerity, and integrity. He should have a sound knowledge of English grammar, usage and pronunciation. A knowledge of music is also necessary. Although many stations do not require college graduates, quite a few do and the number is growing.

Special Program Performer - offers an opportunity for substantially greater earnings. The work requires a combination of talent, showmanship, technical knowledge and a creative flair.

Music Specialist, Sportscaster, Farm Editor - all must have the aptitudes mentioned under Staff Announcer, plus, of course, a thorough knowledge of his speciality.

News Director - guides the over-all news policy of the station, supervises newsmen and also serves as working newsmen.

Newsmen - serves as a reporter, selecting stories from the wire services, editing and rewriting them for the local audience. He is also a performer who delivers the news on the air. He should have news sense, a knowledge of what is important and interesting and where to find it. Most stations seek newsmen with college degrees in broadcasting or in journalism.

Director or Producer-Director - work involves the planning, rehearsal and direction of the on-the-air presentation.

Music Librarian - catalogues and stores the records and often selects the music for shows. The most important requirement for this job is a broad-gauge knowledge of music.

Continuity Writer - writes commercial announcements which will sell the sponsor's products and services, writes public service and station promotional announcements and occasionally creates program material. Must be able to write persuasive copy.

Sales Manager - combines selling with management. He is responsible for setting the general sales policy of the station as well as for supervising the daily activities of his salesmen.

Salesman - sells radio time in the form of programs, portions of programs or commercial announcements, to advertisers or their advertising agencies. He must be conversant with the station's program schedule and with its time availabilities. He often writes commercial copy tailored to the particular sponsor's need. He maintains contact with sponsors and services their accounts by handling changes in schedules, rotation of copy, special sales campaigns, etc.

Traffic Manager - prepares the daily logs of the station's program activity, using information collected from the sales, programming, and engineering departments, as well as from the station's national sales representative and its network, if the station is a network affiliate.

Chief Engineer - may supervise the activities of a dozen technicians. He may also be the only engineer on the staff. He may work on the control board or at the transmitter. He is a fully qualified engineer with an FCC First Class Radiotelephone Operator's license.

Recording (singing, commercials)

Secretarial

Reporter

Disc Jockey

Publicity man

PBX - Switchboard operator

Film

Types of Radio Programs

A. Limited equipment

1. Radio talks and speeches
2. Readings and storytelling
3. Newscasts and announcements
4. Comedy routine (one person)
5. Comedy program (two persons)
6. Interview: man-on-the-street
7. Commentary
8. Book review
9. Simple quiz program
10. Sportscast
11. Special event: on-the-spot commentary
12. Disc-jockey program
13. Music: solo instrumental-piano, violin, flute, etc.; solo vocal
14. Poetry program: lecture-recital type
15. Round table: three people
16. Variety - with individual numbers.

B. More extensive equipment

All of the above are possible, plus these as suggestions:

1. Dramatic shows
2. Chorus: vocal music; quartets-instrumental or vocal
3. Orchestra or string ensemble
4. Dramatizations and adaptations of short stories, novels, Bible stories, fairy tales, sports stories, adventure
5. Children's programs
6. Women's programs: demonstration or commentator-styles, food, household
7. Agricultural programs
8. Special-occasion shows
9. Public-service shows; community, school
10. Town meeting of the Air; larger round tables
11. Audience participation shows
12. More elaborate quiz programs
13. Assembly programs
14. Serials and continued dramatized shows

104

Things to Know in Radio Broadcasting

I. When you meet the microphone

A. radio actors tools-intelligence-voice-speech

B. delivery of lines

1. voice-sound natural; avoid extremes-too loud or soft, use contrast, pauses, variation
2. speech-enuciate distinctly; avoid explosive s and p sounds - relax

II. Sound affects

A. in play it helps it come alive

B. rules to follow

1. when possible, use real object
2. use recordings
3. carefully rehearsed and timed
4. use only when really necessary

III. Music

A. used to indicate mood

B. select music proper to time, locale, and mood

C. use music that your audience will not readily recognize

IV. Directing

A. Coordinator

B. maintain harmony between departments without conflict

C. guide crew

D. in any disputes you have final say

figure 4

108

Radio Activities #1.

News Program #1

Objective: Create a newscast (news, sports, weather, etc.) from a daily newspaper.

- A. Select the stories to be used and cut them out.
- B. Arrange them in the order to be presented.
- C. Edit each story by selecting the facts and quotes to be used and discard the rest.
- D. If necessary, change phrasing to suit radio announcing.
- E. Find the correct pronunciations for any words the announcer questions.
- F. Proofread.
- G. Tape record or present to the class.
- H. Evaluate critically and as a public audience (i.e., errors and then appeal of material and delivery style).

Radio Activities #2

News Program #2

Objective: Given only the essential facts, create a newscast (news, sports, etc.).

Teacher will make a list of the facts about a murder, auto accident, robbery, fire, etc.

- A. Select those facts to be used in the story.
- B. Construct an introduction designed to get the listener's attention.
- C. Write the news story keeping in mind that simplicity of language and non-editorializing are the two most important factors.
- D. Tape record or present orally.
- E. Evaluation.

106

Radio Activities #3

News Program #3

Objective: Create a newscast by selecting and editing wire copy (UPI or AP) releases.

Teacher may obtain old wirecopy by contacting a local station or newspaper.

- A. Select the stories to be used and cut them out.
- B. Arrange them in the order to be presented.
- C. Edit each story.
- D. Write "lead-in" for each story or group of stories (i.e., national news, local news, sports, human interest, etc.)
- E. Locate correct pronunciations.
- F. Proofread.
- G. Record or read orally.
- H. Evaluate.

Radio Activities #4

News Program #4

Objective: Create a news program by selecting information from the newspaper, list of facts, wirecopy and first-hand reporting.

- A. Use the techniques set down in activities one, two and three.

Radio Activities #5

Writing a Commercial

Objective: Taking a real or fictional product or commodity write a ten, thirty or sixty second radio commercial. Include music and sound effects if desired.

- A. Select the item to be advertised.
- B. Find out as much as possible about the product.
- C. Determine who the consumer is likely to be (age, sex, desires, activities, etc.)
- D. Study various propaganda devices.

- E. Determine appropriate selling approach.
- F. Write the commercial. (See supplements on commercials.)
- G. Tape the commercial adding music and sound effects.

108

ANNOUNCEMENTS AND COMMERCIALS

Many copywriters use a word count scale to determine the number of words that will go into a given time segment of a radio announcement or commercial but, at best, such word counts are approximate. The length of individual words, the complexity of the ideas, the need for emphasis through pause and variation in rate, and the personality of the performer delivery the announcement are some of the factors which may affect the number of words that may be spoken effectively in a given length of time. Some generalizations may be made, however. The 10-second ID will contain about 25 words; the 20-second announcement, about 45 words; the 30-second announcement, about 65 words; the 45-second announcement, about 100 words; the one-minute announcement, about 125 words; the minute and one-half announcement, about 190 words; and the two-minute announcement, about 250 words. These word counts cannot be applied to television, except in the instance of a continuous spoken announcement, because the visual action in television may be expected to take up a portion of the time without dialogue or verbal narration.

ANNOUNCEMENTS

Spot announcements may be commercial or non-commercial materials. Programs do not end at the "minute" mark. Actual time lengths taken by networks and stations vary for, as it is called, the station break. The 1965 NAB Codes specify up to 130 seconds per break, not exceeding 16 minutes and 20 seconds total commercial time per hour for television; and no specified station break limits with a maximum of 18 minutes of commercial time for a single hour on radio. Spot announcements may be, therefore, of varying lengths. The station break announcement may be a station identification; a public service announcement concerning almost any civic matter, such as keeping the streets clean; a news flash; a service announcement, such as a weather report attached to a commercial message; a station "cross-plug" for one of its upcoming programs; or, of great importance to a profit-minded industry, a straight commercial message. Spot announcements of the same type, excepting the station identification, sometimes are inserted into a break in a given program, no matter at what time that break occurs. Let us look first at the non-commercial spot announcement.

109

Principles of Copywriting for Commercial Radio

1. Get facts -- try it yourself.
2. Create a copy policy or follow given copy policy. A copy policy is information about the product.
3. Limit ideas to one thought, if possible. Two at the most!
4. Back up main ideas with 3 or 4 good selling points or appeals.
5. Put across name of product or sponsor's name and his location -- sprinkle through commercial.
6. Select words and phrases for sound value. Work for cadence (rhythm) alliteration, word patterns.
7. Read commercials aloud just as if you were going to announce them yourself.
8. Write for one listener. Use the "you" attitude -- use the preposition you, not we. We is too friendly ... and too general.
9. Clarify all statements: If you think the audience won't comprehend it, rewrite it or repeat it in everyday language.
10. Utilize repetition -- "taste that beats the others cold".
11. Use fragment sentences if they convey the thought. "Fast" "Dependable" "Accurate".
12. Don't use trite, stereo-type sentences, or phrases.
13. Be natural. Keep conversational.
14. Respect listeners' feelings.
15. Write commercials to fit in with the program.
16. Write for announcer.
17. Strive for the unusual, but avoid excessive cleverness.
18. Avoid hyphenating the last word of a line because the announcer may not pronounce that word clearly. "Is that statement clear?"
19. Keep copy on one page.
20. Don't use all caps.

I. Writing Commercials for Television and Radio.

- A. Commercial copy writing technique and style.
- B. Before writing commercials -

- 1. Writer must know objectives of the advertising campaign.
- 2. Must secure information on product, the market, and consumer.

II. Fundamentals of Television and Radio Copy Writing.

- A. It must be truthful, and reasonable in its implications.
- B. It must be believable.
- C. It must not unfairly disparage competitors.
- D. Should be simple so the audience will remember.
- E. The product attributes must be important to advertising influences.

III. Guideposts to Successful Television and Radio Copy Writing.

- A. Get the facts.
- B. Follow or prepare a copy policy.
- C. Determine the theme idea.
- D. Stress one major selling idea.
- E. Register the brand name strongly.
- F. Write for the individual viewer or listener.
- G. Utilize repetition.
- H. Be specific.
- I. Maintain interest throughout the commercial.
- J. Be aware of the cost factors.
- K. Create the proper commercial tone.
- L. Be natural.
- M. Ask for action at the end of the commercial.
- N. Write the rewrite.

IV. Special Guideposts for Television Commercials Copy Writing.

- A. Devise a visual interpretation of the main idea in the plot command.
- B. Plot the audio and video simultaneously.
- C. Sell the product as soon as possible.
- D. Work closely with the artists, the producer, and the print copy writer.
- E. Visualize and talk about the same thing at the same time.
- F. Utilize identical wording in the audio.
- G. Don't oversell.
- H. Know the difference between creating live or taped commercials.

V. Special Guideposts for Radio Commercials Copy Writing.

- A. Strive for distinction.
- B. Be aware of the conditions under which the commercial will be heard.
- C. Be aware of the time of day the commercial will be heard.
- D. Select words, phrases; and effects for their sound.
- E. Use fragmentary sentences where appropriate.
- F. Work for attention.
- G. Consider radio personalities.
- H. Weigh the pro's and con's of live versus transcribed announcements.

Radio Activities #6

Radio Interview

Objective: Prepare an interview with two class members. This can be about a hobby, special interest or it could be a role playing situation. In role playing, it is implied that some research is done about the personality or career to be interviewed.

- A. Set up the format for the interview.
- B. Interviewee should prepare by self-education or compiling information.
- C. Interviewer should establish some basic questions and do some research on the character to be interviewed.
- D. Title the show.
- E. Interviewer should prepare an introduction for the program.
- F. Tape or present orally.
- G. Study supplement on interviews.

112

Points to Remember about Interviews (Radio)

Interviewer

1. Remember that the audience cannot see your guest and that frequent references to this person by name and occasional mention of his background will assist those who tune in late.
2. Relax and help your guest relax (especially if he is not used to broadcasting).
3. Be a good listener and don't rely on a list of prepared questions. (Listen closely to the interviewees answers)
4. Ask questions the interviewee would like to answer rather than putting him on the spot.
5. Consider yourself a member of the average listener. Don't act like you are an authority on the subject.
6. If all else fails, remember the 5 W's and H - Who, What, Why, When, Where, and How.

Interviewee

1. Your preparation for the interview should be complete. Know the topic and/or background information you may be questioned about.
2. If statistics or quotes are essential then have them written out and ready. Other than this a minimum of notes will prove to be better.
3. Don't leave out important points. You have as much opportunity to steer the discussion as the interviewer so failure to bring out things you want to discuss are as much your fault as his.
4. Relax and speak conversationally.

BOTH MEMBERS ARE RESPONSIBLE FOR COMPLETE AND SPONTANEOUS INTERACTION. DON'T EXPECT THE "OTHER GUY" TO CARRY YOU. NEVER ASSUME THAT THE MICROPHONES ARE OFF UNTIL SOMEONE IN AUTHORITY NOTIFIES YOU THAT SUCH IS THE CASE.

113

Radio Activities #7

Production of Sound Effects

Objective: Create tape recorded sound effects using simple everyday materials to construct the audio illusion. This could be done on a class basis or a total school basis, such as a contest, having students identify sound.

- A. Listen to sounds around you and think of what else makes a similar sound.
- B. Bring the simple materials to class.
- C. Tape the sound effects
- D. Have the class listen and write down what the sound conveys to them. (Discovery of other uses will be the end result.)
- E. Discuss ways of changing or improving the sound. See supplement on sound effects.

11.4

How to Make Sound Effects

Basic wave sound	14 to 16 inch balloon with 50 BB shot inside. Shake the balloon for waves crashing -- twist or swirl it for surf.
Splashing water Lapping water	Use real water poured from pail into bathtub-- splash in bathtub.
Rain	Try sugar poured in a trough of wax paper.
Fire	Crumple cellophane paper -- the louder the crumple, the more crackly the fire.
Horses hooves	Halves of coconut shells pounded in rhythm-- on a table for pavement, on a rug for earth.
Airplane	Paper pushed into an electric fan.

115

Radio Activities #8

Poetry Reading Set to Music

Objective: The student will practice oral expression.

- A. Select a poem.
- B. Obtain an appropriate tape or record to use as background.
- C. Consider addition of sound effects.
- D. Tape final product.
- E. Class critique.

Radio Activities #9

Radio "Spots"

Objective: The student will create and produce a short public interest spot.

- A. Brainstorm ideas for 1-2 minute original spots (such as Bicentennial Minutes, Iowa Historical Moments, humor, trivia, or other informative public service material.)
- B. Write script; Add sound effects and music.
- C. Rehearse. Time exactly using stop watch.
- D. Tape final product.
- E. Class critique.

Radio Activities #10

Disc Jockey Patter

Objective: The student will write ten different introductions to the same record.

- A. Select record and gather information available.
- B. Write out ten different ways to introduce it taking into consideration length of time, avoiding repetition and monotony.
- C. Tape different introductions in succession.
- D. Class critique.

Radio Activities #11

Sportscast

Objective: Viewing a live sports event, tape record play-by-play and color commentary on the event.

- A. Select an event happening within the community or tape a telecast event turning down the volume.
- B. Research the participants and statistical matter relating to the event.
- C. Listen to a live broadcast of a similar event to use as a guide.
- D. Prepare material and mock interviews for the broadcast.
- E. View the event and record the play-by-play as it progresses.
- F. Listen to the tape and evaluate.

Optional

- G. Use several people to perform the different functions
 - 1) announcing play-by-play
 - 2) spotting the players
 - 3) color announcing - additional information and human interest stories about the contestants and
 - 4) recorder operator.

Note: Football and baseball will be relatively easy sports to broadcast as they have longer periods of "break" between action. Basketball, on the other hand, has fast action and few breaks making it more difficult for the novice announcer.

Radio Activities #12

Developing a Radio Station

Objective: Set up a real or mock radio station in the school. This could be done with the use of the school public address system or tape recorder.

- A. Select a four initial title for the station.
- B. Assign or elect position (careers) for each member of the class or group: 1. Program director 2. Music personnel 3. News director 4. Salesmen 5. Secretaries 6. Reporters 7. Disc jockies 8. Publicity crew 9. Announcers 10. Writers and 11. Others.
- C. Determine the purpose and policies of the station.
- D. Set up time schedules for air time.
- E. Develop advertising, for the station, to put on the air (jingles) and posters and flyers to distribute in the school.
- F. Create introductions for the shows and commercials.
- G. Sell or simulate selling air time to interested groups. These could be actual school organizations or mock-up businesses in the classroom.
- H. Create public service (ecology, safety, human rights, health, education, etc.) announcements.
- I. Create some human interest programs such as interviews and documentaries.
- J. "Technicians" should set up the studio.
- K. Begin airing.

Television

Television, like radio, provides careers that vary in scope from station to station. With some stations, a few people may be doing several things, while at another, a larger staff may specialize to a greater extent. The impact of the networks also implies more specialization and more opportunities in the technical, performing and management areas. Following is a list of possible career selections in the television field. Remember that more than one of these functions may be performed by one person at a given station.

The following careers are basically the same in both the Radio and Television fields. Refer to the career descriptions in the Radio section for the following occupations:

Traffic Manager

Special Program Performer

Engineer

News Director

Salesman

Newsman

Program Director

Continuity Writer

Staff Announcer

Production Manager - determines personnel, space and equipment requirements, supervises studio activities, secure stage properties, and performs dozens of other tasks associated with production.

Producer - Director - plans and supervises the production of a program or series of programs. He directs the performers, studio technicians and production workers who are under his supervision for the particular show. He co-ordinates the various elements of the program, including the selection of film, scripts, and music, and maintains budgetary controls.

Film Director - handles the screening and preparation of all film used on the station and often participates in buying decisions.

Film Editor - cut, splice and clean film under supervision.

Film or Still Cameraman - covers the news.

Floor Manager - directs the performers on the studio floor in accordance with the director's instructions, relaying stage directions and cues.

Floorman - works on the studio floor arranging sets and backdrops, lighting and handling the various movable properties which are used in the show.

Graphic Artist - plans set designs, constructs scenery, paints backdrops and handles lettering and art work.

Makeup Artist

Costumer

Dramatic Actor

Promotion Manager - secures publicity for the station, its programs and its talent. The work typically involves the planning and layout of advertising campaigns and promotional activities directed at the station's audience. He may also handle sales promotions which include the planning and layout of advertising for trade journals.

A. Background and History of Television

1. Innovations prior to the image orthicon were:
 - a. The invention of the scanning disc by Paul Nipkow, German-1884
 - b. The iconoscope by Dr. V. K. Zworykin, American-1923
2. Television through 1948
 - a. Moved out of the laboratory and into the practical stage.
 - b. Broadcast the New York World's Fair and an address by President Roosevelt - 1939
 - c. Was authorized by the FCC for full commercial usage on the black and white 525 line basis - 1941.
 - (1) there were only six stations on the air.
 - (2) there were only 4,700 sets in the New York area.
3. The "Freeze" of 1948-52
 - a. Had two purposes:
 - (1) develop a frequency allocation plan.
 - (2) develop a policy for color TV.
 - b. Typical programs were:
 - (1) "Simulcasts" (adding a TV camera to a radio show) of radio, wrestling, rollerskating, etc.
 - (2) The first major TV variety program was Milton Berle.
 - c. Was a loss venture to the station.
 - d. Created UHF channels 14-83 as well as VHF channels 2-13.
4. Major factors in the growth of television were:
 - a. CBS system approved by FCC in 1950. This system not compatible i.e., it could receive only color broadcasts or only black and white, hence 2 sets were necessary.
 - b. 1953 - FCC issued new color rules making compatibility required. This was the result of lobbying by RCA and its subsidiary NBC. RCA controlled patent rights to color until the 1960's.
 - c. Three major networks were broadcasting color in 1962.

5. 1962 - All sets were required to carry VHF and UHF channel selectors. Some UHF stations were being bankrupted because no one could receive them.
6. The first earth-satellite broadcast occurred in 1962.

B. Contemporary Developments and Utilizations of Broadcasting

1. Radio's changes because of TV were:

- a. FM with multiplex and stereocasting.
- b. Portability and transistorizing of receivers.
- c. Mobile transmitting units utilizing telephone lines.

2. Utilizations of radio are:

- a. Educational broadcasting of radio and television.
- b. "Ham" or shortwave operations.
- c. Citizens band (low frequency and power radio for business and pleasure).
- d. Police, fire, and other public service protection.
- e. Emergency Broadcasting System.

3. Utilizations of television are:

- a. Educational TV via:
 - (1) Network of educational stations with programs geared to classroom supplement.
 - (2) Closed circuits in schools.
- b. Closed circuit as in:
 - (1) Industry (guarding, inspecting).
 - (2) Sports
 - (3) Traffic control
 - (4) Fund raising
 - (5) Medical demonstrations
 - (6) Business conventions
- c. Subscription ("pay-as-you-go" or "toll").

- d. Space exploration (photography).
- e. Instant replay through refinement of the video-tape recorder.
Examples: sports, drama.

C. Radio and Television Affect Our Social Behavior:

1. Broadcasting influences our actions through:

a. Advertising

- (1) Tobacco and alcoholic beverages can be made to look attractive in spite of the health hazards. Examples: "Winston tastes good" "Live life with gustō-Schlitz"
- (2) The buying habits of the public are affected as a result of advertisers appeals to young people. Example: "Pepsi generation"
- (3) Morals are affected through deliberate sexual appeals built in as gimmicks, such as "Sex appeal" toothpaste.
- (4) The use of humor has been a welcome change. Examples: "No matter what shape your stomachs in", "trials of Benson and Hedges"

b. Programming

- (1) Language patterns are established among youngsters through examples exhibited on programs designed for children.
- (2) Habits are determined through examples set for the audience such as morals.
- (3) The teenager plays an impressive role in determining policy and programming. Many of the ABC shows such as "Batman", "Mod Squad", "The New People" are evidence of this.
- (4) News commentaries often determine public sentiment on political issues. Consider the Spiro Agnew speech in Des Moines, NBC'S "Black in America", CBS's "Hunger in America".

2. Broadcastings greatest impact was achieved through:

a. Information as a social force.

- (1) Newscasts of World War II, Korea, and Vietnam were dramatically illustrated.
- (2) Public Service Announcements in time of distress.

Student Study Sheet
(One Per Student)

- (3) Special events - man on the moon, etc.
 - (4) The martyrdom of John and Robert Kennedy through extensive coverage of their assassinations and funerals.
- b. Persuasion as aimed at inducing mass social activity.
- (1) Charles E. Coughlin opposed the Executive Reorganization Bill of 1938.
 - (2) CBS's "Hunger in America".
 - (3) The environment issue and programs related to it.
- c. Politics, especially the 1968 Democratic Convention and the Nixon-Kennedy debates.
- d. Appeal to emotions and imagination, as in:
- (1) Kate Smith's 1944 war bond drive.
 - (2) H. G. Wells's "War of the Worlds" in 1938.
 - (3) Milton Berle's 1955 Damon Runyon Fund
 - (4) Roberta Albert Fund
- e. Improvement of cultural standards:
- (1) The standardization and simplification of the English language.
 - (2) More universal dissemination of current events.
 - (3) Greater exposure to music and drama.

The following material was reproduced from the
Communication and Media material developed by
Oklahoma State Board of Vocational and Technical
Education.

TELEVISION

Using the Video Tape Recorder in the Classroom

Unit Objective

After completion of this unit, the student should be able to identify the parts of a video tape camera, and discuss the controls and connectors of a video tape recorder and jobs and related job opportunities. The student should demonstrate this ability by performing eight-five percent of the exploratory activities.

Specific Objectives

After completion of this unit, the student should be able to:

1. Discuss orally the controls and connectors of a video tape recorder.
2. Identify eight parts or controls on a video tape camera.
3. List three types of lighting used in a television studio.
4. Select from a list two microphones used in television.
5. Match jobs related to television to the responsibilities of each.
6. Discuss orally employment opportunities for jobs related to television.
7. Discuss orally or in writing the preparation and training for jobs related to television.
8. Discuss orally the employment outlook and advancement possibilities for jobs related to television.
9. Match jobs related to television to the working conditions of each.
10. Demonstrate the ability to:
 - a. Role play a news broadcast.
 - b. Connect and operate a video tape camera and recorder.

TELEVISION

Unit 1

Suggested Activities

I. Instructor:

- A. Provide students with objective sheet.
- B. Provide students with information, assignment, and job sheets.
- C. Make transparencies.
- D. Have newspapers available for use with assignment sheet.
- E. Discuss unit and specific objectives.
- F. Discuss information and assignment sheets.
- G. Demonstrate and discuss procedures outlined on the job sheet.
- H. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Complete assignment sheet:
- D. Demonstrate the ability to accomplish the procedures outlined on the job sheet.
- E. Take test.

Instructional Materials

I. Included in the unit:

- A. Objectives
- B. Information Sheet
- C. Transparency masters
 1. 111m-Controls and Connectors
 2. 111n-Controls and Connectors
 3. 111o-Controls on a Video Tape Camera
 4. 111p- Types of Lighting
 5. 111q-Microphones Used in Television
- D. Assignment Sheet #1-Role Play a News Broadcast.
- E. Job Sheet #1-Connect and Operate a Video Tape Camera and Recorder
- F. Test
- G. Answers to test.

II. References:

- A. Filliard, Robert L. Understanding Television, New York: Hasting House, 1964.
- B. Lewis, Bruce. The Technique of Television Announcing. New York: Hasting House, 1966.

- D. U.S. Department of Labor. Occupational Outlook Handbook. Washington, D.C.: Government Printing Office, 1972-73.

TELEVISION

Unit 1

1. Controls and connectors of video tape recorder (Transparencies 111m and 111n)
 - A. Supply reel spindle
(NOTE: A full reel of tape is placed on this spindle.)
 - B. Tension arm--Regulates tape tension to provide an intimate contact between tape and video heads.
 - C. Erase head--Erases previous recordings as the tape passes over it.
 - D. SKEW control--Controls the tape tension
(NOTE: Turn the knob in the playback mode only when the upper position of the playback picture is distorted.)
 - E. TRACKING control--Regulates the tracking of the video heads.
(NOTE: If the playback picture is distorted due to deformation of the tape, turn the knob to achieve optimum picture stability. This knob does not function in the record mode.)
 - F. Rotary video heads--Record or play back video signals.
 - G. Audio/control head--Records and plays back servo control and audio signals.
 - H. Tape counter and reset button--Tape counter indicates the amount of tape used in either record or playback; reset button is pushed to set the figures on the tape counter to "000"
 - I. RECORD button--Records when pressed
(NOTE: When the video recorder is in the record mode, the light above the button will come on. While holding the button down, turn the function selector to FORWARD. The tape will move and the recording will begin.)
 - J. Take-up reel spindle
(NOTE: An empty reel is placed on this spindle.)

K. CAMERA/LINE/TV selector

1. CAMERA position--Records pictures supplied by the video camera connected to the CAMERA connector
2. LINE position--Records pictures supplied by the video camera, the video monitor, and other video equipment connected to the VIDEO IN connector
3. TV position--Records on-the-air TV programs

L. Function selector

1. FAST FORWARD position--Advances the tape quickly
2. PAUSE position--Stops tape motion momentarily

(NOTE: The RECORD and AUDIO DUB buttons are not released in the PAUSE position.)
3. FORWARD position--Moves the tape at normal speed for record or playback mode
4. STOP position--Stops tape motion
5. REWIND position--Rewinds the tape.

M. Automatic shut-off switch--Turns off the power automatically when the tape runs out or breaks

(NOTE: If the function selector is set to the FORWARD or REWIND position without the tape being threaded, the power will be shut off automatically.)

N. AUDIO LEVEL meter--Indicates the audio recording level during manual recording and playback audio signal level in the playback mode; does not function in the automatic recording mode.

O. Pilot lamp--Lights when the POWER switch is pressed, indicating the video recorder is on

P. POWER switch--Turns the video recorder on or off

Q. AUDIO LEVEL control--Turns to adjust the audio recording level manually while watching the AUDIO LEVEL meter; has no control over the playback signal

R. AGC/MANUAL button

(NOTE: Button is usually set in the upper position. Push down on the knob when adjusting the audio level manually.)

- S. AUDIO DUB button--Adds sound to prerecorded pictures during playback
- T. CAMERA connector--Connects to a video camera
- U. VIDEO IN connector--Connects to a video camera or a TV set equipped with a UHF-type coaxial video output receptacle
- V. VIDEO OUT connector--Connects to a video monitor having an input impedance of 75 ohms with the use of a 75-ohm coaxial cable
- W. RF unit compartment

(NOTE: The RF unit is inserted in this compartment. The RF unit is supplied for viewing the playback picture through an ordinary TV set.)

- X. RF OUT jack--Connects to an antenna selector supplied with the RF unit for playback through a conventional TV receiver
- Y. TV connector--Accepts any video monitor

(NOTE: All video and audio interconnections to the monitor are made at this connector.)

- Z. MIC IN jack--Used to connect the microphone supplied with the video camera kit or any high-quality, low-impedance dynamic microphone.
- AA. AUX IN jack--Allows connection of an alternative sound source, such as a phonograph, tuner, tape recorder, or other microphone/amplifier system.
- BB. LINE OUT jack--Permits audio connections to an external hi-fi system or high-impedance crystal earphone
- CC. FUSE holder--Accepts a 1.5-ampere cartridge fuse

(NOTE: Do not use a fuse with a higher rating.)

- DD. AC IN receptacle--Used to make connection to a 115-120 volt, 60-Hz AC power outlet using the AC power cord supplied with the video recorder
- EE. AC OUT receptacle--Provides AC power to the video recorder components such as a monitor or video camera

(NOTE: Maximum rating of these outlets is a total of 500 watts.)

II. Parts or controls on a video tape camera (Transparency 111o)

- A. Video/RF output
- B. VTR connector
- C. Pilot lamp
- D. Video/RF switch
- E. Sync selector
- F. AC power cord
- G. Power switch
- H. Contrast control
- I. Brightness control
- J. Vertical hold control
- K. Viewfinder connector
- L. Tripod receptacle
- M. Horizontal hold control
- N. Focus ring
- O. Lens opening ring
- P. Zoom ring

III. Types of lighting used in a television studio

- A. Spotlight (Transparency 111p)
- B. Pattern spotlight (Transparency 111p)
- C. Scoop or floodlight (Transparency 111p)
- D. Lighting grid

IV. Microphones used in television (Transparency 111q)

- A. Boom microphone--Places microphone over the action
- B. Highly directional microphone--Used to pick up football signals
- C. Lavalier dynamic microphone--Comes in various sizes and can be hidden beneath the clothing easily

V. Responsibilities of jobs related to television

- A. Television announcer
 - 1. Presents news, weather, or sports
 - 2. Presents commercials
 - 3. May have additional duties of operating control board, selling time, and writing commercials
- B. Programing director
 - 1. Responsible for overall program schedule
 - 2. Keeps in mind both advertisers' wishes and community's needs
- C. Producer
 - 1. Selects scripts
 - 2. Controls finances
 - 3. Supervises overall problems of production
- D. Broadcast technician
 - 1. Sets up electronic equipment
 - 2. Operates electronic equipment
 - 3. Maintains electronic equipment

VI. Employment opportunities of jobs related to television

- A. Television announcer
 - 1. Local television stations.
 - 2. National broadcasting networks

- B. Programing director
 - 1. Local television stations
 - 2. National broadcasting networks

- C. Producer
 - 1. Local television stations
 - 2. National broadcasting networks

- D. Broadcast technician
 - 1. Local television stations
 - 2. National broadcasting networks

VII. Preparation and training for jobs related to television

- A. Television announcer
 - 1. Excellent pronunciation
 - 2. Well-rounded education
 - 3. High standard of personal appearance
 - 4. English and speech courses are an asset

- B. Programing director
 - 1. Background in electronics
 - 2. Minimum of a high school education
 - 3. Often a background in sales helps to transfer from sales to programing

- C. Producer
 - 1. Minimum of high school education
 - 2. Classes in business management are helpful
 - 3. Overall background of television set operations

D. Broadcast technician

1. Must obtain a radio-telephone first class operator's license from FCC
2. High school courses in algebra and trigonometry are valuable
3. Technical and college level training is a distinct advantage

VIII. Employment outlook and advancement possibilities for jobs related to television

A. Television announcers

1. Employment outlook--increase moderately
2. Advancement possibilities--Good but extremely competitive

B. Programing director

1. Employment outlook--Good
2. Advancement possibilities--Good

C. Producer

1. Employment outlook--Good
2. Advancement possibilities--Good

D. Broadcast technician

1. Employment outlook--Increase slightly
2. Advancement possibilities--Good

IX. Working conditions for jobs related to television

A. Television announcer

1. Most work forty hours per week
2. May work as many as eight hours overtime per week in small stations
3. Variety of work
4. Usually very pleasant conditions
5. May be union

B. Programing director

1. Forty hour week
2. Works under great pressure to meet deadlines
3. Generally works inside in pleasant surroundings

C. Producer

1. Forty hour week
2. Works under great pressure to meet deadlines
3. Generally works inside in pleasant surroundings

D. Broadcast technician

1. Forty hour week with overtime pay
2. May have to work long hours and under great pressure to meet deadlines
3. Generally works inside in pleasant surroundings
4. May be union

141

- c. Weatherman (one person)
- 1) Writes weather report from newspaper
 - 2) Has maximum time of three minutes
 - 3) Turns stories over to the producer
 - 4) Makes maps as props
 - 5) Presents weather report
- d. Sports reporter (one person)
- 1) Writes sports stories from newspaper
 - 2) Writes minimum of four stories with a maximum of three minutes
 - 3) Turns stories over to the producer
 - 4) Makes required props
 - 5) Presents sports report
- e. Special reports (two people)
- 1) Make two special reports from two different locations
 - 2) Write each report to be thirty seconds in length
 - 3) Turn in report to the producer
- f. Commercials (three people)
- 1) Each person will write one commercial thirty seconds in length
 - 2) Each of three people will present his thirty second commercial at the producer's direction
- g. Cameraman
- 1) Sets up video tape equipment as directed in Job Sheet #1
 - 2) Operates camera and records newscast

h. Tape recorder operator

- 1) Operates the recorder
- 2) Insures microphone is in place and working

i. Light technician

- 1) Checks lighting
- 2) Adjusts lights
- 3) Secures additional lighting if necessary

j. Director

(NOTE: Teacher will play the role of director.)

144

111t

TELEVISION

Unit 1

Job Sheet #1 - Connect and Operate a
Video Tape Camera and Recorder

I. Tools and materials needed

- A. Video tape recorder
- B. Video tape camera with tripod
- C. Video tape monitor
- D. Connector cables

II. Procedure

- A. Connect the camera cable (supplied) to the VTR connector on the camera (Figure 1)

FIGURE 1

- B. Set the SYNC selector to EXT
- C. Set the VIDEO-RF switch to VIDEO
- D. Connect both the camera and the video recorder to AC outlets
- E. Turn on the equipment
- F. Make audio connections to the video recorder
- G. Connect a monitor to the video recorder and to an AC source

- H. Proceed with the recording
- I. Focus and adjust camera
- J. Use zoom as required

TELEVISION

Unit 1

TEST:

1. Discuss orally in class the controls and connectors of a video tape recorder.
2. Identify eight parts or controls on the video tape camera by placing the appropriate letters in the blanks provided on the diagram.

a. VTR Connector	e. Zoom ring
b. Lens opening ring	f. AC power cord
c. Vertical hold control	g. Sync selector
d. Video-RF switch	h. Viewfinder connector

3. List three types of lighting used in a television studio.
- a.
 - b.
 - c.
4. Select two microphones used in television from the list below by circling the correct two responses.
- a. Lavalier dynamic microphone
 - b. Low volume microphone
 - c. Misdirectional microphone
 - d. Boom microphone
5. Match the jobs on the right to the correct responsibilities by placing the appropriate letter or letters in the blanks provided.
- | | |
|--|-------------------------|
| _____ a. Select scripts | T. Television announcer |
| _____ b. Present commercials | D. Programing director |
| _____ c. Responsible for overall program schedule | P. Producer |
| _____ d. Operate electronic equipment | B. Broadcast technician |
| _____ e. Set up electronic equipment | |
| _____ f. Control finances | |
| _____ g. Keep in mind both advertisers' wishes and community's needs | |
| _____ h. Present news, weather, or sports | |
6. Discuss orally in class employment opportunities for jobs related to television.

7. Discuss orally or in writing the preparation and training for jobs related to television.

(NOTE: Space is provided if the instructor requests a written answer.)

8. Discuss orally in class the employment outlook and advancement possibilities for jobs related to television.
9. Match the jobs related to television on the right to the correct working conditions by placing the appropriate letter or letters in the blanks provided.

- | | |
|--|-------------------------|
| _____ a. May be union | T. Television announcer |
| _____ b. May work as many as eight hours overtime per week in small stations | D. Programing director |
| _____ c. Work under great pressure to meet deadlines | P. Producer |
| _____ d. Generally work inside in pleasant surroundings | B. Broadcast technician |

10. Demonstrate the ability for
- Role play a news broadcast.
 - Connect and operate a video tape camera and recorder.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

TELEVISION

Unit 1

ANSWERS TO TEST

1. Discussed orally to the satisfaction of the instructor.
- 2.

3. Any three of the following:

- a. Spotlight
- b. Pattern spotlight
- c. Scoop or floodlight
- d. Lighting grid

4. a, d

150
111z

5.
 - a. P
 - b. T
 - c. D
 - d. B
 - e. B
 - f. P
 - g. D
 - h. T
6. Discussed orally to the satisfaction of the instructor.
7. Discussed orally or in writing to the satisfaction of the instructor. A written discussion should include the following points:
 - a. Television announcer
 - 1) Excellent pronunciation
 - 2) Well-rounded education
 - 3) High standard of personal appearance
 - 4) English and speech courses are an asset
 - b. Programing director
 - 1) Background in electronics
 - 2) Minimum of a high school education
 - 3) Often a background in sales helps to transfer from sales to programing
 - c. Producer
 - 1) Minimum of high school education
 - 2) Classes in business management are helpful
 - 3) Overall background of television set operations

d. Broadcast technician

- 1) Must obtain a radio-telephone first class operator's license from FCC
- 2) High school courses in algebra and trigonometry are valuable
- 3) Technical and college level training is a distinct advantage

8. Discussed orally to the satisfaction of the instructor. †

9. a. T, B

b. T

c. D, P, B

d. D, P. B

10. Performance skills will be evaluated to the satisfaction of the instructor.

111bb

152

7

Television Activities #1

Newscast

Objective: Create a newscast (news, sports, weather, etc.) that will be accompanied by pictures (Still or moving) or illustrations.

- A. Use the procedures established in radio newscast for the audio aspect of television.
- B. Locate pictures from magazines, take instamatic pictures or shoot film to accompany the story.
- C. Construct a system of projecting the picture while delivering the audio portion of the newscast.
- D. Rehearse
- E. Video tape or present orally with projections on a screen.

153

Television Activities #2

Television Graphics

Objective: In rectangles (4 units across: 3 units down) create title logos for a group of shows.

- A. Select the titles (and style of lettering) to be used.
- B. Select accompanying illustration, picture or symbol if there is to be one.
- C. Sketch the idea.
- D. Once the final layout has been determined, construct the final logo.
- E. Refer to graphics units for further help.

SAMPLE ASSICNMENT:

"BURNING WHEELS" (A Movie About Teenage Dragsters)

154

Title Cards

- I. They are used for pictures or any printed material.
- II. Society of Motion Picture and Television Engineers recommends:
 - A. Establish a rectangle with a 3 by 4 aspect ratio in the center of the card. If you use an 11 by 14 inch card you can do this by marking off an inch of dead space around the entire card and leaving an area of 9 by 12 inches. This is the scanned area of your card.
 - B. Mark off one tenth of the height of the scanned area with a horizontal line on the top and another tenth with a horizontal line on the bottom.
 - C. Mark off one tenth of the length of the scanned area with a vertical line of the right side.
 - D. This will leave a rectangle centered in the scanned area measuring 7.2 by 9.6 inches. If you are using a conventional ruler, the figure can be rounded out to $7\frac{1}{4}$ by $9\frac{1}{2}$, this is your copy area.

Student Study Sheet
(One Per Student)

The amount of area loss depends on transmission factors and, to a greater extent, on the degree of misalignment of the home receiver. The picture height as well as the picture width may be simultaneously misadjusted on the receiver. Although this misadjustment may not change the general proportions of the image, it crops the top, bottom, and sides of the picture.

156

Student Study Sheet
(One Per Student)

The area framed by the camera and transmitted by the station (and, under ideal conditions, received on the home set) is called the scanning area. Centered within the scanning area is the most important part of the picture area, the essential area. All pertinent copy and picture information must be contained within the boundaries of the essential area, if the information is to be seen on a majority of television receivers. In general, the essential area is slightly more than 2/3 of the height and width of the scanning area.

Layout

The amount of information that can be simultaneously projected on the television screen is limited. You should confine your copy to no more than ten words. By limiting the number of words, you can use a letter size that is easily legible even to people sitting at a considerable distance from the screen. Large letters are especially important for color television. The limited resolution power of the television system will not reproduce detailed art work or small print.

Television Activities #3

Script Writing and Marking

Objective: Create a television script (commercial, drama, documentary, etc.) separating the audio and visual elements.

- A. Thinking terms of television as primarily a visual medium, write a short television script. Brainstorming for ideas may help.
- B. Using the Television Script Sheet as a format, proceed to mark the left hand column to explain the shot needed to accompany the wording.
- C. Using the abbreviations listed under the Camera Shots supplement, mark the type of shot desired.
- D. Using the symbols supplement, mark the script for camera usage.

1SHOT	SHOT WITH ONE PERSON IN THE PICTURE (VARIATIONS ARE 2SHOT, 3SHOT, ETC.)

160

Television Activities #4

Television Cues

Objective: Study and practice the cues used for communication between floor manager and performer.

- A. Select an activity from the television unit or create a new one (i.e., interview or panel discussion).
- B. Videotape or present live to the class the selected activity.
- C. The floor manager will cue the announcer according to the desired responses.

161

CUEING SYSTEMS

To ensure that action begins and ends at the instant it is required, reliable cueing systems are essential, especially if accurate timing and continuity are to be maintained. Performers may be cued to enter, speak, start, stop, and so on, according to circumstances.

Most cueing is done by the floor manager, on the director's instructions. He will either make hand-signals to the performer himself, or throw a cue to someone nearer, who will relay it. Figure below lists these gestures.

Word-cues are widely used, the performer taking his cue from dialogue or action around him. Small, portable, cue-lights can cue performers from switches on the director's desk.

FLOOR MANAGER SIGNALS

Stand by; go ahead.

Cut it; stop; finish; omit rest of item.

You are cleared. You are now off camera and can move, or stop action.

Volume up; louder.

Volume down; quieter (sometimes preceded by "Quiet" signal).

Quiet; stop applause.

Tighten-up. Get closer together.

Open-up. Move further apart.

Come nearer; come downstage.

Go further away; go upstage.

You're on that camera, play to that camera. (Sometimes preceded by "Turning actor's head" gesture.)

Play to the light indicated. (When actors are shadowing, point to light source and to area of face shadowed.)

Turn around (in direction indicated).

Speed up; faster pace; quicker tempo. (Movement's speed shows amount of increase.)

Slow down; slower pace; stretch it out. (Indicated by slow "stretching" gesture.)

O.K.; you're all right now; it's O.K. (Confirmation signal.)

We're/you're on time.

Are we on time? How is time going?

You have time left (Illustrated—2 mins. and 1/2 min.).

Wind-up now.

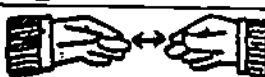

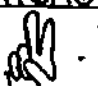

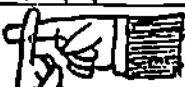

To audience: you can applaud now. (May be followed by "Louder" signal.)

Stop. (For applause, widespread action, etc.)

Student Study Sheet
(One Per Student)

Since the microphone is unable to distinguish between the sound you want to broadcast and the sound you would rather keep in the studio, all communication between the people in the studio and the people in the control room must be silent. To accomplish this, a set of signals has been developed which is used by all stations. Learn the signals so you can communicate when you are "on the air".

	WATCH ME; WATCH FOR CUE point finger to eye
	READY FOR CUE put one hand up, palm out
	TAKE THE CUE lower arm form ready for cue position, point index finger at person involved
	SPEED UP rotate index finger in a clockwise motion
	SLOW DOWN use both hands to make a stretching taffy, pulling-apart motion
	ON THE NOSE touch nose with index finger to show timing is right
	OKAY; EVERYTHING IS UNDER CONTROL raise hand - form circle with thumb and forefinger
	MOVE CLOSER TO MIKE make a beckoning gesture or wave hand close to mouth (palms in)
	MOVE AWAY FROM MIKE make a pushing away gesture
	MORE VOLUME; SPEAK UP extend arm - palm up, and raise
	LESS VOLUME; YOU'RE TOO LOUD extend arm - palm down, and push down or raise finger to lips
	CUT draw forefinger across-throat in a slashing motion
	BRING IN THEME MUSIC make a "T" with forefingers of each hand
	PLAY COMMERCIAL use index finger - point to palm of opposite hand
	REPEAT LAST CHORUS point to top of head
	NUMBER OF MINUTES LEFT hold up appropriate number of fingers
	1/2 MINUTE divide one index finger with the index finger of the other hand

163

Lighting for Television (and film)

Objective: Create an emotion, mood or atmosphere desired and light the subject (person, titles, display, room, etc.) to develop it.

- A. Select the subject.
- B. Arrange or place the subject in relation to its surroundings.
- C. Determine how many lights will be needed and how bright they need to be. If coloring is desired, include the use of gels or some substitute.
- D. Arrange the lights in relation to the subject and carry out necessary corrections.

Use can be made of school stage lights, flood lights, or even lights made with tin cans and a light bulb.

Student Study Sheet
(One Per Student)

LIGHT REFLECTION. Brightness changes also with the texture and finish of the surface, and the angle at which we view it. *Left:* Complete absorption indicates little or no reflection (e.g. black velvet), and the surface appears dark from all viewpoints. *Centre left:* With diffuse reflection light scatters in all directions (rough, irregular surfaces) and the surface is fairly bright from all viewpoints. *Centre right:* Spread reflection occurs on glossy surfaces, and their appearance is fairly dark from viewpoint (1), bright from viewpoint (2) and fairly bright from viewpoint (3). *Right:* Specular reflection is uni-directional, and comes from polished metal, mirrors, etc. From viewpoints (1) and (2) the surface seems dark, from viewpoint (3) it appears bright.

CORRECTIVE LIGHTING. The human face is rarely symmetrical. Most faces have characteristic unbalance (*left*) or disproportion (*right*).

On camera, such irregularities may be emphasized, but can be disguised with varying success by make-up and, where the subject is stationary, by lighting.

Where the subject is mobile, corrective lighting is impracticable, and irregularities may be exaggerated if incorrectly lit. For example, by the key light on the wrong side (*left*), by top light, combined top light and backlight, and double-rim lighting (*right*).

165

Student Study Sheet
(One Per Student)

TONAL PLANES AND TONAL GRADATION. *Left:* A light-toned object or plane tends to look larger and more distant than a similar dark-toned area. *Right:* Compare the effect of distance where our vision stops at the black openings and where the white openings suggest further planes beyond the walls.

Left: By lighting progressive planes we get an illusion of recession, whereas darkening more distant planes destroys all sense of depth. Now we have the principle of tonal gradation (shading), which will affect our impressions of form. *Right:* The flat, plain area, when shaded one way suggests one thing but shaded differently, suggests something else.

Perspective alone gives us a partial impression of space (*left*). Tonal change, suitably graded, gives us an impression of both depth and solidity (*centre*), while unsuitable gradation will start to destroy the illusion already provided by perspective (*right*).

SURFACE BRIGHTNESS. The apparent brightness of a surface depends upon its actual surface tone and the amount of light directed upon it. Each of these examples would appear equally bright.

Television Activities #6

Television Sets

Objective: Create a model or actual size set for a television program or a scene from a program.

- A. Discuss and visualize a set for a particular scene. Keep in mind, moods, workability and other factors that are important to the total effect of the picture which would appear on the screen.
- B. With the top and one side of a cardboard box, cut out, draw the layout (windows, placement of furniture, fireplace, etc.) for the set.
- C. Collect materials, illustrations and doll furniture to be used.
- D. Construct items that cannot be found.
- E. Paste-up, paint and insert the backdrops.
- F. Situate furniture and other props.
- G. Place model cameras (matchbox) where they will probably be located.
- H. For outdoor scenes, miniature landscape model materials may be substituted.
- I. Display the model.

Sets

- I. Three problems when you design a set:
- A. Include areas for the necessary action
 - B. Provide mobility for cameras, mikes and crews
 - C. It must reflect your interpretation of the mood and style of the drama:
 1. Is it complete realism?
 2. Is it one of the varieties of selective realism?
 3. Is it completely non-objective?
 4. Or is it stylized?
- II. Three different styles for a scene in an Eighteenth Century jail. The basic requirements are:
- A. A sitting area for Macbeth
 - B. An entrance
 - C. An area for a chase
 - D. Depth for the composition of pictures with as many as four people
 - E. Realistic set:
 1. constructed from flats and columns
 2. entrance an arch show realistic effect of heavy walls
 3. through arch steps giving depth to the scene
 4. behind window set barred window with a backing flat behind it
 5. area for Macbeth against one column backed by a wall
 6. foreground column gives perspective and depth to set from the angle seen in illustration
 7. set is mobile
 - a. column on casters
 - b. wild wall
 - c. angled flats
 - F. Modified Realistic:
 1. realistic set pieces placed against a black backdrop
 2. columns, door, window seat, bench and table
 3. lighting is extremely important
 4. light comes through window and is seen on the floor - gives a sense of tiles
 5. concentrated on the columns, door in itself, and outline the playing area
 6. less mobility
 7. in directing, use:
 - a. close shots
 - b. concentrate on shoulder shots
 - c. working depth shots against the barred windows
 - G. The stylized Cameo set
 1. built of flats, distorted in size and shape and set against a set
 2. minimum of background for essentially the same playing area
 3. this style emphasizes comedy elements
 4. camera complete mobility

Television Activities #7

Costumes and Make-up

Objective: Create characters for a specific television program.

- A. Select the type of program and characters needed. If this is not original, a play could be substituted.
- B. Determine the costumes and make-up needed. Television make-up is often done differently than stage.
- C. Make listings for each character.
- D. Locate the materials and outfit the characters.

Television Activities #8

Special Effects - Visuals

Objective: Create optical special effects.

- A. Select effects that are difficult to obtain as actual objects (mountains, trains, boats, rivers, wreckage, etc.) or occurrences (fire, auto accidents, volcano eruptions, fog, etc.)
- B. Discuss ways of constructing a model or illusion.
- C. Gather materials.
- D. Carry out the effect and photograph it for slide projection or movie projection.
- E. Develop and project the end result.
- F. Evaluate and if possible, correct errors.

169

VISUAL AND AURAL EFFECTS

We tend to expect effects to be spectacular or abnormal in some way. But effects devices are at their most exciting and interesting when we use them to recreate naturalistic illusions, and here, paradoxically enough, the more successful we are, the more self-effacing such effects become.

In this chapter we shall meet many methods and mechanisms, old and new. Some are widely-used tricks-of-the-trade, others are subject to patents, design registration and similar restriction.

Visual Effects

Dry-ice - solid carbon dioxide. When highly compressed, carbon dioxide solidifies into a white, ice-like substance. This, in block form, is widely used as a coolant. Allowed to become warmer, the dry-ice evaporates slowly, giving off clouds of harmless white vapour as it returns to its natural invisible gaseous state. Quite cheap, and easily stored, the material is foolproof to handle. The only precaution necessary is to avoid prolonged skin contact, which causes blistering.

Small pieces dropped into water dissolve, bubbling with wreathing white "steam". Ideal for bubbling retorts, and magic potions, the effect is dramatic, but harmless. One can even drink the result; unlike the poisonous titanium tetrachloride often used for steaming liquids.

As the water becomes progressively colder, the dry-ice dissolves less vigorously. Hot water prolongs the action. But where we want continuous dense mist, the dry-ice is best placed on an electric hotplate, or in a portable steam-over. The heavy white vapour sinks rapidly and can be blown to represent swirling ground-mists, ethereal clouds around dancer's feet, smoke from burning rooms.

Because the vapour disperses fairly rapidly, continuous replacement is needed. This is just as well, for persistent clouds can be an embarrassment around the studio.

170

LYCOPODIUM POT. The lycopodium powder is blown through holes on to the burning wick.

Fire. Although most mock fireplaces use perforated gas-pipes to provide flames, subterfuges are generally safer for more widespread fire-effects.

The lycopodium pot is a reliable safe controllable device, for its powder is only ignited when blown on to the wick. Sheets of flame can be generated on cue by regulating the air supply.

Wood-alcohol in jellied or liquid-form enables torches, furniture, buildings, to burn fiercely; augmented, perhaps, with fragments of paraffin-wax or firelighters.

To avoid real flames altogether, we can superimpose filmed flames. Or, with care, smoke and flickering light alone will give the illusion.

Water-tank effects. In a small water-tank we can contrive many strange and impressive sights. Substances dropped into the water (e.g. potassium permanganate), or stirred from its bottom, conjure up clouds, streaks of variegated tones, ephemeral patterns. With the picture inverted, whatever is dropped or squired into the tank will seemingly rise from the ground - useful for explosions and volcanic eruptions. Water catastrophe, flooding, fushing torrents are easily simulated. Lettering can dissolve to illegibility.

Glass partitions enable us to introduce several separately controlled effects into the same tank.

THE WATER-TANK Shot in big close-up the water-tank provides a number of visual opportunities.

Glass panels. An unbreakable glass panel in front of the camera will protect it against subjective assaults! It can effectively prevent such discomforts as thrown water, fruit, landslides, collapsing buildings, engulfing camera and cameraman.

Lecturers have used glass panels as invisible blackboards; standing behind, painting, facing the camera. The result is stunting, and becomes bizarre and confusing unless suitably presented; for the panel-writing and the studio-scene can merge indecipherably.

Turntables. Ranging from hand-turned 6 in. miniatures to electrically-driver revolving stages, turntables have numerous applications. Horizontal turntables are invaluable where we want to display sculpture, models, etc., from various angles. Vertical turntables can spin titling, decorative shapes, or stills (e.g. to suggest crashing aircraft dizziness, and the like).

Passing backgrounds. To create the illusion that a background is moving past our stationary subject, there are several devices. A continuously-moving roller-cloth may suffice, providing it is soft-focused and without obvious detail.

We can make use of moving back-projection, electronically-inserted moving backgrounds. Walking in front of a moving background is usually dummied by marking-time. Treadmills or moving floors are most effective, but seldom noise-free.

For night scenes, the illusion of passing backgrounds may be created by moving lights alone, using a cyclodrum or mirror-drum. A scenic projector may also be used.

Fog and dense smoke. Smoke superimposed from film, or a smoke-filled glass tank, is convenient and controllable; but unconvincing where people walk, or the studio camera moves. Live smoke is invariably unpleasant, and liable to hang over into following scenes.

Special blow-torches releasing crude-oil vapour through heated tubes generate controllable clouds of dense smoke. Smoke-producing pyrotechnics are ignited by slow-fuse or electrical contacts, but they burn persistently until exhausted. Dry-ice provides innocuous "smoke", which disperses readily. Smoke from compounds such as metafuel cubes (spread on to a hot-plate), or exposed titanium tetrachloride, is sometimes suggested, but is highly distressing to breathe. Flash-boxes loaded with naked-ignition smoke-powder and magnesium flash-powder, produce bursts of smoke on cue.

THE FLASH-BOX. (1) Low-current fuse wire and powder; (2) terminals; (3) asbestos board. Electric current melts the fuse wire, igniting the powder.

Student Study Sheet
(One Per Student)

Wind. For realistic wind, an assembly of vari-speed generating devices are available, from domestic fans to huge, encased airplane-type propellers. Most wind machines are bulky and highly directional. Moreover, by the time their breezes are strong enough to register, dust and paper are airborne, and microphones rumble. Localizing the wind may reduce these hazards. Often better still, we simulate the effect instead. Fanning with a hand-held board, or attaching cottons to waft drapes or blow-away hats, can work wonders.

Cobwebs. A special gadget, allowing rubber-solution to leak in a fine jet on to rotating fan-blades, produces cobwebs that would satisfy a spider. The thrown filament is normally spun on to a framework of stretched black cotton threads. A poorer substitute is devisable by squeezing rubber-solution between two boards, and drawing them apart. Dusting with Fuller's earth makes the cobwebs visible.

Gunfire and bullet-holes. Real gunfire being unpopular, bullet-holes are cunningly contrived by pre-drilled holes, plugged with dowelrod and dust-packed, strings or springs remove them on cue or else by electrically-ignited charges in dust-packed holes.

Ground impact-spatter may be simulated by buried charges or, more conveniently, by a compressed air system.

BULLET HOLES. Left: When tripped, the mousetrap pulls the plug from the pre-formed bullet hole and makes contact with a metal strip, firing electrically-ignited charges. Right: For ground-spatter effects, compressed-air is connected to a buried perforated pipe. When released, air puffs through each hole in turn, giving a realistic surface-spatter. Rubber branch-pipes allow more widespread effects.

Partial disappearances. If we place a subject before a black background, any part we then cover in black will disappear.

In this way we can produce headless bodies, disembodied limbs, gravity-free ballet (assisted by black-clad partners), and kindred mysteries.

Vignettes. Simply a black cardboard stencil placed in front of the camera, to mask-off or isolate parts of the scene.

VIGNETTES. Left: The vignette used as a masking effect. Right: Vignetting to obtain localized superimposition.

173

LIGHTING EFFECTS

Sparkles. Glitter, stars, stardust and similar scintillations, are emulated by sequins, diamante, or flake-mica. Glass chips are often stuck to scenery for glitter effects, but, remember, they cause painful abrasions if handled.

Metallic dust (used for sparkling coiffures) can be dropped into a light-beam to produce a shimmering column of light. So, by cutting from Mephistopheles to such a cloud, we have him vanish in a puff.

Reflected shapes. The decorative and dramatic possibilities of light reflections have been to date little used.

The reflection can be thrown directly on to the scene (rear or forward, or superimposed upon another's shot. We can cover or paint the reflector with a stencil, and so lettering, patterns, or symbols, can be flexed and manipulated ad infinitum. By covering up, we can make any part of the reflection disappear. Varying the finish of the reflector's surface (e.g. greasing, varnishing) changes the relative brightness, clarity or texture of parts of the image. Foil, sequins, etc., can be used for localized reflections. Furthermore, by arranging patterns at either end of a reflector, their respective images can be juggled, superimposed, interposed, simply by flexing.

Amongst the countless uses of reflected shapes we have that of simulating stars, nebulae, planetary-motions, clouds, lighting, making mobile patterns for abstractions, dream sequences, mental states, producing magic and supernatural effects, or animated titling.

Ripple reflections. To imitate the rippling-light reflected from nearby water, we have the apparatus illustrated.

Apparatus employing moving patterned glass or metal stencils is used in theatres to project water-ripple effects, but the result may not satisfy the scrutiny of the television camera.

Firelight. Real firelight is too feeble to illuminate the scene, or to register satisfactorily on camera, so light from a powerful lamp on the ground is flickered instead. Waving linen streamers or leafy branches can produce quite convincing illusions - when skilfully handled. The motion picture practice of using smoke or gas-jets to animate the light is generally less convenient. There are automatic fire-flicker devices, but most give somewhat mechanical results.

REFLECTED SHAPES. Polished material, held in a sharply-focused light-beam, projects its image on to nearby surfaces. Bending the reflector distorts the reflected shape.

Television Activities #9

Camera Angle Shots

Objective: Photograph several pictures from different viewpoints.

- A. Decide on the subjects to be photographed.
- B. Make a list of the possibilities of viewpoints.
- C. Determine the shots which will be taken.
- D. Shoot the film (instamatic, 35mm, still, movie or other) and have it developed. Project the results and evaluate the ideas communicated.

This is a good exercise for film study also.

Television Activities #10

Setting up a television studio

Objective: Create a television studio and station with the necessary personnel to make decisions and operate it.

- A. Pick a four initial title for the station.
- B. Determine the audience you will be reaching. (Take surveys or have discussion on "to whom" the programs will be aimed.)
- C. Decide on program format for a daily operation.
- D. Assign, volunteer, elect class members for the various positions: 1. audio personnel. 2. salesmen 3. program director 4. production manager 5. news director 6. film editor 7. photographers 8. graphic artists 9. cameramen for T.V. 10. projectionist 11. others
- E. Begin developing programs for the different time slots
- F. Meet in groups (for each show) and map out the illustrations, costumes, music, performers, scripts needed for each show.
- G. Begin the production of the shows.
- H. Rehearse each show.
- I. Sell commercial time and write the commercials.
- J. Make cue cards where necessary.
- K. If video equipment is available, tape the show. If it is not, go through the programs much like a stage play and tape the sound and use mock cameras made of cardboard.

FILM

Introduction to Film Careers

Film making covers a broad spectrum of career opportunities. Even the types of subject matter involved presents a variant that affects one's choice. From advertising, newsfilm and education to major studio and documentary filming, the selection can be made on special interest and occupational availability. Needless to say, only a few highly trained professionals produce our theatre show motion pictures. Obviously, at some levels of production people perform one function of what goes into a single movie. At the same time many people choose to do all the elements of a completed film. They write, direct, become cameraman, do sound work, edit, splice and even act.

The making of films may be an integral part of another primary occupation. A promotion man may produce films as a small part of the total career he has chosen. A television newsman may be called upon to supplement a story with footage of the story. A complete list of such careers cannot possibly be explored here. The following list is not intended for the purpose of encompassing such overlap. Rather it is aimed at those careers solely or primarily concerned with movie making. At the same time the list is not exclusive of other related careers.

FILM CAREERS and DESCRIPTIONS

- Producer - Coordinates writers, directors, and editors. Works with the budget and engages key actors and production staff members.
- Director - Directs the cast and crew members during rehearsals and filming.
- Director of research - Researches and then advises director concerning historical details of the subject to be filmed.
- Director, Art - Directs and coordinates motion picture art work production concerned with set design, scenic effects, and costumes.
- Director, Music - Supervises personnel in studio music department and conducts studio orchestra.
- Director, Casting - Auditions and interviews performers for specific parts.
- Director, Location - Seeks out, then arranges for leasing of suitable property for use as a location site.
- Editor, Scenario - Supervises scenario and continuity writers engaged in writing stories, screen adaptations, and screen continuity.
- Scenario Writer - Writes stories, adaptations, or scenarios.
- Continuity Writer - Writes sequence of scenes in photoplays, arranging scenes to provide action continuity to series of events being portrayed.
- Gag Writer - Writes humorous dialogue, jokes.
- Script Clerk - Keeps records of data relative to filming scenes and performs secretarial duties for director.
- Background and Title Artist - Draws, and paints titles and title background, and also letters the credits to be photographed. (See Graphics)
- Cartoonist - Draws cartoons in sequence to portray animation of characters, of wind, fire, rain or of background layouts.
- Color Advisor - Advises cartoonist and animation photographers about color.
- Painter, Animated Cartoons - Applies paint on celluloids to depict characters and background.
- Cameraman, Animation - Operates special cameras to make animated cartoons.
- Cameraman, Special Effects - Photographs still and action scenes on miniature sets, when developed and incorporated in sequence, these create realistic images of action supposedly occurring.

Dubbing Machine Operator - Tends film dubbing machines that play back recordings to facilitate sound and picture synchronization.

Electrician, Chief - Supervises and coordinates installation, maintenance, and operation of all electrical lighting equipment.

Machinist, Motion Picture Equipment - Repairs and services mechanical parts of photographing, projecting, editing, sound recording, and power equipment.

Microphone Boom Operator - Moves boom according to script and position of performers.

Operator, Lights - Positions and operates overhead and floor lights during filming.

Recordist - Controls recording equipment of sound that originates on set.

Sound Cutter - Edits and synchronizes music, dialogue, and sound effects of film into single sound print.

Sound Mixer - Operates console to regulate volume level and quality of sound during filming.

Stage Man - Places microphone on set preparatory to filming.

Editor, Film - Edits film and sound tracks according to scenario and director's requirements.

Film Printer - Operates film printing machine whereby image on negative motion picture film is printed on positive.

Film Splicer - Splices ends of film together to make a continuous reel.

Librarian - Keeps library of stock and processed films for future reference.

Motion Picture Projectionist - Sets up and operates projector and sound reproducing equipment.

Costumer - Designs and selects costumes for cast according to period style and characters to be portrayed. Fits costumes.

Make-up Man - Analyzes production requirements and applies make-up to alter actors' appearances in accord with their roles.

Prop Maker - Fabricates props, miniatures, and sets from various materials. Rigs and controls moving elements that depict action.

Painter, Stage Settings - Paints walls, furniture, etc., of sets.

Set Director - Coordinates decoration of sets.

1578

Special Effects Man - Operates special effects equipment such as wind and fog machines.

Miniature Set Constructor - Constructs miniature models according to scale.

Sketcher - Plans, develops, prepares sketches of scenes and backgrounds against which action is shot.

Figure 1 is a list of basic items that are needed to start instruction in film careers.

179

Glossary of Film-making Terms - Learn!

1. Long shot - view of a scene from a great distance
2. Medium shot - view of scene from a middle ground
3. Close up - view of a scene or individual close in, usually head and shoulders or just face.
4. Extreme close up - view of scene or individual showing a detail of the face (eyeball, eye and nose) or object (dial on a telephone, a key)
5. Establishing shot - a long shot that sets the time, locale, weather, period, etc.
6. Two-shot - usually the heads and shoulders of two actors on the screen.
7. Three shot - heads and shoulders of three persons on the screen
8. Pan - Moving the camera from left to right or right to left or up or down an object, scene, or individual
9. Dolly - the camera is mounted on a tripod with wheels and is moved into a set
10. Zoom - a lense that can go from a long shot to extreme close up without moving the camera
11. Montage - a shot in which several scenes appear together at the same time.
12. Cinema verite - a scene shot with a hand-held camera that suggests real life.
13. Fade - gradually darkening a scene, leaving the screen empty - often used to end an action or change the theme
14. Dissolve - when one scene briefly overlaps another, to create a feeling of continuity
15. Voice-over - the narrator's voice dominating a scene that may have background music and/or sound effects

16. Scoring - combining music with the film and voice parts
17. Work print - the uncorrected printed film
18. Answer print - the first corrected print

FILM MATERIALS

Essential film texts

Movie camera - super 8, 8mm, of 16 mm

Magazines - picture

Lights

Still camera

Records

Bulletin board

Splicing tape

Play books

Screen

Projector

Tape recorders - cassette and/or reel-to-reel

Record player

Clean tapes

Coloring utensils - crayons, magic markers, etc.

OPTIONAL

Tripod

Editor-viewer-splicer

Easel

figure 1

182

Film Activity #1

Obtaining a story

Objective: Develop a story for filming purposes by using one of the following methods (1) write an original story for filming. (2) re-write a common theme (boy meets girl in big city) for a film. (3) develop a documentary (4) re-write a short play for filming (5) select a short story and change it to fit film (6) select a recording and prepare its message for filming.

- A. Select one of the above for the source.
- B. Decide on the thrust of the message (emotion, story, education, aesthetics, comedy, etc.)
- C. Write or re-write the story keeping in mind that this is primarily a visual medium.
- D. Break the script down into scenes.
- E. Break the scenes down into specific shots (angles, persons, movement of camera).
- F. Review the script for modifications.
- G. Carry through by filming the story.

184

Student Study Sheet
(One Per Student)

These persons make interesting characters for a story:

Actor or actress	Banker	Explorer	Hermit
Advertising man	Barbarian	Fanatic	Mobster
Agent	Baron	Financier	Model
Agitator	Cannibal	Fireman	Moonshiner
Alienist	Capitalist	Fisherman	Murderer
Anarchist	Captain	General	Musician
Apostle	Card sharp	Gladiator	Mute
Artist	Dancer	Governor	Media Consultant
Astrologer	Deaf person	Grafter	Steelworker
Astronomer	Dentist	Guard	Stenographer
Athlete	Detective	Guide	Stool Pigeon
Auditor	Dictator	Gunman	Streetwalker
Auto. racer	Editor	Gypsy	Student
Aviator	Embezzler	Hangman	Swimmer
Ball player	Emigrant	Healer	Swindler
Bandit	Engineer	Heeler	Tailor

Interesting Places in Which a Story Might Take Place

Aboard plane	Indian Country	Prairie
Aboard ship	Island	Prison
Aboard train	Jail	Publisher's office
Advertising Agency	Jungle	Saloon
Airfield	Laboratory	Savage country
Anarchist's hdqts.	Lake	School
Aristocratic home	Lawyer's Offices	Sea
Army post	Lighthouse	Small town
Artist's studio	Logger's camp	Smuggler's hangout
Battlefield	Newspaper office	Stage
Beach	Night club	Stock exchange
Bowery	Observatory	Theatrical district
Broadway	Penitentiary	Tropics
Broker's office	Piers	Television studio
Cabaret	Pirate's lair	
Camp	Plantation	
Cattle Ranch	Police station	

36 BASIC PLOTS

GOOD FILMMAKING REQUIRES AN ORGANIZED WRITTEN PLAN. THIS PLAN, THE SCRIPT, IS REALLY WHERE PRODUCTION BEGINS. THE CORE OF THE SCRIPT, ASSUMING A STORY FORM IS BEING USED, IS THE PLOT. LEST YOU THINK THERE ARE ENDLESS POSSIBILITIES ... YOU WILL FIND THAT ALL PLOTS, WHEN REDUCED TO A SIMPLE SENTENCE OR PHRASE, FALL INTO 36 CATEGORIES.

1. SUPPLICATION: persecutor, suppliant, powerful authority whose decision is in doubt.
2. DELIVERANCE: an unfortunate, a deliverer, a threatener
3. CRIME FOLLOWED BY VENGEANCE: a criminal, his avenger
4. VENGEANCE - KINDRED UPON KINDRED: guilty kinsman, avenging kinsman, remembrance of the victim, a relative of both
5. PURSUIT: punishment and a fugitive
6. ABDUCTION: the abducted, a guardian, an abductor
7. REVOLT: a tyrant; a conspirator
8. CRIMES OF LOVE: the lover; the beloved
9. MURDEROUS ADULTERY: 2 adulterers, a betrayed husband or wife
10. AMBITION: an ambitious person, the thing coveted, an adversary
11. DISASTER: a vanquished power, a victorious enemy, a messenger
12. MADNESS: madman, victim
13. AN ENEMY LOVED: the beloved enemy, the lover, the hater
14. OBSTACLES TO LOVE: 2 lovers, an obstacle
15. FATAL IMPRUDENCE: the imprudent person, the victim or object lost
16. DARING ENTERPRISE: bold leader, an object, an adversary
17. OBTAINING: a solicitor, an adversary who is refusing or an arbitration and the opposing parties
18. ENMITY OF KINSMAN: a malevolent kinsman, a hating or hated kinsman
19. RIVALRY OF KINSMAN: the preferred kinsman, the rejected kinsman, the object

136
143

20. SLAYING OF A KINSMAN UNRECOGNIZED: the slayer, the unrecognized victim
21. THE ENIGMAN: the interrogator, seeker and a problem
22. DISCOVERY OF THE DISHONOR OF A LOVED ONE: the guilty one, the discoverer
23. FALLING PREY TO CRUELTY OR MISFORTUNE: an unfortunate, a master, and a misfortune
24. CONFLICT WITH A GOD: a mortal, an immortal
25. ERRONEOUS JUDGMENT: the mistaken one, the victim of the mistake, the cause or author of the mistake, the guilty person
26. REMORSE: the culprit, the victim of the sin, the interrogator
27. RECOVERY OF A LOST ONE: the seeker, the one found
28. INVOLUNTARY CRIMES OF LOVE: the lover, the beloved, the revealer
29. LOSS OF LOVED ONE: a kinsman slain, a kinsman spectator, an executioner
30. MISTAKEN JEALOUSY: the jealous one, the object of whose possession he is jealous, the supposed accomplice, the cause or author of the mistake
31. SEDUCTION: a deceived husband, wife or lover...and the adulterer or deceiver
32. SACRIFICING SELF FOR AN IDEAL: hero, ideal, the creditor of the person or thing being sacrificed
33. NECESSITY OF SACRIFICING LOVED ONE: the hero, the beloved victim, the necessity
34. SELF-SACRIFICE FOR KINDRED: hero, kinsman, creditor of person or thing being sacrificed
35. ALL SACRIFICED FOR A PASSION: the lover, object of the fatal passion, the person or thing sacrificed
36. RIVALRY OF SUPERIOR AND INFERIOR: the superior rival, the inferior rival, the object

187

Film Activity #2

Storyboard

Objective: Select a story written for film and translate it to pictures.

- A. Select the "story" (poem, musical recording, play, original story, etc.)
- B. Using a storyboard form (see next page) draw a rough sketch of each shot or sequence of shots to be filmed.
- C. Write notes for the film sequence and cameraman (i.e. pan left, zoom in, medium shots, etc.)
- D. Write accompanying sound and other notes.
- E. On a bulletin board, arrange the cards in sequence to the story. Next, number the cards and then rearrange them for their shooting order.
- F. Cluster the cards into shooting locales and persons needed for the shots.
- G. Put the titles and credits on storyboard forms.
- H. Shoot the film.

Film Activity #3

Discovering the Camera

Objective: Understand and recognize the basic parts and principles in the operation of a movie camera.

- A. Select a small movie camera - super 8 or 8mm (students can bring these from home or check with the A.V. department.)
- B. Study the handbook that comes with the camera.
- C. Determine the limitations and capabilities of the camera.
- D. Decide on shots that would be interesting to experimentally try.
- E. Shoot the experimental shots, have the roll developed and view the results.
- F. Apply all of this experimentation to the actual shooting of a "story" film.

Optional

- G. Have a photographer or film equipment salesman talk on the various aspects of the movie camera.
- H. Discuss and study the elements of illusion in motion pictures.
- I. With sample films, commercials, or television, recognize the different shots utilized and try to determine how they were obtained.
- J. Using still photographs, zoom, pan, and cut with a movie camera, to transform them into "motion pictures".
- K. When film is bought or developed there is enclosed an explanation sheet concerned with proper filming and common errors in photography. Study these.

Film Activity #4

Film Animation

Objective: ~ Create a cartoon to be filmed for moving pictures.

- A. Decide on an idea and story (keep it simple).
- B. Draw some rough sketches of the characters or objects.
- C. Study the technique of animation (see film bibliography).
- D. Begin drawing the backgrounds and foreground action (these tasks can be separated).
- E. Arrange the completed pictures and set up the number of frames each is to be exposed.
- F. Set up the lighting and camera for filming.
- G. Prepare the titles.
- H. Shoot the film.

Alternates

- I. The same process can be followed substituting objects (chess set, toys, clay modeling, etc.) for illustrations.
- J. Substitute cut-outs for illustrations.

Student Study Sheet
(One Per Student)

CEL ANIMATION

PAPER ANIMATION

Best for classroom or at home. Low cost, low pressure, quiet and highly creative.

SCIENTIFIC TIME LAPSE

Photograph and study slow processes in laboratories, construction and homes.

CUT-OUT ANIMATION

Simplest method. Use puppets, comic books, baby pictures, cutouts, etc. & original art.

SYMBOL ANIMATION

Animate your concepts. Give dynamic illustrations of market strategies, athletic diagrams, work and material flow, etc.

TITLING

Create professional free action and stop action titles for your film productions.

FILMOGRAPHY

Use a tele remote controlled zooms, pans and tracks of professional quality.

ANIMATION

It is valuable when equipment or machinery cannot be photographed internally.

With animation, time periods can be shortened or lengthened.

Animation permits a visual treatment of an abstract idea.

Animation can add humor and interest to any subject matter.

Animation may be divided into five general types:

* Limited

* Full realistic

* Full

* Technical

* Nonrealistic

Limited Animation -- Basically static pictures. Only minimum extensive use of cycles, pans, "popping" movements, and cel levels. Best suited for comic effects.

Full -- A separate drawing for each frame (sound 16mm, 24 drawings for each second of screen time).

Full Nonrealistic Animation -- Typical cartoon film. Uses lots of "straight-ahead" animation and moves much more smoothly.

Full Realistic Animation -- Illusion of reality. Most difficult and expensive type of animation. Actual movement rendering often involves filming live actors and duplicating the film frame by frame.

Technical -- Animation using sophisticated animation equipment such as animation stands, pin registration for cels and paper drawings, and techniques like triple-frame animation (See media dictionary).

Film Activity #5

Setting up a movie studio

Objective: As a class or group project divide into areas of special interest and produce a movie.

- A. Decide on the subject to be filmed.
- B. Break down individual duties much like those in television activity #2. Add new positions where necessary (See Film Careers and Descriptions page).
- C. Each group begin work on its facet of the film.
- D. Carry the film to completion and project for class evaluation and suggestions for future improvement.
- E. If time and money permits, re-do those segments of the film that need improving.

Film Activity #6

Film Genre

Objective: Classify various types of film by creating a list of several categories.

- A. Brainstorm to establish titles of films or television shows.
- B. Now make a list of the different types involved.
- C. List the characteristics of the various genre (categories).
- D. Discuss the similarities and differences among the categories.
- E. Try to add to the list.
- F. Make another list of characteristics which are predominant in these shows (costumes, special effects used, camera angles employed, etc.).
- G. Make a new genre listing by combining categories in the original list or creating more specific ones.

Sample List

1. Western
2. Comedy
3. Fantastic
4. Short subjects
5. Drama
6. Musicals
7. Mystery
8. Action and Adventure
9. Documentary
10. Religious themes
11. War themes.

TAPE SPLICING

A modern and simple way to splice 8mm, super 8, and 16mm motion picture film is offered by the Kodak Presstape Universal Splicer. This is a dry splicer; no cement or water is required. The splices are made with pressure-sensitive Kodak Presstape.

This method provides a strong, durable bond and the film can be projected immediately after a splice has been made. The heat from the projector lamp will cure the splice, making it even stronger. Even if the film is not projected for some time, curing will take place within three or four weeks.

CEMENT SPLICING

Film cement contains a solvent that fuses the film ends together. A cement of good quality, such as Kodak Film Cement, should be used.

Directions furnished with your splicer should be followed in scraping and cementing the film. When the film is placed in the splicer, the emulsion (dull) side must be up. It is important that both the emulsion and the coating under it (the binder) be removed completely from the section of film that is to be overlapped in the splicer. Next, the cement should be applied evenly, in a thin layer. The back of the overlapping film strip should be pressed quickly on top of the scraped area. After the splicer has been closed and reopened, excess cement should be wiped off.

Principle of Cement Splicing: illustrations below show the principle involved in cement splicing of motion picture film.

Structure of Motion Picture Film: Film has several layers (figs. 1 and 2). These include:

1. Flexible film base provides a strong and durable support.
2. Emulsion coating consists chiefly of gelatine. In this layer is suspended the silver or dye that forms the photographic image.
3. A microscopically thin layer, or binder, between the base and emulsion coating, binds these two layers tightly together.

CEMENT SPLICING OF MOTION PICTURE FILM

Figure 1—If a small section of motion picture film were to be magnified to great size, we should see that the film is made up of more than one layer. In this illustration the thickness of the various layers is exaggerated.

Figure 2—1. The flexible film base provides a durable support. 2. The emulsion coating consists chiefly of gelatin, in which is suspended the silver or dye image. 3. A thin layer, or binder, between the base and emulsion binds them tightly together.

Figure 3—It is impossible to cement the base side of one piece of film to the emulsion of another. The emulsion and binder must first be completely removed so that the two film base surfaces can come in direct contact with each other.

Figure 4—The emulsion and binder coatings should be moistened with water. This softens the emulsion slightly so that it can be removed easily. The moistened surface should be dry before the film cement is applied.

Film Activity #7

Film Editing and Splicing

Objective: Cut, arrange, and splice film together into a finished product for projection.

- A. Cut the film into separate shots as they were filmed.
- B. Decide on the order they should follow to compose the final line of action.
- C. Splice the units together. Use either tape splice or cement splice.
- D. Thread and run through the projector. Re-edit and splice if necessary.

Splicing tape can be obtained from most camera shops. For cement splicing it will be essential to obtain a mechanical splicer (about \$6) and cement. An editor-viewer will make the process of viewing and cutting film ends easier. For practice or the pure activity of splicing use old 16 mm film that would normally be discarded.

Film Activity #8

Photo Essay

Objective: Create a story through the combined arrangement of still pictures and written description.

- A. Gather various pictures (magazines, still photographs, slides, snapshots, etc.) that can be interpreted in different ways.
- B. Look at the pictures and make up a story using part or all of them.
- C. Number and arrange the pictures.
- D. Construct the story in writing.
- E. This can emphasize comedy, seriousness, mood, etc. and the purpose should be stated.

Other Film Activities,

Many film related activities could be similar to activities in the television section. Such exercises may have to be modified to fit the film machinery and medium. The most applicable television activities are numbers 2,3,4,5, 6,7, and 8.

197

SLIDE PRESENTATION

Thorough planning is the key to a high quality sound slide presentation. Every detail should be complete prior to the actual "shooting" of the pictures.

As an example, the music and sound background including voices to be used in the narration, should "fit" the script and the end results to be accomplished.

Under the most ideal circumstances you are apt to shoot one or two hundred pictures to find the 60 or 80 that will make up the final selection.

SLIDE PRESENTATION

PRODUCTION SEQUENCE

- I. Planning and Programming
 - A. Determine audience
 - B. Synopsis - purpose or objective
 - C. Research
 - D. Budget

- II. Script and Story Board
 - A. Writing (verbal presentation)
 - B. Story Board (pictorial outline of presentation)

- III. Artwork
 - A. Titles
 - B. Background or scenery

- IV. Pre-Production Planning
 - A. Equipment
 - B. Lighting
 - C. Actors and Releases

- V. Filming

- VI. Production
 - A. Film Processing
 - B. Editing
 - C. Sound
 - D. Pulsing
 - E. Duplication
 - F. Storage

- VII. Showing the Final Product

Related Communications Areas

Sign Language

Career Descriptions:

Interpreter for the Deaf: Person who translates messages to people for the deaf. (Lawyers, doctors, educators, etc.)

Television Interpreter for the Deaf: Person who translates information on T.V. for the deaf. (ex.: translates tornado warnings, interprets news, relates public service messages.)

In both of these careers, as well as any other related to working with the deaf mute, the person working with the deaf must have a warm and pleasing personality and must be able to relate confidence and trust to that person.

Activity #1

Objective: The student will learn the sign language alphabet.

After mastering the signs for each letter in the alphabet, have the students spell out words, phrases, then whole sentences to each other. The students could be divided into groups of two to set up a competitive atmosphere. Given the same phrase or sentence, the group who successfully translates the sign language to verbage wins.

Activity #2

Objective: The students will participate in a "Signing Bee"

Set up the students into two groups. Conduct the activity the same way as you would a Spelling Bee. Given a word, the student spells it in sign language. The last student standing is the winner.

Activity #3

Objective: In a role playing situation, the student will interpret for a deaf mute who is being interviewed.

This activity needs three people in each group: the interviewer, the interviewee, and the interpreter. If you want the atmosphere as realistic as possible, have the interviewee put cotton or ear plugs in his ear so he can't hear the interviewer ask the questions. The interviewer asks the question and the interpreter converts it to sign language. The interviewee then answers the question in sign language and the interpreter converts it to verbage. Remember, keep the questions short and simple as the students are not going to be experts from the very beginning. Have the students take turns playing the three different roles.

Related Communications Areas

Speaker's Bureau

Career Description:

Serving as a member of any company Speaker's Bureau, a person may prepare and deliver public speeches or presentations to promote, inform, entertain or serve other purposes as prescribed by his company.

Activity #1

Objective: The student will listen to professional members of Speaker's Bureaus.

The teacher may invite members from the Speaker's Bureau of Northwestern Bell Telephone Company or any other company or association to address the class. Following the speech, the class may discuss the skills, techniques and effectiveness of the presentation.

Activity #2

Objective: The student as a member of a Speaker's Bureau will prepare and deliver a speech which has as its purpose the explanation of or promotion of a selected business or industry.

The class may be organized into several Speaker's Bureaus which are made up of any number of students who share interest in some aspect of business or industry. Individually speeches may be prepared and rehearsed until ready for presentation. The polished presentations may be promoted through advertising and delivered throughout the school, perhaps even out of school.

SPIRIT MASTERS

Attention getting announcements through cheap or cheaper methods of reproduction.

Think about what you wish to say, then get it down on paper in the form of thumbnail sketches. While doing these sketches, think color, where and what you might want emphasized. If you cannot come up with ideas on your own, search through magazines, other flyers or anywhere that might serve your purpose.

Thumbnail sketches only suggest layout possibilities, illustration spots and copy space. These do not have to be in detail but only sketchy space and outlines. Lines will indicate where copy will go.

Copy is the information that you want read and acted upon. It can be handwritten, lettered or typed.

Something that will catch the eye and move the mind to wondering what the copy is all about. It is a stimulant for your readers and a shot in the arm for your communique.

Color is what this whole thing is all about. It is an addition to liven up those purple jobs. Don't knock the purple "jobbies" because with the same layout, planning and some colored paper, you can score again.

Color

LETTERING COOL

Now this is what we're about - dittos or spirit masters. In the trade they are some times called "carbons". Carbons come in five colors at present; purple, the most common, red, green, blue and black.

All of them have things in common, all have something different. All will work separately, but usually work better in combinations with one stand-by, purple jobs. Colored carbons are more expensive than purple ones. Colored carbons will not produce many copies per run as the regular purple ones.

211

Let's talk about the common characteristics. First, what is a "Ditto Master"? It is a three-part copying sheet that reproduces any mark that has been picked up from its emulsion sheet.

This sheet is the master. This is where the final and finished work is done. This is the sheet that is used to reproduce, in number, what you have to say. You write on the front and the carbon emulsion is picked up on the back. Any mark you make, without the second sheet in place, will print, unless corrected.

This is a thin waste sheet that protects your "master" from the carbon emulsion. It must be removed in order to make a good master.

This sheet holds the dyed emulsion which adheres to the back of your master. When mixed with spirit fluid, prints your message.

General info

Any moisture or extreme heat will cause you problems. When wet, the emulsion will run and stain everything with which it makes contact. It will wash off your hand, but it might play havoc with your clothing - especially white things - so handle with care. Heat will cause emulsion to melt into your master. In this case, you might have to start over, or use it as part of your design. So there you have it - the spirit master.

Now it's your turn.

First, you must experiment with spirit masters to gain some personal knowledge. Learn from your mistakes. Experiment with the purple jobs first - they are less expensive.

You can correct the master by scraping the emulsion from the back of the master with a knife or razor blade. Scrape, not cut. Some times transparent tape can be used to cover a spot that is not to be used, or cannot be scraped reasonably clean.

212

A master can be made with a pencil, a ball point, a typewriter or any dull instrument that will not cut the surface of your master.

For straight line or to make guidelines for lettering, use a ruler, straight edge or T-square.

Spirit masters break down fast - so a run is good for about 200 prints, that is, with the purple ones. The other colors are only good for about 150.

White paper emphasizes your color carbon usually better than colored paper. But, don't omit colored paper because of that fact.

If you have a heavy hand with your pencil, use a piece of lightweight cardboard or several sheets of regular paper between the divider and your master, so that there will be no carbon pickup. But be sure to remove all dividers when you're ready to do your final art work. These precautions should also be taken when inserting your color carbons.

Hand made masters usually last longer than typewritten ones.

DESIGN YOUR OWN PERSONAL STATIONERY

Here's all you have to do --

Take a sheet of plain 8½ by 11 paper. With a soft lead pencil (No. 2), lightly draw a line across the page about one-half inch from the top. Draw a second line approximately two inches from the top. Keep these guidelines light because you will erase them when you are finished. Try to keep your design, writing or printing, within this rectangle.

There are no strict rules as far as where you draw or print your design. The above is only a guide to the traditional location of the letterhead. But you can work in the margin, on the bottom of the page - wherever you wish. - Just remember to stay at least one-half inch away from the edge of the paper.

4 EASY STEPS to preparing your own personalized stationery

Keep your design a 1/2" away from the edge of the paper on all sides. Place the guide under your paper to keep art square.

Select a symbol or border design from one of the sheets and cut it out.

Use rubber cement to adhere design in position.

Using a felt pen, you can personalize your stationery or type in the copy with a typewriter for snappy looking print.

and that's it!
anybody can do it, have fun!

(uné per student)

TITLE: VOCATIONAL AGRICULTURE II: A CURRICULUM GUIDE. TENTH GRADE.

PERSONAL AUTHOR: PATTON, BOB; BRAKER, CLIFTON R. (PETE)

DESCRIPTOR: *STATE CURRICULUM GUIDES; *CURRICULUM GUIDES; SECONDARY EDUCATION; *VOCATIONAL AGRICULTURE; *GRADE 10; UNIT PLAN; BEHAVIORAL OBJECTIVES; LEARNING ACTIVITIES; TESTS; TRANSPARENCIES; RESOURCE MATERIALS

IDENTIFIER: *OKLAHOMA

EDRS PRICE: MF AND PC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 57IP.; THIS CURRICULUM GUIDE WAS WRITTEN IN 1971 BY BOB PATTON AND REVISED IN 1975 BY CLIFTON R. (PETE) BRAKER.

ABSTRACT: THE CURRICULUM GUIDE IS DESIGNED TO PROVIDE A BASIC CORE OF INSTRUCTION IN VOCATIONAL AGRICULTURE IN OKLAHOMA. THE 27 INSTRUCTIONAL UNITS ARE GROUPED ACCORDING TO SIX AREAS: CHEMICALS, LEADERSHIP, SUPERVISED EXPERIENCE PROGRAMS, PLANT AND SOIL SCIENCE, ANIMAL SCIENCE, AND AGRICULTURAL MECHANICS. EACH INSTRUCTIONAL UNIT INCLUDES BEHAVIORAL OBJECTIVES, SUGGESTED ACTIVITIES FOR TEACHER AND STUDENT, INFORMATION SHEETS, ASSIGNMENT SHEETS, JOB SHEETS, TRANSPARENCY MASTERS, A TEST, AND TEST ANSWERS. A SHORT INTRODUCTORY SECTION EXPLAINS USE OF THE GUIDE. (AUTHOR)

TABLE OF CONTENTS

Section A	Chemicals
Unit I	Agricultural Chemicals
Section B	Leadership
Unit I	Becoming a Good Leader
Unit II	Importance of Public Speaking
Unit III	Developing and Delivering a Speech
Section C	Supervised Experience Programs
Unit I	Analysis and Evaluation of Supervised Experience Programs
Unit II	Farm Credit
Section D	Plant and Soil Science
Unit I	Elementary Study of Soils
Unit II	Soil Conservation Practices
Unit III	Plant Growth and Reproduction
Unit IV	Seed Selection
Unit V	Land Preparation
Unit VI	Chemical Weed Control
Unit VII	Plant Insect Control
Unit VIII	Plant Diseases
Unit IX	Landscaping
Section E	Animal Science
Unit I	Animal Nutrients
Unit II	Composition and Classification of Feeds
Unit III	Animal Digestion
Unit IV	Maintaining Animal Health
Unit V	Livestock Diseases
Unit VI	Livestock Parasites
Section F	Agricultural Mechanics
Unit I	Drawing and Sketching
Unit II	Position Welding
Unit III	Oxyacetylene Fusion Welding
Unit IV	Oxyacetylene Braze Welding
Unit V	Bill of Material
Unit VI	Plumbing

FOREWORD

This publication is designed to provide a basic core of instruction in vocational agriculture in Oklahoma.

Today, teachers of vocational agriculture are faced with increasing problems of what to teach and whom to serve. The student of today, who will be the agriculturist of tomorrow, needs to be a well-educated individual who is constantly seeking information on which to base the many decisions he is required to make.

The purpose of this guide is to assist teachers in improving instruction in Vocational Agriculture II in Oklahoma.

Appreciation is expressed to the many individuals who helped in the development of this publication. The teaching of vocational agriculture should become more effective with its use.

Francis T. Tuttle, State Director
State Department of Vocational
and Technical Education

Byrle Killian, State Supervisor
Vocational Agriculture

ACKNOWLEDGMENTS

Appreciation is expressed to many individuals who gave their time and knowledge to the preparation of this publication. Without the combined efforts of the State Department of Agriculture, the Department of Agricultural Education, and the teachers of vocational agriculture, this publication would not have been possible.

The contents of the original publication were prepared and reviewed by:

Instructors of Vocational Agriculture

Gratitude is expressed to Sheila Stone for editing; to Nancy Skach and Debbie Burchette for assistance with research; and to Cindy Johnson, Brenda Risner, and the Communications Center for typing.

Much credit goes to Bob Rea, Media/Graphics Designer; Dean Clark and Mike Adair, Illustrators; and Beth Akins, Paste-up Artist, for the illustrations and drawings used in the publication.

The printing staff of the State Department of Vocational and Technical Education is deserving of much credit for printing this publication.

Special appreciation is extended to Bob Patton, Assistant Coordinator, for the Oklahoma Curriculum and Instructional Materials Center for his counseling and assistance.

Clifton R. (Pete) Braker
Agriculture Curriculum Specialist

INTRODUCTION

Vocational education in agriculture has changed. Fewer students each year are returning to the farm and more are entering fields of related agricultural occupations. Teachers of vocational agriculture are faced with the problem of teaching subject matter areas in which they have limited experience and little or no available instructional materials. This has created a challenge for curriculum personnel. The Curriculum and Instructional Materials Center of the State Department of Vocational and Technical Education has accepted the challenge.

In 1968, the Basic Core Curriculum Guide was developed outlining four years of instruction in vocational agriculture. From this basic guide, units of instruction have been developed for Vocational Agriculture II to cover six sections: Agricultural Chemicals, Leadership, Supervised Experience Programs, Plant and Soil Science, Animal Science, and Agricultural Mechanics. The instructional units are designed to account for sixty percent of an instructor's time in teaching vocational agriculture. The remaining forty percent is left to the individual instructor according to the demands of his local community.

Use of This Publication

The approach taken in this publication is unique and quite new. Teachers, before attempting to teach from this material, should become familiar with it and should understand the writer's ideas. This introduction is for the teacher's benefit and explains the most effective use of the publication.

Instructional Units

Each instructional unit includes objectives, suggested activities, information sheets, assignment sheets, job sheets, transparency masters, a test, and answers to the test.

Objectives (White)

Included in each unit of instruction are measurable objectives. These objectives state the goals of the course in such a way that both teacher and student will know the changes in behavior expected to occur as a result of the instruction. In short, objectives are a means of providing a sense of direction and accomplishment for the student.

The measurable objectives are stated in two forms: Terminal Objectives stating the subject matter to be covered in a unit of instruction; Specific Objectives stating the performance of the student in order to reach the terminal objective. Specific objectives are most important in regard to teaching the unit. Before attempting to teach a unit, terminal and specific objectives must be explained to the student in order to tell him what is expected.

Suggested Activities (White)

Each unit of instruction has a Suggested Activities Sheet outlining steps to follow in accomplishing the specific objectives. The activities relate the duties of the instructor to the particular unit. Duties may vary according to the unit and usually include the following: provide students with information sheet and job sheets, make transparencies, discuss terminal and specific objectives, discuss information sheet, and give test. Teachers are encouraged to use any additional activities and means of accomplishing objectives.

Information Sheet (Green)

The information sheet contains essential facts necessary for the teaching of a unit of instruction. These sheets should be given to the student. Information sheets can be reproduced at the local school or ordered from the Curriculum Center.

Assignment Sheets (Tan)

Assignment sheets are included in units when necessary. An assignment sheet allows the student to practice a written skill, such as calculating board feet, before the evaluation is given.

Job Sheets (Blue)

Job sheets are included in units when necessary. A job sheet gives operations necessary to successfully complete a production job. It contains the name of the job, drawings, materials, equipment and tools needed, and procedures for completing a job.

Transparency Masters (White)

Transparency masters are charts, pictures, or illustrations printed for use in making overhead transparencies. These are included in units when necessary. A transparency should be made from the transparency master and be shown on an overhead projector to supplement the information.

Test (Yellow)

A test is included at the close of each unit of instruction to test for the specific objectives.

Answers to Test (Pink)

Test answers are provided for each unit. These may be used by the teacher and/or student for checking student achievement of the objectives.

Page Numbering System

Each section in this publication is assigned a specific letter: (A) Agricultural Chemicals; (B) Leadership, (C) Supervised Experience Programs; (D) Plant and Soil Science; (E) Animal Science, (F) Agricultural Mechanics. Pages are numbered consecutively within each section. If the page is available as a transparency master, TM appears at the bottom of the page.

(NOTE: This publication will provide unity of instruction throughout Oklahoma in teaching vocational agriculture. The effectiveness of the publication will depend on you as an instructor.)

AGRICULTURAL CHEMICALS UNIT I

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to name pests on which chemicals are used and list ways chemicals enter the body and safety rules to observe when using and storing chemicals. The student should be able to properly dispose of empty chemical containers and select proper protective clothing and accessories when using chemicals. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with agricultural chemicals to the correct definitions.
2. Name five major types of pests on which chemicals are used.
3. Select from a list items that all chemical labels must contain.
4. List three general safety rules to follow before attempting to use chemicals.
5. Explain in writing the responsibility of a land grant college in regard to agricultural chemicals.
6. Select from a list three benefits from using chemicals.
7. Describe three types of insecticides and how each works.
8. List three methods by which chemicals enter the body.
9. List three safety precautions to follow when storing chemicals.
10. List two means of disposing of empty chemical containers.
11. Select from a list proper clothing and accessories necessary for the protection of anyone handling chemicals.

AGRICULTURAL CHEMICALS
UNIT I

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information sheet.
- C. Make transparencies.
- D. Collect chemical container labels for use in the classroom.
- E. Discuss terminal and specific objectives.
- F. Discuss information sheet.
- G. Discuss chemical labels on containers.
- H. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Take additional notes.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this test:

- A. Objectives
- B. Information sheet
- C. Transparency masters
 1. TM 1-Key Words on Labels
 2. TM 2-Key Words on Labels (Continued)
 3. TM 3-Proper Clothing and Accessories

D. Test

E. Answers to test

II. References:

- A. Flora, Newton W. "Pesticides Can Be Used Safely." *OSU Extension Facts*. Stillwater: Oklahoma State University.
- B. _____ "Check Your Pesticide Labels." *OSU Extension Facts*. Stillwater: Oklahoma State University.
- C. _____ "Laws Governing Safe Use of Chemicals." *OSU Extension Facts*. Stillwater: Oklahoma State University.
- D. "Handling and Using Agricultural Chemicals Safely." Urbana, Illinois: Vocational Agriculture Service, University of Illinois.

AGRICULTURAL CHEMICALS
UNIT I

INFORMATION SHEET

I. Terms and definitions

- A. Nematode--Small roundworm which lives in the soil and frequently enters the plants through the roots
- B. Pesticide--Substance or mixture used for destroying or repelling such pests as insects, rodents, nematodes, weeds, and brush
- C. Herbicide--Chemical substance used to kill herbaceous plants
- D. Insecticide--Chemical substance used to kill or repel insects such as flies and grasshoppers
- E. Rodenticide--Chemical substance or mixture of substances used to control rats, mice, and other rodents
- F. Defoliant--Any substance or mixture of substances used to cause leaves or foliage to drop from plants, generally to facilitate harvesting
- G. Fungicide--Chemical substance used to control fungi
- H. Antibiotic--Any chemical or chemicals produced by living organisms that help alleviate or control bacterial diseases
- I. Plant regulator--Any substance or mixture of substances that affects growth rate or other behavior of plants through physiological action
- J. Poison--Substance which, if introduced into an organism in relatively small amounts, may chemically produce an injurious or deadly effect
- K. Toxicity--Degree of poisonousness of a substance
- L. Absorption--Process occurring when the material gains entry into the bloodstream
- M. Acute exposure--Inhalation or absorption of large amounts of chemicals in a short period of time
- N. Chronic exposure--Inhalation or absorption of relatively small amounts of poison over a long duration (days, months, or years)
- O. Hazard--Danger or probability that injury will result from the use of a substance in a given quantity and manner
- P. Safety--Practical certainty that injury will not result from the use of a given substance

INFORMATION SHEET

II. Major types of pests

- A. Weeds
- B. Insects
- C. Diseases
 - 1. Bacteria
 - 2. Viruses
 - 3. Fungi
- D. Rodents
- E. Nematodes

III. Items that all chemical labels must contain

- A. POISON, skull and crossbones on hazardous substances (Transparency 1)
- B. DANGER on highly toxic products (Transparency 1)*
- C. Caution or warning on products that can cause illness or injury (Transparency 2)
- D. Name and address of manufacturer
- E. Statement of net contents
- F. Ingredients
- G. Directions for use
- H. Precautionary statements for using
- I. Date of expiration
- J. Antidote

IV. Safety rules to follow before attempting to use chemicals

- A. Read labels before using
- B. Use only when necessary
- C. Use according to recommendation
- D. Avoid spray and dust drift

INFORMATION SHEET

- E. Keep away from livestock
- F. Cover feed and water containers when using

V. Land grant college's responsibility in regard to agricultural chemicals

- A. Research
- B. Development
- C. Dissemination of information

VI. Benefits from using chemicals

- A. Increases production
- B. Reduces loss caused from pests
- C. Controls undesirable vegetation
 - 1. Grass
 - 2. Weeds
 - 3. Brush
- D. Acts as defoliant

VII. Types of insecticides and how each works

- A. Stomach poison--Must enter the digestive tract of the insect before becoming effective
- B. Contact poison--Can enter the insect by means other than the digestive tract
- C. Repellent--Does not kill most insects although may injure certain types

VIII: Methods by which chemicals enter the body

- A. Absorption through the skin
- B. Swallowing

INFORMATION SHEET

- C. Absorption by breathing
- D. Absorption through the eyes

IX. Safety precautions for storing chemicals

- A. Store in original containers
- B. Store away from children
- C. Store away from feed
- D. Store in a cool, dry area
- E. Store in a locked cabinet

X. Means of disposing of empty containers

- A. Burning

(CAUTION: Hazardous fumes may be given off when burned.)

- B. Burying

XI. Proper protective clothing and accessories (Transparency 3)

- A. Rubber gloves
- B. Rubber boots
- C. Safety goggles
- D. Breathing apparatus (respirator)
- E. Head protection
- F. Rubber apron or slicker suit

- m. Inhalation or absorption of relatively small amounts of poison over a long duration (days, months, or years)
- n. Substance or mixture used for destroying or repelling such pests as insects, rodents, nematodes, weeds, and brush
- o. Chemical substance used to kill herbaceous plants
- p. Chemical substance or mixture of substances used to control rats, mice, and other rodents

2. Name five major types of pests on which chemicals are used.

a.

b.

c.

d.

e.

3. Select from the list below the items that all chemical labels must contain by placing an "X" in the blanks.

- a. Antidote
- b. Ingredients
- c. Inventor's name
- d. Date of expiration
- e. Date chemicals were identified
- f. Directions for use
- g. Date container was made
- h. Name and address of manufacturer
- i. Date manufactured
- j. Statement of net contents
- k. Cost per pound of chemical

4. List three general safety rules to follow before attempting to use chemicals.

a.

b.

c.

5. Explain in writing the responsibility of a land grant college in regard to agricultural chemicals.

6. Select from the list three benefits from using chemicals by placing an "X" in the blanks.

a. Eradicates disease

b. Increases production

c. Eradicates screwworm

d. Controls undesirable vegetation

e. Acts as defoliant

7. Describe three types of insecticides and how each works.

a.

b.

c.

8. List three methods by which chemicals enter the body.

a.

b.

c.

9. List three safety precautions to follow when storing chemicals.

a.

b.

c.

10. List two means of disposing of empty chemical containers.

a.

b.

11. Select from the list below proper clothing and accessories necessary for the protection of anyone handling chemicals by placing an "X" in the blanks.

_____ a. Rubber gloves

_____ b. Clean water

_____ c. Safety goggles

_____ d. Rubber apron or slicker suit

_____ e. Head protection

_____ f. Breathing apparatus (respirator)

**BECOMING A GOOD LEADER
UNIT I****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to define leadership and list characteristics of a good leader. He should be able to discuss the importance of being a good leader and list values of having leadership abilities. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Define leadership.
2. List five characteristics of a good leader.
3. Discuss in a short paragraph the importance of being a good leader.
4. Select from a list steps to take in order to become a good leader.
5. List five values of having leadership abilities.
6. List seven items in the FFA code of ethics.
7. Rate himself as a leader after taking the Personality Self-Rating Scale.
8. Select leaders within his community, listing traits that make them leaders.

**BECOMING A GOOD LEADER
UNIT I****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide student with objective sheet.
- B. Provide student with information sheet.
- C. Discuss terminal and specific objectives.
- D. Discuss information and assignment sheets.
- E. Help evaluate the student according to the Personality Self-Rating Scale.
- F. Use outside resource persons knowledgeable in the area of leadership.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet and take notes.
- C. Complete assignment sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Assignment sheets
 1. Assignment Sheet #1--Personality Self-Rating Scale
 2. Assignment Sheet #2--Selecting Leaders Within Your Community
- D. Test
- E. Answers to test

II. References:

BECOMING A GOOD LEADER UNIT I

INFORMATION SHEET

- I. Leadership-Combination of qualities which inspire confidence, draw others toward the leader, and cause them to follow
- II. Characteristics of a good leader
 - A. Faith in people and desire to work with them
 - B. Poise and confidence
 - C. Preplanning of the program so the meeting moves with dispatch
 - D. Interested and alert
 - E. Democratic in dealing with group members
 - F. Fair and impartial
 - G. Patient, optimistic, and gives credit for work done
 - H. Sensitive to the individuals and recognizes individual differences
 - I. Sense of humor to relieve the tension of a serious meeting
 - J. Realization that his responsibility is to let others share responsibilities
 - K. Belief in the organization
 - L. Desire to be a team member
- III. Importance of being a good leader
 - A. Leadership needed in all fields
 - B. Challenge to learn leadership
 - C. Respect created for others
 - D. Maturation of individual
- IV. Steps in becoming a good leader
(NOTE: Leaders are made, not born.)
 - A. Study qualities of a good leader
 - B. Evaluate strong and weak points of oneself

INFORMATION SHEET

- C. Become a good follower
- D. Develop a plan for training oneself as a leader

V. Values of having leadership abilities

- A. Education
- B. Respect
- C. Advancement in an occupation
- D. Financial betterment
- E. Pride
- F. Security

VI. FFA code of ethics

- A. Dress neatly and appropriately for the occasion
- B. Show respect for rights of others and be courteous at all times
- C. Be honest and do not take unfair advantage of others
- D. Respect the property of others
- E. Refrain from loud, boisterous talk, swearing, and horseplay
- F. Demonstrate sportsmanship in the show ring, judging contests, and meetings
- G. Be modest in winning and generous in defeat
- H. Attend meeting promptly and respect the opinions of others in discussion
- I. Take pride in the organization, activities, farming programs, exhibits, and the occupation of farming and ranching
- J. Share with others the experiences and knowledge gained by attending state and national meetings

BECOMING A GOOD LEADER
UNIT I

ASSIGNMENT SHEET #1-PERSONALITY SELF-RATING SCALE

Circle the appropriate number following each trait. Four is outstanding, three is above average, two is average, one is poor. Total your score on the following page.

- | | | | | | |
|-----|--|---|---|---|---|
| 1. | Do I maintain a well-groomed appearance? | 1 | 2 | 3 | 4 |
| 2. | Do I have a pleasing voice? | 1 | 2 | 3 | 4 |
| 3. | Is my posture alert and poised? | 1 | 2 | 3 | 4 |
| 4. | Is my disposition cheerful? | 1 | 2 | 3 | 4 |
| 5. | Do I make friends easily? | 1 | 2 | 3 | 4 |
| 6. | Do I exert a positive leadership? | 1 | 2 | 3 | 4 |
| 7. | Am I generally thoughtful of the feelings of others? | 1 | 2 | 3 | 4 |
| 8. | Is my enthusiasm sincere and contagious? | 1 | 2 | 3 | 4 |
| 9. | Do I persevere until I achieve success? | 1 | 2 | 3 | 4 |

TOTAL SCORE

ASSIGNMENT SHEET #1

Evaluation of Assignment Sheet #1

Evaluate your scores--If your score totaled over 100, your personality rating is definitely superior. If you've been honest with yourself, you are among the people who are most likely to succeed. A score of 90 - 100 is above average; 75 - 90 is average; below 75 shows plenty of room for improvement. How did you rate?

5. List five values of having leadership abilities.

- a.
- b.
- c.
- d.
- e.

6. List seven items in the FFA code of ethics.

- a.
- b.
- c.
- d.
- e.
- f.
- g.

7. Rate yourself as a leader after taking the Personality Self-Rating Scale.

8. Select leaders within your community, listing traits that make them leaders.

(NOTE: If activities 7 and 8 have not been accomplished prior to the test, ask the instructor when they should be completed.)

BECOMING A GOOD LEADER
UNIT 1

ANSWERS TO TEST

1. Combination of qualities which inspire confidence, draw others toward the leader, and cause them to follow
2. Any five of the following:
 - a. Faith in people and desire to work with them
 - b. Poise and confidence
 - c. Preplanning of the program so the meeting moves with dispatch
 - d. Interested and alert
 - e. Democratic in dealing with group members
 - f. Fair and impartial
 - g. Patient, optimistic, and gives credit for work done
 - h. Sensitive to the individuals and recognizes individual differences
 - i. Sense of humor to relieve the tension of a serious meeting
 - j. Realization that his responsibility is to let others share responsibilities
 - k. Belief in the organization
 - l. Desire to be a team member
3. Discussion should include:
 - a. Leadership needed in all fields
 - b. Challenge to learn leadership
 - c. Respect created for others
 - d. Maturation of individual
4. a, b
5. Any five of the following:
 - a. Education
 - b. Respect

- c. Advancement in an occupation
 - d. Financial betterment
 - e. Pride
 - f. Security
6. Any seven of the following:
- a. Dress neatly and appropriately for the occasion
 - b. Show respect for rights of others and be courteous at all times
 - c. Be honest and do not take unfair advantage of others
 - d. Respect the property of others
 - e. Refrain from loud, boisterous talk, swearing, and horseplay
 - f. Demonstrate sportsmanship in the show ring, judging contests, and meetings
 - g. Be modest in winning and generous in defeat
 - h. Attend meeting promptly and respect the opinions of others in discussion
 - i. Take pride in the organization, activities, farming programs, exhibits, and the occupation of farming and ranching
 - j. Share with others the experiences and knowledge gained by attending state and national meetings
7. Evaluated to the satisfaction of the instructor.
8. Evaluated to the satisfaction of the instructor.

IMPORTANCE OF PUBLIC SPEAKING
UNIT II

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to recognize the advantages of public speaking and relate these advantages to his vocational agriculture training. He should be able to listen to a speech and evaluate what the speaker is saying and be able to use discussion groups as a means of improving his speaking ability. This knowledge will be evidenced through demonstration, and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with public speaking to the correct definition.
2. Select from a list of alternatives the percentage of time an individual spends communicating.
3. Name four ways in which public speaking will benefit him today as a student and later on as a leader in the community.
4. Name three reasons for public speaking.
5. Name four advantages of being able to deliver a speech.
6. Distinguish between good speaking and bad speaking when given an example of each.
7. Match poor habits of speaking to the correct means of improvement.
8. Select from a list three key characteristics that will attract the attention of a prospective employer.
9. Name three advantages of being part of a group discussion as related to his ability to be a speaker.
10. Name the four requirements of a group discussion.
11. Match the types of discussion groups to the correct definition.
12. Name five rules to follow when organizing a group discussion.
13. Name three ways to improve his speaking ability.
14. Name five factors to consider when evaluating someone as a speaker.

15. Match the speaker's goals to the listener's response.

16. Demonstrate the ability to:

- a. Participate in a group discussion.
- b. Evaluate a speaker.

IMPORTANCE OF PUBLIC SPEAKING UNIT II

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information and assignment sheets.
 - C. Discuss terminal and specific objectives.
 - D. Discuss information and assignment sheets.
 - E. Inform students of any speeches being given in the community.
 - F. Identify the type of discussion group and select the topic for the students to use in the discussion.
 - G. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet.
 - C. Participate in group discussion and turn in assignment sheet.
 - D. Attend a meeting where a speech is being given and evaluate the speaker.
 - E. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Assignment sheets
 1. Assignment Sheet #1--Participate in a Group Discussion
 2. Assignment Sheet #2--Evaluate a Speaker

D. Test

E. Answers to test

II. Reference--Oliver, Robert T. and Rupert L. Cortright. *Effective Speech*. New York: Holt, Rinehart, and Winston.

IMPORTANCE OF PUBLIC SPEAKING
UNIT II

INFORMATION SHEET

I. Terms and definitions

- A. Speech--Form of symbolism; expression of thought, language, voice, and action; product of the total personality
- B. Communication--Two-way process of speaking and listening
- C. Communicative speech--Speech that is not addressed at or toward its hearers; a talk with and to its listeners
- D. Rapport--Sympathetic relationship of mutual understanding and feeling
- E. Circular response--Mechanism through which rapport is established and maintained
- F. Listening--More than merely hearing; attentive, active-copartnership role in any act of oral communication
- G. Discussion--Learning process; process of sharing the information and experiences of a group
- H. Debate--Opportunity for presenting an argument for and against a proposed plan of action so that the participants and listeners may make up their minds and be prepared to vote on a certain issue

II. Communicative activities of individuals

- A. Nine percent in writing
- B. Sixteen percent in reading
- C. Thirty percent in speaking
- D. Forty-five percent in listening

III. Benefits of public speaking

- A. Builds friendship
- B. Exchanges information
- C. Gives or asks for orders
- D. Entertains others
- E. Displays wit, intelligence, or information

INFORMATION SHEET

IV. Reasons for public speaking

- A. Expression.
- B. Communication
- C. Social control

V. Advantages of speech delivery

- A. Improve the art of speaking
- B. Develop clearer understanding of oneself
- C. Develop better understanding of other people
- D. Develop more logical, orderly habits of thinking
- E. Develop skill in evaluating what one hears

VI. Good speaking vs bad speaking.

- A. Good speaking - Occurs when the speaker is communicating with an audience
- B. Bad speaking - Occurs when the speaker is talking at the audience

VII. Poor habits of speaking Means of improvement

- | | |
|--|-------------------------------------|
| A. Careless preparation | A. Research and practice speech |
| B. Boastfulness | B. Accuracy; being oneself |
| C. Fault-finding | C. Accept constructive criticism |
| D. Unsupported facts | D. Know what one is talking about |
| E. Dull voice | E. Be enthused and pleasant |
| F. Nervous, rapid speech and/or pacing | F. Calm and steady rate of delivery |

* VIII. Key characteristics that will attract attention

- A. Appearance
- B. Personality
- C. Speech

INFORMATION SHEET

- IX. Advantages of being part of group discussion
- A. Increases conversational skills
 - B. Develops skills in decision-making
 - C. Contributes directly to improvement in public speaking
- X. Requirements of group discussion
- A. Phrasing each question for discussion
 - B. Organizing the discussion
 - C. Leading the discussion
 - D. Participating in discussion
- XI. Types of discussion groups
- A. Round table--Group of individuals seated around a table; each member responds directly to the question
 - B. Lecture form--Expert on the subject gives a lecture; discussion comes directly from the audience in the form of questions
 - C. Panel discussion--Panel of experts on the subject sits on a platform and discusses the questions among themselves while the audience listens
 - D. Debate form--Similar to the lecture form; usually presents both sides of the issue and questions
 - E. Symposium--Group of short talks are presented by experts on various phases of the subject or from different viewpoints which can later be opened to the listeners
 - F. Personal interview--Individual uses the principles of both conversation and discussion in conducting personal interviews for applying for a job
- XII. Rules to follow when organizing a group discussion
- A. Define the topic clearly
 - B. Agree upon the principles or objectives
 - C. Analyze question thoroughly
 - D. Determine how far differences in agreements may extend
 - E. Summarize what was discussed

INFORMATION SHEET

XIII. Ways to improve speaking ability

- A. Speak to satisfy oneself
- B. Relate speech to individual personality
- C. Make speech meaningful to audience

XIV. Factors to consider when evaluating a speech

- A. Is what the speaker saying true?
- B. Does speech increase audience respect?
- C. Is the speech audience centered?
- D. Does speech progress from introduction to conclusion?
- E. Is audience listening to the speech or the speaker?

XV. Speaker's goals

- A. To inform
- B. To induce belief
- C. To move to action
- D. To inspire
- E. To entertain

Listener's responses

- A. To learn
- B. To be convinced
- C. To do what is urged
- D. To feel inspired
- E. To enjoy

IMPORTANCE OF PUBLIC SPEAKING UNIT II

ASSIGNMENT SHEET #1--PARTICIPATE IN A GROUP DISCUSSION

You have been assigned to a discussion group which will discuss a topic selected by the instructor. Using the information previously studied, organize the discussion and take an active part with the group members. In the space provided, write the part of the discussion that you will be responsible for presenting. At the close of the discussion, write a short paragraph concerning your own personal feelings toward the benefits of a discussion group.

Topic to be discussed: _____

Group member's discussion part: _____

Evaluate the discussion group by answering the following questions.

1. Was the discussion organized? _____
2. Was the discussion properly led? _____
3. Did each group member participate in the discussion? _____
4. Was the topic clearly defined? _____
5. Did the group members agree upon the principles or objectives of the discussion? _____
6. Did the leader of the discussion group summarize what was discussed? _____

Benefits of discussion groups: _____

IMPORTANCE OF PUBLIC SPEAKING
UNIT II

ASSIGNMENT SHEET #2-EVALUATE A SPEAKER

Select someone who is speaking in your local community and, by using the questions below, rate his skill as a speaker. If no such person is available within your community, rely on other means such as radio and television. After listening to the speech, complete the evaluation form below and turn in to the instructor for his evaluation:

1. Who was the speaker? _____
2. Speech was given to what type of audience? _____
3. Was the speech a communication speech? _____
4. Were there any poor habits of speaking detected? _____ If yes, check the habit or habits.
 - a. Careless preparation _____
 - b. Boastfulness _____
 - c. Fault-finding _____
 - d. Unsupported facts _____
 - e. Dull voice _____
 - f. Rapid speaking _____
5. Which of the following were goals of the speaker as determined by the text of his speech? Place an "X" in the correct blank(s).
 - a. To inform _____
 - b. To induce belief _____
 - c. To move to action _____
 - d. To inspire _____
 - e. To entertain _____
6. Was the speech audience centered? _____
7. Did you agree with what the speaker was saying? _____
8. Discuss in a short paragraph, your overall opinion of the speech and your impression of the speaker. (Use back of this page if necessary.)

IMPORTANCE OF PUBLIC SPEAKING UNIT II

TEST

1. Match the terms on the right to the correct definition.

- | | |
|--|--------------------------------|
| <p><input type="checkbox"/> a. Opportunity for presenting an argument for, and against a proposed plan of action so that the participants and listeners may make up their minds and be prepared to vote on a certain issue</p> | <p>1. Speech</p> |
| <p><input type="checkbox"/> b. Two-way process of speaking and listening</p> | <p>2. Rapport</p> |
| <p><input type="checkbox"/> c. Learning process; process of sharing the information and experiences of a group</p> | <p>3. Communication</p> |
| <p><input type="checkbox"/> d. Form of symbolism; expression of thought, language, voice, and action; product of the total personality</p> | <p>4. Debate</p> |

a.

b.

c.

d.

4. Name three reasons for public speaking.

a.

b.

c.

5. Name four advantages of being able to deliver a speech.

a.

b.

c.

d.

6. Distinguish between good speaking and bad speaking by placing an "X" before the example of good speaking.

a. Occurs when the speaker is talking at the audience

b. Occurs when the speaker is communicating with an audience

7. Match the poor habits of speaking on the right to the correct means of improvement.

a. Accept constructive criticism

b. Know what one is talking about

c. Research and practice speech

d. Accuracy; being oneself

e. Nervous, rapid speech and/or pacing

f. Dull voice

1. Careless preparation

2. Boastfulness

3. Fault-finding

4. Unsupported facts

5. Calm and steady rate of delivery

6. Be enthused and pleasant

8. Select from the list below three key characteristics that will attract the attention of a prospective employer, by placing an "X" in the blanks.

- a. Intelligence
- b. Appearance
- c. Height
- d. Speech
- e. Age
- f. Personality

9. Name three advantages of being part of a group discussion as related to your ability to be a speaker.

- a.
- b.
- c.

10. Name the four requirements of a group discussion.

- a.
- b.
- c.
- d.

11. Match the types of discussion groups on the right to the correct definition.

- | | |
|--|-----------------------|
| <input type="checkbox"/> a. Individual uses the principles of both conversation and discussion in conducting personal interviews for applying for a job | 1. Round table |
| <input type="checkbox"/> b. Group of individuals seated around a table; each member responds directly to the question | 2. Lecture form |
| <input type="checkbox"/> c. Group of short talks are presented by experts on various phases of the subject or from different viewpoints which can later be opened to the listeners | 3. Panel discussion |
| | 4. Debate form |
| | 5. Symposium |
| | 6. Personal interview |

- _____ d. Expert on the subject gives a lecture; discussion comes directly from the audience in the form of questions
- _____ e. Similar to the lecture form; usually presents both sides of the issue and questions
- _____ f. Panel of experts on the subject sits on a platform and discusses the questions among themselves while the audience listens

12. Name five rules to follow when organizing a group discussion.

- a.
- b.
- c.
- d.
- e.

13. Name three ways to improve your speaking ability.

- a.
- b.
- c.

14. Name five factors to consider when evaluating someone as a speaker.

- a.
- b.
- c.
- d.
- e.

15. Match the speaker's goals on the right to the correct listener's response.

Listener's responses	Speaker's goals
_____ a. To learn	1. To entertain
_____ b. To enjoy	2. To inform,
_____ c. To be convinced	3. To induce belief
_____ d. To feel inspired	4. To move to action
_____ e. To do what is urged	5. To inspire

16. Demonstrate the ability to:
- a. Participate in group discussion.
 - b. Evaluate a speaker.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

d. Does speech progress from introduction to conclusion?
e. Is audience listening to the speech or the speaker?
15. a. 2
b. 1
c. 3
d. 5
e. 4
16. Performance skills will be evaluated to the satisfaction of the instructor.

DEVELOPING AND DELIVERING A SPEECH UNIT III

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to name the intent of a speech when listening to or reading a text of a speech. He should be able to select, gather information, and deliver a three- to eight-minute speech on some phase of vocational agriculture training. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with developing and delivering a speech to the correct definition.
2. Name the five general intents of a speech.
3. Name the steps in developing ideas concerning a speech.
4. Name the "must do" factors for beginning speakers when preparing a speech.
5. Name the three factors to remember when recording material for a speech.
6. State the rules for using quotations in a speech.
7. Name three important factors to remember when using statistics in a speech.
8. Select the most frequent error used by beginning speakers when given a list of alternatives.
9. Name three factors that facilitate speech development.
10. Distinguish between a topical and a sentence outline when given a definition of each.
11. Name four reasons for outlining a speech.
12. Name the three principal parts of an outline, arranging them in order of development.
13. Name four factors used when developing the main ideas of a speech.
14. Discuss in a short paragraph how the introduction is used in a speech.
15. Discuss in a short paragraph how the conclusion should blend with the speech.

16. Name three ways of making a good first impression when giving a speech.
17. Name five ways of developing and adding meaning to the delivery.
18. Name three reasons for using gestures in public speaking.
19. Name three ways of developing the proper delivery.
20. Demonstrate the ability to:
 - a. Read a speech and identify the introduction, body, and conclusion.
 - b. Select a speech topic from the different divisions of the FFA public speaking contest, conduct research on the subject, and write the information.
 - c. Write a sentence outline of the speech from the information collected.
 - d. Write and deliver a three- to eight-minute speech to the class.

**DEVELOPING AND DELIVERING A SPEECH
UNIT III****SUGGESTED ACTIVITIES**

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information and assignment sheets.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information and assignment sheets.
 - F. Inform student of any speeches being given in the community.
 - G. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet.
 - C. Complete all assignment sheets and return to instructor for his evaluation.
 - D. Present a three- to eight-minute speech to the class.
 - E. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives

DEVELOPING AND DELIVERING A SPEECH
UNIT III

INFORMATION SHEET

- I. Terms and definitions
 - A. Paraphrase--Process of taking a quotation and breaking it down into one's own words
 - B. FFA public speaking contest--Contest held on the local, county, district, state, regional, and national levels where a student can demonstrate his ability in developing skills in public speaking
 - C. Outline--Logical organization of ideas which forms the framework of any story, essay, or other form of literature
 - D. Gesture--Use of arm or body motions as a means of expressing or emphasizing an idea, an integral part of speech
- II. General intents of a speech
 - A. To inform
 - B. To induce belief
 - C. To move to action
 - D. To inspire
 - E. To entertain
- III. Developing ideas concerning speech
 - A. Start with what one knows
 - B. Research available references
 - C. Record speech material
- IV. "Must do" factors for beginning speakers when preparing a speech
 - A. Write it
 - B. Label it
 - C. File it

INFORMATION SHEET

V. Factors for recording material

- A. Identify reference source
- B. Record passage accurately
- C. Record material as a single and complete unit

VI. Rules for using quotations

- A. Do not use several quotations in speech

(NOTE: Audience wants your opinion, not some unknown author's opinion.)

- B. Use quotations in complete text

VII. Factors to remember when using statistics

- A. Source of information
- B. Date of information
- C. Representative value

VIII. Erequent error of beginning speaker--Selecting speech topics that are too broad

IX. Factors that facilitate speech development

- A. Make the speech clear

1. Make it clear to yourself
2. Phrase it clearly for your audience
3. Clarify new idea further by definition

- B. Make the idea arresting

1. Should be striking, different, and unusual
2. Should be personal
3. Should be concrete

- C. Make the idea significant

65

INFORMATION SHEET

- D. Make the idea familiar--Get acquainted with audience
- E. Make the idea attractive--Provide the audience with an opportunity to hear what is being said
- F. Make the idea inevitable--Speak as though the idea has to happen
- G. Make the idea appealing

X. Types of outlines

- A. Sentence--Clearer and more complete form of outline; gives a more detailed statement
- B. Topical outline--Key words or phrases that express a thought

XI. Reasons for outlining speech (Transparency 1)

- A. Reveal strength and weakness
- B. Aid in organization and development of ideas
- C. Reveal the proportion of the speech
- D. Serve as an invaluable time-saver

XII. Principal parts of outline (Transparencies 2 and 3)

- A. Introduction
- B. Body--Main idea of the speech; should be developed first when preparing a speech
- C. Conclusion

XIII. Factors used when developing main ideas

- A. Limited in numbers
- B. Stand out clearly and emphatically
- C. Adequate to support the theme
- D. Arranged in the order most effective for the audience

XIV. Introduction of speech--Attractive and motivating means of introducing the subject on which one is going to speak

(NOTE: This is a process of telling the audience what one is going to say.)

XV. Conclusion--Combining the various threads of the speech in one final effort to complete the speaker's purpose (Transparency 4)

(NOTE: Tell the audience what has been discussed.)

INFORMATION SHEET

XVI. Ways of making a good first impression

- A. Step up to lectern briskly and confidently
- B. Stand behind lectern in a comfortable but erect position
- C. Be clearly heard with pleasant volume
- D. Let all important actions, objects, and aids be clearly seen
- E. Gain and hold audience attention
- F. Recognize that some fear is normal and do not get upset

XVII. Developing and adding meaning to delivery

- A. Eye contact
- B. Gestures
 1. Hand
 2. Facial
- C. Posture
- D. Movement
- E. Voice control

XVIII. Reasons for using gestures

- A. Signify specific thought
- B. Imply attitudes or moods
- C. Express thoughts and feelings

XIX. Ways of developing proper delivery

- A. Stand in front of mirror
- B. Use tape recorder
- C. Present speech to someone

INFORMATION SHEET

XX. FFA public speaking contest topics

Speech Division	Sponsor	Context	Time	Resource Materials
FFA Public Speaking	National FFA Foundation	Any field related to Agri. and FFA	6-8 min.	FFA Manual, National Assn. Materials
Bankers	Oklahoma Bankers Assn.	Any phase of banking	6-8 min.	Local bank, Oklahoma Bankers Assn.
Co-op	Okla. Agri. Co-Op Council	Aspect of Co-Op mgnt.	6-8 min.	Okla. Agri. Co-Op Council, Stillwater, Oklahoma
Soil Conservation	Okla.-Assn. of Soil and Water Conservation Districts	Any phase of soil and water mgnt.	6-8 min.	County Soil Conservation Office, State SCS Office
<u>Greenhand Limited to Freshmen only</u>	Johnny McElroy 1967-68 State FFA President	Any field related to Agri. and FFA	6-8 min.	Manual, National Convention Proceedings, National Future Farmers Mag.
Dairy	American Dairy Assn. of Okla.	Any phase of dairy products, promotion, and sales	6-8 min.	Okla. Dairy Assn. of Milk Producers, Okla. City, Dairy Processing Plants
Farmers Union	Farmers Union	Any phase of Agriculture; speech must mention Farmers Union	3-5 min.	Local Farmers Union Rep. Office, Agri. Farm Mag.

(NOTE: For their speeches contestants may choose any current subject of agricultural nature and of general interest to the public. The speech must be tied closely to the services and functions of the speech division sponsor.)

JUDGES SCORE SHEET STATE PUBLIC SPEAKING CONTEST-FUTURE FARMERS OF AMERICA

PART I FOR SCORING AND COMPOSITION

Items to be scored	Points Allowed	Points Awarded Contestants						
		1	2	3	4	5	6	7
1. CONTENT OF MANUSCRIPT Importance and appropriateness of subject Suitability of the material used Accuracy of the statements included Evidence of purpose Completeness and accuracy of bibliography	200							
2. COMPOSITION OF SPEECH - MANUSCRIPT Organization of content Units of thought Logical development Language used Sentence structure Accomplishment of purpose	100							

PART II FOR SCORING DELIVERY OF THE PRODUCTION

Items to be scored	Points Allowed	Points Awarded Contestants						
		1	2	3	4	5	6	7
1. VOICE Pitch Force Articulation Pronunciation Quality	100							
2. STAGE PRESENCE Personal appearance Poise and body posture Ease before audience Attitude Confidence Personality	100							
3. POWER OF EXPRESSION Fluency Emphasis Sincerity Directness Communicative ability Conveyance of thought and meaning	200							
4. RESPONSE TO QUESTIONS Ability to satisfactorily answer the questions on the speech which are asked by the judges indicating originality, familiarity with subject, and ability to think quickly	200							
5. GENERAL EFFECT Extent to which the speech was interesting, understandable, convincing, pleasing, and held attention	100							
TOTAL	1000							
Less time each minute	20							
GRAND TOTALS								
Numerical or Final placing of contestants								

69

CONTESTANT'S CERTIFICATION
FUTURE FARMERS OF AMERICA--PUBLIC SPEAKING CONTESTS

I hereby certify that I meet all the eligibility requirements for participation in the state FFA public speaking contests for the current year as set forth by the boards of student officers and directors. My speech entitled

_____ in the _____ division is the result of my own effort and ability. It is understood that I am encouraged to utilize all available training facilities of my local school in developing my speaking abilities and that I may obtain facts and working data from any source. However, in securing information such as direct quotes or phrases, specific dates, figures, or other materials, such must be marked in "quote" in the manuscript and are identified in the bibliography at the end of the manuscript. Failure to do so represents plagiarism and will automatically lead to my disqualification.

DATE: _____ SIGNED: _____

(Contestant's full signature)

APPROVED _____
 (Local Advisor)

IMPORTANT: This form must accompany four double-spaced typewritten copies of your speech to the person in charge of the district or state public speaking contests.

70

What is an Outline ?

A SKELETON

OR A FRAME

An Outline Forms The Framework Of A Story, Essay, Or Speech.

00071

TM

What Should an Outline Look Like?

I. INTRODUCTION

- A. Relationship establisher
- B. Interest gainer

II. MAIN IDEA

- A. Revelation of central thought
- B. Reason for giving this talk

III. BODY

A. First main point

1. Subheading--Development of point

- a. Supporting idea
- b. Further support

2. _____

B. Second main point

1. _____

- a. _____

- b. _____

2. _____

IV. CONCLUSION

- A. Summary or restatement
- B. Final punch line

Principal Parts of an Outline

- I. INTRODUCTION : Arouses interest in you and indicates your appreciation of the audience.
- II. MAIN IDEA : Lets the audience know what they are to hear about and prepares them for good listening.
- III. BODY : Develops the main idea.
- IV. CONCLUSION : Summarizes, reviews, urges action, or gains respect for ideas expressed.

00073

Conclusion

PURPOSES OF A CONCLUSION:

- A. To Give A Feeling of Finality to Talk
- B. To Clinch Arguments
- C. To Inspire Action or Respect for Ideas

WHEN FINISHED

00000

DEVELOPING AND DELIVERING A SPEECH UNIT III

ASSIGNMENT SHEET #1--READ A SPEECH

Read the speech below and when completed with the reading, identify the introduction, body, and conclusion. This may be accomplished by writing a short discussion of how well you believe the three parts were written. When completed, return to instructor for his evaluation.

A THING CALLED LEADERSHIP by Speaking Winner - First Place National FFA Convention Kevin Hall

I'd like to relate to you a story of a young boy who, when entering high school, had a burning desire to participate in school athletics. He was not the same as you and me, however, for an early childhood accident left him without the use of his arms. They hung limp at his sides, permanently, crippled. He couldn't play baseball, football, or basketball. Wrestling and soccer were not for him. But there was one sport he could participate in - track.

In his sophomore, junior, and senior years he practiced hard after school with the track squad, but he never ran in a race. He wasn't good enough! Finally, at the last meet of the year, one of his teammates took ill suddenly and was unable to run. The boy of our story went to the coach and asked to be allowed to run in his teammate's place. Rather than lose the race by default, the coach granted permission, and as the runners took their positions in the blocks, a strange hush fell over the crowd. The gun went off, and as the runners shot up out of the blocks and down the track, our boy was last. He was last going around the first turn and last going down the far side, with his arms dangling pitifully at his sides while the other sprinters constantly enlarged the lead. As this boy started around the last turn he lost his balance, tripped, and fell. He got up without the use of his arms and again started to run. As he approached the finish line, the audience stood and cheered, many with tears in their eyes.

As he crossed the finish line, not only his teammates but also his competitors greeted him and hoisted him upon their shoulders and paid tribute to him. This boy had drive; he had ambition, he had courage; he had a goal. And it is these same four qualities that are characteristic of a successful FFA member and of a leader.

But what is this thing called leadership? Leadership has almost as many definitions as there are people in the world. As defined by *Webster's New World Dictionary*, leadership is the "ability to lead." As outlined in the inspirational book *Forward FFA*, leadership in an individual is that combination of qualities and attributes that radiates confidence, inspires others, and causes others to follow him.

Some people accept the philosophy that leaders are born, not made. Others believe that leaders are made, not born. I believe that no man is born a leader, but that every man is born with the potential of leadership. Not every man is capable of becoming an outstanding leader, but every man has a degree of leadership ability that should be developed and put to work.

Picture, if you would, a set of concentric circles. In the center of these circles we place a dot. The dot represents individuals, and the circles represent the degree of actual limits of leadership ability.

00075

ASSIGNMENT SHEET #1

Those with lesser ability lie within the first circle, those with more ability come within the second circle, and so on. It's our responsibility to push toward our potential to reach for our ultimate capability - this should be our goal.

We may never reach the outer circle - few, if any, will. But it is there for us to strive toward each day, week, month, year and for our lifetime. Our world, our environment and its problems are changing constantly and so will our potential.

Some worthy advice to young leaders and FFA members who are striving for this lifetime goal can be found in the words of Calvin Coolidge, who said:

"Nothing can take the place of persistence,
Talent will not, nothing is more common than unsuccessful men
with talent,
Education will not, the world is full of educated derelicts,
Genius will not, unawarded genius is almost a proverb.
Persistence and perseverance alone are omnipotent.
The slogan 'Press On' has solved and always will solve the problems
of the human race."

W.H. Danforth, a great leader, wrote in his book *I Dare You*, "I dare you to be yourself, I dare you to do your best, I dare you to do better tomorrow than you have done today."

Today's youths are tomorrow's leaders - and today's FFA members are not only going to replace those down on the farm and in other agricultural positions, but many are destined to be leaders as well. At the rate our world is changing and with the growing complexity of our problems, tomorrow's leaders will have to be more efficient, better educated, and better citizens. They will have to be more knowledgeable about our environment, more aware of our country's problems, more concerned with the world, but, most of all, tomorrow's leaders will have to be squares! Squares, you ask? Because you connote square to be a degrading term or insult. But doesn't it all depend on your definition of the word square? Back in Mark Twain's day, square was one of the finest words in the English language. You gave a man a square deal if you were honest. You gave him a square meal if he were hungry. You stood foursquare for your rights and square against all unjust oppression. And if you were out of debt you were square with the world, and then you could look your fellowman square in the eye. But this word square has been badly bent and misshapen, and today everyone knows what a square is:

A square is someone who volunteers when he doesn't have to; someone who starts a job and completes it to the best of his ability. Someone who has the courage to step out and take command; someone who helps his neighbor and cooperates with his fellowman. A square not only preaches the Golden Rule but practices it. This is the kind of person I picture as a leader.

So the next time someone calls you square for going to church on Sunday, for saluting your flag, for helping your neighbor, for having the drive, the ambition, the courage to overcome any obstacles on the way to your goal, be proud you are given that distinction, for tomorrow the world will call upon the squares to solve the problems and assume the positions of leadership!

(NOTE: Taken from the 1970 Proceedings of the 43rd National Convention of the Future Farmers of America.)

00076

DEVELOPING AND DELIVERING A SPEECH
UNIT III

ASSIGNMENT SHEET #2-SELECT SPEECH TOPIC

Study closely the different divisions of the FFA public speaking contest. After you have finished, select a topic on which you would like to speak. Using the identified references, conduct as much research as possible on the topic. When completed, visit with the instructor about additional information. The research should be recorded below.

DEVELOPING AND DELIVERING A SPEECH
UNIT III

ASSIGNMENT SHEET #3-WRITE SENTENCE OUTLINE ON SELECTED TOPIC

At this point, you should begin to structure your speech in order to develop meaning and clarification. By using the information you have collected, write a sentence outline. When completed, have the instructor evaluate it and discuss means of improvement.

00078

DEVELOPING AND DELIVERING A SPEECH
UNIT III

ASSIGNMENT SHEET #4-WRITE AND DELIVER A SPEECH

Using the sentence outline written previously, write a three- to eight-minute speech. When finished, have the instructor evaluate it. Study the manuscript and be able to present the context orally. The space provided below may be used for writing the speech.

00079

DEVELOPING AND DELIVERING A SPEECH UNIT III

TEST

1. Match the terms on the right to the correct definition.

- | | |
|---|--|
| <p>_____ a. Contest held on the local, county, district, state, regional, and national levels where a student can demonstrate his ability in developing skills in public speaking</p> <p>_____ b. Logical organization of ideas which forms the framework of any story, essay, or other form of literature</p> <p>_____ c. Use of arm or body motions as a means of expressing or emphasizing an idea; an integral part of speech</p> <p>_____ d. Process of taking a quotation and breaking it down into one's own words</p> | <p>1. Gesture</p> <p>2. Paraphrase</p> <p>3. Outline</p> <p>4. FFA public speaking contest</p> |
|---|--|

2. Name the five general intents of a speech.

- a.
- b.
- c.
- d.
- e.

3. Name the three steps in developing ideas concerning a speech.

- a.
- b.
- c.

4. Name the three "must-do" factors for beginning speakers when preparing a speech.

- a.
- b.
- c.

00080

5. Name the three factors to remember when recording material for a speech.
- a.
 - b.
 - c.
6. State the rules for using quotations in a speech.
- a.
 - b.
7. Name three important factors to remember when using statistics in a speech.
- a.
 - b.
 - c.
8. Select the statement below which represents the most frequent error used by beginning speakers. Place an "X" in the blank.
- a. Speech topic not appropriate for speaker
 - b. Speech topic not appropriate for audience
 - c. Speech topic too broad
 - d. Introduction does not fit the body of speech
9. Name three factors that facilitate speech development.
- a.
 - b.
 - c.
10. Distinguish between a topical and a sentence outline by placing an "X" in the blank in front of the topical outline:
- a. Clearer and more complete form of outline; gives a more detailed statement
 - b. Key words or phrases that express a thought
11. Name four reasons for outlining a speech.
- a.
 - b.

00081

- c.
 - d.
12. Name the three principal parts of an outline, arranging them in order of development.
- a.
 - b.
 - c.
13. Name four factors used when developing the main ideas of a speech.
- a.
 - b.
 - c.
 - d.
14. Discuss in a short paragraph how the introduction is used in a speech.
15. Discuss in a short paragraph how the conclusion should blend with the speech.
16. Name three ways of making a good first impression when giving a speech.
- a.
 - b.
 - c.
17. Name five ways of developing and adding meaning to your delivery.
- a.
 - b.
 - c.
 - d.
 - e.

00032

18. Name three reasons for using gestures in public speaking.
 - a.
 - b.
 - c.
19. Name three ways of developing the proper delivery.
 - a.
 - b.
 - c.
20. Demonstrate the ability to:
 - a. Read a speech and identify the introduction, body, and conclusion.
 - b. Select a speech topic, conduct research on the subject, and write the information.
 - c. Write a sentence outline of the speech from the information collected.
 - d. Write and deliver a three- to eight-minute speech.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

00083

**DEVELOPING AND DELIVERING A SPEECH
UNIT III****ANSWERS TO TEST**

1.
 - a. 4
 - b. 3
 - c. 1
 - d. 2
2.
 - a. To inform
 - b. To induce belief
 - c. To move to action
 - d. To inspire
 - e. To entertain
3.
 - a. Start with what one knows
 - b. Research available references
 - c. Record speech material
4.
 - a. Write it
 - b. Label it
 - c. File it
5.
 - a. Identify reference source
 - b. Record passage accurately
 - c. Record material as a single and complete unit
6.
 - a. Do not use several quotations in speech
 - b. Use quotations in complete text
7.
 - a. Source of information
 - b. Date of information
 - c. Representative value

000814

8. c
9. Any three of the following:
- Make the speech clear
 - Make the idea arresting
 - Make the idea significant
 - Make the idea familiar
 - Make the idea attractive
 - Make the idea inevitable
 - Make the idea appealing
10. b
11. a. Reveal strength and weakness
- b. Aid in organization and development of ideas
- c. Reveal the proportion of the speech
- d. Serve as an invaluable time-saver
12. a. Introduction
- b. Body
- c. Conclusion
13. a. Limited in numbers
- b. Stand out clearly and emphatically
- c. Adequate to support the theme
- d. Arranged in the order most effective for the audience
14. The introduction is used in a speech to make it attractive and motivating; it is a means of introducing the subject on which one is going to speak
15. The conclusion combines the various threads of the speech in one final effort to complete the speaker's purpose

00085

16. Any three of the following:
 - a. Step up to lectern briskly and confidently
 - b. Stand behind lectern in a comfortable but erect position
 - c. Be clearly heard with pleasant volume
 - d. Let all important actions, objects, and aids be clearly seen
 - e. Gain and hold audience attention
 - f. Recognize that some fear is normal and do not get upset
17.
 - a. Eye contact
 - b. Gestures
 - c. Posture
 - d. Movement
 - e. Voice control
18.
 - a. Signify specific thought
 - b. Imply attitudes or moods
 - c. Express thoughts and feelings
19.
 - a. Stand in front of mirror
 - b. Use tape recorder
 - c. Present speech to someone
20. Performance skills will be evaluated to the satisfaction of the instructor.

00085

ANALYSIS AND EVALUATION OF SUPERVISED EXPERIENCE PROGRAMS
UNIT I

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to list reasons for enterprise analysis. He should also be able to calculate unit cost and analyze each enterprise owned. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. List four reasons for using enterprise analysis.
2. List strong and weak points of an enterprise owned.
3. Calculate unit cost analysis.
4. Demonstrate the ability to analyze each enterprise owned.

00083

**ANALYSIS AND EVALUATION OF SUPERVISED EXPERIENCE PROGRAMS
UNIT I****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide student with objective sheet.
- B. Provide student with information and assignment sheets.
- C. Discuss terminal and specific objectives.
- D. Discuss information and assignment sheets.
- E. Relate the information to the supervised farm training record book.

(NOTE: If student does not have projects with which to work assignment sheets, the instructor should provide him with necessary information to complete an analysis.)

- F. Check assignment sheets.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Complete each assignment sheet pertaining to his projects or assigned by instructor.
- D. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Assignment sheets
 1. Assignment Sheet #1--Breeding Enterprise Analysis
 2. Assignment Sheet #2--Feeding Enterprise Analysis

00088

3. Assignment Sheet #3--Crop Enterprise Analysis
4. Assignment Sheet #4--Dairy Enterprise Analysis

D. Test

E. Answers to test

II. References:

- A. *Future Farmers of America, Supervised Training Record Book*. Stillwater, Oklahoma: Vocational Agriculture, State Department of Vocational and Technical Education, 1974.
- B. *Instructional Materials for Vocational Agriculture I*. College Station, Texas: Teaching Materials Center, Agricultural Education Department, Texas A&M University.

00087

ANALYSIS AND EVALUATION OF SUPERVISED EXPERIENCE PROGRAMS UNIT I

INFORMATION SHEET

I. Reasons for enterprise analysis

- A. Aids in planning future farm and ranch operations
- B. Allows comparison of one enterprise to another
- C. Aids in management decisions
- D. Evaluates efficiency as manager

II. Strong and weak points of enterprises

	<u>Strong</u>	<u>Weak</u>
A. Breeding		
1.	90% or higher calf crop	Less than 90% calf crop
2.	125% lamb crop	Less than 125% lamb crop
3.	8.5 pigs weaned/litter	Weaning less than 8 pigs/litter
4.	Weighing regularly	No weight record
5.	Facilities to handle livestock	Poor facilities
B. Feeding		
1.	Feed efficiency	Poor feed conversion
2.	Good facilities	Poor feeding facilities
3.	Feeding a proper ration	Failure to feed a balanced ration
4.	Good water supply	Failure to provide adequate water supply
5.	Good parasite and disease control	Poor parasite and disease control
6.	Good management practice	Poor management (weighing, marketing, etc.)

00090

INFORMATION SHEET

C. Crops

- | | | |
|----|----------------------|------------------------------------|
| 1. | Quality seed used | Failure to plant high quality seed |
| 2. | Use of fertilizer | Failure to use fertilizer |
| 3. | Weed control | Poor weed control management |
| 4. | High yield | Yield too low |
| 5. | Seed bed preparation | Poor seed bed preparation |

D. Dairy

- | | | |
|----|------------------------------|---|
| 1. | Testing and records | Poor records and failure to test production |
| 2. | Good water supply | Poor supply of water |
| 3. | Sanitation | Poor sanitation |
| 4. | Good production | Production low |
| 5. | Parasite and disease control | Poor control of parasites and disease |

(NOTE: The teacher may wish to give students the standards of the local community or the county. Students with the same enterprise should compare and evaluate each other's records.)

III. Calculating unit cost

A. Breeding enterprise

1. Calf crop

$$\frac{\text{Total number of calves}}{\text{Total number of cows}} \times 100 = \text{percent calf crop}$$

2. Average weight of animal at weaning

$$\frac{\text{Total pounds at weaning}}{\text{Total number of calves}} = \text{average weight at weaning}$$

00091

INFORMATION SHEET

B. Feeding enterprise

1. Total gain

$$\frac{\text{Finish weight} - \text{starting weight}}{\text{Total number of animals}} = \text{average gain per animal}$$

2. Average gain per head per day

$$\frac{\text{Average gain per head}}{\text{Total number of days on feed}} = \text{average gain per head per day}$$

3. Pounds of feed fed per animal

$$\frac{\text{Total pounds of feed fed}}{\text{Total number of animals}} = \text{pounds of feed fed per animal}$$

4. Pounds of feed per pound of gain

$$\frac{\text{Total pounds of feed fed per animal}}{\text{Total gain per animal}} = \text{pounds of feed per pound of gain}$$

5. Feed cost per pound of gain

$$\frac{\text{Pounds of feed per pound of gain} \times \text{feed cost}}{100} =$$

Feed cost per pound of gain

C. Crop enterprise

1. Yield per acre

$$\frac{\text{Total production (bushels, pounds, tons)}}{\text{Total acres}} = \text{units per acre}$$

2. Cost per unit of production

$$\frac{\text{Total cost (seed + tillage + fertilizer + etc)}}{\text{Total acres}} = \text{cost per acre}$$

ANALYSIS AND EVALUATION OF SUPERVISED EXPERIENCE PROGRAMS.
UNIT I

TEST

1. List four reasons for using enterprise analysis.

a.

b.

c.

d.

2. List two strong and two weak points for an enterprise owned.

Strong

Weak

a.

a.

b.

b.

3. Calculate unit cost analyses for the following problems.

a. John Doe, a freshman, owns a Hereford steer. He purchased the steer September 1, and the steer weighed 600 pounds. He fed the steer for 140 days and the final weight was 1000 pounds. What was the total weight gain and average gain per day?

1) Total weight gain _____

2) Average daily gain _____

b. Jim Smith planted 20 acres of wheat which yielded a total production of 800 bushels. What was his yield per acre? _____

c. Bill White is milking 20 Holstein cows with a total production of 266,800 pounds. What is the average production per cow and average butterfat per cow using 3.6% butterfat?

1) Average production per cow _____

2) Average butterfat per cow _____

00097

4. Demonstrate the ability to analyze each enterprise owned.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00098

ANSWERS TO TEST

1.
 - a. Aids in planning future farm and ranch operations
 - b. Allows comparison of one enterprise to another
 - c. Aids in management decisions
 - d. Evaluates efficiency as manager
2. Evaluated to the satisfaction of the instructor.
3.
 - a.
 - 1) 400 pounds.
 - 2) 2.85 pounds
 - b. 40 bushels
 - c.
 - 1) 13,340 pounds
 - 2) 480 pounds
4. Evaluated to the satisfaction of the instructor.

00099

**FARM CREDIT
UNIT II****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to select characteristics of a lender and a borrower, list sources of credit, and discuss factors indicating that borrowing money is a good business practice. He should also be able to identify credit instruments and write a check correctly. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with farm credit to the correct definitions.
2. Select from a list characteristics a lender should look for in a borrower.
3. Select from a list characteristics a borrower should look for in a lender.
4. List five main sources of credit.
5. List five purposes of a loan.
6. Discuss the factors indicating that borrowing is a good business practice.
7. State causes for poor repayment ability of a loan.
8. Identify credit instruments.
9. List five factors to consider when writing a check.
10. Write a check.
11. Calculate interest and interest rates when given a problem and a formula.

00100

**FARM CREDIT
UNIT II****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide the student with objective sheet.
- B. Provide the student with information and assignment sheets.
- C. Make transparencies.
- D. Provide each student with a copy of *Financing Modern Agriculture* which can be obtained free from the Farm Credit Banks of Wichita, Wichita, Kansas.
- E. Discuss terminal and specific objectives.
- F. Discuss information and assignment sheets.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Read and study information sheet and take additional notes when necessary.
- C. Complete all assignment sheets and have them evaluated by the instructor.
- D. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Transparency masters
 1. TM 1--Credit Instruments: Check and Warehouse Receipt
 2. TM 2--Credit Instruments: Bill of Sale Sight Draft: Front and Back
 3. TM 3--Credit Instruments: Promissory Note

00101

D. Assignment sheets

1. Assignment Sheet #1--Writing Checks
2. Assignment Sheet #2--Calculating True Interest Rate

E. Answers to Assignment Sheet #2

F. Test

G. Answers to test

II. References:

- A. *Financing Farm and Ranch Activities*. Wichita, Kansas: Farm Credit Banks.
- B. Hall, I.F., and W.P. Morteson. *The Farm Management Handbook*. Danville, Illinois: The Interstate Printers and Publishers.
- C. Hamilton, James E. and W.R. Bryant. *Profitable Farm Management*. Englewood-Cliffs, New Jersey: Prentice-Hall, Inc.
- D. *Financing Modern Agriculture*. Wichita, Kansas: Farm Credit Banks, 1972.

FARM CREDIT
UNIT II

INFORMATION SHEET

I. Terms and definitions

- A. ~~Credit~~-Use of borrowed capital which is obtained with a promise to repay the borrowed capital at a future date
- B. ~~Interest charge~~-Amount of money charged for the use of money loaned
(NOTE: This term is sometimes referred to as *finance charge*.)
- C. ~~Check~~-Signed written order on a bank to pay a certain sum of money on demand to the bearer of the check or to the order of a named person
- D. ~~Draft~~-Order from one party to another directing that party to pay money to a third party; similar to a check
- E. ~~Promissory note~~-Written promise of the borrower to repay a certain sum of money to a certain person or bearer on demand or on a specified date
- F. ~~Lien~~-Legal claim against property; usually proven by a mortgage, a security agreement, a sales contract, or other written contracts
- G. ~~Mortgage~~-Instrument creating a lien on property or making a conditional transfer of title to property; given as security for the payment of a debt or the carrying out of a contract
- H. ~~Warehouse receipt~~-Receipt given by a warehouseman for goods received by him for storage in his warehouse
- I. ~~Bill of lading~~-Contract or receipt signed by a common carrier agreeing to deliver the described freight to a given person at a stated place
- J. ~~Release~~-Transfer of a person's interest or right in property to another who has an interest in and usually possession of it
- K. ~~Sales contract~~-Agreement by one party to sell property or a service to a second party for a stated price and under stated conditions
- L. ~~Consumer credit~~-Services bought that are used up or consumed and do not directly improve the earning capacity or financial condition of the borrower
- M. ~~Short term credit~~-Loan usually made for one year or less
- N. ~~Intermediate term credit~~-Loan written with a maturity of more than one year, but not more than seven years

INFORMATION SHEET

- O. Long term credit--Real estate credit used to finance investments in land, buildings, and other fixed capital which can be used for a long period of time, usually for ten years or more
- II. Characteristics a lender looks for in a borrower
- A. The person
 - B. Managerial ability
 - C. Financial position
 - D. Ability to repay
 - E. Purpose of the loan
 - F. Security for the loan
- III. Characteristics a borrower looks for in a lender
- A. Character
 - B. Lending policies
 - C. Permanence and dependability
 - D. Experience and knowledge of agriculture
 - E. Cost of the loan
- IV. Sources of credit
- A. Merchants or dealers
 - B. Individuals
 - C. Commercial banks
 - D. Insurance companies
 - E. Federal land banks
 - F. Production Credit Association
 - G. Farmers Home Administration

00104

INFORMATION SHEET

V. Purposes of a loan

- A. Buy a farm
- B. Add new acreage to the farm already owned
- C. Build a house, barn, grain storage, or other farm building that will add value to the farm or efficiency to the operation
- D. Buy equipment with which to operate the farm
- E. Buy fertilizer or other materials to make the land more productive.
- F. Add improved breeding stock and increase production
- G. Buy feed for livestock or buy livestock
- H. Consolidate old loans or debts into repayment schedules coordinated with new sources or times of income
- I. Buy other goods or services

VI. Factors indicating that borrowing is good business practice

- A. Additional income
- B. Increase in size of operation
- C. Product price rise
- D. Sufficient repayment capacity
- E. Individual's ability as a manager

VII. Causes for poor repayment ability

- A. Business too small
- B. Low production per unit

Examples: Poor crop yields, small calf crop, small pig crop, small returns from poultry

- C. Low price per unit sold

Examples: Poor market, poor marketing management, poor quality

00105

INFORMATION SHEET

D. High cash production costs

Examples: High feed, high labor, high replacement

E. High cash overhead

Examples: Heavy debt load, high interest rate, heavy taxes, high maintenance cost

F. High cash living costs

Examples: Extravagance, sickness, education of children

G. Borrowing above ability to repay

H. Overestimating the amount of the loan

VIII. Credit instruments (Transparencies 1, 2, and 3)

A. Check

B. Draft

(NOTE: It is sometimes referred to as a bill of sale draft.)

C. Promissory note

D. Warehouse receipt

IX. Factors to consider when writing a check

A. Write in ink

B. Write plainly

C. Do not leave space between dollar sign and check amount

D. Write out amount

E. Do not make payable to CASH

F. Do not sign a blank check

G. Void check if mistake is made

H. Write memo stating reason for check

00106

INFORMATION SHEET

X. Written check (Transparency 1)

XI. Calculating interest rates

A. Formula

$$\text{True annual interest rate} = \frac{\text{Total of finance charges}}{\frac{1}{2} \text{ original loan}} \times \frac{\text{No. of payments}}{\text{No. of years}} \times \frac{1}{\text{No. of payments plus one}}$$

B. Problem

A farmer borrowed \$8,000 which cost him \$400 for 24 months. What was his interest rate?

$$\frac{400}{4000} \times \frac{24}{2} \times \frac{1}{25} = 4.8\% \text{ interest}$$

RECEIPT

XYZ Farmers Cooperative Association
Random, Kansas (Specimen)

LICENSED AND BONDED UNDER THE UNITED STATES WAREHOUSE ACT
ORIGINAL NEGOTIABLE WAREHOUSE RECEIPT FOR GRAIN

CCO Warehouse No. _____
The Undersigned Warehouseman Declares A True On Said Grain For Charges And Licenses As follows:

RECEIVED BY: XYZ Farmers Cooperative Association of Random, Kansas

For Storage - in the above named warehouse - in the course of interstate or foreign commerce or both of the quantity and grade described herein for which this receipt is issued to be used in the United States. We advise you the regulations hereunder for grain warehousemen and the terms of this contract apply to U.S. official standards and weight and to determine by an inspector and weight accepted under said act. Said grain is FULLY INSURED by the undersigned warehouseman against loss or damage by fire, theft and inherent viciation, damage, leakage, and war risks unless otherwise stated herein. Said grain is accepted upon condition that the detector or holder of this receipt shall deliver same later than the date of this receipt. The undersigned warehouseman is not the owner of said grain either solely jointly or in common with others. Any claims or charges against the receipt properly endorsed and accepted at the warehouseman's risk. Claimed hereon said grain or part of the same or better grade shall be delivered to the above named depositor or his ORDER.

Date Issued	Kind of Grain	Grade	Out to	Use of Gr. and Buck.	Grain Quantity	Net Weight	Net Volume	Exception Class	Date Storage

4. Any five of the following:

- a. Merchants or dealers
- b. Individuals
- c. Commercial banks
- d. Insurance companies
- e. Federal land banks
- f. Production Credit Association
- g. Farmers Home Administration

5. Any five of the following:

- a. Buy a farm.
- b. Add new acreage to the farm already owned
- c. Build a house, barn, grain storage, or other farm building that will add value to the farm or efficiency to the operation
- d. Buy equipment with which to operate the farm.
- e. Buy fertilizer or other materials to make the land more productive
- f. Add improved breeding stock and increase production
- g. Buy feed for livestock or buy livestock

- h. Consolidate old loans or debts into repayment schedules coordinated with new sources or times of income
 - i. Buy other goods or services
6. Discussion should include:
- a. Additional income
 - b. Increase in size of operation
 - c. Product price rise
 - d. Sufficient repayment capacity
 - e. Individual's ability as a manager
7. Any three of the following:
- a. Business too small
 - b. Low production per unit
 - c. Low price per unit sold
 - d. High cash production costs
 - e. High cash overhead
 - f. High cash living costs
 - g. Borrowing above ability to repay
 - h. Overestimating the amount of the loan
8. a. Warehouse receipt
- b. Check
 - c. Promissory note
 - d. Draft
9. Any five of the following:
- a. Write in ink
 - b. Write plainly
 - c. Do not leave space between dollar sign and check amount
 - d. Write out amount

ELEMENTARY STUDY OF SOILS
UNIT I

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to select from a list reasons that soils are important. He should be able to discuss soil formation and label layers of a soil profile. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with soils to the correct definitions.
2. Select from a list reasons that soils are important.
3. Discuss three factors that affect soil formation.
4. List five benefits of organic matter.
5. Identify three soil particles according to size.
6. Label an illustration showing the different layers of a soil profile.
7. Identify five kinds of soil structures.
8. Match colors of soils with the identifying characteristics of each.
9. Label a drawing showing the composition of an average soil.
10. Match terms indicating degree of erosion to the correct descriptions.
11. Match terms indicating soil depth to the correct descriptions.
12. Match terms indicating degrees of permeability to the correct descriptions.
13. Match terms indicating degrees of slope to the correct descriptions.

00126

ELEMENTARY STUDY OF SOILS
UNIT I

INFORMATION SHEET

I. Terms and definitions

A. Soil--Outer layer of the earth's crust capable of supporting plant growth; made up of mineral and organic matter

B. Organic matter--General term for plant and animal material in or on the soil in all stages of decomposition

(NOTE: In chemistry, *organic* refers to the compounds of carbons.)

C. Mineral--General term for the inorganic elements in the soil

Examples: Nitrogen, potash, phosphorus

D. Soil profile--Cross section of a soil from top to bottom (Transparency 3)

E. Soil texture--Size of the individual soil particles such as sand, silt, and clay

F. Soil color--Indication of the amount of organic matter, moisture, and texture of the soil

(NOTE: Kinds of compounds contained in the soil, such as iron (Fe_2O_3), will also give a characteristic color.)

G. Soil structure--Way in which individual soil particles are grouped together to form clusters of particles (Transparency 4)

H. Rock weathering--Process by which rocks are broken down into soil-sized particles through exposure to the weather over hundreds of years

I. Leaching--Removal of soil components from the soil by the downward action of water

J. Rock--More or less consolidated mass composed of two or more minerals

K. Aggregate--Single mass or cluster of soil particles such as a clod, crumb, or granule

L. Slope--Number of feet fall in each 100 feet of distance

M. Permeability--Movement of air and water through the soil

N. Depth--Total thickness of soil from the topsoil to the parent material

00127

INFORMATION SHEET

II. Importance of soils

- A. Provide food
- B. Provide energy
- C. Provide shelter

III. Factors affecting soil formation

A. Parent materials

1. Rocks

- a. Igneous--Derived from the molten materials in the center of the earth's crust
- b. Metamorphic--Formed from the pre-existing rocks through the action of extreme heat and great pressures
- c. Sedimentary--Deposited by rivers, moving glaciers, or wind

2. Moved by

- a. Wind
- b. Water
- c. Glaciers

B. Weathering (Transparency 1)

- 1. Physical--Mechanical forces caused by temperature changes, such as heating and cooling, freezing and thawing, which have soil abrasive action
- 2. Chemical--Chemical reactions of water, oxygen, and carbon dioxide

C. Climate

- 1. Temperature
- 2. Rainfall

D. Vegetation and organisms

- 1. Plant--Lichens, mosses, weeds, grasses, shrubs, trees
- 2. Animal--Bacteria, fungi, birds, man

00128

INFORMATION SHEET

E. Slope and drainage

1. Hillsides

- a. Thin topsoil caused by erosion
- b. Less plant growth
- c. Less organic matter
- d. Less leaching

2. Flat lands

- a. Deeper topsoil
- b. More vegetation
- c. More organic matter
- d. More leaching

IV. Benefits of organic matter

- A. Makes soil porous
- B. Supplies nitrogen to the plant
- C. Holds water in the soil
- D. Furnishes food for soil organisms
- E. Stores mineral nutrients
- F. Reduces leaching
- G. Stabilizes soil structure

V. Soil particles (Transparency 2)

- A. Sand
- B. Silt
- C. Clay

VI. Soil profile (Transparency 3)

- A. Topsoil
- B. Subsoil
- C. Parent material

0012900

INFORMATION SHEET

VII. Kinds of soil structures (Transparency 4)

- A. Crumb--Very porous granular structure
- B. Granular--Individual grains are grouped into spherical aggregates with indistinct sides
- C. Platy--Aggregate has thin vertical axis and long horizontal axis; flat, tubular
- D. Prismatic--Aggregate is prislake with vertical axis of the aggregate longer than the horizontal
- E. Blocky--Aggregate has equal sides; may be round or angular
- F. Columnar--Aggregate is columnlike with vertical axis longer than the horizontal

VIII. Soil color

- A. Dark brown to black--Regarded as being the most productive; usually contains a higher organic matter content
- B. Red or reddish brown--Usually less fertile than black or dark brown soils; may contain a high iron content
- C. Yellow--Usually caused by imperfect drainage
- D. Gray--Low in organic matter

IX. Composition of an average soil (Transparency 5)

- A. Mineral matter--48%
- B. Water--25%
- C. Air--25%
- D. Organic matter--2%

X. Degrees of erosion

- A. None to slight--Less than 25 percent of surface soil removed with no gullies
- B. Moderate--25 to 75 percent of surface soil removed with or without gullies
- C. Severe--75 percent or more of the surface soil removed with occasional uncrossable gullies and/or severe accumulations by wind
- D. Very severe--75 percent or more of surface soil removed with frequent uncrossable gullies and/or severe accumulations by wind

00130

INFORMATION SHEET

XI. Soil depths

- A. Deep--More than 36 inches deep
- B. Moderately deep--20 to 36 inches deep
- C. Shallow--10 to 20 inches deep
- D. Very shallow--Less than 10 inches deep

XII. Degrees of permeability

- A. Very slow--Soils that have dense, heavy clay or claypan subsoils
- B. Slow--Soils that have crumbly, clayey subsoils
- C. Moderate--Soils that have high granular, clay loam subsoils
- D. Rapid--Soils that have sandy subsoils

XIII. Degrees of slope

- A. Nearly level--Less than one foot fall in each 100 feet
- B. Gently sloping--One to three feet fall in each 100 feet
- C. Moderately sloping--Three to five feet fall in each 100 feet
- D. Strongly sloping--Five to eight feet fall in each 100 feet
- E. Steep--Eight to twelve feet fall in each 100 feet
- F. Very steep--More than twelve feet fall in each 100 feet

TEST

1. Match the terms on the right to the correct definition.

- | | |
|---|---------------------------|
| <p>_____ a. Way in which individual soil particles are grouped together to form clusters of particles</p> | <p>1. Soil</p> |
| <p>_____ b. Cross section of a soil from top to bottom</p> | <p>2. Organic matter</p> |
| <p>_____ c. Outer layer of the earth's crust capable of supporting plant growth; made up of mineral and organic matter</p> | <p>3. Mineral</p> |
| <p>_____ d. Total thickness of soil from the topsoil to the parent material</p> | <p>4. Soil profile</p> |
| <p>_____ e. Single mass or cluster of soil particles such as a clod, crumb, or granule</p> | <p>5. Soil texture</p> |
| <p>_____ f. Removal of soil components from the soil by the downward action of water</p> | <p>6. Soil color</p> |
| <p>_____ g. Indication of the amount of organic matter, moisture, and texture of the soil</p> | <p>7. Soil structure</p> |
| <p>_____ h. General term for the inorganic elements in the soil</p> | <p>8. Rock weathering</p> |
| <p>_____ i. Movement of air and water through the soil</p> | <p>9. Leaching</p> |
| <p>_____ j. Number of feet fall in each 100 feet of distance</p> | <p>10. Rock</p> |
| <p>_____ k. General term for plant and animal material in or on the soil in all stages of decomposition</p> | <p>11. Aggregate</p> |
| <p>_____ l. More or less consolidated mass composed of two or more minerals</p> | <p>12. Slope</p> |
| <p>_____ m. Process by which rocks are broken down into soil-sized particles through exposure to the weather over hundreds of years</p> | <p>13. Permeability</p> |
| <p>_____ n. Size of the individual soil particles such as sand, silt, and clay</p> | <p>14. Depth</p> |

00137

2. Select from the list below reasons that soils are important by placing an "X" in the blanks.

- a. Holds the earth together
- b. Provides food
- c. Provides energy
- d. Provides a base on which to build houses
- e. Provides shelter
- f. Provides insulation

3. Discuss three factors that affect soil formation.

7

4. List five benefits of organic matter.

- a.
- b.
- c.
- d.
- e.

00138

5. Identify three soil particles according to size.

a. _____

b. _____

c. _____

6. Label the drawing below showing the different layers of a soil profile.

a. _____

b. _____

c. _____

00139

Identify five kinds of soil structures.

a. _____

b. _____

c. _____

d. _____

e. _____

8. Match the color of soil on the right to the correct characteristic.

- _____ a. Usually caused by imperfect drainage
- _____ b. Low in organic matter
- _____ c. Regarded as being the most productive; usually contains a higher organic matter content
- _____ d. Usually less fertile than black or dark brown soils; may contain a high iron content

- 1. Dark brown to black
- 2. Red or reddish brown
- 3. Yellow
- 4. Gray

00140

9. Label the drawing below showing composition of an average soil.

10. Match the terms indicating degree of erosion on the right to the correct description.

- | | |
|---|-------------------|
| _____ a. 75 percent or more of the surface soil removed with occasional uncrossable gullies and/or severe accumulations by wind | 1. None to slight |
| _____ b. 75 percent or more of the surface soil removed with frequent uncrossable gullies and/or severe accumulations by wind | 2. Moderate |
| _____ c. 25 to 75 percent of surface soil removed with or without gullies | 3. Severe |
| _____ d. Less than 25 percent of surface soil removed with no gullies | 4. Very severe |

11. Match terms indicating soil depth on the right to the correct description.

- | | |
|-----------------------------------|--------------------|
| _____ a. More than 36 inches deep | 1. Deep |
| _____ b. 20 to 36 inches deep | 2. Moderately deep |
| _____ c. 10 to 20 inches deep | 3. Shallow |
| _____ d. Less than 10 inches deep | 4. Very shallow |

00111

12. Match the terms indicating degrees of permeability on the right to the correct description.

- | | |
|--|--------------|
| _____ a. Soils that have sandy subsoils | 1. Very slow |
| _____ b. Soils that have crumbly, clayey subsoils | 2. Slow |
| _____ c. Soils that have dense, heavy clay or claypan subsoils | 3. Moderate |
| _____ d. Soils that have high granular, clay loam subsoils | 4. Rapid |

13. Match the terms indicating degrees of slope on the right to the correct description.

- | | |
|--|-----------------------|
| _____ a. Less than one foot fall in each 100 feet | 1. Nearly level |
| _____ b. Three to five feet fall in each 100 feet | 2. Gently sloping |
| _____ c. Eight to twelve feet fall in each 100 feet | 3. Moderately sloping |
| _____ d. One to three feet fall in each 100 feet | 4. Strongly sloping |
| _____ e. Five to eight feet fall in each 100 feet | 5. Steep |
| _____ f. More than twelve feet fall in each 100 feet | 6. Very steep |

OC142

ELEMENTARY STUDY OF SOILS.
UNIT I

ANSWERS TO TEST

1.
 - a. 7
 - b. 4
 - c. 1
 - d. 14
 - e. 11
 - f. 9
 - g. 6
 - h. 3
 - i. 13
 - j. 12
 - k. 2
 - l. 10
 - m. 8
 - n. 15

2. b, c, e

3. Discussion may include any three of the following:
 - a. Parent materials
 - 1) Rocks
 - a) Igneous--Derived from the molten materials in the center of the earth's crust
 - b) Metamorphic--Formed from the pre-existing rocks through the action of extreme heat and great pressures
 - c) Sedimentary--Deposited by rivers, moving glaciers, or wind
 - 2) Moved by
 - a) Wind
 - b) Water
 - c) Glaciers
 - b. Weathering
 - 1) Physical--Mechanical forces caused by temperature changes, such as heating and cooling, freezing, and thawing, which have soil abrasive action
 - 2) Chemical--Chemical reactions of water, oxygen, and carbon dioxide

00143

c. Climate

- 1) Temperature
- 2) Rainfall

d. Vegetation and organisms

- 1) Plant--Lichens, mosses, weeds, grasses, shrubs, trees
- 2) Animal--Bacteria, fungi, birds, man

e. Slope and drainage

1) Hillsides

- a) Thin topsoil caused by erosion.
- b) Less plant growth
- c) Less organic matter
- d) Less leaching

2) Flat lands

- a) Deeper topsoil
- b) More vegetation
- c) More organic matter
- d) More leaching

4. Any five of the following:

- a. Makes soil porous
- b. Supplies nitrogen to the plant
- c. Holds water in the soil
- d. Furnishes food for soil organisms
- e. Stores mineral nutrients
- f. Reduces leaching
- g. Stabilizes soil structure

- 5. a. Sand
- b. Silt
- c. Clay
- 6. a. Topsoil
- b. Subsoil
- c. Parent material
- 7. a. Platy
- b. Granular
- c. Crumb
- d. Prismatic
- e. Columnar
- 8. a. 3
- b. 4
- c. 1
- d. 2
- 9. a. Air
- b. Organic matter
- c. Water
- d. Mineral matter
- 10. a. 3
- b. 4
- c. 2
- d. 1
- 11. a. 1
- b. 2
- c. 3
- d. 4

145-

12. a. 4

b. 2

c. 1

d. 3

13. a. 1

b. 3

c. 5

d. 2

e. 4

f. 6

SOIL CONSERVATION PRACTICES UNIT II

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to list types of erosion and management practices that aid in conservation. He should also be able to select from a list factors that determine cropping systems and conservation practices for reducing erosion. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with soil conservation practices to the correct definitions.
2. List two types of erosion.
3. Select from a list conservation practices for reducing wind erosion.
4. List four categories of water erosion.
5. Select from a list factors that determine the type of cropping system to use.
6. List four management practices that aid in erosion control.
7. Survey his home farm to see how he rates as an FFA conservationist.
8. Survey his home community.
 - a. List five examples of good conservation practices.
 - b. List five examples of poor conservation practices.

**SOIL CONSERVATION PRACTICES
UNIT II****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide student with objective sheet.
- B. Provide student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss the terminal and specific objectives.
- E. Discuss Information and assignment sheets.
- F. Take student on field trips to see types of erosion and cropping systems.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet and take additional notes.
- C. Complete assignment sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Transparency masters
 1. TM 1--Terracing for Erosion Control
 2. TM 2--Crop Rotation for Erosion Control
 3. TM 3--Strip-Cropping for Erosion Control

D. Assignment sheets

1. Assignment Sheet #1--How Do You Rate as an FFA Conservationist?
2. Assignment Sheet #2--Locating Good and Poor Conservation Practices

E. Test

F. Answers to test

SOIL CONSERVATION PRACTICES
UNIT II

INFORMATION SHEET

I. Terms and definitions

- A. Erosion--Removal of soil by wind and/or water
- B. Water outlet--Ditch which carries the excess water from farm
- C. Terracing--Structure designed to slow down running water and control erosion on sloping land (Transparency 1)
- D. Crop rotation--Rotation of crops on a field from one crop to another (Transparency 2)
- E. Strip cropping--Practice of growing soil-conserving and soil-depleting crops in alternate strips running perpendicular to the slope of the land or to the direction of prevailing winds for the purpose of reducing erosion (Transparency 3)
- F. Diversion ditch--Ditch which prevents erosion by diverting water around a field rather than across
- G. Cover crop--Crop used to cover the soil surface to decrease erosion

II. Types of erosion

- A. Wind
- B. Water

III. Wind erosion conservation practices

- A. Strip-cropping
- B. Prevention of burning
- C. Prevention of overgrazing
- D. Moisture conservation
- E. Emergency cover crops
- F. Emergency tillage operations
- G. Stubble mulching
- H. Shelterbelt of trees

INFORMATION SHEET

IV. Categories of water erosion

- A. Splash
- B. Sheet
- C. Rill
- D. Gully

V. Factors determining cropping systems

- A. Slope
- B. Erodibility
- C. Drainage
- D. Moisture
- E. Depth
- F. Fertility
- G. Economics

VI. Management practices that aid in erosion control

- A. Wise use of land
- B. Water control systems
 - 1. Terracing
 - 2. Diversion ditches
 - 3. Strip-cropping
 - 4. Crop rotation
 - 5. Water sallets
 - 6. Contour farming
- C. Cover crops
- D. Control of gullies
- E. Use of fertilizer

Terracing for Erosion Control

Crop Rotation for Erosion Control

Strip-Cropping for Erosion Control

154

SOIL CONSERVATION PRACTICES UNIT II

ASSIGNMENT SHEET #1--HOW DO YOU RATE AS AN FFA CONSERVATIONIST?*

Answer each of the questions below and on the following pages. Turn in to the instructor. If the question applies to you or your farming operation, answer YES; if it does not apply to you, answer NO.

- | | YES | NO |
|---|--------------------------|--------------------------|
| 1. Are droughts on your farm less severe than they used to be? | <input type="checkbox"/> | <input type="checkbox"/> |
| 2. Can you cultivate as soon after a rain as you once could? | <input type="checkbox"/> | <input type="checkbox"/> |
| 3. Do the rains seem to soak into your soil, faster and deeper than they once did? | <input type="checkbox"/> | <input type="checkbox"/> |
| 4. Do streams flood less frequently? | <input type="checkbox"/> | <input type="checkbox"/> |
| 5. Do your fields drain properly? | <input type="checkbox"/> | <input type="checkbox"/> |
| 6. Are your crop yields increasing? | <input type="checkbox"/> | <input type="checkbox"/> |
| 7. When you plow, does your soil seem darker in color than it was a few years ago? | <input type="checkbox"/> | <input type="checkbox"/> |
| 8. Do you notice fewer clay spots in the fields when you plow? | <input type="checkbox"/> | <input type="checkbox"/> |
| 9. Are gullies getting smaller in size and fewer in number? | <input type="checkbox"/> | <input type="checkbox"/> |
| 10. Does your soil drift against the fences less now than it once did? | <input type="checkbox"/> | <input type="checkbox"/> |
| 11. When you dig post holes, do you find plant roots all the way to the bottom of the holes? | <input type="checkbox"/> | <input type="checkbox"/> |
| 12. After a beating rain, does the surface of your soil still appear open and porous like a sponge? | <input type="checkbox"/> | <input type="checkbox"/> |
| 13. Is it becoming less difficult to prepare a good seedbed? | <input type="checkbox"/> | <input type="checkbox"/> |
| 14. Does your soil crust over less now than it once did? | <input type="checkbox"/> | <input type="checkbox"/> |
| 15. Do you spread manure on your land as fast as it is produced? | <input type="checkbox"/> | <input type="checkbox"/> |

155

ASSIGNMENT SHEET #1

- | | YES | NO |
|---|-------------------------------------|--------------------------|
| 16. Do you grow a soil-building legume at least one year in three? | <input type="checkbox"/> | <input type="checkbox"/> |
| 17. Do you plow under or incorporate all crop residues into your soil? | <input type="checkbox"/> | <input type="checkbox"/> |
| 18. Do your crops grow better in dry weather than they once did? | <input type="checkbox"/> | <input type="checkbox"/> |
| 19. Does it take less power to plow your fields than it did a few years ago? | <input type="checkbox"/> | <input type="checkbox"/> |
| 20. Do you cultivate just often enough to control weeds? | <input type="checkbox"/> | <input type="checkbox"/> |
| 21. Do you use a disk and chisel more now than you do a turning plow? | <input type="checkbox"/> | <input type="checkbox"/> |
| 22. Do you follow the recommended planting dates for all farm crops? | <input type="checkbox"/> | <input type="checkbox"/> |
| 23. Do you follow a recommended crop rotation plan for all fields? | <input type="checkbox"/> | <input type="checkbox"/> |
| 24. Do you plant the highest yielding varieties of crops? | <input type="checkbox"/> | <input type="checkbox"/> |
| 25. Does your cropping system produce the most possible forage for your livestock? | <input type="checkbox"/> | <input type="checkbox"/> |
| 26. Are your yields per acre as high as any in your neighborhood? | <input type="checkbox"/> | <input type="checkbox"/> |
| 27. Have you increased the productivity of all of your fields and pastures? | <input type="checkbox"/> | <input type="checkbox"/> |
| 28. Do you use as much limestone as any farmer on similar land in the neighborhood? | <input type="checkbox"/> | <input type="checkbox"/> |
| 29. Do you fertilize your fields and pastures as much as do any of your neighbors? | <input type="checkbox"/> | <input type="checkbox"/> |
| 30. Do you graze the right number of livestock on your range and pasture land? | <input type="checkbox"/> | <input type="checkbox"/> |
| 31. Are your livestock healthy? | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

ASSIGNMENT SHEET #1

- | | YES | ND |
|---|--------------------------|--------------------------|
| 32. Do you have a home garden as good as any in your neighborhood? | <input type="checkbox"/> | <input type="checkbox"/> |
| 33. Have you had your soil tested on all gardens, fields, and pastures within the past three years? | <input type="checkbox"/> | <input type="checkbox"/> |

Your rating as an FFA conservationist:

Total answers which are YES _____ ND _____

I am

Good	(22-33 YES answers)
Fair	(11-21 YES answers)
Poor	(0-10 YES answers)

*The contents of Assignment Sheet #1 have been reprinted by permission from *Our Soils and Their Management* by Roy L. Donahue, published by The Interstate Printers and Publishers, Inc., Danville, Illinois.

Strip-cropping</p> <p>6. Diversion ditch</p> <p>7. Cover crop</p> |
|---|--|

2. List two types of erosion.

a.

b.

3. Select from the list below conservation practices for reducing wind erosion by placing an "X" in the blanks.

- _____ a. Strip-cropping
- _____ b. Prevention of burning
- _____ c. Prevention of overgrazing
- _____ d. Moisture conservation
- _____ e. Emergency tillage operations
- _____ f. Emergency cover crops
- _____ g. Stubble mulching
- _____ h. Shelterbelt of trees

4. List four categories of water erosion.
 - a.
 - b.
 - c.
 - d.
5. Select from the list below factors that determine the type of cropping system to use by placing an "X" in the blanks.
 - a. Slope
 - b. Fertility
 - c. Drainage
 - d. Depth
 - e. Economics
 - f. Row crop
6. List four management practices that aid in erosion control.
 - a.
 - b.
 - c.
 - d.
7. Survey your home farm to see how you rate as an FFA conservationist.
8. Survey your home community.
 - a. List five examples of good conservation practices.
 - b. List five examples of poor conservation practices.

(NOTE: If activities 7 and 8 have not been accomplished prior to the test, ask the instructor when they should be completed.)

SOIL CONSERVATION PRACTICES
UNIT II

ANSWERS TO TEST

1.
 - a. 4
 - b. 7
 - c. 1
 - d. 5
 - e. 2
 - f. 6
 - g. 3
2.
 - a. Wind
 - b. Water
3. a, b, c, d, e, f, g, h
4.
 - a. Splash
 - b. Sheet
 - c. Rill
 - d. Gully
5. a, b, c, d, e
6. Any four of the following:
 - a. Wise use of land
 - b. Water control systems
 - c. Cover crops
 - d. Control of gullies
 - e. Use of fertilizer
7. Evaluated to the satisfaction of the instructor.
8. Evaluated to the satisfaction of the instructor.

PLANT GROWTH AND REPRODUCTION
UNIT III

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to match terms and definitions and identify the parts of a plant and flower. He should also be able to match functions and plant parts and list the steps of the photosynthesis process and factors that cause poor germination. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with plant growth and reproduction to the correct definitions.
2. Label the primary parts of a plant.
3. Match functions of plant parts to the correct parts.
4. Identify the two main types of root systems.
5. Label a drawing showing the different parts of a plant stem.
6. List the stages of seed germination.
7. Select from a list requirements for good seed germination.
8. List three factors that cause poor seed germination.
9. Select from a list substances that must be present before photosynthesis will occur.
10. List the steps in the process of manufacturing of plant food with photosynthesis.
11. Describe three ways a plant absorbs nutrients.
12. Label a drawing showing the parts of a complete flower.
13. Select from a list methods of pollination.
14. List three methods of vegetative reproduction.

PLANT GROWTH AND REPRODUCTION
UNIT III

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information sheet.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information sheet.
 - F. Plant seeds to demonstrate how germination occurs.
 - G. Conduct field trip to demonstrate the process of pollination or set up a demonstration in the classroom.
 - H. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet and take additional notes.
 - C. Observe seed during the process of germination.
 - D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 1. TM 1--Respiration vs Photosynthesis
 2. TM 2--Parts of a Plant
 3. TM 3--Root Types

163

4. TM 4--Parts of a Stem
5. TM 5--Germination of a Bean Seed (Dicot)
6. TM 6--Germination of a Corn Seed (Monocot)
7. TM 7--Photosynthesis
8. TM 8--Parts of a Flower
9. TM 9--Cross Pollination
10. TM 10--Self-Pollination
11. TM 11--Pollination by Insects

D. Test

E. Answers to test.

164

PLANT GROWTH AND REPRODUCTION
UNIT III

INFORMATION SHEET

I. Terms and definitions

- A. Embryo--Rudimentary plantlet within the seed; the germ
- B. Germination--Changing of a dormant embryo to active status
- C. Pollen--Male sex cells produced in the anthers of flowering plants
- D. Fertilization--Union of the male (pollen) nucleus with the female (egg) cell
- E. Pollination--Transfer of pollen from the anther to the stigma (Transparencies 9, 10, and 11)
- F. Pistil--Seed-bearing organ of a flower; composed of the ovary, style, and stigma
- G. Photosynthesis--Process by which carbohydrates are manufactured by the chlorophyll-bearing cell granules from CO_2 and water by means of the energy of sunlight
- H. Ovule--Female sex cell with the immediate surrounding parts; the future seed
- I. Respiration--Taking in of oxygen and giving off of carbon dioxide (Transparency 1)
(NOTE: This is the process by which plants breathe.)
- J. Transpiration--Evaporation of moisture through the ^{stoma}stoma or open pores in the leaves
- K. Chlorophyll--Green vegetable pigment of plants essential in the process of photosynthesis
- L. Monocotyledon--Plant having one seed leaf (cotyledon) as in grasses
- M. Dicotyledon--Plant which produces two seed leaves, such as beans or cotton.
- N. Imperfect flower--Flower lacking either stamen or pistil
- O. Perfect flower--Flower having both pistil and stamen

165

INFORMATION SHEET

- P. Monoecious plant--Both sexes present on same plant
- Q. Dioecious plant--Sexes (male and female) are on different plant
- R. Rhizome--Plant stems horizontal below ground; usually sending up a plant and sending down roots at the node
- S. Seed inoculation--Application of nitrogen-fixing bacteria to the seed of legumes before planting
- T. Secondary root--Branch of the main root
- U. Hypocotyl--Stem of the embryo or young seedling below the cotyledons
- V. Primary root--Root arising from the base of a hypocotyl

II. Primary plant parts (Transparency 2)

- A. Root
- B. Stem
- C. Leaf
- D. Bud or flower

III. Functions of the plant parts

- A. Root
 - 1. Absorbs water and minerals
 - 2. Stores food
 - 3. Anchors and supports plant
- B. Stem
 - 1. Supports leaves
 - 2. Aids in manufacturing plant food from leaves
 - 3. Serves as food storage area

INFORMATION SHEET

C. Leaf

1. Manufactures food for the plant
2. Is necessary for transpiration (evaporation of water)
3. Serves as food storage

D. Bud or flower

1. Serves as site of reproduction
2. Stores food

IV. Root types (Transparency 3)

A. Taproot

Examples: Cotton, alfalfa

B. Fibrous

Examples: Grasses, cereal grains

V. Parts of a plant stem (Transparency 4)

A. Terminal bud

B. Petiole

C. Auxiliary bud

D. Abcission layer

E. Node

F. Internode

VI. Stages of seed germination (Transparencies 5 and 6)

- A. Absorption of water and oxygen into the seed
- B. Seed swells and seed coat ruptures
- C. Primary (temporary) root goes down
- D. First internode goes up
- E. New leaves form and food production starts

167

INFORMATION SHEET

VII. Requirements for good seed germination

A. Proper temperature

(NOTE: It ranges from 32 to 120 degrees F. Most seeds germinate from 68 to 86 degrees F.)

B. Sufficient moisture

C. Ample supply of oxygen

VIII. Factors that cause poor seed germination

A. Mechanical injury (cracked grain)

B. Disease

C. Storage conditions

D. Old seed

E. Temperature too cold

F. Hard seed coat (hard-seeded legumes)

G. Drying out of soil

H. Planting too deep

I. Chemical damage (fertilizer)

J. Immature seed

IX. Substances that must be present before photosynthesis occurs

A. Light

B. Carbon dioxide (CO₂)

C. Water

D. Essential nutrients

E. Favorable temperature

F. Living cells containing chlorophyll

INFORMATION SHEET

X. Steps of photosynthesis process (Transparency 7)

A. CO₂ taken in by leavesB. H₂O taken in by roots

D. Plants convert sugar to starch or reverse the process as needed to build protein, fats, or energy

XI. Absorption of nutrients and water

A. Diffusion--Movement of gases or liquid from an area of high concentration to an area of lower concentration

B. Osmosis--Movement of a substance from the place of greater concentration through a thin, semipermeable membrane to the place of lesser concentration

C. Nonroot feeding (leaf feeding)--Nutrients and water entering plant through leaves and stems

XII. Parts of a flower (Transparency 8)

A. Pistil--Female part where egg cell originates

1. Stigma--Upper part of pistil which holds pollen

2. Style--Supports stigma

3. Ovary--Produces ovule or ovules which develop into seed or seeds

a. Ovule

b. Embryo sac

c. Pollen tube

B. Stamen--Male part of flower

1. Filament--Supports anther

2. Anther--Bears the pollen

C. Accessory organs--Protect the essential organs of the plant

1. Corolla--Petals of the flower

2. Calyx--Located below the petals

INFORMATION SHEET

3. Receptacle--Top part of the flower stalk
4. Micropyle--Opening of pollen tubes

XIII. Methods of pollination (Transparencies 9, 10, and 11)

- A. Gravity
- B. Wind
- C. Insects
- D. Man

1. Hybrids--First generation offspring of a cross between two individuals differing in one or more genes
 - a. Single cross--Progeny obtained by crossing two inbred lines
 - b. Double cross--Progeny resulting from crossing two single crosses
2. Mechanical pollination

- E. Animals
- F. Birds

XIV. Methods of vegetative reproduction

- A. Tubers
- B. Root
- C. Stolon
- D. Stem
- E. Rhizomes

Respiration vs Photosynthesis

A Destruction Process

Food Consumed

Energy is Released

CO₂ Given Off

Oxygen Used

Simple Compounds Form

Produces CO₂ and H₂O

Goes on Day and Night

Carried on in all Cells

A Building Process

Food Manufactured

Sun Provides Energy

CO₂ Taken in Plant

Oxygen Given Off

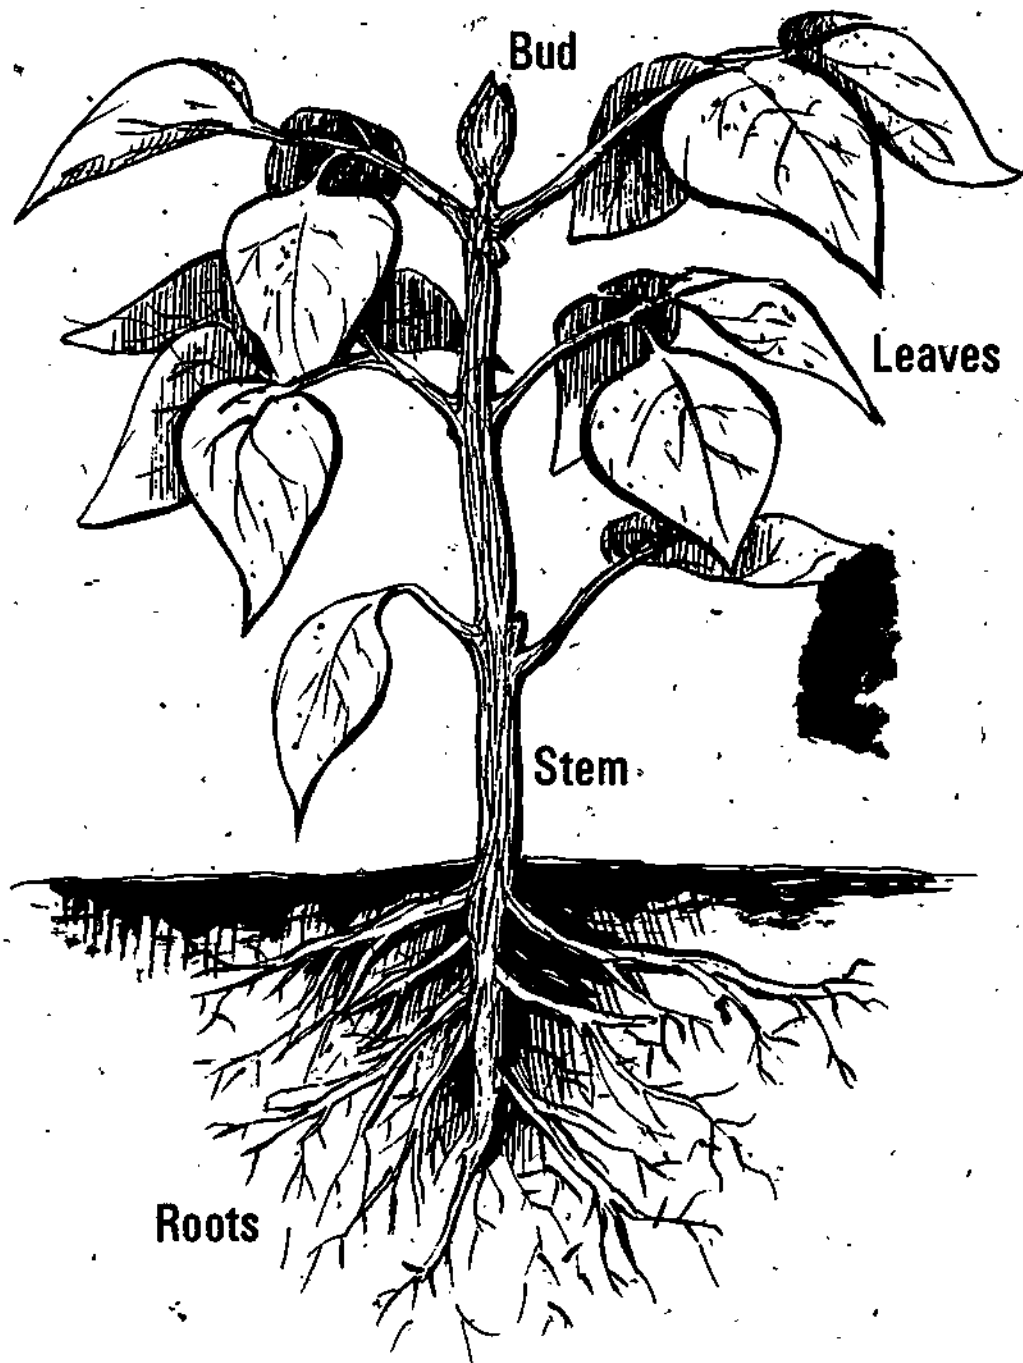

Complex Compounds Form

Produces Sugars, Starches

Requires Light

Chlorophyll Must be Present

UNIT III

TEST

1. Match terms on the right to the correct definition.

- | | |
|---|----------------------|
| _____ a. Process by which carbohydrates are manufactured by the chlorophyll-bearing cell granules from CO ₂ and water by means of the energy of sunlight | 1. Germination |
| _____ b. Flower lacking either stamen or pistil | 2. Fertilization |
| _____ c. Root arising from the base of a hypocotyl | 3. Pollination |
| _____ d. Female sex cell with the immediate surrounding parts; the future seed | 4. Embryo |
| _____ e. Flower having both pistil and stamen | 5. Pollen |
| _____ f. Stem of the embryo or young seedling below the cotyledons | 6. Pistil |
| _____ g. Seed-bearing organ of a flower; composed of the ovary, style, and stigma | 7. Photosynthesis |
| _____ h. Plant which produces two seed leaves, such as beans or cotton | 8. Ovule |
| _____ i. Branch of the main root | 9. Respiration |
| _____ j. Male sex cells produced in the anthers of flowering plants | 10. Transpiration |
| _____ k. Plant having one seed leaf (cotyledon) as in grasses | 11. Chlorophyll |
| _____ l. Application of nitrogen-fixing bacteria to the seed of legumes before planting | 12. Monocotyledon |
| _____ m. Rudimentary plantlet within the seed; the germ | 13. Dicotyledon |
| _____ n. Green vegetable pigment of plants essential in the process of photosynthesis | 14. Imperfect flower |
| _____ o. Plant stems horizontal below ground; usually sending up a plant and sending down roots at the node | 15. Perfect flower |
| | 16. Monoecious plant |
| | 17. Dioecious plant |
| | 18. Rhizome |
| | 19. Seed inoculation |
| | 20. Secondary root |
| | 21. Primary root |
| | 22. Hypocotyl |

- ___ p. Transfer of pollen from the anther to the stigma
- ___ q. Evaporation of moisture through the stoma or open pores in the leaves
- ___ r. Sexes (male and female) are on different plants
- ___ s. Union of the male (pollen) nucleus with the female (egg) cell
- ___ t. Taking in of oxygen and giving off of carbon dioxide
- ___ u. Both sexes present on same plant
- ___ v. Changing of a dormant embryo to active status

2. Label the parts of the plant illustrated below by writing the correct names in the blanks provided.

00183

3. Match the plant parts on the right to the correct set of functions.

- | | |
|--|------------------|
| _____ a. Reproduction; stores food | 1. Root |
| _____ b. Absorbs water and minerals; stores food; anchors and supports plant | 2. Stem |
| _____ c. Manufactures food for the plant; transpiration (evaporation of water); serves as food storage | 3. Leaf |
| _____ d. Supports leaves; aids in manufacturing plant food from leaves; serves as food-storage area | 4. Bud or flower |

4. Identify the two main types of root systems as illustrated below by writing the correct names in the blanks.

a. _____

b. _____

00181

5. Label the parts of the stem in the illustration below by writing the correct names in the blanks.

6. List the stages of seed germination.

a.
b.
c.
d.
e.

7. Select from the list requirements for good seed germination by placing an "X" in the blanks.

___ a. Proper temperature
___ b. Sufficient moisture
___ c. Ample supply of oxygen
___ d. Present in southern Oklahoma
___ e. Two inches deep in soil

8. List three factors that cause poor seed germination.
- a.
 - b.
 - c.
9. Select from the list below substances that must be present before photosynthesis will occur by placing an "X" in the blanks.
- a. Light
 - b. Soil
 - c. Water
 - d. Rocks
 - e. Favorable temperature
 - f. Organic matter
 - g. Living cells containing chlorophyll
 - h. Occurs only in southern United States
 - i. Carbon dioxide (CO₂)
10. List the steps in the process of manufacturing of plant food with photosynthesis.
- a.
 - b.
 - c.
 - d.
11. Describe three ways a plant absorbs nutrients.
- a. Diffusion
 - b. Osmosis
 - c. Nonroot feeding

00185

12. Label the parts of the flower below by writing the correct names in the blanks.

13. Select from the list below methods of pollination by placing an "X" in the blanks.

- a. Gravity
- b. Wind
- c. Insects
- d. Man
- e. Animals
- f. Birds

14. List three methods of vegetative reproduction.

- a.
- b.
- c.

PLANT GROWTH AND REPRODUCTION
UNIT III

ANSWERS TO TEST

- | | | | | | | | | |
|----|----|----|----|----|----|----|----|---|
| 1. | a. | 7 | b. | 13 | o. | 18 | v. | 1 |
| | b. | 14 | i. | 20 | p. | 3 | | |
| | c. | 21 | j. | 5 | q. | 10 | | |
| | d. | 8 | k. | 12 | r. | 17 | | |
| | e. | 15 | l. | 19 | s. | 2 | | |
| | f. | 22 | m. | 4 | t. | 9 | | |
| | g. | 6 | n. | 11 | u. | 16 | | |
- 2.
- a. Root
 - b. Stem
 - c. Leaf
 - d. Bud or flower
- 3.
- a. 4
 - b. 1
 - c. 3
 - d. 2
- 4.
- a. Taproot
 - b. Fibrous
- 5.
- a. Terminal bud
 - b. Auxiliary bud
 - c. Petiole
 - d. Abcission layer
 - e. Node
 - f. Internode

00188

b. Osmosis--Movement of a substance from the place of greater concentration through a thin, semipermeable membrane to the place of lesser concentration

c. Nonroot feeding (leaf feeding)--Nutrients and water entering plant through leaves and stems

12. a. Pollen tube

b. Ovule

c. Embryo sac

d. Micropyle

e. Receptacle

f. Calyx

g. Ovary

h. Filament

i. Corolla

j. Anther

k. Style

l. Stigma

m. Pistil

n. Stamen

13. a, b, c, d, e, f

14. Any three of the following:

a. Tubers

b. Root

c. Stolon

d. Stem

e. Rhizomes

00190

**SEED SELECTION
UNIT IV****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to select good quality seed. He should also be able to list and classify weeds as prohibited or restricted noxious. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with seed selection to the correct definitions.
2. Select from a list factors to look for in selecting high quality seed.
3. Classify noxious weeds as prohibited or restricted.
4. Select from a list procedures to follow in handling or storing seed.
5. List two means of securing good seed.
6. List the six requirements that must be printed on all Oklahoma seed labels.
7. Identify ten noxious weeds.
8. Select quality seed.

00191

SEED SELECTION
UNIT IV

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Conduct field trip to allow students to collect weed seeds and other crop seeds.

(NOTE: Samples of weed and crop seeds can be secured from the Agronomy Club at Oklahoma State University.)

G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet and take additional notes.
- C. Complete assignment sheets and turn in to instructor.
- D. Take test.

INSTRUCTIONAL MATERIALS :

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency masters
 1. TM 1--Prohibited Noxious Weeds
 2. TM 2--Restricted Noxious Weeds
 3. TM 3--Seed Label Requirements

00192

D. Assignment sheets

1. Assignment Sheet #1--Identifying and Classifying Noxious Weeds
2. Assignment Sheet #2--Selecting Quality Seed

E. Test

F. Answers to test

00193

SEED SELECTION
UNIT IV

INFORMATION SHEET

I. Terms and definitions

- A. Seed-Plant embryo and stored food surrounded by a seed coat
- B. Breeder seed-Seed used by the breeder to maintain the strain or variety
(NOTE: This seed is the source of foundation seed.)
- C. Foundation seed-Second link in the certified seed chain; produced from breeder seed and handled in such a way as to ensure genetic identity and varietal purity
- D. Registered seed-Seed produced from foundation seed and used to produce certified seed

(NOTE: This is the third link in the certification chain.)

- E. Certified seed-Seed which is guaranteed by a state agency to meet certain minimum requirements in respect to purity, germination, and other characteristics including freedom from weed seed, disease, spores, and insect eggs
- F. Pure seed-Percentage of seed that will produce plants true to variety and type
- G. Inert matter-Percentage by weight of chaff, broken seeds, stems, and soil particles
- H. Hard seed-Seed which remains hard at the end of the prescribed test because it has not absorbed water due to an impermeable seed coat
- I. Pure line seed-Amount of seed when planted that will produce plants

II. Factors to look for in selecting high quality seed

- A. Size and plumpness
- B. Color of seed coat
- C. Free of disease
- D. Free of broken seed

00191

INFORMATION SHEET

E. Free of noxious weeds

F. Free of insects

III. Noxious weeds

A. Prohibited noxious (Transparency 1)

1. Field bindweed*
2. Yellow nutsedge*
3. Canada thistle
4. Hoary cress
5. Russian knapp

B. Restricted noxious (Transparency 2)

1. Bracted plantain*
2. Buckhorn*
3. Cheat*
4. Dock*
5. Dodder*
6. Johnson grass*
7. Purple nightshade*
8. Wild onion*
9. Corn cockle
10. Giant foxtail
11. Quack grass
12. Sheep or red sorrel
13. Darnel

(NOTE: *These are used in FFA crops identification.)

00195

INFORMATION SHEET

IV. Procedures to follow in handling and storing seed

- A. Purchase foundation or registered seed for planting
- B. Select clean seed, if home grown
- C. Control weeds
- D. Prevent seed from mixing
- E. Store in a cool, dry place
- F. Treat seed for insects and disease
- G. Protect from rodents
- H. Test seed for germination
- I. Inspect seed during storage
- J. Make sure moisture is favorable for storage before harvesting home grown seed

V. Means of securing good seed

- A. Home grown
- B. Reliable seed dealers

VI. Requirements printed on seed labels (Transparency 3)

- A. Kind, variety, origin
- B. Lot number
- C. Percentage of purity
- D. Percentage of inert matter
- E. Percentage of weed seed
- F. Percentage of other agricultural seed

00195

Prohibited Noxious Weeds

Field Bindweed

Yellow Nutsedge

Canada Thistle

Hoary Cress

Russian Knapp

00197

A

**LAND PREPARATION
UNIT V****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to match terms and definitions and select from a list reasons for tillage. He should also be able to identify equipment used in land preparation, determine when to plow, and discuss advantages of turning under crop residue. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with land preparation to the correct definitions.
2. Select from a list reasons for tillage.
3. List five characteristics of a good seedbed.
4. Select from a list factors that determine the time to plow.
5. List advantages of fall plowing and spring plowing.
6. Discuss advantages of turning under crop residue.
7. Describe the purposes of summer fallowing.
8. List reasons for stubble mulching.
9. Identify equipment used in land preparation.

00205

LAND PREPARATION
UNIT V

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information sheet.
- C. Discuss terminal and specific objectives.
- D. Discuss information sheet.
- E. Take class on field trip to an implement dealer to see types of tillage implements used in the community.
- F. Have students collect pictures of tillage implements and bring to class.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Collect pictures of tillage implements used in your community.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Test
- D. Answers to test

II. References:

- A. Morten, John H., and Warren H. Leonard. *Principles of Field Crop Production*. New York: The Macmillan Company, 1968.

00206

- B. Hughes, Harold D. and Edwin R. Henson. *Crop Production*. New York: The Macmillan Company, 1967.
- C. *Instructional Materials for Vocational Agriculture I*. College Station, Texas: Teaching Materials Center, Agricultural Education Department, Texas A&M University.

LAND PREPARATION
UNIT V

INFORMATION SHEET

I. Terms and definitions

- A. Tillage--Type of cultivation used to maintain a seedbed and control weeds
- B. Crop residue--Part of the crop that is left on top of the soil after harvesting
(NOTE: The kind and amount of residue will determine type of tillage to use.)
- C. Stubble mulching--Tillage beneath the stubble without covering all the residue
- D. Erosion--Removal of soil by wind and/or water
- E. Land preparation--Complete process of preparing the soil after a crop is removed until a new crop is planted
- F. Summer fallow--Cropland left idle, usually for one growing season, while the soil is being cultivated to control weeds and conserve moisture
- G. Moldboard--Implement that breaks loose or shears off furrow slice and inverts the soil
- H. One-way--Disk plow used in loose soil and hard, dry soil where a moldboard cannot be used; leaves a rough surface and does not cover all the residue
(NOTE: You can only turn one direction with it.)
- I. Sweep--Used for stubble mulching; leaves surface rough with all residue on top
(NOTE: This is used primarily in the dryer climates.)
- J. Chisel--Implement used to break up dry, hard soils for water penetration
- K. Disk--Tillage implement for loose soils; used in final preparation of the seedbed

II. Reasons for tillage

- A. Eliminate weeds
- B. Increase soil's chemical and biological conditions for seed germination
- C. Loosen soil so that roots of seedlings can penetrate

00208

INFORMATION SHEET

- D. Aerate the soil
- E. Destroy insects
- F. Prepare land surface for irrigation
- G. Aid in erosion control
- H. Conserve moisture

III. Characteristics of a good seedbed

- A. Clean
- B. Firm
- C. Mellow
- D. Free of disease
- E. Free of insects
- F. Free of trash and weeds

(NOTE: Seedbed preparation is determined by the crop to be planted.)

IV. Factors that determine time to plow

- A. Type of crop
- B. Weed problem
- C. Erosion
- D. Moisture

V. Advantages of fall and spring plowing

- A. Fall
 - 1. Increases time for crop residue to decay
 - 2. Reduces tillage load
 - 3. Improves chance of forming a firm seedbed
 - 4. Allows time for soil to crumble from freezing and thawing
 - 5. Aids in insect control

00209

INFORMATION SHEET

B. Spring

1. Aids in controlling erosion on sandy soil
2. Adds organic matter

VI. Advantages of turning under crop residue

- A. Adds organic matter to the soil.
- B. Increases food elements
- C. Increases microorganism action
- O. Conserves moisture

VII. Purposes of summer fallowing

- A. Conserve moisture
- B. Control weeds

VIII. Reasons for stubble mulching

- A. Reduce erosion (wind)
- B. Increase moisture intake
- C. Increase crop yield

(NOTE: Crop yield may decrease the first year or two before it starts to increase.)

00210

INFORMATION SHEET

IX. Land preparation equipment

A. One-way plow

B. Subsurface tiller

C. Chisel plow

00211

INFORMATION SHEET

D. Semimounted moldboard plow

E. Spike-tooth harrow

00212

INFORMATION SHEET

F. Spring-tooth harrow

G. Tandem disk

LAND PREPARATION
UNIT V

TEST

1. Match terms on the right to the correct definition or description.

- | | |
|---|---------------------|
| _____ a. Complete process of preparing the soil after a crop is removed until a new crop is planted | 1. Crop residue |
| _____ b. Type of cultivation used to maintain a seedbed and control weeds | 2. Stubble mulching |
| _____ c. Tillage implement for loose soils; used in final preparation of the seedbed | 3. Erosion |
| _____ d. Implement used to break up dry, hard soils for water penetration | 4. Tillage |
| _____ e. Removal of soil by wind and/or water | 5. Land preparation |
| _____ f. Tillage beneath the stubble without covering all the residue | 6. Summer fallow |
| _____ g. Used for stubble mulching; leaves surface rough with all residue on top | 7. Moldboard |
| _____ h. Disk plow used in loose soils and on dry, hard soils where a moldboard cannot be used; leaves a rough surface and does not cover all the residue | 8. One-way |
| _____ i. Cropland left idle, usually for one growing season, while the soil is being cultivated to control weeds and conserve moisture | 9. Sweep |
| _____ j. Part of the crop that is left on top of the soil after harvesting | 10. Chisel |
| _____ k. Implement that breaks loose or shears off furrow slice and inverts the soil | 11. Disk |

2. Select from the list below reasons for tillage by placing an "X" in the blanks.

- _____ a. Eliminate weeds
- _____ b. Aerate the soil

00014

- c. Destroy insects
- d. Aid in erosion control
- e. Conserve moisture

3. List five characteristics of a good seedbed.

- a.
- b.
- c.
- d.
- e.

4. Select from the list below factors that determine the time to plow by placing an "X" in the blanks.

- a. Type of crop
- b. Time of day
- c. Month
- d. Weed problem
- e. Erosion
- f. Moisture

5. List advantages of fall plowing and spring plowing.

a. Fall

- 1)
- 2)
- 3)
- 4)

b. Spring

- 1)
- 2)

00715

6. Discuss the advantages of turning under crop residue.

7. Describe two purposes of summer fallowing.

8. List reasons for stubble mulching.

a.

b.

c.

9. Identify the following equipment used in land preparation by writing the correct name in the blank.

a. _____

b. _____

c. _____

d. _____

00216

LAND PREPARATION UNIT V

ANSWERS TO TEST

1.

a. 5	g. 9
b. 4	h. 8
c. 11	i. 6
d. 10	j. 1
e. 3	k. 7
f. 2	

2. a, b, c, d, e
3. Any five of the following:
 - a. Clean
 - b. Firm
 - c. Mellow
 - d. Free of disease
 - e. Free of insects
 - f. Free of trash and weeds
4. a, d, e, f
5.
 - a. Fall (any four of the following)
 - 1) Increases time for crop residue to decay
 - 2) Reduces tillage load
 - 3) Improves chance of forming a firm seedbed
 - 4) Allows time for soil to crumble from freezing and thawing
 - 5) Aids in insect control
 - b. Spring
 - 1) Aids in controlling erosion on sandy soil

00217

2) Adds organic matter

6. Discussion should include:
 - a. Adds organic matter to the soil
 - b. Increases food elements
 - c. Increases microorganism action
 - d. Conserves moisture
7. Description should include:
 - a. Conserve moisture
 - b. Control weeds
8.
 - a. Reduce erosion (wind)
 - b. Increase moisture intake
 - c. Increase crop yield
9.
 - a. Chisel plow
 - b. Spike-tooth harrow
 - c. Semimounted moldboard plow
 - d. Tandem disk

**CHEMICAL WEED CONTROL
UNIT VI****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to list ways weeds are spread and describe damages they cause to a farming program. He should also be able to calculate the proper amount of herbicide to use and the application rate. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with chemical weed control to the correct definitions.
2. List four safety precautions to observe when using herbicides.
3. Select from a list three ways weeds are propagated from area to area.
4. List four means by which seeds are spread.
5. Describe three ways weeds can hinder a farming program.
6. Match the methods of chemical application to the correct descriptions.
7. Discuss in writing three classifications of herbicides.
8. List four forms in which herbicides may be purchased.
9. Select from a list factors that determine herbicide application rate.
10. List three factors that determine when to apply herbicides.
11. Identify three types of spray nozzles.
12. Calculate application rates of herbicides.

CHEMICAL WEED CONTROL
UNIT VI

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objectives.
 - B. Provide student with information and assignment sheets.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information and assignment sheets.
 - F. Collect chemical labels for class use.
 - G. Take students on a field trip to a chemical supplier.
 - H. Teach unit on chemical safety before teaching this unit.
 - I. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet and take notes.
 - C. Complete the activities outlined on the assignment sheet.
 - D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 1. TM 1--Application of Herbicides
 2. TM 2--Application of Herbicides (Continued)

CHEMICAL WEED CONTROL
UNIT VI

INFORMATION SHEET

I. Terms and definitions

- A. Weed--Plant growing where it is not wanted
- B. Herbicide--Chemical developed to control weeds without harming crops
- C. Label--Legal identification attached to containers of any commercially sold agricultural chemical giving a summary of its properties, uses, and precautions
- D. Foliar herbicide--Herbicide applied to the crucial parts (leaves) of a plant
- E. Soil herbicide--Herbicide applied directly to the soil
- F. Selective herbicide--Herbicide which kills or damages certain types of plants
- G. Nonselective herbicide--Herbicide used to remove all or most of the plants within a given area
(NOTE: It may also be referred to as a soil sterilant.)
- H. Penetration--Movement of the herbicide retained on the surface
- I. Translocation--Movement of a herbicide from the point of penetration to the other parts of the plant
- J. Retention--Amount of herbicide that remains on the foliage after application
- K. Perennial--Plant that normally lives more than two years
- L. Hazardous chemical--Chemical harmful to man, animals, and plants

II. Safety precautions to observe when using herbicides

- A. Follow recommendations
- B. Use according to label instructions
- C. Use only on recommended crops
- D. Wear protective clothing
- E. Guard against injury to other plants

(NOTE: Instructor may add other precautions as needed.)

00222

INFORMATION SHEET

III. Ways weeds are propagated

- A. Seeds
- B. Roots
- C. Stems

IV. Means by which seeds are spread

- A. Wind
- B. Water
- C. Animals
- D. Man
- E. Equipment

V. Ways weeds hinder a farming program

- A. Reduces crop yields
- B. Reduces quality of crop
- C. Increases production cost
- D. Increases labor and equipment costs
- E. Lowers land value
- F. Harbors disease and insects
- G. Damages livestock and people

(NOTE: Most of the ways mentioned are affected through the competition with crops and by removing soil nutrients, moisture, and carbon dioxide.)

VI. Methods of chemical application (Transparency 1)

- A. Broadcast--Covers the entire area or field at a uniform rate
- B. Row or band--Places chemical directly over the rows
- C. Spot--Places chemical in limited areas infested with weeds
- D. Directed spray--Places spray directly on a certain part of the plant

00273

INFORMATION SHEET

- VII. Herbicide classification (Transparency 2)
- A. Preplant--Applying herbicide before the crop is planted
 - B. Preemergence--Applying chemical before the crop or weeds emerge
 - C. Post emergence--Applying chemical after the crop or weeds emerge
- VIII. Forms in which herbicides may be purchased
- A. Emulsions
 - B. Wettable powder
 - C. Granules
 - D. Soluble liquid and solid
 - E. Foam
- IX. Factors that determine application rate
- A. Texture of soil
 - B. Organic matter in soil
 - C. Size and condition of crop
 - D. Size and condition of weeds
 - E. Available moisture
- X. Factors that determine when to apply herbicides
- A. Climate
 - 1. Temperature
 - 2. Wind
 - 3. Moisture
 - B. Stage of plant growth
 - C. Condition of plant
- XI. Types of spray nozzles (Transparency 3)
- A. Hollow cone
 - B. Regular flat fan
 - C. Flooding flat

00224

INFORMATION SHEET

XII. Calculation of problems

A. Calculation of nozzle calibration (Transparency 4)

(NOTE: Use nomograph to determine missing factor.)

Example: Sprayer ground speed is 4 mph, nozzle spacing is 20 inches, and desired application rate is 20 gal/acre. Solution: Using a straightedge, draw a line from 4 mph on SPEED LINE through 20 inches on NOZZLE SPACING LINE and locate point where line intercepts PIVOT LINE. Now draw a line through intercept point on PIVOT LINE and through 20 gal/acre on APPLICATION RATE LINE and locate point where line intercepts CALIBRATION CHECK LINE. Read either 35 oz/min or 0.27 gal/min. Select nozzle size to give 0.27 gal/min at desired pressure. Adjust pressure regulator to give a flow rate of 35 oz/min from each nozzle.

B. Mixing herbicides

1. Product label-Static amount of active ingredients.

a. Percent by weight

b. Pounds equivalent per gallon of liquid

2. Formula calculations

a. $\frac{\text{Pounds per acre by 100\%}}{\text{Strength of mixture}} = \text{Pounds of product required per acre}$

b. $\frac{4 \text{ pounds per acre active ingredient}}{4 \text{ pounds per gallon product}} = \text{One gallon of product required per acre}$

00275

00229

ASSIGNMENT SHEET #1

- b. Rows are 40 inches apart. You want to spray a 14 inch band at five miles per hour and with an equivalent broadcast rate of 25 gallons per acre. How many ounces per minute would be applied?
- c. You want to spray a broadcast rate of 25 gallons per acre at a speed of 3.5 miles per hour. The nozzles are spaced 20 inches apart on the boom. What should be the flow rate for each nozzle?

00231

CHEMICAL WEED CONTROL
UNIT VI

ANSWERS TO ASSIGNMENT SHEET #1

1. 8 pounds of the 50% wettable powder required per acre
2. 5 pounds of the 80% wettable powder required per acre
3.
 - a. 4.3 miles per hour
 - b. 38 ounces per minute per nozzle
 - c. .3 gallons per minute or 38.5 ounces per minute

00232

CHEMICAL WEED CONTROL
UNIT VI

TEST

1. Match the terms on the right to the correct definition or description.

- | | |
|--|---|
| <p>_____ a. Legal identification attached to containers of any commercially sold agricultural chemical giving a summary of its properties, uses, and precautions</p> <p>_____ b. Herbicide used to remove all or most of the plants within a given area</p> <p>_____ c. Plant that normally lives more than two years</p> <p>_____ d. Chemical developed to control weeds without harming crops</p> <p>_____ e. Herbicide which kills or damages certain types of plants</p> <p>_____ f. Amount of herbicide that remains on the foliage after application</p> <p>_____ g. Plant growing where it is not wanted</p> <p>_____ h. Herbicide applied directly to the soil</p> <p>_____ i. Movement of a herbicide from the point of penetration to the other parts of the plant</p> <p>_____ j. Herbicide applied to the crucial parts (leaves) of a plant</p> <p>_____ k. Movement of the herbicide retained on the surface</p> <p>_____ l. Chemical harmful to man, animals, and plants</p> | <p>1. Weed</p> <p>2. Herbicide</p> <p>3. Label</p> <p>4. Foliar herbicide</p> <p>5. Soil herbicide</p> <p>6. Selective herbicide</p> <p>7. Nonselective herbicide</p> <p>8. Penetration</p> <p>9. Translocation</p> <p>10. Retention</p> <p>11. Perennial</p> <p>12. Hazardous chemical</p> |
|--|---|

2. List four safety precautions to observe when using herbicides.

- a.
- b.
- c.
- d.

00233

3. Select from the list, three ways weeds are propagated from area to area by placing an "X" in the blanks.

_____ a. Birds

_____ b. Seeds

_____ c. Animals

_____ d. Roots

_____ e. Stems

4. List four means by which seeds are spread.

a.

b.

c.

d.

5. Describe three ways weeds can hinder a farming program.

6. Match the methods of chemical application on the right to the correct description.

_____ a. Places chemical in limited areas infested with weeds

_____ b. Covers the entire area or field at a uniform rate

_____ c. Places spray directly on a certain part of the plant

_____ d. Places chemical directly over the rows

1. Broadcast

2. Row or band

3. Spot

4. Directed spray

00234

7. Discuss in writing three classifications of herbicides.

8. List four forms in which herbicides may be purchased.

- a.
- b.
- c.
- d.

9. Select from the list below factors that determine herbicide application rate by placing an "X" in the blanks.

- a. Texture of soil
- b. Time of day
- c. Month
- d. Organic matter in soil
- e. Size and condition of crop
- f. Size and condition of weeds
- g. Available moisture

10. List three factors that determine when to apply herbicides.

- a.
- b.
- c.

00235

11. Identify the following types of spray nozzles by writing the correct name in the blank provided.

a. _____

c. _____

b. _____

12. Calculate application rates of herbicides.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00336

CHEMICAL WEED CONTROL
UNIT VI

ANSWERS TO TEST

1.

a. 3	g. 1
b. 7	h. 5
c. 11	i. 9
d. 2	j. 4
e. 6	k. 8
f. 10	l. 12
2. Any four of the following:
 - a. Follow recommendations
 - b. Use according to label instructions
 - c. Use only on recommended crops
 - d. Wear protective clothing
 - e. Guard against injury to other plants
 - f. Others as added by instructor
3. b, d, e
4. Any four of the following:
 - a. Wind
 - b. Water
 - c. Animals
 - d. Man
 - e. Equipment
5. Description should include any three of the following:
 - a. Reduces crop yields
 - b. Reduces quality of crop

00237

- c. Increases production cost
 - d. Increases labor and equipment costs
 - e. Lowers land value
 - f. Harbors disease and insects
 - g. Damages livestock and people
- 6.
- a. 3
 - b. 1
 - c. 4
 - d. 2
7. Discussion should include:
- a. Preplant--Applying herbicide before the crop is planted
 - b. Preemergence--Applying chemical before the crop or weeds emerge
 - c. Postemergence--Applying chemical after the crop and weeds emerge
8. Any four of the following:
- a. Emulsions
 - b. Wettable powder
 - c. Granules
 - d. Soluble liquid and solid
 - e. Foam
9. a, d, e, f, g
- 10.
- a. Climate
 - b. Stage of plant growth
 - c. Condition of plant
- 11.
- a. Regular flat fan nozzle
 - b. Flooding flat nozzle
 - c. Hollow cone nozzle
12. Evaluated to the satisfaction of the instructor.

00238

PLANT INSECT CONTROL
UNIT VII

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to match plant damage and insects that cause the damage. He should be able to classify insects according to the way they feed and whether they are harmful or beneficial. He should be able to discuss the importance of insect control as it relates to the farming program. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with plant insects to the correct definitions.
2. List five practices used in controlling insects.
3. Match insects to the plant damage caused by each.
4. Classify insects according to the way they feed on plants.
5. Classify insects as either harmful or beneficial.
6. Discuss the importance of economics in relationship to plant insect control.
7. Label a drawing showing life cycle of an insect.
8. Match types of insecticides to the correct descriptions.
9. Describe natural and artificial methods of insect control.
10. Name the insect when given description, damage, and crops attacked.
11. Collect and identify common insects, telling if they are harmful or beneficial.

00239

PLANT INSECT CONTROL
UNIT VII

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Take students on field trip to collect insects.
- G. Assist students in identifying insects.
- H. Give test.

II. Students:

- A. Read objectives.
- B. Study information sheet and take notes.
- C. Collect insects and complete assignment sheet.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet

PLANT INSECT CONTROL
UNIT VII

INFORMATION SHEET

I. Terms and definitions.

- A. Insect--Small, boneless animal whose body is divided into three sections and has six legs
- B. Nymph--Young insect which looks like a small adult insect
- C. Life cycle--Stages in the life development of insects
- D. Insecticide--Chemical or biological material used to kill or control insects
- E. Pesticide--Chemical or biological material used to control pests

(NOTE: An insecticide may be classed as a pesticide.)

II. Practices used in insect control

- A. Tillage, pasturing, and timely planting
- B. Rotation and selection of crops
- C. Planting dates
- D. Destruction of trash
- E. Quarantine areas
- F. Biological control
- G. Poison baits
- H. Chemical control

III. Plant damage and insects causing damage (Transparency 1)

- A. Cotton boll weevil
- B. Corn earworm
- C. Southwestern corn borer

INFORMATION SHEET

IV. Insect classification according to feeding habits

A. Chewing

(NOTE: These insects bite off, chew, and swallow plant parts. This results in ragged, deformed, or stunted plants that may be more susceptible to disease and may die due to excessive damage.)

1. Armyworm
2. Grasshopper
3. Cutworm
4. Potato beetle
5. Blister beetle
6. Cotton bollworm
7. Southwestern corn borer

B. Sucking

(NOTE: These insects pierce the outer layer of the plant tissue with their "coke straw" beak and feed on the plant sap.)

1. Aphid
2. Leafhopper
3. Chinch bug
4. Thrips
5. Scale
6. Hessian fly
7. Greenbug

C. Internal feeding

(NOTE: This group enters the plant and feeds from within.)

1. European corn borer
2. Cotton boll weevil
3. Corn earworm

INFORMATION SHEET

D. Subterranean

(NOTE: This group includes both chewing and sucking insects which enter the plant below the soil surface.)

1. Corn rootworm
2. Wireworm

V. Beneficial and harmful insects

A. Beneficial insects (Transparency 2)

1. Ground beetle--Feeds on insects
2. Lady beetle--Feeds on aphids
3. Lacewing larva--Feeds on aphids
4. Big-eyed bug--Feeds on moth eggs (lepidoptera)
5. Pirate bug--Feeds on moth eggs (lepidoptera)
6. Damsel beetle--Feeds on caterpillar and small, soft-bodied insects
7. Assassin bug (wheelbug)--Feeds on caterpillars and soft-bodied insects
8. Spider--Feeds on caterpillar and soft-bodied insects

B. Harmful insects

1. Armyworm--Eats foliage; strips fields
2. Chinch bug--Sucks juice from plant
3. Southwestern corn borer--Eats leaves and then bores into stalk
4. Corn earworm--Cuts through husks; eats and tunnels through kernels
5. Lesser cornstalk borer--Bores into nuts and pegs of peanuts and roots of other crops
6. Corn rootworm (southern)--Bores into stem and feeds on roots
7. Alfalfa webworm--Webs tops of plants together; devours leaves
8. Cotton boll weevil--Feeds inside squares of bolls

INFORMATION SHEET

9. Cutworm--Cuts plant stems off near soil surface
10. Grasshopper--Eats foliage; strips plants
11. Greenbug--Sucks sap, weakens and kills plants
12. Cotton fleahopper--Feeds on tender parts of the plant
13. Thrips--Feeds on young plants
14. Granary weevil--Feeds on grain in storage

VI. Economic importance of insect control

- A. Over \$705 million spent annually on insect control
- B. Over \$2 billion annual loss
- C. Five to ten percent of total crop damaged
- D. Over \$100 million spent yearly, on cotton alone

VII. Life cycles of insects (Transparencies 3 and 4)

A. Four-stage group

1. Egg
2. Larva
3. Pupa
4. Adult

B. Three-stage group

1. Egg
2. Nymph
3. Adult

VIII. Description of types of insecticides

- A. Fumigant poison--Enters the insect's body through the tracheal system in the form of a gas
- B. Stomach poison--Eaten and digested by the insect

00245

INFORMATION SHEET

- C. Contact poison--Absorbed through the insect's skin or body wall and acts upon the pest's nervous system

IX. Methods of insect control

A. Natural

1. Climate
2. Temperature
3. Rainfall
4. Sunshine
5. Predatory insects
6. Disease

B. Artificial

1. Mechanical and physical
 - a. Insect traps
 - b. Male sterile insects
Example: Screwworm fly
 - c. Colored lights.
2. Cultural
 - a. Rotation of crops
 - b. Tillage
 - c. Planting date
 - d. Drainage
 - e. Improved plant varieties

3. Chemical

00246

INFORMATION SHEET

X. Insect identification by description, damage, crops attacked, and control

Insect	Adult Description	Larva Description	Damage	Control	Crops Attacked
Armyworm	Moth, brownish gray, 1 1/2-inch wing spread	Caterpillar, greenish, 3 stripes on side; 1 1/2 inches long	Eats foliage; strips field	Dylox, Toxaphene, Endrin, Sevin	Corn, grasses
Armyworm (fall)	Moth, gray, white, or dull-colored, 1 1/4-inch wing spread	Caterpillar, green to black with inverted white Y on head; 1 1/2 inches long	Eats foliage; often completely destroys crop	Toxaphene, Endrin, Sevin, Parathion, Diazinon	Corn, sorghum, grasses
Chinch bug	Soft-bodied, black with white wings with spots, 1/5-inch long	Nymph, brick red; wings reduced to small pads until adult stage is reached	Sucks juices from plants	Malathion, Sevin, Parathion	Corn, small grains, grasses
Southwestern corn borer	Moth, white to smoky yellow, 1 1/4-inch wing spread	Yellowish caterpillar with dark spots; 1 inch long	Eats leaves, then bores into stalk	Crop rotation, Diazinon EC and Granules, Furadan	Corn, sorghum, Johnson grass
Corn earworm	Moth, yellowish-green or gray, 1 1/2-inch wing spread	Caterpillar, varies from green to almost black	Cuts through husks; eats and tunnels through kernels	Sevin, Azodrin, Toxaphene, Parathion, Methomyl	Corn, cotton, grain sorghum
Cotton boll weevil	Snout beetle, yellowish to almost black, 1/4-inch long	White grub, wrinkled, curved brown head; 1/2-inch long	Grubs feed inside squares of bolls	Toxaphene, Parathion, Guthion, Sevin, Malathion ULV (ultra low volume)	Cotton

00247

00248

Insect	Adult Description	Larva Description	Damage	Control	Crops Attacked
Lesser corn-stalk borer	Moth, brown, 3/4-inch wing span; active at dusk and early evening	Bluish green, 3/4-inch long, nine narrow brown lines on each segment, brown to black head	Bores into nuts and pegs of peanuts and roots of other crops	Diazinon, Parathion, Dyfonate, Dasanit, Azodrin	Peanuts, corn, grain sorghum
Corn root-worm (southern)	Beetle, yellowish green, 12 black spots on wing corners, 1 1/4 inches long	Slender yellowish white worm, brown head, 6 small legs; about 1/2-inch long	Bores into stem and feeds on roots	Late planting; EPN or Sevin, Parathion	Corn, small-grains, grasses, cucumbers
Alfalfa webworm	Buff to brown moth, 3/4-inch wing spread	Greenish brown, 3 black dots in each side; 3/4-inch long	Webs tops of plants together; devours leaves	Mow early; Sevin, Parathion, Dylox, Toxaphene	Alfalfa, vegetables, clover, soybeans
Cutworm	Moth, varies in color with species, wing spread 1 1/2 inches	Caterpillar; pale brownish to grayish white worm	Cuts plants off near ground	Rotate crops; Endrin, Toxaphene, Parathion, Sevin, Dylox	Corn, grains, grasses, cotton, clover
Grasshopper	Varies according to species	Nymph	Eats foliage; strips plants	Cultivation to destroy eggs, Sevin, Toxaphene, Malathion	Corn, small grains, alfalfa

INFORMATION SHEET

Insect	Adult Description	Larva Description	Damage	Control	Crops Attacked
Granary weevil	Chestnut brown beetle, 1/16-inch long		Feeds on grains in storage	Use standard grain fumigants available on market	Cereal grains
Greenbug	Yellowish green-aphid	Nymph	Sucks sap, weakening and killing plants	Malathion, Parathion, Systox, Cygon, Di-Syston	Small grains, corn
Hessian fly	Mosquito-like fly, dark-bodied, 1/10-inch long	Small red maggot, 1/16-inch long	Sucks juices from plants	Delay seeding until flies have emerged	Wheat, barley, rye, and some grasses
Cotton flea-hopper	Pale green, 1/8-inch long, wings are marked with small dark spots and black marks near the end	Nymph	Feeds on tender part of plants	Cygon, Dylox, Sevin, Toxaphene, Parathion, Bidrin	Cotton
Thrips	Small, slender insect, yellowish with two pair of narrow wings with long hairs		Feeds on young-plants	Methomyl, Bidrin, Sevin, Toxaphene, Parathion, Di-Syston (Granules), Phorate (Granules), Thimet (Granules)	Cotton, peanuts

UNIT VII

ASSIGNMENT SHEET #1--COLLECTING AND IDENTIFYING INSECTS

Survey your local community and collect five specimens of insects. List the insects on the chart below and indicate their methods of feeding and the crops they attack.

Insect	Method of Feeding		Crop Attacked	Harmful or Beneficial
	Sucking	Chewing		

00254

PLANT INSECT CONTROL
UNIT VII

TEST

1. Match the terms on the right to the correct definition or description.

- | | |
|--|----------------|
| _____ a. Stages in the life development of insects | 1. Pesticide |
| _____ b. Chemical or biological material used to control pests | 2. Insecticide |
| _____ c. Young insect which looks like a small adult insect | 3. Life cycle |
| _____ d. Chemical or biological material used to kill or control insects | 4. Nymph |
| _____ e. Small, boneless animal whose body is divided into three sections and has six legs | 5. Insect |

2. List five practices used in controlling insects.

- a.
- b.
- c.
- d.
- e.

3. Match the insect on the right to the correct illustration showing the damage each does.

1. Cotton boll weevil
2. Corn earworm
3. Southwestern corn borer

4. Classify the following insects according to the way they feed on plants by writing the name in the proper column.

Armyworm	Aphid	Cutworm
Grasshopper	Leafhopper	Chinch bug
European corn borer	Cotton boll weevil	Corn earworm
Wireworm	Corn rootworm	

Subterranean	Internal feeding	Sucking	Chewing
1.	1.	1.	1.
2.	2.	2.	2.
	3.	3.	3.

5. Classify the following insects as harmful or beneficial by placing an "H" in front of the harmful and a "B" in front of the beneficial.

- | | |
|--------------------------------|---------------------------|
| ___ a. Chinch bug | ___ g. Cotton boll weevil |
| ___ b. Ground beetle | ___ h. Cutworm |
| ___ c. Southwestern corn borer | ___ i. Spider |
| ___ d. Lacewing larva | ___ j. Grasshopper |
| ___ e. Pirate bug | ___ k. Cotton fleahopper |
| ___ f. Corn earworm | ___ l. Thrips |

6. Discuss the importance of economics in relationship to plant insect control.

7. Label a drawing showing the four-stage life cycle of an insect by writing the correct name in the blank.

00256

8. Match the type of insecticide on the right to the correct description.

- | | |
|--|---|
| <p>_____ a. Absorbed through the insect's skin or body wall and acts upon the pest's nervous system</p> <p>_____ b. Eaten and digested by the insect</p> <p>_____ c. Enters the insect's body through the tracheal system in the form of a gas</p> | <p>1. Stomach poison</p> <p>2. Fumigant poison</p> <p>3. Contact poison</p> |
|--|---|

9. Describe natural and artificial methods of insect control.

10. Complete the chart below by naming the insect when given the description, damage, and crops attacked.

Insect	Adult Description	Damage	Crops Attacked
a. _____	Varies according to species	Eats foliage; strips plants	Corn, small grains, alfalfa
b. _____	Moth, brownish gray, 1 1/2-inch wing spread	Eats foliage; strips field	Corn, grasses
c. _____	Buff to brown moth, 3/4-inch wing spread	Webs tops of plants together; devours leaves	Alfalfa, vegetables, clover, soybeans
d. _____	Moth, varies in color with species, wing spread 1 1/2 inches	Cuts plants off near ground	Corn, grains, grasses, cotton, clover
e. _____	Yellowish green aphid	Sucks sap, weakening and killing plants	Small grains, corn

11. Collect and identify common insects, telling if they are harmful or beneficial.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00257

PLANT INSECT CONTROL
UNIT VII

ANSWERS TO TEST

1. a. 3

b. 1

c. 4

d. 2

e. 5

2. Any five of the following:

a. Tillage, pasturing, and timely planting

b. Rotation and selection of crops

c. Planting dates

d. Destruction of trash

e. Quarantine areas

f. Biological control

g. Poison baits

h. Chemical control

3. a. 2

b. 1

c. 3

4. Subterranean

1. Corn rootworm

2. Wireworm

Internal Feeding

1. European corn borer

2. Cotton boll weevil

3. Corn earworm

00258

Sucking

1. Aphid
2. Leafhopper
3. Chinch bug

Chewing

1. Armyworm
2. Cutworm
3. Grasshopper

5.
 - a. H
 - b. B
 - c. H
 - d. B
 - e. B
 - f. H
- g. H
 - h. H
 - i. B
 - j. H
 - k. H
 - l. H

6. Discussion should include:

- a. Over \$705 million spent annually on insect control
- b. Over \$2 billion annual loss
- c. Five to ten percent of total crop damaged
- d. Over \$100 million spent yearly on cotton alone

7.
 - a. Egg
 - b. Larva
 - c. Pupa
 - d. Adult

- B.
 - a. 3
 - b. 1
 - c. 2

9. Description should include:

- a. Natural
 1. Climate
 2. Temperature
 3. Rainfall

4. Sunshine
5. Predatory Insects
6. Disease
- b. Artificial
 1. Mechanical and physical
 - a. Insect traps
 - b. Male sterile insects
 - c. Colored lights
 2. Cultural
 - a. Rotation of crops
 - b. Tillage
 - c. Planting date
 - d. Drainage
 - e. Improved plant varieties
 3. Chemical
10.
 - a. Grasshopper
 - b. Armyworm
 - c. Alfalfa webworm
 - d. Cutworm
 - e. Greenbug
11. Evaluated to satisfaction of instructor.

00260

**PLANT DISEASES
UNIT VIII****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to match terms and definitions, classify a disease, and label a drawing showing the life cycle of smut. He should also be able to collect and identify diseased plants. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with plant diseases to the correct definitions.
2. List four practices used to control plant diseases.
3. Match plant diseases to the damage caused by each.
4. Classify a disease as a fungus, bacteria, nematode, or virus.
5. Label a drawing showing the life cycle of smut.
6. Name the disease when given the crops affected, symptoms of the disease, and methods of control.
7. Identify diseases of plants collected in his community.

00261

PLANT DISEASES
UNIT VIII

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information sheet.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information sheet.
 - F. Provide student with an opportunity or an incentive to collect plant diseases for identification.
 - G. Conduct a field trip.
 - H. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet and take notes.
 - C. Collect and identify plants showing disease damage.
 - D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 1. ✓ TM 1--Fungus Diseases
 2. TM 2--Fungus Diseases (Continued)

3. TM 3--Bacterial Diseases
4. TM 4--Bacterial Diseases (Continued)
5. TM 5--Nematode Diseases
6. TM 6--Life Cycle of Smut

D. Assignment Sheet #1--Collect and Identify Plant Disease Damage

E. Test

F. Answers to test

PLANT DISEASES
UNIT VIII

INFORMATION SHEET

I. Terms and definitions

- A. Blight--Rapid discoloration and death of tissue over certain portions of the plant
- B. Fungicide--Chemical or biological material used to kill or control fungi
- C. Dwarfing--Failure of any part of the plant or the entire plant to develop properly

(NOTE: This is generally caused by nutritional deficiencies or a diseased condition.)

- D. Host--Plant in which the disease lives and obtains food
- E. Resistant--Inherited ability of a plant to retard growth of disease organisms
- F. Fungus--Plant which lacks chlorophyll and obtains its food from other plant matter, dead or alive
- G. Parasitic plant--Plant which cannot manufacture its own food but lives on other living plants

- H. Ring spot--Yellowish ring on leaf with green tissue inside the ring

(NOTE: This is a virus disease that is common on sweet potato leaves.)

- I. Scale--Crust-like, diseased lesion produced as a result of disease infection
- J. Lesion--Abnormal change in parts of a plant due to disease or injury
- K. Mosaic--Symptom of certain virus-incited diseases in which angular patterns of leaf coloration are apparent due to loss of chlorophyll along some of the veins

- L. Virus--Microscopic, protein-like substance capable of causing mosaic and other diseases

- M. Conk--Dead area on a stem surrounded by living tissue

- N. Wilt--Loss of freshness and drooping of leaves

- O. Gall--Knot on the plant root produced by nematode; causes stunting of plant and severe reduction in yield

00264

INFORMATION SHEET

II. Practices used to control plant diseases

- A. Use of resistant varieties
- B. Eradication of alternate host plants
- C. Treatment of soil
- D. Rotation of crops
- E. Destruction of plant residue
- F. Use of disease-free seed

III. Plant damage caused by diseases (Transparencies 1, 2, 3, 4, and 5)

- A. Root rot
- B. Blight
- C. Smut
- D. Stalk rot
- E. Bacterial spot on tomato
- F. Cotton leaf blight
- G. Root gall

IV. Disease classifications

A. Fungus (Transparencies 1 and 2)

- 1. Seedling disease
- 2. Root rot
- 3. Rust
- 4. Scab
- 5. Smut
- 6. Ergot

B. Bacterial (Transparencies 3 and 4)

- 1. Bacterial blight

00265

INFORMATION SHEET

2. Bacterial wilt
 3. Leaf spot
 4. Angular leaf spot
 5. Cornstalk rot
 6. Verticillium wilt
- C. Nematode (Transparency 5)
1. Gall
 2. Root-knot
- D. Virus-Mosaic
- V. Life cycle of smut (Transparency 6)
- A. Seed planted; produces plant but seeds are destroyed by smut
 - B. Black head
 - C. Spores
 - D. Infected young
 1. New heads
 2. Young spikelets
 - E. Infectious seed
- VI. Common plant diseases

(NOTE: Refer to chart on the following page.)

00266

VI. Common plant diseases

INFORMATION SHEET

Disease	Crops Affected	Symptoms	Control
Root rot	Cotton, alfalfa, peanuts, soybeans	Yellowing and bronzing of leaves; leaves become brown and dry	Rotation with other crops; use early-maturing varieties
Rusts black stem	Wheat, oats, barley, rye, grasses	Long brick-red pustules on stems and leaf sheaths; later turn black	Use resistant varieties and early-maturing varieties
Smut	Corn, sorghum, oats, barley, rye, wheat	Grayish white galls on any part of plant; filled with mass of black spores at maturity	Crop rotation; use resistant hybrids; treat seeds
Bacterial blight	Soybeans, sorghum, corn	Light to dark brown irregular spots without marginal halo on leaves, stems, and pods	Destroy crop residue; treat seeds; use resistant varieties
Bacterial wilt	Corn, alfalfa	Leaves wilt, turn yellow, then brown, and plant dies; stems show yellow discolored area	Rotation; use hardy and resistant varieties
Mosaic (virus)	Alfalfa, soybeans	Plants may dwarf; vein yellowing with dwarfing of stems	Good insect control
Ergot	Barley, wheat, rye	A blue black, hard mass replaces the kernels in the head of the plant	Rotation; sow disease-free seed
Nematode	Wheat, rye	Rolled or curled leaf; stem enlarged near the base, frequently bent	Use resistant varieties; plant disease-free seed
Verticillium wilt	Cotton	Discoloration of leaf margins; diseased leaves; bolls shed	Use wilt-resistant varieties

00275

- _____ n. Rapid discoloration and death of tissue over certain portions of the plant
- _____ o. Knot on the plant coat produced by nematode; causes stunting of plant and severe reduction in yield

2. List four practices used to control plant diseases.

- a.
- b.
- c.
- d.

3. Match the plant diseases on the right to the plant damage caused by each.

- 1. Cotton leaf blight
- 2. Root galls
- 3. Stalk rot
- 4. Smut

4. Classify the following diseases by placing an "F" in front of the fungi, "B" in front of the bacteria, "N" in front of the nematodes, and "V" in front of the viruses.

- | | |
|----------------------------|---------------------------|
| _____ a. Root rot | _____ g. Mosaic |
| _____ b. Leaf spot | _____ h. Root-knot |
| _____ c. Cornstalk rot | _____ i. Smut |
| _____ d. Verticillium wilt | _____ j. Ergot |
| _____ e. Rust | _____ k. Bacterial wilt |
| _____ f. Gall | _____ l. Seedling disease |

5. Label the drawing below showing the life cycle of smut.

00277

6. Name the disease when given the crop affected, symptom of the disease, and method of control.

a.	Corn, sorghum, oats, barley, rye, wheat	Grayish white galls on any part of plant; filled with mass of black spores at maturity	Crop rotation; use resistant hybrids; treat seeds
b.	Wheat, oats, barley, rye, grasses	Long brick-red pustules on stems and leaf sheaths; later turn black	Use resistant varieties and early-maturing varieties
c.	Barley, wheat, rye	A blue black, hard mass replaces the kernels in the head of the plant	Rotation; sow disease-free seed
d.	Soybeans, sorghum, corn	Light to dark brown irregular spots without marginal halo on leaves, stems, and pods	Destroy crop residue; treat seeds; use resistant varieties
e.	Alfalfa, soybeans	Plants may dwarf; vein yellowing with dwarfing of stems	Good insect control

7. Identify diseases of plants collected in your community.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

PLANT DISEASES
UNIT VIII

ANSWERS TO TEST

1. a. 13 h. 10 o. 14
 b. 8 i. 6
 c. 4 j. 11
 d. 12 k. 7
 e. 9 l. 3
 f. 5 m. 2
 g. 15 n. 1
2. Any four of the following:
 a. Use of resistant varieties
 b. Eradication of alternate host plants
 c. Treatment of soil
 d. Rotation of crops
 e. Destruction of plant residue
 f. Use of disease-free seed
3. a. 3
 b. 4
 c. 2
 d. 1
4. a. F g. V
 b. B h. N
 c. B i. F
 d. B j. F
 e. F k. B
 f. N l. F

00279

5.
 - a. Seed planted; produces plant but seeds are destroyed by smut
 - b. Black head
 - c. Spores
 - d. Infected young
 - e. Infectious seed
6.
 - a. Smut
 - b. Rust
 - c. Ergot
 - d. Bacterial blight
 - e. Mosaic
7. Evaluated to satisfaction of the instructor.

**LANDSCAPING
UNIT IX****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to design a basic landscape plan showing the three major areas. He should also be able to determine location of the areas within the plan and apply the information to fit his local community. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with landscaping to the correct definitions.
2. Identify three major areas in a landscape plan.
3. List three overall objectives of a landscape plan.
4. Select from a list four factors to consider when selecting trees for a landscape plan.
5. List three factors to consider when selecting shrubs for a landscape plan.
6. Select from a list three factors to consider in selecting plants for a landscape plan.
7. Discuss three rules of thumb to follow in drawing a landscape plan.
8. Classify plants as trees or shrubs.
9. Identify symbols used in drawing a landscape plan.
10. Collect and identify ten samples of trees and shrubs used in his local community.
11. Draw a landscape plan using the basic symbols and plants found in his area.

00281

LANDSCAPING
UNIT IX

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Provide student with a situation to landscape.

(NOTE: A landscape planning kit can be purchased from W. R. Brown Enterprises, Box 429, Claremont, California 91711.)

- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Complete assignment sheets and turn in to instructor for evaluation.
- D. Take test.

INSTRUCTIONAL MATERIALS

00283

LANDSCAPING
UNIT IX

INFORMATION SHEET

I. Terms and definitions

- A. Landscape design--Art of developing land for use and enjoyment in such a way as to provide maximum utility and beauty with a minimum of maintenance
- B. Deciduous--Plant having no living leaves during dormant season
(NOTE: Deciduous plants drop their leaves by December.)
- C. Evergreen--Plant retaining functional leaves throughout the year
- D. Narrow-leaved--Plant having leaves of much greater length than width
- E. Broad-leaved--Plants having a relatively broad leaf in relation to the length
- F. Conifer--Cone-bearing trees; most kinds are evergreen cedar type trees
- G. Formal balance--Precise and methodical treatment of an area to produce geometric exactness or exact pairs of plants or plant groups
- H. Informal balance--Plant in masses

(NOTE: Plants should be grouped together for a pleasing effect versus duplicate balance in which duplicate plants are planted on both sides of design with center open.)

II. Major areas of a landscape plan (Transparency 1)

- A. Public--Area that lies between the street or highway and the house
- B. Private--Area used for outdoor relaxation, rest, entertainment, and general family enjoyment
(NOTE: This area is generally behind the house and may also be a children's play area.)
- C. Service--Area conveniently located near the kitchen, utility room, garage, and driveway

00284

INFORMATION SHEET

III. Objectives of a landscape plan

- A. Attractive
- B. Interesting
- C. Convenient
- D. Useful
- E. Comfortable

(NOTE: Comfortable refers to comfort from shade, wind, dust, odor, and sound.)

IV. Factors to consider in selecting trees

- A. Adaptability
- B. Freedom from major disease and insects or pests
- C. Use of tree
- D. Size

(NOTE: Tall houses require tall growing trees. Low rambling houses require moderate-sized trees.)

- E. Shape

V. Factors to consider in selecting shrubs

- A. Placement of shrubs
- B. Size in width and height
- C. Shape
- D. Winter and/or seasonal color

VI. Factors to consider in selecting plants

- A. Climatic conditions
- B. Ultimate size
- C. Shape

00285

INFORMATION SHEET

VII. Rules of thumb for drawing a landscape plan

- A. Do not plant shrubs closer than three feet to the house
 - 1. Make sure the average line of shrub height does not exceed one-third of the eaves line height
 - 2. Plant all shrubs in groups of three or more of a kind except for accent
 - 3. Do not plant duplicate shrubs or ground cover without eliminating and controlling bermuda grass first
 - 4. Do not plant thorny plants where people pass
- B. Do not overplant
- C. Do not cover windows
- D. Plant large plants at least twenty feet from house
- E. Beware of obstacles
 - 1. Sewer
 - 2. Power lines
 - 3. Underground cables
- F. Consider assets of landscape
 - 1. Dust
 - 2. Odor
 - 3. Sound
 - 4. Sight
 - 5. View

ASSIGNMENT SHEET #2-DRAWING A, LANDSCAPE PLAN

Using the basic symbols, draw a rough draft of a landscape plan showing the location of trees, shrubs, flower beds, and other features. Your plan should be attractive, interesting, convenient, and useful.

00292

LANDSCAPING
UNIT IX

TEST

1. Match the terms on the right to the correct definition.

- | | | |
|--|----|------------------|
| _____ a. Plant retaining functional leaves throughout the year | 1. | Landscape design |
| _____ b. Cone-bearing trees; most kinds are evergreen cedar type trees | 2. | Deciduous |
| _____ c. Plant in masses | 3. | Evergreen |
| _____ d. Plant having no living leaves during dormant season | 4. | Narrow-leaved |
| _____ e. Plants having a relatively broad leaf in relation to the length | 5. | Broad-leaved |
| _____ f. Precise and methodical treatment of an area to produce geometric exactness or exact pairs of plant or plant groups | 6. | Conifer |
| _____ g. Art of developing land for use and enjoyment in such a way as to provide maximum utility and beauty with a minimum of maintenance | 7. | Formal balance |
| _____ h. Plant having leaves of much greater length than width | 8. | Informal balance |

2. Identify three major areas in a landscape plan.

00293

3. List three overall objectives of a landscape plan.
- a.
 - b.
 - c.
4. Select from the list below four factors to consider when selecting trees for a landscape plan by placing an "X" in the blanks.
- a. Adaptability
 - b. Color
 - c. Season
 - d. Freedom from major disease and insects or pests
 - e. Use of tree
 - f. Size
5. List three factors to consider when selecting shrubs for a landscape plan.
- a.
 - b.
 - c.
6. Select from the list below three factors to consider in selecting plants for a landscape plan by placing an "X" in the blanks.
- a. Climatic conditions
 - b. Winter growth
 - c. Ultimate size
 - d. Shape
 - e. Color
 - f. Depth

7. Discuss in a short paragraph three rules of thumb to follow in drawing a landscape plan.

8. Classify the following plants by placing a "T" in front of the trees and an "S" in front of the shrubs.

___ a. Burford Holly

___ f. Scotch Pine

___ b. Pyracantha

___ g. Bald Cypress

___ c. Redbud

___ h. Privet

___ d. Sycamore

___ i. Bur Oak

___ e. Arborvitae

___ j. Nandina

9. Identify the following symbols used in drawing a landscape plan.

a. _____

b. _____

c. _____

d. _____

00295

10. Collect and identify ten samples of trees and shrubs used in your local community.
11. Draw a landscape plan using the basic symbols and plants found in your area.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

00296

LANDSCAPING
UNIT IX

ANSWERS TO TEST

1.
 - a. 3
 - b. 6
 - c. 8
 - d. 2
 - e. 5
 - f. 7
 - g. 1
 - h. 4
2.
 - a. Public
 - b. Private or children play area
 - c. Service
3. Any three of the following:
 - a. Attractive
 - b. Interesting
 - c. Convenient
 - d. Useful
 - e. Comfortable
4. a, d, e, f
5. Any three of the following:
 - a. Placement of shrubs
 - b. Size in width and height
 - c. Shape
 - d. Winter and/or seasonal color
6. a, c, d
7. Any three of the following:
 - a. Do not plant shrubs closer than three feet to the house
 - 1) Make sure the average line of shrub height does not exceed one-third of the eaves line height.

00297

- 2) Plant all shrubs in groups of three or more of a kind except for accent
- 3) Do not plant duplicate shrubs or ground cover without eliminating and controlling bermuda grass first
- 4) Do not plant thorny plants where people pass

- b. Do not overplant
