After completion of this unit, the student should be able to discuss the effects of feeding antibiotics and write the purpose of feed additives. He should be able to match nutrients with their sources, functions, and deficiency symptoms. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with animal nutrients to the correct definitions.
2. List the six major classes of nutrients.
3. Select from a list two types of protein.
4. Match nutrients with their functions.
5. Select from a list the major minerals.
6. List three minor or trace minerals.
7. Match nutrients to their sources.
8. Match vitamins to the correct deficiency symptoms.
9. Match minerals to the correct deficiency symptoms.
10. Write the purpose of feed additives.
11. Discuss the effects of feeding antibiotics.

00299

ANIMAL NUTRIENTS
UNIT I

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objectives.
 - B. Provide student with information sheet.
 - C. Discuss terminal and specific objectives.
 - D. Discuss information sheet.
 - E. Provide opportunity for student to look at a feed tag.
 - F. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet and take notes.
 - C. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Test
 - D. Answers to test
- II. References:

00301

ANIMAL NUTRIENTS
UNIT I

INFORMATION SHEET

I. Terms and definitions

- A. Nutrient--Single class of foods or group of like foods that aid in the support of life
- B. Total digestible nutrient (TDN)--That portion of a nutrient which may be digested and taken into the animal body
- C. Feed additive--Powerful substance which is added in small amounts to feeds for promoting rapid growth, for more efficient feed utilization, and for disease treatment
- D. Protein--Nutrient which supplies building materials for body growth and repair
- E. Digestible protein--Amount of crude protein in a feed that can be digested by the animal
- F. Starch--Carbohydrate which supplies energy to animals
- G. Vitamin--Complex chemical essential for normal body functions
- H. Mineral--Element which is necessary for proper body functions and life processes
- I. Amino acid--Building block of protein
- J. Antibiotic--Substance used in small amounts to help prevent and control certain diseases in animals
- K. Urea--Synthetic protein substance used in ruminant rations

(NOTE: A rule of thumb says that urea should make up not more than three percent of a grain mix for dairy cows; the beef cow should not get more than 1/4# of actual urea per day.)

II. Major classes of nutrients.

- A. Water
- B. Protein
- C. Carbohydrate
- D. Mineral
- E. Vitamin
- F. Fat

00302

INFORMATION SHEET

III. Two types of protein

A. Plant

Examples: Soybean meal, cottonseed meal, linseed meal

B. Animal

Examples: Tankage, fish meal, meat scraps, dried milk products

IV. Functions of nutrients

A. Water

1. Transports nutrients and waste materials
2. Regulates body temperature

B. Protein

1. Develops muscle tissue
2. Repairs worn-out tissue

C. Carbohydrate

1. Supplies heat and energy
2. Stores heat and energy

D. Mineral

1. Aids in skeletal development
2. Provides chemical balance for proper body functions

E. Vitamins

1. Vitamin A
 - a. Aids in disease resistance
 - b. Aids in development of nerve cells
2. Vitamin D--Aids in skeletal development (bones, teeth, etc.)
3. Vitamin E--Is necessary for reproduction
4. Vitamin K--Is necessary for blood clotting

00303

INFORMATION SHEET

5. Vitamin B₇

- a. Promotes growth
- b. Prevents skin infections

E. Fat

1. Provides source of energy
2. Provides source of insulation

V. Major minerals

- A. Calcium (Ca)
- B. Phosphorus (P)
- C. Sodium chloride (NaCl)
- D. Potassium (K)
- E. Sulfur (S)

VI. Minor or trace minerals

- A. Iron (Fe)
- B. Copper (Cu)
- C. Zinc (Zn)
- D. Iodine (I)
- E. Cobalt (Co)
- F. Magnesium (Mg)

VII. Sources of nutrients

A. Protein

1. Cottonseed meal
2. Linseed meal

00304

INFORMATION SHEET

3. Soybean meal
4. Skim milk
5. Tankage
6. Alfalfa hay

B. Carbohydrate

1. Cereal grains
Examples: Wheat, oats, barley, corn
2. Nonlegume roughage
3. Molasses

C. Fat

1. Tallow
2. Animal products
3. Seeds

D. Mineral

1. Almost all common livestock feeds
2. Commercially prepared mineral and trace mineral mix

E. Vitamin

1. Most feeds
2. Produced in the rumen
3. Commercial vitamin premix

VIII. Symptoms of vitamin deficiencies

A. Vitamin A

1. Blindness
2. Loss of young
3. Poor development of bones
4. Slow growth

00305

INFORMATION SHEET

- B. Vitamin D
 - 1. Bone deformities
 - 2. Rickets
 - C. Vitamin E
 - 1. Loss of young
 - 2. Failure to reproduce
 - D. Vitamin K
 - 1. Internal bleeding
 - 2. Lung deformities resulting in death
 - E. Vitamin B complex
 - 1. Muscular weakness
 - 2. Abnormalities of young
- IX. Symptoms of mineral deficiencies
- A. Calcium
 - 1. Rickets
 - 2. Broken bones
 - 3. Poor gains
 - 4. Milk fever
 - B. Phosphorus
 - 1. Lameness
 - 2. Stiffness of joints
 - 3. Less appetite
 - 4. Reduced rate of gain
 - 5. Decreased heat cycle
 - C. Sodium chloride
 - 1. Lack of appetite
 - 2. Unthrifty appearance

00306

INFORMATION SHEET

D. Potassium

1. Slow growth rate
2. Reduced feed consumption
3. Stiffness
4. Shock

E. Sulfur--Unthriftiness

F. Iron--Anemia

G. Iodine

1. Hairless pigs
2. Goiter

H. Copper--Anemia

I. Cobalt

1. Loss of appetite
2. Unthriftiness
3. Delayed sexual development

X. Purpose of feed additives--Increase growth and feed efficiency

Examples: Stilbestrol, progesterone, testosterone

XI. Effects of feeding antibiotics

Examples:- Aureomycin, Terramycin, Penicillin, Streptomycin

A. Increased gains

B. Prevention and control of certain diseases

00307

ANIMAL NUTRIENTS
UNIT I

TEST

1. Match terms on the right to the correct definition.

- _____ a. Nutrient which supplies building materials for body growth and repair
- _____ b. Element which is necessary for proper body functions and life processes
- _____ c. Amount of crude protein in a feed that can be digested by the animal
- _____ d. Substance used in small amounts to help prevent and control certain diseases in animals
- _____ e. Carbohydrate which supplies energy to animals
- _____ f. Synthetic protein substance used in ruminant rations
- _____ g. That portion of a nutrient which may be digested and taken into the animal body
- _____ h. Building block of protein
- _____ i. Powerful substance which is added in small amounts to feeds for promoting rapid growth, for more efficient feed utilization, and for disease treatment
- _____ j. Single class of foods or group of like foods that aid in the support of life
- _____ k. Complex chemical essential for normal body functions

1. Nutrient
2. Total digestible nutrient (TDN)
3. Feed additive
4. Protein
5. Digestible protein
6. Starch
7. Vitamin
8. Mineral
9. Amino acid
10. Antibiotic
11. Urea

2. List the six major classes of nutrients.

- a.
- b.
- c.
- d.
- e.
- f.

00208

3. Select from the list below two types of protein by placing an "X" in the blanks.

- | | |
|------------------------------------|--|
| <input type="checkbox"/> a. Old | <input type="checkbox"/> e. Yellow |
| <input type="checkbox"/> b. Plant | <input type="checkbox"/> f. Supplement |
| <input type="checkbox"/> c. New | <input type="checkbox"/> g. Corn |
| <input type="checkbox"/> d. Animal | |

4. Match the nutrients on the right to the correct functions.

- | | |
|---|-----------------|
| <input type="checkbox"/> a. Supplies heat and energy; stores heat and energy | 1. Water |
| <input type="checkbox"/> b. Transports nutrients and waste materials; regulates body temperature | 2. Protein |
| <input type="checkbox"/> c. Aids in skeletal development; provides chemical balance for proper body functions | 3. Carbohydrate |
| <input type="checkbox"/> d. Provides source of energy; provides source of insulation | 4. Mineral |
| <input type="checkbox"/> e. Develops muscle tissue; repairs worn-out tissue | 5. Fat |

5. Select from the list below the major minerals by placing an "X" in the blanks.

- | | |
|---|---------------------------------------|
| <input type="checkbox"/> a. Calcium | <input type="checkbox"/> g. Argon |
| <input type="checkbox"/> b. Gold | <input type="checkbox"/> h. Helium |
| <input type="checkbox"/> c. Phosphorus | <input type="checkbox"/> i. Potassium |
| <input type="checkbox"/> d. Sodium chloride | <input type="checkbox"/> j. Boron |
| <input type="checkbox"/> e. Silver | <input type="checkbox"/> k. Silica |
| <input type="checkbox"/> f. Sulfur | <input type="checkbox"/> l. Sugar |

6. List three minor or trace minerals.

- a.
b.
c.

00309

7. Match the nutrients on the right to the proper source or sources. Nutrients may be used more than once.

- | | |
|--|-----------------|
| _____ a. Tallow | 1. Protein |
| _____ b. Seeds | 2. Carbohydrate |
| _____ c. Commercial vitamin premix | 3. Fat |
| _____ d. Cottonseed meal | 4. Mineral |
| _____ e. Cereal grains | 5. Vitamin |
| _____ f. Skim milk | |
| _____ g. Animal products | |
| _____ h. Soybean meal | |
| _____ i. Nonlegume roughage | |
| _____ j. Commercially prepared mineral and trace mineral mix | |
| _____ k. Tankage | |
| _____ l. Molasses | |
| _____ m. Alfalfa hay | |

8. Match the vitamins on the right to the correct deficiency symptom.

- | | |
|---|----------------------|
| _____ a. Internal bleeding; lung deformities resulting in death | 1. Vitamin A |
| _____ b. Blindness; loss of young; poor development of bones; slow growth | 2. Vitamin B complex |
| _____ c. Loss of young; failure to reproduce | 3. Vitamin D |
| _____ d. Muscle weakness; abnormalities of young | 4. Vitamin E |
| _____ e. Bone deformities; rickets | 5. Vitamin K |

~~00310~~

9. Match the minerals on the right to the correct deficiency symptom.

- _____ a. Lameness; stiffness of joints; less appetite; reduces rate of gain; decreased heat cycle
- _____ b. Loss of appetite; unthriftiness; delayed sexual development
- _____ c. Slow growth rate; reduced feed consumption; stiffness; shock
- _____ d. Hairless pigs; goiter
- _____ e. Anemia
- _____ f. Rickets; broken bones; poor gains; milk fever

- 1. Calcium
- 2. Phosphorus
- 3. Potassium
- 4. Iron
- 5. Iodine
- 6. Cobalt

10. Write the purpose of feed additives.

11. Discuss the effects of feeding antibiotics.

00311

ANIMAL NUTRIENTS
UNIT I

ANSWERS TO TEST

1.

a.	4	g.	2
b.	8	h.	9
c.	5	i.	3
d.	10	j.	1
e.	6	k.	7
f.	11		
2.
 - a. Water
 - b. Protein
 - c. Carbohydrate
 - d. Mineral
 - e. Vitamin
 - f. Fat
3. b, d
4.

a.	3	d.	5
b.	1	e.	2
c.	4		
5. a, c, d, f, i
6. Any three of the following:
 - a. Iron
 - b. Copper
 - c. Zinc
 - d. Iodine
 - e. Cobalt
 - f. Magnesium

00312

7. a. 3 h. 1
b. 3 i. 2
c. 5 j. 4
d. 1 k. 1
e. 2 l. 2
f. 1 m. 1
g. 3

8. a. 5
b. 1
c. 4
d. 2
e. 3

9. a. 2
b. 6
c. 3
d. 5
e. 4
f. 1

10. Increase growth and feed efficiency

11. Discussion should include:

- a. Increased gains
b. Prevention and control of certain diseases

00313

**COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT II****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to complete a chart showing the composition of a feed, determine value of a feed, classify feeds into concentration and roughage, and compute rations by the Pearson's square and trial and error methods. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with composition and classification of feeds to the correct definitions.
2. Complete a chart showing composition of feed.
3. List three methods used to determine value of a feed.
4. Classify feeds into the proper category.
5. Select from a list three requirements that every commercial feed company must state on its feed tag.
6. Classify sugars as compound or simple.
7. Describe the procedure for determining water and dry matter content of a feed.
8. Match percent of protein required in a ration with size of various livestock.
9. Compare the composition of feeds as to digestible protein and total digestible nutrients.
10. Determine the total percentage of digestible protein and total digestible nutrients of feeds.
11. Balance a ration using the Pearson's square method.
12. Balance a ration for digestible protein, dry matter, and total digestible nutrients using the trial and error method.
13. Determine protein requirements for various animals.

00314

COMPOSITION AND CLASSIFICATION OF FEEDS UNIT - II

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information and assignment sheets.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information sheet and procedures for completing the assignment sheets.
 - F. Provide the students with a copy of a commercial feed tag.
 - G. Take students on a field trip to a food company to see how feeds are mixed and rations are determined, if possible.
 - H. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet.
 - C. Complete assignment sheets.
 - D. Attempt to figure a ration for animals included in supervised training program.
 - E. Take test.

00316

COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT II

INFORMATION SHEET

I. Terms and definitions

- A. Fiber--Tough part of a feed; not very digestible
- B. Roughage--Feed that is high in fiber or nondigestible material and low in total digestible nutrients
- C. Concentrate--Feed that is high in total digestible nutrients and low in fiber
- D. Silage--Feed from crops cured and stored green or without drying
- E. Ration--Feed allowed for a given animal during a day of twenty-four hours
(NOTE: The feed may be fed all at once or at intervals throughout the day.)
- F. Balanced ration--Ration which furnishes the several nutrients in such proportion and amount as will properly nourish a given animal for twenty-four hours
- G. Supplement--Protein or vitamin added to a feed
- H. Crude protein--Total amount of protein contained in a feed
- I. Digestible protein--Portion of crude protein which may be digested by the animal
- J. Total digestible nutrients (TDN)--That portion of a feed which is digested and used in the animal's body
- K. Pasturage--Plant growth available to animals on the range or in the pasture
- L. Protein--Organic compound consisting of carbon, hydrogen, oxygen, nitrogen, and sulfur
- M. Fat--Organic compound composed of carbon, hydrogen, and oxygen
- N. Dry matter (DM)--Average percentage of dry material in a feed found by weighing the feed, drying by heat, and reweighing

00317

INFORMATION SHEET

II. Composition of feed (Transparency 1)

A. Water

B. Dry matter

1. Ash (minerals)

2. Organic matter

a. Protein

b. Carbohydrates

1) Crude fiber (cellulose)

2) Nitrogen-free extract

a) Simple sugar

b) Starch

c) Compound sugar

c. Vitamins

d. Fats

III. Methods used to determine value of feed

A. Cost per pound of TDN

B. Cost per pound of protein

C. Cost per pound of feed

IV. Classification of feeds

A. Concentrates (Transparency 2)

1. Grains

Examples: Corn, wheat, oats, milo, barley

2. Grain by-products

Examples: Wheat bran, wheat standard middlings

3. Molasses

Examples: Cane, beet

00318

INFORMATION SHEET

4. Oil meals:

Examples: Soybean, cottonseed, linseed, peanut

5. Animal products

Examples: Meat scraps, tankage, fish meal, dried dairy products

B. Roughages (Transparency 3)

1. Dry

a. Hays

Examples: Grass, legume, alfalfa

b. Hulls

Examples: Cottonseed, peanut, rice

c. Straws

Examples: Wheat, oats, barley

2. Green

a. Roots

b. Grasses

c. Tubers

3. Silage

Examples: Corn forage, sorghum forage, grass

V. Commercial feed tag requirements (Transparency 4)

A. Minimum of crude protein

B. Minimum of crude fat

C. Maximum of crude fiber

(NOTE: Laws govern the sale of commercial feeds and mineral mixtures to protect the purchaser. The ingredients of a mixture must be labeled with contents, but the percentage of each is not required.)

VI. Classification of sugars

A. Simple

1. Glucose

2. Fructose

3. Galactose

00319

INFORMATION SHEET

B. Compound

1. Maltose
2. Sucrose
3. Lactose

VII. Procedure for determining water and dry matter content of feed

- A. Weigh feed
- B. Dry in oven
- C. Weigh again

(NOTE: The difference in the weights is the water or moisture content. Dry matter content should be the same as second weighing. Generally, feed grains are about 90 percent dry matter and 10 percent moisture.)

VIII. Percent of protein required for various livestock

A. Swine

1. Birth to 15 pounds, 20% protein
2. 15 to 50 pounds, 16 - 18% protein
3. 50 to 125 pounds, 16% protein
4. 125 to 240 pounds, 14% protein.

B. Cattle

IX. Comparison of feed composition

(NOTE: The following information was taken from Morrison's *Feeds and Feeding*, Table I.)

Feed	DP	TDN	Cost/lb
Milo grain	8.5%	79.4%	\$.042
Corn, dent, Grade #2	7.0%	80.0%	\$.061
Wheat, average all types	11.1%	80.0%	\$.070
Oats (not including Pacific Coast states)	9.4%	70.1%	\$.056
Alfalfa hay, average all analysis	10.9%	50.7%	\$.035

A. Cost per pound of protein

Milo	.042 ÷ .085	=	\$.494/# protein
Corn	.061 ÷ .070	=	\$.871/# protein
Wheat	.070 ÷ .111	=	\$.630/# protein
Oats	.056 ÷ .094	=	\$.596/# protein
Alfalfa	.035 ÷ .109	=	\$.321/# protein

B. Cost per pound of TDN

Milo	.042 ÷ .794	=	\$.052/# TDN
Corn	.061 ÷ .800	=	\$.076/# TDN
Wheat	.070 ÷ .800	=	\$.087/# TDN
Oats	.056 ÷ .701	=	\$.079/# TDN
Alfalfa	.035 ÷ .507	=	\$.069/# TDN

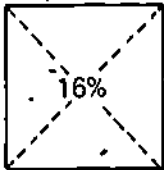

00325

INFORMATION SHEET

- X. Determining total percentage of DP and TDN in feeds--Use Morrison's *Feeds and Feeding*, Table I
- XI. Balancing rations using Pearson's square method
- Select amount of protein required
 - Place in square
 - Select feeds
 - Cross-subtract

(NOTE: This gives parts of each feed needed in the ration.)

Example:

Milo 8.5%		Part	%	#/100#
		25	77	77#
SBM 41.0%		7.5	23	23#
		<u>32.5</u>	<u>100%</u>	<u>100#</u>

- XII. Balancing rations for dry matter, digestible protein, and total digestible nutrients--Trial and error method
- Determine type of animal
 - Look up requirements of the animal in Morrison's *Feeds and Feeding*, Table III
 - Select feeds to use
 - Look up composition (Morrison's *Feeds and Feeding*, Table I)
 - Determine amount of each feed in the ration
 - Compute the ration

00226

INFORMATION SHEET

Example:

	DM	DP	TDN
Corn	85.0%	7.0%	80.0%
Oats	90.2%	9.4%	70.1%
Alfalfa hay	90.5%	10.9%	50.7%

Alfalfa 9.4#	DM	DP	TDN
	.905	.109	.507
	<u>x9.4</u>	<u>x9.4</u>	<u>x9.4</u>
	8.507	1.024	4.766

Corn 1.5#	.850	.070	.794
	<u>x1.5</u>	<u>x1.5</u>	<u>x1.5</u>
	1.275	.105	1.191

Oats 1.5#	.920	.094	.701
	<u>x1.5</u>	<u>x1.5</u>	<u>x1.5</u>
	1.353	.141	1.051

Example of trial and error method, 400# dairy heifer

Ration too high in protein

	Dry matter	Digestible protein	Total digestible nutrients

**COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT II****ASSIGNMENT SHEET #1-DETERMINING TDN AND DP
CONTENT OF BASIC FEEDS**

Using Table I of Morrison's *Feeds and Feeding*, calculate the TDN and DP of the following feeds.

1. How many pounds of TDN are there in:
 - a. 50 pounds of No. 1 yellow corn
 - b. 30 pounds of milo grain
 - c. 50 pounds of wheat, average all types
 - d. 50 pounds of oats, Pacific Coast states
 - e. 20 pounds of alfalfa hay, all analyses

2. How many pounds of DP are there in each of the above pounds of feed?
 - a.
 - b.
 - c.
 - d.
 - e.

00333

COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT II

ASSIGNMENT SHEET #2-BALANCING RATIONS USING PEARSON'S SQUARE

Determine the total parts needed in a 16% ration using 8.5% DP milo and 41.0% cottonseed meal. Show your work.

00334

COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT IIASSIGNMENT SHEET #3-WORKING A SAMPLE RATION FOR
FATTENING A BEEF ANIMAL.

Balance a sample ration for an 800 pound beef fattening animal for DM, TDN, and DP.
Use Morrison's *Feeds and Feeding* for reference.

Animal Requirements	DM	DP	TDN
---------------------	----	----	-----

Use the following grains:

Corn, dent, Grade #1

Soybean meal 41%

Cottonseed, hulls

00335

COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT IIASSIGNMENT SHEET #4-WORKING A SAMPLE RATION
FOR FATTENING SWINE

Balance a sample ration for a 125 pound swine fattening animal for DM, DP, and TDN.
Use Morrison's *Feeds and Feeding* for reference.

Animal requirements	DM	DP	TDN
---------------------	----	----	-----

Use the following grains:

Wheat, average all types

Corn, dent, Grade #1

Soybean meal 41%

00336

COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT IIASSIGNMENT SHEET #5-DETERMINE PROTEIN REQUIREMENTS
FOR VARIOUS ANIMALS

From the tables provided in the information sheet, determine the pounds of protein required per day per animal.

Calculation can also be made by using the following formula:

Pounds dry matter or pounds of feed per day per animal \times percent of protein of the ration = # of protein per day per animal

Check answers found in the tables by calculating problems 1 and 2. Use only table values on the remainder of the problems.

1. 70# lamb to gain 0.40# per day
2. 140# nonlactating ewe in first 15 weeks of gestation to gain 0.07# per day
3. 500# growing heifer to gain 0.55# per day
4. 600# growing steer to gain 1.10# per day
5. 1200# dry pregnant mature cow to maintain her weight
6. 1800# bull to maintain weight

COMPOSITION AND CLASSIFICATION OF FEEDS
UNIT II

TEST

1. Match the terms on the right to the correct definition.

- | | |
|---|--------------------------------------|
| _____ a. Feed that is high in total digestible nutrients and low in fiber | 1. Roughage |
| _____ b. Organic compound composed of carbon, hydrogen, and oxygen | 2. Concentrate |
| _____ c. Feed from crops cured and stored green or without drying | 3. Silage |
| _____ d. That portion of a feed which is digested and used in the animal's body | 4. Ration |
| _____ e. Protein or vitamin added to a feed | 5. Balanced ration |
| _____ f. Ration which furnishes the several nutrients in such proportion and amount as will properly nourish a given animal for twenty-four hours | 6. Fiber |
| _____ g. Feed that is high in fiber or nondigestible material and low in total digestible nutrients | 7. Supplement |
| _____ h. Average percentage of dry material in a feed found by weighing the feed, drying by heat, and reweighing | 8. Crude protein |
| _____ i. Portion of crude protein which may be digested by the animal | 9. Digestible protein |
| _____ j. Feed allowed for a given animal during a day of twenty-four hours | 10. Total digestible nutrients (TDN) |
| _____ k. Tough part of a feed; not very digestible | 11. Pasturage |
| _____ l. Organic compound consisting of carbon, hydrogen, oxygen, nitrogen, and sulfur | 12. Protein |
| _____ m. Plant growth available to animals on the range or in the pasture | 13. Fat |
| _____ n. Total amount of protein contained in a feed | 14. Dry matter (DM) |

00339

2. Complete the following chart showing the composition of a feed.

3. List three methods used to determine value of a feed.

a.

b.

c.

4. Classify the following feeds by placing a "C" in front of the concentrates and an "R" in front of the roughages.

- ___ a. Grains (corn)
- ___ b. Hays (alfalfa)
- ___ c. Grain by-products (wheat bran)
- ___ d. Molasses (cane)
- ___ e. Cottonseed hulls
- ___ f. Wheat straw
- ___ g. Soybean oil meal
- ___ h. Meat scraps

00340

5. Select from the list below three requirements that every commercial feed company must state on its feed tag by placing an "X" in the blanks.

- a. Percentage of corn
- b. Minimum of crude protein
- c. Minimum of crude fat
- d. Minimum of crude fiber
- e. Maximum of crude protein
- f. Maximum of crude fiber

6. Classify the following list of sugars by placing a "C" in front of the compound sugars and an "S" in front of the simple sugars.

- | | |
|---------------------------------------|--------------------------------------|
| <input type="checkbox"/> a. Glucose | <input type="checkbox"/> d. Fructose |
| <input type="checkbox"/> b. Maltose | <input type="checkbox"/> e. Sucrose |
| <input type="checkbox"/> c. Galactose | <input type="checkbox"/> f. Lactose |

7. Describe in a short paragraph the procedure for determining water and dry matter content of a feed.

8. Match the percent of protein required in a ration on the right to the appropriate size of pigs.

- | | |
|---|-------------|
| <input type="checkbox"/> a. 50 lbs to 125 lbs | 1. 20% |
| <input type="checkbox"/> b. Birth to 15 lbs | 2. 16 - 18% |
| <input type="checkbox"/> c. 15 to 50 lbs | 3. 16% |
| <input type="checkbox"/> d. 125 to 240 lbs | 4. 14% |

00341

9. Compare the cost per pound of protein for the following feeds.

(Cost per pound \div DP = cost per pound of protein.)

Cost per pound
of protein

- a. Milo costs \$4.50/wt - DP 8.5%

- b. Oats cost \$6.00/wt - DP 9.4%

- c. Which costs more per pound of protein

10. Determine the percentage of DP and TDN in the following feeds by using the table given below.

% DP % TDN

- a. Corn, dent, Grade #2

- b. Oats (not including Pacific
Coast states)

- c. Alfalfa hay, all analyses

TABLE I. Average composition and digestible nutrients

Feeding stuff	Total dry matter	Dig. protein	Total dig. nutrients	Nutri- tive ratio	Average total composition					No. of anal.
					Pro- tein	Fat	Fiber	N-free extract	Mineral matter	
Dry Roughages	Per ct.	Per ct.	Per ct.	1:	Per ct.	Per ct.	Per ct.	Per ct.	Per ct.	
Alfalfa hay, all analyses	90.5	10.9	50.7	0.7	15.3	1.9	28.6	36.7	8.0	1,288
Alfalfa hay, very leafy (less than 25% fiber)	90.5	12.8	52.7	3.1	17.5	2.4	22.7	39.5	8.4	219
Alfalfa hay, leafy (25-28% fiber)	90.5	11.7	51.2	3.4	16.0	2.1	27.2	36.8	8.4	294
Alfalfa hay, good (28-31% fiber)	90.5	10.2	50.3	3.9	14.6	1.8	29.6	36.5	8.0	323
Corn, dent, Grade No. 1	87.0	6.9	81.9	10.9	8.9	4.0	2.0	70.8	1.3	
Corn, dent, Grade No. 2	85.0	6.7	80.1	11.0	8.7	3.9	2.0	69.2	1.2	169
Corn, dent, Grade No. 3	83.5	6.5	78.6	11.1	8.5	3.8	2.0	68.0	1.2	
Oat mill by-product, high grade	91.5	7.9	58.8	6.4	10.8	3.9	17.7	53.2	5.9	10
Oat mill by-product, with molasses	92.4	3.6	37.2	9.3	5.5	1.4	24.1	55.0	6.4	31
Oats, not including Pacific Coast states	90.2	9.4	70.1	6.5	12.0	4.6	11.0	58.6	4.0	498
Oats, Pacific Coast states	91.2	7.0	72.2	9.3	9.0	5.4	11.0	62.1	3.7	118
Oats, ground, usual commercial feed grade	89.8	9.0	68.5	6.6	11.6	4.1	12.1	57.7	4.3	419
Oats, light weight	91.2	8.3	59.8	6.2	12.0	4.5	15.1	54.9	4.7	32
Oats, wild	83.0	9.1	53.0	4.9	12.7	5.5	15.2	50.9	4.7	2

**ANIMAL DIGESTION
UNIT III****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to label the parts of various digestive tracts and classify animals according to types of stomachs. He should also be able to list functions of hormones and describe the chemical and digestive processes. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with animal digestion to the correct definitions.
2. Label drawings showing parts of the digestive tracts of the cow, the pig, and the chicken.
3. State in writing the primary difference between a simple and ruminant animal.
4. Classify animals according to simple stomach and ruminant.
5. List three functions of hormones in the digestive process.
6. Select from a list the digestive processes that take place in the mouth.
7. List five glands that aid in the breakdown of feeds.
8. Describe the chemical and mechanical digestive processes.

00346

ANIMAL DIGESTION UNIT III

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information sheet.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.

(NOTE: If facilities are available, the instructor may want to take the class to a slaughter facility to see digestive tracts of various animals.)

F. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency masters
 - 1. TM 1-Compound Digestive System of the Cow
 - 2. TM 2-Simple Digestive System of Swine
 - 3. TM 3-Simple Digestive System of the Chicken
- D. Test
- E. Answers to test

00347

ANIMAL DIGESTION UNIT III

INFORMATION SHEET

I. Terms and definitions

- A. Digestion--Process of breaking down and dissolving feeds so that the body can absorb them
- B. Absorption--Passing of food materials from the digestive tube into the body after they are digested and dissolved.
- C. Enzyme--Mysterious organic compound which brings about changes in other organic compounds without being changed or broken down itself
- D. Hormone--Internal body secretion that regulates various body processes
- E. Mastication--Grinding or chewing of food to aid in digestion
- F. Metabolism--Sum of all physical and chemical changes which take place within an organism
(NOTE: This process includes both material and energy changes.)
- G. Excretion--Removal of water and waste material from the body
- H. Regurgitation--Process by which food eaten by a ruminant is carried from the second stomach and the rumen into the gullet and then forced up to the mouth for chewing
- I. Feces--Manure; undigested material and wastes expelled at the end of the digestive tube
- J. Pancreatic juice--Clear, watery fluid with an alkaline reaction secreted by the pancreas, aids in feed breakdown
- K. Bile--Thin, yellowish brown or greenish liquid secreted by the liver
- L. Ruminant animal--Animal with a four compartment stomach

II. Parts of digestive tracts

- A. Cow (Transparency 1)
 - 1. Salivary ducts
 - 2. Pharynx
 - 3. Esophagus

00349

INFORMATION SHEET

4. Rumen
5. Reticulum
6. Omasum
7. Abomasum
8. Small intestine
9. Cecum
10. Colon or large intestine
11. Anus

B. Pig (Transparency 2)

1. Pharynx
2. Esophagus
3. Stomach
4. Small intestine
5. Cecum
6. Large intestine
7. Colon
8. Rectum

C. Chicken (Transparency 3)

1. Esophagus
2. Crop
3. Proventriculus
4. Gizzard
5. Liver
6. Pancreas
7. Duodenum

00350

INFORMATION SHEET

8. Small intestine
9. Cæcum
10. Large intestine
11. Rectum
12. Cloaca
13. Vent

III. Primary difference between simple stomach and ruminant-Simple stomach animals have only one compartment stomachs while ruminants have four compartment stomachs

IV. Animal classification according to simple stomach or ruminant

A. Simple stomach

1. Pig
2. Chicken
3. Rabbit
4. Man
5. Dog
6. Horse

B. Ruminant

1. Cow
2. Sheep
3. Goat

V. Functions of hormones

- A. Digestion
- B. Metabolism
- C. Milk secretion
- D. Let-down of milk
- E. Development of sexual characteristics

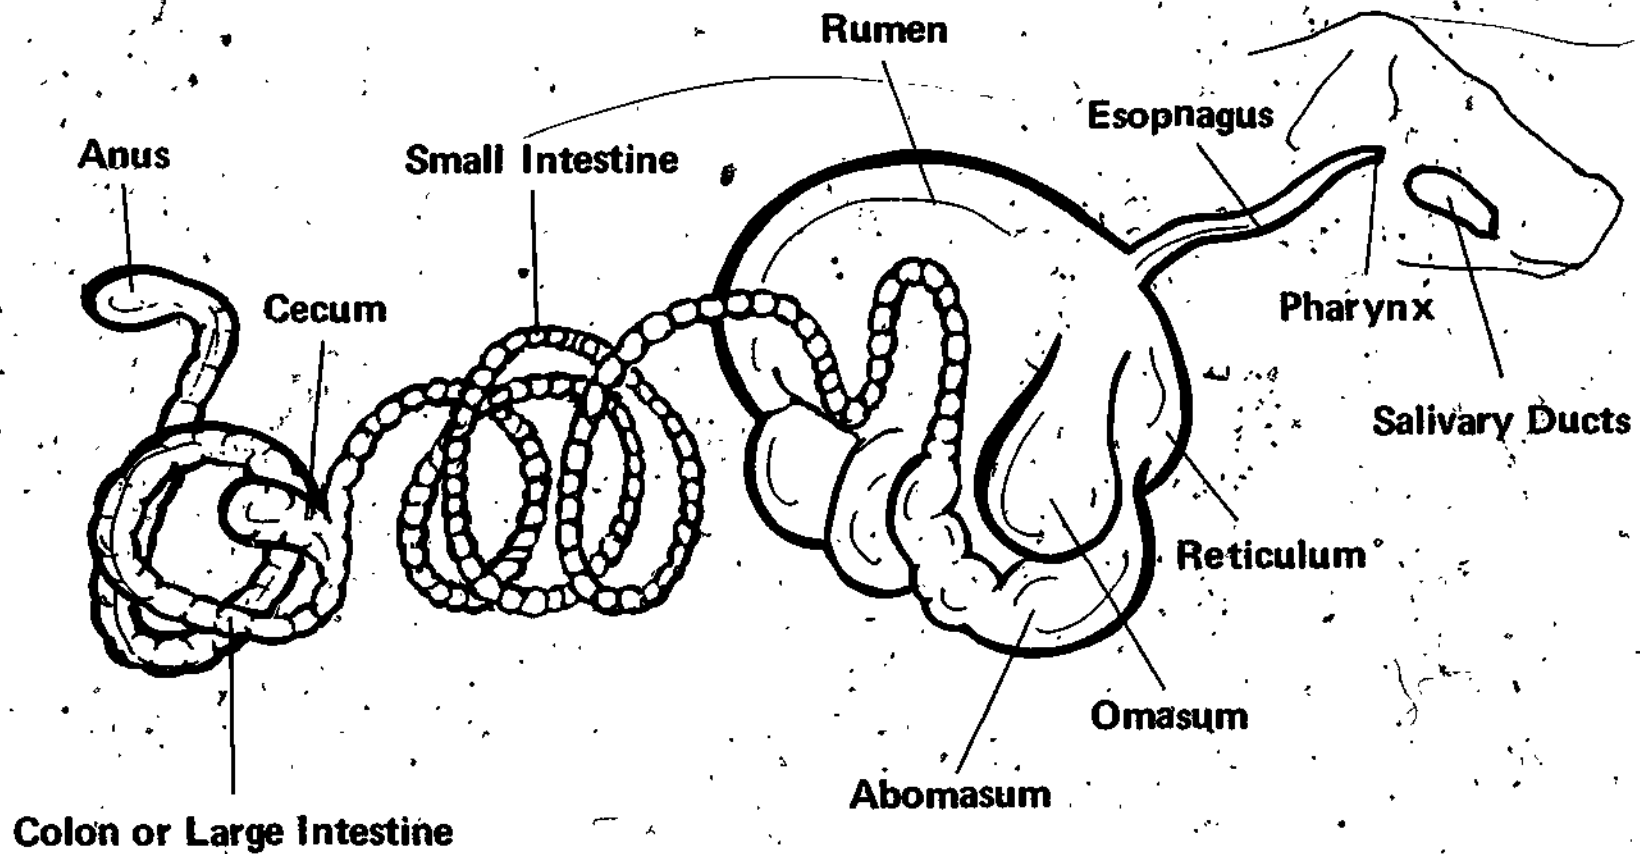

00351

INFORMATION SHEET

- VI. Digestive processes in the mouth
 - A. Chewing or grinding of feed
 - B. Secretion of saliva
- VII. Glands that aid in feed breakdown
 - A. Thyroid
 - B. Parathyroid
 - C. Pituitary
 - D. Adrenal
 - E. Pancreas
 - F. Liver
- VIII. Digestive processes
 - A. Mechanical
 - 1. Chewing
 - 2. Grinding
 - B. Chemical
 - 1. Saliva--Produced in the mouth
 - 2. Juices--Secreted into the stomach and intestines

00352

Compound Digestive System of the Cow

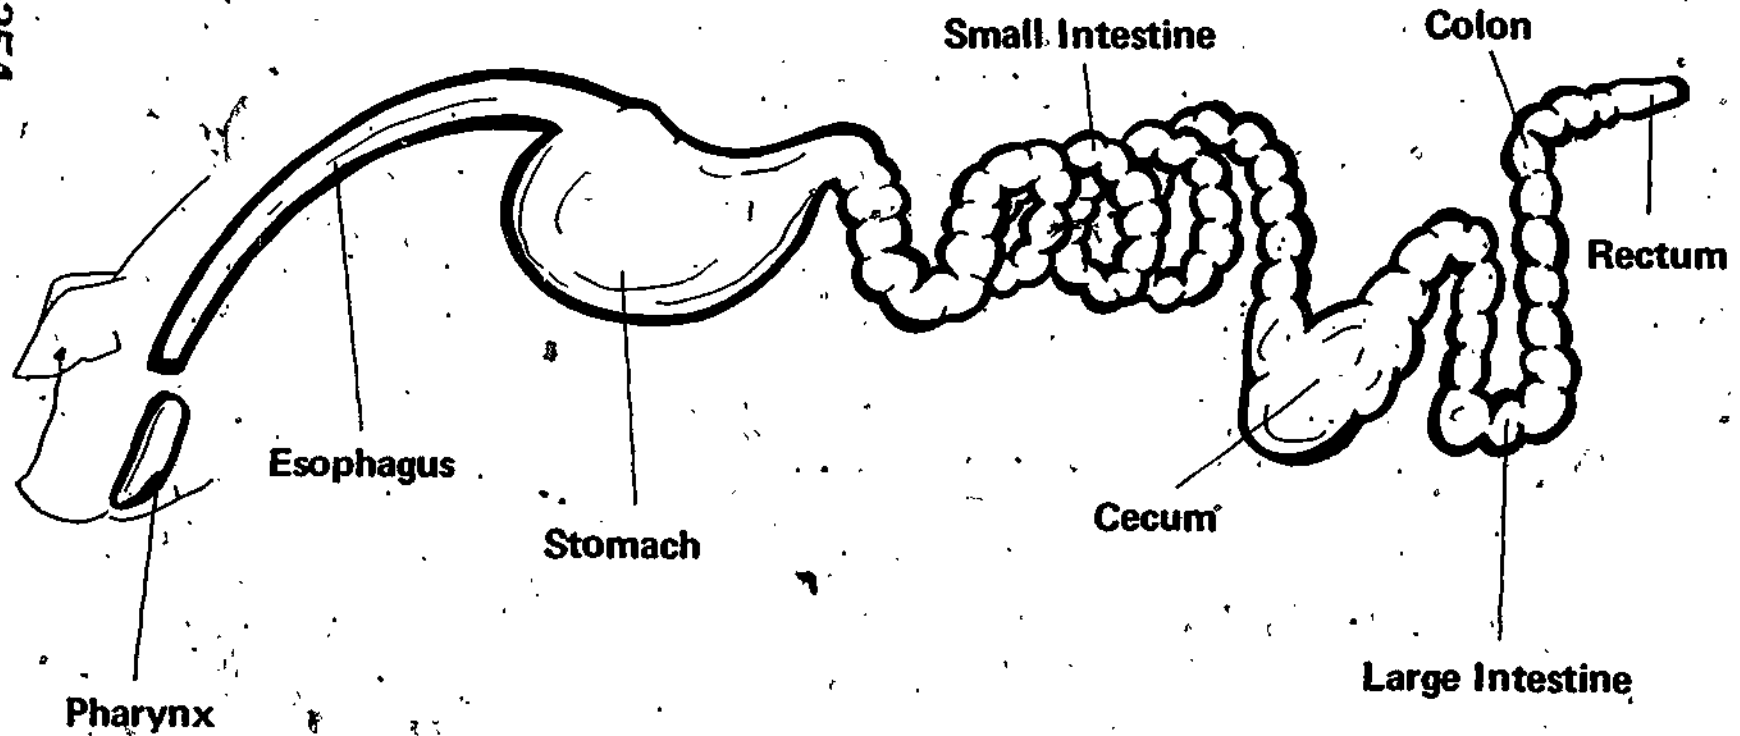

00353

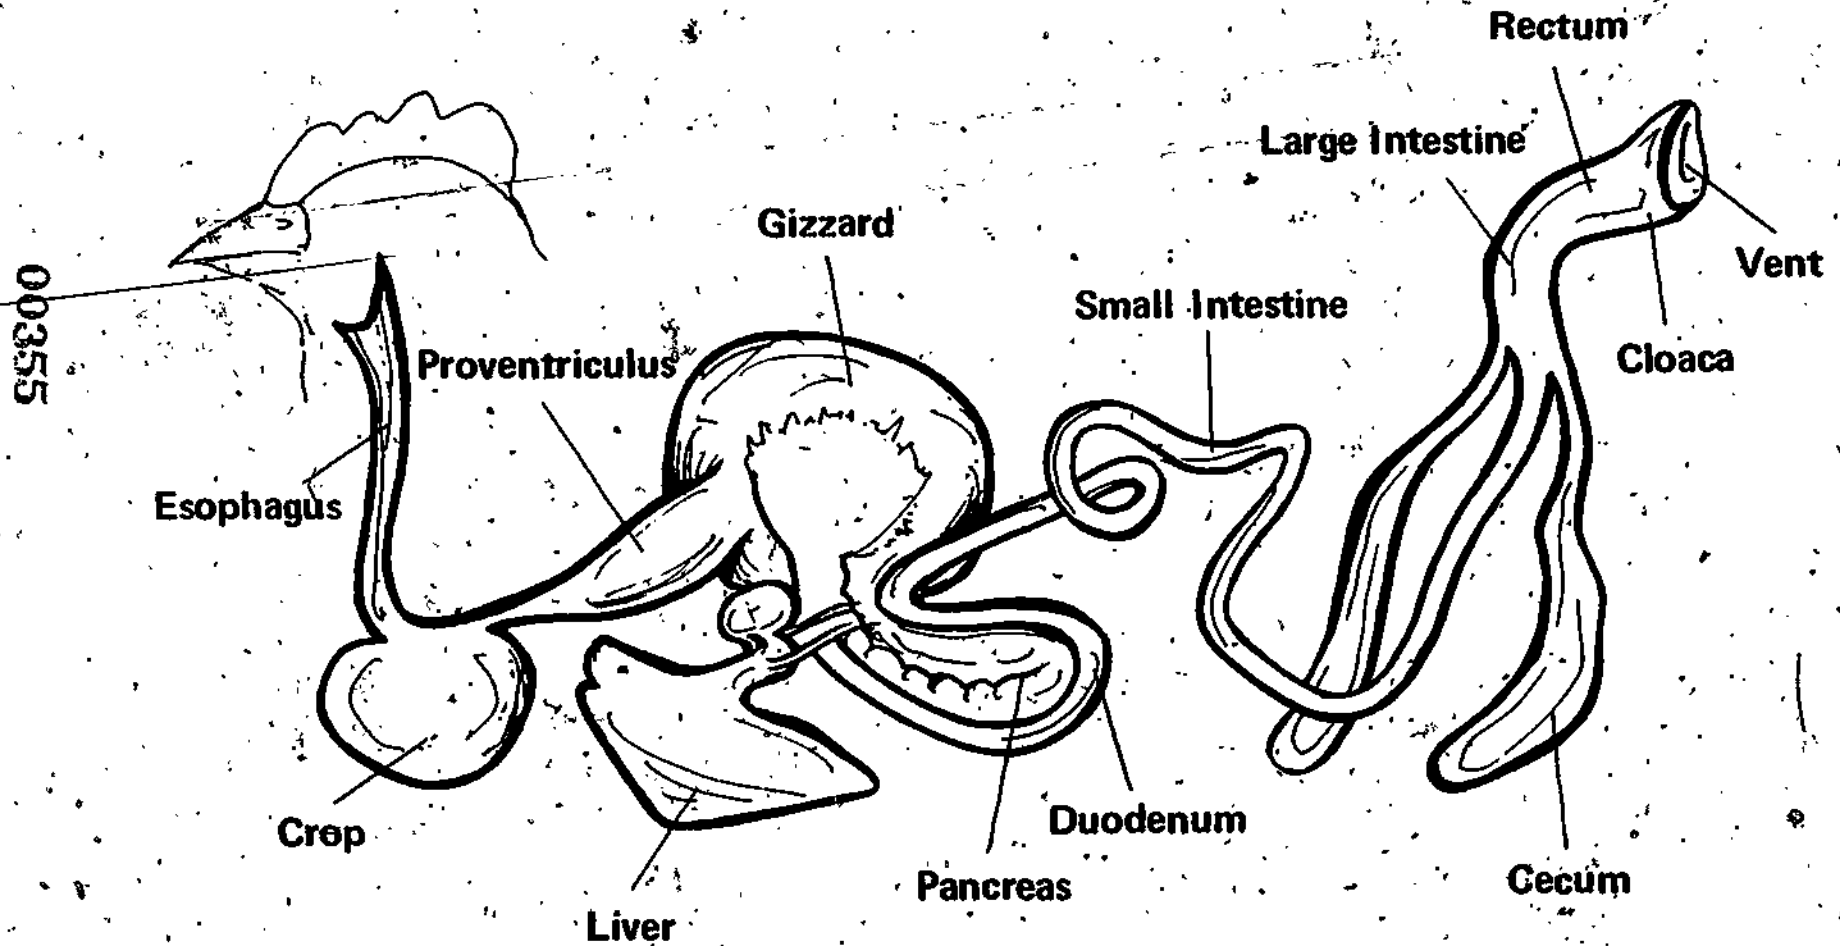

JM 1

Simple Digestive System of Swine

00354

Simple Digestive System of the Chicken

**ANIMAL DIGESTION
UNIT III**

TEST

1. Match terms on the right to the correct definition.

- | | |
|--|-----------------------------|
| <p>_____ a. Process by which food eaten by ruminant is carried from the second stomach and the rumen into the gullet and then forced up to the mouth for chewing</p> | <p>1. Digestion</p> |
| <p>_____ b. Mysterious organic compound which brings about changes in other organic compounds without being changed or broken down itself</p> | <p>2. Absorption</p> |
| <p>_____ c. Thin, yellowish brown or greenish liquid secreted by the liver</p> | <p>3. Enzyme</p> |
| <p>_____ d. Removal of water and waste material from the body</p> | <p>4. Hormone</p> |
| <p>_____ e. Animal with a four compartment stomach</p> | <p>5. Mastication</p> |

| <p>_____ l. Internal body secretion that regulates various body processes</p> | <p>12. Ruminant animal</p> |

00256

2. Label the following drawings by writing the correct name in the blank.

00257

3. State in writing the primary difference between a simple stomach and ruminant animal.

4. Classify the following animals by placing an "S" in the blank for a simple stomach animal and an "R" in the blank for a ruminant animal.

_____ a. Horse

_____ e. Goat

_____ b. Dog

_____ f. Man

_____ c. Cow

_____ g. Rabbit

_____ d. Pig

_____ h. Sheep

5. List three functions of hormones in the digestive process.

a.

b.

c.

6. Select from the list below the digestive processes that take place in the mouth by placing an "X" in the blank.

_____ a. Absorption

_____ b. Excretion

_____ c. Chewing or grinding of feed

_____ d. Metabolism

_____ e. Secretion of saliva

7. List five glands that aid in the breakdown of feeds.

a.

b.

c.

d.

e.

00358

8. Describe the chemical and mechanical digestive processes.

00359

- c. Milk secretion
 - d. Let-down of milk
 - e. Development of sexual characteristics
6. c, e
7. Any five of the following:
- a. Thyroid
 - b. Parathyroid
 - c. Pituitary
 - d. Adrenal
 - e. Pancreas
 - f. Liver
8. Description should include:
- a. Mechanical
 - 1. Chewing
 - 2. Grinding
 - b. Chemical
 - 1. Saliva--Produced in the mouth
 - 2. Juices--Secreted into the stomach and intestines

00362

**MAINTAINING ANIMAL HEALTH
UNIT IV****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to determine health of an animal by observation, match temperatures of various animals to the correct animal, and develop an animal health plan for his own situation. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with animal health to the correct definition.
2. Select from a list signs that indicate good animal health.
3. List signs of poor animal health.
4. Match average temperatures to various classes of livestock or poultry.
5. List three factors that constitute a good disinfection program.
6. Identify kinds of injections.
7. Select from a list four agencies that regulate animal health.
8. Develop a plan for maintaining animal health using livestock in his supervised experience program.

MAINTAINING ANIMAL HEALTH UNIT IV

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objectives.
- B. Provide student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Demonstrate the proper procedure for vaccinating an animal.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Complete assignment sheet.
- D. Apply a good animal health plan to your livestock program.
- E. Vaccinate at least one animal.
- F. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency master: TM 1-Injection Points.
- D. Assignment Sheet #1-Developing an Animal Health Plan
- E. Test
- F. Answers to test

00364

II. References:

00365

MAINTAINING ANIMAL HEALTH
UNIT, IV,

INFORMATION SHEET

I. Terms and definitions

- A. Vaccination--Injection of some agent into an animal for the purpose of preventing a disease
- B. Vaccine--Preparation containing live or killed microorganisms that are given to an animal to produce an immunity to a particular disease
- C. Disinfectant--Substance which destroys infective agents
- D. Antiseptic--Substance that will inhibit the growth of microorganisms without destroying them
- E. Injection--Placing of a vaccine or antibiotic into an animal's body
- F. Serum--Watery portion of an animal's blood which will stop the action of an infectious agent
- G. Syringe--Instrument used to make injections, consisting of a plunger, a barrel, and various types and sizes of needles

II. Signs that indicate good health

- A. Contentment
- B. Alertness
- C. Chewing of cud (ruminants)
- D. Sleek coat
- E. Bright eyes and pink eye membrane
- F. Normal feces and urine
- G. Normal temperature
- H. Normal pulse rate
- I. Normal respiration

III. Signs that indicate poor health

- A. Loss of appetite
- B. Rough hair coat

00363

✓

INFORMATION SHEET

- C. Abnormal feces
- D. Dull eyes
- E. High temperature
- F. Discolored urine
- G. Ruminants not chewing their cud

IV. Average temperature of various classes of livestock or poultry

Class of Livestock or Poultry	Degree F Average	Degree F Range
Cattle	101.5	100.4-102.8
Sheep	102.3	100.9-103.8
Goats	103.8	101.7-105.3
Swine	102.6	102.0-103.6
Horses	100.5	99.0-100.8
Poultry	106.0	105.0-107.0

V. Factors that constitute a good disinfection program

- A. Cleanliness of area before applying disinfectant
- B. Killing strength of disinfectant
- C. Dilution at which disinfectant is used
- D. Thoroughness of application

VI. Kinds of injections (Transparency 1)

- A. Subcutaneous-Injection placed under the skin
- B. Intravenous-Injection placed in a vein
(NOTE: This is generally used when fast action is desired.)
- C. Intramuscular-Injection placed in the muscle
(NOTE: This injection is generally placed in the thigh or neck.)
- D. Oral-Injection placed through the mouth into the stomach
- E. Intraperitoneal-Injection placed in the right side of the abdominal cavity

00367

INFORMATION SHEET

F. Udder infusion--Injection placed in the udder

(NOTE: This injection is placed through the teat opening into the udder.)

VII. Agencies that regulate animal health

A. Animal disease eradication division

B. State veterinarians

C. State sanitary commissions

D. State agricultural boards

VIII. Factors to consider when developing an animal health plan

A. Proper housing

B. Adequate ventilation

C. Proper manure disposal

D. Control of rodents and birds

E. Use of disinfectants

F. Proper carcass disposal

G. Proper isolation of new animals

H. Pasture rotation

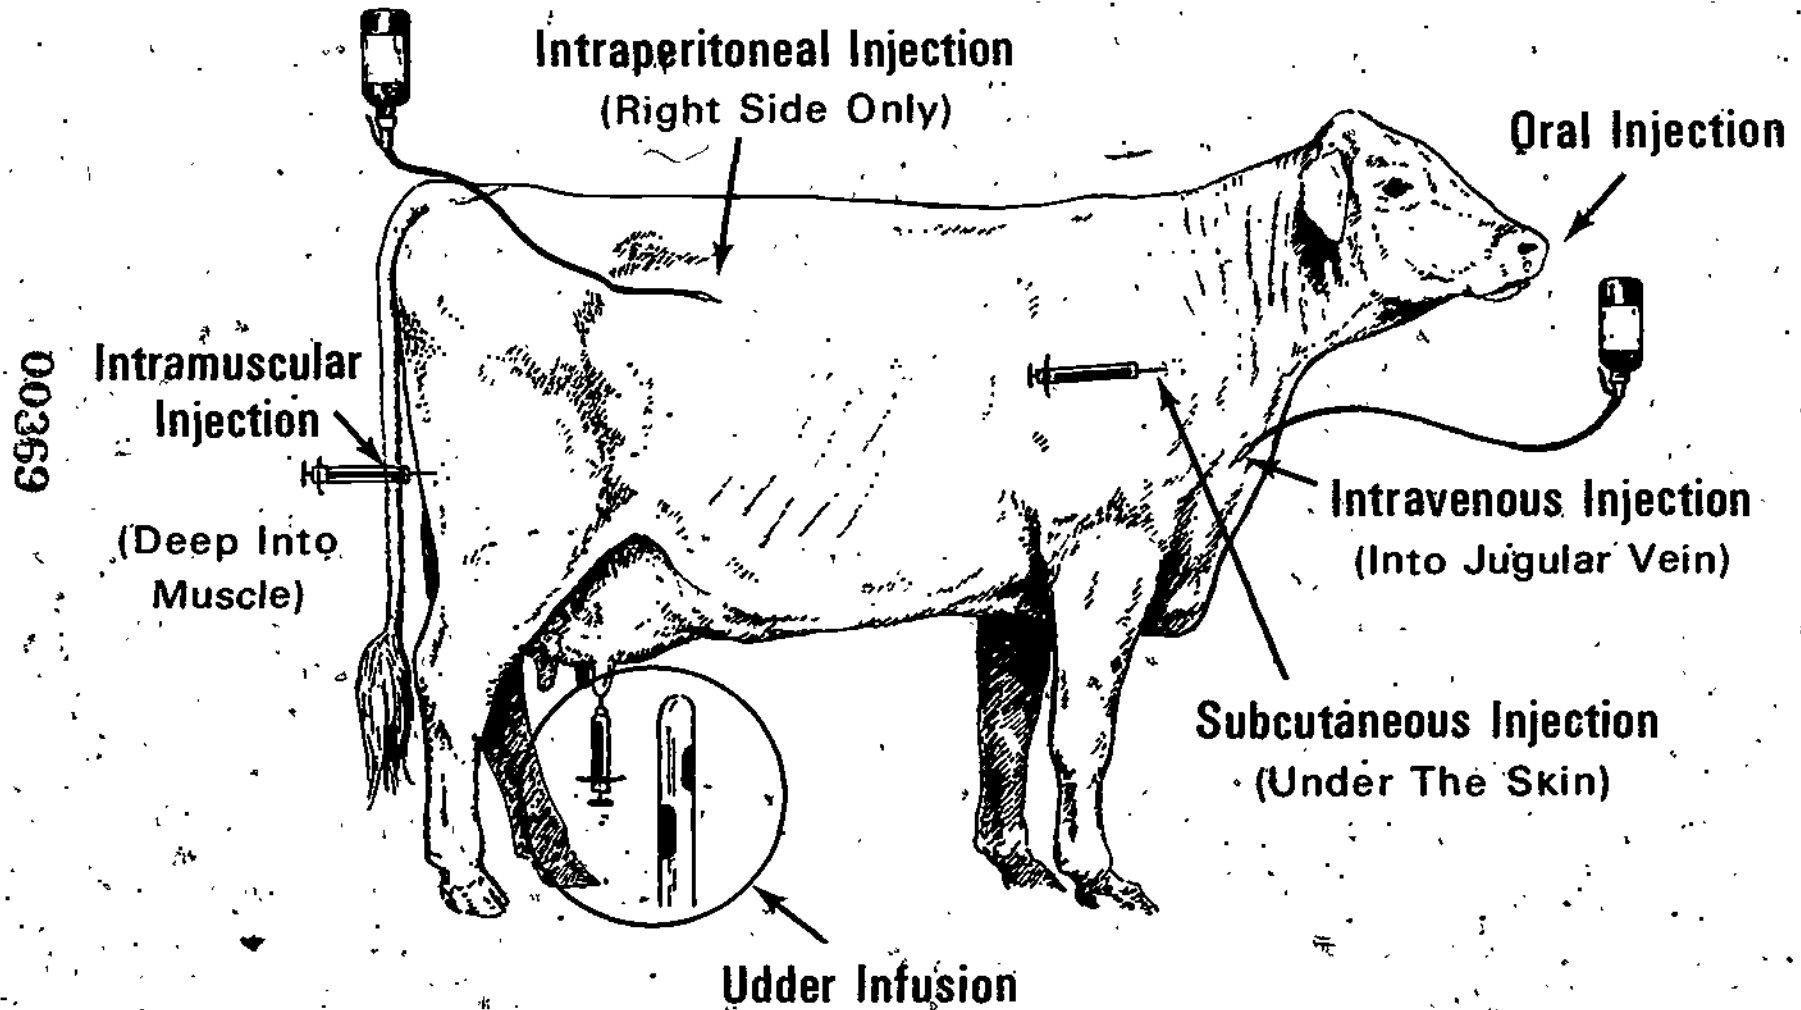

I. Vaccination

J. Parasite control

(NOTE: Others may be added by instructor.)

00368

Injection Points

**MAINTAINING ANIMAL HEALTH
UNIT IV****ASSIGNMENT SHEET #1-DEVELOPING AN ANIMAL HEALTH PLAN**

Using livestock in your supervised experience program, develop a plan for maintaining animal health. Factors on the information sheet may be used as a guide. Complete and turn in to the instructor for evaluation.

00370

MAINTAINING ANIMAL HEALTH
UNIT IV

TEST.

1. Match terms on the right to the correct definition.

- | | |
|---|-----------------|
| <input type="checkbox"/> a. Substance that will inhibit the growth of microorganisms without destroying them | 1. Syringe |
| <input type="checkbox"/> b. Watery portion of an animal's blood which will stop the action of an infectious agent | 2. Serum |
| <input type="checkbox"/> c. Injection of some agent into an animal for the purpose of preventing a disease | 3. Injection |
| <input type="checkbox"/> d. Placing of a vaccine or antibiotic into an animal's body | 4. Antiseptic |
| <input type="checkbox"/> e. Substance which destroys infective agents | 5. Disinfectant |
| <input type="checkbox"/> f. Instrument used to make injections, consisting of a plunger, a barrel, and various types and sizes of needles | 6. Vaccine |
| <input type="checkbox"/> g. Preparation containing live or killed microorganisms that are given to an animal to produce an immunity to a particular disease | 7. Vaccination |

2. Select from the list signs that indicate good animal health by placing an "X" in the blanks.

- a. Contentment
- b. Loss of appetite
- c. Alertness
- d. Sleek coat
- e. Bright eyes and pink eye membrane
- f. Fast respiration
- g. Chewing of cud (ruminants)

00371

3. List three signs that indicate poor animal health.

a.

b.

c.

4. Match the average temperature on the right to the correct class of livestock or poultry.

- | | |
|------------------|----------|
| _____ a. Poultry | 1. 102.6 |
| _____ b. Horses | 2. 100.5 |
| _____ c. Swine | 3. 106.0 |
| _____ d. Goats | 4. 101.5 |
| _____ e. Sheep | 5. 102.3 |
| _____ f. Cattle | 6. 103.8 |

5. List three factors that constitute a good disinfection program.

a.

b.

c.

6. Identify the following kinds of injections by writing the correct name in the blank provided.

00372

7. Select from the list below agencies that regulate animal health by placing an "X" in the blanks.

- a. Cattlemen's association
- b. Animal disease eradication division
- c. Federal government
- d. State veterinarians
- e. State sanitary commissions
- f. State agricultural boards
- g. State universities

8. Develop a plan for maintaining animal health using livestock in your supervised experience program.

(NOTE: If this activity has not been accomplished prior to test, ask the instructor when it should be completed.)

00373

MAINTAINING ANIMAL HEALTH.
UNIT IV

ANSWERS TO TEST

1. a. 4 e. 5
b. 2 f. 1
c. 7 g. 6
d. 3
2. a, c, d, e, g
3. Any three of the following:
a. Loss of appetite
b. Rough hair coat
c. Abnormal feces
d. Dull eyes
e. High temperature
f. Discolored urine
g. Ruminants not chewing their cud
4. a. 3 d. 6
b. 2 e. 5
c. 1 f. 4
5. Any three of the following:
a. Cleanliness of area before applying disinfectant
b. Killing strength of disinfectant
c. Dilution at which disinfectant is used
d. Thoroughness of application
6. a. Intraperitoneal
b. Oral

00374

- c. Intramuscular
 - d. Intravenous
 - e. Subcutaneous
 - f. Udder infusion
7. b, d, e, f
8. Evaluated to satisfaction of the instructor.

00375

**LIVESTOCK DISEASES
UNIT V****TERMINAL OBJECTIVE.**

After completion of this unit, the student should be able to classify diseases as infectious, noninfectious, or nutritional; list ways brucellosis and cholera are spread; and name the disease when given the symptom, species affected, and treatment and control. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with livestock diseases to the correct definition.
2. Classify diseases as infectious, noninfectious, or nutritional.
3. List steps of a brucellosis eradication program.
4. Select from a list ways cattle may become infected with brucellosis.
5. List ways swine cholera may be spread.
6. Select from a list items that will help in the control of swine cholera.
7. Complete a chart by naming the disease when given the species affected, symptoms, and treatment and control.

00376

LIVESTOCK DISEASES
UNIT V

SUGGESTED ACTIVITIES

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information sheet.
 - C. Discuss terminal and specific objectives.
 - D. Discuss information sheet.
 - E. Give test.
- II. Student:
 - A. Read objective sheet.
 - B. Study information sheet.
 - C. Apply information to your supervised experience program.
 - D. Take test.

00378

LIVESTOCK DISEASES
UNIT V

INFORMATION SHEET

I. Terms and definitions

- A. Disease--Any departure from the normal state of the living animal that affects the performance of the vital functions
- B. Pathogen--Disease-producing organism
- C. Infection--Entry and development of a pathogen in or on the animal body
- D. Infectious disease--Disease of man or animal resulting from an infection
- E. Metabolic derangement--Unbalance of the vital organs in the animal body
- F. Noninfectious disease--Disease of man or animal not due to an infection but resulting from physical or chemical agents or metabolic derangement
- G. Incidence of disease--Number of cases of a disease occurring during a prescribed time interval
- H. Prevalence of disease--Total number of cases of a disease at a particular time
- I. Symptom--Any observable sign or evidence of disease
- J. Incubation period--Period of time between the exposure to a disease agent and the appearance of the first symptom or sign of the disease
- K. Carrier of disease--Animal which harbors in its body the specific organism of a disease without showing symptoms
- L. Vehicle of disease--Medium by which a disease agent may be spread
- M. Fetus--Unborn offspring of an animal in the later stages of development
- N. Abortion--Expulsion of a dead or immature fetus

II. Disease classification

- A. Infectious
 - 1. Brucellosis (Bang's)
 - 2. Leptospirosis
 - 3. Vibriosis

00379

INFORMATION SHEET

4. Trichomoniasis
5. Vaginitis
6. Blackleg
7. Anaplasmosis
8. Foot rot
9. Scours
10. Pink eye
11. Erysipelas
12. Cholera
13. Swine influenza
14. Shipping fever
15. Pneumonia
16. Mastitis
17. Warts
18. Red nose
19. Tuberculosis
20. Atrophic rhinitis
21. Transmissible gastroenteritis (TGE)

B. Noninfectious diseases

1. Bloat
2. Prussic acid
3. Milk fever
4. Cancer eye

00283

INFORMATION SHEET

C. Nutritional

1. Anemia
2. Founder
3. Rickets
4. Ketosis

III. Steps of a brucellosis eradication program

- A. Test all cows and heifers
- B. Remove all reactors from herd
- C. Calfhood vaccinate all replacement heifers
- D. Retest at regular intervals
- E. Isolate all new animals purchased
- F. Test all new animals before placing in herd

IV. Ways cattle may become infected with brucellosis

- A. Purchased animals may be infected
- B. Contact with infected animals over fence lines
- C. Exposure at livestock shows
- D. Livestock trucks and trailers
- E. Public livestock auctions
- F. Aborted calves not disposed of properly

V. Ways swine cholera may be spread

- A. Feed contaminated with urine
- B. Secretions from mouth or sores
- C. Drinking unclean water
- D. Feeding raw garbage

00181

INFORMATION SHEET

VI. Items that will help control swine cholera

- A. Cook raw garbage before feeding
- B. Prohibit the use of live hog cholera virus
- C. Report all cases of hog cholera

(NOTE: This is a mandatory procedure introduced by the State Department of Agriculture. The disposal of carcasses is supervised by officials of the State Department of Agriculture.)

- D. Dispose of infected animals properly
- E. Clean and disinfect facilities
- F. Conform to interstate and intrastate controls on movement of swine

VII. Diseases

(NOTE: Refer to charts on the following pages.)

00283

INFORMATION SHEET

VII. Diseases

DISEASE	SPECIES AFFECTED	SYMPTOMS	TREATMENT AND CONTROL
Brucellosis	Cattle, sheep, swine, and man	Abortion; retained placenta; repeat breeders	Slaughter infected animals; calfhood vaccinate
Leptospirosis	Cattle, sheep, swine, and man	Abortion; loss of appetite; feverish; heavy breathing; bloody urine; calves may be born, but are weak and death may occur	Perform blood test; vaccinate all animals; isolate new animals
Vibriosis	Cattle and sheep	Abortion; low conception; temporary infertility	No treatment available; use antibiotics; sexual rest
Trichomoniasis	Cattle	Abortion; low conception; repeat breeding; inflammation of uterus	Sexual rest cows for 3 months after abortion; market infected bulls
Vaginitis	Cattle	Tissue of vagina reddish, roughened, and granular in appearance	Use artificial insemination; purchase clean animals
Blackleg and Malignant edema	Cattle; less frequently sheep	Sudden sickness or death; high fever; lameness; swelling of muscles; crackling sound may be heard when areas are touched	Burn or bury carcasses; vaccinate sheep 2-4 weeks before shearing, castrating, and docking; vaccinate all calves
Anaplasmosis	Cattle; sheep to lesser extent	Animals become weak and lag behind herd; skin becomes pale around eyes, on the muzzle, lips, and teats, and then turns yellow	Vaccinate all animals in winter months; keep animals from brushy areas; control flies, ticks, and mosquitoes; may cause neonatal anemia; will not control an outbreak
Foot rot	Cattle and sheep	Lameness; reddening and swelling of skin above hoof between toes	Move animal to dry quarters; trim inflamed foot and wash with warm soapy water; sulfa drugs and antibiotics are effective in treating

00283

Ag. H. 109-E

INFORMATION SHEET

DISEASE	SPECIES AFFECTED	SYMPTOMS	TREATMENT AND CONTROL
Cancer eye	Cattle	A small tumor on eyelid or eyeball; irritation around eye	Early diagnosis followed by surgery; slaughter
Pink eye	Cattle and sheep	Watering and squinting of eyelid; severe reddening of membrane	Isolate affected animals; use antibiotics for control
Milk fever	Cattle, sheep, and swine	Occurs one to two days before or soon after giving birth; loss of appetite; constipation; nervousness; head usually turned back	Keep good supply of vitamins and minerals available; treat with an injection of calcium glucose intravenously
Erysipelas	Swine	Purple patches under belly; stiff, swollen knees and hocks	Isolate all sick animals; clean and disinfect pens; vaccinate once or twice a year; use antibiotics for control
Cholera	Swine	Sudden onset; fever; loss of appetite; weakness; drinking considerable water; belly may be purplish red color; coughing is often evident	Isolate new animals coming into the herd; do not feed uncooked garbage
Swine influenza	Swine	Loss of appetite; become distressed; difficult breathing; discharge from eyes; cough is deep and loud; high fever for a few days	Provide warm, clean, well-ventilated quarters and ample supply of fresh water; use antibiotics
Shipping fever	Cattle, sheep, and swine	High fever; discharge from eyes; hacking cough; difficult breathing; sometimes swelling in region of neck	Provide good feeding and management; vaccinate three weeks before stressing cattle

00281

INFORMATION SHEET

DISEASE	SPECIES AFFECTED	SYMPTOMS	TREATMENT AND CONTROL
Pneumonia	Cattle, sheep, and swine	High fever; quick, shallow breathing; loss of appetite; crackling noise with breathing; discharge from nostrils	Isolate sick animals; practice good, sound husbandry; use sulfa drugs and antibiotics
Mastitis	Cattle, sheep, and swine	Acute: udder becomes hot, very hard, and tender; increase in temperature; milk flow reduced and watery Chronic: milk thick or lumpy Sheep: discharge from teats or gangrene (blue bag)	Eliminate source of udder injury; provide clean bedding; use antibiotics
Warts	Cattle	Growths on the skin varying from very small to large, appearing around teats and head	Isolate cattle; clean and disinfect pens; vaccinate cattle to remove warts;
Bloat	Cattle and sheep	Enlarged paunch noticeable on the left side	Keep animals on feet and moving; use stomach pump; feed dry hay before turning in to green, lush pasture
Prussic acid	Cattle	Staggered walking; animals will go down quickly	Keep cattle from grazing frost- or drought-damaged Johnson grass or Sudan grass; prompt treatment will result using nitrate boluses
Anemia	Cattle, sheep, and swine	Loss of appetite; slow and inefficient gains; death	Provide adequate amounts of nutrients; vaccinate suckling pigs
Founder	Cattle, horses, and sheep	Extreme pain; high fever; dropping of hoof soles; turning up of toe walls	Avoid overfeeding of the animal; severe cases should be destroyed; vaccinate early affected animals
Rickets	Cattle, sheep, and swine	Enlargement of the knee and hock joints; bowed legs	Provide sufficient calcium, phosphorous, and vitamin D

0082

INFORMATION SHEET

DISEASE	SPECIES AFFECTED	SYMPTOMS	TREATMENT AND CONTROL
Red nose	Cattle	Cough; loss of appetite; loss of weight; nasal discharge; rapid breathing; high fever	Vaccine available; practice good sanitation
Ketosis.	Cattle and sheep	Cows: Loss of weight and appetite; decline in milk production Sheep: Weakness; frequent urination; trembles when exercised; death usually occurs in 90% of the cases	Glucose injection; feed well-balanced ration; add molasses ration
Transmissible gastroenteritis	Swine	Scouring and vomiting; disease spreads rapidly	No effective treatment available; practice good sanitation; move farrowing grounds
Tuberculosis	Cattle, sheep, and swine	Very few symptoms; coughing; labored breathing	Practice good sanitation; test and slaughter reactor animals
Atrophic rhinitis	Swine	Starts with baby pigs; show signs of sneezing; snout twisted or distorted	Select replacements from clean herd; slaughter infected animals; SP 250 in feed.

00300

LIVESTOCK DISEASES UNIT V

TEST

1. Match terms on the right to the correct definition.

- | | |
|--|----------------------------------|
| <p>_____ a. Entry and development of a pathogen in or on the animal body</p> | <p>1. Disease</p> |
| <p>_____ b. Any departure from the normal state of the living animal that affects the performance of the vital functions</p> | <p>2. Fetus</p> |
| <p>_____ c. Total number of cases of a disease at a particular time</p> | <p>3. Pathogen</p> |
| <p>_____ d. Disease of man or animal resulting from an infection</p> | <p>4. Abortion</p> |
| <p>_____ e. Unborn offspring of an animal in the later stages of development</p> | <p>5. Infectious disease</p> |
| <p>_____ f. Expulsion of a dead or immature fetus</p> | <p>6. Vehicle of disease</p> |
| <p>_____ g. Number of cases of a disease occurring during a prescribed time interval</p> | <p>7. Infection</p> |
| <p>_____ h. Disease of man or animal not due to an infection but resulting from physical or chemical agents or metabolic derangement</p> | <p>8. Carrier of disease</p> |
| <p>_____ i. Period of time between the exposure to a disease agent and the appearance of the first symptom or sign of the disease</p> | <p>9. Metabolic derangement</p> |
| <p>_____ j. Animal which harbors in its body the specific organism of a disease without showing symptoms</p> | <p>10. Incubation period</p> |
| <p>_____ k. Unbalance of the vital organs in the animal body</p> | <p>11. Noninfectious disease</p> |
| <p>_____ l. Disease-producing organism</p> | <p>12. Symptom</p> |
| <p>_____ m. Medium by which a disease agent may be spread</p> | <p>13. Incidence of disease</p> |
| <p>_____ n. Any observable sign or evidence of disease</p> | <p>14. Prevalence of disease</p> |

00387

2. Classify the following diseases as infectious, noninfectious, or nutritional by placing an "I" in front of infectious, an "NI" in front of noninfectious, and an "N" in front of nutritional diseases.

- | | |
|-----------------------|--|
| _____ a. Pink eye | _____ i. Anemia |
| _____ b. Bloat | _____ j. Cholera |
| _____ c. Vaginitis | _____ k. Shipping fever |
| _____ d. Milk fever | _____ l. Founder |
| _____ e. Anaplasmosis | _____ m. Rickets |
| _____ f. Cancer eye | _____ n. Atrophic rhinitis |
| _____ g. Brucellosis | _____ o. Ketosis |
| _____ h. Prussic acid | _____ p. Transmissible gastroenteritis |

3. List six steps of a brucellosis eradication program.

- a.
- b.
- c.
- d.
- e.
- f.

4. Select from the list below ways cattle may become infected with brucellosis, by placing an "X" in the blanks.

- _____ a. Contact with infected animals over fence lines
- _____ b. Eating feed low in minerals
- _____ c. Exposure at livestock shows
- _____ d. Exposure to weather
- _____ e. Aborted calves not disposed of properly

5. List four ways swine cholera may be spread.

- a.
- b.
- c.
- d.

00788

6. Select from the list below items that will help in the control of swine cholera by placing an "X" in the blanks.

- a. Cook raw garbage before feeding
- b. Report all cases of hog cholera
- c. Dispose of infected animals properly
- d. Clean and disinfect facilities

7. Complete the chart by putting the name of the disease in the block.

DISEASE	SPECIES AFFECTED	SYMPTOMS	TREATMENT AND CONTROL
a.	Cattle, sheep, swine, and man	Abortion; retained placenta; repeat breeders	Slaughter infected animals; calfhood vaccinate
b.	Swine	Sudden onset of fever; loss of appetite; weakness; belly may be purplish red color; coughing	Isolate new animals; do not feed uncooked garbage
c.	Cattle and sheep	Weakness; lagging behind herd; skin becomes pale around eyes, muzzle, lips, and teats, then turns yellow	Vaccinate all animals during winter months; keep animals from brushy areas; control flies, ticks, and mosquitoes; may cause neonatal anemia; will not control an outbreak
d.	Cattle, sheep, and swine	High fever; quick shallow breathing; loss of appetite; crackling noise with breathing; discharge from nostrils	Isolate sick animals; practice good sound husbandry; use sulfa drugs and antibiotics
e.	Swine	Purple patches under belly; knees and hocks swollen and stiff	Isolate all sick animals; clean and disinfect pens; vaccinate once or twice a year; use antibiotics for control
f.	Cattle and sheep	Watering and squinting of eyelids; severe reddening of the membrane	Isolate affected animals; use of antibiotics helps in control

00389

LIVESTOCK DISEASES
UNIT V

ANSWERS TO TEST

1.

a. 7	h. 11
b. 1	i. 10
c. 14	j. 8
d. 5	k. 9
e. 2	l. 3
f. 4	m. 6
g. 13	n. 12
2.

a. I	i. N
b. NI	j. I
c. I	k. I
d. NI	l. N
e. I	m. N
f. NI	n. I
g. I	o. N
h. NI	p. I
3.
 - a. Test all cows and heifers
 - b. Remove all reactors from herd
 - c. Calfhood vaccinate all replacement heifers
 - d. Retest at regular intervals
 - e. Isolate all new animals purchased
 - f. Test all new animals before placing in herd
4.
 - a, c, e
5.
 - a. Feed contaminated with urine
 - b. Secretions from mouth or sores

00390

- c. Drinking unclean water
- d. Feeding raw garbage
- 6. a, b, c, d
- 7. a. Brucellosis
- b. Cholera
- c. Anaplasmosis
- d. Pneumonia
- e. Erysipelas
- f. Pink eye

00391

**LIVESTOCK PARASITES
UNIT VI****TERMINAL OBJECTIVE.**

After completion of this unit, the student should be able to classify parasites as internal or external. He should also be able to reproduce the life cycle of parasites and name the parasite when given the animal affected, symptom, and prevention and control. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with livestock parasites to the correct definitions.
2. List general measures in preventing internal and external parasites.
3. Classify parasites as internal or external.
4. Reproduce the steps in the life cycle of an internal parasite and an external parasite.
5. Identify external parasites when given a drawing.
6. Complete a chart by naming the parasite when given the species affected, symptoms, and prevention and control.

00392

LIVESTOCK DISEASES UNIT VI

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information sheet.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Emphasize the major parasites found in your community.

(NOTE: There are several good films on parasites that are available from Oklahoma State University or various chemical companies that would be helpful in creating motivation.)

- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency masters
 1. TM 1--Life Cycle of the Horn Fly
 2. TM 2--Life Cycle of the Cattle Grub
 3. TM 3--Life Cycle of the Swine Intestinal Roundworm
 4. TM 4--External Parasites

00293

- D. Test
- E. Answers to test

II. References:

LIVESTOCK PARASITES
UNIT VI

INFORMATION SHEET

I. Terms and definitions

- A. Parasite--Organism that lives in or on another animal and obtains its food from its host
- B. Life cycle--Series of changes through which an organism passes during its life
- C. Metamorphosis--Change in the form or structure of an animal occurring after birth or hatching
- D. External parasite--Organism that lives on or under the skin of an animal
- E. Internal parasite--Organism that lives part of its life cycle inside the animal body
- F. Blowfly--Fly that breeds in necrotic (dead) animal flesh
- G. Screwworm fly--Fly that raises its maggots in the open wound of animals and feeds on live flesh
- H. Horn fly--Small black fly often seen resting around the base of the horn; sucks blood from the back, neck, and shoulders
- I. Grub--Maggot (larva) stage of a honeybee-like insect known as a heel fly
- J. Ringworm--Contagious fungus growth on the outer layer of the skin
- K. Lice--Small, flattened, wingless parasite
- L. Anaplasmosis--Serious blood disease of cattle caused by insect bites
- M. Horsefly--Large gray fly generally found around bushy or wooded areas; known to transmit anaplasmosis to cattle
- N. Coccidiosis--Parasitic disease caused by protozoan organisms known as coccidia
- O. Intestinal worm--Long worm found in the stomach, small intestine, and colon
- P. Lungworm--White threadlike worm 1 1/2 to 3 inches long found in the trachea and bronchi of cattle
- Q. Ascarid--Yellowish or pinkish worm 8 to 15 inches long; almost the size of a lead pencil
- R. Tick--Blood-feeding parasite known to transmit some disease-bearing organism from one animal to another

00295

INFORMATION SHEET

II. Measures for preventing internal and external parasites

A. Internal

1. Practice pasture rotation
2. Check animals regularly
3. Treat animals showing signs of parasites
4. Practice proper lot sanitation
5. Drain wet pasture sites
6. Graze young animals on clean pastures

B. External

1. Keep manure cleaned from barnyards to prevent fly breeding
2. Spray livestock regularly
3. Spray livestock housing
4. Control grubs before they damage the hide
5. Spray new animals arriving on the farm
6. Check livestock frequently

III. Internal and external parasites

A. Internal

1. Coccidiosis
2. Intestinal worm
3. Lungworm
4. Ascarid
5. Liver fluke
6. Stomach worm
7. Tapeworm

00295

INFORMATION SHEET

B. External

1. Blowfly
2. Horn fly
3. Screwworm fly
4. Grub (heel fly)
5. Horsefly
6. Tick
7. Lice
8. Ringworm
9. Mite

IV. Life cycle of parasites

A. Horn fly (Transparency 1)

1. Egg
2. Larva
3. Adult

B. Cattle grub or heel fly (Transparency 2)

1. Adult lays eggs
2. Larva enters body
3. Larva drops to ground
4. Adult emerges

C. Swine intestinal roundworm (Transparency 3)

1. Egg eaten by swine
2. Egg hatches to worm
3. Adult worm in small intestine
4. Eggs are passed in feces

00397

· INFORMATION SHEET

V. External parasites (Transparency 4)

- A. Mite
- B. Lice
- C. Tick
- D. Horn fly
- E. Barn fly
- F. Heel fly
- G. Screwworm fly

VI. Parasites

(NOTE: Refer to the charts on the following pages.)

00093

INFORMATION SHEET

VI. Parasites

A. External	Species Affected	Symptoms	Preventions and Controls
Blowfly	Cattle, sheep, and swine	Infected wounds; soiled hair or fleece; animals become weak and fevered	Use proper procedure for destroying dead animals. Use traps, poisoned baits, and repellents.
Horn fly	Cattle	Cattle refuse to graze; seek protection by hiding in buildings, brush, or tall grass	Remove manure from around barn. Spray animals frequently from early May until frost. Use Methoichlor, Toxaphene, Malathion, Ronnel, Co-Ral.
Screwworm fly	Cattle, sheep, and swine	Loss of appetite and poor condition	Branding, dehorning, and castrating during winter months. Keep property free of trash and report all cases to proper authority. Kill larva stage. Use EQ 335 and Co-Ral.
Heel fly	Cattle	Grub (larva) in back of cattle from December to May; swelling in backs of animals	Control flies between June and October. Use Co-Ral; do not use after October 15.
Horsefly	Cattle and horses	Irritation, restlessness, and loss of condition; causes anaplasmosis in cattle	No spray is available, but frequent spraying helps from May until frost. Keep animals from heavy brush areas. Use Pyrethrins.
Tick	Cattle, sheep, and swine	May cause anaplasmosis; weak, weight loss, ears droop.	Spray or dust frequently. Use Lindane, Toxaphene, and Malathion.
Lice	Cattle, sheep, and swine	Irritation, restlessness, and loss of condition; some lice cause animals to become anemic	Spray frequently from October until spring. Use Toxaphene, Co-Ral, and Malathion.
Ringworm	Cattle, sheep, swine, and man	Round, scaly areas around eyes, ears, and neck	Isolate affected animals, disinfect equipment, and practice strict sanitation. Apply iodine solution.
Mites and Scabies	Cattle, sheep, and swine	Skin irritated; itching and scratching	Spraying and dipping. Use Lindane, lime-sulfur.

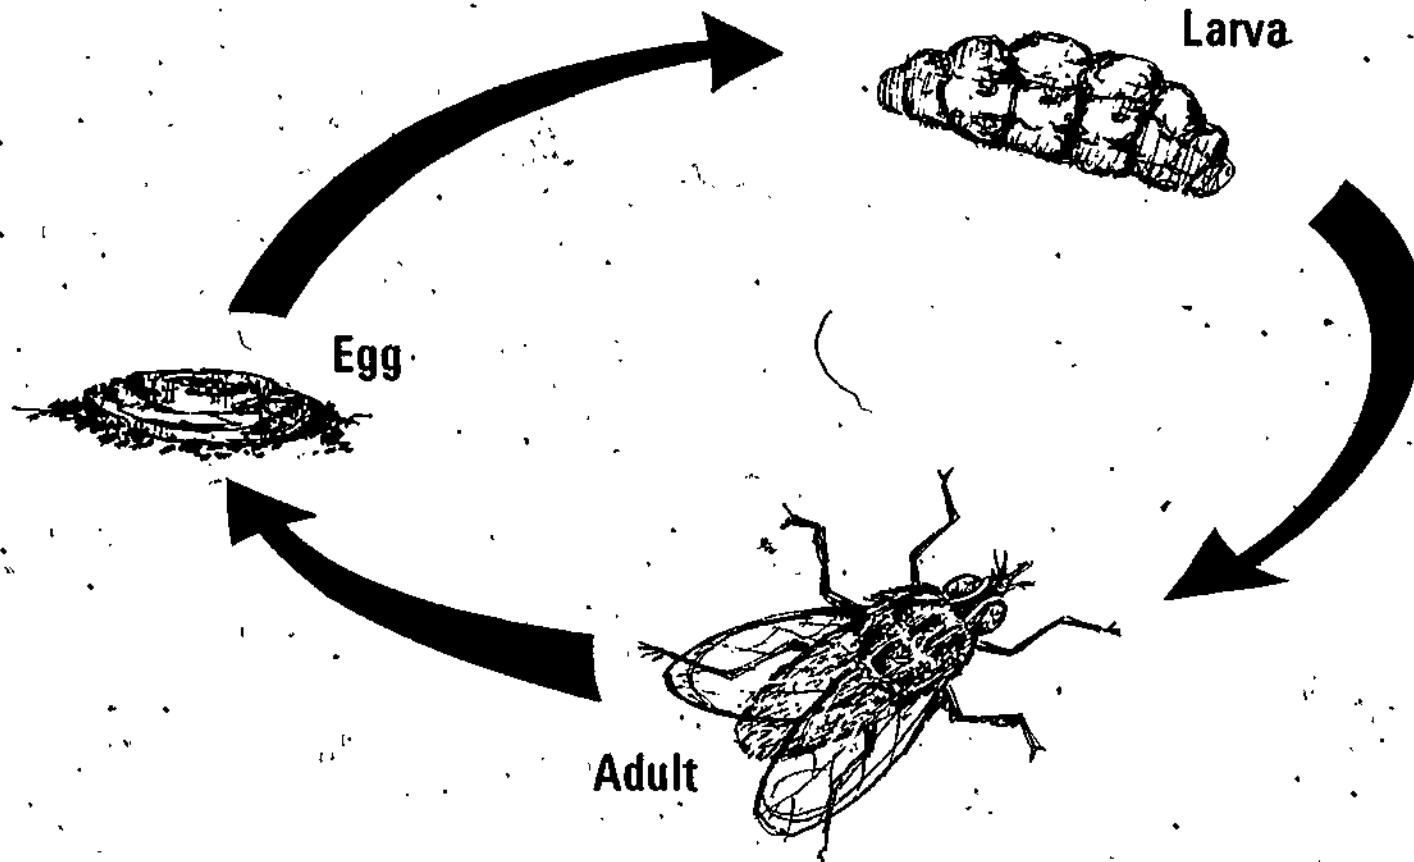

00299

INFORMATION SHEET

B. Internal	Species Affected	Symptoms	Preventions and Controls
Coccidiosis	Cattle, sheep, and swine	Diarrhea, bloody feces, and weakness	Avoid contaminated feed and water, isolate affected animals, and keep feeders and waterers sanitary. Consult veterinarian. Use sulfa drugs.
Intestinal worm	Cattle, sheep, and swine	Loss of weight, poor rate of gain, anemia, and/or diarrhea	Rotate pastures, isolate calves and lambs from adult animals, and keep feeders and waterers sanitary. Use Phenothiazine or Thibenzole.
Lungworm	Cattle, sheep, and swine	Coughing, labored breathing, and loss of appetite; young animals become stunted and unthrifty	Practice good sanitation. Do not spread infested manure on pasture. Use Dictyicide.
Ascarid	Swine	Coughing and hard breathing; young pigs become unthrifty and stunted; liver damage	Clean farrowing quarters. Wash sows before farrowing; place sows and pigs on clean pasture after farrowing. Use Piperazine, sodium, and fluoride.
Liver fluke	Cattle and sheep	Anemia, digestive disturbances, loss of weight	Avoid wet pastures. Use a good drench of Hexachlorethane-Bentonite mixture.
Stomach worm	Sheep	No specific symptoms	Pasture rotation. Drench with Phenothiazine.
Tapeworm	Cattle, sheep, and swine	No specific symptoms	Pasture rotation. Use copper sulfate-nicotine sulfate.

NATIONAL BUREAU OF STANDARDS-1963-A

ERIC logo, featuring a globe icon above the text ERIC.

Full Text Provided by ERIC

**DRAWING AND SKETCHING
UNIT I****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to interpret drawings of simple plans. He should also be able to identify parts of a drawing, symbols used for welding, and abbreviations used on a drawing. He should be able to complete a simple drawing of a project to be made in the shop. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with drawing and sketching to the correct definitions.
2. State in writing the purpose of a sketch or drawing.
3. Identify the three major views of a pictorial drawing.
4. Select from a list three basic elements of a drawing.
5. Match the basic types of dimensions to their uses.
6. Identify basic lines used on a drawing.
7. Match drawing abbreviations with their corresponding identification.
8. Identify basic welding symbols used on a drawing.
9. Read and interpret a drawing.
10. Draw a simple three-view sketch of a rectangular block 6" long, 2" thick, and 4" wide.
11. Complete a drawing of a simple project to construct in the shop.

**DRAWING AND SKETCHING
UNIT I****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide student with objectives.
- B. Provide student with information and assignment sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Provide the students with necessary equipment and opportunity to make a simple drawing or sketch.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Obtain drawing paper and necessary equipment to make simple drawing or sketch.
- D. Complete assignment sheets.
- E. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Transparency masters
 1. TM 1--Converting a Pictorial View into a Three-Sided View
 2. TM 2--Types of Dimensions on a Drawing

00414

DRAWING AND SKETCHING
UNIT 1

INFORMATION SHEET

I. Terms and definitions

- A. Drawing--Written message conveyed from the draftsman to the workman containing technical information
- B. Sketch--Rough drawing representing the chief features of an object or scene

(NOTE: A sketch is usually made without the aid of drafting instruments.)

- C. Blueprint--Photographic print in white on a bright blue ground used especially for copying maps, mechanical drawing, and architects' plans
- D. Dimension--Process of illustrating the size of various objects
- E. Scale--Proportion between two sets of dimensions as between those of a drawing and its original
- F. Pictorial view--Illustration showing three or more sides of an object
- G. Size dimension--Notes and dimensions that tell the size of an object
- H. Shape dimension--Views that illustrate the shape of an object

- II. Purpose of a sketch or drawing--To express an idea or an object on paper so that it may be understood by other persons involved

III. Major views of a pictorial drawing (Transparency 1)

- A. Top
- B. Front or side
- C. End

IV. Basic elements of a drawing

- A. Lines--Shape and dimensioning of the object
- B. Dimensions--Size and location of various segments of items being constructed
- C. Notes--Details of construction not shown by lines

00415

INFORMATION SHEET

V. Types of dimensions (Transparency 2)

- A. Overall--Describes a total distance, such as the complete length, width, or thickness of an object
- B. Size--Gives information concerning the size of an object
- C. Location--Gives information concerning the location of some details of construction, such as a hole

VI. Basic lines used on a drawing (Transparencies 3 and 4)

- A. Border line--Serves as a frame for a drawing
- B. Object line--Indicates the outline of an object
- C. Hidden line--Broken line that represents an edge that cannot be seen from the outside of the object
- D. Extension line--Indicates the exact distance the dimension describes
- E. Dimension line--Extends between the extension lines to indicate distance
- F. Center line--Used to locate the center of a circle or a curved surface
- G. Leader line--Shows the detail described by a dimension or note
- H. Cutting plane line--Used to show the shape of complicated parts
- I. Break line--Used to show interior detail

VII. Common abbreviations used on drawings

- | | |
|------------------------------|-----------------------------|
| C. I. = Cast iron | F. S. = Full size |
| C. C. = Center to center | F. S. D. = Full size detail |
| C. Bore = Counterbore | Hex = Hexagon |
| C. R. S. = Cold rolled steel | I. D. = Inside diameter |
| C. S. = Cast steel | N. C. = National coarse |
| Csk. = Countersink | N. F. = National fine |
| Dia. = Diameter | No. or # = Number |
| F or Fin = Finish | O. C. = On center |
| F. A. O. = Finish all over | O. D. = Outside diameter |

INFORMATION SHEET

- | | |
|--|-------------------------|
| R. or Rad = Radius | GI = Galvanized iron |
| Req'd = Required | I = I beam |
| S. A. E. = Society of Automotive Engineers | In. or " = Inch(es) |
| Sq. = Square | Mal I = Malleable iron |
| U. S. S. = United States Standard | Std = Standard |
| | Stl = Steel |
| N. T. S. = Not to scale | Stl C. = Steel casting |
| Cir = Circular | Thd or Thds = Thread(s) |
| Cyl = Cylinder | WI = Wrought iron |
| Deg or ° = Degree(s) | Br# = Brass, SAE# |
| Ga = Gauge | Bro# = Bronze, SAE# |
| | Chfr = Chamfer |

VIII. Basic welding symbols used on a drawing (Transparency 5)

- | Weld Type | Symbol |
|--------------------------|--|
| A. Fillet |  |
| B. Plug or slot |  |
| C. Arc seam, arc spot |  |
| D. Butt or square groove |  |

DRAWING AND SKETCHING
UNIT I

ASSIGNMENT SHEET #1-READ AND INTERPRET
A DRAWING

Much practice is necessary for developing skill in reading and interpreting a drawing. The questions and problems below will provide such practice. Work each of the problems and return to the instructor when completed.

1. Study this drawing and answer the following questions.

Rev	Description	Date
A	Changed Width To Sin.	4/1/70
B	Changed Stock To Oak Was Walnut	4/3/70

Front View: A rectangle with a width of 5 and a height of 1. A horizontal line is drawn near the top edge.

Side View: An L-shaped object with a top width of 1, a total height of 6, and a bottom width of 2.

Drawn By: W. Watosh	Bookend	Co.: Jones Corp.
Checked By: Q.E.S.		Dwg. No.: C 3218
Mat'l: Oak		
Scale: 1/4"=1"		

- a. What company did the drawing? _____
- b. What is the name of the object? _____
- c. What is the scale of the drawing? _____
- d. Who was the draftsman? _____

00124

ASSIGNMENT SHEET #1

2. Give the dimensions of this object.

- a. Height _____ inches
- b. Width _____ inches
- c. Depth _____ inches
3. Answer the following questions dealing with views.
- a. Suppose you are standing directly in front of this object. You cannot see any other part. What view would you be seeing? _____

1

2

00425

ASSIGNMENT SHEET #1

b. Which would be considered the front view of the following object?

1

2

3

c. Which view would be considered the top view of the object below?

1

2

3

00426

ASSIGNMENT SHEET #1

- d. Label each part of the drawing below.

- e. Study this object closely, and label each view.

DRAWING AND SKETCHING
UNIT I

ASSIGNMENT SHEET #2-DRAW A THREE-VIEW SKETCH

Draw a three-view sketch of a rectangular block using the following dimensions. Be sure to show your dimensions.

1. 5" long by 2" wide by 1" thick

2. 6" long by 1" wide by 1/4" thick

00428

**DRAWING AND SKETCHING
UNIT I****ASSIGNMENT SHEET #3-DRAW A SIMPLE PROJECT**

Complete a three-sided drawing of some project that will be built in the shop. Draw a front, side, and top view showing all dimensions. The instructor should approve the drawing before construction begins.

DRAWING AND SKETCHING UNIT I

TEST

1. Match terms on the right to the correct definition.

- | | |
|---|---------------------------|
| <p>_____ a. Notes and dimensions that tell the size of an object</p> | <p>1. Scale</p> |
| <p>_____ b. Rough drawing representing the chief features of an object or scene</p> | <p>2. Dimension</p> |
| <p>_____ c. Proportion between two sets of dimensions as between those of a drawing and its original</p> | <p>3. Pictorial view</p> |
| <p>_____ d. Written message conveyed from the draftsman to the workman containing technical information</p> | <p>4. Size dimension</p> |
| <p>_____ e. Illustration showing three or more sides of an object</p> | <p>5. Shape dimension</p> |
| <p>_____ f. Photographic print in white on a bright blue ground used especially for copying maps, mechanical drawing, and architects' plans</p> | <p>6. Drawing</p> |
| <p>_____ g. Process of illustrating the size of various objects</p> | <p>7. Sketch</p> |
| <p>_____ h. Views that illustrate the shape of an object</p> | <p>8. Blueprint</p> |

2. State in writing the purpose of a sketch or drawing.

00432

3. Identify the three major views of a pictorial drawing.

- a.
- b.
- c.

4. Select from the following list three basic elements of a drawing by placing an "X" in the blank.

- | | |
|---|-------------------------------------|
| <input type="checkbox"/> a. Pictures | <input type="checkbox"/> d. History |
| <input type="checkbox"/> b. Lines | <input type="checkbox"/> e. Notes |
| <input checked="" type="checkbox"/> c. Dimensions | |

5. Match the basic types of dimensions on the right to the correct use.

- | | |
|---|-------------|
| <input type="checkbox"/> a. Gives information concerning the size of an object | 1. Overall |
| <input type="checkbox"/> b. Describes a total distance, such as the complete length, width, or thickness of an object | 2. Size |
| <input type="checkbox"/> c. Gives information concerning the location of some details of construction, such as a hole | 3. Location |

6. Identify the following basic lines used in a drawing.

- | | |
|----|--|
| a. | |
| b. | |
| c. | |
| d. | |
| e. | |
| f. | |

00433

7. Match the drawing abbreviations on the right to the correct name each represents.

- | | |
|---------------------------|-------------|
| _____ a. Standard | 1. F or Fin |
| _____ b. Countersink | 2. Chfr |
| _____ c. Outside diameter | 3. Stl |
| _____ d. Malleable iron | 4. Br# |
| _____ e. Hexagon | 5. Cir |
| _____ f. Cylinder | 6. R. |
| _____ g. Brass, SAE# | 7. Std |
| _____ h. Steel | 8. N. C. |
| _____ i. Square | 9. Hex |
| _____ j. Chamfer | 10. Deg |
| _____ k. Degree | 11. Sq. |
| _____ l. Circular | 12. Csk. |
| _____ m. Finish | 13. O. D. |
| _____ n. Radius | 14. Cyl |
| _____ o. National coarse | 15. Mal I |

8. Identify the following basic welding symbols.

- _____ a.
- _____ b.
- _____ c.
- _____ d.
- _____ e.
- _____ f.

9. Read and interpret a drawing.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00434

10. Draw a simple three-view sketch of a rectangular block 6" long, 2" thick, and 4" wide.

11. Complete a drawing of a simple project to construct in the shop.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00435

ANSWERS TO TEST

1. a. 4 e. 3
 b. 7 f. 8
 c. 1 g. 2
 d. 6 h. 5
2. To express an idea or an object on paper so that it may be understood by other persons involved
3. a. Top
 b. Front or side
 c. End
4. b, c, e
5. a. 2
 b. 4
 c. 3
6. a. Hidden
 b. Center line
 c. Extension line
 d. Dimension line
 e. Object line
 f. Border line
7. a. 7 f. 14 k. 10
 b. 12 g. 4 l. 5
 c. 13 h. 3 m. 1
 d. 15 i. 11 n. 6
 e. 9 j. 2 o. 8

00436

- 8. a. Fillet
 - b. Butt
 - c. V groove
 - d. Bevel groove
 - e. U groove
 - f. Weld all around
9. Evaluated to satisfaction of instructor.

11. Evaluated to satisfaction of instructor.

00457

**POSITION WELDING
UNIT II****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to identify welding positions and properly and improperly formed beads. He should be able to complete exercises in the four positions. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with position welding to the correct definitions.
2. List four factors that determine proper machine adjustment.
3. Identify the four welding positions.
4. Select from a list reasons for removing slag from a weld.
5. Describe the importance of fusing one bead with another.
6. List four factors that determine weld quality.
7. Identify properly and improperly formed beads.
8. Discuss solutions to prevent arc blow.
9. Label a drawing of the different types of groove joints.
10. Demonstrate the ability to:
 - a. Make a pad in the horizontal position.
 - b. Make a single V-groove butt weld in the flat position.
 - c. Make a single V-groove butt weld in the horizontal position.
 - d. Make a single V-groove butt weld in the vertical up position.
 - e. Make a single V-groove butt weld in the overhead position.
 - f. Run a continuous bead using pine and flat plate.

00428

POSITION WELDING UNIT II

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information and job sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate and discuss procedures outlined on the job sheets.
- G. Demonstrate weld patterns and rod manipulation.
- H. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives

00440

POSITION WELDING
UNIT II

INFORMATION SHEET

I. Terms and definitions

- A. Pad--Series of overlapping stringer beads that completely cover the surface of a practice plate increasing its thickness by each subsequent layer
- B. Horizontal position--Running of a horizontal bead on a vertical surface (Transparency 1)
- C. Vertical position--Beads are deposited vertically on a vertical surface; axis of the weld is vertical (Transparency 1)
- D. Weld face--Exposed surface of a fusion weld
- E. Root--Bottom surface of a weld; the opposite side from which the welding was done
- F. Penetration--Distance from the original surface of the base metal to that point at which fusion ceases
- G. Undercutting--Portion of the crater left unfilled due to excessive current and the improper movement of the electrode; occurs at the edge of the bead (Transparency 5)
- H. Crater--Depression in the face of a weld caused by arc force; usually found at the end of a bead
- I. Fusion--Melting of metals until the molten parts unite with each other
- J. Spatter--Deposit of small spots or particles of metal on the base metal alongside the bead (Transparency 3)
- K. Overhead position--Position of welding wherein welding is performed from the underside of the joint
- L. String bead--Weld bead made with very little rod manipulation
- M. Root opening--Gap between the members to be joined at the root of the joint
- N. Porosity--Condition caused by a trapped gas pocket in a weld as it solidifies
- O. Slag inclusion--Nonmetallic porous material entrapped in weld metal or between the weld metal and base metal
- P. Cold lap--Piling up of weld metal due to improper starts and current adjustments causing a defect usually at the start of the weld

00411

INFORMATION SHEET

- Q. Arc blow--Concentration of magnetic force acting on the welding arc causing it to deflect, move, or "blow" from its normal path
 - R. Coupon--That portion of a weld which is removed from the test plate to test
- II. Factors that determine proper machine adjustment
- A. Length of welding cables
 - B. Thickness of metal
 - C. Diameter and type of electrode
 - D. Welding technique used by operator
 - E. Efficiency of welding machine
 - F. Polarity of machine
 - G. Welding position
- III. Welding positions (Transparencies 1 and 2)
- A. Flat
 - B. Vertical
 - C. Overhead
 - D. Horizontal
- IV. Reasons for removing slag
- A. Permits better fusion of beads
 - B. Prevents gas pockets and slag inclusions from forming in bead
 - C. Improves appearance of bead
- V. Importance of fusing one bead with another
- A. Increases strength of weld
 - B. Improves appearance of weld
 - C. Improves penetration

00412

INFORMATION SHEET

VI. Factors that determine weld quality

- A. Amperage
- B. Length of arc
- C. Speed of travel
- D. Position of electrode

VII. Properly and improperly formed beads (Transparency 3)

- A. Current, voltage, and speed normal--Smooth well-formed bead with no undercutting, overlapping, or piling of slag
- B. Current too low--Poor penetration; slow progress; excessive piling of weld metal
- C. Current too high--Excessive spatter; undercutting of weld joints
- D. Voltage too high--Poor penetration with flat head; weld zone not shielded
- E. Voltage too low--Poor penetration; wide humped bead; electrode too close to crater, causing porosity
- F. Speed too slow--Excessive heat; piling up of weld metal, leading to unnecessary distortion of joint
- G. Speed too fast--Irregular bead; poor penetration; not enough metal in joint, causing a weak joint

VIII. Solutions to prevent arc blow

- A. Reduce current
- B. Switch polarity
- C. Change current to AC
- D. Change location of ground clamp
- E. Wrap ground cable around workpiece and pass ground current through it to neutralize magnetic field
- F. Maintain a short arc

00443

INFORMATION SHEET

IX. Types of groove joints (Transparency 4)

- A. Square
- B. J
- C. Single bevel
- D. Single V
- E. Double bevel
- F. U

POSITION WELDING UNIT II

JOB SHEET #1--MAKE A PAD IN THE HORIZONTAL POSITION

I. Equipment and materials

- A. Arc welding station and required tools
- B. Protective clothing
- C. E-6010, 6011, or 6013 electrode 1/8" or 5/32"
 1. 1/8" - 75-130 amps
 2. 5/32" - 90-175 amps
- D. AC current
- E. Mild steel plate 3/8" thick, 6" by 6"

II. Procedure

- A. Adjust machine to correct type and amount of current
- B. Position metal in horizontal position for welding and tack
- C. Position electrode down 5°-10° and angled 20° in direction of travel (Figure 1)

00450

JOB SHEET #1

- D. Strike arc and hold high arc length 1-2 seconds in lower left-hand corner welding to the lower right-hand corner

(NOTE: Some type of manipulation of the rod will be helpful.)

(CAUTION: Care should be taken to hold center of bead from 1/8" to 3/16" from bottom edge to avoid burning off edge.)

- E. Chip and brush weld clean after laying first bead and check weld surface for pinholes and slag inclusions

(NOTE: Crater at end of bead should be filled.)

- F. Continue running beads, overlapping at least the first one-third of the previous bead until pad is filled (Figure 2)

(NOTE: Alternate travel direction for each pass.)

FIGURE 2

(NOTE: Clean each pass thoroughly before overlapping with another to insure a sound weld deposit with proper penetration. Each pass should fuse with the base metal as well as with the preceding pass.)

- G. Clean the pad and turn it in for instructor's approval.

00451

POSITION WELDING
UNIT II

JOB SHEET #2-MAKE A SINGLE V-GROOVE BUTT WELD
IN FLAT POSITION

(NOTE: This welding exercise will be tested.)

I. Equipment and materials

- A. Arc welding station and required tools
- B. Mild steel, two pieces $\frac{3}{8}$ " thick, 5" x 6"
- C. E-6010, 6011, or 6013 electrode, $\frac{1}{8}$ " or $\frac{5}{32}$ "
 1. $\frac{1}{8}$ " - 75-130 amps
 2. $\frac{5}{32}$ " - 90-175 amps
- D. AC current
- E. Protective clothing

II. Procedure

- A. Adjust welding machine for correct current and amperage settings
- B. Prepare metal for welding
 1. Bevel edge of plates 30° (Figure 1)

FIGURE 1

Bevel One Long Side of Each Plate

2. Remove all burrs and slag

00452

JOB SHEET #2

- C. Place metal together parallel to each other leaving a root gap from $3/32''$ to $1/8''$ in flat position (Figures 2 and 3)

FIGURE 2

Hold Plates Together Tightly, Separated
By One End of Spacer Wire

Remove Spacer Wire
Immediately After
Depositing Tack

FIGURE 3

Separate Plates with $3/32-1/8''$
U-Shaped Wire Spacer

Deposit Light Tack
At One End

Joint Spacing Should Be Equal
From One End To The Other

- D. Tack pieces together at both ends and feather tack with a right angle grinder

(NOTE: Place a strip of metal under each piece to hold it off table top when welding.)

00453

JOB SHEET #2

- E. Position electrode straight into plate and angle 5° - 10° away from weld puddle (Figure 4)

- F. Strike high arc length to heat plates, then move to end and weld plates together using a stringer bead

(NOTE: The root pass should have 100% penetration on both plates extending through the root and overlapping $1/16''$ of an inch on each side. The back of the root pass should have a convex appearance when observed from the bottom of the plate. See Figure 5.)

FIGURE 5

(CAUTION: Avoid undercutting faces of groove.)

- G. Chip slag and brush weld clean

00454

JOB SHEET #2

- H. Deposit necessary filler passes to fill out the V, using care to remove all slag deposits between each pass

(NOTE: Filler passes can be stringers or weaves.)

- I. Make cover pass or passes slightly convex, overlapping edge of groove 1/16" on each side

- J. Cut and prepare two coupons out of this weld

- K. Cool plates slowly

(CAUTION: Do not place plates in water.)

- L. Turn in plate to instructor for testing

00455

POSITION WELDING
UNIT II

JOB SHEET #3 MAKE A SINGLE V-GROOVE BUTT WELD
IN THE HORIZONTAL POSITION

(NOTE: This welding exercise will be tested.)

I. Equipment and materials

- A. Arc welding station and required tools
- B. Mild steel plates, two pieces $\frac{3}{8}$ " thick, 5" x 6"
- C. E-6010, 6011, or 6013 electrode, $\frac{1}{8}$ " or $\frac{5}{32}$ "
 1. $\frac{1}{8}$ " - 75-130 amps
 2. $\frac{5}{32}$ " - 90-175 amps
- D. AC current
- E. Protective clothing

II. Procedure

- A. Adjust welding machine for correct current and amperage settings
- B. Prepare plates for welding
 1. Bevel each plate 30° (Figure 1)

FIGURE 1

Bevel One Long Side of Each Plate

2. Remove all burrs and slag if flame cut
- C. Tack plates together leaving a root gap of $\frac{3}{32}$ " - $\frac{1}{8}$ " slag and feather tacks

00456

JOB SHEET #3

JOB SHEET #5

- J. Cover pass or passes should be well fused into previous passes with a 1/16" overlap at the top and on both sides of V-joint; bead should be convex in contour
- K. Cut and prepare coupons
- L. Cool plates in still air, never water
- M. Test coupons

00468

POSITION WELDING
UNIT II

JOB SHEET #6--RUN A CONTINUOUS BEAD

- I. Tools and equipment
 - A. Welder, electrode holder, and ground clamp
 - B. Gloves, helmet, and safety glasses
 - C. Chipping hammer
 - D. Wire brush
 - E. Pliers
- II. Materials
 - A. Mild steel plate, 4" long by 4" wide by 1/8" to 3/8" thick
 - B. Black pipe nipple, 4" long by 3/4" to 2" in diameter
 - C. Welding rod, E-6010, 6011, 6013
- III. Procedure
 - A. Place nipple near center of plate
 - B. Place metal in proper welding position
 - C. Start weld at position shown in Figure 1 on the following page
 - D. Hold electrode 25° from nipple
 - E. Strike arc and continue welding without breaking arc
 - F. Chip slag and brush clean
 - G. Turn in to instructor for grading

UNIT II

TEST

1. Match terms on the right to the correct definition:

- | | |
|---|--|
| <p>_____ a. Series of overlapping stringer beads that completely cover the surface of a practice plate increasing its thickness by each subsequent layer</p> <p>_____ b. Melting of metals until the molten parts unite with each other</p> <p>_____ c. Position of welding wherein welding is performed from the underside of the joint</p> <p>_____ d. Gap between the members to be joined at the root of the joint</p> <p>_____ e. Running of a horizontal bead on a vertical surface</p> <p>_____ f. Deposit of small spots or particles of metal on the base metal alongside the bead</p> <p>_____ g. Distance from the original surface of the base metal to that point at which fusion ceases</p> <p>_____ h. Condition caused by a trapped gas pocket in a weld as it solidifies.</p> <p>_____ i. Depression in the face of a weld caused by arc force; usually found at the end of a bead</p> <p>_____ j. Exposed surface of a fusion weld</p> <p>_____ k. Concentration of magnetic force acting on the welding arc causing it to deflect, move, or "blow" from its normal path</p> <p>_____ l. Nonmetallic porous material entrapped in weld metal or between the weld metal and base metal</p> | <p>1. Root</p> <p>2. Penetration</p> <p>3. Undercutting</p> <p>4. Crater</p> <p>5. Pad</p> <p>6. Horizontal position</p> <p>7. Vertical position</p> <p>8. Weld face</p> <p>9. Fusion</p> <p>10. Spatter</p> <p>11. Coupon</p> <p>12. Arc blow</p> <p>13. Overhead position</p> <p>14. Cold lap</p> <p>15. String bead</p> <p>16. Slag inclusion</p> <p>17. Root opening</p> <p>18. Porosity</p> |
|---|--|

00473

- _____ m. Portion of the crater left unfilled due to excessive current and the improper movement of the electrode; occurs at the edge of the bead
- _____ n. Beads are deposited vertically on a vertical surface; axis of the weld is vertical
- _____ o. That portion of a weld which is removed from the test plate to test
- _____ p. Weld bead made with very little rod manipulation
- _____ q. Bottom surface of a weld; the opposite side from which the welding was done
- _____ r. Piling up of weld metal due to improper starts and current adjustments causing a defect usually at the start of the weld

2. List four factors that determine proper machine adjustment.

- a.
- b.
- c.
- d.

3. Identify the following welding positions by writing the correct name in the blank.

a. _____

b. _____

c. _____

d. _____

00173

4. Select from the list reasons for removing slag from the weld by placing an "X" in the blank.

- a. Permits better fusion of beads
- b. Prevents gas pockets and slag inclusions from forming in bead
- c. Improves appearance of bead
- d. Prevents cold lap or undercutting

5. Describe in a short paragraph the importance of fusing one bead with another.

6. List four factors that determine weld quality.

- a.
- b.
- c.
- d.

00471

7. Identify the properly and-improperly formed beads by telling the cause.

a. _____

b. _____

c. _____

d. _____

e. _____

f. _____

g. _____

00475

8. Discuss in a short paragraph three solutions to prevent arc-blow.

9. Label the following types of groove joints.

a. _____

b. _____

c. _____

d. _____

e. _____

00176

10. Demonstrate the ability to:

- a. Make a pad in the horizontal position.
- b. Make a single V-groove butt weld in flat position.
- c. Make a single V-groove butt weld in horizontal position.
- d. Make a single V-groove butt weld in vertical up position.
- e. Make a single V-groove butt weld in overhead position.
- f. Run a continuous bead using pipe and flat plate.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

00477

POSITION WELDING
UNIT II

ANSWERS TO TEST

- | | | | | | | |
|----|----|----|----|----|----|----|
| 1. | a. | 5 | g. | 2 | m. | 3 |
| | b. | 9 | h. | 18 | n. | 7 |
| | c. | 13 | i. | 4 | o. | 11 |
| | d. | 17 | j. | 8 | p. | 15 |
| | e. | 6 | k. | 12 | q. | 1 |
| | f. | 10 | l. | 16 | r. | 14 |

2. Any four of the following:

- a. Length of welding cables
- b. Thickness of metal
- c. Diameter and type of electrode
- d. Welding technique used by operator
- e. Efficiency of welding machine
- f. Polarity of machine
- g. Welding position

3. a. Vertical

b. Flat

c. Horizontal

d. Overhead

4. a, b, c

5. Description should include:

- a. Increases strength of weld
- b. Improves appearance of weld
- c. Improves penetration

00178

6.
 - a. Amperage
 - b. Length of arc
 - c. Speed of travel
 - d. Position of electrode
7.
 - a. Current too high
 - b. Current too low
 - c. Speed too fast
 - d. Current, voltage, and speed normal
 - e. Voltage too high
 - f. Voltage too low
 - g. Speed too slow
8. Discussion should include any three of the following:
 - a. Reduce current
 - b. Switch polarity
 - c. Change current to AC
 - d. Change location of ground clamp
 - e. Maintain a short arc
 - f. Wrap ground cable around workpiece and pass ground current through it to neutralize magnetic field
9.
 - a. Single V
 - b. Double bevel
 - c. J
 - d. U
 - e. Single bevel
10. Performance skills evaluated to the satisfaction of the instructor.

00179

OXYACETYLENE FUSION WELDING UNIT III

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to demonstrate the ability to light, adjust, and turn off the oxyacetylene welding equipment, handle the equipment properly, and make welds with or without filler rod. He should be able to select proper tip size and list factors that determine the correct type of filler rod. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with oxyacetylene fusion welding to the correct definitions.
2. List ten safety rules to observe when handling oxygen, acetylene, and oxyacetylene welding equipment.
3. Identify the parts of oxyacetylene fusion welding equipment.
4. Select from a list factors that determine weld quality.
5. List properties of a good weld.
6. Select from a list factors that determine tip size in oxyacetylene welding.
7. List two factors that determine the type of filler rod to use in oxyacetylene welding.
8. State in writing the purpose of a filler rod.
9. Identify three types of oxyacetylene fusion welding flames.
10. Demonstrate the ability to:
 - a. Turn on, light, adjust, and turn off the oxyacetylene welding equipment.
 - b. Construct a corner weld without filler rod.
 - c. Lay beads on gauge metal without filler rod.
 - d. Lay beads on gauge metal with filler rod.
 - e. Weld butt joints with filler rod.

00480

**OXYACETYLENE FUSION WELDING
UNIT III****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide student with objective sheet.
- B. Provide student with information and job sheets.
- C. Make transparencies.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate and discuss procedures outlined in the job sheets.

(NOTE: The instructor may want to secure films on oxyacetylene fusion welding from Curriculum and Instructional Materials Center to show to class.)

G. Give test.**II. Student:**

- A. Read objectives.
- B. Study information sheet.
- C. Demonstrate the ability to accomplish the procedures outlined in the job sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Transparency masters
 - 1. TM 1--Oxyacetylene Welding Equipment
 - 2. TM 2--Welding Torches

00181

3. TM 3--Welding Regulators
4. TM 4--Oxyacetylene Fusion Welding Flames

D. Job sheets

1. Job Sheet #1--Turn On, Light, Adjust, and Turn Off Oxyacetylene Welding Equipment
2. Job Sheet #2--Construct a Corner Weld Without a Filler Rod
3. Job Sheet #3--Lay Beads on Gauge Metal Without Filler Rod
4. Job Sheet #4--Lay Beads on Gauge Metal with Filler Rod
5. Job Sheet #5--Weld Butt Joints with Filler Rod

00483

OXYACETYLENE FUSION WELDING · UNIT III

INFORMATION SHEET

I. Terms and definitions

- A. Fusion welding--Joining of pieces of metal by heating the adjoining edges to the fusion or melting point and allowing them to flow or run together and then cool
- B. Penetration--Distance from the original surface of the base metal to that point at which fusion ceases
- C. Base metal--Metal to be welded
- D. Alloy--Mixture with metallic properties; composed of two or more elements of which at least one is a metal
- E. Inner cone--Inner white part of a neutral flame
- F. Tack weld--Short weld used for temporarily holding metal in place
- G. Backfire--Momentary burning back of the flame into the tip; flame goes out with a loud snap or pop
- H. Flashback--Fire inside the torch; indicated by a hissing or squealing sound
(CAUTION: This is a very dangerous condition.)

II. Safety rules for handling oxygen, acetylene, and oxyacetylene welding equipment

- A. Support oxygen and acetylene cylinders in an upright position so they cannot be tipped over

(NOTE: Acetylene gas is in a liquid state in the cylinder and should be used in the vertical position in order that acetone will not be withdrawn.)
- B. Blow out cylinder valves in order to remove dust and dirt that may damage regulators

(NOTE: Be sure to crack cylinder valves for a second before attaching regulators.)
- C. Release pressure adjusting screw on regulator before opening cylinder valve to prevent damage to regulator and possible injury to operator
- D. Stand to the side of regulator, keeping the cylinder valve between operator and regulator while opening cylinder valve

00183

INFORMATION SHEET

- E. Open cylinder valve slowly
- F. Do not use acetylene (in free state) at pressures higher than 15 psi
(NOTE: Acetylene becomes unstable at pressures above 15 psi and becomes highly explosive.)
- G. Purge oxygen and acetylene passages individually before lighting torch
- H. Light acetylene before opening oxygen torch valve
- I. Never use oil or grease on regulators, torches, or fittings
(NOTE: Oil or grease and oxygen have a very great attraction for one another and will unite with explosive violence.)
- J. Do not use oxygen as a substitute for compressed air
- K. Use safety goggles, gloves, and protective clothing
(NOTE: Keep gloves, hands, and clothing free from oil and grease.)
- L. Have CO₂ or dry powder type fire extinguisher available
- M. Test connections for leaks with Ivory Soap suds, paintbrush, and water
- N. Avoid lighting torch or welding near combustible material
- O. Never open the acetylene cylinder valve more than 1/2 to 3/4 turn
- P. Always operate torch in a well-ventilated place
- Q. Never weld on containers that have been used for combustible materials
- R. Avoid breathing toxic fumes when welding
Example: Galvanized metal
- S. Place steel caps on all gas cylinders when they are being moved or stored to protect the valves
- T. Shut off cylinder valves when not in use for any length of time to reduce the possibility of leakage and strain on equipment
- U. Turn off acetylene torch valve first in order that the flame will go out immediately
- V. Never cut or weld near concrete

00131

INFORMATION SHEET

- W. Always weld or cut at least five feet from cylinder
- X. Always protect hoses from hot metal, rupture, or mechanical damage
- Y. Always light torch with friction lighter
- Z. Never leave a burning torch unattended

(NOTE: The instructor may want to add other safety rules.)

III. Oxyacetylene welding equipment (Transparencies 1, 2, and 3)

- A. Acetylene cylinder
- B. Acetylene cylinder valve
- C. Acetylene fitting
- D. Acetylene regulator
- E. Oxygen cylinder
- F. Oxygen-cylinder valve
- G. Oxygen fitting
- H. Oxygen regulator
- I. Oxygen torch valve
- J. Welding torch body
- K. Acetylene torch valve
- L. Welding tip
- M. Welding goggles
- N. Welding gloves
- O. Safety chain
- P. Flint lighter
- Q. Cylinder truck

00485

INFORMATION SHEET

IV. Factors that determine weld quality

- A. Proper flame adjustment
- B. Angle of tip
- C. Distance from work
- D. Speed of travel
- E. Movement of tip

V. Properties of a good weld

- A. Consistent width
- B. Straightness
- C. Slightly crowned
- D. Fused into base metal
- E. Clean appearance

VI. Factors that determine tip size

- A. Thickness of metal
- B. Size of welding rod

(NOTE: Always use manufacturer's recommendation on tip size.)

VII. Factors that determine filler rod selection

- A. Rod with similar properties as base metal
- B. Thickness of metal

(NOTE: A general rule is to use a rod with a diameter equal to the thickness of the base metal.)

VIII. Purpose of filler rod - To add strength to weld or joint

IX. Oxyacetylene welding flames (Transparency 4)

A. Carburizing flame

- 1. Contains an excess of acetylene

(NOTE: An acetylene feather is visible on the inner cone.)

00186

INFORMATION SHEET

2. Recommended flame for welding cast iron
3. Introduces carbon into weld; causes hardening of the metal

B. Oxidizing flame

1. Burns an excess of oxygen
2. Identified by short inner cone
3. Oxidizes the metal, causing it to harden and become brittle
4. Not recommended for welding of most metals
5. Is the hottest flame
6. Recommended for brazing when slightly oxidized

C. Neutral flame

1. Burns equal parts of oxygen and acetylene
2. Identified by clear, well-defined white inner cone
3. Burns at a temperature of approximately 5950°F

00187

Oxyacetylene Fusion Welding Equipment

00288

OXYACETYLENE FUSION WELDING
UNIT IIIJOB SHEET #1--TURN ON, LIGHT, ADJUST, AND
TURN OFF OXYACETYLENE WELDING EQUIPMENT

I. Tools, equipment, and materials

- A. Oxygen cylinder
- B. Acetylene cylinder
- C. Hoses
- D. Oxygen and acetylene regulators
- E. Torch body and welding tips
- F. Cylinder holder and hose rack
- G. Flint lighter
- H. Welding goggles with #5 lens
- I. Gloves

II. Procedure for turning on and lighting

- A. Check all cylinder, regulator, and torch valves to make sure they are turned off
- B. Open acetylene cylinder valve $1/2$ to $3/4$ of a turn
(CAUTION: Never open more than $1\ 1/2$ turns.)
- C. Open acetylene valve on torch one turn to purge line
- D. Turn acetylene regulator pressure adjusting screw clockwise until desired working pressure is reached
(NOTE: The working pressure is determined by the size of the tip.)
- E. Close acetylene valve on torch
- F. Open oxygen cylinder valve all the way and tighten in open position
- G. Open oxygen torch valve one turn
- H. Turn oxygen regulator pressure adjusting screw clockwise until desired pressure is reached
(NOTE: The working pressure is determined by the size of the tip.)

00693

JOB SHEET #1

- I. Close oxygen valve on torch.
 - J. Open acetylene valve on torch 1/4 turn
 - K. Light the torch with flint lighter and adjust until smoke on flame clears
 - L. Open oxygen torch valve and adjust to a neutral flame with a tiny trace of feather on the inner cone
- III. Procedure for adjusting welding torch for the three types of flames--Start with a neutral flame
- A. To produce a carburizing flame--Reduce the supply of oxygen by slowly closing the oxygen torch valve until an excess acetylene feather is produced
 - B. To produce an oxidizing flame--Increase the supply of oxygen by slowly opening the oxygen torch valve until a short, white inner cone is produced
- IV. Procedure for turning off the torch and oxyacetylene welding unit
- A. Close acetylene torch valve
 - B. Close oxygen torch valve
 - C. Close acetylene cylinder valve
 - D. Close oxygen cylinder valve
 - E. Open acetylene torch valve
- (NOTE: When gauges reach 0, release acetylene regulator pressure adjusting screw and close torch valve.)
- F. Open oxygen valve on torch
- (NOTE: When gauges reach 0, release oxygen regulator pressure adjusting screw and close torch valve.)
- (CAUTION: Do not open the acetylene and oxygen torch valves at the same time.)
- G. Place torch and hoses on hanger or brackets

OXYACETYLENE FUSION WELDING
UNIT III

JOB SHEET #2-CONSTRUCT A CORNER WELD WITHOUT A FILLER ROD

- I. Tools, materials, and equipment
 - A. Oxyacetylene welding unit
 - B. Welding tip (according to manufacturer's recommendations)
 - C. Gloves
 - D. Goggles
 - E. Pliers
 - F. Wire brush
 - G. Flint lighter
 - H. Fire brick
 - I. Mild steel, 2 strips of 16 gauge, 1 1/4" x 6"
- II. Procedure
 - A. Prepare metal for welding
 - B. Place metal in welding position
 - C. Turn on oxyacetylene unit
 - D. Set working pressure (according to manufacturer's recommendations)
 - E. Light torch and adjust to a neutral flame with very slight feather
 - F. Tack weld metal in position
 - G. Place inner cone about 1/16" to 1/8" from plate
 - H. Do not begin travel until you have established a molten puddle
 - I. Begin welding at right end

00491

JOB SHEET #2

- J. Hold tip vertically at 45° angle from direction of travel (Figure 1)

- K. Slowly move flame down the joint, forming puddle as you travel from right to left
- L. Examine welded joint for good bead characteristics and penetration
- M. Repeat process until instructor gives permission to go on to next job

00195

JOB SHEET #4-LAY BEADS ON GAUGE METAL WITH FILLER ROD

I. Tools, materials, and equipment

- A. Oxyacetylene welding unit
- B. Welding tip (according to manufacturer's recommendations)
- C. Gloves
- D. Goggles
- E. Pliers
- F. Wire brush
- G. Flint lighter
- H. Fire brick
- I. Mild steel, 1 strip of 16 gauge, 1 1/4" x 6"
- J. Mild steel filler rod (according to manufacturer's recommendations)

II. Procedure

- A. Prepare metal for welding
- B. Place metal in welding position
- C. Turn on oxyacetylene unit.
- D. Set working pressure (according to manufacturer's recommendations)
- E. Light torch and adjust to a neutral flame

00:53

JOB SHEET #4

F. Hold torch 30° to 45° from center (Figure 1)

- G. Place inner cone about 1/16" to 1/8" from surface of puddle
- H. Do not begin travel until you have established a molten puddle
- I. Add filler rod to front edge of puddle in front of torch
- J. Move puddle forward with torch and allow puddle to form in base metal
- K. Add rod to front edge of puddle and withdraw rod as you move puddle forward
- L. Keep puddle the same size and shape for the entire length of the bead
- M. Show bead to instructor when completed

j.

3. Identify the oxyacetylene fusion welding equipment illustrated below by writing the correct name in the blank.

o. _____

p. _____

q. _____

00503

4. Select from the list below factors that determine weld quality by placing an "X" in the blank.

- a. Proper flame adjustment
- b. Angle of tip
- c. Distance from work
- d. Speed of travel
- e. Movement of tip
- f. Thickness of metal
- g. Width of bead

5. List three properties of a good weld.

- a.
- b.
- c.

6. Select from the list below factors that determine tip size by placing an "X" in the blank.

- a. Size of welding rod
- b. Temperature of metal
- c. Thickness of metal
- d. Distance to work

7. List two factors that determine the type of filler rod to use in oxyacetylene welding.

- a.
- b.

8. State in writing the purpose of a filler rod.

00504

9. Identify the three types of flames illustrated below by writing the correct name in the blank.

a. _____

b. _____

c. _____

10. Demonstrate the ability to:

- Turn on, light, adjust, and turn off the oxyacetylene welding equipment.
- Construct a corner weld without filler rod.
- Lay beads on gauge metal without filler rod.
- Lay beads on gauge metal with filler rod.
- Weld butt joints with filler rod.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

ANSWERS TO TEST

1.

a. 6	e. 7
b. 2	f. 1
c. 8	g. 5
d. 4	h. 3

2. Any ten of the following:
 - a. Support oxygen and acetylene cylinders in an upright position so they cannot be tipped over
 - b. Blow out cylinder valves in order to remove dust and dirt that may damage regulators
 - c. Release pressure adjusting screw on regulator before opening cylinder valve to prevent damage to regulator and possible injury to operator
 - d. Stand to the side of regulator, keeping the cylinder valve between operator and regulator while opening cylinder valve
 - e. Open cylinder valve slowly
 - f. Do not use acetylene (in free state) at pressures higher than 15 psi
 - g. Purge oxygen and acetylene passages individually before lighting torch
 - h. Light acetylene before opening oxygen torch valve
 - i. Never use oil or grease on regulator, torches, or fittings
 - j. Do not use oxygen as a substitute for compressed air
 - k. Use safety goggles, gloves, and protective clothing
 - l. Have CO₂ or dry powder type fire extinguisher available
 - m. Test connections for leaks with Ivory Soap suds, paintbrush, and water
 - n. Avoid lighting torch or welding near combustible material
 - o. Never open acetylene cylinder valve more than 1/2 to 3/4 turn
 - p. Always operate torch in a well-ventilated place

00506

- q. Never weld on containers that have been used for combustible materials
- r. Avoid breathing toxic fumes when welding
- s. Place steel caps on all gas cylinders when they are being moved or stored to protect the valves
- t. Shut off cylinder valves when not in use for any length of time to reduce the possibility of leakage and strain on equipment
- u. Turn off acetylene torch valve first in order that the flame will go out immediately
- v. Never cut or weld near concrete
- w. Always weld or cut at least five feet from cylinder
- x. Always protect hoses from hot metal, rupture, or mechanical damage
- y. Always light torch with friction lighter
- z. Never leave a burning torch unattended

(NOTE: Instructor may want to add others.)

- 3.
 - a. Oxygen regulator
 - b. Oxygen cylinder valve
 - c. Acetylene regulator
 - d. Acetylene cylinder valve
 - e. Acetylene cylinder
 - f. Safety chain
 - g. Oxygen cylinder
 - h. Cylinder truck
 - i. Oxygen fitting
 - j. Oxygen torch valve
 - k. Torch body
 - l. Welding tip
 - m. Acetylene fitting
 - n. Acetylene torch valve

00507

- o. Welding goggles
 - p. Flint lighter
 - q. Welding gloves
4. a, b, c, d, e
5. Any three of the following:
- a. Consistent width
 - b. Straightness
 - c. Slightly crowned
 - d. Fused into base metal
 - e. Clean appearance
6. a, c
7. a. Rod with similar properties as base metal
- b. Thickness of metal
8. To add strength to weld or joint
9. a. Carburizing
- b. Oxidizing
 - c. Neutral
10. Performance skills evaluated to the satisfaction of the instructor.

00508

OXYACETYLENE BRAZE WELDING UNIT IV

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to describe the differences between braze welding and fusion welding and list advantages and disadvantages of braze welding. He should also be able to describe the reaction when adding bronze to base metal that is too hot, too cold, or correct. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with brazing to the correct definitions.
2. List three advantages and three disadvantages of braze welding.
3. State in writing the importance of having a chemically clean metal surface in braze welding.
4. Select from a list methods for removing oxides from a clean metal surface.
5. Describe the differences between braze welding and fusion welding.
6. List five purposes for using flux.
7. Describe the reaction of molten bronze when the temperature of the base metal is too hot, too cold, and correct.
8. Demonstrate the ability to braze weld a square groove butt joint.

00569

OXYACETYLENE-BRAZE WELDING
UNIT IV

SUGGESTED ACTIVITIES

I. Instructor:

- A. Provide student with objective sheet.
- B. Provide student with information and job sheets.
- C. Make transparency.
- D. Discuss terminal and specific objectives.
- E. Discuss information sheet.
- F. Demonstrate and discuss procedure outlined in the job sheet.

(NOTE: The instructor may want to secure the film on braze welding from a local welding supplier or the Curriculum and Instructional Materials Center to show to the class.)

- G. Give test.

II. Student:

- A. Read objective sheet.
- B. Study information sheet.
- C. Demonstrate the ability to accomplish the procedure outlined in the job sheet.
- D. Take test.

INSTRUCTIONAL MATERIALS

I. Included in this unit:

- A. Objectives
- B. Information sheet
- C. Transparency master: TM 1--Braze Welding a Butt Joint
- D. Job Sheet #1--Braze Weld a Square Groove Butt Joint

00510

00511

OXYACETYLENE BRAZE WELDING

UNIT IV

INFORMATION SHEET

I. Terms and definitions

- A. Braze welding--Heating the base metal to a dull red color and depositing a bead over the seam (joint) with a bronze filler rod; the base metal is not melted. (Transparency 1)
 - B. Malleability--Property of metals which allows them to be bent or permanently distorted without rupture; opposite of brittleness
 - C. Ductile--Capable of being drawn or stretched out
 - D. Tinning operation--Melting a small amount of bronze rod onto the surface and allowing it to spread along the entire seam (joint)
- (NOTE: It is this flow of the thin film of bronze which is known as *tinning*.)
- E. Flux--Chemical used to clean metals and to promote fusion during the welding process

II. Advantages and disadvantages of braze welding

A. Advantages

1. Provides less chance of destroying main characteristics of base metal since it is not heated to a molten condition
2. Consumes less gas
3. Can be used on thin metals
4. Used on malleable castings
5. Increases speed of joining metals
6. May be used to join different kinds of metals

B. Disadvantages

1. Cannot be used on metal where stress is a factor
2. Bronze rod is expensive to use
3. Not recommended for parts which are raised to temperatures higher than the melting point of bronze, either in service or during heat treatment

00510

INFORMATION SHEET

4. Bronze will lose its strength at temperatures above 500°F
5. Bronze may have corrosion-resistant properties which differ from those of the base metal being used

III. Importance of a chemically clean surface in braze welding

- A. Ensure the molten bronze will stick to the base metal
- B. Have a stronger bond on base metal
- C. Allow bronze to flow smoothly and evenly over entire weld area

IV. Methods for removing oxides

A. Mechanical means

1. Wire brush
2. Grinder

B. Chemical means-Flux

(NOTE: Both methods should be used to completely remove the oxides.)

V. Differences between braze welding and fusion welding

A. Braze welding

1. Base metal is not melted
(NOTE: Base metal is heated only to a dull red color.)
2. An alloy rod is used to lay a thin coat of bronze along the seam

B. Fusion welding

1. Base metal is melted and joined
2. Rod with similar characteristics of base metal, must be used

VI. Purposes for using flux

- A. Clean the base metal chemically
- B. Prevent oxidation of filler metal
- C. Float and remove oxides already present
- D. Increase flow of filler metal

00513

INFORMATION SHEET

- E. Increase the ability of filler metal to adhere to the base metal
- F. Bring the filler metal into immediate contact with metals being joined
- G. Permit the filler metal to penetrate the pores of the base metal

VII. Reaction of molten bronze at different temperatures

- A. Too hot--The molten bronze will tend to boil and form little balls
- B. Too cool--The molten bronze will form into drops rather than flowing evenly over the surface
- C. Correct--The molten bronze will spread evenly and flow over a considerable area

00511

Braze Welding A Butt Joint

00515

TM 1

OXYACETYLENE BRAZE WELDING
UNIT IV

JOB SHEET #1-BRAZE WELD A SQUARE GROOVE BUTT JOINT

I. Tools, equipment, and materials

- A. Oxyacetylene welding unit
- B. Gloves
- C. Safety glasses
- D. Goggles
- E. Welding tip (according to manufacturer's recommendations.)
- F. Wire brush
- G. Flint lighter
- H. Fire brick
- I. Mild steel, 2 strips 1/8" thick, 1 1/4" x 6"
- J. Bronze filler rod (use according to manufacturer's recommendations)
- K. Welding flux

III. Procedure

- A. Clean metal
- B. Place metal in brazing position, 1/16" to 1/8" apart
- C. Turn on oxyacetylene unit
- D. Adjust proper working pressure of oxygen and acetylene (use manufacturer's recommendations)
- E. Place metal on fire brick
(NOTE: Do not lay metal flat on brick. Arrange metal so a small space will be between the base metal and the fire brick.)
- F. Light and adjust torch to a neutral or slightly oxidizing flame
- G. Preheat the end of the brazing rod and dip in the flux or use fluxed rod
- H. Tack metal in place using braze filler metal

00516

JGB SHEET #1

- I. Heat the surface of the weld area slightly
- J. Hold torch 30° to 45° vertically; hold filler rod at same angle in opposite direction (Figure 1)

- K. Melt a small amount of bronze rod onto the surface and allow it to spread along the entire seam when a cherry red color occurs
- L. Start depositing the proper size bead when the base metal is tinned sufficiently

(NOTE: When metal is not hot enough, the bronze will form into drops; when metal is too hot, bronze tends to boil.)

- M. Complete the weld and practice doing other welds
- N. Inspect weld; then check with instructor

00517

OXYACETYLENE BRAZE WELDING UNIT IV

TEST

1. Match terms on the right to the correct definition.

- | | |
|--|---|
| <p>_____ a. Capable of being drawn or stretched out</p> <p>_____ b. Chemical used to clean metals and to promote fusion during the welding process</p> <p>_____ c. Property of metals which allows them to be bent or permanently distorted without rupture; opposite of brittleness</p> <p>_____ d. Heating the base metal to a dull red color and depositing a bead over the seam (joint) with bronze filler rod; the base metal is not melted</p> <p>_____ e. Melting a small amount of bronze rod onto the surface and allowing it to spread along the entire seam (joint)</p> | <p>1. Flux</p> <p>2. Braze welding</p> <p>3. Malleability</p> <p>4. Tinning operation</p> <p>5. Ductile</p> |
|--|---|

2. List three advantages and three disadvantages of braze welding.

a. Advantages

1)

2)

3)

b. Disadvantages

1)

2)

3)

00518

3. State in writing the importance of having a chemically clean metal surface in braze welding.

4. Select from the list below methods for removing oxides from a clean metal surface by placing an "X" in the blank.

_____ a. Wire brush

_____ b. Hammer

_____ c. Acid

_____ d. Grinder

_____ e. Flux

_____ f. Water

5. Describe the differences between braze welding and fusion welding.

00519

6. List five purposes for using flux.
 - a.
 - b.
 - c.
 - d.
 - e.

7. Describe the reactions of molten bronze when the temperature is:
 - a. Too hot
 - b. Too cool
 - c. Correct

8. Demonstrate the ability to braze weld a square groove butt joint.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00520

OXYACETYLENE BRAZE WELDING
UNIT IV

ANSWERS TO TEST

1.
 - a. 5
 - b. 1
 - c. 3
 - d. 2
 - e. 4
2. Any three from each group:
 - a. Advantages
 1. Provides less chance of destroying main characteristics of base metal since it is not heated to a molten condition
 2. Consumes less gas
 3. Can be used on thin metals
 4. Used on malleable castings
 5. Increase speed of joining metals
 6. May be used to join different kinds of metals
 - b. Disadvantages
 1. Cannot be used on metal where stress is a factor
 2. Bronze rod is expensive to use
 3. Not recommended for parts which are raised to temperatures higher than the melting point of bronze, either in service or during heat treatment
 4. Bronze will lose its strength at temperatures above 500°F
 5. Bronze may have corrosion-resistant properties which differ from those of the base metal being used

00501

3. Discussion should include:
 - a. Ensure the molten bronze will stick to the base metal
 - b. Have a stronger bond on base metal
 - c. Allow bronze to flow smoothly and evenly over entire weld area
4. a, d, e
5. Description should include:
 - a. Braze welding
 1. Base metal is not melted
 2. An alloy rod is used to lay a thin coat of bronze along the seam
 - b. Fusion welding
 1. Base metal is melted and joined
 2. Rod with similar characteristics of base metal must be used
6. Any five of the following:
 - a. Clean the base metal chemically
 - b. Prevent oxidation of filler metal
 - c. Float and remove oxides already present
 - d. Increase flow of filler metal
 - e. Increase ability of filler metal to adhere to the base metal
 - f. Bring the filler metal into immediate contact with metals being joined
 - g. Permit the filler metal to penetrate the pores of the base metal
7. Description should include:
 - a. Too hot--The molten bronze will tend to boil and form little balls
 - b. Too cool--The molten bronze will form into drops rather than flowing evenly over the surface
 - c. Correct--The molten bronze will spread evenly and flow over a considerable area
8. Performance skills evaluated to the satisfaction of the instructor.

00522

**BILL OF MATERIAL
UNIT V****TERMINAL OBJECTIVE**

After completion of this unit, the student should be able to complete a bill of material for various projects. He should also be able to calculate problems in determining board feet and costs of various materials. This knowledge will be evidenced by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with bill of material to the correct definitions.
2. Match the units of measure by which various materials are sold to the correct materials.
3. Select from a list basic measurements in width and length by which most lumber is sold.
4. Identify the components of a bill of material.
5. Match symbols used in lumber selection to the correct descriptions.
6. State the rule for calculating board feet.
7. Calculate problems determining board feet.
8. Calculate problems determining costs of various materials.
9. Complete a bill of material.

00503

**BILL OF MATERIAL
UNIT V****SUGGESTED ACTIVITIES****I. Instructor:**

- A. Provide student with objective sheet.
- B. Provide student with information and assignment sheets.
- C. Make transparency.
- D. Discuss terminal and specific objectives.
- E. Discuss information and assignment sheets.
- F. Require each student to complete a bill of material for each project he constructs in the shop.
- G. Give test.

II. Student:

- A. Read objectives.
- B. Study information sheet.
- C. Complete all activities outlined in assignment sheets.
- D. Take test.

INSTRUCTIONAL MATERIALS**I. Included in this unit:**

- A. Objectives
- B. Information sheet
- C. Transparency master; TM 1--Components of a Bill of Material
- D. Assignment sheets
 1. Assignment Sheet #1--Calculate Board Feet
 2. Assignment Sheet #2--Calculate Cost of Various Materials
 3. Assignment Sheet #3--Complete a Bill of Material

00524

E. Answers to assignment sheets

F. Test

G. Answers to test

00525

BILL OF MATERIAL
UNIT V

INFORMATION SHEET

I. Terms and definitions

- A. Bill of material--Itemized list of the number and kind of pieces needed and the dimensions of each for the construction of a project
- B. Board foot--Piece of lumber one inch thick, 12 inches long, and 12 inches wide
- C. Running foot--Foot length of a material regardless of thickness and width
- D. Square foot--Equal to a 12-inch by 12-inch surface regardless of thickness
- E. Cubic foot--Measurement 12 inches long by 12 inches wide and 12 inches thick
- F. Square--Unit of measurement equal to 100 square feet of material
- G. Surfaced lumber--Lumber that has been surfaced by running through a planer
- H. Rough stock--Lumber that has been sawed to dimension but not planed; usually thicker and wider

II. Units of measure for various materials

- A. Board foot--Lumber
- B. Running foot--Molding, some steel rods, chain, cable
- C. Square foot--Some steel products

(NOTE: Steel priced by the square foot generally is calculated from weight per square foot.)

- D. Square--Metal siding, roofing sheet iron, shingles
- E. Bundle--Lathe, sometimes shingles when a square is broken

(NOTE: Four bundles of standard 16-inch wood shingles make a square. Three bundles of asphalt shingles make a square.)

- F. Weight--Steel

(NOTE: Practically all metals are priced per pound.)

00526

INFORMATION SHEET

III. Basic measurements of lumber in width and length

A. Width

1. 4 inches
2. 6 inches
3. 8 inches
4. 10 inches
5. 12 inches

B. Length

1. 6 feet
2. 8 feet
3. 10 feet
4. 12 feet
5. 14 feet
6. 16 feet

IV. Components of a bill of material (Transparency 1)

A. Date

B. Name and address of the buyer

C. Name of purchaser

D. Project

E. Number of pieces

F. Kind of material

G. Dimensions

H. Unit cost per kind of material

I. Total cost

INFORMATION SHEET

J. By whom received

K. Terms

(NOTE: Most firms have paper pads or order books used for completing a bill of material.)

V. Symbols used in lumber selection

A. S1S--Surfaced on one side

B. S2S--Surfaced on two sides

C. S1E--Surfaced on one edge

D. S2E--Surfaced on two edges

E. S4S--Surfaced on all four sides

VI. Rule for calculating board feet

$\frac{\text{No. of pieces} \times \text{thickness in inches} \times \text{width in inches} \times \text{length in feet}}{12}$

12

= board feet

VII. Calculation of board feet--Sample problem

1. One board 1" thick x 4" wide x 12' long

2. $\frac{1 \times 1" \times 4" \times 12'}{12} = 4 \text{ board feet}$

VIII. Calculation of cost of various material

A. Lumber--Board feet.

1. Figure number of board feet

2. Multiply number of board feet by cost per board foot

3. Sample problem

a. 1-2" x 8" x 12' at \$.30/bd ft or \$300/M (1000 bd ft)

b. $\frac{1 \times 2" \times 8" \times 12'}{12} = 16 \text{ board feet}$

c. 16 board feet x \$.30 = \$4.80

00583

INFORMATION SHEET

B. Steel-Sample problem.

(NOTE: Sixteen gauge sheet steel weighs 2.5 lbs/sq. ft.)

1. $3' \times 8'$ 16 ga sheet = 60 lbs
2. Steel is \$.30/lbs
3. $60 \text{ lbs} \times \$.30 = \18.00

C. Sheet iron roofing

1. Figure number of square feet to be covered
2. Calculate number of square feet per sheet
3. Determine number of sheets needed
4. Sample problem
 - a. Roof for shed 8' wide 10' long
 - b. Sheet roofing is 2' wide and 10' long
 - c. Each sheet contains 20 sq ft ($2' \times 10' = 20 \text{ sq ft}$)
 - d. Roof contains $8' \times 10' = 80 \text{ sq ft}$.
 - e. $80 \text{ sq ft} \div 20 \text{ sq ft} = 4 \text{ sheets of sheet iron roofing}$

BILL OF MATERIAL
UNIT V

ASSIGNMENT SHEET #1--CALCULATE BOARD FEET

Calculate the total board feet in each of the problems listed below.

Formula:

Number of pieces x thickness in inches x width in inches x Length in feet

12

1. 1 piece 1" x 10" x 10' =
2. 1 piece 1" x 4" x 14' =
3. 1 piece 2" x 6" x 8' =
4. 1 piece 2" x 8" x 10' =
5. 2 pieces 2" x 4" x 8' =
6. 5 pieces 1" x 8" x 8' =
7. 10 pieces 4" x 6" x 10' =
8. 1 piece 2" x 4" x 18' =
9. 7 pieces 10" x 12" x 20' =
10. 3 pieces 1" x 2" x 6' =

00571

BILL OF MATERIAL
UNIT V

ASSIGNMENT SHEET #2-CALCULATE COST OF MATERIALS.

Calculate the cost of the various materials listed below.

1. Lumber-Number of board feet x cost per board foot = cost of lumber

- a. 4 pieces 2" x 10" x 12' at a cost of \$275/M
- b. 22 pieces 2" x 4" x 16' at a cost of \$.32/bd ft
- c. 12 pieces 1" x 12" x 12' at a cost of \$.27/bd ft

2. Steel-Pounds x price per pound = cost of material

Use the tables on the following pages to determine weight of metals for the problems below.

- a. Find the cost of 4 pieces of hot rolled sheet steel 18 ga 3' x 8' at \$.27 per pound.
- b. Determine the cost of 100 pieces of 1" x 1" x 1/4" angle 20' long at a cost of \$.25 per pound.
- c. Find the cost of 10 pieces of 1" round stock 10' long at a cost of \$.32 per pound.
- d. Calculate the cost of 5 pieces of 5/8" concrete reinforcing bars 20 ft long at a cost \$.07 per foot.
- e. Calculate the cost of one piece of 3" channel iron 10 ft long that weighs 5# per foot at a cost of \$.30 per pound.

BILL OF MATERIAL
UNIT V

ASSIGNMENT SHEET #3--COMPLETE A BILL OF MATERIAL

Complete a bill of material for a project you are to make in the shop or a project designated by the instructor.

00536

BILL OF MATERIAL
UNIT V

ANSWERS TO ASSIGNMENT SHEETS

Assignment Sheet #1

1. 8.3 board feet
2. 4.6 board feet
3. 8 board feet
4. 13.3 board feet
5. 10.6 board feet
6. 26.5 board feet
7. 200 board feet
8. 12 board feet
9. 1,400 board feet
10. 3 board feet

Assignment Sheet #2

1.
 - a. \$22.00
 - b. \$75.09
 - c. \$38.08
2.
 - a. \$64.80
 - b. \$745.00
 - c. \$21.38
 - d. \$7.00
 - e. \$15.00

Assignment Sheet #3--Evaluated to satisfaction of instructor

00537

BILL OF MATERIAL
UNIT V

TEST

1. Match terms on the right to the correct definition.

- | | |
|---|---------------------|
| _____ a. Piece of lumber one inch thick, 12 inches long, and 12 inches wide | 1. Square foot |
| _____ b. Foot length of a material regardless of thickness and width | 2. Cubic foot |
| _____ c. Equal to a 12-inch by 12-inch surface regardless of thickness | 3. Running foot |
| _____ d. Unit of measurement equal to 100 square feet of material | 4. Square |
| _____ e. Lumber that has been sawed to dimension but not planed; usually thicker and wider | 5. Board foot |
| _____ f. Lumber that has been surfaced by running through a planer | 6. Surfaced lumber |
| _____ g. Measurement 12 inches long by 12 inches wide and 12 inches thick | 7. Bill of material |
| _____ h. Itemized list of the number and kind of pieces needed and the dimensions of each for the construction of a project | 8. Rough stock |

2. Match the units of measure by which materials are sold on the right to the correct material.

- | | |
|-------------------|-----------------|
| _____ a. Lumber | 1. Bundle |
| _____ b. Steel | 2. Weight |
| _____ c. Shingles | 3. Board foot |
| _____ d. Molding | 4. Square |
| _____ e. Lathe | 5. Running foot |

100538

5. Match symbols used in lumber selection on the right to the correct description.

- | | | |
|-------------------------------------|----|-----|
| _____ a. Surfaced on one side | 1. | S4S |
| _____ b. Surfaced on two sides | 2. | S1E |
| _____ c. Surfaced on one edge | 3. | S1S |
| _____ d. Surfaced on two edges | 4. | S2E |
| _____ e. Surfaced on all four sides | 5. | S2S |

6. State the rule for calculating board feet.

7. Calculate problems determining board feet.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

8. Calculate the following problems.

a. Find the number of pounds of steel in a 10 ga sheet 48" x 96" if it weighs 5.625 pounds per square foot.

b. What is the cost of 100 board feet of lumber if it costs \$300 per thousand board feet?

9. Complete a bill of material.

(NOTE: If this has not been accomplished prior to the test, ask the instructor when the above activity should be completed.)

00540

BILL OF MATERIAL
UNIT V

ANSWERS TO TEST

1. a. 5 e. 8
b. 3 f. 6
c. 1 g. 2
d. 4 h. 7

2. a. 3
b. 2
c. 4
d. 5
e. 1

3. b, d, f, g, h, i, l, m, n, o

4. a. Date
b. Name of purchaser
c. Number of pieces
d. Kind of material
e. Terms
f. By whom received

5. a. 3
b. 5
c. 2
d. 4
e. 1

00541

6.
$$\frac{\text{No. of pieces} \times \text{thickness in inches} \times \text{width in inches} \times \text{length in feet}}{12} =$$

board feet

7. Evaluated to the satisfaction of the instructor.

8. a. 180 lbs

b. \$30.00

9. Evaluated to the satisfaction of the instructor.

00512

PLUMBING
UNIT VI

TERMINAL OBJECTIVE

After completion of this unit, the student should be able to identify various kinds of pipe or tubing and fittings. He should also be able to demonstrate proper procedures for fitting various kinds of pipe or tubing. This knowledge will be evidenced through demonstration and by scoring eighty-five percent on the unit test.

SPECIFIC OBJECTIVES

After completion of this unit, the student should be able to:

1. Match terms associated with plumbing to the correct definitions.
2. Match the various kinds of pipe to the use of each.
3. Identify common pipe fittings.
4. Select from a list reasons for using threading compound.
5. Identify tools used in plumbing.
6. List reasons for using cutting oil.
7. Select from a list common sizes of pipe and copper tubing used in plumbing.
8. Describe how pipe size is determined in relationship to copper tubing.
9. Discuss the differences between pipe, bolt, and copper fitting threads.
10. Demonstrate the ability to:
 - a. Cut pipe.
 - b. Ream pipe.
 - c. Thread pipe.
 - d. Join or fit plastic pipe.
 - e. Sweat a copper joint.
 - f. Cut and flare copper tubing.

00543

**PLUMBING
UNIT VI****SUGGESTED ACTIVITIES**

- I. Instructor:
 - A. Provide student with objective sheet.
 - B. Provide student with information and job sheets.
 - C. Make transparencies.
 - D. Discuss terminal and specific objectives.
 - E. Discuss information sheet.
 - F. Demonstrate and discuss procedures outlined on the job sheets.
 - G. Give test.
- II. Student:
 - A. Read objectives.
 - B. Study information sheet.
 - C. Demonstrate the ability to complete the procedures outlined on the job sheets.
 - D. Take test.

INSTRUCTIONAL MATERIALS

- I. Included in this unit:
 - A. Objectives
 - B. Information sheet
 - C. Transparency masters
 1. TM 1--Pipe Fittings
 2. TM 2--Types of Valves
 3. TM 3--Plumbing Tools
 4. TM 4--Plumbing Tools (Continued)
 5. TM 5--Pipe vs Bolt Threads

00544

D. Job sheets

1. Job Sheet #1-Cut Pipe
2. Job Sheet #2-Rearm Pipe
3. Job Sheet #3-Thread Pipe
4. Job Sheet #4-Join or Fit Plastic Pipe
5. Job Sheet #5-Sweat a Copper Joint
6. Job Sheet #6-Cut and Flare Copper Tubing

E. Test

F. Answers to test

00545

PLUMBING
UNIT VI

INFORMATION SHEET

I. Terms and definitions

- A. Plumbing--Piping and pipe attachments used to carry water into buildings and to drain away sewage and waste
- B. Soil pipe--Any pipe that receives the discharge of waste water from house fixtures
- C. Fitting--Piece used to join pipe, to provide opening in pipe, and to change the direction of pipe
- D. Trap--Water-sealed bend or chamber in a waste pipe
- E. House drain--Pipe which carries all the sewage from the house
- F. Stack--Soil, waste, or ventilating pipe
- G. Fixture--Appliance connected to the plumbing
- H. Septic tank--Tank which receives all the sewage piped into it and allows the process of sewage treatment to take place
- I. Lateral pipe--Pipe which drains the liquid from the septic tank to the soil

II. Kinds of pipe and their uses

- A. Black--Used for natural and L.P. gas, oil, and air lines
- B. Galvanized--Used for water lines
- C. Copper tubing--Used for water, refrigeration, and waste systems
- D. Cast iron--Used in sewage systems
- E. Brass or lead--Used for traps and drains
- F. Plastic--Used in water systems
- G. PVC--Plastic pipe used in a water or sewage system
- H. Soil--Used in sewage system; generally a cast iron pipe

00546

INFORMATION SHEET

III. Pipe fittings (Transparencies 1 and 2)

- A. 45° elbow
- B. 90° street elbow
- C. Bell reducer
- D. Coupling
- E. Nipple
- F. Tee
- G. Union
- H. Bushing
- I. Cap
- J. Plug
- K. Floor flange
- L. Straight cross
- M. "Y"
- N. Globe valve
- O. Gate valve
- P. Gas stop

IV. Reasons for using threading compound

- A. Insures tight joints
- B. Prevents threads from rusting

V. Tools used in plumbing (Transparencies 3 and 4)

- A. Die
- B. Bench yolk or chain vise

00527

INFORMATION SHEET

- C. Burr reamer
- D. Pipe wrench
- E. Pipe cutter
- F. Hacksaw
- G. Tapered triangular file
- H. Tubing cutter
- I. Flaring tools

VI. Reasons for using cutting oil.

- A. Allows tools to cut smoother
- B. Permits tools to cut easier
- C. Lengthens lifetime of tools
- D. Removes burrs and cuttings from dies

VII. Common sizes of pipe and copper tubing used in plumbing

A. Pipe

- 1. 1/4"
- 2. 1/2"
- 3. 3/4"
- 4. 1"
- 5. 1 1/4"

B. Copper tubing

- 1. 3/8"
- 2. 7/16"
- 3. 1/2"
- 4. 3/16"
- 5. 5/8"

00548

INFORMATION SHEET

VIII. Size of pipe vs copper tubing

- A. Pipe size determined by inside diameter
- B. Tubing size determined by outside diameter
- C. Pipe wall generally thicker

IX. Differences between pipe, bolt, and copper fitting threads (Transparency 5)

A. Pipe

- 1. Tapers $1/32$ " per inch in length

(NOTE: This insures a tight fit.)

- 2. Has standard threads

B. Bolt

- 1. Straight
- 2. National coarse
- 3. National fine

C. Copper fitting-National fine threads

(NOTE: National fine threads are used to provide more strength to insure a tight joint.)

PLUMBING
UNIT VI

JOB SHEET #1-CUT PIPE

I. Tools and materials

- A. Vise
- B. Tapered triangular file
- C. Ruler or steel tape
- D. Pipe cutter
- E. 3/4 inch pipe, 2 feet
- F. 1/2 inch pipe, 1 foot

II. Procedure

(NOTE: Using the procedure below, cut two pieces of 3/4 inch pipe eight inches long. Cut one piece of 1/2 inch pipe eight inches long.)

- A. Measure length of pipe desired (Figure 1)

FIGURE 1

- B. Mark desired length with tapered triangular file (Figure 2)

FIGURE 2

- C. Fasten pipe in vise so mark is at least four inches from vise
- D. Place pipe cutter on mark

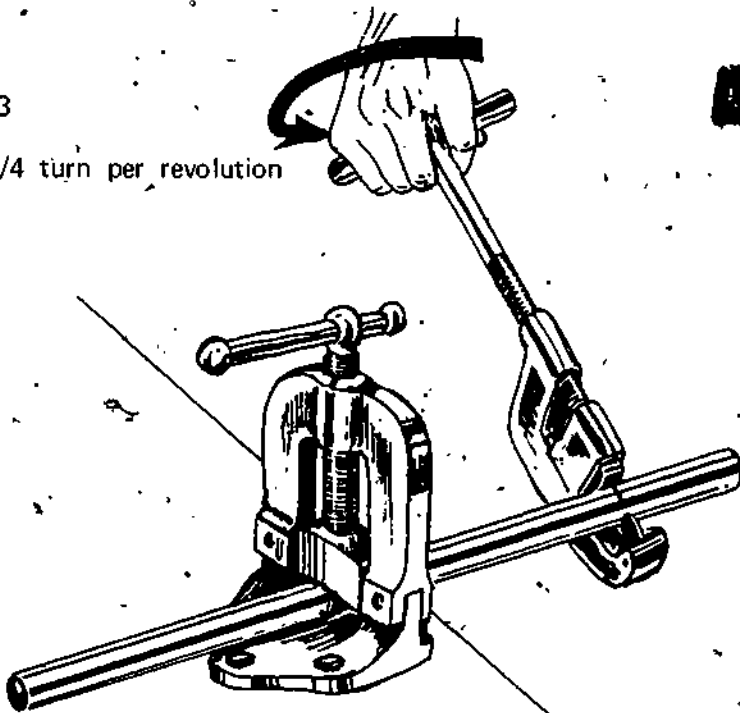

00555

JOB SHEET #1

- E. Tighten pipe cutter by screwing in handle until cutting wheel is snug against pipe
- F. Hold handle perpendicular to the pipe and tighten handle until cutting wheel penetrates metal
- G. Turn pipe cutter 1/4 turn per revolution until pipe is cut off (Figure 3)

FIGURE 3

1/4 turn per revolution

- H. Check cut for squareness (Figure 4)

FIGURE 4

- I. Turn in to instructor for grade

00556

PLUMBING,
UNIT VI

JOB SHEET #2-REAM PIPE

I. Tools and materials

- A. Vise
- B. Burr reamer
- C. Carpenter brace
- D. $\frac{3}{4}$ inch pipe, B inches long, 2 pieces
- E. $\frac{1}{2}$ inch pipe B inches long, 1 piece

(NOTE: Use the pipe cut in Job Sheet #1.)

II. Procedure

(NOTE: Using the procedure below, ream two pieces of $\frac{3}{4}$ inch pipe eight inches long. Ream one piece of $\frac{1}{2}$ inch pipe eight inches long.)

- A. Fasten pipe in vise allowing four inches to extend from vise (Figure 1)

FIGURE 1

- B. Place reamer in line with pipe (Figure 1)
- C. Turn reamer clockwise until inside burr is off (Figure 1)
- D. Remove reamer and check with finger to see if burr is cut away

(NOTE: Do not cut more than necessary because the first threads on pipe will be weakened.)

- E. Turn in to instructor for grade.

00557

PLUMBING
UNIT VI

JOB SHEET #3--THREAD PIPE

I. Tools and materials

- A. Vise
- B. Flat file
- C. 3/4" and 1/2" dies
- D. Die stock
- E. Cutting oil
- F. Wire brush
- G. 3/4 inch pipe, 8 inches long, 2 pieces
- H. 1/2 inch pipe, 8 inches long, 1 piece

(NOTE: Use the pipe cut in Job Sheet #1.)

II. Procedure

(NOTE: Using the procedure below, thread the pieces of pipe that were used in Job Sheets #1 and #2. Thread pipes on both ends.)

- A. Place pipe in vise, allowing six inches to extend from vise
- B. File off any outside burr that may be on pipe end
- C. Place proper size die in stock
- D. Place pressure against die holder with palm of hand; turn clockwise until die starts cutting threads (Figure 1)

FIGURE 1

00558

JOB SHEET #3

- E. Use cutting oil on the threading area at all times
- F. Continue threading until one thread is past the die
- G. Back off die and inspect threads
- H. Use wire brush and clean threads
- I. Turn in to instructor for grade

00558 A

PLUMBING
UNIT VI

JOB SHEET #4--JOIN OR FIT PLASTIC PIPE

I. Tools and materials

- A. Hacksaw
- B. 1/2" plastic pipe, 2 feet
- C. Plastic pipe cement
- D. 1/2" plastic coupling
- E. Clean rags
- F. Solvent for cleaning plastic pipe

II. Procedure

- A. Cut two pieces of 1/2" plastic pipe one foot in length (Figure 1)

(NOTE: Make sure ends are cut square.)

FIGURE 1

- B. Smooth the ends
- C. Clean ends of pipe and coupling with clean rag and solvent
- D. Spread cement evenly over inside of coupling
- E. Insert pipe and give 1/4 turn

(NOTE: Make sure the pipe is pushed into the coupling as far as it will go. See Figure 2.)

FIGURE 2

- F. Repeat steps C, D, and E for other end of coupling
- G. Let set until dry

PLUMBING
UNIT VI

JOB SHEET #5-SWEAT A COPPER JOINT

- I. Tools and materials
 - A. 1/2" copper tubing, 2 pieces
 - B. 1/2" copper tubing coupling sweat joint
 - C. Solder
 - D. Flux
 - E. Oxyacetylene torch
 - F. Tubing cutter
 - G. Reaming tool
 - H. Clean rags
- II. Procedure
 - A. Cut tubing to desired length
 - B. Remove burrs, inside and out. (Figure 1)

FIGURE 1

- C. Clean the surface to be soldered by coating with flux and wiping clean

00560

JOB SHEET #5

D. Apply a thin, even coat of flux (Figure 2)

FIGURE 2

E. Join tubing and fitting; give a 1/4 twist (Figure 3)

(NOTE: This will spread the flux.)

FIGURE 3

F. Apply heat to the heaviest part of the fitting first then move to the opening where solder enters (Figure 4)

FIGURE 4

JOB SHEET #5

G. Apply solder to joint (Figure 5)

(NOTE: Heat melts the solder and capillary action draws it into the clearance spacer of the joint.)

FIGURE 5

H. Wipe joint clean while solder is molten (Figure 6)

FIGURE 6

UNIT - VI

JOB SHEET #6-CUT AND FLARE COPPER TUBING

- I. Tools and materials
 - A. 3/8" flare nuts, 2
 - B. 3" copper union, 1
 - C. 3/8" copper tubing, 6" long, 2 pieces
 - D. Tubing cutter
 - E. Flaring tool
 - F. Reamer
 - G. File
- II. Procedure
 - A. Cut tubing to desired length
 - B. Remove burrs, inside and out
 - C. Place flare nut on tubing (Figure 1)

FIGURE 1

- D. Place tubing in flaring tool and secure (Figure 2)

(NOTE: End of tubing should be flush with flaring tool.)

FIGURE 2

00563

JOB SHEET #6

E. Flare end of tubing

(NOTE: Make sure end flares evenly and will fit the union snugly.)

PLUMBING
UNIT VI

TEST

1. Match terms associated with plumbing to the correct definition.

- | | |
|--|-----------------|
| _____ a. Pipe which drains the liquid from the septic tank to the soil | 1. House drain |
| _____ b. Pipe which carries all the sewage from the house | 2. Stack |
| _____ c. Water-sealed bend or chamber in a waste pipe | 3. Fixture |
| _____ d. Soil, waste, or ventilating pipe | 4. Septic tank |
| _____ e. Piping and pipe attachments used to carry water into buildings and to drain away sewage and waste | 5. Lateral pipe |
| _____ f. Piece used to join pipe, to provide opening in pipe, and to change the direction of pipe | 6. Plumbing |
| _____ g. Appliance connected to the plumbing | 7. Soil pipe |
| _____ h. Any pipe that receives the discharge of waste water from house fixtures | 8. Fitting |
| _____ i. Tank which receives all the sewage piped into it and allows the process of sewage treatment to take place | 9. Trap |

2. Match the various kinds of pipe on the right to the correct use.

- | | |
|--|------------------|
| _____ a. Used for water lines | 1. PVC |
| _____ b. Used for natural and L.P. gas, oil, and air lines | 2. Black |
| _____ c. Plastic pipe used in a water or sewage system | 3. Soil |
| _____ d. Used in sewage system; generally a cast iron pipe | 4. Galvanized |
| _____ e. Used for traps and drains | 5. Brass or lead |
| _____ f. Used for water, refrigeration, and waste systems | 6. Copper tubing |

00565

7
3. Identify the following common pipe fittings by writing the correct name in the blank.

a. _____

b. _____

c. _____

d. _____

e. _____

f. _____

g. _____

h. _____

i. _____

j. _____

00566

4. Select from the list below reasons for using threading compound by placing an "X" in the blank.

- a. Insures tight joints
- b. Fits together easier
- c. Prevents threads from rusting
- d. Can be disassembled easier

5. Identify the following tools used in plumbing by writing the correct name in the blank.

a. _____

b. _____

c. _____

d. _____

e. _____

00567

6. List four reasons for using cutting oil.

- a.
- b.
- c.
- d.

7. Select from the list below common sizes of pipe and copper tubing used in plumbing by placing an "X" in the blank.

Pipe	Copper tubing
<input type="checkbox"/> a. 4"	<input type="checkbox"/> h. 2"
<input type="checkbox"/> b. 1"	<input type="checkbox"/> i. 3/8"
<input type="checkbox"/> c. 1 1/4"	<input type="checkbox"/> j. 1/2"
<input type="checkbox"/> d. 1/2"	<input type="checkbox"/> k. 7/16"
<input type="checkbox"/> e. 3"	<input type="checkbox"/> l. 1"
<input type="checkbox"/> f. 2"	<input type="checkbox"/> m. 1 1/4"
<input type="checkbox"/> g. 3/4"	<input type="checkbox"/> n. 1 1/2"

8. Describe how pipe size is determined in relationship to copper tubing.

9. Discuss the differences between pipe, bolt, and copper fitting threads.

00558

10. Demonstrate the ability to:
 - a. Cut pipe.
 - b. Ream pipe.
 - c. Thread pipe.
 - d. Join or fit plastic pipe.
 - e. Sweat a copper joint.
 - f. Cut and flare copper tubing.

(NOTE: If these have not been accomplished prior to the test, ask the instructor when the above activities should be completed.)

00569

PLUMBING
UNIT VI

ANSWERS TO TEST

1.
 - a. 5
 - b. 1
 - c. 9
 - d. 2
 - e. 6
 - f. 8
 - g. 3
 - h. 7
 - i. 4
2.
 - a. 4
 - b. 2
 - c. 1
 - d. 3
 - e. 5
 - f. 6
3.
 - a. Coupling
 - b. Straight cross
 - c. Cap
 - d. 45° elbow
 - e. Bushing
 - f. Tee
 - g. Union
 - h. Plug
 - i. Street elbow
 - j. Nipple
4.
 - a, c
5.
 - a. Bench yoke vise
 - b. Spiral ratchet pipe reamer
 - c. Pipe cutter
 - d. Ratchet threader
 - e. Pipe wrench
6.
 - a. Allows tools to cut smoother
 - b. Permits tools to cut easier
 - c. Lengthens lifetime of tools
 - d. Removes burrs and cuttings from dies

00570

7. b, c, d, g, i, j, k
8. Description should include:
 - a. Pipe size determined by inside diameter
 - b. Tubing size determined by outside diameter
 - c. Pipe wall generally thicker
9. Discussion should include:
 - a. Pipe
 1. Tapers $1/32$ " per inch in length
 2. Has standard threads
 - b. Bolt
 1. Straight
 2. National coarse
 3. National fine
 - c. Copper fitting-National fine threads
10. Performance skills evaluated to satisfaction of the instructor.

ACCESSION NUMBER: VTI03474

TITLE: SCIENCE CAREER EDUCATION: A COURSE OF STUDY. EXPERIMENTAL EDITION,
1975.

DESCRIPTOR: *SCIENCE EDUCATION; CAREER EXPLORATION; SENIOR HIGH SCHOOLS;
*SCIENCE UNITS; UNIT PLAN; *HEALTH OCCUPATIONS EDUCATION; COURSE CONTENT;
CHEMISTRY; BIOLOGY; *LABORATORY TECHNOLOGY; PARAPROFESSIONAL PERSONNEL; MEDICAL
LABORATORY ASSISTANT; NURSING

IDENTIFIER: SIMI VALLEY HIGH SCHOOL; CALIFORNIA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL: 10, NO. 3.

DESCRIPTIVE NOTE: 97P.

ABSTRACT: THE SCIENCE CAREER EDUCATION COURSE DEVELOPED FOR INCORPORATION
IN THE SCIENCE CURRICULUM OF THE SIMI VALLEY HIGH SCHOOL, CALIFORNIA, CONTAINS
TWO COMPONENTS. THE FIRST SEMESTER CONSISTS OF CORE UNITS PROVIDING BASIC
MATERIALS IN BIOLOGY, CHEMISTRY, AND PHYSICS WITH LABORATORY SKILLS TRAINING.
THE SECOND SEMESTER CONSISTS OF UNITS FOR SPECIALIZED VOCATIONAL EDUCATION,
WITH SEGMENTS ON LABORATORY ASSISTANT (BOTH MEDICAL AND NONMEDICAL) AND
PRENURSING. IN ITS PRESENT STAGE OF DEVELOPMENT THE COURSE IS NARROWED TO THE
THREE CATEGORIES OF SPECIALIZATION FOR WHICH THERE ARE NEEDS BY NO EXISTING
EDUCATIONAL PROGRAMS. TWO CATEGORIES PROVIDE TRAINING TO QUALIFY THE STUDENT
FOR ENTRY EMPLOYMENT AS LABORATORY ASSISTANT, EITHER IN A MEDICAL LABORATORY OR
NONMEDICAL (TESTING) LABORATORY. A THIRD ALTERNATIVE PROVIDES FURTHER
SPECIALIZED EDUCATION PREPARATORY TO POSTSECONDARY EDUCATION FOR AN ALLIED
HEALTH CAREER. EACH COURSE SEGMENT REFERENCES TEXTBOOKS AND SUPPLEMENTARY
MATERIALS. COURSE STRUCTURE IS FLEXIBLE TO ALLOW REVISIONS FOR FUTURE NEEDS OR
JOB MARKET CHANGES. (MF)

PREFACE

This course was developed in response to both society's demands that the graduates of the public schools be literate contributing members of that society and the educator's need to afford relevance to the educational content of the school system. Career education has provided the opportunity for this demand and need to be fulfilled in an integrated venture.

Hoyt, et. al., in Career Education: What It is and How to do It, describe career education as a total concept permeating all of education merging the worlds of the home, the community, the school and the workplace "into a challenging and productive whole". (p. 3) It is not intended to conflict with, but to augment existing sound educational objectives.

In spite of the fact that educators must be cognizant of society's demands in relation to their own striving for relevance and legislatures' enactments of accountability measures, it may seem trite to remind ourselves of the obvious --- the students in the schools today are education's first responsibility. They are the persons to whom we must be accountable.

It was this underlying philosophy that prompted the application for and ultimate awarding of a VEA Part "D" Exemplary Project to field test the Manpower Management Information System (MMIS) at the local school district level. This project provided funds which allowed

the use of MMIS to document a needs analysis and the subsequent development of the course "Science Career Education". The development incorporated a flexibility into the course structure and content which allows revisions to be made easily in order to adapt this course to meet the unique needs of a specific locale or for future changes in the job market.

These materials were developed pursuant to a grant by the State Department of Education with funds available through the Vocational Education Amendments of 1968, Part "D" Exemplary. The freedom to express professional judgment in the development process was encouraged. Points of view or opinions expressed do not, therefore, necessarily represent official State Department of Education position or policy.

INTRODUCTION

"Science Career Education" was developed for incorporation into the Science curriculum of the Simi Valley Unified School District. The format is one that is not only amenable to the existing individualized science instruction at Simi Valley High School for which the course was written, but is one that with minor variation can be adapted to a variety of instructional patterns including the more traditional "lock step" approach.

The course is divisible into two major components as illustrated in the "Course Design", (p. 11). The first component is a "Core" which primarily but not exclusively promotes career awareness within the science career cluster. There is a specific emphasis upon the "non-professional" science careers. Non-professional careers will be defined as those requiring minimal or no postsecondary education as a prerequisite for employment. The promotion of career awareness is to be accomplished both directly by research and evaluation of the related careers and indirectly through the presentation of that knowledge and those skills prerequisite to more specialized career education. Although the initial purpose of the project was to develop a course for the educating of laboratory assistants, research has indicated that a broad spectrum of employment possibilities, including those of laboratory assistants, are dependent upon a common base of

science knowledge and skills. It is this common base that composes the knowledge and skills of the Core.

The second component consists of education for the indicated specialized vocational choices. An anticipated outcome of the first semester would be the student's selection of one of these specialized vocational choices to be pursued during the second semester. A further discussion of some of the aspects of this component can be found in the second semester overview which should be read prior to attempted implementation of the course.

This course in its current stage of development and proposed application, as a matter of practical necessity, has narrowed to three categories of specialization. "Current Stage of Development" as well as that section in the "Course Design" entitled "Miscellaneous" must be underscored since they are the indicators of the dynamic potential and timelessness of the second semester offering. Two of these alternative categories afford the education considered desirable to qualify a person for employment as laboratory assistants, either in a 1) medical laboratory or 2) non-medical (testing) laboratory. A third alternative is to provide further specialized education preparatory for continued postsecondary for an allied health career as is available in the Simi Valley Adult School.

These three were selected because it appeared that the greatest effective educational impact relative to local conditions

would be realized from that combination. A need for laboratory assistants combined with no recognized educational program of a value in existence justified the first two alternatives. A viable functioning allied health program requiring a basic science background in Adult Education justified the third alternative. The nurse's aide/ orderly alternative was eliminated as an initial option since there were existing programs available to fulfill this need. Another alternative, the prescription of a science program leading to a science career requiring the Baccalaureate Degree, its equivalent, or a higher degree, will be implemented at a later date.

As can be readily noted, the second component is the more flexible of the two. Whereas the time line for the first semester was one period per day, the flexibility of this component should allow for differing time requirements. This component, more than the Core, requires a tailoring to local employment projections, student interests and the availability of existing educational programs. This course development has reflected these criteria for this demographic locale. The content resulted from direct communication both with potential employers and with persons instrumental in the development and administration of related postsecondary educational programs. A complete treatment of this process can be found in the Vocational Education Planning Process Manual available from the Vocational Education Section, California State Department of Education. This

manual would be an invaluable resource in attempting to tailor this course to local needs.

Although this course has been developed to utilize a particular series of textbooks and supplementary materials this is neither to be construed as an endorsement of these materials nor an implication that other choices may not work equally as well. Regardless of the fact that some objectives were derived from textbook sources, they were selected for their inherent value and contribution to the fulfillment of the course goals. Other resource materials may be found to be applicable and of equal or greater value in a given situation. It should be noted, however, that a search for resource materials for the class did not unveil any one comprehensive resource. Even had one been located, it would not have been used inasmuch as it would have projected an inconsistency into the simulation experience. Within the spectrum of experiences that the student will be anticipated to encounter while employed, he will not be able to get all the answers from one source but will have to make decisions regarding the best available source of information. The laboratory simulation will pursue this premise and utilize a variety of information sources.

Since the intention of this course presentation was to retain flexibility allowing for the easiest possible adaptation and implementation into a local educational system, special directions to the instructors were kept to a minimum being replaced by an overview of the

corresponding units with some general suggestions included. Also since differing textbooks and laboratory investigations may be selected, the teacher's resource guide for each will be found to be the most effective resource for specific problems.

COURSE TITLE: Science Career Education

COURSE DESCRIPTION:

This is a course designed for the student interested in obtaining science knowledge and entry-level occupational skills qualifying him for employment in a variety of non-professional science careers (i. e., lab aides, medical lab assistants, nurse's aides, orderlies, etc.), or for entry into other postsecondary science career programs. This course emphasizes the acquisition of knowledge of basic science and training of specific laboratory skills.

The course is individualized with all students being introduced to the cognitive aspect via a "core" program which includes basic relevant materials in the areas of biology, chemistry, and physics. The specific laboratory skills training is individually prescribed to coincide with the student's chosen goals. The course content, both cognitive and psychomotor, has been selected as the result of interviews with potential employers. The student's goals are to be determined from the results of interest surveys (Career Planning Inventory -- CPI), aptitude tests (General Aptitude Test Battery -- GATB), psychological tests (Practical Aptitude Test for Nursing -- PSB), work observation, and personal counseling.

This is a one year course and is recommended for 12th grade students who have completed preliminary counseling in career planning

in the Career Guidance Center. Although the Core may be completed at an earlier grade to allow for prescription into the college-prep sequence, any other area of specialized training should be reserved for the 12th grade.

COURSE TITLE: Science Career Education

COURSE GOALS:

1. Identify career opportunities in science and science-related fields and indicate their corresponding educational and training requirements.
2. Explore a chosen science career cluster including the following considerations:
 - a. level of preparation needed.
 - b. ability, interest, and aptitude requirements.
 - c. working conditions, salary, shift times, etc.
 - d. employment opportunities.
3. Demonstrate an understanding of fundamental laboratory skills and safety procedures.
4. Demonstrate an understanding of the processes of observing and measuring.
5. Demonstrate an understanding of recording, representing, communicating, and interpreting data in written, pictorial, tabular, or graphic form.
6. Demonstrate a comprehension of a basic vocabulary of scientific terminology.
7. Demonstrate an ability to recognize basic laboratory apparatus and to describe its function.
8. Demonstrate an understanding of the characteristics of life.
9. Demonstrate an understanding of the structure and composition of matter, and of the chemical changes in matter.
10. Demonstrate an understanding of the physical properties of matter.
11. Demonstrate an understanding of energy and energy relationships.
12. Demonstrate a prescribed exit level proficiency as determined by the postsecondary goal choice. These choices may include minimal scientific literacy, specific job entry-level, or further education (including adult education, community college, four-year college, training schools, etc.).

COURSE DESIGN

First Semester

CORE

Careers Exploration
Employment Application/Potential

PROFESSIONAL SCIENCE CAREERS **

College Preparatory Courses:
Chemistry, Physics, Biology,
and Anatomy & Physiology

ADULT EDUCATION *

The Core would allow for enrollment into any of a variety of Allied Health courses offered at the Adult Education level and neither feasible to offer nor necessary to duplicate at the secondary level.

MISCELLANEOUS

To be developed as other related areas exhibit need.

*Preparation for employment at graduation

**College preparatory sequence

This unit is one which practically never receives a priority of unit status and more often than not is relegated to an ad-lib, free-style presentation of what has been presented year after year. In reality it is this unit which ultimately can make it or break it for the students. Therefore utmost consideration must be given to the students insuring that they understand the purpose of the course, how it is to be conducted, and what are its requirements. More appropriately this should become an introduction for both the students and their parents. Past experiences have shown that when parents are involved from the very beginning, the rate of success of the program and the progress of the student is much greater than if the parents are not included. It would be of considerable value if this introduction with the parents were begun at the time of registration. The introductory parent letter could be sent home with the student as soon as they have registered in the course. Additionally, based on favorable experience, an evening meeting for all parents could be scheduled early in the course preferably during the first week. Further consideration should be given to have this meeting include both the students and their parents.

Regarding the introductory process in the classroom, the students should at this time have their course syllabus and it would

be well, in essence, to "walk through" each student performance objective. It is quite possible that this is the first time in the student's educational career that he will be faced with student performance objectives, telling him what he is expected to learn. This introductory unit provides an excellent opportunity to develop a non-threatening atmosphere familiarizing the students with the anticipated function of performance objectives. Emphasize the importance of the use of the performance objectives as aids to study and as screens to eliminate non-essential materials, not as barriers.

The skills developed in this unit are primarily cognitive in nature although Objective #3, Unit I, Segment 1, "Become Familiar with Materials Available In and Use the Science Resource Room", is one stressing the psychomotor skills. It is recommended that the student is introduced to the Science Resource Room by the use of an audio-tutorial unit within the room itself. This, however, is one of those objectives uniquely developed for Simi Valley High School which may have limited application elsewhere.

As was implied earlier, the length of time required should be of the least concern; the primary concern should be the assurance that the students understand the procedures and the requirements of the course and hopefully providing them with a greater opportunity to be successful.

I. Unit Title INTRODUCTION

A. Segment Title Course Format/Purpose

B. Student Performance Objectives

1. Distinguish between the purposes of the first semester "Core" (exploration, guidance, general background skills) and those of the second semester (specialized education for employment/postsecondary education).
2. Explain the process of the individualized approach and select a pacing schedule.
3. Become familiar with materials available in the Science Resource Room (SRR) and demonstrate an appropriate use of those materials.
4. Communicate with parents/guardians the format, purposes and requirements of the course.

C. Segment Resources

Course Syllabus
"Science Career Education-Organization"
Parent Letter
Introduction to Resource Room (Tape)

1. Unit Title INTRODUCTION

A. Segment Title Course Requirements

B. Student Performance Objectives

1. Distinguish between ninety percent (90%) mastery level required for employment recommendation and seventy percent (70%) mastery level for science elective credit.
2. Identify consistent attendance and promptness as a part of the laboratory simulation and vitally related to evaluation.
3. Demonstrate an understanding that extra-class visitation and observation is required.
4. If not already completed, take the General Aptitude Test Battery (GATB) and the Practical Aptitude Test for Nursing (PSB), and receive post-test counseling from the appropriate persons.
5. Participate in the course as an employee in a simulated commercial laboratory.

C. Segment Resources

Course Syllabus
GATB and PSB
Career Counselor

SAMPLE LETTER

Dear Parent:

Your son/daughter is currently enrolled in the course "Science Career Education" (SCE). This is a new course for the Simi Valley Unified School District being offered at Simi Valley High School (1st year entry only). I would like to offer a brief explanation so that you may be familiar with the course and its objectives.

The course is designed to afford both science elective credit meeting graduation requirements and to offer a particular skills education for those students who may be interested in entering a science-related vocation. The content of the first semester includes research into the variety of science-related occupations with employment potential and a basic generalized science background for preparation for the second semester.

The second semester is one which will allow for specialization. At the end of the first semester each student should be qualified to select an area of vocational specialization. This first year there will be two major areas from which to choose. Specialized education will be given to qualify for employment in positions of Laboratory Assistant or Laboratory Helper in either medical or industrial laboratories. The alternative is to select from a variety of individualized study units in preparation for entry into postsecondary courses not feasibly taught at the high school including the Allied Health Courses offered at Adult Education. These include, but are not restricted to, Nurse Licensed Vocational (LVN), Operating Room Technician, Respiratory Therapy Technician, Dental Technologist, Dental Assistant and any future additions.

The classroom laboratory conditions, insofar as possible, will simulate those found "on the job". This will mean that certain school policies will be adhered to more rigidly and will have a greater effect on grading than may occur in some of your son's/daughter's other classes.

Two standards will be used in the class. A seventy percent (70%) mastery level will be required for science elective credit and/or for transfer credit into the Adult Education courses. A ninety percent (90%) mastery level will be required for recommendation for employment placement upon graduation. Hopefully a certain number of job openings will be available for placement in June. Attendance and

promptness to class will be most important. A maximum of five (5) days tardies/absentees will be allowed for placement recommendation unless an emergency situation occurs. An extension would be allowed only after a student-parent-teacher conference is held.

➤ Additionally the class will be individualized and self-paced. A proposed time schedule is included within the course syllabus to which you may want to make reference. The primary responsibility will be upon the student to maintain this pace. He/she may progress on schedule or more rapidly than the schedule without any formal declaration. A student may opt, for a variety of reasons, to progress more slowly, but this option will require a student-parent-teacher conference. The student will be provided with one copy of the course syllabus. Any additional copies will be available for fifty cents (50¢).

Early in the first semester your son/daughter will be required to make arrangements to visit a variety of work situations or classes outside of the regular school day as homework. This is to provide him/her with an awareness of the variety of related vocational opportunities and assist in the making of a valid realistic career choice. The available visitation sites and contact persons will be provided.

Since the class requirements are somewhat different from most offerings, I would like to have you sign and return the enclosed form. If you have any questions, please call 526-0330. I would be most happy to try to answer them for you.

Sincerely yours,

Wayne C. Hollins
Curriculum Planning Specialist

WCH/pk

enc.

SCIENCE CAREER EDUCATION - ORGANIZATION

1. Locate the appropriate unit study guide and supplemental materials in the course syllabus.
2. Read the unit study guide identifying the performance objectives, applicable investigations, and unit resource aids.
3. Listen to the introductory unit tape in the Science Resource Room (SRR, S-7), take notes if necessary.
4. Study the assigned material with the objectives in mind.
5. Determine by pretest if supplementary review materials are necessary. Use as pretest indicates.
6. Use the recommended unit resource aids in the SRR.
7. Complete the required investigations:
 - a. Select an investigation to do - read what the book has to say about it and check the investigation hints on the unit study guide and from the taped unit introduction.
 - b. Check out lab materials from the lab assistant.
 - c. Plan your lab time carefully, often more than one investigation can be done concurrently especially if more than one day is needed for completion.
 - d. Make sure that a teacher observes and initials your lab work while it is in progress.
 - e. Return cleaned equipment to the lab store room.
 - f. Be prepared to discuss the investigation during its progress or upon its completion.
 - g. All students will be required to have a bound laboratory notebook. It is strongly recommended that the type sold in the student store be used.
8. Get investigation write-ups and worksheets approved.
9. Review objectives and investigations, study for test. If available complete and self-grade preparatory test to aid in study.
10. Sign up in the SRR for the unit test one day in advance of testing.
11. Take the unit test in the SRR.

12. Obtain the results from the classroom instructor.
13. Following successful completion of the unit, proceed to the next unit study guide in the course syllabus.

- REMINDERS -

1. Read the assigned material related to the objectives thoroughly before doing any investigations.
2. Reading, written work, defining vocabulary words, completing reports, studying for tests, etc., should be done as homework.
3. Class time should be used exclusively for lab work or group discussion.
4. The SRR is to be used for QUIET study, testing, and unit resource aids only!
5. Keep your laboratory notebook up to date and bring it, the course syllabus, and the textbook to class each day.
6. If you need more help than is available during class, come in after school or during lab-nite (to be arranged).

The purpose of this unit is threefold: 1) to stimulate an introspection on the part of the students in order to assist them in increasing their self-awareness, 2) to expand the students' perspectives regarding viable career opportunities which are complementary to their own goals and aptitudes, and 3) to provide a realistic evaluation of their specific career choice. These purposes are compatible with and fulfill Course Goals 1 and 2.

Two days will be spent explaining the methods of utilization of the available data sources. This is to include visits to the Career Information Center (CIC) and the introduction of those persons who can give guidance both in the use of the CIC and in providing career information. This unit is intended to be self-directed on the part of the student, thus this time should remain flexible assuring the instructor that all students have a grasp of the tasks expected of them. This also implies that the instructor is knowledgeable of the functioning of the CIC if a facility of this type exists. If such is not the case, the instructor should undertake and complete an orientation of the CIC prior to the beginning of this unit.

It is anticipated that following the introduction of this unit, the research necessary to fulfill the requirements of the Performance Objectives would occur outside the classroom as a form of homework

and concurrently with subsequent course units. It would be advisable for the CIC to schedule science-related career presentations during this time allowing the students in the course the opportunity to relate to persons active in the field of their career interests while at the same time introducing this career cluster to other students. It would seem in addition to the knowledge gained during these presentations that the interaction between the students in the course and those still "looking" could be invaluable:

Five weeks would be afforded to the students for completion of this unit. Evaluation of successful completion will be based upon the presentation of documentation either in written or oral form of fulfillment of the stated Performance Objectives. An Occupational Analysis Worksheet is provided to facilitate the completion of this part of the unit. Although some sample job descriptions and application forms have been included, if some could be obtained reflecting local agencies this would be of more value than the ones herein.

I. Unit Title CAREER EXPLORATION - SCIENCE

A. Segment Title Job Identification & Description

B. Student Performance Objectives

1. Given a list of science-related careers, analyze no less than three of which at least two are pre-professional, e.g., do not require a college degree. Include such items as working conditions, shift hours, salary, advancement and employment opportunities, educational/training requirements, etc.
2. Complete the General Aptitude Test Battery (GATB) if not already done and discuss the results, relative to your career research, with the Career Counselor.
3. Select a preferred science occupation and list the skills and knowledge needed in order to be proficient in that occupation.
4. Identify at least two other occupations related to your occupational choice which with further education you could be capable of accepting employment.
5. Distinguish between monetary and non-monetary benefits and list those that apply to any occupation within your chosen career cluster.
6. Document at least six (6) hours of work observation of which one-half the time must be in an occupation other than the one that is your preferred choice.

C. Segment Resources

- Career Counselor
- Career Guidance Technician
- California Occupational Guides, EDD
- Career Opportunities for Technicians & Specialists, Ferguson
- Encyclopedia of Careers and Vocational Guidance, Vol. II
- Ferguson
- Occupational Analysis Worksheet

Occupational Guidance Books, Finney Co.:

Occupational Outlook Handbook, U. S. Department of Labor
Sample Job Descriptions

S. R. A. Occupational Exploration Kit -- Individual Briefs and
Job Family Series Books

Vital Information for Education and Work (VIEW), microfilm

D. Introduction/Motivation (Comments)

Students will be introduced to the Career Information Center (CIC) stressing both the persons available for guidance and the data sources which can be used to fulfill the objectives for this unit.

I. Unit Title CAREER EXPLORATION - SCIENCE

A. Segment Title, Identification of Educational Requirements

B. Student Performance Objectives

1. Identify different places/ways wherein education for a particular occupation can occur.
2. In case a preferred career requires postsecondary education, list and analyze both the prerequisites for and the demands of the postsecondary education.

C. Segment Resources

As listed for Unit II/Segment 1

D. Introduction/Motivation (Comments)

/ Continuation of those for Unit II/Segment 1

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

I. Unit Title CAREER EXPLORATION - SCIENCE

A. Segment Title Applications to Advancement

B. Student Performance Objectives

1. Identify industries, by name, where persons in your selected occupation might find employment.
2. Given the guidelines for responding to an interview, exhibit that knowledge in an interview (simulated) situation.
3. Given the guidelines for completing a job application form, exhibit that knowledge by filling out a job application completely and correctly.
4. Identify at least two ways of advancement and/or increasing one's salary.

LABORATORY GLASSWARE CLEANING

LOCATION: Laboratory Procedures, West

SCHEDULE: Plant

NATURE OF WORK: To provide thoroughly clean glassware for laboratory units.

FUNCTIONS OF JOB: Provides thoroughly clean glassware for use in all areas of the laboratory. Responsible for picking up used glassware from laboratory units; washing glassware by hand or machine using special acid or other washing techniques in accordance with established procedures; and delivering clean glassware to the laboratory units.

MINIMUM EXPERIENCE: None required.

ON-THE-JOB TRAINING: One month to become familiar with different procedures used, equipment operation, and needs of laboratory units.

EQUIPMENT USED: Automatic washing equipment.

PERSONAL REQUIREMENTS: Must work according to details of washing procedure. Has contacts with all laboratory units requiring cooperation and even temperament. Good manual dexterity is important.

PHYSICAL DEMANDS: Ability to lift 40 lbs.

WORK CONDITIONS: Exposure to acids and possibility of cuts and burns from broken glass and hot water.

INITIATIVE AND RESOURCEFULNESS: Requires initiative to meet needs of various laboratory units.

RESPONSIBILITY: Responsible for following procedures carefully and providing thoroughly clean glassware for laboratory units.

SUPERVISION EXERCISED: None.

LABORATORY ASSISTANT I

- LOCATION: Laboratory Procedures, West
- SCHEDULE: Plant
- NATURE OF WORK: To assist laboratory technologists by performing regular procedures which are permissible under California law.
- FUNCTIONS OF JOB: To assist laboratory technologists by performing the regular procedures which are permissible under California law. Responsible for following detailed procedures established by licensed personnel and performing such regular functions as distribution of approved test results to other laboratory units for transmittal to clients, transferring specimen qualitatively to appropriate receptacle on instrument or equipment, keeping reagent containers filled.
- MINIMUM EXPERIENCE: High school graduate is desirable. Courses in chemistry and science would be desirable.
- ON-THE-JOB TRAINING: Up to three months is required to become familiar with specific responsibilities, location of supplies, and overall operation of the laboratory unit assigned.
- EQUIPMENT USED: Various types of mechanical laboratory equipment.
- PERSONAL REQUIREMENTS: Must be able to work rapidly and accurately, follow detailed instructions precisely, work well with others, and pay strict attention to detail.
- PHYSICAL DEMANDS: Some parts of work require heavy lifting.
- WORK CONDITIONS: Exposure to cuts from broken glass and possible health hazard from handling specimens.
- INITIATIVE AND RESOURCEFULNESS: Must demonstrate that he is capable of handling large volume of work within time limits. Must also demonstrate that he has the ability to follow detailed instructions precisely and to keep operating equipment supplied with proper reagents.

LABORATORY ASSISTANT I (contd.)

RESPONSIBILITY:

Responsible for following detailed work instructions precisely and for performing specific tasks within proper time limits and with a high degree of accuracy.

SUPERVISION
EXERCISED:

None.

LABORATORY ASSISTANT II

- LOCATION: Laboratory Procedures, West
- SCHEDULE: Plant
- NATURE OF WORK: To assist laboratory technologists by performing the more complex procedures which are permissible under California law.
- FUNCTIONS OF JOB: To assist laboratory technologists by performing the more complex procedures which are permissible under California law. Responsible for following detail procedures established by licensed personnel and performing such functions as: preparation of culture media, assisting in location of specimens, distributing approved test results to other laboratory units for transmittal to clients, staining slides for microscopic examination, preparation of mechanical equipment for operation, transferring specimen qualitatively to appropriate receptacle on an instrument, keeping reagent containers filled, transcribing results which have been previously recorded by licensed personnel.
- MINIMUM EXPERIENCE: High school graduate is desirable.
- ON-THE-JOB TRAINING: A minimum of three years prior experience as a laboratory assistant.
- EQUIPMENT USED: Uses various types of mechanical laboratory equipment.
- PERSONAL REQUIREMENTS: Must be able to work rapidly and accurately, follow detailed instructions precisely, work well with others, and pay strict attention to detail. Must perform tests with minimum supervision and work closely with laboratory assistants and other laboratory personnel. Integrity of reporting results is essential.
- PHYSICAL DEMANDS: Some parts of work require heavy lifting.

LABORATORY ASSISTANT II (contd.)

WORK CONDITIONS: Exposure to cuts from broken glass and possible health hazard from handling specimens.

INITIATIVE AND RESOURCEFULNESS: Both are required to conduct tests independently, recognize variances, and take necessary action to correct variances. Must possess initiative and resourcefulness in assisting licensed laboratory personnel with more complex procedures authorized under California law. Such procedures may include calling attention of licensed personnel to unusual operation of equipment, and in keeping equipment supplied with reagents, and in the location of missing specimens or test requests.

RESPONSIBILITY: Responsible for following instructions precisely and calling immediate attention to licensed personnel of any deviation from pre-established standards. Responsible for accuracy of test performed, results reported and keeping up-to-date in the field of clinical testing.

SUPERVISION EXERCISED: May help in the training of laboratory assistants under the supervision of licensed laboratory personnel and/or supervision. Personal technical direction of work of laboratory assistants. May also assist in training of other laboratory technologists.

REAGENT PREPARATION I

- LOCATION: Laboratory Procedures, West
- SCHEDULE: Plant
- NATURE OF WORK: To prepare and provide high quality reagents for laboratory units when needed, and to maintain an adequate inventory of reagent ingredients to assure that laboratory needs will be met.
- FUNCTIONS OF JOB: To prepare and provide high quality reagents for laboratory units when needed. Responsible for selecting correct ingredients, preparing them exactly from formula, identifying completed reagents properly and delivering them to the proper laboratory units. This requires knowledge of chemicals, chemical symbols, metric system measurements, and basic chemical mathematics.
- To maintain an adequate inventory of reagent ingredients to assure laboratory needs will be met. Responsible for inventory of existing ingredients, recording use of ingredients and re-ordering ingredients ahead of time so that there will be enough ingredients on hand to meet the needs of the laboratory units.
- MINIMUM EXPERIENCE: High school graduate with chemistry and mathematic courses being highly desirable.
- ON-THE-JOB TRAINING: One month to become familiar with reagent demands, ingredients, formulas, measurement equipment and calculations for reducing or increasing proportions based on potency of ingredients or amount of reagent needed.
- LABORATORY EQUIPMENT USED: Balances, colormeters, and other standard equipment and glassware.
- PHYSICAL DEMANDS: Must be capable of lifting, shaking and carrying 60 lbs. several times each day.

REAGENT PREPARATION I (contd.)

WORK CONDITIONS: Subject to burns from chemicals and cuts from glassware.

INITIATIVE AND RESOURCEFULNESS: Both are required to a great extent to plan and complete his work schedule so that quality reagents are available within time limits and adequate inventories of reagent ingredients are maintained.

RESPONSIBILITY: Responsible for accurate and careful selection of ingredients, measurements, calculations, and preparation exactly from formula of reagents used by laboratories. Poor quality reagents may cause inaccurate laboratory test results, loss of laboratory operation time, and damage to specimens sent for testing.

REAGENT PREPARATION II

LOCATION: Laboratory Procedures, West

SCHEDULE: Plant

NATURE OF WORK: To prepare and provide high quality reagents for laboratory units as needed, and to assist in training of new Reagent Preparation personnel. To maintain adequate weekly inventory of all chemicals and all materials listed in Central Supply. To assist Automated Chemistry personnel in putting reagents on-line as required. To learn to perform jobs in other departments at a maintenance level in order to provide adequate back-up for vacations, illness, etc.

FUNCTIONS OF JOB: To prepare and provide high quality reagents for laboratory units as needed. Responsible for careful selection of correct ingredients, identifying complete reagents properly, putting them on-line. Standardizing, adjusting baselines, trouble shooting reagents on Automated Chemistry machines as required. These functions require knowledge of chemicals, chemical symbols, metric system measurements, basic chemical mathematics, and equipment basic to a chemistry laboratory.

MINIMUM
EXPERIENCE:

High School graduate with courses in Chemistry and Mathematics is highly desirable. Two years experience at Reagent Preparation along with a proven ability to produce quality reagents. Working knowledge of most machines in Automated Chemistry and an ability to trouble shoot reagents as regards their use on those machines. A proven record of versatility in a clinical laboratory.

LABORATORY
EQUIPMENT USED:

Must have working familiarity with equipment such as pH meters, various balances, automated chemistry machines, and other standard equipment and glassware.

REAGENT PREPARATION II (contd.)

PHYSICAL DEMANDS: Must be capable of lifting, shaking, and carrying 60 pounds several times each day.

WORK CONDITIONS: Subject to burns from chemicals and cuts from glassware. Must be able to take constructive criticism; must be capable of maintaining an even disposition in the face of adverse situations.

INITIATIVE AND RESOURCEFULNESS: Both are required to a great extent to plan and complete his work schedule within time limits, to be sufficiently flexible to meet STAT demands, to be able to trouble shoot reagent problems as they pertain to Automated Chemistry machines, to provide supervisor with an adequate weekly inventory of chemicals and materials needed for Reagent Preparation and Central Supply, to assist in training of new Reagent Preparation Personnel, and to perform jobs in other departments for illness, vacation, etc., to learn and perform regular radiation safety jobs as outlined by the Radiation Safety Committee or by the Radiation Safety Officer.

SPECIMEN PREPARATION I

LOCATION: Laboratory Procedures, West

SCHEDULE: Plant

NATURE OF WORK: To accurately receive, identify, perform initial processing, and deliver specimens and laboratory work records to proper laboratory units.

FUNCTIONS OF JOB: To accurately receive and identify incoming specimens and test requests. Responsible for carefully opening incoming specimen mailing containers and checking thoroughly the contents of the containers to assure that specimens and test requests are correctly identified; are complete, and are correct. This requires a thorough knowledge of the types of tests performed by the laboratory units, the type of specimen required, the quantity of specimen required, the proper containers for each type of test, and the proper data which must accompany the specimen on the test request.

To perform initial processing of specimens. Responsible for maintaining correct identification of specimens by run, tray, and sample number, for properly centrifuging and pouring specimens into laboratory test containers, and for transferring correct laboratory number to the test containers. This requires following established procedures exactly.

To deliver prepared specimens and necessary work records to proper laboratory units. Responsible for promptly delivering specimens and proper work sheets or records to each laboratory for testing, for delivery of complete and accurate test requests to data processing, and for locating missing specimens or test requests. This requires a thorough knowledge of laboratory operating procedures, time schedules and which specimens and requests are ready for testing versus those which will need additional follow-up by others prior to testing.

SPECIMEN PREPARATION I (contd.)

Responsible for keeping accurate count of mailing containers received, time received, time specimens were delivered to laboratory units, time test requests were delivered to data processing, and that mark sense test result report cards are accurate.

Responsible for keeping work area clean and orderly and cleaning centrifuges after use.

MINIMUM EXPERIENCE:

None required, although high school courses in chemistry would be desirable. Knowledge of key punch machine is desirable, but not necessary.

ON-THE-JOB TRAINING:

Up to three months required to become familiar with laboratory terminology, procedures, and various test requirements.

EQUIPMENT USED:

Centrifuges, copy machines, keypunch machine.

PERSONAL REQUIREMENTS:

Must be able to work rapidly and accurately with limited supervision without becoming flustered. Works as a team member and must be able to cooperate with others. Attention to detail is essential.

PHYSICAL DEMANDS: Some parts of work require heavy lifting.

WORK CONDITIONS: Exposure to cuts from broken glass and possible health hazard from handling specimens.

INITIATIVE AND RESOURCEFULNESS:

Must possess initiative in processing large volume of incoming specimens within time limits as well as in calling attention of supervision to specimens or requests which need to be followed up prior to processing. Resourcefulness needed to locate missing specimens or test requests.

RESPONSIBILITY:

Responsible for proper identification and preparation of specimens for laboratory testing. Errors can make test result invalid and cause re-test to be necessary which is extremely

SPECIMEN PREPARATION I (contd.)

damaging to Laboratory Procedures' relationship with its clients. Human life may be dependent upon accuracy of identification and preparation of specimens.

SUPERVISION
EXERCISED:

None.

SPECIMEN PREPARATION II

LOCATION: Laboratory Procedures, West

SCHEDULE: Plant

NATURE OF WORK: To accurately subdivide specimens received for multiple testing and maintain positive identification of the original specimen in addition to accurately receive, identify, perform initial processing, and deliver specimens and laboratory work records to proper laboratory units.

FUNCTIONS OF JOB: To accurately subdivide specimens received for multiple testing and maintain positive identification of the original specimen. Responsible for carefully dividing original specimens into separate tubes for processing by various laboratory units. This requires thorough knowledge of the quantity requirements for all tests and the special handling requirements for all specimens.

To accurately receive and identify incoming specimens and test requests. Responsible for carefully opening incoming specimen mailing containers and checking thoroughly the contents of the containers to assure that specimens and test requests are correctly identified, are complete, and are correct. This requires a thorough knowledge of the types of tests performed by the laboratory units, the type of specimen required, the quantity of specimen required, the proper containers for each type of test, and the proper data which must accompany the specimen on the test request.

To perform initial processing of specimens. Responsible for maintaining correct identification of specimens by run, tray, and sample number, for properly centrifuging and pouring specimens into laboratory test containers, and for transferring correct laboratory number to the test containers. This requires following established procedures exactly.

SPECIMEN PREPARATION II (contd.)

To deliver prepared specimens and necessary work records to proper laboratory units. Responsible for promptly delivering specimens and proper work sheets or records to each laboratory for testing, for delivery of complete and accurate test requests to data processing, and for locating missing specimens or test requests. This requires a thorough knowledge of laboratory operating procedures, time schedules and which specimens and requests are ready for testing versus those which will need additional follow-up by others prior to testing.

Responsible for keeping accurate count of mailing containers received, time received, time specimens are delivered to laboratory units, time test requests were delivered to data processing, and that mark sense test result report cards are accurate.

Responsible for keeping work area clean and orderly and cleaning centrifuges after use.

MINIMUM EXPERIENCE:

Considerable experience in specimen preparation work is desirable. Practical experience in making accurate visual measurements is desirable. High school chemistry desirable.

MINIMUM POSITIONS NECESSARY:

Present workload requires a minimum of four positions at this time.

ON-THE-JOB TRAINING:

Two years' prior experience in Specimen Preparation I, plus ability to work with a minimum of supervision and must demonstrate continued initiative and dependability.

EQUIPMENT USED:

Centrifuges and copy machines.

PERSONAL REQUIREMENTS:

Works on own most of the time and therefore, must be capable of working rapidly, accurately, and not get flustered. When working with other specimen preparation employees, must be cooperative. Attention to detail and ability to make

SPECIMEN PREPARATION II (contd.)

accurate visual measurements. Past work record is an important factor in qualifying for Specimen Preparation II.

PHYSICAL DEMANDS: Occasional heavy lifting.

WORK CONDITIONS: Exposure to cuts from broken glass and possible health hazard from handling specimens.

INITIATIVE AND RESOURCEFULNESS: Initiative required to process large volume of incoming specimens within time limits, to plan own work schedule in deciding specimens, and to indicate which specimens need to be followed up on prior to processing. Must be resourceful to locate missing specimens or test requests, and to achieve special handling of certain specimens.

RESPONSIBILITY: Responsible for accurate measurement and identification of divided specimens, proper identification and preparation of specimens for laboratory testing. Errors can make test result invalid and cause re-test to be necessary, which is extremely damaging to Laboratory Procedures' relationship with its clients. Human life may be dependent upon accuracy of identification and preparation of specimens.

SUPERVISION EXERCISED: May act as supervisor or lead in specimen preparation area in absence of supervision.

UNIT TITLE: LABORATORY ORIENTATION

Overview

Of all the units of the Core section of the course this unit has the potential for the greatest amount of individualization, thus the greatest dependence upon a pre-test. The performance objectives for the individual segments can summarily be referred to as the most basic laboratory skills prerequisite to any continued laboratory work. It should be emphasized that the mastery of these skills will necessarily be exhibited time and time again during the progression through the course, and that there will be a continuing evaluation relative to a demonstration of their mastery. The determination to include these skills resulted from interviews of potential employers.

Stressing the high level of mastery, in some cases one hundred percent (100%), should help develop the concept that the classroom laboratory will, as much as is possible, simulate an actual laboratory. Nor should it be unreasonable to expect a continued high level of competence in these laboratory skill areas. The nurture of the combined concepts of the reality to be faced outside the classroom and the responsibilities that these realities demand must of necessity begin with this unit, if not sooner. It may not need stating, but in some manner the idea of responsibility must result from an awareness of the critical nature -- in some cases life and death -- of the decisions to be derived from the laboratory test results. A concept of

responsibility based simply on adherence to a set of regulations should be avoided.

Inasmuch as the first laboratory manipulations occur in this unit, a comment from a prior unit is worth restating -- the assurance that the student has a confident grasp of the basic laboratory skills is of far greater importance than the amount of time required to instill this confidence. These skills will function as integral components of the laboratory simulations.

This would be a good time to acquaint the students with the concept of the laboratory simulation. In the simulations they will be functioning in a role defined by a job description. They will work cooperatively with other persons in the laboratory with other job descriptions:

I. Unit Title LABORATORY ORIENTATION

A. Segment Title Safety in the Laboratory

B. Student Performance Objectives

1. Identify and observe safety regulations related to the following laboratory procedures: heating liquids (flammable/non-flammable), pouring liquids, hot glass (bending), mixing chemicals, acids and bases, glass tubing, pipettes, centrifuge, burners, test tubes and any other related laboratory procedures/items.
2. Identify by location/function, and use when appropriate, the following safety apparatus: goggles, aprons, fume hood, fire extinguisher, fire blanket, eye wash, and any other items noted.
3. Perform simple first-aid for any laboratory injuries. (Note that the first step is to report accident to the instructor.)
4. Identify and observe laboratory regulations for waste disposal and cleanliness.

C. Segment Resources (Title/Page numbers)

Interdisciplinary Approaches to Chemistry Reactions and Reason (IAC-R & R), p. 91
Chemical Technicians' Ready Reference Handbook, Index
Handout Sheet of Laboratory First-Aid
Safety Worksheet

D. Introduction/Motivation.(Comments)

Continuation in course is contingent upon passing safety test at 100% mastery level.
Laboratory grades both now and in the future will reflect continued observance of the laboratory and safety regulations.

I. Unit Title LABORATORY ORIENTATION

A. Segment Title Labware/Apparatus Identification & Use

B. Student Performance Objectives-

1. Correctly operate and read Dial-O-Gram (vernier scale) balance.
2. Correctly operate and read analytical balance.
3. Select appropriate burner for intended laboratory procedure and correctly light and adjust it.
4. Identify visually and by function the following labware: flasks (volumetric, Erlenmeyer, boiling), beakers, test tubes (chemical, culture), graduated cylinders, pipettes, petri dishes, mortar and pestle, crucibles, and any other items as noted.

C. Segment Resources (Title/Page numbers)

Molecules to Man (MtM), p. 527
Labware Identification, Audio-Tutorial (A/T)
Vernier Scale Worksheet
Analytic Balance Guide

D. Introduction/Motivation (Comments)

Continuation in course is contingent upon successful completion of the labware identification and laboratory skills test at the 100% mastery level.

Laboratory grade will reflect continued ability to identify proper labware and correctly operate the laboratory apparatus.

ANALYTIC BALANCE (Sartorius 2842) GUIDE

Steps in weighing using the analytic balance. (Refer to accompanying page of diagrams.)

1. Adjust zero point.
 - a. Move arrest lever (A) to release (position 3, Fig. 2).
 - b. Turn zero-point adjustment knob (B) until reading mark coincides with the zero line of projection scale (Fig. 3).
 - c. Move arrest lever (A) to arrest (position 1, Fig. 2).
2. Pre-weigh.
 - a. Place sample on balance pan -- close door.
 - b. Move arrest lever (A) to pre-weigh (position 2, Fig. 2). The coarse weight can now be seen on the optical scale (Fig. 4).
 - c. Read the number below the index mark. Weight: 72-g.
3. Dial the weight knobs (C, D) to the number reading below the index mark. (Fig. 5).
4. Weigh the sample.
 - a. Move the arrest lever (A) to release (position 3, Fig. 2).
 - b. Allow the projection scale to stop moving.
 - c. Move the micrometer knob (E) until the index mark coincides with one line of the projection scale. Example weight: 72.5234 g. (Fig. 6).
 - d. Arrest the balance.
 - e. Remove the sample.
 - f. Zero the balance.

Basic Rules

1. Never place chemicals directly on pan; always use weighing paper (take into account its "weight" when doing computations).
2. Use forceps to place samples on and remove them from the pan.
3. "Weigh" with the glass doors closed.
4. Always zero balance after use.
5. Keep balance and table clean.

sartorius

Fig. 1

- A - Arrest lever
- B - Zero point adjustment knob
- C - Knob to dial weights 1 - g
- D - Knob to dial weights 10 - 150g
- E - Micrometer (fine setting knob)

Fig. 6

I. Unit Title LABORATORY ORIENTATION

A. Segment Title Biology/Chemistry: Human Activities

B. Student Performance Objectives

1. Distinguish between observation and interpretation.
2. Distinguish between qualitative and quantitative observations.
3. Identify observations that can indicate that a reaction has occurred between two substances.
4. Observe physical and chemical phenomena and accurately report observations. (IAC-R&R:A-2, MtM:l-B)*
5. Devise a classification scheme for any given set of materials. (IAC-R&R:A-4, IIS:Bio:2-6)*
6. Report laboratory observations accurately (honestly) and neatly.

*Parenthesized references are applicable laboratory investigations.

C. Segment Resources (Title/Page numbers)

IAC-R&R, p. 12-17

MtM, p. 2-14; 29-36

Ideas and Investigations in Science: Biology (IIS:Bio), Vol. 2

Introduction to Segment (Tape)

Variation on A-2 -- Kit w/numbered tubes (keyed for replacement) A/T

"Techniques for Recording Observation" A/T

I. Unit Title LABORATORY ORIENTATION

A. Segment Title Biology/Chemistry: Measuring

B. Student Performance Objectives

1. Explain the difference between mass and weight.
2. Measure the mass and volume of a solid object, reporting both values to the precision of the respective instruments used. Use both the Dial-O-Gram and the analytical balances when applicable.
3. Measure the volume of a liquid reporting the value to the precision and correct choice of the respective instruments used. Use volumetric flasks, graduated cylinders, and pipettes (LAP: Liquid Volume Measurement).
4. Conduct a quantitative investigation (MtM 1-7 or 1-A) and record the results.
5. Construct a graph of the data obtained from either of the above investigations containing paired values (i. e., mass-volume, volume-time, volume-concentration).
6. Read data from a graph of paired values.
7. Use metric units to report laboratory measurements.

C. Segment Resources (Title/Page numbers)

IAC-R&R, p. 18-23

MtM, p. 13-27

*Supplementary for students needing further practice/instruction.

FIRST AID IN THE LABORATORY

1. The first and MOST basic rule of First-aid is the prevention of accidents and self-protection. Be alert at all times and use your best common sense. CARELESSNESS IS THE MOST COMMON CAUSE OF ACCIDENTS.

Retain this and your safety regulations worksheet and follow their rules diligently.

2. In case an accident does occur always get help, preferably the instructor. For corrosive liquids/chemicals in the eyes or fire, get nearest available person for help IMMEDIATELY. (Likewise be prepared to help anyone else.)
 - a) Corrosive liquids/chemicals in eyes: wash eyes for several minutes with eye wash. IMMEDIATELY have someone else tell instructor.
 - b) Fire (clothes): wrap/get wrapped in fire blanket.
 - c) Fire (other): if burner is involved, turn off gas, extinguish with fire extinguisher.
 - d) For any injuries get First-aid from the instructor before going to the school nurse.

SAFETY WORKSHEET

Directions: Using available resources including your text, reference books, and audio tapes in the classroom and Science Resource Center, list all of the rules pertaining to the following topics and if applicable an item's location.

Goggles -

Laboratory apron -

Fire extinguisher -

Fire blanket -

Use of pipette -

Tasting/smelling chemicals -

SAFETY WORKSHEET - page 2

Mixing chemicals-

Use of test tube-

Use of burner-

Use of fume hood-

Working with glass tubing
(include thermometers)-

Acids and bases-

Centrifuge-

Work area-

"LABORATORY INVESTIGATION AND RECORDING PROCEDURES"

(Script)

While listening to this tape, you should have the worksheet from your syllabus entitled "Laboratory Investigation and Recording Procedures". Unless there are specific instructions telling you to follow another procedure, the procedure that is now being elaborated is the one that you will use for all lab investigations.

In order to obtain materials for a given experiment or investigation, go to the central storage area and submit a request to the laboratory attendant for laboratory materials by investigation number. The laboratory materials are contained in boxes referred to as lab kits. For example, your first experiment is A-2. In getting the materials for this experiment you would request lab kit A-2. When you get the lab kit you will see a card listing the contents; check to make sure that the actual contents do in fact match with the list. Do not accept a lab kit which is incomplete. Make sure that the lab attendant has it completed; also report any discrepancies to your instructor. You will then be asked to initial your card indicating that you have accepted the lab kit and that it does contain a full complement of items listed.

After you have completed the investigation, return the lab kit to the central storage, check off your name. Make sure that all items

are in the kit and that they are all cleaned.

For the purpose of recording and maintaining your data a regular quadrille line laboratory book is preferred. No Peechee folders or any other loose-leaf type folders are acceptable. If you want to get other than the quadrille line laboratory book, check with your instructor first to obtain his approval. Prior to actually conducting the investigation, make a note of all of the hints that may be found either in the textbook, in the introductory unit tapes, or in your syllabus. You will use experiment A-2 again as an example.

Checking the syllabus for experiment A-2 note that instructions are given for the proper salvage of the metal. These are the kinds of things to look for. When making observations during the progression of an investigation always record all data as you collect it. Do not presume that you are going to remember to record it later. The following steps should allow for easier collection and recording of your data:

1. Read the instructions for the experiment to determine the categories of data that you are planning to collect and to see if they have any interrelationship; for instance, volume with time, color change with volume, or temperature change with time. There may be any number of possible combinations of these. Note in your lab workbook any that you find. In most instances the instructions will identify sample tables.

2. Based on your reading of the experiment and if no example is given, devise some means for collecting your data. In most instances this will just be a simple table, and the directions for the experiment will inform you as to the proper means of recording the data collected.
3. Make sure that you label your data. Again, as I stated previously, do not assume that you will remember what the data categories are. Record them -- a series of numbers without labels will be of no value to you or anyone else.
4. Perhaps the most important idea, if any one idea regarding data collecting and recording can be labeled most important, is that there are no wrong results although the degree of validity may vary. You record what you see. If you have questions about the reliability or validity of your data, you can check with other people. You may want to duplicate your experiment. The most important thing that you can do if there is a variation is to determine why such a variation did occur and what means can be taken to increase the validity.
5. To this point your record of data may be very jumbled and you may have a rather messy notebook. Do not be concerned if you can read it and make sense from it. The final presentation of data in your lab book, however, whether it is a table, a graph, a chart, or any other type of display, must be NEAT.

If the display requires straight lines use a straight edge to do your drawing. Do not free hand these final presentations of data. The final presentation also is not complete unless it has been fully labeled. A name must be given to the display and each data item must be labeled regarding its value. Refer to the worksheet for examples of correct and incorrect data presentations. Note that in order to make tables neater, the headings include the units of measurement in parentheses; for instance, (ml.), (gm.), ($^{\circ}$ C). If these units are included in the heading, they do not have to be repeated in the columns or rows of data. The numbers should be whole numbers with fractions expressed as decimal fractions. If the decimal fraction is less than one always precede the decimal point with a zero. Note the examples in the worksheet.

6. When there are calculations, if they are hand calculations, include these in your laboratory book. If they are done on the computer, tape or staple the computer calculations on a page. If the computer calculations need labeling, label the data that has been inserted into the computer and label the answers that the computer has given you.
7. Complete the practice exercises and self-check them with the answer sheet available from your instructor.

8. If you feel that you need some help or review on the proper techniques of producing graphs, there is an audio-tutorial unit entitled "Graphs". Complete the practice exercises on the worksheet and have them approved by your instructor.

If there are any questions regarding this particular tape, see instructor.

This unit provides the opportunity to stress the continuing evaluation of the laboratory and safety techniques introduced in Unit III. The emphasis upon a confident and effective performance of laboratory manipulations as initiated in the last unit should continue with additional reinforcement.

At the risk of waxing eloquent without statistical documentation, the following will be declared: There is a greater possibility of getting "correct" results consistently when the emphasis is upon proper laboratory techniques than when the emphasis is placed on the result rather than the procedure. This is not to say that the results should not be considered, but rather, that as so often happens, they should not be considered as ends in themselves. It is perceived that as skill proficiency increases the validity of the results will likewise increase.

The individualized approach lends itself to this philosophy. The student can utilize alternative investigations and take the amount of time necessary to achieve success for any given psychomotor skill. Any variety of Chemistry Laboratory Workbooks and/or the instructor's own experiences can provide a source for the alternative exercises to be used for additional practice.

This and the following unit are the ones with the purpose of developing those skills which the student will utilize during the second

semester in his/her area of specialization. The completion of Unit II and the initial selection of the student's choice of an area of specialization should occur within the time span covered by this unit.

I. Unit Title INTRODUCTORY CHEMISTRY

A. Segment Title Investigating Physical Properties

B. Student Performance Objectives

1. Explain the importance of objective unbiased observations in science and list ways bias can be introduced.
2. Distinguish between pure substances (elements and compounds) and mixtures.
3. Separate the components of a mixture, using processes appropriate to the mixture such as dissolving, subliming, filtering. (A-11)
4. Calculate the mass percentage composition of a mixture from measured values. (A-10)
5. Determine the relative solubility of a substance in various solvents and at different temperatures. (A-11)
6. Determine the density of a substance from a mass-volume graph, or calculate the density from direct mass-volume measurements, and express the density in correct units. (A-13)
7. Determine freezing and boiling points of pure liquids and mixtures. (A-13)
8. Use the Handbook of Chemistry and Physics to compare experimental and accepted values.
9. Formulate an explanation for deviations between laboratory results and accepted values.
10. Describe or recognize features of the kinetic molecular theory.
11. Account for the observable physical properties and changes of state of solids, liquids, and gases by means of the kinetic molecular theory.

12. Identify an unknown substance from collected data on its density, boiling point, freezing point, and solubility. (A-18)

C. Segment Resources (Title/Page numbers)

IAC-R&R (Investigations A-10, A-11, A-13), p. 24-35

Handbook of Chemistry and Physics

Segment Introduction (Tape)

"Definition of Chemistry and the Use of the Centigrade, Fahrenheit, and Kelvin Temperature Scales" (A/T)*

An Audio-Tutorial Introduction to Chemistry, Houghton Mifflin, Co.

*Supplementary for students needing further practice/instruction.

I. Unit Title INTRODUCTORY CHEMISTRY

A. Segment Title Chemical Changes

B. Student Performance Objectives

1. Distinguish between chemical analysis and synthesis. (A-20)
2. Recognize evidence for chemical change. (A-20, 21)
3. Demonstrate decanting, removal of moisture from a precipitate, and dissolving a precipitate. (A-21)
4. Classify a solution as either acidic, basic, or neutral, given the solution and pH paper and/or a pH meter. (A-21, 7-A)
5. Write word and symbolic equations.
6. Classify chemical reactions by type from among oxidation-reduction, neutralization, precipitation.
7. Determine the relative masses of the elements in a binary compound, given data similar to those in this experiment. (A-22)

C. Segment Resources (Title/Page numbers)

IAC-R&R (Investigations A-20, A-21, A-22), p. 36-52
MtM, p. 133-34

"Using the pH Meter" Worksheet

Programmed Unit in Chemistry: Chemical Symbols,

Programmed Unit in Chemistry: Chemical Formulas and
Names, Prentice-Hall.

"Decimals, Signed Numbers, and Solving Simple Linear
Equations"* An Audio-Tutorial Introduction to
Chemistry, Houghton Mifflin Co.

"Electrolytes, Acids, Bases and Salts"* An Audio-Tutorial/
Introduction to Chemistry, Houghton-Mifflin Co.

*Supplementary for students needing further practice/instruction.

I. Unit Title INTRODUCTORY CHEMISTRY

A. Segment Title The Language of Chemistry

B. Student Performance Objectives

1. Differentiate between an ion and a neutrally charged atom.
2. Interpret formulas in terms of elements or ions present and their relative amounts.
3. Write formulas for simple compounds.
4. Write balanced equations for reactions stated in symbolic or sentence form.
5. Recognize the importance of an international system for nomenclature.

C. Segment Resources (Title/Page numbers)

IAC-R&R, p. 61-66

MtM, p. 133-34

Programmed Unit in Chemistry: Balancing Chemical Equations,
Prentice-Hall.

"Chemical Equations" Worksheet

PH METER - USER'S GUIDE

Procedure 1. Rotate the switch to STANDBY. Allow to warm up 30 min.

CAUTION When the instrument is not in use, keep on STANDBY.

2. Raise the electrode from the storage solution in the beaker.

CAUTION Always keep the electrodes in distilled water when not in use.

3. Rinse the electrodes thoroughly with distilled water. Blot with absorbent tissue.

4. Determine the temperature of the buffer solution with a thermometer. If the unit has a TEMPERATURE calibration, adjust it to correspond with the buffer temperature.

5. Calibrate the meter by immersing the electrodes in a buffer solution of known pH.

a. Rotate the selector switch to pH.

b. Turn the adjustment knob to CALIBRATION to read the pH of the known buffer solution.

CAUTION Do not allow the electrodes to touch the sides of the beaker.

6. Rotate the selector knob to STANDBY.

a. Raise the electrodes carefully.

b. Remove the buffer solution

c. Rinse the electrodes thoroughly with distilled water.

d. Blot the electrodes with absorbent, lint-free tissue.

7. Place the beaker of solution to be tested beneath the electrodes.

8. Lower the electrodes carefully into the solution.

9. Rotate the selector knob to pH. Read the pH of the

pH METER - USER'S GUIDE (contd.)

solution directly from the meter. Record the value.

10. When the determination is complete:
 - a. Switch to STANDBY. Raise the electrodes.
 - b. Rinse the electrodes with distilled water.
 - c. Store the electrodes in distilled water.

This unit is a continuation of Unit IV with an emphasis upon related life functions. Although chemistry provides the vehicle for the presentation of life processes, it (chemistry) should be viewed in a complementary role rather than either a primary or supplementary position.

The Introduction for the Teacher's Guide of Molecules in Living Systems very aptly and succinctly states the position that ought to be maintained during this unit: "the complexity of the subject should not be a barrier to enjoying the study of biochemistry . . ." In fact the entire "Introduction" should be required reading for all instructors inasmuch as it more than adequately presents the basic philosophy of particular reference to this complex subject area.

While the student is in the process of completing this unit he/she should be directed to finalize the selection of a choice of specialization for the second semester. The instructor will be required to do some counseling to assist the students to draw together their experiences to date. This counseling should emphasize the contribution of each unit to the choice to be made. Reference may be made to the "Course Introduction" and second semester "Overview". It must be noted that a decision not to continue for the second semester is a valid decision.

I. Unit Title MOLECULES OF LIFE

A. Segment Title Considering Life Processes

B. Student Performance Objectives

1. Identify the functions and basic structural characteristics of the biomolecules of each biochemical class and cite examples of each.
2. Define isomerism.
3. Distinguish between the functional groups of alcohols, aldehydes, and ketones.
4. Draw electron dot and line structures of simple organic molecules.
5. Recognize the structures of the carboxylic acid, amine, and peptide groups and show how the latter is formed from the two former groups.
6. Distinguish between amino acids by recognizing different functional groups.
7. Recognize carbohydrates in general by their complement of functional groups.
8. Describe types of carbohydrates (mono-, di-, and polysaccharides) and give an example of each by name (not structure), e. g., glucose-monosaccharide. (B-6)
9. Identify by name carbohydrates used as energy storage compounds or used as structural compounds.
10. Recognize examples of lipids (saturated and unsaturated) and identify their functional groups.

C. Segment Resources (Title/Page numbers)

IAC-R&R - Molecules in Living Systems (MLS), p. 12-39
MtM, p. 144-149, 684, 686, 687

"Molecules and Processes of Life" (A/T) PLAN: Biology,
Westinghouse Learning Corporation

I. Unit Title MOLECULES OF LIFE

A. Segment Title Properties & Reactions of Biomolecules

B. Student Performance Objectives

1. Given the structure of a biomolecule, predict on the basis of functional groups present, its solubility in polar and non-polar solvents. (B-10)
2. Distinguish experimentally, monosaccharides, amino acids, proteins, and lipids, through physical and chemical tests. (B-13)
3. Define acids and bases according to Brønsted-Lowry theory.
4. Explain the acidic and basic properties of amino acids.
5. Identify the acidic and basic parts of a zwitterion.
6. Discuss Miller's experiment simulating primitive earth conditions.
7. Explain the hypothesis of coacervate formation. (7-B)

C. Segment Resources (Title/Page numbers)

IAC-MLS, (Investigations B-10, 13), p. 40-50
MtM, (Investigation 7-B), p. 134-42

I. Unit Title: MOLECULES OF LIFE

A. Segment Title Enzymes: Where the Action Is

B. Student Performance Objectives

1. List and describe the properties of enzymes including a definition of the "active site".
2. Compare properties of enzymes and catalysts. (B-16)
3. Distinguish experimentally between catalysts and non-catalysts. (B-16)
4. Explain, in general, how enzymes are structured and the ways that the structures of enzymes can differ.
5. Carry out calculations that relate pH with H^+ concentration and with OH^- concentration. (Exercise B-22)
6. Explain why a change in pH will cause a change in enzyme activity.
7. Determine optimum pH for an enzyme reaction given the experimental data. (B-23)
8. Experimentally determine the reaction rate of a given enzyme and plot reaction rate vs. pH. (B-25)
9. Demonstrate the use of a pipette.
10. Carry out an experiment which shows the relationship between substrate analogs and reaction rate. (B-27)
11. Cite examples from daily living and discuss the consequences of protein denaturing. (B-20)
12. Determine the effect of temperature on reaction rate. (B-29)
13. Explain how temperature effects of enzymatic reactions would differ from non-enzymatic reactions.

C. Segment Resources (Title/Page numbers)

IAC-MLS (Investigations B-16, 20, 22, 23, 25, 27, 29),
p. 51-81
MtM, p. 150-52

I. Unit Title MOLECULES OF LIFEA. Segment Title Metabolism, the Community of Enzyme Reactions

B. Student Performance Objectives

1. Explain and distinguish between the terms "metabolism" and "digestion".
2. Determine if a given enzyme will hydrolyze gelatin. (B-31).
3. Identify and cite examples of metabolites and cofactors.
4. Explain the function of some vitamins in metabolism.
5. Outline an experimental procedure for demonstrating the activity of ATP.
6. Identify the events of the light reaction and the dark reaction of photosynthesis that result in the transformation of light energy into chemical energy.
7. Explain where most of the ATP from glucose metabolism is generated.
8. Explain why oxygen is so important in the metabolism of many organisms. (10-A)
9. Measure the amount of an acid by titration. (B-39)

C. Segment Resources (Title/Page numbers)

IAC-MLS (Investigations B-31, 39), p. 81-98

MtM (Investigation 10-A), p. 152-57, 186-191, 690-92, 700-02

"Respiration/Glucose Metabolism"* A/T

"Photosynthesis"* (A/T)

"Energy Transformation: U-3" (A/T) PLAN: Biology,
Westinghouse Learning Corporation

*Supplementary for students needing additional practice/instruction.

I. Unit Title MOLECULES OF LIFE

A. Segment Title Putting It All Together

B. Student Performance Objectives

1. Demonstrate the correct use of the microscope by being able to locate given specimens in the microscope field; predict the observable changes of position of a specimen when viewed in the field and moved on the stage. (1-C)
2. Identify from a diagram, model, micrograph, or description the following nuclear structures of a cell: nucleus, nuclear envelope, nucleolus, chromatin (chromosome).
3. Determine the functions of the nuclear structures listed in objective #2.
4. Identify from a diagram, model, micrograph, or description the following organelles located in the cytoplasm of a cell: plasma membrane, mitochondrion, endoplasmic reticulum (smooth and rough), Golgi Apparatus, vacuole, ribosome.
5. Determine the functions of the cytoplasmic structures listed in objective #4.
6. Compare and contrast between the structures of plant cells and animal cells.

C. Segment Resources (Title/Page numbers)

MtM (Investigation 1-C), p. 236-46

"Cellular Basis of Life" (A/T) PLAN: Biology, Westinghouse Learning Corporation

An Atlas of Fine Structure: The Cell, Its Organelles and

Inclusions, Don W. Fawcett, W. B. Saunders Company

The Living Cell: Readings from Scientific American

I. Unit Title MOLECULES OF LIFE

A. Segment Title The Organization of Cellular Activities

B. Student Performance Objectives

1. State two functions of the cellular membrane.
2. Identify and distinguish between the different processes of transport across a membrane.
3. Perform a separation of different sized molecules by dialysis. (B-42) (Alternative: 8-B)
4. Contrast the activities of the mitochondria and chloroplasts.
5. Separate particles of different densities by the density gradient method. (B-47)
6. Given a DNA sequence, be able to pair bases and "synthesize" an RNA sequence.
7. Explain the interaction between DNA, RNA, and the ribosomes to synthesize proteins.
8. Compare and contrast the mitotic and meiotic processes of cell division. (13-B)

C. Segment Resources (Title/Page numbers)

IAC-MLS: (Investigations B-42, 47), p. 99-121
MtM (Investigation 8-B, 13-B), p. 198-224, 246-51, 262-64
"Cellular Events" (A/T) PLAN: Biology, Westinghouse Learning Corporation

Although titled "Second Semester - Overview" this could easily be considered an introduction for a second course. "Be prepared" becomes more than a Boy Scout Motto; at this point it becomes an admonition both to the instructor and to the student. For the instructor it should prompt him to assess realistically the educational setting in terms of personal involvement, course organization, and the materials and facility resources. Essentially this assessment should have preceded the initiation of the first semester of the course and continued as an ongoing process. For the student it is an embarking into a simulated application growing out of his first semester experience and decisions.

As the instructor assesses the educational setting, there are several factors to consider and constraints to be determined. It would be valuable to the success of the program to place more self-constraints on it initially than appear to be necessary.

Considerations:

1. It will be during the second semester more than at any other time that the ability to cope with individualization will occur. For those with experience in the individualized classroom, the constraints will be fewer. Those persons who have had little or no experience with an individualized approach would be advised to limit the available career simulations to one or two. Appropriately these

would be the ones for which the greatest student interest/employment potential was exhibited. Likewise the students should be made aware of the anticipated conditions of the second semester while completing the Core.

2. Integral to the first consideration is one which determines the potential and useability of the physical setting. Just as persons have different tolerance levels for accommodating to a variety of activities occurring simultaneously so also does the classroom/laboratory and complementary facilities. One must first achieve a sense of the totality of the events which will be taking place and proceed to organize the laboratory accordingly. With a little visionary creativity the flexibility of the classroom can usually be "stretched" to afford greater accommodation than its original planner ever had in mind. To help minimize some of the facility/laboratory apparatus constraints, those persons interviewed unanimously counseled that the lack of sophisticated equipment should not be considered a constraint. Sophisticated apparatus could be simulated as well as experiences, i. e., the use and understanding of the Spectronic 20 could well substitute for the use of any computerized automated colorimetric apparatus.

3. The ~~experiences~~ experiences to be provided will be determined in part by the above consideration but as has been implied, like a broken record, must also reflect the local situation. The units included for

use in this section of the guide have not been given unit nor segment numbers. This is intentional. The numbering has been eliminated since these units are to be selected and tailored into an individually functional course. Titles have been retained to assist in this fashioning process, but all units within a given category may not be necessary. A "cut and paste" method of matching the Student Performance Objectives with the needs of the local situation should be the criteria determining their selection and inclusion. Likewise, in no sense are these to be considered comprehensive and applicable to every situation. They are simply those developed for use in the pilot program at Simi Valley High School and it is anticipated that they will be revised and supplemented as the needs arise.

Although inherently implied it is practically demanded that the simulations of this portion of the course focus on actual problems anticipated to be encountered in the potential sites of employment. These can best be determined as the result of direct contact with possible employers. As the result of personal interviews, it was determined that the type of experience (problem solving), i. e., analysis of water quality, rather than the sophistication of laboratory apparatus, was the more significant feature. It is intended that a "Cover Unit" will be used or developed to organize the second semester program with complementary segments (Performance Objectives) selected which apply to any of the simulations assigned.

Three samples have been provided.

In summary, it would appear to be obvious that no one consideration can be examined independently of any of the other considerations. Each affects and is affected by decisions resulting from any of the considerations. The value of this segment of the course can only be determined by evaluating how closely the "tailored product" correlates with the "on the job" experiences of the graduates. This program will of necessity require ongoing evaluation in terms of graduate follow-up and revisions made to coincide with both graduates' and employers' recommendations.

COVER UNIT 1

I. Unit Title LAB ASSISTANT (Medical)

A. Segment Title Laboratory Simulation

B. Student Performance Objectives

1. Distinguish between the functions of a primary and a reference laboratory.
2. List the job functions of positions within the simulated medical reference laboratory.
3. Function in an assigned position within the laboratory simulation and assist in other areas as requested and work load allows.
4. Maintain a record of assignments completed.
5. Complete study segments as assigned.
6. Demonstrate proficiency in the use and understanding of apparatus required in fulfillment of assigned job duties.
7. Exhibit a responsible attitude while functioning in assigned positions.

C. Segment Resources (Title/Page numbers)

Job Description (Laboratory Procedures Division of Upjohn Co.)
Specimen Preparation, Reagent Preparation, Laboratory
Assistant, Laboratory Glassware Cleaner, Prescribed
Study Segments

COVER UNIT 2

I. Unit Title LAB ASSISTANT (Non-Medical)

A. Segment Title Laboratory Simulation

B. Student Performance Objectives

1. Determine the characteristics of a variety of non-medical laboratories -- quality control, chemical, consumer products testing, food, etc.
2. Function as an assigned lab assistant in a situation simulating the type of laboratory chosen.
3. Maintain records of analyses undertaken with results properly recorded on appropriate report forms.
4. Complete study segments as assigned.
5. Demonstrate proficiency in the use and understanding of apparatus required in fulfillment of assigned job duties.
6. Exhibit a responsible attitude while functioning in assigned positions.

G. Segment Resources (Title/Page numbers)

Prescribed Study Segments

COVER UNIT 3

I. Unit Title PREPARATION FOR POSTSECONDARY EDUCATION

A. Segment Title Program Design

B. Student Performance Objectives

1. State postsecondary goals and list available educational resources for their fulfillment.
2. List the prerequisites and recommendations to be completed which will facilitate acceptance into the desired postsecondary program.
3. Utilizing available study segments with the assistance of the instructor, develop a course outline which will fulfill prerequisites.
4. Complete study segments and participate in any simulated situations which may be prescribed by the instructor.

C. Segment Resources (Title/Page numbers)

Prescribed Study Segments

I. Unit Title LAB ASSISTANT

A. Segment Title Periodicity: A Chemical Calendar

B. Student Performance Objectives

1. Describe changes in ionization energy as a periodic function.
2. Distinguish between metals and nonmetals on the basis of their physical properties.
3. Determine the relation between ionization energy and atomic number for a given chemical family and chemical period.
4. Illustrate the atomic number and ionization energy data relationship by means of a graph. (IAC-D & P:I-4)
5. Given an element, predict its relative chemical reactivity based on its position in the periodic table.
6. Given an element, use the relationships in the periodic table to predict its valence.
7. Using an element's valence, write formulas of compounds such as oxides and halides.
8. Perform a redox reaction experiment to determine relative chemical reactivity of the halogens. (IAC-D & P:I-9)

C. Segment Resources (Title/Page numbers)

IAC - Diversity and Periodicity (D & P), p. 13-37

I. Unit Title LAB ASSISTANT

A. Segment Title Bioinorganic Chemistry

B. Student Performance Objectives

1. Give examples or write equations to illustrate how inorganic materials can act as environmental pollutants.
2. Determine the effect on algal growth of the presence or absence of essential trace metals. (IAC-D & P:I-42)
3. Propose an experimental procedure to quantitatively determine and record the changes in the algal growth of investigation I-42.
4. Explain the function of metallic elements in biochemical enzymes.
5. Explain the function of hemoglobin and myoglobin in respiration.
6. Illustrate by equation the redox behavior of Fe in the cytochrome c system.

C. Segment Resources (Title/Page numbers)

IAC-D & P, p. 96-106

The Human Organism, McGraw Hill Co., p. 132, 322-27, 404-09

I. Unit Title LAB ASSISTANT: TESTING

A. Segment Title Structural Chemistry of Metals and Their Compounds

B. Student Performance Objectives

1. Describe and explain the malleability of metals in terms of their metallic bonding.
2. Identify and test physical properties of metals and non-metals. (IAC-D & P:I-12)
3. Recognize the properties of metals as determined by the arrangements of their atoms and electrons.
4. Construct three-dimensional models of metallic lattices using plastic balls and boxes. (IAC-D & P:I-14).
5. Explain malleability and ductility of metals; relate these properties to the ease of "layer glide" in the crystal system.
6. Construct three-dimensional models of ionic lattices using plastic balls and boxes. (IAC-D & P:I-16-18)
7. Compare the physical properties of metals and nonmetals to the physical properties of ionic compounds.
8. Given an ionic crystal, explain its physical properties in terms of its ionic lattice.

C. Segment Resources (Title/Page numbers)

IAC-D & P, p. 38-54

Industrial Analysis, Franklin Pub. Co., p. 333-414

I. Unit Title LAB ASSISTANT

A. Segment Title Inorganic Molecules

B. Student Performance Objectives

1. Identify covalent bonds as those that result from the sharing of electrons.
2. Predict shapes of molecules, including those with non-bonding pairs of electrons.
3. Write line formulas and electron dot structures for molecules. (IAC-D & P:1-22).
4. Relate the physical properties of molecules to their molecular geometry.
5. List common important inorganic molecules and indicate why they are important.

C. Segment Resources (Title/Page numbers)

IAC-D & P, p. 54-67

I. Unit Title LAB ASSISTANT

A. Segment Title Chemistry of the Transition Elements

B. Student Performance Objectives.

1. Given a compound or ion, determine the oxidation state of the elements composing it.
2. Write equations to illustrate the oxidation and reduction of elements.
3. Given a coordination compound or complex, identify its two components.
4. Synthesize coordination compounds. (IAC-D & P:I-31)
5. Determine the effect of different metal ions on the sudsing ability of soap solutions. (IAC-D & P:I-34)
6. Determine the effectiveness of different chemicals as water softeners. (IAC-D & P:I-35)
7. Use solvent extraction to separate a mixture of compounds. (IAC-D & P:I-37)
8. Test qualitatively for the presence of absence of lead in a sample. (IAC-D & P:I-39)

C. Segment Resources (Title/Page numbers)

IAC-D & P, p. 76-96

Industrial Analysis, p. 281-329

I. Unit Title LAB ASSISTANT

A. Segment Title Organic Chemistry

B. Student Performance Objectives

1. Identify the bond type found in most organic compounds.
2. Distinguish between single, double, and triple bonds; relate these bonds to the number of electron pairs shared.
3. Discuss the formation of organic compounds from inorganic compounds; interpret appropriate equations in the discussion.
4. Explain the significance of the formation of fossil fuels from once-living materials.
5. Distinguish between an organic compound and an inorganic compound by means of their combustibility.
(IAC-F & F:0-8)
6. Explain fractional distillation.
7. Given a two component mixture, separate it by means of fractional distillation. (IAC-F & F:0-10)
8. Given several compounds, identify by structure those most likely to undergo substitution and addition reactions.
9. Identify saturated molecules compared with unsaturated molecules as determined by their reaction rate with KMnO_4 . (IAC-F & F:0-13)
10. Predict reactivity of compounds based upon their structure; and then verify the predictions by experiment.
(IAC-F & F:0-13)

C. Segment Resources (Title/Page numbers)

IAC - Form and Function F & F, p. 12-36

I. Unit Title LAB ASSISTANT

A. Segment Title Alcohols, Esters, and Acids

B. Student Performance Objectives

1. Describe oxidation-reduction on the basis of a loss or gain of oxygen or hydrogen.
2. Explain the increase in boiling point of alcohols compared with hydrocarbons in terms of H-bonding.
3. Given the structure and properties of a variety of compounds and solvents, predict their solubility.
4. Experimentally determine the solubility of common materials in water and organic solvents. (IAC - F & F:0-20).
5. Identify an organic acid and an ester by their structure.
6. Experimentally prepare a specific ester. (IAC-F & F:0-28)
7. Experimentally determine the melting points of a variety of compounds. (IAC-F & F:0-30)
8. Synthesize an aspirin sample comparing its properties with those of commercial aspirin. (IAC-F & F:0-30)

C. Segment Resources (Title/Page numbers)

IAC-F & F, p. 36-71

I. Unit Title PRE-NURSING

A. Segment Title Tissues

B. Student Performance Objectives

1. Visually identify representative examples of epithelial, connective, and muscle tissues when presented in 35 mm slide, microscope slide, or diagram form.
2. Identify these tissues from definitions of structure, location and/or function.
3. Be able to discuss the relationship between the structure and the function of the tissues being studied.
4. Understand and correctly use vocabulary relative to the study of tissues.
5. Explain cartilaginous and membranous bone development.
6. Explain tissue repair and major problems associated with tissue/organ transplants.
7. Distinguish between mucous and serous membranes by definition and cite specific examples of each.

C. Segment Resources (Title/Page numbers)

The Human Organism, p. 68-94

Anatomy and Physiology, p. 46-84

I. Unit Title PRE-NURSING

A. Segment Title Skeleton

B. Student Performance Objectives

1. Identify visually the bones of the human skeleton.
2. Identify visually and verbally five different types of articulations and give examples of each.
3. Understand and use vocabulary relative to the study of the skeletal system.
4. Discuss at least one basic difference between infant and adult skeletons with examples. (Size not an acceptable difference.)
5. Discuss at least three medical problems associated with the skeletal system.
6. Discuss with examples three functions of the human skeleton.

C. Segment Resources (Title/Page numbers)

The Human Organism, p. 98-127

I. Unit Title PRE-NURSING

A. Segment Title Respiratory System

B. Student Performance Objectives

1. Locate and identify the structures of the respiratory system listed within the vocabulary list.
 - a. The structures should be located on the mannequin and/or on a diagram.
 - b. The structures should be identified by function and/or location.
2. Detail the "fate" of a given breath of air by following an O_2 molecule from the nares to the cell tissue and back again.
3. Discuss the function of the chemoreceptors and pressoreceptors.
4. Compare external respiration with internal respiration indicating similarities and differences.
5. Discuss the role of the gas law of partial pressures or tension of gases as they relate specifically to respiration and the transport of gases; be able to compute partial pressures.
6. Discuss at least three specialized respiratory movements.
7. Discuss the mechanism of breathing -- how do you breathe?
8. Summarize the neural control of breathing; include the Hering-Brewer reflex.

C. Segment Resources (Title/Page numbers)

The Human Organism, pp. 420-45

Anatomy and Physiology, p. 369-98

I. Unit Title PRE-NURSING

A. Segment Title Digestive System

B. Student Performance Objectives

1. Name and describe by structure, location and function the parts of the alimentary canal.
2. Name and describe by structure, location and function those parts of the digestive system which are not a part of the alimentary canal accessory organs.
3. List the digestive enzymes, their source, area of activity, substrate, and resultant substance.
4. Discuss the stages of digestion.
5. Discuss the role of peristalsis in digestion.
6. Know at least six vitamins, sources and effects on physiology.
7. Discuss the various changes which occur to food during the process of digestion.
8. Discuss absorption, the type and areas wherein each occurs.

C. Segment Resources (Title/Page numbers)

Anatomy & Physiology, p. 399-465

I. Unit Title PRE-NURSING

A. Segment Title Circulatory System

B. Student Performance Objectives

1. Type blood; A, B, AB, O, and D (Rh).
2. Make a blood count and compare it to "normal counts".
3. Make a differential white blood cell count.
4. List and discuss 10 functions of the blood.
5. Discuss the disorders of the blood; anemia, sickle cell anemia, hemophilia and leukemia.
6. Discuss the clotting mechanism and factors affecting it.
7. Diagrammatically follow a unit of blood through the heart beginning at the vena cavae and ending at the aorta. List and identify the structures through and/or by which this blood-passes.
8. Discuss the cardiac cycle and the activating mechanism.
9. Take blood pressure.
10. Compare arteries, veins, and capillaries regarding their anatomy and function.

C. Segment Resources (Title/Page numbers)

The Human Organism, p. 330-415

I. Unit Title PRE-NURSING

A. Segment Title The Nervous System

B. Student Performance Objectives

1. Describe the structure and function of a spinal motor neuron, spinal sensory neuron and association neuron.
2. Discuss the origin and characteristics of nervous tissue.
3. Discuss the conditions accompanying a nerve impulse.
4. Distinguish between convergence and divergence of nerve impulses.
5. Illustrate and discuss a simple reflex arc.
6. Discuss the chemical transmission of nerve impulses across synapses or from motor end plates to muscles.
7. Describe the structure and function of the central nervous system.
8. Distinguish between cranial and spinal nerves.

TITLE: CAREER PLACEMENT BY WORK SAMPLING FOR THE HANDICAPPED. A RESEARCH REPORT.

PERSONAL AUTHOR: HONSBERGER, TREVA; SHELLEY, MARK

DESCRIPTOR: *HIGH SCHOOL STUDENTS; *HANDICAPPED STUDENTS; SECONDARY EDUCATION; PHYSICALLY HANDICAPPED; MENTALLY HANDICAPPED; LEARNING DISABILITIES; CAREER PLANNING; *VOCATIONAL COUNSELING; *VOCATIONAL APTITUDE; *VOCATIONAL INTERESTS

IDENTIFIER: *WORK SAMPLING

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 131P.; PAGES 41 THROUGH 46 AND PAGE 128 WERE NOT REPRODUCIBLE AND WERE REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION. APPENDED MATERIALS MAY NOT REPRODUCE WELL. BEST COPY AVAILABLE.

ABSTRACT: THE GOAL OF THE PROJECT WAS THE PLACEMENT OF DIVERSELY HANDICAPPED STUDENTS AT THE SECONDARY LEVEL IN SUITABLE VOCATIONAL PROGRAMS WHICH WOULD LEAD TO EVENTUAL EMPLOYMENT. WORK SAMPLING, A VOCATIONAL EVALUATION PROCEDURE UTILIZING "HANDS ON" EXPERIENCES, INTEREST, AND BASIC ACADEMIC SKILLS TESTING TO ASSESS THE CLIENT'S VOCATIONAL POTENTIAL, WAS THE TECHNIQUE EMPLOYED TO DISCOVER APTITUDES OF THESE SPECIAL STUDENTS. TWENTY HOURS OF WORK SAMPLING WERE ADMINISTERED TO 30 STUDENTS, FOLLOWED BY PARENT, STUDENT, AND TEACHER CONFERENCES. AN INSERVICE COMPONENT CONSISTED OF AN INITIAL ORIENTATION TO PARENTS, VISITATION OF THE FACILITIES AT VENTURA AND CAMARILLO, AND A STAFFING SESSION WITH TEACHERS AND EVALUATION STAFF. IT WAS FELT THAT WORK SAMPLING WAS EFFECTIVE IN MOST CASES IN DELINEATING STUDENTS' APTITUDES AND, TO A SOMEWHAT LESSER EXTENT, THEIR INTERESTS. DUE TO TIME LIMITATION, THE ANTICIPATED FOLLOWUP OF PLACEMENT IN CLASSES OR TRAINING PROGRAMS AND/OR ADDITIONAL COUNSELING WAS NOT COMPLETED. RECOMMENDATIONS ARE PRESENTED FOR THE CONTINUATION OF AN EXPANDED PROGRAM WHICH WOULD INCLUDE ADDITIONAL COUNSELING SERVICES, CONFIDENCE-BUILDING PROGRAMS, AND FOLLOWUP PROCEDURES. APPENDIXES TO THE REPORT INCLUDE AN EXCERPT FROM THE DICTIONARY OF OCCUPATIONAL TITLES, DESCRIPTIONS OF CAREER EVALUATION PROGRAMS AT THE TWO WORK SAMPLING SITES, A CAREER PLANNING INVENTORY, AND PROJECT DEVELOPED FORMS. A special thanks to our bus driver, Ellie Beck, for her patience and encouragement with the project staff and students.

Abstract

Funded under Part B of the Vocational Education Amendment (VEA) of 1968, "Career Placement by Work Sampling for the Handicapped" commenced in February, 1976 by the Simi Valley Unified School District under the Department of Instructional Operations. The project's goal was the placement of diversely handicapped students at the secondary level in suitable vocational programs which would lead to eventual employment. The technique employed to discover the aptitudes of these special students was work sampling, which is a vocational evaluation procedure utilizing "hands on" experiences, interest and basic academic skills testing to assess the client's vocational potential. Facilities at the Regional Occupational Program (ROP) of the Ventura County Superintendent of Schools were utilized, while the County of Ventura Health Services Agency Work Evaluation Unit served the more severely handicapped students.

Two vocational technicians were responsible for the implementation of the project. Twenty hours of work sampling was administered, followed by parent, student and teacher conferences. An in-service component consisted of an initial orientation to parents, visitation of the facilities and a staffing session with teachers and evaluation staff.

It was felt that the work sampling was effective in most cases in delineating students' aptitudes and, to a somewhat

lesser extent, their interests. Follow-up, consisting of placement in classes, training programs and/or additional counseling, was difficult due to the time limitation.

The project indicated a need for further work and research in this area, and was for the most part supported by students, parents and teachers.

Preface

In eras past, handicapped individuals were regarded as "demon-possessed" or incurably mentally ill. Fortunately, the human collective consciousness has emerged from these barbaric and medieval diagnoses, and now can see these individuals as capable of productivity and self-fulfillment. A major responsibility of education is to tap and develop these potentials; to help prepare these special students for a meaningful life after high school graduation. To this end, was this project conceived, proposed and implemented.

Although the obvious end of a project of this nature is eventual placement in the world of work, the major benefit of such a program may indeed be a less tangible, measurable one. The success a student experiences in a hands-on, job related task, the encouragement he receives from staff and teachers, the insight that he can do something well, may prove to be a more immediate, long lasting result. A positive glimpse of himself in the midst of what seem to be overwhelming handicaps may encourage the student to further explore, develop and train in his interests and aptitudes. If this were the only result of such a project, one would have to gauge it as an overwhelming success.

As a pilot project, the limitations of this project are realized and delineated. Yet it is apparent that much value lies with the idea of increased in-depth vocational evaluation. It is our hope that the lessons learned here will serve as a

motivation and a basis for further research and programming
in the area of career awareness for handicapped students.

Background and Theory

Need and Previously Existing Conditions

Career planning, vocational education and related areas have a high national, state and local priority for students in grades K thru 12. Preparing students to function effectively after graduation is a primary goal of secondary education.

A survey conducted by the Simi Valley Unified School District during the 1974-75 school year requested teachers and parents to prioritize the educational goals for students in the district. Results of this survey indicated the highest priority for vocational guidance and career planning.

Students, too, seem aware of this need. According to the Summary of Results of the Ventura County Superintendent of Schools Career Planning Inventory given in the Fall of 1975, 70% of the 30,000 students who participated indicated a need for additional or considerable help in career planning.

Students from special education classes are often doubly handicapped when it comes to job preparation. They not only are unsure of their physical limitations, but most also have reading and/or math liabilities which need to be considered. High school students (grades 10-12) who are moderately to severely physically or educationally handicapped comprise about 4% of the total senior high school population in Simi Valley. In addition, the school district serves the entire deaf and hard of hearing and orthopedically handicapped student population in the southeastern portion of Ventura County; also the deaf students from the Las Virgenes Unified School District in Los

Angeles County.

One of the special education teachers has acted in the capacity of Work Study Coordinator for the handicapped part-time since 1972, mainly in conjunction with the Department of Rehabilitation (DR) agreement with the Ventura County Superintendent of Schools. An on-campus work incentive pay program and supervised work experience comprised the greater part of the program. Besides the obvious time and personnel limitations, attention was concentrated on those qualified as clients with D R. Funds for this position have been dwindling each year, and next year these funds will no longer be available. Other means to serve a greater variety of handicapped students are needed.

Prior to the initiation of this project there was no specific plan for evaluating the vocational potential of these students in order to effectively place them in regular vocational education programs.

14

Work Sampling Theory

Several forms of work sampling have been in use for rehabilitation purposes for some time, but it wasn't until the late sixties that a systematic discipline of vocational evaluation with an explicit theoretical framework gained widespread acceptance among professionals. Pioneer work in the field was done by Vocational Guidance and Rehabilitation Services in Cleveland, Stout State University, in Menomonie, Wisconsin, and the Philadelphia Jewish Employment and Vocational Service. Since that time, Singer-Graflex has produced a complete line of audio-visual evaluation units, and Valpar Corporation of Arizona has continued to develop and norm a component work sampling system.

A work sample is defined as a mock-up or a close simulation of an actual industrial operation not different in its essentials from the kind of work a potential worker would be required to perform on an ordinary job. Work sample evaluation is a systematic procedure for assessing work potentials and behaviors. Pruitt (1970)¹ outlines nine basic postulates of work sample theory:

1. Persons who do poorly on psychological tests can be effectively evaluated by the method of work sample evaluation. This includes populations for whom standardized tests are not normed and those persons below the average level in verbal, mathematical and academic skill or training, which most pencil and paper tests assume.

¹ Pruitt, W. A., Basic assumptions underlying work sample theory, Journal of Rehabilitation, 1970, 36, 12-15.

2. Work samples differ from psychological tests in the degree of relatedness to the criterion. The criterion is work behavior and job performance. Hence, the client or student sees himself as performing a work task rather than taking a test, increasing his interest and lowering his anxiety.

3. Work samples are as efficient and as inexpensive as other evaluative methods including psychological testing.

4. Work samples illustrate the client's ability to function in a field of work, such as bench assembly, clerical work, etc. This broadens the scope of possible job selection and helps narrow choices to a field of work most suited for the client or student.

5. Work samples can be graded with respect to their problem solving complexity and occupational area. This graded aspect helps to predict occupational level as well as occupational area.

6. Work samples not only measure qualitative performance, but also allow for evaluation of such factors as motivation, vocational self-concepts, interpersonal relationships, initiative, ability to accept criticism, attention span, physical stamina and emotional maturity. Work samples also provide measures of manifest (performance) interests and aptitudes as opposed to measured (pencil-and-paper tested) interests and aptitudes.

7. Work sample evaluation provides the necessary information for vocational choice decision making.

8. Work sample evaluation reports are more meaningful and have more immediate application to both client and related personnel (counselors, teachers and placement specialists) than psychological reports.

9. Work sample evaluations provide information of broader scope than do psychological tests.

Another important facet of work sampling is that it is directly related and keyed to worker functions, traits and working conditions. Most work sample systems use the Department of Labor's Dictionary of Occupational Titles (DOT)

"Data-People-Things" classification, coupled with the DOT's components of training time, aptitudes, interests, temperaments, physical demands and working conditions. (See Appendix A) This provides a direct link from the work sample evaluation to the actual job market.

Thus, work sampling can be seen, at least in theory, as applicable to a handicapped student population as a potentially effective tool for the assessment of aptitudes and interests, and to provide both student and staff with information needed for vocational decision making.

Work Sampling Facilities

In Ventura County, two work sampling evaluation centers are in existence--the Career Evaluation Laboratory at the Regional Occupational Program (ROP) of the Ventura County Superintendent of Schools at the demilitarized Oxnard Air Force Base in Camarillo and the Work Evaluation Unit at the Ventura County Hospital BARD unit operated by the County of Ventura Health Services Agency (HSA).

The ROP facility, the newer of the two, is outfitted with Valpar and Singer units, supplemented with samples from the University of Wisconsin/Stout Materials Development Center. It is funded primarily by the Comprehensive Employment Training Act (CETA) of the State of California, and as such, evaluates primarily CETA clients. Due to its location and association with the school system, this unit was the primary evaluation center. (A description of the ROP facility's services are included in Appendix B).

HSA's facility also included the Valpar and Singer units, and is supplemented by Jewish Employment and Vocational Services (JEVS) battery. Their clientele consists mainly of DR clients and County Hospital referrals. This facility was utilized for the more severely handicapped and wheelchair students, as it is both barrier-free and adjacent to the hospital, should any student require immediate medical assistance. (See Appendix C).

The ROP and HSA work under a non-financial cooperative agreement.

GOALS AND OBJECTIVES

19

Goals and Objectives

Program Goals

The project-determined goals were as follows:

1. To provide all moderate to severe physically and educationally handicapped students in grades 10 thru 12 with comprehensive career evaluation to assess their vocational potential; this to lead to placement into programs designed to maximize their acquisition of marketable skills and their eventual ability to be self-supporting.
2. To provide teachers, counselors and parents of these students with appropriate orientation and assistance as to their role in implementing a realistic vocational education program.

Measurable Performance Objectives

The following measurable performance objectives were proposed to assess the attainment of the goals of the program.

1. Teacher In-service Training

Participating teachers of students in grades 10-12 with exceptional needs, high school counselors and selected vocational education teachers will receive 12 hours of in-service training on the goals and objectives of the project and their specific roles in its implementation.

2. Parent Participation

A minimum of 75 per cent of the parents of the participating students will participate in a three-hour orientation program to explain the goals and objectives of the project and their role in its implementation.

3. Student Evaluation

Thirty students will be selected and evaluated by the ROP or HSA work evaluation program and a written report of the results will be made available to appropriate school personnel and become a part of the student's cumulative file. Participating students will be administered on a pre-test/post-test basis the Career Planning Inventory (CPI) in order to determine attitudinal changes brought about as a result of their participation in the project.

4. Student Placement

Based on the results of the work sampling evaluation, each student will be placed, as appropriate, in regular on-going dis-

strict vocational education classes, work experience program, and/or advanced training programs. Each placement will be made following a review of the student's assessment data and in consultation with the student's parents, teacher, Director of Special Education, appropriate high school counselor, and/or work experience coordinator, appropriate vocational education teachers and the project vocational technicians.

Research Techniques

Design

The original project proposal called for a one group, pre-test/post-test experimental design. However, to assess the effects of work sampling evaluation on the population, the Director of Research and the external evaluator modified the design to a two-group pre-test/post-test design, utilizing an experimental and control group.

Sampling

The target population were students in special education classes at the high school level, which included the following handicaps:

Learn Disability (LD)
Educable Mentally Retarded (EMR)
Trainable Mentally Retarded (TMR)
Deaf and Hard of Hearing (DHH)
Orthopedically Handicapped (OH)
Visually Handicapped (VH)
Aphasic

Initially, the project called for the selection of 60 students, their prioritization based on need and ability to profit from the evaluation, and a narrowing of the sample to 30 target students. However, with the modification in design, randomization of the initial selection was preferred.

Seventy-three referrals were collected and first arranged by handicap, then stratified by grade level. Through randomization procedures, 30 students were assigned to the experimental group and 30 functioned as the control. The result was a stratified matching random sample (Table 1, page 12).

Unfortunately, time constraints did not allow for exploration of the students' willingness to participate. As a consequence, several substitutions had to be made in both the experimental and the control groups. This was done with consideration, using the criteria chosen by the external evaluator (handicaps and grade). The groups were kept carefully balanced. Sex was not a controlled variable.

Composition of Experimental and Control Groups.

Grade Level	OH		DHH		APH		LD		EMR		TMR	
	E	C	E	C	E	C	E	C	E	C	E	C
10	2	2	2	2	1	1	8	8	5	4		
11			2	2	1	1	5	5	2	3	1	1
12					1	1						

non-graded

E = Experimental Group

C = Control Group

Table 1

Instrumentation

The Career Planning Inventory (CPI)

The CPI is administered annually to all students in Ventura County in grades 9-12. The pre-test was initially administered in November 1975, although several of the sample group were given the Inventory in February due to their absence for the initial testing. A copy of the CPI and a detailed explanation of its conception, purpose and use is published by the Ventura County ROP, and is included in Appendix D.

The CPI was re-administered in May 1976 as the post-test. Student profiles were obtained and comparisons made.

A major limitation of the CPI, when used in a pre-test/post-test design, is the ambiguity of response changes and difficulty in the interpretation of the related causes of those changes. For example: Student A may on the pre-test indicate that he is sure of his interests, and on the post-test indicate that he is uncertain of his interests. Is this uncertainty "bad" (i.e., did the work sampling confuse him?), or is it "good" (is he more aware of different vocational possibilities)? Conclusions, then, are extremely difficult to arrive at.

More than this, the CPI, being a fairly sophisticated instrument, was extremely difficult for most of the sample population to read and/or understand. It was necessary to read the inventory to many of the students. Therefore, the validity of the responses as truly representative of these students' attitudes, came into serious question. Problems of memory retention,

vocabulary and attention span also presented difficulties in its administration.

The CPI, although possibly giving a vague indication of attitudinal change, proved ineffective with this population.

Parent, Teacher and Student Feedback Forms

In order to evaluate the project's effect on parents, teachers and students, questionnaires were developed in order to give these groups an opportunity to respond to the activities and goals of the project (see Appendix E). The teacher and student Feedback Forms were designed around the activities in which each participated. The parent Feedback Form was constructed around what the parents perceived as the effects of the project. This resulted in a three-dimensional evaluation of the program.

29

Project Procedures

This section is a description of the various activities engaged in throughout the project, arranged in chronological order. Forms, letters, etc., utilized in the project are printed on yellow paper at the end of this section and are referred to by page number.

Teacher Orientation

The initial orientation to the project, held on February 10, 1976, was attended by all special education teachers involved with students at the secondary level, the two vocational technicians, Mr. Stan Norton (Director of Special Education), Dr. Shayle Uroff (Director of Research), Dr. Chet Howe (Director of Instructional Operations), Jerry Kinzel (Occupational Counselor, ROP unit), and Terry Dinneen (Work Evaluation Supervisor, HSA unit). Mr. Norton explained the need and relationship of the project to special education, and Dr. Howe distributed a project abstract (page 27) and briefed the teachers on the goals and objectives of the program, and Dr. Uroff described the design and some of the mechanics of the project. Terry Dinneen presented slides of his facilities and answered questions raised about the work sampling procedure. Jerry Kinzel then passed out referral forms (page 28) and explained the referral system. Teachers were asked to fill in all information for any student they felt might benefit from such a program. These forms were later collected by the vocational technicians. It was also announced that there would be one vocational technician stationed at each of the two high schools available to aid and consult with teachers during this process.

Advisory Committee

After the referrals had been collected, an advisory committee meeting was called. This consisted of Dr. Howe, Dr. Uroff, Dr. Lee Hendricks (external evaluator for the project), Rick Cardoni (representing HSA), Jerry Kinzel (ROP), and Treva Honsberger and Mark Shelley (vocational technicians).

At this meeting, the basic outline and mechanics for the project were decided upon (see agenda and suggestions, page 28-30). Responsibilities for various parts of the in-service components were assigned and final selection of students was made. Results of this meeting are recorded in the informal minutes (pages 31-34).

The vocational technicians were utilized to facilitate all phases of the program. The implementation of the work sampling, in-service training, parent orientation, communications, physical arrangements, conferences and compilation of the final report became the responsibilities of the technicians.

Parent Orientation

Parents were initially notified of their son's/daughter's selection for participation in the project by telephone. A letter confirming their selection was mailed to them carrying the signature of the Director of Special Education (see page 35). It explained the program briefly and invited the parents to attend the orientation meeting on March 2, 1976.

That evening turned out to be cold and very rainy. Even so, sixty per cent of the parents attended (an agenda is included on page 36). The program was explained, the staff introduced and the goals stressed. A slide presentation was presented by Jerry Kinzel and Terry Dinneen, and several work samples were demonstrated. A timeline (page 37) was given to each parent which outlined the work sampling schedule and dates of conferences, evaluation and final reports.

Information release forms (see page 38) were passed out to the parents and their purpose explained. All parents attending completed the form. (It should be noted here that none of the parents of participating students refused to grant authorization for their child's participation in the project.)

A question-answer period followed. The main concern of the parents seemed to be follow-up and placement. It was made clear to them that time limitations might prevent on-the-job placement for every student, but that this project would serve as a starting point. Reaction to the orientation was almost totally positive, and with the exception of only a few isolated cases, parents were supportive of the project throughout.

Teacher Visitation of Facilities

Prior to the actual evaluation of students, the special education teachers and selected school counselors toured the ROP and HSA work evaluation units. The philosophy and history of each center was explained by its own staff, and teachers were able to do actual work samples in order to become familiar with the testing environment. A tour of all the ROP and County school facilities was included, taking in the vocational training areas, county offices, and the center for severely handicapped children.

Release time was provided for participating staff. Approximately 90% of the special education teachers participated. Car pool transportation was arranged. Other than comments about the distance to the facilities, teacher reaction was overwhelmingly positive.

Work Sampling of Students

Referrals of students in the experimental group were delivered to Jerry Kinzel at the ROP. He and the HSA determined that eleven of the thirty students were to be evaluated at the HSA due to the nature of their handicaps, and the remaining 19 would be tested at the ROP.

As originally agreed, the HSA provided transportation for wheelchair confined students. All other transportation was provided by the District, via school station wagon driven by the vocational technicians, or carry-all or bus driven by District transportation personnel. Some of the transportation arrangements proved to be very limiting regarding the actual time students spent per day in testing.

Each group of students was evaluated for five days, from three to four hours per day depending upon distance to facility and transportation arrangements. In all cases, the evaluating facility was able to gather enough information for a complete evaluation of each student. Students needing additional testing due to absence were transported for make-up sessions near the end of the project. The fact that there were two technicians working on the project made this possible.

The project technicians were also used by the ROP and HSA to assist the evaluators in administering and scoring work samples. This gave them, in addition to spending time enroute to facilities and at lunch, valuable information about each student and his/her potential which they shared with both parents and teachers.

The attendance office, counselors, work experience coordinators and all other teachers of students were notified of each student's absence while participating in the sampling (see page 39-40). Teachers were requested to allow for make-up work. No negative feedback in this area was received from either teachers or students.

Staffing and Manpower Presentation

On April 28, 1976, members of the ROP and HSA staff and teachers of participating students met for a "staffing" session. "Staffing" is the term used by these agencies to denote a detailed briefing of a teacher or counselor about an individual student. Each teacher was given the opportunity to ask questions regarding each of his/her students and discuss this in relation to classroom performance and behavior. The Director of Special Education and vocational technicians also participated in the staffing, which consumed the entire morning and early afternoon. Release time was made available, and 70% of the special education teachers took part.

In the afternoon, John Van Zant and Maribeth Potter, of the Dissemination Staff for a special project developing the California Manpower Management Information System (CMMIS) presented a basic outlook of the job market for high school graduates and explained the CMMIS. The system combines several federal and state resources and agencies to provide information on all jobs listed in the DOT in a simple yet comprehensive form. This information includes projected employment in the field, general education and specific training required for the job, data on physical demands and working conditions, along with a schedule of institutions in Ventura County which offer a particular kind of training for that job.

Teacher reaction to this presentation was enthusiastic, yet a need for more training in the use of these aids was expressed.

Student de-briefing

Approximately a month after testing was completed, final work evaluation reports were received from the evaluation units (see Appendices F and G for sample reports from each facility). Following the staffing of teachers, the vocational technician and the student, along with a combination of teacher, parent and/or counselor, reviewed the report and discussed educational and personal limitations with that student and possible areas of vocational exploration and training. The tone of the interview was to be positive and encouraging, yet honest and consistent with the evaluation.

These de-briefings were of much value with LD, DHH and VH students. However, with the OH and EMR students, it remains questionable if the intent of these interviews was perceived. It was also found that in some instances with the parents and/or teachers involved in the conferences, the discussion revolved around personal and educational problems not directly related to the evaluation procedure and vocational area (these problems are seen as important, but possibly over-emphasized or misplaced during the de-briefing session). The most productive interviews occurred when the technician met separately with the student and then the parent. Although this method was much more time consuming, interviews tended to be more honest and candid.

Parent Conferences

In most cases, parent conferences were held during or immediately following school hours. Twenty-one of the thirty students' parents attended personal conferences with the technicians. A copy of the evaluation report was given to the parents to read and keep, while the technician explained any questions that came up. Areas of discussion were primarily as follows:

- Present educational status
- Employment potential of the student
- Nature and remediation of physical and/or educational limitation
- Work, personal and social behavior
- Immediate job/training possibilities
- Vocational classes for next school year
- Summer Job Survival Skills clinic
(offered by Youth Employment Services)

Those parents who could not attend personal conferences were contacted by phone and sent a copy of the evaluation report. A cover letter inviting them to future conferences included phone numbers where the technicians could be reached.

Some of the conferences revealed personal and family problems of students and/or parents. Counseling was recommended in several instances. Most parents were quite pleased that their son/daughter had been selected for and participated in the evaluation and were anxious to utilize the results.

Follow-up

Due to time limitations, only a minimal amount of follow-up was accomplished. This was to include placement in on-the-job training (OJT), scheduling of vocational education classes for the next year (to be done by counselors and teachers) and placement in actual job situation. The following is a summary of completed follow-up as a direct result of the project:

<u>Activity</u>	<u>Number of Students Involved</u>
Enrollment in ROP (see Appendix H) and/or vocational education classes	10
Job Survival Skills program (see page 41 and Appendix I)	4
DR referrals	2
Speech therapy evaluation	1
Psychological re-evaluation	1
Hearing test (non-DHH student)	1
Special assistance in Completion of Employment Application	1
Volunteer Job Exploration	2

Many of the students continued in the District's on-going incentive-pay work experience program. Graduating seniors were given special attention regarding employment possibilities and opportunities.

Evaluation

Assessment of the program by students, parents and teachers was accomplished through the use of the feedback forms. Students and teachers were administered these questionnaires during school hours. Parents were mailed the forms, and a self-addressed envelope was included. Information from these forms is summarized in the Results and Conclusions section.

SIMI VALLEY UNIFIED SCHOOL DISTRICT
PROJECT ABSTRACT

Project Title: Career Placement by Work Sampling for the Handicapped
Funding Source: Vocational Education Amendments of 1963 - Part B
Duration: January 1976 - June 30, 1976
Project Director: Dr. Chester A. Howe, Director of Instructional Operations
Requested Funding: \$33,263
Project Description:

The project will provide the Career Evaluation Assessment Services of the County R.O.P. facilities in Camarillo to assess the vocational potential of 30 moderate to severe physically and educationally handicapped students in grades 10 thru 12. A three hour orientation meeting, with the parents of target students, will be conducted to explain the goals, objectives, and activities of the program.

Twelve hours of inservice training will be given to participating teachers, counselors and other appropriate school staff personnel on the goals, objectives and activities of the project and their roles.

Following assessment of the students (each student will receive 20 hours of assessment at the R.O.P. facilities) the results will be used to place students in ongoing district vocational educational programs. Where possible existing programs will be modified to accommodate the needs of handicapped students.

The project staff will consist of the following personnel:

1. Project Director
2. Vocational Technician
3. Part time clerk
4. External evaluator

In addition the following personnel will be closely involved with the implementation of the project: Mr. Stan Norton, Director of Special Services, Dr. Shadle Uroff, Director of Research, Mr. Van Zant, Ventura County Director of Occupational Education, and personnel from the R.O.P. Assessment facilities.

AGENDA
Advisory Meeting
Project "BH"
February 20, 1976

- I. Proposed Calendar
 - February - Screening and contact of parents
 - March----- Work sampling, in-service training for parents and teachers
 - April----- Evaluation and de-briefing, field trip and job placement
 - May----- Write-up of project, evaluation of existing programs
 - June----- Printing and distribution of final report
- II. Screening Procedures
- III. Parents
 - A. Contacting
 - B. Pre-testing
 - C. In-service training
 - D. Post testing
 - E. De-briefing
- IV. Teacher In-service Training
 - A. Orientation & pre-testing (2 hours)
 - B. Observation of sampling (ROP & HSA, 5 hours)
 - C. CMMIS (2 hours)
 - D. Post-testing and evaluation (1 hour)
 - E. Total remaining hours (4 hours)
- V. Physical Details
 - A. Transportation
 - B. Lunches and ROP/HSA
- VI. Criteria for Write-up

SUGGESTIONS FOR:

TEACHER IN-SERVICE TRAINING

- 1 hour - Orientation Meeting
 - 4 hours - On-Location Training Observation - ROP, HSA (Monday)
 - 2 hours - Evaluation of Student by ROP or HSA Evaluator (Friday)
 - 2 hours - Manpower Presentation
 - 1 hour - Tour of Adult Education Vocational Facilities Workshop
 - 1 hour - Parent/Student Debriefing
 - 1 hour - Post-test and Evaluation of Project
- 12 hours Total

PARENT IN-SERVICE TRAINING

- 1 hour - Orientation (to stress support and positive reinforcement of child)
 - 1 hour - Student/Parent/Teacher/Technician Debriefing
 - 1 hour - Post-testing and Evaluation of Project
- 3 hours Total

OPTIONAL: Observation at ROP/HSA of Sampling Procedures

AUTHORIZATION FOR RELEASE OF INFORMATION
Non-School Agency

I hereby request and authorize the SIMI VALLEY UNIFIED SCHOOL DISTRICT to release Educational & Health Records, & Photographs regarding _____ to Ventura County Superintendent of Schools Office and County of Ventura Health Services Agency.

It is understood and agreed that the authorized institution or individual will not permit any other party to have access to such information without the written consent of the student's parent or the adult student.

_____ witness _____ signature of parent or guardian

_____ date _____ relationship

I hereby request and authorize Ventura County Superintendent of Schools Office and County of Ventura Health Services Agency to release Work Evaluation Results information concerning _____ name of student to Simi Valley Unified School District, Departments of Special Education and Instructional Operations.

It is understood and agreed that the authorized institution or individual will not permit any other party to have access to such information without the written consent of the student's parent or the adult student.

_____ witness _____ signature of parent or guardian

_____ date _____ relationship

Date _____

ROYAL HIGH SCHOOL

To the teachers of _____

The above named student will be participating in a special vocational educational program during the week of _____

He/she will be taking part in a work sampling program at either the Regional Occupational Program facility or the Health Services Agency in Ventura. The work sampling is designed to help him better evaluate future employment possibilities.

We would like to request that this student be permitted to make up any work missed during this week, either prior to or following his actual absence. We definitely would like to prevent his falling behind in regular school work while taking part in this program.

If you have any questions or would like more information, please call either his Special Education teacher, _____ or me. I'm in the CGC.

Thank you for your cooperation.

Vocational Technician

Royal High School

Memo to Royal High School Counselors

From: Treva Honsberger, Vocational Technician, VEA Project "BH"

I thought you might like an idea of what "Project BH" is all about. It's a federally funded project whose goal is vocational placement of Special Ed students: possible job placement, vocational classes, ROP programs, college or trade school if advantageous, etc.

This is to be accomplished by work sampling at either the ROP center in Oxnard or the Health Services Agency located in the hospital in Ventura. Each of the thirty Special Ed kids involved in this project will receive twenty hours of work sampling and career counseling. They will be absent from classes for five days (per attached schedule). We will go with them on the bus, stay with them during the work sampling, take them to lunch and return with them. This will all occur within the normal school day hours. I will send notes to their other teachers to inform them of the reason for their absences and to request make-up work.

At the end of the sampling there will be a conference with the parents, Special Ed teacher and each child to go over the results.

An orientation for parents was held last night and we had a little better than 50 per cent response. Most parents seemed very supportive. We are taking the Special Ed teachers Friday to visit both facilities, and will begin the actual work sampling on Monday.

Please get in touch if you have any questions, suggestions or information that you think we should have. I will be in the career center when I am on campus. I apologize for not doing this sooner - there simply has not been enough time.

SIMI VALLEY

HIGH SCHOOL

HOME OF THE PIONEERS

ROBERT J. JACOB PRINCIPAL

June 3, 1976

Dear

Remember us talking about a Job Survival Skills workshop? Well, here are the details:

The Youth Employment Service (Y.E.S.) of Simi Valley is sponsoring it, and what it is meant to do is acquaint you with how to find a job, how to present yourself in an interview, how to fill out job applications, how to make out your resume, how to get along with supervisors and co-workers, and just generally orient you to the world of work. Some of the ways they do this is by using a video-tape machine, so you can actually see yourself in an interview situation, and 'role-playing', which is acting out actual job situations.

This workshop will be offered the week after school's out, June 21-25, from 9 - 11 am. This will give you plenty of time to get out and put what you learn to work and find a job!

If you want to go, and I really think you would get alot from it, call the Youth Employment Service at 522-HIRE, and they will put your name on the list and tell you where its going to take place. I really hope you'll go, and if there is anything more I can do to help, let me know.

Happy Job Hunting!

Sincerely,

Mark Shelley
Mark Shelley, Vocational Technician

P.S.-Show this letter to your parents and ask them what they think. They might even let you out of washing the dishes or mowing the lawn if you decide to go!

53

Results and Conclusions

Due to the nature of the project, results, in their various modes, were difficult to interpret, and in some cases it was necessary to base conclusions upon direct observations in combination with test and evaluative data. The analysis of the following results are thus interpreted.

Outcome of Measurable Performance Objectives

1. Teacher In-service Training

Over 12 hours of in-service training was provided for teachers in connection with this project. Time allotment was as follows:

- 2 hours - Initial Orientation (2/10/76)
- 5 hours - Visitation of Facilities (3/5/76)
- 4 hours - Staffing Session (4/28/76)
- 2 hours - Manpower Presentation (4/28/76)
- 1/2-3 hours - Parent Conferences

Approximately 70% of the special education teachers were actively involved in the activities throughout the entirety of the project. The remaining teachers attended at least seven hours of the in-service component.

2. Parent Participation

60 per cent of the parents attended the initial orientation program, while 65 per cent attended conferences to discuss the results of the work evaluation. Although this did not meet the objective of 75 per cent participation, to have two out of three parents attend a session to discuss the vocational potential and plans for their child was considered both significant and respectable.

3. Student Evaluation

Two students dropped out of the program due to previous commitments, and one of those vacancies was filled. Twenty-nine students were finally evaluated, and the written evaluation reports were distributed to appropriate school personnel.

Pre-tests/post-tests sets were collected on 80 per cent of the participating students. The more severely involved handicapped students were unable to complete one inventory or the other. Results of the CPI pre-test/post-test are summarized in Table 2 (page 45). The limitations of the test instrument have already been described. No drastically significant differences were observed, yet several trends are alluded to:

- a. The experimental group changed their expressed interests more than did the control. This may indicate that exposure to the work sampling made the experimental group more aware of vocational opportunities.
- b. More certainty as to the experimental group's interests are revealed. Combined with the greater number of changes in this group, it could indicate a more realistic view of their vocational outlook.
- c. No significant differences are observed in either changes in or certainty of aptitudes between the two groups. This may be a possible indication that the students did not understand the concept of "aptitudes" and/or the purpose of the sampling.
- d. The changes in types of training for the experimental group, besides being greater, were almost exclusively a switch from an academic to a vocational type of preparation, such as apprenticeships or trade schools. Although it must be admitted that the work sampling was geared around benchwork, clerical and industrial occupations, yet the fact that over half the experimental group indicated a change of this type could possibly

CPI Pre-test/Post-test Summary of Results

Variable	Experimental	Control
<u>Interests - (Question C.)</u>		
No change -	14%	40%
1 change -	72%	35%
2 changes -	14%	20%

be indicative of a realization of their abilities and possibilities for success in such an area.

A look at the summary of post-test results regarding certainty of interests, aptitudes, and career planning (Table 3, page 47) reveals no significant differences between groups relating to interests and aptitudes. The experimental group, however, indicates more certainty in educational and career planning. This could be partially due to the effects of the project.

It is to be taken into consideration that many, maybe even most, of the changes gauged by the CPI are a result of vocational maturity, which is closely linked with social and personal maturity. It is evident, then, in dealing with a handicapped population, that these areas would lag behind those of regular students. The intent of this project was to aid in the development of that vocational maturity. Direct observation of the student's behavior and reaction pointed out two areas in which the experimental group benefited as a direct result of the project:

- 1) Many of the students gained a sense of increased self-worth in that they were able to do things they had not seen themselves capable of previously, and 2) their vocational horizons were significantly broadened from their exposure to many new areas of work. These were seen in both their behavior and conversation, and is not always apparent in the results from the CPI or even in the feedback forms.

4. Student Placement

Due to time limitations, only limited placement was accomplished. Thirty per cent of the experimental group had been

Student Attitudinal Summary -- Post-test (CPI)

Variable	Experimental	Control
<u>Certainty of Interests</u>		
Certain -	32%	25%
Fairly sure -	45%	50%
A little uncertain -	19%	15%
Very uncertain -	4%	10%
<u>Certainty of Aptitudes</u>		
Certain -	32%	15%
Fairly sure -	41%	55%
A little uncertain -	27%	30%
Very uncertain -	0%	0%
<u>Educational and Career Planning</u>		
Need considerable help -	14%	5%
Need additional help -	32%	65%
Need no help -	46%	30%

Table 3

signed up for ROP classes. as of the end of school, four students attended a summer Job Survival Skills program, and two were involved in volunteer job exploration (one as a candy-striper and one in a horticultural nursery). The information has been forwarded to teachers and counselors, so further placement may take place next fall.

Teacher Feedback

Results from the teacher feedback forms are summarized in Table 4 (page 50-51). Generally, teachers seemed to be in favor of the program and were actively involved. Many of the shortcomings of the project noted by the technicians (e.g., time limitation, problem of project orientation, etc.) were also pointed out by the teachers. These suggestions will prove valuable in revising and improving the program.

Summary of Results

TEACHER FEEDBACK*

Work Sampling for Handicapped Students

Please comment on the following areas of the project:

1. Selection of students for Sampling -

Teachers wish to either select or prioritize students for participation (80%).

Random sampling not well received.

2. Scheduling of students for Sampling -

Majority reported "Good" or "Good under circumstances." (90%)
One commented they should not miss so much class. (10%)

3. In-service orientation (Mar. 5) -

Good or excellent (40%).

Disorganized but informative (10%).

Disorganized (10%).

Unnecessary (20%).

Not long enough (10%).

No response (10%).

4. ROP & County Hospital facilities -

Good, excellent or adequate (80%).

Better units available elsewhere (10%).

Do not have facilities for more severely handicapped (10%).

5. In-service staffing -

Good or excellent (30%).

Need more individualized meetings & discussion (30%).

Did not attend (40%).

6. Written Reports of results. -

Excellent, good, thorough and realistic (70%).

Average (30%)

Comments: "perhaps difficult for parents to read."
"should be written less clinically."

7. Debriefing of students -

Good (30%).

Time available had limiting effect (10%).

EMR students did not understand what was taking place (20%).

Should be done by ROP or HSA staff (20%).

No response (20%).

*100% response

8. Parent conferences -
Informative, good (30%).
Did not participate (40%).
Inadequate (10%).
No response (20%).
9. Vocational Technicians -
Helpful; well-informed, excellent, willing, reliable (70%)
Limited background and experience (10%).
No response (20%)
10. Student benefits of program -
Difficult to determine at this point, some benefit (40%).
Important in planning vocational training, good experience (30%).
No response (30%).

Comments:

"For many it was a start of their thinking about jobs in the future. Each student enjoyed the individual attention. Some would have benefitted more next semester when more ready and more mature."

"These students need professional career guidance counseling to assist them after sampling, otherwise I fear that they will think the program is of no benefit."

Parent Feedback

Response to the mailed feedback questionnaires for this group was only 25 per cent, which was disappointing. Only parents and students in the experimental group were given the forms. Parents who responded felt that the program was "somewhat effective" in relationship to how their child viewed himself and the program. The orientation was seen as informative, and the parent conferences were very informative. Comments received indicated a concern for both the quality and continuation of the program. It is safe then to conclude that this project met with significant parental support.

Table 5

Summary of Results*

PARENT FEEDBACK

Work Sampling for Handicapped Students

1. How effective do you think this program was in relation to:
 - a. Your child's positive view of himself/herself?

43% very effective 43% somewhat effective
 14% slightly effective ineffective don't know
 - b. Your child's awareness of his/her actual abilities?

very effective 86% somewhat effective
 14% slightly effective ineffective don't know
 - c. Your child's awareness of different possible work areas in which he/she can be successfully involved?

43% very effective 43% somewhat effective
 14% slightly effective ineffective don't know
 - d. Making the possibility of meaningful work more a reality for your child?

very effective 86% somewhat effective
 14% slightly effective ineffective don't know
2. How effective does your child think this program was?

14% very effective 72% somewhat effective
 14% slightly effective ineffective don't know
3. How informative was the initial program orientation for you?

29% very informative 29% somewhat informative
 slightly informative not informative 42% didn't attend
4. How informative was the conference discussing the results of the evaluation?

72% very informative 14% somewhat informative
 14% slightly not informative didn't attend
5. Observations and comments (We would welcome any suggestions for improving the program, assuming that it will be possible to continue next year.)

"The people who give the test must realize they are dealing with high school kids and not adults who have worked and now need rehabilitation."
"Every student should have the option of going through a program of this type if he/she is in doubt of their ability."

* 25 per cent response

Student Feedback

Response from students in many cases was somewhat ambiguous. It is felt that many of the students who responded did not understand the significance of the form. Even so, the largest response to each question was a positive response to their experience. Some of their comments will also be helpful in improving the program.

Table 6

Summary of Results

STUDENT FEEDBACK*

Now that you have finished the work sampling and seen the results, we would like to know what you thought of the program. Please tell us honestly how you feel about it, and if you have any suggestions as to how it could be improved, include them under "Comments." Thank you for your time and patience. If we are able to continue next year, please come by and see us. We'd like to know how you're doing.

1. What did the work sampling tell you about yourself that you didn't already know?

- I'm a good worker; good with my hands; more abilities than I knew (34%).
- Caught on easy (10%).
- Learned nothing more. (24%).
- No response (14%).

2. What did you like and/or dislike about the work sampling?

Likes:

- Most or all of it (31%).
- A particular work sample or activity (24%).
- Getting out of school (4%).
- Staff (4%).

Dislikes:

- Difficulty of tasks (10%).
- Too short timewise (10%).
- Food was bad (10%).
- Didn't like any of it too much (4%).

3. Is there a better way to schedule the sampling? If so, choose one of the following, or give us your ideas.

- | | |
|-----------------------------------|-----|
| a) One week, four hours per day | 58% |
| b) Two weeks; two hours per day | 4% |
| c) Four weeks, one period per day | 8% |
| d) After school | 14% |
| e) Other | 4% |

One week, six hours per day 4%

4. How do you plan to use what you have learned about yourself?

- | | |
|----------------------------------|-----------------------|
| Try and get a job (37%). | Don't know (14%). |
| Work better (4%). | Learned nothing (4%). |
| Look at myself differently (4%). | No response (17%). |

5. How could we improve the work sampling?

- | | |
|--------------------------|-------------------------|
| No change needed (17%). | Hold after school (4%). |
| Job placement (8%). | Improve lunches (8%). |
| More work samples (17%). | Don't know (10%). |
| Harder tasks (4%). | No response (21%). |

*85% response. Some students made more than one comment under each question.

LIMITATIONS

24

29

Limitations

Generalizability of Results

Because of the cross-section of handicaps involved in the sampling, it is difficult to generalize any of the findings to special education students as a whole or to a particular program within special education. Observation and analysis of the individuals sampled leads to the preliminary conclusion that this type of procedure is of most immediate benefit to the following groups in rank order:

Learning Disability
Visually Handicapped
Aphasic
Deaf and Hard of Hearing
Orthopedically Handicapped
TMR
EMR

Special procedures for each handicap, however, would increase the benefit to the students and lend to a more accurate assessment of the results.

Time and Distance

The major limitation of this project was undoubtedly the brevity of its duration due to lateness of funding. Originally scheduled to begin when school commenced, the project did not get underway until mid-February, and at that time no specific plans had been arrived at. This affected several crucial areas.

The selection of students took place over two weeks. Unfortunately, the willingness of students to participate was not investigated, requiring numerous substitutions in the original sample and many scheduling difficulties.

Transportation was another problem area. The trip to Ventura and back is 65 miles, and the journey to Camarillo is 50 miles round trip. This caused approximately three to four hours of evaluation to be missed each week. Thus, for efficiency, the work sampling of students was accomplished in a continuous five week period. Staffing, reports and conferences followed as quickly as possible. Even so, some nine or ten weeks elapsed between the evaluation and de-briefing for those who were tested near the beginning. More immediate feedback, it is felt, would have strengthened the impact of the sampling on the students.

Due to shortness of time again, the staffing had to be held in one day. This required many teachers to listen to all evaluations rather than just that of their own students. Individualized staffings with teachers can be a key to proper follow-up.

Time for follow-up with the students was almost non-existent. Exploration of their interests and jobs relating to their aptitudes is as vital as the evaluation itself. More individual attention with each student after the evaluation might help crystallize the experience and motivate him/her to explore different possibilities.

Uniqueness of Project

It was apparent from the start that very few of the people involved in the implementation of the project were familiar with the work sampling process. This raised some unique problems, which were exaggerated by the time limitation.

The project technicians came into the project "cold turkey," knowing nothing about work sampling. Both had some experience in career guidance and counseling, which was a great asset. A brief visit to each of the evaluation units was the extent of their orientation prior to the actual sampling of students. This made it difficult to distribute detailed information to teachers, parents and students at the beginning of the project. Much was learned in the actual sampling process, and they were able to put this knowledge to work in the student de-briefings and parent conferences.

Neither of the evaluation facilities had been extensively involved with high school students prior to this project. This was seen in some of the reports and the difficulty each facility had in orienting the students. As a first attempt at adapting a vocational rehabilitation procedure to an educational setting and population, much was learned and will be valuable in further evaluation experiences. Both parents and teachers were aware of this weakness (see Table 3, item 6 and Table 4, item 5). Revisions in the procedures will need to be made should the program continue.

Despite all the limitations, the project proceeded smoothly and efficiently, with significant and observable results being accrued.

RECOMMENDATIONS

74

Recommendations

Involvement of Related School Personnel

The involvement of Career Guidance Technicians (in the Career Centers), Vocational Counselors, Vocational Education Teachers and School Psychologists, acting in their areas of expertise would add great dimension and depth to the program. Their inclusion in orientation and in-service activities would raise their awareness and provide solutions to many of the limitations cited, particularly in the area of follow-up. Counselors, particularly, would be a great asset to the students if involved in this procedure.

Immediate Feedback from Evaluation

The time lapse between the actual work sampling evaluation and the student de-briefings tended to have a dampening effect on their initial budding enthusiasm about the world of work and careers. Two things might help this cooling effect: First, more counseling during the evaluation by the evaluation staff would help give the students immediate direction and motivation. This may involve more time per evaluation, but is seen as vital to the process. If a student was also able to read his evaluation a week after his evaluation, then the follow-up could start and enthusiasm would be maintained.

Additional Areas for Guidance

Many of the students in the handicapped population have personal problems (family, behavior, psychological) that must be dealt with before any meaningful vocational decision making can take place. Either counseling by school counselors and psychologists or referrals to other sources needs to be included in a career placement program for the handicapped.

Additional vocational counseling is also indicated. Directed exploration of expressed interests and information of jobs available should be made available to these students.

A recommendation which came up frequently in the reports was assertive training or confidence-building of some nature. As most of these students would not be able to participate in a regular training program of this sort (due to their already low self concept), it would be beneficial to develop a pre-assertiveness training program for this group, possibly led by a handicapped facilitator, to boost their feelings of self-worth and ability to succeed in social and work relationships.

The Job Survival Skills program offered by ROP would be excellent for these students if geared down to their level. Most of them have never been exposed to work situations or have even applied for a job. This workshop could be offered during school hours and would be of immense value to these students.

Evaluation of Vocational Education Programs

In an effort to place these students into vocational training programs, the present vocational education programs, including the individual junior high and high schools, Adult Education and ROP should be evaluated as to their feasibility for placing special education students into them and their chances of success on the job after such training is completed. A comprehensive list could also be compiled of post-diploma training institutes which would accept special students, their fields and duration of training and cost, to be used in directing graduating seniors. A list of local employers willing to employ such students could also be obtained, and possible work experience stations set up in these locations!

Expansion and Continuation of Program

Since observable benefits to students have resulted from this project, and as there is no other program available for vocational evaluation and guidance for special education students, it is recommended that the program continue next year, expanding its services to 60 more students including ninth graders, and following up on students evaluated during this project's duration. If possible, the above recommendations should be included, as this would provide a comprehensive career guidance program for these handicapped high school students, enabling them to find a meaningful place in the world of work.

APPENDIX A

Explanation of Relationships Within Data, People, Things Hierarchies

Much of the information in this edition of the Dictionary is based on the premise that every job requires a worker to function in relation to Data, People, and Things, in varying degrees. These relationships are identified and explained below. They appear in the form of three hierarchies arranged in each instance from the relatively simple to the complex in such a manner that each successive relationship includes those that are simpler and excludes the more complex.¹ The identifications attached to these relationships are referred to as worker functions, and provide standard terminology for use in summarizing exactly what a worker does on the job by means of one or more meaningful verbs.

A job's relationship to Data, People, and Things can be expressed in terms of the highest appropriate function in each hierarchy to which the worker has an occupationally significant relationship, and these functions taken together indicate the total level of complexity at which he must perform. The last three digits of the occupational code numbers in the Dictionary reflect significant relationships to Data, People, and Things, respectively.² These last three digits express a job's relationship to Data, People, and Things by identifying the highest appropriate function in each hierarchy to which the job requires the worker to have a significant relationship, as reflected by the following table:

DATA (4th digit)	PEOPLE (5th digit)	THINGS (6th digit)
0 Synthesizing	0 Mentoring	0 Setting-Up
1 Coordinating	1 Negotiating	1 Precision Working
2 Analyzing	2 Instructing	2 Operating-Controlling
3 Compiling	3 Supervising	3 Driving-Operating
4 Computing	4 Diverting	4 Manipulating
5 Copying	5 Persuading	5 Tending
6 Comparing	6 Speaking-Signaling	6 Feeding-Offbearing
7 No significant relationship	7 Serving	7 Handling
8 No significant relationship	8 No significant relationship	8 No significant relationship

DATA: Information, knowledge, and conceptions, related to data, people, or things, obtained by observation, investigation, interpretation, visualization, mental creation; incapable of being touched, written data take the form of numbers, words, symbols; other data are ideas, concepts, oral verbalization.

- 0 **Synthesizing:** Integrating analyses of data to discover facts and/or develop knowledge concepts or interpretations.
- 1 **Coordinating:** Determining time, place, and sequence of operations or action to be taken on the basis of analysis of data; executing determinations and/or reporting on events.
- 2 **Analyzing:** Examining and evaluating data. Presenting alternative actions in relation to the evaluation is frequently involved.
- 3 **Compiling:** Gathering, collating, or classifying information about data, people, or things. Reporting and/or carrying out a prescribed action in relation to the information is frequently involved.
- 4 **Computing:** Performing arithmetic operations and reporting on and/or carrying out a prescribed action in relation to them. Does not include counting.
- 5 **Copying:** Transcribing, entering, or posting data.
- 6 **Comparing:** Judging the readily observable functional, structural, or compositional characteristics (whether similar to or divergent from obvious standards) of data, people, or things.

PEOPLE: Human beings, also animals dealt with on an individual basis as if they were human.

- 0 **Mentoring:** Dealing with individuals in terms of their total personality in order to advise, counsel, and/or guide them with regard to problems that may be resolved by legal, scientific, clinical, spiritual, and/or other professional principles.

¹ As each of the relationships to People represents a wide range of complexity, resulting in considerable overlap among occupations, their arrangement is somewhat arbitrary and can be considered a hierarchy only in the most general sense.

² Only those relationships which are occupationally significant in terms of the requirements of the job are reflected in the code numbers. The incidental relationships which every worker has to Data, People, and Things, but which do not seriously affect successful performance of the essential duties of the job, are not reflected.

- 1 **Negotiating:** Exchanging ideas, information, and opinions with others to formulate policies and programs and/or arrive jointly at decisions, conclusions, or solutions.
- 2 **Instructing:** Teaching subject matter to others, or training others (including animals) through explanation, demonstration, and supervised practice, or making recommendations on the basis of technical disciplines.
- 3 **Supervising:** Determining or interpreting work procedures for a group of workers, assigning specific duties to them, maintaining harmonious relations among them, and promoting efficiency.
- 4 **Diverting:** Amusing others.
- 5 **Persuading:** Influencing others in favor of a product, service, or point of view.
- 6 **Speaking-Signaling:** Talking with and/or signaling people to convey or exchange information. Includes giving assignments and/or directions to helpers or assistants.
- 7 **Serving:** Attending to the needs or requests of people or animals or the expressed or implicit wishes of people. Immediate response is involved.

THINGS. Inanimate objects as distinguished from human beings, substances or materials, machines, tools, equipment; products. A thing is tangible and has shape, form, and other physical characteristics.

- 0 **Setting Up:** Adjusting machines or equipment by replacing or altering tools, jigs, fixtures, and attachments to prepare them to perform their functions, change their performance, or restore their proper functioning if they break down. Workers who set up one or a number of machines for other workers or who set up and personally operate a variety of machines are included here.
- 1 **Precision Working:** Using body members and/or tools or work aids to work, move, guide, or place objects or materials in situations where ultimate responsibility for the attainment of standards occurs and selection of appropriate tools, objects, or materials, and the adjustment of the tool to the task require exercise of considerable judgment.
- 2 **Operating-Controlling:** Starting, stopping, controlling, and adjusting the progress of machines or equipment designed to fabricate and/or process objects or materials. Operating machines involves setting up the machine and adjusting the machine or material as the work progresses. Controlling equipment involves observing gages, dials, etc., and turning valves and other devices to control such factors as temperature, pressure, flow of liquids, speed of pumps, and reactions of materials. Setup involves several variables and adjustment is more frequent than in tending.
- 3 **Driving-Operating:** Starting, stopping, and controlling the actions of machines or equipment for which a course must be steered, or which must be guided, in order to fabricate, process, and/or move things or people. Involves such activities as observing gages and dials, estimating distances and determining speed and direction of other objects, turning cranks and wheels, pushing clutches or brakes; and pushing or pulling gear lifts or levers. Includes such machines as cranes, conveyor systems, tractors, furnace charging machines, paving machines and hoisting machines. Excludes manually powered machines, such as handtrucks and dollies, and power assisted machines, such as electric wheelbarrows and handtrucks.
- 4 **Manipulating:** Using body members, tools, or special devices to work, move, guide, or place objects or materials. Involves some latitude for judgment with regard to precision attained and selecting appropriate tool, object, or material, although this is readily manifest.
- 5 **Tending:** Starting, stopping, and observing the functioning of machines and equipment. Involves adjusting materials or controls of the machine, such as changing guides, adjusting tuners and temperature gages, turning valves to allow flow of materials, and flipping switches in response to lights. Little judgment is involved in making these adjustments.
- 6 **Feeding-Offbearing:** Inserting, throwing, dumping, or placing materials in or removing them from machines or equipment which are automatic or tended or operated by other workers.
- 7 **Handling:** Using body members, handtools, and/or special devices to work, move, or carry objects or materials. Involves little or no latitude for judgment with regard to attainment of standards or in selecting appropriate tool, object, or material.

NOTE: Included in the concept of Feeding-Offbearing, Tending, Operating-Controlling, and Setting Up, is the situation in which the worker is actually part of the setup of the machine, either as the holder and guider of the material or holder and guider of the tool.

APPENDIX B

Explanation of Worker Trait Components

Those abilities, personal traits, and individual characteristics required of a worker in order to achieve average successful job performance are referred to as worker traits. Occupational information presented in volumes I and II is based in part on analysis of required worker traits in terms of the six distinct worker trait components described in this appendix. These six components have been selected for this purpose because they provide the broadest and yet most comprehensive framework for the effective presentation of worker trait information. Within this framework the user will find data concerning the requirements of jobs for: (1) The amount of general educational development and specific vocational preparation a worker must have, (2) the specific capacities and abilities required of him in order to learn or perform certain tasks or duties, (3) preferences for certain types of work activities or experiences considered necessary for job success, (4) types of occupational situations to which an individual must adjust, (5) physical activities required in work situations, and (6) physical surroundings prevalent in jobs.

Information reflecting significant worker trait requirements is contained, explicitly or by implication, in the job definitions in volume I. In the Worker Traits Arrangement in volume II, the qualifications profile for each worker trait group shows the range of required traits and/or levels of traits for the first five of these components. Numbers or letters are used to identify each specific trait and level. In this appendix, these identifying numbers and letters appear in italics.

The worker trait components are:

- I. Training time (general educational development, specific vocational preparation)
- II. Aptitudes
- III. Interests
- IV. Temperaments
- V. Physical demands
- VI. Working conditions¹

I. Training Time

The amount of general educational development and specific vocational preparation required for a worker to acquire the knowledge and abilities necessary for average performance in a particular job.

General Educational Development: This embraces those aspects of education (formal and informal) which contribute to the worker's (a) reasoning development and ability to follow instructions, and (b) acquisition of "tool" knowledges, such as language and mathematical skills. It is education of a general nature which does not have a recognized, fairly specific, occupational objective. Ordinarily such education is obtained in elementary school, high school, or college. It also derives from experience and individual study.

¹ Working conditions were recorded as part of each job analysis, and are reflected, when appropriate, in job definitions in volume I. However, because they did not contribute to the homogeneity of worker trait groups, they do not appear as a component in the Worker Traits Arrangement.

The following is a table explaining the various levels of general educational development.

GENERAL EDUCATIONAL DEVELOPMENT

Level	Reasoning Development	Mathematical Development	Language Development
6	Apply principles of logical or scientific thinking to a wide range of intellectual and practical problems. Deal with non-verbal symbolism (formulas, scientific equations, graphs, musical notes, etc.) in its most difficult phases. Deal with a variety of abstract and concrete variables. Apprehend the most abstruse classes of concepts.	Apply knowledge of advanced mathematical and statistical techniques such as differential and integral calculus, factor analysis, and probability determination, or work with a wide variety of theoretical mathematical concepts and make original applications of mathematical procedures, as in empirical and differential equations.	Comprehension and expression of a level to — Report, write, or edit articles for such publications as newspapers, magazines, and technical or scientific journals. Prepare and draw up deeds, leases, wills, mortgages, and contracts. — Prepare and deliver lectures on politics, economics, education, or science. — Interview, counsel, or advise such people as students, clients, or patients, in such matters as welfare eligibility, vocational rehabilitation, mental hygiene, or marital relations. — Evaluate engineering technical data to design buildings and bridges.
6	Apply principles of logical or scientific thinking to define problems, collect data, establish facts, and draw valid conclusions. Interpret an extensive variety of technical instructions, in books, manuals, and mathematical or diagrammatic form. Deal with several abstract and concrete variables.	Perform ordinary arithmetic, algebraic, and geometric procedures in standard, practical applications.	Comprehension and expression of a level to — Transcribe dictation, make appointments for executive and handle his personal mail, interview and screen people wishing to speak to him, and write routine correspondence on own initiative. — Interview job applicants to determine work best suited for their abilities and experience, and contact employers to interest them in services of agency. — Interpret technical manuals as well as drawings and specifications, such as layouts, blueprints, and schematics.
4	Apply principles of rational systems ¹ to solve practical problems and deal with a variety of concrete variables in situations where only limited standardization exists. Interpret a variety of instructions furnished in written, oral, diagrammatic, or schedule form.	Make arithmetic calculations involving fractions, decimals and percentages.	Comprehension and expression of a level to — File, post, and mail such material as forms, checks, receipts, and bills. — Copy data from one record to another, fill in report forms, and type all work from rough draft or corrected copy. — Interview members of household to obtain such information as age, occupation, and number of children, to be used as data for surveys, or economic studies. — Guide people on tours through historical or public buildings, describing such features as size, value, and points of interest.
3	Apply common sense understanding to carry out instructions furnished in written, oral, or diagrammatic form. Deal with problems involving several concrete variables in or from standardized situations.	Use arithmetic to add, subtract, multiply, and divide whole numbers.	Comprehension and expression of a level to — Learn job duties from oral instructions or demonstration. — Write identifying information, such as name and address of customer, weight, number, or type of product, on tags, or slips. — Request orally, or in writing, such supplies as linen, soap, or work materials.
2	Apply common sense understanding to carry out detailed but uninvolved written or oral instructions. Deal with problems involving a few concrete variables in or from standardized situations.	Perform simple addition and subtraction, reading and copying of figures, or counting and recording.	
1	Apply common sense understanding to carry out simple one- or two-step instructions. Deal with standardized situations with occasional or no variables in or from these situations encountered on the job.		

¹ Examples of "principles of rational systems" are Bookkeeping, internal combustion engines, electric wiring systems, house building, autoing, farm management, shop setting.

Specific Vocational Preparation: The amount of time required to learn the techniques, acquire information, and develop the facility needed for average performance in a specific job-worker situation. This training may be acquired in a school, work, military, institutional, or avocational environment. It does not include orientation training required of even every fully qualified worker to become accustomed to the special conditions of any new job. Specific vocational training includes training given in any of the following circumstances.

- Vocational education (such as high school commercial or shop training, technical school, art school, and that part of college training which is organized around a specific vocational objective);
- Apprentice training (for apprenticeable jobs only);
- In-plant training (given by an employer in the form of organized classroom study);
- On-the-job training (serving as learner or trainee on the job under the instruction of a qualified worker);
- Essential experience in other jobs (serving in less responsible jobs which lead to the higher grade job or serving in other jobs which qualify).

The following is an explanation of the various levels of specific vocational preparation.

Level	Time	Level	Time
1	Short demonstration only.	5	Over 6 months up to and including 1 year.
2	Anything beyond short demonstration up and including 30 days.	6	Over 1 year up to and including 2 years.
3	Over 30 days up to and including 3 months.	7	Over 2 years up to and including 4 years.
4	Over 3 months up to and including 6 months.	8	Over 4 years up to and including 10 years.
		9	Over 10 years.

II. APTITUDES

Specific capacities and abilities required of an individual in order to learn or perform adequately a task or job duty.

- G INTELLIGENCE:** General learning ability. The ability to "catch on" or understand instructions and underlying principles. Ability to reason and make judgments. Closely related to doing well in school.
- V VERBAL:** Ability to understand meanings of words and ideas associated with them, and to use them effectively. To comprehend language, to understand relationships between words, and to understand meanings of whole sentences and paragraphs. To present information or ideas clearly.
- N NUMERICAL:** Ability to perform arithmetic operations quickly and accurately.
- S SPATIAL:** Ability to comprehend forms in space and understand relationships of plane and solid objects. May be used in such tasks as blueprint reading and in solving geometry problems. Frequently described as the ability to "visualize" objects of two or three dimensions, or to think visually of geometric forms.
- P FORM PERCEPTION:** Ability to perceive pertinent detail in objects or in pictorial or graphic material. To make visual comparisons and discriminations and see slight differences in shapes and shadings of figures and widths and lengths of lines.
- Q CLERICAL PERCEPTION:** Ability to perceive pertinent detail in verbal or tabular material. To observe differences in copy, to proofread words and numbers, and to avoid perceptual errors in arithmetic computation.
- K MOTOR COORDINATION:** Ability to coordinate eyes and hands or fingers rapidly and accurately in making precise movements with speed. Ability to make a movement response accurately and quickly.
- F FINGER DEXTERITY:** Ability to move the fingers and manipulate small objects with the fingers rapidly or accurately.
- M MANUAL DEXTERITY:** Ability to move the hands easily and skillfully. To work with the hands in placing and turning motions.
- E EYE-HAND-FOOT COORDINATION:** Ability to move the hand and foot coordinately with each other in accordance with visual stimuli.
- C COLOR DISCRIMINATION:** Ability to perceive or recognize similarities or differences in colors, or in shades or other values of the same color, to identify a particular color, or to recognize harmonious or contrasting color combinations, or to match colors accurately.

Explanation of Levels

The digits indicate how much of each aptitude the job requires for satisfactory (average) performance. The average requirements, rather than maximum or minimum, are cited. The amount required is expressed in terms of equivalent amounts possessed by segments of the general working population.

The following scale is used:

- 1 The top 10 percent of the population. This segment of the population possesses an extremely high degree of the aptitude.
- 2 The highest third exclusive of the top 10 percent of the population. This segment of the population possesses an above average or high degree of the aptitude.
- 3 The middle third of the population. This segment of the population possesses a medium degree of the aptitude, ranging from slightly below to slightly above average.
- 4 The lowest third exclusive of the bottom 10 percent of the population. This segment of the population possesses a below average or low degree of the aptitude.
- 5 The lowest 10 percent of the population. This segment of the population possesses a negligible degree of the aptitude.

Significant Aptitudes

Certain aptitudes appear in boldface type on the qualifications profiles for the worker trait groups. These aptitudes are considered to be occupationally significant for the specific group, i.e., essential for average successful job performance. All boldface aptitudes are not necessarily required of a worker for each individual job within a worker trait group, but some combination of them is essential in every case.

III. INTERESTS

Preferences for certain types of work activities or experiences, with accompanying rejection of contrary types of activities or experiences. Five pairs of interest factors are provided so that a positive preference for one factor of a pair also implies rejection of the other factor of that pair.

- | | | | | |
|---|---|-----|---|---|
| 1 | Situations involving a preference for activities dealing with things and objects. | vs. | 6 | Situations involving a preference for activities concerned with people and the communication of ideas. |
| 2 | Situations involving a preference for activities involving business contact with people. | vs. | 7 | Situations involving a preference for activities of a scientific and technical nature. |
| 3 | Situations involving a preference for activities of a routine, concrete, organized nature. | vs. | 8 | Situations involving a preference for activities of an abstract and creative nature. |
| 4 | Situations involving a preference for working for people for their presumed good, as in the social welfare sense, or for dealing with people and language in social situations. | vs. | 9 | Situations involving a preference for activities that are nonsocial in nature, and are carried on in relation to processes, machines, and techniques. |
| 5 | Situations involving a preference for activities resulting in prestige or the esteem of others. | vs. | 0 | Situations involving a preference for activities resulting in tangible, productive satisfaction. |

IV. TEMPERAMENTS

Different types of occupational situations to which workers must adjust.

- 1 Situations involving a variety of duties often characterized by frequent change.
- 2 Situations involving repetitive or short cycle operations carried out according to set procedures or sequences.
- 3 Situations involving doing things only under specific instruction, allowing little or no room for independent action or judgment in working out job problems.
- 4 Situations involving the direction, control, and planning of an entire activity or the activities of others.
- 5 Situations involving the necessity of dealing with people in actual job duties beyond giving and receiving instructions.
- 6 Situations involving working alone and apart in physical isolation from others, although the activity may be integrated with that of others.
- 7 Situations involving influencing people in their opinions, attitudes, or judgments about ideas or things.
- 8 Situations involving performing adequately under stress when confronted with the critical or unexpected or when taking risks.
- 9 Situations involving the evaluation (arriving at generalizations, judgments, or decisions) of information against sensory or judgmental criteria.
- 0 Situations involving the evaluation (arriving at generalizations, judgments, or decisions) of information against measurable or verifiable criteria.
- X Situations involving the interpretation of feelings, ideas, or facts in terms of personal viewpoint.
- Y Situations involving the precise attainment of set limits, tolerances, or standards.

V. PHYSICAL DEMANDS

Physical demands are those physical activities required of a worker in a job.

The physical demands referred to in this Dictionary serve as a means of expressing both the physical requirements of the job and the physical capacities (specific physical traits) a worker must have to meet the requirements. For example, "seeing" is the name of a physical demand required by many jobs (perceiving by the sense of vision), and also the name of a specific capacity possessed by many people (having the power of sight). The worker must possess physical capacities at least in an amount equal to the physical demands made by the job.

The Factors

- 1 **Lifting, Carrying, Pushing, and/or Pulling (Strength).** These are the primary "strength" physical requirements, and generally speaking, a person who engages in one of these activities can engage in all. Specifically, each of these activities can be described as:
 - (1) **Lifting:** Raising or lowering an object from one level to another (includes upward pulling).
 - (2) **Carrying:** Transporting an object, usually holding it in the hands or arms or on the shoulder.
 - (3) **Pushing:** Exerting force upon an object so that the object moves away from the force (includes slapping, striking, kicking, and treadle actions).
 - (4) **Pulling:** Exerting force upon an object so that the object moves toward the force (includes jerking).

The five degrees of Physical Demands Factor No. 1 (Lifting, Carrying, Pushing, and/or Pulling), are as follows:

87

S Sedentary Work

Lifting 10 lbs. maximum and occasionally lifting and/or carrying such articles as docket, ledgers, and small tools. Although a sedentary job is defined as one which involves sitting, a certain amount of walking and standing is often necessary in carrying out job duties. Jobs are sedentary if walking and standing are required only occasionally and other sedentary criteria are met.

L Light Work

Lifting 20 lbs. maximum with frequent lifting and/or carrying of objects weighing up to 10 lbs. Even though the weight lifted may be only a negligible amount, a job is in this category when it requires walking or standing to a significant degree, or when it involves sitting most of the time with a degree of pushing and pulling of arm and/or leg controls.

M Medium Work

Lifting 50 lbs. maximum with frequent lifting and/or carrying of objects weighing up to 25 lbs.

H Heavy Work

Lifting 100 lbs. maximum with frequent lifting and/or carrying of objects weighing up to 50 lbs.

V Very Heavy Work

Lifting objects in excess of 100 lbs. with frequent lifting and/or carrying of objects weighing 50 lbs. or more.

2 Climbing and/or Balancing:

- (1) Climbing: Ascending or descending ladders, stairs, scaffolding, ramps, poles, ropes, and the like, using the feet and legs and/or hands and arms.
- (2) Balancing: Maintaining body equilibrium to prevent falling when walking, standing, crouching, or running on narrow, slippery, or erratically moving surfaces; or maintaining body equilibrium when performing gymnastic feats.

3 Stooping, Kneeling, Crouching, and/or Crawling:

- (1) Stooping: Bending the body downward and forward by bending the spine at the waist.
- (2) Kneeling: Bending the legs at the knees to come to rest on the knee or knees.
- (3) Crouching: Bending the body downward and forward by bending the legs and spine.
- (4) Crawling: Moving about on the hands and knees or hands and feet.

4 Reaching, Handling, Fingering, and/or Feeling:

- (1) Reaching: Extending the hands and arms in any direction.
- (2) Handling: Seizing, holding, grasping, turning, or otherwise working with the hand or hands (fingering not involved).
- (3) Fingering: Picking, pinching, or otherwise working with the fingers primarily (rather than with the whole hand or arm as in handling).
- (4) Feeling: Perceiving such attributes of objects and materials as size, shape, temperature, or texture, by means of receptors in the skin, particularly those of the finger tips.

5 Talking and/or Hearing:

- (1) Talking: Expressing or exchanging ideas by means of the spoken word.
- (2) Hearing: Perceiving the nature of sounds by the ear.

6 Seeing:

Obtaining impressions through the eyes of the shape, size, distance, motion, color, or other characteristics of objects. The major visual functions are: (1) acuity, far and near, (2) depth perception, (3) field of vision, (4) accommodation, (5) color vision. The functions are defined as follows:

- (1) Acuity, far—clarity of vision at 20 feet or more.
Acuity, near—clarity of vision at 20 inches or less.
- (2) Depth perception—three dimensional vision. The ability to judge distance and space relationships so as to see objects where and as they actually are.
- (3) Field of vision—the area that can be seen up and down or to the right or left while the eyes are fixed on a given point.

- (4) Accommodation—adjustment of the lens of the eye to bring an object into sharp focus. This item is especially important when doing near-point work at varying distances from the eye.
- (5) Color vision—the ability to identify and distinguish colors.

VI. WORKING CONDITIONS

Working conditions are the physical surroundings of a worker in a specific job.

1 Inside, Outside, or Both:

- I Inside: Protection from weather conditions but not necessarily from temperature changes.
- O Outside: No effective protection from weather.
- B Both: Inside and outside.

A job is considered "inside" if the worker spends approximately 75 per cent or more of his time inside, and "outside" if he spends approximately 75 per cent or more of his time outside. A job is considered "both" if the activities occur inside or outside in approximately equal amounts.

2 Extremes of Cold Plus Temperature Changes:

- (1) Extremes of Cold. Temperature sufficiently low to cause marked bodily discomfort unless the worker is provided with exceptional protection.
- (2) Temperature Changes. Variations in temperature which are sufficiently marked and abrupt to cause noticeable bodily reactions.

3 Extremes of Heat Plus Temperature Changes:

- (1) Extremes of Heat. Temperature sufficiently high to cause marked bodily discomfort unless the worker is provided with exceptional protection.
- (2) Temperature Changes: Same as 2 (2).

4 Wet and Humid:

- (1) Wet: Contact with water or other liquids.
- (2) Humid. Atmospheric condition with moisture content sufficiently high to cause marked bodily discomfort.

5 Noise and Vibration:

Sufficient noise, either constant or intermittent, to cause marked distraction or possible injury to the sense of hearing and/or sufficient vibration (production of an oscillating movement or strain on the body or its extremities from repeated motion or shock) to cause bodily harm if endured day after day.

6 Hazards:

Situations in which the individual is exposed to the definite risk of bodily injury.

7 Fumes, Odors, Toxic Conditions, Dust, and Poor Ventilation:

- (1) Fumes. Smoky or vaporous exhalations, usually odorous, thrown off as the result of combustion or chemical reaction.
- (2) Odors: Noxious smells, either toxic or nontoxic.
- (3) Toxic Conditions: Exposure to toxic dust, fumes, gases, vapors, mists, or liquids which cause general or localized disabling conditions as a result of inhalation or action on the skin.
- (4) Dust. Air filled with small particles of any kind, such as textile dust, flour, wood, leather, feathers, etc., and inorganic dust, including silica and asbestos, which make the workplace unpleasant or are the source of occupational diseases.
- (5) Poor Ventilation. Insufficient movement of air causing a feeling of suffocation; or exposure to drafts.

Appendix B

Explanation of Ventura ROP
Career Evaluation Program

WHY HAVE IT?

The Career Evaluation Program was designed to assist those people who are involved in personal career planning, but who lack direction, have little experience or knowledge of the world of work, or who want to

ERIC
Full Text Provided by ERIC
potential employment.

WHERE

The Career Evaluation Program is located at the Ventura County Superintendent of Schools Educational Facilities, East Pleasant Valley Road and Las Posas Road, Camarillo, California.

Further information may be obtained by calling:
(805) 487-7711, extension 4437

These toll free numbers may be used to call from other areas in Ventura County:

- Ventura-Ojai: 648-6131, extension 4437
- Santa Paula: 647-0500, extension 4437
- Fillmore: 524-2292, extension 4437
- Moorpark-Newbury Park-Simi-Westlake-Thousand Oaks: 529-2060, extension 4437

VENTURA COUNTY
SUPERINTENDENT OF SCHOOLS OFFICE
James F. Cowan, Ed.D., Superintendent

WHAT

IS THE CAREER EVALUATION PROGRAM?

THE CAREER EVALUATION PROGRAM.

96
96

The main components of the program are interest inventories, aptitude assessment, and vocational information. Most of a client's time is spent in work-sample assessment. Work samples are actual job tasks that are designed to give clients a hands-on experience in different vocational areas. They serve both as an exploration tool, and as an accurate assessment of aptitude and ability. Interest inventories are used in conjunction with work samples to further determine potential areas of exploration. Various aptitude tests, such as the General Aptitude Test Battery, are also available and are used where appropriate. All clients spend a portion of time in the Career Center exploring specific areas of vocational interest. Here they receive career counseling which includes information on job duties, training required, and the employment outlook.

HOW

Referrals to the Career Evaluation Program can be made through Ventura County Manpower Operations, other Comprehensive Employment & Training Act (C.E.T.A.) programs, or through school personnel working with handicapped and disadvantaged students. A complete evaluation takes a minimum of 20 hours. Evaluations for specific occupational areas can usually be completed in less than 10 hours. Scheduling is flexible and can be adapted to the needs of the referring agency.

CAREER EVALUATION PROGRAM

Clients may be referred to the Career Evaluation Program at the deactivated Oxnard Air Force Base in Camarillo by telephoning 487-7711, Extension 4437, for an appointment. A completed referral form together with any supporting information should be given to the Career Evaluation Program staff prior to the client's first day of evaluation.

Examples of information which could prove extremely helpful include any disabilities (together with prognosis and any functional limitations), medication that might affect performance, previous work history, and results of educational-vocational testing.

A basic evaluation can usually be completed in 20 to 25 hours. The hours and days can be flexible in order to meet the needs of the clients. Transportation to and from the Career Evaluation Program can usually be provided (on a space available basis) through the R.O.P. bus system. Clients who ride the R.O.P. buses are usually involved in evaluation for two hours per day.

The two major parts of the evaluation process are testing and work sample assessment. An attempt is made to keep paper and pencil tests to a minimum. When recent assessments of a client's reading and math achievement levels are not available, the determination of these achievement levels will be the first step in the evaluation. This is done to avoid giving them work samples or further tests that may be beyond their current level.

For those clients whose level is quite low, the determination of an ability or I.Q. score is helpful. For this determination, attention has been paid to finding tests that are culture free and not dependent on reading skills.

Interest inventories are administered to all clients. A variety is available including one that is nonverbal. Personality assessment will not be attempted with all clients, the exception being when specific questions arise or when a client appears to have some type of behavior problem that interferes with performance. In addition, various tests such as work values inventories are used when such information would be helpful. The General Aptitude Test Battery is given to clients with an appropriate reading level.

The majority of the client's time is spent in work sample assessment. Work samples are a mock up of a job, a part of a job, or a simulation of tasks required in a job. They are a "hands on" experience for clients, which allows them to try out different types of work. Each work sample is D.O.T. (Dictionary of Occupational Titles) coded and also cross-indexed to related jobs. Work samples are scored by both time and quality. Observations are an important part of work samples, yielding information on such variables as ability to follow directions, work patterns, and distractability.

All clients receive a variety of work samples to get a picture of their overall performance and ability. Ideally, the testing program will yield some information on interests, therefore, work samples can be used to follow up on these. They can evaluate specific skills and aptitudes necessary for job in an interest area.

At all times the clients are encouraged to ask questions and make comments

about the tasks they are performing. This two way communication is an important part of work sample assessment as it gives the clients an opportunity to connect what they are experiencing with the actual job world.

At some point toward the end of the evaluation, the clients spend some time in the career center exploring specific vocational areas of interest. They receive career counseling which includes information on job duties, training required, and employment outlook in occupations consistent with their aptitudes, interests, values, etc.

Upon completion of the evaluation, a report is sent to the referring school district. Included in this report are the results of any tests taken or work samples administered, a narrative of the overall performance and specific vocational assets and limitations. Where appropriate, recommendations are made for further assessment, possible training, or possible placement. The staff of the Career Evaluation Program is also available to answer any further questions or set up a staffing upon request.

Clients will be accepted from the various school districts on a first-come-first-served basis. Priority will be given to handicapped and disadvantaged clients.

In order to further enhance the employability of clients of the Career Evaluation Program, the Singer Job Survival Skills Program will be offered. Job Survival Skills Program activities are based upon group inter-action which facilitates maximum involvement and participation. Group discussion, games, role playing, and written exercise create an active learning process that will allow the client to more effectively seek and maintain employment.

CAREER EVALUATION PROGRAM

WORK SAMPLES

- ADDING MACHINE** - Measures the ability to do simple addition on an adding machine. Accuracy and time are the important factors.
- BENNETT HAND TOOL DEXTERITY** - Dexterity in working with hand tools
- CASH REGISTER** - Measures the ability to learn the operation of a cash register and to make change.
- CONDENSING PRINCIPLE** - Measures the ability to accurately reproduce a diagram of a steam boiler
- CONSTRUCTION LAYOUT** - Measures several things: 1. Following a series of written directions, 2. Ability to identify and use common hand tools, 3. Precision measuring, and 4. Problem solving ability
- CRAWFORD SMALL PARTS DEXTERITY TEST** - Hand & finger dexterity while working with small pieces
- FILING BY LETTER** - Measures the aptitude for, and interest in simple filing. The work sample also involves the ability to visualize sequential numbers.
- FILING BY NUMBER** - Measures aptitude for, and interest in this one part of the clerical field. The sample also involves the ability to follow written examples.
- MAIL SORTING BY ZIP CODE** - Measures the ability to sort mail according to number. Incorporated in the ability to visualize numbers in a sequence.
- MESLICK MECHANICAL COMPREHENSION** - Measures the ability to assemble a small structure by following a series of diagrams. It also takes into account attention to small details.
- NUT PACKING** - Measures the ability to concentrate and to accurately count over a period of time.
- ORDER PICKING** - Measures the ability to prepare an order for shipping. Involved are verbal and numerical ability, spatial and form perception, clerical perception, finger & manual dexterity, and the ability to reach.
- PAYROLL COMPUTATION** - Measures the ability to do basic arithmetic functions in figuring out a payroll. It also measures the ability to follow written instructions and examples

RESISTOR READING - Designed to see if the client can learn to inspect, determine the values of, and accept or reject resistors based on tests and mathematic calculations. Involved are the ability to measure accurately, the ability to follow instructions, the ability to use and read a meter, and the ability to remember a series of steps.

RESTER MECHANICAL APTITUDE - Measures the ability to follow a diagram and to do simple mechanical problem solving.

STROMBERG DEXTERITY TEST - Eye - hand coordination as well as arm - hand dexterity.

TYPING - This is a simple test for speed and accuracy; first on straight typing and then on a simple business letter.

VISUAL PURSUIT - Measures the ability to do wiring according to a diagram.

V G R S ASSEMBLY - Measures the ability to learn a manual assembly task and perform it under timed conditions.

WASHER THREADING - Measures the ability to do accurate measurement over a period of time. There is also some finger dexterity involved in this task.

FISH LAMP ASSEMBLY - Measures the client's ability to learn and perform a manual assembly task using three hand tools.

SHIPPING & RECEIVING FREIGHT HANDLING - Assesses a client's ability to route packages and mail for shipment and to determine their costs.

VALPAR COMPONENT WORK SAMPLE SYSTEM

Valpar Component Work Sample 1, Small Tools (Mechanical) - measures a person's understanding of and ability to work with small tools. The design of the sample forces the client to work in difficult physical positions using his fingers and hands in a very small space with the actual work often being blocked from the client's vision.

Valpar Component Work Sample 2, Size Discrimination - measures a person's ability to perform work tasks requiring visual size discrimination.

Valpar Component Work Sample 3, Numerical Sorting - measures a person's ability to perform work tasks requiring the use of numbers and numerical series.

Valpar Component Work Sample 4, Upper Extremity Range of Motion - measures a person's upper extremity range of motion, including the shoulder, upper arm, forearm, elbow, wrist, and hand. The work sample is designed to give the evaluator an actuarial level of the client's performance, and to provide the evaluator with insight into related factors as neck and back fatigue, finger dexterity and finger tactile sense.

Valpar Component Work Sample 5, Clerical Comprehension and Aptitude - measures a person's ability to perform entry level clerical tasks. Incorporated within this sample is a typing aptitude, bookkeeping, alphabetical filing, mail sorting, and telephone answering test.

Valpar Component Work Sample 6, Independent Problem Solving - measures a person's ability to perform work tasks requiring the visual comparison and proper selection of a series of abstract designs. The purpose of the sample is to give a measure of a person's basic independent problem solving ability.

Valpar Component Work Sample 7, Multi-Level Sorting - measures a person's ability to make decisions while performing work tasks requiring physical manipulation and visual discrimination of colors, color-numbers, color-letter and a combination of color-letter-number. The work sample permits the evaluator to establish a distinct level of individual decision-making ability.

Valpar Component Work Sample 8, Simulated Assembly - measures a person's ability to work at an assembly task requiring repetitive physical manipulation and evaluate a person's bilateral use of upper extremities. The work sample is characteristic of conveyor-assembly jobs in which material moves toward and away from workers on the assembly line.

Valpar Component Work Sample 9, Whole Body Range of Motion - measures the agility of a person's gross body movements of the trunk, arms, hands, legs and fingers as they relate to the functional ability to perform job tasks. The work sample is designed to give the evaluator an actuarial level of the client's physical agility, and to provide the evaluator with insight into the relationship of gross body movement to other "finer" manual dexterities in many differing work situations.

Valpar Component Work Sample 10, Tri-Level Measurement - measures a person's ability to perform very simple to very precise inspection and measurement tasks. The sample is designed so that the client is forced to make decisions which increase in their level of difficulty in order to determine if specially lathed, machined parts fit specific tolerances.

Valpar Component Work Sample 11, Eye-Hand-Foot Coordination - measures a person's ability to use his/her eyes, hands and feet simultaneously and in a coordinated manner.

Valpar Component Work Sample 12, Soldering and Inspection (Electronic) - measures a person's ability to acquire and apply the basic skills necessary to perform soldering tasks at varying levels of difficulty. The work sample was designed to apply itself to entry level worker requirements in various industries.

SINGER UNITS

Basic Tools - the client uses a variety of hand tools to fabricate a ring from aluminum bar stock. This work sample tests for medium finger dexterity, manual dexterity, eye-hand coordination, the use of hand tools, measuring ability, form perception, craftsmanship and care in handling.

Plumbing and Pipfitting - the client makes three 6 inch pipe nipples. He is required to measure, cut, ream, file and then thread the pipe. The sample tests for manual dexterity, bi-manual coordination, the use of hand tools, care in handling and judgement.

Refrigeration, Heating and Air Conditioning

This work sample has the client make a tubing frame. He is required to cut and flare copper tubing and then assemble the pieces into a frame using elbows, unions and a tee. Among the skills and abilities tested are manual dexterity, eye-hand coordination, form perception, care in handling and frustration tolerance.

Engine Service

In this work sample the client disassembles a small engine, checks and sets the points and plugs and then reassembles it. Among the observable skills are eye-hand coordination, manual dexterity, measuring ability, form perception, safety consciousness, care in handling, and performance with repetition.

Medical Service

This work sample includes a number of tasks. The client is exposed to bandaging; taking and recording temperature, pulse and respiration; measuring and recording liquid intake and output; and testing for diabetic urine. The observable skills and abilities include medium finger dexterity, manual dexterity, numerical ability, measuring ability, color discrimination, care in handling and performance with repetition.

Appendix, C

Brochure and Brief Description of
HSA Work Evaluation Program

The Need:

The Work Evaluation Unit was established in order to meet a need within the community for a single source to provide a comprehensive real world oriented assessment of the rehabilitation client. The program assesses the client's potentials, interests, and capacities for work as well as activities necessary for daily living. The program was developed in response to rehabilitation practitioners' expressed needs.

The Program:

The Work Evaluation Unit offers a two week evaluation program of vocational exploration and work evaluation. The three

basic components of the program are: Work Samples, Aptitude, Achievement, and Interests, tests, and a Job Search Clinic.

Work Samples are a mock-up of a job, a part of a job, or a simulation of tasks required of a job. Work Samples drawn from industry and standardized for time and quality expectations provide an accurate assessment of skills and aptitudes. A great deal of emphasis is placed on the use of Work Samples. They are reality based situations which give the client the opportunity to realistically learn about the world of work as well as determine the relationship of his occupational assets and deficits to the work world. Two national batteries are presently used in the Work Evaluation Unit, The Singer Graflex System and

The Jewish Employment Vocational System. The information gained through the Work Sample Batteries combined with the information gained through aptitude and achievement tests yield an accurate picture of the worker.

The Job Search Clinic is an approach to teaching clients to sell themselves. The clinic, run in connection with the evaluation, consists of five sessions of one to one and a half hours each. During the sessions a variety of topics are covered oriented around helping the client prepare for employment. Topics covered include: Sources Of Job Information, How To Fill Out Application Forms, Selling Your Skills, Preparing For The Job Interview, How To Handle Problems Encountered At Work, and Relations With Your Employer.

An in-depth evaluation report containing recommendations and results of the work evaluation will be sent to the referral source within two weeks after the evaluation has been completed. Staffings will be conducted on individual clients during the second week of the evaluation.

Clients are ordinarily involved in the program from ten o'clock a.m. to three-thirty p.m., Monday through Thursday and ten to twelve-thirty on Friday for two weeks. Shorter evaluations for specific purposes can be arranged upon consultation with the program director.

The Work Evaluation Unit is located in the Bard Building on the grounds of General Hospital. This location enables access to many specialized services provided through the Health Services Agency to enrich the client's experience. Physicians, psychiatrists, psychologists, social workers, occupational therapists, speech therapists, and physical therapists may be called upon as needed to augment services provided through the Unit.

Additional information can be obtained by calling (805) 648-6181, Extension 3137.

9/75

**THIS IS A QUESTIONNAIRE—IT IS NOT
A TEST**

**PLEASE DO NOT MARK
ON THIS BOOKLET**

The following questions are about your educational and career plans. Each question is important. Your answers will be used to help you clarify your educational and career goals, and to provide you with information about occupations in which you express an interest.

INSTRUCTIONS:

1. Read each question carefully and answer it as best you can.
2. Mark all answers on your answer card, using the special pencil.
3. Erase completely any stray marks or answers you wish to change.
4. Print your name, address, and zip code at the top of the answer card if not already printed.
5. Fill in your sex and grade at the left side of the answer card.

A. Which of the following statements best describes my present choice of classes? I have chosen as many classes as possible that relate to:

select 

1. Receiving a *general education*. I am not trying to specialize in any area at this time.
2. *Business*, office work, and sales.
3. *Agriculture*, such as ornamental horticulture, livestock management, or crop management.
4. *Fine arts*, such as drawing, drama, and music.
5. Working in a *trade or industry*, such as auto mechanics, drafting, electronics, graphic arts, metal, or wood shop.
6. *Home Economics*, such as clothing, foods, child care, and home management.
7. Attending college (*college-prep* classes).
8. *None* of the above statements best describe my present choice of classes.

B. When I consider my educational and career plans, how sure am I of my present choice of classes?

1. Very sure. It is exactly what I want.
2. Somewhat sure. I think it is what I want.
3. Doubtful. I am not too sure it is what I want.
4. I realize now I am in the wrong course of study.

C. TWO of the following types of work which are of most interest to me at this time are:

select 

1. Creative work involving design, color, and materials; or work in the performing arts, such as music, drama. (*Artistic*)
2. Office work involving specific tasks requiring accuracy, such as typing, filing, keeping records and accounts. (*Clerical*)
3. Work involving mathematics or numbers. (*Computational*)
4. Work involving health care of people or animals. (*Health*)
5. Work involving reading and writing. (*Literary*)
6. Work involving machines and tools. (*Mechanical*)

7. Work that keeps you outside most of the time in all kinds of weather. (*Outdoor*).

8. Work that involves meeting and dealing with people, sales, or convincing others of a point of view. (*Persuasive*)
9. Work involving discovery, understanding, and problem solving in nature and the physical world. (*Scientific*)
10. Work involving helping other people. (*Social Service*)

D. How sure am I that my responses to question "C" really are my strongest interests?

select 

1. Certain. My career interests are very firm.
2. Fairly sure. My career interests are somewhat clear.
3. A little uncertain. My career interests are not too clear.
4. Very uncertain. My career interests are not clear at all.

E. TWO of my strongest aptitudes or talents are:

select 

1. Ability to "catch on" or understand instructions—closely related to doing well in school. (*General Learning*)
2. Ability to understand the meaning of words and to use them effectively. (*Verbal*)
3. Ability to work quickly and accurately with arithmetic problems. (*Numerical*)
4. Ability to picture something in my mind from a drawing, to see how the parts of things will fit together, and how the complete object will look. (*Spatial*)
5. Ability to see important details and differences of objects. (*Form Perception*)
6. Ability to pick out and copy letter and number combinations quickly and accurately. (*Clerical*)
7. Ability to coordinate eyes and hands to make precise hand movements with speed. (*Eye-Hand Coordination*)
8. Ability to work with small objects rapidly. (*Finger Dexterity*)
9. Ability to work with my hands easily and skillfully. (*Manual Dexterity*)

F. How sure am I that my responses to question "E" really are my strongest aptitudes?

1. Certain
2. Fairly sure
3. A little uncertain
4. Very uncertain

G. SELECT FIVE job characteristics that are most important to you. I would like a career:

1. Where I have a high level of responsibility and make key decisions involving property, finances, or human safety and welfare.
2. Where I direct activities of others and have supervisory responsibilities.
3. Where I work under close supervision and my job performance and work standards are controlled by a supervisor.
4. Where my work involves performing the same thing time after time — doing repetitious work.
5. Where I compete with others for advancement and recognition.
6. Where I work with details continually, such as numbers, written materials, or technical data.
7. Where I see the physical results of my work; I see a product of my work.
8. Where I have freedom to use my own ideas — have an opportunity for self-expression.
9. Where I help people.
10. Where I work independently — where I use my initiative, self-discipline, and ability to organize.
11. Where I work as a part of a team interacting with fellow employees in performing my duties.
12. Where my work involves a lot of lifting, standing, and walking — requires physical stamina.
13. Where my job involves overtime or shift work — work hours other than normal daytime shifts.
14. Where I work with ideas; I use my intellect to solve problems.
15. Where I work with people and must be able to get along with others.
16. Where I work with things and must be able to work well with my hands.
17. Where I work at one place most of the time.
18. In which jobs are widely scattered in most areas of the United States.
19. Where I influence or motivate others.

H. Based upon facts I have now, my plan for the future is:

select 

1. To graduate from high school and go right to work with no further education or training.
2. To join the military service.
3. To enter an apprenticeship program (formalized on-the-job training program usually associated with a union).

4. To get further training at a trade, technical, or business school.
5. To complete a community college program involving two years of training or less.
6. To start at a community college and then transfer to a four-year college.
7. To go right to a four-year college or university.
8. To attend more than four years of college.

I. Is there any reason why you may not be able to graduate from high school?

1. Yes
2. No

J. I wish to talk to a counselor about:

(SELECT AS MANY AS APPLY)

1. High school education requirements.
2. Trade school, community college, or technical school training opportunities.
3. Four-year college entrance requirements.
4. Scholarships or other financial aids to attend a private school, community or four-year college.
5. I do not wish to talk to a counselor about any of the above.

K. I estimate my grades for the last two years to be:

1. Mostly A's.
2. Mostly A's and B's.
3. Mostly B's.
4. Mostly B's and C's.
5. Mostly C's.
6. Mostly C's and D's.
7. Mostly D's.

L. Please note your need at this time for help with educational and career planning.

1. I need considerable help in figuring out what I am going to do.
2. I have some things planned but could use additional help.
3. I do not need additional help at this time as plans are fairly clear.

M. Do you have any physical handicaps that limit you in any way? (Do not include temporary injuries, dental braces, or glasses for minor visual corrections.)

1. Yes
2. No

N. Some students ride a bus or travel to training programs so they can take special courses. Are you willing to attend such classes (no more than 30 miles from your school) if the training you wish to take is not offered at your school?

1. Yes
2. No

O. Most people have some idea of the occupation(s) they might like to enter. From the following list of occupations, make a first and second choice of occupations you might like to enter. Mark the three-digit number on your answer card as illustrated in the example to the right. If the occupation(s) in which you are interested are not listed, please try to pick a related occupation. You will receive information on the two occupations you pick. If you select "other," write the occupation you prefer on the back of the answer card.

EXAMPLE:

First choice:

111 Accountant

Second choice:

418 Dental Assistant

BUSINESS AND COMMERCE

- 111 Accountant
- 116 Advertising Worker
- 121 Auto Parts Salesperson
- 122 Automobile Salesperson
- 126 Bank Teller
- 131 Bookkeeper
- 136 Cashier
- 143 Clerk Typist
- 145 Computer Operator
- 145 Computer Programmer
- 162 Hotel/Motel Clerk
- 168 Insurance Agent
- 168 Keypunch Operator
- 171 Manufacturers Sales Representative
- 175 Personnel Worker
- 177 Public Relations Worker
- 179 Purchasing Agent
- 181 Real Estate Salesperson
- 183 Receptionist
- 186 Restaurant Manager
- 187 Retail Sales Clerk
- 189 Secretary/Stanographer
- 193 Stockbroker
- 195 Systems Analyst
- 196 Telephone Operator

PUBLIC AND SOCIAL SERVICES

- 221 Beauty Operator/Cosmetologist
- 229 Clergy/Religious Worker
- 232 Cook/Chef
- 236 Counselor
- 241 Custodian
- 254 Fireman/Fire Fighter
- 267 Home Economist
- 269 Lawyer
- 274 Librarian
- 283 Military Service
- 285 Nursery School Teacher
- 287 Police Officer
- 292 Probation Officer/Parole Agent
- 294 Psychologist
- 296 Recreation Worker
- 313 Social Worker
- 317 Teacher
- 322 Waiter/Waitress

TRANSPORTATION AND RELATED

- 352 Air Traffic Controller
- 354 Airline Stewardess/Flight Attendant
- 358 Airplane Pilot
- 363 Bus Driver
- 378 Truck Driver

HEALTH SERVICES

- 418 Dental Assistant
- 419 Dental Hygienist
- 422 Dentist
- 435 Hospital Administrator
- 437 Hospital Attendant/Nurse Aide
- 443 Licensed Vocational Nurse
- 445 Medical Assistant
- 448 Medical Laboratory Worker
- 455 Occupational Therapist
- 462 Optometrist
- 468 Pharmacist
- 471 Physical Therapist
- 474 Physician/Doctor
- 486 Registered Nurse
- 497 Veterinarian
- 499 X-ray Technician

ENGINEERING, SCIENTIFIC, AND TECHNICAL

- 521 Biologist
- 533 Chemical Engineer
- 536 Chemist
- 538 Civil Engineer
- 542 Drafting Technician
- 545 Electrical Engineer
- 547 Electronic Technician
- 551 Engineering/Science Technician
- 563 Geologist
- 572 Mathematician
- 576 Mechanical Engineer
- 585 Oceanographer/Marine Biologist
- 596 Surveyor

COMMUNICATION, DESIGN, AND PERFORMING ARTS

- 612 Actor/Actress
- 615 Architect
- 628 Commercial Artist
- 632 Dancer
- 638 Fashion Designer
- 642 Floral Designer/Florist
- 652 Interior Designer/Decorator
- 654 Interpreter/Translator
- 654 Model
- 657 Musician/Music Teacher
- 674 Newspaper Reporter/Journalist
- 677 Photographer
- 681 Professional Athlete
- 684 Radio and Television Announcer
- 692 Technical Writer

CONSTRUCTION

- 714 Bricklayer
- 721 Carpenter
- 723 Cement Mason
- 729 Electrician
- 738 Heavy Equipment Operator
- 745 Painter/Paperhanger
- 749 Plumber

MECHANICAL AND REPAIR

- 761 Air Conditioning, Refrigeration, and Heating Mechanic
- 763 Aircraft Mechanic
- 765 Appliance Service Technician
- 767 Automobile Body Mechanic
- 769 Automobile Mechanic
- 774 Automobile Transmission Mechanic
- 789 Farm Equipment Mechanic
- 794 Industrial Machinery Mechanic
- 816 Motorcycle Mechanic
- 821 New Car Get Ready Worker
- 823 Service Station Attendant
- 832 Television and Radio Repair Technician

INDUSTRIAL PRODUCTION AND RELATED

- 844 Automobile Painter
- 864 Lithographic Printer
- 868 Machinist
- 877 Photographic Lab. Technician
- 899 Welder

AGRICULTURE AND CONSERVATION

- 914 Animal Keeper
- 916 Commercial Fisher
- 921 Crop and Fruit Grower
- 923 Dairy and Livestock Farmer
- 929 Fish and Game Warden
- 932 Forester
- 934 Forestry Technician
- 936 Gardener/Groundskeeper
- 938 Horse Trainer/Breeder
- 945 Nursery Worker/Landscaper
- 949 Poultry Rancher
- 998 Other (specify on back of answer card)
- 999 Undecided

CHECK YOUR ANSWER CARD FOR COMPLETENESS AND ACCURACY

INTRODUCTION

During each year since 1970, the Regional Occupational Program, Department of Occupational Education of the Ventura County Superintendent of Schools Office has administered a fifteen-item Career Planning Inventory to secondary students. The annual inventory administration process is completed with the cooperation of local district and school personnel, the Ventura County Community College District, and the Ventura County Regional Educational Data Processing Center.

The original purpose for administering the inventory (often referred to as "the Questionnaire") was to obtain student interest data to be utilized for vocational training program planning and program recruitment. It was specifically designed to comply with the California State Department of Education's local district plan for vocational education requirements. The data obtained from the annual inventory administration process directly relate to the Population Needs Analysis, Student Recruitment, and Vocational guidance functions of that plan. Now after five years of development and implementation, the student data are computer processed so that students utilize the information to assist them in making meaningful career decisions.

Computer processing of the Career Planning Inventory provides a number of different reports which can also be used for many other purposes. The utilization of these reports pertains to such activities as:

1. Local district and/or regional program planning.
2. Articulated planning between a local district and other educational entities.
3. Identification of Students with special interest or needs.
4. Providing students with a stimulus to explore various career options.
5. Identification of students who have an expressed interest in a particular occupation.

Those computer reports include individual student profiles, school reports, and statistical reports. The other components of the system include the Career Planning Inventory (the cover of this report), Occupational Profiles, and Occupational Briefs. The complete system is transportable to other geographic areas outside of Ventura County. During the 1974-75 school year there were over 75,000 Career Planning Profiles administered in five other counties. For specific price and procedural information, please contact the Director of the Ventura County Regional Educational Data Processing Center, County Office Building, Ventura, California 93001

The next sections of this publication contain a detailed explanation for each of the various component parts of the system.

CAREER PLANNING INVENTORY

The original questionnaire was developed by the San Diego County Schools Office in 1968 and was released for use by other educational agencies in 1969. This instrument was first used by the Ventura County Superintendent of Schools Office in 1970, and it has been subsequently revised and used in each succeeding year.

The Career Planning Inventory (cover of this publication) is designed for administration by classroom teachers or counselors in 45 minutes or less. With one proctor for each 35 students, it can be administered in large groups. Each person administering the questionnaire is given written instructions for its administration.

The four-page Career Planning Inventory consists of 15 items, "A" through "O," each item requires from one to five responses by the student. The students use special pencils to mark their responses on a separate answer card. The data from the completed inventories are then analyzed by computer in the Ventura County Schools Regional Data Processing Center.

The results of Questions "A," "B," "C," "D," "E," "F," "G," "H," "K," "L," and "O" are covered in the Student Career Planning Profile (Illustration 1 and 2). The results of Questions "B," "D," "F," "H," "I," "J," "K," "L," "M," "N," and "O" are reported in the School Summary Reports and the County Summary Reports (Illustration 3 and 4).

STUDENT CAREER PLANNING PROFILE

The Student Career Planning Profile (Illustration 2 and 3) summarizes each individual student's educational and career plans.

In addition to summarizing the student's educational and career plans, new information is provided for students by comparing interests, job characteristics, and educational plans chosen by each student with the interest areas, job characteristics and requirements, and educational requirements usually associated with each of 316 different occupations. The job characteristics and requirements (including educational requirements) usually associated with the occupations listed were identified in an article which appeared in the U.S. Department of Labor's Occupational Outlook Quarterly, Volume 15, Number 4, winter 1971.

Illustration 1 shows which questions on the first three pages (Questions "A" through "N") of the Educational and Career Planning Questionnaire produce the various responses recorded on the Student Career Planning Profile.

STUDENT CAREER PLANNING PROFILE

Illustration 2 shows that Question "O" on the fourth page of the Educational and Career Planning Questionnaire produces the student's first and second occupational choices.

In parentheses to the right of the present occupational choices are a letter and two numbers. The letter indicates whether or not a student's post high school training plans (Question "H") are consistent with the amount of training necessary to enter the specified occupation. "Y" means "yes," the student's post high school training plans are consistent while "N" means "no," the student is planning to obtain either more or less education than is required for the occupation. The first number indicates how many of the two interest areas (Question "C") selected are included in the occupation and the second number (after the decimal) indicates how many of the five job characteristics and requirements (Question "G") selected are usually associated with the occupation. A plus (+) after the numbers indicates that the occupational outlook is favorable. A minus (-) indicates that the occupational outlook is not favorable and that there may be limited employment opportunities. If there are no pluses or minuses, the opportunities for employment in that occupation are in the average range.

Illustrations 1 and 2 also show in the lower right hand corner of the Student Career Planning Profile, a box with the heading OTHER OCCUPATIONS YOU MAY WISH TO EXPLORE. The box contains up to ten occupations which can be entered with the amount of education the student plans to obtain. Each occupation contains one or both of the interest areas selected by the student and at least three of the five job characteristics selected by the student. The numbers and any pluses or minuses that appear in parentheses to the right of the occupations listed can be interpreted in the same way as those to the right of the student's present occupational choices.

The occupations listed in this section of the Profile are ranked in priority order, first according to the number of interest area matches (first digit), secondly according to the number of job characteristics and requirement matches (second digit), and finally in order of employment potential.

If the student's choices result in no occupational matches, this is noted in the box in the lower right hand corner of the Student Career Planning Profile. If the student selects less than five job characteristics (Question "G"), this is noted in the box in the lower left hand corner of the Student Career Planning Profile. If any of the occupations listed in the lower right hand corner of the Student Career Planning Profile usually require more than four years of college, they are marked with an asterisk and an explanation is made in the box in the left corner portion of the Student Career Planning Profile.

IT SHOULD BE REMEMBERED THAT THE CAREER PLANNING INVENTORY IS NOT TO BE CONSIDERED AS A PREDICTIVE INSTRUMENT. THE LIST OF "OTHER OCCUPATIONS YOU MAY WISH TO EXPLORE" IS ONLY A PARTIAL LIST OF SOME OCCUPATIONS THAT ARE CONSISTENT WITH THE INTERESTS, EDUCATIONAL PLANS AND JOB CHARACTERISTICS WHICH A STUDENT SELECTS ON THE CAREER PLANNING INVENTORY.

THESE TYPES OF WORK INTEREST ME

C. TWO of the following types of work which are of most interest to me at this time are:

MY PRESENT COURSE OF STUDY

A. The following courses of study are offered in most high schools. My present course of study is:

MY STRONGEST APTITUDES

E. TWO of my strongest aptitudes or talents are:

MY FUTURE PLANS

H. Based upon facts I have now, my plans for the future are:

COUNSELING ASSISTANCE

F. Please note your need at this time for help with educational and career planning:

DESIRABLE JOB CHARACTERISTICS

G. I would like a career with the following job characteristics: (circle FIVE of those you would like)

STUDENT CAREER PLANNING PROFILE

SUZANNE SMITH ID FEMALE MARI HIGH SCHOOL OTHARD JONES
 155 SPACE AVE MODERN CITY CALIF. 91066 805 429 8705 07-24-73

COURSE OF STUDY IS COMBINATION OF TWO OR MORE. I AM NOT TOO SURE IT IS WHAT I WANT.
 LITERARY AND SOCIAL SERVICE TYPES OF WORK APPEAR TO BE OF MOST INTEREST TO ME.

I AM PRETTY SURE OF THIS AT THIS TIME. I THINK GENERAL LEARNING AND FORM PERCEPTION ARE MY STRONGEST APTITUDES. I AM PRETTY SURE ABOUT MY APTITUDES. I ESTIMATE MY GRADES TO BE MOSTLY B's

I PLAN TO GO RIGHT TO A FOUR YEAR COLLEGE OR UNIVERSITY.
 I NEED ADDITIONAL HELP WITH EDUCATIONAL AND CAREER PLANNING.

* INDICATES AN OCCUPATION REQUIRING MORE THAN 4 YEARS OF COLLEGE
 (SEE BOX IN LOWER RIGHT HAND CORNER)

MY PRESENT OCCUPATIONAL CHOICES ARE
 (1) AIRLINE STEWARDESS (W1.3)

You probably have some idea of the occupational areas you would like to enter. Please check your first and second choices (TWO ONLY) from the 125 occupations listed by placing a "1" or "2" in front of your first choice and a "3" in front of your second choice. If the occupation(s) in which you are interested are listed below, check each related occupation(s) or place a "3" in the box marked "other" and so on in the appropriate box prior to the box marked "undergrad". If you do not have any idea of the occupation you would like to enter, please place an "X" in the box marked "undergrad".

BUSINESS AND COMMERCE

- 001 Accountant
- 002 Advertising Manager
- 003 Audit Supervisor
- 004 Automobile Parts Fitting
- 005 Bank Teller
- 006 Bookkeeper
- 007 Cashier

ILLUS. 2

OCCUPATIONAL PROFILE

Profiles have been developed for each 125 different occupations. Each occupational profile contains a brief description of the occupation, the training usually required for entry into the occupation, and the employment prospects, including the Bureau of Labor Statistics estimates of the nation-wide employment in 1972 and the average annual nation-wide job openings to 1980. Local employment estimates are provided when available.

The Occupational Profile also contains the ten interest areas, nine aptitudes, and 26 job characteristics and requirements listed in Questions "C," "E," and "G," respectively, of the Career Planning Inventory. A brief definition of each item is included. The interest areas, aptitudes, and job characteristics and requirements usually associated with the occupation are clearly indicated. Additionally, five related careers are also listed.

SCHOOL SUMMARY REPORTS

The School Summary Reports are derived from student responses to the Career Planning Inventory. The computer is programmed to prepare 21 different types of reports compiled from the student responses. Illustration 3 is an example of one type of report. The title block of each report contains the student grade level, the letter of the question, and the question response number. The report title is para-phrased from the question on which it is based.

The body of each report contains an alphabetical listing of each student's name who responded to that particular question by selecting the indicated response. A statistical summary is printed by the computer in the lower left hand corner of each report. It indicates the total number of students who took the questionnaire, the number of students who selected the specified response and a percentage factor.

30-4-

114

SCHOOL SUMMARY REPORTS

This is a list of the various report titles, the question letter designated and the response numbers.

Summary Report Title	Question and Response
1. Students Doubtful of Their Course of Study	B-3
2. Students Who Feel They Are in the Wrong Course of Study	B-4
3. Students Uncertain or Very Uncertain of Their Interests	D3-4
4. Students Uncertain or Very Uncertain of Their Aptitudes	F3-4
5. Students Who Plan to go to Work After High School with no Further Education	H-1
6. Students Who Plan to Enter Military Service	H-2
7. Students Who Plan to Enter an Apprenticeship Program (also matched with their first and second choice of an occupation)	H-3
8. Students Who Plan to go to a Trade or Business School	H-4
9. Students Who Plan to Complete a Community College Program	H-5
10. Students Who Plan to attend a Four Year College/University (also matched with type of college plan, estimate of grades and where available cumulative GPA)	H-6, 7, & 8
11. Students Indicating They May Not Graduate	J-1
12. Students Wishing to Talk to a Counselor about High School Education	J-1
13. Students Wishing to Talk to a Counselor about Post High School Technical Training	J-2
14. Students Wishing to Talk to a Counselor about Four Year College Entrance Requirements	J-3
15. Students Wishing to Talk to a Counselor about Scholarships or other Financial Aids (matched with their future plans)	J4-H
16. Students Needing Considerable Help in Career Planning	L-1
17. Students Needing Additional Help in Career Planning	L-2
18. Students Indicating Physical Handicaps	M-1
19. Students (listed by sex) indicating their first and Second Choice of a Particular Occupation	111-949
20. Students Who Indicated an Occupational Choice Other Than the Ones Listed	998
21. Students Who Are Undecided as to an Occupational Choice	999

A brief study of the Career Planning Inventory will reveal the relationship of these titles and responses to the actual question listed in the Questionnaire.

COUNTY SUMMARY REPORTS

Essentially, the County Summary Reports are computer printed statistical review of each of the school reports. The title block contains the same basic information as the School Reports. The left hand column of the report identified the district and the name of each school within that district. The next three columns list the number of students who selected the particular question response indicated, the total number of students who took the questionnaire and a percentage factor.

The bottom line of each report indicates the County totals for each column. It is possible to obtain from these reports data pertaining to a particular school or a district and compare these results to the County percentage factors.

There is one additional report prepared in the County format but not reported as a separate item in the School Summary Reports. This report is based on Question "N" and pertains to the student's willingness to be bussed to a site other than his school in order to receive occupational training. The response to this question is utilized in the School Report titled "Students Who Indicated An Occupational Choice Under the Column Heading 'Bus'." (Illustration 4).

SPECIAL REPORTS

Because of the creative design of the computer programs utilized by this system, there are other types of reports or services which may be obtained by special request. In addition to address labels, perhaps the most useful report to this type is the "Special Trait Selector."

By specifying the appropriate work traits (Question C) and the job characteristics (Question G) it is possible to identify students which match the requirements of a particular job or training program. This report is particularly valuable for recruiting student into new or unusual programs. Utilizing a report of this nature, situations such as selecting a limited number of students for job opportunities or field trips can be resolved by school officials.

USES OF THE SYSTEM

Each student in Ventura County who completes a Career Planning Inventory receives a Student Career Planning Profile (illustrations 3 and 4), an Occupational Profile on each of his two present occupational choices (Question "0"), and a cover letter explaining how to interpret the enclosed materials.

In the cover letter, the student is encouraged to compare his choice of interests, aptitudes, training and job characteristics and requirements summarized on the Student Career Planning Profile (illustrations 1 and 2) with the interests, aptitudes, training and job characteristics usually associated with each of his two occupational choices. The appropriate occupational profiles are included with the cover letter and the Student Career Planning Profile.

By utilizing the School Summary Reports and the Student Profiles, the Occupational Counselor can identify groups of students who have common interests or similar needs. This process facilitates small or large group counseling. The individual students with particular occupational counseling needs can also be identified.

The Occupational Interest Reports contained in the School Summary Reports facilitate matching student interest with such activities as career days or special speakers. These same reports have been utilized by work experience coordinators to aid in the selection of potential student job candidates when specific requests from community employers are received.

The vocational education teacher can also use the School Reports to identify those students who have a high interest in the particular occupation his program is designed to serve. This feature enables the teacher to recruit the identified students and thereby build the enrollment in his program.

The County Summary Reports, reflecting both numerical totals and percentages by school and by district, are beneficial tools for the vocational education planner. With these reports, he can quickly assess the number of potential students available for any program which is either presently operational or may be in the initial planning stages.

STUDENT FEEDBACK

Now that you have finished the work sampling and seen the results, we would like to know what you thought of the program. Please tell us honestly how you feel about it, and if you have any suggestions as to how it could be improved, include them under "Comments." Thank you for your time and patience. If we are able to continue next year, please come by and see us. We'd like to know how you're doing.

1. What did the work sampling tell you about yourself that you didn't already know?
2. What did you like and/or dislike about the work sampling?
3. Is there a better way to schedule the sampling? If so, choose one of the following, or give us your ideas:
 - a) One week, four hours per day _____
 - b) Two weeks, two hours per day _____
 - c) Four weeks, one period per day _____
 - d) After school _____
 - e) Other _____
4. How do you plan to use what you have learned about yourself?
5. How could we improve the work sampling?
6. How else could we have been of help to you?
7. Comments: (use the back if you need more space)

Tests Administered

Results

SRA Reading Index - Handled material through the sentence comprehension level. With no problem. Missed the proficiency level for paragraph comprehension by two points.

SRA Arithmetic Index - Handled addition, subtraction, multiplication and division of whole numbers with no problem. Unable to do fractions, decimals or percentages.

California Occupational Preference System - High interest areas were professional and skilled art. Skilled technology was also above average but considerably below the rating for art:

scores varied, but were generally in the average to above average range for both time and quality. There does not appear to be any particular pattern in the tasks which she dropped down.

listened carefully to directions and was generally able to proceed with out further help. The exceptions to this were on tasks where a number of steps were involved. She did need a verbal explanation of written material if math was involved. was able to read and work from diagrams.

Generally, work pace was steady and on the fast side. It slowed down on tasks where close attention to detail or written material was involved. Although her tested dexterity was below average, in practical application it proved to be more than adequate. demonstrated above average concentration and a high tolerance for frustration. While was able to concentrate on her own work, she was also observant of what went on around her. Because of this she needed only a minimal explanation on several of the work samples.

approach to tasks was organized and she knew how to break tasks down into separate steps. She tended to stick closely to demonstrated methods rather than modify them to any great degree.

Employability Assets:

- 1) Steady, fairly rapid work pace
- 2) Good concentration
- 3) Ability to organize her work
- 4) Ability to follow directions

Present Limitations:

- 1) Math skills somewhat low
- 2) Quality of work drops when close attention to numbers or detail is required.

The above occupations are consistent primarily with tested interests and secondarily with her aptitudes. Her two main interests were art and working with animals. Unfortunately we do not have work samples that test these aptitudes directly.

During the time spent in the Career Center, she talked primarily about entering the art field in some capacity. Most occupations that she was looking at require at least four years of college. There is a two year program in applied art at Moorpark College that she might wish to consider. This would train her for some entry level jobs in the art field.

If she chooses to go the other way and follow up her interest in animals, Moorpark, again, has a course in wild animal training. We talked briefly about this and horse breeding and training. She also reviewed some information on the latter.

She might want to consider both the R.O.P. classes in floral design and retail merchandising. Both of these relate to her artistic interests.

The following is a list of Worker Trait Groups consistent with tested aptitudes on work samples:

- .380 Set-up machine operating
- .381-.281 Craftsmanship and related work
- .368 Information gathering, dispensing, verifying and related work
- .488-.388 Computing and related recording
- .588-.688 Routine checking and recording
- .684-.487 Sorting, inspecting, measuring and related work.

.782 Operating controlling
.878 Child and adult care
.883 Driving operating
.884 Manipulating

Tests Administered

Results

SRA Reading Index - Handled material through the sentence comprehension level. With no problem. Missed the proficiency level for paragraph comprehension by two points.

SRA Arithmetic Index - Handled addition, subtraction, multiplication and division of whole numbers with no problem. Unable to do fractions, decimals or percentages.

California Occupational Preference System - High interest areas were professional and skilled art. Skilled technology was also above average but considerably below the rating for art.

Regional Occupational Program Brochure

138

THE REGIONAL OCCUPATIONAL PROGRAM (R.O.P.)--

a cooperative effort of the Ventura County Superintendent of Schools Office, the various school districts, and the community colleges in the county — makes training available to students who want a marketable skill upon graduation. Training is cost-free to those who are eligible. The programs exist because employers in Ventura County need personnel with the skills being offered in the R.O.P. courses. Those students who develop the required skills and satisfactorily complete the training programs will be prepared to accept entry-level, full-time employment.

Courses:

AIR CONDITIONING/
HEATING/REFRIGERATION
MECHANICAL OCCUPATIONAL
CLUSTER • FLORAL PRODUCT DESIGN
AUTO BODY REPAIR/AUTO REFINISHING
BANK TELLER/FINANCIAL OCCUPATIONS
AUTOMOTIVE SERVICE • MARKETING &
DISTRIBUTIVE OCCUPATIONS • DENTAL
ASSISTANT • PARK & CONSERVATION
AIDE • HYDRAULICS/PNEUMATICS
RESTAURANT OCCUPATIONS
COMMUNITY BASED
PROGRAMS

WHO ARE ELIGIBLE FOR TRAINING?

Seniors and some juniors in all Ventura County high schools. Seventeen to nineteen year old, out of school youths may also be eligible. Sophomores and freshmen plan ahead for an opportunity for hands-on training experience.

LENGTH OF TRAINING

Unless otherwise specified, classes meet two hours per day, five days a week, for two semesters. Most classes are during daylight hours.

CREDIT EARNED

Ten credits per semester are earned for most courses and may be applied toward fulfillment of requirements for high school graduation. Students generally enroll for four classes at their home school as well.

TRANSPORTATION

Bus transportation, from your high school to the training class and return, is available for most classes.

HOW TO ENROLL

Discuss the course with your parents (or guardian) and contact your high school counselor for enrollment information.

FOR MORE INFORMATION

Contact Mrs. Florine Matthews, Student Services Specialist, Regional Occupational Program, County Office Building, Ventura, California 93001, (805) 487-7711, ext. 4433.

Appendix I

"Job Survival Skills" Program Brochure

WHY HAVE IT?

Vocational trainees, students, and other clients with limited work experience often have difficulty adjusting to demands in the world of work. Education and vocational training can provide basic technical skills, but the client may lack interpersonal skills necessary to find a job and form satisfactory work relationships with supervisors and co-workers. The client also may be unaware of common employer expectations regarding personal appearance, attitude, and punctuality. Too frequently, the new employee is unprepared for these realities and is soon looking for another job.

141

WHEN & WHERE

The full program requires 25 hours of instructional time. A condensed program requiring a minimum of 12 hours will also be offered. Scheduling is flexible, with a minimum of two sessions per week recommended. Every effort will be made to hold the training at a time and place that will be most convenient for the group being served.

IS THE JOB SURVIVAL SKILLS PROGRAM?

THE JOB SURVIVAL SKILLS PROGRAM.

CE 009 634

The Job Survival Skills Program is designed to equip trainees and job seekers with information and abilities that are essential in finding and holding employment. Techniques of group interaction such as role playing and group discussion are used to achieve maximum participation and involvement by the trainees. Audio-visual materials are used to present information on critical areas and to stimulate further discussion and activities. Each trainee is given maximum opportunity to ask questions and work out individual problems.

148

AREAS COVERED INCLUDE:

- Personal Appearance
- Communication
- Job Application
- Resume
- Job Seeking
- Job Interview
- Work Relationship with Supervisor
- Work Relationships with Co-workers
- Individual Assessment

WHO NEEDS IT?

- Economically and/or culturally disadvantaged
- Trainees or students with no previous full-time work experience
- Clients with a sporadic work history
- Clients who have had difficulty holding jobs (For example, those who have quit jobs after a short period or have been fired)
- Recent high school dropouts
- Any others showing need or interest

SCHOOLS AND TRAINING AGENCIES THAT PREPARE PEOPLE FOR IMMEDIATE ENTRY INTO THE JOB MARKET WILL FIND THE PROGRAM INVALUABLE.

TITLE: JOB SKILLS NEEDED IN THE AREA OF PLASTIC LENS FABRICATION. FINAL REPORT.

PERSONAL AUTHOR: SCHRADER, MARVIN A.; WOHLEVER, RICHARD

DESCRIPTOR: *JOB SKILLS; LABORATORY TECHNOLOGY; *SCHOOL SURVEYS; *JOB ANALYSIS; *TASK ANALYSIS; *TECHNICAL INSTITUTES

IDENTIFIER: *LABORATORY OPTICIANS; PLASTIC LENS FABRICATION

ORDERS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 31P.

ABSTRACT: TO DETERMINE THE NEED FOR ADDING TRAINING IN PLASTIC LENS FABRICATION TO THE LABORATORY OPTICIAN PROGRAM AT LAKESHORE TECHNICAL INSTITUTE, A SURVEY WAS CONDUCTED OF OPTICAL LABORATORIES IN WISCONSIN AND PARTS OF MINNESOTA AND ILLINOIS. OF THE 35 LABORATORIES RESPONDING TO THE SURVEY, 28 REPORTED THAT PLASTIC LENS FABRICATION WAS BEING DONE. A JOB ANALYSIS INSTRUMENT WAS SENT TO THESE LABORATORIES, ASKING THEM TO RATE THE FREQUENCY AND IMPORTANCE OF TASKS PERFORMED BY THE LABORATORY OPTICIAN. BASED ON SURVEY RESULTS, IT WAS RECOMMENDED THAT PLASTIC LENS FABRICATION BE INCLUDED IN THE PROGRAM. APPENDED ARE THE LABORATORIES SURVEYED, CORRESPONDENCE, SURVEY INSTRUMENTS, AND TABULATIONS OF THE RESULTS. (RG)

Introduction

Plastic lenses have been used for ophthalmic prescription eyewear since the early 1950's. These lenses were never too popular because of their physical characteristics. The first plastic lenses that were made were very soft and scratched easily. Also, they were noted for turning from a clear color to a yellow tint due to the aging process of the plastic.

During the last 25 years, many technical changes have taken place in the construction process and product characteristics of plastic lenses. Due to these changes, plastic lenses are becoming more popular and are now being recommended by dispensing opticians and doctors as an alternate to glass lenses for their new eyewear.

Description of Need

Lakeshore Technical Institute started a Laboratory Optician Program in fall of 1974. This program was designed to train students to become laboratory opticians. A laboratory optician is a person who is involved in the grinding and polishing of lenses and placing them into ophthalmic frames.

All of our optical equipment and materials that were purchased for the program were designed or set up for glass production. We are unable to work with plastic lenses, as this would involve new machines and materials and modifications of some of our present existing equipment.

At the birth of our program, plastic lense fabrication was not considered to be a part of the program, since the optical laboratories in the area, Wisconsin, Minnesota, and Illinois, were producing no or little plastic lenses as part of their regular production. Our Advisory Committee for our Laboratory Optician Program felt that training in plastic lense fabrication was not necessary. Why is it that only a few years later, plastic lense fabrication would be so important? The optical industry is experiencing a technology revolution and a consumer awareness of fashion eyewear. Plastic lenses have been improved greatly over the last 10 years. A plastic lense of today is half the weight of a similar glass lense. Plastic does not change color due to age, and they are stronger than glass concerning impact resistance in some cases. One disadvantage is that they are softer surface than glass, so they can scratch easier.

Consumers have become more aware of fashion eyewear in the last 15 years. We have seen the introduction and acceptance of metal frames and today's fashion designers, such as Piere Cardan and Oscar de la Renta designing frames. The trend is to larger frame size, which will require larger lenses. This is no fad, as optical manufacturing companies are designing their equipment for future larger sizes.

Since plastic lenses are 50% lighter than glass, people will be wanting the plastic lense versus the glass lense. It is only a

matter of time before the surface of a plastic lense will be harder than glass, as many companies are trying to develop this process at this time.

Due to these changes, optical wholesale companies have seen an increase in their plastic lense production from approximately 10% to 35% or more. This change has led to new demands for lab opticians with expertise in the area of plastic lense fabrication.

Description of Project

At Lakeshore Technical Institute we set out to study the need of such an educational program and to what extent the program should be presented. To do this, we decided to use a survey instrument as our tool to collect data. First of all, it was necessary to determine the location of laboratories in the state of Wisconsin and parts of Minnesota and Illinois. To do this, addresses were taken from area phone books in the yellow pages under Optical Wholesalers. All metropolitan areas of Wisconsin were investigated to see if a wholesale laboratory existed in these areas. Only the larger city areas of Minneapolis-St. Paul and Chicago of Minnesota and Illinois respectively were investigated and a close list of the laboratory survey in this project is attached. A questionnaire was developed (see attachment) and sent to these addresses to determine if and what areas of plastic lense fabrication are the laboratories involved in and do they forecast an increase in plastic lense production? This questionnaire was mailed to the laboratories with a return-reply envelope.

Twenty-seven task and job analyses were sent out to laboratories that fabricate plastic lenses. A phone call or a reminder letter was sent to those labs that did not return this analysis. Of these 27, 15 (56%) responded by sending back their analysis.

Results:

The task analysis shows a majority of laboratories doing glass and plastic lens fabrication in both the surfacing and finishing areas. The average lab size was 11 to 35 employees with the plastic department size being between one and five employees.

Twelve of the fifteen responded that Lakeshore Technical Institute should include plastic lens fabrication as part of their regular educational program.

The job analysis was divided into 3 basic areas: stock, surface, and finish. Basically, the stock area showed a seldom or often frequency with a low or medium range importance. Both surface and finishing operations showed an often or daily frequency with a medium or essential importance. The task having the lowest frequency and importance response was "using frame warmers".

Decisions

Task Analysis results end up as a series of numbers which are in themselves worth very little to the curriculum persons and instructors involved. In order that the numbers have value and the efforts of obtaining this data be justified, decision points must be set. Decision points are points that define parameters of categories. In this study, the categories decided upon were: 1) essential task; must be included at level indicated, 2) non-essential task; recommended for inclusion at level indicated, 3) task can be eliminated without being detrimental to the program; may be nice to know.

The decision points in this study were defined using the mean of the frequency as a criteria. The proficiency mean would then only be used in studying level needed by the students. The decision points were set as presented below. Following these is a listing of the tasks under each of the categories.

Category	Decision Point(s)
1. Essential task; must be included	3.00 and above
2. Nonessential task; recommended for inclusion	2.00-3.99
3. Task that can be eliminated	below 2.00

The following has been based on frequency data.

Essential Task Must Be Included		Essential Task Must Be Included	
1	19	35	51
3	20	36	52
6	21	37	54
7	22	38	55
8	23	39	56
9	24	40	61
10	25	41	62
11	26	43	63
12	28	44	64
13	29	45	65
14	30	46	66
15	31	47	67
16	32	48	68
17	33	49	69
18	34	50	70

Total = 60 Tasks.

Nonessential Tasks
Recommended for Inclusion

2 53
4 57
5 58
27 59
42

60

Total = 9 Tasks

Total = 1 Task

Recommendations

Based on the information tabulated and evaluated for this particular project, I would recommend that Lakeshore Technical Institute include plastic lens fabrication as part of its educational program. There is no doubt, as the information bears out, that there will be an increasing demand for this particular product, and trained technicians will be necessary to work in this area. Due to the high frequency and importance in both surface and finishing areas, it is essential to include both of these areas in planning this particular program.

LAKE SHORE Technical Institute

Frederick J. Nierode
District Director

LAKESHORE VOCATIONAL, TECHNICAL AND ADULT EDUCATION DISTRICT

1290 NORTH AVENUE PHONE (414) 693-8211
CLEVELAND, WISCONSIN - 53015

Dear Lab Manager:

We are considering adding plastic lens fabrication to our present Laboratory Optician Program at Lakeshore Technical Institute. To do this, we need your help to determine the need and the extent of training necessary for this addition to our program.

Would you be so kind as to take a few minutes and fill out the enclosed questionnaire and return this form to our school. I wish to sincerely thank you for your cooperation and time in helping us.

Sincerely yours,

Richard Wohlever
Optical Program Instructor

Questionnaire

Need for Training in Plastic Lens Fabrication

Please complete the questions below
and return to Lakeshore Technical
Institute.

Laboratory Name _____
Address _____

Please check one:

- | | Yes | No |
|--|-------|-------|
| 1. Do you fabricate plastic lenses in your laboratory in surfacing or finishing. If no, do not complete below questions. | _____ | _____ |
| 2. If yes for question one, in which of the following areas: | | |
| A. Both Surface & Finish | _____ | _____ |
| B. Surface Only | _____ | _____ |
| C. Finish Only | _____ | _____ |
| 3. Do you forecast an increase in your plastics lens production in the future? | _____ | _____ |

Additional Comments:

Questionnaire Results

Laboratory	Questions				
	One	A	B	C	3
Berteau Optical, IL	Yes			Yes	Yes
H.O.U. Optical, IL	Yes	Yes			Yes
Herslof, Milwaukee, WI	Yes	Yes			Yes
Victory, Milwaukee, WI	Yes	Yes			Yes
Royal Optical, IL	Yes			Yes	Yes
Dependable Optical, IL	Yes			Yes	Yes
Soderberg, Milwaukee, WI	Yes	Yes			Yes
Twin City Optical, MN	Yes	Yes			Yes
Wesley-Jessen, IL	Yes	Yes			Yes
H.O.U. Optical, MN	Yes	Yes			Yes
Eye Kraft Optical, MN	Yes	Yes			Yes
Vision Ease, MN	No				Yes
Phillips Optical, MN	Yes	Yes			Yes
American Optical, IA	Yes	Yes			Yes
Soderberg, Madison, WI	Yes			Yes	Yes
Ehrmann, Milwaukee, WI	Yes	Yes			Yes
Benson, Madison, WI	Yes	Yes			Yes

TABULATION AND EVALUATION OF QUESTIONNAIRE

A total of 35 questionnaires were returned out of a total of 126 that were mailed to the laboratories. Tabulation of the questionnaires received is as follows:

1. Yes 27, No 8
2. a. $\frac{17}{9}$
b. $\frac{1}{9}$
c. $\frac{1}{9}$
3. 28, Yes; 27, no answer

The above tabulation shows a large number, 27 out of 35, doing plastic lens fabrication. Seventeen responded that both surface and finishing operations were being done in their laboratory. Only one lab responded as to doing only the surfacing operation of plastic lens fabrication while nine responded that they did only the finishing operation in their laboratory.

All labs that were fabricating plastic lenses in surface and/or finish operations forecasted an increase in plastic lens fabrication. Only one manufacturer responding indicated an increase in plastic lens fabrication. Numerous comments were listed concerning anticipated increases in plastic lens fabrications for the future.

We may evaluate the above tabulation by saying the following: Many labs are doing both surface and finishing operations while some laboratories are doing finishing only. The labs which finish only are probably branch laboratories which receive surface lenses from the main lab. The results of the answer of question 3 definitely show an increase in plastic lens fabrication for the future for the laboratories which are doing this type of operation.

CLEVELAND, WISCONSIN - 53015

March 30, 1976

Dear Lab Manager:

In the recent questionnaire which you returned to us, you indicated that you fabricate plastic lenses in your laboratory.

Before developing plastic lens fabrication as part of our program, it is necessary for us to obtain additional information concerning the need for this training and to what extent it should be taught in an educational program.

We are asking you to help us by filling out the following form and returning the form to Lakeshore Technical Institute in the enclosed reply envelope. Your cooperation in this endeavor will be greatly appreciated.

Sincerely yours,

Richard Wohlever
Optical Program Instructor

LAB OPTICIAN

PLASTIC LENS FABRICATION

TASK ANALYSIS

Please answer the following questions concerning your laboratory, by inserting a check mark in the appropriate space.

Which of the following areas are you involved in concerning your laboratory operation?

1. _____ surface and finish (glass)
2. _____ finish only (glass)
3. _____ surface and finish (plastic)
4. _____ finish only (plastic)

How many lab opticians are there in your laboratory total operation of laboratory (glass and/or plastic)?

5. _____ 1 - 5
6. _____ 5 - 10
7. _____ 11 - 20
8. _____ 21 - 35
9. _____ 36 - 50
10. _____ More than 50

How many lab opticians are in your plastics lens fabrication operation?

11. _____ 1 - 5
12. _____ 6 - 10
13. _____ 11 - 15
14. _____ 16 - 20
15. _____ More than 20

Do you feel that plastic lens fabrication should be a part of the educational program at Lakeshore Technical Institute?

16. _____ yes
17. _____ no

LAB OPTICIAN

PLASTIC LENS FABRICATION

JOB ANALYSIS

Purpose: To identify tasks usual to the work of the lab optician in plastic lens fabrication only. Do not include tasks of the lab optician involved in glass production in your laboratory.

Directions: Blacken the appropriate number for each of the items in each section for both the task frequency and task importance. At the end of the questionnaire, there are blank spaces for additional tasks.

<u>Task Number</u>	<u>Task Performed by Lab Optician in Plastics Lens Fabrication</u>	<u>Task Frequency</u>				<u>Task Importance</u>			
		Never	Seldom	Often	Daily	None	Low	Medium	Essential
<u>I. Stock Room Work</u>									
<u>A. Inventory (Plastic Lenses)</u>									
1.	Determines inventory amount	1	2	3	4	1	2	3	4
2.	Count inventory	1	2	3	4	1	2	3	4
3.	Pull stock for lab jobs	1	2	3	4	1	2	3	4
<u>B. Inventory (Frames)</u>									
4.	Determines inventory amount	1	2	3	4	1	2	3	4
5.	Count inventory	1	2	3	4	1	2	3	4
6.	Pull stock for lab jobs	1	2	3	4	1	2	3	4
<u>II. Surface Area</u>									
<u>A. Layout and Marking</u>									
7.	Determine if correct lenses have been selected	1	2	3	4	1	2	3	4
8.	Calculate center thickness and curves by hand	1	2	3	4	1	2	3	4
9.	Check marker for accuracy	1	2	3	4	1	2	3	4

24

	<u>Task Frequency</u>				<u>Task Importance</u>			
	Never	Seldom	Often	Daily	None	Low	Medium	Essential
10. Determine inset and drop	1	2	3	4	1	2	3	4
11. Mark by hand	1	2	3	4	1	2	3	4
B. <u>Surface Blocking</u>								
12. Block Gx and CC curves using an alloy	1	2	3	4	1	2	3	4
13. Re-block for surfacing	1	2	3	4	1	2	3	4
C. <u>Generating</u>								
14. Operate manual generator	1	2	3	4	1	2	3	4
15. Operate automatic generator	1	2	3	4	1	2	3	4
16. Generate minus curves using a generator	1	2	3	4	1	2	3	4
17. Generate plus curves using a generator	1	2	3	4	1	2	3	4
18. Set for prism grind	1	2	3	4	1	2	3	4
19. Change coolant in generator	1	2	3	4	1	2	3	4
20. Check accuracy of generated curve	1	2	3	4	1	2	3	4
D. <u>Fining and Polishing</u>								
21. Fining using hand surfacer	1	2	3	4	1	2	3	4
22. Fining using automatic sph machine	1	2	3	4	1	2	3	4
23. Fining using cylinder machine	1	2	3	4	1	2	3	4
24. Fining using emery pad and water	1	2	3	4	1	2	3	4
25. Checking for fining and polishing grey	1	2	3	4	1	2	3	4
26. Polishing for spheres and cylinders	1	2	3	4	1	2	3	4
27. Mix fining and polishing solutions	1	2	3	4	1	2	3	4
28. Checking accuracy of finers and polishers	1	2	3	4	1	2	3	4

	Task Frequency				Task Importance			
	Never	Seldom	Often	Daily	None	Low	Medium	Essential
E. <u>Surface Check-Out of Lenses</u>								
29. Check lense power	1	2	3	4	1	2	3	4
30. Check final thickness	1	2	3	4	1	2	3	4
31. Adjust lensometer for accuracy	1	2	3	4	1	2	3	4
32. Locate optical center using lensometer	1	2	3	4	1	2	3	4
33. Use lensometer to verify optical characteristics	1	2	3	4	1	2	3	4
34. Determine if surface lens should be rejected	1	2	3	4	1	2	3	4

III. Finish Area

A. Layout and Marking

35. Spot lenses using lensometer	1	2	3	4	1	2	3	4
36. Determine minimum blank size	1	2	3	4	1	2	3	4
37. Determine A and B measurements	1	2	3	4	1	2	3	4
38. Determine effective diameter of frame	1	2	3	4	1	2	3	4
39. Measure distance between lenses	1	2	3	4	1	2	3	4
40. Calculate "below center" or "drop"	1	2	3	4	1	2	3	4
41. Calculate "decentration"	1	2	3	4	1	2	3	4

B. Chucking or Blocking

42. Use lens clamp for fiber chucking	1	2	3	4	1	2	3	4
43. Operate finish blocker	1	2	3	4	1	2	3	4
44. Check blocker temperature	1	2	3	4	1	2	3	4
45. Chuck block lenses in edger	1	2	3	4	1	2	3	4

26

	<u>Task Frequency</u>				<u>Task Importance</u>			
	Never	Seldom	Often	Daily	None	Low	Medium	Essential
C. <u>Edger</u>								
46. Set edger size.	1	2	3	4	1	2	3	4
47. Set for correct bevel (rimless, U-Bevel, Hide A Bevel)	1	2	3	4	1	2	3	4
48. Check for correct bevel location	1	2	3	4	1	2	3	4
49. Clean edger	1	2	3	4	1	2	3	4
50. Change coolant	1	2	3	4	1	2	3	4
51. Set axis of edger	1	2	3	4	1	2	3	4
52. Correct for edger size error	1	2	3	4	1	2	3	4
53. Dress diamond wheels	1	2	3	4	1	2	3	4
54. Check lens size after edging	1	2	3	4	1	2	3	4
D. <u>Hand Edging</u>								
55. Shape plastic lenses to frame shape and size	1	2	3	4	1	2	3	4
56. Safety bevel lens	1	2	3	4	1	2	3	4
57. Dress hand wheels	1	2	3	4	1	2	3	4
E. <u>Mounting Plastic Lenses into Frames</u>								
58. Use heating pans with salt	1	2	3	4	1	2	3	4
59. Use heating pans with glass beads	1	2	3	4	1	2	3	4
60. Use air warmers	1	2	3	4	1	2	3	4
61. Heat frame and insert lenses	1	2	3	4	1	2	3	4
62. Align lenses in frames	1	2	3	4	1	2	3	4
63. Place lenses in standard adjustment	1	2	3	4	1	2	3	4
64. Clean glasses after mounting lenses	1	2	3	4	1	2	3	4

	<u>Task Frequency</u>				<u>Task Importance</u>			
	Never	Seldom	Often	Daily	None	Low	Medium	Essential
F. <u>Final Finish Check Out</u>								
65. Check optical characteristics such as power, axis, add power	1	2	3	4	1	2	3	4
66. Spot for pupillary distance	1	2	3	4	1	2	3	4
67. Measure pupillary distance	1	2	3	4	1	2	3	4
68. Determine if lens meet imbalance standards, horizontal and vertical	1	2	3	4	1	2	3	4
69. Reject lenses because they do not meet your standard.	1	2	3	4	1	2	3	4
70. Readjust frames that are not adjusted to standards	1	2	3	4	1	2	3	4
Other Tasks deemed appropriate for Lab Optician in Plastic Lens Fabrication								
71.	1	2	3	4	1	2	3	4
72.	1	2	3	4	1	2	3	4
73.	1	2	3	4	1	2	3	4
74.	1	2	3	4	1	2	3	4
75.	1	2	3	4	1	2	3	4
76.	1	2	3	4	1	2	3	4

Dear Lab Manager:

Recently, we sent you a survey concerning a job and task analysis of the lab optician involved in your plastic lens fabrication operation.

We would like to remind you that your input is important for this project. Please try to take a few minutes out of your busy schedule today to fill out our survey and return it to Lakeshore Technical Institute.

Thank you for your cooperation and time on this project.

Sincerely yours,

Richard Wohlever
Optical Program Instructor

TITLE: FOOD SERVICE SYSTEM PLANNING.

PERSONAL AUTHOR: GEPHART, WOODROW W.

DESCRIPTOR: *SCHOOL ACCOUNTING; *RECORDS (FORMS); *DATA COLLECTION; *FOOD SERVICE; SCHOOL SERVICES; LUNCH PROGRAMS; BREAKFAST PROGRAMS; MANAGEMENT; FACILITY INVENTORY; COSTS

IDENTIFIER: *OHIO

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 44P.

ABSTRACT: DURING THE FOOD SERVICE SYSTEM PLANNING PROJECT REPORTED FOR THE PERIOD AUGUST 1, 1975-JUNE 30, 1976, AN AUTOMATED FOOD SERVICE DATA SYSTEM WAS DEVELOPED FOR USE BY ALL THE PUBLIC SCHOOLS IN OHIO. PLANNING AND ACCOUNTABILITY PROCEDURES IN SCHOOL FOOD SERVICE OPERATIONS WERE ANALYZED, REPORTING FORMS WERE REVISED, AND DATA COLLECTION INSTRUMENTS WERE DESIGNED AND TESTED. MANAGEMENT DATA FOR MORE EFFECTIVE INVENTORY CONTROL AND MANPOWER UTILIZATION IN ASSIGNING COSTS ARE TO BE REPORTED ON THE FORMS, WHICH MAY ACCOMMODATE MANUAL AND AUTOMATED DATA PROCESSING. THE DATA INSTRUMENTS WITH RELATED ACCOUNTING PROCEDURES, COMPRISING MOST OF THE DOCUMENT, ARE: LABOR AND OTHER COSTS REPORT, SCHOOL BREAKFAST CLAIM FOR REIMBURSEMENT, INVENTORY COST REPORT, MONTHLY SCHOOL CLAIM FOR REIMBURSEMENT, SPECIAL OCTOBER-MARCH REPORT SCHOOL FOOD SERVICE PROGRAM, SCHOOL BREAKFAST PROGRAM DAILY WORKSHEET, FOOD SERVICE BEGINNING AND CHANGE REPORT, AND SCHOOL LUNCH AND MILK PROGRAM DAILY WORKSHEET. (MF)

Duration of Activity: August 1, 1975 - June 30, 1976

Purpose of Grant: Research and training programs in
vocational education

Use of Funds: Research and training program

Total Funds Used: \$6,711.51

ABSTRACT

Title of Project: Food Service System Planning (R-7-76)

Principal Investigator: Dr. Woodrow W. Gephart, Superintendent

Contracting Agency: Ashtabula County JVSD
S. R. 167 and Beatty Road
Jefferson, OH 44047

Funds Used: \$6,711.51

Beginning and Ending Dates: August 1, 1975 - June 30, 1976

Statement of Problem: An effective planning and accountability procedure was needed for use by vocational education food service job training administrators and other school food service administrators. A data collection instrument for food service was developed and field-tested.

Statement of Objectives:

- (1) Present planning and accountability procedures were analyzed in vocational and other school food service operations.
- (2) An effective data collection instrument was designed for vocational and other school food services.
- (3) Vocational and other school food service reporting forms were tested and validated.
- (4) Needed changes in vocational and other food service accounting operations for FY77 were identified.
- (5) Changes needed in vocational and in other food services accountability are being recommended to the State Department of Education.

Techniques of Evaluation of Objectives: A data collection instrument for vocational education and other school food service operations was developed, field tested and revised and turned over to the State Department of Education for state use.

Contribution to Education: Data collection instruments that school administrators can use to analyze cost of job training and other food service feeding operations have been developed and revised.

NARRATIVE PROPOSAL PLAN

Problem

An analysis of the elementary and secondary school food system operation across Ohio by the Ashtabula County JVS and the State Division of Food Service indicated the need for an automated food service data system for use by both vocational job training and other feeding operations within all the public schools of Ohio. A myriad of factors involved in planning both for vocational food service job training and for feeding operations plus determining accountability for both time and funds necessitated changes in current elementary and secondary school food service operations. More automated data was needed for sound management and more effective inventory control and manpower utilization in assigning costs between job training and other school feeding operations.

Objectives

- (1) Present planning and accountability procedures were analyzed in vocational food service job training and other school food service operations.
- (2) An effective data collection instrument was designed which can accommodate manual and automated data processing.
- (3) The school's vocational job training and other food service reporting procedures were tested, validated, and some were revised for more effective management planning.
- (4) Changes in vocational job training and other food service operations were identified and changes made for FY77.
- (5) Changes needed for vocational and other food service operations and in reports for the State Department of Education were field tested and revised.

Description of Activities

- (1) August 1 - 31, 1975

Current food service reporting forms used by elementary and secondary schools were reviewed through mail requests and meeting with state and local school food service administrators. As a result, the Food Service Manual is being revised.

- (2) September 1 - 15, 1975

Costing procedure instructions and forms which can accommodate manual and automated data processing have been designed. These forms included procedures to account for:

- a. Inventory control between job training and other food service operations.

- b. Labor cost charge between job training and other food service operations.
- c. Instruction cost charge between job training and other food service operations.
- d. Supervision cost charge between job training and other food service operations.

(3) September 16 - October 15, 1975

Necessary materials and forms were printed in the joint vocational school as a part of the printing program project and field tested in elementary and secondary food service operations.

(4) October 16 - 31, 1975

Costing procedures and forms were handed out to schools at group meetings such as the Ohio School Board Association to JVS superintendents who completed and monitored for needed changes.

(5) November 1, 1975 - March 31, 1976

Completed food service reports were edited and a draft of changes needed were discussed, tested and implemented.

(6) April 1 - June 30, 1976

- a. Food service costing procedures and forms were developed through workshops, meetings, and telephone calls with local and state vocational education food service training administrators and other food service personnel.
- b. Final report with recommended changes for school year 1976-77 has been made. Copies of revised forms are enclosed to indicate improvements made for effective food service operation which includes a revised Food Service Manual for FY77.

Techniques of Evaluation

- (1) Food service data collection instruments were developed and field tested in local elementary and secondary Ohio schools during the school year 1975-76. The January - February computer scan error of 20 percent in February had been reduced to only 6 percent by May.
- (2) The State Division of Food Services has the field tested form with recommended changes for use in FY77, which is included in this report.

Contribution to Education

The development of these automated Food Service Operation data instruments with related accounting procedures should be useful to any school administrator who is computing cost for job training and other food service operations within the same school plant.

MONTHLY LABOR AND OTHER COSTS REPORT CN-8 INSTRUCTIONS

TO FILL OUT THE FORM:

1. Use a No. 2 lead pencil. Identification information may be typed with care not to intrude into the reporting area. Data must be entered for all items each month. Report must be signed by an authorized person.
2. First, write the numbers in the rectangles above the numbered bubbles. Pay particular attention to decimals and commas, such as:

Second, darken the corresponding bubble below each number, such as:

Third, clearly erase any response that is changed. Completely darken the bubble for each number you mark.

3. Data must be recorded in each column. Enter "0" if there is no information to report.

This form covers operations for one calendar month for each school or food preparation site. The form is required for reporting the dollar value of labor used, other costs associated with labor, costs of items sold to others outside the normal school food operation, and other costs and incomes not recorded on Form CN-1. This information accompanied by Form CN-2 will justify your claim for reimbursement for Breakfasts, Lunches, and/or Milk.

The report is due in the state office by the 10th of the month following the month being reported. Reports or corrections received 90 days after a reporting month will not be honored and could nullify your claim for reimbursement.

FILING COMPOSITE REPORTS

Districts that have 2 or more schools, where food service costs are not easily identifiable for each school, (such as a base kitchen transporting food to satellite schools) may report on one composite report for the group. Forms CN-2 and CN-5 must parallel the reporting system used for this report. Report the base kitchen as the group.

Enter the school's IRN in the space provided and darken the corresponding bubbles below each digit. Darken the proper bubble for the month and year of the report and if it is an original or revision for this month.

Refer to your Food Service Reporting and Management Information Handbook (distributed May and June, 1974) for detailed explanations of each item reported. Include costs for all food service functions in this school. Breakfasts, Banquets, auxiliary food services, etc.

1. Actual value of food service labor used during the month including sick leave, paid holidays, and proper proration of annual salaries. It may not necessarily agree with Clerk's payroll. If some direct labor (Supervisors) is paid from a general fund, report the value here and also as income under No. 10.
2. Self-explanatory.
3. Report number of hours actually used for food service by all food service employees. Could easily be taken from a "Time and Attendance" record. This question is optional for districts which do not collect labor hours.
- 4, 5, 6, 7. Costs of food, labor, and supplies (also special supplies sold to other districts) sold to other functions such as Banquets, Breakfast programs or other food preparation or training functions.
8. Report the value of expenditures from the General Fund for Insurances (Hospitalization, Life, etc.) and other indirect costs. Do not include Board's share of Retirement or Workman's Compensation.
9. Purchased services include equipment repairs and other maintenance, refuse removal, laundry and similar services. If any of these are paid from General Fund they must be recorded with No. 6.
- 10, 11. Other income which cannot be recorded with daily receipts on the daily worksheets and reported on Form CN-1.
12. Total deposits must be recorded in order to reconcile the total receipts from the claim forms plus other income on this report.

Verify costs as truly representing this month's share of expenses in relation to the actual food service provided this month.

The original report shall be forwarded to the Ohio Department of Education, Division of School Food Service, 65 South Front Street, Room 1009, Columbus, Ohio 43215, no later than the TENTH DAY OF THE MONTH following the calendar month being reported. A copy should be retained by the Board of Education clerk for a permanent record.

SCHOOL BREAKFAST CLAIM FORM CN-4 INSTRUCTIONS.

The School Breakfast Claim for Reimbursement is required for reporting a school's month end totals, as taken from the breakfast daily worksheet CN-6, to receive federal assistance for breakfasts served to students.

The claim form covers operations for one calendar month. It is due in the state office by the 10th of the month following the month being reported. Claims or corrections for claims received more than 90 days after a reporting month will not be honored. The column letter and headings are identical to those on the daily worksheet CN-6. Record the totals from the daily worksheet columns in the corresponding column on the claim form.

TO FILL OUT FORM:

Use a No. 2 lead pencil. The identification data may be typed. Care should be taken not to type in the reporting areas.

First write the numbers in the rectangles above the numbered bubbles. Pay particular attention to decimals and commas, such as:

The image shows two examples of how to write numbers in the form's bubbles. The first example shows the number '11020' written in the top row of bubbles, with the corresponding bubbles below darkened. The second example shows the number '11020' written in the top row of bubbles, with the corresponding bubbles below darkened.

Second, darken in the corresponding bubble below each number, such as:

Third, clearly erase any response that is changed. Completely darken the bubble for each number marked. Data must be recorded in each column. Enter "0" if there is no data to report.

A, B, C:

Failure to report actual receipts as collected each month under each category, and in particular receipts from other agencies or federal programs--such as DPPF, Head Start, service clubs, etc.--could jeopardize eligibility for reimbursement.

D, E, F, G, H:

Record actual costs for food, labor, supplies, equipment and services listed during the period reported. (The value of resources used should be based on actual costs and not on "bills" paid.) Indirect costs will be calculated by the state office using standard formulas.

M:

Record the number of half pints of milk used for the breakfast program. This may be documented by delivery slips, inventory, or breakfasts served. If the school has a lunch program, milk purchased for the breakfast program must be included on forms CN-1 and CN-7 in columns F-1 and F-2.

N:

Count the number of serving days recorded on the breakfast daily worksheet for which breakfasts are served. Normal months are 20-22 days.

O:

Record only the paid or charged breakfasts served students for which money has been or will be received. **NOTE. See "L."**

P:

Record the number of breakfasts served free to needy children.

Q:

Record the number of breakfasts served to needy children at reduced price.

R:

Record only the breakfasts served students who, except when through a policy of the district the children are not charged for their breakfast, would be expected to pay.

S:

Total of all breakfasts served children during the calendar months reported (should equal P + Q + R + S).

The school name and IRN, district and county names at the top of the form must be filled out completely and the form signed. The original monthly claim for reimbursement shall be forwarded to the Ohio Department of Education, Division of School Food Service, 65 South Front Street, Room 1009, Columbus, Ohio 43215, not later than the TENTH DAY OF THE MONTH following the calendar month being reported. A copy should be retained by the Board of Education clerk for a permanent record.

Report all summer income and expenditures in the August report. All June claims must be submitted by July 10th. Claims for one fiscal year cannot be paid from funds appropriated for another fiscal year. The last claim submitted should be marked "Final". Summer Type A and/or Special Milk claims through June 30th must be included with the June claim for reimbursement for regular NSL, SM, and Breakfast programs.

MONTHLY INVENTORY COST REPORT, CN-2 INSTRUCTIONS

TO FILL OUT THE FORM.

1. Use a No. 2 lead pencil. Identification information may be typed with care not to intrude into the reporting area. Data must be entered for all items each month. Report must be signed by an authorized person.
2. First, write the numbers in the rectangles above the numbered bubbles. Pay particular attention to decimals and commas, such as.

Second, darken the corresponding bubble below each number, such as.

1.210.00

0	0	0	0	0	0	0	0
1	1	1	1	1	1	1	1
2	2	2	2	2	2	2	2
3	3	3	3	3	3	3	3

or

0	0	0	0	0	0	0	0
1	1	1	1	1	1	1	1
2	2	2	2	2	2	2	2
3	3	3	3	3	3	3	3

Third, clearly erase any response that is changed. Completely darken the bubble for each number you mark.

3. Data must be recorded in each column. Enter "0" if there is no information to report.

This form covers operations for one calendar month for each school or food preparation site. The form is required for reporting dollar value of month end inventories and all purchases for the month, in order to justify your claim for reimbursement for Breakfasts, Lunches, and/or Milk. (Must be accompanied by Form CN-8).

The report is due in the state office by the 10th of the month following the month being reported. Reports or corrections received 90 days after a reporting month will not be honored and could nullify your claim for reimbursement.

FILING COMPOSITE REPORTS

Districts that have 2 or more schools, where food service costs are not easily identifiable for each school, (such as a base kitchen transporting food to satellite schools) may report on one composite report for the group. Forms CN-5 and CN-8 must parallel the reporting system used for this report. Report the base kitchen as the group.

Enter the school's IRN in the space provided and darken the corresponding bubble below each digit. Darken the bubble of the month and year of this report and if it is an original or revision of this month.

The form is basically self-explanatory. Refer to the Food Service Reporting and Management Handbook distributed May and June, 1974. Month end inventory, taken the last serving day of each month, is to be extended to total dollar value, and this total dollar value reported under each category of No. 9, No. 10, No. 11 and No. 12. Consult with the state office if there are problems with Central Warehousing.

This report covers all food services for this school including Breakfasts, Banquets and other food service functions.

Value of purchase orders, delivery slips or invoices for supplies or food actually received during a month will be totaled by category and recorded under No. 5, No. 6, No. 7 and No. 8. Be sure to include cost of milk purchased from dairy in item No. 5. Monthly statements from suppliers are not necessary to report these values.

Data for items No. 1, No. 2, No. 3 and No. 4 are the same as data recorded in items No. 9, No. 10, No. 11 and No. 12 for the preceding month.

Government Donated Food is valued at local wholesale prices. Handling charges billed by the state distributing system are included in this wholesale price and are not to be reported as costs.

Special Supplies. Items No. 4, No. 8 and No. 12 are supplies unique to "Type A" transported lunches, such as pre-pack containers, foil, film, baskets, etc. Values entered must be included with the corresponding "All Supplies" data for items No. 3, No. 7 and No. 11 for the month.

You Must Proof the Report - Beginning Inventory (+) Purchased or Received (-) Ending Inventory (=) Value used for a month. No. 1 + No. 5 - No. 9 = purchased food used, No. 2 + No. 6 - No. 10 = government donated foods used, No. 3 + No. 7 - No. 11 = all supplies used, and No. 4 + No. 8 - No. 12 = special "Type A" supplies used. The value used must represent the true value of each category actually used or consumed by the food service operation each month and only that month.

The original report shall be forwarded to the Ohio Department of Education, Division of School Food Service, 65 South Front Street, Room 1009, Columbus, Ohio 43215, not later than the TENTH DAY OF THE MONTH following the calendar month being reported. A copy should be retained by the Board of Education clerk for a permanent record.

CLAIM FOR REIMBURSEMENT FORM CN-1 INSTRUCTIONS

The claim for reimbursement is required for reporting month end totals for each school as taken from the daily worksheet, form CN-7, to receive federal assistance for the lunch and milk program.

The claim covers operations for one calendar month. It is due in the state office by the 10th of the month following the month being reported. Claims are processed for payment on a first-in, first-out basis. Claims or corrections received more than 90 days after a reporting month will not be honored.

TO FILL OUT THE FORM:

1. Use a No. 2 lead pencil. The identification data may be typed with care not to intrude into the reporting areas.
2. First write the numbers in the rectangles above the numbered bubbles. Pay particular attention to decimals and commas, such as: _____

plain				
1,200				
0	0	0	0	0
1	2	0	0	0
2	2	2	2	2

plain				
0				
0	0	0	0	0
1	1	1	1	1
2	2	2	2	2

Second, darken the corresponding bubble below each number, such as:

3. Third, clearly erase any response that is changed: Completely darken the bubble for each number you mark.

The signature at the top of this claim form certifies that this claim for reimbursement is true and correct, is in accordance with the terms of the school food service agreement with the State Department of Education, payment therefor has not been received, and that records are available to support this claim.

Enter the school's IRN in the space provided and darken the bubbles corresponding with the digits printed above. Darken the bubble of the month and year for which the report is being filed. Darken the bubble identifying this report as either the original submission or a revision for this month.

The column letter and headings are identical to those on the Daily Worksheet CN-7. Total each column on the Daily Worksheet and record the month's totals in the corresponding columns of the claim form.

Data must be recorded in each column. Enter "0" if there is no data to report.

Count the number of serving days recorded on the Daily Worksheet and record this total in column "N". Normal months are 20-22 days.

Receipts are to be recorded on the day they are collected on the daily worksheet. The recorded receipts in columns "A", "B", "C", and "D" equal the month's total receipts. Total receipts may not equal total deposits for a calendar month if deposits of receipts from that month are made in the next calendar month.

The original of the monthly claim for reimbursement shall be forwarded to the Ohio Department of Education, Division of School Food Service, 65 South Front Street, Room 1089, Columbus, Ohio 43215, not later than the TENTH DAY OF THE MONTH following the calendar month being reported. A copy should be retained by the Board of Education clerk for a permanent record.

Report all summer income and expenditures in the August report. All June claims must be submitted by July 10th. Claims for one fiscal year cannot be paid from funds appropriated for another fiscal year. The last claim submitted should be marked "Final". Summer Type A lunch and/or Special Milk claims through June 30th must be included with the June claim for reimbursement for the regular NSL and SM programs.

INSTRUCTIONS

Special Report for School Food Service
CN-5

This report is furnished twice a year to school districts for each school participating in the National School Lunch Program, the School Breakfast Program, and the Special Milk Program.

The requested information is required each October and March in order to remain eligible for federal reimbursement assistance for these programs.

Two forms are supplied, they must be completed in full, signed, one returned to the state office no later than **October 25** or **March 25**, and one copy must be retained in the district files.

Estimated Number of Needy Children Eligible

The number of eligible children reported should be the number for whom approved applications are on file. An application should be completed and on file for eligible children whose families have not submitted an application, but whose children have been determined to be eligible for participation under the "Principal's Prerogative" provision of the district Policy Statement.

The Breakfast Program number reported is a combined total of children eligible for free and reduced price breakfasts. It is required to periodically review and update the list of free and reduced price meal recipients.

Value of Food Service Equipment for Depreciation

Refer to your equipment inventory schedule forms FS-14 and 14a:

Report the total value of food service equipment as of October 1 or March 1 for this school. This means that all equipment purchased since the last report should be added to the inventory list at purchased-installed cost and retained on the list for the next 12 years. (Five years for automotive equipment.) Equipment which has reached 12 years maturity since the last report would be deleted -- valued at "0".

NOTE: If the district has chosen to report costs as a composite of several schools (Such as a central kitchen and its satellites), then this report must also be prepared as a composite for these schools.

Keep up to date daily

BEGINNING AND CHANGE REPORT CN-3 INSTRUCTIONS

This School Food Service Report is provided at the beginning of the school year, to initiate food service in a new school during the school year, or to revise data previously reported. It must be completed before the due date of the first claim for reimbursement. No reimbursement can be made before this report has been received by the State Department of Education.

Use this form to notify the state office of changes. It is the school district's responsibility to resubmit this form to change data previously submitted. Reimbursement paid to school districts based upon information which has not been kept current will be subject to audit refund.

The form is a school or reporting site form and is to be completed for each school submitting a claim for reimbursement. Information reported will always apply to the entire month entered on the form and for all subsequent months until a change is submitted. The school name, TRN number, district name, etc. must be completed in full, and the report must be signed.

The answer blanks are "right oriented" so please observe the decimal points and commas.

1. ADM - Enter the most current average daily membership (students under 21 enrolled) available -- including kindergarten students.
2. Attendance Percentage - Enter the average percentage of ADM in attendance. **NOTE** the decimal point. (State average is about 92.8)
3. Check **ONE** block that indicates the preparation site for food service for this school.
4. Lunch Charge to Children -- Enter the lowest "Type A" price to students in "A". Enter a next higher price in "B" and the third in "C" if applicable. (Such as 0.45)
5. Reduced Price Lunch Charge - Enter the price charged needy students eligible for a reduced price "Type A" lunch. Cannot exceed 20¢.
6. Enter an "X" beside the program or programs that will be provided in this school for which you are seeking federal assistance.
7. Number of Square Feet - To determine usable square feet, measure the length and width of the floor of the preparation, serving and dining areas, and storage and refrigeration floor space. Do not include hall corridors or stairs. Multiply the length times the width for each area, add the totals and enter on report. Dining areas used for other academic purposes must be pro-rated accordingly on a time used basis. If students must eat in their classroom, do not count the classroom floor space.
8. Charge to Student for Milk -- Enter the charge to students for a ½ pint of milk. (Such as five cents -- 0.05)
9. Charge to Adults for Milk -- Enter the charge to adults for a ½ pint of milk. Charge must equal or exceed the "full" cost. (Direct cost + indirect cost)
10. Milk Cost -- The dairy price per ½ pint of milk. Must be a "four-place" figure.
(Examples 0.0925 0.1033 0.1100)

BREAKFAST PROGRAM

11. Breakfast Program Average Daily Attendance - Average number of students that could attend the breakfast program being provided. Would equal #1 ADM (X) #2 Attendance % if breakfast program is available to all students in the school.
12. Charge to Adults for Breakfasts -- Must equal or exceed "full cost" of breakfast including beverage.
13. Breakfast charge to students -- Enter price charged paying students.
14. Reduced price breakfast charge -- Charge to needy children eligible for a reduced price breakfast. (Cannot exceed ten cents -- 0.10)

Prepare in duplicate each time it is submitted, and retain one copy in district's files.

Send original of the beginning report by September 2, 1975, to the Ohio Department of Education, Division of School Food Service, 65 South Front Street, Room 1009, Columbus, Ohio 43215. Send changes as needed throughout the year.

INSTRUCTIONS FOR COMPLETING DAILY WORKSHEET CN-7

Enter data on this form daily, under the appropriate column. The form provides columns for sufficient data for adequate accountability of the school lunch and milk programs plus a la carte and adult information for one month. Recording more data than that provided for on the form is not necessary.

Identify the county, month, district and school.

Record receipts the day they are collected. Record lunches the day they are served.

- A. Include only actual receipts for all children's complete Type A lunches the day they are collected. The receipts for a charged lunch should be recorded on the day received.
- B. Receipts from the sale of milk to children.
(Noon, recess, kindergarten, etc.)
- C. Receipts from children for all a la carte sales. Include extra items purchased with a Type A lunch, partial lunches, desserts, ice cream, etc.
- D. All receipts from sales of food and beverages to adults during normal school day. Do not include banquets. There is no legal provision for charging food services to adults.
- E. Total receipts should equal columns A+B+C+D.
- F-1, F-2. Record the number of half-pints of milk purchased from the dairy on the day delivered under either plain or flavored. Record milk shake mix on day delivered by converting to 16 half-pints per gallon of mix purchased. Include milk purchased for breakfast program and kindergarten. Milk purchased in 5-gallon, gallon, and half-gallon containers should be converted to half-pints and recorded.
- G. Record the number of half-pints of milk served to needy students who are eligible for free meals.
- H-1, H-2, H-3. Record the number of paid or charged Type A lunches served students starting with the lowest price under H-1, the next higher price under H-2 and highest price under H-3.
Record a charged student lunch the day it is served.
- J. Record the number of lunches served free to eligible needy students.
- K. Record the number of lunches served to eligible needy students at a reduced price--must be priced no more than 20¢ and less than regular lunch charge to children.
- L. Record all non-paying student workers and other lunches served free to students other than those recorded in "J" and "K". (Needy students working in lunchroom are recorded under the appropriate columns.)
- T. Total of all student lunches served. (Columns H-1 + H-2 + H-3 + J + K + L. Verify this count by tabulation, or tray count, or portions prepared, etc.)
- M. Record all milk consumed by adults under total column. Include milk served with adult lunches, extra milk sold to adults, milk consumed by cooks and milk used with coffee. The two columns without headings may be used as desired.

Total each column after the last serving day of each calendar month. These totals are used to complete the monthly school claim for reimbursement--form CN-1.

TITLE: SCHOOL BASED JOB PLACEMENT SERVICE MODEL. FINAL REPORT, 1975-76.

PERSONAL AUTHOR: FEHNEL, BARRY J.; GRANDE, JOSEPH J.

DESCRIPTOR: *JOB PLACEMENT; *SCHOOL SERVICES; *BUSINESS EDUCATION; PROGRAM DESCRIPTIONS; *MODELS; SCHOOL COMMUNITY COOPERATION; COOPERATIVE EDUCATION

IDENTIFIER: PENNSYLVANIA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 29P.; RELATED DOCUMENTS VT 103 507 THROUGH VT 103 509 IN THIS ISSUE.

ABSTRACT: THIS REPORT DESCRIBES A SCHOOL-BASED JOB PLACEMENT SERVICE MODEL FOR BUSINESS EDUCATION STUDENTS AND GRADUATES OF THE READING-MUHLENBURG AREA VOCATIONAL-TECHNICAL SCHOOL. IMPLEMENTATION INVOLVED: FAMILIARIZATION BY THE JOB PLACEMENT SPECIALIST OF ALL ASPECTS OF THE BUSINESS EDUCATION CURRICULUM, ESTABLISHMENT OF WORKING RELATIONSHIPS WITH THE BUREAU OF EMPLOYMENT SECURITY, THE COOPERATIVE EDUCATION COORDINATORS, AND TRAINING STATION EMPLOYERS, COLLECTION OF STUDENT DATA, JOB DEVELOPMENT, PREPARING STUDENTS FOR JOB INTERVIEWS, CLASSROOM PRESENTATIONS, PLACEMENT, AND FOLLOWUP. THE REPORT INCLUDES A REVIEW OF THE RELATED LITERATURE THAT SUPPORTS A NEED FOR A SCHOOL-BASED JOB PLACEMENT SERVICE. STUDENT OBJECTIVES LISTED ARE WORK EXPERIENCE, WAGE EARNING, DEVELOPMENT OF GOOD WORK HABITS AND ATTITUDES, AWARENESS OF THE DIGNITY OF WORK, AND INCREASE OF SELF-ESTEEM. SPECIFIC DUTIES OF THE JOB PLACEMENT SPECIALIST ARE LISTED, AND AN OUTLINE FOR JOB PREPARATION MATERIALS APPEARS. THE RESULTS OF THE FOLLOWUP EMPLOYMENT REPORT OF THE 1976 GRADUATES IS ALSO INCLUDED. INTRODUCTION

The school-based job placement service was established to fill a void in the business education and vocational education process. Much time and effort has been devoted to training students in business education and the vocational-technical areas. These students are well trained for entry-level positions upon completion of their high school training. The problem develops as these young people begin to enter the labor market. They are suitably trained for entry-level jobs but have little or no training or help in finding employment. The result is that although there may be jobs in areas related to their training, many students eventually find employment in unrelated areas. It is thought that the most effective means of helping graduates find employment in areas related to their training is through a school-based job placement service.

Implementation

The school based job placement service model was implemented at the Reading-Muhlenberg Area Vocational-Technical School on February 11, 1974 with the employment of the job placement specialist.

We are continuing the implementation of our orientation to the four sending schools. It was determined that since the placement specialist had not previously been on the four sending schools staff, he should attempt to become familiar with all aspects of their school curriculum. This was done by touring the schools and spending some time with each instructor to get an in-depth evaluation of the business education program. It is obvious that if the job placement specialist is going to sell the students to local employers he should be reasonably well versed as to the level of training and potential of the graduates. This orientation to the school took up much of the time during the first six weeks of the program.

The school based job placement service is a cooperative effort between the school and the Bureau of Employment Security. Frequently we meet with representatives of the B.E.S. to keep a good working relationship with our contact person and the B.E.S. office.

This program has developed an excellent working relationship with the Bureau of Employment Security. Graduates of our school will undoubtedly benefit through the close cooperation of both organizations.

A great amount of time was devoted to working with the cooperative education coordinator and the employers at the training station which he has developed. It was thought that since the placement service will be dealing with these same employers, we should become familiar with their operations. Also, it was concluded that most of these training sites would eventually develop into full time jobs upon graduation.

It was apparent that if we were going to be placing graduates in jobs we would need various types of information on each individual. We determined the types of information we would need which includes personal information as indicated on the data sheet, ratings as to their employability (from their instructors), and an indication as to their post graduation plans. With this information, we know if a student plans to go to school, enlist in the military, look for work either related or unrelated to their area of training, stay at home and not seek employment, etc. The rating sheets are of particular value when the instructors leave for the summer and we are unable to get a personal recommendation from them.

The current economic conditions forced us to devote additional time to job development. Going out to contact potential employers is possibly the most important aspect of the placement service. We have found that in general, some employers are still somewhat uninformed of the capabilities of the Vo-Tech School and the competencies of its graduates. They are normally most receptive and eager to learn more about our programs. We have found that it is not too difficult to convince an employer to employ a Vo-Tech graduate if he has an opening in an appropriate area. It is obvious that when an employer is going to hire a Vo-Tech graduate for the first time we want to make sure that the person or persons we refer will be able to adequately handle the job. If the employer's first experience is unpleasant or unrewarding, we cannot expect him to return to us as subsequent openings arise.

We feel the preparation for the preemployment interview is most important. Our students have a skill and can make a positive contribution to our selected employers if they have the opportunity to demonstrate this skill, attitude and knowledge. Therefore, we devote one week in intensive preparation for the senior co-op interview. This is over and

above the classroom instructions directions. To assist us we use the following:

1. Job Hunting: Where to Begin
2. What You Should Know Before You Go To Work
3. Your Job Interview.
4. Job Attitudes: Trouble at Work.
5. Job Attitudes: Liking Your Job and Your Life.
6. Job Attitudes: On the Job, Four Trainees.
7. Employment Booklets (2)

In addition to the senior preemployment preparation interview the following materials were used for classroom presentation to all Business Ed seniors and our Special Co-op A and B Students.

1. Consumer Credit Guide For Buying On Time
2. Truth In Lending
3. Automation
4. Economic Man vs Social Man
5. The National Debt
6. The New Poverty
7. The Four Hats of The Federal Reserve
8. Gold
9. Inflation and/or Unemployment
10. The Price System
11. The Mystery of Economic Growth
12. The Growth of Government
13. Making the Most of Your Money
14. Money: Master or Servant
15. Inventory of Valuable Records and Personal Papers
16. The Travels of a Check
17. The Story of Checks
18. Student Practice Checkbook
19. The Name of the Game is Money
20. Pennsylvania Banking: It's Role in American Progress
21. Banking Is Your First Step in Financial Management
22. Your Pennsylvania Banks
23. Personal Money Management
24. Women and Her Bank
25. Bank Services For You
26. Get Involved in Banking
27. Banking, An Opportunity For You
28. Policies For Protections
29. A Date With Your Future
30. You And The Investment World
31. How To Get A Job
32. How To Prepare Yourself For Job Interviews

As time has passed, it has become evident that the functions of the placement service overlap with those of the other co-op instructors. We all make contacts with potential employers. The co-op instructors make

contacts to find and develop training stations and to follow-up students as they graduate. Also, they work extensively seeking part time and summer jobs for students. They have been quite involved with co-op job placement and follow-up. Since we started, the job placement specialist worked primarily with pre-employment preparation-job placement and follow up, and did a substantial amount of career counseling.

The follow up component of the job actually begins the first Christmas after graduation. We mail Christmas cards and enclose a response card to be filled out by the student and returned. This gives us an idea of what the student is doing. It is expected that by that time most students will have found a situation of a relatively permanent nature, i.e. full time employment (related or unrelated), school, service, staying at home, etc. These results will be tabulated during January. From these follow up forms we will also be able to determine which students need or desire additional help in finding employment. We also have a one and three year follow-up by enclosing a response card when we mail the graduate's birthday card. The feedback facet of the job will be conducted on a year round basis. We will be continuously trying to determine what types of skills local employers need. Attempts will be made to determine which areas we are over training and in which we are undertraining. As this information is gathered it will be possible to make appropriate adjustments in the curriculum at the school. The manner in which feedback information will initially be gathered will be through personal interviews with employers and a mailing questionnaire.

The co-op and job placement functions of the placement services will take place primarily in January. This is when students are available for part-time employment and hopefully leading to full time positions. October and November will be devoted to student interviews and job preparation

instructions. The month of December will be devoted to finding jobs for the students.

It has become obvious that placement activities can be conducted much more smoothly while school is still in session. Once the students graduate they scatter in many directions. As job openings become available after graduation it is frequently quite difficult to get in touch with the most qualified graduates to refer them for the jobs. Frequently as many as three to five phone calls over a period of several days are required just to determine if the individual is interested. Many times we resort to a letter in a final attempt to contact our graduates. Hopefully, as we place more and more people in jobs, additional students will continue to use our services after graduation. The problem of not being able to contact graduates will be overcome if it becomes known that we can help them and they keep in closer touch with us.

We have met with the executive director of the Chamber of Commerce of Reading and Berks County. Many of the initial contacts from employers who might be considering locating in Reading are channelled through the Chamber. We have offered to be of assistance to them. The Chamber has sent out information about our placement service to all their members to let them know that our services are available.

7

Problem

Although many evaluation studies of vocational education have found systems for job placement services inadequate or nonexistent, little if any effort has been extended to eradicate this dilemma. The seriousness of the problem is amplified when one examines the national employment statistics. At present there is a total unemployment rate of 7.3 per cent of the labor force.

After analyzing the problem it is evident that higher unemployment rates exist for teenagers, blacks and women. The rates of unemployment have increased since April, 1969.

Related Literature

One criticism of vocational education at the secondary level has been the lack of attention given to job placement. This component of student personnel service program is unstructured in many instances and non-existent in others. Critics from within vocational education and those on the outside have been pointing to this inadequacy for sometime. Venn (1964) suggests that job placement practices exist at the high school level are ineffective or nonexistent, although the need is acute and complex. Further, he recommends: "high schools, two-year colleges, universities and state departments of education should encourage employers to make greater use of the placement offices of educational institutions (p. 174)"

In section 143 of Part D of the 1968 Amendments, it states that exemplary programs should be developed for all students that involve intensive occupational guidance and counseling during the last years of school and for initial job placement.

Rosen (1970) states that counselors must take a more active role in helping young people make the transition from school to work. He specifically alludes to the fact that counselors must act as change agents by recommending to employers whose hiring standards are not valid that they should be modified. Although one can concur, the question of whether counselors are sufficiently aware of occupational information is questionable, specifically at the local level. Venn (1964) offers support by stating:

The failure of educators to understand the relation-

ship between their work and the future occupational role of their students has inhibited the development of vocational guidance, placement and follow-up despite pleas, recommendations and studies to the contrary (p. 149).

Further support is offered by Froehlich (1950) when he concludes a placement service model in schools is essential. He bases this on his belief that students need and deserve help in taking action upon their decisions. He states, "the school has a unique opportunity to assist students to find their proper place (p. 229)."

A somewhat similar position is offered by Rosen (1970) who concludes;

If counselors are to become a part of the linkage system between school and work, they will have to change their posture from "neutral" sources of occupational and job information to active developers of information and to participants in the job seeking process.

Humphries and Trexler (1954) considered placements as ". . . the last practical step in the formal educative process--a step that helps to make the student's education effective socially (p. 237)."

The success of a project in vocational guidance and job placement for culturally deprived high school youth was attributed to a significant degree to the development of relationships with schools, business, labor, students and other agencies (Vocational Guidance Service, 1969). Evidently this form of activism is what should replace the neutral roles of the pupil personnel services staff in order to produce effective results. Effective results being in part successful job placement. However, the volume of placement is not the ultimate evaluation for job placement. Zanzalari (1960) found that

the lack of adequate criteria for evaluation was evident in the placement function of the student personnel service program.

In summary, it appears that most public secondary schools do not have a definitive structure within the student personnel service program to effectively provide all students with strategies and procedures for effectively obtaining a job. It is clear that past and current literature reflect a need to establish a program of job placement for all students. This program should provide for channels of communication among school personnel with employers, the state and local employment service and community agencies to obtain occupational information which can be used to provide strategies and procedures for the job placement of all students.

Objectives

The general objective of the program is to give the student an exposure to the world of work so he may learn the dignity of work and develop the proper attitudes and characteristics for it.

Specific objectives of the program are to encourage and to develop specific skills in which the student-learner demonstrates aptitude and interest.

To improve and expand the technical-vocational schools classroom, the student-learner who will participate in the program may expect to:

1. Work experience in a career objective occupation.
2. Earn a wage while he learns a skill.
3. Develop good work habits and attitudes.
4. Learn desirable personal traits.
5. Become more aware of the dignity of work.
6. Develop greater self-esteem, leading to more self-confidence.
7. Learn how to handle money.
8. Develop a greater awareness of the economic, social, and personal relationships necessary for successful participation in the working world.

The employer who participates in the program may expect:

1. A local supply of future employees properly oriented to the world of work.
2. Participation in the planning of the student's training plan.
3. Assistance in training the student in the particular manner requested by the employer.
4. Use of guidance and testing techniques which may bring to light a student's hidden talent.
5. Advantages of learning about new training techniques from the teacher-coordinator.

Recommendations

We all know how important it is for all individuals to be happy with their job. When you have this fact in mind you can see how important the job placement program is for the overall student education. The objective of the job placement specialist becomes more and more involved with matching the student with the job and not just a placement of the student on a job.

It must be remembered that today, in Berks County, there are over five thousand (5,000) employers, four hundred (400) of which are major firms, employing as many as three thousand (3,000) employees. Consider, then, the contacts that must be made with these firms all year round, not only to maintain our current job placement relationship but to enlarge it in the future. Public relation visitation work is the same as advertising and as any wise company knows, once you stop advertising sales go down.

Everyone is aware of the current tight labor market, not only in our area, but the nation as a whole. You must remember that only so many students can be absorbed, and now, with the unemployment in Berks County over 7 per cent, job competition becomes even more severe. Our students are always competing with sixteen other county high school students. So, therefore, if I do not see an employer ... at least periodically ... certainly one of the other school's representatives will, which may result in the loss of job orders for Reading and Muhlenberg District Schools. With this in mind, most of my time has been spent in job development and less time in one of my other functions.

This school year 1975-76, Reading High School Business Education students were ready for their cooperative Work Study Program. This involves over one hundred twenty (120) seniors. Couple this figure with Reading-Muhlenberg AVTS, Muhlenberg, Central Catholic and Holy Name High Schools and the figure approximates seven hundred (700) students! That's seven hundred (700) students needing Job Placement Service.

In conclusion, as of today, Job Placement is at the top of the priority list for the State of Pennsylvania, with plans to expand the overall state level projects by providing funds for other project sites.

The Job Placement program is as important as any of the instructional areas in the school system. Once we train the student in an academic or vocational field, we should not drop the student upon graduation. We all know graduation is one of the most important events because then for the first time, the student must face the World of Work. In the past, (before Co-op or Job Placement) very little preparation time was given to students. How to contact an employer, or how to sell his skills on an interview, or how to fill out an application form, was always left to the discretion of the student. This, to many employers, reflected on the school and its teachers. Keeping this in mind, job placement should be part of the overall education system.

In addition, I feel our program could grow to a much larger program by just extending this service to Adult Evening School at the Vo-Tech and home schools. Most evening school students are attending classes to either improve their skills for advancement in their present field or training for a new field. Since I have been at my present job as Job Placement Specialist, I have received job orders from our current employers that hire our daytime students,

Also, I cannot think of a better way to give service and build up a good rapport with the general public (Our Tax Payers).

THE ROLE OF THE JOB PLACEMENT SPECIALIST
AT READING-MUHLENBERG AREA VOCATIONAL-TECHNICAL SCHOOL

Specific Duties.....Job Placement of Business Education Students

1. Preparation for the pre employment interview.
2. Develop and put into operation a job placement program for students on a part-time or full-time basis.
3. He shall maintain close contact with industry and coordinate and assist in placing students in employment or advanced schooling.
4. He shall, while in contact with industry, determine the needs of the employer and employee for future curriculum development.
5. Develop and operate an employer follow-up program.
6. He shall develop and maintain constant follow-up of graduate students to ascertain their progress and secure information from them as to the relative effectiveness of the curriculum.
7. Organize a Craft Committee.
8. Meet with Craft Committees along with the teachers of the Business Education programs in an effort to gain an insight into each area of instruction.
9. Develop a plan whereby suitable occupational information will be filtered into the participating schools in the amounts needed and to the person to whom you are directed to forward the materials.
10. Have an awareness of public relations opportunities for the sending schools and the Vo-Tech school.
11. Develop a plan and put into operation an open exchange of philosophies in regard to the Business Education programs at the home schools and the Basic Data Processing, Key punch and Computer operation of the Vo-Tech school.
12. We should be fully aware that the diversified duties of the position at times will not be confined to the normal school day.

SUNDRY JOB PREPARATION MATERIALS

Mr. Grande and I prepared and implemented the following with all vocational students.

FROM: DR. JACK D. NEAL, SUPERINTENDENT
MR. GARL E. STRITTMATTER, SUPERINTENDENT
MR. CHARLES H. MATTERS, DIRECTOR OF VOCATIONAL EDUCATION
MR. JOSEPH J. GRANDE, COORDINATOR OF INDUSTRY

DATE: JULY 6, 1976

SUBJECT: EMPLOYMENT REPORT 1976 GRADUATES

Since our Employment Report of June 2, 1976 we have contacted the unemployed graduates by phone and mail and the attached report is a breakdown by Instructional Area indicating the number of graduates directly employed, number of graduates employed related and non-related, those graduates that plan to further their education or enter the armed forces and the number of graduates not available for work. Also those that are unemployed.

In reference to the Job Outlook picture as shown in the June report, our findings now qualify the pleasure and encouragement we indicated.

The average starting wage is estimated at \$2.57 an hour, based on available information. The combined gross annual income of those going directly into employment will be in excess of \$2,202,699.20*.

The educational development and the work skills imparted by our fine staff will enrich the lives of our graduates.

*Based on average prevailing wage rate of employed seniors.
40 hour week, 52 weeks at \$2.57 average wage per hour.

SUBJECT: JOB PLACEMENT REPORT. 1976 GRADUATES

In today's world of work, people with saleable skills are the ones getting the jobs. That's why skill equates with employment.

Our basic cooperative work program is for twelfth grade students of the Reading-Muhlenberg Area Vocational-Technical School. This means a properly qualified student is released from his instructional area for employment at an occupation directly related to the class in which he or she is enrolled. This placement station is an extension of the classroom. Therefore, only the better seniors are recommended to take advantage of this outstanding educational opportunity.

By following these guide lines Reading-Muhlenberg AVTS has enjoyed an excellent reputation throughout the community for the quality possessed by their graduates. The community business people are aware that when we recommend a student, he possesses the necessary entry level skills.

Business Education students

Of 206 senior students, 110 are employed or committed to post high school training. This represents better than 53% of our Business Education students.

Special Co-op Program.

In our Special Co-op Program we have had 29 seniors working and 30 underclassmen on the job. We have 33 students on the class rolls and we have 23 students awaiting entrance into the program.

FOLD

(DO NOT DETACH)

Pupil progress for students enrolled in the Vocational-Technical Cooperative Educational Program is measured by a rating scale developed by the Vocational Technical School. The rating instrument pays particular attention to:

ATTITUDES (A)—This encompasses the student's overall approach to the subject matter and his philosophy of the trade as well as his ability to work with other people.

SKILL (S)—This applies to his ability to apply his knowledge in a practical, rather than a theoretical sense.

KNOWLEDGE (K)—This applies to the student's knowledge of the subject matter.

OVERALL (O)—This is a combination of the above grades.

TITLE: JOB PLACEMENT. FINAL REPORT.

PERSONAL AUTHOR: THOMAS, DON

DESCRIPTOR: *JOB PLACEMENT; *SCHOOL SERVICES; PROGRAM DESCRIPTIONS

IDENTIFIER: PENNSYLVANIA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 24P.; RELATED DOCUMENTS VT 103 506 THROUGH VT 103 508 IN THIS ISSUE.

ABSTRACT: THIS PROJECT ESTABLISHED A JOB PLACEMENT SERVICE IN THE GREATER JOHNSTOWN AREA VOCATIONAL-TECHNICAL SCHOOL IN PENNSYLVANIA. THE MAJOR OBJECTIVES WERE TO PROVIDE PLACEMENT, FOLLOWUP, AND PRE-EMPLOYMENT PREPARATION, AND TO MAINTAIN COMMUNICATION WITH THE BUREAU OF EMPLOYMENT SECURITY. ACTIVITIES CONDUCTED TO MEET THE OBJECTIVES WERE: VISITING EMPLOYERS FOR JOB DEVELOPMENT AND PUBLIC RELATIONS PURPOSES, SETTING UP JOB INTERVIEWS, CONDUCTING FOLLOWUP STUDIES FOR FIRST AND FIFTH YEAR GRADUATES, AND INTERVIEWING WORKING STUDENTS AND EMPLOYERS OF GRADUATES. PRE-EMPLOYMENT ACTIVITIES INVOLVED DISCUSSION AND COMPLETION OF EMPLOYMENT PACKET, COMPLETION OF PRE-GRADUATION SURVEY AND PERSONAL DATA SHEET, AND GATHERING INFORMATION FROM INSTRUCTORS REGARDING EMPLOYABILITY FACTORS. PERCENTAGE OF TIME SPENT IN VARIOUS PROJECT ACTIVITIES IS SHOWN ALONG WITH RESULTS OF THE 1971 AND 1975 FOLLOWUP STUDIES. SOME CONCLUSIONS INCLUDE THE FOLLOWING: A CLOSE RELATIONSHIP WAS NOT MAINTAINED WITH THE BUREAU OF EMPLOYMENT SECURITY; THERE WAS LITTLE IMPACT ON CURRICULUM CHANGES FROM FEEDBACK STUDIES; AND THE INABILITY TO RETAIN A PLACEMENT SPECIALIST RESULTED IN A FRAGMENTING OF OBJECTIVES. APPENDED TO THE REPORT ARE THE EMPLOYER AND EMPLOYEE FEEDBACK FORMS, FOLLOWUP SURVEYS, ANECDOTAL RECORD, CAREER PLANNING SHEET, RATING SHEET, AND PERSONAL DATA SHEET. (NJ)

I. PREFACE

This report represents happenings in the third year of the project as well as reflections of the project since its beginning in the 1973-74 term.

The major problem that we have had in accomplishing the objectives of the project centers around the loss of the Job Placement Specialist. He was with us in 1973-74 and 1974-75 but was not employed during 1975-76.

This meant that the activities to accomplish the objectives were fragmented. This does not indicate our lack of concern for placement; however, the process to accomplish our objectives had to be revised.

-4-

II. INTRODUCTORY SECTION

A. ABSTRACT

The project had three general objectives:

1. Provide placement and follow-up services for all youth commensurate with their ability and interest.
2. Provide students with pre-employment preparation activities directed to enable all existing youth obtain and retain employment.
3. Maintain lines of communication with the Bureau of Employment Security.

In order to accomplish the above objectives we did the following:

- 1.1. Defined the roles of individuals involved; i.e., Co-Op, Career Resource Center, Counselors, Teachers, Paraprofessionals, Clerks.
 - 1.2. Employed an individual during evening hours to continue placement activities for recent graduates.
 - 1.3. Conducted follow-up studies for first and fifth year graduates.
 - 1.4. Visit employers to develop job slots and help employers better understand our program.
 - 1.5. Set up job interviews.
 - 1.6. Interview students who are working.
 - 1.7. Interview employers of graduates.
- 5

2.1 Engaged in pre-employment program activities.

2.1.1. Handout, discuss and complete employment packet.

2.1.2. Complete pre-graduation survey and personal data sheet.

2.1.3. Gather information (rating sheets) regarding employability factors from instructors.

3.1 Worked with designated representative from Bureau of Employment Security.

As a method to provide feedback to our staff and determine whether or not objectives were being met we maintained a daily log of activities which was converted into weekly reports and eventually summarized into an annual report.

Having worked on the Placement Project both with a Placement Specialist and without one we can make the following observations:

1. Since data is on file with Counselors, with Career Resource Center; Co-Op, and Placement Office; there must be a systematic method to gather and retrieve information.
2. In a system where you have Co-Op and Career Resource Center activities and responsibilities overlapping placement; much direction has to be given to spell out who does what.
3. With the Placement Specialist it is possible that instructors will get further removed from the work picture and they may develop the attitude that "that is his job".
4. The setting up of the office and responsibilities of the Clerk/Paraprofessional must be well defined. If ground rules are not spelled out there can be problems as to whether or not the slot should be filled by a Co-Op student or graduates.

The district must establish the amount of time and effort, and money it will spend on the out-of-school youth versus those in attendance.

5. Imperative that one individual be responsible for potential graduates and graduates and their employment. Without someone responsible recorded information is scattered and lost.

B. METHODS

Placement data is used as one component in the evaluation system developed to evaluate our vocational and technical programs.

In order to obtain feedback from the staff, graduates, and employers we used the following forms that appear in the appendix.

1. Employee Feedback Report
2. Employer Feedback Report
3. Follow-Up Surveys
4. Required Job Placement Anecdotal Record Survey
5. Career Planning Sheet
6. Rating Sheet
7. Personal Data/Referral

III. FINDINGS AND ANALYSIS

The activities we engaged in provided us with the following results as they relate to the project objectives.

During the third year of the Project the Placement Clerk utilized her time in the following manner:

- 1. Contacts with students 50%
 - A. Program orientation:
 - Student requests for employment
 - Student requests for information on Co-Op
 - Student requests for appointments with Co-Op Instructor
 - Assisting students complete and understand forms for Co-Op/Placement
 - B. Job Matching:
 - Finding suitable students from areas as requested by employers, such as qualified Electric Shop student for Electrical Contractor
 - C. Job Placement/Follow-up:
 - Graduate students requesting help in finding jobs
 - Phone calls from graduates requesting appointments for employment help
 - Helping students complete data sheets for employers
 - D. Related Problems:
 - Grades
 - Work Schedules
 - Notebook and Wage Records

- 2. Contacts with Bureau of Employment Security 00%
 - A. Discussion with BES liaison:
 - Job leads we are unable to fill
 - Student referrals for job requests

- 3. Visits to local businesses and industries 8%
 - A. Telephone Contacts:
 - Making appointments for employer interviews of students
 - Requests from employers for students to fill job openings
 - Calls to employers to let them know of progress in filling job leads
 - Obtaining employer ratings on students in their employ

- 4. Contacts with faculty 7%
 - A. Program orientation:
 - Requests from instructors for best available students for particular job
 - Instructors opinion of students' capability to fill particular job
 - Approval of instructor to send student out on Co-Op

5. Meetings with school administrators and staff . . . 10%
 - A. Review of progress and problems:
 - Review of students grades, discipline, attendance
 - Process approval for Co-Op forms
 - Rating Sheets-Instructors and Employers
 - Weekly listings of Co-Op Placement
 - B. Discussions with PPS Director:
 - Schedule changes
 - Approval for student to go on Co-Op
 - C. Related Problems:
 - Co-Op parking permits
 - Early dismissal and arrivals for interviews, etc

6. Data Processing concerns 14%
 - A. Tabulations of Surveys:
 - Graduate surveys (Preparation of surveys, envelopes, letters, etc)

7. Form Concerns 1%
 - A. Development concerns:
 - Developing forms to be used for operation of Co-Op/Placement Office

8. Self-initiated job development 11%
 - A. Industry and business contacts:
 - Phone calls and letters, checking on job leads

Follow-up surveys provided us with the following results for the 1975 and 1971 graduates:

Greater Johnstown Area Vocational-Technical School

IV. CONCLUSIONS AND RECOMMENDATIONS

What was not accomplished:

1. We were unable to retain a placement Specialist.
2. There was little impact from our feedback studies as it related to curriculum changes.
3. A close working relationship with the Bureau of Employment Security was not maintained.

What was accomplished:

1. We were able to focus on placement and follow-up activities as a means of bringing a team of professionals and paraprofessionals together.
2. Appropriate utilization of a clerk will expand the activities of Job Placement at a lower cost.
3. Used placement data as integral part of advisory committee meetings.

Implications for education:

1. Job Placement becomes an important factor in evaluating programs.
2. Placement and follow-up should not only be a Vo-Tech school activity.
3. Coordination of service to pupils must be well thought out for program execution to be most effective. Placement can be separated into work with students and work with employers.
4. Co-Op theory and pre-employment preparation programs must be tied together.

5. Personnel involved in the program must be energetic self-starters who understand the school system so they can operate as coordinators and consultants rather than salesman.

6. The level of our effectiveness in placement counseling and actual placement activities will either serve as a building block or over time, employers will become less and less interested in cooperating with Vo-Tech without placement the latter will occur.

Graduates who have received placement services do help future graduates find jobs by contacting placement personnel in the school. Effective placement and follow-up has improved the status of Vocational-Technical Education.

TO: All Seniors
FROM: Pupil Personnel Department
SUBJECT: After High School Job and Career Plans

Your graduation is rapidly approaching. Some of you know exactly what you will be doing after graduation; some of you know the area of your interest but do not have school or employment plans worked out, and some of you may still be unclear as to your vocational direction.

This questionnaire is designed to do two things:

- (a) Provide a record of your after-high-school job and career plans
- (b) Indicate those students who could use additional assistance from Counselors; the Career Resource Center; employers; and the State Employment Service.

Please indicate below the category which you feel best describes your plans and situation at this time.

Name _____
Last First Middle

- _____ 1. Now seeking full-time employment. Describe the job you want _____

- _____ 2. Now working at a job and will continue to work for the same employer
a. Name of company _____
b. Describe the job _____
- _____ 3. I desire additional training or schooling. (Describe course and name the school)
a. Type of training _____
b. Name of school _____
- _____ 4. Plan to go into military service. (List service and describe schooling if known)
a. Branch of service _____
b. Describe speciality selected _____
- _____ 5. Remain at home and not seek employment _____
- _____ 6. My plans are not definite at this time. (What do you think you might do for a career? Describe)

- _____ 7. Others (Moving, travel, etc.) _____

NOTE: Many seniors after graduation last year returned to Vo-Tech during the summer for career information and counseling. Mr. Johnson and a counselor will be here throughout the summer months.

DESCRIPTIVE NOTE: 19P.

ABSTRACT: THIS PROJECT WAS DESIGNED TO IMPROVE THE COMMUNICATION AND COORDINATION BETWEEN PROGRAMS AT THE SECONDARY AND POSTSECONDARY LEVELS IN ENGINEERING TECHNOLOGY IN JOHNSTOWN, PENNSYLVANIA. OBJECTIVES WERE TO LIST ENTRY-LEVEL JOBS AT THE HIGH SCHOOL, POSTSECONDARY, AND FOUR-YEAR COLLEGE LEVELS, DETERMINE THE COURSES TAUGHT, AND COORDINATE THE CURRICULUM. IN MEETING THE OBJECTIVES, MEETINGS WERE HELD TO SHARE CURRICULUM INFORMATION, FACILITIES WERE VISITED, EMPLOYERS AND GRADUATES WERE INTERVIEWED, AND A REVIEW OF THE LITERATURE WAS CONDUCTED. SUGGESTIONS ON CURRICULUM IMPROVEMENT RESULTING FROM FEEDBACK FROM EMPLOYERS AND GRADUATES ARE LISTED ALONG WITH SOME GENERAL CONCLUSIONS ABOUT THE EFFECTS OF THE PROJECT. AMONG THESE, IT WAS NOTED THAT AN EFFECTIVE APPROACH WAS TO COMPARE LEARNING COMPETENCIES RATHER THAN COURSE OUTLINES AND DESCRIPTIONS. THE STUDENT COMPETENCY RECORD FOR A UNIT IN BASIC ELECTRONICS IS INCLUDED ALONG WITH THE EMPLOYABILITY RATING FORM. (NJ)

I. PREFACE

This project is concerned with the need to promote better understanding of technical education at the high school, post high school, degree and non-degree levels, while increasing the communication and coordination of programs offered at two institutions.

Since there is no community college in our area, we in a sense, serve the community in this capacity; however, articulation between a "high school" and a 4-year college as it relates to technical programs is probably more difficult than between a high school and a community college.

ACKNOWLEDGEMENTS:

The extent to which this project met its objectives is due to the efforts of Glen Elliott and Fred Berish, instructors in Electronics Technology at the secondary level; Herb Reynolds, post secondary two-year non-degree Electronics Technology Instructor; and Dick Bender and Gregory Dick, instructors in the Engineering Technology program at the University of Pittsburgh at Johnstown.

II. ABSTRACT

A. OBJECTIVES

1. List entry level jobs at the high school, two-year post high school, and four-year Applied Engineering Program.
2. At these three levels determine courses taught along with descriptions and outlines.
3. Draw conclusions as to how coordination can be achieved to the benefit of students and institutions.

B. ACTIVITIES TO ACCOMPLISH THESE OBJECTIVES:

- 1.1. Follow-up graduates and indicate place of employment.
- 1.2. Interview employers to determine their view of the three programs.
- 2.1. Gather and review curriculum information from both schools.
- 3.1. Meet and review data compiled.

C. PROBLEMS:

There were very few graduates to date to follow-up from all three program levels.

It did not take long to see that the programs did not fit together as we anticipated they might.

Almost all available literature on technical education deals with the post high school programs.

D. SIGNIFICANCE AND NEED FOR FURTHER ACTION:

The role of the Area Vocational-Technical School in providing vocational education at the high school level needs to be examined. What is the rationale for technical education in the high school and how do two-year high school programs relate to two-year post-high school programs?

METHODS

Methods utilized to better understand the curriculum at the three levels of instruction and meet our objectives included the following activities:

1. Meetings with all participants to tour facilities and share curriculum information.
2. Personal interviews of graduates and employers.
3. Review of current literature on the subject including a search by VEIN and a meeting of personnel from PENN TAP.

7

III. FINDINGS AND ANALYSIS

Both institutions now have a better understanding of the scope of the programs at the three levels.

Essentially, we are producing technicians and they are producing practical engineers. We do a lot more trouble shooting where they stress the design and building phase of engineering.

Although we have no formal agreements to date we have made it possible for students to be considered for advanced standing. One of the problems we found is that many of the students who want to move from the Vo-Tech post secondary program to the four-year degree program lack the math background for Engineering Technology and have a difficult time adjusting to the more theoretical environment.

In looking at the job picture we find that the Engineering Technology students must go out of the local market for jobs, but jobs do exist locally at the technician level.

Both institutions serve a need in the community and provide specialized programs for students with varied interest, abilities, and goals.

FEEDBACK FROM EMPLOYER/EMPLOYEE AS IT RELATES TO CURRICULUM:

POST SECONDARY (Non-Degree):

1. More emphasis of color televisions and antenna matching and tuning procedures.
2. Emphasize troubleshooting by schematic interpretation and signal tracing methods.
3. Emphasize craftsmanship in soldering.
4. Include more cable repair and fabrication.
5. Emphasize test equipment use and more attention to solid-state switching and controls for remote monitoring and control of industrial processes.
6. Need good basis for logic circuits.

SECONDARY:

1. More solid state - less tubes.
 2. More troubleshooting experience.
 3. Less theory more practical experience.
 4. Incorporate mechanical problems.
 5. Include some logic-digital.
- Initiate a program where students simulate job interviews.

CONCLUSIONS AND RECOMMENDATION:

1. It is more effective to compare learning outcome; i.e., competencies -- then it is to look at course outlines and descriptions.

Competencies as developed for our secondary program are included in the appendix.

This record is available for both employers and post secondary institutions to review as it relates to the competencies of individuals.

2. The effort put forth by the instructors has opened some doors to employment for graduates and has also helped us in making revisions in curriculum to meet local needs.
3. Student interviews have given us a better insight into their needs as it relates to obtaining and retaining employment in their field.
4. There is a place for the three types of programs; however, it is more difficult to place the high school technical graduates.
5. It is more feasible to transfer with advanced standing into a two-year technical program then into a four-year degree program. This is due mainly to the fact that in the four-year programs year one and two are more general and academic in nature with most of the lab work in the third and fourth year.

6. Even though no written agreement exists a willingness to place students at advanced levels and exchange ideas has been achieved.

We will continue to explore our role in providing technical education and how we can articulate better to both employers and other institutions.

TITLE: MINING AND RECLAMATION COOPERATIVE EDUCATION PROGRAM. ANNUAL REPORT.

DESCRIPTOR: *DEMONSTRATION PROGRAMS; *SCHOOL INDUSTRY RELATIONSHIP;
*PROGRAM DESCRIPTIONS; *COOPERATIVE PROGRAMS; VOCATIONAL EDUCATION; COMMUNITY
COLLEGES; *TECHNICAL OCCUPATIONS

IDENTIFIER: *COAL MINING; *RECLAMATION TECHNOLOGY

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 88P.; APPENDIXES I AND II MAY NOT REPRODUCE WELL.

ABSTRACT: THIS REPORT DESCRIBES THE FISCAL YEAR 1975 FOURTH QUARTER
ACTIVITIES AND RESULTS OF A COOPERATIVE EDUCATION PROJECT IN MINING AND
RECLAMATION INVOLVING TWO EDUCATIONAL AGENCIES, COAL MINING COMPANIES, AND
GOVERNMENT AGENCIES IN THE WESTERN KENTUCKY COAL REGION. THE PURPOSE IS TO
RELIEVE THE COAL MINING MANPOWER SHORTAGE OF THE REGION BY TRAINING AND
RETRAINING LOCAL PERSONNEL THROUGH THE COOPERATIVE EFFORTS OF THE SCHOOLS AND
ONSITE PLACEMENTS. THE REPORT DESCRIBES THE PRACTICUM IN RECLAMATION
TECHNOLOGY, SIGNIFICANT PROJECT FINDINGS AND EVENTS, DISSEMINATION ACTIVITIES,
DATA COLLECTIONS, STAFF UTILIZATION, AND FUTURE ACTIVITIES. THE SECOND YEAR OF
THE PROJECT OPERATION IS VIEWED AS SUCCESSFUL BY THE AUTHOR OF THE REPORT. THE
MAJOR PORTION OF THE REPORT CONSISTS OF APPENDED MATERIAL THAT INCLUDES:
DESCRIPTION AND ITINERARY OF THE PRACTICUM IN RECLAMATION TECHNOLOGY; FACT
SHEET REPORTING A TVA EXPERIMENT IN CONTOUR STRIP MINING; PROGRAMS FROM
INSTITUTES, CONFERENCES, AND COUNCIL MEETINGS; POSITION PAPER ON COOPERATIVE
EDUCATION PREPARED BY THE UNIVERSITY OF KENTUCKY; DESCRIPTION OF THE WEST
VIRGINIA SURFACE MINING RECLAMATION INSPECTOR TRAINING; PROJECT CORRESPONDENCE
AND BUDGET INFORMATION; PUBLICITY; AND AN INTERVIEW CHECKLIST FOR PROSPECTIVE
STUDENTS. (NJ)

INSTITUTION NAME: MAISONVILLE STATE VOCATIONAL-TECHNICAL SCHOOL, KY.;

PERIOD COVERED

April 2, 1976 through June 30, 1976

MAJOR ACTIVITIES AND ACCOMPLISHMENTS DURING THE ENTIRE FISCAL YEAR PLUS THE FOURTH QUARTER

Introduction

This report describes the activities and results of the Cooperative Mining and Reclamation Project for the fourth quarter specifically and the entire fiscal year in general.

This experimental project in cooperative education has been a complete success for the second year. The interaction between mining companies, government agencies, and both educational institutions has been the key to the excellent progress of this program. The faculty and staff from both institutions have worked very closely together and have complete faith in their capabilities to resolve any local problem big or small.

There continues to be an interaction from the students from both schools. The vocational students and college students have been placed in the same mining classes, using the same facilities and instructors with excellent results. Both groups of students came out of this situation with positive attitudes and both have met their performance objectives.

The coal industry and the reclamation agencies have given their full support to the project and their enthusiasm continues to grow. We sincerely need industry to keep a project of this nature and magnitude operating. Through the provision of co-op positions for work experience and the sharing of their expertise where necessary, the total help from industry has been exemplary.

The project directors have played a key role in keeping the project running smoothly and preventing small difficulties from becoming large ones. From the beginning they work daily to make this cooperative effort between the two (2) schools a success.

The assistance provided by Mr. Louis Perry of the Bureau of Vocational Education and Mr. Keith Stephens of the University of Kentucky has been invaluable. Their suggestions and recommendations have been a great help to the cooperative coordinator, and have played a major part in the success of the entire cooperative project.

Strong support for the above introductory statements is provided in this fourth and final report.

As coordinator of the cooperative project, it has indeed been a pleasure for me to have worked on such a project. I appreciate all of the advice and assistance that has been given so graciously. Much work remains to be done in the area of cooperative mining and reclamation, and Region II lends itself as a very worthwhile and practical area for such activities.

The following pages of this introductory section include a brief description of the project problem under investigation, the scope of the study, the objectives pursued, the methodology, and the results obtained.

Madisonville Community College and Madisonville State Vocational-Technical School are located in the center of the Western Kentucky coal field, one of the heaviest coal producing areas of the United States. Adequately trained manpower is a constant problem for the coal companies and especially so during the period of energy shortage which we are now experiencing.

The major coal companies are in an expansion period during which they expect to open several new mines within a fifty (50) mile radius of the two (2) educational institutions. Three (3) of the greatest problems they face are the lack of well-trained coal miners, reclamation technologists, and mining supervisory personnel.

The mining engineer supply is improving but coal producers are still having problems finding enough. Bureau of Mines Director Thomas V. Falkie says that, without minimizing the importance of the overall increase in mining-related enrollments, "we still face a shortage of professional personnel in the mineral fields. This has simply got to be overcome if America is to avert serious mineral and fuel problems that can worsen inflation and compound our unemployment problems."

The mining engineering, undergraduate enrollment for academic years 1974-75 and 1975-76 increased from 1625 to 2125 as of last fall. The number of graduates last year was 304 and the number expected to graduate this year is 366.

The majority of the major coal producers say they have had problems finding enough mining engineers. All reporting companies say they are hiring civil engineers or engineers of other disciplines in lieu of mining engineers. One producer, who reports no problems in finding mining engineers, says: "We use the co-op pretty widely and this, coupled with normal recruiting, has served our needs to date."

The above information is extracted and condensed from the June 1976 edition of COAL AGE magazine.

It is the purpose of the two (2) schools and the mining industry to relieve the manpower shortage by training and retraining the people of Region II who are genuinely interested in either Mining or Reclamation Technology. We feel that the development of manpower through the co-op work experience method will fulfill the needs of the student and the mining industry.

This Cooperative Program is an exemplary program designed to field test a Cooperative Mining and Reclamation Technology Program. The knowledge and experience gained from this program could be used in other cooperative programs throughout the state of Kentucky. The project has identified methods of sharing the expertise and facilities of the Madisonville State Vocational-Technical School and Madisonville Community College to better serve the mining and reclamation industry and the people of Region II and the Western Kentucky coal field.

Student selection for the Co-op Programs have varied according to the school selected and the student's objectives.

For the most part, the student attending the vocational school co-op program has received training to permit him to be a better safer coal miner. He receives instructions in mine maintenance mechanics, dealing with a detailed study of hydraulics and electric circuits. The student's goal is to become a master mechanic for an underground coal mining company.

The community college co-op program is designed to train the individual to be a better safer coal miner or Reclamation Technologist. The student in the Mining Technology Program could eventually become a supervisory or mid-management employee for the company. Face boss, assistant mine foremen, mine foreman, and superintendent are positions suitable to the graduate. Reclamation Technologists are trained to work for a surface mining company, federal agencies, state division of reclamation, or for a private reclamation agency as an expert technologist in preplanning, planning, inspecting, and actually working in and completing reclamation projects of the area.

Student selection for the vocational school co-op program is done jointly by the vocational school and the mining companies. The student is required to bid for his co-op position much in the same way that a worker bids for a position at the mine site. The potential student is screened and tested by the company and the vocational-technical school officials for entry into the program.

The community college students are selected from the community college mining and reclamation students who desire co-op work experience while enrolled in the program. Interviews are conducted by representatives from the mining industry and the cooperative coordinator. The student must exhibit an ability to do satisfactory work on the college level before being allowed to work in a co-op position.

The entire project has been in operation for two (2) years. Plans are for the revised program to go into effect on July 1, 1976, and continue through June 30, 1977. The new project is to begin with an extensive recruitment effort most of which has already been completed. Many high schools in the area have been visited by the coordinator to explain the Co-op Program. From this point, the business of screening, interviewing, and testing the applicants will take place before any new students will be admitted to the program. The next step will be to admit new students to the program for the 1976-77 school year.

Once the student is aboard, the business of an effective teaching, tutoring, counseling, and evaluation program comes into effect. Throughout the year, the student will be involved in an extensive education program that when completed will provide him with the skills, attitude, and knowledge to help equip him for the job market and the world of work.

A continued effort during the year by the cooperative coordinator in recruitment, counseling, interviewing, and securing more co-op positions will take place. A complete documented report will be filed quarterly to Mr. Louis Perry, project monitor, as was done during 1975-76.

It is our desire to provide the mining and reclamation technology student the best quality education. With this goal in mind, we feel that the mining industry will be able to look to our schools for graduates now and in the future.

Practicum in Reclamation Technology

Mr. Patrick Ange^l and George Kyle conducted the second Reclamation Practicum course during the month of May. Fifteen (15) students participated in the two (2) week course that included practical "hands on" type activities in both the Western and Eastern Kentucky coal fields.

The students received three (3) hours college credit for the two (2) week course. It was begun on May 17, 1976 and was completed on May 28, 1976. They were involved in learning situations eight (8) hours a day for the full ten (10) days.

We have a number of agencies and people to thank for making the Practicum such an overwhelming success. The following deserve recognition:

- a. Breckinridge Job Corps (Muhlenberg County)
- b. Kentucky Division of Reclamation
- c. Kentucky Reclamation Association
- d. U.S. Forestry Service Experimental Station at Berea.
- e. Tennessee Valley Authority
- f. U.S.D.A. Soil Conservation Service at Quicksand, Ky.
- g. Falcon Coal Company
- h. Forest and Wood Technology School at Quicksand, Ky.

The course was designed to familiarize the community college reclamation student with the use of reclamation tools and equipment. The course involved students visiting active surface mine operations, as well as actual participation of spoil placement with heavy equipment, grading, seedbed preparation, seedings, tree planting, liming and fertilization of spoil, and water quality treatment.

No textbooks were required for the course and no examinations were given. Grades were based on attendance, enthusiasm, and a special typewritten journal which had to be submitted no later than May 28, 1976. The journal had to be a complete and detailed account of every activity the student was involved in during the two (2) week period.

Please refer to Appendix I for a more detailed account of the Practicum and Appendix II for descriptive literature on the TVA's back to contour experiment conducted on Massengale Mountain near Careyville, Tenn.

Indiana Coal Mining Institute

April 9, 1976

The Indiana Coal Mining Institute was held at the Executive Inn in Evansville, Ind. from April 9 thru April 10, 1976.

The coordinator attended all sessions of the conference and received valuable input for new ideas in mining. All coal companies and allied industry along with concerned government agencies were involved and present at the conference. The coord. met and had lunch with Mr. Richard McNabb, the director of Indiana Division of Reclamation. He indicated they only have 3 full time inspectors with the Indiana Division of Reclamation and anticipates adding 3 more in the near future. The state of Indiana requires their Reclamation inspectors to have a four year degree in natural sciences, forestry, or some allied field. They do not anticipate using associate degree people in the near future. Mr. McNabb has referred several people to our school for the associate degree and requested we provide him with more literature to use in referring young people to us.

See Appendix III for the program.

Cooperative Education Conference
Bluegrass Convention Center, Ramada Inn
Louisville, KY

The cooperative conference was a 3 day learning experience, sponsored jointly by the University of Kentucky Community College System and the Cooperative Education Association of Kentucky. The conference was funded under Title IV Part D, USOE.

The co-op coordinator attended two full days of sessions March 31 and April 1 but returned after the program on April 1 to speak at "Career Day," at Dawson Springs High School on Friday, April 2.

The conference was kicked off by Dr. Stanley Wall, who spoke on the University of Kentucky's position paper on cooperative education. The next speaker, Mr. Marshall McGhee, discussed how he had expanded his co-op program from a budget of \$20,000.000 a year to over \$100,000.00 in two years. The keynote speaker, Mr. Russell McClare is the new Commissioner of Finance for the State of Kentucky. He indicated, that the governor is one hundred percent behind the Cooperative Education Programs in the state and believes co-op is the single most important educational step the state has taken.

Dr. Lee M. Frederick, Chief of Bureau of Post Secondary Education, U.S. Office of Education, attended all sessions and contributed significantly to the overall conference. Dr. Frederick is the man who authorized Title IV Part D Funds to Co-op Programs. Kyle had several conversations with Dr. Frederick and felt fortunate to be placed on a first name basis with him. Dr. Frederick requested Kyle to write

up a coup of "Students' Success Stories," for nation-wide publicity in the National Cooperative Educational Newsletter. He also indicated he would like to get to know our program.

See Appendix IV for program.
See Appendix V for Position Paper.

Vocational Mini Conference 5-18-76

On May 18, 1976, the Coordinator attended a Vocational experiences information dissemination Mini Conference at the Capital Plaza Tower in Frankfort. The purpose of the conference was the promulgation of information on three new work experience programs conducted at the high school level. These programs have been highly successful and could possibly work into an excellent feeder project for cooperative oriented post secondary level courses.

During the conference, the coordinator had the opportunity to talk with Mr. Louis Perry, Dr. Floyd McKinney, Mr. Norman Sims and other individuals interested in our program. It is highly beneficial for the coordinator to get the opportunity to talk with these people in sessions like these. Mr. Perry particularly provided some suggestions for new ways to improve our program.

See Appendix VI for Agenda of Mini Conference.

Mining Co-op Program Continues At Voc-Tech School

On June 15, 1976, nine students were enrolled at Madisonville Vocational-Technical School in cooperation with the Island Creek Coal Company. The program is six (6) months in length with the student alternating six (6) week sessions of school and work.

The co-op program is designed to train the person to become a mine machinery mechanic. His course of study includes theory and practical work in hydraulics and electricity while at school and "hands on" activities as a mechanic trainee while in the work phase.

The co-op student receives full pay benefits while in the six (6) month program and he remains a member of the United Mine Workers of America with full benefits.

SIGNIFICANT FINDINGS AND EVENTS

T.V.A. Visit Knoxville, Tennessee 4-22-76

The Coordinator met with Gerald Shilling, Personnel Director, Jack Hampton, T.V.A. Co-op Coordinator and Tom Cox, Assistant to Mr. Shilling. The purpose of the meeting was to establish co-op work stations with the Tennessee Valley authority for both Mining and Reclamation students.

Mr. Shilling was very enthusiastic about our programs and offered full cooperation. He promises to get in contact with supervisors to determine number of slots available for students in both local area and out west. He stated, they are setting up a lab. in Kasper, Wyoming and are now searching for work force for that area. They have some coal operations with the purpose of providing demonstration sites. They have mining positions in both coal and nuclear fuels.

Co-op students are normally hired in the subprofessional schedule of SE-1 which encompasses both high school co-op and college freshmen. The beginning salary rate is \$6600.00. This factor alone will probable limit the number of mining co-ops, but will be adequate for reclamation students.

The T.V.A. has a new scholarship program designed to encourage participation in education and subsequent employment with T.V.A.; for women and minorities. This scholarship program provides tuition and books up to (\$500.00) five hundred dollars per year to qualified students. More detailed information will be provided later.

Mr. Jack Hampton also offered to come to our area and assist in recruitment of minorities and women for our program.

South Hopkins Coal Co. Meeting 4-12-76

Coordinator met with Mr. Charles Savage owner of South Hopkins Coal Co. on 4-12-76. Mr. Savage is interested in adding his Coal Co. to our work station group.

Mr. Savage reviewed our curriculum in detail and seemed very impressed with our program. He is now going to follow thru by talking to his superintendent and indicated he would be able to provide work spots which could handle 4 to 6 mining students per year.

P.S. On May 15, 1976, Mr. Savage stated he would interview students during the summer for co-op work spots for the fall 1976 semester.

New Work Stations In Utah

The Co-op Coordinator was notified on 4-5-76 by Willie Curtis U.S.F.S., Berea that they will need 4 extra co-op spots in September for work stations in Logan, Utah. The Coordinator followed up with more information to Mr. Curtis on June 15, 1976. On the same date the Coordinator contacted Mr. Con H. Schallau, Deputy Director of the Intermountain Forest and Range Experiment Station in Ogden, Utah. We hope to continue communications until we have ironed out all the problems and initiated a cooperative agreement with the U.S.F.S. in Utah.

U.S.F.S. Co-op Requirements

The following guidelines have been promulgated on 4-13-76 by the U.S.F.S. to be used in selecting and preparing reclamation students for work station experience with the U.S.F.S.:

1. The student must prepare and provide a complete resume to be on file prior to submitting application for co-op experience.
2. A complete copy of transcripts must be provided on file with co-op coordinator.
3. A list of courses in which student is presently enrolled.
4. SF-171 completed.
5. They prefer students who have been enrolled for two semesters at M.C.C.
6. If possible, they desire people who have worked in other co-op positions.

Project Doron

Yet another cooperative effort has been initiated by Madisonville-Vocational Technical School, Madisonville Community College, Island Creek Coal Company, and the U.S. Bureau of Mines and MESA.

Project Doron was initiated in May 1976 and is now an on going educational experiment. It is a shuttle car operator training module which during a forty hour training period will prepare an underground coal miner to be a better, safer shuttle car operator.

The training sessions are divided into three phases:

1. Academic training phase
2. Electronic shuttle car simulator trainer phase
3. Actual shuttle car operation phase

Three teams of two men each will be used to debug the program. Our co-op students from M.C.C. have volunteered to act in the trainee capacity.

The cooperative effort of this operation is emphasized by the following points.

1. Two graduates of M.C.C. Mining Technology cooperative program employed by Island Creek Coal Co. are the Doron instructors
2. The Voc-Tech Region II is supplying building and facility to house the computerized physical plant and classrooms.
3. The U.S. Bureau of Mines owns the equipment.
4. MESA is helping sponsor the program.

New Building Plans For M.C.C.

6-7-76

The approval has just been received for the construction of a new building at M.C.C. for the housing of the Technical Courses. The building will contain approximately 20,000 sq. ft. to be utilized by Mining and Reclamation Technology, Nursing and Business for offices class rooms and laboratories.

The building will cost approximately 1 million dollars. The plans are in progress now at the U. of Ky. for the construction.

Surface Mining Reclamation Inspector
In-Training Specifications

The state of West Virginia, Division of Reclamation, under the able leadership of Mr. Benjamin C. Greene (Chief of the Division) has established M.C.C. as one of the two schools in the U.S. approved by the W. VA. Department of Natural Resources to train inspectors in-training. We are proud to have the honor to be selected by such a progressive and able organization.

See Appendix VII for letter and specification.

Accreditation of Technical Schools
by the Council for Surface Mining and Reclamation
In Appalachia

Mr. Patrick Angel, the Administrative Coordinator for Mining and Reclamation Technology at M.C.C. met with the Council for Surface Mining and Reclamation Research in Appalachia to present a paper proposing that the council establish itself as an accreditation body to monitor training programs for the schools that have or will establish Reclamation Technology Programs. The increasing numbers of schools setting up Reclamation Technology Programs indicates a pressing need in this area.

See Appendix VIII for Agenda of above council.

American Mining Congress
1976 Coal Show
May 10-13, 1976

The Cooperative Coordinator attended the the 1976 Coal Show at Detroit, Michigan and found it to be the most informative conference of this type he has ever attended. The convention sessions were held daily in Cobo Hall and were attended by thousands of mine and related industry supervisors. The papers presented there, were extensively researched and contained the most current information available.

It is the coordinator's opinion that much of this current and pertinent information should be integrated into both mining and reclamation classes.

All major mining, reclamation and allied industry companies were represented by actual static displays of equipment and by the top men in each company.

The session papers presented at the Coal Show will be ordered for study by the coordinator and mining and reclamation instructors. The following papers were presented:

1. opening session
2. management
3. longwall mining
4. reclamation
5. underground face operations
6. safety and health
7. surface mining operations
8. underground mining service operations
9. coal preparation

An added advantage of attending the Coal Show is that it is a concentration of all the top personalities in the mining industry. The coordinator was fortunate to meet socially and talk with many of these highly informed individuals.

See Appendix IX for Session Papers.

State Deep Mining Safety Commission Meeting

Madisonville State Vocational-Technical School, Madisonville Community College and heads of mining industry provided the setting on June 21 and 22, 1976 for the first, State Deep Mining Safety Commission Meeting, held in Kentucky. Mr. B.M. Hatley, Dr. G. Harold Massey, Mr. John H. Gray and Senator Ken Gibson laid the ground work and provided the facilities for this milestone event.

Budget Report

The budget for this year was found to be adequate after two budget adjustments which made use of excess funds from Line (101) salaries. This item had an excess because of vacancies in the coordinator and coordinator's aide positions earlier in the year.

The revised budget has been submitted by Mr. Louis Perry. We agree with Mr. Perry that the revised budget will not significantly alter the scope of our effort.

See Appendix X for letter and project budget for 1977.

DISSEMINATION ACTIVITIES

New Co-op Brochure

The revised co-op brochure has been printed and is now in circulation. We feel the U. of Ky. printing press did an exceptional job in producing such a professional product. The new brochure has proven itself in the recruiting of new and counselling of on going students.

See Appendix XI for new brochure.

Lady Reclamation Inspector

The Mining and Reclamation Technology Cooperative received state wide publicity thru the newspaper article entitled "Learning Reclamation in 520 Easy Daily Lessons". This article is the story of Sherry Mallory our first female reclamation student to serve as a reclamation inspector.

See Appendix XII for newspaper clippings.

Area High School Counselors Conference

On 4-19-76 Madisonville Community College was host to over one hundred high school counselors and business men. The meeting was sponsored by the Education Committee of the Madisonville Chamber of Commerce. The purpose of the meeting was to discuss ways of bringing education and the world of work together in the Madisonville area.

A film prepared by Madisonville Voc-Tech Region II in concert with the Chamber of Commerce was viewed and offered for use by the high school counsellors. The film depicted the many Vocational opportunities in industry available in the Madisonville area.

A buffet luncheon was served by Mr. Hall Edwards a local merchant and member of the Chamber of Commerce.

Mr. John H. Gray, the Master of Ceremonies for the meeting, called on the heads of industry and the educational institutions of Madisonville, to address the group. All attendees indicated it was a highly productive meeting which facilitated opening of the lines of communication of the community.

The Rec Tech Gazette

The newly formed Reclamation Technologists of America Club has printed the first official newsletter dated May 1976. This letter got nation wide distribution and received excellent reviews.

We feel this letter to be a highly efficient dissemination instrument which can be utilized monthly to maintain interest and enthusiasm over a large geographical area.

The co-op coordinator congratulates the Rec Tech Association of America and Mr. Pat Angel for the terrific results obtained by the Rec Tech Gazette.

See Appendix XIII for copy of Rec Tech Gazette.

DATA COLLECTIONS

New Initial Interview Checklist For Prospective Students

The Co-op Coordinator felt a need for more extensive information on prospective students than has been available in the past. Prior to this time a informal list was maintained on interested students, and comprehensive information was not available until after the student had completed an application for admission. This new checklist gives us the ability to follow-up on interested students prior to registration.

See Appendix XIV for Prospective Student Initial Interview Checklist.

Student Evaluations Completed 6-7-1976

The evaluation of all co-op students progress in both school and work station phase was completed on 6-7-76.

The coordinator was delighted to discover very few problems in school phase performance and no significant problems in the work phase evaluations of all active cooperative students.

Where problem areas were detected or where a student's progress indicated a trend toward a decline in performance immediate action was taken to advise and counsel the individual.

The coordinator continues to note an increase in academic performance after the first work phase. This points up the great advantage giving the student an early (after first school semester) experience in the chosen "world of work."

New Company / Agency Evaluation Forms

The coordinator felt an intense need to update the company/ agency evaluation forms which provides an invaluable feed back on our program. Information from this form is compiled to allow us to continue to improve the program to meet the needs of industry and agencies.

See Appendix XV for company/agency evaluation form.

PROBLEMS

The problems encountered this quarter stem from the migration of personnel. Two very important personalities have left the program to be employed in the mining industry.

Mr. L.C. Combs, Head of Mining Technology, left us in May 1976, Mrs. Sarah Spencer, Secretary of Mining and Reclamation Technology left June 30, 1976. Mrs. Jenna Lou Mason, Coordinator's Assistant, and right arm, is leaving July 7, 1976 to return to school.

Both Co-op Programs continue to make beautiful progress and we feel that soon new leaders will join us to continue to move the program toward new and higher goals.

The cooperation among the various agencies is truly unique and will be the one force which carries us over the above mentioned problem.

We know that 1976-77 will be as successful as 1975-76. The year has been truly a mountaintop experience for the coordinator.

OTHER ACTIVITIES

The Reclamation Technologist of America

The Reclamation Technology Club has met to elect new officers for the summer semester and shows promise and enthusiasm in continuing the good works from the previous semester.

A.I.M.E. Activities

The American Institute of Mining Engineers has established Tuesdays at 12:30PM for this semester's meeting dates. They have elected new officers and are now in the process of selecting a new sponsor to replace Mr. L.C. Combs. The students from this organization provided the assistance needed to make the two day State Deep Mining Safety Commission meeting an overwhelming success.

STAFF UTILIZATION

Approval for New Instructors

M.C.C. has received approval for the employment of one additional mining instructor and one reclamation instructor. Mr. Combs' departure left us with two vacancies in Mining Technology.

LTC William Henshaw, who is retiring from the Air Force in August 1976, has been employed for the start of the Fall 1976 semester as a mining instructor. His credentials are very impressive in that he has a BS in Mining Engineering and a MS in Systems Engineering. We welcome LTC Henshaw and we all are positive he will significantly contribute to our program.

New Secretary

Ms. Sheba Y. Keaton has been employed effective June 28, 1976 as Secretary to the Mining and Reclamation Technology Program. We are delighted to have Ms. Keaton on our team. Ms. Keaton also comes to us highly qualified. She has a BA in Secretarial Science from Livingston College and was the editor in chief of the College year book for Livingston College her senior year.

Faculty and Staff Visits To Work Areas

During the fiscal year 1975-76 the co-op coordinator made personal visits to all work station where co-op students were employed. The purpose of these visits was; to familiarize the coordinator with the work situations, to evaluate the students and to remain on a cooperative basis with the students' supervisors.

The faculty members exhibit great enthusiasm to accompany the coordinator on future visits to work stations and the coordinator will provide opportunities and coordination to facilitate a greater number of visits during fiscal 1976-77.

LTC Henshaw is intensely interested in visiting all mine areas, where we have co-op work stations with the coordinator during August and September 1976. The coordinator is making plans for these visits now.

New Composition for Technical Students Instructor

Ms. Pat Ramsden has recently joined the English faculty at M.C.C. One of her major areas of interest is the organization of Technical Writing Class using actual mine company and government agency forms, and writing requirements.

Mining Intercession Yields Positive Results

Vocational School instructors again presented classes in Hydraulics, Electrical Circuits and Elements of Mining.

From conferences with the faculty and staff at the Vocational School it is quite apparent that the experiment is yielding very positive results. The students also seem very happy and contented with the Cooperative Project.

Again this is an example of how the two (2) institutions can and do work together for the good of the student. We are indeed proud of the success of this experiment which will open the door to future projects of this type. We are positive that the end result will be better prepared students for the mining and reclamation industry.

FUTURE ACTIVITIES

Outlook For New Co-op Positions For 1976-77

The situation is highly favorable for a number of new co-op positions for the fall of 76 and spring of 1977. At the present (summer semester 1976) we have one hundred and forty six (146) students enrolled. Forty seven (47) are reclamation students and ninety nine (99) are mining students.

With all the new positions (mentioned earlier in report), becoming available it becomes apparent that the programs are very attractive to the people of Region II. We look to the future with optimism and great hope. Our objective is to make the program even bigger and better in the coming years.

Interviews for Fall Semester

Recent contacts with company representatives have yielded a tentative schedule for co-op position interviews. The latter part of July and early August will be set aside for interviewing potential co-op students.

One of the major companies require the students to have completed the ACT Test prior to interview while other companies don't require completion of ACT.

Generally all other requirements are the same for co-op positions. The student would first be required to perform academically. After being accepted by the company the student will be required to pass a physical examination and then commit himself to the program by signing a training agreement.

Steering Committee and Advisory Committee Plans for Coming Year

We feel that the steering committee and advisory committee are essential, to provide that vital link with industry and agencies. This close communication with users of our product insures an effective cooperative program. The steering committee will be responsible for the overall direction of the project and operational guidelines. This committee will also review and evaluate plans for the mining programs as they are developed.

The local advisory committee will continue to be responsible for keeping a close watch on the entire co-op program. It will be this committee's duty to assess the progress of the co-op program and to make suggestions to the project directors and the Steering Committee. The Advisory Committee will in no way function as a decision making body for the cooperative program.

Plans For Coordinator At Vocational School

The Cooperative Coordinator continues to be housed part of the time at the Madisonville Vocational-Technical School. The duties there centered around the Mining Program. A close association has been established and will be maintained with the faculty and staff.

Mr. Walter Carneal, the principal of the Voc Tech. School has been highly cooperative. He recently upgraded the furniture and facilities in the coordinator's office there at the Voc Tech. School.

The Coordinator will continue to be responsible for linking the Vocational School, Community College and the Mining Industry together. Region II has made great strides to this end, in fact this close cooperation and communications may be one of the most significant factors in the continuing success of this program.

nce, the coordinator's task is to meet and deal with people. It is his duty to maintain a harmonic atmosphere in regards to the three agencies involved. This is accomplished by relating to people and letting them know he is vitally concerned with all aspects of the programs.

First Lady Mining Technology Students

Ms. Lyda Ruth Noe was the first lady to register for the Mining Technology AA degree at M.C.C. Ms. Patricia Jennings was right behind her to become the second. We have been diligently searching for some female students in this program and it seems this is an excellent beginning. These are two of the twenty newly enrolled students during the summer semester. We have high hopes for them and we are certain there will be many ladies to follow. The coordinator congratulates these ladies for their courage in entering a here-to-fore masculine vocation. We wish them complete success in their endeavor.

Holiday Inn

The Holiday Inn Motel located two miles north of M.C.C. here in Madisonville was recently given to the University of Kentucky. We were inturn given approval to use the motel as a part of M.C.C. The rooms will be used as residences for M.C.C. students who live beyond a reasonable commuting distance. The conference rooms will also be available to be used as class rooms and for group meetings. This new facility is a tremendous asset to Region II which will provide us with the ability to house mining and reclamation students from afar who have indicated a desire to come to school if housing was available.

Mining and Reclamation Information Institute

A committee has been formed at M.C.C. and the Voc-Tech School to initiate an information gathering program which will provide a central location for all current developments and source information. A concerted effort is being made by the co-op coordinator to gather and catalog mining and reclamation information from all available sources. Some of these sources are: mining companies, other educational institutes, government agencies such as MESA, U.S. Bureau of Mines, U.S. Forest Service and the Kentucky Division of Reclamation. We think this information institute can be highly valuable to our students and as an information exchange center between mining companies and government agencies.

APPENDIX I

Reclamation Practicum

26

PRACTICUM IN RECLAMATION TECHNOLOGY (ET 175)

Information Sheet

WHAT IS PRACTICUM?

Practicum in Reclamation Technology (ET 175) is a required three (3) credit hour course that is designed to familiarize N.C.C. reclamation students with the "practical" aspect of the reclamation profession. Students are exposed to reclamation tools and equipment, the latest developments in research, the enforcement of reclamation laws, and to the various methods of operation for both area and contour surface mining. The course will involve participation of spoil placement with heavy equipment, grading, seedbed preparation, seedings, tree planting, liming and fertilization of spoil, and water quality treatment.

WHEN AND WHERE WILL PRACTICUM MEET?

Practicum will meet from May 17 to May 28, 1976, and the students will be involved in work/learn situations eight (8) hours per day, for ten (10) days during this time. The first week will be held in Western Kentucky and the second week will be held in Eastern Kentucky (see itinerary on pages 4 - 7 for more details).

WHAT WILL PRACTICUM COST?

The tuition for Practicum in Reclamation Technology is \$51.00 for Kentucky residents. If you are planning to take six (6) or more credit hours during the regular summer session, tuition would be an additional \$97.50.

Housing has been arranged in Eastern Kentucky at a cost of \$18.00 per student and meals will be taken at restaurants on the road. The following is a list of the approximate costs on the road for Practicum in Reclamation Technology:

In Western Kentucky

May 17	Lunch at Restaurant	-	Approx.	\$	2.00
18	Lunch at Restaurant	-	Approx.		2.00
19	Lunch at Restaurant	-	Approx.		2.00
20	Bring a Sack Lunch	-	Approx.		1.50
21	Bring a Sack Lunch	-	Approx.		1.50

(continued on the following page)

In Eastern Kentucky

May 23	Dinner at Restaurant	-	Approx.	\$	2.50
	Motel Room	-			7.50
24	Breakfast at Restaurant	-	Approx.		1.50
	Lunch at Restaurant	-	Approx.		2.00
	Dinner at Restaurant	-	Approx.		2.50
	Motel Room	-			7.50
25	Breakfast at Restaurant	-	Approx.		1.50
	Lunch at Restaurant	-	Approx.		2.00
	Dinner at Restaurant	-	Approx.		2.50
	Room at Quicksand	-			1.00
26	Breakfast at Restaurant	-	Approx.		1.50
	Lunch at Restaurant	-	Approx.		2.00
	Dinner at Restaurant	-	Approx.		2.50
	Room at Quicksand	-			1.00
27	Breakfast at Restaurant	-	Approx.		1.50
	Lunch at Restaurant	-	Approx.		2.00
	Cook-out and Camp-out at cabin on "Angel's Mountain" (Optional)	-			
	Room at Quicksand	-			1.00
28	Breakfast at Restaurant	-	Approx.		1.50
	Lunch at Restaurant	-	Approx.		2.00

Approx. Total | \$ 54.50

Expect to spend approximately \$50.00 to \$60.00 for meals and housing during the two (2) weeks.

Transportation and all necessary equipment (including hardhats) will be provided. The use of personal cars during Practicum is not permitted. Each student must have a pair of hardtoe boots. For the week in Eastern Kentucky, each student must bring his own linen (towels, washcloths, blankets, pillow, extra large bed sheets, etc.) for the three (3) nights we will spend at Quicksand. A sleeping bag could be substituted in place of bed sheets and blankets. A student accident and sickness insurance coverage is provided for all students involved in the two (2) week activities in Practicum.

1-2-8

HOW WILL GRADES BE EARNED IN THIS COURSE?

No textbooks are required and there will be no examinations. Grades will be based on:

- (1) attendance
- (2) enthusiasm
- (3) a special written journal which must be submitted the morning after each days work
- (4) a plant press for new vegetative species encountered during the course.

The journal will be a complete and detailed account of every activity you are involved in during the two (2) weeks of Practicum. It will include step-by step descriptions of activities, names and comments of Reclamation people encountered, sketch maps of areas visited, critiques of experimental plots observed, and any other detail worth recording for future reference. The majority of your grade will be based upon the journal that you submit.

HOW DO I SIGN UP FOR PRACTICUM IN RECLAMATION TECHNOLOGY?

Due to the nature of this course, no more than fourteen (14) students will be permitted to sign up. Therefore, reservations will be made on a "first come - first serve" basis. The first fourteen (14) students who pays the tuition fees for Practicum will have a guaranteed reservation for the course. The fees must be paid in full to the business office at H.C.C. before you are considered officially signed up. When the list is full, a "waiting list" will be started in the event one of the first students withdraws or fails to show up for the course. The tuition fees may be sent in by mail or brought in personally but in either case, must be paid no later than May 7.

WHERE CAN I GET MORE INFORMATION ABOUT PRACTICUM?

ITINERARY OF PRACTICUM IN RECLAMATION TECHNOLOGY (ET 175)

In Western Kentucky

May 17, 1976

7:15 AM

- Leave H.C.C. student parking lot for Breckinridge Satellite Job Corp Training Center.

8:00 AM to 9:00 AM

- Lecture. Familiarization with the use and functions of bulldozers in reclamation or related activities on strip mine spoil. Cost factors, safety, specifications of different models, etc.

9:00 AM to 11:30 AM

- Field exercise. Actual participation in placement of spoil, grading, etc. with bulldozers. Dozer repair, maintenance and limitations of each model used.

11:30 AM to 12:30 PM

- Lunch

12:30 PM to 1:30 PM

- Lecture. Familiarization with the use and functions of scrapers in reclamation or related activities on strip mine spoil. Cost factors, safety, specifications of different models, etc.

1:30 PM to 4:30 PM

- Field exercise. Actual participation of movement and replacement of spoil with scrapers. Scraper repair, maintenance and limitations of each model used.

4:30 PM

- Return to H.C.C.

May 18, 1976

7:15 AM

- Leave H.C.C. student parking lot for Breckinridge Satellite Job Corp Training Center.

8:00 AM to 9:00 AM

- Lecture. Familiarization with the use and functions of graders in reclamation or related activities on strip mine spoil. Cost factors, safety specifications of different models, etc.

9:00 AM to 11:30 AM

- Field Exercise. Actual participation of spoil grading and movement of spoil with graders. Grader repair, maintenance and limitations of each model used.

11:30 AM to 12:30 PM

- Lunch

12:30 PM to 1:30 PM

- Lecture. Familiarization with the use and functions of front-end loaders as applicable to strip mine reclamation or related activities. Cost factors, safety, specifications of different models, etc.

1:30 PM to 4:30 PM

- Field exercise. Actual operation of front-end loaders. Front-end loader repair, maintenance and limitations of each model used.

4:30 PM

- Return to M.C.C.

May 19, 1976

7:45 AM

- Leave M.C.C. student parking lot for Madisonville District office of the Kentucky Division of Reclamation.

8:00 AM to 4:30 PM

- Inspection of area surface mines with state reclamation inspectors. Students will travel with inspectors and observe their routine activities and participate in activities such as inspecting, testing water, taking spoil samples, "walking out" permits, taking slope readings, etc. Students will observe first hand the actual enforcement of area surface mining in Western Kentucky. Lunch at local restaurant.

4:30 PM

- Return home

May 20, 1976

7:00 AM

- Leave M.C.C. student parking lot for Asax Coal Company reclamation operations in Chandler, IN

8:00 AM to 4:00 PM

- Actual participation of reclamation activities including operation of hydroseeder, exploratory overburden drill, fertilizing and seeding. Bring a sack lunch.

4:00 PM

- Return home

May 21, 1976

7:30 AM

- Leave M.C.C. student parking lot for Kentucky Reclamation Associations nursery and field operations on nearby strip mine.

8:00 AM to 4:30 PM

- Actual participation in the application of lime, fertilizer, mulch, etc. on spoil material. Seeding, tree planting, seedbed preparation, tree nursery work. Bring a sack lunch.

4:30 PM

- Return home

In Eastern Kentucky

May 23, 1976

1:00 PM

- Leave M.C.C. student parking lot for U.S.F.S. Experimental Station at Berea, Kentucky.

6:00 PM

- Arrive in Berea, Kentucky, check in motel, and have dinner.

May 24, 1976

8:00 AM to 5:00 PM

- Tour of U.S. Forest Service Experimental Station and review a Strip Mine Reclamation Research project being conducted at Berea. Lunch and dinner at local restaurant. Stay at Motel.

May 25, 1976

7:30 AM

- Leave Berea for Caryville, Tennessee

9:30 AM to 3:00 PM

- Tour of Multiple Seam-Back to Contour Experimental Operation by Long Pit Mining Company and other experimental areas in cooperation with Tennessee Valley Authority and Tennessee Division of Surface Mining and Reclamation.

3:00 PM

- Leave Tennessee for Quicksand, Kentucky

May 26, 1976

7:15 AM

- Leave Quicksand for Hazard District office of the Kentucky Division of Reclamation.

8:00 AM to 4:30 PM

- Inspection of contour surface mines with state reclamation inspectors. Students will travel with inspectors and observe their routine activities and participate in activities such as inspecting, testing water, taking spoil samples, "walking out" permits, taking slope readings, etc. Students will observe first hand the actual enforcement of contour surface mining in Eastern Kentucky. Lunch at local restaurant.

4:30 PM

- Return to Quicksand

May 27, 1976

8:00 AM to 12:00 noon

- Tour of U.S.D.A., Soil Conservation Services Plant Materials Center at Quicksand, Kentucky and review of Strip Mine Reclamation Research projects being conducted on mountain top removal in Breathitt County, Kentucky.

12:00 noon to 1:00 PM

- Lunch

32

1:00 PM to 4:30 PM

- Tour of mountain top removal operation experimental plots, hydroseeder operation, and vineyard of Falcon Coal Company strip mine spoil in Breathitt County, Kentucky.

4:30 PM

- Travel to cabin on "Angel's Mountain" for cook-out and camp-out (optional).

May 28, 1976

8:00 AM to 10:00 AM

- Travel to Winchester, Kentucky

10:00 AM to 12:00 noon

- Demonstration of Estes lime spreading trucks, straw blower, wood bark mulcher and one-way spreader attachment and other heavy equipment designed for strip mine spoil reclamation.

1:00 PM

- Return to Madisonville

TVA's Back-To-Contour Experiment
Massengale Mountain Near Careyville, Tenn.

Summary Report Sheet
 TVA Experimental Contour Strip Mining Studies
 Massengale Mountain
 Campbell County, Tennessee
 Long Pit Mining Company

Experimental "Back-to-Contour" Mining Method

Advanced-Conventional Contour Method

I. Engineering and Mining Factors

- | | |
|---|---|
| <p>1. Mining begun July 2, 1972; estimated completion is July 1975.</p> <p>2. Multiple cut strip and auger system</p> <p>3. Approximately 182 acres disturbed in 2.6 miles.</p> <p>4. 835,053 tons recovered as of 1-1-75.</p> <p>5. Multiple seam contour mining on four seams averaging 13-1/2 feet of coal on slopes between 22-27 degrees (average 24 degrees).</p> <p>6. Widths of mine cuts - <u>Experimental</u> -</p> <ul style="list-style-type: none"> (1) Frozen Head - 60 feet (2) Pee Wee <ul style="list-style-type: none"> 1st cut - 110 feet > 200 feet 2nd cut - 90 feet (3) Walnut Mountain <ul style="list-style-type: none"> 1st cut - 110 feet > 210 feet 2nd cut - 100 feet (4) Red Ash - 85 feet <p>7. Return to approximate contour with elimination of highwalls and benches through advanced spoil handling systems and techniques, including placement of spoil materials in temporary and permanent off-site storage areas; and with placement of spoil into progressively higher pits.</p> <p>8. Most applicable (efficient) on multiple seam operations.</p> <p>9. Mining system requires much closer planning and operator care (much more complex).</p> <p>10. 1,202 tons per acre recovered.</p> | <p>1. Mining begun February 19, 1971; completed in October 1972.</p> <p>2. Multiple cut strip and auger system.</p> <p>3. A total of 360 acres were disturbed and revegetated in 3.3 miles.</p> <p>4. 432,749 tons recovered.</p> <p>5. Multiple seam contour mining on four seams averaging 13-1/2 feet of coal on slopes between 22-27 degrees (average 24 degrees). A fifth seam averaging 30 inches of coal also mined at 3,000 feet elevation.</p> <p>6. Widths of mine cuts - <u>Conventional</u> -</p> <p style="padding-left: 20px;">Widths of mine cuts by seams</p> <ul style="list-style-type: none"> (1) Frozen Head - 50 feet (2) Pee Wee - 80 feet (3) Walnut Mountain - 80 feet (4) Red Ash - 60 feet <p>7. Mining resulted in a single highwall, out-slope and bench because of closeness of the four seams; out-slope angle increased.</p> <p>8. Applicable either single or multiple seam operations.</p> <p>9. Mining system relatively simple and conventional.</p> <p>10. 1,202 tons per acre recovered.</p> |
|---|---|

II. Environmental Factors

- | | |
|--|---|
| <ol style="list-style-type: none"> 1. Eliminates the visual topographic contrast of a conventional highwall at any viewer angle. 2. Returns overburden back to approximate contour at minimum slope with reduced risks of erosion and landslides. 3. Segregation and covering of acid-bearing materials easier, thereby preventing toxic problems. Permits placement of better spoil on the surface for more rapid revegetation. 4. Intersecting ditches above the highwall provides better water control by directing to prepared drainages. On completion of mining additional final water control measures will provide post mining protection. 5. Problems of permanent off-site spoil storage, water control and revegetation. | <ol style="list-style-type: none"> 1. Persistent highwalls with continuing visual problem, especially until outslope has mature tree growth. 2. Creates steeper outslopes with increased risk of erosion and landslides. 3. Segregation and burying of toxic materials somewhat more difficult without great care. 4. No water control (diversion) measures above the highwalls. 5. No off-site spoil storage. |
|--|---|

III. Future Uses

- | | |
|---|--|
| <ol style="list-style-type: none"> 1. Demonstrates advanced mining and reclamation techniques. 2. With roads left and improved, provides access for land management. 3. Eliminates flat areas for higher types of land use utilizing entire area for productive forestry and wildlife programs. 4. Permits easier vertical highwall access. | <ol style="list-style-type: none"> 1. Demonstrates conventional mining and reclamation practices. 2. Provides access for land management. 3. Provides flat bench areas for higher types of land use: impoundments, house sites, wildlife clearings (level), etc. 4. Highwall limits vertical access. |
|---|--|

IV. Economic Factors

Cost to date averaged \$12.03/ton

1. Cost for the two-year mining period averaged \$8.82/ton.

V. Conclusions

More costly (approaches 20 percent).

1. Less costly.

Limited, short-term aesthetic problems.

2. Continuing aesthetic problems.

Lower risk of onsite environmental damage.

3. Higher risk of onsite environmental damage.

Offsite storage areas required.

4. No offsite storage of spoil required.

Except for roads, no level area produced.

5. More level area produced.

Most feasible only on multiple cut and seam jobs without high cost.

6. Universally applicable.

Program For The
Cooperative Education Conference
March 31 - April 2, 1967
Louisville, Ky.

44

INTRODUCING

MARY BACON, Coordinator, Occupational Education, Somerset Community College, Somerset, KY 42501

SHANNON BAILEY, Graduate Assistant, Cooperative Education, Morehead State University, Morehead, KY 40351

STEVE CARROLL, Product Training Manager, Sales and Systems Education, Burroughs Corporation, 9403 Kenwood Road, Cincinnati, Ohio 45242

JOHN EVERSOLE, Director of Personnel, The Jefferson Club, Citizens Fidelity Bank Building, Louisville, KY 40201

LEE FREDERICK, Acting Chief, Cooperative Education Section, Department of Health, Education, and Welfare, Office of Education, Washington, D. C. 20202

DON HOLLOWAY, Morehead State University, Morehead, KY 40351

DON HUNT, Director, Cooperative Education, University of Detroit, 4001 W. McNichols Road, Detroit, Michigan 48221

JIM KEELER, WAVE-TV, Louisville, KY 40201

ROBERT KLINE, Associate Professor, Department of Political Science, Eastern Kentucky University, Richmond, KY 40475

RICHARD LEWIS, Chief, Administrative Assistant for Internal Affairs, Office of the Governor, Capitol Building, Frankfort, KY 40601

RUSSELL MCCLURE, Assistant Commissioner of Finance, Capitol Building, Frankfort, KY 40601

MARSHALL MCGHEE, Director, Central State University, 25 N. Kilmer Street, Dayton, Ohio 45415

HARRY NEWMAN, Manager, Personnel Selection and Development, Ashland Oil, Inc. Ashland, KY 41101

ROBERT NEWTON, Director, Cooperative Education, Morehead State University, Morehead, KY 40351

KEN NOAH, Coordinator, Cooperative Education Program, Eastern Kentucky University, Richmond, KY 40475

JOE PIERCE, Director, Cooperative Education, Speed-Scientific School, University of Louisville, Louisville, KY 40201

WILLIAM RAMSEY, Dean of Labor, Berea College, Berea, KY 40403

CLAYTON RILEY, Western Kentucky University, Department of Business-Education, Bowling Green, KY 42101

JANE ROGERS, Coordinator, Cooperative Education, Murray State University, Murray, KY 42071

TERRELL ROSS, Manpower Planner, Gateway Development, Owensville, KY 40360

ADA LEE SALISBURY, Program Coordinator of Cooperative Education, Ashland Community College, Ashland, KY 41101 and Co-Director, Kentucky Community College System Cooperative Education Training Program

GENE SCHÖLES, Dean, Academic Affairs, Morehead State University, Morehead, KY 40351

KATHY SMOOT, Director, Cooperative Education, Southern West Virginia Community College, Williamson, West Virginia 25661

DON STARKEY, Director, Cooperative Education, Murray State University, Murray, KY 42071

KEITH STEPHENS, Coordinator, Federal Programs, University of Kentucky Community College System, Lexington, KY 40506 and Co-Director, Kentucky Community College System Cooperative Education Training Program

ISHMAEL STEVENS, Coordinator, Cooperative Education Training Program, Ashland State Vocational Technical School, Ashland, KY 41101

STANLEY WALL, Vice President, University of Kentucky Community College System, Lexington, KY 40506

Position Paper on Co-op Education

417

UNIVERSITY OF KENTUCKY
COMMUNITY COLLEGE SYSTEM

Position Paper
on
Cooperative Education

I. Philosophy

Cooperative education, one form of off-campus experiential education, is an educational process by which the student's academic study is formally integrated with periods of planned and evaluated work experiences related to the student's educational objective. The student usually receives both financial remuneration and academic credit.

The Community College System believes that meaningful and appropriate learning can occur outside the formal classroom setting. Recognizing that cooperative education is one way by which such extramural learnings can occur, the System provides the means whereby academic credit may be awarded to a student who is pursuing an associate in applied science degree when the work experiences are relevant to his degree objective.

It is the belief of the Community College System that student participation in cooperative education experiences should be voluntary. Therefore, when cooperative education is formally included in the program of studies leading to an associate in applied science degree, suitable options should be provided those students who elect not to participate. However, when certain programs mandate it, cooperative work experiences may be required.

Whether or not a community college provides cooperative education in any, in some, or in all the associate in applied science programs which it offers is a matter for the faculty and administration of that college to decide.

48

It is recognized that there are both advantages and disadvantages in offering cooperative education on either a parallel or alternating basis. Whether a college offering cooperative education chooses either one or both methods should be determined by the faculty and administration of that college, giving consideration to the curriculum, the needs of the students, the needs of the employers, and the resources available to the college.

It is the right of a receiving college to determine which credits earned in another college are acceptable to it. The constituent colleges of the Community College System not only accept credit for cooperative education from an accredited college or university, but also accept the credit in satisfaction of degree requirements, subject to the criteria for awarding credit for cooperative education established by the Community College Council.

The Community College System acknowledges that other approaches to experiential education may have occupational, academic and/or personal value. While recognizing the value of such experiences, the Community College System has not yet incorporated any of them into its educational program.

II. Objectives

The primary objective of cooperative education is to provide the student with planned and evaluated work experiences which will enhance the integration of theory learned in the classroom with the pragmatic requirements of the work situation.

Secondary objectives include learning how to work, selecting appropriate career goals, learning to work with others, and the broadening and deepening of the student's humanistic learnings.

49

In addition to the objectives relating directly to the student, it should be the conscious objective of the appropriate faculty of the college to update curriculum content so that the gap between classroom instruction and the reality of the present work situation is minimized.

III. Program

A. Planning

If a college decides to initiate a program of cooperative education, or if it decides to expand into program areas for which it has previously not offered such experiences, a suitable period of planning should be provided. A variety of factors will have an influence on the length of the required planning period.

Throughout the planning period, appropriate opportunities should be provided for the participation of the faculty, administration, students and advisory groups. In addition there should be assessment of the resources available with which to provide cooperative education in the selected program areas. The long-range plans of the college should be considered.

B. Development

The available workstations should be identified during the period of program planning and development. Potential employers must be familiarized with the philosophy and purpose of cooperative education within the Community College System. Attempts should be made to obtain in writing a commitment from each prospective employer of his willingness to participate in the program. The cooperative education model(s) to be used should be explored at this time.

C. Implementation

During the period of implementation, continuous communications among potential employers, faculty, administrators, program coordinators and cooperative education coordinator are essential. Also during this period, such agreements between the employer and the college as may be necessary or desirable are prepared and signed by the appropriate persons. The agreements should carefully delineate the responsibilities of the respective parties.

Students should be registered for cooperative work experience only when it is known that an appropriate work station is available and only after the agreements referred to above have been signed. In addition, training plans must have been developed and agreed to by all parties involved.

D. Evaluation

Provisions must be made for a continuous process of evaluation of the cooperative education experience by the students, faculty, work supervisors, program coordinators, and cooperative education coordinator. The evaluation should be based on behavioral objectives which were agreed upon prior to the beginning of the work experiences.

The faculty, with the assistance of appropriate program coordinators and the cooperative education coordinator, should periodically review the cooperative education program to determine that the program is educationally sound, that it is contributing to the objectives of the educational programs of the students, and is contributing to the overall educational objectives of the college.

IV. Justification and Resources

A. Market Suitability

If a college decides to explore the feasibility of offering a program of cooperative work experience, it should initiate a comprehensive survey within its service area to determine the availability of appropriate work stations for those program areas in which it offers an associate in applied science degree. The survey should attempt to determine the willingness of employers to participate in a cooperative education program; the number of work stations available immediately, as well as the projected number available in the future; the level of academic preparation required prior to the off-campus assignment; and the adequacy of the supervision at the work location.

The market suitability survey may have implications for curriculum and/or program changes.

B. Service Area

If a college considers implementing or expanding a cooperative education program, a conscious effort must be made to identify its service area for the particular program. Topographic, demographic and industrial data should be included in the determination of the service area as it relates to the cooperative education program.

The size of the service area may be larger if the cooperative work experiences are offered on an alternating basis rather than on a parallel basis. However, this is not always true. For example, limited funds for travel may preclude travel by the coordinators beyond the basic service area of the college.

52

C. Student Interest

The success of a cooperative education program is dependent to a significant degree upon the amount of student interest in participating in the program. A college considering the implementation or expansion of such a program will need to determine the level of student interest.

Colleges offering cooperative education who are considering expanding into new program areas can probably assume that student interest in the new program will be comparable to the level of interest in the existing programs. However, consideration should be given to any unusual or unique characteristics of the relevant programs and/or the students enrolled in them.

Colleges implementing a program of cooperative work experience for the first time can probably gain some insight into potential student interest from the experiences of other colleges where the program has been offered. In any event, a survey of students and potential students to determine their interest seems appropriate and desirable.

D. Financial Support

The decision to implement or expand a program of cooperative education implies a willingness on the part of the administration of the college to provide the financial resources necessary for the efficient and effective operation of the program. Certain budgetary support must be provided in addition to the salary of a coordinator of cooperative education or that of an instructor/cooperative work supervisor.

are responsible to their division chairmen, who in turn are responsible to the office of academic affairs. In such an organizational pattern, the position of coordinator of cooperative education has a staff relationship to the office of academic affairs and to the division chairmen.

The less-structured pattern of organization includes only instructor/cooperative work supervisors. The line of responsibility of such persons continues to be to the division chairman.

B. Role Differentiation.

Coordinator of Cooperative Education - The coordinator's responsibility is primarily to serve as a liason between cooperating employers and potential cooperative employers and division chairmen, instructors, counselors, and students. This person's specific responsibilities should include the following: Assist the instructor/cooperative work supervisor in identifying appropriate work stations; contact employers to promote cooperative arrangements; negotiate agreements with cooperating employers; assist the instructor/cooperative work supervisor in developing training agreements, in evaluating student performance and the adequacy of the work station, and in evaluating the educational value of the cooperative education experiences.

Instructor/Cooperative Work Supervisor - The instructor/cooperative work supervisor is responsible for the development of program and performance objectives for the cooperative work experience program in a subject area and for the students enrolled in it. This person also has the primary responsibility for the evaluation of students, the

adequacy of the work station, and the educational value of the cooperative work experience in his subject area.

In the final analysis, it is the instructor/cooperative work supervisor who links classroom instruction, work experience, and the student's career goal into a series of integrated, practical, learning experiences. To achieve this objective, the instructor/cooperative work supervisor shall have the specific responsibilities for negotiating employer agreements in the absence of a coordinator of cooperative education; preparing training plans for the students assigned to him and visiting such students on a regular basis at the place of employment; evaluating the student; and assigning the final grade.

Division Chairman - The division chairman has the same responsibilities for a program of cooperative work experience within the division as he has for all other educational programs of the division. This person has the responsibility for providing the leadership during the decision-making process leading to the decision to either provide or not provide cooperative work experiences in the associate in applied science programs assigned to the division. If the decision is to offer such a program, this person has the responsibility for directing the planning and implementation as well as the general supervision of the program after implementation in addition to the specific responsibility to make the instructor/cooperative work supervisor assignments within that division.

55

Employer - It is the responsibility of the employer to provide the student with work experiences which are consistent with the training plan and to provide on-the-job supervision and instruction which will assure the student of meaningful learning experiences relevant to his occupational goal.

The student shall be remunerated at a rate commensurate with the work performed. In no instance shall the pay be less than applicable minimum wage scales. The employer shall also provide such other benefits which are appropriate or required by law. Working conditions shall be such as to not endanger the health or safety of the student.

Evaluation of the student's work performance is the joint responsibility of the employer and the instructor/cooperative work supervisor.

Students - The students can expect to have clearly-defined objectives for a cooperative work experience but should also be aware that they are ultimately responsible for progress toward those goals. Students must be conscientious in fulfilling the responsibilities of their work situation, and keep the instructor/cooperative work supervisor informed about any problems or changes which affect college study or the cooperative work experiences. The students should be open-minded in evaluating their progress and be willing to discuss candidly all phases of employment with both the employer and the instructor/cooperative work supervisor.

Advisory Committee - The advisory committee can assist the college in assuring the quality of the cooperative work program by sharing its collective knowledge and experience with those responsible for the program.

The membership of the advisory committee should include students, graduates of the program area in which cooperative education is offered, representatives of cooperating employers, and potential cooperating employers. It is desirable that employer representatives include persons from various levels of management.

VI. Evaluation Criteria

The evaluation of the cooperative education program should be a continuous process and should include a regular assessment of the student's progress toward the attainment of specific performance objectives, of the work station as an experiential center providing learning experiences directed toward these objectives, and of the cooperative education program.

A. Evaluation of Students

The evaluation of the student should reflect the extent to which the person has achieved the objectives of an individual training plan. Assessments of both the student's job performance and personal development should be included in the evaluation process. Just as the training plan is the result of the joint effort of the student, the instructor/cooperative work supervisor, and the employer, so is the evaluation process. It should include inputs from the instructor/cooperative work supervisor based on regular site visits, but must also include inputs from the employer and the student.

B. Evaluation of the Work Station

Meaningful evaluation of the work station can only occur when there has been communication between college personnel, the student, and the employer which result in a clear understanding on the part of each of the purposes of cooperative education in general and of the objectives of the student's individual training plan. The evaluation procedures must provide for input by the student and by the employer. The instructor/cooperative work supervisor will add to these inputs the results of insights gained from personal observations and from interviews with the employer.

C. Evaluation of the Cooperative Education Program

It is recognized that the most accurate evaluation of the cooperative education program cannot be made until a college has several years' experience in offering the program. However, such a longitudinal evaluation is based in part on an accumulation of annual evaluations. Therefore, the procedures for evaluating the program should include an annual evaluation and a longitudinal evaluation.

The annual evaluation should include an assessment of student satisfaction, employer satisfaction, the extent to which the objectives of the training plan were achieved, and faculty support of the program.

In addition to the accumulation of annual evaluations, the longitudinal evaluation should attempt to determine whether students who have participated in the cooperative education program have

benefited therefrom in ways which are identifiable and measurable. A third component of the longitudinal evaluation of the cooperative education program should be an assessment of the impact the program has had on the curriculum and upon teaching methods.

The most important of the three components of the longitudinal evaluation is the determination of the benefits received, if any, by those participating in the cooperative education program when they are compared with those who elected not to participate.

VII. Program Operation

A. Credit

The Community College Council has approved awarding one (1) semester hour of academic credit for each eighty (80) hours of successful cooperative work experience. Cooperative education may be repeated to a maximum of ten (10) credits.

B. Grades

The grades A, B, C, D, E, I, and W are to be used when assigning grades to a student enrolled in cooperative education. If cooperative education is not a required course, the student may elect to enroll on a pass/fail basis.

C. Student Load

A student may enroll for no more than three (3) credit hours of cooperative education during any semester or summer session in which he is enrolled as a full-time student. An exception may be made only when an approved curriculum requires more than three (3) credits of cooperative education in a semester.

A student who is not enrolled for any other academic credit and who will be assigned to a work station on a full-time basis may, receive one hour of credit for each eighty hours of successful work experience, to a maximum of eight credits during the fall or spring semesters, two credits during the intersession, and four credits during the summer session.

D. Student Qualifications

Cooperative education is intended to integrate a student's academic study with periods of planned and evaluated work experiences related to his educational objective. It seems to follow from this definition that a student should not be assigned to a cooperative education work station until he has satisfactorily completed at least one course above the introductory level in the area of specialization he has elected. Except in unusual circumstances, a student should be not assigned to a cooperative education work station until he has completed the equivalent of one semester of full-time study.

One important function of a community college is to provide educational opportunities for those in its service area who are already employed on a full-time basis. Such persons often pursue an educational program related to their employment. Cooperative education, as defined by the Community College System, seems not to be intended for such students; therefore, only in very unusual situations should students be enrolled in cooperative education if the work station is to be the position they already occupy.

E. Levels of Experience

Repeated registrations in cooperative education should provide the student with work experiences which reflect the increased competencies resulting from his classroom learnings. This progression should be readily identifiable by a comparison of the successive training plans.

F. Records

Files should be maintained for each employer and for each student participating in the cooperative education program.

The file for the employer should contain a copy of the agreement between the college and the employer, the instructor/work supervisor's evaluation of the work experiences provided by the employer, and the student's evaluation of the work station.

The file for the student should contain a copy of the training plan, the employer's evaluation of the student's work performance, the instructor/work supervisor's evaluation of the student, and the student's evaluation of the work experience as it relates to his educational objective.

West Virginia Surface Mining
Reclamation Inspector-In-Training
Letter and Specifications

64

STATE OF WEST VIRGINIA
DEPARTMENT OF NATURAL RESOURCES
CHARLESTON 25305

IRA S. LATIMER, Jr.
Director

May 5, 1976

Mr. George W. Kyle
Cooperative Coordinator
Mining/Reclamation Technology
Madisonville Community College
Madisonville, Kentucky 42431

Dear Mr. Kyle:

With reference to our recent telephone conversation and your subsequent letter, may I offer the following updated information.

The Reclamation Division has submitted to the West Virginia Civil Service Commission the attached job specification classifications for their consideration and hopeful approval. As you might note, we have recognized the Madisonville Community College program as well as that of Belmont Technical College in our classification of Surface Mining Reclamation Inspector In-Training specifications.

At the present time, until final action is taken, I would be unable to chart a course, however, I do not expect any problems and will be in touch at a later date.

Your interest in our programs is appreciated.

Best regards,

Benjamin L. Greene, Chief
Division of Reclamation

SURFACE MINING RECLAMATION INSPECTOR IN-TRAINING

NATURE OF WORK:

An employee in this class works under the close supervision of surface mining reclamation inspectors and supervisors, and serves an apprenticeship of one year, which will qualify for assignment to permanent employment as a surface mining reclamation inspector. All such employees shall be trained, equipped and conditioned for duty and services wherever and whenever required, as determined by the chief of the Division.

Work embraces concentrated training programs in surface mining regulation, land reclamation, rehabilitation of abandoned surface mined lands, mining methodologies, techniques and their application, Division of Reclamation policies and procedures, comprehensive natural resource conservation practices, and exercise of authority to obtain warrants.

As the employee progresses in the performance of assigned and statutory duties, conditional apprenticeship assignment will be made to a specific geographic area of the state, during which the employees exercises all authority and is assigned responsibility in accordance with the surface mining laws of West Virginia.

After one year; if the employee demonstrates proficiency in conducting surveys and inspections of surface mining operations, administration and enforcement of surface mining laws, and rules and regulations, and such other duties and services as may be prescribed by the Director, certification as a surface mining reclamation inspector will be completed.

REQUIRED KNOWLEDGES, SKILLS, AND ABILITIES:

General knowledge of principles and practices of Natural Resource management.

General knowledge of law enforcement practices and procedures.

Some knowledge of the fundamental principles of the natural sciences.

General knowledge of current research methods and technical information pertinent to surface mining reclamation.

Some skill to prepare technical reports and papers, with appropriate command of language and terms.

Some skill to perform chemical field tests as may normally be required and interpret results.

Some skill to read and interpret maps and fundamental technical plans or reports.

Ability to understand and carry out complex directions, both oral and written.

SURFACE MINING RECLAMATION INSPECTOR IN-TRAINING (Continued)

Ability to adapt to the established organizations of the Department of Natural Resources and the Division of Reclamation, and work effectively with other employees and surface mining reclamation inspectors in-training.

Ability to converse with governmental officials, industrial representatives, and the general public.

Ability to review reports and to make investigations and recommendations on the basis of such reports.

Ability to develop a knowledge of all federal and state laws and regulations pertaining to reclamation, surface mining, and related fields.

Ability to develop a thorough knowledge of operation and policies of the Division of Reclamation's program of surface mining enforcement.

MINIMUM TRAINING AND EXPERIENCE REQUIREMENTS:

Training: Graduation from an accredited four year college or university with a degree in a natural science field or graduation from a reclamation technology program approved by the Department of Natural Resources.

Substitution: (For promotion purposes only) Four years of full time employment in the field of surface mining reclamation, natural resource management or natural resource law enforcement.

Special Requirement: Must possess a valid license to operate a vehicle.

Pay Grade/Scale: Pay Grade 11 (1/1/76) \$8,940 - \$14,448

Reclamation Technology Programs approved by Department of Natural Resources.

1. Madisonville Community College
University Avenue
Madisonville, Kentucky
2. Belmont Technical College
St. Clairsville
Ohio 43590

APPENDIX VIII

Council for Surface Mining and Reclamation
Research in Appalachia

68

COUNCIL FOR SURFACE MINING AND RECLAMATION

RESEARCH IN APPALACHIA

Business Meeting

May 25, 1976

Somerset, Pennsylvania

File
AA Rept

CALL TO ORDER

Chairman Bill Plass called the business meeting to order.

BUSINESS TRANSACTIONS

Mailings

Chairman Plass discussed how the Council could reimburse the Interstate Mining Compact for postage and mailings. It was decided that \$2.00 would be added to the registration fee for meeting expenses.

Committees

Chairman Plass discussed the inability to get committees, as a whole, to instigate work that their committee may perform. It was suggested by Chairman Plass that the committee chairman would be retained on each committee and as work programs developed the committee would be expanded. This was unanimously agreed to by those present.

Nominating Committee

Discussion was to appoint a nominating committee to select candidates for offices to be elected for the Council at the next meeting. Chairman Plass appointed three members as follows:

Chairman - Mr. Ben Greene, Chief
Division of Reclamation
West Virginia Department of Natural Resources
1800 Washington Street, East
Charleston, West Virginia 25301

69

Mr. Russell J. Hutnik
Forest Resources Laboratory
Penn State University
University Park, Pennsylvania 16802

Mr. Thomas G. Zarger
Tennessee Valley Authority
Division of Forestry, Fisheries
and Wildlife Development
Norris, Tennessee 37828

Accreditation of Technician Schools by the Council

Chairman Plass introduced Mr. Patrick Angel of the Madisonville Community College, Madisonville, Kentucky. Mr. Angel proposed that the Council establish itself as an accreditation body to monitor training programs for the many schools that have or will set up reclamation technology programs. The Council will determine if a school's program warrants certification of its graduates. The aims of such an accreditation body would be to discourage a proliferation of training schools and to monitor each school's on-going training program. It was pointed out by Mr. Angel that the Council could become a "programmatic accreditation group" by submitting application to Mr. John Profitt, Commissioner, Bureau of Higher Education, Washington, D.C. A minimum standard would have to be developed by the Council and the quality of instruction would be monitored by the Council. Motion was made by Mr. John W. Sturm and seconded by Mr. Russell Hutnik that the Council appoint a committee of three to contact Dr. Profitt and obtain necessary criteria for accreditation and contact other organizations that would have an interest in such a program. This appointed committee would report back to the Council at the next meeting. The motion carried unanimously. Chairman Plass appointed:

Chairman - Mr. Patrick Angel
Madisonville Community College
Madisonville, Kentucky 42431

Mr. Steve Layton
Maryland Department of Natural Resources
Box C
Westernport, Maryland

76

Mr. John Sturm
West Virginia Surface Mining and
Reclamation Association
1624 Kanawha Boulevard, East
Charleston, West Virginia 25311

Next Meeting

It was unanimously agreed that the next meeting be held in Louisville, Kentucky, in conjunction with EXPO III in October. Chairman Plass stated that when date, time and site information was finalized, notification would be sent to all Council members.

APPENDIX- IX

American Mining Congress
Session Papers

OPENING SESSION

SET NO. 1

- Moderator**
 Ian MacGregor, Chairman, American Mining Congress and Chairman, AMAX Inc., New York
- Developing the Nation's Coal Reserves**

APPENDIX X

Letter From Mr. Perry
And Project Budget For 1977

74

Department of Education

BUREAU OF VOCATIONAL EDUCATION

FRANKFORT 40601

MEMORANDUM

TO: Mr. Keith Stevens

FROM: Lou Perry *LP*

DATE: June 4, 1976

SUBJECT: Revised Budget -- Mining Co-Op Program

As per our discussion recently, I am attaching the revised budget for the "Mining and Reclamation Cooperative Education Program" in FY'77. As a result of limited funds for the "Exemplary Plan - FY'77," we are having to make adjustments in project budgets before final approval.

I do not feel that the adjustments will alter the scope of the effort. Object code 305 (Printing and Advertising) is the most affected line item, and the activities here can continue in consultation with our Coordinator of Information Dissemination.

Please review, and if you have any questions, let me know. I plan to submit this proposal for final approval in the very near future.

**THE 600 YEAR CAREER
OFFERED TO YOU THROUGH THE
MINING AND RECLAMATION
TECHNOLOGY
CO-OP PROGRAM**

Offered by:

**Madisonville Community College
and
Madisonville State Vocational
Technical School
Madisonville, Ky. 42431**

A very important and necessary cooperative project has begun in the Western Kentucky Coal Field. The Madisonville Community College, Madisonville State Vocational Technical School, and area mining companies have joined forces for the purpose of training individuals in the fields of Mining Reclamation Technology. Individuals will be trained for supervisory and technical staff positions.

Madisonville State Vocational School will play a major role in the training of the Mining Technologists. Along with their own course of offerings of General Mining and Operation, Hydraulics, Electricity, and Mechanics, they are opening their doors to the Community College students for training in courses such as hydraulics, electricity, and other mining courses.

AN EARN AND LEARN PROGRAM

The cooperative education program in Mining and Reclamation Technology is a work-study program whereby a person alternates semesters of on-the-job training with study at Madisonville Community College and Madisonville State Vocational School. An associate degree in either Mining or Reclamation Technology will be awarded for completion of the two year programs.

Cooperating companies provide employment to the student as a Mining and Reclamation trainee during his work periods. The student earns money and college credit while in the working phase.

Students completing 100% of the courses and receiving an associate degree in mining technology from MCC will be awarded a two year underground credit toward the assistant mine foreman's certification.

PURPOSE

A critical shortage of well-trained Mining and Reclamation Technologists exists with many companies in the mining industry. Madisonville Community College and Madisonville State Vocational School have joined together in these two programs to help alleviate this shortage.

ELIGIBILITY AND COST

Anyone who is a graduate of an approved high school or who is 19 years of age is eligible to apply for the program. Resident—full-time \$195.00; non-resident—full-time \$490.00. Part-time—resident and non-resident—\$7.00 per credit hour (less than 12 hours per

MADISONVILLE STATE VOCATIONAL TECHNICAL SCHOOL

GENERAL INFORMATION AND COURSE OFFERINGS

The mine maintenance trainee is trained to perform specific functions on equipment in underground mining. The trainee also acquires basic skills and knowledge in all other areas of general mining.

The course of study is for 22 months and is divided into four units: general mining and operations, mechanical, hydraulics, and electrical.

COST

There is an initial registration fee of \$5.00 and a \$4.00 per month tuition cost. Books for the course will cost approximately \$25.00. Students are required to furnish their own miner's cap and shoes.

ELIGIBILITY

1. There are no educational requirements.
2. The student must have a physical examination with a signed form stating that he is capable of working in the underground mines.
3. High school courses in industrial arts, science, math, electricity, and mechanical drawing are recommended.

Nevard Wells, area supervisor of Prestonburg Division of Department of Reclamation, stands with Sherry Mallory, co-op, student from Muhlenberg County. The picture was made at a strip mine in Eastern Kentucky.

Learning reclamation in

520 easy daily lessons

Cooperative job training program

By Jenny Pulliam

Frankfort — Studying an introduction to coal mining doesn't mean that a person knows all there is to know about the business. In fact, it wasn't until working in eastern Kentucky that one western Kentucky student realized how different the types of strip mining and reclamation could be.

That student is Sherry Mallory of Drakesboro, who is now working in the Prestonsburg office of the division of reclamation in the Kentucky Department for Natural Resources and Environmental Protection. She's one of five students in the reclamation degree program of Madisonville Community College who are participating in a cooperative on the job training program with the state reclamation division.

The eighteen-year-old Muhlenberg County native said that she began the reclamation degree program because of her background and home environment. Being from the western Kentucky coal country, she's always been familiar with strip mining and deep mining. And, her brother is an assistant foreman at the same underground deep mine where her father is the mine foreman — Brown Badgett.

Since she started classes at the college in August, Mallory has not only studied general studies courses, such as algebra and English, but has also studied more specialized reclamation courses, such as grasses and legumes,

geology and mapping and surveying. Mallory continued, "Another of our courses is a public speaking class that will help us in dealing with everyone — from coal operators to government environmental officials to concerned citizens."

Mallory added, "Our introduction to coal mining course is really just that — an introduction. There's so much to learning the different types of coal mining and different types of reclamation that each day brings a new lesson."

Mallory said that the courses she takes are part of a two year work-study program in which the student alternates semesters of on the job training in the division of reclamation with study at Madisonville Community College. During the work phase, she is paid as a full-time seasonal employee of the division of reclamation. And, during the school phase, she studies reclamation technology as a full-time student.

Mallory has been going out with each of the Prestonsburg reclamation inspectors on their daily checks. Much of her time is spent with Ann Nuckols, who's one of the state's three women inspectors.

While working at the Prestonsburg field office, Mallory has been doing many of the things the inspectors do. Besides assisting them in making measurements and observations in the field to determine compliance with regulations, she also checks compliance with

maps and monuments and measures outcrops and bench widths. She performs elementary-type chemical field tests for spoil and water and helps the inspectors "walk out" new permits, a system of measuring the limited area on which the company may mine.

Other possible duties for Mallory include compiling technical reports, filling out forms, and preparing maps in the office. She could also be assigned to assisting in the investigation of complaints and helping inspectors conduct tours of strip mined areas.

Mallory expects to work

with the division of reclamation when she finishes her courses and receives her reclamation technology degree. A big plus with a reclamation job, she said, is the prospect of working out-of-doors. Even though she likes eastern Kentucky, she would rather work in the western Kentucky regional office that's closer to home, if she should get a job with the division after finishing school.

Sherry is the daughter of Mr. and Mrs. Willie R. Mallory of Route 1, Drakesboro, and is a graduate of Drakesboro High School.

APPENDIX XIII

Rec Tech Gazette

83

The Rec Tech

GAZETTE

THE OFFICIAL NEWSLETTER FROM THE
RECLAMATION TECHNOLOGISTS OF AMERICA

VOLUME NO. 1

MAY, 1976

MADISONVILLE, KENTUCKY 42431

FIRST IN THE NATION

M.C.C. Reclamation Students Organize

Again, M.C.C. is first in the nation by establishing a reclamation student organization.

The Reclamation Technologists of America has met several times during the semester, accomplishing the preparatory business of creating committees, drawing up a constitution, and selecting officers and chairpersons. This has been preliminary to the advancement of ideas for club projects, including much needed social functions and projects of community service and education. There will also be learning-experience situations for us. For example, it's possible that we may manage the planting of a turf for an all-purpose athletic field on the college campus. We will also have reclamation-related projects to raise money.

We have these primary objectives, to promote fellowship and professionalism among reclamation students, and to be of service to the college, the reclamation community and the public by working in their, and our, interest.

There is an immediacy for the solid establishment of this club because the reclamation community is filling an important niche in our society created by increased production by the surface mining industry to fill our energy needs. This spaceship Earth daily needs every acre used productively and efficiently. Our part in this is the management of poor conditions into better land by using knowledge and skills synthesized from various fields. We are a unique lot and this club can serve a vital function.

The preamble to the club's constitution says, *When in the interest of our environment it becomes necessary to organize into a group . . . with our main purpose the betterment of our environment through reclamation of spoils and conservation. . .* then we will ask you to join us and discuss plans for the future. - LEE STONE

R.T.A.'s First Project Proves Successful

During several weeks in April, R.T.A. members provided labor, supplies and equipment to plant - according to a research plan provided by Rufus H. Allen, Jr. of the U.S. Forest Service at Berea, Kentucky - a total of 20,000 trees on strip mine spoil in Western Kentucky.

The club and members not only earned money on the project, but also obtained good hard core reclamation experience by planting trees on spoil.

The objective of the study by the U.S.F.S. is to determine the effect of interplanting cover cropping, fertilizing and mulching on the survival and growth of several hardwood crop species planted in surface mined spoils.

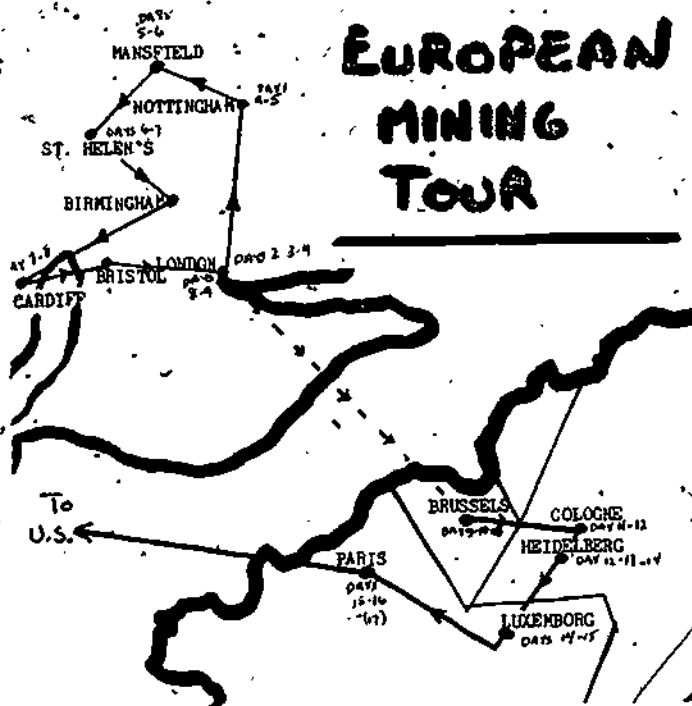

Kyle New Co-Op Coordinator for Reclamation & Mine Tech

George W. Kyle recently was named by Dr. G. Harold Massey, director of Madisonville Community College, and B.M. Hatley, regional director of vocational Region 11, to head the MCC and vocational region's innovative mining and reclamation technology cooperative program.

Kyle is a native of Dawson Springs. He is a graduate of the University of Kentucky, who left the U.S. Army as a regular Army Major to become vice president of an aviation corporation in New York. Kyle returned to Kentucky, where he was employed at the Commercial Bank of Dawson Springs.

When asked about his mining and reclamation experience, Kyle stated, "I started operating a bulldozer and other heavy equipment in the surface mining operation for my father and grandfather at the age of 13. The men in my family have been coal miners in West Kentucky since coal was first mined here. I have one uncle who has worked underground for 40 years and my father is still in the industry, so some of that coal dust was bound to rub off."

Kyle added, "The mining and reclamation program has really taken off here. Prospective mining and reclamation students have a unique and special opportunity in Madisonville not found anywhere else in the United States. Anyone interested in this program should drop me a line at Madisonville Community College, or call me at 502 821 2250, ext 56."

EUROPEAN MINING TOUR SPONSORED BY MCC RECLAMATION & MINING DEPARTMENT

A sixteen day, six country, European mining tour is planned for this summer and sponsored by the Reclamation and Mining Department of the Madisonville Community College.

The touring students and others interested in mining will visit mines and taste a bit of foreign atmosphere while in England, Wales, Belgium, Germany, Luxembourg and France.

An itinerary of the trip follows. Anyone interested in the tour please contact Pat Angel at the college.

DAY ONE

Depart Evansville for flight to Chicago, New York to connect with Trans Atlantic flight to London.

DAY TWO

Morning arrival in London. Transfer to hotel and check in. Balance of day at leisure.

DAY THREE

Morning sightseeing tour of London. Return to hotel at noon, afternoon and evening at leisure.

DAY FOUR

Morning departure from London via air-conditioned motorcoach to Nottingham. Overnight at Nottingham.

DAY FIVE

Continut trip from Nottingham to Mansfield to visit Lound Hall coal museum, then on to St. Helen's for overnight. Stops made at mines enroute.

DAY SIX

St. Helen's to Cardiff via Birmingham with stops at local mines. Over night in Cardiff.

DAY SEVEN

Full day visit to Cardiff mines. Overnight in Cardiff.

DAY EIGHT

Continue trip from Cardiff through Bristol with stops in area mines and back to London for overnight.

EUROPEAN MINING TOUR

DAY NINE

Fly from London to Brussels. Remainder of day at leisure.

DAY TEN

Morning visit to mines in Brussels area. Afternoon, motorcoach trip to Cologne for overnight.

DAY ELEVEN

In Cologne with full day tour to Ruhr area for visit to mines and mining museum center. Return to Cologne for overnight.

DAY TWELVE

Depart Cologne to board Rhine River steamer for two hour cruise, then continue trip to Heidelberg for overnight.

DAY THIRTEEN

In Heidelberg for tour to salt mines.

DAY FOURTEEN

Depart Heidelberg for Luxembourg traveling through the Sahrbrucken area to visit unique French mines. Overnight in Luxembourg.

DAY FIFTEEN

Luxembourg to Paris for overnight.

DAY SIXTEEN

Full day in Paris at leisure/or return flight to U.S.

DAY SEVENTEEN

Return flight to U.S. (if Day 16 spent in Paris)

Notes on Reclamation Co-op

The Reclamation Co-op program continues to gather strength and numbers. More and more government agencies and industry are exhibiting a keen interest in providing work stations for reclamation students. The newest entries in the field are: Department of Army, Corps of Engineers, TVA, McCoy & McCoy Water, Donan Engineering, West Virginia Division of Reclamation and the Virginia Division of Reclamation.

These organizations recognize the many benefits of cooperative experience both for the student and themselves. Many have indicated to me that they believe a man with a degree who has worked for them and trained in their business is much more highly qualified for permanent employment than a person with a degree who has no work experience. Many students have said they were happy to get the opportunity to put their education to use in the world of work after a semester or two, just to find out if they are really going to like the career for which they are preparing themselves.

Statistics show that a student's grades go up after the work experience. The student then can see more easily how the academic classwork applies to the practical experience.

Educators feel that the cooperative education is the way of the future. Co op allows the student to pace himself or herself in the work school environment and apply solutions to problems which many times have not been identified by others in the work field. I am delighted to be a part of the newest concept in dynamic education today. It is even more delightful to be a member of the first institution to produce reclamation cooperative trained graduates.

- G. Kyle

Learning reclamation in 520 easy daily lessons

by Jenny Pulliam

Studying an introduction to coal mining doesn't mean that a person knows all there is to know about the business. In fact, it isn't until working in a coal mine that one western Kentucky student realized how different the types of strip mining and reclamation could be.

That student is Sherry Mallory of Drakesboro, who is now working in the Prestonsburg office of the division of reclamation in the Kentucky Department for Natural Resources and Environmental Protection. She's one of five students in the reclamation degree program of Madisonville Community College who are participating in a cooperative on-the-job training program with the state reclamation division.

The eighteen-year-old Muhlenberg County native said that she began the reclamation degree program because of her background and home environment. Being from the western Kentucky coal country, she's always been familiar with strip mining and deep mining. And, her brother is an assistant foreman at the same underground deep mine where her father is the mine foreman - Brown Badgett.

Since she started classes at the college in August, Mallory has not only studied general studies courses, such as algebra and English, but has also studied more specialized reclamation courses, such as grasses and legumes, geology and mapping and surveying, Mallory continued.

Another of our courses is a public speaking class that will help us in dealing with everyone from coal operators to government environmental officials to concerned citizens.

Mallory added, "Our introduction to coal mining courses is really just that - an introduction. There's so much to learning the different types of coal mining and different types of reclamation that each day brings a new lesson.

Mallory said that the courses she takes are part of a two year work-study program in which the student alternates semesters of on the job training in the division of reclamation study at Madisonville

Community College. During the work phase, she is paid as a full-time employee of the division of reclamation. And, during the school phase, she studies reclamation technology as a full time student.

Mallory has been going out with each of the Prestonsburg reclamation inspectors on their daily checks. Much of her time is spent with Ann Nuckols, who's one of the state's three women inspectors.

While working at the Prestonsburg field office, Mallory has been doing many of the things the inspectors do. Besides assisting them in making measurements and observations in the field to determine compliance with regulations, she also checks compliance with maps and monuments and measures out slopes and bench widths. She performs elementary type chemical field tests for spoil and water and helps the inspectors walk out new permits, a system of measuring the limited area on which the company may mine.

Other possible duties for Mallory include compiling technical reports, filling out forms, and preparing maps in the office. She could also be assigned to assisting in the investigation of complaints and helping inspectors conduct tours of strip mined areas.

Mallory expects to work with the division of reclamation when she finishes her courses and receives her reclamation technology degree. A big plus with a reclamation job, she said, is the prospect of working out-of-doors. Even though she likes eastern Kentucky, she would rather work in the western Kentucky regional office that's closer to home, if she should get a job with the division after finishing school.

Sherry is the daughter of Mr. and Mrs. Willie R. Mallory of Route 1, Drakesboro, and is a graduate of Drakesboro High School.

NEVARD WELLS, area supervisor of Prestonsburg Division of Department of Reclamation, stands with Sherry Mallory, co-op student from Muhlenberg County. The picture was made at a strip mine in Eastern Kentucky.

Federal Strip Mining Bill Looms Again

The House Interior Committee has approved a strip mine regulation bill similar to two versions President Ford vetoed last year and which narrowly missed an override vote.

The Committee voted 28 to 11 in favor of a measure sponsored by Rep. John Melcher (D Montana), which would impose environmental regulations on surface mining and create a fund for reclaiming orphan bank land left by unconcerned coal operators.

The legislation now goes to the House Rules Committee which will decide whether to send it along for consideration by the full House.

It is along the general lines of two bills Ford rejected on grounds which reflected objections by the coal industry that the controls would increase mining costs and thus add to consumer electric bills.

Reacting to the Committee's action, President Carl E. Bagge of the National Coal Association, as expected, called it "a radical and needless step."

The states now have reclamation law, many of them updated since the national debate over surface mining began. But in fact some states either don't have reclamation laws or have inadequate laws.

Some of the better points of federal surface mining regulation is that it insures uniform protection of the environment. It also helps balance the overhead expenses that coal operators encounter when complying with their own states' reclamation laws, as compared to states without laws.

Those coal operators now doing good reclamation work, either on their own or to comply with their state reclamation laws, should not have difficulty complying with new federal laws.

Less far reaching strip mining controls were included by the Senate in a federal coal leasing bill passed earlier by both houses and sent to a conference committee. This bill would cover more than 782,000 acres of federal land leased to coal operators. Out of a total 533 active leases, only 59 leases are now producing coal.

- The bill will focus on these points:
- Require termination of non producing coal leases
 - Bar granting new leases to those holding old leases
 - Require all leases be awarded by competitive bids
 - Insure consideration of environmental impact of federal coal leases

Rep. Morris K. Udall (D Arizona), a key supporter of the measure said, he believed there was "a good chance" another veto could be overridden despite "fierce opposition" by the administration. Udall also said "We have made some good modifications that may wipe out Mr. Ford's transparent arguments against the bill."

David Cobb

R.T.A. Volunteers Work On Honey Bee Research Project

With a hammer in one hand, and refreshments in the other, volunteer Reclamation students worked diligently several evenings this spring constructing bee hives for a research project being conducted by Pat Angel. The title of the research project is "Honey Production on Reclaimed Strip Mine Spoil" and the objectives are to demonstrate that (1) the revegetation on strip mine spoil can be benefited by honey bee pollination, and (2) the grasses and legumes being used to stabilize these reclaimed lands represent a potential nectar source for the production of honey and bees wax. The research is being funded by an IMMR* grant. "Without the help of student volunteers the project would be impossible due to the large amount of man hours required to do the work," Angel said. And he added, "The work provides to the volunteers a chance to get together and at the same time hopefully it teaches them about a very important aspect of Reclamation - crop pollination." The project will continue through the fall of 1977, and all Reclamation students should have an opportunity to "work with the bees."

RETURN REQUESTED

SECOND FULL TIME RECLAMATION INSTRUCTOR SOUGHT

The search is on for a qualified person to fill the newly approved full time Reclamation instructor position at Madisonville Community College. Due to the rapid growth and development of the first Reclamation Tech Program in the nation, a second full time instructor is desperately needed. Hopes are that M.C.C. can attract a person with industrial experience to teach courses that are presently being taught by part time instructors. These courses include Geology, Grasses and Legumes, Wafer Drainage and Management, Mine Management, and Fundamentals of Aerial Photography.

Applicants should have a Masters Degree in a reclamation-related field and must have field experience. Contact Mr. Angel at M.C.C. for further details.

This newsletter is a project of the Reclamation Technologists of America Club at Madisonville Community College, Madisonville, Kentucky. Lee Stone, president; Hugh Van Weaver, vice president; William Colter, secretary. Printing paid for by the RTA Club.

EDUCATION; POST SECONDARY EDUCATION; *PROGRAM EVALUATION; *EMPLOYMENT
POTENTIAL; *JOB SATISFACTION

IDENTIFIER: MAINE

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 34P.

ABSTRACT: THIS REPORT ANALYZES THE RESULTS OF A MAIL SURVEY OF GRADUATES OF HEALTH EDUCATION PROGRAMS IN MAINE VOCATIONAL-TECHNICAL INSTITUTES TO EVALUATE EFFECTIVENESS OF THE TRAINING AND SKILLS RECEIVED IN THEIR PROGRAMS. RETURN RATE OF THE SAMPLE OF 885 WAS 56.3 PERCENT (498). ANALYSES OF RESULTS ARE PRESENTED ACCORDING TO THE CATEGORIES OF EMPLOYMENT STATUS, INCOME EXPECTATIONS, JOB SATISFACTION, JOB PREPARATION, FURTHER TRAINING, AND TRAINING TIME. TABLES PRESENT PERCENTAGES OF GRADUATES BY INSTITUTE RESPONDING TO QUESTIONS ON LENGTH OF TIME SPENT IN LOOKING FOR A JOB; INCOME DISTRIBUTION (AND EXPECTATION); JOB SATISFACTION; MOST AND LEAST HELPFUL ASPECTS OF PROGRAM; PREPARATION; AND FUTURE TRAINING PLANS. SURVEY RESULTS INCLUDE: 75 PERCENT OBTAINED JOBS WITHIN ONE MONTH OF GRADUATION; 75 PERCENT WERE SATISFIED WITH THE QUALITY OF JOB OFFERS; 93 PERCENT OBTAINED JOBS IN THEIR AREA; OVER 50 PERCENT EARNED FROM \$5,000-\$7,499; OVER 80 PERCENT WERE SATISFIED WITH JOBS; OVER 95 PERCENT FELT TRAINING WAS ADEQUATE FOR PRESENT JOBS; AND 67 PERCENT PLANNED ADDITIONAL TRAINING IN THEIR FIELD. A SAMPLE SURVEY INSTRUMENT IS INCLUDED. (NJ)

APPENDIX	A-1

CHAPTER 1

INTRODUCTION AND METHODOLOGY

This report presents an analysis of the results of a mail survey conducted by the Social Science Research Institute of the University of Maine. The sample consisted of 885 Vocational Technical Institute graduates of Health Education during 1971-75. The purpose of the survey was to evaluate the effectiveness of the training and skills received by these students at their respective institutes. The term 'effectiveness' has two meanings here; first, it means the extent to which this training helped people acquire jobs and second, it means the degree to which their training helped these individuals in the successful performance of their jobs.

Survey questions also dealt with the respondents' past training, plans for future training, their work related experiences as well as demographic information.

The State of Maine has six Vocational Technical Institutes and four of these six were included in this survey. The Washington County Vocational Technical Institute was excluded because it does not offer any courses in Health Education and the Kennebec Valley Vocational Technical Institute was not included as it does not have an LPN Program. The other four institutes which were surveyed all have programs of study leading towards a diploma in practical nursing. Also in this survey were graduates of the Maine School of Practical Nursing and the students of Medical Laboratory Technology and Radiologic Technology offered at the Eastern Maine Vocational Technical Institute at Bangor.

Early this year, lists of names and current addresses of graduates were obtained from all these institutes. Thereafter, each of these graduates was sent a typed personal introductory letter explaining the purpose of the survey, a copy of the survey and a postage paid return envelope. After an

interval of two weeks, a follow up letter with another copy of the survey and a return envelope was again sent to non-respondents.

Out of a sample of 885, 498 completed surveys were received which meant a response rate of 56.3%. Subtracting surveys which were returned as undeliverable (address wrong, unknown, etc.), the response rate goes up to 64.7%.

The completed surveys were coded on machine readable mark sense sheets by S.S.R.I.'s staff coders. In order to assure accuracy as well as uniformity in the interpretation of responses, 5 to 10% of each coders' surveys were checked. Finally, these data were transferred from coding sheets to computer cards.

4

CHAPTER 2

RESPONDENT PROFILE

Respondents to this survey were mainly people who grew up in Maine, who were below 25 years of age, were married, female and had annual incomes of between \$5,000 and \$7,499.

A comparison of the respondents' educational and demographic characteristics according to the institute they graduated from, yielded results presented in the following tables.

Table 2 -I provides the distribution of respondents in each field by the institute from which they graduated. It is clear from this data that the majority of students (90.1%) surveyed were graduates of Practical Nursing Programs (LPN).

Sex: Ninety-four percent of the respondents were female. The only group of respondents for whom this distribution was significantly different were the Medical Laboratory students of EMVTI where the percentage of female respondents was 64%.

Age: The median age of the respondents was 24. Over eighty percent of all respondents were below 40 years of age with 53% being below 25 years of age. The percentage of respondents below 25 was much higher for Medical Laboratory students (92%) and for Radiologic Technology students (94%).

Marital Status: Taken as a whole, 63% of all respondents were married, 28% had never been married, 3% were widowed and 7% were divorced. A similar pattern is present among all students, except for the Medical Laboratory Technology students and Radiology students who have a lower percentage (less than 50%) of married respondents.

⁷EMVTI/MMMC: Medical Laboratory Technology, Students (2 yr program) of EMVTI who do their second year of study at Mid Maine Medical Center

Preferences in Location: A majority of respondents (60%-70%) prefer living in small towns or suburban areas. Differences among institutes in this instance were not significant. 90% of all these graduates grew up in Maine and over 90% live in Maine now.

Income: Table 2-2 presents the 1975 income distribution of respondents. The median income was equal to \$6,250. A detailed analysis of student income by each institute is given in the next section.

CHAPTER 3

STUDENT EVALUATION OF EFFECTIVENESS OF TRAINING

The data collected from Health Education graduates were analyzed to find out the student's evaluation of the effectiveness of their training in terms of finding jobs as well as performing these jobs satisfactorily. Chart-1 identifies the main categories into which the survey questions have been grouped for analysis of this study. The texts of the questions referred to in the chart are given in the appendix. All the questions referred to in Chart-1 deal with issues related to the respondents' search for jobs, number and nature of job offers and finally with factors affecting the job selection process. The more important findings from the analysis are summarized in tabular form in this chapter.

Ease of Finding Jobs: Over fifty percent of the respondents taken as a whole already had a job at the time of their graduation while an additional 25% of them had to look only for a month or less to find employment. Less than .1% of the graduates had to look for more than a year for employment. Table 3-1 provides this information by each institute. It is clear from table 3-1 that a very high proportion of graduates from all these institutes seem to have found jobs either by graduation or very soon after. This, combined with the very low percentage of people who had to continue looking for jobs for more than a year after graduation indicates that the demand for trained personnel in this area of Health Education in Maine is quite high.

Three-fourths of the respondents were satisfied with the quality of job offers they received. However, when a comparison was made among respondents by institutes, 57% of Radiology and 30% of Medical Lab graduates

CHART 1

No. of Respondents	97	58	77	82	77	15	22

stated that they were disappointed with the quality of job offers they received.

93% of the respondents entered in their first job in the field in which they were trained.

A comparison of respondents by institute did not alter this distribution in any significant manner. Finally, over 90% of respondents indicated that they plan to continue working in the same field.

Income Expectations: Table 3-2 presents the income distribution of respondents by institutes. While a majority of graduates of all institutes had incomes between \$5,000-\$7,499 in 1975, a disproportionately high percent of NMVTI (41%) and EMVTI/Radiology students (40%) earned incomes below \$5,000 in 1975. At the same time, it is interesting that 7% of Radiology students earned incomes ranging between 12,500-\$14,999. Since the number of respondents in this case is very small (15) no conclusion can be made about the probable reasons behind this.

The respondents were asked whether their incomes coincided with their expectations. Table 3-3 presents the responses which were obtained.

A much higher proportion of Radiology students (50%) considered their incomes to be less than their expectations compared to the other respondents, more than 60% of whom considered their incomes to be either equal to or more than their expectations.

Job Satisfaction: 38% of the respondents taken as one group were 'very satisfied' with their present jobs, while 44% were 'satisfied' and 12% were 'not satisfied.' A comparison by institutes resulted in the following distribution presented in Table 3-4.

TABLE 3-2

From Table 3-4 it is clear that as far as job satisfaction is concerned, the responses of graduates by institutes are not significantly different from the general response.

Job Preparation Aspect of Program: Under this category would come all variables which measure the degree to which their training skills helped the graduates to perform their jobs in a satisfactory fashion. Twenty-three percent of all respondents felt that all aspects of training were useful to them in their professions. Table 3-5 presents the different aspects of the training programs considered helpful by the graduates:

Data provided in Table 3-5 shows that while 44% of Maine School of Practical Nursing students consider all aspects of their training to be useful, only 13% of the Medical Lab students found all aspects of their training to be useful. Thirty-eight percent of Medical Lab students, however, stated that on-the-job-training they received was the most useful aspect of their training program. In general, the three most frequent responses seem to be 'all aspects are good,' 'on-the-job-training' and 'clinical experience,' in that order. When all the respondents are considered as one group, the other 'helpful aspects' most mentioned were 'training in anatomy and physiology (6%)' and 'actual treatment of patients' (4%). The aspects of training least mentioned as being useful for all respondents taken together were, 'food and nutrition courses' (1%), 'internship' (1%), 'working with people' (1%) and 'other courses' (1%).

Least Helpful Aspects of Training: When asked about the least helpful aspects of their programs, 30% of all respondents replied that no aspects were bad, while 12% stated that 'unnecessary courses,' were

¹Other specific courses includes nursing courses

²Specific clinical experience includes other clinical reasons also

³Other reasons include classroom reasons and other 'not classroom, not clinical reasons'

the least useful aspect. Specific clinical experience (6%) and nutrition courses (6%) were the other courses considered least helpful. Table 3-6 presents this data by institute. A lower proportion of EMVTI graduates, LPN (11%) Radiology (25%) and Medical Lab Technology (10%) replied that 'no aspects of their program were bad,' compared to 60% of CMVTI graduates and 50% of Maine School of Practical Nursing students. A high proportion of EMVTI students considered 'unnecessary courses' as the least helpful aspect. 'Nutrition' and 'specific clinical experience' were also cited as being less helpful. Very few of these respondents disliked their school atmosphere or consider that they did unnecessary work during their training.

Another method of evaluating the usefulness of program acquired skills is by finding out the extent to which these skills prepared the respondents for their jobs. When asked this question, the graduates responded in the manner presented in Table 3-7.

Data presented in Table 3-7 clearly indicated that over 95% of the respondents feel that their training prepared them either 'adequately' or 'more than adequately' for their jobs. This response can indeed be considered as a most positive evaluation of all the programs which are surveyed here. A second question about how well this training prepared them for their current jobs also elicited the same kind of positive evaluation.

It is critical for practitioners in areas like health education to be up-to-date and keep abreast of professional developments. Therefore, individuals who undergo further training or plan to take more training can be considered as people who aspire to improve their professional skills. 27.9% of all graduates claimed that they have taken further

22

19

training. A majority of these respondents are recent graduates and perhaps have not had enough time to take further training which could explain this low proportion. Of students who took further training, over 90% did so at institutes different than those from which they graduated.

Over 67% of respondents stated that they plan to take more training and 52% of these cited 'desire for personal advancement' as their reason for further training. In the analysis by institute, it was found that, the graduates of Maine School of Practical Nursing and Medical Lab students are most likely to respond that they plan to take more training. These data are presented in Table 3-8.

Increasingly, on-the-job training is becoming a more important part of manpower training in many fields. A majority of respondents stated that they did receive in-service training as can be seen from the data given in Table 3-9.

Student Evaluation of Training Time: One of the questions on the survey (Q.10, 10A) dealt with whether these graduates would enter the same program again if they were given another chance. An affirmative answer in this instance indicates that the individual considers the time spent in acquiring this training to be worthwhile, and is, therefore, a positive evaluation of the program. Over 61% of all respondents stated that they would enter the same program again while 37% indicated that they would not do so. Results of the analysis of this variable by unit is given in Table 3-10.

Data presented in Table 3-10 indicate that a lower proportion (54%) of EMVTI's LPN students are likely to enter the same program again compared to over 60% in the case of the graduates of other institutes.

The reasons for entering or not entering the same program again do not vary significantly by institute. EMVTI's radiology and medical lab technology students are more likely to say (38.5% for radiology, 37.5% for medical lab) they like the profession while 26.7% of Maine School of Practical Nursing students gave well trained instructors as their reason for re-entering the program. Over 25% of LPN graduates felt that they could advance faster in another program in the general area of health education. Apparently all respondents feel that the wage scales and job opportunities in their areas were satisfactory because a very low proportion of the graduates cited these two reasons for not entering the same program again. This data is presented in Table 3-11.

Chart 1 on p. 9 identified the main categories into which the survey questions have been grouped in order to facilitate the data analysis. The preceding sections presented some of the results of this analysis.

A computer program was used to group respondents into categories which graded the degree of approval of their program of study. Category 1 included those who answered all questions mentioned in Chart 1 in the affirmative. Category 2 included those who answered some of these questions positively. People who answered some of these questions negatively were included in category 3 and finally category 4 contains all those who answered the questions negatively. The results of this program are presented in Table 3-12.

SUMMARY AND CONCLUSIONS

The analysis of data collected from health education graduates is presented in Chapter Three. The results clearly indicate that these programs are effective in fulfilling the objectives set forth in the Introductory Chapter. The most important points of this analysis are summarized below:

1. The typical graduate of these programs is a married female, below 25 years of age, who grew up in Maine and had an annual income between \$5,499 and \$7,500 in 1975.
2. 75% of the graduates who were surveyed either had a job at graduation or obtained one within one month of graduation.
3. 75% of the respondents were satisfied with the quality of job offers they received. This percentage was lower in the case of radiology (43%) and medical laboratory technology (70%) students of EMVTI.
4. 93% of the respondents obtained positions in their area of training for their first jobs. More than 90% stated that they plan to continue working in their field.
5. A majority of students of all institutes (over 50%) earned incomes between \$5,000 and \$7,499 or over during 1975. However, 40.7% NMVTI graduates and 40.0% of EMVTI radiology students received incomes below \$5,000 during the same year. On the average, respondents considered their incomes to be either equal to or above expectations. 50% of EMVTI radiology students responded that their incomes were below expectations.

6. Over 80% of the respondents were either 'very satisfied' or 'satisfied' with their jobs.

7. Over 23% of all respondents claimed that 'all aspects of their training' were useful to them in their profession. 'On-the-job-training' and 'clinical experience' were the other two aspects which were most frequently mentioned as being useful. 'Food and nutrition' courses and 'internship' were among those least mentioned as being useful.

8. 30% of respondents stated that no aspect of their training were bad. 'Unnecessary courses' and 'nutrition courses' were most mentioned as being 'least helpful'.

9. Over 95% of the students felt that their programs prepared them for their professions either 'adequately' or 'more than adequately'. 67% of these students plan to take more training in their field.

10. Over 60% of the graduates of all programs, except EMVTI, stated that they would enter the same program again if given a second chance. 47% of EMVTI graduates (LPN Program) responded they would not do so. 'Liking the profession' and 'well trained instructors' were the reasons most often given for entering a program again. 35% of EMVTI LPN graduates felt that they could 'advance faster' in another program in the area of health education.

This study was conducted to evaluate the 'effectiveness' of a specific program offered by vocational, technical institutes in Maine. Although goals of vocational education vary from program to program, its major function is to provide students with occupational skills that qualify them for jobs. Most manpower forecasts call for workers with specific skills, as opposed to workers with a general education in liberal arts. The 'Maine State Plan for Vocational Education', (1976 and 1977) published by the department of educational and cultural services indicates that the demand for LPN graduates

is increasing in this State.

According to the 1970 census, the median income for women with 1-3 years of college was \$2,367 in 1969 and \$4,511 for those with 4 years of college. The median income of \$6,250 for the respondents of this survey compares favorably with the census figures, even after allowing for the effects of inflation during 1969-1975.

Even though all this evidence suggests that the programs surveyed here are indeed effective, a comparison with criteria for successful performance used by another program might prove interesting. Prof. Albert J. Paulter* of the State University of New York at Buffalo, who worked on a vocational project to develop objectives for the program and a system of evaluation to measure how these objectives were met, used the following criteria.

1. Upon completion of such a program, 65% of the respondents will rate the experience as being satisfying to them.
2. 60% of respondents will indicate that they would re-enter the same program if they were to start all over again.
3. 60% will state that they plan to continue working in the same area of their specialization.
4. 60% will find employment within 6 months of graduation.

When the above criteria is used to evaluate the programs surveyed for the present study, it is obvious that these programs would satisfy all these measures of evaluation.

Our records indicate that you are a graduate of the _____
program at the _____

We would like some information about that education.

1. How many years were you enrolled in this program? 1 2 3 4

2. Which aspects of your health related education did you find most helpful?

3. Which aspects did you find least helpful? _____

4. How well did your health related education prepare you for your first job?

More than adequately 1 Adequately 3 Inadequately 5

5. (If not still working at first job) How well did it prepare you for your current job?

More than adequately 1 Adequately 3 Inadequately 5

6. Since completing this program have you taken any further training in this field?

Yes 1 No 5

6a. (IF YES) Where was this training taken? _____

7. Do you plan to take more training in this field? Yes 1 No 5
(Go to question 8)

7a. Why do you plan to take more training? Please check all responses that apply to you.

- To advance in my field
- Because of licensing requirements
- I personally desire more training
- Other (please specify) _____

8. Since completing this program have you taken any training in another field of study? Yes 1 No 5

(Go to question 9)

8a. (IF YES) What kind of training was this? _____

8b. Where was this training taken? _____

8c. How long was this training?

1 year or less 1 2 years 2 3 years 3 4 years or more 4

9. Have you received any in-service training in your field? Yes 1 No 5

(Go to question 10)

9a. How helpful have you found in-service training?

Very helpful 1 Somewhat helpful 3 Not too helpful 5

10. If you were a graduating high school senior now, would you enter the same educational program? Yes 1 No 5

10a. Why do you feel this way? _____

11. Did you receive any post high school training before entering your health education program? Yes 1 No 5

(Go to question 12)

11a. What was the result of this training?

2 year degree 1 4 year degree 3 Other (specify) _____ 5

12. While you were enrolled in your health educational program did you plan to stay in Maine after graduating? Yes 1 No 5

12a. Why did you plan to stay in or leave Maine? _____

We're also interested in your search for job opportunities.

13. How long did you look for a job in your field of training after graduation? _____

14. Did you have a job offer in your field of training in Maine?

Yes 1 No 5

14a. How many offers did you receive in Maine? _____

14b. Did you seek job offers in Maine?

Yes 1 No 5

15. Were you disappointed in the number of job offers in your field in Maine?

Yes 1 No 5

16. Were you disappointed in the quality of the job offers in your field in Maine? Yes 1 No 5

17. Are you currently licensed to practice in your field in Maine?

Yes 1 No 5 License not required 7

18. Did you enter your field of training in your first job? Yes 1 No 5 (Go to Q. 19)

18a. (IF NO) What did you do on your first job? _____

19. Are you presently working in your field of training?

Yes 1 No 5

19a. Do you plan to continue working in your field of training?
Yes 1 No 5
19b. (IF NO) Why not? _____

19c. What is your present occupation?

19d. Would you like to be working in your field of training?
Yes 1 No 5

20. How satisfied are you with your present job?

Very satisfied 1 Satisfied 3 Not satisfied 5

20a. Why do you feel this way? _____

21. What kinds of jobs outside your field of training have you held since graduation? _____

22. If you have never held a job in your field of training, what factors affected this decision?

- Family needs
- Work of spouse
- Wages too low
- No jobs available
- Decided not to work
- Don't like field of training
- Other (please specify) _____

23. Many factors go into a decision to select a job and job location. Please rate the factors below as to the importance they had in your selecting a job after graduation.

	1. Very Important	3. Important	5. Not Important
a. Wages	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Preference of spouse	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Job opportunities in your field	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Job opportunities outside your field of training	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. Living in Maine, leaving Maine	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f. Further educational opportunities	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
g. Presence of a hospital in community	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
h. Size of community	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

24. In what type of community would you like to locate?

Rural 1 Small town 2 Suburban 3 Urban 4

Finally, we need to know a few things about you as a person.

25. When were you born?

_____ | _____
Month | Year

26. What is your sex? Male 1 Female 5

27. What is your current marital status?

Married 1 Never Married 2 Widowed 3 Divorced/Separated 4

28. What was your marital status when you graduated from your health education program?

Married 1 Never Married 2 Widowed 3 Divorced/Separated 4

29. Where did you grow up?

_____ | _____
City or Town | State

30. Where do you presently live?

_____ | _____
City or Town | State

31. What is your approximate personal income from wages, salaries, stipends, and/or self-employment for the past year before taxes?

- 1 Less than \$5,000 4 \$10,000-\$12,499 7 \$20,000 or more
- 2 \$5,000-\$7,499 5 \$12,500-\$14,999
- 3 \$7,500-\$9,999 6 \$15,000-\$19,999

32. How does this income compare with your expectations for your field of training?

More than expected 1 About as expected 3 Less than expected 5

THANK YOU. PLEASE PLACE IN POSTAGE-PAID ENVELOPE AND MAIL AS SOON AS POSSIBLE.

ABSTRACT: AS PART OF CAREER EDUCATION IN THE HOPEWELL AREA SCHOOL DISTRICT OF PENNSYLVANIA, A PREVOCATIONAL-TECHNICAL PROGRAM FOR GRADES NINE AND TEN WAS ESTABLISHED THAT WAS DESIGNED TO ENABLE STUDENTS TO DEVELOP SELF-AWARENESS AND KNOWLEDGE OF A WIDE VARIETY OF OCCUPATIONS. VARIOUS STAGES LEADING TOWARD ENTRANCE INTO THE JOB MARKET WERE PLACED ON A CONTINUUM AND DIVIDED INTO UNITS OF INSTRUCTION. EACH UNIT WAS SUBDIVIDED INTO SPECIFIC ACTIVITIES TAILORED TO MEET THE SPECIFIC OBJECTIVE. THE REPORT DESCRIBES THE PROJECT COMPONENTS OF ORGANIZATION, SPEAKERS, FIELD TRIPS, TEACHING, PRETEST AND POSTTEST, AND EXPERIMENTAL EVALUATION. RESULTS OF THE KNOWLEDGE OF OCCUPATIONS PRETEST AND POSTTEST ARE PRESENTED ALONG WITH RESULTS OF AN EVALUATION TO DETERMINE SOURCES OF OCCUPATIONAL AND EDUCATIONAL INFORMATION USED BY THE STUDENTS. RESULTS INDICATED THAT PARTICIPATING STUDENTS SOUGHT HELP FROM MORE RELIABLE SOURCES AND USED AVAILABLE SOURCES OF INFORMATION MORE OFTEN AND WITH MORE POSITIVE RESULTS THAN THE CONTROL GROUP. OTHER PROJECT RESULTS INCLUDE: BEHAVIORAL OBJECTIVES AND TEACHING GOALS WERE MET AND ACTIVITIES WERE SUCCESSFULLY USED; PRETEST AND POSTTEST RESULTS INDICATED SIGNIFICANT SUCCESS IN STUDENT LEARNING LEVELS; AND STUDENTS EVALUATED THE PROGRAM POSITIVELY. SAMPLE LEARNING ACTIVITIES, THE CAREER EXPLORATION OUTLINE, AND SUGGESTIONS FOR CAREER CONSULTANTS ARE APPENDED. (NJ)

DESCRIPTION

As part of career education in the Hopewell Area School District, a pre-vocational technical program aimed at the 9th and 10th grade levels was established. This program (under the name of Hopewell Area Vocational Education - HAVE) is designed to enable students to develop self-awareness and knowledge of the world of work so that specific occupational decisions can be made without relying on misconceptions and erroneous assumptions. Various stages leading toward entrance into the job market are placed on a continuum divided into units of instruction. (See Diagram #1.) Each unit is expressed in terms of behavioral objectives. Each behavioral objective is again subdivided into specific activities which are tailored to meet the stated objective. (See Appendix A.)

In carrying out the task of instruction the following areas were tapped for use in the program:

1. Career Resource Center
2. Labor organizations
3. Local businesses
4. Local industry
5. Civic groups & volunteer organizations
6. Governmental agencies

The success or failure of HAVE consists of how well it can be co-ordinated with the above and operate within the existing educational structure in the Hopewell Area School District.

EXPECTATIONS

The expectations can be summarized into 4 general statements. First, an attempt was made to help students develop an awareness of themselves in relation to others. Second, the students were expected to develop knowledge of a wide range of occupations. Third, the program was designed to aid each student in exploring and assessing the Vo-Tech programs available to them. Fourth, the student was to examine his/her suitability to Vo-Tech training and narrow their choice.

BASIC COURSE CONTINUUM

GRADES 11 and 12

GRADE 10

GRADE 9

In mentioning these it should be noted that more specific goals were reached as behavioral objectives were met. But, the behavioral objectives will not be made available until fully tested out and revised at the end of the 1976-1977 school year. At present there are approximately twice the number of behavioral objectives than were contained in the original proposal.

EVALUATION & RECOMMENDATIONS

a. Behavioral Objectives and Activities

The key to adapting the program to individual and class needs is the list of activities contained under each behavioral objective. Since the activities are designed to accomplish the goal of the objectives, more activities increase the likelihood of finding a classroom technique to suit the students. We attempted to have a substantial repertoire of activities on file.

To see how this worked, below is an actual behavioral objective with activities. The activities have a brief explanation for clarification.

Unit: Human Awareness

Behavioral Objective: Work towards developing a positive self image

- Activities:
1. Fill in and discuss " Things I can be Proud of . . ." worksheet (See Appendix B)
 2. Identify areas in which you have shown improvement in the past year.
 3. Compliment Bombardment - students are divided into smaller groups and given strips of masking tape. One of the group is chosen to stand in the center while the remaining students write complimentary things about the person on the tape (as many as they can think of). Each student then says the positive statement aloud while sticking it on to the one in the center literally covering him with "good will".
 4. Mirror Technique - each student looks into a small mirror and tells what they like best about themselves. This is an adaptation of a Psycho-drama technique.

The activities were selected on the basis of their value in producing desirable interpersonal learning experiences. A variety of approaches was selected so that the counselor/teacher could choose the one that would work best with the group at any less activities to accomplish behavioral objectives. Other groups needed no activities at all in certain areas! In the majority of instances, activities were chosen on the basis of their relationship to the verbal and non-verbal tendency of the group. There was satisfactory success in this approach. Most students had initial resistance to some counseling techniques but this was expected. The resistance dissipated in all but one group. However, the use of alternative activities enabled that group to function smoothly.

Additional work activities were used such as the General Career Exploration Outline (See Appendix C). This is but one of several worksheets developed for use in the program.

b. Planning

1. Organization

The program had little difficulty getting organized. Volunteers were obtained from the 9th and 10th grade and they were scheduled on the days where they had a study hall instead of physical education class. The only requirement for acceptance into the program was an interest in pursuing Vo-Tech training in one of the vo-tech fields to be offered by the proposed Beaver County Area Vocational-Technical School. Scheduling out of study periods permitted implementation with the least amount of change in the class schedule.

Some classes were doubled-up on Wednesday and Friday so that these days could be used for speakers and field trips.

Recommendation 1: More activities and resources are still needed.

HAVE began on Monday, November 24, 1975 and ended April 23, 1976, approximately one semester in length. 67 ninth graders participated at the outset; 61 completed the program. These were divided into 6 groups, meeting 3 times each week in the Career Resource Center and available classrooms. The Career Resource Center was used during the Career Exploration Unit while the Human Awareness & Self Awareness units were conducted in classrooms. This permitted maximum access to the Career Resource Center by the other members of the student body.

2. Speakers

Using all available resources, people were contacted and asked to come in and speak to the students. This was done in person and/or by telephone. Verification was sent out in the mail and a "Model for Career Consultants" was enclosed for the speaker's use. This model contains 10 suggestions to aid the speaker in focusing on the program's goals. (See Appendix D.)

Shortly before the scheduled date, a telephone call was made to each prospective speaker. Students were prepared before the speaker came and a follow-up discussion was held after the speaker had finished. Several things became evident in following this procedure:

1. Cancellations were difficult to handle when given less than a day in advance. Earlier notice could have given enough time to get a substitute. Out of 5 scheduled speakers: 2 cancelled within 24 hours of the scheduled time but rescheduled for a later date; 1 was a no-show.

2. Few laborers were willing to take a morning off work and lose pay.

In spite of what would be considered a disappointing average, there were 4 good talks given, with excellent student reaction. There was a demand for more speakers.

Recommendation 2: Schedule the course as an elective for potential Vo-Tech students.

3. Field Trips

There were 4 field trips taken: 3 to Parkway West Area Vo-Tech School and 1 to the Aliquippa School of Beauty Culture. This was done to familiarize each student with the teaching procedures and give them a chance to observe Vo-Tech training in progress. Both of these schools cooperated with Hopewell School District in accepting students for vo-tech training.

No problem was encountered on the field trips. The Hopewell administration was extremely cooperative in granting the field trips and the cooperating schools were informative and gracious while the students were there. This was extremely successful from the reaction the students gave.

Recommendation 3: Provide a stipend for guest speakers, particularly working men who take time off.

Recommendation 4: Utilize alternate speakers from school (i.e. nurse, maintenance personnel, etc.)

Recommendation 5: Send earlier notices to several potential speakers in each field.

Recommendation 6: Don't wait until 2nd half of program to bring in speakers. Do them all along.

Recommendation 7: Someone must cover classes when the counselor/teacher is on field trips.

Recommendation 8: Make arrangements to have students placed in a Vo-Tech class of their choice on field trips to Vo-Tech Schools.

c. Teaching

The counselor/teacher functioned as a facilitator whose goal was to create a learning environment in the classroom. Lesson plans were an important part of the classroom planning. Our goals seemed to be accomplished when seen in the light of the student evaluation and Pre-Test/Post-Test results.

d. Pre-Test/Post-Test

The testing instrument was a variation of the Knowledge of Occupations Test developed by LeRoy G. Baruth and published by Psychologists and Educators, Inc. The pre-test was administered just prior to entering the General Career Exploration Unit. The post-test was administered during the last week of the program. The results of the testing were overwhelmingly favorable. The post-test showed significant improvements over pre-test results:

	<u>PRE TEST</u>	<u>POST TEST</u>
Average Score	47.6	59.4
Standard Deviation	12.0	8.5

Perhaps the most startling statistic is that in the post test only 4 students scored below the pre-test average! The following page contains graphs illustrating the pre-test/post-test results.

Recommendation 9: Devise a test that will more appropriately measure the program's effectiveness, one that is geared specifically to Vo-Tech careers.

e. Experimental vs. Control Group

Another evaluation instrument was employed with the help of an undergraduate student from the University of Pittsburgh Department of Vocational Education. The purpose of the questionnaire was to determine the sources of Occupational information, Occupational influence, Educational information, and several other areas. The questionnaire results will be used in a research project at the University of Pittsburgh which will be published in the fall of 1976.

For our purposes, 60 students in the pre-vo-tech classes answered the questionnaire while 48 students from grades 10-12 were randomly selected to participate. We distinguished between students in the vocational curriculum, college preparatory and general course. Because the computer was primarily

FIG. 1. PRE-TEST RESULTS: AVERAGE SCORE 47.6 (to nearest .1),
STANDARD DEVIATION 12.0 (to nearest .1),
NUMBER TESTED 58

FIG. 2. POST-TEST RESULTS: AVERAGE SCORE 59.4 (to nearest .1),
STANDARD DEVIATION 8.5 (to nearest .1),
NUMBER TESTED 51

programmed for the research project, the figures available for comparisons are those of students in the vocational curriculum.* With these figures the Control group (C) consisted of 8 students, and the experimental group (E) consisted of 35 students.

The findings from this study have been reduced to a relatively small number of statements and figures. The complete study is available in raw form on a computer print-out.

The most obvious difference was in the degree of counselor help and influence:

1. As a source of Occupational Information

E 97% helpful
C 75% helpful

2. As a source of Occupational Influence

E 77% influential
C 37% influential

3. As a source of Educational Information

E 85% helpful
C 63% helpful

4. As a source of Educational Influence

E 77% influential
C 25% influential

This was expected in view of the unavoidable contact the counselor had with the students once they entered the program.

HAVE produced several other more interesting results:

1. The peer group influence as a source of occupational information had a greater impact on E than the peer group did to C. In fact, the impact was

*Vocational Curriculum was defined as "a program which prepares you to work in an office or in a shop or factory, or to enter a post-high school vocational-technical program or become an apprentice after high school" (including Agricultural, Business, Distributive Education, Home Economics, Health related occupations, and trade and industrial education).

almost reversed: 72% of E found their friends helpful while only 37% of C could say the same.

2. While the above was true, E sought information on educational programs from other sources. Friends, student co-workers and parents were less apt to give E helpful information about educational opportunities. The statistics showed that E had a tendency to go to sources such as Books and Catalogs, Radio, TV and the Counselor.

3. This trend is also evident in the Source of Occupational Information. The following table illustrates the point:

		<u>Helpful</u>	<u>Not Helpful</u>
BOOKS	{ E	97%	3%
	{ C	75%	25%
PAMPHLETS	{ E	88%	12%
	{ C	75%	25%
COMPUTER SOURCES	{ E	72%	28%
	{ C	22%	88%

The most significant difference is in the area of Computer Sources. This is believed to be a result of the program's utilization of PENNSCRIPT* which resembles computer cards.

In summary, students in HAVE appear to seek help in more reliable sources than those who are not in the program. They also seem to use the sources of information that are available more often and with more positive results than the other students.

f. Past vs. Present Applications to Vo-Tech Programs

"This year's selection process was greatly improved due to prior student awareness of the program and its relationship to their occupational goals. This we feel is a direct result of the Pre Vo-Tech Program." This excerpt was from the memo sent to the principal and other administrative officials from the Counseling Supervisor and Vocational Counselor who interviewed applicants for the cosmetology program.

The same result was obtained when interviews were undertaken for admission to Parkway West Vo-Tech school. In this instance the counselor from Parkway also interviewed, and the observations were equally encouraging. The efforts of HAVE were reflected in three areas:

1. Increased number of applicants
2. Better knowledge of vo-tech training
3. The written as well as verbal reasons for placing applications

g. Students' Response

A questionnaire was distributed to the students containing basic inquiries as to a) did the students like the course, and b) has it helped them. A total of 34 returned the questionnaire with the following results:

<u>Like</u>	<u>Dislike</u>	<u>Helped</u>	<u>Didn't Help</u>
30	4	32	2

Forty-three (43) students expressed a desire to continue the program in the 10th grade; 14 new members are already signed up. We expect more once the new school year begins in September 1976.

SUMMARY

1. The Behavioral Objectives were met; the activities were successfully used.
2. Organizing the program was relatively simple. It required and received cooperation from faculty and administration.
3. Guest Speakers did not turn out in the numbers we hoped for, but those that came contributed greatly.
4. Field Trips were a great success.
5. The teaching goals were met.
6. Pre-Test/Post-Test results displayed significant success in student learning levels.
7. The Experimental vs. Control group questionnaire gave reason to believe
 - a. that students in HAVE sought help through more reliable sources,
 - b. that students in HAVE use available vo-tech material more often
 - c. that students in HAVE achieve more positive results from these sources than other students.
8. In comparing the past vs. present applications to Vo-Tech programs, HAVE played an important role in improving the quality of the applicant, the number of applicants and the reasons for seeking Vo-Tech training.
9. The student evaluation of HAVE showed that, at least in their eyes, the program was a success.

BEST COPY AVAILABLE

APPENDIX A.

SELF-AWARENESS - "Coat of Arms"

Each student draws the outline of a shield or coat of arms and divides it into six or eight sections. The student fills each section with a drawing representing himself. Sample topics of a section include:

- I feel most at ease when _____;
- My most valued possession is _____;
- My greatest success has been _____;
- I would want people to think of me as _____.

Students thus depict their feelings, interests, goals, etc.

HUMAN AWARENESS - "Bomb Shelter"

Students fantasize a nuclear explosion has occurred. They are in a bomb shelter that can sustain the lives of 5 people long enough for the radiation to dissipate. Each student is given a list of 10 people from whom they must select the 4 others who will inhabit their shelter and perhaps rebuild society. The people on the list are described by sex, age, occupation, physical appearance, and social mores. Students decide for example from among a radical black engineer; a handicapped English teacher; a white, upper-class, arrogant teen-ager; an elderly compassionate janitor; etc. Discussion enlightens students to their values and exposes them to students whose values are different from theirs.

GENERAL CAREER EXPLORATION - "Product Review"

A product is traced to its beginnings as students brainstorm occupations throughout its existence. For example a leather purse is traced from the store's salesperson, to the warehouse people, to the delivery truck driver, to the processing plant occupations, to the stockpens where the cow was bought, to the farm where the cow was raised. Students not only discuss variety of jobs but recognize importance and worth of all jobs to finished product.

VO-TECH EXPLORATION - "Career Demonstrators"

People in occupations that the Vo-Tech school will train students for come to class and demonstrate what they do on a typical day on the job. They come in "work" dress and bring sample tools when possible. These are taped to add to the Career Resource Center materials.

EMPLOYMENT SKILLS - "Talking Job Application"

A student is selected to be a talking application blank and questions a student job seeker - name, age, marital status, education, past work experience, etc. Students learn terminology and see importance of education and training.

GENERAL CAREER EXPLORATION OUTLINE

A good way to prepare for your future career decisions is to get to know yourself better and to become acquainted with the world of work. This research outline should help you gain information about job areas.

JOB CLUSTER THAT I WILL INVESTIGATE _____

A. What does a worker in this area do? Would you like these tasks?

B. Which high school subjects are most important in this career?

1. _____ 2. _____
3. _____ 4. _____

C. Check the highest level of education necessary for this career:

Less than high school _____
High school diploma _____
Technical or vocational _____
On the Job Training _____
College degree _____
More than college _____

D. Check working conditions that would apply to a worker in this area:

Vibrations _____ Danger of burns _____
Moving Objects _____ Electrical Hazards _____
Hlg. places _____ Radiation _____
Explosives _____ Others: _____

E. Hours, earnings, and benefits:

Minimum salary _____ Maximum salary _____

Typical working hours _____

Benefits _____

Are wages different in different areas of the US? _____

F. Physical requirements - Can you meet these requirements?

G. What abilities are required for this area? Do you have those?

H. What opportunities are available in this area? Check PENNSCRIPT

I. Outlook for the future in this area? Will there be job opportunities?

J. Advantages and disadvantages

K. List at least three jobs that are related to this career:

1. _____

2. _____

3. _____

L. Sources of further information (addresses)

M. What sources did you use for the above information?

A MODEL FOR CAREER CONSULTANTS.

The primary objective is to keep the student in mind. It is important to accurately portray the career that you represent so that the student may avoid misdirection and fantasies associated with a career. Seeing the glamor and rewards of a profession is only valuable when coupled with the knowledge of the motivation and hard work needed to master proficiencies that lead to success. A balanced portrayal will better prepare a student to take appropriate steps in career planning.

SUGGESTIONS:

1. Talk about tools and equipment on the job.
2. Talk about people who have need of your services.
3. Explain a typical work day.
4. Try to deal with information about jobs and careers in the local area.
5. Discuss typical problems that must be dealt with in your job. (Perhaps tell of some that you personally have encountered.)
6. Discuss the different ways that someone can get into your profession.
7. Tell how someone advances in your career.
8. Does "back-scratching" play a role in your job? What are some advantages and disadvantages to this?
9. Discuss what you would have liked to have known about your occupation before you entered. Knowing what you do now, would you have done anything differently?
10. What is your greatest personal satisfaction?

TITLE: HEMPFIELD PILOT PROJECT FOR EDUCABLE MENTALLY RETARDED (EMR) AND REGULAR CLASS STUDENTS. FINAL REPORT.

PERSONAL AUTHOR: CACI, WILLIAM P.

DESCRIPTOR: *EDUCABLE MENTALLY HANDICAPPED; *WORK EXPERIENCE PROGRAMS; *AUDIOVISUAL INSTRUCTION; *PILOT PROJECTS; *FEEDBACK; PROGRAM DESCRIPTIONS; SECONDARY EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 14P.

ABSTRACT: THIS PILOT PROJECT ATTEMPTED TO DETERMINE THE EFFECT OF IMMEDIATE AUDIOVISUAL FEEDBACK IN THE FORM OF VIDEO TAPE RECORDINGS ON OCCUPATIONAL-RELATED BEHAVIOR PATTERNS OF EDUCABLE MENTALLY RETARDED AND REGULAR CLASS STUDENTS IN A SECONDARY LEVEL WORK EXPERIENCE PROGRAM. THE REPORT ENUMERATES THE OBJECTIVES, DESCRIBES PROJECT IMPLEMENTATION, AND PRESENTS THE FINDINGS AND CONCLUSIONS. PRIMARILY, IT WAS NOTED THAT STUDENTS DID ALTER SOME BEHAVIOR PATTERNS ON THE JOB. ACCORDING TO STATEMENTS BY THE STUDENTS, THEY WERE MORE AWARE OF THEIR BEHAVIOR AND DERIVED A NEW SENSE OF ACCOMPLISHMENT IN THEIR PERFORMANCE. SEVERAL INSTANCES ARE CITED OF STUDENTS ALTERING THEIR BEHAVIOR AFTER VIEWING THE TAPES, WHILE PREVIOUS ATTEMPTS TO CHANGE THEM HAD PROVEN INEFFECTIVE. PREVOCAATIONAL STUDENTS WERE AFFORDED A CLEARER CONCEPT OF THE REQUIREMENTS OF DIFFERENT OCCUPATIONS, AND EMPLOYERS WERE PROVIDED WITH AN ACCURATE RECORD OF AN EMPLOYEE'S PERFORMANCE FOR REVIEW. AN ADDITIONAL USE FOR THE TAPES WAS AS PRIMARY MATERIAL FOR PREVOCAATIONAL CLASSES TO INDICATE THE ABILITIES AND REQUIREMENTS NECESSARY FOR VARIOUS JOBS. A NUMBER OF RECORDED FINDINGS AND REACTIONS INDICATED THAT THE PROJECT WAS SUCCESSFUL. A SUMMARY OF EDITED AND UNEDITED PROJECT-DEVELOPED VIDEO TAPE MATERIAL IS APPENDED. (NJ)

INTRODUCTION

This pilot project (19-3803) basically attempted to determine what effect the introduction of immediate audio visual feedback, in the form of video tape recordings, had on the occupation-related behavior patterns of EMR and regular class students on a work experience program at the secondary level.

Approximately 40 students, half of whom were classified as Educable Mentally Retarded, were to be involved in the project. Of the forty students, 22 were males. Only juniors and seniors, 16 years of age or older, were involved in the project.

The program's objectives included the following:

1. To make available to work experience students an accurate and immediate description of their actual job performance through the use of video tape.
2. To provide a library of video tapes of local students in local work stations for use by work experience students, employers, prevocational students, parents, teachers, counselors, and the work experience coordinator.
3. To show parents another view of the progress and range of achievement of their children in the work program and the extent of occupational involvement.
4. To assist participating work program employers in evaluating their training and supervision of work experience students.
5. To introduce the work experience program and particular student abilities to those employers who previously had not participated in the program in hopes additional work stations be made available for the program.
6. To assist the work experience coordinator counsel students on the program.
7. To illustrate, via video tape, various occupations and their specific and general requirements to prevocational class students.
8. To attempt to involve the community in the objectives of the work experience program.

In order to meet the objectives of the program, the project director was equipped with a portable video tape camera, recorder, and other necessary equipment to record students at their work stations performing their tasks.

The project director first informed the various employers and students of the pilot project and its objectives. He then secured their cooperation and scheduled recording dates.

To present a comprehensive picture of the student's performance and the specific occupations and their requirements, a number of recording dates were scheduled and a number of tapes concerning an individual occupation were recorded. In addition, the students and their employers were interviewed before and after each tape session to record their reactions and suggestions of the tape sessions.

Unedited tapes were immediately shown to the work experience students and their employers and their reactions and suggestions were noted. Completed tapes were then produced with the use of video tape monitors, an editing machine, tape recorders and other equipment. These tapes were then made available to work experience students, prevocational students, employers, and other interested parties.

The reactions and suggestions from these parties was then noted in order to assist the student in becoming more successful on the job and to continue the success of the work experience program at Hempfield High School.

FINDINGS AND ANALYSIS

A number of findings, suggestions, and reactions were recorded that indicate the project was a qualified success offering much potential for further research.

Primarily it was noted that students did alter some of their behavioral patterns on the job due, in part, to the video tape sessions. The change in behavior was either recorded at a second tape session or employers reported the behavior changes at a later date. They attributed much of the positive changes to the video tape experience.

Every student who viewed their performance on video tape reacted in some manner. They readily noted positive and negative aspects of their behavior to the project director. In most cases students were somewhat surprised at how well they did their work. In many instances the students indicated they would alter their negative performances in the future because of what they "saw."

Edited tapes often eliminated the mistakes or negative performances of students and they came to thank the project director, stating they would try and do it "right" in the future. Employers later reported students did, in fact, alter their performances in a positive manner. Employers were eager to have other employees taped and were generally very impressed with the project's immediate results.

Students were impressed with the project and influenced by what they saw of themselves. One student, for example, who worked in a restaurant as a bus boy continually dropped food onto and off a table when he cleaned the table. He was told and shown repeatedly by his employer of this fault and how to do the task properly, but it was to no avail.

However, after viewing how he did the task improperly on video tape, he exclaimed, "Oh! Is that what I was doing wrong." The tape also revealed how the job was to be performed properly. The tape was then run back and forth a number of times to help "drive the point home" to the student.

The boy was taped again and did the task properly. He also noted many other items he did while performing his work, and according to his employer, tried to correct them as best he could. Another major change was how carefully the boy now moved his busing cart through the restaurant and avoided costly "accidents," especially during the rush hour at the restaurant.

Other specific improvements included a girl lowering her voice at a lunch counter after the sound track on the video tape clearly indicated her voice did indeed carry all through the dining hall. This particular student had refused to believe this and the point of contention became somewhat serious between her and her supervisor. Another boy became more careful in handling liquids after noting how much he repeatedly would spill when filling containers.

One boy, working in a warehouse, found he moved entirely too slow to keep pace with his co-workers. He did the job properly, but his speed needed some improvement. His first reaction to this observation, however, was to deny his speed was questionable. But after viewing the tapes he agreed he was a "little slow" and commented, "I would never have believed it unless I saw it, but I guess the tapes don't lie."

Another student was an excellent worker most of the time, but he often got "side-tracked" during working hours by some small distraction. The unedited tapes were often

interrupted and required repetition of a task, indicating his lack of concentration. His faults did not show up on the tape, but he is now more aware of his concentration shortcomings at work.

Other students in many cases took notice to, and improved their clothing, grooming, and general appearance on the job and in school. Some noted their reactions to customers they served and said they would change their manner of expression to become more polite and friendly to the general public they had to serve.

Prevocational students were especially impressed by what they saw and heard on the tapes. They noted with awe the tasks performed by workers who they knew only as fellow students. They were often surprised at how much the job entailed, especially in relationship to what they had previously thought the job required.

Reactions from the prevocational students ranged from, "You (a fellow student and classmate) do all that!" to "How did you get to learn that stuff?" or "I could never do that!" or "I think I would like that job." to "I don't want any parts of that job."

The work experience program coordinator noted the reactions of the prevocational students viewing the tapes and now has a better idea of the work interest of the particular students. The students themselves also know what jobs now interest them and what jobs they certainly want to avoid or approach in the future. This information has helped to make job selection and success more realistic for the prevocational students. The coordinator's task has been simplified and the selection of job stations for certain students is more accurate.

Employers working with the program have viewed some tapes of other students and have expressed negative or positive interests in the student because of what they saw and heard via the video tapes.

One employer noted that a boy he was viewing would be a "good" candidate for employment with his firm because of how well the boy moved around and handled delicate objects. Another employer thought a boy moved "too slow" for his business. Employers thus got a preview of students actually working, a process that saved time for all concerned and was previously unavailable before this project. The action also may have saved embarrassment to a student and the employer because another "failure" by the student would be avoided.

Generally, it was found that students, employers and prevocational students were more than eager to view the tapes to see things for themselves.

CONCLUSIONS AND RECOMMENDATIONS

A number of objectives were achieved to term the project a qualified success, especially the objectives dealing with work experience students, their coordinator, and prevocational class students.

According to statements they expressed during interviews, work experience students are more aware of their performances because of the video tape sessions in which they participated. Many students immediately changed some negative or poor performances after viewing themselves on video tape. Most students came away from the experience with a new sense of accomplishment in their personal performances. They were anxious for other to view their work and them at work, regardless of some poor performances on their part. They generally indicated pride in their performances. An increase in self-esteem was most notable among EMR students, but regular class students also appeared to gain in self confidence according to the project director's observations and employer reports.

Prevocational students now have a clearer concept or knowledge of different jobs and what is required of those occupations. They can see and hear many of their own friends and fellow students doing different things on different jobs. Many of their previous conceptions of particular jobs have become obsolete. Students who were somewhat unsure of their abilities now meaningfully compare themselves to peers they associate with in everyday school life. Previous apprehensions or overconfidence is now put in perspective for these students, further helping them select suitable jobs that closely match their individual talents and personalities.

Employers found the video tape sessions to be of particular value, having an accurate record of an employee's duties and performances to review and evaluate at their disposal that is both objective and clearly presented. They can see the fruits and faults of their training procedures and are better able to know how to correct some techniques they use in supervision and training. They have a basis for which to correct behavior patterns of students working for them or who will be employed by them in the future.

The work experience coordinator now finds a large amount of guess work removed when attempting to place students in new or different occupations. He has at his disposal a library of video tapes involving local students in local occupations, most of which are familiar to prevocational class, regular class and other work experience students.

The tapes can easily be used as primary material for any prevocational class. They indicate what abilities a person must or should command and what requirements specific jobs and companies require of their employees. Specific requirements of local job sites, difficult to successfully or adequately present in the past, are now plainly illustrated and explained visually and audibly. The work experience teacher does not have to rely exclusively on company produced audio visual materials for class which often use ethnic groups, settings, occupations or other factors unfamiliar to local students.

Technically, it was found the estimated time allotted for the project director to achieve his objectives was vastly underestimated. Actual taping of students working averaged six hours. Time required to tape interviews averaged another four hours. However, the most

time was required when the tapes were edited, especially since the project director was not skilled at the outset with media manipulation. The time required to tape the students, the employers, the job site and the occupation, plus travel time and the complete editing of the first tape amounted to approximately 100 hours. With some editing experience, the total time was cut to less than half for completed tapes. The project director estimates that with further experience, completely edited tapes of reasonable quality should average 30 hours.

It was found that one person could do the entire project, but assistance in the taping, editing, and transporting of equipment is highly recommended. Physically carrying the recorder and camera for hours at a time can strain a person to a degree which causes severe headaches and backaches due mainly to the tenseness of shooting and lugging dead weight.

All the objectives of the project were not reached due directly to an insufficient time allotment for the project director. The objectives concerning the presentation of finished tapes to parents, perspective employers and others were only slightly touched. These objectives should be achieved during the second year of the project. In addition, a more comprehensive sampling of local occupations should be added to the project's library for prevocational class students.

SUPPLEMENTARY AND APPENDIX MATERIAL

The following is a summary of edited and unedited video tape material taken by the project director. Tapes are keyed as follows: a "zero" series indicates unedited tapes; series "A" indicates edited tapes of EMR students; series "B" indicates edited tapes of regular class students; and series "C" indicates unedited introduction and fill-in material recorded to complete edited tapes.

- 01 - Ceramics Production: Illustrates a boy coming to work, receiving the day's production and working schedule, selecting, cleaning, and preparing the various molds. In addition it shows him pouring slip into molds, cleaning and recycling slip as well as the removing of greenware, and putting finishing touches to customer orders.
- A1 - Ceramics Production: Illustrates video tape No. 01 with commentary and interview sessions with owner concerning the job, occupational outlook, pay, work load, responsibilities, requirements, and the work program.
- 02 - Assistant Cook: Illustrates a boy coming to work, receiving instructions, performing routine restaurant preparation work, cleaning of equipment, and the cooking of various foods.
- A2 - Assistant Cook: Illustrates video tape No. 02 with commentary and interview session with owner concerning the job, occupational outlook, pay, work load, responsibilities, requirements, and the work program.
- 03 - Gas Station Attendant: Illustrates a boy coming to work, preparing to handle customers, changing tires, fixing batteries, filling gas tanks, giving tourist directions, handling credit card sales, and doing other routine functions of the occupation.
- 04 - Warehouse Loading Dock Assistant: Illustrates a boy working at a local distribution warehouse. Shows him coming to work, punching time card, checking work load with co-worker, loading various trucks and stock, consulting with foremen, and preparing various stocks for later shipment.

- 05 - Assistant Chef: Illustrates a girl working in a large restaurant. Shows her preparing various foods and making dishes customers' order. Tape also illustrates her preparing area and foods for rush hour demands.
- 06 - Bus Boy: Illustrates a boy working in kitchen and busing tables in restaurant. Shows him coming to work, preparing kitchen area, busing tables, working an automatic dishwasher, and refilling various floor stocks and tableware.
- 07 - Autobody Repair Assistant: Illustrates a boy working in a large autobody repair shop. Shows him working with a journeyman on damaged car and the various processes and methods used to do work. Also it shows other journeymen at work.
- B7 - Autobody Repair Assistant: Illustrates video tape No. 07 with commentary and interview session with shop foreman. Includes comments on the work program, occupational demands, future outlook, responsibilities, salary, and requirements of job.
- 08 - Foodline Assistant: Illustrates a girl working in a local restaurant. Shows her preparing for work, preparing foodline, working cash register, helping in kitchen, and waiting on customers.
- 09 - Book Store Assistant: Illustrates a girl working in a large book store. Shows her coming to work, receiving daily instructions, taking care of her book shelf section, answering phone, waiting on customers, working cash register, and setting up display area.
- 010 - Discount Store Clerk: Illustrates a girl working at a small special items discount store. Shows her stocking shelves, pricing materials, waiting on customers, and checking daily inventory.
- 011 - School Cafeteria Workers: Illustrates school cafeteria workers cooking and preparing for daily meals and the use of large equipment. The tape also shows women serving students during lunch hour.
- 012 - Practical Nurse: Illustrates daily routine of nurse at a home for aged. Shows how patients are handled and the requirements and duties necessary for good patient care. Tape contains scenes of nurse washing and feeding patient as well as taking daily health measurements, such as blood pressure and temperature.

- 013 - Supermarket Bager: Illustrates two boys working in a large local supermarket. Shows how boys check stock, help bag groceries, clean areas of store, and wait on customers. Tapes also include boys taking breaks and punching time cards.
- 014 - Dry Cleaning Workers: Illustrates a number of employees doing their work at a large dry cleaning establishment. Shows girls pressing and folding clothes or sewing and cleaning other garments. Tapes also illustrate a rug being cleaned and girls at counter waiting on customers.
- 015 - Assistant Shoe Department Manager: Illustrates a boy working in a large discount store's shoe department. Boy is shown checking rack items, preparing shoes for display, checking inventory, unloading stock, pricing material and working with customers.
- 016 - Secretary: Illustrates a girl working in a college office with modern automatic machinery and equipment. Shows her obtaining day's work schedule, performing normal office duties, such as answering phones, running off materials, and typing various items.
- C01 - Unedited scenes of local school exterior and introduction material concerning program objectives.
- C02 - Unedited interviews of three employers for use with completed edited tapes.

ACCESSION NUMBER: VT103539

PUBLICATION DATE: JUN76

TITLE: A PROFILE OF U.S. COMPREHENSIVE HEALTH PLANNING AREAS. AGRICULTURAL ECONOMIC REPORT NO. 339.

PERSONAL AUTHOR: FITZWILLIAMS, JEANNETTE

DESCRIPTOR: *HEALTH PROGRAMS; HEALTH SERVICES; HEALTH FACILITIES; *FEDERAL PROGRAMS; *RURAL URBAN DIFFERENCES; RURAL CLINICS; RURAL POPULATION; URBAN AREAS; URBAN POPULATION.

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 42P.; AN ATTACHED COMPREHENSIVE HEALTH PLANNING AREAS MAP WAS NOT REPRODUCIBLE AND WAS REMOVED. IT IS NOT INCLUDED IN THE PAGINATION.

ABSTRACT: HEALTH PROBLEMS COMMON TO BOTH URBAN AND RURAL AREAS MAY BE DIVIDED INTO PREVENTION, HEALTH CARE, AND SUPPORT. THE RURAL HEALTH PROBLEM IS ONE OF IDENTIFYING UNIQUELY RURAL CHARACTERISTICS AND OF MODIFYING HEALTH PROBLEM SOLUTIONS TO MEET THESE RURAL NEEDS. THE REPORT FOCUSES ON THESE RURAL HEALTH PROBLEMS AND THE RELATIONSHIP BETWEEN RURAL POPULATIONS, HEALTH STATUS, AND THE COMPREHENSIVE HEALTH PLANNING PROGRAM (CHP). THIS DATA MAY BE USEFUL IN HELPING TO SOLVE SOME OF THE RURAL HEALTH PROBLEMS AND IS PREPARED FOR FOUR GROUPS OF USERS: (1) PLANNERS AT STATE, REGIONAL, AND NATIONAL LEVELS; (2) LOCAL PLANNERS AND DECISIONMAKERS; (3) PERSONS DOING CONSULTING, EDUCATIONAL, AND PROMOTIONAL WORK IN THE HEALTH FIELD, AND (4) CONCERNED CITIZENS. ELEVEN MAJOR TOPICS ARE INCLUDED IN THE REPORT: SUMMARY, CHARACTERISTICS OF CHP AREAS, TOTAL POPULATION AND LAND AREA, RURAL AND URBANIZED AREA RESIDENTS, MINORITIES, AGE GROUPS, ABILITY OF AREA TO FINANCE HEALTH SERVICES, INFANT BIRTHS AND DEATHS, POOR HOUSING, LACK OF READY ACCESS TO A PHONE, AND A RURAL OVERVIEW. FIGURES AND TABLES ARE BROKEN DOWN SO THAT THE CHARACTERISTICS OF THE RURAL OR URBAN POPULATION CAN CLEARLY BE IDENTIFIED. THE SUMMARY INDICATES THAT RURAL POPULATIONS DO NOT APPEAR TO HAVE AN EASY ACCESS TO HEALTH CARE CENTERS AS URBAN POPULATIONS DO, THAT THE MORE RURAL THE AREA THE GREATER THE PROBLEMS, AND RURAL PARTICIPATION IN CHP WAS GREATER THAN HAD BEEN EXPECTED. A Profile of

U.S. COMPREHENSIVE HEALTH PLANNING AREAS

by Jeannette Fitzwilliams

22

Agricultural Economic Report No. 339
Economic Research Service, U.S. Department of Agriculture

PREFACE.

When the 1966 Comprehensive Health Planning Act and the 1967 Partnership for Health Amendments were enacted, Congress sought to assure the "highest level of health attainable for every person, in an environment which contributes positively to healthful individual and family living." It recognized this goal could best be attained by continuous planning, followed by implementation. Both processes must involve the cooperation and collaboration of government, providers, and consumers of health services at the national, State, and local levels. After the work for this report was completed, Congress passed the National Health Planning and Resources Development Act of 1974, combining and strengthening the Comprehensive Health Planning Program, the Regional Medical Program, and the Hill-Burton Program.

Local planners and concerned citizens need norms for comparison as well as criteria to help in making local decisions. Planners, administrators, and legislators will need an overall picture of needs, resources, and progress.

To provide some of the data needed, particularly in rural areas, the Economic Research Service of the U.S. Department of Agriculture undertook a health research program. This profile is the first report developed from this research. One of its aims is to

improve understanding of the term "rural." Another is to compare the more rural areas with the more urban areas and national averages for CHP areas. Attention will also be focused on how well the more rural areas are participating in comprehensive health planning. A final, and perhaps most important function, of this research is to provide decisionmakers, planners, administrators, and concerned citizens with data they might not otherwise have the resources to obtain for themselves.

The Federal agency with the primary responsibility for the Nation's health is the Department of Health, Education, and Welfare. The Department of Agriculture also has a role. Many of its programs are concerned with promoting and preserving the conditions essential to good health. Furthermore, the Rural Development Act directs the Secretary of Agriculture "to provide leadership . . . for coordinating a nationwide rural development program . . ." Health status and the availability of health care delivery systems are of vital concern to rural people and rural communities.

The health problem, which is common to both rural and urban areas, may be divided into three parts: (1) *prevention*, involving the control of communicable diseases and the problems arising in the environment (pollution, housing, or safety); (2) *health care*, dealing with medical research, manpower, facilities, and the treatment of medical

problems; and (3) *support*, including planning, managerial expertise, data and computer backup, social services, and the health education of consumers.

The rural health problem is one of identifying uniquely rural characteristics and of modifying health problem solutions in light of these rural characteristics and needs. It may be divided into three parts: (1) adapting health care delivery systems to meet the needs of a sparse and dispersed population, often with transportation barriers; (2) making urban decisionmakers aware of rural problems, needs, and attitudes, so they will adequately provide for rural areas; and (3) reaching the rural population effectively to educate and motivate them to make the best use of the services provided.

This report provides data that may help solve some of these rural problems. It is prepared for four groups of users:

1. Planners at State, regional, and national levels who want a broad view for general evaluation purposes.
2. Local planners and decisionmakers who want to know how their areas compare with others and what other areas have similar problems.
3. Persons doing consulting, educational, and promotional work in the health field who want a ready reference.
4. Concerned citizens who want to know what the facts are, what to look for, and why.

A PROFILE OF

U.S. COMPREHENSIVE HEALTH PLANNING AREAS

by Jeannette Fitzwilliams, Economist
Economic Development Division
Economic Research Service

SUMMARY

The Comprehensive Health Planning (CHP) Program, with its multicounty approach, broad coverage of health topics, and its insistence on consumer participation, provides the rural population with an opportunity to make its needs known and to influence plans to solve health problems. Rural participation in this program is greater than might have been expected.

In May 1973, the 3,045 counties and independent cities of the United States (excluding those in the New England States and Alaska for statistical reasons) were divided among 416 CHP areas, according to State plans. Half of the CHP areas, covering half the land area, were in a so-called "funded" status. Seventy-eight percent of the population—89 percent of the urbanized area population, but only 64 percent of the rural resi-

dents—lived in CHP areas containing a 314(b) agency, an agency funded by the Appalachian Regional Commission, or an area where the health planning was being done by the State agency. Fewer of the more rural areas were "funded" and a disproportionate number had no areawide organization.

Every area but one had some rural residents. One-fifth of the total rural population lives in the 49 CHP areas containing all or a substantial portion of urbanized areas of 500,000 or more. A full range of health services is likely to be present in these areas but may not be equally accessible to their rural population (who average only 10 percent of the total). Nationwide, only 26.7 percent of the population is rural, although in 205 areas rural people equal or outnumber the rest of the population.

In addition to the 49 CHP areas with large urbanized areas of 500,000 or more, there are 147

areas with medium sized cities of 50,000 or more. Nearly 43 percent of the rural population lives in these areas. Of the remaining 220 areas, 207 had fewer than 300,000 people in the whole CHP area.

A large population base and a center containing a full range of health services are desirable for each CHP area. This suggests enlarging CHP areas to facilitate planning for essential services. However, in many cases, this would be possible only by encompassing a very large geographical area. This may make it difficult to achieve the goal of local decisionmaking. There are 165 areas that do not have a city of 50,000 or more within a 50-mile radius of the center of their area; 52 had none within a radius of 100 miles; 40 had none in adjoining areas.

The CHP areas containing urbanized areas of 500,000 or more and those in regions II, V, and IX had the greatest number of people and, therefore, the greatest number of people needing medical care. They cover relatively small geographic areas and, in terms of characteristics pertinent to the planning of health care delivery, are on the favorable side of the national average with regard to minorities, age of the population, income, infant deaths, and housing that is crowded or lacking in plumbing. The more rural areas are on the adverse side of the averages. Thus, it may be more difficult for them to provide and maintain adequate health care delivery. Usually, the smaller the largest city in the area, the more adverse the average. Regions IV, III, and VI (in that order) have the greatest number of CHP areas appearing on the lists of areas with potential problems.

CHARACTERIZATION OF CHP AREAS

The Comprehensive Health Planning (CHP) Program got underway as a result of the enactment of the Comprehensive Health Planning and Public

Health Services Amendments of 1966, followed by the Partnership for Health Amendments of 1967. Section 314(a) provided formula grants to the States for health planning at the State level and to coordinate, guide, and assist agencies at the local level. Section 314(b) provided funding for these local CHP agencies. This report focuses on the characteristics of local planning areas, with special attention to rural areas.

The CHP agency functions through its staff, its CHP council, and its various committees. Under the original law, the council is composed of providers and consumers, with consumers in the majority. Providers are those whose major occupations are providing, teaching, researching, administering, or financing health services. Consumers are all others. Today, elected public officials may be either, depending on their job. A CHP agency could come into being when area leaders formed a council and enlisted the support of all the component groups of the area. They would then have to obtain recognition by the State and apply for Section 314(b) funding. Composition of the council was one of the points most closely scrutinized in granting recognition or funding to an agency. The Council had to provide broad representation from consumer as well as provider groups. It was this that made the CHP agency of special value to the rural community. Through representation on the council and its component committees, the rural population could make its needs known.

While the CHP council and staff were organizing and getting to know the health agencies of the area, data were gathered and local needs and resources were assessed. The purpose of this was to develop a plan stating goals and priorities and translating them into objectives that could be accomplished within specified time periods. (In actual practice the small staffs were so busy organizing and reviewing proposals they had little time for planning.) The CHP agency itself was not intended to implement these plans. It was to act as a catalyst. Through its

power to review and comment, it could deter projects that did not fit into the plan.¹

Delineation of CHP Areas²

The 314(b) agencies covered only part of the country. Much of what we wanted to know concerned areas that had not achieved funded status. Therefore, the State CHP agencies were asked to report how their States would be divided into areas. Since it was believed that State agency delineations represented long-range plans while 314(b) funding represented the momentary situation, it was decided to follow the State agency delineation whenever the two differed. In some cases, the State agency was unable or unwilling to assign a county to an area. In that case, the author made an arbitrary assignment after examining the planning and development district boundaries and road patterns. Even in funded or well developed areas, not all counties had joined the council; in some cases, planning was being done as if they had joined.

The location and county composition of the CHP areas may be seen on the map in a pocket of the inside back cover. The delineations and organizational characteristics are as of May 1973. They represent the latest information available at the time the programmer was ready to retrieve the data. Some changes have occurred since then (particularly in Florida) but they would have little effect on data presented in this profile. A few copies of computer printouts of working data (organizational factors for each CHP area, plus data on each of the variables discussed in this profile—by the CHP area, counties making up the CHP area, and State) were given each State's agency and a limited number of others interested in these details.

¹The new National Health Planning and Resources Development Act of 1974 greatly improves the ability of the agency to plan and gives it funds to set implementation in motion. The actual implementation is still left to others.

²Alaska and the New England States are omitted because of statistical difficulties.

Area Type

CHP areas were characterized as SMSA³ only, mixed, and non-SMSA (table 1). A further distinction was made according to the size of the largest urbanized area: 500,000 and over, 250,000 to 500,000, 100,000 to 250,000, 50,000 to 100,000; and cities of 25,000 to 50,000, 10,000 to 25,000, or under 10,000.⁴

Only 25 "all SMSA" areas were found. The 14 largest are shown separately as "SMSA only" in the tables, but the 11 smaller ones were combined with the smaller mixed area types. Five were in the 250,000 to 500,000 and the 100,000 to 250,000 class, and one was in the 50,000 to 100,000 group.

The large SMSA areas are to be found in every region, but most are in regions II, V, and IX. However, only in region II are they over half the areas in the region. In regions III, IV, VII, VIII, and X, over half of the areas were non-SMSA only: Fifty-three percent of the CHP areas had no city as large as 50,000.

Congruence with Planning and Development Districts

Since planning is occurring in many fields, it is important that plans in one field do not conflict with plans in another. To improve coordination and reduce fragmentation and proliferation of projects, many Federal programs require review and comment by planning agencies before funding. To facilitate this, States have been encouraged to establish, by legislative or executive action, planning and development districts for general planning purposes. Most authorizations to set up CHP areas require that they conform to the planning and development dis-

³ A Standard Metropolitan Statistical Area (SMSA) is defined by the Census Bureau as a county or group of contiguous counties containing at least one central city or twin cities with at least 50,000 population.

⁴ The size of the urbanized area refers to the size of the largest SMSA city, not just that portion in a CHP area. Insignificant intrusions into a county were ignored.

Table 1—Number of CHP areas, by area type and region, May 1973

Area type	Region									Total
	II	III	IV	V	VI	VII	VIII	IX	X	
	Number

Types 6, 7, and 8	1	12	20	7	10	18	16	4	11	100
Total	4	11	20	14	14	13	11	6	8	100

⁵ Percentages may not add to 100 due to rounding.

strict boundaries unless major variations in health care patterns warrant exceptions.

When the 416 CHP areas were checked for congruence with these planning and development districts, it was found that:

285 or 69 percent were the same as 1 district.

30 or 7 percent were the same as 2 or more districts.

46 or 11 percent were similar to 1 or more districts.

55 or 13 percent were not similar.

The primary reason for the lack of similarity was that, at the date of comparison, the State had not determined boundaries for all its planning and development districts.

One beneficial byproduct of this high degree of congruence is that much of the data presented in this profile can also be used by those interested in planning in other fields such as housing, transportation, and any field where rural characteristics are important considerations for the planning process.

Formation Status

Formation status was determined for two reasons. First, we wanted to know whether rural areas and rural populations were sharing equitably in the CHP program. It was felt that their position along

the continuum from "undeveloped" to "in 314(b) planning status" would be one measure of this participation. Second, we wanted to prepare to measure progress and evaluate success. It was felt it would be misleading at some time in the future to compare an area that had just started with one that had been organized and operating for several years. It was quickly found that status as of the time of the study was the only feasible way of establishing a benchmark.

The original plan of study called for differentiation between 314(b) agencies in the planning or organizational stage, CHPs that were well developed but not yet funded, councils that were just starting to organize, and those areas that did not yet have a council. As answers came in from the State agencies, certain new classes had to be created. Most of the councils funded by the Appalachian Regional Commission were doing as much planning as many 314(b) agencies. They were given a separate code and included in the "funded" group. It was also found that certain councils would have to reorganize to conform to current State agency plans. Some would have to combine or expand to include additional counties; others were splitting into two or more areas. If any of the counties in the new area had been included in a 314(b) agency, then the whole of the new area was considered funded; otherwise, it was considered developing.

For Hawaii, Nevada, and Wyoming, the State agencies reported that, while subdivisions had been created for planning purposes, the planning always would be done by the State agency, with or without the assistance of a local council. (Hawaii later changed its mind.) These subareas were treated as CHP areas and considered funded, since planning was being done for them. Hereafter, this formation status is written "funded" to indicate that the classification includes more than just 314(b) agencies.

The formation status of the 416 CHP areas as of May 1973 was as follows:

- 111 in 314(b) planning status.
- 56 in 314(b) organizational status.

- 12 splitting or combining, with a 314(b) agency involved.
- 11 no 314(b) agency contemplated, planning done by State.
- 20 operational level with major source of funds from Appalachian Regional Commission or other Federal source.
- 210 "Funded" areas.

- 77 well developed.
- 3 splitting or expanding.
- 70 starting to develop.
- 150 developing areas.

56 undeveloped areas—no council formed.

Agency Type or Staffing Characteristics

Another characteristic closely related to formation status was agency type. This was principally concerned with who controlled the staff and whether there was a paid staff. It was felt that this, too, would be of importance in later evaluation of agency performance.

Initially, the distinction was made between CHP areas with paid staffs and those without. The latter might get some of their staff work done by the staff of the State agency or by volunteers—concerned citizens, businessmen and health personnel—including health planners who volunteered their own services or whose services were volunteered by their employers.

As data were assembled, it was necessary to distinguish between paid staff controlled by the CHP council and those controlled by councils of government or other planning and development district agencies. It was felt that the resources devoted to health planning and the direction that planning might take could be different in these two types of situations.

The question of outside control of health planning arose only when the staff was physically located with or paid by the other planning agency. If it were purely a housekeeping arrangement undertaken to minimize costs and facilitate the use of joint resources (such as data banks), the staff was

considered to be under the control of the CHP council. But, if staff direction came from the other planning agency and the CHP council played only the minimal role required by law, control was considered to be in the hands of the other planning agency.

The staffing of the 416 CHP agencies was as follows:

- 210 CHP councils controlled their own staffs.
- 84 Staffs were controlled by another planning agency.
- 66 CHP agencies relied on the State agency or volunteers.
- 56 CHP areas had no council or staffs.

Forty of the 84 staffs controlled by other planning districts were in region VI. Regions IV and III had 24 and 12 respectively. All of the areas in Arkansas and Texas, 9 out of 10 in South Carolina, and over half of those in Oklahoma, Virginia, and North Carolina were in this category. For some areas, lack of resources—financial and human—motivated in part the consolidation of planning operations. However, in Arkansas, Texas, and Oklahoma (as a group), the more urban oriented CHP areas outnumbered their rural counterparts 2 to 1.

A Bird's Eye View of CHP Progress

As of May 1973, half of the CHP areas covered in this report were "funded," 36 percent were developing, and only 13.5 percent were still undeveloped (table 2). The formation status of the land area of the 3,045 component counties was almost the same.

However, where it really counts—in terms of total population—the record is much better; 78 percent of the total population lived in a county included in an area with a "funded" agency.

The rural population lagged behind the population of the urbanized areas. However, considering the difficulties to be overcome, with 64.4 percent of the rural population living in "funded" areas, rural residents have fared reasonably well. A quarter resided in areas with developing councils, and only 10 percent lived in areas where no councils were

Table 2--Distribution of basic variables, by CHP formation status

Variable	"Funded"	Developing	Undeveloped	Total
	Percent			
Number of CHP areas, May 1973	50.5	36.1	13.5	100.0
Land area, 1967	50.7	35.1	14.2	100.0
Population, 1970	78.1	16.0	5.8	100.0
Urbanized area	89.1	8.3	2.6	100.0
Rural	64.4	25.8	9.8	100.0
Minority	76.8	15.7	7.5	100.0
Under 20 years of age	77.6	16.3	6.4	100.0
20-64 years of age	78.7	15.7	5.7	100.0
Over 64 years of age	77.4	16.7	5.9	100.0
Poor ¹	72.2	19.5	8.3	100.0
In housing ²				
Lacking plumbing	62.0	25.4	12.6	100.0
Crowded and lacking plumbing	57.6	27.0	15.4	100.0
Aggregate money income, 1969	80.7	14.2	5.1	100.0
Infants, annual average 1966-68:				
Births	77.7	16.1	6.2	100.0
Deaths under 28 days	77.1	16.2	6.7	100.0
Deaths under 1 year of age	76.3	16.5	7.2	100.0
Housing units, 1970 ³	78.7	15.7	5.6	100.0
Crowded	76.5	16.5	6.9	100.0
Lacking plumbing	65.5	23.7	10.8	100.0
Crowded and lacking plumbing	59.4	26.1	14.5	100.0
Without access to a phone	73.9	17.9	8.2	100.0

¹ Below the poverty line as defined for 1970 Census. ² Crowded means more than one person per room of occupied housing unit. Lacking plumbing means one or more of the following: 1) lack piped hot water and/or cold water, 2) lack toilet or bathing facilities, or 3) have toilet and bathing facilities used by occupants of another unit.

Sources: (1) (2) (3)

forming. (This 10 percent represents 5 million rural people.)

While the proportion of births by formation status is approximately the same as for the population as a whole, there is a somewhat higher percentage of deaths among infants under 1 year of age in undeveloped areas.

Plan of the Profile

The rest of the profile will be devoted to a more detailed discussion of the variables listed in table 2. The significance of each variable for health planning will be explained in turn and the main features pointed out. Two types of tabular information will be presented for each variable: (1) CHP area aver-

ages and (2) the number of CHP areas that deviate widely from the national average. Tables showing deviations will also indicate the number of CHP areas appearing on prior lists of extremes. In essence, this second type of table will indicate potential-problem areas.

The final section of the profile will summarize the situation for those areas with populations over half rural.

Each table will give the national averages or totals for the United States, excluding the New England States (region I) and Alaska (in region X). The data will be further broken down by region and by area type. There are great variations between regions and also between area types. It will become increasingly clear that there is no one type of rural community and, therefore, there is no such thing as *the* rural health problem or *the* solution to any one problem.

TOTAL POPULATION AND LAND AREA

The first thing a planner wants to know about his area is total population. This gives him the first crude approximation of the number of doctors, dentists, hospital beds, and other kinds of medical and support services the area will need. But population must be considered in relation to total land area (table 3). A large population in a small area permits large-scale institutional organization of health services, enabling economies of scale to be fully realized. Auxiliary services may be readily available. Persons needing medical help will find it relatively near in terms of miles and time. Transportation is likely to be available. This situation will usually face the planner in region II. On the other hand, a small population scattered over a large area may mean many small, struggling hospitals, doctors without the supporting services they need, and patients having to travel great distances to get help. This is likely to occur in region VIII or non-SMSA only CHP areas.

CHP areas come in all shapes, and the population center may be anywhere within the area. Thus, in some small areas, the distance from one corner of the area to a major hospital with specialized equipment may be over 100 miles.

The smallest area, the New York City Comprehensive Health Planning Agency with only 300 square miles, has the largest population (8 million). The largest area with a local council is in eastern Montana with 47,852 square miles for approximately 93,000 residents. The Nevada State agency

plans for an area of just over 102,000 square miles—nearly the whole State—containing 215,450 people.

For a better understanding of the facts presented in the remainder of the profile, see table 3. Perhaps the most important item is the concentration of population in the CHP areas containing all or part of the largest SMSAs. Fifty-two percent of the total population lives in these 49 areas. In contrast, 16 percent of the population lives in the 220 areas with small cities only, but covering 55 percent of the land area. The average density for non-SMSA only

type areas is well below 50 persons per square mile. Note, too, the varied distribution of population among the regions. Region V has nearly a fourth of the total population. Region IV is the next largest.

The average population for all CHP areas is 459,303. This figure is greatly influenced by the 49 highly urbanized areas (table 4). Only 90 of the 416 areas delineated for this study met the 500,000 figure called for in P.L. 93-641. Only 27 more are in the 400,000 to 500,000 group. But at the other end of the scale are 93 areas with fewer than 100,000 residents—all in areas where the largest city is under 50,000. Of these, 26 cover 10,000 or more square miles. In all there are 75 territorially large areas—42 of them in regions VI and VIII.

There are many reasons why it is desirable for a CHP area to have a large population. First, there are economies of scale in the planning process itself. Second, planning should be for a full range of medical services. This is most easily done if the area itself is large enough to support a full range of medical services and does in fact contain not only facilities for secondary care but also most of the very highly specialized services usually referred to as tertiary care. (A rule-of-thumb sets 100,000 as the minimum population base needed to support many of the more common treatments.) A third reason is that a large population usually implies one or more large urban centers providing not only the local tax base but also the nonmedical expertise and support services needed for efficient operation of a medical delivery system.

However, there are disadvantages of size as regards both population and territory. If the population or the territory is very large, the number of facilities that must be studied and reviewed in the planning process may become very large, and keeping in contact with all of the provider and consumer groups becomes a problem. Of particular importance to rural communities is the fact that as the CHP increases in size, they may find difficulty in

Table 3—Land area, population, and density: Average characteristics of CHP areas, 1970

Regions and area types	All CHP areas ¹	Land area		Population		Density	
		Average sq. mi.	Share	Average	Share	Weighted	Un-weighted
	Number	Number	Percent	Number	Percent	People/sq. mi.	People/sq. mi.

winning a seat on the council or in finding a representative able to attend meetings. Unfortunately, existing population distributions frequently do not conform to optimum conditions for planning or delivering health care. The uniquely rural aspect of the health problem is how best to overcome difficulties inherent in geographic characteristics and population dispersion.

Two often related conditions of population and territorial size that pose particularly difficult problems for planners are reflected only indirectly in the accompanying tables. They are seasonality and geographic barriers. The population figures come from the 1970 census and represent the resident population as of April. Tourist and convention centers like New York, Miami, Chicago, San Francisco, and Los Angeles have large transient populations all year, with an especially heavy influx of tourists at certain seasons. Beach, skiing, and mountain resorts or areas containing national parks or forests can expect a great increase in population for weekends or for certain limited periods each year. For places like New York, where the transient population is fairly constant or predictable in size and is small in relation to the resident population, no great problem is presented, since the demand for health services by transients is adequately reflected in past use statistics and the supply of health personnel and facilities is above average.

The situation is very different for recreation-oriented areas. Population on any one day is often not only unpredictable, but may be a multiple of the resident population. Therefore, demand can be large in relation to services required by the resident population. Furthermore, the nature of the recreational activities is likely to cause an unpredictable demand for emergency service, particularly on weekends. Planners must cope both with the problems of providing facilities and personnel for only limited periods of the year and providing that service in what are usually considered "off-duty" hours.

Geographic factors beyond size of area may affect patterns of transportation, consumption, and

communication. The most common barriers are mountains and rivers. Both increase the time required to reach or provide medical help. Roads may be impassable for long periods of time. Mountainous areas with sparse, widely dispersed populations are often the locale for accident-prone industries such as logging and mining. Today, they are often the Mecca for the vacation-bound tourist.

RURAL AND URBANIZED AREA RESIDENTS

When a health planner, administrator, or legislator looks at population data, one of the first things he asks himself is, "Where are the rural and urbanized areas located?" He then evaluates this information.

What does this distribution mean in terms of (1) accessibility to health care, (2) manpower and facilities needed and type of health care delivery system that can be used, and (3) the allocation of resources among communities? If he is responsible for the organization of the council or is concerned with rural problems, he may also be concerned with the ability of the rural residents to make their influence felt. Policymakers must consider the extent and type of dispersion that exists, what it implies for the decisions they have to make, and the probability they will be successful in achieving their goals.

The Overall View

As is to be expected, 75 percent of the people who live in the central cities and their surrounding suburbs are to be found in those areas containing the largest SMSA cities (table 5). What is perhaps less expected is that one-fifth of the rural population is also found in these same areas. Of the remaining rural population, 42.8 percent is distributed to CHP areas with smaller SMSAs, with only 36.8 percent living in CHP areas where the largest city is less than 50,000. Rural residents—

those living in the country or places of under 2,500—are to be found in every CHP area except the New York City area. It is common practice to use "nonmetropolitan," meaning non-SMSA, as a synonym for rural. However, it should be remembered that 30 percent of those the 1970 Decennial Census calls "rural residents" live in the SMSA counties. Recent additions to the SMSA list have raised this figure to 38 percent.

In tables in this report, when rates or percentages are given, both the weighted and unweighted averages are shown. Perhaps the reason for this can best be understood in relation to "percentage rural." If the percentage rural in each CHP area is multiplied by the total population for each area, the total number of rural residents will be obtained—50.9 million. If this 50.9 million is divided by the 191.0 million for the total population covered by this report, the answer is 26.7 percent. This is a weighted average since the size of the population in each area is taken into consideration. But 52 percent of the total population lives in the type of area where the weighted average for the rural population is very low—5.3 and 13.9 percent respectively. When problems concerning all CHP areas are being considered, the unweighted average, obtained by adding the percentages for each CHP area and dividing by the number of areas, may be more meaningful. The "all CHP area" unweighted average for percentage rural is 47.2 percent; 205 of the 416 CHP areas are at least half rural. When the areas are disaggregated by area type, differences between the weighted and unweighted averages are small. Within regions, the differences can be sizeable, principally because of the presence of one or more of the large SMSAs (table 1).

Areas With Large Centers of Population

Lacking more specific information, for this study it was assumed that specialized medical equipment and personnel would most likely be found in CHP areas with large centers of population. There are some areas with cities near the 50,000 population

Table 5—Urbanized area and rural residents: Average characteristics of CHP areas, 1970

Source: (3)

level that find it hard to attract and hold the necessary health personnel and to provide adequate facilities and supporting services. But, there are exceptions. Rochester, Minnesota, (home of the Mayo Clinic) only recently became an SMSA. The University of Virginia Medical School is at Charlottesville, a city of about 39,000. Sayre, Pennsylvania, a town of only 7,500—but the largest in the

county—has a hospital and clinic serving 65 doctors representing 28 areas of specialty care. However, such adequate service is rarely achieved over night. The Sayre situation is due to the foresight of a new chief surgeon 60 years ago.

Looking at the percentage of the population living in urbanized areas, what suppositions can be made as to the types of rural problems likely to be

encountered? If the percentage is very high, the rest of the population (rural or from small cities) may have difficulty making their views known and in receiving a share of scarce funds which may be allocated instead to majority groups. Even if the urbanized area percentage is low, those who live outside cities may find it difficult to compete for health services on an equal footing with those who live in smaller towns. This could be particularly true with regard to auxiliary services, such as transportation and home health care.

Furthermore, the relative size of the three types of population—urbanized area, other urban, and rural—coupled with the territorial size of the area can suggest whether the rural population is distributed more or less evenly throughout the area. This, in turn, will affect decisions as to the number, type, and location of health personnel and facilities. Where the dispersion is great, more health personnel and more (but smaller) facilities may be needed for points of access and secondary care to compensate for additional travel time incurred both by patient and doctor.

There are 196 CHP areas containing all or a major part of an SMSA (table 6). This number is distributed among large and small SMSA area types by percentage of population living in urbanized areas as follows:

	Large SMSA area type	Small SMSA area type
70 percent or more	39	18
50-70 percent	7	37
30-50 percent	3	60
0-30 percent	0	32

Planners would also be interested in knowing in how many of these areas the rural population exceeded half the rest of the population. Reading down the first column, (large SMSA area type) the answer is 32, 7, 3, 0, and down the second column it is 13, 35, 54, 32.

A further breakdown of areas with the greatest concentration of urbanized area population is given

Sources: (1) (3)

In table 6, it will be noted that 24 of the areas contained under 3,000 square miles. Visual inspection of a map showing SMSA city sprawl reveals that for 12 areas the urbanized area covered at least half of

the total CHP area.

The reason for the high concentration of urbanized area population in some areas may be geographic. Several of the big cities, particularly in the

West, lie in narrow valleys or arid areas where natural conditions historically limited the territorial expansion of the population. In these areas and in the 23 very small CHP areas with large cities, there maybe some question as to whether those who live in the country should really be included in the rural population. This consideration may render more valid the assumption that metropolitan residence may be equated with living in an SMSA county even though such counties contain 30 percent of the rural population as defined by the Census Bureau, i.e., those living in the country or in places of under 2,500.

In those areas where the total population is highly concentrated, availability of health personnel and facilities should be good. The large number of people to be served should enable hospitals to take advantage of economies of size. It should also facilitate the sharing of services (such as laundry and purchasing of supplies) to reduce costs. For patients living outside the central city, accessibility to medical services should be relatively good. Practitioners located outside the central city should also find their support facilities readily available.

But table 6 also shows seven areas covering 10,000 square miles or more. Thus, a CHP area involving a large SMSA provides no guarantee that planners will not be faced by the same problems that face so many of the CHP areas in the non-SMSA group. Somewhere in that area, people will be far removed from necessary levels of care and even primary access. Many more will be found in the intermediate sized areas, particularly if the large city is in a corner of the planning area. Even quite close to a big city, there may be communities where, due to poverty, age, or lack of transportation, innovations will be required to provide more adequate medical care to the rural population. Where over half of the remaining population lives in towns, it may be easier to provide service that will meet acceptable goals (such as that the majority of the community's population should be within a certain number of minutes of medical help).

Areas with over 200,000 rural residents

Seventeen of the CHP areas, where 70 percent of the population lives in urbanized areas, are also among the '68 with the largest number of rural residents (table 7). The Pittsburgh area had the largest number—934,714. In the eight areas where rural residents live in geographically small CHP areas containing large SMSA's, it is doubtful if many would fall within our earlier definition of those with rural health problems, i.e., a sparse and widely dispersed population. On the other hand, those living in the 11 CHP areas covering 10,000 or more square miles may, indeed, be widely dispersed.

Nearly all of the areas with large numbers of rural residents are in regions II-V, the eastern half of the country. Nineteen of the 20 that are also at least half rural are also in the East. Only 16 of the 68 have fewer than 20 percent rural residents. Therefore, in most of these areas, the rural population should have a good chance of making their needs known and receiving their share of the funds available for health-related purposes.

The presence of a population center in all but 11 of the 68 areas with large rural populations suggests that planners will have less difficulty in assuring a full range of services for all residents in these areas. Furthermore, large total population numbers—26 CHP areas have over 500,000 inhabitants—mean that the per capita cost of planning can be relatively low and many of the facilities can be large enough to take full advantage of economies of size.

The More Rural Areas

Hereafter in this report, two classifications will be used to draw attention to the more rural CHP areas: (1) areas that do not contain a large city or have one right on their border, and (2) areas where at least half of the residents are rural (commonly called over half rural). There are 205 CHP areas in the latter category (table 8). Of these, 175 are also non-SMSA only area types. Twenty of the CHP areas included in table 7 are over half rural, but only 11 are non-SMSA only.

To a large city resident, a town of under 10,000 may seem very rural. Many laws providing rural programs specify that towns of up to 10,000 (sometimes larger) are eligible. From the point of view of health care, it is not so much the size of the town itself but the size of the health community it serves; i.e., are there other small towns or people living in the country not too far away who look to the doctors, hospitals, and clinics in the town for their medical care? Many of the more rural CHP areas have but one city of 10,000 or more. Few of these towns are close to each other. In 45 areas, over half of the residents live in towns.

Since 100,000 is generally considered the minimum population base needed to support many types of specialized equipment, residents of many of these more rural communities may have to travel a considerable distance to get the service they need. It will be noted that 73 of the CHP areas (41 of them 50 to 70 percent rural, 32 even more rural, and all non-SMSA in type) do not even have 100,000 inhabitants in the whole CHP area. Hospitals and other facilities in such areas may have difficulty staying open. Planners may have to go to adjacent CHP areas to secure full services for their areas. Among the non-SMSA CHP areas, there are 29 over half rural and 20 under half rural areas covering over 10,000 square miles. They must go far afield to secure those specialized medical services that require an even larger population base in order to have a frequency of use that will keep the medical team at an acceptable level of proficiency and cover the capital and operating costs of the equipment while charging a price patients can afford.

Even providing primary access to medical care will pose problems for many planners. Areas that have larger and more compact health service communities may be able to continue to provide initial and ambulatory care in the traditional manner. Where distances result in above-average travel time for the doctor (either to visit bedridden or hospitalized patients or to meet continuing educa-

tional needs), planners may wish to provide more doctors for a given number of people. However, it may be impossible to attract additional doctors. In that case, other methods will have to be devised to alleviate the burden on rural doctors. In some areas, a system of "stand-ins" may permit doctors to get away for a rest or time to attend a course without depriving patients of professional services. Another method would be to provide paraprofessional assistance so physicians can effectively serve a greater number of patients.

Still another alternative would be to set up clinics staffed by part-time or rotating doctors and paraprofessional staff. Doctors would supervise all care and deal with the more complicated cases but leave more routine treatments to physician extenders or nurse practitioners.

A resident doctor is not always the answer to the problem. In many of the remote communities the first contact is now made with a nurse practitioner who handles each case in accordance with instructions (standing orders and protocols) prepared by the supervising physician. The doctor, who may be some distance away, sees the patients only when the medical problem warrants such attention or when the patient desires it. In very remote areas, the physician extender, in addition to getting additional training, will sometimes be provided with specialized communication and television equipment that enables a doctor to diagnose the problem and order a course of treatment.

Of the 220 non-SMSA only CHP areas, 122 were in "funded" or developing status with paid staffs. Part of the job of such a staff is to advise communities as to the options open to them and to give them the technical assistance they need in their efforts to get primary care and to establish linkages with the hospitals, nursing homes, and specialists required for other types of care. However, as of May 1973, there were 56 potential CHP areas—43 of them non-SMSA only—that did not have even a council to assist in this task.

MINORITIES

When an area has either a large number or high proportion of minority residents, the council, staff, and advisory committees may face special health planning problems. For instance, sickle cell anemia particularly affects Blacks. Therefore, in communities with many Blacks, the health plan might call for an educational and screening program, coupled with treatment and counseling for those with the disease and their families. However, while some health problems are associated with certain ethnic groups, health is more often related to living conditions.

While many of the legal barriers to access to health care have been removed in recent years, attitudes and habits ingrained over a lifetime are slower to change. Special efforts may be needed by the council and staff to (1) develop meaningful participation by minority groups in the planning process; (2) overcome any educational gaps that may result in minority groups not knowing how and when to use the health services provided, and (3) change personal attitudes and organizational procedures to encourage minority patients to utilize the services provided once they become aware of the need for such service.

Furthermore, a long history of low incomes and the concentration of minorities in areas of sub-standard housing—with the resultant effects of malnutrition, poor hygiene, and a past history of medical neglect—may necessitate not only a high priority for programs to improve the living environment but also a greater than average medical staff per 1,000 population and a longer than average hospital stay.

Over a quarter of the study area's minority residents live in region IV (table 9). This region also has the highest proportion of its population belonging to minority groups. While region V has the second largest number of minority residents, they are but a small fraction of the total population, with very few living in the more rural areas. On the other hand, region IX has relatively few minority inhabi-

tants, but the unweighted average for region IX CHP areas is 19.3 percent—principally due to the very high percentage of minorities in Hawaiian areas.

There are 65 CHP areas where the percentage of minority residents deviates widely from the all-area average (table 10). Forty of them are in region IV; 10 or less are in regions III, VI, and IX; none are in the other regions.

Fifty-seven percent of all minority group members are in the CHP areas with the largest population centers. While these areas have a slightly higher

proportion of minorities, there is little difference between the averages for the various area types. Areas with a quarter or more of their residents belonging to minority groups (about twice the national average) are to be found in all area types. However, it is noticeable that 39 of the 65 are also half rural and 33 of them are non-SMSA type areas.

The concentration of large numbers of minority residents consists preponderantly of Blacks or, in region IX (and to a lesser extent in region X) of large numbers of Asians and Polynesians. However,

there is one small minority group that is important for planning purposes out of proportion to its number: American Indians. In 1970, no State had as many as 100,000. Yet, in New Mexico, Montana, North and South Dakota, Wyoming, and Arizona, Indians constituted over half of the minority population and in Minnesota, Oklahoma, Utah, Idaho, Oregon, and Washington, over a fifth. Because of their concentration on reservations they are also significant groups for CHP areas in North Carolina, Michigan, Nebraska, California, and Nevada. The Indian Health Service and certain Federal health programs are charged with health care of the Indians and many areas have manpower and facilities exclusively for their use. This provides not only special resources and sources of funds, but calls for close cooperation with other agencies in planning for the overall health of an area.

AGE GROUPS

The age distribution of residents of a CHP area is of primary importance to a health planner for at least three reasons: (1) There is a close association between age and ill health; (2) different ages require different types of service; and (3) the age distribution will affect the method of financing health programs and the ability of the community and the individual to pay for such programs and service.

In recent years, the National Center for Health Statistics has conducted a series of national health interviews showing age patterns for acute and chronic conditions. The number of acute conditions reported per 100 persons per year for 1969-70 declined steadily from 347 for children under 6, to 193 for those 17 to 44, to 123 for those over 45. In each age group, farm residents of non-SMSA counties reported far fewer acute conditions than SMSA residents. Nonfarm residents reported the lowest rate of those under 6, the highest for those over 45, and only a slightly lower rate than the SMSA residents for the other age groups. With 40.9 percent of their population under 20, region VII

areas had the highest average for the young, with region IV next, at 39.4 percent (table 11). By area type, the largest SMSA areas had the smallest proportion of young people, but otherwise there was no discernible pattern.

The percentage of the population reporting a limitation of activity due to chronic health conditions moved in the opposite direction for the Nation as a whole. It rose sharply from 2.7 percent for those under 17 to 7.6 percent for those 17 to 44, to 19.5 percent for those beyond middle age, and then more than doubled again to 42.3 percent for those 65 and over. Under age 45, residence made very little difference, though SMSA counties had a slightly lower percentage; after age 65, the non-SMSA percentages of those with limitations were higher—about 40 percent in SMSA counties versus 46 percent non-SMSA ones. Areas of region VII had by far the highest percentages of old people and region IX the lowest. By area type, the percentage of those age 65 and over increased almost steadily as the size of the largest city declined.

The Young

When an area has a very young population, planners can expect above-average demand for certain types of specialties and services—pediatricians, obstetricians, and services associated with acute illnesses, both ambulatory and requiring inpatient care. The national health survey for 1969 showed that 75 percent of physician visits were for diagnosis and treatment, with slightly more visits for acute conditions than chronic conditions. An additional 8 percent were for pre- and post-natal care or immunization and vaccination—both closely related to child and maternal care.

The unweighted average percentage of the population under 20 is 38.7 percent. For most of the variables discussed in this report, there was a great deal of difference in numbers and percentages from area to area. Not only did the averages differ from region to region or area type to area type, but they also differed within a region or area

type where there could be a wide spread between the largest and smallest figures. This is not the case for the age characteristic. For the young, there are only 53 CHP areas where the percentage is 42 or greater (table 12). However, 35 of these had no city larger than 50,000 and 30 were over half rural. Some may have difficulty providing adequate services for the young—either because they cover over 10,000 square miles, or because they have fewer than 100,000 inhabitants. A few suffer from both problems.

However, some of these 53 areas may be on the list because they contain large institutions (colleges and military installations) with many under age 20. These institutions may be a resource for the area, either because they provide their own medical services or because they have expertise that the planning staff and medical institutions need.

There are 65 CHP areas with relatively few young people, many of them in regions VI and VII. Twenty-nine are over half rural and 39 are non-SMSA only. In the 43 CHP areas also having an unusually high proportion of the aged, there will be a particular need for planners to project the future age distribution. They may want to consider adapting excess capacity for child and maternal care to care for the aged.

The Aged

On the average, 10.7 percent of the residents of the CHP areas were age 65 or over. Again, there is a good deal of uniformity from area to area, and the amount of the deviation from the average is relatively small. Fifty-nine of the CHP areas had less than 8 percent of their residents in this age category (table 13). This would indicate that the demand for types of care needed by older people would be relatively small. However, a small percentage coupled with a small population may mean that the aged are so few that it is difficult to economically provide the services they need. Thirteen of the 59 areas are half rural and 19 are non-SMSA only.

Sources: (1) (3)

There are 67 CHP areas—50 of them non-SMSA only—where the aged were 13.5 percent or more of the population. In these areas, there will be an above average need for doctors and hospital beds for diseases that are more prevalent among the aged. Since diseases of the aged are largely chronic, there will be a relatively high demand for nursing homes, for facilities providing ambulatory care, and for home health services such as a visiting nurse. In addition to these primarily health care services, there may be a high priority need for auxiliary services (such as transportation to get the aged to and from the clinic or doctor). Hot meals or home aid services to do the marketing or repair the house may be necessary to maintain good health while the aged continue to live at home. Such services may have to be planned for as part of comprehensive health planning or in close cooperation with non-health programs for the aged.

Age and the Ability to Pay

Some people continue working full time into their seventies. But most retire by 65 and the retirement age is steadily dropping. Not only does income then drop sharply, but the retirees become very vulnerable to rising prices, whether due to general inflation or increasing medical costs. On the other hand, medicare, and other programs for the aged help assure basic minimum health costs will be met when aged individuals are ill. Furthermore, if plans are well drawn and the CHP agency can raise matching funds, planners may find it easier to obtain Federal assistance for programs related to the aged than for many other types of health care improvements.

While some of those under age 20 are employed, few earn enough to pay for the full cost of the goods and services they consume. The years 20 to 64 are the most productive years when men and many women work to produce the goods and services consumed not only by themselves and their families but by others as well. Thus, provided there is no maladjustment in the local economy, a CHP area with a high proportion of its population in the

working years is in a better position to support improvements in the health care delivery system than other areas. One way of looking at this is to study the ratio of dependents (the young and the old) to those 20 to 64 years of age. In regions VIII, VII, and VI (listed in the order of the size of the ratios), the number of dependents exceed those in the productive years. In region VIII, this is due to the high number of young people. In region VII, it is due to the high number of older people. In region VI, it is due to the high proportion of both young and old. On the average, CHP areas with large cities have relatively few dependents; areas with cities of 25,000-100,000 have barely fewer dependents than producers, but those without even a town of 10,000 have a very high proportion of dependents.

ABILITY OF AREA TO FINANCE HEALTH SERVICES

An even better way to evaluate the ability of an area to pay for improvements to health is to look at estimates of income and poverty. It will be noted in table 14 that the most populous regions have the highest per capita incomes and, therefore, have an even larger share of aggregate income. Average per capita income declines as area type becomes more rural, though areas with very small SMSA cities and large non-SMSA cities have about the same per capita incomes. Nearly 60 percent of aggregate income is received by inhabitants of the 49 areas with the largest urbanized areas. This explains the great difference between the weighted and unweighted averages.

When numbers of poor people rather than numbers of dollars are considered, regions IV and V reverse places, with over a quarter of the poor being found in region IV. By area type, the pattern for the average percentage of poor is the reverse of the pattern for per capita income. This, taken in combination with the pattern for variables discussed in this report, suggests that areas with the least

resources available often have the greatest need to improve health and health services.

Cost is one of the biggest problems facing a comprehensive health planning council and staff. Not only do they have to ask what measures can be recommended to contain costs; at the community level, they also have to ask the following: How much health care can the area afford? Where is the money coming from to cover capital expenses and start-up costs? Can matching funds be raised to obtain federal funding? Can a desirable service be made self-supporting? At the personal level, they must ask these questions: How many people can pay for the services they need? How will they do this—directly by payments to doctors or hospitals or indirectly through premiums paid to insurance companies or Social Security (Medicare) or through prepayment made to health maintenance organizations?

Data presented here provide only a clue; to obtain more complete answers, planners need to know the wealth of a community, the size of its tax base, and the extent of alternative demands on its resources. Some knowledge is needed of the extent of insurance, Medicare and Medicaid coverage, and of the extent to which free services are now supported by public or private groups. Such support may come from direct contributions to cover the capital or operating costs of facilities or as a byproduct of training and research projects that help cover patient costs.

Large populations require large health care establishments. Often, sheer size has its advantages: economies are associated with the size of a facility or practice. Large operations often offer greater opportunities for cost cutting through improving efficiency. Additional funds for high priority jobs can often be squeezed out of large budgets by cutting less essential programs. If per capita incomes are high, it is easier to get contributions from businesses and individuals.

Every region has at least one high income CHP area, and regions II, V, and IX have eight or more

¹ This is the CHP area average of all money income of all persons 14 and over whether they were in families, unrelated individuals, students in dormitories, servicemen in barracks, or inmates in institutions. ² Census did not compute a poverty status for students in dormitories, servicemen in barracks, or inmates of institutions. The Percentage is taken of total population.

Source: (3)

(table 15). Only one of the 41 is a non-SMSA only area type; only six were not "funded" in May of 1973.

By way of contrast, none of the almost equal number of CHP areas with per capita incomes of under \$2,000 have an urbanized area larger than 100,000. Only 19 are "funded," while 12 have no

councils. Yet most of these areas, because of their dispersed populations (38 are over half rural), will find it costs more to provide the same quantity and quality of care. Additional expenditures will be needed to overcome travel barriers.

In addition to the 43 areas where per capita income is under \$2,000, data for table 16 indicate

there are 31 others where a fourth of the population is below the poverty line (defined as the minimum amount a family should spend for food in relation to its total income, depending on the size of the family, its residence and—in the case of one- and two-person families—the age and sex of the head). Medicaid will help, but in these 74 areas, the problem of how individuals and communities are going to pay for medical care will be particularly acute. Most of these areas are non-SMSA only or over half rural. Over half have a high percentage of minority groups, and 24 have an unusually high percentage of young people. Surprisingly, in view of the close association between poverty and old age, very few of these low-income areas have high percentages of aged people. Actually, such areas are about equally divided above and below the poverty average.

No one knows the exact extent and nature of health insurance coverage in rural areas. But it is believed to be below average because of the high proportion of self-employed and small enterprises in rural areas. Neither is conducive to providing opportunities for group insurance. Therefore, under a national health insurance program, not only would the benefits be potentially greater in rural areas but the stresses would also be greater there. Current analyses of health care costs emphasize the need to shift treatment patterns from inpatient hospital care to the less expensive ambulatory care. Most personal health insurance benefit packages include this type of coverage. It is in this area that the greatest increase in demand is likely to come, since relatively few policies now give this type of coverage. It is this kind of care that rural areas often find most difficult to provide.

INFANT BIRTHS AND DEATHS

Socioeconomic vs. Health-related Data

Up to now the characteristics considered can only indirectly be influenced by health planning. Healthy persons may be able to earn more money

and employers may be attracted to communities with good health services, thereby causing changes in per capita income, age distribution, and even residence.

On the other hand, it is the responsibility of health planners (council and staff) to try to stimulate changes in the variables about to be discussed—infant mortality, poor housing and lack of phones. As a result of their efforts, improvements in the quality, the quantity, or the accessibility of health care services may cut infant mortality rates. Perhaps, equally important with the improvement in service is the improvement in the use of pre- and post-natal care resulting from the consumer health educational programs that the council helped get started.

Malnutrition and unsanitary housing are closely associated with high infant mortality. Lack of access to phones is a barrier to obtaining health care. As expressed by Congress, it is the goal of the comprehensive health planning program to "assure the highest level of health attainable for every person in an environment which contributes to healthful individual and family living." One measure of the success of CHP agencies and the programs they generate will be the extent to which environmental hazards to health are reduced or indices such as infant mortality rates are improved.

Infant Mortality Rates

The infant death rate is frequently cited as one of the best indices of an area's health. To a large extent, this is probably because it is one of the few readily available indices for small geographic areas. The infant mortality rate is measured by a ratio of deaths of children under 1 year of age to total live births. The neonatal death rate is the rate of deaths of infants under 28 days to total live births. Data on both births and deaths are collected annually by the same agency, so that both numerator and divisor are readily available for the same time frame and for the same geographic locality. Other mortality statistics also have to be converted to rates, but using popula-

tion figures as the divisor. Unfortunately, accurate population estimates are not always available for small areas between census enumerations.

Data presented in tables 17 and 18 can be used in two ways. One is to look at the figures to grasp the magnitude of the problems involved. How many births and deaths are there? Therefore, what is the probable need for hospital beds, obstetricians, and pediatricians? Where is this need high in relation to total population? Where should child and maternal care be given high priority?

The greatest numbers of births and deaths are found in CHP areas with the greatest populations: Those in regions II, IX, and V (in order of average area births) and in the areas with the biggest urbanized area populations. Relatively, the regions with the greatest problems are IV, III, and VI, in that order. By area type, infant mortality rates fall into three distinct groups. CHP areas with large urbanized areas of 250,000 or more population hover around 22 infant deaths per 1,000 live births; smaller urbanized area CHPs are around 23 per

1,000 and non-SMSA CHP areas are around 24 per 1,000.

Some people might try to use these figures to evaluate service. One conclusion that may not legitimately be drawn from these data is that medical service in those areas is inferior. Infant mortality rates are closely associated with malnutrition, ignorance, and unsanitary housing conditions. These conditions, rather than the quality of the medical care, may be at fault.

It was earlier pointed out that part of the rural health problem was to overcome transportation barriers and to reach people who needed medical services so that they were aware of this need and knew how to use the service. In considering the 66 areas with the highest infant death rates, these facts should be borne in mind: 46 of the areas are over half rural, 41 have high rates of poverty, only 18 are "funded", and 19 have no council to plan improvements (table 18).

POOR HOUSING

Poor housing often has a deleterious effect on health. Many conditions may be defined as poor housing. The house can be damp, drafty, inadequately heated, seriously dilapidated, crowded, or lacking in plumbing. This report deals with two conditions easily identified from the 1970 census: crowded; or lacking plumbing, or a combination of the two (table 19).

Crowded Units

An overcrowded unit is defined as one with more than one person per room. There are 59.7 million housing units in the study area, with the greatest numbers being found in regions V, IV, and II. Five million of them are crowded, with 55 percent of them in regions IV, V, and VI. By area type the average percentage crowded tends to rise as CHPs become less urbanized. However, areas with small SMSAs and medium or large sized towns have about

the same percentage. The average proportion rises one point for areas with no town as large as 10,000.

While the average CHP area reported overcrowding in 9.5 percent of its occupied housing, there were 63 areas where 13 percent or more of the housing units were crowded (table 20). Of the 46 non-SMSA areas, 44 were over half rural. In 29 of the areas, over half the heads of crowded households were Blacks. As might be expected, 36 were in CHP areas with a high proportion of children.

Units Lacking Plumbing or Both Crowded and Lacking Plumbing

There are 3.6 million housing units lacking plumbing in the study area. Of these, 0.7 million are both crowded and lack plumbing. Nearly 11 million people live in these houses with potential health hazards. A unit lacking plumbing is defined by Census as one characterized by one or more of the following conditions: (1) lacking piped hot water and/or cold water, (2) lacking toilet or bathing facilities, or (3) with toilet and bathing facilities used by occupants of another unit.

The region with the highest percentages of housing units lacking in plumbing is IV, with VI and III vying for second place (table 19). By area type, the percentage climbs steeply and steadily from 2.2 percent for SMSA only areas with largest urbanized area 500,000 and over to 16.9 percent (19.4 weighted) for non-SMSA only areas with no town as large as 10,000.

Six percent of all housing in the study area lacked plumbing; the unweighted average for all CHP areas was 10.6 percent. The difference is due to the concentration of housing in the few areas with low percentages. There were 58 CHP areas where 20 percent or more of the houses lacked plumbing (table 21). All but 4 of these areas were over half rural and all but eight were non-SMSA only. In 15 of them, the number of housing units that were both crowded and lacking plumbing was 10 percent or greater.

Many homes without inside running water are

scrupulously clean, particularly when the family lives that way from choice. But for many, a house lacking plumbing is all they can afford. In 49 of the areas with much housing lacking plumbing, over a quarter of the population is below the poverty line. This will pose quite a problem for the comprehensive health planner. It is highly probable that those who live in such housing will be unable to afford the capital outlays necessary to install running water, bathrooms, and septic tanks. They have neither the savings nor can they borrow. In many cases, the community itself would find it difficult to finance the development of a public water and sewer system. Even if one were made available, many might be unable to hook into it and might be forced to move away to even less desirable quarters. Furthermore, one-quarter of these areas with potential health hazards have no CHP council to assist with planning; in another third, councils have not yet reached the "funded" stage.

Poor plumbing and poor water supplies are a matter of concern to health inspectors and health planners. Lack of water for bathing, laundry, dishwashing, and other sanitary practices may result in skin diseases such as ringworm and impetigo. A doctor may cure amoebic dysentery and infectious hepatitis, only to have the patient get reinfected by contaminated drinking water.

Of the 66 CHP areas with the highest infant mortality rate, 32 are on the list of CHP areas with the highest percentage of housing lacking plumbing and 41 are on the list of areas with high percentages of housing that is both crowded and lacking in plumbing (table 22). Improving housing may be as important as improving health care.

LACK OF READY ACCESS TO A PHONE

Useful as a phone is in an emergency, it may be used even more frequently as a support service in day-to-day provision of health care. Among its

Sources: (1) (2) (3)

many uses are calls to make or break appointments, to check on patients, relatives or friends, and to obtain advice. Such services are particularly important in rural areas where travel time for doctor or patient are above average and transportation facilities limited.

In fact, the National Center for Health Statistics now considers a phone call as one form of a visit to a doctor. In 1969, 12 percent of the contacts to obtain medical advice or assistance were conducted by means of the telephone, according to the National Health Interview Survey. That survey also showed that the phone was used most frequently on behalf of young children. Adults 25 to 34 were the next highest users. Those not limited by ill health used it with the same relative frequency as those who were limited in the amount or kind of their major activity.

In the 1970 census, each household was asked whether there was a phone on which occupants could receive calls. (It could be in their own home, a neighbor's home, the hall of an apartment building, or in another building entirely.) The question was asked primarily for the convenience of the census enumerator, in case any problem arose necessitating a call or visit. Therefore, the figures shown in tables 23 and 24 are only an approximation of the true accessibility to a phone, but they are probably indicative of the need to improve our communication system.

Surprisingly, even by this broad definition, 13.3 percent of U.S. housing units (excluding those in Alaska and New England) did not have ready access to a phone. The greatest number of households without ready access to a phone are in regions IV, V, and VI, and in the most urbanized CHP areas. This is to be expected, because these regions and types of areas have the greatest number of housing units.

However, only regions IV and VI have a greater than average percentage when the total number of housing units is used in computing the estimate (weighted average). When unweighted averages are compared, it is found that planners in region III are

also among those faced with an above average deficiency. Whichever average is used—weighted or unweighted—it will be seen that the phone problem becomes relatively greater as the CHP area becomes more rural.

The National Health Interview Survey showed that certain groups made relatively little use of the phone in consulting a doctor. This was particularly true of those whose family income was less than \$7,000 or where the head of the household was not white or had less than 12 years of education. Data in table 24 suggest that this may not have been due to an unwillingness to use the phone, but rather to a lack of access to a phone. There were 76 CHP areas

where over one-quarter of the households did not have ready access to a phone. In 62 of these areas, over one-quarter of the residents were poor and in 38 areas, over a fourth were in minority groups.

In view of the frequency with which the phone is used to contact doctors when children are sick, planners in the 21 areas with the highest percentage of persons under 20 and particularly in the 43 areas with very high infant mortality rates may want to consider what might be done to improve communications. Many of these areas are either over half rural or non-SMSA only and some are both. Overcoming barriers to accessibility is one of the primary goals of comprehensive health planners.

A RURAL OVERVIEW

Up to now, this report has introduced each variable separately. This section pulls these threads together to present a first approximation of the rural picture of the United States (excluding Alaska and the New England States) as it affects rural health planning.

Participation in Comprehensive Health Planning

The CHP program gives rural people and rural communities a chance to make their needs known, secure help in determining how best to meet those needs, and have their requirements included in the goals and priorities of area plans. However, this will occur only if the rural population and the rural communities participate in the CHP program. On the whole, the record is good, particularly when numbers of people, rather than numbers of CHP areas are considered. The idea of comprehensive planning did not gain general recognition until the mid-1960's. It took time to determine which of the counties were to combine to form CHP areas. Local rivalries and fears of domination had to be overcome.

As of May 1973, only half of the potential CHP areas as delineated for this study were in "funded" status. However 89 percent of the urbanized area population and 64 percent of the rural population lived in areas that contained a "funded" agency. This somewhat understates the difference in coverage between rural and urbanized area populations, since many counties—mostly non-SMSA counties—had not yet joined the "funded" or developing councils in the areas to which they had been assigned. Only 5.8 percent of the total population and 9.8 percent of the rural population lived in areas that had not yet formed a council. Those counties containing large numbers of urbanized area residents were the most likely to be organized and funded. Some agencies will have to expand to include the more rural neighboring counties assigned

to their area. But even among the CHP areas that were non-SMSA only in type, less than 17 percent of the population was living in areas where no development had taken place.

On a regional basis, over 80 percent of the rural population of regions V and IX lives in areas with a "funded" agency. Regions VII and VIII, with percentages of 55 and 45, have the greatest proportion in developing areas. However, region VIII also has 16.6 percent of its rural population in areas without a council. Only region IV, with 19 percent, has a higher proportion in undeveloped areas.

To a very large extent, initiative to organize comprehensive health planning councils was left to local communities. Thus, one would have expected many of the rural and depressed areas to have been left out. However, due to health programs undertaken by the Appalachian Regional Commission, the Economic Development Administration, and the Office of Economic Opportunity many depressed rural areas with poor health conditions turned out to have a core of concerned citizens and professional staff who were already planning for specific health projects. Thus, they were ready to organize councils. CHP areas with the greatest poverty, highest infant death rates, and highest percentage of poor housing usually were in the "funded" or developing stage. The rural areas lag, but not as much as might have been expected.

The Potential for Rural Influence

A comprehensive health planning program—with its insistence on consumer participation, broad spatial coverage, and goals and priorities covering all phases of the health problem—provides the opportunity for rural problems to be solved within a framework that looks at the total health problem for an area and for all people within that area.

Problems facing the rural representatives on CHP councils and committees or staff responsible for the rural communities within a CHP area will differ depending upon the "rural" characterization of the area. Where the rural population is large, either

percentage-wise or numerically, they may find it relatively easy, provided their representation is forceful, to make rural needs known and to win a commitment to programs designed to attain rural health goals. Other areas may have so few rural people that there may be no rural representative on the council. In some cases, rural communities will be so remote that their problems may be overlooked.

The rural population is just over a fourth of the population. But in the 49 CHP areas containing 52 percent of the total population, the average proportion of rural residents is only 10.5 percent. The proportion rural in the other 367 CHP areas is so much higher that the average of the percentages in each of the 416 areas comes to 47.2 percent. In 205 areas, rural residents equal or outnumber the rest of the population. Table 25 regroups the 416 CHP areas, taking into consideration relative size (over or under half rural), absolute size (over or under 200,000 rural residents), and the presence or absence of centers of population. On this basis, 89 percent of the rural population is fairly evenly distributed among three of the major groups. The remaining 11 percent is in the 20 CHP areas that are both over half rural and have over 200,000 rural residents. If the non-SMSA areas where less than half the population is rural were added to the first two groups, nearly half the rural population would be located in areas where they should have little difficulty in making their needs known.

However, from the standpoint of the health problem, this is somewhat overly optimistic as regards the truly rural population, i.e., those living in sparsely settled areas with transportation problems. If the rural representatives on the council lived in the country but their social and business lives were essentially urban-oriented, then the truly rural residents or rural communities, especially the more remote ones, may be under-represented.

Also some communities that are rural (in the health problem sense) may run into definitional difficulties when they try to get representation or a

¹ New England and Alaska are excluded. ² "Over . r." is short for: "A few areas may actually be equal to, instead of greater than the value listed." ³ Consists of 1 CHP area with large urbanized area (500,000 or more residents) and 20 CHP areas with medium or small sized urbanized areas. ⁴ All 9 have medium or small sized urbanized areas.

Source: (3)

share of the available resources. The census defines both a small town of 2,500 and a large central city as urban. But from the health point of view, a small town's problems are closely akin to those of the people who live near it but outside its limits. In fact, it is usually in or near these small towns that the access point for primary health care is located, and the residents of these towns provide an important share of the patient population. The problems of the small town or city in supporting a wide range of health care services at a reasonable cost and of

attracting and retaining the necessary manpower are very different from those of the big city.

A similar problem—but one affecting both the rural and small town urban resident—is likely to arise if an SMSA vs. non-SMSA definition is used to distinguish the two groups. Thirty percent of the SMSA population is rural by census definition; the proportion is even larger if the residents of the small towns are included. The problems of the non-urbanized area residents may be very similar to those of the non-SMSA residents just across the

county border. This is likely to be particularly true where the SMSA area is very large and the SMSA city is off in one corner.

The Non-SMSA Only Type of Area

In SMSA only or mixed type CHP areas, the planner only has to deal with problems of sparse population and rural transportation for a relatively small portion of the area. In non-SMSA only type areas, the whole area or large portions of it are likely to be confronted with rural health problems. These 220 non-SMSA CHP areas, where 37 percent of the rural population lives, do not have a city of at least 50,000; 49 of them do not even have a city of 10,000. Only 13 of these areas have more than 300,000 residents. Today, quality health care for a rural area is dependent on the availability in one form or another of the secondary and tertiary health services usually located at a center of population or in an area with a large population:

Under P.L. 93-641, most of these areas have to combine with others to form the new health service areas. (Some may continue to function in amended form as subarea councils.) This will help coordinate the decisionmaking process needed to formulate the health plan for the area. But it will not solve some of the basic problems. There are 52 CHP areas (potential subareas) which do not have a city of even 50,000 within 100 miles of the center of their area; 40 areas do not have a city of at least that size in an adjoining area. As the territory of the combined areas increases in size, it may become more difficult to retain the benefits of local input into the planning process. In addition, the council will have to develop new procedures to overcome the difficulties presented by the large number of reviews called for in order to provide health services for such a widely dispersed population.

Many of these areas will continue to find it difficult, if not impossible, to attract and retain the resident medical personnel needed to continue delivering health care in the traditional manner. Instead, they will have to choose among the new

options made available by improved technology. For this purpose, it may be more practical for them to become subarea councils. This will enable them to plan for their smaller area and provide technical assistance in dealing with the major facilities in adjoining planning areas, which are the source of these services. As an officially recognized subarea council, they may have more influence than as individual counties within the larger health service agency. In the latter case, their chances of making their needs known and getting them attended to could be uncertain.

As a group, these CHP areas also have other problems. They have a high percentage of their residents below the poverty line, 65 years old or over, living in poor housing, or with poor access to a phone. All of these characteristics are associated with a greater than average need for medical care. Their infant death rate is above the national average. In most cases, the smaller the size of the largest city, the more adverse the average. Their average percentage of residents in the productive ages—20 to 64—and their average aggregate and per capita incomes are low, indicating probable difficulty in raising matching funds or providing financing for needed facilities. On the other hand, greater travel time and the disadvantages of small-scale operation are likely to increase per capita costs.

However, a good deal of attention is being directed to devising ways to bring health care to such communities at a price that will make

delivery self-sustaining. In addition, Federal and State legislation often provides special terms for rural or economically depressed communities.

Areas That Are Over Half Rural

Of the 205 CHP areas that are over half rural, 175 are also non-SMSA only (table 26). The one area that contains part of a large SMSA and the 29 that have smaller SMSAs raise the averages slightly, but not enough to raise them above the "all CHP area" averages.

Sixty-three of these areas are at least 70 percent rural and two are wholly rural. Twenty have over 200,000 rural residents. They are to be found in every region. However, in the South (except in Arkansas and Louisiana and along the eastern border of Texas and Oklahoma) few are west of the Mississippi.

The tables of potential problem areas for each variable have indicated those areas that were also over half rural. Table 26 presents information for variables with an appreciable number of rural areas that are over half rural appearing as potential problem areas. (Under the "all CHP area" line, the total number of areas appearing on each list is shown in parentheses.) Of the 416 CHP areas, half are over half rural, yet—except for the list of "funded" areas and areas with over 10,000 square miles—in each column, those that are over half rural are well in excess of half the total—mostly 75 percent or better.

Most of the CHP areas with potential problems due to either size of population or territory are in regions VII and VIII. For other variables indicative of potential problems, region IV has by far the most disproportionate number of areas. Some distance behind, but usually ahead of all others, come regions III and VI.

The Future

The second generation of comprehensive health planning agencies is about to come into being. On September 2, 1975, the area designations for the new health service areas appeared in the Federal Register. The National Health Planning and Resources Development Act of 1974—signed into law January 4, 1975—mandates that the whole country be covered by health service agencies (HSA) which will have Federal funds to enable them to do comprehensive health planning. The new act combines many of the functions of the Comprehensive Health Planning Program, the Regional Medical Program, the Experimental Health Services Delivery Systems Program, and the Hill-Button Program. It gives the new areawide and State agencies added powers and responsibilities for planning and ensuring the implementation of plans. In some cases, existing CHP agencies will form the core of the new HSA; in others, the new agency will contain only elements of existing agencies. Still others will be wholly new creations. These new agencies will be scrutinized closely to see how well rural people have fared in the reorganization.

DEVELOPMENT; *OCCUPATIONAL GUIDANCE; *CAREER EDUCATION; OCCUPATIONAL CLUSTERS;
HANDICAPPED STUDENTS; ELEMENTARY SECONDARY EDUCATION; SCHOOL COMMUNITY
PROGRAMS

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 34P.

ABSTRACT: EVALUATION WAS CONDUCTED OF THE FIRST-YEAR ACTIVITIES OF A
THREE-YEAR PROJECT TO PROVIDE CAREER EDUCATION, OCCUPATIONAL GUIDANCE, AND
IN-SCHOOL AND OUT-OF-SCHOOL VOCATIONAL PROGRAMS AND SERVICES TO ELEMENTARY AND
SECONDARY STUDENTS IN THE SOMERSWORTH, NEW HAMPSHIRE AREA. ACTIVITIES WERE
IMPLEMENTED FOR THESE MAJOR STUDENT OBJECTIVES: GUIDANCE FOR CAREER DECISIONS,
GUIDANCE FOR VOCATIONAL PREPARATION, OCCUPATIONAL PREPARATION WITHIN THE
SCHOOL, OCCUPATIONAL PREPARATION WITHIN THE COMMUNITY, CAREER PREPARATION
ARTICULATION, AND PROVIDING FOR THOSE WITH SPECIAL NEEDS. INCLUDED AMONG THE
ACTIVITIES WERE: WORKSHOPS, DEVELOPMENT OF CAREER PROGRESS BOOKLETS AND
GUIDANCE GATE CHECKLISTS, MODIFICATION OF VOCATIONAL PROGRAMS IN FIVE
OCCUPATIONAL CLUSTER AREAS, COMMUNITY JOB PLACEMENT FOR 26 STUDENTS, EXPANSION
OF CAREER EDUCATION IN THE ELEMENTARY AND MIDDLE SCHOOLS, AND THE BEGINNING OF
INTEGRATION OF SPECIAL NEEDS STUDENTS INTO THE REGULAR VOCATIONAL PROGRAM.
EVALUATION PROGRESS IS DESCRIBED BY STUDENT AND MANAGEMENT OBJECTIVES AND
SPECIFIC RECOMMENDATIONS ARE OFFERED FOR PROGRAM IMPROVEMENT BASED ON THE
EVALUATION. (NJ)

<u>PROJECT GOALS AND OBJECTIVES</u>	-----	9
<u>EVALUATION OF FIRST YEAR EFFORTS</u>	-----	13
<u>CONCLUSIONS, COMMENDATIONS AND RECOMMENDATIONS</u>	-----	25

EXECUTIVE SUMMARY

This evaluation report addresses the first year's efforts of PROJECT BRIDGES, a three-year exemplary vocational education project funded by the U.S. Office of Education.

The project is located in Somersworth, New Hampshire, a semi-rural area in the southeastern part of New Hampshire. The school system encompasses five elementary schools (69 teachers; 1352 students), a middle school (26 teachers; 512 students) and a high school (55 teachers; 880 students).

PROJECT BRIDGES is staffed by a full-time project director, a full-time guidance coordinator and a full-time administrative assistant. The local vocational director serves as a part-time project administrator to assist with overall project direction. The annual budget is \$109,611.

During the first year, PROJECT BRIDGES has implemented a number of activities under all six areas in which it has student objectives. In summary:

I. Guidance for Career Decisions - Phase I

Workshops, career progress booklets and the guidance gate checklists to monitor student progress in guidance has been developed. The use of Operation Guidance concepts and materials at the high school was noted. A new advisor/advisee system is planned.

II. Guidance for Vocational Preparation - Phase II

The beginnings of guidance advisory committees were noted as well as the guidance gate checklist for vocational students. A follow-up survey of graduates is planned.

III. Occupational Preparation in the School

Program modifications have been completed or are being developed in the five clusters of construction, business and office, agri-business, communications and media, and hospitality and recreation.

IV. Occupational Preparation Within the Community

Twenty-six students were placed in the community for vocational education. Task analysis for these occupations was done as was the inservice training of community instructors.

V. Career Preparation Articulation

Career education activities in the elementary and middle schools were expanded.

VI. Providing for those with Special Needs

Cooperative efforts with the Strafford Learning Center marks the beginning of full integration of special needs students into the regular vocational programs.

Management Component

The project has been staffed and directed with skill. All internal management and reporting functions are being conducted in a satisfactory manner.

Recommendations

1. A more systematic approach to the structure and direction of career guidance and career education is needed in grades 1-8 to assure that a coordinated program results.
2. Curriculum development and writing for vocational programs at the high school actively involve advisory committees, follow a common format, consider student interests, and move forward on the development of skills checklists.
3. The evaluation of the effectiveness of vocational training in the community be linked closely to students' performance as related to the original task analysis.
4. Intensive work with teachers on the methods and materials for teaching students having special needs be undertaken in the second year.
5. Attention be directed to those congruents which PROJECT BRIDGES wishes to disseminate so that proper documentation (process and product) can be developed to prove their effectiveness to other school districts.

CONTENT EVALUATION

This evaluation report addresses the first year efforts of a three-year program to eliminate the gap between school and earning a living for the youth of the Somersworth School District.

The project, PROJECT BRIDGES, is funded by the U.S. Office of Education under Part D (Exemplary) of the Vocational Education Act of 1963, as amended.

Project goals address program components in grades 1-12, although primary emphasis is on the reorganization of the secondary vocational programs into a cluster approach and to develop community based training sites for vocational education.

The Locale

Somersworth is located in the southeastern part of New Hampshire, within easy access of cultural centers, metropolitan Boston, and mountain and seashore recreation. Community progress is evident through a sweeping urban renewal program for business, housing, and cultural facilities. Growing recreational programs enhance community spirit.

Growth in the community and region has been continuous. The 1970 census reports the population of the Somersworth Region at 39,400 of which 9,977 are enrolled in public schools. Nineteen-eighty projections show 11,038 students enrolled in area public schools of which 1,040 will be in Somersworth High School.

The population growth rate in the towns which encompass vocational Region 12 in the 1960's and early 1970's was particularly interesting in that Somersworth, the center of vocational education in Region 12, grew at a very slow rate of 6% and is expected to peak at 16% from 1970-1980; the second lowest rate in the country. The Somersworth Industrial Development Committee strongly suggests that Somersworth does not anticipate any future substantial population growth because of the overall lack of geographical space for new home construction.

Much of the great density of population of Strafford County is centered in the three cities of Somersworth, Dover and Rochester. At a county-wide density rate of 166 per square mile, compared to 82 per square mile state-wide, we are left with the reality of greater than average future growth in the feeder towns that comprise Vocational Region 12.

The most substantial gain in population county-wide was in the age range 15-24 which experienced over half the total population increase of the region. The change implies that in the very near future there will be a much larger percentage of persons in the child bearing years than there was in the past and a higher number of births is very probable.

Most of the working population in Somersworth is employed in one of the many manufacturing industries located in the region; however, labor projections indicate a leveling off trend for production occupations and an increase in personal and industrial service occupations during the next five year period creating a need for greater diversification of occupational training opportunities both for those in school and out of school.

Economic conditions for a majority of the families in Somersworth fall below the state average and lack of family income restricts the graduating students' opportunities for post-secondary education.

More restrictive than financial considerations for self-improvement and professional training is the attitude of many parents. The vision of both parents and students is often influenced by the fact that both parents work in low-level ability occupations and have never attended college and in many cases never completed high school. Sixty-eight percent of the graduating class of 1974 directly entered the world of work and did not pursue any additional occupational training. The major industrial employers in the Somersworth area have traditionally been non-durable manufacturers of textiles and footwear. Reflective of the nation as a whole has been the decline of these industries regionally.

Since 1968, 1500 jobs have been eliminated in non-durable manufacturing locally, resulting in New Hampshire's highest unemployment rate in August, 1975, of 8.4% with a seasonally adjusted state wide rate of 6.2%.

In the face of this local economic crisis situation, local business leaders, government officials, and city planners have organized to try and effect their personal initiative, business sense, and Yankee combativeness on the threatening economic backslide of a whole community.

Subjectively speaking, as a community, the people of Somersworth are extremely work oriented. A recent survey finds that in 58% of all families, both parents are employed. This has contributed to Somersworth having the second highest mean family income in the county after Durham, the professional center of southern New Hampshire.

The social implications which are becoming obvious is that the work ethic is strongly engrained in these people and it is a trait which is passed on to subsequent generations. A statistically unsubstantiated but well-known fact is that a lot of secondary school age children have part-time jobs. This is in light of the staggering unemployment level and overall lack of work. Simply, these people find work, no matter how unpleasurable, and do so for the survival of the family unit which is as strong here as can be found anywhere including the more agrarian parts of the country.

The School System.

PROJECT BRIDGES is designed to provide services to two school districts: The Somersworth School District and the Rollinsford School District. These two districts, along with the Oyster River School District, comprise the Supervisory Union #56 School District.

The schools in the project are as follows:

Elementary

Green Street School	Somersworth	21 Teachers	478 Students
Great Falls School	Somersworth	11 Teachers	226 Students
Hilltop/Chandler School	Somersworth	24 Teachers	275/143 Students
Rollinsford Grade School	Rollinsford	13 Teachers	230 Students
		<u>69</u>	<u>1,352</u>

Middle School

Somersworth Middle School	Somersworth	26 Teachers	512 Students
---------------------------	-------------	-------------	--------------

High School

Somersworth High School	Somersworth	55 Teachers	880 Students
-------------------------	-------------	-------------	--------------

The townships served by these districts are Somersworth and Rollinsford.

Each district has its own Board of Education; Somersworth has 9 members and Rollinsford has 3 members.

There is a single superintendent of schools who serves these two districts and the Oyster River Cooperative School district. Thus the whole Supervisory Union #56 has direct or indirect contact with PROJECT BRIDGES.

SCOPE OF THE PROGRAM

PROJECT BRIDGES is a comprehensive program involving all grade levels and all schools in the Somersworth School District. While the focus of effort is in strengthening and expanding the vocational programming at the high school, the needs of career education and career guidance in the elementary and middle school are being met.

The project has three broad components; guidance, vocational clustering and special needs.

The Guidance Component consists of two phases. Phase I provides for a variety of career guidance activities from grade 1 until students make a tentative vocational decision. Phase II provides for guidance services to those students who select the vocational route at the high school level.

Clustering of the vocational programs will work in the five vocational clusters of Agri-Business, Construction, Business and Office, Hospitality and Recreation, and Communications and Media. Program modifications within each of these cluster areas will be made each year through the revision of in-school vocational curricula and through the development of community training sites. Career education activities at the elementary and middle school levels will be designed to articulate with these clusters. Also a continuum of skills for each vocational program will be developed.

The Special Needs congruent utilizes the Strafford Learning Center to assist in the identification, diagnosis and prescription of learning programs for special students. Inservice training for vocational teachers to enable them to implement curriculum modifications for special needs is also included.

Staffing

The PROJECT is staffed as follows:

- Project Administrator Part-time - This person is also the vocational director of the district.
- Project Director Full-time position to direct the operations of the program.
- Guidance Coordinator Full-time position to concentrate on Phase I and II of the guidance component.
- Administrative Assistant Full-time to provide secretarial and clerical support to the program.

All staff are housed at the Somersworth High School, and as indicated above, focus their efforts at the secondary level.

Budget

The annual budget of PROJECT BRIDGES is \$109,611 with the following approximate line item expenditures:

Personnel	\$ 32,500
Benefits	3,500
Travel	5,300
Equipment	14,200
Supplies	33,500
Contractual	6,000
Other	<u>14,611</u>
TOTAL	\$109,611

PROJECT GOALS AND OBJECTIVES

PROJECT BRIDGES has six student objectives (two in Guidance, three in Clustering and one in Special Needs) and six management objectives. These are listed below just as they appear in the project proposal.

Guidance Component

Student Objective No. 1, Guidance for Career Decisions, Phase I

Objective: As a result of a variety of activities it will be insured that from the time students start grade 1 until they make a tentative vocational decision, not only will they receive guidance regarding careers, but also have their progress monitored and reviewed by parents, teachers/advisors, and guidance personnel at key points during their education.

Rationale: The process of selecting a career is a complex undertaking that must not be left to chance. The changing nature of our society and the ever fluxing job market requires young adults that are prepared not only for their first job but well enough prepared to plan for perhaps several job changes throughout their work-lives.

Student Objective No. 2, Guidance for Vocational Preparation, Phase II

Objective: From the time a student selects a vocational route to training until the student no longer requests the school's guidance will be provided continuously by all individuals concerned for the student's career development.

Rationale: The responsibility for career guidance belongs to everyone. A concentrated effort by the entire school community, the local employers that will hire future students, parents, and interested groups outside the school, will increase the value of guidance activities and increase the students' chances for success.

Cluster Component

Student Objective No. 3, Occupational Preparation within the School

Objective: In order to increase student opportunities through clustering, no less than one new in-school vocational program will be started in each of the five occupational clusters selected, per year for the three years duration of the project.

Rationale: It is necessary to expand vocational opportunities for large student enrollments and where specific laboratories are needed. Some vocational training sites are unavailable in the local community and some will offer greater cost effectiveness as part of an in-school program rather than in the local community.

Student Objective No. 4, Occupational Preparation within the Community

Objective: Recognizing that there are many occupations within the community as well as vocational environments that cannot be reproduced within the school, the project will insure that no less than twenty (20) public training stations and instructors are contracted during the first year of the project. During the second year, twenty (20) sites and instructors will be located in private industry.

Rationale: It is impossible for every school to provide vocational laboratories and skilled specialists in all occupational areas because of small numbers of potential enrollees and the related high operational costs. Cost effectiveness will increase by allowing local industry to do the vocational training where student enrollments will be small and facility costs would be extensive. Having the school system and local industry team together to provide a full range of occupational training will also increase the ties between training and actual jobs.

Student Objective No. 5, Career Preparation Articulation

Objective: The project staff will develop and implement a continuum of career exposures and skill development activities starting in grade 1 and terminating with job acquisition. Each existing vocational program will have a continuum that includes strands ranging from unskilled to semi-professional jobs. Rate of continuum development will be no less than ten (10) per year with continuums for all vocational programs developed within three years.

Rationale: There is a need for all students to be able to visualize the relationship between existing career awareness activities in the early educational years, vocational exploration opportunities that are in operation during middle school years, and the objectives of each vocational program offered in both high school and post-secondary vocational/technical schools.

Special Needs Component

Student Objective No. 6, Providing for Those with Special Needs

Objective: Recognizing that there are some students who will not be able to succeed under normal class conditions because of a learning or physical disability, the project will insure that any vocational student with special needs or abilities will be able to succeed due to modifications to regular programs to meet his needs or establishing special programs for groups of students with like needs and abilities.

Rationale: In 1971 the New Hampshire State Legislature changed the laws pertaining to the education of handicapped children. These laws now mandate "that all handicapped children, physically, intellectually, and emotionally capable of being benefited by instruction shall attend an approved school or program." (RSA 186-A:6)

At the national level, the 1974 amendments to Title VI-B of the Elementary and Secondary Education Act (PL 93-380) have placed very direct obligations on schools providing programs and services that are different or in addition to what is provided for the regular student body of those considered handicapped. Interpretation from the U.S. Office of Education indicates that these requirements are not limited specifically to programs funded under this specific law, but to all state and local programs serving handicapped children. While students classified as disadvantaged are not specifically included in the procedures that are outlined, they are most appropriate.

Management Component

Management Objective No. 1, The Management System

Objective: Within sixty (60) days after project approval notification, a start of funding date will be established. All management and administrative individuals and committees will be selected and notified prior to the start of funding.

Management Objective No. 2, Progress Reporting

Objective: The Project Director will implement a system of regular progress reporting of project activities to the Executive Board, the New Hampshire Research Coordination Unit, and the Boston Regional Office of USOE.

Management Objective No. 3, Internal Dissemination

Objective: The project director will implement an internal dissemination strategy which will inform district staff and students as to the status of on-going activities in the project.

Management Objective No. 4, External Dissemination

Objective: The project director will implement an external dissemination strategy which will inform both educators and the general public on the local, state, and national level of the project goals, objectives, and activities.

Management Objective No. 5, A Vocational Needs Assessment

Objective: The project director and vocational director and outside consultants as necessary will develop and implement an on-going needs assessment strategy for the purpose of program expansion.

Management Objective No. 6, Program Evaluation

Objective: The project director will contract an external evaluator for project evaluation services which will include both process and product assessment.

EVALUATION OF FIRST YEAR EFFORTS

The Evaluation Team

Because PROJECT BRIDGES is a multifaceted program addressing career education in grades 1-2, guidance activities in grades 1-12, in-school and out-of-school vocational programs and services to students with special needs, it was decided by the Executive Board that a team approach to evaluation was required.

CEDAR ASSOCIATES of Keene, New Hampshire was selected as the third-party evaluator through a bid process. The evaluation team assigned to this project has five members with varying expertise as described below.

<u>Evaluator</u>	<u>Area of Expertise</u>
Dr. Richard A. Gustafson, Director of CEDAR ASSOCIATES and Assistant Dean for Career Studies at Keene State College.	Dr. Gustafson has conducted a number of vocational and career education program evaluations. He is responsible for overall coordination of the evaluation effort, development of assessment techniques and writing of interim and final evaluation reports.
Mr. John Cepaitis, Vocational Director Nashua, New Hampshire	Mr. Cepaitis has extensive experience in the development and implementation of vocational programs at the secondary level. His responsibilities are to evaluate the vocational curricula and programs at the high school.
Ms. Anitra Sorenson, Learning Disabilities Consultant in Vocational Education at Lebanon High School	Ms. Sorenson has developed in-service training for vocational teachers and services vocational students with special needs. She has worked closely with the State Department of Education in this area of program development.
Mr. Drrin Laferte, Director New Hampshire High School Career Education Model, Keene State College, Keene, New Hampshire	Mr. Laferte has directed a number of large and small career education programs in Rhode Island and New Hampshire. He is a recognized expert in career education throughout New England.

Dr. Arthur Berry, Coordinator of Vocational-Technical Education University of Maine at Portland-Gorham

Dr. Berry has had extensive experience in the development and evaluation of vocational programs in many parts of the country. His experience with community based vocational education is most valuable.

Dr. Gustafson attends each meeting of the Executive Board and is on-site at least quarterly to assess progress of those components of the project for which he has responsibility. All other members of the evaluation team are on-site at least quarterly.

An evaluation design was developed by the evaluation team with consultation with the project staff. Using the project objectives and activities, indicators of success were developed by each evaluator for their component(s) of the project. This design will be refined each year based upon planned program modifications.

Memoranda are developed by each evaluator prior to his/her evaluation visit and follow-up memoranda are prepared after each visit. Semi-annual and annual evaluation reports are prepared.

Evaluation of Progress in Year 1:

Student Objective 1 - Guidance for Career Decisions - Phase I

1. Vocational Staff Workshops

Two were held; one at the beginning of the year to introduce the staff to the cluster development portion of the project; a second was a weekend retreat for the vocational staff and some academic teachers to break down potential barriers between the two groups. This second was successful in improving understanding and communication between the two groups. As activities in themselves, both achieved their purposes, however, they are listed as part of an objective to create a grades 1-12 guidance system. They did not produce identifiable results in relation to this goal.

2. Career Progress Booklets

Nine of these booklets are now in the printing stage. The information on them includes career information on the titled occupation and the requisite courses available in the school. The current versions are all on one reading level (fairly high level). These will be good materials to use in conjunction with a guidance system, form a good resource for that system.

3. The Guidance Gate Checklist

The checklist has been designed and printed. It lists three in-school checkpoints and three follow-up checkpoints. It will be used for vocational students only. Its major benefit is that the student, parent, vocational instructor and guidance counselor will be forced to communicate at three points at the beginning, middle and end of the student's program, and hopefully, all will understand the process and progress of the student. While this is listed under objective number one, it is really the major activity of objective number two, and comprises a duplication when listed within this goal. It does, however, provide the skeleton for a guidance system for vocational students from the end of the tenth grade to graduation and a monitoring vehicle for that same population.

4. Operation Guidance

The committee system called for in the Operation Guidance System is in operation and the participation of various high school faculty members is yielding positive results in their attitudes and understanding. This is an excellent example of an activity that obviously is yielding results in the creating of motivation among teachers to become involved in career education. It has yielded four sets of guidance activities and one planned activity this year. All, however, tend to be activities that are external to the normal school operations and as such are not infusions. Continued use of this mechanism should yield positive results over the three years of the project and hopefully the end product will be a series of on-going career decision making activities for all high school students.

5. Grade 10 Language Arts/Social Studies Team Curriculum

The staff has decided to utilize the above Operation Guidance Task Force (committee) as the vehicle for creating infusion. Therefore, no activities have taken place in this item and none are predicted. As a practical adjustment to the realities of the high school this decision to change the vehicle for infusion is quite appropriate.

6. Career Awareness - Update Presentations

The staff decided against this activity as an on going orientation of the faculty and none were held.

7. Advisor/Advisee System

While this activity is not part of the proposal, the PROJECT BRIDGES staff seems to have been instrumental in introducing an Advisor/Advisee System which will be piloted with next year's Freshman class. If proper orientation takes place for the teachers involved and definite responsibilities are outlined, this system will ultimately achieve the overall goal of developing the high school level system.

Student Objective 2 - Guidance for Vocational Preparation - Phase II

This objective provides for a guidance system that will be developed and implemented for high school level vocational students and it will include a placement and follow-up system.

The implementation plan and staff feedback indicates the major vehicle of this system will be the guidance gate checklist and the personal guidance advisory committee. The other activities relate to a guidance system but it is not clear how all seven constitute a unified system.

1. In-service Activities

See comments under objective one. This is a duplication of the activities described under Vocational Staff Workshops.

2. Guidance Advisory Committee

At the beginning of the year the Building Trades Instructor held two group meetings for parents and students during which he and the counselor described that program. This is the only evidence of an activity related to implementation of the Guidance Advisory Committees. When the Guidance Gate Checklist is implemented, it should insure that the Guidance Advisory Committee structure is implemented.

3. Guidance Gate Checklist

This has been described under objective number one. As stated there it does comprise the first evidence of a Vocational Guidance Monitoring System. It is slated to be implemented in September, 1976.

4. Parent/Student/Staff Meetings

These are essentially the same as the Guidance Advisory Committees, and as listed here, are a second stating of that activity and not a separate function. It seems that individual meetings of the Guidance Advisory Committees will take place only when necessary. Most GAC meetings are expected to be group meetings of the type described in this activity.

5. Industry/Business/Education Seminars

No plans were made to implement these during this project year, and this activity has been eliminated from the second year plan.

6. Guidance Advisory Committee - Role in Placement

The Guidance Gate Checklist provides for involvement of parents, counselor, instructor and student at the end of the program in helping the student make a transition to further education or work. If this is properly implemented, then the G.A.C. will be involved in placement; however, no activities have as yet taken place in this area.

7. Graduate Follow-up Data

A follow-up study has been commissioned for graduates of the classes of 1971, 72, 75. A system has been selected and a phone follow-up is occurring in June.

Student Objective 3 - Occupational Preparation within the School

1. and 2. The Vocational program offering appraisal and review took place by having each teacher and department head review the written description in the program of studies booklet and then rewrite the description wherever they felt it was appropriate. Discussion took place with Vocational Director regarding present offerings and future plans. Teacher input regarding expansion options in the five clusters was recorded through individual meetings and student input was accomplished via the teachers at those meetings. This was the extent of the needs assessment and review conducted by staff in terms of the necessary changes that they were able to observe. There was no formal written documentation of these activities.

3. and 4. Vocational Program Modifications

Curriculum modifications were proposed in each of five cluster areas. Each was at a different stage of completion as of June 8, 1976.

Building Trades has been approved for program expansion with a written craft committee endorsement of training and purchasing equipment. The area of expansion is in the operation of heavy equipment.

Each area does have a job brief with a job description and Dictionary of Occupational Title number. Goal statements are not included and are left open to interpretation. The correlations of staff and resources is also left open for one's interpretation. As a mini course Small Boat Building and Repair has been offered; however, no curriculum has been developed nor has an endorsement of the advisory committee been received or sought.

Communications and Media has been approved for program expansion with a written craft committee endorsement. This will be an introductory course in video tape production.

The labor needs assessment is global and may be difficult for students and the faculty to interpret to help one formulate career goals. The curriculum provided an outline but no goals nor objectives. Also missing were suggested activities, staffing, facility description, on-going operational costs, and integration strategies of resources, equipment and staff.

Food Service in the Hospitality and Recreation cluster has the initial work done for documenting the labor needs in this area. However, the area of proposed expansion, craft committee endorsement, and other industry endorsement have not been accomplished.

Yet to be developed is the curriculum which will include the abstract of the cluster with appropriate descriptions and Dictionary of Occupational Title number, goal statements, course objectives, suggested activities, staffing requirements, facility design and on-going operational costs.

The Agri-Business and Natural Resources cluster of the Vocational Agriculture program has the preliminaries of a labor needs analysis completed. The curriculum includes general overview, job definitions with job briefs and job descriptions with Dictionary of Occupational Title number. Goal statements are included with the major objectives and suggested activities. Also included is a list of major resources areas and how staff and facilities might be used including types of equipment which might be integrated. However, no endorsement of the advisory committee has been received.

The Business and Office cluster has proposed expansion in Computer Studies through the Math Department with little or no input from the Business Department. No evidence exists that a functional advisory committee exists. The data on labor analysis seems rather broad for student and staff interpretation for career planning. The curriculum does meet the guidelines of providing for an abstract, job description, goal statements, major course objectives, suggested activities, staffing, facilities, equipment, operational costs and description of time restraints, but was not rewritten to follow the approved format.

5. Study of Out-of-School Youth

No written documentation of an out-of-school youth needs assessment was in evidence as requested by the evaluator.

Student Objective 4 - Occupational Preparation within the Community

The project did carry out four (4) of the five (5) major activities listed in the 1975-76 evaluation design, and all six (6) items listed under the assessment method were used by the evaluator in reviewing objective achievement.

1. Workshop for staff

Support was sought for PROJECT BRIDGES through personal contacts by the project director and two (2) workshops were held on September 2 and October 1. These were designed to orient school personnel to the scope and purposes of PROJECT BRIDGES, and brochures on the project were distributed.

2. Identification of Community Training Sites

The project director and vocational counselor presented the concept of PROJECT BRIDGES to the community through presentations to the Kiwanis Club, Lions Club and personal contact with business and industry. Twenty-six (26) community training sites were identified and twenty-five (25) task analyses for each occupational area were completed. Each task analysis consisted of the following items:

1. Job Description
2. Identification of Occupation
3. Major responsibilities and percentage of time devoted to each
4. Task listing for each responsibility including steps or processes to be utilized within each.

3. Workshops for Community Site Trainers

Instructor training was conducted on February 17-19 by Professor Richard Carter and Paul Davis of the University of Maine at Portland-Gorham. Seventeen (17) individuals participated in the sessions and all (100%) felt the workshop objectives were met, and activities were sufficient to permit them to function as community site instructors.

Training was not deemed necessary for those individuals serving as instructors at the National Guard sites, as training is seen as an on-going part of their occupational role or job.

4. Students placed in Community Training Sites

Students were informed of the concept of PROJECT BRIDGES through the project director and vocational counselor. A survey was conducted of all juniors and seniors at Somersworth High School in order to determine interest and to serve as a basis for potential site selection. Ninety-two (92) students, or approximately 25% of the student body, expressed an interest in community site training.

Twenty-six (26) students were selected and placements made by Michael Cummings through the counseling office. Factors taken into consideration in placement were:

1. Student needs and interests
2. Potential benefits of in-school versus out-of-school training
3. Seniors were given preference
4. Matching of students to job and instructor.

A flexible schedule was established permitting students to obtain community training. Students spent an average of ten (10) hours per week on site consisting of approximately two (2) hours per day, five (5) days per week. Times were flexible and related to student availability, instructor or trainers availability, and the nature of the training.

Five (5) on-site visitations were made to community training sites, and an additional nine (9) were investigated as to program, instructor training and student involvement.

All investigation and review indicated general satisfaction with the program. Students found it realistic and were motivated, while trainers expressed an interest in a workbook or student manual for use in their training, all trainers indicated that they would continue to support the project but desired input into the student selection process.

Student Objective 5 - Career Preparation Articulation

This objective provides for a continuum of common experiences for students in the elementary and middle school grades to make them more aware of, and to allow them to explore careers.

The plan to do this is through the development and/or purchase of awareness materials at the elementary level and hands-on exploratory materials in the middle school in the cluster areas for which the project is responsible.

Because of the nature of public educational hierarchy and the priority level of this goal, this is an adequate plan for achieving this goal.

This year activity in the elementary schools has been minimal. The staff has contracted elementary teachers to develop cluster boxes of information and activities.

Five cluster boxes have been worked on:

Agri-Business	Incomplete
Communication and Media	Incomplete
Business and Office	Completed
Construction	Completed
Marine Science	Completed

The quality of these boxes vary, but they do comprise a resource bank of ideas and materials which can be moved from school to school to help teachers create Career Awareness activities.

For next year, the plan is to meet with the faculties of each elementary school and help each develop a plan for their school for that year. The principals have already agreed to do this and this plan of attack shows real promise for results at the elementary level.

At the middle school, a number of career education activities had already been infused into Social Studies and Language Arts curricula. This year, the attempt was to add new hands-on activities through the medium of the Project Discovery materials. These were utilized by one teacher and evaluated positively. The plan is to put these materials into the Media Center to be used by teachers and students next year.

Activity four, under objective five, refers to the development of Career Path booklets at varied reading levels. While nine booklets are now available, none have reading levels suitable for use at the lower grades.

Student Objective 6 - Providing for Those with Special Needs

PROJECT BRIDGES has formed a solid cooperative involvement with the Strafford Learning Center. Two full-time staff members at the Center, one a vocational consultant, the second a vocational media specialist, have made a significant impact in dealing with special students in the Somersworth vocational programs.

1. Use of prescriptive process with identified students.

The vocational consultant has adapted and adopted a series of forms for the diagnostic/prescriptive process. These forms include a referral form, observation notes, diagnostic teaching log, program description, evaluation conference notes, follow-up notes, six weeks' evaluation, and a long term follow-up report. Although this may prove to be a cumbersome series of paperwork, the forms are well-designed and will help keep track of student progress, and the effectiveness of the prescribed procedures.

2. Funding for materials and services for program modification or new special programs.

Of approximately \$2,000 allocated for materials for special needs students, only about \$500 has been spent. The PROJECT BRIDGES staff has not "advertised" that this money is available, but a few teachers have come with special requests for arts and crafts supplies, a name-plate maker, and miscellaneous supplies for a summer program for special needs students.

3. Workshops in special needs for vocational teachers.

Although one meeting was held with Nancy Hartley, no special needs workshops were held. This was a conscious choice on the part of the BRIDGES staff who felt that teachers' attitudes toward organized workshops was poor. For the most part this did seem to be the feeling of the staff who commented that workshops were never specific enough to the students they worked with and were generally a waste of time.

4. Follow-up Activities for vocational teachers who were involved in the workshops.

No workshops were held, therefore no follow-up was done.

5. Records for each prescriptive process undertaken.

Records were not available for review and critique because of confidentiality. Several students who have been helped by Pat Theberge were interviewed, however. They seemed glad to have received the help though several of them felt that had been singled out and separate from the rest of the class. All of the students felt the help had been essential to their success in the course.

Management Component

The management component, consisting of six closely related objectives, is the direct responsibility of Ms. Susan Klaiber, the project director. While the following narrative will address the specific accomplishments related to each objective, it is the judgment of the evaluation team that project management has been accomplished with skill and has been done successfully. While we will make recommendations in certain areas, the management of the project has improved as the year progressed and the project director has succeeded in effectively accomplishing all the "start-up" management tasks.

Objective 1 - Management System

The management system objective details the staffing pattern for PROJECT BRIDGES, the creation of an executive board and an advisory board. All these activities have been accomplished including a complete restructuring of the vocational advisory board system in Somersworth. Project staff have worked effectively with the executive board on policy matters and have begun to involve the advisory board in project matters.

Objective 2 - Progress Reporting

Monthly or bi-monthly progress reports have been filed, as scheduled, with the executive board and other local and state individuals. Quarterly reports, program and financial, have been made to U.S.O.E. and the executive board.

Objective 3 - Internal Dissemination

A number of awareness activities designed for Somersworth teachers, counselors, and administrators were completed during the year. These included a brief presentation to all staff in September, 1975, a project brochure, one newsletter, a meeting for vocational staff, and dissemination of executive board and advisory board minutes.

Project awareness seems to be highest with the vocational teachers at the high school and the elementary principals. Academic teachers at the high school and the middle school were generally unable to articulate the purpose of PROJECT BRIDGES.

There is room for improvement in this area and some plans (bulletin boards, video tapes, brief periodic newsletters) have been made to achieve this in year two.

Objective 4 - External Dissemination

Initial efforts in making individuals and agencies outside the Somersworth District aware of PROJECT BRIDGES has been successful.

Discussions with the State RCU Director and local vocational directors, revealed they were abreast of happenings in Somersworth and could articulate the major thrust of the project.

Dissemination activities through school board presentations, newspaper articles, a newsletter, a brochure, presentations to the Somersworth service clubs, and NESDEC have been accomplished. In addition, a number of educators have visited PROJECT BRIDGES to learn first hand of its efforts.

The long range thrust here should be to identify the major project components which are to be disseminated in the future so these can be properly documented.

Objective 5 - Vocational Needs Assessment

Two major efforts in needs assessment have been accomplished during the initial year; both under the director of the guidance coordinator.

Using the materials prepared by Operation Guidance, a survey of staff, students and community members was coordinated to determine the needs for an improved career guidance program. The results of these surveys were considered by committees and specific activities (under student objectives 1 and 2) have been designed to address the needs as identified.

A labor market analysis of the Somersworth area was completed using both primary and secondary sources of labor information. Work remains to be done in the translation of these data into specific recommendations of vocational program modifications.

Objective 6 - Third-Party Evaluation

A third-party evaluation team was contracted as a result of a bid process in the fall of 1975. Quarterly on-site evaluation visits by team members have been accomplished with the filing of semi-annual reports.

CONCLUSIONS - COMMENDATIONS - RECOMMENDATIONS

PROJECT BRIDGES has demonstrated significant levels of activity in all three areas for which student objectives are written:

- Guidance
- Clustering
- Special Needs

It is clear that the project staff has focused its efforts during the first year at those student objectives within the clustering component, especially,

- Occupational Preparation within the school, and
- Occupational Preparation within the community.

Members of the evaluation team offer the following commendations and recommendations in those areas for which they have responsibility.

I. Guidance for Career Decisions - Phase I

Some evidence of a grades 9-12 guidance system is emerging, however, as yet the pattern it will follow is not clear. Excellent use of the Operation Guidance materials and techniques have been used at the high school. Below the 9th grade, no evidence of a guidance system is available.

If a true systematic approach to guidance services in grades 1-12 is to be achieved, a more definitive explanation of what such a system will look like is required. Specifically:

Who will do what to develop the system at:

- the elementary level
- the middle school level
- the high school level

and when will they complete those elements for which they are responsible?

It is possible that PROJECT BRIDGES will not have the staff or material resources to noticeably affect guidance services in grades 1-8. If this is the

case, activities relating to the elementary and middle school should be eliminated in favor of creating a sound high school guidance program.

II. Guidance for Vocational Preparation - Phase II

The beginnings of guidance advisory committees were noted through the involvement of parents and students by the Building Trades instructor.

A guidance gate checklist designed to insure that each vocational student receives guidance services at key points during his or her passage through the vocational program. This level of organization is commendable and we look to this concept as being of interest to many other vocational programs in the state.

There remains a need to define the specific guidance services which will be provided for the student at each "gate".

Follow-up studies of graduates is one of the key components in any vocational guidance effort. Through studies of this type, invaluable information for the improvement of guidance, vocational, and academic programs can be obtained. PROJECT BRIDGES has retained individuals external to the project to design and conduct the first follow-up study. The evaluation team urges that in future years the follow-up system become integrated into the on-going vocational guidance effort. If this is not done, there is a real danger that it will fall by the wayside once project funding ceases.

III. Occupational Preparation within the School

Commendations:

1. The Building Construction cluster has met the criteria set forth in the agreement for program expansion and the curriculum development outline.
2. The Business and Office cluster is a long way toward being completed and is the best developed cluster at this time.
3. The Agri-Business, Communications and Media and the Hospitality and Recreation clusters are on their way to becoming viable.

Recommendations:

1. Develop basic goal statements in specific terms in the Building Construction cluster.
2. Use more precise verbs to try to make the program objectives measurable.
3. Demonstrate more accurately the involvement of the advisory committee in other areas outside of equipment purchases.
4. Complete the work necessary in each of the curriculum areas by September of 1976.
5. Before printing the curriculums verify that the curriculum format is the same for each area.
6. Make more of an effort to localize local job needs in the curriculums in order that they might be used by students and faculty for career planning.
7. Conduct student interest surveys to validate their interests with those curriculum modifications.
8. A curriculum for small boat building be produced.
9. Rough drafts of the skills checklist should be developed by December 31, 1976.
10. A written report of the out-of-school youth should be completed by June 30, 1976.
11. Upon completion of the student survey which is planned for June, 1976, that the results be made available to the evaluation team focusing on how students felt the skills prepared them for the job in which they were employed.

IV. Occupational Preparation within the Community

The staff of PROJECT BRIDGES should be commended for their efforts in getting the concept of community site training into an operational framework. They have achieved their objective, site identification, matching students to training and gaining community acceptance and support.

Three (3) approaches were used to evaluate community training, they were: feedback from trainers, student rating by trainer, and site evaluation by the trainee.

A feedback session with trainers was held on June 6. This provided the director with an appraisal and basis for operation in the second year of the project. Support was shown; however, some trainers were looking for more initial organization and information related to assessment of students against the task analysis.

Training station evaluation by trainees was concerned with student expectations, duties, instruction and supervision, working conditions, recommendations for improvement and plans to seek employment. Not all evaluation forms had been returned. However, those available showed enthusiasm for training, made some positive recommendations and 75% indicated they planned to look for employment in the area of their training.

Project director evaluation provided a basis for review in terms of distance time of day-week and length of training, instructor motivation, enthusiasm of trainer and trainee and potential employment opportunities.

An analysis of these factors will be considerations for retention of the training site and identification of new ones.

Recommendations

The project has been successful in identifying community sites and placing students into them. As the program evolves in its second and third year, the following concerns should be noted.

1. Logistics problems will become overwhelming with twenty (20) additional sites in the second and third year. Student selection, transportation, scheduling evaluation should be streamlined, procedures and processes identified and responsibilities delegated to other in-school staff personnel.
2. Considerations should be given to infusion of the community site training into the on-going cooperative education offerings.
3. Attention should be focused on an evaluation of student outcomes through community training. The task analysis should be utilized as a basis for the evaluation.
4. Process data should be recorded on community site identification, selection, and operating procedures in order that other communities could benefit from the PROJECT BRIDGES development project.

V. Career Preparation Articulation

A host of career education activities is currently in evidence in the elementary and middle schools. Many of these activities were initiated by an earlier career education project in Somersworth. Expansion of these activities through the development of five cluster boxes at the elementary level and the use of Project Discovery materials at the middle school is commendable.

The involvement of each elementary principal in the development of individual staff plans by each school shows real promise for the second year.

The development of nine career path booklets is also to be commended.

There remains a concern with the activity based approach to career education activities in grades 1-8 much the same as the concern for guidance activities in the same grades.

While there is realization that the focus of PROJECT BRIDGES is at the high school level, there remains a need to provide overall structure and direction for the career guidance and career education activities at the elementary and middle school level.

VI. * Providing for those With Special Needs

Progress has been made in the area of meeting the needs of special needs students in vocational education although the PROJECT BRIDGES staff has not been heavily involved in this area. The February hiring of a Vocational Consultant (Edward Crothers) and a Vocational Media Specialist (Pat Theberge) through other funding sources has made a significant impact. Several PROJECT BRIDGES objectives have been met by these people and their programs.

Thus the identification and diagnosis services for students having special needs has been accomplished through the Strafford Learning Center. PROJECT BRIDGES should now be able to concentrate on working with vocational teachers on the methods and materials they can use to teach students having special needs.

The area of special needs students has not been emphasized by the PROJECT BRIDGES staff. Not wanting to duplicate the efforts of the Strafford Learning Center is reasonable, and even more can now be accomplished. The areas specifically needing attention for the coming year are:

1. Teacher attitude needs to be improved either through the Vocational Consultant working individually with the teachers, sensitivity training, or planned workshops.
2. More use could be made of the services of Dr. Nancy Hartley of Keene State College in planning ways to inform teachers of techniques and materials appropriate for special needs students.
3. Teachers need to be made more aware of the availability and usefulness of the diagnostic/prescriptive services.
4. Available funding should be utilized through more awareness of the types of materials available. Dorothea Kitlan at Keene State College might be a helpful resource person for suggestions on materials.

Management Component

As mentioned earlier in this report, project management has been accomplished with skill and successful implementation of this component has been achieved.

The management system, including staffing and the creation of the executive board and project advisory board has been completed. Progress reporting, local and national, has been on time.

PROJECT BRIDGES in some respects has higher visibility outside the Somersworth District than within. External dissemination efforts have resulted in this situation.

There are three recommendations which are offered under the management component.

1. It is recommended that more efforts be directed to informing the staff within the Somersworth District as to the purpose of PROJECT BRIDGES. Awareness at the elementary level seems to be excellent. This is not true at the middle and high school levels.
2. It is recommended that increasing attention be given to what PROJECT BRIDGES intends to demonstrate and disseminate as a result of the three-year effort. As certain components of the project are identified (e.g. Community Training), full documentation of these components (process and product) should begin now if "hard evidence" of success is to be obtained.
3. It is recommended that the project staff study all of the formal and informal needs assessment data which has been gathered (or will be gathered in the near future) in terms of its impact on program planning. The translation of this information into program development priorities is the only way in which the data gathering effort can be justified.

DESCRIPTOR: *GRADUATE SURVEYS; *VOCATIONAL FOLLOWUP; CAREER EDUCATION

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 105P.; RELATED DOCUMENTS VT 103 551 AND VT 103 572 AND VT 103 573 AND VT 103 459 THROUGH VT 103 466 AND VT 103 468 IN THIS ISSUE.

ABSTRACT: AS PART OF THE CAREER EDUCATION PROJECT HOUSED AT STATE FAIR COMMUNITY COLLEGE, THE JOB PLACEMENT AND FOLLOWUP COMPONENT CONDUCTED A TELEPHONE FOLLOWUP SURVEY OF THE 1975 HIGH SCHOOL GRADUATES OF THE 10 PARTICIPATING MISSOURI SCHOOL DISTRICTS. OF THE 795 GRADUATES, 741 (93.2 PERCENT) WERE CONTACTED. OF THE RESPONDENTS, 30 PERCENT WERE EMPLOYED FULLTIME OR PART-TIME, 14.3 PERCENT WERE WORKING AND CONTINUING THEIR EDUCATION, 31.9 PERCENT WERE ENROLLED IN A POSTSECONDARY INSTITUTION OR TRAINING FACILITY, 6.4 PERCENT HAD ENLISTED IN THE ARMED FORCES, 4.9 PERCENT WERE HOUSEWIVES, AND 5.3 PERCENT WERE UNEMPLOYED OR NOT SEEKING WORK. THE SURVEY ALSO REVEALED THAT A HIGHER PERCENTAGE OF MALES WERE EMPLOYED WHILE A HIGHER PERCENTAGE OF FEMALES WERE ENROLLED IN A POSTSECONDARY INSTITUTION. A COMPARISON OF LARGE VERSUS SMALL SCHOOL GRADUATES INDICATED THAT A HIGHER PERCENTAGE OF LARGE SCHOOL GRADUATES WERE ENROLLED IN FURTHER EDUCATION. IN REVIEWING THE LIST OF EMPLOYERS AND A LIST OF POSTSECONDARY INSTITUTIONS ATTENDED, IT WAS FOUND THAT VERY FEW GRADUATES LEFT THE STATE FOR EMPLOYMENT OR POSTSECONDARY TRAINING. APPENDED MATERIAL INCLUDES THE SURVEY INSTRUMENT, LIST OF WORKSHOP PARTICIPANTS, TELEPHONE CALLERS' SCRIPT, SURVEY CODING INFORMATION, AND LISTS OF EMPLOYERS AND POSTSECONDARY INSTITUTIONS ATTENDED. (AUTHOR/NJ)

FOREWARD

THE PURPOSE AND VALUE OF FOLLOW-UP STUDIES IS TO PROVIDE US WITH DATA TO EVALUATE PROGRAMS AND DETERMINE IF WE ARE MEETING OUR OBJECTIVES. THIS SYSTEM OF "ACCOUNTABILITY" COULD BE THE ULTIMATE TEST OF WHERE WE ARE AND WHERE WE ARE HEADED.*

The telephone follow-up survey of the 1975 high school graduates was conducted with the help and cooperation of the following individuals:

Harold Finke, Counselor
Green Ridge High School
Green Ridge, MO 65332

Judy Rodgers, Counselor
Smithton High School
Smithton, MO 65350

Sharon Goth, Counselor
Sacred Heart High School
Sedalia, MO 65301

William McGuire, Counselor
Northwest High School
Hughesville, MO 65334

Kay Sparks, Counselor
La Monte High School
La Monte, MO 65337

Dr. James L. Navara, Director
Career Education Project
State Fair Community College
Sedalia, MO 65301

Jerald L. Morrison, Specialist
Job Development and Follow-Up
Career Education, SFCC
Sedalia, MO 65301

Carleda Williams, Counselor
Lincoln High School
Lincoln, MO 65338

H. N. Branson, Counselor
Smith-Cotton High School
Sedalia, MO 65301

Jay D. Fajen, Counselor
Cole Camp High School
Cole Camp, MO 65325

Bill Gott, Counselor
Warsaw High School
Warsaw, MO 65355

Madelyn Elliot, Counselor
Marshall High School
Marshall, MO 65340

Dr. Jane Bucks, Associate Professor
Central Missouri State University
Warrensburg, MO 64093

Dale Dieckhoff, Applications Programmer
Central Missouri State University
Warrensburg, MO 64093

CHAPTER I

INTRODUCTION

In the summer of 1973, State Fair Community College received a grant from the United States Office of Education, funded through Part D; Public Law 90-576, to implement a career education program in a three-county, ten school district area in Mid-Missouri. The school districts involved include Warsaw, Lincoln, and Cole Camp in Benton County; Green Ridge, La Monte, Smithton, Sacred Heart, Hughesville (Northwest), and Sedalia #200 (Smith-Cotton) in Pettis County, and Marshall in Saline County.

One component of the Career Education Project is the Job Development, Placement, and Follow-Up component with given responsibilities of follow-up activities of high school graduates from these ten school districts.

In September and October 1973, base-line data was gathered from the 1974 high school seniors as to what they planned to do after they graduated from high school. This data was used to implement the job development and placement portion of the Career Education Project. Results of these surveys may be found in the High School Teachers Survey, January 8, 1974; the High School Counselor Survey, January 23, 1974; and the Area High School Senior Survey Results, January, 1974. In order to implement the follow-up portion of the project an initial telephone follow-up survey was conducted in January, 1975, nine months after the 1974 seniors had graduated from high school. The results of the initial telephone follow-up survey may be found in Follow-Up Survey 1974 Graduates. No attempt was made to compare the data gathered in September and October, 1973, with the data gathered in January, 1975.

During the second year of the Career Education Project, the Job Placement and Follow-Up Component continued to carry out its given responsibilities. Many changes and revisions were made to improve service to students, schools

and employers. In January 1975, baseline data was gathered from each 1975 senior to assist in job development, for and placement of the 1975 graduates.

This data was also collected to assist with the follow-up activities outlined in the project proposal. This telephone follow-up survey was again undertaken nine months after the class of 1975 had graduated, in January 1976. The survey remained basically the same, however, a computer service was employed to assist in tabulation and report preparation.

One additional change from the follow-up survey of the 1975 graduates will be the inclusion of some baseline data of the class of 1975 and correlation of this data with the follow-up survey results.

PURPOSE OF THE SURVEY

The primary purpose of the survey was to follow-up the 1975 high school graduates from the ten school districts.

The objectives of the follow-up survey were:

- (1) To survey the 1975 high school graduates from the ten school districts nine months after graduation.
- (2) To analyze, compile and report the results of the follow-up survey to participating schools and other interested parties.
- (3) To use the results of the survey for program development, implementation, and evaluation.
- (4) To improve upon and report any major differences from the results of the Follow-Up Survey of 1974 Graduates.

CHAPTER II

DESIGN OF STUDY

Development of Survey Instrument

Development of the telephone follow-up survey instrument began two years ago. It was first used in the Follow-Up Survey of 1974 Graduates, revised and improved this year for use in the survey of 1975 graduates.

During the 1973-74 school year, the Career Education Job Placement Specialist surveyed the participating guidance counselors to determine what job development, placement and follow-up activities were being conducted by the ten participating school districts. That survey revealed that only two schools (Smith-Cotton and Marshall) were involved in one-year follow-up studies of their graduates.¹ That fact, along with USOE evaluation guidelines spelling out the necessity of follow-up activities for federally funded Career Education Projects prompted the Job Placement Specialist to research materials from different states Washington, Missouri, Virginia, Minnesota, Ohio, Arizona, Florida, and others to determine what types of follow-up studies of high school graduates had been conducted in the past.

Many of the follow-up studies that had been conducted were for vocational-technical high school graduates and assessed the value of the vocational-technical program in their area or state.

None of the follow-up studies reviewed were designed to follow-up all high school graduates one year after graduation within the state of Missouri. The Missouri State Department of Education conducted a follow-up survey of selected Missouri high school graduates five years after graduation during 1973. However, this survey has not been continued.

¹High School Counselor Survey, January 23, 1974, Career Education Project, State Fair Community College, Sedalia, MO 65301.

Marshall and Smith-Cotton high schools had completed one year follow-up studies of their respective graduates for several years and their follow-up instruments were considered.

Information about follow-up surveys was presented to eight participating high school guidance counselors and designated representatives at a Job Development, Placement and Follow-Up Workshop on November 20, 1974. At that workshop, initial survey objectives were developed.

The main objective of the 1974 survey was to contact, by telephone, each graduate and find out "What they are presently doing." Other objectives included:

1. To locate former graduates and let them know that their alma mater was still interested in them.
2. To determine which students are involved in the world of work.
3. To identify employers of 1974 graduates.
4. To determine which students were involved in post-secondary education programs.
5. To determine which students in post-secondary education were also involved in the world of work.
6. To determine which students obtained employment through their high school counselor and/or the Career Education Project Placement Service.
7. To determine trends and graduate flows to post-secondary institutions.

Questions to obtain information to achieve the above objectives were generated from questions asked in other follow-up studies and redesigned to meet the needs of the 1974 telephone follow-up survey.

The survey of 1974 graduates was conducted in January 1975. The results of the Follow-Up Survey of 1974 Graduates were presented to participating high school guidance counselors, superintendents and principals at a Job Development, Placement Follow-Up Workshop on April 16, 1975. During that workshop, problems in the 1974 instrument were discussed and additional information was deemed necessary. The objectives and instrument were revised and approved by each

~~school for use in the follow-up~~ of 1975 graduates. At that time, each school also made a commitment to conduct the 1975 follow-up survey.

The primary objective of the 1975 follow-up survey remained essentially the same; to contact, by telephone, each graduate or a responsible adult and find out "What are you (the graduate) doing now?" Other objectives that remained unchanged were:

- (1) To locate former graduates and let them know that their alma mater was still interested in them.
- (2) To determine which students are involved in the world of work.
- (3) To identify employers of the 1975 graduates.
- (4) To determine which students were involved in post-secondary education and/or training programs.
- (5) To determine which students involved in post-secondary education were also involved in the world or work.
- (6) To determine trends and graduate flows to post-secondary institutions.

Several additional objectives of the survey were added:

- (7) To determine how graduates located their first job after graduation.
- (8) To determine the type of occupation (by USOE cluster) graduates are engaged in.
- (9) To determine the mobility patterns of graduates.
- (10) To determine the marital status of graduates nine months after graduation.

The survey instrument was revised to achieve the above objectives. A copy of the follow-up survey instrument used for 1975 graduates may be found in Appendix A.

Shortly after the survey instrument was developed the Central Missouri State University Computer Service was contacted and engaged to develop a computer program to tabulate and assist in the preparation of data to meet the objectives of the 1975 follow-up survey. During the summer of 1975 the computer program was written, tested and modified.

On December 16, 1975 a Job Development and Follow-Up workshop was attended with representatives from each of the participating schools. A list of workshop participants are included in Appendix B.

During the workshop on December 16, the survey objectives were again discussed and agreed upon. The survey instrument was revised and discussed along with procedures and directions for completing the telephone follow-up forms. During the workshop the computer program analyst presented information about the computerization of the responses, tabulation and analysis of the data.

POPULATION

The population for this survey was the 795, 1975 graduates from the ten participating high schools involved with the Career Education Project at State Fair Community College. These districts included Warsaw, Lincoln, and Cole Camp in Benton County; Green Ridge, La Monte, Smithton, Sacred Heart, Northwest, and Smith-Cotton (Sedalia) in Pettis County; and Marshall in Saline County.

ADMINISTRATION OF THE SURVEY INSTRUMENT

Methods of administration were discussed as they had been on November 20, 1974, and using the telephone was decided to be the most appropriate method. The telephone was chosen again because:

1. A higher rate of response was anticipated than by other methods.
2. By using the telephone, the interviewer could clarify unclear responses.
3. There was less anticipated cost using the telephone as compared to mailing the survey instrument.

After approval of the survey instrument and the telephone as the administrative device, a designated individual was given the responsibility of coordinating and/or conducting the administration of the survey within their school system.

In seven schools, the guidance counselor or counselors telephoned and talked with each graduate or a responsible adult to complete the survey instrument.

At Northwest High School, the high school principal personally talked with each

graduate and completed the survey questions. At Smithton High School the guidance counselor was assisted in contacting the graduates and completing the survey questionnaire by work study students. At Warsaw High School, two students in an English class did the telephoning and completed the survey forms under the direction of the guidance counselor.

To facilitate consistent responses and to provide a guide for interviews, a detailed telephone callers script was prepared and is included in Appendix C.

All respondents except Green Ridge and Northwest were contacted during January 1976. Green Ridge and Northwest were contacted in February.

Once the survey instruments were completed, each school's designated staff member returned their surveys to the Job Placement Specialist for review and preparation for computerization. Each survey form was reviewed by the Placement Specialist and checked for completeness of information.

DATA CODING

Individual student responses from the telephone follow-up survey forms were coded on green "Questionnaire Coding Forms" as illustrated in Appendix D. The "Questionnaire Card Format" and "Directions for Transferring the Information from the Questionnaire to the Coding Form" are included in Appendix D.

Information about graduates employers was coded on the orange "Employer Coding Form" which is also included in Appendix D.

Graduates job title was coded by occupational cluster from the USOE fifteen occupational clusters. The "Occupational Cluster Guide" sheet is also included in Appendix D.

Information about post-secondary educational and training institutions was coded on the canary "College Coding Form" included in Appendix D. "Institution ID Codes" are also included in Appendix D.

Graduates enrolled in post-secondary educational or training programs were codified by "Major Coding" and are included in Appendix D.

Graduates current address was coded by zip code using the National Zip Code Directory for all addresses except those graduates not located who were assigned a zip code 00000; U. S. Army 00010; U. S. Navy 00020; U. S. Air Force 00030; U. S. Marine Corps 00040; Cork, Ireland 00001; and Lille, France 00002.

After all of the telephone follow-up survey forms had been received and coded they were sent to the computer program analyst at CMSU and keypunched by the CMSU computer service for tabulation and analysis.

DATA ANALYSIS

On March 1, 1976, the Central Missouri State University Computer Service received the coded individual responses and processed them for tabulation.

To accomplish the objectives of this survey tables of frequency distributions were constructed for each item or groups of items. Percentages of responses to total responses were computed in each area.

Separate frequency distributions and percentages were constructed for single males, married males, single females and married females on some survey questions. On several questions separate frequency distributions and percentages were computed for males and females. In most cases, distribution and frequency tables were set up so comparisons of graduates from different schools could be made. However, in the analysis of the data, very few comparisons between graduates of different schools were made. Analysis and comparisons between schools were not made because of the myriad factors that influence graduates career decisions and plans.

In addition, distributions were computed using the different combinations of work and school. These distributions were then used to clarify how graduates in related or different classifications responded to the survey questions.

Graduates current address was coded by zip code using the National Zip Code Directory for all addresses except those graduates not located who were assigned a zip code 00000; U. S. Army 00010; U. S. Navy 00020; U. S. Air Force 00030; U. S. Marine Corps 00040; Cork, Ireland 00001; and Lille, France 00002.

After all of the telephone follow-up survey forms had been received and coded they were sent to the computer program analyst at CMSU and keypunched by the CMSU computer service for tabulation and analysis.

DATA ANALYSIS

On March 1, 1976, the Central Missouri State University Computer Service received the coded individual responses and processed them for tabulation.

To accomplish the objectives of this survey tables of frequency distributions were constructed for each item or groups of items. Percentages of responses to total responses were computed in each area.

Separate frequency distributions and percentages were constructed for single males, married males, single females and married females on some survey questions. On several questions separate frequency distributions and percentages were computed for males and females. In most cases, distribution and frequency tables were set up so comparisons of graduates from different schools could be made. However, in the analysis of the data, very few comparisons between graduates of different schools were made. Analysis and comparisons between schools were not made because of the myriad factors that influence graduates career decisions and plans.

In addition, distributions were computed using the different combinations of work and school. These distributions were then used to clarify how graduates in related or different classifications responded to the survey questions.

CHAPTER III

ANALYSIS OF DATA

Of the 795 graduates of the ten school district, 741 or 93.2 percent were contacted using the telephone technique. Only 59 or 6.8 percent of the graduates could not be contacted by telephone or through a responsible respondent.

Table I, page 10 shows that of the 795 graduates 238 or 30.0 percent were employed, 112 or 14.1 percent were working and going to school, 254 or 31.9 percent were enrolled full or part-time in post secondary educational or training institutions, 51 or 6.4 percent were in the military service, 4.9 percent were housewives, 5.3 percent were unemployed and 6.8 percent could not be located.

In analyzing the data, the two largest school systems, Smith-Cotton in Sedalia comprised 42.6 percent of the total population and Marshall High School in Marshall comprised 18.7 percent of the total population. Therefore, 61.4 percent of the population was from the two largest school systems. For comparison purposes, the populations of Smith-Cotton and Marshall have been compared to the populations of the eight smaller high schools.

Table II, page 11 shows the difference between the two populations. The percent of graduates 31.6 percent going directly into the world of work is greater in the eight smaller schools than the 28.9 percent in the larger schools. Appendix E lists employers of all 1975 graduates.

A greater percent of the larger schools graduates 16.6 percent were working while also enrolled in post-secondary education or training, than of the smaller schools 10.1 percent. A larger percentage of graduates were enrolled in post-secondary education or training from the larger schools 48.8 percent than in the smaller schools, 41.7 percent.

100.0

Of the 307 graduates from the eight smaller schools, 16 or 5.3 percent enlisted in the military service compared to 35 or 7.1 percent of the 488 graduates from Marshall and Sedalia. In the large schools, 3.7 percent of the graduates were housewives compared to 6.8 percent of the smaller school graduates.

In terms of unemployment, 21 or 4.3 percent of the graduates were unemployed from Marshall and Sedalia as compared with 18 or 5.9 percent from the smaller schools.

Of the 54 respondents that could not be located, 31 were from Smith-Cotton 7 from Warsaw, 7 from Cole Camp, 4 from Smithton, and Lincoln, Green Ridge, Sacred Heart, Northwest and Marshall each could not locate one graduate. La Monte was the only school able to locate all of their graduates.

In order to analyze the data according to sex and marital status tables III, IV, V, and VI were constructed. Of the 795 graduates there are 400 or 50.3 percent males and 395 or 49.7 percent females. More females were married 83 or 21.0 percent than males 25, or 6.3 percent.

Of the 375 single males reported in Table III, 110 or 30.9 percent were working, 60 or 16 percent were working full or part-time while they were enrolled in post-secondary education or training, 190 or 29.1 percent were enrolled full or part-time in a post-secondary institution, 44 or 11.7 percent were enlisted in the armed forces, 16 or 4.3 percent were unemployed and 7.2 percent were not located.

Table IV indicates that of the 25 married males 16 or 48.0 percent are working, one or 4.0 percent is working full time and also continuing his education, only one graduate is enrolled full time in a post-secondary institution, 4 or 16.0 percent are in the military, and 2 or 8.0 percent the married males could not be located.

There is no unemployment among the married male graduates. In fact the graduates enrolled in post-secondary education are the only married male graduates not employed full time. Only two married male graduates are continuing their education. Proportionately, Lincoln and Marshall high schools have a high married male rate among their graduates.

Table IV page 16 indicates that of the 312 females 78 or 25 percent are working, 50 or 16.0 percent are working and are enrolled in a post-secondary educational or training program, 138 or 44.2 percent are enrolled full or part-time in a post-secondary institution, 2 or 0.6 percent have enlisted in the Army, and 21 or 6.7 percent are unemployed; 6.7 percent could not be located.

Of the 83 married females in Table VI, 27 or 32.5 percent are working full or part-time, one or 1.2 percent is working and going to school, six or 7.2 percent are enrolled in a post-secondary institution. One has enlisted in the Navy and 39 or 47.0 percent are housewives, while five or 6.0 percent are unemployed. Only 4.8 percent of the married females could not be located. We also note that proportionately more female graduates from Lincoln and Northwest High Schools are married.

Table VI indicates that almost half or 47.0 percent of the married females from the participating high schools are engaged full time in the career of homemaking, while an additional one third carry out dual roles as homemakers and employees.

Like the married males, very few married females continue their education or training 8.0 percent and 8.4 percent respectively.

Comparing the total male to the total female population in Table VI A, we find that more males enter the world of work than females and that more females continue their education.

We continue to find more men enlisting in the armed forces than women. However, females from Cole Camp and Smith-Cotton enlisted in the Army and one married female from Warsaw joined the Navy.

We also continue to find more females, 6.6 percent unemployed than males 40 percent.

Table VII page 20 illustrates that 370 students are enrolled in a post-secondary educational or training program. We find that 69.5 percent of the graduates enrolled in post-secondary institutions are enrolled full-time and are not involved in the world of work and that only one graduate is enrolled only part-time. The remaining 30.2 percent are working while they are going to school with the majority 22.7 percent working part-time while they attend school full time.

Of the 1975 graduates 4.3 percent work full time and attend school full-time, 2.4 percent worked full time and attended school part-time and only 0.8 percent worked part-time and go to school part-time. Appendix F lists the post-secondary educational and training institutions being attended by 1975 graduates and the distribution of declared majors.

Tables VIII and IX pages 21 and 22 shows that a greater percentage of males work, 35.0 percent while attending school than females, 26.0 percent and more males worked full time while enrolled, 6.3 percent than females 2.6 percent.

Table X page 23 indicates the type of post-secondary institution the graduates are attending with 16 or 4.3 percent attending one year training programs. In Appendix F we can see that most of these programs are for practical nurses, clerical training, cosmetology, automotive technology, welding, and other programs. These programs are offered in the community college, primarily State Fair Community College and at preparatory schools. Eighty-one or 21.9 percent are enrolled in two year vocational training programs with 75 or 20.3 percent enrolled in community colleges or similar institutions and plan to transfer to a four year college to obtain a degree.

PERCENTAGE	4.3	21.9	20.3	53.2	0.3	100.0	

More than half of the graduates 53.2 percent are enrolled in four year colleges or universities pursuing their educational objectives.

Table X also indicates that of the 1975 graduates continuing their education 26.2 percent are involved in vocational training and 73.5 percent are enrolled in academic training programs.

Tables XI and XII pages 25 and 26 are comparisons of male and female responses. We note that more of the females, 6.6 percent, than males 1.7 percent have enrolled in one year vocational programs which is primarily due to the one year practical nursing and clerical programs. This shift is reversed in the two year vocational programs where we find 24.7 percent of the males and 19.4 percent of the females enrolled in two year vocational programs. Vocational enrollment is just over one fourth of the graduates for both sexes, males 26.4 percent, and females 26.0 percent.

Almost three-fourths of the 735 graduates are enrolled in academic training programs. More females 42 or 21.4 percent than males 33 or 19.0 percent began their academic training in a two year college and plan to transfer. Whereas, more males 94 or 54.0 percent, than females 103 or 52.6 percent enrolled directly in a four year educational institution.

In response to the question, how did you locate your first job after high school, Table XIII page 27 indicates that 340 of the 795 graduates responded to this question. However, it should be pointed out that this question received inconsistent responses because all graduates who were working at the time of the survey did not respond to this item. Only 298 of the 352 graduates who were working responded. There were differences among schools as is easily noted in the left hand percent column which shows that 57.1 percent of the responses came from one school, Smith-Cotton, who had only 42.6 percent of the total population. From the individual response questions, it was also evident that the question was not interpreted in the same way by each interviewer.

PERCENTAGE	12.1	23.5	8.5	26.2	0.9	6.5	2.9	1.5	4.7	13.2	100.0	

From the respondents 26.2 percent indicated they located their first job by their own efforts, 23.5 percent through their friends, 12.1 percent through their parents and 8.5 percent through other relatives; therefore, 70.3 percent of the graduates responding to this item located their first job through their own resources or friends or relatives. In addition, 6.5 percent indicated they located employment through the employment service. Fifteen of the 22 graduates who located their employment in this manner were working at the McGraw-Edison plant that began operation in the summer of 1975 and utilized the Missouri Job Service for all its referrals and testing.

The Placement Specialist and participating high school staff assisted 9.1 percent in locating employment with the least successful way to obtain employment was through newspaper ads which accounted for only 0.9 percent of the respondents. In addition to these 13.2 percent indicated they obtained employment through resources other than those mentioned above.

Tables XIV and XV pages 29 and 30 were constructed to show differences between male and female graduates approach to locating employment. Of the 349 respondents 181 were male and 159 were female. The largest response item for males was friends 24.9 percent whereas, the females indicated it only 22.0 percent. The largest response item for females was own efforts, 30.8 percent, while the males responded to that item only 22.1 percent.

Of the friends and relative groups, males indicated parents helped them locate their first job more frequently than females, 17.7 percent compared to 5.7 percent while on the other hand, females indicated relatives helped them slightly more, 10.1 percent compared to 7.2 percent of the males.

The Job Service office was indicated as the locating agency more frequently by females, 8.2 percent, than by males, 5.0 percent. Likewise the placement specialist was indicated by more females, 5.7 percent than males 3.9 percent as the locating agent. This is also reflected in Table XXVI page 47 which indicates that more females, 62.0 percent, than males, 37.8 percent, requested assistance

in locating employment from the placement specialist in the spring of 1975.

Comparing males and females we note teachers were indicated as helping more males, 4.4 percent, than females, 1.3 percent, and that guidance counselors assisted, 1.1 percent of the males and 1.9 percent of the females. We note also that only females 1.0 percent indicated that they located their first job through the newspaper want ads. Table XVI page 32 was constructed from the respondents job title and coded using the fifteen occupational clusters of the U. S. Office of Education as defined in An Analysis of Fifteen Occupational Clusters Identified by the United States Office of Education.

Among the 1975 graduates we find that 56.5 percent of the graduates are engaged in occupations in three clusters: Marketing & Distribution 22.2 percent; Personal Services 19.0 percent, and Manufacturing 15.3 percent.

An additional 15 percent of the graduates working are engaged in the three additional clusters: Agri-Business 8.8 percent, Transportation 8.2 percent, and Business and Office 8.0 percent. Health 6.0 percent, Construction 5.4 percent,

Communications and Media 2.8 percent, Public Service 2.3 percent, and Hospitality and Recreation 1.1 percent account for 17.6 percent of the graduates. Only two graduates 0.6 percent are employed in the Fine Arts cluster and only one graduate 0.3 percent is in Consumer and Homemaking Education. The Consumer and Homemaking Education cluster does not include the graduates who are housewives. No graduates are engaged in Environmental or Marine Science, however, some graduates enrolled in post-secondary education are enrolled in training programs to prepare them for these types of occupations.

Tables XVII and XVIII pages 33 and 34 compare graduates involvement in career clusters by sex. We find the following clusters dominated exclusively by males: Agri-Business, Transportation and Construction. The Business and Office career cluster is dominated exclusively by females. A larger percent of females than males are engaged in health, manufacturing, and personal services careers.

In the balance of the career clusters, males and females are engaged proportionately.

Table XIX page 36 indicates how graduates in the fifteen clusters located their first job. In the Agri-Business cluster 20 of 22 located the job through family and friends or their own efforts. This was due to the fact that many graduates in the Agri-Business career cluster were working on the family farm.

In the Manufacturing cluster almost 25 percent of the jobs were located through the employment service due to the opening of the McGraw-Edison plant in Sedalia in the spring of 1975 while 13 of 15 construction jobs were located through family and friend and own efforts.

The educational institution, teacher, counselor and placement specialist seemed to be most helpful to graduates in the Business and Office, Health and Public Service career clusters.

Tables XX and XXI pages 37 and 38 reflect the differences in male and female graduate responses to how they located their first job and the career cluster they are employed in.

In this section we will examine some of the mobility patterns of the 1975 graduates. Table XXII page 39 was constructed to show where the 352 graduates who are employed are located by zip code and city. Totals are not given for clusters but are the same as the totals in Table XVI on page 32.

From Table XXII we find that 179, or 50.9 percent or the majority of the graduates are employed in Sedalia, 13.1 percent in Marshall, 5.1 percent in Warsaw, 4.0 percent in Lincoln, 3.4 percent in Cole Camp, 2.3 percent in Kansas City, 2.0 percent in La Monte, 1.7 percent each in Smithton, Warrensburg, and Green Ridge, 1.4 percent in Houstonia and in Hughesville, 1.1 percent in both Miami and Napton, and 0.9 percent in Nelson and Columbia, 0.6 percent each in Ionia, Lake of the Ozarks, Mora and Fristoe, and one each in the remaining cities. Eleven of the 352 graduates who are working are living and working out of the state.

Within the city of Sedalia; 93 of 179 or 51.9 percent of the graduates are working in one of two clusters, Marketing and Distribution or Personal Service. In Marshall and in Warsaw, Marketing and Distribution and Manufacturing make up the majority of the graduates, 56.5 percent and 55.5 percent respectively.

In Lincoln we find 57.1 percent of the graduates involved in the Agri-Business, and Manufacturing career clusters while in Cole Camp it is in the Health and Manufacturing careers where 50 percent of the graduates are employed.

In Table XXIII page 41 we find as in Table XVII, the male populations distributions by career clusters; however, Table XXIII indicates the city of their employment. Almost half, 49.5 percent and 58.8 percent of the males employed in Sedalia and Warsaw respectively are employed in Marketing and Distribution and Personal Services clusters.

Males dominate three clusters exclusively, Agri-Business, Transportation and Construction with graduates usually engaged in these careers in their home town. Four of eight males from Cole Camp are employed in the Transportation Cluster. We also find that six of the 195 males are employed outside of the state of Missouri, in Texas, Kansas, Alaska, South Dakota, and Illinois.

Table XXIV page 42 shows that 103 of the 157 females graduates are employed in Sedalia and Marshall. Fifteen of 80 or 18.7 percent Sedalia, and four of 23 or 17.4 percent Marshall, are in the female dominated Business and Office cluster. The Marketing and Distribution and Personal Service clusters employ 55.0 percent and 52.2 percent of the females in Sedalia and Marshall respectively. Among the employed female graduates from Lincoln, Green Ridge, La Monte, and Warsaw, 75.0 percent are engaged in the Manufacturing cluster.

Of the 157 females, six are employed outside of the state of Missouri, in Alabama, Indiana, South Carolina, Kansas, and Colorado.

Table XXV on pages 44, 45, and 46, shows the mobility patterns of the 1975 graduates by the high school they graduated from. The ten participating schools in the Career Education Project are located in Benton, Pettis, and Saline Counties. Of the 795 graduates 477 or 60.0 percent continue to reside in those counties.

Only 89 of the graduates are living outside of the state of Missouri which includes the 51 graduates who have enlisted in the armed forces and are residing at military installations throughout the world, and the two graduates who are attending college outside of the United States.

Thirty-six graduates are residing in 15 of the other 49 states including: North Carolina (1), South Carolina (1), Alabama (1), Tennessee (2), Indiana (1), South Dakota (1), Illinois (4), Kansas (9), Nebraska (1), Louisiana (1), Oklahoma (2), Texas (6), Colorado (3), Arizona (1), California (1), and one in Alaska.

CHAPTER IV
SUMMARY, COMPARISONS & RECOMMENDATIONS

SUMMARY

In January 1976, a telephone follow-up study was conducted with 795 1975 high school graduates of the ten school districts involved with the Career Education Project at State Fair Community College.

Of these graduates, 93.2 percent were contacted by telephone and responded to the survey instrument.

Of the respondents, 30.0 percent are involved with the world of work fulltime or part-time, 14.1 percent are working and continuing their education, 31.9 percent are continuing their education in a post-secondary education or training facility, 6.4 percent have enlisted in the armed forces, 4.9 percent are housewives, 5.3 percent are unemployed or not seeking work and 6.8 percent could not be located.

The survey also revealed that a higher percentage of the males, 48.1 percent, were involved in the world of work than females, 39.5 percent, and that a higher percentage of females, 46.4 percent, than males, 43.0 percent, were enrolled in post-secondary education or training.

A comparison of large school versus small school graduates indicated that a higher percentage of graduates from the large schools, 48.8 percent to 41.7 percent were enrolled in further education and that more of the small school graduates 31.6 to 28.9 percent were involved in the world of work. Also a greater percentage of graduates from the larger schools, 16.6 to 10.3 percent were working while they were continuing their education.

In reviewing the list of employers of 1975 graduates (Appendix E) and the list of post-secondary institutions attended (Table XXVII), it is evident that the majority of the graduates remain in Missouri and that most of the graduates remain in their home communities.

We also noted that of the 1975 graduates, 108 or 6.2 percent of the males and 21.0 percent of the females were married. In this survey we found that males had less unemployment than females and that no married male was unemployed while more of the males going to school worked, 44.0 percent than females, 26.0 percent; 53.2 percent of the 1975 graduates enrolled in higher education compares to 46.5 percent enrolled in one and two year training programs at community colleges primarily at State Fair Community College and at proprietary schools with 20.3 percent of these students planning to transfer to a four year college to obtain the four year degree of their choice.

In response to the survey item "How did you locate your first job after graduation from high school" we found that this question was not interpreted consistently but that 70.3 percent of those who responded to the question obtained their first job through their own efforts, friends, parents, and other relatives. Of the graduates, 9.1 percent located employment through the placement service or a member of the educational institution including the placement specialist, teacher, and guidance counselor. Six percent of the respondents located their job through the employment service, Newspaper ads were least successful for 1975 graduates.

Parents helped males the most and other relatives tended to help females the most. While more females than males indicated they received help locating employment through the placement specialist.

Among the 1975 graduates, 56.5 percent of those employed are employed in the following three clusters: Marketing and Distribution, 22.2 percent, Personal Service 19.0 percent and Manufacturing 15.3 percent. We also found that 8.3 percent of the graduates are engaged in Agri-Business careers, 8.2 percent in Transportation, and 8.0 percent in Business and Office careers. The 6.0 percent of the graduates in the Health cluster are mostly females, and

the 5.4 percent in Construction are all males. Two and eight tenths percent of the graduates are engaged in Communication & Media careers, 2.3 percent in Public Service careers and 1.1 percent in Hospitality and Recreation careers. Only two graduates are employed in the Fine Arts and Humanities cluster and one graduate is employed in the Consumer and Homemaking Education cluster. Employers of the 1975 graduates are listed in Appendix E as there are 241 employers of the 352 employed graduates.

In this survey we also found that very few graduates, only 89 left the state of Missouri to obtain employment and/or post-secondary education or training. Four hundred sixty-one of the 795 graduates or 58.0 percent of the 1975 graduates even remained within their local high school district.

The most frequently attended post-secondary institution is State Fair Community College with 161, 1975 graduates enrolled, 76 graduates are enrolled at Central Missouri State University, 26 at the University of Missouri, 12 at Southwest Missouri State University, 7 at Southwest Baptist College, 6 at Columbia College, 4 at the University of Missouri at Rolla and 3 graduates are at each of the following: Burge School of Nursing, Southeast Missouri State, Lincoln University, and Westminster College. The remainder of the 49 post-secondary institutions only had one or two graduates enrolled and are listed in Table XXVII.

COMPARISON OF 1974 and 1975 GRADUATES

This chapter deals with some comparisons of the findings in this report with findings from the Follow-Up Survey of 1974 Graduates.

The 1975 and 1974 follow-up surveys were conducted in the same ten school districts, Warsaw, Lincoln and Cole Camp in Benton County; Green Ridge, La Monte, Smithton, Northwest, Sedalia (Smith-Cotton) and Sacred Heart High Schools in Pettis County, and Marshall High School in Saline County.

Both follow-up surveys were conducted using the telephone as the data gathering device and in most cases the guidance counselor(s) was the interviewer. Both surveys were conducted about nine months following graduation during the month of January. In 1974, there were 860 graduates and 96.98 percent were contacted by telephone and responded to the survey instrument. In 1975, there were 795 graduates and 93.2 percent responded to the survey. The lower response in 1975 could have been attributed to several factors:

1. The novelty of a telephone follow-up survey had worn off.
2. Not as many graduates had telephones.
3. Not as much staff time was available to conduct the 1975 survey.
4. Or a myriad number of other factors.

We find that 3.4 percent fewer 1975 graduates are working full or part-time than in 1974, 33.37 percent versus 30.0 percent, and that 1.9 percent more 1975 graduates are working while going to school. Comparisons also show that 4.5 percent fewer 1975 graduates were enrolled in fulltime post-secondary institutions and that more 1975 graduates enlisted in the Armed Forces..

In terms of mobility most of the 1975 graduates remained in the state of Missouri and 461 or 58.0 percent of the 1975 graduates remained within their high school district.

In terms of education, 418 or 48.6 percent of 1974 graduates enrolled in post-secondary training or educational institutions while in 1975, 370 or 46.5 percent enrolled. In 1975 we found more graduates enrolled in four year colleges.

than in 1974, 53.2 percent compared to 50.6 percent while fewer 1975 graduates enrolled in vocational and technical programs or community colleges, 46.5 percent to 48.7 percent.

Following the 1974 follow-up study the survey instrument was changed to ascertain more information about how graduates located their employment in an effort to determine the accountability of the educational system and the placement service. Of the 1974 graduates, 385 or 44.8 percent responded to the question "Did you locate employment through your high school counselor and/or the Career Education Job Placement Service?" and 7.8 percent indicated they had. Of the 1975 graduates, 340 or 42.8 percent responded to the question, "How did you locate your first job after graduation?" and 9.1 percent of the respondents indicated that the educational institution including teachers, counselors, and the placement service assisted them in locating their employment. The follow-up of 1975 graduates substantiates that most graduates obtain employment leads through family, friends, relatives, as has been documented in other studies.

In the 1975 follow-up it was also deemed appropriate to determine what career clusters graduates were entering upon graduation. Over half, 56.5 percent, of the graduates are employed in the following clusters, Marketing and Distribution, 22.2 percent; Personal Service, 19.0 percent; and Manufacturing, 15.3 percent. Male graduates dominate exclusively the Agri-Business and Natural Resource, Transportation and Construction cluster while female graduates dominated exclusively the Business & Office cluster with a large percentage also employed in Health clusters.

This survey, like the survey of 1974 graduates, was constructed to obtain data about the 1975 graduates and for use in determining trends and for use as a basis for future decisions, hopefully to meet the needs of our graduates and improve the accountability of our educational systems.

RECOMMENDATIONS

Having completed the second follow-up survey, several recommendations can be made to improve future follow-up activities. These recommendations are:

- (1) Additional yearly follow-up studies should be conducted by each school district to determine what happens to its graduates.
- (2) Attempts should be made to find out how graduates feel about curriculum, facilities, and faculty.
- (3) Additional follow-up studies should be conducted to follow-up high school students who have dropped out of school.
- (4) Two year and five year follow-up studies should be considered by each school district to determine what happens to its graduates over a longer period of time.

Recommendations that can be made about programs include:

- (1) More emphasis on Marketing and Distribution, Personal Service and Manufacturing, and Transportation career cluster entry level skills.
- (2) Continued improved vocational and technical training programs in Agri-Business, Business and Office, Health and Construction clusters.
- (3) Continued job development and placement services to graduates to assist them in their transition into the world of work.
- (4) Some modification of individual high school curricula is needed to better meet graduates needs.

Dale Diekhoff, Applications Programmer, CMSU, Warrensburg, MO	

APPENDIX C
TELEPHONE CALLERS SCRIPT

GENERAL CALLING INFORMATION

In making these calls, or any telephone calls remember always to be courteous. In being positive yourself, you may obtain a more cooperative response. Listen carefully. Speak clearly and slowly. Sometimes after learning what the caller is seeking, those called will be more helpful.

This information you are obtaining is important for the school system in its evaluation of whether educational experiences are meeting student needs as they move into the working world.

When telephoning graduates if you do not get an answer after at least six rings, note the date and time you tried the call at the top of the form and attempt to reach other graduates. At least four attempts should be made to each graduate at different times of the day; this does not count calls that yield a busy signal.

If you reach a disconnected or out of service number, obtain as much information from the operator as possible and write it in the margin, i.e.,

is the phone disconnected?
out of service?
number has been changed? get the new number
number changed to unlisted number?

If the number has been changed, try the number the operator gives you and note the new number on the form.

Your service to the school system as a caller in this important activity is appreciated. Thank you and good luck!

CALLER'S SCRIPT

For uniformity, this script has been prepared for each caller. What you are to say will be in a box.

Preliminary Information

"My name is _____
I am a _____ at _____
grade classification-job title school
where my _____ class is conducting a telephone follow-
subject
up survey of all 1975-_____ graduates.
school
Is this the residence of _____? (pause)
graduates name
May I please speak with _____?
graduates name

If a child answers, ask to speak with an adult in the home, and begin the preliminary information again. If an adult answers and the graduate is not available, say,

"Maybe you can help me complete the survey with some basic information about what
_____ is doing now?"
graduates name .

If the answer is positive, skip to Part B, and continue. If the answer is negative, ask,

"When might I talk with _____ to learn how his high school
graduate
experiences relate to his present activity?"

Try to contact the graduate at the specified time.

Thank the person for any information given to you.

Part B

"This survey will help the school system to know how school experiences relate to present activities. The survey will give a total picture of all graduates school experiences as they relate to present activities. Some of the questions involve basic information which is a matter of public record, but we'd like to get answers to these questions as a part of the complete survey. Other questions pertain to what you've been doing since you graduated. It should take only a couple of minutes to complete the information.

"Ready?"

Let me first check your name _____
give full name from card

Do you still live at _____ ?
give address on card

or

What is your address? _____

or

What is your new address? _____

Your phone number is _____ ?
give the number you called

We also need the zip code to complete computer forms, however, do not pressure the graduate for the zip code if they don't know it. We can obtain it from a directory later. We need the entire address including house number, street, rural route, box number, etc.

From the conversation you may already know the graduate's sex, if so, check the appropriate sex on the form. If not, ask

"What is your sex? Male or Female?"

write in on form

"What is your marital status? Married or Single?"

write in on form

"What are you doing now, working, going to school, in the service, housewife?"

Listen for response. If student says he is not working but is going to school, skip to SCHOOL, if he is in Armed Forces, or Housewife, skip to OTHER, if in school and working, complete both EMPLOYED & SCHOOL sections. If he is working, ask

(1) EMPLOYED

"Who is your employer?"
"What is your employer's address?"
"What is your job title?"
"Are you working full-time, or part-time?"

enter responses on form

If a student indicated he is self-employed, record his name as employer, his address as his business address, and job title as what he does. Then check only the self-employed section under job title. Do not complete full-time or part-time.

If the graduate is unemployed, not working or going to school, investigate the type of unemployment, ask,

"If you are unemployed, are you looking for work or not looking for work?"

Check the correct response on the form.

If the student is working and none of the above descriptions are accurate, check OTHER and write in an explanation.

(2) SCHOOL

If the graduate indicates he is in college, vocational school, taking correspondence courses, or taking further training, complete this section, ask,

"What school are you attending?"

write in on form

"Where is the school located?"

write in on form

"What is your major or what are you studying to be?"

write in on form

"Are you enrolled as a full-time or part-time student?"

write in on form

Full-time students are usually enrolled in 12 or more semester hours of course work. Part-time is usually less than 12 hours per semester. Some students may be taking correspondence courses. Check the appropriate box on the form if they are.

If a student is in school but none of the above describe their activity, check OTHER and write a brief description, i.e., Job Corps, prison school, etc.

(3) OTHER

If the graduate is in the armed forces, ask,

"In what branch of the armed forces are you now serving?"

write in on form

Some graduates will describe their occupation as housewife, if so, check, Housewife on the form. They may be both a housewife and in school and/or working or both so complete all sections on the form that apply.

If the graduate has not obtained employment since graduation, this question will not apply. Ask,

(4) LAST SECTION

"From whom or how did you find out that there was a job opening for your first job after graduation?"

Enter this response on the form. Use only one response, the one that was the most helpful to the graduate in learning about the job.

Do not read choices on the form unless graduate does not know what you are looking for. If he does not understand why we are asking these particular questions, tell him we want to know how he found out that there was a job available that interested him and later interviewed for the job and was employed. We want to know HOW he found out about the job opening, NOT how he got the job.

"This concludes our survey of 1975 high school graduates. We want to thank you for your assistance and cooperation."

Goodbye."

INSTRUCTIONS FOR TRANSFERRING THE INFORMATION
FROM THE QUESTIONNAIRE TO THE CODING FORM

1. Fill in the school ID number. Each of the ten schools has a unique number identifying it. See the card format sheet for codes.
2. Fill in the graduates Name (last name first), Address, and Zip Code in the appropriate spaces. Do not exceed the space provided (abbreviate where necessary).
3. Code the marital status; M for married; S for single. Must fill in one of these codes.
4. Code the sex of the student; M for male, F for female. Must fill in one of these codes.
5. Fill in the employment status. See card format sheet for codes. One of these codes must be chosen.
6. If the graduate is employed, fill in the employer code. If the graduate is not employed, leave this space blank. If the employer does not already have a code, assign a 3-digit code and record it on an employer coding form (orange sheet) along with the employers name and address.
7. If the student is employed, code his job title into one of the 15 occupational cluster numbers. See the sheet entitled Data Identification Index for codes. If the graduate is not employed, leave this space blank.
8. Code whether or not the graduate is enrolled in further education. If he is enrolled, fill in one of the codes found on the card format sheet. If he is not enrolled, leave the space blank.
9. If the graduate is enrolled, fill in the Institution ID code. If the student is not enrolled, leave this space blank. If the school does not already have a code assigned, assign a code to it and also fill out a college coding form (yellow form) with the name and address of the college. The first digit of the Institution ID code identifies the type school and must be a 1, 2, 3, or 4. See codes on card format sheet.
10. If the graduate is enrolled, determine his major code and fill it in on the coding form. See major code listing for codes. If the graduate is not enrolled, leave space blank.
11. If the graduate is in the armed forces or is a housewife, fill in the Armed Forces column with the correct code from the card format sheet. If the graduate does not fit one of these categories, leave the space blank.
12. Code the space on how they located their first job. See card format sheet for codes. If they have never had a job, leave the space blank.

DESCRIPTIVE NOTE: 153P.

ABSTRACT: THE PURPOSE OF THIS PROJECT WAS TO DEVELOP A MODEL NURSING PROGRAM WITH MULTIPLE ENTRY AND EXIT POINTS TO FACILITATE UPWARD MOBILITY AND CONTINUOUS PROGRESS FOR NURSING AND AUXILIARY STUDENTS. MAJOR PROCEDURES INVOLVED PROPOSAL DEVELOPMENT, A WORKSHOP ON CURRICULUM MODULARIZATION, AND A TASK ANALYSIS INVENTORY TO IDENTIFY COMPETENCIES REQUIRED AT VARIOUS LEVELS OF HEALTH CARE. THE MAJOR PORTION OF THE REPORT (119 PAGES) CONSISTS OF APPENDED PROJECT-DEVELOPED MATERIALS, INCLUDING PROPOSALS SUBMITTED TO THE STATE BOARD OF NURSE EXAMINERS CONCERNING ARTICULATION, CURRICULUM REVISION, AND ADVANCED PLACEMENT AND A SUMMARY OF WORKSHOP INFORMATION THAT INCLUDES WORKSHOP AGENDA, DEFINITION, COMPONENTS, AND CONTINGENCIES OF CURRICULUM MODULES, AND WAYS AND COSTS OF MODULE UTILIZATION. ALSO APPENDED IS THE PROJECT-DEVELOPED 15-WEEK COURSE, TRENDS IN NURSING, DESIGNED TO ALLOW FOR INDIVIDUAL SELF-PACING. THE COURSE CONSISTS OF NINE MODULES, EACH CONTAINING PRETEST, OBJECTIVES, LEARNING ALTERNATIVES, AND POSTTEST. A REPORT OF THE TASK ANALYSIS SURVEY APPEARS WITH A DESCRIPTION OF PROCEDURES, DATA ANALYSIS, AND PRESENTATION OF RESULTS. FOR THE SURVEY THE TASKS WERE GROUPED INTO NINE CATEGORIES. THE RESULTS ARE REPORTED FOR EACH CATEGORY BY A BAR GRAPH ILLUSTRATING THE PERCENTAGE RESPONSE OF COMPETENCIES BY TASKS EXPECTED OF A HEALTH ASSISTANT, LICENSED PRACTICAL NURSE, OR REGISTERED NURSE. FINAL REPORT

I. INTRODUCTION TO PREVIOUS STUDY RESULTS 1974-1975

A. General Information

This project was originally initiated in October of 1974. The proposal was submitted for funding to study the problems existing between training institutions and levels of training and to develop a model program that would support a philosophy of "continuous progress."

The need for the project was based on several factors. First, in 1974 the State Board of Nurse Examiners for the Commonwealth of Pennsylvania had fully or initially approved 18 schools to offer a Baccalaureate Degree in Nursing; 15 schools to offer an Associate Degree in Nursing, 83 schools to offer a diploma in nursing and 59 schools preparing practical nurses. Secondly, many area vocational-technical schools or public secondary schools offered programs in auxiliary nursing fields. Thirdly, each of these programs offered courses designed to produce graduates with competencies commensurate with the levels expected by a particular nursing or auxiliary nursing field. Within the levels expected by educators and employers there are competencies common to all levels. Despite the commonality of competencies, it was difficult for students who wished to transfer from one level to another, or from one program to another, to receive credit for previous knowledge and skills.

Butler County Community College has a career ladder LPN/ADN program, designed to prepare competent practitioners at two levels; Licensed Practical Nurse and Associate Degree Nurse. Therefore, since the program had already served as an example of innovative education, it was a logical choice for the site of further innovations as suggested in the proposal.

At the completion of the project, the State Board of Nurse Examiners had approved the following schools: 21 Baccalaureate programs, 17 Associate Degree programs, 64 diploma programs with two schools scheduled to close in 1976-77, and 52 practical nurse programs. In addition there are 18 programs in auxiliary nursing fields offered by vocational/technical and public secondary schools in western and northwestern Pennsylvania. The changes in the numbers of programs in nursing and auxiliary nursing fields indicate the need to consider a "continuous progress" philosophy.

Prior to the initiation of the project eight schools with various types of nursing programs had expressed an interest in participating in an articulation project. Those interested were:

SCHOOL	PROGRAM
Slippery Rock State College	Baccalaureate
Indiana University of Pennsylvania	Baccalaureate
Villa Marie College	Baccalaureate

Butler County Community College
Lawrence County Vocational-
Technical School
Butler High School
Admiral Perry Vocational School
Highlands Senior High School

Career ladder LPN/ADN
Health Assistant & LPN
Health Assistant
Health Assistant
Health Assistant

B. Hypotheses and Objectives

Based on the information from the Butler County Community College program, a general hypothesis was formulated. A student can enter a nursing program at various levels, receive recognition for previous knowledge and skills, and progress to the level his ability and motivation will allow.

From the general hypothesis, the following subhypotheses were developed:

1. A student from a health assistant program should articulate directly into a nursing program and be exempt from the basic nursing course.
2. A student from an associate degree nursing program should articulate directly into a baccalaureate program on the Junior level.
3. Students from other types of nursing programs or health backgrounds should transfer into an associate degree program at various levels.

The project proposal contained three objectives which were derived from the purpose of the proposal submitted for funding of the project.

1. To develop a program that would facilitate the upward mobility of nursing and auxiliary nursing personnel in their educational programs making "continuous progress" possible to whatever level his ability and motivation will allow.
2. To develop a model for northwestern Pennsylvania that would maximize the efforts of training institutions in preparing nursing and auxiliary nursing personnel.
3. To recommend a procedure for implementing an articulation program that would provide for students the possibility of continuous progress without repetition.

C. Data Collection

It was evident that much preliminary work would have to be done preceding the actual proposed study. It was also evident that the study and recommendations would take considerable time. The study was designed to begin July 1, 1974, and continue through June 30, 1975.

However, due to funding notification which delayed hiring of personnel, the project was only in existence from January 6 through June 30 of 1975.

The procedure as written in the project proposal required the following:

1. Appointment of an "institutional" committee representative of the cooperating educational institutions.
2. Presentation of seminars and workshops to the institutional committee directed to develop standards for expressing behavioral or competency level objectives.
3. Appointment of a task force, representative of the nursing, and auxiliary nursing market of the northwestern Pennsylvania area. This committee will aid in identifying competencies required at various levels in the nursing and auxiliary fields.
4. Bringing to the program a staff member sufficiently knowledgeable in the field of nursing and auxiliary nursing to coordinate and prepare materials in keeping with the thinking of the task force and the institutional committee.
5. Providing consultants to aid in:
 - a. the identification of objectives.
 - b. the development of competency measurement instruments.
 - c. the development of modules of learning.
 - d. the development of overall evaluation instruments.
6. Preparing a final report with recommendations for implementing a "continuous progress" program.

D. Findings

In order to begin discussion on articulation with other programs, it was necessary to review and update course outlines of the nursing program at Butler County Community College. This was done by the project staff and presented to the faculty for approval. As this was done, it became obvious to faculty and the research staff that the entire curriculum would need reviewed and made current before articulation could be discussed. Therefore, most of the time from January through April was utilized to develop a new format for course outlines and to integrate behavioral objectives into the curriculum. After the basic nursing course was approved then contacts were made with individual schools.

The schools with health assistant programs which desired to participate were Highlands High School and Lawrence County Vocational-Technical School. Admiral Perry was visited to observe their program, and later contacted concerning articulation but did not respond to the offer. Butler High School was also contacted, but their program had not begun and was not fully organized.

The tentative proposal for articulation between the two schools and Butler County Community College was that students would be admitted into the first semester of the program and would be exempted from the theory portion of

the basic nursing course, leaving only the clinical experience. Thus, the student would not actually receive credit for his health assistant program. However, being exempt from the theory would free him to have more time for study, or to take an additional course of his own choosing. Another advantage of the free time would be to permit the individual to attend the basic nursing class at any time he desired, or the individual could be required to attend class or a laboratory session if he was performing inadequately in the clinical area. This portion of the project required meeting with the individuals involved with the programs and closely comparing their courses and curricula with the initial nursing course at Butler County Community College. This situation has not been completely resolved with the participating schools due to time. Also, such a change requires the approval of the State Board of Nursing.

Articulation of the associate degree nursing program with a baccalaureate nursing program was explored with the nursing departments of Slippery Rock State College and the University of Pittsburgh. The University of Pittsburgh is in the midst of complete curriculum revision and communication will be maintained with them. Slippery Rock State College has developed a pilot program and, at this time, due to admission criteria which include a stipulation of a one year work experience, direct articulation does not seem possible.

Further review of the curriculum concerned comparing the first year or practical nurse component, with the second year, or associate degree nurse component. The first year has 33 credits and a total of 1530 hours. This portion of the program is based on an 18 week semester, to result in the state required 1500 hours for a practical nursing program. A 15 week semester is followed by the other departments of the college. Also, the practical nurse program demonstrates the gap between nursing education and nursing service. Although the practical nurse student receives the basic principles of pharmacology, he may not administer medications in many institutions until he takes an additional pharmacology course of approximately 60 hours. In comparison, the second year of the program has 45 credits and a total of 1245 hours. The student who begins the associate degree track must take independent learning packages in at least 7 areas, while taking the required courses, in order to be eligible for the licensing examination for practical nurse.

One further limitation with the present curriculum is the rigidity of its structure which does not permit the student to take even one elective. Any significant change in the curriculum requires approval by the State Board of Nurse Examiners; therefore, before presenting such revisions to this Board, much work still needs to be done.

Time did not permit working with service institutions to discuss competencies required at various levels in nursing and auxiliary nursing fields. A beginning step was made by sending letters to 45 hospitals and nursing homes to inform them of the project and to request job descriptions for the levels of nursing and auxiliary nursing personnel in their employ. A 44 percent response was received from 20 of 45 institutions.

Various discussions and meetings as well as the assistance of a curriculum consultant, were helpful in assisting the faculty and research staff to identify several issues in curriculum revision and review. Primarily the faculty wished to become more involved in the nursing curriculum process and revision now that much of the preliminary work had been done by the research staff. The issues identified were:

1. Should candidates for the associate degree be held to meet LPN requirements when they serve to inhibit opportunities for elective course or independent study?
2. How can the problem be resolved in making the nursing curriculum more similar to the other college programs and avoid semesters which extend beyond the college calendar? Closely allied with this problem is the lack of adequate planning time for faculty.
3. Should National League for Nursing accreditation be a goal to assist in assuring quality to the program as well as affording the graduate greater opportunity for furthering his professional education?
4. A plan for evaluation should be developed to focus on the program and the revision process.

E. Summary and Conclusions

This study was designed to investigate problems that exist between training institutions and levels of training and to develop a model program that would support a "continuous progress" philosophy. The hypothesis contended that a student could enter a program at various points, receive recognition for past experience and knowledge, and then progress as far as his ability and motivation would allow.

Two health assistant programs, Highlands Area Schools and Lawrence County Vocational-Technical School, participated in the project. Also, two baccalaureate nursing programs, Slippery Rock State College and the University of Pittsburgh were involved. Several limitations influenced this project. The first limitation was the small sample. It was limited for the following reasons:

1. Proximity of other institutions. Most of the other schools who had expressed a desire to participate were not geographically situated for feasible commuting distance.
2. Numbers of students. (a) Due to clinical facilities and number of faculty, the number of students that could be admitted on this basis were restricted to 2-3 for each institution. (b) Due to community pressure at this time, the admission policy has been changed to offer priority to county residents.

The second limitation in this project was the inflexibility of the first year curriculum, due to the restrictions imposed on it as a practical nursing program by state regulation.

8

The third limitation is the criterion for admission to the ADN level of the program which requires the individual from outside the Butler County Community College program to be an LPN. This means that a diploma student, baccalaureate student, medical corpsman or a PN student who has not received licensure cannot be admitted to the ADN program until licensed as an LPN.

Therefore, the approximate percentages in the attainment of the project objectives are as follows:

- 1. To develop a program that would facilitate the upward mobility of nursing and auxiliary nursing personnel in their educational programs making "continuous progress" possible to whatever level his ability and motivation will allow. 60%
- 2. To develop a model for northwestern Pennsylvania that would maximize the efforts of training institutions in preparing nursing and auxiliary nursing personnel. 50%
- 3. To recommend a procedure for implementing an articulation program that would provide for students the possibility of continuous progress without repetition. 50%

F. Recommendations:

- 1. The project should be continued to enable the achievement of the objectives.
- 2. The actual health needs of the community and surrounding areas should be assessed in determining the levels of nursing and auxiliary nursing personnel needed.
- 3. The career ladder program at Butler County Community College should be refined to permit multiple points of entrance and exit, and thus permit continuation of education with minimal repetition.
- 4. The State Board of Nurse Examiners should be consulted concerning: (a) the inflexibility of the 1500 hours in the PN curriculum; (b) clarification of the function of the practical nurse in the administration of medications; and (c) arrangement for more flexibility in the criteria for advanced placement on the PN and ADN levels.
- 5. The participation of the health care institutions should be solicited in determining competencies required for the levels of nursing and auxiliary nursing personnel.
- 6. A plan for continuing education after graduation at any of the multiple exits in the nursing curriculum should be developed.

9

2

II. CURRENT STUDY 1975-76

A. General Information

Following notification of continuation of the project the initial month was spent in planning for the remaining time of the project, with full-time staff hired in October of 1975.

The first month was utilized to contact and inform former participants of the project that it had been renewed and to send them the summary results to date. The planning also included a possible spring workshop on modularization and a task analysis survey of area hospitals, and nursing homes regarding expected competencies of various levels of personnel. The survey completion date was set for late January 1976 and the workshop for March 26, 1976. The workshop was planned to include a variety of educational institutions such as vocational-technical schools, high schools with allied health programs, hospital schools of nursing, and community colleges with nursing programs. A total of 41 institutions were invited to the workshop with registration limited to 60 persons. The consultant was Fay Bower, from San Jose State University, with her expertise being modularization and innovative teaching/learning strategies.

Further planning was directed toward determination of how to meet the original objectives and if additional objectives were necessary. At this time consideration was also given to the need for writing for funds for proposals that would permit release time for faculty and thus involve them in curriculum evaluation and development of alternative teaching/learning strategies.

B. Objectives

The objectives for the project encompassed the original three objectives as well as additional ones derived from the recommendations of the progress report of June 26, 1975.

1. To develop a program that would facilitate the upward mobility of nursing and auxiliary nursing personnel in their educational programs making "continuous progress" possible to whatever level his ability and motivation will allow.
2. To develop a model for northwestern Pennsylvania that would maximize the efforts of training institutions in preparing nursing and auxiliary nursing personnel.
3. To recommend a procedure for implementing an articulation program that would provide for students the possibility of continuous progress without repetition.
4. To develop a program for continuing education for various levels of health personnel.

- 5. To develop a proposal of program refinement to permit multiple points of entrance and exit in the career ladder nursing curriculum to submit to the State Board of Nurse Examiners for approval.

C. Procedure for Data Collection

The procedure for collecting data was centered around information concerning the workshop on modularization; the expected competencies of health personnel, and content areas for continuing education.

The procedure required the following:

- 1. Providing consultants to assist in:
 - a. development of alternative learning strategies
 - b. grant writing for funding in curriculum evaluation, development of alternative teaching/learning strategies, and continuing education for health care personnel.
- 2. Contacting health care institutions in northwestern Pennsylvania concerning participation in the task analysis inventory.
- 3. Formation of a task analysis inventory to utilize as an assessment tool in identifying competencies required at various levels of health care.
- 4. Formation of questionnaire concerning interest in modularization workshop at Butler County Community College and contacting area educational institutions.
- 5. Presentation of workshop on modularization as a type of alternative learning strategy.
- 6. Plan a beginning program in continuing education for various levels of health care personnel.
- 7. Determine interest and need for continuing education for area health care personnel.
- 8. Prepare a final report.

D. Findings

Regarding articulation arrangements, the involved programs are those schools with Health Assistant programs. The two schools are Highlands Senior High School in Natrona Heights and Lawrence County Vocational-Technical School in New Castle.

The proposal for articulation with the two schools is that the students shall be admitted into the first semester of the nursing program at Butler County Community College. They will be exempted from

117

9

the theory portion of the basic nursing course during this semester, however, they will be required to complete the clinical component. A maximum of six students will be admitted on this basis. To be accepted into the program the students must be recommended by the faculty of the respective school and will be expected to meet the admission criteria of the Butler County Community College program. The two schools may confer with each other concerning the six positions allotted them for advanced standing. Therefore, if one school cannot send its quota of three students, the vacant slot or slots would be available for the other school to utilize if desired. Similar articulation arrangements may be pursued with Butler High School and Butler County Vocational-Technical School pending further development of these programs.

Other proposals submitted to the State Board of Nurse Examiners for approval are a result of recommendations from the previous study. The current curriculum contains 18 credit hours in the first semester. The proposed curriculum revision eliminates Sociology from the PN component of the program making a total of 15 credit hours in the first semester. This revision will permit the student to more logically progress in the load she/he carries.

At the present time students may be admitted to the program on an advanced placement basis during the second semester of the PN component of the curriculum and the summer session of the ADN component. To better demonstrate the philosophy of the career ladder program additional points of entrance have been proposed during the first semester and summer session of the PN component and the third semester of the ADN component.

These proposals concerning articulation, curriculum revision and advanced placement have been submitted to the Board of State Nurse Examiners for approval in order to implement them in August of 1976. These proposals may be found in Appendix A.

Direct articulation at the baccalaureate level is marginally feasible at this time due to the admission criteria of the nursing program at Slippery Rock State College and the incompleteness of the revision of the nursing program at the University of Pittsburgh. A future possibility which may be explored is York College of Pennsylvania which plans to begin a nursing program in the fall of 1977.

The workshop survey showed expressed interest on the part of several institutions. Of the 41 institutions contacted, 15 were definitely interested. A total of 51 persons attended, representing 13 institutions with varying types of nursing and auxiliary nursing programs. The agenda for the workshop included the definition of a module, contingencies of modules, components of modules, ways of utilizing modules and cost. A summary of this information is contained in Appendix B.

The course Trends in Nursing was developed in a modular form by the research staff. The course consisted of nine modules, with one module written in two styles. This was presented to the faculty as an example of a learning alternative. The complete module may be found in Appendix C.

12

The task analysis inventory was formulated to further evaluate and develop curriculum in relationship to competencies expected of various levels of nursing personnel. The results of the survey indicated that the competencies expected of the Registered Nurse, the Licensed Practical Nurse, and the Health Assistant were provided for at the appropriate points of the nursing curriculum at Butler County Community College. Therefore, the career ladder program does provide competencies expected of the Health Assistant during the first semester; the Licensed Practical Nurse competencies are provided for by the end of the first year; and the Registered Nurse competencies are provided for by the end of the program. The only competencies not provided at the Registered Nurse level were in the area of leadership, and the Associate Degree Nurse graduate is not expected to function at that level without additional preparation. The full report of the inventory is contained in Appendix D.

E. Summary and Conclusions

This study was designed to develop a model program in nursing that would support career mobility. Two schools with health assistant programs, Highland Senior High School and Lawrence County Vocational-Technical School participated in the project. Arrangements with baccalaureate nursing programs are only marginally feasible at this time.

The project was influenced by several limitations. The first limitation was the small sample. It was limited for the following reasons:

- a. Proximity of other institutions. The two participating schools were the only ones situated within feasible commuting distance.
- b. Numbers of students. Due to community pressure regarding admission policies students must be county residents. The exception to this policy will be a maximum of six students from the participating schools.
- c. Butler County is in the process of establishing an Area Vocational Technical School. College staff members are currently working with the AVTS director in developing programs directed to full articulators. Included are programs in nursing and medical assistants.

The second limitation in this project was the inflexibility of the first year curriculum due to the restrictions imposed on it as a practical nursing program by state regulations. The only curricular change proposed was the elimination of sociology from the first semester of the program. This change will permit a more logical progression in credit hours for the student.

The third limitation was the criteria for admission to the ADN level of the program which required the individual from outside the Butler County Community College Program to be a Licensed Practical Nurse. However, this limitation will be eliminated if the State Board of Nurse Examiners approves the proposals for advanced placement.*

Therefore, the percentages in the attainment of the project objectives are as follows:

* Exhibit J

1. To develop a program that would facilitate the upward mobility of nursing and auxiliary nursing personnel in their educational programs making "continuous progress" possible to whatever level his ability and motivation will allow. 99%
2. To develop a model for northwestern Pennsylvania that would maximize the efforts of training institutions in preparing nursing and auxiliary nursing personnel. 99%
3. To recommend a procedure for implementing an articulation program that would provide for students the possibility of continuous progress without repetition. 99%

The above objectives will be fully obtained upon the approval by the State Board of Nurse Examiners.

4. To develop a program for continuing education for various levels of health personnel. 90% - depending on funding
5. To develop a proposal of program refinement to permit multiple points of entrance and exit in the career ladder nursing curriculum to submit to the State Board of Nurse Examiners for approval. 95%

Continuing education courses to update and expand knowledge and skills of LPN's and RN's are planned to begin in September of 1976. Further development of the continuing education for all levels of health care personnel will be dependent upon adequate funding.

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF STATE
COMMISSIONER OF PROFESSIONAL AND OCCUPATIONAL AFFAIRS
POST OFFICE BOX 2849
HARRISBURG, PA. - 17120

STATE BOARD OF NURSE EXAMINERS
PHONE - 717-267-7374-7375

July 12, 1976

COMMISSIONER: LOUIS P. VITTI

Mrs. Judy A. Garbinski
Interim Coordinator of Nursing
Practical Nursing Program
Butler County Community College
Butler, PA 16001

Dear Mrs. Garbinski:

At its July 8, 1976 meeting, the State Board of Nurse Examiners reviewed the proposals for the following:

1. Advanced placement policy into the Practical Nursing Program.
2. Advanced placement policy into the Professional Nursing Program.
3. Direct articulation of selected students from health assistant programs.
4. Elimination of Sociology 211 course from the curriculum from the first level of the curriculum.

Action of the Board was to approve all of the above proposals. The Board does request, however, that the word "probably" be deleted from the proposals for advanced placement in the practical nurse and registered nurse programs.

Also, the Board wishes to know what the initials "CGP" stand for in relation to the examination which the applicant will be required to take before final acceptance into the Program with advanced placement.

We wish you the best of success as you implement these proposals.

Sincerely yours,

STATE BOARD OF NURSE EXAMINERS

Geraldine M. Wenger
Geraldine M. Wenger, Secretary

GMV:car

cc: A. Louise Harding
Department of Education

APPENDIX A

The following changes and proposals have all been approved by the Academic Affairs Committee and the Professional Organization at Butler County Community College.

We would appreciate the Board's approval to implement these proposals commencing in August, 1976.

SOCIOLOGY ELIMINATION

Rationale: Elimination of Sociology from the required curriculum.

The Nursing Faculty at Butler County Community College has given careful study to the concepts presented in Sociology and has identified most of these in the nursing courses outlines.

Social Problems, Soc 212, has been retained at the second level of the curriculum.

As the curriculum now stands, the nursing student has 18 credit hours during their first semester in the program. With this change, the student would have 15 credit hours. Attached is a revised curriculum reflecting the elimination of Sociology, Soc 211.

This revision still contains the 1500 contact hours required by PN state law, but allows the student to more logically progress in the load she/he carries each semester.

ADVANCED STANDING

Rationale: Direct Articulation of Health Assistants from Lawrence County Vocational-Technical and Highlands Senior High is proposed into the first level of the Nursing Program at Butler County Community College.

A maximum of six students would be taken into Nursing I and these students would only complete the clinical component. The Behavioral Objectives in Nursing I have been incorporated and met in their programs.

These students will only be accepted upon the recommendation of the Nursing Faculty of the above two mentioned programs.

If there are no students recommended by Highland Senior High and Lawrence County Nursing Faculty, no students will be accepted into the Butler County Community College program on an advanced standing basis through this specific agreement.

This agreement gives the advanced standing student more time within the curriculum to either take additional course work or concentrate independently on some area in nursing.

If the student is found to have not met some of the objectives, supplementary learning experiences will be provided.

If Butler County finalizes vocational training of its citizens, we would appreciate the Board's approval of giving us the option to develop and implement the same arrangement with them.

Philosophy, BCCC Nursing Faculty

The nursing faculty at Butler County Community College believes each student should be considered as an individual. As an individual, he/she should receive credit for past experience or work. Credit in this instance means placement of the student within our nursing curriculum at the place deemed appropriate by the nursing faculty.

This place is to be determined by comparisons of objectives met by the student and the location of these objectives within the nursing curriculum.

This placement will then be validated with teacher-made examinations in theory and evaluation in the clinical area.

Basic Requirements

Basic requirements for admission into the Nursing Program are a high school graduation or G.E.D. and at least 16 years of age.

Before final acceptance into the program, the applicant takes the CGP examination. The results of this test are used to evaluate and counsel the student.

College policy is followed regarding discrimination.

Entry of Students

First Semester--exempting Nursing I theory--continue experience in the clinical area.

Students: Selected students with the recommendation of the Coordinator of the health assistant programs. These students will have met the same objectives in their program that we cover in theory in Nursing I.

Time: This student would spend three semesters on campus and earn 43 credits.

Second Semester--Students: A. Selected students with a background of 4-6 months in another nursing program. These students will have met the objectives of Nursing I. B. Corpsmen or Corpwomen with service connected training. These students will have met the same objectives we cover in Nursing I.

Time: This student would spend two semesters on campus and earn 26 credits.

Summer Session--practical nurse track--Students: Selected students with probably at least an 8-9 month experience in another nurse education program. These students would have met the objectives of our Nursing I and II.

Time: This student would spend one semester on campus and earn 10 credits.

ADVANCED PLACEMENT--RN

Philosophy, BCCC Nursing Faculty

The nursing faculty at Butler County Community College believes each student should be considered as an individual. As an individual, he/she should receive credit for past experience or work. Credit in this instance means placement of the student within our nursing curriculum at the place deemed appropriate by the nursing faculty.

This place is to be determined by comparisons of objectives met by the student and the location of these objectives within the nursing curriculum.

This placement will then be validated with teacher-made examinations in theory and evaluation in the clinical area.

Basic Requirements

Basic requirements for admission into the Nursing Program are a high school graduation or G.E.D. and at least 16 years of age.

Before final acceptance into the program, the applicant takes the CGP examination. The results of this test are used to evaluate and counsel the student.

College policy is followed regarding discrimination.

Entry of Students

Summer Session--associate degree track--Students: Selected students with probably at least 9-12 months in another nurse education program. These students would have met the objectives of our Nursing I, II, and III.

Time: This student would spend three semesters on campus and earn 41 credits.

Third Semester--Students: Selected students with probably at least 12-18 months in another nurse education program. These students would have met the objectives of Nursing I, II, III, and IV.

Time: This student would spend two semesters on campus and earn 32 credits.

23

MODULARIZATION WORKSHOP; MARCH 26, 1976

conducted by

FAY BOWER

FAY BOWER, professor of nursing at San Jose State University, brings to the workshop experience and expertise in the area of curriculum development, modularization and innovative teaching strategies. As director of a curriculum project, she was instrumental in the development of modularized approaches to teaching nursing. Fay has authored books and articles, is involved in research and is working toward a doctoral degree in Community Health Nursing.

24

Workshop - March 26, 1976

A. What is a Module?

Learning package - self-paced

Composed of related ideas - allows student to self evaluate - portable

PORTABLE IS THE MOST IMPORTANT DIFFERENCE

(Self-paced, Portable)

Modules - learning is made explicit

1. Written objectives
2. Pretest
3. Posttest

Problems:

1. Is the learner ready to accept the responsibilities?
2. Who are the learners? Where have they been?
3. Motivation - We must remember the class room offers interaction - this is very important.

B. Contingencies of Modules:

1. Expectations - very clear objectives in behavioral terms.
In psychomotor skills this is easy
Affected domain is more difficult but not impossible
Try to keep the learning experience within a 50
minute period. People get fatigued after 50 min-
utes.
Evaluate the time - use enough people for validation.
One or two major concepts should be covered at one
time.
Modules are good conceptual.
Fluid & Electrolytes have at least 6 concepts
Grieving has at least 8 concepts
2. Prescription - What learning activities will help the student meet the objectives? Example: Develop communication skills -
More than reading a book you need interactions with
live people. Depending upon the verb that describes
the behavior the prescription lies. Reading is alright
because we need some cognitive skills
3. Achievement - Important that we design a prescription that is achievable;
that is, in the time span and for the particular learner.
Most people do not pace well, Wilson. "Doomsday Contingency" How can I build a system so I don't fix it for
students to fail? There has to be some sort of scheduling

and monitoring so that it is achievable. It is important that we build a theory component and application component (we are an occupation and profession) We can address ourselves to the slow achievers and the high achievers. Some have what is termed basic modules and then they have elective modules (if you feel like it, here are some other things you can do)

4. Motivation - Modules that bore or overwhelm the students will kill your system. You need to build into the system periodic progress checks to give feedback to the student. The module talks to the student - where they are going, where they've been, where they are right and where they are wrong. This can be done on tape - by contact - or they come to a seminar. Modules do not replace teachers. The teachers are more important than before. The module gives the information - you now become a facilitator of a learning experience and a skill. The teacher is now the "clarifier you become the "validator."

Some students love modules, some hate them! They don't like the independence. Give yourself one year to prepare students. Begin to feed in some amount of self-pacing. At San Jose they began all the modules in one day without evaluation. It has taken 5 years to straighten out the mess.

Faculties needs must be met. Look at both faculty and students. Instruments - MMPI First semester students hate the modules. Cognitive Style Mapping - Hill is a good method. This gives a printout of how you learn - how you organize your world. Modules should be developed to fit all learning styles. We tend to teach the way we learn:

How We Deal
With Facts

Big basket - reach in
Hanging on something - organize in similar packages
Matching opposites
File cabinet - categorized or in order

Cost \$1.00 per person for Cognitive Mapping. Crystal Lange is working in this area of cognitive mapping.

We are beginning to individualize the modules. A module needs to be given to 4 groups in order to validate the module.

Organization:

- a. Modules are scheduled
- b. Seminars are scheduled (bring concept alive in the practice of nursing)
- c. Post test must be passed before admittance to seminar. Three times not meeting a seminar and they are called in.
- d. After 5 modules - test. Situational test 4 tests a semester. They are graded on the exams. Students want grades so they can go on to graduate school.

4. Evaluation - Progress checks and post tests.
Most difficult to keep everything consistent
Validate modules in pilot study
Different post test than pre test covering
the same concept.
Pre-tests are for: (a) Pre-requisite information
(b) Acceleration
Resources are given on the front of the modules
6. Generalization - Conceptual rather than disease oriented. This
stops students from memorizing material rather
than grasping a concept.

- C. Components of Module -
1. Objectives (expectations of module)
 2. Directions (tell learner what to do)
 3. Pre test (test on content or prerequisite)
 4. Learning activities (a) Programmed instruction
(b) Interpersonal action
(c) Visual activities
(d) Reading assignments
 5. Progress checks after each learning activity
 6. Post test - test the complete contents
(a) Written
(b) Verbal
(c) Performance

D. Ways to use modules in developing a concept

1. Clustered
2. Chained
3. Pyramids - sequential or random
4. Individual

E. Cost - San Jose State University Modularized system is self-supporting

1. Cost effective @ end of 6 years
2. Pay people to review modules
3. Pay persons to man lab
4. Reduced no. of faculty it takes to handle the no. of students
5. Media - very careful selection now
6. Use less and less film
Students don't want tied to lab
Slides, photographs are being utilized
Slides and tapes check out (6 copies of each available)
7. Cost per module - \$1.00
8. None of this expense comes out of the nursing budget

27

F. Summary - The question was asked about objective evidence that modules are better than conventional teaching methods. There are many studies going on but many of these are misleading. It is most important what is happening in your own particular institution. Are the students ready for this? Is your faculty ready?

As alternative learning method we were exposed to "Explicit Memory Technique" during the workshop. Using large sheets of paper, a recorder writes the main points of the class discussion and posts these around the classroom. If a student misses class he or she can go in and read the papers in order to keep current with the class. Also, this keeps everyone thinking along the same lines during the discussion period.

In the afternoon, everyone had a chance to practice what they had learned by developing a module.

26

APPENDIX C

Introduction to Trends in Nursing

General Information

This course consists of 9 modules to be completed within the fifteen week semester, meaning approximately one module per week must be completed.

Grades will be based upon the midterm and final examinations.

Each student is required to attend one seminar per week using a pretest or posttest as criteria for admission.

Each module consists of a pretest, objectives and learning alternatives, and a posttest.

The bibliography for the course should be obtained with the first module.

Directions:

1. Take pretest. If you achieve 100% on the test you may proceed to the pretest of the next module. If you preempt the module, you may use your time to your advantage. However, you must attend the seminar for that week, using your pretest for admission.
2. If you do not achieve 100% on the pretest, proceed with the module. You may select any or all of the learning alternatives to assist you in meeting the objectives. Upon completion of the objectives you will take the posttest, which will not be graded. Satisfactory achievement of the posttest will admit you to the seminar.

Module 2

I DID IT MY WAY

Pretest

A. Essay

1. What types of programs can lead to licensure as an RN?
2. Differentiate an accredited nursing program from an approved nursing program.
3. What is the purpose of Lysaught's "An Abstract for Action"?
4. What type of career pattern emphasizes nursing practice for health maintenance and prevention of illness?
5. Give two examples of nursing programs which illustrate career mobility.
6. What are three characteristics of graduate education in nursing?

B. True or False (T for True, F for False)

1. A level of nursing practice involving intermediate functions requiring skills and some judgments is a technical level.
2. The New York Resolution of 1985 advocates the maintenance of the current system of licensure.
3. An RN pursuing a BSN is an example of continuing education in nursing.
4. A professional nurse is educated at a level of nursing practice which involves intermediate functions requiring skills and a certain amount of judgment.
5. CEU's are mandatory for nursing licensure in most states.
6. Associate Degree programs in nursing are decreasing in numbers.

Module 2: I DID IT MY WAY

General Objective

1. Upon completion of this module, the student will be able to explain the types of nursing programs, as well as describe the trend in nursing education and what studies have influenced this trend.

Vocabulary

ADN	Open curriculum	Abstract for Action
BSN	Distributive	CEU
Diploma nurse	Episodic	Extended role
PN/VN	Technical	Accredited program
ANA Position Paper	Professional	Approved program

Specific Objectives

1. Identify the types of nursing programs leading to licensure and compare the similarities and differences of each type of program.
2. Differentiate an accredited nursing program from an approved nursing program.
3. List three reports and/or studies which have affected nursing education from the late 1950's to the present.
4. Explain the career patterns identified by the National Commission for the Study of Nursing and Nursing Education in 1970, and give an example of each.
5. Describe the trends in nursing education as to what programs are increasing in numbers, and explain the types of open curriculum.
6. State the definition of a professional and a technical nurse.
7. Discuss the New York resolution and other similar resolutions being promoted by SNA's and what impact this will have on nursing.
8. Give a rationale for continuing education for nurses and state three examples of how a nurse may be involved in continuing education.
9. Explain the purpose(s) of graduate education in nursing.

Suggestions for Learning Activities

1. Lecture by nurse educator.
2. Interview faculty and/or students of various types of nursing schools.
3. Debate: Should continuing education be mandatory for re-licensure.

4. Make a graph showing number of students enrolled in ADN, Diploma, BSN programs and contrast with 10 years ago.
5. Panel discussion concerning New York's 1985 resolution.

In Depth Studies

1. Do a survey of nurses in a specific institution to determine what percentage of LPN, ADN, BSN, and Diploma graduates are employed there.
2. Obtain the criteria for NLN accreditation and the Rules and Regulations of the State Board of Nurse Examiners.

Module 2

I DID IT MY WAY

Post test

A. True or False (T for True, F for False)

1. _____ An approved nursing program is one which has voluntarily sought evaluation by the NLN in order to meet the criteria of nationally determined standards of excellence.
2. _____ Episodic is a career pattern which emphasizes nursing practice that is curative and restorative and most often provided in the hospital setting.
3. _____ An "Abstract for Action" was a paper published by the ANA to guarantee economic security to nurses.
4. _____ Approval of nursing programs is performed by a State Board of Nurse Examiners and is a necessary procedure for the programs to legally operate.
5. _____ CEU's are necessary for licensure in Pennsylvania.
6. _____ The following types of nursing programs lead to the same licensure - ADN, BSN, LPN, diploma.
7. _____ A career pattern which emphasizes nursing practice for health maintenance and disease prevention, and is based in a community setting is called episodic.

B. Essay

1. Which types of schools of nursing have increased in numbers in the past 5 years?
2. Define professional nurse and technical nurse according to Kelly.
3. Explain the general implications of the 1985 New York Resolution.
4. List two reports within the past 25 years which you think affected nursing education the most and briefly tell why (25 words or less).

5. Briefly describe the type of nursing curriculum available at BC³ and explain the purpose of such a curriculum.
6. List three ways in which continuing education for nurses can be obtained.

PEOPLE AND EVENTS

A. Purpose: Upon completion of this module, the student should appreciate the scope of forces that have made nursing what it is today and that have potentialities for influencing its future development.

B. Vocabulary

1. Intuitive nursing - The first period in the development of nursing as a profession where there was no special training or education involved.
2. Apprentice nursing - The second period in the development of nursing as a profession where there was an actual on-the-job training for those wishing to practice nursing.
3. Educated nursing - The third period in the development of nursing as a profession whereby the schools for nursing were established.
4. Contemporary nursing - A term applied to nursing beginning at the end of World War II until the present day.
5. Code of ethics - An established standard of conduct used for the guidance of professional activities.
6. Professional criteria - A set of standards by which to evaluate a chosen occupation as to its professionalism.
7. ANA Certification - A voluntary program for recognition of excellence in a specific area of clinical practice.

C. OBJECTIVES

LEARNING ALTERNATIVES

1. Describe a period in nursing history when any one of the following characteristics typified nursing: apprenticeship preparation, tradition bound practice, dependent relationship with physician, mothering role with clients.
Leg XII-C Obj. 1
2. Given a list of nursing leaders, select six leaders and briefly describe their contributions to nursing and the approximate time period in which they functioned.

1. Lecture
2. History & Trends of Professional Nursing, Griffin & Griffin, Chap. 1-
3. "Nursing History, One Means to Personalized Care," AJN, Jan. 1968.
4. Steppingstones to Professional Nursing, Cafferty & Sugarman, Chap. 1-4.
1. Principles and Practices of Nursing Care; Storey, Chap. 1.
2. Prepare a report (200 words or less) on a nursing leader and describe their contribution to nursing.
3. "Florence Nightingale," RN, May 1970.
4. "Lillian Wald," NQ, Oct. 1971.

3. Select the war which you feel had the greatest influence on nursing; describe the social conditions that the cessation of hostilities produced and state why nursing education progressed or regressed as a result.
4. Discuss five social and economic factors which will have an impact on nursing during the next decade.
5. Describe the purposes of a code of ethics, professional standards and criteria.
6. Given a problem situation in a hospital and a list of actions that the nurse might take, select those that demonstrate behavior that shows moral responsibility to the client and loyalty to the employer and state why.
Leg XII-A Obj. 18
7. Compare the role of the nurse within a unit management system with the role of the nurse without such a system and list three examples of tasks that the nurse would relinquish within such a system.
Leg XIV-C Obj. 21

D. Enrichments:

1. Locate one name of a distinguished nurse in this area and explain the contributions made to the field of nursing.
2. Obtain a copy of Florence Nightingale's "Notes on Nursing" and read any chapter in the book. Write a brief paragraph which describes the changes in nursing care that was given then and the nursing care given today. Note any area that remains the same.
3. Read the history of a hospital in your area. How old is the hospital? Did the hospital start through a religious organization? Outline some of the facts about the hospital which you find interesting and report to your class.

E. Evaluation

Test on objectives 1, 2, 4, 6 & 7.

1. Griffin & Griffin, Chap. 25-27.
 2. Dimensions of Professional Nursing, Kelly, Chap. 5.
 3. Cafferty & Sugarman, Chap. 1-4.
-
1. Lecture
 2. Kelly, Chap. 7-11.
 3. The Emergence of Modern Nursing Bullough & Bullough, Chap. 8.
-
1. "Establishing Standards for Nursing Practice," AJN, July, 1969.
 2. Kelly, Chap 12 & 13.

1. Legs Audiotape, No. 10 Side 1.
-
1. "The ANA Certification Program," Nursing Clinics of North America Sept. 1974.

Module 1

1. Matching

- | | |
|--------------------------------|--|
| 1. _____ Clara Barton | a. America's first trained nurse |
| 2. _____ Linda Richards | b. First professor of nursing in the world |
| 3. _____ Lillian Wald | c. Founder of Henry Street Settlement |
| 4. _____ Mildred Montag | d. Organized and implemented associate degree nursing |
| 5. _____ Jessie Scott | e. Assistant Surgeon General |
| 6. _____ Mary Adelaide Nutting | f. Chief nurse officer United States Public Health Service |
| 7. _____ Faye Abdellah | g. Founded American Red Cross |
| 8. _____ Dorothy Novella | h. President of NLN |
| 9. _____ Florence Nightingale | i. Perfected plan to have professional nurses enrolled & ready for military service in World War I |
| 10. _____ Mary Breckenridge | j. Active in early development of nursing organizations in this country and of ICN |
| 11. _____ Jane Delano | k. First professional Negro nurse in U.S. |
| 12. _____ Lavinia Dock | l. Army nurse who died after volunteering for yellow fever experiment. |
| 13. _____ Mary Mahoney | m. Organized nursing care for soldiers in Crimean War. |
| 14. _____ Clara Maass | n. Founded Frontier Nursing Service of Kentucky |

2. Define each of the following:

- a. Intuitive nursing
- b. Apprentice nursing
- c. Educated nursing
- d. Contemporary nursing

3. List and discuss briefly 3 social and/or economic factors which will have an impact on nursing during the next decade.

4. What actions would you take for the following situation:

You notice the blood pressures being recorded by your LPN are always similar to the previous readings taken on each patient. You recheck two of these patients and discover that your readings and hers differ by 20 points on one patient and 15 on another.

5. Select which of the following functions are being carried out by staff nurses in your hospital and which you feel could be carried out by a nonnurse in the role of a unit manager.

FUNCTIONS	WHO IS PRESENTLY DOING IT	WHO SHOULD DO IT
<ol style="list-style-type: none"> 1. Contact various departments to make the necessary arrangements for scheduling of tests. 2. Check all supplies in Clean Utility Room (initiate necessary requisitions if required) and the medication room. 3. Make rounds of patients rooms. Indicate in checklist any areas which require maintenance, housekeeping, etc. Initiate paper work required. Follow up on requisitions made previously. <ol style="list-style-type: none"> a. Check for properly functioning equipment in room and bathroom b. Environment - comfort c. Window closed d. Report to maintenance any repairs required e. Report to housekeeping supervisor any discrepancies in housekeeping 4. Visit all new admissions as soon as possible and use the procedure below. <ol style="list-style-type: none"> a. Explain the intercom system, pillow speaker for radio and TV, closet for clothes 		

FUNCTIONS

WHO IS PRESENTLY
DOING IT

WHO SHOULD DO IT

- b. Security-patient valuables policy. Advise him that there should be no valuables kept with him. Valuables can be locked in safe or Business Office.
 - c. Inform patient of barber/beautician facilities; explain the requirement of doctor's permission.
 - d. Inform patient of other facilities such as Volunteer Library, Gift Shop, etc.
 - e. Answer any questions the patient may have or refer his questions to nursing.
5. Direct visitors. Promote good relationships with patient's family, visitors, and staff.
 6. Check the emergency cart with nurse to ensure that everything is in order.
 7. Maintain the necessary relationship with the Dietary Department on all matters pertaining to food service on the unit.

Module 2

I DID IT MY WAY

- A. Purpose: Upon completion of this module, the student will be able to explain the types of nursing programs, as well as describe the trend in nursing education and what studies have influenced this trend.
- B. Vocabulary:
1. ADN - A 2 year community college program, upon the completion of which the individual is eligible for licensure as a registered nurse and possesses an Associate Degree in Nursing.
 2. BSN - A 4-5 year collegiate or university program, upon the completion of which the individual is prepared for licensure as a registered nurse and possesses a Bachelor of Science in Nursing.
 3. Diploma nurse - A 24 to 30 month program in a hospital setting, upon the completion of which the individual is eligible for licensure as a registered nurse and possesses a diploma.
 4. PN/VN - A program approximately 1 year in length in a variety of settings, upon the completion of which the individual is eligible for licensure as a practical or vocational nurse.
 5. ANA Position Paper - Published in 1965, and presented criteria for education of the professional and technical nurse, and stated that nursing education should take place within the general education system.
 6. Open curriculum - An educational approach designed to accommodate the learning needs and career goals by providing flexible opportunities of entry into and exit from the educational program.
 7. Distributive - A career pattern which emphasizes nursing practice for health maintenance and disease prevention based in a community setting.
 8. Episodic - A career pattern which emphasizes nursing practice that is curative and restorative, and most often provided in the hospital setting.
 9. Technical - A level of nursing practice involving intermediate functions requiring skills and some judgments.
 10. Professional - A level of nursing practice involving complex functions requiring expert skills and judgments.
 11. CEU - Contact hours of participation in an organized continuing education experience under responsible sponsorship, capable direction and qualified instruction.

12. Abstract for Action - A study conducted by National Commission for the Study of Nursing and Nursing Education which focused on supply and demand for nurses, nursing roles and functions, nursing education and nursing careers.
13. Extended role - The term applied to the broader scope of functions and responsibilities in nursing in order to meet the emerging health care needs of our society.
14. Accredited program - Nursing programs which have voluntarily sought evaluation by the NLN in order to meet the criteria of nationally determined standards of excellence.
15. Approved program - Nursing programs which have met the criteria established by the State Board of Nurse Examiners, in order to operate legally.

C.

OBJECTIVES

LEARNING ALTERNATIVES

1. Identify the types of nursing programs leading to licensure and compare the similarities and differences of each type of program.
2. Differentiate an accredited nursing program from an approved nursing program.
3. List three reports and/or studies which have affected nursing education from the late 1950's to the present.
4. Explain the career patterns identified by the National Commission for the Study of Nursing and Nursing Education in 1970, and give an example of each.

1. Lecture.
 2. Dimensions of Professional Nursing, Kelly, Chap. 11.
 3. Professional Nursing, Spalding & Notter, Chap. 10.
 4. Group discussion and presentation.
1. Group discussion and presentation.
 2. Research the standing of your school.
 3. Obtain the criteria for NLN accreditation or State Board approval of ADN programs and list the differences.
1. Group reports - one study per group.
 2. Dimensions of Professional Nursing, Kelly, Chap. 6.
 3. "An Abstract for Action," Lysaught.
1. Lecture.
 2. An "Abstract for Action."
 3. Kelly, Chap. 6.
 4. Pamphlets "Abstract for Action; Episodic Nursing," "Abstract for Action; Distributive Nursing."
 5. Dept. of Health, Education & Welfare, Washington D.C. "Extending the Scope of Nursing Practice 1972."
 6. Spalding & Notter, Chap. 10.

5. Describe the trends in nursing education as to what programs are increasing in numbers, and explain the types of open curriculum.
6. State the definition of a professional and a technical nurse.
7. Discuss the New York resolution and other similar resolutions being promoted by SNA's and what impact this will have on nursing.
8. Give a rationale for continuing education for nurses and state three examples of how a nurse may be involved in continuing education.
9. Explain the purpose(s) of graduate education in nursing.

D. Enrichment:

1. Do a survey of nurses in a specific institution to determine the percentage of LPN, ADN, BSN, and Diploma graduates who are employed there.

E. Evaluation:

Test on objectives 1-9 - 80% of grade
 Midterm
 Final
 Reports 20% of grade

7. "Education for Episodic & Distributive Care," NO, Aug. 1972.
 8. "Proposal: A Career Plan for Nursing," AJN, May 1973.
 9. "This I Believe About Career Ladders," NO, Sept. 1970.
 10. "Career Mobility Through Nursing Education," NO, April 1974.
-
1. Kelly, Chap. 11.
 2. Lecture.
 3. Career Mobility, Storey, Chap. 1.
 4. Griffin & Griffin, Chap. 17; 20-24.
 5. Make a graph showing number of students enrolled in ADN, Diploma, BSN in 1975 & contrast with 10 years ago.
 6. "Educational Preparation for Nursing - 1974," NO, Sept. 1975.
-
1. Group presentation.
 2. New Directions in Patient-Centered Nursing, Abdellah, Beland, Martin & Matheney, Chap. 8 & 9.
 3. Kelly, Chap. 25.
-
1. Lecture.
 2. "ANA Convention 1974," AJN, July 1974.
 3. Copies of resolution.
-
1. "Mandatory Continuing Education," AJN, Mar. 1973.
 2. Debate: Should continuing education be mandatory for re-licensure?
 3. "Continuing Education in Nursing," Nursing Clinics of North America, June 1973.
-
1. Lecture.
 2. Abdellah, Beland, Martin & Metheney. Chap. 10.

Module 2

True or False

1. _____ An approved nursing program is one which has voluntarily sought evaluation by the NLN in order to meet the criteria of nationally determined standards of excellence.
2. _____ Episodic is a career pattern which emphasizes nursing practice that is curative and restorative and most often provided in the hospital setting.
3. _____ An "Abstract for Action" was a paper published by the ANA to guarantee economic security to nurses.
4. _____ Approval of nursing programs is performed by a state board of nurse examiners and is a necessary procedure for the programs to legally operate.
5. _____ CEU's are necessary for licensure in Pennsylvania.
6. _____ The following types of nursing programs lead to the same licensure - ADN, BSN, LPN, Diploma.
7. _____ A career pattern which emphasizes nursing practice for health maintenance and disease prevention, and is based in a community setting is called episodic.

1. Which types of schools of nursing have increased in numbers in the past 5 years?
2. Define professional nurse and technical nurse according to Kelly.
3. Explain the general implications of the 1985 New York Resolution.
4. List two reports within the past 25 years which you think affected nursing education the most and briefly tell why (25 words or less).

5. Briefly describe the type of nursing curriculum available at 'BC³ and explain the purpose of such a curriculum.

6. List three ways in which continuing education for nurses can be obtained.

TO BE, OR NOT TO BE

- A. Purpose: The purpose of this module is to assist the student to gain knowledge and understanding of the professional nursing organization, so that he may decide where his commitment is. He should be able to differentiate between the various organizations and to name the nursing publications available today.
- B. Vocabulary:
1. ANA - The American Nurses' Association is a professional organization, with membership open only to the registered nurse.
 2. ANF - The American Nurses' Foundation is an organization created by the ANA to meet the need for an independent, permanent, non-profit organization devoted to nursing research.
 3. NLN - The National League for Nursing is an organization whose membership includes nurses, other members of the health care team and interested lay persons and agencies concerned with nursing education and nursing service.
 4. ICN - The International Council of Nurses is a federation of national nursing organizations working together to raise the standards of education and professional ethics, public usefulness and civic spirit of their members.
 5. NSNA - The National Student Nurses' Association is an organization for nursing students in the United States whose purpose is to aid in the development of the individual student.
 6. NAPNES - The National Association for Practical Nurses' Education and Service is the oldest organization for practical nurses in the U.S. whose purpose is to improve and extend the education of the practical nurse to meet the critical need for more nursing personnel.
 7. NFLPN - The National Federation of Licensed Practical Nurses is a federation of state associations made up entirely of practical or vocational nurses.
 8. AACN - The American Association of Colleges of Nursing is an organization of deans and directors of NLN accredited baccalaureate and higher degree programs for the purpose of providing knowledgeable leadership in nursing.
 9. AJN - The American Journal of Nursing is a monthly publication of the American Journal of Nursing Company and is the official ANA publication.
 10. NO - Nursing Outlook is also published monthly by the American Journal of Nursing Company and is the official journal of the National League for Nursing.
 11. PHS - Public Health Service is a federal agency charged with promoting and assuring the highest level of health attainable for every individual and family in the U.S. (may be referred to as USPHS).

12. WHO - The World Health Organization is a specialized agency set up by the United Nations and is charged with assuring the highest level of health attainable for every individual in the participating countries.

D.

OBJECTIVES

LEARNING ALTERNATIVES

1. Compare the ANA and NLN organizations as to purposes, membership, programs and official publications.
2. Write a rationale for having two such large organizations in nursing.
3. State or write the purposes and/or functions of two other nursing organizations.
4. List two nursing organizations formed since 1969 and explain their principal functions.
5. List five nursing publications, excluding those in objective 1 and briefly describe their purpose.
6. List the major index publication of the AJN Co. and explain its value.

1. Lecture
 2. "Illustrious Past, Challenging Future," AJN, Sept. 1971.
 3. Dimensions of Professional Nursing, Kelly, Chap. 25-26.
 4. Steppingstones for Professional Nurses, Cafferty/Sugarman, Chap. 20, 21, 24.
 5. Write a brief 2 page history of ANA or NLN, including first president & current president.
 6. "This I Believe - About the National League for Nursing," NO, Feb. 1971.
-
1. Debate: Are two nursing organizations really necessary?
 2. "The Functions of the Professional Association," AJN, June 1958.
-
1. Group discussions and presentation.
 2. Professional Nursing, Spalding & Notter, Chap. 22.
 3. Kelly, Chap. 27.
 4. Cafferty & Sugarman, Chap. 25.
-
1. Kelly, Chap. 27.
 2. Group discussion and presentation.
-
1. Assigned reports and discussion.
 2. Cafferty & Sugarman, Chap. 21.
 3. History and Trends in Professional Nursing, Griffin/Griffin, Chap. 34.
 4. Kelly, Chap. 30.
-
1. Group discussion and presentation.
 2. Kelly, Chap. 30.
 3. "The International Nursing Index", AJN, Apr. 1966.
 4. Griffin/Griffin, Chap. 34.

D. Enrichments:

1. Contact the PNA office in Pittsburgh and find out the number of PNA members in the district.
2. Attend a local unit meeting.

True or False

1. _____ The ANA is open to lay people interested in nursing as well as to professional nurses.
2. _____ The AJN is the official ANA publication.
3. _____ The student in an AD nursing program is being prepared as a technical nurse.
4. _____ One function of the NLN is to establish a national salary goal for the beginning practitioner in nursing every 2 years.
5. _____ Nurses may designate their state organization to act as bargaining agent in employee-employer negotiations.
6. _____ The ANA Economic Security Unit makes professional liability insurance available to all nurses.
7. _____ The oldest organization for practical nurses in the U.S. is NSNA.
8. _____ Nursing Outlook is published by the AJN co. and is the official magazine of the NLN.
9. _____ The ICN is a federation of national nursing organizations working together.

1. The NLN provides:

- a. Evaluation Services (achievement tests to schools of nursing).
- b. Licensing examinations for use by state boards of nursing.
- c. Membership for both professional nurses and lay persons.
- d. Is officially connected with the World Health Organization.
- e. Accreditation services.

1. a, b, d, e
2. b, c, d, e

3. a, b, c, e
4. a, c, d, e

2. The official publication of NAPNES is _____
3. An agency set up by the United Nations to assure optimum health for member countries is _____
4. The NLN fosters the development and improvement of _____ and _____
5. What are the 5 divisions of nursing practice in ANA?
 1. community health
 2. geriatrics
 3. maternal and child care
 4. medical-surgical
 5. psychiatric and mental health

6. (a) What district association do you have the privilege of joining after you become an R.N.?
 - (b) Who is the present president?
 - (c) What are the dues?
 - (d) How often are meetings held?
7. (a) Where are the headquarters for ANA?
 - (b) When and where will the next convention be held?
 - (c) Who was the first president and who is the present president of ANA?

THE THREE FACES OF EVE

- A. Purpose: Upon completion of this module, the student should be able to identify how the nurse's responsibility for health care is legally regulated as well as identify the general changes in nursing practice.
- B. Vocabulary
1. Nurse Practice Act - Licensing laws enacted by individual states which establish the definition of the practice of nursing as well as the requirements of those persons engaged in the profession.
 2. Institutional Licensure - The concept by which the institution in which the service is provided will license or give legal sanction for an individual to practice.
 3. Permissive Licensure - A type of licensing law which does not forbid unlicensed persons from engaging in activities and assuming the responsibilities of a particular licensed profession or occupation, but does forbid the use of the designation authorized by law.
 4. Mandatory Laws - A type of licensing laws forbidding any person from performing the activities of a licensed profession or occupation unless he is legally licensed.
 5. Nursing process - A set of actions to determine, plan and implement patient care.
 6. Case nursing - A one-to-one nurse-patient relationship.
 7. Functional nursing - A traditional nursing method which is task oriented, such as medication nurse or treatment nurse.
 8. Team nursing - A group of nursing personnel working together to administer quality care to a group of patients under the direction of a designated leader.
 9. Primary nursing - One-to-one nurse-patient relationship. The primary nurse has complete responsibility for patients on a 24 hour basis, from admission to discharge.
 10. Nursing history - A clinical tool used to collect data from the patient, friends or family which includes medical and social aspects.
 11. Assessment - A process of analyzing and identifying problems.

C. OBJECTIVES

LEARNING ALTERNATIVES

1. Describe the importance of nurse practice acts to nursing; and list the basic components of such an act.

1. Steppingstones to Professional Nursing, Cafferty and Sparrow, Chap. 17.

51

2. Discuss the purposes of institutional licensure.
3. State orally or in writing five functions of your State Board of Nursing. Leg XII-A Obj. 20
4. Briefly describe the phases of the nursing process.
5. Given descriptions of RN's working in a hospital, identify what methods of organization each is using and state how you know this. Leg XII-A Obj. 10.
6. Given nursing actions or client situations, describe either orally or in writing, nursing actions which are dependent and independent. Leg VI-B Obj. 19
7. Demonstrate reading a medical history; interviewing an aged client to determine his life style, pattern of aging, and present needs; and recording this information in a concise written form which could be used by all levels of health personnel in planning the nursing care. Leg XIII-B Obj. 10

2. Professional Nursing, Spalding & Notter, Chap. 27.
3. History & Trends of Professional Nursing, Griffin & Griffin, Chap. 44.
1. "Institutional Licensure: A Dilemma for Nurses," Nursing Clinics of North America, Sept. 1974.
2. "Resolutions on Institutional Licensure," AJN, 1972.
1. "State Boards of Nursing: Legal Aspects," Nursing Clinics of North America, Sept. 1974.
2. Group discussion.
3. Obtain rules of the State Board of Nursing:
 1. Lecture.
 2. The Process of Planning Nursing Care, Bower, Chap. I.
 3. Make a chart showing 4 phases.
 4. "Components of Nursing Process," Nursing Clinics of North America Mar. 1971.
 5. Fundamentals of Nursing, Fuerst, Wolff & Weitzel, Chap. 5.
 6. "Teaching Nursing Process to Beginning Students," NO, July 1968
 7. The Nursing Process, Yura & Walsh, 1973.
 8. "Some Crucial Terms in Nursing: What Do They Really Mean?" NO, Nov. 1974.
1. Primary Nursing, G. Marram.
2. Review of Team Nursing, L.M. Douglass.
3. Observe the types of nursing care used in area institutions and be prepared to discuss any type in class.
 1. Cafferty & Sugarman, Chap. 17.
 1. Fuerst, Wolff & Weitzel, Chap. 8.
 2. Create a nursing history form that will help you obtain information about a geriatric patient's lifestyle.

8. Demonstrate or role play obtaining an accurate nursing history from a client in a given time using a given nursing history form.

D. Enrichment

1. Take a nursing history on:
 - a. A newly admitted patient
 - b. A patient hospitalized for several daysand compare your impressions with someone else's impressions.
2. Given a simulated client unit and a list of personnel (both full and part-time) write a plan for the nursing care coverage for that unit for one week for all three shifts, giving your rationale for any differences in numbers of staff assigned to each shift and be able to state what changes would be made if any one or more persons were on sick leave or vacation. Leg XII-A Obj. 15

E. Evaluation

1. Obtain at least 2 nursing history forms to evaluate.
2. "Components of the Nursing Process," Nursing Clinics of North America, Mar. 1971.
3. "Nursing History: One Means to Personalize Care," AJN, Jan. 1968.
4. "Interviewing or Social Chit-Chat?" AJN, July 1971.

True or False

1. _____ Mandatory law requires that any nurse engaged for hire be licensed by the state in which she is employed.
2. _____ A function of the State Board of Nursing is to investigate all violations of the Nurse Practice Act.
3. _____ The total assessment of a patient must always be done on the day of admission.
4. _____ Nursing assessment and nursing diagnosis are synonymous terms.
5. _____ Nursing process is a guide for nursing care actions.

1. Define:

a. Functional Nursing

b. Team Nursing

c. Primary Nursing

2. Give 5 functions of the State Board of Nursing

a.

b.

c.

d.

e.

3. Describe the phases of the nursing process.

4. Select three actions from the following list which are independent actions of the nurse functioning in an acute care center:
 - a. Realizing a CVA patient's need for speech evaluation and contacting an agency for consultation.
 - b. Giving an IV injection of heparin.
 - c. Applying Bucks extension to a patient with a possible fractured femur.
 - d. Reinsertion of a foley catheter.
 - e. Teaching the newly diagnosed diabetic patient about skin care, diet, and insulin administration.
 - f. Start an IV infusion on a severely dehydrated person who refuses fluids.

5. List the essential components of a nurse practice act.

6. State three possible reasons that a nurse in Pennsylvania could have her license revoked.

Evaluation :

Written test on Obj. 1, 3, 4, 5 and vocabulary.

Satisfactory demonstration of Obj. 8 in clinical area.

Lab demonstration of Obj. 9.

WHERE THE ACTION IS

- A. Purpose: Upon completion of this module, the student will be able to describe the trends in the delivery of health care, how the delivery may be accomplished and how the care is evaluated.
- B. Vocabulary:
1. RMP - A Regional Medical Program is designed to improve the nation's health manpower and facilities and is federally funded.
 2. CHPC - A Comprehensive Health Planning Council, is a state planning board for community health care and education for health manpower.
 3. HMO - A Health Maintenance Organization is designed to assure responsibility for total health care of a defined population on the basis of fixed annual contracts.
 4. PSRO - The Professional Standards Review Organization was established by the Social Security Amendments of 1972. The law calls for the establishment of PSRO's throughout the country to monitor and control the medical care provided to beneficiaries of Medicare, Medicaid and Maternal and Child Health Programs.
 5. POMR - Problem-Oriented Medical Records is a systematic method of recording, which identifies the patient's problems, the plan of treatment, and the progress of the plan.
 6. Utilization review - This is an evaluation of the utilization of hospital facilities and services.
 7. Audit - The process of reviewing a chart to evaluate the health care of the individual based on specific criteria.
 8. Infection control nurse - A nurse who supervises the environment with regard to prevention and control of infections.
 9. ECF - An Extended Care Facility - is a nursing home type institution where skilled services are available for persons who do not require acute care.
 10. Medicare - Program developed to pay the major share of healthcare costs for individuals over 65.
 11. Medicaid - A program designed to cover medical care costs on an optional basis contingent on the payment of a small monthly premium for individuals over 65.
 12. Blue Cross/Blue Shield - Nonprofit prepayment insurance plans to cover hospital and physician's costs.

C.

OBJECTIVES

1. Identify which Health Service Region your community is in; list three services it offers to your community and state how these services are financed. Leg XII-C Obj. 8
2. Describe one current national health insurance bill being proposed for legislation.
3. Discuss the advantages and disadvantages of a Health Maintenance Organization.
4. List three changes in health care, and state why they are partial solutions to the rising costs of health care. Leg XII-C Obj. 7
5. Describe what your state and local nursing associations are doing regarding the poverty or health issues in your state and community Leg XIV-A Obj. 2

LEARNING ALTERNATIVES

1. Individual reports and discussions.
2. Interview someone involved in the promotion of health care in your community. (Health and Welfare Council)
3. Draw a map of Pennsylvania, designating the various Health Service Regions.
4. "Health Service Areas Designated," Penna. Health, Summer 1975.
1. Lecture.
2. Obtain, "Message from the President of the United States on Health," Pres. Richard M. Nixon, Congressional Record-Senate, Wash. D.C., Superintendent of Documents, U.S. Government Printing Office, Mar. 2, 1972.
3. Obtain "Towards a Comprehensive Health Policy for the 1970's, May 1971, Superintendent of Documents.
4. Obtain "Emergency Medical Services Act," Congressional Record - House, Jan. 31, 1972, Superintendent of Documents.
5. New Directions in Patient-Centered Nursing, Abdallah, Beland, Martin, Matheny, Chap. 17.
6. "The Health Department and the Comprehensive Health Care Act," Penna. Health, Winter 1973.
1. Group discussions and reports.
2. "HMO's and Health Education," AJPH, May 1975.
3. "Health Maintenance Organization Delivery System," AJPH, Nov. 1975.
1. "Free Clinics Change the Scene" AJN, Feb. 1974.
1. Interview nurses (PNA) at hospital.
2. Obtain "The ANA in Washington," Julia Thompson, Pub. 1972, Kansas City, MO.

6. List the actions that are currently being taken in one of your community hospitals to evaluate, verify, and improve the client care and list three additional actions that could be taken. Leg XII-C Obj. 9

7. Given a client situation, list three actions a nurse could take to help keep the cost of hospitalization down for that particular client and state why each would have that effect. Leg XII-C Obj. 6

8. List the actions that are currently being taken in one of your community hospitals to evaluate, verify, and improve the client care and list three additional actions that could be taken. Leg XII-C Obj. 9

C. Enrichment:

1. Examine the hospital bill of a patient to become familiar with the costs. Categorize the charges - highest per day and check for costs that could have been avoided.
2. Interview the hospital's pharmacist as to cost of hospital medications versus private pharmacy, what method of dispensing drugs is least expensive etc.
3. Interview the head of Central Processing as to costs comparison of disposable and non-disposable equipment, "false economy" practiced, such as reusing disposable equipment to "save" costs.

1. Lecture by Nurse Epidemiologist BCMH.
2. "Nurse Participation in Medical Peer Review," NO, Jan. 1974.
3. "Accreditation - What About the Public," NO, Oct. 1971.
4. Rounds with Nurse Epidemiologist/Utilization Coordinator.
5. Attend meetings Infection Committee
1. Invite someone from hospital credit office to find out ways of handling costs.
2. Interview Utilization Coordinator, about her role and function at BCMH.
3. "Nurses are Key in HIP Experiment to Cut Health Care Costs," AJN, Feb. 1972.
1. Do a chart audit.
2. "The Nursing Audit for Evaluation of Patient Care," NO, June 1966.
3. Interview chairman of Nursing Audit Committee.
4. Attend a meeting of the Nursing Audit Committee.
5. NLN publication - "The Nursing Audit," Helen Benedekter.
6. NLN publication No. 84 - "The Nursing Audit," Dunn and Morgan.
7. The Nursing Audit, Maria C. Phaneuf, Chap. 2.

1. _____ The World Health Organization is designed to assure responsibility for total health care of a defined population on the basis of fixed annual contracts.
2. _____ The PSRO is a federal law designed to monitor and control medical care.
3. _____ Medicare and Medicaid are similar types of health insurance programs.
4. _____ Blue Cross/Blue Shield are private insurance plans designed to cover hospital and physician costs.
5. _____ An evaluation of the facilities available and services provided by the hospital is called audit.
6. _____ An HMO is designed to assure total health care of a defined population.

1. Butler is located in the _____ Health Service Region.
2. List 3 programs currently being carried out by BCMH to evaluate, verify and improve patient care:
3. Briefly describe one current national health insurance bill currently pending in legislation. (25 words or less)
4. What are three objectives of the Problem-Oriented Medical Records?
5. An Extended Care Facility is:
6. List three actions a nurse could take to help keep the cost of hospitalization down for one of the following and explain how each would be effective.
 - a. 75 year-old comatose client,
 - b. 40 year-old post-operative cholecystectomy client,
 - c. A 24 year-old active tuberculosis client

BEAT THE NURSE CURSE

- A. Purpose: Upon completion of this unit, the student should be aware of the opportunities available to the professional nurse and the qualifications required for those opportunities. The student should also understand more fully what determines success or failure in any type of work and appreciate the important practices in securing and resigning from positions.

B. OBJECTIVES

LEARNING ALTERNATIVES

1. Describe how you would obtain information on job opportunities.
2. List at least three aspects of a job that are important to you and why, and state or role play how you would find out this information from an employer during an interview. Leg XII-A Obj. 17.
3. Demonstrate or role play applying for a job as a staff nurse in writing and during a personal interview using the criteria of anticipating what information the employing agency will need from you and what you will need from them in order to make a decision concerning their offering and your accepting a job at that agency. Leg XII-A Obj. 16
4. Describe what items should be included in your budget.
5. Discuss what services are available through professional organizations in the area of economic security.
6. List three nursing opportunities which have declined in need and explain why.

1. Steppingstones to Professional Nursing, Cafferty & Sugarman, Chap. 23.
 2. Lecture - local recruiters.
 3. Obtain information about job opportunities from Career Resource Center on campus for a given week.
 4. "Assessing Growth Potential," AJN, Apr. 1974.
-
1. "Assessing Growth Potential," AJN, Apr. 1974.
 2. Group discussions & reports.
-
1. Write a letter of application.
 2. Be prepared to role play the applicant as staff nurse or the employer.
-
1. Plan a monthly budget on a current starting salary for an RN.
 2. "Proven & Practical Ways to Handle Money Better," The Changing Times, July 1970.
 3. Cafferty & Sugarman, Chap. 20.
-
1. "What About Pensions?" Nursing Clinics of North America, Sept. 1974.
 2. Write to ANA headquarters about economic security.
-
1. Dimensions of Professional Nursing, Kelly, Chap. 24.

7. Describe the trend in nursing opportunities, list four examples of current opportunities.

8. List 5 reasons why a person might wish to leave a position and explain how long you should remain in a position before resigning.

D. Enrichment:

1. Survey community to determine how many types of positions nurses are maintaining in area.

E. Evaluation:

1. Letters of application and resignation.
2. Evaluation of report on objective #2.

1. Lecture.
2. Cafferty & Sugarman, Chap. 24.

1. Write a letter of resignation.

A THOUSAND FACES

- A. Purpose: Upon completion of this module, the student will be familiar with some of the personal and professional problems which confront graduate nurses, and also will be able to utilize some of the principles used as a guide in dealing with various types of professional problems and situations.

B. OBJECTIVES

LEARNING ALTERNATIVES

- | | |
|--|--|
| <p>1. List at least three changes in your behavior that you anticipate occurring to yourself as you change your role from student to new graduate to experienced RN and state why each may occur and what it means. Leg XII-A Obj. 2</p> | <p>1. Develop a questionnaire and interview several new graduates in local hospital.</p> <p>2. Group discussions and reports.</p> <p>3. "Transition from Student to Graduate." <u>AJN</u>, Dec. 1967.</p> |
| <p>2. List three specific problems you anticipate encountering as a new graduate in your local hospital and describe at least one way of handling each, based on a problem-solving approach. Leg XII-A Obj. 3</p> | <p>1. "Nursing as a Career," <u>AJN</u>, June 1969.</p> <p>2. Legs Audio Tape #12 - Side 2, "Conflicts in Values."</p> <p>3. "Grouping Newcomers on an Orientation Unit," <u>AJN</u>, Feb. 1970.</p> |
| <p>3. Demonstrate receiving a shift report from another person which results in your receiving and being able to repeat verbally or in writing all of the information that was predetermined as being pertinent to your assuming responsibility for any of the following assignments:
 Medication nurse for 16 clients
 Treatment nurse for 16 clients
 Total care for 4 clients
 Leg XII-A Obj. 5</p> | <p>1. Group discussion.</p> <p>2. Audio Tape #1 - Reporting.</p> <p>3. Attend shift report and be prepared to assume the role of any of the three listed assignments.</p> |
| <p>4. List the observations you would plan to make and describe how you would make them immediately following or during the shift report of each client in objective 3 to prepare for your assignment. Leg XII-A Obj. 6</p> | <p>1. Group discussion.</p> <p>2. Observe medication nurse, treatment nurse, & primary nurse on the clinical unit.</p> <p>3. "Night Report - Orthopedics," <u>AJN</u>, Nov. 1969.</p> <p>4. Create your own form as an assignment organizer.</p> |
| <p>5. Demonstrate either orally or in writing that you have listened to a verbal exchange between a staff member and yourself of from 1 to 5 min. (e.g., orders from a physician, report from an aide or LPN, introduction of a new staff member, etc.) by either repeating the information heard or by carrying out the actions required. Leg XII-A Obj. 1</p> | <p>1. Observe this interaction on the clinical area and be prepared to role play the situation in class.</p> |

- 6. Given a list of statements, select which give directions in each of the following ways: as a direct order, as an implied direction, as a request. Leg XII-A Obj. 11
- 7. List at least three ways, that your hospital nursing service administrator is kept informed of each client's condition and any sudden change in condition, each eight hours. Leg XII-A Obj. 9

C. ENRICHMENTS:

- 1. Think of an RN whom you admire and identify 5 behaviors which you believe are desirable as a graduate nurse.
- 2. Evaluate your own personality as to whether you possess any of these attributes and what you can do to acquire any specific behavior.

D. EVALUATION

Test on objectives 2, 3, 6 & 7

1. Lecture.

1. Interview nursing supervisors in local hospital.

Module 7

Short answer questions

1. What will be your action as an office nurse in a general practitioner's office when the physician tells an adult patient to stand for his IM injection in the hip? You are to administer the injection.
2. You are a new graduate and have reason to suspect that the 3-11 staff nurse is stealing narcotics, what will your action be?
3. Explain how the director of nursing service may be informed of sudden changes in patients' conditions and of each patient's condition during an eight hour period..
4. List the information that needs to be communicated during a shift report.
5. Give an example of each of the following directions:
 - a. A direct order
 - b. An implied order
 - c. A request

YOU'VE COME A LONG WAY, NURSE

- A. Purpose: Upon completion of this module the student should be able to identify the organization of administration, and also identify and implement the principles of effective leadership in any type of nursing care situation.
- B. Vocabulary:
1. Authoritarian - A dictatorial climate which allows little room for recognition of the individual as a person with worth and dignity.
 2. Laissez-faire - A climate which is permissive for self and others which fosters a negative reaction to standards, rules and regulations.
 3. Democratic - A climate which facilitates the process of exploration and discovery of personal meaning with freedom to change and expand.
 4. Team nursing - A group of nursing personnel working together to administer quality care to a group of patients under the direction of a designated leader.
 5. Primary Nursing - One-to-one nurse-patient relationship. The primary nurse has complete responsibility for patients on a 24 hour basis, from admission to discharge.
 6. Functional Nursing - Traditional nursing method which is task oriented, such as medication nurse, or treatment nurse.
 7. Group dynamics - An ever changing process involving action that is both dependent and interdependent.
 8. Nursing conference - Meetings held for the purposes of giving progress reports of assignments, of focusing on patient care, of acquiring information and of assessing team relationships.
 9. Shift report - Communication between personnel concerning patients; floor functions, etc. at change of work periods.
 10. Team report - A form of communication between a team leader and team members concerning patients' conditions and assignments.
 11. Accountability - The obligation to take full responsibility for whatever occurs as a result of the individual's actions or decisions.
 12. Team leader - A nurse who is responsible for a designated group of patients and the direction of her team members.

C.

OBJECTIVES

1. Identify and explain the five elements of administration.
2. Describe three climates for nursing leadership; select which one is most effective and explain why..
3. Define leadership and list five qualities of a leader.
4. Discuss how the nurse functions as a leader in team nursing, primary nursing and in a charge nurse situation.
5. List two methods that are helpful in organizing work when caring for large groups of clients (15-30) and four actions that can be taken to help auxiliary staff members keep organized. Leg XII-A Obj. 12
6. Given a sheet of doctor's orders, demonstrate checking another person's transcription of them and finding any errors in transcribing or making them effective. Xcg XII-C Obj. 13

LEARNING ALTERNATIVES

1. Lecture
1. "Resolving a Nursing Leadership Crisis," AJN, Mar. 1965.
2. Review of Team Nursing, Douglass, Chap. 4.
1. Interview prominent leader in community industry, health care, nursing.
2. Write a report on a prominent nursing leader.
3. Dimensions of Professional Nursing, Kelly, Chap. 4.
4. "To Be a Good Supervisor," NO, Sept. 1965.
5. Nursing Leadership in Action, Douglass, Bevis, Chap. 7.
6. Management of Patient Care, Kron, Chap. 6.
1. Lecture.
2. "Primary Nurse," RN, Apr. 1974.
3. Professional Nursing, Spalding & Notter, Chap. 4.
4. Douglass, Chap. 3 & 5.
5. A Handbook for Head Nurses, Geitgey, Chap. 10, 11, 12 & 13.
6. "Primary Nurse - Role Evaluation," NO, Oct. 1973.
7. "Why Primary Nursing?" Nursing Clinics of North America, June 1973.
1. Legs Audio Tape #14, Side 1.
2. Plan assignments for nursing care on your clinical unit - present class discussion.
1. Check your patient's chart and kardex on the clinical and evaluate the transcription and effectiveness of orders.

- 7. List three actions that you could take as a team leader in order to obtain factual information regarding the quality of client care each one of your team members is giving and two actions that will give you information regarding completing each assignment. Leg XII-A Obj. 14
- 8. Demonstrate leading a staff conference with at least three team members to problem solve a predetermined topic (client or staff), within a specified period of time, arriving at a group decision and one or more actions to take. Leg XII-A Obj. 13
- 9. Given a shift report as a team leader, rounds, and Kardexes on a group of clients, identify what information needs to be communicated to staff members when they consist of an LPN and an aide in order for them to give safe care to each client. Leg XII-A Obj. 7
- 10. Demonstrate giving a shift report as a team leader for eight clients, which includes each client's name, diagnosis, room number, physician's name, care given and observations made, new orders, changes in client's condition, and any special instructions regarding care to be given in succeeding shifts; completing it in 15 minutes. Leg XII-A Obj. 8
- 11. List five functions of the team leader.
- 12. Describe the purpose of evaluation.

D. ENRICHMENT:

- 1. Lead actual team conference.
- 2. Serve as team leader for a period of time.
- 3. 1 - 3 days observational experience as charge nurse.

- 1. Group discussion and presentation.
- 2. "Leadership and Responsibility in Team Nursing," Nursing Clinics of North America, June 1973.
- 3. New Directions in Patient-Centered Nursing, Abdellah, Beland, Martin & Matheney, Chap. 1
- 4. Videotape cartridge 819 "Evaluation of Nursing Care," VT 5 A4246
- 1. Trainex film on staff conference.
- 2. Consult team leader from local hospital.
- 3. Audio Tape - Legs I, Reporting 1 & 2.
- 1. Role play - team conference.
- 2. Audio Tape - Legs 10, side 1.
- 3. "Making Rounds with a Purpose," NO, July 1960.
- 1. Divide group into 3 smaller groups. Each small group conduct a report with a leader and recorder - Share with larger group the types of information you found necessary to give good patient care.
- 1. Douglass,
- 1. Lecture.
- 2. Debate: Are Written Evaluations Helpful?
- 3. Write a personal evaluation based on questions in the article "Assessing Growth Potential," Apr. 1974.

1. A democratic leader is one who is:
2. List the 5 necessary elements of administration:
3. A climate for leadership which allows little room for recognition of the individual with worth and dignity is _____.
4. The obligation to take full responsibility for whatever occurs as a result of one's action or decisions is called _____.

True or False

1. _____ A primary nurse is the team leader.
2. _____ The main responsibility of a charge nurse is to make out the team assignments.
3. _____ A good team leader is one who gives explicit instructions and expects team members to carry them out.
4. _____ All team members should contribute to the formulation of an effective nursing care plan.
5. _____ Functional nursing is a new concept in nursing care being tested in some hospitals.
6. _____ The team leader should not take a patient assignment as it will prevent her from carrying out her role as a team leader.
7. _____ The team report should be attended by all team members.
8. _____ A good leader will conscientiously evaluate you only on your weak points so that you may improve.
9. _____ Primary nursing is based upon the concept of a one to one relationship for each patient.
10. _____ A good team member should report immediately to her head nurse when her patient's B.P. drops dramatically.
11. _____ A primary nurse has complete responsibility for her patients on a 24 hour basis.
12. _____ The ability to evaluate one's own skills and knowledge is an important aspect in personal growth and development.

"RES IPSA LOQUITUR"

- A. Purpose: Upon completion of this module the student shall be familiar with basic legal terms, laws and trends in legal issues which may affect the nurse in the performance of her professional responsibilities.
- B. Vocabulary:
1. Contract - A term applied to a written or verbal agreement between two or more persons which is enforceable by law.
 2. Tort - A term applied to a legal breach of duty other than a contract committed against another person or his property for which damages may be recovered in a civil action.
 3. Assault - A term applied in law which means to give the appearance of trying to inflict injury, or to be menacing to another person.
 4. Battery - A term applied in law which means to actually inflict injury upon another person.
 5. Malpractice - This term applies in law to the misconduct or improper practice of any person licensed to practice his profession or duty.
 6. Will - An instrument or legal declaration in which a person disposes of his property.
 7. Defamation - This term applies to the publishing of anything that is injurious to the good name or reputation of another.
 8. Negligence - Implies that the person accused did not use ordinary prudence and was not guided by usual or expected consideration for another.
 9. Misdemeanor - A term applied to a minor offense for which statute provides a lesser punishment than for a felony.
 10. Felony - A term used for a crime that is punishable by imprisonment in a state prison.
 11. Crime - Commission of an act that is prohibited by law or is an omission of a duty required by law.
 12. False imprisonment - This term means to illegally restrict the freedom of another.
 13. Plaintiff - The term applied to the person who brings a suit into court.
 14. Defendant - The term applied to the defending persons in a law suit.
 15. Summons - An official order to appear in court as a defendant to a charge.
 16. Privileged communication - This is confidential information revealed during or as a result of a patient's treatment.
 17. Civil law - A body of law having to do with the private rights of an individual.

18. Common law - Laws based upon customs and records of previous court decisions.
19. Libel - A term applied in law to any false and or malicious written statement, sign or picture which exposes a person to public ridicule, contempt or injures his reputation in any way.
20. Slander - A term applied to an oral statement that might cause a person to be avoided, jeered at, ridiculed or held in contempt either personally or in his occupation.
21. Statutory law - A body of law enacted by federal, state and local governments.
22. Res Ipsa Loquitur - "The thing speaks for itself" - The plaintiff is not required to prove negligence through expert witness as there is a presumption of negligence and the burden of proof shifts to the defendant.

"The Malpractice Problem," <u>Nursing Clinics of North America</u>, Sept. 1974. 8. Creighton, Chap. 7. |

5. Explain the necessity of professional liability insurance for nurses.
6. Given a situation including facts involving a certain aspect (e.g., giving meds, ambulating a client, etc.) or nursing care, identify, at least one principle of malpractice law that applies, and decide the reasonable legal consequences (if any). Leg XII-C Obj. 16
7. Given a list of nursing actions, identify those that have malpractice-liability potential and indicate what changes in behavior would conform to acceptable legal standards of care. Leg XII-C Obj. 17
8. Describe the three types of wills and explain the nurse's role.
9. Describe "privileged communications" and the nurse's responsibility in this situation.
10. Discuss the implications for your practice as a nurse based on the trends in legal issues.
11. Discuss the implication of the Patient's Bill of Rights for nursing.
12. Discuss the nurse's role as a political force in determining the health care delivery system.
13. Explain "Joint Policy Statements" and how they affect nursing.

1. Lecture.
 2. Sarner, Chap. 5.
 3. Creighton, Chap. 6.
1. Role play or skit - divide class into groups and assign topics. Dramatize a courtroom scene.
1. Film strip "Legal Implications in Nursing" - Trainex.
 2. Review - "The Regan Report on Nursing Law."
1. Griffin & Griffin, Chap. 48.
 2. Spalding & Notter, Chap. 15.
1. "When is a Communication Privileged," AJN, 1970.
 2. Sarner, Chap. 10.
 3. Kelly, Chap. 22.
1. Refer to "News" section of 6 or 8 recent issues of AJN for legislation which affects nursing.
1. "The Patient's Bill of Rights and the Nurse," Nursing Clinics of North America, Sept. 1974.
 2. Kelly, Chap. 13.
1. "Political Action and Nursing," Nursing Clinics of North America, Sept. 1974.
 2. *"Nursing Organizations as a Political Pressure Group," Nursing Forum, Vol. XII #1, 1973.
 3. Kelly, Chap. 19.
1. "Joint Statements: Your Legal Safeguards," RN, Apr. 1971.
 2. Creighton, Chap. 6.

4

D. ENRICHMENT:

1. Obtain one or more malpractice insurance policies (include one suggested by District Nurses Association). Read fine print and be aware of coverage provided.
2. Find out legal aspects of your hospital-college agreement - Example : Do students take orders, answer phone etc.

True or False

1. The nurse is legally responsible for securing the patient's written consent for a surgical procedure.
2. A paralyzed patient has refused consent for an injection but the nurse approaches him with a syringe in her hand as if she would give it. This is an example of assault.
3. The only contract that is binding is a written contract.
4. If a nurse has been guilty of negligent conduct but there is no injury to the patient, there is no legal liability.
5. "Joint Policy Statements" are issued to give more protection to the nurse who performs tasks that were normally regarded as for physicians only - i.e. the "grey areas" of nursing practice.

1. Which of the following actions have malpractice liability potential?
 - a. A nursing student giving care to patients that is normally given by an RN.
 - b. A pediatric specialist who is relieving in I.C.U. because of shortage of staff.
 - c. A nurse who refuses to do a certain nursing action because she does not possess the required skill.
2. Briefly describe 3 types of wills and explain the nurse's role.
3. Give an example of breach of contract.
4. List the elements of a contract.
5. What are three elements needed to establish liability in a legal action against a nurse for malpractice?

Matching

- 1. _____ Contract
 - 2. _____ Tort
 - 3. _____ Malpractice
 - 4. _____ Negligence
 - 5. _____ Assault
 - 6. _____ Battery
 - 7. _____ Privileged Communication
 - 8. _____ Libel
 - 9. _____ Slander
 - 10. _____ Res Ipsa Loquitur
- a. A term applied in law which means to give the appearance of trying to inflict injury, or to be menacing to another person.
 - b. A term applied in law which means to actually inflict injury upon another person.
 - c. A term applied to a written or verbal agreement between two or more persons which is enforceable by law.
 - d. This term applies in law to the misconduct or improper practice of any person licensed to practice his profession or duty.
 - e. This is confidential information revealed during or as a result of a patient's treatment.
 - f. A term applied to an oral statement that might cause a person to be avoided, jeered at, ridiculed or held in contempt either personally or in his occupation.
 - g. A term applied to a legal breach of duty other than a contract committed against another person or his property for which damages may be recovered in a civil action.
 - h. A term applied in law to any false and/or malicious written statement, sign or picture which exposes a person to public ridicule, contempt or injures his reputation in any way.
 - i. A term applied in law which implies that the person accused did not use ordinary prudence and was not guided by usual or expected consideration for another.
 - j. "the thing speaks for itself"

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

FOREWARD

The task analysis survey reflected in this study is patterned after two previous studies concerning allied health professions. One study, the Allied Health Professions Project of the University of California, Los Angeles, was a national project. The second study, conducted by Educational Projects Incorporated of Pennsylvania, only reflected the Middle Atlantic region. This task analysis survey reflects mainly western Pennsylvania and is restricted to the field of nursing. It is also a part of a larger project in nursing for Butler County Community College.

APPROACH

The task analysis approach was utilized in this study to develop and evaluate curriculum from the standpoint of competencies and behaviors expected of an individual employed at a specific level of nursing. The specific objectives of the study were:

1. To determine what tasks are competencies expected of each level of nursing personnel within the area of general nursing care.
2. To identify areas of overlapping tasks in nursing care by various levels of nursing personnel.
3. To articulate these tasks to the Butler County Community College nursing curriculum for three specific levels of nursing personnel.

PROCEDURE

The general procedure utilized in this project was as follows:

1. Development of a task inventory to be utilized as the instrument for gathering data.
2. Selection of respondents to survey in order to verify the inventory of tasks.
3. Distribution of the task survey.
4. Analysis of data from survey.
5. Articulation of survey data to curriculum.

Development of a Task Inventory

To save time and resources, an inventory derived from the previously mentioned projects was utilized as a guideline to determine competencies expected of levels of nursing personnel in this western area of Pennsylvania where the Butler County Community College graduates were most likely to be employed. The inventory developed for the purposes of this study was prepared in two forms; one form for acute care settings, and one form for interim or chronic care settings.

Selection of the Respondents

The selection of the respondents was based on a geographical area representative of locations where Butler County Community College graduates might be employed. Due to the levels of nursing personnel involved, the selection of respondents included nursing homes as well as hospitals. The cooperating institutions are presented in Exhibit I and reflect mainly rural settings but are representative of both acute and chronic health care facilities. All of the facilities selected had been previously approached and employers requested to submit job descriptions for the levels of nursing personnel they employed.

Distribution of the Task Survey

After the facilities for the survey had been selected, letters were sent requesting cooperation and permission to administer the questionnaires at those institutions. Of the 18 facilities presented in Exhibit I, all except 4 were personally visited. Those four hospitals, noted by an asterisk, were mailed questionnaires due to inclement weather conditions and lack of time for rescheduling visits. There was a total of 18 institutions involved with the survey in 9 counties of western Pennsylvania. The cooperation of the respondents, as well as the influence of the personal administration of the questionnaires by the research personnel is obvious in that of a total of 101 questionnaires, 93 were completed and returned for a 93% response. Actually, all the questionnaires were returned, but 8 forms were not returned in time to be included in the data.

ANALYSIS OF DATA

Overview

Nursing is a very traditional field as far as roles and functions of the levels of personnel. Yet, nursing is now in a transitional period. The positions of Registered Nurse, Licensed Practical Nurse, and Health Assistant seem to have overlapping functions and confusion as to what function belongs to which position. The confusion is not so much evident in job descriptions but is apparent in actual performance expected on assignment. The responses show the overlap of positions and tasks which leads to the confusion.

Sample

A total of 93 questionnaires were returned, with 54 from hospitals and 39 from nursing homes. Of the 93 responses, 82 were in the Registered Nurse category, 8 in the Licensed Practical Nurse category and 3 in the Health Assistant category.

The ages, years of experience and educational preparation are shown in the Summary of Background Data Chart. The majority of Registered Nurses (75%), regardless of position, were diploma nurses. In the Administrative category 75% of the respondents were diploma nurses. Only 1 respondent, a staff nurse, was an Associate Degree graduate. Approximately 66% of the Licensed Practical Nurse group received their preparation in a Vocational-Technical program, while 33% received 1 year in a Community College program. In general, the nurse aides, though only 3, received no formal program or training.

Results

The following pages present the results of the survey. The tasks were grouped into 7 categories. Although the tasks and situations varied slightly between hospitals and nursing homes, they were sufficiently similar to be in the same broad categories. The major categories were:

- A. Safety, Comfort and Personal Hygiene Measures
- B. Food, Fluid and Elimination Measures
- C. Treatments and Procedures.
- D. Diagnostic Activities
- E. Medications
- F. Nursing Assessment and Intervention
- G. Leadership

For each of these 7 categories a graph is utilized to illustrate the percentage response of competencies by tasks expected of the three levels of nursing personnel, based on competencies expected of a Health Assistant, a Licensed Practical Nurse, or a Registered Nurse. Any percentage response at 5% expectation or less was considered nonsignificant.

7

A. SAFETY, COMFORT & PERSONAL HYGIENE MEASURES

Results

The tasks in this area relate to the patient's need for a safe, comfortable environment, the need for movement, and the need for personal hygiene. One additional task was added to the nursing home survey to include devices utilized frequently in a nursing home situation.

These tasks are competencies expected of all levels of nursing personnel. The percentage response indicates only two exceptions of any significance to expected competencies in this category. In hospital settings Health Assistants expected competencies for Task 3 at 38.2% response for aseptic technique, and Task 11 for Range of Motion exercises at 52.5% response indicate these tasks are not usually expected of this level of nursing personnel. In nursing home settings the most significant deviation was for task 3 at 40.1% response. Thus, in both settings, aseptic technique is not an expected competency for the Health Assistant. This is justifiable due to the basic scientific principles necessary to understand aseptic technique and the task probably should have been included in category C.

Therefore, tasks in this category are expected competencies of all three levels of nursing personnel with the noted exceptions.

22. Irrigate urinary catheters!			98%				98%				15.2%

26

B. FOOD, FLUID & ELIMINATION MEASURES

Results

The activities in this category are concerned with the patient's need for food, fluids and elimination. The major areas of difference in expected competencies were quite obvious in the percentage response graphs. In hospitals, Tasks 17-19, show that Health Assistants are not expected to be involved at all, although they are expected to do Task 20 at 73%. However, Licensed Practical Nurses are expected to administer tube feedings (76%) and to hang, regulate and discontinue intravenous fluids (49%); but are not expected to start intravenous infusions. With elimination measures, Tasks 22-25 show significant variations. Health Assistants were rated below 50% expectations for each task. In Task 22, the inclusion of colonic irrigations may have affected the response, and the 49.2% response for removal of fecal impactions is interesting. A variation between male and female Health Assistants on Task 24 shows more expected of the male. Health Assistants are also not expected to irrigate urinary catheters.

In nursing homes, Health Assistants were not expected to possess competencies for tube feedings or intravenous infusions. On the other hand, Licensed Practical Nurses were not only expected to have more competency in hanging, regulating and discontinuing intravenous than in hospitals, but a 27% response expected this level to start intravenous infusions. The responses showed less expectations of Health Assistants in procedures dealing with fecal or urinary eliminations. Most nursing homes informed us that the nurses (RN's or LPN's) did these tasks and some employed no male assistants at all.

46

G. TREATMENTS & PROCEDURES

Results

In this category the hospital responses illustrated a questionable difference of expected competencies for the Licensed Practical Nurse with a significant difference between expectations concerning chest tubes, nasogastric tubes and gastrostomy tubes (Tasks 27-29) all dealing with drainage tubing with suction.

In nursing homes again respondents expected more competency from the Licensed Practical Nurse in most tasks than did hospital respondents.

D. DIAGNOSTIC ACTIVITIES

Results

In this area dealing with obtaining data for diagnostic activities, the variations of expectations were reversed from previous categories. Here, the hospital respondents expected more of the Licensed Practical Nurses and the Health Assistants than did nursing home respondents.

103

E. MEDICATIONS

Results

There appears to be little significant difference between expected competencies of the Registered Nurse and Licensed Practical Nurse in this functional area. The one surprising percentage for hospitals and nursing homes is the task concerning preparation and administration of IV medications with a 19.5% and a 30% response expectations of the Licensed Practical Nurse. Also, a larger percentage response in the area of topical medications was illustrated for the Health Assistant in hospitals as opposed to nursing homes.

G. LEADERSHIP

Results

The responses in this category were fairly predictable illustrating the bulk of leadership responsibilities being at the Registered Nurse level. However, in the nursing home setting, much more leadership responsibility was expected of the Licensed Practical Nurse, with the exception of Tasks 90, 91 and 96.

BEST COPY AVAILABLE

SUMMARY

1. The results of this sample indicates that the survey does measure the tasks performed in the area of nursing. A few tasks should have been placed in another category, but their placement did not affect the overall results.
2. The overlapping of competencies expected of the three levels of nursing personnel was expected in some of the categories especially the area of Safety, Comfort and Personal Hygiene. This area is basic to nursing care and thus all levels should be competent to perform these measures with the exception of aseptic technique with sterile supplies.
3. The major areas of difference in expected competencies between Registered Nurses and Licensed Practical Nurses were in relation to starting intravenous infusions, giving intravenous medications, central venous pressure, and leadership tasks. These variations were less in nursing homes, supporting the premise that Licensed Practical Nurses are often given responsibility identical to an Registered Nurse in those settings.
4. The responses on the Health Assistant level showed in many instances that these persons were expected to perform many tasks. For the most part, their education is left to on-the-job training and indications are that specific course work and training are necessary to prepare them for the competencies expected.

BEST COPY AVAILABLE

ARTICULATION OF DATA TO BC³ NURSING CURRICULUM

The semesters of the curriculum according to the levels of personnel are as follows: First semester - Nurse Aide or Health Assistant certificate; first year - Practical Nurse diploma; second year - Associate Degree in Nursing.

Category A. - SAFETY, COMFORT & PERSONAL HYGIENE MEASURES

All tasks are presented in the first semester so that all three levels could provide these measures.

Category B. - FOOD, FLUID & ELIMINATION MEASURES

All tasks except tube feedings and starting intravenous infusions are presented in the first semester, which is the Health Assistant level. Tube feedings are in the second semester, and starting intravenous infusions are included as a route of administration of medications in the first semester and in the beginning Associate Degree Nurse track.

Category C. - TREATMENTS & PROCEDURES

Insertion of nasogastric tubes is taught to Associate Degree Nurse level students in the summer session. Removal of sutures and skin clips is not included in curriculum content. Tracheostomy care is covered at the first year Licensed Practical Nurse level and again at the Associate Degree Nurse level in more depth, as are tasks with chest tubes. The other tasks are presented in the 2nd semester.

Category D. - DIAGNOSTIC ACTIVITIES

All tasks except central venous pressure and EKG procedures are taught on the Licensed Practical Nurse level.

Category E. - MEDICATIONS.

Administration of medications is taught in the first semester therefore, all three levels have been presented the content, even though Health Assistants are not expected to have this competency.

Category F. - NURSING ASSESSMENT & INTERVENTION

The principles behind the assessment required for the tasks in this category are presented in the first year Licensed Practical Nurse level and in more depth in the second year at the Associate Degree Nurse level.

Category C. - LEADERSHIP

Although the tasks in this category are certainly expected of the Registered Nurse level, only the content is presented in the curriculum. At the present time according to the State Board of Nurse Examiners, Associate Degree Nurses are not expected to function as team leaders. Therefore, the actual experience of functioning in a leadership role is not a requirement of the curriculum, but will be offered as an optional learning experience.

This questionnaire has been prepared to identify skills and competencies required for three levels of nursing personnel. This information will be analyzed to determine if the basic educational program at BC³ contains the material to produce a competent practitioner at each level.

Please complete the questionnaire by checking (✓) the column of the person you think can or should be capable of performing that particular task. You may check one, two, three or four columns for some of the tasks.

In the spaces below please complete the requested information. You need not sign your name unless you care to do so.

Nursing position _____

Age _____

Basic nursing education _____

Date of graduation from above _____

Highest degree _____

Previous experience in nursing _____

Safety, Comfort, and Personal Hygiene

1. Explain and use safety measures (e.g., restraints, side rails) in caring for patients.....
2. Observe and enforce safety and fire regulations (e.g., spilled water, no smoking signs).....
3. Carry out aseptic technique when using sterile supplies (e.g., syringes, dressings).....
4. Prevent transferring pathogens between patients (e.g., wash hands, change gowns).....
5. Give or assist patients to take baths.....
6. Assist patients with personal hygiene (e.g., hair, nails, skin, teeth).....
7. Give skin care to bedridden patients (e.g., in casts, restraints, coma).....
8. Turn and position patients in correct body alignment.....
9. Use supportive and comfort devices (e.g., bed cradles, footboards).....
10. Assist patients in range of motion exercises...
11. Assist patients to become ambulatory (e.g., dangle, get out of bed).....

Feeds and Fluids

Assist patients to eat:

1. Infant.....
2. Toddler.....
3. Child.....
4. Adult.....
5. Geriatric patient.....
6. Administer tube feedings (e.g., nasogastric, gavage, gastrostomy).....
7. Start intravenous infusion.....
8. Monitor, regulate, and discontinue intravenous feeds.....

20. Observe, measure, and record food and fluid intake and output. (include drainage bottles)

Elimination

21. Assist patients with natural elimination (bedpan, urinal).....
22. Prepare and give enemas and Colonic irrigations.....
23. Remove fecal impactions.....
24. Insert urinary catheters.....
25. Irrigate urinary catheters.....

Treatments and Procedures

26. Insert nasogastric tubes.....
- Check and maintain drainage tubing with suction:
27. Chest tubes.....
28. N/G tubes.....
29. Gastrostomy.....
30. Irrigate and instill solutions into tubings (e.g., colostomy, drains).....
31. Irrigate and instill solutions directly into body openings (e.g., douche, wounds).....
32. Assist patients to turn, cough, and deep breathe
33. Set up for and assist physician with procedures (e.g., examinations, cut downs, L.P.'s).....
34. Remove sutures and skin clips.....
35. Prepare equipment and administer inhalation therapy.....
36. Assist patients with postural drainage.....
- Care for tracheostomy:
- Suction.....
38. Remove, clean and replace inner cannula

3. Set up and operate commonly used O₂ equipment (e.g., nasal catheters, masks, tents, croupettes)

40. Give mouth-to-mouth resuscitation.....

Assemble commonly used orthopedic equipment:

41. Beds and frames.....

42. Traction.....

43. Operate commonly used orthopedic beds and frames

44. Maintain patients in traction.....

Apply bandages:

45. Ace.....

46. Scultetus.....

47. Pressure.....

48. Slings.....

49. Splints.....

Diagnostic Activities

50. Take TPR and BP.....

51. Determine central venous pressure.....

52. Set up and operate EKG equipment.....

53. Recognize and report abnormalities recorded on monitors, scopes, EKG strips.....

54. Apply and read skin tests.....

55. Obtain nose, throat, stool, urine, and wound specimens.....

Test urine for:

56. Sugar.....

57. Acetone.....

58. Specific Gravity.....

59. pH.....

Medications

Prepare and administer medications:

60. Oral.....

61. Rectal.....

62. IM.....
63. Subcutaneous.....
64. Intradermal.....
65. Inhaled...A.
66. I.V.
67. Eye, nose, and ear drops.....
68. Topical.....

Susan, age 2, who has just returned from the operating room with a new tracheostomy:

69. Have present and operational at the bedside a suction machine and tracheostomy care tray upon Susan's return to her room.....
70. Recognize that Susan's arms are not restrained as she is admitted to her room after surgery..
71. Wait until Susan is quiet before rechecking her pulse rate which is 180 while crying.....
72. Notice secretions bubbling in the tracheostomy upon entering Susan's room.....
73. Organize care to insure Susan remains in an environment of increased oxygen and humidity as much as possible.....
74. Suction Susan's tracheostomy after noticing her to be unusually restless, even though no gurgling sound is heard.....
75. Notice Susan staring at the door in her mother's absence.....
76. Provide a constant means by which Susan can initiate communication.....
77. Organize Susan's activities so that a familiar routine similar to home is established.....

Karl, age 15, hospitalized as a newly diagnosed diabetic:

78. Introduce herself to Karl when he is admitted. orient him to the ward, and introduce him to other teen-age patients.....
79. Recognize steps to be taken upon noting an acetone odor while assisting Karl with his oral hygiene.....

80. Sit down and listen with interest when Karl complains bitterly that he cannot eat anything that he likes anymore.....
81. Encourage Karl to carry out his care independently, as he is able to accept new responsibilities.....
82. Show Karl how to give his insulin and test his urine.....
83. Delay giving Karl a scheduled dose of insulin when he remarks that his lips are numb and his hands perspiring.....
84. Use examples with which Karl is familiar in teaching him about his illness and medical regime.....
85. Refrain from scolding Karl for sneaking food, rather express understanding of his feelings and discuss possible adaptive behaviors.....
86. Arrange to lunch with Karl and his parents in a restaurant outside the hospital for the purpose of aiding in the selection of Karl's diet.....

Mr. Thomas, age 42, who has been in the Coronary Care Unit for one week with a myocardial infarction:

87. Insure that the activity and noise levels remain low in Mr. Thomas' room.....
88. Refrain from statements such as "You'll be up and about in no time," when Mr. Thomas asks whether he is ever going to be well again....
89. Notice Mr. Thomas, who is supposed to be on bedrest, attempting to get out of bed.....
90. Say something like "It must be very frustrating to be stuck in bed," when Mr. Thomas makes sarcastic remarks.....
91. Observe that though Mr. Thomas has been lying quietly in bed, his posture is rigid and his expression tense.....
92. Elevate the head of his bed and initiate oxygen therapy immediately when Mr. Thomas complains of dyspnea.....
93. Observe that Mr. Thomas has not questioned the doctor regarding his illness even though he has expressed concern to the nurse.....

94. Provide opportunities for Mr. and Mrs. Thomas to talk in relative privacy.....
- Assign patients and tasks taking into account the abilities of each team member.....
96. Review assigned patients' diagnoses and care with each team member at the beginning and as necessary during each shift.....
97. Listen and change assignments accordingly when a patient complains bitterly about "his nurse".....
98. Plan her activities so that she will be available to assist team members.....
99. Set an example and give suggestions while assisting each team member in giving care.....
100. Discuss the problem and attempt a satisfactory solution when two team members appear sharp with each other.....
101. Comment at a team conference on the success of a team member's suggestion and have this member enter the suggestion on the patient's care plan.
102. Assist personnel with problem solving in patient care situations.....
103. Reassign team members to accomplish tasks by priorities when a team member leaves ill.....

Thank you for
assisting with our research project.

Safety, Comfort, and Personal Hygiene

1. Explain and use safety measures (e.g., restraints, side rails) in caring for patients.....
2. Observe and enforce safety and fire regulations (e.g., spilled water, no smoking signs).....
3. Carry out aseptic technique when using sterile supplies (e.g., syringes, dressings).....
4. Prevent transferring pathogens between patients (e.g., wash hands, change gowns).....
5. Give or assist patients to take baths.....
6. Assist patients with personal hygiene (e.g., hair nails, skin, teeth).....
7. Give skin care to bedridden patients (e.g., in casts, restraints, coma).....
8. Turn and position patients in correct body alignment.....
9. Use supportive and comfort devices (e.g., bed cradles, footboards).....
10. Assist patients in range of motion exercises....
11. Assist patients to become ambulatory (e.g., dangle, get out of bed).....
12. Assist a patient in the use of crutches, walker etc.

Foods and Fluids

13. Assist patients to eat.....
14. Administer tube feedings (e.g., nasogastric, gavage, gastrostomy).....
15. Start intravenous infusion.....
16. Hang, regulate, and discontinue intravenous fluids.....
17. Observe, measure, and record food and fluid intake and output (include drainage bottles)....

Elimination

18. Assist patients with natural elimination (bedpan, urinal).....

RN

LPN

NA

ORDERLY

19. Prepare and give enemas and colonic irrigations.....
20. Remove fecal impactions.....
21. Insert urinary catheters.....
22. Irrigate urinary catheters.....

Treatments and Procedures

23. Insert nasogastric tubes.....

Check and maintain drainage tubing with suction:

24. N/G tubes.....
25. Irrigate and instill solutions into tubings (e.g., colostomy, drains).....
26. Irrigate and instill solutions directly into body openings (e.g., douche, wounds).....
27. Assist patients to turn, cough, and deep breathe.....

Care for tracheostomy:

28. Suction.....
29. Remove, clean and replace inner cannula.....
30. Set up and operate commonly used O₂ equipment (e.g., nasal catheters, masks, tents)
31. Give mouth-to-mouth resuscitation.....

Assemble commonly used orthopedic equipment:

32. Beds and frames.....
33. Traction.....
34. Operate commonly used orthopedic beds and frames
35. Maintain patients in traction.....

Apply bandages:

36. Ace.....
37. Scultetus.....
38. Pressure.....
39. Slings.....
40. Splints.....

Diagnostic Activities

41. Take TPR and BP.....
42. Set up and operate EKG equipment.....
43. Apply and read skin tests.....
44. Obtain nose, throat, stool, urine, and wound specimens.....
- Test urine for:
45. Sugar.....
46. Acetone.....
47. Specific Gravity.....
48. pH.....

Medications

Prepare and administer medications:

49. Oral.....
50. Rectal.....
51. IM.....
52. Subcutaneous.....
53. Intradermal.....
54. Inhaled.....
55. I.V.
56. Eye, nose, and ear drops.....
57. Topical.....

Re Mary, age 80, who has been admitted to your institution after having been hospitalized with a CVA and subsequently having a tracheostomy to maintain her airway:

58. Have present and operational at the bedside a suction machine and tracheostomy care tray upon Mary's arrival.....
59. Suction Mary's tracheostomy after noticing her to be unusually restless, even though no gurgling is heard.....
60. Encourage her to place a finger over the tube opening in order to help her express herself verbally.....

61. Organize her activities to assure her she will be taken care of as well as she was when hospitalized.....
62. Notice secretions bubbling in the tracheostomy upon entering Mary's room.....

Re Frank, age 72, admitted to your institution with a history of diabetes mellitus:

63. Determine Frank's level of knowledge concerning his disease, diet and medication.....
64. Recognize steps to be taken upon noting an acetone odor while assisting Frank with his bath.....
65. Delay giving Frank a scheduled dose of insulin when he remarks that his lips are numb and his hands perspiring.....
66. Check his feet for signs of irritation such as blisters, cuts, etc.....
67. Recognize the significance of Frank's complaining of weakness and dizziness and taking appropriate action.....

Re John, age 68, admitted to your institution after having been hospitalized with a CVA

68. Assess John's level of activity and write his care plan.....
69. Provide adequate exercise in order to maintain ranges of motion of all extremities.....
70. Recognize a reddened area on the coccyx area as a potential problem and institute proper treatment.....
71. Understand the importance of attempting to communicate with John even though he appears not to understand.....
72. Maintain correct body alignment and pay particular attention to prevention of foot drop.....

Re Ronald, age 50, admitted to your institution with the diagnosis of Parkinson's Disease:

73. Organize Ronald's activities so that a familiar routine is established.....
74. Provide appropriate utensils and encourage him to feed himself.....

75. Insure that the noise level remains low in Ronald's room.....
76. Observe that he is becoming more unsteady on his feet and provide an environment to insure his safety.....

Re Alice, age 55, admitted to your institution after a below the knee amputation of the left leg:

77. Notice Alice staring at her artificial leg in the corner of her room.....
78. Observe that Alice does not want to be taken to the dining room with the other patients.....
79. Arrange her room so that she can help herself as much as possible.....
80. Encourage Alice to exercise the amputated limb..
81. Recognize a reddened area on the suture lines as a potential problem and institute proper measures.....

Re Ann, age 78, with atherosclerosis and mild confusion:

82. Provide a safe environment for Ann.....
83. Institute a plan for reality orientation.....
84. Establish realistic goals and find some tasks that Ann can do which will give her satisfaction....
85. Observe Ann crying more frequently and hoarding food in her room.....

Leadership activities

86. Assist personnel with problem solving in patient care.....
87. Support of the patient and family as death approaches.....
88. Review patient's care with staff and make judgments concerning h.s. and p.r.n. medications..
89. Assign patients and tasks, taking into account the abilities of each person giving nursing care..
90. Discuss the problem and attempt a satisfactory solution when two members of the nursing staff are in conflict with each other....

RN.

LPN

NA

ORDERLY

91. Reassign personnel to accomplish tasks by priorities when a member of the staff leaves ill.....
92. Set an example and give suggestions while assisting personnel in giving care.....
93. Listen and change assignments accordingly when a patient complains about "his nurse"...
94. Call a patient's family to come in when the patient asks for them.....
95. Observe a patient's condition and inform the physician of pertinent information by phone....
96. Take phone orders from a physician and transcribe them on the patient's chart....

Thank you for assisting with our research project.

134

We would appreciate the following information in addition to the questionnaire.

Bed capacity -

Level of care

Skilled

Intermediate

Ambulatory

Staff:

R.N.'s -

L.P.N.'s -

Aides -

Orderlies -

Is there any differentiation between aides and orderlies as to wages and responsibilities?

Do the L.P.N.'s take a pharmacology course prior to administering medication in your institution?

If possible, please have the following persons complete the questionnaire:

Charge Nurse
Staff Nurses:
R.N.
L.P.N.

Thank you,

Karen Dambach
Coordinator, Nursing & Auxiliary
Nursing Articulation Project

Current nursing practice demands much greater knowledge and understanding on the part of all practitioners than can be provided in any introductory learning sequence. Present knowledge and capability are sure indicators that future nursing roles will be more complex and demanding. Therefore, plans are being formulated to provide continuing education for nurses and will be part of the continuing education program at Butler County Community College. Some courses may be tentatively scheduled for fall of 1976.

In order to plan systematically a program which will best meet your needs, please indicate with a check your areas of interest. Please feel free to include any areas of interest in addition to those topics listed below:

- Nursing Process
- Problem Oriented Medical Records and Audit
- Management by Objectives
- Interviewing and Counseling Nursing Personnel
- Fluid and Electrolyte Balance
- Assessment and Intervention for Neurological Problems
- Methods of Nursing Care
- Pharmacodynamics
- Disturbances of Homeostasis due to Oxygen Deprivation
I. Pulmonary
- Disturbances of Homeostasis due to Oxygen Deprivation
II. Cardiac
- Activity and Mobility Problems
- Basic Patient Assessment
- Concepts of Geriatric Nursing
- Other (please specify)

COMPUTER ASSISTED BASIC ARITHMETIC

Nursing students entering the Butler County Community College at both the Practical Nursing and the Associate Degree Nursing program levels have demonstrated a deficiency in basic arithmetic. Their deficiencies may be in selected or all topical areas. These deficiencies inhibit their normal progress through the program.

A remedial course in basic arithmetic has been designed for the student directed to developing skills in each of the four required areas, addition, subtraction, multiplication and division as they apply to whole numbers, decimals and fractions. In addition, considerable emphasis has been placed on statement problems to encourage the development of analytical skill.

The nature of such a course and the varied background of the student encouraged the use of the computer as a support in dealing with the individual differences of these students.

We are using the DEC PDP/8I at the college with five teletypes. The program support works in two ways: to support the individual student on each of the teletypes or to assist the individual teachers.

The student may go to the teletype, answer questions on the computer that will identify the kind of skill the student needs to develop, then do a series of exercises the computer selects based on student information. The computer gives the student immediate feedback concerning the accuracy with which he is exhibiting his skill.

As an asset to the instructor the uses are varied and essentially serve four functions: overall diagnostic testing, testing in specific identified skills, developing work exercises in specific skill areas, and providing answer keys to each of the above. Other applications are as varied as the instructor's imagination will allow.

Even though those skill objectives identified by an instructor for the computer may be identical on two sequential occasions, the exercises or tests generated by the computer will never be identical. This makes it possible for the instructor to test several students on any time schedule on the same topic without using the same tests.

If an instructor wants to do group testing such as diagnostic testing or post testing, he may use that which the computer has generated as a master and Xerox the student tests for their response.

Currently there are eighteen nursing students testing the program. Based on their evaluation and progress the system will be reviewed. If the system is as successful as preliminary studies indicate, we hope to expand the system to other programs at the college.

A copy of the documentation, programs, and examples of several tests are included with this report.

DOCUMENTATION FOR COMPUTER GENERATED
ARITHMETIC TESTS

Programs in this series are:

NEWFIL
QUEST2
QUEST3
QUEST4
ANSKEY

All programs run from EduSystem 25 BASIC (Language). No program requires more than 11 blocks of scratch area to run. All programs are located on the OS/8 Systems tape CGT Arithmetic #4050. All programs are called into use by the command OLD\$.

NEWFIL is a program used to create new question files.

Procedure:

1. Type RUN (Return)
2. Supply the following input:
 - a. Name of the file being created.
 - b. Total number of questions in the file.
3. Each question must be preceded by a line of data items consisting of subroutine number and three answer key items.
4. At the end of the question type ↑ in response to the next ?.
5. Computer will respond with OK??
Type any character and RETURN key to have question stored in file; Type NO and RETURN key to repeat question.

QUEST2 will print every question in a file sequentially for debugging purposes. The only input is question file name.

QUEST3 and QUEST4 are identical except for answer generating subroutines. Therefore QUEST3 must be used with UNIT1, UNIT2, UNIT3, UNIT4. QUEST4 must be used with UNIT5, UNIT6, and UNIT7.

Procedure:

1. Type Run (Return)
2. Both QUEST3 and QUEST4 have a fixed length input queue of 5. RETURN key must be typed enough times to fill this queue.
3. Typing YES in response to the DECIMALS? question will cause the computer to generate decimal values in all appropriate spots in every file in the input queue.

ANSKEY is used to print answer keys. Input is variable length queue of answer key file names. Type RETURN key to terminate queue. Answer keys will be printed one after the other. KILL command may be used after answer keys have been printed to delete them from Dectape.

PUBLICATION DATE: 30JUN75

TITLE: INDIVIDUALIZED, PERFORMANCE-BASED CURRICULUM AT THE MINNEAPOLIS AREA VOCATIONAL TECHNICAL INSTITUTE. INTERIM REPORT.

PERSONAL AUTHOR: ANDERSON, FLOYD L.; FROKE, CRAIG N.

DESCRIPTOR: INDIVIDUALIZED CURRICULUM; *CURRICULUM DEVELOPMENT; *TASK ANALYSIS; *AREA VOCATIONAL SCHOOLS; INSTRUCTIONAL MATERIALS; *PERFORMANCE BASED EDUCATION; *CURRICULUM PLANNING; *VOCATIONAL EDUCATION; POST SECONDARY EDUCATION; FOOD SERVICE; AUTO MECHANICS; PATTERNMAKING; NEEDLE TRADES

FORMS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 114P.; APPENDED MATERIALS MAY NOT REPRODUCE WELL. BEST COPY AVAILABLE.

ABSTRACT: THE 16-PAGE INTERIM REPORT SUMMARIZES THE ACTIVITIES AND ACCOMPLISHMENTS OF THE SECOND YEAR OF A CURRICULUM DEVELOPMENT PROJECT. USING THE ORGANIZATIONAL MODEL DEVELOPED DURING THE PREVIOUS YEAR, CURRICULA WERE TO BE DEVELOPED FOR THE DEPARTMENTS OF THE INSTITUTE BASED ON ACCEPTED CRITERIA FOR EMPLOYMENT IN INDUSTRY. A CURRICULUM SPECIALIST, MEDIA SPECIALIST AIDE, AND PRODUCTION AIDE WERE RESPONSIBLE FOR CURRICULUM DEVELOPMENT UTILIZING INPUT FROM THE INSTRUCTIONAL STAFF. THE OBJECTIVES AND SUBOBJECTIVES AND THE EXTENT TO WHICH EACH HAS BEEN MET ARE LISTED AND DISCUSSED FOR EACH OF THE FOLLOWING DEPARTMENTS: TRANSPORTATION, APPAREL ARTS, FOOD SERVICE, PATTERNMAKING, AND UPHOLSTERY. SAMPLES OF MATERIALS AND INSTRUCTIONAL PACKAGES DEVELOPED IN THE PROJECT ARE CONTAINED IN THE APPENDIXES. THESE INCLUDE: (1) A SAMPLE TASK LISTING BY LEVEL FOR AUTO ELECTRICITY, (2) AN INDIVIDUALIZED LEARNING PACKAGE WITH CORRESPONDING MEDIA PRESENTATION FOR AUTOMATIC TRANSMISSIONS, (3) A PROGRAM MODEL AND TASK ANALYSIS FOR AN AUTO/TRUCK PARTS PROGRAM, (4) A PROGRAM MODEL AND TASK ANALYSIS FOR THE BUS/TRUCK PROGRAM, (5) A PROGRAM MODEL FOR IMPORT/COMPACT AUTO MECHANICS PROGRAM, AND (6) A LISTING OF SUGGESTED FOOD SERVICE COMPETENCIES. (RG)

INTERIM REPORT FORM - RESEARCH AND EXEMPLARY PROJECTS

LEA Project Person Submitting Report: Craig N. Froke

SEA Person Filing Report: Bill Stock

Date of Report: June 30, 1975

Period Covered: May 1, 1974 - June 30, 1975

Major Activities and Accomplishments During This Period:

Perhaps the most conclusive method of reporting the activities and accomplishments during this period is the comparison of each objective and sub-objective with the extent of completion shown below and on the following pages.

OBJECTIVES AND SUB-OBJECTIVES
AND THE EXTENT TO WHICH THEY HAVE BEEN MET

OBJECTIVES AND SUB-OBJECTIVES	Extent of Meeting the Objective		
	Fully Met	Partially Met	To Be Met
1. The organizational model for developing new programs and modifying existing programs developed during the first year of the project will be further tested and modified as needed.	X		
2. Curriculum will be developed based on accepted criteria for employment in industry. This objective and related sub-objectives is different for each department. Consequently, the objective and sub-objectives will be discussed individually as they pertain to specific departments.		X	
<u>Transportation Department</u> <u>Auto Mechanics:</u>			
1. Finish industry survey of competencies	X		
2. List competencies needed by graduates.	X		

OBJECTIVES AND SUB-OBJECTIVES
AND THE EXTENT TO WHICH THEY HAVE BEEN MET

OBJECTIVES AND SUB-OBJECTIVES	Extent of Meeting the Objective		
	Fully Met	Partially Met	To Be Met
3. Write behavioral objectives.		X	
4. Develop, use, evaluate, modify individualized learning packages.		X	
5. Review total progress and re-evaluate programs			X
<u>Auto/Truck Parts, Bus/Truck Mechanics, and Import/Compact Auto Mechanics: New Programs.</u>			
1. Orientation of Staff.	X		
2. Develop Program Model.	X		
3. Analysis of Student and Employer Needs.		X	
4. Identification of Program Content and Structure of Program.	X		
5. Develop Student Competencies.		X	
6. Write Behavioral Objectives		X	
7. Develop, use, evaluate, modify individualized learning packages.			X
<u>APPAREL ARTS DEPARTMENT:</u>			
1. Finish Orientation of Staff.	X		
2. Identify major tasks and competencies needed by program graduates.		X	
3. Complete review of existing materials.		X	
4. Begin collecting curriculum resource materials		X	
5. Meet with Advisory Committee for their input into curriculum design and competencies		X	

OBJECTIVES AND SUB-OBJECTIVES
AND THE EXTENT TO WHICH THEY HAVE BEEN MET

OBJECTIVES AND SUB-OBJECTIVES	Extent of Meeting the Objective		
	Fully Met	Partially Met	To Be Met
6. Survey community apparel arts industries for employer needs and success of recent program graduates.			X
7. Validate competency listing through a survey of local apparel arts industries.			X
8. Finalize competency listing.			X
9. Write behavioral objectives corresponding to finalized competency list.			X
10. Develop, use, evaluate, and modify individualized learning packages.			X
<u>FOOD SERVICE DEPARTMENT:</u>			
1. Complete orientation of Staff.	X		
2. Identify competencies needed by graduating students in the Foods Department.		X	
3. Selection of course structure and organization.	X		
4. Meet with Advisory Committee to enlist their input into curriculum reorganization.	X		
5. Survey community foods industries to ascertain needs of employers.		X	
6. Validate competencies through foods industries survey.		X	
7. Finalize competency list.			X
8. Write behavioral objectives corresponding to competency list.			X
9. Develop, use, evaluate, and modify individualized learning packages.			X

4

OBJECTIVES AND SUB-OBJECTIVES
AND THE EXTENT TO WHICH THEY HAVE BEEN MET

OBJECTIVES AND SUB-OBJECTIVES	Extent of Meeting the Objective		
	Fully Met	Partially Met	To Be Met
<u>PATTERNMAKING DEPARTMENT:</u>			
1. Complete orientation of Staff.		X	
2. Develop program model.		X	
3. Complete review of course and curriculum materials.			X
4. Identify major tasks and competencies needed by program graduates			X
5. Meet with Advisory Committee to review suggested program model and gain input on identified competencies.			X
6. Conduct survey of local industries to identify employer needs.			X
7. Validate competency listing through survey of local industries.			X
8. Finalize competency listing.			X
9. Write behavioral objectives corresponding to competency/task listings.			X
10. Develop, use, evaluate, and modify individualized learning packages.			X
<u>UPHOLSTERY DEPARTMENT:</u>			
1. Complete orientation of staff	X		
2. Complete development of several instructional packages and related media.		X	
3. Begin development of additional packages and related media.			X
4. Develop program model.			X
5. Complete review of existing course materials			X

OBJECTIVES AND SUB-OBJECTIVES
AND THE EXTENT TO WHICH THEY HAVE BEEN MET

OBJECTIVES AND SUB-OBJECTIVES	Extent of Meeting the Objective		
	Fully Met	Partially Met	To Be Met
6. Identify competencies needed by program graduates.			X
7. Meet with Advisory Committee to validate identified tasks and competencies and provide input on program modifications.			X
8. Write behavioral objectives.			X
9. Develop, use, evaluate, and modify individualized learning packages.			X
3. A release time program for human relations training for all staff will be a continuing part of the project to emphasize the human element of the implementation of competency based curriculum.	X		
4. The new teacher support program developed and tested during the 1973-74 school year shall be continued and modified to increase its effectiveness.		X	
4.1. Teachers new to the Minneapolis Area Vocational-Technical Institute will meet on a regular basis to discuss questions and problems of teaching.		X	
4.2. New teachers will be instructed on school policies, procedures, and personnel involved in support of their teaching as well as those involved in student support.	X		
4.3. New teachers will be instructed in the process of developing competency based curriculum.		X	

OBJECTIVES AND SUB-OBJECTIVES
AND THE EXTENT TO WHICH THEY HAVE BEEN MET

OBJECTIVES AND SUB-OBJECTIVES	Extent of Meeting the Objective		
	Fully Met	Partially Met	To Be Met
4.4. New teachers will participate in a special human relations program designed especially for them;		X	
5. A steering committee made up of administrators, department chairmen, coordinators, and teachers will be organized to direct the efforts of the curriculum specialist and assist in long range planning.		X	
6. The concept of the new teacher support program tested during the 1973-74 school year will be expanded to include all teachers.		X	
7. Plan and organize an extensive curriculum resource center in conjunction with the Instructional Material Center Staff.		X	
8. Long range curriculum planning for program offerings at a new Minneapolis Area Vocational-Technical Institute facility will be organized.		X	
8.1. The programs and courses will be organized around the fifteen career clusters identified by the U.S. Office of Education.	X		
8.2. A matrix of occupations and courses will be identified.		X	
8.3. General course content will be identified.		X	
8.4. Educational specifications for classrooms, laboratories, and equipment requirements will be developed.		X	

A brief description of the progress for each objective and sub-objective is listed below. Samples of materials developed are included as appendices in this report.

1. The organizational model for developing new programs and modifying existing programs developed during the first year of the project will be further tested and modified as needed.

This objective was fully met. The model has been used successfully with several departments with little or no modification needed. The model appears to provide good direction for curriculum development. A copy of the model was included in the first year interim report.

2. Curriculum will be developed based on accepted criteria for employment in industry.

This objective and sub-objectives is different for each department. Consequently, the objectives will be discussed individually as they pertain to specific departments.

TRANSPORTATION DEPARTMENT
Auto Mechanics:

The industry survey was completed and the results of the survey provided the necessary input for a competency/task listing. A sample of the survey was included in the first year interim report. The task listing was divided into three levels on the basis of the survey results. The levels consist of Level 1 - Service Station Mechanic, Level 2 - Independent Garage or Lower Level Dealer Garage Mechanic, and Level 3 - Dealer Mechanic. The levels were developed to allow the students to identify with a skill level and consequently, a job upon completion of the program. The student identifies a level with which he/she feels comfortable and then completes the competencies/tasks at that level as well as those tasks at the lower levels. It should be noted that the student is not "locked into" any given level in that he/she may change levels. A sample task listing by level for auto electricity is contained in Appendix A.

Some behavioral objectives and consequent individualized learning packages have been developed in the Auto Mechanics Program. A sample package for Level 1 of Automatic Transmissions is shown in Appendix B. A sound on slide media presentation accompanies the learning package. A story board of the media presentation is also found in Appendix B.

Auto/Truck Parts Program:

The parts instructor and the curriculum specialist have met several times and have produced a program model which is contained in Appendix C. A task analysis has been completed and is presently being tabulated. A copy of the task analysis appears in Appendix D. The instructor and curriculum specialist are presently working on the development of behavioral objectives and individualized learning packages utilizing multi-media.

Bus/Truck Mechanics Program:

The instructor and curriculum specialist have completed the orientation phase and a program model has been identified (Appendix E). A task analysis has been developed by the instructor but has not yet been validated (Appendix F). Behavioral objectives and learning packages have yet to be developed.

Import/Compact Auto Mechanics Program:

The orientation phase is completed and a program model was identified (Appendix G). A basic outline of instructional components has been identified (Appendix H), however, the task listing is still being developed at this time.

APPAREL ARTS DEPARTMENT

The orientation phase has been completed and the staff has begun identifying competencies and tasks. The program model was modified and shall be implemented during the 1975-76 school year. The addition of a "specialization" block as per the program model was developed and it will be an operational component of the program during 1975-76. Progress has not been great within this department primarily due to the planning of a new Minneapolis A.V.T.I. Long range planning (Objective No. 8) has become a high priority objective, consequently progress with other objectives has not transpired as previously anticipated.

FOOD SERVICE DEPARTMENT

The orientation of the Food Service Staff has been completed. The process of identification of competencies and tasks, however, has just begun. A program model was identified and a copy was included in the first year interim report. The first component of the program model, Introduction to Food Service was tested during the 1974-75 school year and was quite successful. In addition, the drop out rate of beginning students was decreased substantially. The total program model will be implemented during the 1975-76 school year. A working copy of competencies is included as Appendix I of this report. Again, as with the Apparel Arts Department, work has not progressed as expected due to the planning required for a new facility.

PATTERNMAKING PROGRAM:

The orientation phase is still under way, as is the development of a program model. The progress was not according to the objectives within this department as several immediate needs were of a higher priority. The instructor was in need of assistance in actual teaching methods, scheduling student time, classroom management techniques, etc. Consequently, much of the time was devoted to these immediate needs. The results were well worth the deviation from the plan. The instructor has lowered the student drop out rate within the program and enrollment has increased to the point that a waiting list now exists where in the beginning of the year it looked as though the program might have to be dropped due to a lack of students.

A lesson was also learned by the curriculum specialist. An agenda of events must not overlook the immediate needs of an instructor or a program. Hopefully, the agenda can be implemented during the 1975-76 school year.

UPHOLSTERY DEPARTMENT

The orientation phase was completed. However, a time problem upset the progress toward completion of the stated objectives. The instructor does not have any spare time to develop the necessary program materials. He presently teaches post high and high school classes from 8:00 A.M. until 6:00 P.M. It appears that the only way in which to develop instructional packages in this program would be through a contract with the instructor.

- 3. A release time program for human relations training for all staff will be a continuing part of the project to emphasize the human element of the implementation of competency based curriculum.

The implementation of this objective occurred in a manner somewhat apart from the actual project. Craig Froke again served as a member of the Human Relations Committee.

A needs assessment of the staff was completed and the staff decided to pursue the following topics:

- 1. Human relations in industry.
- 2. Interstaff communications.
- 3. Building trust.

A plan of implementation was developed which is contained in Appendix J. The implementation followed the plan quite closely and was rather successful in stimulating discussion, especially the meetings concerning interstaff communications. The most positive aspect of the human relations program was in the involvement of the entire staff in identifying needs. The same technique is expected to be utilized during 1975-76.

- 4. The new teacher support program developed and tested during the 1973-74 school year shall be continued and modified to increase its effectiveness.

This objective was only partially met in that there were only four new teachers, of which only two had actual classroom responsibilities and two of them were working with the curriculum specialist on curriculum development. In addition there were three new support staff people. Because of the make up of the group it was decided to hold the orientation program for only one semester. A schedule of meetings and topics is included in Appendix K. The participants did feel that the meetings were very worthwhile and provided them with a valuable experience.

14

5. A steering committee made up of administrators, department chairmen, coordinators and teachers will be organized to direct the efforts of the curriculum specialist and assist in long range planning.

This objective was partially met in that a steering committee was established but it took on a somewhat different look than anticipated. The curriculum specialist met weekly with school administrators to discuss curriculum development and staff development progress as well as long term planning. From these meetings came many productive ideas, many of which have resulted in a major reform of positions, policies, etc. One notable example is an organizational model for the A.V.T.I. A working copy of the proposed model may be found in Appendix L. The model should be implemented in the fall of 1975 following necessary modification. Because the model proposes many changes in position responsibility, many meetings have been held to discuss the changes with the individuals affected and draft new job and position descriptions and responsibilities documents. Many additional meetings will be necessary before they are finalized.

The curriculum specialist also met weekly with the support staff to identify curriculum and staff development needs from the counselors' point-of-view. These meetings not only provide the curriculum specialist with direction but ensured a good working relationship with the counseling and support staff. In this manner, a team approach can be used to help instructors become more effective.

6. The concept of the new teacher support program tested during the 1973-74 school year will be expanded to include all teachers.

This objective was partially met as the program was not expanded to include all teachers. It was, however, used with one group of teachers with significant success.

The group involved in the program consisted of Secondary Center teachers who, by design, had a common hour for preparation. One hour of this preparation time each week was devoted to the orientation program conducted by Ken Thompson and Craig Froke. Most of the Secondary Center teachers also were teaching in the post high program, consequently, the program was justifiable from a post high position.

The topics covered in the program consisted of educational philosophy, values clarification, human relations, career education, and Adlerian psychology. For a more complete description of the topics the reader is directed to Appendix M of this report. The emphasis of the program was placed on the practical application of each topic in a classroom or laboratory situation. For example, when values clarification was discussed during a meeting, the teachers performed values clarification exercises themselves and were then encouraged to take the same exercises back to their class and use them. This technique provided a certain amount of control over the material and methods used in the classroom. A similar format was used throughout the meetings.

It became readily apparent after the first few meetings that immediate mechanical concerns of the teachers would have to be discussed before delving into the more philosophical issues. Because this was the first year of operation for the Secondary Center there were many concerns regarding mechanical items such as budgets, equipment, forms to be used, etc. The facilitators of the meetings decided to use this concern as a framework for the meetings around which the philosophical issues could be developed. This technique worked very well although at times the entire meeting would be devoted to the "nuts-and-bolts" issues. However, by the end of the school year each philosophical issue had been covered and the teachers seemed "hungry" for more.

The Secondary Center teachers and administrators were very pleased with the program. In fact, the 1974-75 program will be used as a model for Secondary Center programs throughout the Minneapolis Public Schools. The same approach involving more post secondary teachers is anticipated for the 1975-76 school year using the cluster approach discussed under Objective 8 below.

7. Plan and organize an extensive curriculum resource center in conjunction with the Instructional Material Center staff.

The definition of extensive places this objective in the "partially completed" column. Many references have been purchased and many more have been used through the Minnesota Instructional Materials Center. The purchased materials are all housed in one section of the library and organized by clusters and programs. A sample of curriculum references for the Commercial Foods Program is included in Appendix N.

While the materials have been heavily used the facilities for media production have also expanded to the point where more space must be found to provide the staff with this service. At the present time only about 360 square feet is available for production. It is expected that the space for 1975-76 will at least triple.

8. Long range curriculum planning for program offerings at a new Minneapolis Area Vocational-Technical Institute facility will be organized.

A major emphasis was placed upon this objective and corresponding sub-objectives when the voters of Minneapolis approved a new facility in a November referendum. The entire objective remains partially met but should be complete by August when the final draft of the educational specifications are due.

8.1. The programs and courses will be organized around the fifteen career clusters identified by the U.S. Office of Education.

This sub-objective was fully met. A copy of the program/occupation breakdown is contained in Appendix O. A slight deviation from the U.S. Office of Education exists in that a new cluster, Energy and Power, was developed to contain the electrical and electronics related programs rather than divide the programs into several clusters. A model of the Energy and Power cluster may be found in Appendix P.

It should be noted that MAVTI is not offering programs within every cluster. Consequently, only twelve of the fifteen clusters appear on the sheet (Appendix O). In addition, some of the programs are proposed for the new facility and have not received state approval. The cluster breakdown shown in Appendix O should be considered as a working copy and for discussion purposes only.

8.2. A matrix of occupations and courses will be identified.

This sub-objective was developed as procedural step in identifying programs and spaces within a new facility and was fully met. A sample matrix for the Health Occupations Cluster appears in Appendix Q.

It should be noted that the matrix exhibited in Appendix Q was a working copy for developmental purposes and as such presents a technique of development rather than an intent of offering the occupations listed. For example, Dental Assistant and Dental Lab Technician are occupations that are not programmed for a new facility although they appear on the matrix. The matrix should be considered for discussion and developmental purposes only.

8.3. General course content will be identified.

See 8.4. below.

8.4. Educational specifications for classrooms, laboratories, and equipment requirements will be identified.

Because the general course content (8.3.) is contained in the educational specifications these two sub-objectives will be combined.

Educational specifications make up the base for planning any new facility. A sample copy of educational specifications for Architectural Drafting is contained in Appendix R of this report. The educational specifications contain a program description, program objectives, instructional content, methods of instruction, relationship to other programs, student and instructor stations, space requirements, design requirements, and equipment needs, and locations.

The status of the educational specifications is the second phase of a four phase process. The first phase included instructor and consultant input; the second phase used student, instructor, and advisory committee input; the third phase involves instructor, administration, and consultant input; and the fourth phase involves the instructor, advisory committee, administration, and consultant input. The second phase is complete and it is expected that the fourth phase should be completed by September, 1975.

The curriculum specialist has been and will continue to be involved with each program at every phase of development.

Significant Findings and Events:

A breakdown of findings and events by objective and sub-objective is contained in the previous section, "Major Activities and Accomplishments During This Period".

Problems:

Again, for a discussion of specific problems for each objective, the reader is directed to the "Major Activities and Accomplishments" section of this report. However, the chief problem area is concerned with the lack of sufficient instructor time and reward for making extensive changes to an existing curriculum, particularly when that existing curriculum seems to be operating satisfactorily. This is especially true of veteran instructors who have "been doing it this way for years without any problems". It seems that the best technique for affecting change with person is to make the reward one "that they cannot refuse". One such technique would provide for contracting with an instructor to perform a certain amount of curriculum development. This proposal is discussed in greater detail with a plan for implementation in the Addendum to the Proposal for Exemplary Program or Project in Vocational Education for 1975-76.

Another technique for instructors who do not have sufficient time to develop curriculum would provide for specific time out of the existing school day to perform the required tasks. This time would have to be carefully structured to provide the curriculum modification. To a certain extent this has been partially accomplished through scheduling. The curriculum specialist played a major role in developing class schedules for 1975-76 and in doing so obtained some curriculum time for almost every instructor. A sample schedule is exhibited in Appendix S. It is imperative that this time be carefully planned and structured. It is suggested that a position of Staff Development Specialist be considered for Minneapolis A.V.T.I. This person could work closely with the curriculum specialist and in doing so, provide a new dimension to curriculum and staff development.

Dissemination Activities:

No major dissemination activities took place during 1974-75. Some presentations were made by the curriculum specialist to various groups regarding the development of open-entry and open exit program models and individualized instruction. The groups receiving that presentation included:

1. Minneapolis Vocational Planning Committee.
2. Minneapolis Chamber of Commerce Education Committee.
3. Minneapolis Public Schools Secondary Center Staff.
4. A group of high school principals from rural Nebraska.
5. Various program advisory committees.

Data Collection:

Please refer to the section, "Major Activities and Accomplishments" and the appendices of this report.

Progress on Evaluation Plans and Procedures:

The project may be evaluated by inspection of the objectives and extent of completion contained in the section, "Major Activities and Accomplishments During This Period". While many objectives are only partially met and others remain to be met, it is believed that this project has accomplished a great deal.

The department-by-department curriculum development has not progressed entirely on schedule but the limited progress is more than offset by the progress on long term planning for a new building, the new organizational model, revised job descriptions and responsibilities, and the staff orientation program. The fact that the orientation program will move system wide within the Secondary Center program indicates its success.

The actual number of instructional packages developed is not large but it is anticipated that substantial progress will be accomplished through the proposed contracting system as well as through curriculum planning time for instructors.

Other Activities:

Additional activities include the curriculum specialist's involvement in class scheduling (see Appendix S and "Problems" section of this report). Many substantial gains in scheduling were realized. The organization of related subjects into a schedule on a planned basis is one notable gain.

An additional change involves elective subjects scheduled individually for students to provide custom programs to meet their individual occupational goals. This is a drastic change in an otherwise traditional program.

Staff Development:

The entire project is aimed at staff development and the section on "Major Activities and Accomplishments" covers this topic.

An additional note on staff development concerns the excellent support for curriculum development by the administration of the Minneapolis Area Vocational-Technical Institute. During the year the principal of MAVTI and the curriculum specialist met with every department and discussed curriculum planning. The principal, Wayne Nelson, and the curriculum specialist jointly developed a memorandum stating the parameters of curriculum development. This document was the sole agenda item for the aforementioned departmental meetings. A copy of this memorandum may be found in Appendix T.

The curriculum specialist was also involved in the development of the Metropolitan In Service Directors group where plans for a unified system of inservice and staff development has been developed under the guidance of John Van Ast.

Staff Employment and Utilization:

There are three individuals directly involved with the project, curriculum specialist, media specialist aide, and the curriculum production aide.

The curriculum specialist's work on this project has already been discussed throughout this report. The media specialist aide has been responsible for the production of slide presentations, detail work on instructional packages, tape duplication, photography, detail work on story boards, assisting instructors in identifying content areas suitable for media, and the preparation of corresponding graphics.

The curriculum production aide has been responsible for the typing and duplication of curriculum materials, transparency production, the typing of correspondence, etc.

In addition to the three individuals mentioned above, an instructor was relieved of one hour of daily class responsibilities to assist in the curriculum project. His area of expertise is drafting and his assistance in graphic layout and design provided an additional dimension to the curriculum project. His assistance was significant and he often spent more than the allotted one hour per day working on curriculum.

Nearly every instructor has had some responsibility in working on curriculum. The utilization of these instructors has been previously discussed in this report.

Future Activities Planned for the Next Reporting Period:

The specific objectives and plan of implementation for 1975-76 is discussed in the Addendum to the Proposal for 1975-76.

Generally the following list describes activities for 1975-76:

1. Contract with instructors to write curriculum.
2. Additional time for instructors has been made available and must be carefully structured.
3. Additional space for curriculum and media production will be provided.
4. .6 of an instructor will be provided from MAVTI to assist the project.
5. Curriculum development by program will continue in 1975-76.
6. The new staff orientation program will continue in 1975-76.
7. The orientation (staff development) of existing staff will continue with expansion on a cluster basis.

8. The human relations program will be an on-going portion of the project.
9. Long range planning for a new MAVTI facility will continue within each program as well as for the overall operation and management of the facility.
10. The Minneapolis Area Vocational-Technical Institute has committed a substantial amount of funds for curriculum development.
11. It is anticipated that a staff development specialist will be employed during 1975-76 which will provide a significant impact on curriculum development.

APPENDIX A

TASK LISTING FOR AUTO ELECTRICITY

22

COMPETENCIES

1. Auto Electricity
 - 1.1. Storage Battery
 - 1.1.1. Level One
 - 1.1.1.1. Remove and replace battery.
 - 1.1.1.2. Visually inspect battery.
 - 1.1.1.3. Clean battery terminals.
 - 1.1.1.4. Test specific gravity.
 - 1.1.1.5. Perform high rate discharge test.
 - 1.1.1.6. Activate dry-type battery.
 - 1.1.1.7. Slow charge battery.
 - 1.1.1.8. Fast charge battery.
 - 1.1.1.9. Know battery ratings.
 - 1.1.1.10. Know theory of battery operation.
 - 1.1.1.11. Safety precautions - charging.
 - 1.2. Cranking System
 - 1.2.1. Level One
 - 1.2.1.1. Check cable connections with battery insp. & service.
 - 1.2.1.2. Check cable conditions with battery insp. & service.
 - 1.2.1.3. Check ground connections with battery insp. & service.
 - 1.2.1.4. Measure voltage drop (Bat.-Sol.)
 - 1.2.1.5. Measure voltage drop across sol.
 - 1.2.1.6. Test starter current draw.
 - 1.2.1.7. Remove and replace starter.

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963-A

1.3. Charging System

1.3.1. Level One

1.3.1.1. Remove and replace generator.

1.3.1.2. Perform gen. circuit resistance test.

1.3.1.3. Perform gen. output current test

1.3.1.4. Check wire connections.

1.3.1.5. Check wire condition.

1.3.1.6. Remove and replace alternator.

1.3.1.7. Make Alt. current output test.

1.3.1.8. Make Alt. circuit resistance tests.

1.3.1.9. Make alternator voltage test.

1.3.1.10. Test and adjust drive-belt tension.

1.3.1.11. Inspect condition of alt.-drive belt.

1.4. Ignition System

1.4.1. Level One

1.4.1.1. Know theory of operation (standard ignition).

1.4.1.2. Trace primary circuit.

1.4.1.3. Trace secondary circuit.

1.4.1.4. Remove and replace high voltage wires.

1.4.1.5. Remove and replace spark plugs.

1.4.1.6. Clean, cap and test spark plugs.

1.4.1.7. Diagnose spark plugs from engine.

1.4.1.8. Know spark plug heat ranges and effects.

1.4.1.9. Remove, install and adjust points.

1.4.1.10. Measure and adjust dwell.

1.4.1.11. Check and adjust engine timing.

- 1.4.1.12. Test ignition system with scope.
- 1.4.1.13. Diagnose and repair ignition system malfunctions.
- 1.4.1.14. Read and trace schematic diagrams of ignition system.

1.5. Lighting and Horn Circuits

1.5.1. Level One

- 1.5.1.1. Remove and replace head lamps.
- 1.5.1.2. Adjust headlamp for proper "aim".
- 1.5.1.3. Remove and replace dimmer switch.
- 1.5.1.4. Read schematic diagram of lighting circuits.
- 1.5.1.5. Remove and replace fuse and know the function of fuses and overload devices.
- 1.5.1.6. Solder wires and connections.
- 1.5.1.7. Use voltmeter to locate electrical problems.
- 1.5.1.8. Remove and replace wire terminals.
- 1.5.1.9. Solder wires and terminals.
- 1.5.1.10. Use solderless connectors.
- 1.5.1.11. Remove and replace stoplight switch and adjust stop light switch positions.
- 1.5.1.12. Know effects of wire size and length on voltage and current.

1.6. Gauges and Indicators

1.6.1. Level One

- 1.6.1.1. Know theory of operation of ammeter (alt. gauge).

25

COMPETENCIES

1. Auto Electricity
 - 1.1. Storage Battery
 - 1.1.2. Level Two
 - 1.1.2.1. Perform light load test.
 - 1.2. Cranking System
 - 1.2.2. Level Two
 - 1.2.2.1. Test starter field windings.
 - 1.2.2.2. Test and replace starter brushes.
 - 1.2.2.3. Test and service starter armature.
 - 1.2.2.4. Diagnose cranking system problems.
 - 1.2.2.5. Know theory of starter operation.
 - 1.2.2.6. Know electrical theory.
 - 1.3. Charging System
 - 1.3.2. Level Two
 - 1.3.2.1. Know theory of generators.
 - 1.3.2.2. Know theory of generator regulators.
 - 1.3.2.3. Test and replace generator brushes.
 - 1.3.2.4. Know theory of alternators.
 - 1.3.2.5. Know theory of alternator regulators.
 - 1.3.2.6. Test and service alt. rotor and slip rings.
 - 1.3.2.7. Test and service alt. rectifier diodes.
 - 1.3.2.8. Test and service alt. stator windings.
 - 1.3.2.9. Test and adjust alternator regulator.
 - 1.3.2.10. Disassemble and assemble alternator.

1.4. Ignition System

1.4.2. Level Two

1.4.2.1. Test ignition coil (primary & secondary).

1.4.2.2. Test ignition condenser.

1.4.2.3. Remove and replace ignition switch.

1.4.2.4. Remove and replace distributor.

1.4.2.5. Test distributor on test machine.

1.4.2.6. Test ignition system with scope.

1.4.2.7. Diagnose and repair ignition system malfunctions.

1.4.2.8. Test and service dual point distributors.

1.4.2.9. Know operation of dual point distributors.

1.4.2.10. Know theory of electronic ignitions.

1.5. Lighting and Horn Circuits

1.5.2. Level Two

1.5.2.1. Remove and replace light switch.

1.5.2.2. Remove and replace head lamp relay.

1.5.2.3. Know the operation of head lamp relay.

1.5.2.4. Know the operation of overload relays.

1.5.2.5. Remove and replace wiring harness and trace wiring in vehicle. Visually inspect wiring for defects.

1.5.2.6. Know operation of turn signal switch, remove and replace flasher unit, and diagnose and repair turn signal problems.

1.5.2.7. Diagnose and repair horn circuit malfunctions.

COMPETENCIES

1. Auto Electricity
 - 1.3. Charging System
 - 1.3.3. Level Three
 - 1.3.3.1. Make alternator current output test.
 - 1.3.3.2. Make alternator circuit resistance tests.
 - 1.3.3.3. Make alternator voltage test.
 - 1.3.3.4. Diagnose charging circuit malfunctions.
 - 1.4. Ignition System
 - 1.4.3. Level Three
 - 1.4.3.1. Know operation of advance mechanisms.
 - 1.4.3.2. Adjust advance mechanisms.
 - 1.4.3.3. Overhaul distributor.
 - 1.4.3.4. Test ignition system with scope.
 - 1.4.3.5. Diagnose and repair ignition system malfunctions.
 - 1.4.3.6. Test and service electronic ignitions.
 - 1.5. Lighting and Horn Circuits
 - 1.5.3. Level Three
 - 1.5.3.1. Remove and replace wiring harness, trace wiring in vehicle and visually inspect wiring for defects.
 - 1.5.3.2. Use voltmeter to locate electrical problems.
 - 1.5.3.3. Know operation of 4 way flashers and diagnose and repair 4 way flasher system.
 - 1.6. Gauges and Indicators
 - 1.6.3. Level Three
 - 1.6.3.1. Know theory of operation of ammeter (alternator gauge)

- 1.6.3.2. Test operation of ammeter.
- 1.6.3.3. Remove and replace ammeter gauge.
- 1.6.3.4. Diagnose and repair problems with ammeter gauge.
- 1.6.3.5. Know theory of operation of elect. oil pressure gauge.
- 1.6.3.6. Know theory of operation of mechanical oil pressure gauge.
- 1.6.3.7. Remove and replace oil pressure gauge.
- 1.6.3.8. Remove and replace oil pressure sending unit.
- 1.6.3.9. Diagnose and repair problems of oil pressure gauge.
- 1.6.3.10. Know theory of operation of elect. temperature gauge.
- 1.6.3.11. Know theory of operation of mech. temperature gauge.
- 1.6.3.12. Remove and replace water temperature sending unit.
- 1.6.3.13. Diagnose and repair problems in temperature gauge.
- 1.6.3.14. Know theory of operation of fuel gauge.
- 1.6.3.15. Test operation of fuel gauge.
- 1.6.3.16. Test operation of fuel gauge tank unit.
- 1.6.3.17. Remove and replace fuel gauge.
- 1.6.3.18. Remove and replace fuel gauge sending unit.
- 1.6.3.19. Diagnose and repair fuel gauge problems.
- 1.6.3.20. Know operation of ammeter warning light.
- 1.6.3.21. Test operation of ammeter warning system.
- 1.6.3.22. Remove and replace ammeter warning sending unit.
- 1.6.3.23. Diagnose and repair amp. warning light system.
- 1.6.3.24. Know operation of oil pressure warning light system.
- 1.6.3.25. Test operation of oil pressure warning light system.

- 1.6.3.26. Remove and replace oil pressure warning light sending unit.
- 1.6.3.27. Diagnose and repair oil pressure warning light system problems.
- 1.6.3.28. Know operation of temperature warning light system.
- 1.6.3.29. Test operation of temperature warning light system.
- 1.6.3.30. Remove and replace temperature light sending unit.
- 1.6.3.31. Diagnose and repair temperature light sending unit.
- 1.6.3.32. Know operation of brake malfunction warning light.
- 1.6.3.33. Test operation of brake malfunction warning light.
- 1.6.3.34. Remove and replace brake malfunction light sending unit.
- 1.6.3.35. Diagnose and repair brake warning light system problems.
- 1.6.3.36. Seat Belt System.

TRANSPORTATION CENTER

Program: Auto Mechanics

Course: 11. Automatic Transmission

Task/Competency: 11.2.1.7 Check Transmission Fluid Level and Add Fluid As Necessary

Objective: Given an automobile with an automatic transmission, you will check the fluid level of the transmission and add fluid as necessary to the satisfaction of the instructor.

Sub-Objectives: Upon completion of the objective you will know the following:

1. Types of automatic transmission fluid.
2. Condition of vehicle while checking the fluid.
3. Proper use of equipment utilized in checking and adding fluid.
4. The difference between transmission fluid which has been burned and normal fluid by sight and smell.
5. How much fluid to add.

Upon completion of the objective you will be able to do the following:

1. Check the fluid level of an automatic transmission.
2. Add the proper amount of fluid to an automatic transmission.

References: Chilton's Auto Repair Manual. (See Automatic Transmission Section for specific vehicle.)

Special Instructions:

If you need assistance on any of the steps in the Learning Procedure, refer to the references indicated, the service manual for the specific vehicle you are working on (or a Motor's Manual), or your instructor.

Evaluation:

You will be evaluated on your performance in checking fluid level and adding fluid to an automatic transmission. There are several "Instructor Check" points in the procedure. You must have the instructor check your work at these points to get credit for this task/competency.

If you feel you are already competent in checking and adding fluid to an automatic transmission notify your instructor and he will arrange a performance test for you. If you are proven competent you will not have to go any further with this package.

Learning Procedure:

There are two ways to follow the Learning Procedure:

- Option 1. Obtain the sound-on-slide package from your instructor and use that package with option no. 2 to check and add fluid to a transmission.
- Option 2. Read the following basic procedure on checking and adding fluid to an automatic transmission and complete the task. Make sure you get your instructor's O.K. where it is required. No credit will be given without his O.K.

CHECKING FLUID LEVEL IN AN AUTOMATIC TRANSMISSION

Follow this general procedure for checking fluid level in a vehicle equipped with an automatic transmission.

1. Transmission should be at normal operating temperature. Transmission fluid shrinks, or contracts, as it cools. Checking a cold transmission will give an inaccurate reading.
2. Vehicle should be located on a level area. If the vehicle is not level the fluid will drain to one end of the transmission and the dipstick reading will be incorrect.
3. Check dipstick cap for cleanliness and clean, if necessary, to avoid contamination of transmission fluid.
4. Set parking brake firmly, start and idle engine. Move selector lever through all positions, pausing momentarily in each, then return to either neutral or park as recommended in the service manual.
5. Check fluid level immediately. Remove dipstick, wipe clean and reinsert in filler tube, seating it properly, remove dipstick again and check fluid level. Make sure you are checking the transmission and not the engine. If you are not sure, see your instructor.
6. Inspect fluid for darkened color and burned odor. Burned fluid, which is caused by overheating the transmission, generally is an indication of serious problems within the transmission. This fluid must be replaced and a thorough inspection of the transmission is advised. This is a good opportunity to make a sale while performing a vital service for the customer. In-car transmission service is often neglected.

Call your instructor for his O.K. at this point. No credit will be given for this task without his O.K.

Instructor
O.K.

7. Add the specified automatic transmission fluid to bring the fluid level to the mark on the dipstick as explained in the service manual. Fluid should be at room temperature.

CAUTION: DO NOT OVERFILL THE TRANSMISSION.

Add small amounts of fluid, (less than a pint) at a time. Overfilling will cause foaming and loss of fluid through vent pipe. Excess fluid, if left in the transmission could cause mechanical damage. If fluid is above recommended level, remove excess fluid with a CLEAN siphon gun.

8. Install dipstick making sure the cap is securely seated.
9. Have instructor check your work and O.K. the job.

Instructor

O.K.

CHECKING FLUID LEVEL
AND ADDING FLUID
TO AN AUTOMATIC
TRANSMISSION

Cut outs.- oil cans transmission fluid

Task/Competency 11.2.1.7

MAVTE TRANSPORTATION DEPT.

1974 MPLS. AREA VOCATIONAL-TECHNICAL
INSTITUTE

FRAME 1

(Close-up of Temperature Gauge At
Operating Temperature)

FRAME 2

(Slide of two cars, side view, with
transmission and dip stick drawn in
and fluid level shown. One car level
and one car tilted showing how the
fluid drains to one end.)

FRAME 3

This presentation outlines a
general procedure to follow when
checking fluid level in an auto-
matic transmission and when adding
fluid to an automatic transmission.
Consult the specific manual for
more complete information on any
given auto.

The transmission should be at
normal operating temperature before
you check the fluid level. If the
transmission is cold, run the engine
at idle for 15 minutes or until it
reaches normal operating temperature.
Transmission fluid contracts or
shrinks as it cools. If you check
a cold transmission you will get
an inaccurate reading.

The vehicle should be located
on a level area, if the vehicle is
not level the fluid will drain to
one end of the transmission and the
dip stick reading will be incorrect.
Notice what happens to the fluid
when a vehicle is not level as
shown by the two cars on the screen.

Permission to reproduce this copy-
righted material has been granted by
CRAIG M. FROKE, MINN.

to AIM/ARM, ERIC, and organizations
operating under agreements with the
U.S. Office of Education and National
Institute of Education. Further repro-
duction outside the AIM/ARM and
ERIC systems requires permission of
the copyright owner.

SOUND/SLIDE-Story Board Pad

(Slide of 2 selectors showing different positions of indicator.)

FRAME 4

(Slide of engine compartment with arrow pointing to dip stick.)

FRAME 5

(Slide of hands wiping a dirty dip stick cap.)

FRAME 6

Set the parking brake firmly,
then start and idle the engine. Next
move the gear selector level through
all the positions, pausing momentarily
in each one. Return to either neutral
or park as recommended in the service
manual.

Locate the transmission dip stick-
which is usually on the right hand or
passenger side of engine and toward
the firewall of the vehicle.

Check the dip stick cap for
cleanliness. Clean it if necessary.
If dirt falls into the filler tube,
it will contaminate the transmission
fluid and damage the transmission.

SDUND/SLIDE—Story Board Pad

(Slide of hands holding dip stick and wiping.)

FRAME 7

Remove the dip stick and wipe it clean with a clean dry rag or paper towel.

(Slide of dip stick fully seated, hand pushing stick down into tube.)

FRAME 8

Then reinsert it in the filler tube, seating it properly.

(Slide of dip stick with person checking level.)

FRAME 9

Remove the dip stick again and check the fluid level.

38

(Slide of comparison in color -
- good and burned fluid in beakers.)

FRAME 10

(Slide of mechanic adding fluid
to a transmission.)

FRAME 11

Make sure it's the right fluid.
(Slide of 3 types of fluid)

TA or *FE* or *Dexon*

Consult the manual

FRAME 12

At this time you should also inspect the fluid for darkened color and burned odor. Burned fluid, which is caused by overheating the transmission, generally is an indication of more serious problems within the transmission. This fluid must be replaced and a thorough inspection of the transmission is advised.

This is a good opportunity to make a sale while performing a vital service for the customer. In-car transmission service is often neglected.

Call your instructor for his O.K. at this point. No credit will be given for this task without his O.K.

Add the specified automatic transmission fluid to bring the fluid level to the mark on the dipstick as explained in the service manual. Fluid should be at room temperature. Make sure you add the correct type of fluid to the transmission.

If you don't know which type of fluid to use, consult a manual as there are three different types of automatic transmission fluid available. Adding the wrong type of fluid could damage the transmission.

SDUND/SLIDE--Story Board Pad

(Close up of dip stick comparing fluid levels.)

FRAME 13

(Close up of dip stick being seated on the tube.)

FRAME 14

FRAME

You must be careful not to add too much fluid to the transmission as overfilling will cause foaming and loss of fluid through the vent pipe. Excess fluid, if left in the transmission could cause mechanical damage. To avoid overfilling a transmission, add small amounts of fluid, usually a pint at a time and recheck the level each time you add fluid.

Install the dip stick making sure the cap is securely seated. You have now completed this task.

Have your instructor check your work and O.K. the job.

APPENDIX J

HUMAN RELATIONS PROGRAM FOR 1974-75

113

TO: All Staff

FROM: Human Relations Committee
by Dave Jenson, Co-Chairperson

DATE: 7 November 1974

SUBJECT: 1974-75 Human Relations Program

In our small group sessions on 15 October, subject areas for this year's program were discussed. The three areas mentioned most often in the eleven groups were:

1. Human relations in industry
2. Interstaff communications
3. Building trust

On this basis, the committee drafted the attached program proposal. I guaranteed the staff the chance to see the program before it was submitted to the East Area Human Relations Steering Committee.

Please read through the proposal. If you have any suggested revisions to offer, please see a committee member before 3:00 P. M. Monday, 11 November.

The committee members are:

Clara Anderson
Eleanor Byrne
Kathy Cleary
Elizabeth Davis
Craig Froke
Wayne Heikkila
Dave Jenson
Ed Karbo
Elise Lyle
Stan Markun
Sally Slic
Mel Sorenson
Dena Tarnowski
Ken Thompson

HUMAN RELATIONS PROGRAM
PLAN FOR VOCATIONAL
1974-75

I. Our Human Relations Goal(s):

- A. Interstaff Communications: To assist the staff in an attempt to improve interstaff communications.
- B. Building Trust: To promote growth in developing trusting relationships among the staff.
- C. Human Relations in Industry: To gain an awareness and possible understanding of industry's approach to Human Relations and see whether these approaches can be applied in the classroom for the benefit of students.

II. Our Human Relations Objectives:

Goal "A": Upon completion of this program, staff members will have a better understanding of the problems involved in interstaff communications with a staff of over 150 people working in several educational sites.

The staff will develop the ability to communicate more fully and have a better understanding of the channels and techniques of communications within the school.

Goal "B": Upon completion of this part of the HR program, staff members will have a more complete understanding of what is involved in building trust.

Staff members will have been given a chance to develop skills needed in building trust.

Goal "C": Upon completion of this part of the program, staff members will have been exposed to industry's approach to Human Relations.

75

III. Actions to Meet Our Objectives:

DESCRIPTION OF SESSION.	PARTICIPANTS	MATERIALS	REQUESTED FUNDS
<p>Small groups will meet to compile a list of problem areas in interstaff communications.</p> <p>Small groups will then assemble as a staff in the auditorium. Group facilitators will present questions to the panel of administrators.</p> <p>Administration will respond to questions.</p> <p>Date: DECEMBER 3</p>	All staff	none	none
	LEADERSHIP	RESOURCE PEOPLE	
	Co-chairpersons and committee members to act as facilitators in small groups	none	

DESCRIPTION OF SESSION	PARTICIPANTS	MATERIALS	REQUESTED FUNDS
<p>Similar procedure to above. This session will allow us to check what improvement has taken place in interstaff communications. If the same questions occur, it will point the way for additional work.</p> <p>Date: APRIL 15</p>	All staff	none	none
	LEADERSHIP	RESOURCE PEOPLE	
	same as above	none	

76

DESCRIPTION OF SESSION	PARTICIPANTS	MATERIALS	REQUESTED FUNDS
<p>Address to staff by an individual (s) skilled in techniques of building trust. Address to include a working definition of trust and ways one can begin to develop it.</p> <p>Question and answer period to follow.</p> <p>Alternate format may be used dependent on resource person's style of presentation.</p>	All staff	furnished by speaker and reproduced by school.	For speaker \$100.
	LEADERSHIP	RESOURCE PEOPLE	
	Co-chair-person to introduce speaker & initiate question & answer period	Dr. Jerome Each	

Date: DECEMBER 10.

DESCRIPTION OF SESSION	PARTICIPANTS	MATERIALS	REQUESTED FUNDS
<p>Follow-up session to above. A check to see growth in building trust. Speaker to discuss additional techniques for further development of trust. A self-check evaluation will be developed so each staff member can judge his own progress.</p>	All staff	same as above	For speaker \$100
	LEADERSHIP	RESOURCE PEOPLE	
	Co-chair-person	Dr. Jerome Each	

Date: FEBRUARY 4

77

DESCRIPTION OF SESSION	PARTICIPANTS	MATERIALS	REQUESTED FUNDS
<p>A panel of representatives from industry will be invited to discuss industry's approach to human relations.</p>	<p>All staff</p>	<p>?</p>	<p>?</p>
<p>A question & answer period will follow.</p> <p>Date: FEBRUARY 11</p>	<p>LEADERSHIP</p>	<p>RESOURCE PEOPLE</p>	
	<p>Co-chair-person to introduce panel</p>	<p>4 or 5 representatives from industry and industry liason person from Vocational</p>	

It is hoped that after the above Tuesday Released Time Human Relations session, we will be able to have a morning session involving students, staff, and at least one representative from each of the various trade areas for which we prepare students. This session would include an auditorium program for everyone and small group sessions for each trade area.

This program would take place in March.

78

IV. Some thoughts on how we intend to evaluate the accomplishment of our objectives:

A. Follow-up session, similar to the initial session, will be held in February to see whether the areas of concern voiced in December are still areas of concern.

B. By using materials provided by resource person, including a self-check evaluation, a follow-up session will be held two months later (Feb. 4) to see whether greater trust has begun to be developed among the staff.

C. Program does not lend itself to a formal evaluation.

V. We are: (Human Relations Members)

TOPICAL OUTLINE FOR SECONDARY CENTER
TEACHER ORIENTATION PROGRAM

SECONDARY CENTER TEACHER ORIENTATION

This outline is designed to provide direction to a series of weekly meetings of teachers involved with the Secondary Center Program, an opportunity to share ideas and problems. Meetings will be held each Thursday from 10:15 to 11:30 a.m. The major areas of emphasis include philosophy, values clarification, human relations, career education, and Adlerian psychology.

I. PHILOSOPHY

A. Concepts

1. Reasons students are enrolled in Secondary Center courses and their possible effects on classes.
2. Dealing with students and their unique problems.
3. The necessity for each student to remain actively involved in class and functioning within their own ability level.
4. Need for curriculum development to be continuous and on-going.

B. Implementing exercises.

1. Concept of democracy using Earl Kelley's "Return to Democracy".
 - a. Democracy in administrator-teacher relationships.
 - b. Democracy in teacher-student relationships.
2. Ranking of essential behavior.
 - a. Administrator - teacher
 - b. Teacher - student
3. "Unfinished Business" - teaching strategy useful in dealing with students and associates.
4. "The Ability to Change" - Teaching strategy concerning affective behavior of students.

II. VALUES CLARIFICATION

A. What is it?

An internal process where-by an individual takes a look at his own value system.

Values Clarification (Cont.)

1. Utilizes a variety of issues through which a small group can interact
2. No value system is wrong.
3. An individual need not reveal his value system.
4. It is NOT sensitivity training or therapy.
5. Provides a basis for decision making according to the individual's value system.

B. How is it applied?

1. Can be used in large or small groups or individually.
2. Values clarification can be applied to students after a teacher has a thorough understanding of the process.

C. Implementation Exercises.

1. Definition of moral stages.
2. Values level teaching.
3. Educational objectives dealing with values level teaching.
4. Examples and suggestions for values level.

III. HUMAN RELATIONS TECHNIQUES

- A. "Human Relations Competencies" - Discussion of human relations competencies necessary for students to survive in and outside school.
- B. "Removing Barriers to Humaneness in the High School" - Discussion of behavior of administrators and teachers in promoting and restricting human relations.
- C. "Listening to the Kids" - Listening to music of the student's culture, discussion of the themes presented, and identification of its implication to class and curriculum.
- D. Cultural Differences - Identification of the different cultures to be dealt with in the Secondary Center classroom and some suggestions for dealing with them.

**TENTATIVE
FOR DISCUSSION PURPOSES ONLY**

Human Relations Techniques (Cont.)

- E. Student mixer techniques - Sociogram.
- F. Make provisions for including staff in the decision making process - those which affect them.
 - 1. Feeling of belonging - group identity
 - 2. Willingness to accept results
 - 3. Use of expertise and experience of staff.

IV. CAREER EDUCATION

- A. Teacher orientation to philosophy and techniques.
- B. Application to students.
- C. (Above section to be developed)

V. ADLERIAN PSYCHOLOGY - Concepts and Applications

- A. A. Ties in closely with Human Relations and Value Clarification
- B. To be developed.

PARTIAL EDUCATIONAL SPECIFICATIONS FOR
ARCHITECTURAL DRAFTING AT A
NEW MINNEAPOLIS AVTI FACILITY

100

TENTATIVE
FOR DISCUSSION PURPOSES ONLY

ARCHITECTURAL DRAFTING

A. Program Description

Architectural draftsmen may have various duties depending on the type of employer and the position that they occupy. These might be:

1. Making the working drawings (plans, elevations, and details) for a residence or commercial building.
2. Making a "presentation" drawing of a proposed building, to give the owner a pictorial view of the finished structure.
3. Doing "take-off" work to be used in preparing bids which will be submitted by his company.
4. Selecting, and specifying, the most suitable materials to be used in the construction of a building.
5. Computing sizes of structural members for a building.

Graduates of the architectural drafting course may be employed by contractors (air conditioning, electrical, plumbing or general), building materials distributors, sash and door plants, building product manufacturers, retail stores, manufacturing plants or architects.

The program is 21 months in length. Architectural draftsmen must possess above average intelligence to perform successfully in this trade. They must be able to understand and apply math, science and reading of technical subjects. Artistic ability is not needed in technical specialties but is essential in designing. Graduates of this course should have had courses in algebra, geometry, advanced algebra and physics.

B. Program Objectives

The major objective of this program is to provide students with marketable skills required for entry type jobs as a

TENTATIVE
FOR DISCUSSION PURPOSES ONLY

draftsman in an architectural office or one of a variety of related drafting offices such as mill work detailing, contractor's office, structural engineer's office, plant layout, steel fabricator, or pre-stress concrete plant.

C. Instructional Content

The following major topics are included in the program:

First Year Curriculum

1. Drafting room practices and orientation
2. Architectural methods and materials
3. Basic technical drawing
4. Presentation techniques
5. Topographic drawing and surveying
6. Planning-light construction
7. Materials and methods of construction
8. Construction drawings: light construction
9. Specifications: light construction
10. Structural systems: light construction
11. Mechanical systems: light construction
12. Electrical system: light construction
13. Technical science
14. Technical mathematics
15. Communications

Second Year Curriculum

1. Drafting room practices and orientation
2. Presentation techniques
3. Planning: building construction
4. Materials and methods of construction
5. Construction drawings: building construction
6. Specifications
7. Structural systems: building construction
8. Mechanical systems: building construction
9. Electrical systems: building construction
10. Communications - advanced
11. Estimating
12. History of American building

TENTATIVE
FOR DISCUSSION PURPOSES ONLY

D. Methods of Instruction

Instruction in this program is highly individualized. Students spend the majority of their time acquiring actual drafting skills on the drafting board. In addition to drafting, students will gain some experience in actual construction skills and will develop a certain amount of skill in architectural model making.

E. Relationship to Other Programs

No special relationship exists with other programs.

F. Organizational Summary

APPENDIX T

MEMORANDUM TO STAFF REGARDING
CURRICULUM DEVELOPMENT

to _____

115

M E M O R A N D U M

TO: NAVTI STAFF

FROM: Wayne Nelson & Joe Papatola

DATE: December 18, 1974

In the interest of making our school more serviceable to students and community, the following five points should be considered by all departments. As we plan for the new building and strive toward curriculum that is efficient and competitive, we are asking that these points be incorporated into the plans of each department. Craig Froke will be of assistance in planning and implementation.

1. ALL PROGRAMS SHOULD BE OPEN ENTRY AND OPEN EXIT

- a. Provisions should be made to allow students to enter any program a minimum of four times during a year. Ideally, a program should be open to new students at any time.
- b. Provisions should also be made for open exit from an educational program into a job. To accomplish this, a variety of entry level jobs in a given trade must be identified and included into the curriculum. (Ideally, a student could become employable at an entry level job in a trade area after one month of instruction.)

2. ALL EDUCATIONAL PROGRAMS SHOULD BE COMPETENCY BASED UTILIZING BEHAVIORAL OBJECTIVES

- a. Emphasis should be placed on exit competencies rather than entry requirements.
- b. The competencies to be taught should be validated through surveys of industry.
- c. We should move toward the exiting student having a listing of competencies rather than a diploma or certificate indicating the completion of a given program.

3. ALL PROGRAMS SHOULD OPERATE ON A 12-MONTH YEAR AROUND BASIS (Beginning this summer where possible)

4. ADVANCED PLACEMENT IN AN EDUCATIONAL PROGRAM FOR PREVIOUS EXPERIENCE OR INSTRUCTION IN A TRADE AREA SHOULD BE GUARANTEED.

- a. Students entering the AVTI from a secondary center program must be given advanced standing depending upon their individual competencies.
- b. A system of credit by examination (written, performance, or both) should be developed for students who already have competencies in a trade area.

5. ALL PROGRAMS SHOULD BEGIN TO UTILIZE INDIVIDUALIZED INSTRUCTION.

- a. Instruction should be geared to an individual's unique goals and background.
- b. Students should progress through an educational program at their own rate.
- c. This does not mean that the teacher's role is that of a dispenser of instructional packages (as is true of some institutions). We must continually be aware that motivation will be necessary from the time our students enter our classrooms until they exit.
- d. The teacher is still the best method of individualizing instruction in spite of what media salesman say.

ABSTRACT: THIS REPORT DESCRIBES A PROJECT TO INITIATE DEVELOPMENT AND IMPLEMENTATION OF A K-12 CAREER EDUCATION PROGRAM IN THE PUBLIC SCHOOLS OF VIRGINIA. THE PRIMARY PURPOSE OF THE PROJECT WAS TO PROVIDE LEADERSHIP AT THE STATE AND LOCAL LEVELS. A COORDINATING COMMITTEE PROVIDED LEADERSHIP WITHIN THE RESPECTIVE DIVISIONS OF THE MEMBERS AND ASSISTED IN PLANNING AND CONDUCTING WORKSHOPS; A LIBRARY OF CAREER EDUCATION MATERIALS WAS ASSEMBLED; REGIONAL WORKSHOPS WERE CONDUCTED IN VARIOUS LOCATIONS THROUGHOUT THE STATE; INSTRUCTIONAL MATERIALS WERE DISSEMINATED TO EACH LOCAL SCHOOL DIVISION; A SURVEY WAS CONDUCTED TO DETERMINE THE STATUS OF CAREER EDUCATION IN LOCAL SCHOOL DIVISIONS; AND THE STATE SUPERVISOR CONDUCTED ADDITIONAL DIVISION WORKSHOPS, PROVIDED PLANNING ASSISTANCE, AND ATTENDED TWO NATIONAL MEETINGS OF STATE COORDINATORS OF CAREER EDUCATION. EVALUATION OF THE PROJECT WAS SUBJECTIVE, BASED ON RESPONSES FROM LOCAL SCHOOL DIVISIONS. THE OVERALL CONSENSUS OF OPINION WAS FAVORABLE. FUTURE PLANS AND RECOMMENDATIONS FOR CAREER EDUCATION IN THE STATE ARE BRIEFLY OUTLINED. (NJ)

Summary

The project operated from July 16, 1974 to August 22, 1975. A full time Supervisor of Career Education was employed on July 16, 1974, and a full time secretary was employed in September, 1974. The project involved the work of a State Supervisor of Career Education who gave leadership within the State Department of Education and to local school divisions in planning, developing, and implementing career education. The Supervisor conducted meetings of a Career Education Coordinating Committee within the State Department of Education, conducted in-service meetings for Divisions within the State Department of Education, conducted regional workshops in various localities around the state, conducted workshops for local school divisions, met with deans and other key professors in colleges of education, and met with other groups such as Richmond Metropolitan Chamber of Commerce, etc. A library of career education materials was assembled.

Problem Area

The concept of career education springs from the conviction of educators that too many youth are leaving the public school, either by graduation or as droupouts, ill-prepared for careers. These youth generally lack either the desire or capacity for higher education, yet they have not received the kind of preparation which would aid them in finding a place in the world of work. Too often, they simply do not know what is available to them, or they are unprepared for productive employment.

The purpose of this project was to initiate the development and implementation of a career education program in the public schools of Virginia that will enable each student to be prepared upon leaving high school to

either become gainfully employed, or to continue his/her education beyond the high school level. The original proposal for this project emphasized that considerable attention be given to staff development to enable teachers to implement career education.

Dr. Sidney P. Marland, U. S. Commissioner of Education, in his speech before the National Association of Secondary School Principals in Houston, Texas, on January 23, 1971, indicated his concern realistically for today's world of work. He said, "Shall we persevere in the traditional practices that are obviously not properly equipping fully half or more of our young people or shall we immediately undertake the reformation of our entire secondary education in order to position it properly for maximum contribution to our individual and national life?" Dr. Marland continued, "To make public education become relevant according to today's needs and the needs of the future, the entire school program must be restructured, and it is becoming increasingly evident that public education should be focused around the theme of career development."

Career education is a comprehensive educational program focused on careers, which begins in kindergarten and continues through the adult years. In the elementary school, students are informed about a wide range of jobs in our society and the roles and requirements involved. In junior high school, students may explore several specific clusters of occupations through hands-on experiences and field observations, as well as classroom instruction. In the senior high school, students pursue a selected occupational area, exercising one of three options--intensive preparation for entry into the world of work immediately upon leaving high school, preparation for postsecondary occupational area, exercising one of three options--intensive preparation for entry

into the world of work immediately upon leaving high school, preparation for postsecondary occupational education, or preparation for a four-year college. Finally, placement into an entry-level job or further education is guaranteed for every student in an effective career education program.

During the period since 1969, numerous journal articles and documents were prepared which were related to the type of educational programs now referred to as "career education." Many of the documents are now available through the ERIC system. The Division of Vocational and Technical Education, Bureau of Adult, Vocational and Technical Education, USOE prepared a document, dated May 10, 1973, entitled, "Career Education: A Model for Implementation." This document contains a list of some of the more significant articles and documents.

Objectives

The primary purpose of the proposed project was to provide leadership at the state and local levels for the development and implementation of a career education program in the public schools of Virginia. This program would include grades k through 12. Specific objectives were:

1. To assemble, review and catalogue materials that have been prepared on career education by USOE, State Departments of Education and other educational institutions and agencies.
2. To provide leadership within the State Department of Education and involve all divisions of the Department that deal with instruction, student guidance; and special services in the planning, developing, and implementing of the career education program.
3. To plan and conduct an in-service training program on career education for local school administrators, teachers, and other local school personnel.

4. To develop and disseminate instructional materials to local school divisions.
5. To assist local school divisions in developing and initiating a program of career education.

Procedures

A full time Supervisor of Career Education and a full time secretary were employed. The Supervisor of Career Education administratively was responsible to the Assistant Superintendent for Instruction. The Supervisor of Career Education conducted the following activities as part of an attempt to develop and implement career education in Virginia:

1. A State Department of Education Coordinating Committee for Career Education was appointed. The members of this Committee represented the Divisions of Special Education, Elementary Education, Secondary Education, Vocational Education, Guidance Services, and the Bureau of Teaching Materials. This Committee advised the State Supervisor of Career Education, gave leadership for career education within their respective Divisions, and assisted in planning and conducting workshops.
2. A library on career education was established at the Media Examination Center of the Division of Special Services within the State Department of Education. This library consists of two sections. One section contains curriculum guides, books, reports, commercial materials, and other such materials. This section of the library is available to any one who wishes to use it. The other section of the library contains materials purchased with staff development money by the State Department of Education, and this section is accessible only to members of the State Department of Education. This section contains materials similar to those which are in the other section, but this section is used primarily

to assist members of the State Department of Education to conduct workshops on career education.

3. Regional workshops were conducted by the State Supervisor in various geographic sections of the state. An attempt was made to conduct these workshops by inviting local school administrators, teachers, and other local school officers to come to a special workshop on career education. However, some difficulty was encountered in using this procedure because few key administrators attended the specially called workshops. Since the successful operation of this project required contacts with and workshops for key administrators, the first plan of attack was modified. Existing schedules of meetings for key administrators were examined, and their leaders' cooperation was solicited. With the cooperation of the various leaders of these pre-planned meetings, the State Supervisor of Career Education conducted workshops for Superintendents' Advisory Council Regional meetings, Supervisory Groups' Regional Meetings, and counselors' regional meetings. Additionally, many key teachers and administrators were present in workshops conducted by the State Supervisor of Career Education in conjunction with the Title IV curriculum workshop at the University of Virginia, at meetings conducted in cooperation with other members of the State Department of Education including representatives from all of the instructional divisions, the Telecommunications Division, and the Federal Programs Office. Additionally, the State Supervisor participated in workshops conducted by various teacher education institutions, and discussed with these institutions their plans for conducting week-long and three-week long summer credit courses on career education. All of the public teacher training institutions in Virginia have

offered such courses this summer and expect to repeat them and or build on them during the coming year.

4. Instructional materials for career education were disseminated to each local school division in Virginia by the Radford and Petersburg Exemplary Career Education Projects. The State Supervisor of Career Education followed up this dissemination by contacting the school divisions to suggest ways in which the materials might be used.

5. A survey was taken to determine the status of career education in local school divisions in Virginia. The results of this survey were compiled, and a list of contact persons for local divisions was formulated. The State Supervisor of Career Education used this list in sending out communications about materials resources and personnel resources available to local divisions to assist with the development and implementation of career education.

6. The State Supervisor of Career Education contacted each school division through a memorandum to offer assistance. Many school divisions requested such assistance, and the State Supervisor held several divisional workshops. Additionally, the State Supervisor of Career Education met with individuals and career education committees in many school divisions to help them plan specific actions to take to implement career education locally.

7. The State Supervisor of Career Education communicated by letter with all of the career education contact persons in all of the other states and territories, and attended two national meetings for state coordinators of career education.

Evaluation

Under the direction of the Assistant Superintendent for Instruction,

the State Supervisor of Career Education, with the advice of the State Career Education Coordinating committee, decided that subjective evaluation, based on activities conducted and responses from local school divisions would be the basis for evaluating the project. Many favorable reports were received (examples are in appendix), and the overwhelming consensus of opinion was that career education in Virginia had greatly been advanced by the operation of this project.

On the basis of these favorable reports, the State Department of Education has included a continuance of the project positions in their budget for the next biennium.

During 1976 the General Assembly of Virginia and the State Board of Education incorporated career preparation into the Standards of Quality. It was concluded that a goal of public education must be to enable each student, upon leaving school, to continue successfully a program of advanced education or to enter the world of work.

On August 22, the Supervisor of Career Education left the State Department of Education to accept another position. It was not until May 1, 1976 that the position was filled by a new supervisor. At the present time the office is staffed by a full time supervisor and a full time secretary of career education.

Since May 1, 1976 the Supervisor has made an effort to work jointly with and give leadership to the staff of the Elementary, Secondary and Special Education department. Leadership has also been given to several local school divisions in planning, developing and implementing career education programs.

The Supervisor, also, has visited the three pilot projects in the State and plans for further follow-up have been made.

Initial planning has begun with the Richmond and Virginia Chambers of Commerce in their efforts to assist educators in meeting the educational needs of business, industry and labor.

Since May 1; the Supervisor has attended two National Conferences and plans to participate in three state conferences conducted by three state Universities as well as help conduct several pre-school workshops in local school divisions.

Additional materials and information are being assembled to enlarge upon the career education section in the library.

In conclusion plans are being made by the Supervisor to organize a task force of State Department of Education staff and a state advisory committee to assist in the development and implementation of a state plan and model for career education.

Conclusions, Implications, Recommendations

Career education continues to be the most viable means of achieving the educational reform called for by many of education's critics. In Virginia, career education has been experiencing considerable grass-roots growth, and the operation of this project has given considerable direction and encouragement to this growth during the past year. At the present time 124 of Virginia's one hundred and thirty-six school divisions are active in implementing some portion of career education in elementary and junior high schools.

The direction of public education in Virginia is determined by Standards of Quality and Objectives for Public Schools in Virginia established by the General Assembly, and career education efforts have been incorporated into these Standards. In order to help local school divisions achieve the Standards of Quality, the State Department of Education has published an Action Plan for Achieving Certain Measurable Objectives for Public Education in Virginia 1974-76. For example, one of the Standards states that "By June 1976 at least 90% of high school graduates not continuing formal education should have a job entry skill", and the Action Plan requires that public schools provide students with help in choosing a career objective. Additionally, the Standards of Quality require that each division shall revise and extend annually a five year school improvement plan which contains strategies for reaching the objectives of the school division, and many school divisions have included career education as a vehicle they plan to use in reaching the Standards of Quality.

It is further recommended that the State Superintendent of Public Instruction give increased leadership to career education by establishing the position of Special Assistant for Career Education, and including the Special Assistant for Career Education in all of the policy making and planning meetings of the State Department of Education.

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: B1P.

ABSTRACT: THE STUDY WAS CONDUCTED TO DETERMINE THE FEASIBILITY OF DEVELOPING A VOCATIONAL TRAINING PROGRAM AT THE HIGH SCHOOL LEVEL TO EQUIP STUDENTS WITH ENTRY-LEVEL SKILLS FOR EMPLOYMENT IN THE PETROLEUM INDUSTRY. AN INVESTIGATOR WITH EXTENSIVE EXPERIENCE IN THE PETROLEUM INDUSTRY WAS EMPLOYED TO: ACCESS LOCAL MANPOWER NEEDS, INVESTIGATE CURRENT AND PAST TRAINING METHODS, IDENTIFY NECESSARY SKILLS AND DETERMINE THE FEASIBILITY OF IMPARTING THESE SKILLS, IDENTIFY AND ACQUIRE A SITE, SELECT TOOLS AND EQUIPMENT, ASSESS STUDENT AND COMMUNITY INTEREST, AND CONDUCT AN EXPLORATORY COURSE. BASED ON THE DATA COLLECTED, PRELIMINARY DECISIONS WERE MADE, AND AN INTRODUCTORY ONE-WEEK COURSE WAS OFFERED AND COMPLETED BY 67 STUDENTS. IT WAS RECOMMENDED THAT FUNDING BE MADE AVAILABLE FOR DEVELOPING A COURSE IN PETROLEUM PRODUCTION TO SERVE AS A MODEL FOR OTHER GEOGRAPHIC AREAS. THE DOCUMENT INCLUDES A BIBLIOGRAPHY, GLOSSARY, AND APPENDED MATERIALS DEVELOPED IN THE STUDY SUCH AS A LIST OF REQUIRED TOOLS, CORRESPONDENCE FROM INDUSTRY, AND OUTLINE OF THE INTRODUCTORY COURSE. PREFACE

The project has proven to be an interesting and enlightening experience. Of the many and varied problems, the most significant was the frustration of waiting for various agencies to meet and render decisions upon which the fate of the project hinged. Another involves the ability to measure the cooperation of the local oil companies.

Due to an independent and hands off policy maintained by the local oil companies, the merging and moving of home offices from the Bradford area, the extreme work load imposed on oil company executives due to government controls, and certain other political factors beyond our control it became virtually impossible to obtain anything in writing as to the extent of contributions that the course can expect to obtain from local industry. It is the investigator's firm opinion, after contacting executives in the local oil industry, that once the course is in operation, local effort will be forthcoming.

Mr. Marcus Herrold, Consultant for Vocational Education Field Services, Edward Goulding, Supervising Principal of Bradford Area High School, and William L. Kaschube, Chairman of the Vocational Education Committee of the Board of Education have been most beneficial in contributing much time and effort in pursuing the various objectives of this study.

Abstract

In an attempt to comply with a request of the local petroleum industry that a vocational training program be instituted, to supply the industry with trained man power, this project was developed. The major aim was to investigate the possibilities, identify the favorable aspects, and deal with problems which might impede the development of such a project. An investigator with extensive experience in the petroleum industry was employed to conduct the study. Areas to which he was instructed to direct his attention included a determination of man power needs in the industry, current and past training methods, identification of necessary skills, feasibility of imparting these skills, tools and equipment necessary to teach these skills, develop and maintain rapport with the local petroleum industry, identify and acquire a suitable site for training, recommend the necessary renovations to comply with the various regulatory codes, assess student and community interest, and conduct an exploratory course to help increase student interest and knowledge. These problems were approached, many of them concurrently. The study of the man-power revealed that over 1/4 of the workers were age 50 and above. A formal training program does not exist nor has one ever existed in this geographic area. Through the utilization of his own experience and interviews with oil company representatives the necessary skill areas were identified. It was determined that the skills could be taught in the proper setting. This setting proved to be an operating oil lease to provide actual hands on experiences for the students. Local industry officials were informed of progress and consulted prior to recommendations concerning the course. They have pledged

support in terms of resource persons, field trips, demonstrations, and tools, equipment and materials. A site has been identified and the various shortcomings relative to the appropriate codes have been identified. Student and community interest has been surveyed and documented. The listed objectives of the project have either been met or the reason for failure to do so has been noted.

It is the opinion of the administration of the Bradford Area High School and the investigator that the project has been properly conducted and that the accumulated data verifies and supports the need for the creation of a course to equip students with entry level skills for employment in the petroleum industry.

Methods

The project was designed to employ an investigator who had extensive experience in the production of crude oil. This type of experience was necessary to make decisions relative to the objectives of the project. Many of these decisions were of a subjective nature based upon his experience, what the industrial contacts indicated their needs were, and how these related to school policy and available funds. The projection of employment opportunities was made with the cooperation of the Pennsylvania Department of Employment Security and personal contact interviews with local oil producers. During the interviews with the oil producers items such as necessary skills, special tools and equipment, major instructional areas of the occupation, availability of field trips, and demonstrations, industry cooperation in terms of loaning and donation of material, and equipment, and cooperative placement of students were discussed by the investigator and the industrial representatives. This information was then compiled from the investigator's notes, evaluated, and used as a basis for recommendations and decisions which were made pertinent to these topics.

Another area with which the investigator was concerned involved the location and securing of a suitable site for instructional purposes. All available locations with even remote possibilities were examined, evaluated and recommendations made based upon their merits or deficiencies. This process of examination and elimination led to the recommendation of the final site.

The investigator also conducted an introductory course for the purpose of exposing students to the various aspects of the petroleum industry. This aided in measuring student interest through questionnaires and interviews. It also provided for the development of additional interest among the students in the petroleum industry. This course was conducted as a one week course consisting of 4 hours of classroom instruction and 2 hours of field experience. This was conducted in grades 9 through 12 for those students whose schedules afforded time for this activity.

A glossary of terms pertaining to the petroleum industry with which the reader may be unfamiliar is included in the report.

Investigatory Process

In the procedure section of the proposal, several activities were outlined which would enable us to realistically assess the situation regarding a course in petroleum production. In this section of the report I shall describe those activities and the results of our efforts.

In the area of man power needs, the investigator worked in cooperation with the Pennsylvania Bureau of Employment Security and the local oil producers to arrive at a projection of present and future man power needs. We were first informed of a man power shortage at a meeting initiated by the Pennsylvania Oil, Gas and Minerals Association requesting that we attempt to include the training of personnel for this occupational area in our vocational-technical program at Bradford Area High School.

With figures supplied by the Bureau of Employment Security relative to the large companies employing personnel in the petroleum and related industries and figures obtained from the companies which indicate the ages of these employees, certain deductive projections can be made. A work force of 985 was employed by these major companies. This figure constitutes 11% of McKean County's total workforce.

Examination of personnel rosters for these companies reveals that approximately 1/4 of these employees are 50 and above. Replacement of these employees alone represents approximately 20 jobs per year. Please refer to the appendix¹ for a complete list of companies and personnel. Other factors which must be considered in assessing future man power needs involve production figures and new recovery techniques which are in an advanced stage of development.

¹See Appendix A.

The Penn Grade crude oil area supplies approximately 20% of the total lubricating oil sold in the nation.² Of this amount Pennsylvania is the largest producer with 2/3 of the state's oil being produced in McKean County. To assess the importance to the area, in 1974 the oil production and related industries accounted for 33.6% of the county's industrial production or \$105.5 million worth of business.³ Another item to consider involves the tertiary recovery methods now being tested in the Bradford field. Mr. Ted Geffen of Amoco wrote, "It is estimated that improved methods for oil recovery can, as a target, recover an additional 59 billion barrels from discovered fields."⁴ The recovery method being tested locally is referred to by its trade name of Maraflood. This process is described in technical detail in an article found in the Oil and Gas Journal.⁵ The results of these experiments to date are outlined in a recent article printed in The Bradford Era. The article describes the site being used, the companies involved, and the results to date. The figures which are pertinent to this study are the statement that this method applied to the 45,000 acres of oil property in the Bradford field has a recovery potential of 5000 barrels per acre. This would result in recovery of approximately 425 million barrels of oil.⁶ The significance of this figure can best be

²Petroleum Engineering Technology, University of Pittsburgh, Bradford Campus: Bradford, Pa., p.1

5
7

appreciated by the knowledge that McKean County has produced approximately 480 million barrels since the initial discovery of oil in 1871.⁷ These figures added to the employment figures which were previously noted can easily be translated into a period of increased activity and increased employment opportunities, with a projected figure of approximately 13 students completing the course each year the industry will be easily able to absorb these trained persons into the work force of the petroleum and related industries.

To attempt to establish our position concerning the feasibility of adding this curriculum it was decided to assess existing or past training programs. It was discovered that in this geographic area there has never been an organized training program in this industry. There have been individuals trained for various jobs on a one to one basis and skills have been transmitted from generation to generation within families; however no apprenticeship or training vehicle for job progression has ever existed in the Bradford field.

A program financed by CETA funds at Hocking Technical College, at Nelsonville, Ohio was brought to our attention. After corresponding with school officials, our investigator visited Nelsonville for a first hand look at the program. He found little of use to us in this course. They had a bus, met in a classroom, and then traveled in the area to see whatever was occurring regarding oil production in the area that day. For example, if a well was being fractured or drilled they would visit the site.

⁷Petroleum Engineering Technology, p.1

There were no hands on experiences connected with the program. The investigator was not interested in pursuing a similar approach in our course.

The investigator compiled a list of skills which the oil field mechanic should possess. These skills are broken down into major areas of the occupation. A list of these skills may be seen in the appendix.⁸ This list of skills will provide the nucleus of the curriculum which we shall develop in Phase II of the project.

These skills reflect the change in direction our project has taken with the additional input of the investigator. Initially our thoughts were aimed toward skills which could be imparted in a shop-laboratory setting. The investigator who was hired is an active oil producer. His thoughts were aimed toward instruction based upon the everyday problems of an operating oil lease. Upon examination of what could be taught in a building (shop-laboratory) vs. an operating lease it was determined that the scope of instruction could be significantly broadened. This idea is also in agreement with the hands on philosophy of vocational education. Therefore our efforts were concentrated toward securing an operating oil lease. Tools and equipment necessary to teach the skills which have been identified as feasible and desirable can be found in the appendix.⁹

⁸ See Appendix B

⁹ See Appendix C

Since this project was the result of an industry suggestion it has been our feeling that the industry representatives should be appraised of the efforts and progress of the project. This has been done with representatives of all the major oil companies and several independent producers being furnished copies of the various projects which were submitted for approval. This, plus a continual appraisal of events of the investigation as well as requests for assistance when necessary, have kept communication channels both open and active.

In addition to this the investigator conducted personal interviews with representatives of the oil companies, independent producers, and related industries. A copy of the questionnaire used in these interviews is found in the appendix.¹⁰ From these contacts lists of contributions such as field trips and resource people were compiled.¹¹

One problem which presented itself during these interviews and in subsequent communication was the oil companies' reluctance to put a dollar estimate upon pledged support in writing. Verbal assurances that "Let us know what you need, when you need it, and we'll help you out," were almost unanimously given by the companies, but no one would put this in writing. This has already manifested itself in our recent purchase of an electric jack, in which a large discount was allowed and some accessories donated to permit us to purchase this item with funds from this project. We have also received many letters of support from our

¹⁰ See Appendix D
¹¹ See Appendix E

industrial contacts. Copies of these letters may be found in the Appendix.¹²

It is our opinion that while we are unable to document industry support as strongly as we would prefer that industry interest is sincere and the verbal commitments will be honored.

After the initial meeting with industry representatives an immediate problem was recognized concerning where such a course might be taught. As a comprehensive high school building funds available to AVTS schools are not accessible to us, therefore, construction was virtually eliminated. Real Estate agents were contacted, the industrial representatives contacted again, board members, and other interested parties were queried as to a possible instructional site. Numerous sites suggestions were made and all of these were investigated. A few of these could be rejected for various reasons after a cursory inspection. A list of the properties which were studied in depth is attached.¹³ The features of each and the comments of the investigator are included in this list. After this investigation we made our recommendation. The site which was recommended provides us with the most favorable situation we were able to find to include the training activities which we wish to include in the curriculum. This site has sufficient space to conduct these activities and the building which will be used for indoor activities will meet all state standards in regard to safety and school code requirements.

In a related activity which was occurring concurrently with the investigatory activities detailed up to this point was the assessment

¹²See Appendix F.

¹³See Appendix G.

of student interest. The first step was a survey of the entire student population (Grades 10-11-12) with regard to employment interests. Of the 1207 students surveyed 104 indicated an interest in the petroleum and related industries. A copy of this questionnaire is included.¹⁴

In the text of the proposal a nine week exploratory course was outlined and planned to help measure and stimulate student interest. After a more detailed study, consideration of the investigator's recommendation, and calculation of the number of students available for such a course, the format was changed. This involved a change to 9 one week courses of a broad exploratory nature.¹⁵ The change enabled us to involve many more students and also include grade 9 in our two junior high schools.

A total of 67 students enrolled in and completed this one week exploratory course. Various scheduling problems limited the enrollment, such things as all sophomores being scheduled full and not having a study hall every day to take the course, vocational students already enrolled in a trade and industrial program not having free time in their schedule, and an active work-study and work release program eliminated many other potential candidates. A total of 47 students made application for admittance to the course planned for the coming school year.

A questionnaire¹⁶ was administered to the students who completed this course to assess the results in terms of increased knowledge, interest, knowledge of careers, and other questions.

¹⁴See Appendix H

¹⁵See Appendix I

¹⁶See Appendix J

Of the 67 questionnaires given to students 52 were returned for 77.6% rate of return. A scale of 1 low to 5 high was used for the first 5 questions. The results of the returns are as follows:

1. To what extent has this course increased your knowledge of the petroleum industry? 3.69
2. To what degree has participation in this course influenced your interest in a career in the petroleum industry? 3.82
3. To what degree has participation in this course increased your knowledge of careers in the petroleum and related areas of employment? 3.32
4. When applicable to what degree were safety procedures and practices emphasized and applied? 4.32
5. To what extent would you recommend this course to other students who have not had the opportunity to enroll in it? 4.40

Another question which is significant involved a desire to enroll in the year long course for next year. Responses to this question were 30 yes, 11 no, and 3 undecided. In light of the fact that practically 1/3 of our population were not able to enroll in the course because of scheduling problems, we are quite satisfied with student interest and response. When the announcement was made that applications were being accepted for next year's course, 47 students responded. This occurred during the last two weeks of the school year with students already scheduled for next year in other courses and in spite of the many distractions of the year's end activities.

Objectives

The following information relates to activities which specifically apply to the achievement of the objectives of the project.

1. To determine and list the actual employment opportunities for trained oil field personnel:

Through the investigator's interviews with major oil company executives, personnel officers, The Pennsylvania Bureau of Employment Security, and independent oil producers, employment opportunities in the Bradford oil field were compiled. These are referred to on page 5 of this report, and listed in the Appendix.¹⁷

2. To determine what skills should be apparent in the modern oil field mechanic:
3. To indicate which skills can be imparted in a classroom (Shop-laboratory) setting:

Through interviews with independent oil men and foreman for major oil companies it was determined the skills that the companies demand in the oil field personnel which they wish to hire. These skills can be taught in an actual operating oil lease situation and not in a classroom setting. Refer to the list in the Appendix.¹⁸

4. The amount of space necessary to teach these skills will be calculated:
5. To examine existing facilities and make recommendations pertaining to leasing vs. renovation:

Real estate agents and oil men were contacted as to the

¹⁷See Appendix A.

¹⁸See Appendix B

availability of buildings and property. When completed this list was evaluated and a recommendation made to the vocational committee of the area school board.¹⁹

6. To compare the recommended facility with applicable state regulations to insure compliance in regard to size, lighting, safety, etc:

In designing this course to encompass an actual working oil producing lease, OSHA safety requirements, Department of Environmental Resources regulations, and Department of Labor & Industry regulations, will be observed and adhered to in all future construction and maintenance developments. With an operating lease consisting of approximately twenty-five acres of mineral rights and eight acres of surface we have no problems as to size.

7. To explore field opportunities available to aid in instruction and list appropriate field trips and demonstrations:

A survey of the local oil industry and related industries was made and the various field trips and demonstrations are listed in the Appendix.²⁰

8. To identify possible cooperative employment placement of senior students:

Due to this course being only in the initial planning stage and having no senior students available for graduation very little has been done concerning employment placement. This is one of the objectives of Phase II. The oil industry has indicated a willingness to the investigator to hire students enrolled in the oil production course upon graduation.

¹⁹See Appendix G.

²⁰See Appendix E.

9. To solicit cooperation from oil producers in regard to loaning equipment for instruction purposes, donation of equipment, and making personnel available for lectures and demonstrations.

An attempt was made to solicit some definite statement from the major oil companies in regard to the amount or definition of equipment that they would make available for instruction purposes. This was not possible due to the reluctance of local executives to put anything in writing. A list of personnel available for lectures and demonstrations is enclosed in the Appendix. ²¹

10. To survey and determine student interest through interest inventories, aptitude tests, surveys and personal interviews.

Student interest was first determined through a survey conducted in the local high school. One hundred-four students indicated an interest in the petroleum industry.²² Of this number sixty-seven availed themselves of a nine week exploratory course²³ conducted by the investigator. At the end of this course a student evaluation questionnaire,²⁴ was administered. Forty-seven students expressed a desire to enroll in the oil production course for the year 1976-1977.

11. To determine the extent of industrial interest, cooperation, and support of a vocational training program with the use of a survey and individual interviews.

This was accomplished by the investigator conducting personal interviews with major company executives and independent oil

²¹See Appendix E.

²²See Appendix H.

²³See Appendix I.

²⁴See Appendix J.

producers. At this time a survey sheet,²⁵ was left and a request for a testimonial letter was made. These letters are now on file in the investigator's office and are included in the Appendix.²⁶

- 12. To list the special tools and equipment unique to the industry, and a master list of essential items for basic instruction and make recommendations concerning the purchase of these items.
- A master list of tools and equipment and also a list of large tools and equipment necessary for the instruction of an oil production course are included.²⁷ Some funding was made available due to a transfer in the original estimated budget proposal so that a new electric pumping jack could be purchased for this course.

²⁵See Appendix D.
²⁶See Appendix F.
²⁷See Appendix C.

Conclusions and Recommendations

The activities and findings of the study which have been completed are outlined in the previous material. It is our contention that sufficient evidence was presented to demonstrate several things:

1. That interest exists on a local level among oil producers and related industries in the creation of the proposed course.
2. That the local companies will support such a course in terms of field trips, demonstrations, resource persons, and donations or loan of tools, equipment and materials.
3. That such a course is feasible as a vocational technical offering on a secondary level.
4. That an ideal site exists in close proximity to the high school.
5. A suitable instructor has been located. He has completed an evaluation interview at Penn State and his competency has been certified. In addition he has completed one year of college.
6. That sufficient interest is evident among students to warrant the addition of the course.
7. Employment opportunities are available at the present rate of field activity and even the addition of our training program may not provide sufficient man power if projected activity becomes a reality.
8. The Bradford Board of Education is prepared to support such a course with significant local effort at this time and prepared to assume the full burden of the program when the project funding has terminated.

In light of these findings we recommend that:

1. Funding be made available for the development of the course in petroleum production.
2. This program be used as a model for other areas where oil is produced both on a state and national level.
3. That an effort be made by the Department of Vocational Education to have the procedures for funding requests emphasized in an administration course, through the vocational training institutions.
4. Other geographic areas be encouraged to expand efforts to develop courses which may have benefits for local employment opportunities for students.

GLOSSARY

Cable Tools, A method of percussion drilling where a hole is literally pounded into the ground--machines such as standard rig, parkersburg, national, and spuddef are in this category.

Coring and Chipping, Methods of extracting oil producing sand samples from a well for laboratory analyzing.

Five-Spot, Method of developing a lease in a checker-board pattern by drilling four intake wells with a single producing well in the center.

Fracturing, The actual cracking or breaking of the oil bearing sand formations by injecting a fluid under tremendous pressure on the sand formation.

Injection or Intake Well, Well used to carry water to the oil bearing sands for the purpose of forming and moving an oil bank to the producing well.

Pony Beam Jack, Above ground equipment located over producing oil well and used for pumping the oil well in connection with a central pumping power.

Producing Well, Well used for the purpose of obtaining the crude oil from the oil bearing sand formations.

Pulling Crew, A group of production workers consisting of one tractor driver and one or two men with duties under the pulling pole.

Pumper, Name given to the oil field production worker who has the responsibility of checking the oil producing wells for maintenance problems and correct pumping schedules. This may be on pony beam jacks connected to a central pumping power or on individual units such as electric jacks.

Rotary, A drilling machine employing a turning and grinding method of drilling.

Roughneck, Name given to the non technical drilling crew worker.

Roustabout, Name given to the non technical production oil field worker.

Secondary Recovery, Method of oil recovery employing the five-spot method of drilling and water injection.

Shooting, The process of creating a cavity in the oil bearing sand, after a well has been drilled, by setting off a charge of nitro-glycerin that had been lowered to the sand formation.

Spudder, A drilling machine employing a percussion method of drilling.

Stationary Engineer, Oil Field production worker with specific duties in a water plant, central pumping power, or pump station such as minor machinery maintenance; operation of engines, motors, powers, triplex pumps, centrifugal pumps, filters, chemical feeders, etc.; reading and recording of gauges, meters, and recording charts.

Tertiary Recovery, Third method of oil recovery employing such means as combustion, steam, surfactant, etc.

Working Barrel, The actual sub surface pump located near the bottom of a producing oil well and used to pump the crude oil to the surface.

Oil related job skills that will be taught in a 3 year oil production course at the Bradford Area Senior High School operating oil lease.

1. Tool recognition and correct useage
2. Pipe fitting
3. Oil well pulling
4. Well plugging
5. Pumping jack maintenance and erection
6. Pumping
7. Roustabouting
8. Tractor and bulldozer operation
9. Trouble shooting an internal combustion engine
10. All types of oil field maintenance problems
11. Well drilling
12. Basic oil field welding
13. Basic oil field carpentry
14. Basic oil field electricity
15. Basic oil field mechanics

Note: In all of the above skill areas good work habits and safety will be stressed.

APPENDIX C

TOOLS

- 1 Ridgid 1" to 2" Pipe Threaders No. 65R
- 1 Ridgid 1/4" to 1" N.C. Bolt Dies No. 00R-B
- 1 Ridgid Hvy. Duty Pipe Cutter No. 2
- 1 Box Hvy. Duty Wheels for above cutter No. 2
- 1 Ridgid Lon Grip Pipe Reamer #2
- 1 Gal. Oster Bestoil Cutting Oil
- 1 Ridgid Yoke Bench Pipe Vise No. 23
- 1 Columbian Malleable Iron Combination Pipe Vises No. 205
- 1 Set Standard N.C. Hand Taps-High Speed Steel
1 ea. of both taper and Bottoming taps
1/4, 3/8, 1/2, 5/8, 3/4, 7/8, and 1"
- 1 Set Standard Taper Pipe Taps-High Speed Steel
1/8, 1/4, 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2, 2"
- 1 Set Little Giant Screw Extractors, No. 1316
- 1 Set Little Giant Screw Extractors No. 1322
- 1 Screw Pitch Gage for pipe and nuts and screws-Brown & Sharpe No. 632
- 1 Jobbers Straight Shank High Speed Steel Twist Drill Set 1/16" to 1/2" by 64ths.
- 1 Set 1/2" Straight Shank High Speed Steel Twist Drills
9/16", 5/8, 11/16, 3/4, 13/16, 7/8, 15/16, 1" & 1 1/16"
- 1 Weller Soldering Gun No. S-500
- 1 1 lb. spool Acid-Core Solder
- 1 1 lb. spool Plastic Rosin-Core Solder
- 1 Hvy. Tin Snips-12 to 14"
- 2 Hvy. Duty Lever Grease Guns (Cartridge Type)
- 2 Pews Force Feed Oilers (1 1/2 Pt.) No. N-3975
- 1 Pews Force Feed Oilers (1 Qt.) No. 845-DPS
- 1 Pews Force Feed Oilers (1 Qt.) No. 860-DPS

- 2 Galvanized Combination Measures (2 Qt. Cap.)
- 1 Imperial Copper Tubing Flaring & Cutting Tool Kit
- 1 Lufkin Royal Ni-Clad Steel Tape No.496-100'
- 4 Lufkin Mezurall Nickel Plated Tape-Rules No. 9210-10'
- 1 Carpenter's Steel Square 2'-24" x 2" Body
- 1 24" Aluminum Level
- 1 Ratchet Bit Brace-10" Sweep
- 1 Auger Handle
- 1 Auger Bit set-1/4, 5/16, 3/8, 7/16, 1/2, 9/16, 5/8, 11/16, 3/4, 13/16, 7/8, 15/16 and 1"
- 1 Expansive bit & Cutters 7/8 to 1 3/4 & 1 3/4 to 3"
- 2 Set Ship Augers 1/2", 5/8, 3/4, 7/8, 1"
- 1 12" or 14" Jack Plane
- 1 Set Wood Chisels 1/4, 3/8, 1/2, 3/4, 1, & 1 1/2"
- 3 Phillippe Screwdrivers
- 6 Regular Screwdrivers
- 1 Pr. Channel lock pump pliers.
- 2 Lineman's Hvy. pliers
- 1 Lineman's Insulated Side Cutting Pliers
- 1 Diagonal Cutting Pliers
- 1 Needle Nose Pliers
- 4 Cold Chisels 1/2, 5/8, 3/4, 1"
- 3 Half Round Chisels 1/8, 1/4, 3/8
- 3 Diamond Point Chisels 1/8, 1/4, 3/8
- 1 Set Drive Pin Punches (All Sizes)
- 2 Center Punches
- 2 True Temper Ripper Hammers (Bell Face-St. Claws)

- 3 True Temper Ball Pein Hammers (Different sizes)
- 4 Lead Hammers
- 2 Flint Edge Double Bit Axes
- 1 Disston Pruning Saw 24" Blade
- 1 26" Hand Saw-Crosscut
- 1 26" Hand Saw-Rip
- 1 Simonds One Man Crosscut Saw No. 111 4½'
- 2 Crescent Hacksaw Frames No. 1047
- 12-10" High Speed Tungsten Hacksaw Blades
- 4 Norton Crystolen Scythestones 12" No. TJ4
- 2 Mill Files Single Cut Flat 6"
- 2 Mill Files Single Cut Flat 8"
- 2 Mill Files Single Cut Flat 12"
- 2 Mill Files Single Cut Flat 14"
- Flat Files Double Cut Same Amount as above
- Round Files Same Amount as Above
- Half Round Files Same Amount as Above
- Handles For Above Files
- 1 1/2" Sq. Drive 12 point-socket Wrench Set
Note: Check On No. 1001 Williams Superchest Socket Wrench & Wrench Set
- 2 Crescent Adjustable Wrenches in the following Sizes 4,6,8,10,12 & 18 inches
- Ridgid Straight Pattern Pipe Wrenches 1-6"; 1-8"; 1-10"; 1-12"; 1-14"; 1-18";
2-24"; 1-36"
- 1 12" or 14" Monkey Wrench
- 2 Vise-Grip Wrenches 1-7" & 1-10"
- 2 Round Point-Solid Shank-Contractors' Weight Shovels
- 1 Square Point-Solid Shank-Contractors' Weight Shovels

1 Post Hole Digger

1 Round Point Telegraph (Digging) Bar

1-5/8 x 18"; 1 3/4 x 24" Wrecking Bars

2 5' Pinch Bars

1 Railroad or Clay Pick

1 Mattock

1 No. 10 True Temper Brush Hook

2 Scythe Blades (1-light weight weed) (1-Lightweight brush)

2 Snaths

1 12 lb. Cross Pein Sledge

1 14 lb. Cross Pein Sledge

6 Chains. 1/4 3/8 1/2 9/16" Different lengths

1 Snatch Block 10" Dia. Pulley

1 1 1/2 to 2-Ton Capacity Coffin Hoist-Chain

2 22" Track Jack-15 Ton

1 1 1/2 Ton Hydraulic Jack

2 Set of Tubing Tongs (2" Pipe)

1 Set of Tubing Tongs (2" Collar-Backup)

2 2" Tubing Elevators

2 5/8" Rod Elevators

2 5/8" Rod Wrenches

1 Neilson Socket (Fishing)

1 Set Rod Jars

1 2" Pipe Driving Head

1 24' Single Ladder (Wood)

1 3' Mechanics' step ladder

2 Putty Knives

2 Paint or Wall Scrapers

1 Set 3 x 2 Rope Blocks

1 GE AC Volt Ammeter GE AK-4

1 3/8" Hvy. Duty Portable Electric Drill

1 1/2" Hvy. Duty Portable Electric Drill

1 3/4" Hvy. Duty Portable Electric Saw

1 6"-8" Hvy. Duty Ball Bearing D.E. Bench Electric Grinder

1 15"-20" Floor or Bench Type Drill Press

1 Two Stage Air Compressor with Tank, Hoses, & Blow Guns

1 Purox Welding & Cutting Outfit (Complete with Accessories)

1 Lincoln Portable 300 Amp Welder (Complete with Accessories)

1 Chain Saw

PENNSYLVANIA OIL AND GAS ASSOCIATION

DRAWER D • 27 WEST WARREN ROAD, CUSTER CITY, PENNSYLVANIA 16725

February 20, 1976

Bradford Area School District
50 Congress Street
Bradford, PA 16701

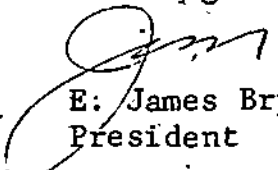

ATTN: Mr. Frederick Shuey, Superintendent

Dear Fred,

This is to advise that our Association represents over 500 companies engaged in the production of oil and gas within the Commonwealth. These companies employ some 6,000 people most of whom are actively engaged in field production activities. There is an ever increasing need for trained production workers, and the Bradford Area Board of Education, as well as the University of Pittsburgh at Bradford, are to be commended for recognizing this need.

The educational opportunities proposed in your Vocational Petroleum Course will fill a long needed requirement in our industry. We offer the assistance of our monthly newsletter in appraising our companies of your trained young people as they complete their course of education.

Best regards,

E. James Bryner
President

 Bradford, Pennsylvania 16701

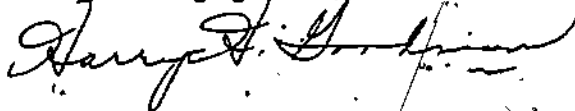

Dear Mr. Crumrine:

We wish to congratulate you on your tentative vocational program being set up for oil field workers. This is indeed something new to the area, and should be welcomed by all contractors in the Pennsylvania oil fields.

Due to the fact that it is almost an impossibility to hire personnel trained in this field, we would be willing to hire graduates from your vocational training program.

If we can be of further assistance, please get in touch with us.

Very truly yours,

Harry H. Goodman
 President

Dear Mr. Stark:

I have been advised that you are initiating an oil country education course in the local senior high school.

This type of program carries my endorsement in that I feel we have a dire need for teaching the high school students the elementary and advanced knowledge available concerning oil country operations.

For some time now we have had a shortage of manpower to follow the oil producing industry because of many reasons. Any way to alleviate this shortage of potential labor in the future by early high school training I again endorse and encourage.

Very truly yours,

Richard B. Herzog

Bradford, Pennsylvania 16701

Attention: Mr. Myron Crumrine

Gentlemen:

It has been brought to our attention thru a Bradford oil field supplier that, hopefully, in the near future, vocational training in oil field service will be offered by your school system.

Being of the younger generation myself, I want to commend you for considering this program for young people in and about the Pennsylvania oil fields.

Since it is almost impossible to hire personnel fully trained in this field, we are willing to hire graduates of your vocational training course. I am sure this will prove educational to all concerned.

If further information is needed, please contact me at the above address.

Very truly yours,

PENN FLO OIL COMPANY

Dear Sir:

We have heard that the vocational department of B.A.H.S. is planning to offer a course in skills applicable in the area oil fields. We wish to indicate support for this venture because we feel that there is a need for training in this field, particularly among the younger generation.

We will give you whatever assistance we can.

Yours truly,

SIGNED

Bradford, Pa. 16701

Attn: F. O. Stark, Jr.

Gentlemen:

This letter is written in support of the concept of a vocational training program directed toward supplying a potential labor force for the Bradford Oil Field. We, as small independent producers, especially, see the drastic need because we are not large enough to train young people ourselves. As a result, we, as many independents, see the average age of our employees reaching the upper 50 and 60 year brackets.

Our only source of experienced personnel has been other independent oil producers. As some of their properties have been shut down or abandoned, these personnel have become available for work elsewhere.

In addition, as we look toward tertiary recovery in the Bradford Oil Field, the need for this type of vocational training becomes even more apparent.

Sincerely,

S. H. ELDER & CO.

Attention: Mr. Myron Crumrine

Gentlemen:

I have just learned thru my employer that a vocational training school is being considered for students interested in oil field work.

Having worked with young people in many different phases over the years, we would like to offer our services by agreeing to hire students graduating from the School.

I am sure that a training school in Bradford will be quite an asset to not only the local oil fields, but all over the State of Pennsylvania as well.

Very truly yours,

March 5, 1976

Mr. Frealyn O. Stark
Bradford Area High School
Interstate Parkway
Bradford, Pa. 16701

Dear Mr. Stark:

In reply to your recent telephone request I have enclosed a photo copy of our job categories for Pennzoil Company's Bradford District, effective through December 31, 1975. You mentioned you were particularly interested in the breakdown of classifications pertaining especially to our field or hourly group, such as pumpers and roustabouts. I trust this will give you the information that you require by classifications.

Your Petroleum Production Course which you are initiating should be beneficial to the area oil companies as this will allow them to employ youths that have a background or some knowledge of petroleum production. The addition of this course is an excellent effort by the Bradford Area High School.

I am sure that Pennzoil Company and its operating managers would be interested in a progress report on the course after a reasonable length of time. Please keep us informed regarding the course. If I can be of any further service, please contact me.

Very truly yours,

R. S. Fuller

Attention: Mr. Myron Crumrine

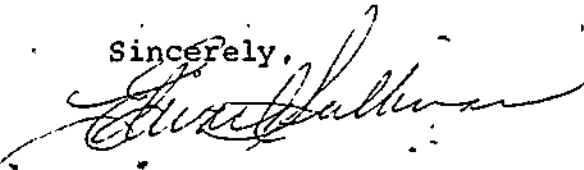

Dear Mr. Crumrine:

We were very pleased to hear from one of your local oil field suppliers of the vocational training program for oil field workers being set up as a part of your school system. I am sure this will be most beneficial to the young people who are willing to do this much needed type of labor, especially in and about the Pennsylvania oil fields.

We are always willing to hire competent people for our crews and, with this new program, will always be insured of good workers.

May I advise you, at this time, that we would be willing to take part in this program by hiring some of your more qualified graduates to work on our leases.

Sincerely,

Edward Sullivan

Dear Sir:

We have just learned thru one of your Bradford oil field suppliers that you will soon be offering a vocational training program to train young people for work in and around the Pennsylvania oil fields.

We would be definitely interested in hiring graduates of the school as apprentices whereas they would eventually become more familiar with oil and gas field work.

After the school has been established, kindly give me a call - I am sure we can all be of help.

Very truly yours,

Forestry Building
Toad Hollow
Bradford, Pa.

Contacted Byron Rhodes at the Forestry Department in Warren, Pa. and Donald Burge at the Klondike Ranger's Office. Donald Burge, District Forest Ranger, stated on February 13, 1976 that the buildings and land would be for sale but possibly not for approximately 1 year. He is going to investigate this matter further as to possible use of one building by next fall, selling price, or what arrangements might be worked out. There is city water and sewage in the buildings. Fuel oil was used for heat. These buildings are located near the bus garage which would minimize transportation problems.

Donald Burge was contacted at a later date and stated that he did not know when or if buildings would be on the market.

New Construction

A Sharon Steel Building located at the West Penn Lumber Co. in Lewis Run, Pa. was examined and a Mr. Clyde Keech, the Sharon Building dealer from Kersey, Pa. was contacted. Mr. Keech came to Bradford and gave us an estimate on a 40' x 70' Sharon Steel Building erected on a 6" cement slab.

14' Side Walls
2 Walk in doors
2 Walk in panic doors
5-5' x 4' windows -
1-12' x 14' Overhead door
R-200 insulation

Total Package Price \$20,395.00

Some construction policies were not suitable and land would have to be secured for a building site. No wiring, plumbing or heating system included in price.

Swartz Property-Oil Lease
East Warren Road, Custer City, Pa.
Approximate-10 acres
Surface and Mineral rights
5 Producing wells
2 very small tin buildings, suitable for nothing but storage

Asking price \$60,000.00

Very poor condition-about 1/2 with pony beam jacks-the rest with nothing.
No central pumping power.

Edward Lemage Property-Oil Lease

Custer City, Pa.

17A-Surface and sub surface

14 Producing oil wells

(3 wells equipped with pony beam jacks and connected to a central pumping power. 6 wells had been equipped with electric jacks but jacks have been sold.)

Mineral rights are in fee but if sold Mr. Lemage will retain a 1/8 royalty and he quoted a purchase price of approximately \$30,000.00

No pulling or well servicing equipment

No buildings except for power house

"Mickey" Edmonds Oil Property

Willard Avenue Ext.

Bradford, Pa.

25A.-Mineral Rights 1/8 Roy. 7/8 Working Int.

3.5 Surface (Warrant 3906-7.45A + 60' x 200' Lot)

11 Producing wells

4 Water injection wells

4 electric Jacks

1 Central pumping power

1 Cleatrac Bulldozer

1 Pulling Pole

1 Keystone spudder (truck mounted)

1-36' x 40' Butler Building

1440 Sq. Ft. Area /

Steel Building

14' Sidewalls

Cement Floor

12' x 14' Overhead Door

Insulated

Gas Heat

220V-3PH. Wiring

Well Water

City Sewage

Purchase Price-\$40,000.00

Rental of oil lease--\$8,750.00/yr \$729.16/mo.

Rental of equipment--\$4,585.00/yr \$382.08/mo.

Due to the location of this property, the actual working lease involving a hands on training facility, the Butler Building, and many other advantages this property was further investigated and recommended to the school district.

OIL PRODUCTION
INTRODUCTORY COURSE
STUDENT EVALUATION QUESTIONNAIRE

Please respond to the following questions by checking a numerical rating (1 low 5 high) to the questions in the blank space which is provided.

1. To what extent has this course increased your knowledge of the petroleum industry?

1. _____ Low 2. _____ 3. _____ 4. _____ 5. _____

2. To what degree has participation in this course influenced your interest in a career in the petroleum industry.

1. _____ Low 2. _____ 3. _____ 4. _____ 5. _____ High.

3. To what degree has participation in this course increased your knowledge of careers in the petroleum industry and related areas of employment.

1. _____ Low 2. _____ 3. _____ 4. _____ 5. _____ High.

4. When applicable to what degree were safety procedures and practices emphasized and applied.

1. _____⁰ Low 2. _____ 3. _____ 4. _____ 5. _____ High.

5. To what extent would you recommend this course to other students who have not had the opportunity to enroll in it.

1. _____ Low 2. _____ 3. _____ 4. _____ 5. _____ High.

Please respond in your own words to the following questions.

1. Was the field trip beneficial to your understanding of the petroleum industry?

2. Are you interested in taking the full year course which will be offered next school year?

3. What was the most interesting portion of this course?

4. What was the least interesting part of the course? _____

5. Please indicate what you would like to see included or deleted from this course if it is offered again. _____

6. In the year long course what area should be emphasized the most.

- ____(a) technical lectures
- ____(b) shop repair techniques
- ____(c) field production techniques
- ____(d) related skill areas

(Please number 1 through 4 in degree of importance to a year long course)

MICROCOPY RESOLUTION TEST CHART

NATIONAL BUREAU OF STANDARDS-1963-A

ACCESSION NUMBER: VT103584

TITLE: PLANNING PROCESS MANUAL FOR VOCATIONAL EDUCATION: UTILIZING THE
MANPOWER MANAGEMENT INFORMATION SYSTEM. EXPERIMENTAL EDITION, 1975.

DESCRIPTOR: *EDUCATIONAL PLANNING; MANUALS; VOCATIONAL EDUCATION; SCIENCE
EDUCATION; *MANAGEMENT INFORMATION SYSTEMS; *SCHOOL INDUSTRY RELATIONSHIP;
SURVEYS; EMPLOYMENT OPPORTUNITIES; CAREER PLANNING; *STUDENT NEEDS; VOCATIONAL
INTERESTS; *NEEDS ASSESSMENT; *RELEVANCE (EDUCATION); SECONDARY EDUCATION;
ARTICULATION (PROGRAM)

IDENTIFIER: VENTURA COUNTY; CALIFORNIA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 102P.

ABSTRACT: THE MANUAL WAS DESIGNED TO BE USED BY VOCATIONAL PROGRAM PLANNERS
IN DEVELOPING VOCATIONAL COURSES/PROGRAMS IN OCCUPATIONAL AREAS GEARED TO LOCAL
INDUSTRY NEEDS. TO BUILD METHODOLOGY FOR PLANNED CHANGE INTO A VOCATIONAL
SYSTEM REQUIRES A DATA COLLECTION AND ANALYSIS SYSTEM, INCLUDING COOPERATION
WITH INDUSTRY AND AMONG THE VARIOUS VOCATIONAL AND TECHNICAL SCHOOLS TO
COORDINATE RELEVANT JOB REQUIREMENTS AND NEEDS WITH STUDENT CAREER PLANNING.
THE MANUAL PRESENTS A PLANNING PROCESS FOR VOCATIONAL EDUCATION, USING SOME OF
THE ELEMENTS OF THE MANPOWER MANAGEMENT INFORMATION SYSTEM TO ARRANGE DATA FROM
A VARIETY OF SOURCES TO MATCH STUDENT INTERESTS, PROGRAM ENROLLMENTS, AND
OCCUPATIONAL TRENDS. JOB TITLES FELT APPLICABLE TO A SCIENCE EDUCATION PROGRAM
WERE IDENTIFIED FROM THE DICTIONARY OF OCCUPATIONAL TITLES. LOCAL INDUSTRIES
WERE SURVEYED AS TO THE LABOR MARKET FOR THE JOB TITLES, AND A STUDENT NEEDS
ASSESSMENT WAS MADE TO DETERMINE PARENTAL INFLUENCES, GEOGRAPHIC MOBILITY,
COMMUNITY PREFERENCES, AND STUDENT INTEREST IN CAREER PLANNING. OTHER SECTIONS
OF THE REPORT TOUCH ON ADVISORY COMMITTEES, EDUCATIONAL ACCOUNTABILITY, STUDENT
FOLLOWUP, AND PROGRAM ARTICULATION. INCORPORATED IN THE DOCUMENT ARE THE
QUESTIONNAIRES AND OTHER FORMS USED IN THE STUDY. (MF)

PREFACE

During the school year 1971-72, the State Department of Education, the Ventura County Superintendent of Schools Office, the Ventura County Community College District and the California Employment Development Department (EDD) initiated a research project. This project, now in its fourth year, is commonly known as the "Manpower Management Information System" (MMIS). The initial phase of the project's research activities dealt with identifying occupational needs or "demands" at a local level. This project has since been expanded to include the designing, implementing and evaluating of a comprehensive system to match occupational demand with the potential occupational supply now enrolled in vocational education training programs.

Continuing with this expansion, application was made to the State Department of Education for assistance from funds available through the Vocational Education Amendments of 1968, Part "D" Exemplary. The Project funding was awarded in July of 1974, through the Simi Valley Unified School District.

The purpose of this project is to develop the means and methods of constructing a comprehensive vocational program geared in a specific area of occupational training to documented local industrial needs. Inherent in this purpose is a commitment to give birth to an

implementable, transportable methodology and procedure that can be used in both public and private schools at the secondary and community college level. The final ingredient is to develop a good working relationship among local school districts, community college districts, county educational facilities and industrial resources.

The project in its final form can then be utilized as a working model to expand the vocational thrust toward which education is currently committed.

The freedom to express professional judgment in the developmental process was encouraged. Points of view or opinions do not, therefore, necessarily represent official State Department of Education position or policy.

USE OF THE PLANNING PROCESS MANUAL

THIS MANUAL IS DESIGNED FOR USE BY VOCATIONAL PROGRAM PLANNERS FOR INITIATING AND DEVELOPING COURSES/PROGRAMS AT THE SECONDARY LEVEL. ALTHOUGH INTENDED TO USE IN TOTO AS A STEP-BY-STEP PROCEDURE FOR BEGINNING A NEW PROGRAM, IT HAS BEEN ORGANIZED SO THAT IT MAY BE REFERENCED FOR A SPECIFIC FUNCTION.

It is acknowledged that for a variety of reasons it may not be necessary to refer to the entire manual. For someone with a functioning program, for instance, a new means of enrolling students might be sought. In this case the "Student Needs Assessment (CPI)" section can be singularly referenced.

INTRODUCTION

Those entrusted with the creation of a vocational education program must remember to treat vocational education as a process. The process requires careful planning, thus a Planning Process Manual.

This Manual is presented in a step-by-step format, with examples, utilizing a number of the elements of the Manpower Management Information System. The Manpower Management Information System (MMIS) provides the ability to utilize data collected from a variety of sources to match student interests, program enrollments and occupational trends. It also has produced a series of information display forms designed to correlate the various data into a viable information dissemination system.

The demand for relevant education has intensified the need for career preparation that matches a variety of student needs. A student career assessment tool is a component of the MMIS that assesses the student's interests, aptitudes, skills, etc., either structurally or directly. This will allow for correlation between the potential worker's "needs" and the labor market's requirements.

One of the greatest concerns of young people today is to find work that is meaningful -- jobs that can give them a sense of purpose. Parents, educators and the public are concerned that schools offer

young people the practical and relevant education that will prepare them for work in which they can find that fulfillment.

Vocational Education is by definition education for employment, and the 1963 and 1968 vocational education legislation indicate that such training must be "realistic in the light of actual or anticipated opportunities for gainful employment".

Establishing a new program of vocational education is one of the most speculative ventures in which educators can become engaged. Nevertheless, in an era of change and development of new industrial techniques and occupations, administrators of vocational programs must be on the alert to provide programs which will prepare young people for job and career opportunities.

There are a number of ways that controlled, guided, or planned change may be built into a vocational system. First of all, and critical to the entire process, is the necessity for a data collection and analysis system which allows for information analysis pertinent to the appropriate internal and external guidance of the system. Without such information, planning becomes an intuitive process, which may or may not be related to the needs of the real world. A part of this data collection and analysis system would be the development of close administrative ties with informed agencies and individuals in the relevant planning area.

All of education must become more conscious of business and

industrial needs, and vocational education, especially, must strengthen its cooperative linkage with the employing community. Cooperation between industry and education is usually recognized as essential in establishing new vocational and technical education programs. Generally, industry people would like to have the school assume the burdens of recruiting and training potential new employees. They would like the prestige which comes to their industry and organization as a result of the offering of their program by the schools, and they welcome the opportunity to engage in an educational activity which satisfies their sense of civic duty and pride in public service.

Unfortunately, employers do not always clearly understand the problems of the educational institution, and vice versa. Here the educators have to take initiative to clarify and resolve difficulties of communication, rapport, and cooperation. For instance, employers may not develop definitive manpower policies, nor feel any commitment to employ graduates of the school occupational programs, despite the fact that they may have helped establish the programs.

Crucial to the development of effective industry-education cooperation is the need for organized cooperative relationships among the advisory committees of the various types of vocational and technical schools within the boundaries of a given school system or metropolitan labor market area. It appears to be the rule rather than the exception for school systems to develop and offer occupational

education programs without reference or regard to what is offered in the neighboring school systems. Yet, each of the programs is attempting to meet industry's needs within a particular metropolitan area.

There is also the need for articulating the occupational program both horizontally and vertically among the secondary schools, the area vocational schools (ROP/ROC), the technical institutes, and the community colleges. Perhaps even more important, there is the need for developing some formalized relationships between local school system advisory committees, whether established voluntarily or by state mandate, and the state advisory councils established in accordance with provisions of the Vocational Education Act of 1968.

Program success will, to a great extent, be dependent on favorable attitudes and support of the faculty, the administration, the governing board, the students, the parents, labor, management, and the community at large. The continued development of the total Manpower Management Information System should help produce an effective and efficient planning tool which can be utilized for assisting students in determining relevant career choices and curriculum content for occupational preparation programs.

BACKGROUND

This Planning Process Manual reflects the development of an IDEA from its inception to a finished product. A new or modified program in vocational education must begin somewhere. . . with something . . . or someone. An idea, by definition, is a mental image, intention, plan, belief, opinion, thought, visual perception, or vague impression. One of the definitions should provide a stimulus for further investigation, as it was for us. The examples included on the BLUE PAPER in this manual are the project staff's (Mickie Potter and Wayne Hollins) experiences in using the data available from the Manpower Management Information System. The examples are in the first person plural.

Two remarks describe the uniqueness of our particular project: 1) we conducted a "field test" of the Manpower Management Information System (MMIS), utilizing data which previously was not available for a comprehensive program planning exercise, and, 2) the intention of the program is not to offer a "survey" course, but one to educate students for employment in a science related occupation upon graduation from high school.

The project began with a search of the MMIS data available to us through the Ventura County Superintendent of Schools Office. This included the Industry-Occupation Matrix, the Career Planning Inventory,

and other documents relating to manpower planning. From this activity it was decided that it would be necessary to develop a list of relevant job titles. Utilizing the D. O. T. we identified, by inspection, job titles that we felt would be most applicable to the science related program. Once the list was compiled, we undertook a verification survey by contacting appropriate industries.

An area not to be overlooked in planning a new program in vocational education is the consideration of student needs. The examples illustrated in the Planning Process Manual are taken from the Career Planning Inventory (CPI) which is given to every ninth through twelfth grade student in Ventura County. Due to the versatility of computer programming, it was possible to identify students with specific needs. The C. P. I. is available from the Ventura County Superintendent of Schools Office and has been utilized in other areas of the State.

Upon completion of the initial data search, we selected the occupational title, MEDICAL-LABORATORY ASSISTANT. This occupation seemed to be most encompassing of the type of training program that will meet the needs of our students and the employing community. It will be used as the specific example throughout this Manual.

In order to relate the occupational title selected to the planning process, the following excerpts from the 1974-75 Occupational Outlook Handbook are included for your information:

MEDICAL LABORATORY ASSISTANT

Medical Laboratory Assistants . . . generally have a year or less of formal training. . . assist medical technologists in routine tests and related work that can be learned in a relatively short time. . . may store and label plasma; clean and sterilize laboratory equipment, glassware, and instruments; prepare solutions following standard laboratory formulas and procedures; keep records of tests; and identify specimens.

Most medical laboratory assistants employed in 1972 were trained on the job. In recent years, however, an increasing number have studied in one-year training programs conducted by hospitals, junior colleges in cooperation with hospitals, or vocational schools. Hospitals offer the greatest number of training programs.

Applicants should be high school graduates with courses in science and mathematics. The programs include classroom instruction and practical training in the laboratory. They often begin with general orientation to the clinical laboratory followed by courses in bacteriology, serology, parasitology, hematology, clinical chemistry, blood banking, and urinalysis.

Accuracy, dependability, and the ability to work under pressure are important personal characteristics for a medical laboratory worker. Manual dexterity and accurate color vision are highly desirable.

Employment of medical laboratory workers is expected to expand moderately through the mid-1980's, as physicians make wider use of laboratory tests in routine physical checkups and in the diagnosis and treatment of disease. Indirectly influencing growth in the field are population growth, rising standards of living, greater health consciousness, and expansion of prepayment programs for medical care that make it easier for people to pay for services.

While employment of laboratory personnel in general is expected to expand moderately, the use of automated laboratory test equipment may lead to a greater growth of medical laboratory technicians and assistants relative to technologists. Through technological advances, technicians and assistants can operate equipment to perform tests which previously required the skill of a technologist.

Beginning salaries for laboratory assistants averaged about \$6,200 annually. The Federal Government paid medical laboratory assistants and technicians starting salaries ranging from \$4,798 to \$6,128 a year in early 1973, depending on the amount and type of education and experience.

MANPOWER PROJECTIONS

The State Department of Education and the Board of Chancellors require local districts to prepare and submit an Annual Plan for Vocational Education. Part II of this plan details the local district's objectives and activities for fulfilling the requirements of a Twelve Function Vocational Education Delivery System. However, certain of these functions are difficult to fulfill because there is no satisfactory methodology to utilize.

A variety of estimating techniques is currently employed by practitioners in projecting manpower demand. There is apparently no consensus as to which yields the best series of demand projections. All methods are based on existing knowledge of demographic and economic data for a given area. A combination or mix of these methods and the necessary judgment to analyze the data makes projecting primarily an art, not a science.

There are four basic techniques in manpower projections: employers survey, extrapolations of historic trends, industry/occupation matrices, and input/output tables. Two of these techniques were used in this project: the industry/occupation matrices and the survey of employers.

In all projection techniques, assumptions or corrections must be made for occupational employment needs resulting from employment

opportunities created by death, retirement, layoff, promotions, and technological advances.

A California Manpower Management Information System (MMIS) is being designed to assist the local Vocational Education practitioner to fulfill many of the management responsibilities inherent to the Twelve Function Delivery System. While the management information system is ancillary to the Twelve Function Vocational Education Delivery System, it is specifically designed to provide the Vocational Education practitioner with a logical and systematic methodology to accommodate, organize, and utilize the continuous demand for input/output data.

Developing a capability for generating and projecting industrial and occupational data for a prescribed geographical area, such as a Standard Metropolitan Statistical Area, was a major element of the original Manpower Projection Model Project. The beginning efforts were devoted to the production of an "Early Warning" Industry-Occupational Matrix. This was developed by a linkage of local historical employment data to national manpower projections. The fundamental assumption of the Phase I localized Industry-Occupational Matrix was that local occupational distributions within industry divisions tend to be comparable to the national industry-occupational structure. The second assumption was that such distributions remained relatively stable over the short-term periods for which the projections were made.

Based on these assumptions, the occupational coefficients were computed for industries from census and other data. Standard Metropolitan Statistical Area trends and anticipated movements within industries were then projected.

With the availability of the 1970 census data for SMSA's, it was possible to apply the procedures and methodology provided by the U. S. Bureau of Labor Statistics to local data. The data here has been adjusted to the census classification structure, and a computer program and processing has been developed and completed for thirteen SMSA's in the State by the California Department of Employment Development.

As a result, one component of the California Manpower Management Information System is now operational. This component is a tool for the practitioner to utilize when seeking to identify Labor Market Needs (Function 1). The heart of the component is the Industry-Occupational Matrix (I-O). The data contained in the matrix are very useful for a variety of purposes, but they do require careful interpretation.

Additional information on the I-O Matrix is available through the Employment Data and Research Section, Employment Development Department, either the Los Angeles or San Francisco office.

EXAMPLE

The development of vocational education programs rests on the premise that an identified need exists. This need has been demonstrated by a reliable and accurate data collection system. We went to a variety of data services, the first of these being the Manpower Projections. We used three: those for our local county (Ventura), for the State of California, and since our geographical location is right on the border of Los Angeles County where a great number of people in our area work, we added the Los Angeles County data. When the Employment Development Department prepares Industry-Occupation Matrices, it is necessary to utilize Bureau of Census occupational titles. Because of the occupations related to the health field, we found the listing to be quite general. The titles were, for example, health aides, health trainees, laboratory technicians (non-medical), medical help (non-nursing).

The MMIS data sources did support a projected demand for workers in these occupations, particularly in the technical field associated with allied health.

The data we surveyed represented a combination of the industry change and replacement needs for the years 1972 through 1975. The following is an example;

		PROJECTED TOTAL NEEDS FOR 3 YEAR PERIOD 1972 - 75		
Line #	Job Description	Ven Co	LA Co	Calif.
50	Other Health Technologists	41	677	1723
57	Technologist, except Health	16	217	3800
392	Health Aide, except Nursing	71	2972	5300
393	Health Trainees	15	201	369
395	Nurses Aides/Orderlies	507	8659	20450

This same procedure can be used in seeking manpower needs for other areas of employment.

To clarify what occupations are within the Occupational Groupings it was necessary to utilize the Classified Index of Industries and Occupations (see Reference #4). This publication lists detailed job titles that, in most cases, can be related to specific D. O. T. job titles.

These projections are also available for other Standard Metropolitan Statistical Areas in California.

JOB PERFORMANCE REQUIREMENTS

Dictionary of Occupational Titles Search

Volume I of the D. O. T. is very useful to the program planner in determining specific and unique relationships within and between numerous occupations. The volume identifies and describes occupations which possess similar occupational, industrial, and worker characteristics. Volume II is most beneficial for grouping specific occupational areas.

Development of specific programs is most profitable when it is accomplished within the framework of their relationships to the entire spectrum of the world of work. This type of relationship is illustrated for the specific job of MEDICAL-LABORATORY ASSISTANT.

Code Structure of the D. O. T.

The major job groupings in Volume II of the Dictionary of Occupational Titles are related to the occupational code numbers assigned to jobs in the Dictionary as given in Volume I. Each digit value in an assigned code has important occupational meaning. It is helpful to be able to understand the code structure of the Dictionary.

First Three Digits

An occupational code has six digits separated by a period, such as: 078.381. The first three digits of the code to the left of the period specify the area of technology for each job. These areas of technology are expressed in three levels or degrees of specificity which correspond to the three digit positions of the code. The levels are called:

Occupational Categories (first code digit)

Occupational Divisions (second code digit)

Occupational Groups (third code digit)

Within these levels are technological titles for the organization of all jobs in the world of work. There is also a code numbering system which provides a structure for the organization. (See Volume II, p. 1-24, for a complete outline of the Categories, Divisions, and Groups with the numbering system.) The application of the Occupational Categories, Divisions, and Groups to an occupational code can be outlined as follows:

First three digits express the area of technology of any given job.

Nine broad Categories expressed by digits 0-1 through 9 in the first position.

Eighty-three intermediate two-digit Divisions broken down from the nine Categories by the addition of a number from 0-9 in the second position.

Six hundred and three specific three-digit Groups broken down from the Divisions by the addition of a number from 0-9 in the third position.

In the example above the broad Occupational Category (first digit) is specified as 0 for "Professional-Technical Occupations". A further breakdown into an Occupational Division is expressed by the addition of another number in the second position. In this case it is 7 making the two digit Division of 07 for "Occupations in Medicine and Health". The third digit is 8 indicating that the full Occupational Group for this job is 078 for "Medical and Dental Technology". This illustrates the progression from a broad Occupational Category through an intermediate Division to a specific Occupational Group.

The assignment of the first three digits of an occupational code to any given job is made regardless of the "skill level" or complexity of that job, so long as the work itself falls within the specified area of

technology. This means that in any given Occupational Group there may be many different levels of jobs from supervisors down to laborers.

Last Three Digits

The meaning of the numbers in the last three digits of an occupational code is quite different from that of the first three. The last three digits of a code express the total activity requirements of the job-worker situation, or, in other words, they describe "what the worker does". This is sometimes termed Worker Function. This expression is made in terms of three primary factors: DATA, PEOPLE, and THINGS. All job-worker situations involve a relationship to DATA, PEOPLE, and THINGS to some degree. A hierarchy of numbered levels has been devised to express the varying degrees of relationship which a worker may have with DATA, PEOPLE, and THINGS in his work activities. (See Volume II, Appendix A, p. 649-650, for an outline of the structure and for definitions of the DATA, PEOPLE, THINGS hierarchies.)

The last three digits of an occupational code correspond to DATA, PEOPLE, and THINGS as follows-

JOB TITLE:
MEDICAL LABORATORY
ASSISTANT

Last three digits express
what the worker does in
relation to DATA,
PEOPLE, and THINGS.

In the above example the numbers indicate that the worker's relationship to DATA is at hierarchy level 3 for "compiling", the relationship to PEOPLE is at level 8 which is described as "No Significant Relationship", and the relationship to THINGS is at level 1 for "Precision Working". (See Volume II, Appendix A, for full definition of the worker's functional activities in this particular job.)

The worker's activities involve compiling data and performing precision work with things and objects. Contacts with people are not important, or are incidental, to the performance of the work. It should be noted that in the Dictionary only those relationships which are occupationally significant in terms of the requirements of the job are reflected in the code numbers. The incidental relationships which every worker has to DATA, PEOPLE, and THINGS, but which do not seriously affect successful performance of the essential duties of the job, are not reflected.

The assignment of the last three digits of an occupational code to any given job is made regardless of the area of technology involved.

The functional code in the previous example of .381 may apply to many jobs in many different areas of technology besides the Occupational Group 078, so long as it correctly indicates "what the worker does" in the various Occupational Groups.

It is in the combination of the first three with the last three digits of the occupational code that the full occupational meaning can be realized, the last three digits expressing "what the worker does" and the first three digits specifying in what area of technology the work is being done. The resulting combination provides a "thumbnail sketch" of the job itself.

Inference of Complexity in Last Three Digits

Since the DATA-PEOPLE-THINGS hierarchy levels are arranged in an ascending scale of functional complexity as the number values get lower, the resulting combinations of numbers for the last three digits carry with them the implication of complexity of "skill level". For example, it might be inferred that a job having the last three digits of .381 is of a "higher skill level" than a job coded .685. This type of inference may be useful in comparing different jobs, especially if they are in the same Occupational Group, so long as it is kept firmly in mind that the DATA-PEOPLE-THINGS levels are descriptive concepts rather than quantitative measures, and as such do not always represent the fullest expression of job complexity.

Worker Traits

The concepts of Worker Traits and the system of grouping jobs into families according to universal worker trait requirements are among the most important ideas in the Dictionary of Occupational Titles. They permit jobs and groups of jobs to be viewed and dealt with in terms of the critical requirements which will be made upon the workers themselves.

Worker Traits are comprised of six individual concepts or components as follows:

- I. Training time: the amount of (1) General Education Development or G. E. D. (six levels) and (2) Specific Vocational Preparation, S. V. P., (nine levels) required for a worker to acquire the knowledge and abilities necessary for average performance in a particular job.
- II. Aptitudes: the specific capacities and abilities required of an individual in order to learn and perform adequately a task or job duty. (eleven factors)
- III. Interests: preferences for certain types of work activities or experiences, with possible rejection of contrary types of activities or experiences. (ten bi-polar factors)
- IV. Temperaments: different types of occupational situations to which workers may have to adjust in terms of personality characteristics, (twelve factors)

V. Physical demands: the important physical activities required of a worker on the job. (six multiple factors)

VI. Working conditions: the physical surroundings imposed by a specific job which will markedly affect the worker. (seven multiple factors)

It should be kept in mind that worker traits are primarily job requirements. They are inherent in job duties and are not, strictly speaking, personality factors which people possess. They are, however, those requirements of jobs which will have potential effect upon some aspects of the worker's present capability or intrinsic nature, and as such they are expressed in "people terms". As a result, it is easier to evaluate human individuals in terms of the Worker Trait requirements of jobs. The important questions become: How does the student match up to such job requirements as --

--the amount of educational achievement needed as background for performing the work?

--the amount of specific skill training necessary to become proficient in the job?

--the aptitudes that appear to be required in order to learn and perform the job?

--the task-interest patterns that are reflected in the job duties?

--the work situations that may make demands on personality?

--the physical activities of performing the work?

--the working conditions imposed by the job?

The basic use of the Worker Trait group in career development is as a means of comparison between the student's own traits with the trait requirements of the work toward which he/she seems inclined.

Training Time Information

What educational development must a student have in order to perform a given job? How long does it take to train a student in the specific knowledge and skills required by a job?

These are essential questions in Vocational Education Planning. The answers are important for the effective and realistic planning of pre-vocational and vocational programs.

The importance of training time as a characteristic of jobs has long been recognized in the United States Employment Service. The job analysis method and concepts used to obtain information for the Dictionary of Occupational Titles identified two types of training experience which are required for successful job performance. The first is related to basic educational development as expressed in general reasoning ability and the use of mathematics and language skills. The second type of training involves the acquisition of specific job knowledge and specific performance skills. These two types of training are called: (1) General Educational Development, (GED), and, (2) Specific Vocational Preparation, (SVP).

These job-requirements concepts, along with others, called aptitudes, interests, temperaments, physical demands, and working conditions, are known as Worker Traits and are the basis of the Worker Traits arrangement in Volume II of the D. O. T.

Ratings which indicate the amount of General Educational

Development and Specific Vocational Preparation typically required to perform any job defined in the Dictionary of Occupational Titles have been published in two supplementary volumes. The first is entitled Selected Characteristics of Occupations, A Supplement to the Dictionary of Occupational Titles. Jobs, with their GED and SVP ratings, are arranged in this volume in numerical order according to the six digit occupational code numbers which are assigned to all jobs in the Dictionary. A second volume, entitled Selected Characteristics of Occupations by Worker Traits and Physical Strength, Supplement to the Dictionary of Occupational Titles, contains the same information but presents the job and ratings arranged first into Worker Trait groups as found in the Worker Traits arrangement, and secondly according to the degrees of strength required to perform the jobs.

These ratings can serve as a valuable guide both in planning and in evaluating various aspects of vocational programs. They enable the planner to have some foreknowledge of the training requirements that individual jobs make upon potential workers.

The data are particularly relevant because of the method by which the ratings were obtained. Rather than by a statistical approach in which, for example, employers, unions, or professional associations were canvassed regarding their training time standards, the sole basis for determining the ratings was a job analysis of the duties performed. This analysis was made independently of employer requirements or

other arbitrary standards, and independently of the years of schooling completed by job incumbents. The attainment of average successful job performance was the fundamental criterium used in making the ratings of general and specific training required by the jobs.

The Concept of General Education Development

Definition and Meaning

The idea underlining General Education Development is that some amount of general education and/or life experience is necessary for the satisfactory performance of any given job. The amount required varies according to the nature and complexity of the job.

GED is defined as follows: General Education Development embraces those aspects of education (formal and informal) which contribute to the worker's (a) reasoning development and ability to follow instructions, and (b) acquisition of "tool" knowledges, such as language and mathematical skills. It is education of a general nature which does not have a recognized, fairly specific, occupational objective. Ordinarily such education is obtained in elementary school, high school, or college. It also derives from experience and individual study.

A number chart was published in the third edition of the D. O. T. to define six levels of GED requirement. The factors of reasoning, mathematics, and language were described in three parallel columns.

GENERAL EDUCATIONAL DEVELOPMENT

Level	Reasoning Development	Mathematical Development	Language Development
6	Apply principles of logical or scientific thinking to a wide range of intellectual and practical problems. Deal with nonverbal symbolism (formulas, scientific equations, graphs, musical notes, etc.) in its most difficult phases. Deal with a variety of abstract and concrete variables. Apprehend the most abstruse classes of concepts.	Apply knowledge of advanced mathematical and statistical techniques such as differential and integral calculus, factor analysis, and probability determination, or work with a wide variety of theoretical mathematical concepts and make original applications of mathematical procedures, as in empirical and differential equations.	Comprehension and expression of a level to— —Report, write, or edit articles for such publications as newspapers, magazines, and technical or scientific journals. Prepare and draw up deeds, leases, wills, mortgages, and contracts. —Prepare and deliver lectures on politics, economics, education, or science. —Interview, counsel, or advise such people as students, clients, or patients, in such matters as welfare eligibility, vocational rehabilitation, mental hygiene, or marital relations. —Evaluate engineering technical data to design buildings and bridges.
5	Apply principles of logical or scientific thinking to define problems, collect data, establish facts, and draw valid conclusions. Interpret an extensive variety of technical instructions, in books, manuals, and mathematical or diagrammatic form. Deal with several abstract and concrete variables.	Perform ordinary arithmetic, algebraic, and geometric procedures in standard, practical applications.	Comprehension and expression of a level to— —Transcribe dictation, make appointments for executive and handle his personal mail, interview and screen people wishing to speak to him, and write routine correspondence on own initiative. —Interview job applicants to determine work best suited for their abilities and experience, and contact employers to interest them in services of agency. —Interpret technical manuals as well as drawings and specifications, such as layouts, blueprints, and schematics.
4	Apply principles of rational systems ¹ to solve practical problems and deal with a variety of concrete variables in situations where only limited standardization exists. Interpret a variety of instructions furnished in written, oral, diagrammatic, or schedule form.	Make arithmetic calculations involving fractions, decimals, and percentages.	Comprehension and expression of a level to— —File, post, and mail such material as forms, checks, receipts, and bills. —Copy data from one record to another, fill in report forms, and type all work from rough draft or corrected copy. —Interview members of household to obtain such information as age, occupation, and number of children, to be used as data for surveys or economic studies. —Guide people on tours through historical or public buildings, describing such features as size, value, and points of interest.
3	Apply common sense understanding to carry out instructions furnished in written, oral, or diagrammatic form. Deal with problems involving several concrete variables in or from standardized situations.	Use arithmetic to add, subtract, multiply, and divide whole numbers.	Comprehension and expression of a level to— —Learn job duties from oral instructions or demonstration. —Write identifying information, such as name and address of customer, weight, number, or type of product, on tags or slips. —Request orally, or in writing, such supplies as linen, soap, or work materials.
2	Apply common sense understanding to carry out detailed but uninvolved written or oral instructions. Deal with problems involving a few concrete variables in or from standardized situations.	Perform simple addition and subtraction, reading and copying of figures, or counting and recording.	
1	Apply common sense understanding to carry out simple one- or two-step instructions. Deal with standardized situations with occasional or no variables in or from these situations encountered on the job.		

¹ Examples of "principles of rational systems" are. Bookkeeping, internal combustion engines, electric wiring systems, house building, nursing, farm management, ship sailing.

The Concept of Specific Vocational Preparation

Definition and Meaning

Specific Vocational Preparation is defined as: The amount of time required to learn the techniques, acquire information, and develop the facility needed for average performance in a specific job-worker situation. This training may be required in a school, work, military, institutional, or a vocational environment. It does not include orientation training required of every fully qualified worker to become accustomed to the special conditions of any new job. Specific Vocational Training includes training given in any of the following circumstances: (a) vocational education (such as high school, commercial or shop training, technical school, art school, and that part of college training which is organized around a specific vocational objective); (b) apprentice training (for apprenticeable jobs only); (c) in-plant training (given by an employer in the form of organized classroom study); (d) on the job training (servicing as learner to trainee on the job under the instruction of a qualified worker); (e) essential experience in other jobs (serving in less responsible jobs which lead to the higher grade job or serving in other jobs which qualify).

In order to express the amount of Specific Vocational Preparation required by various jobs, the following scale of time periods has been established:

LEVELTIME

- 1 Short demonstration only.
- 2 Anything beyond short demonstration up to and including 30 days.
- 3 Over 30 days up to and including 3 months.
- 4 Over 3 months up to and including 6 months.
- 5 Over months up to and including 1 year.
- 6 Over 1 year up to and including 2 years.
- 7 Over 2 years up to and including 4 years.
- 8 Over 4 years up to and including 10 years.
- 9 Over 10 years.

SVP does not represent just the amount of time required to learn a job. It also involves any amount of practice time needed to apply the learning in order to reach a level of average performance. SVP is always measured by performance. The amount of time needed for Specific Vocational Preparation is also an indicator of the complexity of a job. From the definition, it can be seen that there are actually three factors that may influence the required amount of SVP time. These factors have to do with different aspects of job complexity. They are: (1) learning the techniques of the job, (2) acquiring the necessary job knowledge, (3) developing performance facility. A generalization might be made that the more complex a job is, the greater its required training time will be.

The Relationship of GED and SVP

GED and SVP are complementary concepts although they have different types of rating scales. The GED scale is stated in terms of immediate performance capacity levels. The SVP scale is stated in terms of time periods. It is in the combination of these two ideas that the total expression of training time requirement is understood. Just as general education is the base upon which specific training can be built, the GED capacity rating for a job provides a base for the estimation of SVP time.

PHYSICAL DEMANDS

Physical demands are those physical activities required of a worker in a job.

The physical demands listed in this publication serve as a means of expressing both the physical requirements of the job and the physical capacities (specific physical traits) a worker must have to meet the requirements. For example, "seeing" is the name of a physical demand required by many jobs (perceiving by the sense of vision), and also the name of a specific capacity possessed by many people (having the power of sight). The worker must possess physical capacities at least in an amount equal to the physical demands made by the job.

The Factors

1 Lifting, Carrying, Pushing, and/or Pulling (Strength): These are the primary "strength" physical requirements, and, generally speaking, a person who engages in one of these activities can engage in all.

Specifically, each of these activities can be described as:

- (1) **Lifting:** Raising or lowering an object from one level to another (includes upward pulling).
- (2) **Carrying:** Transporting an object, usually holding it in the hands or arms or on the shoulder.
- (3) **Pushing:** Exerting force upon an object so that the object moves away from the force (includes slapping, striking, kicking, and treadle actions).
- (4) **Pulling:** Exerting force upon an object so that the object moves toward the force (includes jerking).

The five degrees of Physical Demands Factor No. 1 (Lifting, Carrying, Pushing, and/or Pulling), are as follows:

S Sedentary Work

Lifting 10 lbs. maximum and occasionally lifting and/or carrying such articles as docket, ledgers, and small tools. Although a sedentary job is defined as one which involves sitting, a certain amount of walking and standing is often necessary in carrying out job duties. Jobs are sedentary if walking and standing are required only occasionally and other sedentary criteria are met.

L Light Work

Lifting 20 lbs. maximum with frequent lifting and/or carrying of objects weighing up to 10 lbs. Even though the weight lifted may be only a negligible amount, a job is in this category when it requires walking or standing to a significant degree, or when it involves sitting most of the time with a degree of pushing and pulling of arm and/or leg controls.

M Medium Work

Lifting 50 lbs. maximum with frequent lifting and/or carrying of objects weighing up to 25 lbs.

H Heavy Work

Lifting 100 lbs. maximum with frequent lifting and/or carrying of objects weighing up to 50 lbs.

V Very Heavy Work

Lifting objects in excess of 100 lbs. with frequent lifting and/or carrying of objects weighing 50 lbs. or more.

2 Climbing and/or Balancing:

- (1) **Climbing:** Ascending or descending ladders, stairs, scaffolding, ramps, poles, ropes, and the like, using the feet and legs and/or hands and arms.
- (2) **Balancing:** Maintaining body equilibrium to prevent falling when walking, standing, crouching, or running on narrow, slippery, or erratically moving surfaces; or maintaining body equilibrium when performing gymnastic feats.

3 Stooping, Kneeling, Crouching, and/or Crawling:

- (1) **Stooping:** Bending the body downward and forward by bending the spine at the waist.
- (2) **Kneeling:** Bending the legs at the knees to come to rest on the knee or knees.
- (3) **Crouching:** Bending the body downward and forward by bending the legs and spine.
- (4) **Crawling:** Moving about on the hands and knees or hands and feet.

4 Reaching, Handling, Fingering, and/or Feeling:

- (1) **Reaching:** Extending the hands and arms in any direction.

- (2) Handling: Seizing, holding, grasping, turning, or otherwise working with the hand or hands (fingering not involved).
- (3) Fingering: Picking, pinching, or otherwise working with the fingers primarily (rather than with the whole hand or arm as in handling).
- (4) Feeling: Perceiving such attributes of objects and materials as size, shape, temperature, or texture, by means of receptors in the skin, particularly those of the finger tips.

5. Talking and/or Hearing:

- (1) Talking: Expressing or exchanging ideas by means of the spoken word.
- (2) Hearing: Perceiving the nature of sounds by the ear.

6 Seeing: Obtaining impressions through the eyes of the shape, size, distance, motion, color, or other characteristics of objects. The major visual functions

are: (1) acuity, far and near, (2) depth perception, (3) field of vision, (4) accommodation, (5) color vision. The functions are defined as follows:

- (1) Acuity, far—clarity of vision at 20 feet or more.
Acuity, near—clarity of vision at 20 inches or less.
- (2) Depth perception—three-dimensional vision. The ability to judge distance and space relationships so as to see objects where and as they actually are.
- (3) Field of vision—the area that can be seen up and down or to the right or left while the eyes are fixed on a given point.
- (4) Accommodation—adjustment of the lens of the eye to bring an object into sharp focus. This item is especially important when doing near-point work at varying distances from the eye.
- (5) Color vision—the ability to identify and distinguish colors.

WORKING CONDITIONS

Working conditions are the physical surroundings of a worker in a specific job.

1 Inside, Outside, or Both:

- I* Inside: Protection from weather conditions but not necessarily from temperature changes.
- O* Outside: No effective protection from weather.
- B* Both: Inside and outside.

A job is considered "inside" if the worker spends approximately 75 percent or more of his time inside, and "outside" if he spends approximately 75 percent or more of his time outside. A job is considered "both" if the activities occur inside or outside in approximately equal amounts.

2 Extremes of Cold Plus Temperature Changes:

- (1) Extremes of Cold: Temperature sufficiently low to cause marked bodily discomfort unless the worker is provided with exceptional protection.
- (2) Temperature Changes: Variations in temperature which are sufficiently marked and abrupt to cause noticeable bodily reactions.

3 Extremes of Heat Plus Temperature Changes:

- (1) Extremes of Heat: Temperature sufficiently high to cause marked bodily discomfort unless the worker is provided with exceptional protection.
- (2) Temperature Changes: Same as 2(2).

4 Wet and Humid:

- (1) Wet: Contact with water or other liquids.
- (2) Humid: Atmospheric condition with mois-

ture content sufficiently high to cause marked bodily discomfort.

5 **Noise and Vibration:** Sufficient noise, either constant or intermittent, to cause marked distraction or possible injury to the sense of hearing, and/or sufficient vibration (production of an oscillating movement or strain on the body or its extremities from repeated motion or shock) to cause bodily harm if endured day after day.

6 **Hazards:** Situations in which the individual is exposed to the definite risk of bodily injury.

7 Fumes, Odors, Toxic Conditions, Dust, and Poor Ventilation:

- (1) Fumes: Smoky or vaporous exhalations, usually odorous, thrown off as the result of combustion or chemical reaction.
- (2) Odors: Noxious smells, either toxic or nontoxic.
- (3) Toxic Conditions: Exposure to toxic dust, fumes, gases, vapors, mists, or liquids which cause general or localized disabling conditions as a result of inhalation or action on the skin.
- (4) Dust: Air filled with small particles of any kind, such as textile dust, flour, wood, leather, feathers, etc., and inorganic dust, including silica and asbestos, which make the workplace unpleasant or are the source of occupational diseases.
- (5) Poor Ventilation: Insufficient movement of air causing a feeling of suffocation; or exposure to drafts.

INTERESTS

Preferences for certain types of work activities or experiences with accompanying rejection of contrary types of activities or experiences. Five pairs of interest factors are provided so that a positive preference for one factor of a pair also implies rejection of the other factor of that pair.

1. Situations involving a preference for activities dealing with things and objects. vs. Situations involving a preference for activities concerned with people and the communication of ideas.
2. Situations involving a preference for activities involving business contact with people. vs. Situations involving a preference for activities of a scientific and technical nature.
3. Situations involving a preference for activities of a routine, concrete organized nature. vs. Situations involving a preference for activities of an abstract and creative nature.
4. Situations involving a preference for working for people for their presumed good, as in the social welfare sense, or for dealing with people and language in social situations. vs. Situations involving a preference for activities that are nonsocial in nature, and are carried on in relation to processes, machines, and techniques.
5. Situations involving a preference for activities resulting in prestige or the esteem of others. vs. Situations involving a preference for activities resulting in tangible, productive satisfaction.

TEMPERAMENTS

Different types of occupational situations to which workers must adjust:

1. Situations involving a variety of duties often characterized by frequent change.
2. Situations involving repetitive or short cycle operations carried out according to set procedures or sequences.
3. Situations involving doing things only under specific instruction, allowing little or no room for independent action or judgment in working out job-problems.
4. Situations involving the direction, control, and planning of an entire activity or the activities of others.
5. Situations involving the necessity of dealing with people in actual job duties beyond giving and receiving instructions.
6. Situations involving working alone and apart in physical isolation from others, although the activity may be integrated with that of others.
7. Situations involving influencing people in their opinions, attitudes, or judgments about ideas or things.
8. Situations involving performing adequately under stress when confronted with the critical or unexpected or when taking risks.
9. Situations involving the evaluation (arriving at generalizations, judgments, or decisions) of information against sensory or judgmental criteria.
0. Situations involving the evaluation (arriving at generalizations, judgments, or decisions) of information against measurable or verifiable criteria.
- X. Situations involving the interpretation of feelings, ideas, or facts in terms of personal viewpoint.
- Y. Situations involving the precise attainment of set limits, tolerances, or standards.

EXAMPLE

In trying to deal with more specifics, we went to the D. O. T. The job descriptions in the Dictionary of Occupational Titles are very specific, almost the opposite of what we were seeing in the Manpower Projection data mentioned previously. The D. O. T. is very specific in terms of job descriptions such as lab aides, lab helper, lab assistant, anything specific to a particular laboratory. Using the base data to interpret the D. O. T. we compiled a list of job titles associated with science careers. The GED and SVP levels were carefully scrutinized so that the job title selected would not require more than a high school education. In other words, we selected the job titles where education at the secondary level would be all that would be necessary in order to perform the particular job duties required.

On the following page is an example of the results of this search.

ANALYSIS OF SELECTED
OCCUPATIONS

D. O. T. Number	OCCUPATIONAL TITLES	Refer to Preceding Pages for Code Interpretation				
		Physical Demands	General Education Development (GED)	Specific Vocational Preparation (SVP)	Interests	Worker Temperament
029.281	Laboratory Tester I	L 4 6	5 4	7 6 5	1 7 9	O Y
029.381	Laboratory Tester II	L 4 6	5 4	7 6 5	1 7 9	O Y
078.381	Medical Lab Assistant	L 4 6	5 4	7 6 6	1 7 9	O Y
078.687	Lab Assistant, Plasma Drawing Off	S L M 4 5 6	2 3 1	2 3 4	1 3 9	2 Y O 3
079.368	Occupational Therapy Aid	L M 4 6	4	6 7	4 7	5 Y
223.587	Lab Helper (Clerical)	S L M 4 5 6	2 3 1	2 3 4	1 3 9	2 Y O 3

CHOICE OF SAMPLE

One of the major criteria used by educators for determining whether or not to establish or expand a vocational education program is some degree of assurance that there will be jobs for the students who complete such a program.

Occupational labor market research consists of analyses of the demand-supply factors in a particular occupation or group of occupations. It evaluates occupational job opportunities in relation to available labor supply. Since most workers seek employment in specific occupations and employers usually hire workers with specific skills or abilities, occupational labor market information is paramount to a meaningful and practical understanding of the functioning of the total labor market.

In any one state or area, occupational requirements may change markedly as old industries decline and new activities develop. The necessary information should be collected from a representative sample of firms in the area which typically hire workers employed in the occupations being surveyed.

To ascertain future job vacancies and to develop appropriate curricula to properly prepare its graduates for entry into these jobs, educators may utilize information provided by manpower and skills surveys. A scientific sample (stratified-random) of employers is asked

to provide current estimates of employment, estimates for two years hence, and five years in the future. The most efficient sample which will provide valid results for this type of study is one stratified by establishment size which includes all large establishments and a lesser representation of the smaller establishments in the appropriate industries.

For further information regarding the use of a stratified-random sample, refer to the U. S. Department of Labor "Handbook on Labor Market Research Methods", Draft Section (No. 5, Occupational Labor Market Analysis).

A pre-survey, or cover, letter offers several benefits. The purpose of the survey should be outlined briefly and the cooperation and endorsement of the employers sought. It is an excellent form of publicity for the survey inasmuch as it tells employers of the survey and introduces the person or firm conducting the survey. It prepares employers for receipt of the survey questionnaire which can be either included with the cover letter or sent to them at a later date.

EXAMPLE

The Project was underway prior to our knowledge and understanding of the services offered by the Employment Data and Research Division of the Employment Development Department. There are two Employment Data and Research Divisions in California -- one in San Francisco and one in Los Angeles. These research divisions are available to assist in selecting a sample.

Although there are many factors to consider regarding the procedure of selecting a sample, primary concern should be the constraints of time and finances.

If the E. D. D. sampling techniques are either not available or feasible, there are other methods to derive a sample:

- 1) community contacts (Chamber of Commerce, etc.).
- 2) direct referral by business or industry.
- 3) the yellow pages of the geographic area you wish to survey.

These additional sources are apt to be biased and should be used with that known restriction.

OPERATIONAL PROCEDURES

With the indicated student interest, we decided to fully document our ideas regarding the needs of industry. We felt a strong need for feedback from industry to education. The cover letter and the accompanying survey illustrate our efforts of surveying and interviewing in our geographical-employment community. We found industry to be most cooperative and responsive to us as representatives of the educational system, specifically to the possibilities of developing a course in vocational education for which they could participate and provide input. We would anticipate that any vocational planner who uses this planning process would find the same responsiveness from any industry or occupational area. It was a most rewarding experience and one that nurtures the bond between industry and education.

EXAMPLE

The Cover Letter and Accompanying Survey

It seems there is no published document on the right and proper way to write a cover letter that accompanies a survey to industry. We formulated a letter to describe to industry what we had in mind in the way of a course of study and what information we wanted from them. The first step was to send a letter to a "person", not to a "position". We went to the yellow pages of the telephone books of the area in which we were going to survey and looked up all of the laboratories, the hospitals, and any other employer that might have some input for the occupational title, MEDICAL LABORATORY ASSISTANT. With the use of some student help, the firms were contacted by phone to get the name of the personnel director, the complete address of the company, etc., and a file was set up for each one of these labs.

The D. O. T. gave us the words to ask specific questions of employers. We wanted the letter to be definitive. We explained that we had done some initial research and we hypothesized that there must be some kind of a labor market for the type of positions that we had in mind. We asked for their help in securing information about their particular firm. We had the dilemma of trying to be explanatory and short at the same time -- we wanted a good response but felt it was necessary to be concise.

We included the cover letter with the survey. In keeping with

this philosophy we tried to keep the survey short with only pertinent questions which would help us to develop the course. Questions such as: "Do you employ persons without a college education?" "Do you visualize that you could employ persons like this if you do not now?" It was interesting that we had more yes responses to the latter question which gave us the feeling that if they do not hire people in this area at the present time, they might possibly do so in the future. We asked them if they felt this project merited further research and development, and if they gave a proficiency entry level test to their potential employees.

We made the questions easy to answer only requiring a check to indicate a "Yes" or "No". We debated long and hard as to whether to include the question regarding specialized training. This type of a question in many cases cannot be answered with a simple "Yes" or "No". However, we were not disappointed at the response. Many of the employers included xerox copies of particular techniques and procedures required; others sent us Department of Health specifications as to specific requirements and limitations of the persons they employ.

We also provided a place for the name of a particular person with whom we could make an appointment for further discussion. Again, we received what we considered a very good response. Sometimes, we received names of different people than those we had addressed the letter to; i. e., the personnel director felt that some other person, the chief lab technician, etc., could better answer our specific questions.

We also included a self-addressed, stamped envelope.

The initial survey was sent to 45 potential employers and the response was 55%. According to people in the business of surveying, this was better than average.

Illustrated on the following pages are a copy of our cover letter and of the accompanying survey. For your information, the survey with the indicated responses is a tally of the responses we received from industry.

SIMI VALLEY

HIGH SCHOOL

HOME OF THE PIONEERS

ROBERT J. JACOB PRINCIPAL

Dear

Simi Valley High School, as a part of its Science Department's attempt to improve curriculum, is taking a survey of several laboratory oriented industries to determine if there is sufficient need to provide class offerings to prepare students as lab assistants. If we find that a need exists, we would attempt to develop a curriculum to support it.

From our minimal experience in the vocational field, we have hypothesized that there exists a job market for the graduating high school student who wishes to be employed in a science related field. We visualize a position in which a high degree of competence in the performance of repetitive laboratory tests and/or preparation is needed. This would be a position requiring reliability in routine lab work, but not necessarily the responsibility of analysis or supervision expected from a college or technical school graduate.

We are writing to you because you may possibly have a job description and/or employ persons in this general career category. We have enclosed a short questionnaire which we hope you will complete. We thank you for your time and consideration.

Sincerely yours,

Wayne Hollins
Chairman, Science Department

WH:kh

CURRICULUM IMPROVEMENT SURVEY

1. Do you employ persons without a college education to perform laboratory procedures? Yes No
2. Could you visualize hiring a high school graduate whose experience was limited to a training course which included work observations? Yes No
3. In the light of your hiring/job descriptions does this idea merit further research and development? Yes No
4. Do you use a proficiency level entry test to determine employment which may be functional in assessing ability levels of our graduates? Yes No
5. Is there someone with whom I could make an appointment for further discussion of this concept? Yes No

Name

Phone

6. What specialized training, i. e., laboratory techniques and procedures, manipulative skills, science understanding, etc., would qualify a student for employment at your particular facility?

Interview Techniques

Responding to the persons who on their survey returns had volunteered further input, we arranged an appointment to meet with them at their convenience. We are including those comments regarding the interviews which seem most significant.

Regarding the interview technique itself, we had been advised not to spend any more than 15 minutes in an interview. Because the persons from industry were so very anxious to talk to us, no interview lasted less than 45 minutes. In most cases we were the first people from education to come to them to solicit their assistance in developing an educational program.

We used MMIS Form #5 to structure a pattern for our interview. A copy is included for your reference. Note that the content and pattern of information sought allows for an atmosphere of informality and an ease of question formulation to occur. Prior to the interview we had provided the name of the company, the address, the name of the contact person who we would be interviewing and his/her telephone number, and the date of the particular interview.

Throughout the laboratories we visited we found a variety of job titles that describe what is functionally the same job. For example, one firm referred to their employees as Laboratory Aides I and II, while another firm gave their employees job titles of Reagent

Preparer and Specimen Preparer.

In spite of differing job titles, the job descriptions were similar. The employers told us that Laboratory Assistants work under the supervision of a Registered Clinical Laboratory Technologist and perform a variety of standard laboratory procedures, such as preparing specimens, setting up equipment in the lab, identifying and labeling the specimens, and cleaning and maintaining the laboratory utensils and equipment according to established standards. They are often required to keep the records for the testing that is in progress or completed. The employers description of duties was, in most cases, similar to the Dictionary of Occupational Titles. This was of assistance in the verification process of our earlier D.O.T. search. It was also of assistance in the student selection process for the course of study because the employers identified the specific worker traits and job duties.

All of the employers interviewed preferred to hire people with a high school diploma. In the job descriptions, a high school diploma was desirable, with courses in Chemistry, Biology, and Mathematics. In further questioning, we determined that the employers are seeking workers with a knowledge of basic science and a sincere desire to work. They felt that persons above the age of eighteen were better candidates for the jobs because they demonstrate a more responsible attitude.

There are no specialized training programs in the geographical area that we surveyed. Employers stated that they would prefer entry level positions to require specialized training but that most training is performed on-the-job. Ninety percent of the employers we interviewed were willing to contribute to the curriculum development of a course in science related careers. They indicated that the education and training that would be received by the students through such a course would greatly shorten the amount of time required in on-the-job training. This would be a definite cost savings to the laboratories.

Entry level wage information was collected from the employers in order to update and localize the salaries for the related job titles. The salary information will be included in the career exploration unit of the course of study. The salary data in the most recent edition of the Occupational Outlook Handbook (1974-75) was obtained in 1973, and considerable outdated.

We had a twofold purpose in asking for the number of people currently employed in each job category. First, we wanted to localize the employment data to include actual figures. Second, the information was needed as a contributing factor in determining class size and future placement possibilities for the students in the Science Career Training Program. It was not intended to confirm or deny any of the Industry-Occupation Matrix figures.

The employers interviewed were unable or hesitant to estimate

the number of employees by category for the following year and five years hence. This reconfirmed the expert opinion of labor market analyst that employers have a difficult task in projecting future employment needs.

EXAMPLE

Follow-Up Letter

When the interviews were completed, we began the task of formulating a follow-up letter. A good deal of thought and time went into the construction of the letter. We did not want it to be too lengthy but we did want to exemplify the list of categories that were being considered for inclusion in the curriculum. The main purpose of the letter, however, was to say "Thank you".

Mr. Hollins asked for some additional thoughts and ideas on specific details. MMIS Form #6 (Instructional Resource Survey) was included with the follow-up letter. The form was time consuming, asking if audio-visual materials can be provided, personnel for guest speakers arranged, etc. We were disappointed with the lack of feedback but have not made any assumptions as to why the response was less than the first survey. We have hypothesized that the survey may have been too involved or that the employers were not able to provide the information.

Some of the employers who responded to the initial survey and were interviewed have offered to serve on the Advisory Committee for the Science Related Careers Program. It is anticipated that the information Form #6 requests will be provided by the members of that committee during the meetings that will be held in the coming year.

The follow-up letter and the accompanying survey are illustrated on the following pages.

SIMI VALLEY

HIGH SCHOOL

HOME OF THE PIONEERS

ROBERT J. JACOB PRINCIPAL

First of all, thank you for your time and positive response regarding our planned Science Careers Curriculum. With the response you have given, this project is becoming very exciting.

Much time has passed, but as a result of our visits I have compiled a list of categories to be included in the curriculum:

- Introduction to basic chemistry
- Introduction to basic biology
- Scientific/medical terminology
- Scientific measurement
- Data collecting/recordkeeping
- General laboratory/safety techniques
- Specific laboratory manipulations (such as the use of specialized laboratory apparatus and the conducting of particular tests)
- Laboratory simulations (the classroom functioning as a simulation of a functioning commercial laboratory)

These have been incorporated into a tentative curriculum design intended to provide a basic science grounding for all students plus areas for further and more intensive training. I have enclosed this design on another sheet. Currently I am consulting with publishers in order to evaluate possible textbooks and manuals for resource materials.

I also need more ideas from you on some specific details:

- 1) Are there any areas that I missed in setting up the list of categories?
- 2) Inasmuch as most of the laboratory equipment has a sophistication and/or cost rendering its use in a high school laboratory unfeasible -- do you have any suggestions for instructional methods and/or lower priced

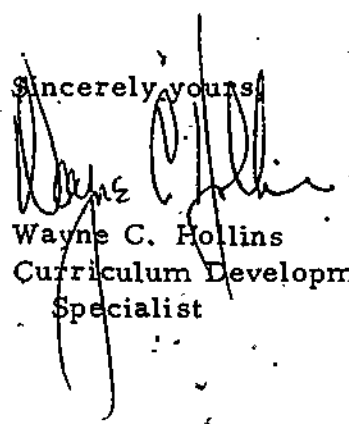

equipment capable of providing valid alternative experiences? We will have computer terminals available to assist in providing simulated experiences.

- 3) I would also like a list of laboratory equipment and apparatus that you feel should necessarily be included for student use. Include items based on need with minor consideration for cost -- that constraint will come later.

In some of these or other instances you may have resources which could afford invaluable experiences for the students. I am enclosing an Instructional Resource Survey which I would like you to fill out and return. Every resource is significant. For instance, as someone pointed out, the completion of the Job Application is a most important first step which is often overlooked.

I realize that this is very demanding of your time but I have no resource which can begin to substitute for your expertise in providing direction for this type of program. Now that a pattern is beginning to emerge, if you feel that it would be of value to get together again, perhaps with more people, I would be most happy to arrange another appointment. Again our thanks to you for your very favorable response and valuable contributions to our planning.

Sincerely yours,

Wayne C. Hollins

STUDENT NEEDS ASSESSMENT

One of the twelve functions of vocational education is Population Needs Analysis. It includes parental influences, geographic mobility, community preference, and student interest. All of these considerations feed into "student needs".

The Career Planning Inventory (C. P. I.) was originally designed to provide the basic information required to comply with the Population Needs Analysis Function of a District Plan for Vocational Education. The C. P. I. is given to every ninth, tenth, eleventh, and twelfth grade student in Ventura County, as well as to students in Los Angeles, San Bernadino, Riverside, and other counties in the State.

After three years of development and implementation, additional information is processed to be utilized by students as well as educational personnel to aid them in making meaningful decisions. Computer reports include individual student profiles, school and district summaries, and a county summary. These reports are utilized for local district program planning and articulated planning between the district and other educational agencies, identification of students with special interest or needs, and providing students with a stimulus to explore their various career options.

The C. P. I. and its related reports have evolved into a five component system for occupational counselors and vocational education planners:

1. The Educational and Career Planning Questionnaire
2. The Student Career Planning Profile
3. The Occupational Brochure and Brief
4. The School Summary Reports
5. The County Summary Statistical Reports

The Educational and Planning Questionnaire is illustrated on the following pages (4), followed by an explanation of the remaining components of the C. P. I.

EDUCATIONAL AND CAREER PLANNING QUESTIONNAIRE

NAME _____ SEX: Male Female

Last First Initial

ADDRESS _____ PHONE _____

Number Street City Zip Code

SCHOOL _____ GRADE _____ COUNSELOR _____

Please print information as requested at the top of this sheet. The following questions are about your educational and career plans. Each question is important. Your answers will be used to help you understand your educational and career goals and to provide you with information about appropriate careers. Read each question carefully and answer it as best you can. You are to mark only one answer for each question unless the directions tell you to mark more than one answer. To indicate your choice simply circle the number in front of your answer.

A. The following courses of study are offered in most high schools. My present course of study is:

1. General Education
2. Business Education
3. Vocational Agriculture
4. Fine Arts
5. Industrial Education
6. Home Economics
7. College Prep. (Math/Science)
8. College Prep. (English/Social Sciences)
9. College Prep. (General Program)
10. Combination of two or more of 1 - 9

B. How sure am I about my choice of a course of study?

1. Very sure. It is exactly what I want.
2. Somewhat sure. I think it is what I want.
3. Doubtful. I am not too sure it is what I want.
4. I realize now I am in the wrong course of study.

C. TWO of the following types of work which are of most interest to me at this time are:

1. Artistic (creative work involving design, color and materials or the performing arts such as music, drama or dance)
2. Clerical (work involving precision, order and accuracy)
3. Computational (work involving mathematics or numbers)
4. Health Services (work involving health care of people or animals)
5. Literary (work involving reading and writing)
6. Mechanical (work involving machines and tools)
7. Outdoor (work that keeps you outside most of the time in all kinds of weather)
8. Persuasive (work involving sales, advertising, and/or public relations)
9. Scientific (work involving discovery, understanding and problem solving in nature and the physical world)
10. Social Service (work involving helping other people)

D. How sure am I that my responses to question "C" really are my strongest interests?

1. Certain. My career interests are very firm.
2. Fairly sure. My career interests are rather clear.
3. A little uncertain. My career interests are fairly clear.
4. Very uncertain. My career interests are not clear at all.

E. TWO of my strongest aptitudes or talents are.

1. General learning (closely related to doing well in school)
2. Verbal (ability to work with and understand written and oral information)
3. Numerical (ability to work well with numbers and mathematics)
4. Spatial (ability to picture something in my mind from a drawing)
5. Form perception (ability to see important details and differences)
6. Clerical (ability to work well with details in numbers or words)
7. Eye-hand coordination (ability to make a movement response accurately and swiftly)
8. Finger dexterity (ability to work with small objects rapidly)
9. Manual dexterity (ability to move my hands easily and skillfully)

F. How sure am I that my responses to question "E" really are my strongest aptitudes?

1. Certain
2. Fairly sure
3. A little uncertain
4. Very uncertain

G. I would like a career with the following job characteristics: (circle FIVE of those you would like)

1. Involves a high level of responsibility -- makes key decisions involving property, finances or human safety and welfare
2. Directs activities of others -- work involves supervisory responsibility
3. Works under close supervision -- job performance and work standards controlled by a supervisor
4. Has repetitious work -- performs the same task on a continuing basis
5. Competes with other people on the job for recognition and advancement
6. Works with details on a continuing basis -- may be numbers, written materials or technical data
7. Sees the physical results of work -- produces a tangible product
8. Has an opportunity for self-expression -- freedom to use one's own ideas
9. Helps people -- assists people in a helping relationship
10. Works independently -- requires initiative, self-discipline and the ability to organize
11. Works as part of a team -- interacts with fellow employees in performing work
12. Requires physical stamina -- involves continued lifting, standing and walking
13. Works overtime or shift work -- works hours other than normal, daytime shifts
14. Works with ideas -- uses intellect to solve problems
15. Works with people -- requires a pleasing personality and ability to get along with others
16. Works with things -- job generally requires manual skills
17. Works at one work setting -- generally confined to work area
18. Has jobs widely scattered -- jobs are located in most areas of the United States
19. Motivates others -- must be able to influence others

H. Based upon facts I have now, my plan for the future is:

1. To graduate from high school and go right to work with no further education .
2. To join the armed forces .
3. To enter an apprenticeship program .
4. To get further training at a trade, technical or business school .
5. To complete a junior college program involving two years of training or less .
6. To start at a junior college then transfer to a four year college .
7. To go right to a four year college or university .
8. To attend more than four years of college .

I. Is there any reason why you may not be able to graduate from high school?

1. Yes, 2. No

J. I wish to talk to a counselor about (circle as many as apply):

1. High school education requirements .
2. Post high school technical (community college) and trade school opportunities .
3. Four year college entrance requirements .
4. Scholarships or other financial aids to attend a private school, junior college or four year college .
5. I do not wish to talk to a counselor about any of the above.

K. I estimate my grades since 8th grade to be.

1. Mostly A's
2. Mostly A's and B's
3. Mostly B's
4. Mostly B's and C's
5. Mostly C's
6. Mostly C's and D's
7. Mostly D's

L. Please note your need at this time for help with educational and career planning:

1. I need considerable help in figuring out what I am going to do.
2. I have some things planned but could use additional help.
3. I do not need additional help at this time as plans are pretty clear.

M. Do you have any physical handicaps that limit you in any way?

1. Yes 2. No

N. Some high school students ride a bus to an area vocational school so they can take special courses. Are you willing to attend an area school (no more than 30 miles from your school) if the vocational courses you wish to take are not offered at your school? Please circle your answer.

1. Yes 2. No

O. You probably have some idea of the occupation(s) you would like to enter. Please select your first and second choices (TWO ONLY) from the 126 occupations listed by placing a "1" in front of your first choice and a "2" in front of your second choice. If the occupation(s) in which you are interested are not listed, please pick related occupation(s) or place an "X" in the box marked "other" and write in the occupation(s) you prefer. If you do not have any idea of the occupation you would like to enter, please place an "X" in the box marked "undecided."

Student Career Planning Profile

The Student Career Planning Profile summarizes each individual student's educational and career plans per his responses on the Educational and Career Planning Questionnaire.

In addition to summarizing the student's educational and career plans, new information is provided for students by comparing interest, job characteristics, and educational plans chosen by each student with the interest areas, job characteristics and requirements, and educational requirements usually associated with each of 124 different occupations.

It should be remembered that the educational and career planning questionnaire is not to be considered as a predictive instrument. The list of "other occupations you may wish to explore" is only a partial list of some occupations that are consistent with the interests, educational plans and job characteristics which a student selects on the educational and career planning questionnaire.

THESE TYPES OF WORK INTEREST ME

C. TWO of the following types of work which are of most interest to me at this time are:

MY PRESENT COURSE OF STUDY

A. The following courses of study are offered in most high schools. My present course of study is:

MY STRONGEST APITUDES

E. TWO of my strongest aptitudes or talents are:

STUDENT CAREER PLANNING PROFILE

SUZANNE SMITH FEMALE HIGH SCHOOL DIXHART JONES
AGE SPACE AGE MODERN CITY CALIF. 916 805 429 8705 07-24-73
COURSE OF STUDY IS COMBINATION OF TWO OR MORE. I AM NOT TOO SURE IT IS WHAT I WANT.

LITERARY- AND SOCIAL SERVICE TYPES OF WORK APPEAR TO BE OF MOST INTEREST TO ME.
I AM PRETTY SURE OF THIS AT THIS TIME. I THINK GENERAL LEARNING AND FORM PERCEPTION ARE MY STRONGEST APITUDES. I AM PRETTY SURE ABOUT MY APITUDES. I ESTIMATE MY GRADES TO BE MOSTLY B's

I PLAN TO GO RIGHT TO A FOUR YEAR COLLEGE OR UNIVERSITY.

I NEED ADDITIONAL HELP WITH EDUCATIONAL AND CAREER PLANNING.

* INDICATES AN OCCUPATION REQUIRING MORE THAN 4 YEARS OF COLLEGE (SEE BOX IN LOWER RIGHT HAND CORNER)

MY PRESENT OCCUPATIONAL CHOICES ARE

- (1) AIRLINE STEWARDESS (H. 3)
- (2) SOCIAL WORKER (T. 4)

UNDECIDED OTHER

I WOULD LIKE A CAREER WHERE THE JOBS INVOLVE

- A HIGH LEVEL OF RESPONSIBILITY
- DIRECTING ACTIVITIES OF OTHERS
- WORKING UNDER CLOSE SUPERVISION
- PERFORMING THE SAME TASK ON A CONTINUING BASIS
- COMPETING WITH OTHERS FOR RECOGNITION AND ADVANCEMENT
- WORKING WITH DETAILS - NUMBERS, WRITTEN MATERIALS OR TECHNICAL DATA
- SEEING THE PHYSICAL RESULTS OF WORK
- FREEDOM TO USE ONE'S OWN IDEAS
- HELPING PEOPLE
- WORKING INDEPENDENTLY WITH INITIATIVE AND SELF DISCIPLINE
- WORKING AS PART OF A TEAM
- WORK REQUIRING PHYSICAL STRENGTH AND ENDURANCE
- OVERTIME WORK OR OTHER THAN NORMAL HOURS
- WORKING WITH IDEAS TO SOLVE PROBLEMS
- ABILITY TO GET ALONG WITH OTHERS
- WORKING WITH THINGS USING MANUAL SKILLS
- WORKING AT ONE PLACE CONFINED TO WORK AREA
- MANY LOCATIONS OF EMPLOYMENT
- MOTIVATING AND INFLUENCING OTHERS

OTHER OCCUPATIONS YOU MAY WISH TO EXPLORE

- HOME ECONOMIST (2.5+)
- * CLERGYMAN/RELIG. WORKER (2.4+)
- NURSERY SCHOOL TEACHER (2.4+)
- SOCIAL WORKER (2.4+)
- * TEACHER (2.4-)
- PSYCHOLOGIST (2.3)
- INTERPRETER/TRANSLATOR (2.3)
- PROB OFFICER/PAROLE AGENT (1.4+)
- RECREATION WORKER (1.4+)
- * COUNSELOR (1.3+)

Occupational Brochures and Briefs

Brochures and briefs have been developed for each of 124 different occupations. Each occupational profile contains a brief description of the occupation, the training usually required for entry into the occupation, and the employment prospects, including the Bureau of Labor Statistics estimates of the nation-wide employment in 1972 and the average annual nation-wide job openings to 1980.

TRUCK DRIVER

DUTIES: Both local and long-distance truck drivers are vital assets to our giant transportation system. Generally, both pick up, transport, and deliver materials, goods, and products of all kinds. The local driver usually works within one metropolitan area, while the other may haul cargo over hundreds of miles. Local truck drivers most often deliver over regular routes or runs, although some may be assigned different routes when they report to work each day. Long-distance truck drivers usually travel routes designated by dispatchers. The truck is generally loaded for the local driver by platform workers, but he may be obliged to unload the merchandise at the customer's place of business. The long-haul driving is a senior driving job with more responsibility and usually better pay than local driving jobs, but the hours are less regular. Long-haul drivers often must spend time away from home. Both jobs require that the workers anticipate problem areas when traveling, drive defensively and with great safety. Also, a certain amount of recordkeeping is usually required.

TRAINING: While there are successful drivers who do not have a high school diploma, many employers prefer that their employees have a high school education or its equivalent. Driver training, automotive mechanics, and English are helpful high school courses. For most jobs you should be 21 years of age, be able to pass a physical examination, and be familiar with traffic laws and safe-driving procedures. You should have good hearing, 20/40 vision (with or without eye glasses), and normal blood pressure. Some companies have more stringent rules. You may have to be at least twenty-five, possess specific height and weight, have at least one year of driving experience, and an excellent driving record. Some employers use aptitude tests for hiring, while others rely on personal interviews. You may be asked to accept temporary assignments before receiving permanent status. Truck drivers are required to have a chauffeur's license (a commercial driving permit). As a new employee, you may be required to ride along with an experienced driver for a time; the company also may provide a short training program. Driving experience can be gained in the Armed Forces. Also a small number of private technical schools offer truck driving courses. The Special Projects Division of Ventura College offers a truck driving course; however, because of its popularity, there is a long waiting list.

EMPLOYMENT PROSPECTS: Employment opportunities for truck drivers should increase moderately through the 1980's, provided economic conditions permit anticipated growth in volume of freight and the spreading of industry throughout the United States.

RELATED CAREERS: Ambulance Driver, Dispatcher, Heavy Equipment Operator, Taxi Driver, and Warehouseman

ESTIMATED EMPLOYMENT-1972			AVERAGE ANNUAL OPENINGS		
Nationwide	California	Ventura County	Nationwide	California	Ventura County
2,176,000	129,436	1,938	62,600	3,739	101

INTERESTS: Outdoor, Mechanical

APTITUDES: General Learning, Eye-Hand Coordination, Manual Dexterity,
Clerical

CHARACTERISTICS AND REQUIREMENTS:

1. Works independently -- requires initiative, self-discipline, and the ability to organize
2. Work requires physical stamina -- involves continued lifting, standing, and walking
3. Works overtime or shift work -- works hours other than normal daytime shifts
4. Works with things -- jobs generally require manual skills
5. Works at one setting -- generally confined to work area
6. Jobs widely scattered -- jobs are located in most areas of the United States

School Summary Reports

The School Summary Reports are derived from student responses to the Educational and Career Planning Questionnaire. The computer is programmed to prepare 26 different types of reports compiled from these responses.

The body of each report contains an alphabetical listing of each student's name who responded to that particular question by selecting the indicated response. A statistical summary is printed by the computer in the lower left hand corner of each report. It includes the total number of students who took the questionnaire, the number of students who selected the specified response and a percentage factor.

County Summary Reports

The County Summary Reports are computer printed statistical review of each of the school reports. The title block contains the same basic information as the School Reports. The left hand column of the report identified the ditrict and the name of each school within that district. The next three columns list the number of students who selected the particular question response indicated, the total number of students who took the questionnaire and a percentage factor.

The bottom line of each report indicates the County totals for each column. It is possible to obtain from these reports data pertaining to a particular school or a district and compare these results to the County percentage factors.

EXAMPLE

We, in the Simi Valley Unified School District, have been involved with the CPI since its inception. The information obtained from students via the CPI is taken and stored in the Ventura County School's Data Processing system. This data is retrievable in a variety of modes depending upon individual school district's needs. The results returned to our district from the CPI were surveyed carefully to determine the degree of student interest in the area of the allied health/science careers. This process will be explained with specific examples related to our goals as well as indication of other reports available to the users of the CPI.

We determined from the school summary report that there were students at the two high schools in our district that had indicated an interest in the areas of medical laboratory worker, medical assistant, licensed vocational nurse, hospital attendant/nurse aides, physical therapist, and x-ray technician.

After completing our survey of, and interviews with, employers we were able to systematize the duties required of people working in a primary or reference laboratory. With the list of the job duties, a list of interest areas and aptitude strengths applicable to someone working in this particular type of occupation was prepared. We contacted the Supervisor of Systems and Programming in the Ventura

Regional Education Data Center and scheduled a meeting to determine the possibility of retrieving students' names based upon the input of their interests and aptitudes. A program has been written to make this selection process possible for any area that utilizes the Career Planning Inventory. We discovered, by the trial and error method, that we had been either too specific or too general in assigning the limitations of the data retrieval program. The result of the overly specific program was a computer printout listing three eligible students. We knew from the District School Summary Report that there was a greater interest so we went back to the Supervisor for a second meeting and decided to be less specific in the areas of the student's occupational choice, screening only in the areas of "interest", aptitudes", and "job characteristics". This profile produced a much longer list of students to be contacted. From these experiences in working with the CPI data, it was observed that student interest and aptitudes often lack correlation with their occupational choices. As an example, a student may have indicated on "Question C" that two of the following types of work which are of most interest to me at this time are "health services" and "scientific" ... on "Question E" that two of my strongest aptitudes or talents are "clerical" and "finger dexterity" ... and on "Question G" I would like a career with the following job characteristics: "competes with other people on the job for recognition and advancement", "sees the physical results of work", "works as part of a team", "works with

people", and has "jobs widely scattered". However, when it comes to selecting an occupation, the student may choose one with widely divergent traits such as game warden, airline stewardess, or bookkeeper.

The Ventura Regional Education Data Center in the Ventura County Superintendent of Schools Office has the capability of using student profiles derived from the CPI to produce a list of prospective students. The staff at the Center is most cooperative in working with school districts who are participating in the Career Planning Inventory. The turnaround time was most expedient and the computer printouts were exactly as we had requested.

We have interviewed the students who were selected through the CPI computer procedure and have found that many of the students were unsure of their choice of a definite occupation but were reasonably certain of their interests in and aptitudes for the types of jobs they would enjoy. At the secondary level, students are often hesitant to make a decision regarding the career they will enter following graduation from high school. Since one objective of the course is to give the students an opportunity to experience and investigate different careers in the allied health/science related occupations, the less specific screening process was sufficient to provide an appropriate list of names of potential students.

We have included an example of the CPI and indicated the profile

of responses requested for data processing retrieval to determine the students to be selected for possible inclusion into our program.

Student Career Planning Data Compared to Projected Labor Demands

A useful booklet which is provided by the Ventura County Superintendent of Schools Office is titled, "The Student Career Planning Data Compared to Projected Labor Demands". It lists occupational training programs within Ventura County and contains forms that compare student interests and program availability to occupational needs. It is a simplified method for matching student career interests with related available occupational programs and the associated labor market demands data. There is a column on the form which cites the occupational outlook for the specific careers. The local occupational outlook was determined by a subjective analysis of program availability/potential occupational supply, student interest, and local occupational demands and other local/regional influencing factors. The national outlook was obtained from the Occupational Outlook Handbook.

The "program availability" section of this publication lists the existing training programs and their locations within Ventura County. This allows for county-wide articulation to occur and should be beneficial for local vocational planners in considering the development of curricula.

The following example illustrates the profile we submitted to Data Processing to obtain the list of potential students for the Science Career Education program:

EDUCATIONAL AND CAREER PLANNING QUESTIONNAIRE

NAME _____ SEX: Male Female

STUDENT SELECTION

ADDRESS _____ PHONE _____

SCHOOL _____ GRADE _____ COUNSELOR _____

Please print information as requested at the top of this sheet. The following questions are about your educational and career plans. Each question is important. Your answers will be used to help you understand your educational and career goals and to provide you with information about appropriate careers. Read each question carefully and answer it as best you can. You are to mark only one answer for each question unless the directions tell you to mark more than one answer. To indicate your choice simply circle the number in front of your answer.

A. The following courses of study are offered in most high schools. My present course of study is:

1. General Education
2. Business Education
3. Vocational Agriculture
4. Fine Arts
5. Industrial Education
6. Home Economics
7. College Prep. (Math/Science)
8. College Prep. (English/Social Sciences)
9. College Prep. (General Program)
10. Combination of two or more of 1 - 9

ANY 2

B. How sure am I about my choice of a course of study?

1. Very sure. It is exactly what I want.
2. Somewhat sure. I think it is what I want.
3. Doubtful. I am not too sure it is what I want.
4. I realize now I am in the wrong course of study.

C. TWO of the following types of work which are of most interest to me at this time are:

1. Artistic (creative work involving design, color and materials or the performing arts such as music, drama or dance)
2. Clerical (work involving precision, order and accuracy)
3. Computational (work involving mathematics or numbers)
4. Health Services (work involving health care of people or animals)
5. Literary (work involving reading and writing)
6. Mechanical (work involving machines and tools)
7. Outdoor (work that keeps you outside most of the time in all kinds of weather)
8. Persuasive (work involving sales, advertising, and/or public relations)
9. Scientific (work involving discovery, understanding and problem solving in nature and the physical world)
10. Social Service (work involving helping other people)

D. How sure am I that my responses to question "C" really are my strongest interests?

1. Certain. My career interests are very firm.
2. Fairly sure. My career interests are rather clear.
3. A little uncertain. My career interests are fairly clear.
4. Very uncertain. My career interests are not clear at all.

ANY 2

E. TWO of my strongest aptitudes or talents are.

- ① General learning (closely related to doing well in school)
- ② Verbal (ability to work with and understand written and oral information)
3. Numerical (ability to work well with numbers and mathematics)
4. Spatial (ability to picture something in my mind from a drawing)
5. Form perception (ability to see important details and differences)
6. Clerical (ability to work well with details in numbers or words)
- ⑦ Eye-hand coordination (ability to make a movement response accurately and swiftly)
- ⑧ Finger dexterity (ability to work with small objects readily)
- ⑨ Manual dexterity (ability to move my hands easily and skillfully)

F. How sure am I that my responses to question "E" really are my strongest aptitudes?

1. Certain
2. Fairly sure
3. A little uncertain
4. Very uncertain

ANY 5

G. I would like a career with the following job characteristics: (circle FIVE of those you would like)

1. Involves a high level of responsibility -- makes key decisions involving property, finances or human safety and welfare
2. Directs activities of others -- work involves supervisory responsibility
- ③ Works under close supervision -- job performance and work standards controlled by a supervisor
- ④ Has repetitious work -- performs the same task on a continuing basis
5. Competes with other people on the job for recognition and advancement
- ⑥ Works with details on a continuing basis -- may be numbers, written materials or technical data
7. Sees the physical results of work -- produces a tangible product
8. Has an opportunity for self-expression -- freedom to use one's own ideas
9. Helps people -- assists people in a helping relationship
10. Works independently -- requires initiative, self-discipline and the ability to organize
- ⑪ Works as part of a team -- interacts with fellow employees in performing work
12. Requires physical stamina -- involves continued lifting, standing and walking
- ⑬ Works overtime or shift work -- works hours other than normal, daytime shifts
14. Works with ideas -- uses intellect to solve problems
- ⑮ Works with people -- requires a pleasing personality and ability to get along with others
- ⑯ Works with things -- job generally requires manual skills
17. Works at one work setting -- generally confined to work area
18. Has jobs widely scattered -- jobs are located in most areas of the United States
19. Motivates others -- must be able to influence others

H. Based upon facts I have now, my plan for the future is:

1. To graduate from high school and go right to work with no further education.
2. To join the armed forces.
3. To enter an apprenticeship program.
4. To get further training at a trade, technical or business school.
5. To complete a junior college program involving two years of training or less.
6. To start at a junior college then transfer to a four year college.
7. To go right to a four year college or university.
8. To attend more than four years of college.

I. Is there any reason why you may not be able to graduate from high school?

1. Yes
2. No

J. I wish to talk to a counselor about (circle as many as apply):

1. High school education requirements.
2. Post high school technical (community college) and trade school opportunities.
3. Four year college entrance requirements.
4. Scholarships or other financial aids to attend a private school, junior college or four year college.
5. I do not wish to talk to a counselor about any of the above.

K. I estimate my grades since 8th grade to be:

1. Mostly A's
2. Mostly A's and B's
3. Mostly B's
4. Mostly B's and C's
5. Mostly C's
6. Mostly C's and D's
7. Mostly D's

L. Please note your need at this time for help with educational and career planning:

1. I need considerable help in figuring out what I am going to do.
2. I have some things planned but could use additional help.
3. I do not need additional help at this time as plans are pretty clear.

M. Do you have any physical handicaps that limit you in any way?

1. Yes
2. No

N. Some high school students ride a bus to an area vocational school so they can take special courses. Are you willing to attend an area school (no more than 30 miles from your school) if the vocational courses you wish to take are not offered at your school? Please circle your answer.

1. Yes
2. No

0. You probably have some idea of the occupation(s) you would like to enter. Please select your first and second choices (TWO ONLY) from the 126 occupations listed by placing a "1" in front of your first choice and a "2" in front of your second choice. If the occupation(s) in which you are interested are not listed, please pick related occupation(s) or place an "X" in the box marked "other" and write in the occupation(s) you prefer. If you do not have any idea of the occupation you would like to enter, please place an "X" in the box marked "undecided."

BUSINESS AND COMMERCE

- ___ 001 Accountant
- ___ 003 Advertising Worker
- ___ 005 Auto Salesman
- ___ 007 Automobile Parts Counterman
- ___ 009 Bank Teller
- ___ 010 Bookkeeper
- ___ 011 Cashier
- ___ 013 Clerk Typist
- ___ 015 Computer Operator
- ___ 017 Hotel/Motel Clerk
- ___ 019 Insurance Agent
- ___ 021 Keypunch Operator
- ___ 023 Manufacturers' Salesman
- ___ 025 Personnel Worker
- ___ 027 Public Relations Worker
- ___ 029 Purchasing Agent
- ___ 031 Real Estate Salesperson
- ___ 033 Receptionist
- ___ 035 Restaurant Manager
- ___ 037 Retail Sales Clerk
- ___ 039 Secretary/Stenographer
- ___ 041 Stockbroker
- ___ 043 Telephone Operator

APPLIED AND PERFORMING ARTS

- ___ 101 Actor/Actress
- ___ 103 Commercial Artist
- ___ 104 Dancer
- ___ 105 Interior Designer/Decorator
- ___ 106 Interpreter/Translator
- ___ 107 Journalist/News Paper Reporter
- ___ 109 Lithographer
- ___ 111 Model
- ___ 113 Musician/Music Teacher
- ___ 115 Photographer
- ___ 117 Photographic Lab Technician
- ___ 118 Professional Athlete
- ___ 119 Radio & Television Announcer
- ___ 121 Technical Writer

AGRICULTURE AND CONSERVATION

- ___ 201 Animal Keeper
- ___ 203 Crop and Fruit Grower
- ___ 205 Dairy and Livestock Farmer
- ___ 207 Fish and Game Warden
- ___ 209 Fisherman
- ___ 211 Forester
- ___ 213 Forestry Technician
- ___ 215 Gardener/Grounds Keeper
- ___ 216 Horse Trainer/Breeder
- ___ 217 Nurseryman/Landscaper
- ___ 219 Poultry Rancher

SKILLED TRADES AND REPAIR

- ___ 301 Air Conditioning, Refrigeration and Heating Mechanic
- ___ 303 Aircraft Mechanic
- ___ 305 Appliance Serviceman
- ___ 309 Automobile Body Repairman
- ___ 311 Automobile Mechanic
- ___ 313 Automobile Painter
- ___ 315 Automobile Transmission Repairman
- ___ 317 Bricklayer
- ___ 319 Business Machine Serviceman
- ___ 321 Carpenter
- ___ 323 Cement Mason
- ___ 325 Electrician
- ___ 327 Farm Equipment Mechanic
- ___ 329 Heavy Equipment Operator
- ___ 331 Industrial Machinery Repairman
- ___ 333 Lineman
- ___ 337 Machinist
- ___ 339 Motorcycle Mechanic
- ___ 340 New Car Get Ready Man
- ___ 341 Painter/Paperhanger
- ___ 343 Plumber
- ___ 344 Service Station Attendant
- ___ 345 Television and Radio Repairman
- ___ 347 Welder

PUBLIC SERVICES

- ___ 401 Air Traffic Controller
- ___ 403 Airplane Pilot
- ___ 405 Airtine Stewardess
- ___ 407 Beauty Operator
- ___ 409 Bus Driver
- ___ 411 Clergyman/Religious Worker
- ___ 413 Cook/Chef
- ___ 415 Counselor
- ___ 417 Custodian
- ___ 419 Fireman/Fire Fighter
- ___ 423 Home Economist
- ___ 425 Lawyer
- ___ 427 Librarian
- ___ 428 Military Service
- ___ 429 Nursery School Teacher
- ___ 431 Police Officer
- ___ 433 Probation Officer/Parole Agent
- ___ 435 Psychologist
- ___ 437 Recreation Worker
- ___ 439 Social Worker
- ___ 441 Teacher
- ___ 443 Truck Driver
- ___ 445 Waiter/Waitress

ENGINEERING, SCIENTIFIC AND TECHNICAL FIELDS

- ___ 501 Architect
- ___ 503 Biologist
- ___ 505 Chemical Engineer
- ___ 507 Chemist
- ___ 509 Civil Engineer
- ___ 511 Computer Programmer
- ___ 513 Draftsman
- ___ 515 Electrical Engineer
- ___ 517 Engineering/Science Technician
- ___ 519 Geologist
- ___ 521 Mathematician
- ___ 523 Mechanical Engineer
- ___ 525 Oceanographer/Marine Biologist
- ___ 527 Surveyor
- ___ 529 Systems Analyst

HEALTH SERVICES

- ___ 601 Dental Assistant
- ___ 603 Dental Hygienist
- ___ 605 Dentist
- ___ 607 Hospital Administrator
- ___ 609 Hospital Attendant/Nurse Aide
- ___ 611 Licensed Vocational Nurse
- ___ 613 Medical Assistant
- ___ 615 Medical Laboratory Worker
- ___ 617 Occupational Therapist
- ___ 619 Optometrist
- ___ 621 Pharmacist
- ___ 623 Physical Therapist
- ___ 625 Physician/Doctor
- ___ 627 Registered Nurse
- ___ 629 Veterinarian
- ___ 631 X-ray Technician

THE ADVISORY COMMITTEE

Effective coordination and articulation of occupational education programs within and between school systems is impeded because of strong differences of opinion regarding the objectives of the programs among the responsible educators. What is needed is a comprehensive system of occupational education and training for both the youth and adults in a community who need and desire such education. School administrators acknowledge the need for such a system of occupational education rather than groups of uncoordinated programs. It appears reasonable and logical in developing such a system to have the benefit of the advice and counsel of a general advisory committee composed of industry executives from all segments of the community.

Advisory committees play a vital role in the success of vocational and occupational programs. It is important that as technology demands increase and industrial patterns change, the instructional programs reflect current practice. These advances require the joint efforts of school and community to remain abreast of changing needs.

In order for training programs to respond to the needs of industry, a situation conducive to a constant exchange of information must be maintained. Interested people from industry are needed to acquaint the schools with trends, technical advances, and the varied requirements for specific occupational skills and training. An advisory committee sensitive to the daily needs of local industry can

provide the effective interchange of information that is vital to both the school and industry. The advisory committee can make an effective contribution if it has been given a clearly defined function that is unanimously considered relevant by the members of that committee.

The committee must be "wanted" by the school and the potential value of its contributions must be recognized by the school administration.

The superintendent and his staff must be willing to give the necessary time, energy, and support to make it successful. It has been said that the achievements of advisory committees are proportionate to the demands made on them by the school district.

The function of an advisory committee is, as the name signifies, to give advice. An advisory committee has no administrative or legislative authority; this is the responsibility of the board of education.

There are three essential criteria to keep in mind when selecting and inviting individuals to become members of an advisory committee. First, the members must have had successful first-hand experience in the special area being served. They should be people who have the respect and confidence of their associates. Second, since an advisory committee should meet as often as is necessary, members must be able to maintain close contact with vocational activities of the school district. Each member should be willing to devote time to the committee and in some instances give additional time for subcommittee work. Third, each member should exhibit a strong sense of responsibility in civic-mindedness.

ACCOUNTABILITY AND FOLLOW-UP

Judgment about the effectiveness of educational preparation for work can be made only after the results are observable. The success of graduates -- the number who acquire and keep jobs in the occupation for which they are trained, the wages they earn, and the extent to which they need further education and training -- are the types of data that influence this judgment. On the basis of this evidence, a school can endorse, modify, or cancel the educational program being evaluated. The feedback obtained from and about graduates is invaluable to the school in discharging its instructional obligations.

The school's advisory committees are keenly interested in information derived from follow-up studies. The findings can, for example, be used by the school to justify soliciting their counsel on certain phases of the instruction or to seek their endorsement of a new course offering. The committees will be able to use follow-up information to endorse or recommend alterations in placement practices.

A critical public is demanding that educators and educational institutions justify their expenditures more diligently than ever before. One measure of accountability applied to vocational education is how well its graduates fare in the world of work. The public, however, is holding schools accountable for expending taxpayers' funds in a manner that will ensure the maximum benefits to society. Thus, the student's

total adjustment to society is part of the school's accountability.

Follow-up studies conducted for the purposes of determining how well their graduates adjust to work and to adult life can provide schools with a useful accountability tool.

Obtaining valid data is the first step in a process that enables vocational educators to incorporate knowledge derived from past experiences into plans for the future. It should be an integral part of a continuous process whereby the curriculum which may include other peripheral vocational studies undergo scrutiny and change.

The following pages illustrate a graduate follow-up questionnaire. This particular assessment tool is commonly known as "TRACE" and was produced by the Santa Barbara County Schools in cooperation with the Vocational Education Section of the California State Department of Education.

3. What is the name of the school? _____
4. What is your major subject? _____ None

ANSWER THE QUESTIONS IN THIS BOX IF YOU ARE WORKING FULL-TIME OR PART-TIME OR IF, YOU ARE LOOKING FOR A JOB.

5. Which of the following is your present job situation?
- Unemployed, but looking for a job
 In an apprenticeship program
 Receiving on-the-job training
 In a job I am fully qualified for
6. Which statement best describes your present job or, if unemployed, the job you are looking for?
- In a field for which I received specific high school training
 In a field related to my high school training
 In a field unrelated to my high school training

ANSWER THE QUESTIONS IN THIS BOX IF YOU ARE WORKING FULL-TIME OR PART-TIME.

7. What type of business or industry are you employed in? _____

8. What is your job title? _____

9. How far from your high school is your place of employment?

0-10 miles 26-50 miles
 11-25 miles 51-100 miles
 more than 100 miles

10. Who helped you get your job?

Parents, relatives, or friends Private employment agency
 High school vocational counselor State or public employment agency
 Got it on my own Other (DESCRIBE) _____

11. Make an "X" in the box that best describes your agreement or disagreement with the statement for your present job.

STRONGLY DISAGREE	DISAGREE	NOT SURE/ UNDECIDED	AGREE	STRONGLY AGREE	
□	□	□	□	□	The work is interesting to me.
□	□	□	□	□	My chances for advancement are good.
□	□	□	□	□	The pay is good, considering my training and experience.
□	□	□	□	□	I am satisfied with this job, at this stage in my career.
□	□	□	□	□	The job is related to my ultimate occupational objective.

PLEASE ANSWER ALL OF THE FOLLOWING QUESTIONS

12. Read the following list of high school subject areas. Then make an "X" in each set of columns according to the instruction at the top of the sets.

Did you take any courses in this area?

If "yes," check the degree of usefulness of courses you have taken to your present activity

not useful somewhat useful very useful

Check here if you wish you had taken any OR more courses in this area

21. Make an "X" in the box that best describes your agreement or disagreement with the following statements:

STRONGLY DISAGREE DISAGREE NOT SURE/ UNDECIDED AGREE STRONGLY AGREE

------------------------- My counselor gave me good information in planning my high school program.

 My counselor was helpful in planning my activity after graduation.

------------------------- Most of my teachers made their courses interesting and enjoyable.

 Most of my teachers tried to meet my specific educational needs.

------------------------- Most of my teachers related their subjects to the needs of today.

 Most of my teachers were not prejudiced toward minority group students.

------------------------- I feel that high school was a pleasant and rewarding experience.

22. Indicate in which schools you have completed a program of study or from which you have received a degree since leaving high school. (CHECK AS MANY SCHOOLS AS APPLY).

- No schools
- Four-year college or university
- Technical school (type) _____
- Trade school (type) _____
- Private Business School
- Other (describe) _____

- Junior college (also check one below)
- Two-year AA program only
- Certificate program (type) _____
- Other (describe) _____

Thank you for completing the questionnaire
 Feel free to write comments in the empty space above

ARTICULATION

Articulation is not simply a coordinating meeting of each district so that one knows what the other offers; it is an organized plan whereby the educational objectives at every program level are systematically organized into an upward mobility module. It permits spin-offs at each level, eliminates repetition, and strengthens further development.

In addition to providing an upward mobility the articulation allows an opportunity to begin breaking down the interdepartmental barriers so common to secondary education. No valid program can be realized within the confines of a single department. Vocational education must promote the interdisciplinary approach if it is to develop a viable program.

To have a successful vocational program, articulation must be one of the earliest, if not the first, steps. It is essential to be convinced of the value and rationale for developing an organized articulative program with accompanying benefits to the students, the district, and most importantly, vocational education.

While it is imperative that each vocational program independently prepare graduates for entry level job employment at the completion of high school training, an articulated program of vocational education will enable students to complete their advanced training in a reduced amount of time, and/or prepare them for a more advanced position by

the end of a completed junior college or adult education program.

An articulated program benefits a school district by clarifying educational opportunities for parents, students, counselors, and the community in understanding the advantages of promoting a vocational education training program. It affords the opportunity to provide an expanded curriculum and/or a more advanced program addressed to student needs in a particular vocational area. Articulation can save expenses of equipment, facilities and maintenance in vocational programs.

A well articulated program should give the community a more positive and supportive outlook at various vocational programs; they will be more confident that the best programs possible are being operated to meet each individual need.

Articulation requires considerable planning, in-service meetings, joint advisory committee meetings, joint curriculum development, etc., all of which will contribute to a greater need for the vocational leaders, both at the community college, adult education, and the secondary school levels to take an active part. When administrators are better informed and cooperatively working together in the best interests of vocational education they should be more able to meet the needs of their student population and the community they serve.

GLOSSARY OF TERMS

BLS NATIONAL INDUSTRY/OCCUPATIONAL (I-O) MATRIX - a means of displaying data designed and developed by the Bureau of Labor Statistics (BLS) combining census data, employer surveys, and extrapolation techniques to "fill-in" the industry-occupation employment cells. (Refer to Tomorrow's Manpower Needs, available from the U. S. Department of Labor, Bureau of Labor Statistics,)

CLASSIFIED INDEX OF INDUSTRIES AND OCCUPATIONS - defines the industrial and occupational classification systems adopted for the 1970 Census of Population; presents approximately 19,000 industry and 23,000 occupational titles.

DOT CODE - Dictionary of Occupational Titles - an occupational classification system first published in 1939 and revised and updated over the years. It makes available descriptive information concerning most jobs in the U. S. economy and provides a numerical classification structure by means of which occupations are arranged according to their interrelationships. The standardization of job titles and accompanying definitions of job duties provide a unique tool for the many users of occupational information.

EDD - State of California, Employment Development Department (formerly known as HRD).

EMPLOYER VALIDATION - a technique used to obtain occupational information and estimates from a sample of area employers to be used in validating cells of the matrix and to assist in making localized projections of occupational and industrial trends.

ENTRY-LEVEL JOBS - those positions for which employers will accept and hire workers with little or no previous experience in the occupation and with relatively minimum training or education for the specific job:

EXTRAPOLATION TECHNIQUE - projection techniques used to extend known economic time series data into a future time period.

LABOR MARKET AREA - an identifiable area with a major industrialized city or cities, meeting a certain size criterion, in which resident workers move to and from jobs.

MMIS - Manpower Management Information System - a comprehensive information system, supported by JOPTF,, designed to develop, compile, evaluate, and deliver a large volume of valid and pertinent information relating to the interactions of the labor market to those individuals and groups directly or otherwise involved in the use and application of such information.

PROJECTION - a quantitative economic trend decision based on analysis and statistical calculations using economic data. The word is commonly used to distinguish the conditional prediction from the unconditional prediction.

SMSA - Standard Metropolitan Statistical Area - a concept first developed by the U. S. Bureau of the Budget in 1943. The primary objective was to have all reporting federal agencies utilize the same geographic boundaries in publishing statistical data useful for analyzing labor market problems. The criteria used for defining Standard Metropolitan Statistical Areas (SMSA) are essentially those used in defining major labor market areas. As of July 1, 1970, there were 233 Standard Metropolitan Statistical Areas (SMSA) in the United States. The 16 in California coincide with the 16 major labor areas in the state.

TITLE: A MODEL FOR THE IMPLEMENTATION OF A BILINGUAL VOCATIONAL EDUCATION TRAINING PROGRAM.

DESCRIPTOR: *ADULT VOCATIONAL EDUCATION; *BILINGUAL EDUCATION; ENGLISH (SECOND LANGUAGE); *SPANISH SPEAKING; MEXICAN AMERICANS; ECONOMICALLY DISADVANTAGED; EDUCATIONALLY DISADVANTAGED; *SKILL CENTERS; MODELS; CONTINUING EDUCATION CENTERS; *VOCATIONAL TRAINING CENTERS; COMMUNITY COLLEGES; POST SECONDARY EDUCATION; SECONDARY EDUCATION

IDENTIFIER: EL PASO COUNTY; TEXAS.

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 85P.; PAGES 87 THROUGH 103 CONTAINING INFORMATION ABOUT PROGRAM PARTICIPANTS WERE REMOVED. THEY ARE NOT INCLUDED IN THE PAGINATION.

ABSTRACT: TO SERVE THE LOW-INCOME, LOW-EDUCATION POPULATION OF EL PASO CITY AND COUNTY, TEXAS, MORE THAN HALF OF WHOM ARE PRIMARILY SPANISH-SPEAKING MEXICAN-AMERICANS, THE EL PASO COMMUNITY COLLEGE INITIATED PROGRAMS FOR NON-TRADITIONAL STUDENTS IN BILINGUAL OCCUPATIONAL SKILLS TRAINING AND IN BILINGUAL LANGUAGE DEVELOPMENT. A MODEL FOR BILINGUAL VOCATIONAL TRAINING WAS DEVELOPED FOR USE BY OTHER EDUCATIONAL INSTITUTIONS. IN IMPLEMENTING THIS MODEL THE BILINGUAL SKILLS CENTER OF THE COLLEGE CONDUCTED CLASSES IN INDUSTRIAL SEWING MACHINE REPAIR, RADIO/TELEVISION REPAIR, OPTICAL LENS GRINDING, INDUSTRIAL SEWING MACHINE OPERATION, AND THE BUILDING TRADES. THE FIRST THREE PROGRAMS HAVE BEEN APPROVED FOR COLLEGE CREDITS AND THE SECOND TWO FOR CONTINUING EDUCATION UNITS. IN ADDITION, THE CENTER PROVIDED VOCATIONAL TRAINING FOR DISADVANTAGED ADULTS IN AUTO BODY REPAIR, AUTO SERVICE AND TUNEUP, CASMIER/CHECKER, OFFICE PROCEDURES, TYPING, NURSE'S AIDE AND ORDERLY, AND PREEMPLOYMENT PREPARATION. INCLUDED IN THE DOCUMENT ARE AN INFORMATIONAL BROCHURE, A TEST FOR IDENTIFYING PERSONS OF LIMITED ENGLISH-SPEAKING ABILITY, AN EVALUATION OF THE SKILLS CENTER, AND AN INSTRUCTIONAL MODEL AND STUDENT RATING SCALE. INTRODUCTION

PART IV

PROGRAM NARRATIVE

1. Need for This Assistance

National and State Perspectives

Historically, Southwestern public educational institutions have failed to response to culturally different students. Schools persist in judging all students by conventional standards while ignoring real differences and deprivations. Typically, non-traditional students enter school at a disadvantage and just as typically leave in much the same fashion. Current statistical data indicate that of any single ethnic group (with the exception of Native Americans), the Spanish-speaking group has the lowest educational level, the highest dropout rate and the lowest proportionate percentage enrolled in institutions of higher education (1). Reluctance on the part of the Spanish speaking to abandon their cultural and linguistic heritage and inability of others to achieve an understanding of their culture and language accounts, in part, for less than adequate participation by the Spanish speaking in programs available to serve them (1). In Texas, by the eighth grade nearly three-fourths of the Mexican Americans are reading below their grade level. By the 12th grade, almost half of those who started first grade (47 percent) have dropped out. Blacks have fared only slightly better (2). The Coleman, Newman, and Jencks Reports dramatically illustrate on a national scope the failure of traditional educational approaches to successfully reach disfranchised minorities.

El Paso County Perspective

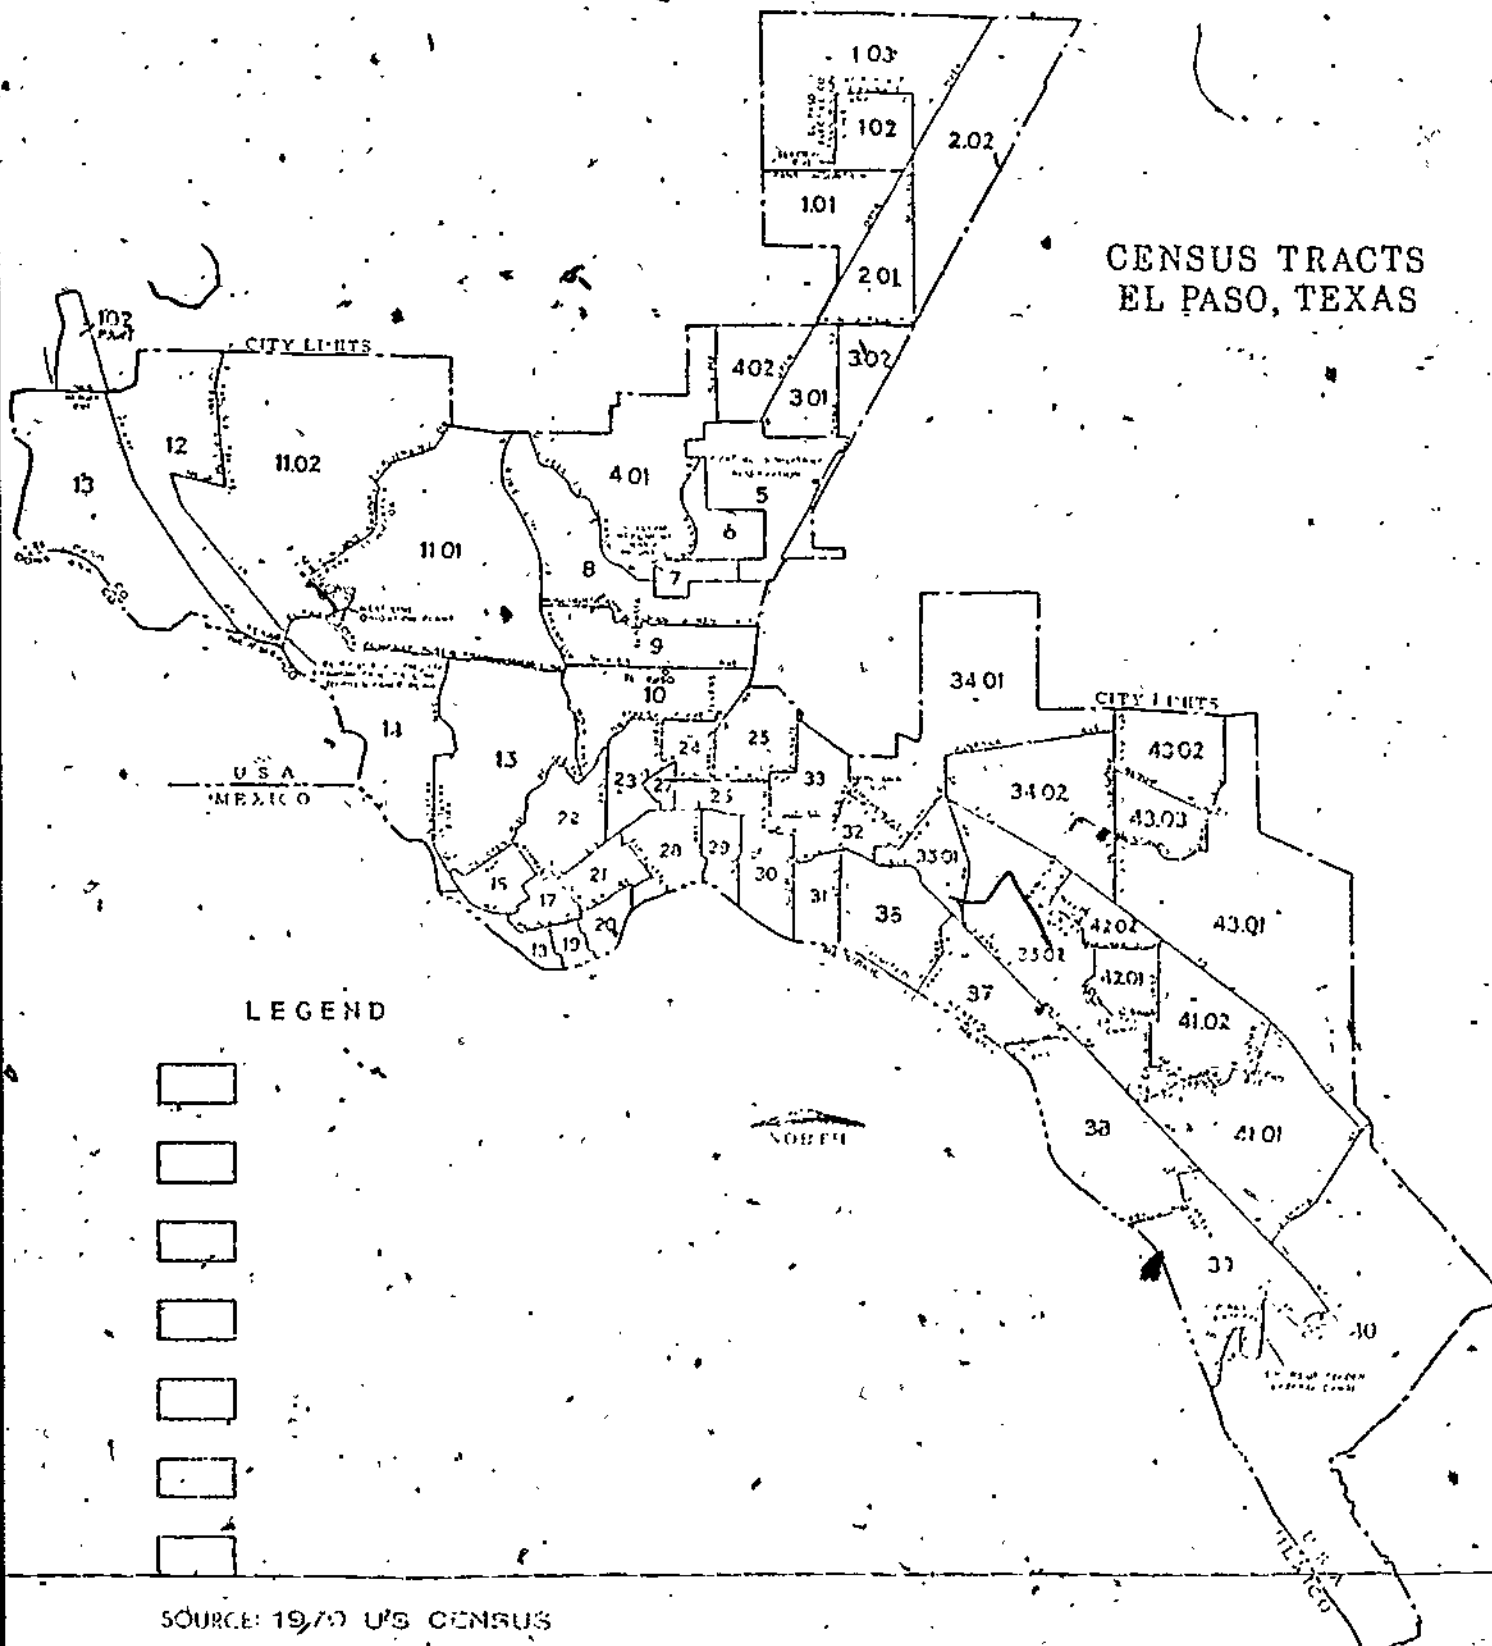

El Paso County with a population of 400,971 (2.8 percent Black and 56.9 percent Spanish surnamed or whose primary language is Spanish) is the largest metropolitan area located on the United States-Mexico border (4). Like other border communities, it has one of the highest incidences of poverty and lowest educational attainment rates in the United States. More than 10,000 Mexican-American families live below what is considered poverty level by federal government definition. The city of El Paso, with over 330,000 inhabitants, was recently designated as the second "poorest" major city in the United States with 30.3 percent of the city's population classified as "poor" by OEO standards. Over 46,000 (54.8 percent) of Mexican Americans 25 years of age or over have completed eight or less years of school (4).

Economic and Employment Situation of Mexican Americans in El Paso

The average annual income of the Mexican American family in the city of El Paso is under \$5,000 (US Census Tract). Furthermore, a survey conducted by the Texas Employment Commission showed that of the 7,400 unemployed persons in the area in December, 1973, 75 percent were Mexican Americans. Of those employed, Mexican Americans have occupied the less preferred positions that are either dead end or low waged.

More specific data exists in the form of poverty indicators for the metropolitan statistical tract of El Paso. These selected indicators show that of the total number of individuals below poverty level, fully 78 percent are Mexican American.

Educational Status

Among the many needs, the El Paso Community College must meet is that of continuing or adult education. This is brought very forcibly by the data listed in the U.S. Census of 1970 as shown in Table 1.

The data are for males and females and the total for both who are 25 years and over in El Paso County in 1970. Note that a higher percentage of the females than males is in each category of completing no schooling on through high school, and then the males show up as having a higher percentage than females which completed 1-3 years and 4 years or more of college.

There was 4.93 percent (8,047) of the total number (163,028) of males and females who had completed no schooling. There were 56,683, or 34.77 percent had completed none to 8 grades of schooling. Of these 12,338 had completed the 8th grade.

A total of 68,897, or 42.24 percent stated they had had 1 to 4 years of high school, of which 45,667 or 28.00 percent had completed high school. There were 37,498, or 22.99 percent who had some college education. Of this number almost half, 18,590, or 11.40 percent had 4 or more years of college.

One can see the large number of adults who are 25 years or over who need further training. In fact, the figures in Table 1 show that 79,913 or 49.01 percent have less than a four year high school education. As shown in Table 1 another 12,337 have only an eighth grade education.

Table 1

The level of education of males and females and total of both who are 25 years and over in El Paso County, Texas.

Amount of Schooling	Males	Per Cent	Females	Per Cent	Total	Per Cent
No School Years Completed	3,316	4.36	4,731	5.44	8,047	4.93
Elementary:						
1-4 years	6,442	8.46	8,734	10.04	15,176	9.30
5-7 years	8,739	11.48	12,283	14.24	21,122	12.95
8 years	5,438	7.14	6,900	7.94	12,338	7.59
			Sub-total		(56,683)	(34.77)
High School:						
1-3 years	10,326	13.56	12,904	14.84	23,230	14.24
4 years	20,604	27.06	25,063	28.82	45,667	28.00
			Sub-total		(68,897)	(42.24)

4 years or more	11,088	14.57	7,502	8.64	18,590	11.40
			Sub-total		(37,498)	(22.99)
Total	76,129	100.00	86,949	100.00	163,078	100.00
Median School Years Completed	12.2		11.5		11.9	
Percent High School Graduates	55.0		47.6		51.0	

(U.S. Census)

Bilingual-Bicultural Goals of El Paso Community College

Perhaps an informative way to describe bilingual-bicultural education is to define its intended outcomes. Accordingly, the goals of bilingual-bicultural education at El Paso Community College are as follows:

1. To develop in each student the ability to maximize his potential as an individual, as a learner, and as a citizen in a multi-lingual, multicultural society.
2. To enrich and deepen mutual understanding for all citizens by building upon the rich multicultural foundations of our society. The learners' unique environment and experiences are the cornerstones of these foundations.
3. To promote cultural acceptance, national pride, and more world understanding.
4. To offer a curriculum that meets the diverse needs of students with different language and cultural orientations in order to better permit them to:
 - a. preserve and strengthen their self-image and sense of dignity through appropriate and meaningful instructional programs.
 - b. utilize their first language as a medium of instruction.
 - c. develop pride in self, college and community.
 - d. learn to interact in multilingual-multicultural social settings.
 - e. develop communications skills to level of proficiency in order for the individual not only to survive, but progress socially and economically in either culture.

To summarize, the goals of bilingual-bicultural education include the integral bicultural context, full acceptance of the Spanish language as a vital linguistic medium, the use of both languages (the native and English) as a means toward increasing efficiency and improving attitudes in training bilingual-bicultural individuals and English-as-a-second-language as a vital component.

Institutional Commitment

El Paso Community College opened its doors to 901 students in the Fall Semester, 1971. Enrollment has grown in three years to over 9,200 students in the Spring Semester 1974-75. A unique feature of the college is that the ethnic composition of its student body is truly representative of the ethnic composition of its community. Enrollment for the Spring Semester 1974-75 is 58% Mexican American, 34% Caucasian, 4% Black, 1% Native American, 3% other. Furthermore, the college, in its fourth year of operation, is enrolling more than 1.5 percent of the population within its district. This percentage compares favorably with some of the "better" urban community colleges in Texas, thus partially indicating the college's effectiveness in moving quickly to serve a commendable proportion of its community population.

In addition to extensive programs in technical-vocational education, general education, transfer education, and continuing education and community services; the college has initiated programs specifically aimed to serve non-traditional students. Working in cooperative with organizations such as NYC, Educational Talent Search, Operation SER, Texas Rehabilitation Commission, Upward Bound, Trinity OIC Coalition, Father Rahm Clinic, Project Bravo, A.J.I.V.I.A.N.E., local health organizations, the El Paso Public Schools; the University of Texas at El Paso, and several veterans organizations, the college

provides educational programs of two years or less which are desperately needed within the community. Utilizing the "college without walls concept" El Paso Community College offers classes in high schools, community centers, housing projects, technical-vocational schools, and a main campus. In fact, the college had no campus--its first year of operation. Even today, more than 40 percent of the students attend classes during the evening in the nine teaching centers located throughout El Paso.

Within a relatively short period of time and with scarce resources El Paso Community College has implemented the following program for non-traditional students: (1) A veterans assistance program to recruit and counsel educationally deprived veterans; (2) A nurse retention program to supplement instruction in the college's Associate Degree Nursing program; (3) A Special Services Program to provide "peer" tutors and counselors for low-income, non-traditional students; (4) A Right to Read Program to provide developmental reading; (5) A Moody Foundation Program to establish communications and mathematics programmed individualized instructional laboratories; (6) Headstart supplementary teacher training courses; (7) An Upward Bound Educational Talent Search Program for Vietnam Veterans; (8) and an Allied Health recruitment and retention program to recruit low-income and minority students into allied health career fields and to give them entry-level skills and confidence necessary for completing their intended programs of study; (9) Ft. Bliss, an army base of approximately 25,000 personnel, is located in El Paso. The College has quickly moved to serve military men by becoming a Service Men's Opportunity College and this move will allow the college to more adequately serve other adult non-military residents.

OBJECTIVES

The objectives for the Bilingual Skills Center vocational training program includes:

- a) to identify and recruit individuals of limited English speaking abilities who are in need of vocational training to enter into gainful employment
- b) to provide career counseling to individuals to facilitate realistic vocational choices based on aptitude tests results and assessment of the individual's needs
- c) to provide English as a Second Language training for target individuals prior to their entry into vocational training
- d) to provide General Education Development for target individuals lacking high school education
- e) to provide instruction in consumer education, jobs or pre-employment preparation, and citizen's awareness for participation in local, state, and national government as an informed constituent
- f) to provide bilingual training programs in occupations having a shortage of skilled workers
- g) to provide placement counseling for target individuals completing the bilingual vocational training programs
- h) to implement the model for bilingual vocational education which was developed during the first year of the program
- i) to provide in addition to ESL/GED those basic communication and computation skills that are job related.

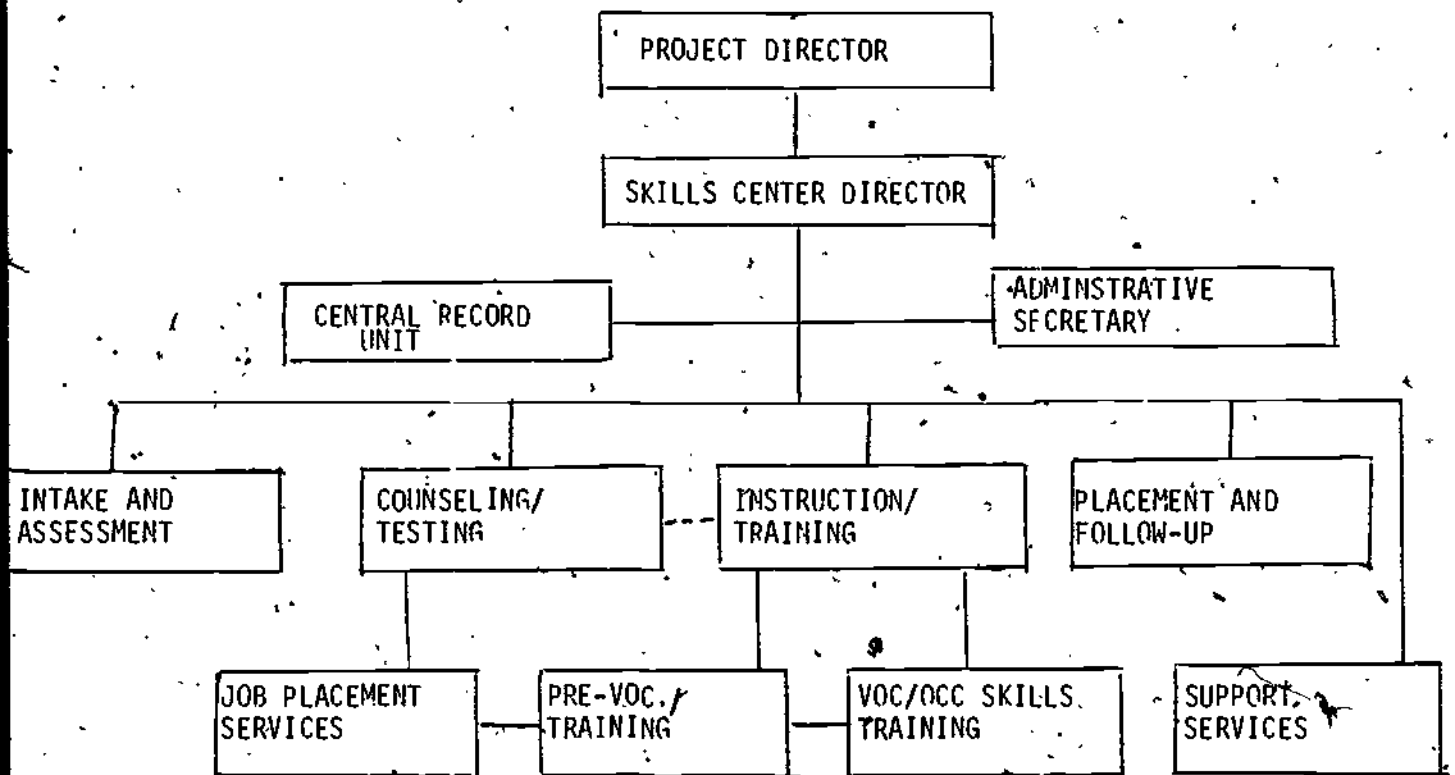

The objectives stated above have been met with a relative degree of success during the first year of operation. Only objective (h) is being consolidated into a formal format of guidelines for providing a model for bilingual vocational training to be used or adapted for use by educational institutions involved in or anticipating involvement in providing bilingual vocational training.

7. Accomplishments

The El Paso Community College's Bilingual Skills Center has been conducting classes in the areas of Industrial Sewing Machine Repair Mechanic, Industrial Sewing Machine Operator, Radio-Television Repair Technician, Optical Lens Grinding Technician and the Building Trades under Part J, Bilingual Vocational Training projects provided through the United States Office of Education grant.

As a "Model for Implementation of Bilingual Vocational Training," the Bilingual Skills Center has been teaching classes since October 13, 1975. When the grant was announced, the development a Skills Center was initiated, beginning in July 1975, a building was leased and remodeled by the institution to house the new vocational training programs. Faculty and Staff were hired and instructional supplies and materials were purchased, but instead of utilizing one-third of the grant funds to purchase equipment and to avoid the mass of record-keeping required for reports of equipment purchased through federal funds, El Paso Community College has purchased equipment for each of the five (5) occupational programs.

The results or benefits achieved in the first year of operation included; 1) individuals of limited English speaking ability were provided opportunities for bilingual occupational skills training, as well as bilingual language development to better function at the job entry level. Also a model for providing bilingual vocational training is being developed to be used or adapted for use by educational institutions involved in or anticipating involvement in providing vocational training.

This project has been divided into three thrusts; Thrust I - identification of program materials; Thrust II - implementation of bilingual vocational training; and Thrust III - model development and evaluation.

Three of the instructional programs have been approved by the Texas Education Agency to award college credits upon successful completion of the program, these are: Radio-T.V. Repair, Sewing Machine Repair and Optical Lens Grinding. The other two programs have been approved by T.E.A. under the Continuing Education and Community Services programs to award Continuing Education Units (CEU's).

Each of the training programs have been undergoing a series of instructional development procedures in order to provide an individualized and a Systematic approach to instruction. The College's Faculty Development Officer has conducted staff development in the area of curriculum writing. As a result of these efforts to individualize and systematize the instruction, student's progress has been measured in that instructor's relate the student is able to learn and retain more by working on instructional modules that cover only a portion of the total course. Students are also paired to provide a peer-tutor relationship to assist one another.

The Curriculum Developer/Translator has provided assistance to the Skills Center's faculty in systematization of the programs. Handouts and course outlines have been translated into Spanish for use by the students who are severely limited in their English-speaking ability. Instructional materials, already translated or those available in Spanish, have been identified and obtained for inclusion in the instructional program.

8. Major Activities and Events

The Bilingual Skills Center has established linkages with social service agencies, as well as local, state, and federal offices which have the responsibility for assisting disadvantaged, unemployed or underemployed individuals. Other programs and program counselors often seek training programs at the

Skills Center where they may refer clients for the opportunity to receive saleable skills. More important is that employers are becoming interested in the programs by referring unqualified job applicants to the training and are hiring the graduates upon completion. In addition to the liaison maintained with other community programs for student referrals, the Bilingual Skills Center has developed community-based support in that factories in the needle-trades are providing information, materials, and employment opportunities to the program. Levi-Strauss, Mann Manufacturer and Farah Slacks, Inc., have donated materials for the sewing classes. On January 19, 1976, the Bilingual Skills Center expanded its English/Spanish instructional capabilities to Vietnamese, when Vietnamese resettlement refugees were accepted into the Sewing Machine Operators training program. Arrangements are being made to provide English classes to the Vietnamese students thru C.E.T.A. funding.

The Bilingual Skills Center will continue to provide instruction in the skills areas that were operational during the 1975-76 academic year, but as part of the college's commitment, the training programs will be expanded to provide student services, i.e., Intake and Assessment; Testing and Counseling; and Job Placement to individuals enrolled in the Texas Education Agency's programs to train Adults with Special Learning Needs. One of the objectives of the Vocational Education Amendment Act of 1968 is to provide meaningful vocational education to educationally disadvantaged persons. Currently, the Skills Center is providing occupational training or retraining for those adults with Special Learning Needs in the following areas:

- 1) Auto Body Repair Mechanic
- 2) Automotive Service Center Attendant.
- 3) Automotive Electrical & Ignition System (Tune-up mechanic)

- 4) Cash Register Management (Cashier-Checker)
- 5) Secretarial Office Procedures
- 6) Typing Skills
- 7) Geriatric Nurse's Aide and Orderly
- 8) Pre-Employment Preparation and Career Awareness

These programs are being planned to provide instruction and training on a "Clustered Concept" with an "open entry" and "open-exit" upon successful completion of course requirements. This method provides any students who cannot complete the entire program with an alternative. If the student cannot reach the highest skills level required, he/she can exit at any point during the period of instruction and still have a competency level skill with which to become employed.

Two training programs funded by the Bilingual Vocational Education grant during the academic year (Optical Lens Grinding Technician and the Building Trades) are being institutionalized and will not be considered for refunding. However, the expansion of those Texas Education Agency training programs and the present Bilingual Vocational Education programs of Industrial Sewing Machine Repair Mechanic and Industrial Sewing Machine Operator will continue to be systematized to develop individualized instruction in the "Cluster Concept" by groups or classes of machines. The Radio-T.V. Service Technician course will also be developed as an advanced technical skills training supplemented by a shorter Basic Electricity and Basic Electronics programs which prepare students for the Radio-T.V. Repair program under the "Clustered Concept".

The institution has committed budgeting funds to provide instructors, equipment and supplies for the program. The purpose of the proposed project is to provide student financial assistant and administrative and instructional support for students qualifying for Bilingual Vocational training.

9. Problems

The problems encountered to date can be grouped into two areas: initiation of the program; and program operation. The problems encountered in the initiation of the bilingual vocational program are those which are normally experienced in the opening of a new teaching facility with new equipment and staff. These problems included: Remodeling of teaching facility, purchasing of equipment, employment of faculty and staff, and identification of students.

Problems involved in the program operation included: identification of adequate and valid testing instrumentation for limited English speaking discriminations; arranging course offerings to meet student needs; locating financial assistance for students in need and with financial difficulties; and students withdrawing from class because of financial difficulty. One of the most exasperating problems encountered was the identification of qualified, bilingual instructors in the vocational programs. For example the Optical Lens Grinding instructor was not employed until December 15, 1975. This caused the delay in initiation of the optical lens grinding program.

10. Publicity Activities

The Bilingual Skills Center was given support from the Public Affairs Office of the El Paso Community College by placing articles, advertisements in the local newspapers and by providing guest appearance on local Spanish radio and television stations to explain the programs and to solicit students. Program directors and counselors from other programs were invited to tour the Skills Center facilities, meet the staff and make student referrals to the training programs. Advisory Committee members were also helpful in identifying students for training.

11. Dissemination Activities

In addition to the publicity given the program, the director and staff have gone to several agencies and explained the purpose of the Bilingual Skills Center. Training schedules have been distributed to agency counselors and a brochure and pamphlet is being developed in both English and Spanish. During El Paso Community College week April 9-16, 1976, the Bilingual Skills Center held an "open house" and invited business and industry, as well as social service agency directors and counselors and other interested individuals to tour the facilities and view the training programs being conducted. In February, the Skills Center was invited to participate in the planning of a Vocational Occupational Education Impact Conference sponsored by the governor's Advisory Council for Technical-Vocational Education. This activity served to inform other education institutions and school districts of the training programs available at the Bilingual Skills Center for persons of limited English speaking ability.

12. Progress on Data Collection and Evaluation Plans and Procedures

A consultant visited the Skills Center on March 2nd and 3rd and revisited on April 1, 1976. The purpose of the consultant's visit was to provide the Skills Center staff personnel with an outside evaluation of the progress made as of that date. The report is enclosed in the next section.

13. Other Activities

As per Memorandum, dated June 10, 1976 to Part J Project Directors from Doris V. Gunderson, the items requested is hereby furnished:
Items 1, 2, 3, and 4 are attached.

Originally, it was projected that 136 students would be served through the five occupational programs. Attached is a table of unduplicated head count of the number of students served through this grant.

Enrollment: October 13, 1975 to May 28, 1976

Overall the program as funded by Part J of the Bilingual Vocational Training project was an overwhelming success in that it provided an Educational-Employment Opportunity to individuals who were of limited English speaking ability and whose limitation and lack of a saleable skill prevented them from becoming gainfully employed.

and Rufino Rodriguez

The Skill Center of El Paso Community College offers adult vocational training on a post-high school basis. The objectives of the Skills Center are to impart the necessary work knowledge and develop the occupational skills required for entry into employment in business or industry in El Paso and surrounding areas.

Adult vocational training is offered on a tuition basis in the following

- skill areas:
- (1) Business and Office Procedures
 - (2) Radio/TV Repair
 - (3) Cash Register Management
 - (4) Sewing Machine Operator
 - (5) Sewing Machine Repair

In addition, special training programs are developed to provide skill training to meet the needs of local businesses and industries.

In addition to the adult vocational programs offered on a tuition basis, special grants and contracts are received to meet the training needs of special interest groups. The El Paso Community College works with the Texas Education Agency to provide skill training for disadvantaged adults. Programs normally offered through this grant arrangements include:

- (1) Auto Electrical and Ignition
- (2) Auto Body Repair
- (3) Automotive Service Center Attendant
- (4) Building Maintenance
- (5) Cashier Checker
- (6) Nurses Aide
- (7) Secretarial Office Practice
- (8) Unit Clerk
- (9) Typing
- (10) Pre-employment Preparation

Students interested in program offered for disadvantaged adults should contact the Director of the Skill Center for information on admission requirements to these programs.

ADMISSION REQUIREMENTS

Admission to the Skill Center may be obtained by any one of the following:

- (1) Provide an official transcript verifying satisfactory completion of high school.
- (2) Provide official set of scores indicating satisfactory completion of the General Education Development Test (GED).
- (3) Be 17 years of age, out of high school for one year, and provide the Director of the Skill Center with scores from the Counseling Office which show tested ability to function at the 10th grade level.
- (4) By special approval of the Director of Occupational Education and the instructor.
- (5) For the Sewing Machine Operator program, an applicant must provide a set of scores which show tested ability to function at the 7th grade level.

Students who are not adequately prepared to enter training in their desired vocational program are encouraged to enroll in the Pre-Vocational Job Related Education courses offered through the Skill Center and/or Developmental Studies. Pre-Vocational courses are designed to improve, review and refresh the general high school educational level of the student. Included in the Pre-Vocational courses is instruction in General Education Development and English as a Second Language.

Students must meet the specific admission requirements established for their chosen adult vocational programs. These admission requirements are denoted according to each program area.

Scheduling

Most adult vocational programs offered through the Skill Center will meet three (3) hours per day, five (5) days per week for part-time students and six (6)

hours per day, five (5) day per week for full-time students.

How to Enroll

- (1) Contact the Director of the Skill Center
- (2) File an application with the Director of the Skill Center
- (3) Provide satisfactory scores on aptitude and mechanical testing
- (4) Submit required materials evidencing satisfactory compliance with admission requirements.
- (5) Tuition and fees must be paid before a person is officially enrolled.

Certificates

Students who satisfactorily complete the minimum objectives of the training program will receive a Certificate of Completion. Students who do not complete the minimum objectives of the training will receive a Certificate of Attendance.

DISMISSAL/TERMINATION

A student may be dropped for misconduct or for consistently poor work. Students who enter without any serious purpose and whose work is unsatisfactory will not be permitted to remain in the training program.

TUITION AND FEES

Tuition and fees for long-term adult vocational programs offered at the Skill Center of El Paso Community College are charged on a monthly basis. Tuition must be paid by the 15th of the preceding month. No reduction in tuition is allowed for the months during which times Christmas, spring, and summer vacations are observed. The student must purchase books and tools required for the vocational program.

Adult Vocational Programs - Day

Normally, students will enroll for vocational programs based on a full-time or part-time enrollment. A full-time student enrolls for a minimum of 25 contact hours per week. A part-time student enrolls for a minimum of 15 contact hours per

week. Accordingly, tuition rates for these students should be:

<u>Length</u>	<u>Tuition</u>
15 hours/week	\$18/mo.
25 hours/week	\$30/mo.
30 hours/week	\$36/mo.

Adult Vocational Programs - Evening

Students enrolled in an evening program will normally register for 12 hours of instruction per week. The minimum monthly tuition will be \$15. A student who has not paid the required tuition according to the payment schedule indicated above will not be allowed to continue in the program.

Out-of-State Fee

An out-of-State fee of \$5 per month for full-time students and \$2.50 per month for part-time students will be charged.

RADIO/T.V. REPAIR

The Radio/T.V. Repair program at El Paso Community College is a one year certificates program. Upon completion of the program the student will be able to trouble shoot and service most radio and T.V. equipment. The graduate of the program will be qualified to work in an entry level position as a serviceman.

Length of Program

The Radio/T.V. Repair program consists of 1,320 hours of instruction. Full-time students will be enrolled six (6) hours per day, five (5) days per week for 44 weeks. A maximum of twenty (20) students per year may be admitted to the program.

Admission Requirements

The Radio/T.V. Repair program is open for male or female applicants 17 to 55 years of age. The applicant must meet the admission requirements of the Skill

Center, must have a high school diploma or its equivalent, must be physically fit, and have normal color perception. The applicant must provide an official copy of satisfactory scores on aptitude and mechanical tests administered through the counselor's office.

Attendance

Students are required to attend lecture and laboratory sessions. Any student who is absent from class for five days may be dropped from the class. Any student who adopts a pattern of absenteeism or tardiness may be dropped from class at the discretion of the instructor.

Radio/T.V. Program

<u>Course</u>	<u>Clock Hours</u>
Basic Electricity	120
Basic Electronics	120
Basic Radio-Block Diagram I	60
Basic Television-Block Diagram I	60
Television Symptom Diagnosis	120
Television Symptom Diagnosis Application	210
Customer Relations and Shop Management	30
Basic Electronics II	80
Basic Radio-Circuitry II	120
Basic Television-Circuitry II	400
Total	1,320

SEWING MACHINE REPAIR

The Sewing Machine Repair Program at El Paso Community College is a 480 hour certificate program. Upon completion of the program, the student will be able to trouble shoot and repair sewing machines used in industrial sewing factories. The graduate of the program will be qualified to work in an entry level position as a sewing machine mechanic.

Length of Program

The Sewing Machine Repair program consists of 480 hours of instruction. Special training programs of 90 or more contact hours may be offered to meet the needs of industry.

Admission Requirements

The Sewing Machine Repair program is open for male or female applicants 17 to 55 years of age. The applicant must meet the admission requirements for the Skill Center, must have a high school diploma or its equivalent and must be physically fit. The applicant must provide an official copy of satisfactory scores on aptitude and mechanical tests administered through the counselor's office.

Attendance

Students are required to attend lecture and laboratory classes. Any student who is absent from class for five days may be dropped from the class. Any student who adopts a pattern of absenteeism or tardiness may be dropped from class at the discretion of the instructor.

Sewing Machine Repair Program

	<u>Unit</u>	<u>Clock Hours</u>
I.	Single Needle Lockstitch - Singer 281	30
II.	Single Needle Lockstitch - Union Special 63400	30
III.	Double Needle Lockstitch - Singer 212	30
IV.	Double Needle Lockstitch - Union Special 62200	30
V.	Single Needle Overseamer - Union Special 39500	30
VI.	Double Needle Safety Chain Stitch - Union Special 39800	35
VII.	Double Needle Chain Stitch - Union Special 56500	35
VIII.	Double Needle Chain Stitch - Union Special 35800	35
IX.	Double Needle Chain Stitch Bander - Singer 302	40
X.	Single Needle Bartack - Singer 269	45
XI.	Single Needle Chain Stitch Button Holder - Reece 101	50
XII.	Single Needle Lockstitch Button Sewer - Singer 269	30
XIII.	Single Needle Lockstitch - Union Special 63900 M	30
XIV.	Single Needle Chain Stitch - Union Special 300-20	30
XV.	Shop Safety and Customer Relations (continuous throughout course)	
	Total	480

SEWING MACHINE OPERATOR

The Sewing Machine Operator program at El Paso Community College is a short-term adult vocational training program designed to provide students with those basic knowledge and skills requisite for job-entry level employment as a sewing machine operator. The basic training program is 60 to 240 contact hours. Graduates of the program will be qualified to work as an industrial sewing machine operator.

Length of Program

The Sewing Machine Operator program consists of 60 to 240 hours of instruction. Full-time students will be enrolled six (6) hours per day, five (5) days per week. Part-time students will be enrolled three (3) hours per day, five (5) days per week.

Admission Requirements

The Sewing Machine Operator program is open to applicants 17 year of age or older. The applicant must be physically fit and must desire to go to work as an industrial sewing machine operator upon completion of the program. Although a high school diploma is not required it is recommended that the applicant without a high school diploma pursue the GED while attending the training program.

Attendance

Students are required to attend lecture and laboratory classes. Any student who is absent from class for five (5) days may be dropped from the class. Any student who adopts a pattern of absenteeism or tardiness may be dropped from the class at the discretion of the instructor.

The student will be provided skill training in the basic operations of the following types of machines: single needle lockstitch, double needle lockstitch,

single needle chainstitch, double needle chainstitch, safety stitch and serger, bartacker, and button hole machine. The student will also be taught safety and maintenance procedures for operating industrial sewing machines. A student may enroll for instruction in operation of one or more of the above machines.

PRE-VOCATIONAL PROGRAMS

The Pre-Vocational Programs taught through the Skill Center consist basically of General Education Development and English as a Second Language. The Pre-Vocational program is designed to develop the students' basic knowledges and skills to meet the minimum admission requirements of the Skill Center and the students' selected adult vocational program.

In addition to the Pre-Vocational program taught at the Skill Center, students may attend the Developmental Studies Skills program is designed to supplement the College curriculum by providing instruction to students who want and need assistance in successfully completing their college course. The main objective of the program is to help students function adequately in their intended program of study. A secondary objective is to increase entry-level skills of students who need assistance before entering college courses.

Length of Program

The General Education Development Program is an 80 contact hour program. If the student does not complete the G.E.D. in the 80 hour period, he/she may enroll for another 80 hour course. The English as a Second Language course is a three level program with each level consisting of a 45 contact hour course. Upon satisfactory completion of each level, the student may proceed to the next level. The G.E.D and E.S.L programs are operated on an open entry, open exit concept. The courses are individualized to permit students to determine the number of hours of instruction to attend each week. The G.E.D and E.S.L labs are open from 9:00 a.m. to 12:00 noon and 1:00 p.m. to 5:00 p.m.

TRAINEES GUIDE

EL PASO COMMUNITY COLLEGE
BILINGUAL SKILLS CENTER

ORIENTATION CERTIFICATE

This certifies that I have received a formal or informal orientation. I have received a copy of the Guide for Trainees which I may keep. I have read the "Guide" and its contents have been explained to me.

I understand that if I have any questions concerning procedures contained in the "Guide" I may go to my counselor or instructor for clarification.

I understand that I should review the guide occasionally, and should read it through at least once a month.

Telephone: 532-3685

GUIDE FOR TRAINEES

I. General Information

- A. The purpose of this guide is to tell something about the El Paso Community College Skills Center and its method of operation. The training program conducted in the Skills Center is, and of necessity must be, a cooperative effort on the part of both the trainees and the Center staff. To participate effectively each person must know what is expected of him and what he can expect from others.
- B. The Skills Center is operated by El Paso Community College Junior College District. The staff includes administrative personnel, skill instructors, and counselor. The goal of the Center is to provide the skill training, and preparation necessary to qualify trainees for employment. Further, the Center will assist insofar as possible in the work of job development and placement and in obtaining supportive services when required.
- C. Upon enrollment in the Center, each trainee will be considered individually in order to develop a training program fitted to this exact needs and desires. Trainees who enroll in any one skill area may receive varying amounts of training in each area of specialization. The course content and the length of training may be different for each person, depending on his individual preference, needs, and abilities.

II. Guidelines Applicable to the Training Day

A. Class Schedule

1. Classes begin at 8:30 a.m. and end at 4:30 p.m.
 2. There will be an hour for lunch. The exact time may vary depending on class schedules.
 3. Fifteen minutes will be allowed each morning and afternoon for break periods.
- B. Classes must begin on time. All trainees will be in the assigned class area ready for work at the appointed time. Breaks are provided so that trainees may relax, have coffee or other refreshments, use the rest rooms, etc.

- C. For safety reasons, smoking is permitted only in designated areas and at designated times. Smoking is not permitted in rest rooms, classrooms, or shop areas.
- D. Counselor is available for trainees who desire counseling services. To see a counselor, make an appointment with the receptionist, and obtain the instructor's permission before leaving class. Visiting a counselor does not excuse a trainee from a scheduled class period unless he has been excused by the instructor.
- E. Telephone and Messages. Center telephones are to be used for business only. Trainees should inform relatives and friends that they will not be called out of class for telephone calls, except in extreme emergencies. However, they may leave messages so that calls may be returned during breaks or the lunch periods.
- F. Visitors are not allowed in classrooms except on official business. Do not interrupt other classes by stopping to visit. Trainees expecting visitors should ask them to come to the Reception Desk.
- G. Conduct. All personnel at the Center are expected to conduct themselves properly at all times. ~~This means showing proper respect and consideration to other trainees and to staff members.~~ If an instructor or other staff member should correct a trainee's behavior it is for the purpose of helping the trainee avoid problems with his employer later.

There are some serious types of misconduct which can result in immediate termination from Skills Center training without good cause.

1. The use of illegal drugs or alcoholic beverages during training hours is prohibited. Anyone who uses or is under the influence of alcohol or drugs during the training day, including lunch and breaks periods, will be terminated immediately.
 2. Anyone bringing a weapon into the Center will be terminated immediately.
 3. A physical assault on any other person while on the Center premises will result in immediate termination for bad cause.
 4. Refusal to accept directions in class from an instructor to complete assignments, to participate in class work, to take tests, or examinations, or to observe safety precautions will result in a recommendation for termination.
 5. Careless or dangerous use of tools and equipment may result in recommendation for termination.
- H. Clothing. The primary consideration in determining the propriety of clothing in shop training areas is safety. In other classes good taste will determine the type of clothing to be worn. Part of the training at the Center will concern proper attire in the business world. Any criticism or suggestions offered by instructors or counselors concerning clothing are part of the overall training to increase the trainee's employment potential.

- I. Parking. Parking in the vicinity of the Skills Center is extremely limited. The Center has one lot for student and staff parking, located on the side of the building. None of the parking areas available should be considered to be secure. Leave nothing of value in a parked automobile, and always lock all doors. No parking in front of business loading zones adjacent to Skills Center.

III. Early Completion

- A. An instructor may recommend a trainee for early completion of a course under the following conditions:
1. The trainee has reached his maximum level of performance and additional training would not be effective.
 2. The trainee has achieved the goals he has set for himself.
 3. Trainee has met all performance standards set by the instructor in less than the maximum course hours prescribed.
- B. Final determination regarding early completion will be made by the Center Director after the recommendation has been reviewed by instructor and Center counselor concerned, and any other agency counselor or representatives who might be concerned.
- C. Upon early completion a certificate of proficiency will be awarded for the highest skill level achieved by the trainee.
- D. Termination from the Skills Center can be for the following reasons:
1. Excessive absences and tardiness
 2. Misconduct
 3. Failure to follow rules and regulations outlined in these policy guidelines.
 4. Inability to successfully complete the minimum requirements of the skills training or course objectives.
 5. Upon successfully completing the minimum course requirements and earning a signed Certificate of Completion.
 6. Upon completing the course materials, but not achieving the minimum levels of proficiency in the skills being trained for. Persons will be awarded a Certificate of Attendance at the end of the program.
 7. Persons failing to complete the minimum course requirements and dropping prior to the final class period.

7. Leaving a class without permission, or failure to report to a class, will result in the trainee being charged with unexcused absence for the period of time involved. The trainee will be warned that a repetition may result in termination.
8. Should a circumstance arise in which a trainee feels that he must leave early for a reason which would not warrant an excused absence, he must notify the instructor or counselor before leaving. While the absence may not be excused, it would not then be considered misconduct.

B. Policy Concerning Unexcused Absences

1. If a trainee knows he will be absent on a certain day he should notify his instructor as soon as possible.
2. A trainee absent without excuse for a total of five days or forty hours in a calendar month will be recommended for termination.
3. A trainee absent without excuse for five days or 30 hours in a five month period will be recommended for termination.
4. No basic allowance will be paid for hours or days of unexcused absence.

C. Policy Concerning Excused Absences

1. Absence for medical treatment of the trainee by a doctor or at a medical facility will be excused. Documented evidence of such treatment must be given to the instructor.
 - a. An excuse is valid only for the time actually spent in the doctor's office or at the medical facility, plus a reasonable time for travel.
 - b. A trainee is expected to return to class following medical visit unless the doctor specifies in writing that the trainee's physical condition does not permit it.
2. Attendance at funerals of members of the immediate family may be excused.
 - a. Immediate family shall include father, mother, sister, brother, husband, wife, or child, and other relatives if the latter are actually members of the trainee's household.
 - b. No more than three days will be excused.
3. Absence caused by domestic circumstances, such as serious injury to a member of the immediate family, conditions which would endanger the health or safety of the immediate family, or similar emergency circumstances may be excused.

IV. Absence and Tardiness. The training courses conducted at the Center are concentrated and intense. It is important that trainees attend every day and arrive on time. Poor attendance or habitual tardiness may result in termination.

A. Policy Concerning Tardiness or Partial Absence

1. If a trainee finds that he will be late to the 8:30 a.m. class he should make every effort to notify the Skills Center receptionist as soon as possible. This call in itself does not excuse being late or absent, but will be considered in determining whether or not such lateness or absence should be excused. The Skills Center telephone number is 532-3685.
2. A trainee will be reported as tardy if he arrives in class after the instructor has checked attendance. This applies to each class period, not just the first period of each day.
3. Attendance is recorded by the tenth of an hour. Any tardiness of six minutes or less will be reported as one-tenth of an hour absence. Tardiness of seven to 12 minutes inclusive will be counted as two-tenths of an hour of absence. (Note: For trainees receiving Veterans benefits any absence of less than an hour (tardy) will be counted as a full hour of absence.)
4. A trainee may be recommended for termination because of excessive tardiness. Excessive tardiness for this purpose is defined as:
 - a. Seven tardy reports in any four week period. This includes not only being late the first attendance check in the morning but any other attendance check made during the school day.
 - b. Ten tardy reports in any eight week period.
 - c. Loss of four hours of school time during the four week period due to tardiness.
 - d. Loss of six hours of school time during any eight week period due to tardiness.
5. If a trainee misses a total of two hours of a class day he will be considered absent for that day. The instructor will determine whether or not the absence is excused.
 - a. Should a trainee be absent without excuse for two hours or more, he will be paid the training allowance for those hours actually present.
 - b. There will be more than one attendance check each day. Attendance may be checked at the beginning of each new class period, and after each break and lunch period.
6. If a trainee must leave class early for any reason he must notify the instructor as far in advance as possible.

6. Absence due to transportation difficulties, such as bus strikes or hazardous traffic conditions due to weather, may be excused. If bus transportation is available, car trouble or bad weather will not excuse an absence.
7. Trainees will be excused for appointments at the food stamp office.
8. A referral agency or the prime sponsor may excuse their trainees' absence at any time. Such excuses must be in writing and must clearly excuse the absence, not merely recommend that it be excused.
9. Holidays or other non-training days when the Center is closed will normally be treated as excused absences. However, these will be considered unexcused if the trainee is absent unexcused on both the day preceding and the day following the holiday or other non-training day.

D. Reconsideration of Unexcused Absence

1. If a trainee is not satisfied concerning the determination of an unexcused absence by the Skills Center he may request and receive reconsideration of the determination. In such cases, the payment for the period may be processed upon the basis of the Skills Center's determination without prejudice to the right of reversal upon subsequent reconsideration.
2. The trainee ~~must request reconsideration~~ of an unexcused absence during the five working days following the date on which he signs the request for allowance.

V. Procedures for Handling Grievances and Problems of Trainees

- A. Trainee problems and grievances can be divided generally into two categories.
 1. Those which involve the trainee's participation in classroom activities or involve the general training facility environment.
 2. Those which involve the trainee's personal life or supportive services available to him.
- B. Some examples of matters involving the classroom or Skills Center are as follows:
 1. Inability to understand the instruction.
 2. A feeling that additional help is needed.
 3. Actions or policies of the instructor which appear to be unfair.
 4. Problems caused by other students.
 5. Classroom or other facility conditions which hinder the learning process.

6. Behavior by instructor or other students which might be considered to be verbal/or physical abuse.
- C. When a trainee believes that he has a problem or grievance of this type he should bring it to the attention of the instructor or Skills Center counselor in an attempt to reach a satisfactory resolution of the matter. If the trainee believes that his effort to resolve the problem with the instructor or counselor has failed he should then request a meeting with the Skill Center Director, Director of Occupational Education, Dean of Instruction and the College President (in that order). If the trainee feels that he has not resolved the problem after discussing it with the Skills Center staff he should then contact his referral agency counselor.
- D. Following are some examples of problems which involve the trainee's personal life or supportive services:
1. Medical problems of trainee or his family.
 2. Financial difficulty.
 3. Internal family problems.
 4. Legal difficulty.
 5. Transportation problems.
- E. When a trainee has a problem of this type he should notify the instructor and ask permission to see the Skills Center counselor. The counselor will assist the trainee in resolving his problem and will contact the appropriate supportive service, the trainee's referral agency or other agency as necessary.

VI. Weekly Request for Allowances

- A. Trainees eligible to receive Bilingual Grant allowances will sign a request allowances each Friday. A trainee must be in class on Friday from 8:30 a.m. to 3:30 p.m. Should a trainee, after signing the request, leave before being dismissed or properly excused, the request will show unexcused for that time.
- B. If a trainee is absent on Friday, he must sign his request the following Monday as early as possible. Failure to do so will probably delay receipt of allowances for at least a week.

VII. Procedure In Case of Injury

- A. If you should suffer any injury, no matter how minor, while at the Skills Center report it immediately to an instructor, counselor, or the Director.
- B. Failure to report an injury on the day it occurs will release the Skills Center from any further responsibility in the matter.

VIII. Reports Submitted on Trainees

- A. Referral agencies are notified daily of unexcused absence or when absence or tardiness appears to be a problem.
- B. Monthly progress reports are submitted to the trainee's referral agency, upon request of the referral agency.
- C. A final evaluation is submitted to the trainee's referral agency. This report describes the trainee's performance and level of skills attained while in the Skills Center. This evaluation may be used as the basis of a recommendation for employment. It will describe not only the trainee's technical ability but also his work habits, dependability, initiative, and other traits of interest to employers.

TABLE OF SPECIFICATIONS
 IDENTIFYING
 OBJECTIVES OF LIMITED ENGLISH USAGE
 E.P.B.

I	12.5%	Identification of noticeable limitation in interpreting simple visual situations (10 items)
II	25%	Identification of limited use of elementary to high school level vocabulary. (20 items)
III	25%	Identification of awkward sentence structure usage resulting in limited effectiveness in communication. (20 items)
IV	12.5%	Identification of limited ability in interpreting academic statements (10 items)
V	12.5%	Identification of problems in following instructions in English (10 items)
VI	12.5%	Identification of difficulty in reading comprehension (10 items)

Explanation to Table of Specifications

(Weights as they relate to effect on communication)

Certain aspects of this exam will show limitations in the use of English which definitely impede communication. The weights on these questions will be rated high. Other aspects of this exam will show limitations of English which indicate a lack of maximum effectiveness in English communication. The weights on these questions will be rated low.

Maximum effectiveness is interpreted as speaking English with native or near-native fluency. Impeded communication is when a central thought is partially or completely blocked for lack of proper usage.

The weights as related to the question types are also correlated with the subsequent rating sheet for the purpose of rounding out an oral evaluation of the subject. Included herewith is a student self-appraisal form written in Spanish as a further aid in determining a subject's limitation in the practical use of English. It may be presented orally, in written form or both as required.

The rating sheet includes a list of language objectives which also characterize a subject's limitation in speaking English. The list is divided into two groups: (1) Subject Rating Scale (2) Proficiency Rating Scale. The ratings are from 0 - 5 on both scales. A "0" score automatically eliminates the subject. Ratings from 1 - 5 represent varying degrees of limited English usage.

There is a total of eighty questions on the exam comprising six groups of questions corresponding to the ratings of 0 - 5. The correlation of the table of specifications with the rating scale is in reverse order. Deficiency in the first group of ten questions corresponds to level "5" with a percentage weight of 12.5%. Deficiency in the second group of twenty questions corresponds to level "4" with a percentage weight of 25%. Deficiency in the third group of twenty questions corresponds to level "3" with a percentage weight of 25%. Deficiency in fourth group of ten questions corresponds to level "2" with a percentage weight of 12.5%. Deficiency in the fifth group of ten questions corresponds to level "1" with a percentage weight of 12.5%. And, deficiency in the sixth group of ten questions corresponds to level "0" with a percentage weight of 12.5%; this percent subtracted from the total weight of the exam would allow the subject 86.5% proficiency sufficiently qualifying him for level "0". The "0" level qualification is an automatic disqualification in terms of limited usage discrimination.

LIMITED ENGLISH USAGE

INTERVIEWER'S RATING SHEET
E.P.B.

Below you will find a list of language objectives which characterize a Spanish speaking subject's limitation in speaking English. The list is divided into two groups: I. Subject Rating Scale II. Proficiency Rating Scale. This Rating Sheet may be used in conjunction with the EILEU following an oral interview with each examinee.

The ratings are from 0 - 5 on both scales. A "0" score automatically disqualifies a subject. Ratings from 1 - 5 represent varying degrees of limited English speaking ability characteristic of the majority of monolingual and bilingual subjects.

The interviewer will circle the appropriate number on each rating scale upon interviewing the applicant, reviewing the subject's self-appraisal proficiency form and checking the EILEU score of the interviewee.

I. Subject Rating Scale

- 0 - Monolingual speaker of English or bilingual with native or near-native fluency in English
- 1 - Bilingual speaker of Spanish and English limited in making a fluent transition from Spanish to English
- 2 - Native speaker of Spanish who speaks English limited by noticeable lack of clarity.
- 3 - Native speaker of Spanish who speaks English limited by substandard grammatical forms and phonology
- 4 - Native speaker of Spanish who speaks ungrammatical English
- 5 - Monolingual speaker of Spanish regardless of exposure to unsystematic English vocabulary

II. Proficiency Rating Scale

- 0 - Responses are automatic and natural indicating a monocultural background in English or a reciprocal bicultural influence in English and Spanish
- 1 - Comprehension and oral communication are generally good but characterized by a noticeable limitation in the use of specialized vocabulary
- 2 - Communication skills in English are generally understood but oral sentence structure is awkward resulting in contextual distortion

- 3 - English usage characterized by linguistic and phonemic transference from Spanish which severely interferes with effective communication. Minimal differences in meaning are obscured by improper word order, tense and pronunciation.
- 4 - English usage cannot be understood 25% of the time. Speaker uses word level responses in order to avoid more involved grammatical forms.
- 5 - Responses range from a non-verbal level to an unsystematic knowledge of English vocabulary.

SELF-APPRAISAL PROFICIENCY OF LIMITED ENGLISH USAGE

(Una lista de preguntas para evaluarse en el uso practico del ingles)

		<u>SI</u>	<u>NO</u>
5	¿Puede Ud. usar un mínimo de treinta palabras en inglés menos los números y los días de la semana?	—	—
4	¿Puede Ud. preguntar que hora es, que día es o a que fecha estamos? ¿Puede Ud. pedir una simple comida en un restorán donde se hable solamente inglés?	—	—
3	¿Puede Ud. entender y responder correctamente a preguntas en inglés tocante a su nacionalidad, estado civil, ocupación, fecha y lugar de nacimiento? ¿Puede Ud. hacer una presentación social en inglés usando también las expresiones apropiadas de despedirse?	—	—
2	¿Puede Ud. con su inglés describir en pocos detalles su trabajo actual o el trabajo más reciente que ha tenido? ¿Puede Ud. recibir y dar en inglés recados sencillos por teléfono?	—	—
1	¿Puede Ud. dar en inglés información detallada de su familia, su casa, y el tiempo climático? ¿Se siente Ud. seguro que comprende lo que le dicen en inglés los nativos de habla inglesa y que entiende a lo menos 80% del tiempo?	—	—
0	En el ambiente de su empleo, ¿puede Ud. hablar en inglés tocante a los detalles del sueldo, calificaciones, horas del trabajo y tareas especiales? ¿Puede Ud. ser interprete al inglés para una conversación de las situaciones representadas por las preguntas de arriba?	—	—

INSTRUCTIONS TO THE PROCTOR

1. This exam will help to determine the degrees of limitation in English usage by subjects who are of Spanish speaking origin. There are eighty items in this exam.
2. The exam is designed so that it may be administered orally, if necessary, for reinforcement or to insure comprehension of the stems of each item.
3. Each participant should be provided with one (1) test booklet, one (1) answer sheet, two (2) number two pencils and one (1) picture booklet necessary to complete Test # 1 : Interpreting Visual Situations.
4. The testing group should be instructed to fill in the personal data on the answer sheet. They should be reminded not to mark in the test booklet or in the picture booklet and not to begin until told to do so.
5. This is not a speed test; therefore, a specific time limit is not included in the instructions. However, the proctor should determine a reasonable amount required for the majority of each group to finish the exam.
6. The group should be encouraged to attempt all items since each score will be based on the number of correct answers. They should be cautioned to shade only one corresponding space for each item in the exam booklet. All answers must be recorded on the answer sheet. If an answer is changed, it should be completely erased.
7. Upon completion of each exam, be sure the answer sheet is checked for name, today's date, test booklet number, age, sex, address, native language, second language, and place of birth.

INSTRUCCIONES AL PARTICIPANTE

1. Este exámen es para determinar el nivel de su uso práctico de inglés. Hay ochenta preguntas escritas en español. Para cada pregunta habrá hasta cuatro respuestas en inglés o español. Escoja solamente una de las alternativas.
2. Usted debe de tener una hoja aparte para grabar sus respuestas. En esta hoja marque (sombree) la respuesta correspondient a la pregunta que se encuentra en el folleto de preguntas. Para hacer la primera prueba del folleto tiene que usar el folleto de retratos.
3. Arriba en la hoja de respuestas ponga los datos según lo que le diga la persona que administra el examen. Hay que escribir su nombre completo poniendo su apellido paterno al último, la fecha de hoy, el número del folleto que usa; apuntar su edad, sexo y dirección e indicar su lenguaje nativo (el idioma que usa más en casa), su segundo lenguaje (el idioma que usa menos en casa), y su nacionalidad.
4. No raye ni apunte en el folleto de preguntas ni en el folleto de retratos. No abra los folletos hasta que le sea señalado.
5. Lo siguiente es un ejemplo de las preguntas y respuestas:

Pregunta (en el folleto):

¿Cuántos años tiene el?

- (A) He is twenty five years old.
- (B) She is twenty five of age.
- (C) He has twenty five years old.
- (D) She has twenty five years of age.

Respuesta (en la hoja de respuestas)

A B C D,

1. () () () ()

TEST # 1 : Interpreting Visual Situations

Examine las figuras del folleto. Observe las representaciones e interprete cada situación al inglés escogiendo la correcta frase descriptiva. Sombree entre paréntesis la letra correspondiente en su hoja de respuestas.

Fig. 1

- (A) Man is standing
- (B) Teacher was standing
- (C) Boss will stand
- (D) Priest stands

Fig. 2

- (A) Student is approaching
- (B) Woman approaches
- (C) Secretary reproaches
- (D) Sweetheart may approach

Fig. 3

- (A) Man took pencil
- (B) Man had taken pencil
- (C) Man takes pencil
- (D) Man should take pencil

Fig. 4

- (A) Man tore pencil
- (B) Man has torn pencil
- (C) Man breaks pencil
- (D) Man has broken pencil

Fig. 5

- (A) Woman folds arms
- (B) Man looks at woman
- (C) Client seems impatient
- (D) Patient feels sick

Fig. 6

- (A) Man speaks at woman
- (B) Woman looks at man
- (C) Man talks about woman
- (D) Woman speaks toward man

Fig. 7

- (A) Wife angrily snatches paper
- (B) Secretary clears desk
- (C) Woman reaches for paper
- (D) Man fires woman

Fig. 8

- (A) Student is frustrated
- (B) Woman becomes irritated
- (C) Woman throws paper and pencil
- (D) Pencil and paper are thrown away

Fig. 9

- (A) Male observes female
- (B) Secretary glares at boss
- (C) Professor reproaches student
- (D) Lady makes pass at gentleman

Fig. 10

- (A) Man offends woman
- (B) Woman turns away
- (C) Employee is modeling
- (D) Employer regards model

TEST # 2 : Vocabulary # 1

Conteste las preguntas o complete las oraciones escritas en español escogiendo una de las cuatro respuestas escrita en inglés. Sombree entre paréntesis la letra correspondiente en su hoja de respuestas.

11. ¿Cuál de los siguientes es el pariente más cercano?

- (A) uncle
- (B) grandmother
- (C) daughter
- (b) stepfather

12. Si hoy es lunes, hoy en ocho días será ...

- (A) Friday
- (B) Saturday
- (C) Sunday
- (D) Monday

13. Los trastos se lavan en ...

- (A) the sink
- (B) the tub
- (C) the washbasin
- (D) the shower

14. En caso de una enfermedad, ¿no sería mejor que uno consulte con ...

- (A) the medic?
- (B) the physician?
- (C) the nurse?
- (D) the witchdoctor?

15. Diez más tres son ...

- (A) thirty
- (B) three
- (C) thirteen
- (D) thrice

16. En el país de la Argentina, las estaciones del año son al revés; por eso, ¿en que mes del año hace mucho frío?

- (A) February
- (B) April
- (C) September
- (D) July

17. En la mañana cuando uno tiene hambre habrá ...

- (A) breakfast
- (B) lunch
- (C) supper
- (D) dinner

18. La persona que enseña en la escuela primaria se llama ...

- (A) the master
- (B) the teacher
- (C) the professor
- (D) the trainer

19. Un kilo de carne aproximará en inglés más o menos dos ...

- (A) tons
- (B) ounces
- (C) pounds
- (D) kilograms

20. Hablando de perros, se refiere a la hembra como ...

- (A) a girl
- (B) a female
- (C) a male
- (D) a bitch

TEST # 2 (cont.) : Vocabulary # 2

Observe las frases españolas escogiendo una de las cuatro palabras escrita en inglés que define la subrayada palabra española. Sombrée entre paréntesis la letra correspondiente en su hoja de respuestas.

21. Personas adaptables:

- (A) adjustable
- (B) suitable
- (C) easy-going
- (D) regular

22. Declarar la fe de uno

- (A) explain
- (B) avouch
- (C) prove
- (D) renounce

23. Comer con gusto

- (A) mustard
- (B) disgust
- (C) relish
- (D) excess

24. Inesperada cancelación:

- (A) postponement
- (B) reduction
- (C) continuation
- (D) annulment

25. Una mirada advertida

- (A) admonitory
- (B) anxious
- (C) imploring
- (D) coquetish

26. Un bosque con sendas enredadas

- (A) dense
- (B) labyrinthine
- (C) pathless
- (D) laborious

27. Engaño demostrado

- (A) guilt
- (B) innocense
- (C) deceit
- (D) genious

28. Tardar su salida

- (A) regret
- (B) accept
- (C) reject
- (D) delay

29. El lenguaje o germanía de rufianes

- (A) jargon
- (B) plotting
- (C) pay-off
- (D) accent

30. Una suave brisa occidental (del oeste)

- (A) western dust devil
- (B) zephyr
- (C) eastern breeze
- (D) gust

TEST # 3. Structural Usage

Conteste las preguntas o complete las oraciones españolas escogiendo una de las cuatro respuestas escrita en inglés. Sombree entre paréntesis la letra correspondiente en su hoja de respuestas.

31. ¿Qué debe uno decir si hay basura para tirar?

- (A) Disposē her.
- (B) Throw it.
- (C) Dispose of it.
- (D) Throw her away.

32. ¿Está Felipe en casa?

- (A) Yes, is in house.
- (B) No, no is in home.
- (C) Yes, is at house.
- (D) No, he isn't at home.

33. ¿A quién va a dar el regalo?

- (A) I am going to give it to her.
- (B) To him it I go to give.
- (C) I am going to give to her it.
- (D) I go to give it to him.

34. ¿Qué le gustaría que hiciera yo?

- (A) I would that you should study.
- (B) I would like for you to study.
- (C) It would be pleasing that you might study.
- (D) It would please me that you should study.

35. ¿Te gusta la casa?

- (A) To me, it pleases me much.
- (B) The house, she likes me a lot.
- (C) I like the house very much.
- (D) It is pleasing to me the house a lot.

36. Cuando a usted le falta dinero, ¿cómo lo diría en inglés?

- (A) I don't have nothing of money.
- (B) I don't have no money.
- (C) No have moñey.
- (D) I don't have any money.

37. La expresión 'no se moje!' se dice en inglés ...

- (A) Don't get wet!
- (B) No wet yourself!
- (C) Don't wet!
- (D) No get wet!

38. ¿Cómo se llama ella?

- (A) She is called the Chita.
- (B) Her name is Chita.
- (C) She is the Chita.
- (D) She calls herself the Chita.

39. Indicando la casa de en frente, contra la suya se dice en inglés ...

- (A) The house in front.
- (B) The counter house.
- (C) The opposing house.
- (D) The opposite house.

40. Cuando un joven se quiere casar, ...

- (A) He will marry himself.
- (B) He will marry with his bride.
- (C) He will marry himself with the bride.
- (D) He will get married.

41. Donde se prohíba fumar debe colocarse un letrero que diga ...

- (A) No smoking
- (B) Prohibit yourself to smoke
- (C) Don't smoke it.
- (D) No smoke.

42. ¿Quiere escribirme una carta? Entonces, escribemela.

- (A) Write it me.
- (B) Write it, to me.
- (C) Write to me it.
- (D) It to me write.

43. "Juan tiene que estudiar", se traduce al inglés ...
- (A) Juan has that to study.
 - (B) Juan had to study.
 - (C) Juan has to study.
 - (D) To study has Juan.
44. Para saber si un niño tiene hambre, sería bien preguntarle ...
- (A) You are hungry?
 - (B) Are hungry you?
 - (C) Have you hungry?
 - (D) Are you hungry?
45. "¿Con quién vive su hermano?" es mejor traducida con cuál de las siguientes preguntas?
- (A) With whom does your brother live?
 - (B) Who does your brother live with?
 - (C) With who lives your brother?
 - (D) Whom lives your brother with?
46. "Vamos a ir con Miguel" quiere decir en inglés ...
- (A) We go with Miguel.
 - (B) Let's visit Miguel.
 - (C) We are going with Miguel.
 - (D) Let's go with Miguel.
47. La expresión equivalente del vocablo "ánde" es cual de las siguientes:
- (A) Go to it!
 - (B) Get with it!
 - (C) Come on!
 - (D) Get up!
48. ¿Cuál de las siguientes expresiones es la más ofensiva en inglés?
- (A) Go to the wicked mother.
 - (B) Go to the devil.
 - (C) Go to the bloody one.
 - (D) Go to hell.

49. ¿Cuál de las siguientes expresiones es la más brusca en inglés?

- (A) My God!
- (B) Son of a gun!
- (C) Snake in the grass.
- (D) Whoremonger.

50. ¿Cuál de las siguientes expresiones le parece la más santa?

- (A) For goodness sake!
- (B) May God bless you!
- (C) In heaven's name!
- (D) Upon my mother's grave!

TEST # 4 : Interpreting Academic Statements

Abajo, se encuentra un número de expresiones escritas en inglés académico que tienen significados específicos. Sombree entre paréntesis la letra correspondiente en su hoja de respuestas. Escoja la palabra que correctamente interpreta la oración académica observando la palabra clave subrayada.

51. "He was dismissed from his position" means:
- (A) transferido
 - (B) suspendido
 - (C) despedido
 - (D) disminuido
52. "He has a certain nostalgia for his homeland" means:
- (A) noticia
 - (B) noción
 - (C) recuerdo
 - (D) añoranza
53. "That is a genetic trait" means:
- (A) heredado
 - (B) semejante
 - (C) generado
 - (D) genérico
54. "That is not a feasible solution" means:
- (A) buena
 - (B) practicable
 - (C) razonable
 - (D) sensata
55. "All of the alternatives are equally distasteful" means:
- (A) impracticables
 - (B) sabrosas
 - (C) desagradables
 - (D) distintas
56. "The inclusion of this person would be an asset to any gathering" means:
- (A) complemento
 - (B) obligación
 - (C) problema
 - (D) ventaja

57. "That action would have serious repercussions" means:

- (A) consecuencias
- (B) complicaciones
- (C) alternativas
- (D) objetivos

58. "He repeatedly refused to comply" means:

- (A) contestar
- (B) obedecer
- (C) responder
- (D) conceder

59. "It is not without regret that I must terminate your employment" means:

- (A) terminar sin pena
- (B) posponer con pena
- (C) despedir con pena
- (D) exponer sin pena

60. "The veracity of the statement could not be determined" means:

- (A) sentido
- (B) propósito
- (C) inverosímil
- (D) verdad

TEST # 5 : Signs and Sequences

Esta prueba requiere un buen sentido de seguir instrucciones. Escoja la secuencia apropiada de señales, símbolos y números según las instrucciones escritas en inglés sombreando entre paréntesis la letra correspondiente en su hoja de respuestas.

61. Select the answer which contains the following figures: \$ # % *

- (A) \$ # % *
- (B) \$ # * %
- (C) # \$ % *
- (D) * \$ % \$

62. Select an answer which contains a percent sign, two dollar signs and an asterisk.

- (A) \$ * * %
- (B) % \$ \$ *
- (C) % # # *
- (D) \$ % % *

63. Select the answer which contains a dash before a slash followed by a slash before a dash.

- (A) / -- /
- (B) -- / -- /
- (C) -- / / --
- (D) / -- / --

64. Starting with the symbol at the extreme left of \$ # % " & and then counting five figures to the right you would find:

- (A) *
- (B) #
- (C) +
- (D) ¢

65. Count the number of signs # % ¢ " @ Subtract four from this number selecting the remainder below.

- (A) 1
- (B) 3
- (C) 2
- (D) 5

66. Which set of numbers represents an increasing numerical order?

- (A) 4, 3, 2, 1
- (B) 1, 2, 3, 4
- (C) 3, 1, 4, 2
- (D) 1, 4, 2, 3

67. Which set of numbers represents a decreasing numerical order?

- (A) 1, 2, 3, 4
- (B) 3, 6, 9, 12
- (C) 8, 6, 9, 12
- (D) 6, 8, 4, 2

68. Select the set of asterisks (stars) which is equal to an odd number.

- (A) * * * *
- (B) * * * * * *
- (C) * *
- (D) * * * * *

69. The following is a set of seven slashes // // // // // // By crossing the smallest even number there would remain:

- (A) // / / // //
- (B) / / / // // //
- (C) // // / / / /
- (D) / / // // // //

70. Which would be a corresponding alphabetical arrangement to the following numbers? (2, 4, 6, 8, 10)

- (A) A, B, C, D, E
- (B) B, D, F, H, J
- (C) E, D, C, B, A
- (D) A, C, E, G, I

TEST # 6A : Reading Comprehension

El siguiente pasaje es semejante a ellos que se encuentra en cualquier texto. Lealo con cuidado y luego de vuelta a la siguiente pagina. Escoja la respuesta correcta que está basada en el pasaje sombreando entre parentesis la letra correspondiente en su hoja de respuestas.

BLOOD STRUCTURE AND FUNCTION

Red Blood cells, or erythrocytes, contain no nuclei and are produced by larger cells called erythroblasts located in the marrow of long bones. Hemoglobin in red blood cells combines with oxygen in the lungs and releases oxygen to the body cells.

There are several types of white blood cells, some of which function to destroy invading germs. Other white blood cells produce antibodies which defend the body against certain parasitic invaders. In comparison to red blood cells, some white blood cells are smaller and some are larger.

There is a great variation in human blood such that each individual has his own unique combination of blood chemicals. For instance, blood groups A, B, AB, and O are based on the presence or absence of two such blood chemicals. People with type A have one specific protein in their red blood cells while members of group B have a different protein. Type AB blood has both of these proteins and type O has neither. Similarly, each individual is a member of a blood group termed Rh-positive or Rh-negative.

Blood is carried away from the heart by arteries and returns to the heart through veins. Arteries and veins are connected by a complex network of capillaries.

Blood functions to aid the life process in a number of ways. It furnishes the body with nourishment by absorbing digested food in the intestines and transporting it to all cells in the body. Oxygen is carried to all parts of the body by the blood, and it also carries waste materials from the body to the lungs and kidneys. In addition to defending the body against invasion by harmful bacteria, the blood also regulates body heat and water content, and functions to maintain a constant internal environment which is necessary for body cells to survive.

TEST 6B : Informational Recall

Abajo, encontrará diez (10) oraciones basadas en el pasaje de la página anterior tocante a la estructura y función de la sangre. Escogiendo la respuesta correcta, sombree entre parentesis la letra correspondiente en su hoja de respuestas.

71. Las células rojas son producidas por células más grandes llamadas :

- (A) erythrocytes
- (B) marrow
- (C) erythroblasts
- (D) hemoglobin

72. El oxígeno es transportado a todas partes del cuerpo por medio de :

- (A) white blood cells
- (B) protein
- (C) capillaries
- (D) hemoglobin

73. La sangre es conducida al corazón por vía de :

- (A) veins
- (B) arteries
- (C) capillaries
- (D) erythrocytes

74. Otro nombre para las células rojas es :

- (A) leucocytes
- (B) erythrocytes
- (C) hemoglobin
- (D) carbohydrates

75. La sangre lleva material deshecho del cuerpo a :

- (A) the liver
- (B) the heart
- (C) the lungs
- (D) the stomach

76. Los cuatro tipos de sangre son:

- (A) A, B, C, D
- (B) AB, BA, O, AO
- (C) A, B, C, AB
- (D) A, B, AB, O

77. Los tipos de sangre son determinados por la presencia o ausencia de:

- (A) proteins
- (B) blood cells
- (C) Rh-factors
- (D) carbohydrates

78. La sangre ayuda para mantener una constancia interna de:

- (A) temperature
- (B) environment
- (C) humidity
- (D) respiration

79. Las células de la sangre que varían en tamaño son:

- (A) erythrocytes
- (B) red blood cells
- (C) white blood cells
- (D) erythroblasts

80. La sangre absorbe comida dirigida en:

- (A) the capillaries
- (B) the stomach
- (C) the liver
- (D) the intestines

FIG. 1

SKILLS CENTER
STUDENTS FLOW AND INSTITUTIONAL MODEL

AN EVALUATION OF THE EL PASO COMMUNITY COLLEGE -
BILINGUAL SKILLS CENTER

April 2, 1976

This report is a result of a letter contact by Mr. Ruben Ochoa, Director of the El Paso Community College - Bilingual Skills Center, calling for a consultation of a two-day on-site visit, on March 4 and 5, and a return one-day visit for submission of conclusions and recommendations, on April 2, 1976. The on-site visit consisted of a tour of the main campus and other training sites, including the Skills Center complex on Yandell. Interviews were conducted with the director, counselor, curriculum developer, instructors, and several students. A telephone conversation was held with the Associate Dean of Occupational Education, and an informal conversation was held with the Texas Education Agency representative. The on-site visit gave the consultant a cursory view of the Skills Center operation.

This report is intended to point out those positive factors that enhance the Skills Center and those that could be used more effectively for the continued improvement in carrying out the goals and purposes of the Skills Center. It cites areas that, in the consultant's opinion, need attention in order to improve the effectiveness of the services to the Skills Center clients. In addition, this report points out several areas, to be considered in long-range planning, that could enhance the continued development and growth of the Skills Center. It is the intent of this report to cover areas of significant concern, either expressed or observed, but it cannot and does not deal with all aspects of concern.

There are several notable positive factors that strengthen the Skills Center concept as a viable training alternative. It currently fills an otherwise unmet "training for employment" need identified in the El Paso community by

several surveys and advisory committees. The growth potential for the Center, based on documented need, is unlimited. As an integral part of the Community College, the Skills Center derives many excellent services, such as purchasing, financial accounting, facility maintenance, and personnel/payroll processing. It also derives some benefit from the Counseling and Developmental Studies departments. The Skills Center is exceptionally well equipped in all training areas, with up-to-date equipment. The program has elements of flexibility of operation which are necessary and its student clients are motivated to maximize their training opportunities within their individual limitations. Of course, the Center's greatest resource is its industrious, dedicated, hardworking staff. Each staff member has something unique to offer to the total effort.

It is recognized, however, that several factors also have contributed to limiting the Center's effectiveness:

1. This is the first year of operation and the program has had to make rapid adjustment with little opportunity for effective planning. The second year's proposal should have incorporated procedural changes learned in the first year of operation. The Bilingual/Vocational grant, the main source of funding for the Skills Center, requires recruiting and selecting clients of limited English backgrounds and developing a program design to meet their academic and vocational training needs to prepare them to enter and advance in occupations, using parallel courses in Spanish to achieve this goal. The consultant interprets this to be the institution's main objective. However, it is recognized that all aspects of this requirements are not being met. Utilizing bilingual staff and translating materials partially fulfill this requirement, but long-range development of this concept needs to be formulated. It is evident that the basic philosophy is incorporated in the proposal; however, follow-through has been slow because of procedural problems encountered during the implementation phases. It is the writer's contention that if the attached model (Figure 1) is followed without exception and the identified component sequences are fully developed, the requirements of the program will be met.

Consideration has to be given so that clients screened for occupational training have a "chance" of being employed. Therefore, a

screening procedure and admissions policy that includes assessment of interests and skills has to be established and be adhered to. The development of a trainee flow-through process, with defined behavioral objectives, is essential in moving clients from one component to another--intake, assessment, basic skills, vocational training, placement. Each enrollee should be given an opportunity to progress through the program individually, at his own pace. This process would require implementation of an open-entry/open-exit program. Each enrollee would have an individually prescribed educational development plan (EDP). This process has been proven most effective because it supports the accepted learning theory that learners possess individual differences and should be taught accordingly. An open-entry/open-exit design forces the instructor to develop objective criteria to effectively monitor the trainee's progress. It also allows the trainee to use his time more effectively between language development, basic education skills and vocational training. It is the opinion of the writer that this explanation was, at best, a "tease effort" to the concept of individualized instruction and that it requires much more planning and development than is possible in this report. It is recommended that serious consideration be given to its development as a long range project. The effective use of the curriculum developer could greatly enhance this development process and provide a valuable contribution to disseminating a model, as required by the contract.

2. Since the Skills Center is patterned under the community college format, several questions are raised and some possible alternatives offered as to the advantages or disadvantages of close ties with the community college. In some respects, the close ties to the community college's policies and procedures restrict the flexibility needed and affects the autonomy needed by the Skills Center to serve its clients.

There exist excellent linkages with some college departments; however, three (3) department linkages should definitely be expanded--Counseling, Developmental Education and the Library-Audio-Visual Center. These departments have many resources to offer to the Skills Center and its clients. A placement component and more clerical support to the Skills Center staff should also be provided. If regular staff cannot be provided, several alternatives such as work-study, TEC personnel, or Public Service Employment slots should be investigated. The Community College Placement Unit should be made available for Skills Center trainees.

In some respects the community college structure may be cumbersome to the effective operation of the Skills Center in meeting its commitment. The Skills Center client, being different from the

college student, requires a program without a semester-credit course structure. It is recommended that the credit requirement be eliminated and that those Skills Center enrollees wishing to continue at the college at a later date be given a "test-out" credit where applicable within the college program.

The Skills Center needs some funding permanency, other than grant monies. It is recommended that the college establish a fund, at approximately twenty percent (20%) of grant monies generated, to establish permanency, particularly during grant uncertainty periods. This insures staff and clients of program continuation. This uncertainty of continuity adversely affects morale and productivity of both staff and students.

Concern was expressed over the decision making process. There seems to be a lack of understanding as to whether the director has the authority, or uses the authority he does have, to make necessary and timely decisions. It is recommended that the Center Director and the Associate Dean determine these areas of responsibility to expedite timely and effective solutions to problems and develop a problem-solving plan of action to the extent possible.

It is recognized that the Center Director has many responsibilities, even outside the realm of the Skills Center operation, and is not always available to make timely procedural or programmatic decisions. It is, therefore, recommended that a set of operating policies and procedures be developed, either through management or by a committee of staff and students, to resolve these sometimes minute frustrations.

3. It is recognized that space is at a premium and that Skills Center classes are overcrowded with no space to expand. Also, Skills Center classes away from the Yandell location have to be accommodated around other college program schedules. It would be most desirable to acquire a facility that could house the Skills Center in one location for all of its programs and give the Skills Center client an opportunity equal to other enrollees.

Although time and scope limitations preclude indepth discussion, there were other concerns expressed, or observed, which warrant mention. The recommendations which follow are offered as a result of comments and observations. These recommendations are, by necessity, brief and cannot be fully developed in this report. They are offered as items for continued study and implementation.

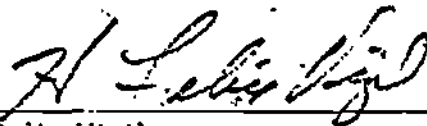

1. Schedule regular staff meetings and with definite objectives established for each meeting.
2. Establish priorities, with timetables, and ensure that staff is aware of these.
3. Establish a formal mechanism to share ideas and exchange problems and concerns among staff.
4. Develop plan of action formats for program segment designs, with individual instructors responsible for respective program segments and the Curriculum Developer responsible for coordinating overall curriculum.
5. Formalize student intake, initial assessment and progress monitoring techniques, with a formal progress monitoring system in all courses/classes.
6. Define roles and explore role expectations as a sensitizing effort for staff to better understand each other's needs and functions.
7. Clarify lines of authority and responsibility to/for all staff.
8. Utilize staff resources to the maximum by developing a system whereby staff can utilize each other's expertise.
9. Strengthen staff commitment and enthusiasm by recognizing work and effort expended.
10. Provide opportunity for enrollees and staff to participate in meaningful continued evaluation of program and decision making.
11. Strengthen client recruitment effort by developing and adhering to criteria; seek screening cooperation from other agencies involved in human development services.
12. Provide an ESL and GED program in conjunction with the language development needs for vocational enrollees. ESL and GED for non-vocational students should be conducted separately.
13. Formalize and use the job preparedness scale as designed by curriculum development, "Student Performance Rating Scale," (Figure 2).
14. Establish identifiable step-off levels in vocational training courses so that enrollees who cannot complete the total program could become employable at a step-off level by identifying specific skills required at each level.
15. Provide inservice training for instructors who do not have formal teaching backgrounds.

it is the intent of this report to be critical only to be constructive and to produce positive thinking in relation to the Skills Center current operation and its continued expansion and improvement. Each one of the classes visited had evidence of extremely positive and effective learning processes being utilized and much worthwhile learning taking place. Each person interviewed shared many positive comments and expressed satisfaction with his or her involvement in the Skills Center effort.

The Skills Center at present is a tremendously ambitious and progressive effort. All staff and clients are to be commended for their contributions to its success.

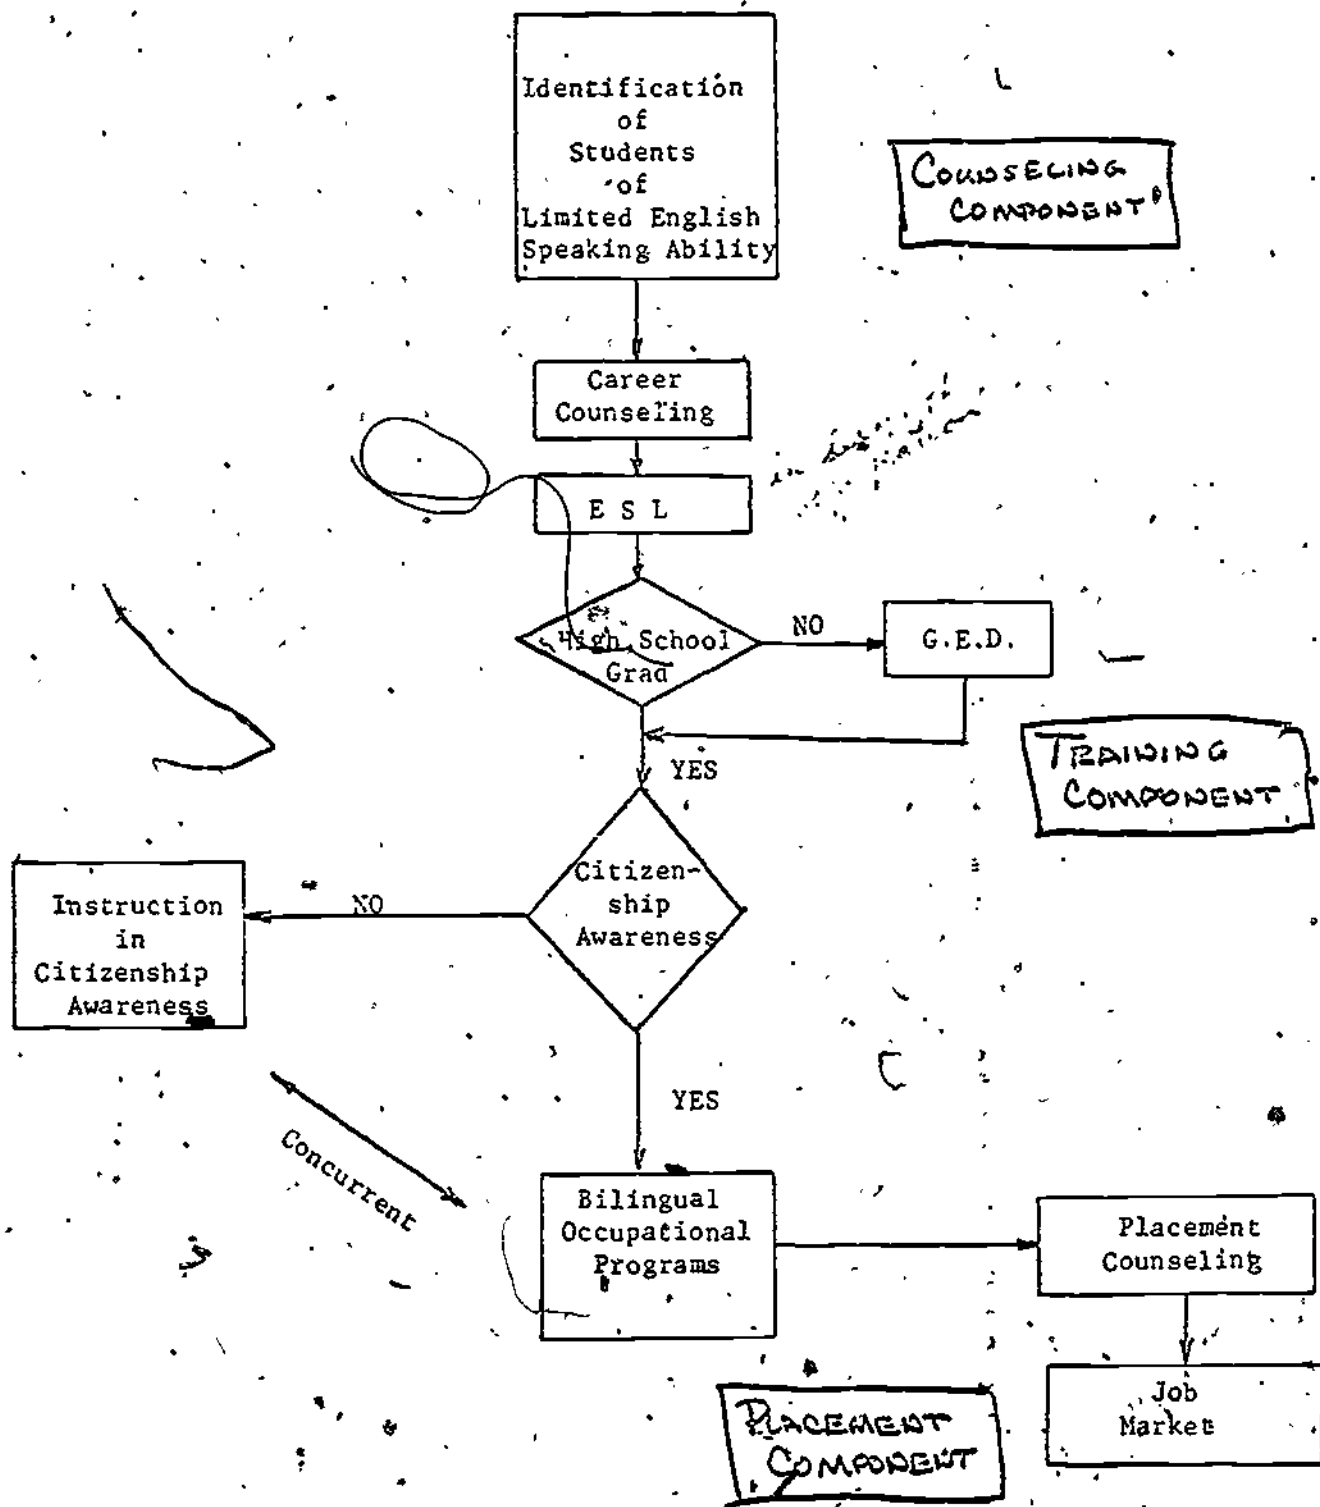

Please extend my thanks to all the staff and other participants for their cooperation and hospitality. It was indeed a pleasure to have had the privilege of this involvement.

Respectfully submitted,

H. Felix Vigil

FIGURE 1.
INSTRUCTIONAL MODEL

Adapted
for
E.P.C.C. Skills Center
Student Performance Rating Scale
by
Edwin P. Bowden

Below you will find a list of behavioral objectives that should characterize a student's performance in the EPCO Skills Program. The S-C staff will please rate each behavior as it applies to the particular student by writing in the corresponding rating number in the blank to the left of each statement. Use the following criteria for your ratings:

RATING:	Applies when that behavior occurs:
7	ALWAYS
6	ALMOST ALWAYS
5	VERY FREQUENTLY
4	OFTEN
3	OCCASIONALLY
2	RARELY
1	NEVER

Make a decision on each item individually. Do not hesitate to use extreme ratings if warranted. It is necessary to have a frank and objective evaluation of the student.

There is a total of 36 statements in reference to student rating. The 36 statements are worded so as to reflect Responsibility (R), Cooperation (C), and Motivation (M). The RCM rating is determined by placing the appropriate number of each behavior in the space provided. The kind of statement will be indicated by the RCM letter.

Student's Name: _____

Evaluator's Name: _____

Evaluator's Position: _____

Rating Cycle: From _____ To _____

(It is recommended that the student receive an accumulative score of 144 points as a mean for a favorable recommendation.)

EXPLANATION OF SCALE FACTORS

Responsibility: This includes responsible behavior directed toward successful student participation. It means helping the S-C staff to carry out the objectives of the program directed toward areas of student development. Student behavior will be rated as it relates to faculty, staff, and academic responsibility. All behavioral patterns instrumental in the participant's successful accommodation to the life style of a student are included here. They are all program related patterns of behavior such as: study habits, punctuality, responsiveness to instruction, and diligence in the skill area extending to care of tools, equipment and materials to include personal and school property.

Cooperation: Cooperative behavior relates to personal characteristics of the student, i.e. to the degree to which the person is able to get along with faculty, staff and peers. Behavior reflecting emotional adjustment, friendliness, willingness to get along, attitudes and general disposition toward others is included here. Cooperation reflects a positive attitude of the student in relation to his weaknesses as well as his strengths.

Motivation: Behavior included here is related to the degree to which the S-C participant is interested and involved in becoming a skilled worker. The degree to which his development is important to him and his willingness to work on deficiencies in predetermined areas for development is a main consideration under motivation. All behavior reflecting interest, dedication, and extra effort is significant here.

- M 1. Seems interested in the program and speaks enthusiastically about it.
- C 2. Is fair in dealing with others.
- R 3. Is reliable in executing assigned tasks.
- C 4. Treats peers courteously.
- R 5. Is decisive in class participation.
- R 6. Attends classes regularly and is on time.
- M 7. Shows interest in the program by seeking additional information.
- C 8. Shows attention, consideration and courtesy toward the director, instructors, and staff.
- R 9. Is neat and orderly in his/her work.
- C 10. Avoids negative comments about the program.
- M 11. Can go ahead with work without being told.
- M 12. Shows satisfaction and pride in work well done.
- C 13. Accepts supervision from instructors even if he/she has had some experience in what is being done.
- C 14. Is willing to change old methods of doing things when a new way is demonstrated or expected.
- R 15. Organizes and plans his/her work carefully.
- M 16. Wins the cooperation of others.
- M 17. Asks questions and seeks information related to work and the vocation.
- M 18. Follows instructions given by the instructor.
- M 19. Is willing to do more than the minimum requirements.
- C 20. Avoids ugly gestures, shoulder shrugs, or other signs of displeasure when asked a question or to do something.
- C 21. Speaks politely and shows consideration for fellow students.
- R 22. Plans well but lacks "snap" in getting things done.
- M 23. Asks meaningful questions directed toward relevant points while in class.
- R 24. Accepts difficult assignments without complaint.
- R 25. Avoids gossip about peers, instructors or staff.

- C ___ 26. Tries to communicate with others in a meaningful, reasonable fashion.
- M ___ 27. Self-motivated to do work without prodding.
- M ___ 28. Attends extra activities (when available) pertaining to the E.P.C.C. Skills Center program.
- M ___ 29. Seems to feel there is much to be learned from instructors.
- R ___ 30. Attends obligations and appointments punctually (promptness, similar to # 6).
- R ___ 31. Completes tasks efficiently and on schedule.
- C ___ 32. Accepts suggestions for self-professional improvement.
- R ___ 33. Acts with forethought (is not impulsive).
- R ___ 34. Takes care of personal appearance.
- C ___ 35. Is able to work effectively with others.
- C ___ 36. Participates actively in group sessions.

TITLE: OCCUPATIONAL EDUCATION PROGRAM ARTICULATION BETWEEN SECONDARY VOCATIONAL EDUCATION CENTERS AND GREENVILLE TECHNICAL COLLEGE. FINAL PROGRAM PERFORMANCE REPORT.

DESCRIPTOR: CAREER EDUCATION; VOCATIONAL EDUCATION; OCCUPATIONAL GUIDANCE; *VOCATIONAL SCHOOLS; TECHNICAL EDUCATION; HIGH SCHOOL STUDENTS; TECHNICAL INSTITUTES; *POST SECONDARY EDUCATION; *ARTICULATION (PROGRAM); INDUSTRIAL EDUCATION; ENGINEERING GRAPHICS; TRADE AND INDUSTRIAL EDUCATION; *SECONDARY EDUCATION

IDENTIFIER: GREENVILLE COUNTY SCHOOL SYSTEM; SOUTH CAROLINA

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 123P.

ABSTRACT: THE OCCUPATIONAL EDUCATION PROGRAM ARTICULATION PROJECT WAS DESIGNED TO DEVELOP POLICIES AND PROCEDURES WHICH WOULD FACILITATE STUDENT MOVEMENT FROM A LOCAL SCHOOL SYSTEM (GREENVILLE COUNTY SCHOOL SYSTEM) TO A TECHNICAL COLLEGE (GREENVILLE TECHNICAL COLLEGE). THESE POLICIES AND PROCEDURES APPLY TO THREE INDUSTRIAL/ARTS CURRICULUM AREAS: MACHINE SHOP, INDUSTRIAL ELECTRICITY, AND ENGINEERING GRAPHICS. THIS FINAL PROGRESS REPORT FOCUSES ON PROJECT ACCOMPLISHMENTS, MAJOR ACTIVITIES AND EVENTS, PROBLEMS, PUBLICITY ACTIVITIES, DISSEMINATION ACTIVITIES, EVALUATION PLANS AND PROCEDURES, AND STAFF DEVELOPMENT PROCEDURES. THE OVERALL ACCOMPLISHMENTS OF THE PROJECT WERE THE DEVELOPMENT OF SEQUENTIAL BEHAVIORAL OBJECTIVES; ADJUSTMENT OF CLASSROOM ACTIVITIES TO CONFORM TO COMPETENCY-BASED PLACEMENT PROGRAM; AND BROADENING OF COUNSELOR INFORMATION AND SKILLS IN THE IMPLEMENTATION OF ARTICULATION PROCEDURES. ACTIVITIES AND EVENTS WHICH LEAD TO THOSE ACCOMPLISHMENTS INCLUDE TUITION SCHOLARSHIPS, GUIDANCE FORMS, TEACHER VISITATIONS, AND COUNSELOR WORKSHOPS. THE PROJECT WAS NOT COMPLETED IN THE FISCAL YEAR THAT IT WAS FUNDED. FOR THAT AND OTHER REASONS FORMAL EVALUATION IS NOT AVAILABLE. TWO APPROACHES ARE ALSO INCLUDED IN THIS REPORT. APPENDIX A INCLUDES EXAMPLES OF PUBLICITY ACTIVITIES; APPENDIX B INCLUDES THREE PROGRAM BOOKLETS (ONE FOR EACH CURRICULUM AREA) WHICH PROVIDE INFORMATION ON THE ARTICULATION PROCESS. (TM)

ACCOMPLISHMENTS

The overall accomplishment of the Occupational Education Program Articulation Project was the development of comprehensive articulation policies and procedures in three instructional areas common to Greenville Technical College and the Greenville County School System. The areas were Machine Tool Technology-Machine Shop, Engineering Graphics Technology-Drafting, and Industrial Electricity-Electricity.

The attainment of the articulation policies and procedures was facilitated by the following:

- Statement of compatible and sequential behavioral objectives by both secondary and post-secondary instructors

- Adjustment of classroom evaluation techniques to conform to a competency-based placement program

- Broadening of counselor information and skills in the implementation of articulation procedures

The Articulation Project was funded for FY-76 and a three month extension (July 1-September 30, 1976).

The status of the grant activities is explained in the following narrative.

Specific performance objectives were developed for three occupational training programs to replace credit and clock-hour requirements. (Included in the appendices of this report are Program Articulation Booklets which contain copies of performance objectives.) The objectives for the Machine Tool Technology program were specified through the South Carolina State Department of Education Career Cluster Project.

The Career Cluster Project provides objectives, materials, and evaluation methods whose usage is required of the area vocational centers. Vocational center and Greenville TEC instructors specified performance objectives for the Industrial Electricity and Engineering Graphics Technology Programs.

Procedures were adopted to allow advanced placement of vocational center students in post-secondary programs. Following the specification of program objectives, instruments to rate student skills were constructed. The Engineering Graphics Technology program will be using a "Skills Proficiency Rating Form" and the Machine Tool Technology Program will use a "Machine Shop Transcript Evaluation Form." Each of the three programs uses a placement exam. (The Industrial Electricity Program uses a competency exam exclusively to determine advanced placement.)

Effective advanced placement is a bilateral decision. The institution must determine a student's competencies and prescribe appropriate instruction. The student must also feel confident of his abilities and of the placement. Students have the option of requesting lower program placement. Counselors encourage students, however, not to choose an entry level lower than the one prescribed.

The vocational centers and Greenville TEC programs utilize advisory committees to ensure instructional compatibility with industrial reality. These committees advise on the specification of curricula, selection of equipment and instruction of new methodologies. The committees also make certain that training practices are commensurate to industrial needs.

Special Articulation Project Committees were established early in the project funding period. Committee membership was composed of counselors, instructors, program administrators, community representatives, and project staff. The varied membership

provided effective constructive criticism of project activities and commitment to the implementation of the project.

Program Completion Requirements were based on graduation standards established by the State Board for Comprehensive and Technical Education and skills levels demanded by employers. The principal goal of the technical college and the vocational centers is to provide opportunities for individuals to enter the labor market with maximum skills.

An integral function of the articulation process was the regularly scheduled meetings of technical college and vocational school instructors. Instructors were able to discuss common goals and frustrations, share teaching methodologies, and become generally more informed about each other's programs.

MAJOR ACTIVITIES AND EVENTS

The major activities and events of the project are described below.

Tuition Scholarships--Greenville TEC established a tuition scholarship for the three departments of each vocational center involved in the project. The ten scholarships are awarded each June and provide one quarter of free tuition. The scholarships are renewable for one quarter after the student's work is satisfactorily reviewed by his college department faculty.

Guidance Information Form--This form was developed to provide feedback to the College and vocational center counselors on the progress of articulated students.

Teacher Visitations--Instructors in the drafting and engineering graphics programs exchanged teaching positions for one day. This exchange facilitated understanding

of the particular instructional needs of each program level.

Counselor's Workshop--Project Staff coordinated a September workshop for Greenville TEC and vocational center counselors. The workshop allowed counselor to "walk through" the program. Program administrators presented synopses of the articulation process as it applied to their instructional areas. Vocational center instructors were given information and materials to use in advising their students.

PROBLEMS

The project was not completed within the fiscal year for which it was funded. At the end of June, four activities remained unfinished. These activities were the validation of the Industrial Electricity Articulation Test, the completion of the counselor training program, the establishment of a testing center to handle placement exams, and the dissemination of developed materials.

The Industrial Electricity Articulation exam was validated during the late summer. Test items were matched with program objectives and difficulty and discrimination indices calculated for each item. A college testing center has not been established. The lack of these facilities, however, has not inhibited the program. The counselor training workshop and procedures for dissemination of materials are explained elsewhere in this report.

Fall 1976, was the first quarter the articulation process had been used to place students in instructional programs. Although comprehensive evaluation of the program is premature, the program does appear to have the necessary mechanisms to support efficient placement of students. The program needs to become more widely accepted, but this acceptance will be a function of time as the participants become more

comfortable with the process,

PUBLICITY ACTIVITIES

Included in the appendices are four articles which were published by the Greenville TEC "in-house" newspaper, "Tectonics". The "Tectonics" circulation includes all full and part-time instructors and administrators and officials of forty other institutions throughout the country. Two newspaper articles were published to promote the program. These articles, also included in the appendices, were announcements of scholarship awards.

DISSEMINATION ACTIVITIES

Copies of the final report and the program articulation booklets will be sent to the ERIC Clearinghouse for Junior Colleges, the Center for Vocational Education (Ohio State University), the sixteen technical colleges of South Carolina, each vocational center in Greenville County, and the offices of the Greenville County School System. Additional copies will be printed and made available to any institution requesting materials.

PROGRESS ON DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES

The Articulation Project was funded for one year only. The year was spent in the activities of initiating the project. The grant did not provide for a formal evaluation process, however, as the program is fully implemented it will be evaluated through the institutional research and program auditing function of the College.

This evaluation will be examining such program aspects as:

Are the levels of advanced placement appropriate for the student?

What is the effect of the articulation program on retention/attrition rates?

What is the effect of the program on length of study of vocational center graduates?

How do vocational center students compare with non-vocational center students on characteristics as academic success, job placement, and wage levels?

What are the attitudes of vocational center and college faculty toward the articulation process?

Greenville TEC hopes to answer these questions when the program enters its second and third years. The grant funded seed activities only and therefore, the College deems it more valuable to assess the effectiveness of the total program rather than the initiating activities.

OTHER ACTIVITIES

(not applicable)

STAFF EMPLOYMENT AND UTILIZATION

(not applicable)

STAFF DEVELOPMENT

The staff development activities which resulted from the accomplishment of the objectives of this grant are best described with respect to those groups served.

Instructors participated in all of the articulation program meetings and became involved in the design and implementation of the program. Instructors also worked individually with a curriculum specialist as they specified their instructional objectives and correlated test items with those objectives.

Counselors participated in the initial and final articulation program meetings. Efforts were made to increase the level of program information, to inform the counselors of the advantages of advanced placement, and to train them in the evaluation of student skills.

Appendix A
Publicity Activities

ARTICULATION GRANT ACTIVITIES *

Progress is being made on the goals of the articulation grant. The grant is funding activities to improve articulation between Greenville TEC and the vocational education centers.

Recently DAVE TITUS, J. D. WARREN, OLIVER ROGERS, JANIE McPIERSON, and LARRY SANKEY met with guidance counselors and instructors from the vocational centers and HAROLD KAY of the Greenville County Schools.

The participants agreed on a policy of evaluation for machine technology students. Some of the objectives are based on the Career Cluster Project.

The student placement system will be evaluated four weeks after the quarter begins.

BILL BAILY, RANDY LUCAS, and BRUCE CARDALL are writing objectives in Industrial Electricity for the articulation project.

Engineering Graphics Technology instructors LES CARAWAY and WALTER RICE have met with the area vocational instructors and are coordinating objective writing in their departments.

ARTICULATION GRANT ACTIVITIES

(TECTONICS, Vol. I, No. 4, Dec., 1975)

Greenville Tec has a grant to promote articulation and instructional agreements between Tec and the vocational high schools in the area. J. D. WARREN, LES CARAWAY, and SHIRLEY DENTON are coordinating most of the activities from the Tec end. The grant will be of mutual benefit to the schools concerned, but will help students the most. By agreeing on instructional objectives, the faculty at both schools will be able to place students into the Tec program at their skill level. Then students would not have to repeat material they had already learned. The grant is quite comprehensive and requires the involvement of administration, faculty, and counselors from both educational systems.

(TECTONICS, Volume I, No. 7, March 1976)

HAVE AN IDEA?

LES CARAWAY, WALTER RICE, and area vocational instructors are developing objectives for the articulation project. SHIRLEY DENTON is working with BRUCE CARDALL to write industrial electronic objectives.

(TECTONICS, Vol. I No. 8, April 1976)

Greenville Tec faculty continue to meet with instructors from the vocational education centers. On April 6, instructors from the various institutions met to review program and course objectives. A model for the process has been developed. The model depicts student progress through the system.

J. D. Warren has developed a slide-tape set for the Machine Tool Technology program. The program will be used by counselors with prospective students.

Thursday, June 10, 1978 Greenville Piedmont-

10 honored

Ten high school seniors from Greenville, selected as "outstanding graduates of industrial and technical programs at area vocational centers, received scholarship awards from Greenville TEC in ceremonies last week.

The students were chosen by center directors and instructors as having "outstanding records in drafting, electricity and machine shop," J.D. Warren, chairman of the industrial careers division at TEC, said.

The awards, consisting of tuition of \$50 for the first quarter of attendance at TEC, are renewable for a second quarter, contingent on the students' maintaining satisfactory progress as set by TEC.

Award recipients from Enoree Vocational Center include Jerry Matthews, Greg Stoudenmire and Kermit Shelton; from Foothills, James Liner, Ricky Pruitt and Warren Lewis. Anderson; from Donaldson Center, Dennis Finch, Douglas Edward Jackson and Joel Ambrose; and from Wade Hampton High School, David Gaze.

8-The Greer Citizen, Greer, S. C., Wed., June 2, 1976

Foothills School Students Get Scholarships

Three seniors at Foothills Vocational Center received scholarship awards from Greenville Technical College in ceremonies this week. J.D. Warren, second from left, chairman of the industrial careers division at Greenville TEC,

made the presentations to James Liner, Greer, for drafting; Warren Lewis Anderson, Taylors, for machine shop; and Rickey Pruitt, Greenville, for electricity.

MACHINE TOOL TECHNOLOGY

ARTICULATION GRANT

GREENVILLE TECHNICAL COLLEGE

JUNE, 1976

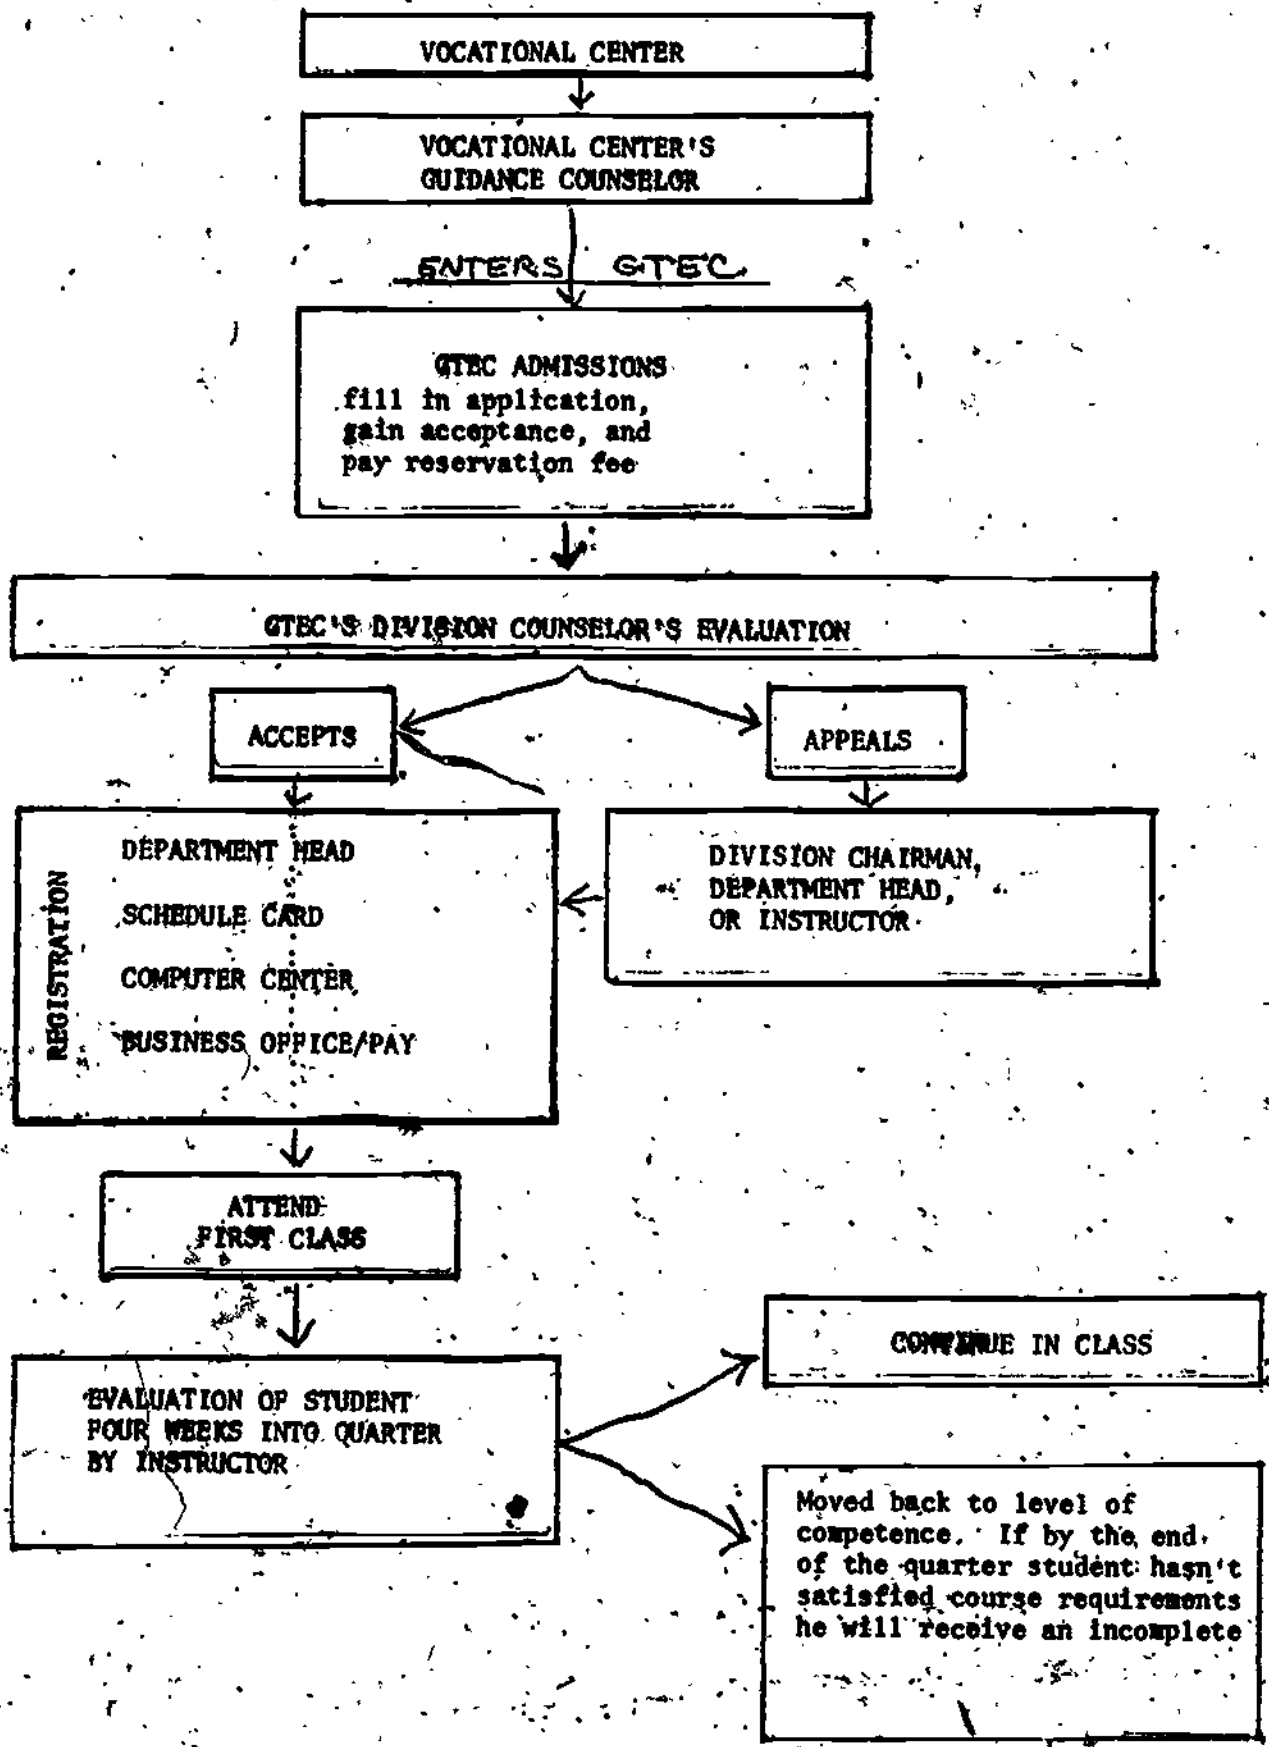

OVERVIEW

Evaluation for articulation into the Machine Tool Technology program at Greenville Technical College begins with the vocational student at his/her vocational center. The student should properly complete a release form in order to allow his/her "machine shop transcript" to be sent to the Industrial Division counselor at GTEC. This "transcript" should have been completed by the machine shop instructor at the center.

The GTEC guidance counselor will evaluate the "transcript" by the Machine Shop Transcript Evaluation Form. This form has a list of Career Cluster Project objectives that have been correlated to the machine shop courses at GTEC. Completion of objectives listed by each project within the four quarters of courses will be considered completion of that project at GTEC. A recommendation is made by the counselor for placement in the Machine Tool Technology program.

If the student disagrees with the counselor's recommendation and requests a higher placement, there is a detailed procedure for reviewing the evaluation by members of the Machine Tool Technology department. (See "Articulation Evaluation Procedure" in this booklet.) If the student requests a lower placement, his/her request will be honored at this time.

ARTICULATING MACHINE SHOP STUDENT FLOW CHART

ARTICULATION EVALUATION PROCEDURE

I. Entering Student Is Evaluated by GTEC Division Guidance Counselor with students signature for release

1. Yellow Card (MTT transcript)

II. Student Accepts-

1. Registers for suggested quarter

II. Student Appeals -

1. Division Chairman, Department Head or Instructor will reevaluate student.

2. Deficiencies listed and closer evaluation given - decision re-issued with counseling on its rational

a. appeal denied - go to #3

b. appeal accepted - go to #4

3. If appeal denied, student allowed to register for suggested MTT course

4. If appeal accepted, time expectancies on student's performance and quality determined and noted to him

At the end of 4 weeks the student must meet with the instructor involved to justify continuance based on performance of heretofore listed deficiencies and appropriate progress into the quarter's work

a. If student's work acceptable, he continues through the quarter.

b. If not acceptable, student will be moved back to his level of competency. If by the end of the quarter student hasn't satisfied course requirements, he will receive an incomplete.

III. Evaluation of Student, four weeks into quarter, by instructor to verify acceptable level of performance and appropriate initial evaluation

The evaluation instrument development by the South Carolina State Department of Education for the Cluster Project in the ARC funded program for Machine Shop has been included under Machine Tool Technology by courtesy of the South Carolina State Department of Education.

OFFICIAL STUDENT PROGRESS RECORD
 Machine Shop

NOTICE TO INSTRUCTOR(S): THIS IS AN OFFICIAL RECORD of the student's progress in the course. Please follow these instructions:

1. Draw a line through all LEPs which you do not require of the student to get credit for the unit.
2. Place a check in the blank beside each required LEP when:
 - a. You have TRAINED the student on the LEP, or
 - b. You are giving the student CREDIT for the LEP because of YOUR SPECIAL KNOWLEDGE that the student has competence in the training required by this LEP.
3. Occasionally space is provided for your initials and the date.
4. Do not try to complete ALL other relevant information about the student on this form.
5. If the student completes the course or withdraws from the course for any reason, complete the reverse side of this form and IMMEDIATELY forward to the records office.

TUITION SCHOLARSHIP

Greenville Technical College is proud to offer tuition scholarships in each of the Articulation Grant programs: Machine Tool Technology, Industrial Electricity, and Engineering Graphics Technology. These scholarships were suggested at an Articulation Grant Advisory Committee meeting and handily approved by the Greenville Technical College administration. It is hoped their inception will stimulate interest in continuing quality education and training in these fields.

The Donaldson, Enorse, and Foothills Vocational Centers will each select their most outstanding and/or worthy student in their drafting, electricity, and machine shop programs. Wade Hampton High School will select a student from their electricity program. The three scholarship students from each center will receive one quarter of tuition free study at Greenville Technical College. After their first quarter, each student may receive an extension for another quarter based upon review and approval by his or her instructors and department head.

After the selection of the students by their instructors, the director or principal of each school should send a copy of all the names to the heads of the Industrial and Technical Divisions, Mr. J.D. Warren and Mr. Las Caraway. This is necessary to insure the tuition waiver be available when the student begins.

GUIDANCE INFORMATION FORM

This form was designed to supply feedback to guidance counselors, instructors, and administrators. It will be sent by the Greenville Technical College department involved to the vocational center each time there is a horizontal line of asterisks. The information on the form will supply data to evaluate our effectiveness and suggest continuation or change in our procedures.

IT IS EXTREMELY IMPORTANT THAT THE STUDENT OR HIS/HER PARENT IF THE STUDENT IS UNDER 18 SIGNS THE PERMISSION BLANK ON THE SIDE OF THE FORM. IT WOULD BE ILLEGAL TO DISEMINATE THIS INFORMATION FROM GREENVILLE TECHNICAL COLLEGE WITHOUT THE PROPER SIGNATURE.

MACHINE SHOP
ARTICULATION STUDENT'S PROGRESS

Your student, _____, from _____

Vocational Center has exempted through MTT _____ (quarter _____) and

may (conditionally, unconditionally) enroll in MTT _____ (quarter _____).

This placement was based on

- _____ the "machine shop transcript" only
- _____ the "machine shop transcript" and an interview
- _____ requested by _____ and conducted by _____
- _____ vocational instructor's recommendation

The student

- _____ readily accepted placement
- _____ requested a lower placement - outcome _____
- _____ requested a higher placement - outcome _____

Date of evaluation _____

The student at mid-term has been re-evaluated and is

- _____ progressing satisfactorily
- _____ moved back to level of competence
- (may be able to finish quarter's work, may have to take Inc.)

Student's signature _____

Instructor's signature _____

Date _____

The student at the end of the first quarter of work

- _____ successfully completed MTT _____ (grade _____) on _____ (date).
- _____ received an incomplete
- _____ dropped out before end of quarter

Student's status at the end of the first year of work- _____

I GIVE MY PERMISSION FOR THE INFORMATION ON THIS SHEET TO BE RELEASED TO GREENVILLE COUNTY SCHOOL SYSTEM.

MACHINE SHOP - UNIT 2 - BLUEPRINT READING

MS-2-1 INTRODUCTION TO BLUEPRINT READING

When you finish this learning package, you will be able to answer questions about blueprints and about the title block and notes on blueprints.

MS-2-2 ONE, TWO, AND THREE VIEW DRAWINGS

When you finish this learning package, you will be able to identify the different views of objects as shown by isometric drawings of the object.

MS-2-3 ALPHABET OF LINES

When you finish this learning package, you will be able to identify the different types of lines used in blueprints.

MS-2-4 SECTIONS

When you finish this learning package, you will be able to identify the following sections: full, half, offset, broken out, revolved, and removed.

MS-2-5 SCALE DRAWING

When you finish this learning package, you will be able to answer (basic) questions about (interpreting the) scale (of a) drawing.

MS-2-6 FINISH MARKS

When you finish this learning package, you will be able to identify and explain the finish marks on blueprints.

MS-2-7 FREEHAND SKETCHING

When you finish this learning package, you will be able to make freehand sketches of cylindrical, rectangular, and irregularly shaped work pieces.

MACHINE SHOP - UNIT 3 - MEASURING

MS-3-1 THE MACHINIST'S SCALE

When you finish this learning package, you will be able to use the machinist's scale to measure the length and width of a piece of stock. Your measurements must be within $\pm 1/64$ of an inch of specifications.

MS-3-2 CENTER HEAD OF THE COMBINATION SET

When you finish this learning package, you will be able to locate and mark the center on both ends of a round bar of any size from $\frac{1}{4}$ " to 6" using the center head of the combination set. Your marks must be within $\pm 1/32$ of an inch of specifications.

MS-3-3 THE SQUARE HEAD OF THE COMBINATION SET

When you finish this learning package, you will be able to use the square head to scribe straight lines and angles to within $\pm 1/32$ of an inch of specification.

MS-3-4 DIVIDERS

When you finish this learning package, you will be able to use the machinist's scale and dividers to transfer the dimensions of a drawing to a workpiece. Your transferred measurements must be within $\pm 1/64$ of an inch of specifications.

MS-3-5 HERMAPHRODITE CALIPERS

When you have finished this learning package, you will be able to use the hermaphrodite caliper to: a-scribe parallel lines on a workpiece, and b-locate and mark the center of a round workpiece. Your work must be within $\pm 1/64$ of an inch of specifications.

MS-3-6 OUTSIDE CALIPERS

When you finish this learning package, you will be able to use the outside caliper and the machinist's scale to measure the outside diameter of round workpieces to within $\pm 1/64$ " of specifications.

MS-3-7 BEVEL PROTRACTOR

When you finish this learning package, you will be able to use the bevel protractor of the combination set to lay out, on a workpiece, the various angles called for on a set of specifications to within $\pm 1/2^\circ$.

MS-3-8 OUTSIDE MICROMETER

When you finish this learning package, you will be able to use the outside micrometer to measure: the outside diameter of round stock, the thickness of flat stock, and the length of flat stock.

MS-3-9 INSIDE CALIPERS

When you finish this learning package, you will be able to use the inside calipers and the outside micrometer to measure the inside diameters of tubular stock to within $\pm .002$ " of specifications.

MS-3-10 TELESCOPING GAGE

When you finish this learning package, you will be able to use the telescoping gage and the outside micrometer to measure internal dimensions to within $\pm .001$ " of specifications.

MACHINE SHOP - UNIT 3 CONTINUED - MEASURING

MS-3-11 INSIDE MICROMETER

When you finish this learning package, you will be able to assemble and use the inside micrometer to measure inside diameters of tubular stock to within $\pm .001$ " of specifications.

MS-3-12 DEPTH MICROMETER

When you finish this learning package, you will be able to assemble, adjust, and use the depth micrometer to measure the depth of holes and slots to within $\pm .001$ " of specifications.

MS-3-13 SCREW PITCH GAGE

When you finish this learning package, you will be able to use the screw pitch gage to measure the number of threads per inch on any given screw or bolt.

MS-3-13A SCREW THREAD MICROMETER

When you finish this learning package, you will be able to use the screw thread micrometer to measure the pitch diameter of screw threads to within $\pm .001$ " of specifications.

MS-3-14 VERNIER CALIPER

When you get finished with this learning package, you will be able to use the vernier caliper to measure the outside and inside diameters of round stock and the depths of holes and slots to within $\pm .001$ " of specifications.

MS-3-15 SURFACE GAGE

When you finish this learning package, you will be able to use the surface gage to measure and scribe lines on vertical surfaces to within $\pm .010$ " of specifications.

MS-3-16 VERNIER HEIGHT GAGE

When you finish this learning package, you will be able to use the vernier height gage to make comparison checks to within $\pm .001$ " of specifications.

MS-3-17 OPTICAL COMPARATORS:

When you have finished this learning package, you will be able to answer questions about optical comparators and how they work.

MS-3-18 GAGE BLOCKS AND DIAL INDICATORS

When you finish this learning package, you will be able to use gage blocks to verify the accuracy of a dial indicator to within $\pm .0001$ ".

MS-3-19 DIAL INDICATOR

When you finish this learning package, you will be able to use the dial indicator to check the concentricity (roundness) of round stock to within $\pm .001$ ".

MS-3-20 DIAL INDICATOR - VISE ALIGNMENT

When you finish this learning package, you will be able to use the dial indicator to align a vise on a milling machine to within $\pm .001$ " of specifications.

MACHINE SHOP - UNIT 3 CONTINUED - MEASURING

MS-3-21 RADIUS GAGE

When you finish this learning package, you will be able to use a radius gage to measure convex and concave radii of parts.

MS-3-22 PLANER GAGE

When you finish this learning package, you will be able to adjust the planer gage to a given height.

MS-3-23 VERNIER BEVEL PROTRACTOR

When you finish this learning package, you will be able to use the universal vernier bevel protractor to lay out a given angle, with an accuracy of $\pm 0^{\circ}5'$.

MS-3-24 SINE BAR

When you finish this learning package, you will be able to use a sine bar to measure and set up various angles with an accuracy of $\pm 0^{\circ}5'$.

MS-3-25 SNAP GAGES

When you finish this learning package, you will be able to use snap gages to measure lengths, diameters, and thicknesses of parts.

MS-3-26 GEAR TOOTH VERNIER CALIPER

When you finish this learning package, you will be able to use a gear tooth vernier caliper to measure the addendum and the chordal thickness of any gear tooth.

MACHINE SHOP - UNIT 4 - LAYOUT

MS-4-1 INTRODUCTION TO LAYOUT TOOLS AND ACCESSORIES

When you finish this learning package, you will be able to identify basic layout tools and answer questions about their use.

MS-4-2 USING LAYOUT TOOLS: PART 1

When you finish this learning package, you will be able to layout fluid, scriber, dividers, trammels, hermaphrodite calipers, and prick punch to do layout work to specifications.

MS-4-3 USING LAYOUT TOOLS: PART 2

When you finish this learning package, you will be able to use the vernier height gage, magnifying glass, angle plate, toolmaker's square, c-clamps, parallel clamps, 1-2-3 step blocks, precision square, gage blocks, and sine bar to do layout work to specifications.

MS-4-4 USING LAYOUT TOOLS: PART 3

When you finish this learning package, you will be able to use the combination set, vernier protractor, and protractor depth gage to do inspection and layout work to specifications.

MS-4-5 USING LAYOUT TOOLS: PART 5

When you finish this learning package, you will be able to use the surface gage, dial indicator, planer gage, center punch, and hammer to do layout work to specifications.

MS-4-6 LAYING OUT A T-SLOT CLEANER

When you finish this learning package, you will be able to layout a T-slot cleaner to specifications.

MS-4-7 LAYING OUT A DRILL AND TAP BLOCK

When you finish this learning package, you will be able to lay out a series of six holes on a drill and tap block.

MACHINE SHOP - UNIT 5 - BENCH WORK

MS-5-1 INTRODUCTION TO BENCH TOOLS

When you finish this learning package, you will be able to identify basic bench tools.

MS-5-2 THE BENCH VISE

When you finish this learning package, you will be able to name the parts of a bench vise and do clamping operations on the vise according to specifications.

MS-5-3 FILES AND FILING

When you finish this learning package, you will be able to identify basic files used in machining and file work pieces accurately to specifications.

MS-5-4 HAND HACK SAWS

When you finish this learning package, you will be able to identify and properly use hand hack saws to cut metals.

MS-5-5 TAPS AND DIES

When you finish this learning package, you will be able to identify and properly use taps and dies to cut threads on work pieces to specifications.

MS-5-6 HAND REAMING

When you finish this learning package, you will be able to use hand reamers properly to ream holes in metals to specified sizes.

MS-5-7 HAMMERS, SCREW DRIVERS, CHISELS, PLIERS, AND WRENCHES

When you finish this learning package, you will be able to identify and properly use hammers, screw drivers, chisels, pliers, and wrenches.

MACHINE SHOP - UNIT 6 - BENCH AND PEDESTAL GRINDING

MS-6-1 GRINDING WHEELS

When you finish this learning package, you will be able to use reference charts to select proper grinding wheels. You will be able to install the wheels on a grinder, adjust the wheels, and adjust the tool rest.

MS-6-2 DRESSING WHEELS

When you finish this learning package, you will be able to true and dress a grinding wheel for normal grinding operations.

MS-6-3 GRINDING A RADIUS

When you finish this learning package, you will be able to grind a $\frac{1}{4}$ " radius to fit a $\frac{1}{4}$ " gage.

MACHINE SHOP - UNIT 7 - DRILL PRESS

MS-7-1 INTRODUCTION TO DRILL PRESS

When you finish this learning package, you will be able to name each control on a upright drill press and tell what each control does.

MS-7-2 SETUPS FOR DRILLING

When you finish this learning package, you will be able to use the proper holding devices to set up for the following drilling tasks: round stock, flat stock, sheet metal, irregular shapes.

MS-7-3 DRILL PRESS CUTTING TOOLS

When you finish this learning package, you will be able to identify cutting tools used in a drill press and tell what each one does.

MS-7-4 ADAPTERS AND SLEEVES

When you finish this learning package, you will be able to use sleeves and/or chucks to change the holding capacity of a drill press spindle.

MS-7-5 DRILLING HOLES

When you finish this learning package, you will be able to choose correct feeds and speeds for drilling holes in steel and aluminum. Accuracy will be $\pm 1/32"$.

MS-7-6 DEPTH DRILLING

When you finish this learning package, you will be able to use the drill press depth stops to drill holes to a specified depth, with an accuracy of $\pm 1/16"$.

MS-7-7 COUNTERBORING, COUNTERSINKING, AND SPOT FACING

When you finish this learning package, you will be able to use the proper tool to counter sink, counterbore, and spot face drilled holes to a tolerance of $\pm 1/32"$.

MS-7-8 ANGULAR HOLES

When you finish this learning package, you will be able to make table adjustments and use proper holding devices to drill angular holes in metal, to an accuracy of $\pm 1/32"$.

MS-7-9 RADIAL DRILL PRESS

When you finish this package, you will be able to answer questions about the parts and controls of a radial drill press and tell what each does.

MS-7-10 REAMING

When you finish this learning package, you will be able to use a straight or taper shank reamer to ream holes to a specified size, with an accuracy of $\pm 1/64"$.

MS-7-11 MACHINE TAPPING

When you finish this learning package, you will be able to use the proper tap drill size, tap, and tapping attachment to drill tap holes as shown on drawings, with an accuracy of $\pm 1/32"$.

MACHINE SHOP - UNIT 7 CONTINUED - DRILL PRESS

MS-7-12 PARTS OF A TWIST DRILL

When you finish this learning package, you will be able to name the parts of a twist drill and tell the purpose of each.

MS-7-13 TWIST DRILL SIZES

When you finish this learning package, you will be able to use charts and drill gages to select the proper size drill for a given application.

MS-7-14 TRANSFERRING HOLES

When you finish this learning package, you will be able to transfer holes from one piece of work to another by spotting with a twist drill, using a transfer punch, and using transfer screws.

MACHINE SHOP - UNIT 8 - DRILL GRINDING

MS-8-1 FREEHAND DRILL SHARPENING

When you finish this learning package, you will be able to use the bench or pedestal grinder to sharpen a dull twist drill. Using a drill bit gage as a guide, you will be able to: keep the point angle to within $\pm 1^\circ$ and keep the point centered to within $\pm 1/64$ " drill lip length.

MS-8-2 MACHINE DRILL SHARPENING

When you finish this learning package, you will be able to set up and operate a machine drill grinder to sharpen a two-lip twist drill and a three or four-lip core drill.

MACHINE SHOP - UNIT 9 - POWER SAWS

MS-9-1 POWER SAWS: PARTS AND CONTROLS

When you finish this learning package, you will be able to name the main parts and controls of the horizontal band saw, the vertical band saw, and the power hack saw.

MS-9-2 CHOOSING POWER SAW BLADES

When you finish this learning package, you will be able to choose the correct power saw blade for a given application.

MS-9-3 FREQUENT SAWING PROBLEMS

When you finish this learning package, you will be able to answer questions about diagnosing and correcting problems often met when using the power hacksaw, vertical band saw, and horizontal band saw.

MS-9-4 SETTING BLADE SPEEDS

When you finish this learning package, you will be able to use charts or a job dial selector to choose the proper speed of a band saw blade for a given job.

MS-9-5 SETTING UP POWER SAW CONTROLS

When you finish this learning package, you will be able to set up the operational controls of a power hack saw and a power band saw for a sawing operation.

MS-9-6 MOUNTING BAND SAW BLADES AND CUTTING STOCK

When you finish this learning package, you will be able to select, mount guides, and install blades on the vertical band saw, and cut stock with a vertical band saw to an accuracy of $\pm 1/16"$.

MS-9-7 WELDING BAND SAW BLADES

When you finish this learning package, you will be able to use the bulk blade provided and the welding attachment on the vertical band saw to weld band saw blades. You will weld blades to specified lengths for particular saws and to the thickness required by the blade thickness gage on the vertical band saw.

MS-9-8 VERTICAL BAND SAW: CUTTING CIRCLES, CONTOURS, AND STRAIGHT LINES

When you finish this learning package, you will be able to use the vertical band saw to cut contours, circles, and straight lines with an accuracy of $\pm 1/16"$.

MS-9-9 FRICTION SAWING

When you finish this learning package, you will be able to set up a vertical band saw for friction sawing of thin sheet metal.

MS-9-10 BAND FILING

When you finish this learning package, you will be able to select and set up a band file for a band filing job.

MACHINE SHOP - UNIT 9 CONTINUED - POWER SAWS

MS-9-11 HORIZONTAL BAND SAW: STRAIGHT AND ANGLE CUTS

When you finish this learning package, you will be able to use the horizontal band saw to cut stock, with an accuracy of $\pm 1/16''$ and to make angular cuts with an accuracy of $\pm 1^\circ$.

MS-9-12 FINISHING A T-SLOT CLEANER

When you finish this learning package, you will be able to finish a T-slot cleaner to blueprint specifications.

MS-9-13 FINISHING A DRILL AND TAP BLOCK

When you finish this learning package, you will be able to finish a drill and tap block to blueprint specifications.

MACHINE SHOP - UNIT 10 - ENGINE LATHE

MS-10-1 LATHE PARTS AND CONTROLS

When you finish this learning package, you will be able to point out the main parts and controls of an engine lathe.

MS-10-2 CUTTING SPEEDS AND FEEDS

When you finish this learning package, you will be able to choose proper feeds and speeds used to machine different kinds of metals on the lathe.

MS-10-3 INSTALLING CHUCKS

When you finish this learning package, you will be able to install all of the chucks used on a lathe.

MS-10-4 TOOL BIT GRINDING

When you finish this learning package, you will be able to: identify and sketch basic lathe tools, grind a general purpose tool bit for use on the engine lathe.

MS-10-5 FOUR-JAW CHUCK TRUING

When you finish this learning package, you will be able to true a piece of round stock in a 4-jaw chuck.

MS-10-6 FACING TO LENGTH

When you finish this learning package, you will be able to machine a workpiece to a given length using a facing tool on an engine lathe with an accuracy of $\pm .001$ ".

MS-10-7 COLLET ASSEMBLY AND CENTER DRILLING

When you have finished this learning package, you will be able to: set up a collet assembly on a lathe, center drill a workpiece on the lathe.

MS-10-8 GRADUATED MICROMETER COLLAR: ROUGH AND FINISH TURNING

When you finish this learning package, you will be able to use a graduated micrometer collar to turn a workpiece to a specified diameter, with an accuracy of $\pm .001$ ".

MS-10-9 NECKING

When you finish this learning package, you will be able to do a necking operation on an engine lathe.

MS-10-10 MOUNTING WORK BETWEEN CENTERS

When you finish this learning package, you will be able to mount a workpiece between centers properly.

MS-10-11 ALIGNING THE TAILSTOCK

When you finish this learning package, you will be able to adjust the lathe tailstock properly for turning a work between centers with an accuracy of $\pm .001$ ".

MACHINE SHOP - UNIT 10 CONTINUED - ENGINE LATHE

- MS-10-12 DRILLING AND REAMING ON THE LATHE
When you finish this learning package, you will be able to drill and ream a workpiece on an engine lathe to a specified size.
- MS-10-13 TURNING WORK ON A MANDREL
When you finish this learning package, you will be able to use a mandrel to turn a workpiece to a specified diameter.
- MS-10-14 TURNING TO SQUARE AND FILLETED SHOULDERS
When you finish this learning package, you will be able to cut a square and a filleted shoulder properly.
- MS-10-15 FILING AND POLISHING
When you finish this package, you will be able to file and polish a work piece on a lathe to a specified size.
- MS-10-16 KNURLING
When you finish this learning package, you will be able to knurl a workpiece on a lathe.
- MS-10-17 TAPER TURNING WITH A COMPOUND REST
When you finish this learning package, you will be able to turn a taper on a workpiece using the compound rest.
- MS-10-17A CALCULATING TAPERS
When you finish this learning package, you will be able to: calculate proper compound rest angle settings for turning tapers using formulas and trigonometric tables and calculate taper per foot and taper per inch using formulas.
- MS-10-18 TAPER TURNING AND TAPER ATTACHMENT
When you finish this learning package, you will be able to turn a taper using the taper attachment for the lathe.
- MS-10-19 TAPER TURNING WITH OFFSET TAILSTOCK
When you finish this learning package, you will be able to cut a taper using the offset tailstock method.
- MS-10-20 EXTERNAL THREADING WITH THREADING DIE AND HOLDER
When you finish this learning package, you will be able to use the engine lathe to cut threads on a workpiece with a threading die and holder.
- MS-10-21 TURNING ON THE LATHE
When you finish this learning package, you will be able to cut an internal thread with the lathe by using a tap and holder.
- MS-10-22 THREADING ON THE LATHE: EXTERNAL THREAD CHASING
When you finish this learning package, you will be able to: cut threads on a workpiece by using the lathe thread cutting mechanisms and chase external threads using a lathe.

MACHINE SHOP - UNIT 10 CONTINUED - ENGINE LATHE

MS-10-23 BORING BAR

When you finish this learning package, you will be able to bore a hole to size on a lathe.

MS-10-24 INTERNAL THREADING

When you finish this learning package, you will be able to cut internal threads using the thread chasing mechanism.

MS-10-25 STEADY REST

When you finish this learning package, you will be able to set up and machine a long workpiece using a steady rest.

MS-10-26 FOLLOW REST

When you finish this learning package, you will be able to set up and machine a workpiece using the follow rest.

MS-10-27 FORM TURNING

When you finish this learning package, you will be able to turn a radius on the lathe by hand.

MACHINE SHOP - UNIT 11 - MILLING : INTRODUCTION

MS-11-1 KINDS OF MILLING MACHINES

When you finish this learning package, you will be able to point out and name six different kinds of milling machines and briefly describe their uses.

MS-11-2 LUBRICATION AND PREVENTIVE MAINTENANCE

When you finish this learning package, you will be able to lubricate and perform preventive maintenance on milling machines.

MS-11-3 SPEEDS AND FEEDS

When you finish this learning package, you will be able to figure speeds and feeds on a milling machine for given cutters and work materials.

MS-11-4 CUTTING FLUIDS AND OILS

When you finish this learning package, you will be able to identify, mix, and apply cutting fluids and oils in milling machine operations.

MS-11-5 ACCESSORIES AND ATTACHMENTS

When you finish this learning package, you will be able to point out and name several milling machine attachments and tell what is used for.

MS-11-6 INDEXING HEADS AND DIRECT INDEXING

When you finish this learning package, you will be able to: point out and name the five basic parts of an indexing head, describe the use of each part, and set an indexing head up for direct indexing.

MS-11-7 SIMPLE INDEXING

When you finish this learning package, you will be able to change an index plate and set up an indexing head for simple indexing.

MS-11-8 ANGULAR INDEXING

When you finish this learning package, you will be able to: set up an indexing head for angular indexing and use the proper formulas to figure angular indexing settings.

MS-11-9 PREPARING THE HEAD FOR INDEXING

When you finish this learning package, you will be able to prepare an indexing head along with the footstock (tailstock).

MS-11-10 INDEXING: ALIGNMENT OF CENTERS

When you finish this learning package, you will be able to align the centers of an indexing head and tailstock with an aligning bar and dial indicator.

MS-11-11 VISE AND TABLE ALIGNMENT

When you finish this learning package, you will be able to: align a milling machine vise with a square, a dial indicator, and the marks on the vise base and align the table of a milling machine with the column face.

MS-11-12 ROTARY TABLE AND SLOTTING ATTACHMENT

When you finish this learning package, you will be able to identify and briefly describe the uses of the rotary table and slotting attachment.

MACHINE SHOP - UNIT 12 - MILLING MACHINES: VERTICAL AND HORIZONTAL
SECTION A - VERTICAL MILLING MACHINES

MS-12A-1 SOUTH BEND RAM TURRET: PARTS AND CONTROLS

When you finish this learning package, you will be able to name the parts and controls of a South Bend Ram Turret vertical milling machine and describe what each control does.

MS-12A-2 CINCINNATI NO. 3: PARTS AND CONTROLS

When you finish this learning package, you will be able to point out and name the parts and controls of the Cincinnati No. 3 vertical milling machine and describe what each control does.

MS-12A-3 MODEL "J" BRIDGEPORT: PARTS AND CONTROLS

When you finish this learning package, you will be able to point out and name the parts and controls of the Model "J" Bridgeport vertical head milling machine and describe what each control does.

MS-12A-4 MODEL "J" BRIDGEPORT: VERTICAL HEAD ALIGNMENT

When you finish this learning package, you will be able to align the head of a Model "J" Bridgeport vertical head milling machine.

MS-12A-5 MODEL "2J" BRIDGEPORT: PARTS AND CONTROLS

When you finish this learning package, you will be able to point out and name the parts and controls of the Model "2J" Bridgeport vertical head milling machine and describe what each control does.

MS-12A-6 CINCINNATI MODEL "D" TOOLMASTER: PARTS AND CONTROLS

When you finish this learning package, you will be able to point out and name the parts and controls of the Cincinnati Model "D" Toolmaster vertical milling machine and describe what each control does.

MS-12A-7 VAN NORMAN MODEL 13: PARTS AND CONTROLS

When you finish this learning package, you will be able to point out and name the parts and controls of the Van Norman Model 13 milling machine and describe what each control does.

MS-12A-8 VERTICAL MILLING MACHINE CUTTERS

When you finish this learning package, you will be able to point out and name cutters used in vertical milling operations and describe their uses.

MS-12A-9 MOUNTING CUTTERS AND CUTTING A KEYSLOT

When you finish this learning package, you will be able to mount vertical milling machine cutters properly and cut a keyseat, using a 4-flute end mill.

MS-12A-10 VERTICAL MILLING SETUPS AND OPERATIONS

When you finish this learning package, you will be able to identify and make setups on a vertical milling machine.

MACHINE SHOP - UNIT 12 - MILLING MACHINES: VERTICAL AND HORIZONTAL
SECTION B - HORIZONTAL MILLING MACHINES

MS-12B-1 CINCINNATI UNIVERSAL NO. 2: PARTS AND CONTROLS

When you finish this learning package, you will be able to name and point out the parts and controls on the above milling machine and describe what each control does.

MS-12B-2 HORIZONTAL MILLING MACHINE CUTTERS

When you finish this learning package, you will be able to point out and name cutters used in horizontal milling operations and describe their uses.

MS-12B-3 MOUNTING HORIZONTAL MILLING CUTTERS

When you finish this learning package, you will be able to mount horizontal milling machine cutters properly.

MS-12B-4 HORIZONTAL MILLING SETUPS AND OPERATIONS

When you finish this learning package, you will be able to identify and make setups on a horizontal milling machine.

MS-12B-5 INSTALLING A VERTICAL HEAD ATTACHMENT

When you finish this learning package, you will be able to install, lubricate, and operate a vertical head milling attachment.

MS-12B-6 CUTTING A SPUR GEAR

When you finish this learning package, you will be able to set up a horizontal column and knee type milling machine for cutting a spur gear and cut a spur gear according to blueprint specifications.

MS-12B-7 CUTTING A RACK GEAR

When you finish this learning package, you will be able to set up a horizontal column and knee type milling machine for cutting a rack gear and cut a rack gear according to blueprint specifications.

MS-12B-8 CUTTING A HELICAL GEAR

When you finish this learning package, you will be able to set up a horizontal column and knee type milling machine for cutting a helical gear and cut a helical gear according to blueprint specifications.

MACHINE SHOP - UNIT 13 - SHAPER

MS-13-1 SHAPER: PARTS AND LUBRICATION

When you finish with this learning package, you will be able to name the main parts of a shaper and lubricate a shaper to manufacturer's specifications.

MS-13-2 SHAPER CONTROLS

When you finish this learning package, you will be able to name the operating controls of the shaper and tell what each does.

MS-13-3 CUTTING TOOLS

When you finish this learning package, you will be able to name common cutting tools used on the shaper and describe and tell the purpose of the angles ground on each tool.

MS-13-4 VISE ALIGNMENT: SHAPER SAFETY

When you finish this learning package, you will be able to level and align a shaper vise using a dial indicator and a precision square or parallel, and state important safety rules about the shaper swivel head and vertical tool head.

MS-13-5 MACHINING A FLAT, HORIZONTAL SURFACE

When you finish this learning package, you will be able to set up and machine a flat, horizontal surface on a shaper.

MS-13-6 SETUPS FOR VERTICAL AND ANGULAR CUTS

When you finish this learning package, you will be able to set up a shaper and machine vertical and angular cuts on a workpiece to given specifications.

MS-13-7 FEEDS AND SPEEDS

When you finish this learning package, you will be able to figure proper feeds and speeds for different shaper operations, using formulas and charts and set a shaper for a given cutting speed, number of strokes per minute, and feed per stroke.

MACHINE SHOP - UNIT 14 - SURFACE GRINDING

MS-14-1 SURFACE GRINDER PARTS AND CONTROLS

When you finish this learning package, you will be able to name the main parts and controls of a surface grinder.

MS-14-2 SELECTING AND CHANGING GRINDING WHEELS

When you finish this learning package, you will be able to select and change grinding wheels on a surface grinder to meet requirements of the material to be ground.

MS-14-3 MOUNTING AND DRESSING GRINDING WHEELS

When you finish this learning package, you will be able to select, test, mount, and dress the proper grinding wheel for a given job by using the diamond tip dresser to true the wheel in relation to the magnetic chuck.

MS-14-4 MAGNETIC CHUCKS

When you finish this learning package, you will be able to position and secure a workpiece on the magnetic chuck of the surface grinder and align the workpiece surface so that it is parallel to the face of the grinding wheel, using a dial indicator to get an accuracy of $\pm .001$ ".

MS-14-5 GRINDING A WORKPIECE

When you finish this learning package, you will be able to make a finish drawing and grind two parallel bars to the specifications of that drawing with an accuracy of $\pm .0005$ ".

MS-14-6 WHEEL DRESSING: CONVEX OR CONCAVE RADIUS

When you finish this learning package, you will be able to set up a radius dresser and dress a grinding wheel to a convex or concave radius.

MACHINE SHOP - UNIT 15 - TOOL POST GRINDING

MS-15-1 SETTING UP A TOOL POST GRINDER

When you finish this learning package, you will be able to set up a lathe and tool post grinder for a grinding operation.

MS-15-2 EXTERNAL TOOL POST GRINDING

When you finish this learning package, you will be able to grind a lathe center point properly to fit a center gage in 55 minutes.

MS-15-3 REAMER SHARPENING ON THE TOOL POST GRINDER

When you finish this learning package, you will be able to sharpen a machine reamer properly on a tool post grinder in 1½ hours.

MS 15-4 INTERNAL TOOL POST GRINDING

When you finish this learning package, you will be able to grind a drill bushing bore to blueprint specifications with a tool post grinder in one hour and twenty minutes.

ENGINEERING GRAPHICS TECHNOLOGY ARTICULATION

Greenville Technical College GREENVILLE, SOUTH CAROLINA 29606

ENGINEERING GRAPHICS TECHNOLOGY

ARTICULATION GRANT

GREENVILLE TECHNICAL COLLEGE

JUNE, 1976

OVERVIEW

In order for the graduates of the vocational high school drafting program to enter the Engineering Graphics Technology program at Greenville Technical College at an advanced level, course objectives, an Employability Profile, and articulation procedures have been developed.

The concept sheets have been developed jointly by the instructors in the vocational high schools of Greenville County and the department head, division chairman and members of the Educational Development Team at Greenville Technical College. Their purpose is to help insure uniformity of objectives to be covered at either school or college.

The Student's Employability Profile shows the major mechanical drafting units plus a further breakdown of competencies that can be used by an instructor to keep a running account of a student's progress. The completed form supplied by the vocational school instructor will be used along with other data to help determine at what level the student may enter the Engineering Graphics Department at Greenville Technical College. The same form will be used at Greenville Technical College and the additional tasks and competencies will be checked as they are reached.

When the student leaves GTEC, the completed form may be used by an employer as a guide with reference to his technical skills accomplishments and also as an indication of his attitudes, behavior, and work habits.

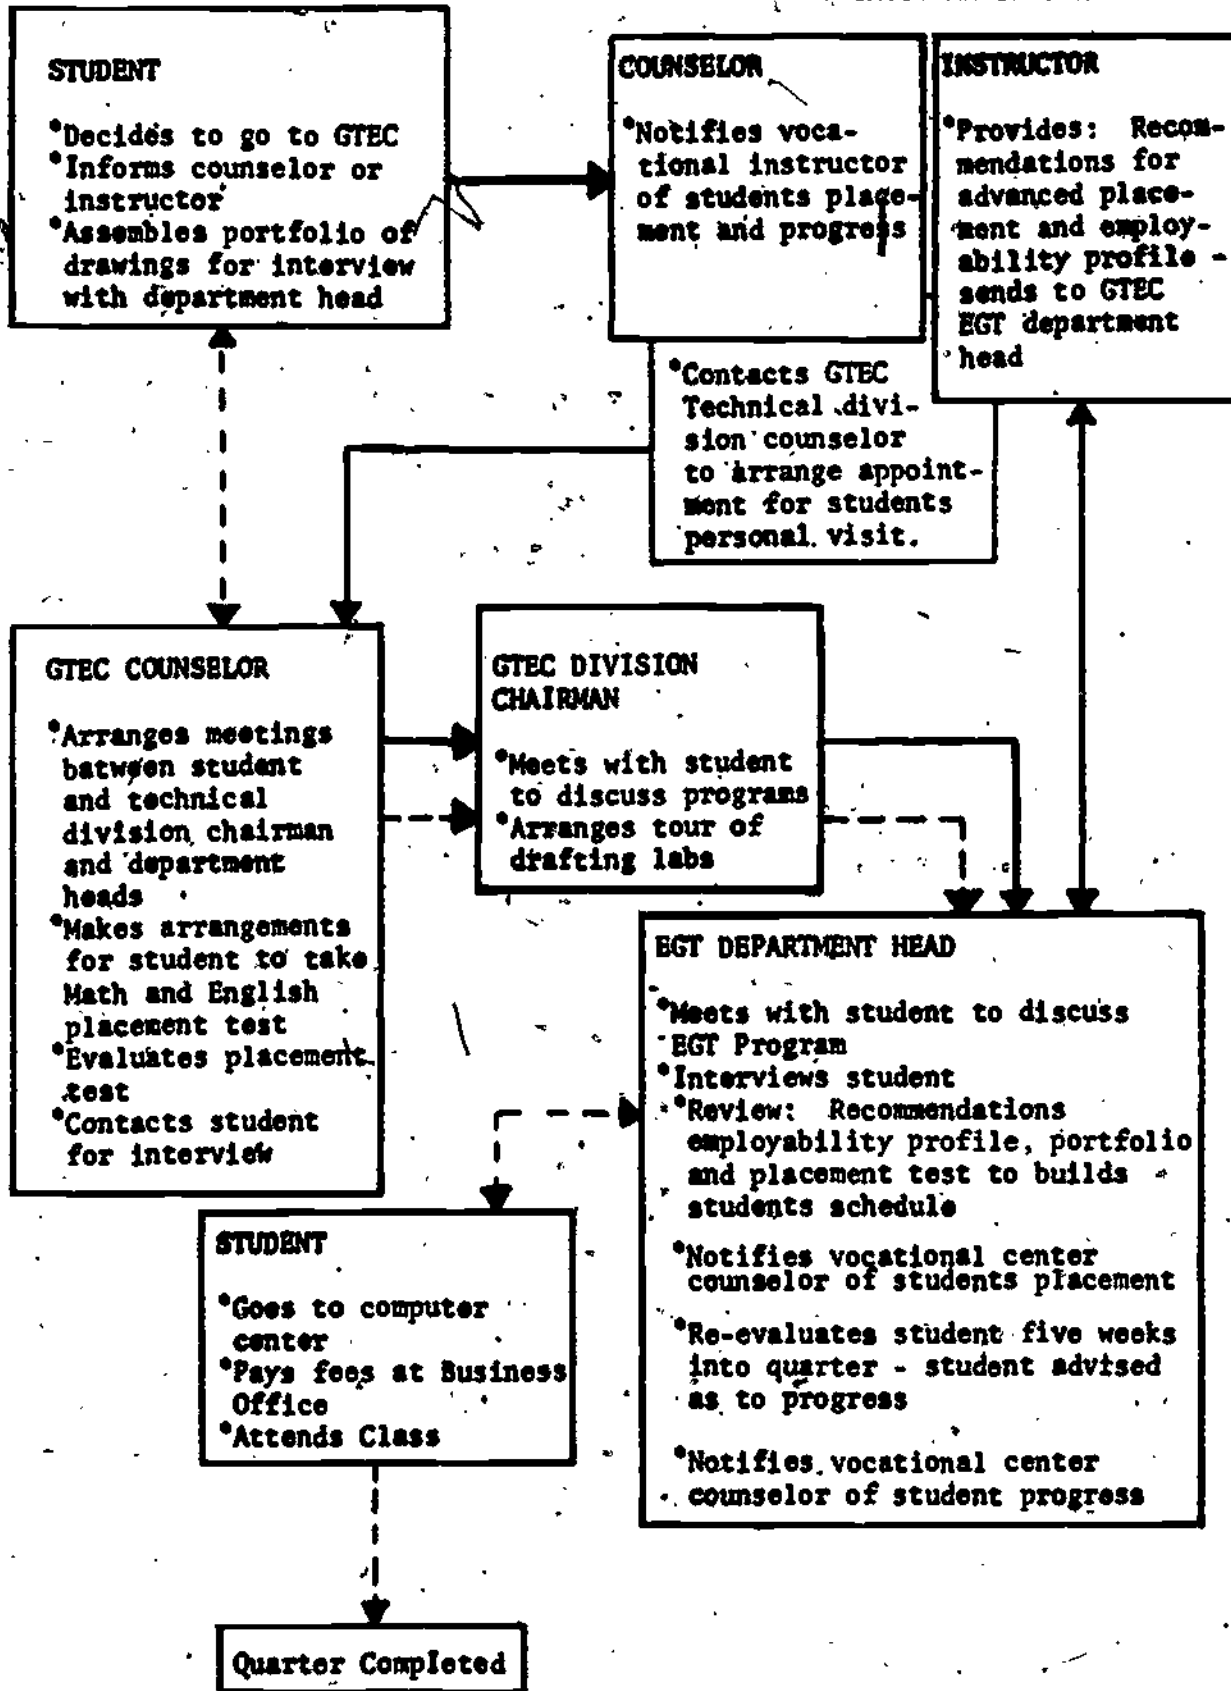

The major units and competencies listed in the Employability Profile cover many specialized fields of drafting so that it is highly unlikely that any one student will cover them all even though he completes two years at a vocational school and two years at Greenville Technical College.

The following courses will be considered for exemption:

<u>Course Title</u>	<u>Course Number</u>
Engineering Graphics I	EGT 111
Engineering Graphics II	EGT 121
Engineering Graphics III	EGT 131
 Related Drafting Courses	
Engineering Drawing I	EGT 112
Engineering Drawing II	EGT 122

FLOW CHART OF ARTICULATION STUDENTS - EGT

VOCATIONAL CENTER

ARTICULATION EVALUATION PROCEDURE

Students who graduate from any Greenville area vocational centers' drafting program may be permitted to exempt one, two, or three quarters of engineering graphics from the Engineering Graphics curriculum or one quarter of engineering drawing from the Architectural Engineering Technology curriculum at Greenville Technical College.

The following steps should be taken by vocational school students who plan to apply for exemption from engineering graphics or engineering drawing courses.

1. By the middle of your senior year ask your instructor or counselor to contact the Technical Division counselor at GTEC and set up an appointment for you to make a personal visit.
2. Arrangements will be made by the GTEC counselor for you to meet the Technical Division chairman, the department heads and to visit the drafting labs while classes are in session.
3. Your counselor can make arrangements for you to take the placement test administered by GTEC either at your school or at GTEC.
4. The GTEC technical division counselor will evaluate your test and contact you to arrange for an interview.
5. Providing that you have met the general entrance requirements you will need a recommendation from your instructor for advanced placement. (This will be sent directly to the department head).
6. You will need an Employability Profile. (This will be sent directly to the department head by your instructor).
7. You will need a portfolio of your drawings either originals or prints. (Bring this with you when you are called for an interview with the GTEC department head).

ATTITUDES, BEHAVIOR, AND WORK TRAITS

EVALUATION: Please draw circle around numbers that are most appropriate.

RELATIONSHIP WITH OTHERS

1. Unable to determine at this time
2. Has difficulty with others
3. Gets along satisfactorily
4. Exceptionally well accepted

COOPERATION

1. Unable to determine at this time
2. Generally not cooperative
3. Generally cooperative
4. Exceptionally cooperative

COURTESY

1. Unable to determine at this time
2. Poor attitudes, needs improvement
3. Generally courteous
4. Exceptionally courteous and considerate

DEPENDABILITY

1. Unable to determine at this time
2. Needs constant follow-up
3. Generally accepts responsibility
4. Exceptionally reliable

INITIATIVE

1. Unable to determine at this time
2. Never initiates action
3. Seldom needs prodding
4. Exceptionally good "self starter"

JUDGMENT

1. Unable to determine at this time
2. Often uses poor judgment
3. Usually makes the right decision
4. Above average in making decisions

SELF CONTROL

1. Unable to determine at this time
2. Tends to be excitable
3. Well balanced
4. Exceptionally well balanced

CONCENTRATION

1. Unable to apply self to job at hand
2. Concentration fluctuates
3. Satisfactory concentration level
4. Highly satisfactory

ADAPTABILITY TO NEW JOB TASKS

1. Cannot adjust to new assignment
2. Has difficulty adjusting
3. Adjusts adequately
4. Adjusts well to new assignments

MOTIVATION IN OCCUPATIONAL AREA

1. Unable to determine at this time
2. Lacks motivation
3. Average interest and application
4. Highly motivated

ADAPTABILITY

1. Unable to determine at this time
2. Has difficulty in adapting
3. Usually accepts change
4. Self reliant, imaginative

DEXTERITY REQUIREMENTS FOR THE OCCUPATION

1. Unable to determine at this time
2. Prognosis for success is poor
3. Is well suited. Shows potential
4. Highly suited to needs of occupation.

CRAFTSMANSHIP AND SKILLS

1. Unable to determine at this time
2. Substandard work
3. Average performance
4. High standards of performance

EFFICIENCY AND PRODUCTION

1. Unable to determine at this time
2. Often wastes time and effort
3. Makes effort to work effectively
4. A steady and productive worker

SAFETY

1. Unable to determine at this time
2. Lacks genuine concern for safety
3. Satisfactory practice of safety
4. High regard for safety requirements

WRITTEN PERFORMANCE

1. Unable to determine at this time
2. Work is selfom good
3. Work is generally good
4. Work is consistently good

TOLERANCE

1. Cannot tolerate many obstacles
2. Has difficulty with obstacles
3. Generally sticks to job
4. Sticks to job in face of obstacles

CONSISTENCY OF WORK BEHAVIOR

1. Very unstable work behavior
2. Generally more erratic than not
3. Showed moderately steady work behavior
4. Showed steady work behavior

TUITION SCHOLARSHIP

Greenville Technical College is proud to offer tuition scholarships in each of the Articulation Grant programs: Machine Tool Technology, Industrial Electricity, and Engineering Graphics Technology. These scholarships were suggested at an Articulation Grant Advisory Committee meeting and hardily approved by the Greenville Technical College administration. It is hoped their inception will stimulate interest in continuing quality education and training in these fields.

The Donaldson, Enores, and Foothills Vocational Centers will each select their most outstanding and/or worthy student in their drafting, electricity, and machine shop programs. Wade Hampton High School will select a student from their electricity program. The three scholarship students from each center will receive one quarter of tuition free study at Greenville Technical College. After their first quarter, each student may receive an extension for another quarter based upon review and approval by his or her instructors and department head.

After the selection of the students by their instructors, the director or principal of each school should send a copy of all the names to the heads of the Industrial and Technical Divisions, Mr. J.D. Warren and Mr. Les Caraway. This is necessary to insure the tuition waiver be available when the student begins.

GUIDANCE INFORMATION FORM

This form was designed to supply feedback to guidance counselors, instructors, and administrators. It will be sent by the Greenville Technical College department involved to the vocational center each time there is a horizontal line of asterisks. The information on the form will supply data to evaluate our effectiveness and suggest continuation or change in our procedures.

IT IS EXTREMELY IMPORTANT THAT THE STUDENT OR HIS/HER PARENT IF THE STUDENT IS UNDER 18 SIGNS THE PERMISSION BLANK ON THE SIDE OF THE FORM. IT WOULD BE ILLEGAL TO DISEMINATE THIS INFORMATION FROM GREENVILLE TECHNICAL COLLEGE WITHOUT THE PROPER SIGNATURE.

ENGINEERING GRAPHICS
ARTICULATION STUDENT'S PROGRESS

Your student, _____, from _____
Vocational Center has exempted EGT _____, _____, _____, and may
(conditionally, unconditionally) enroll in EGT _____ (quarter _____).

This placement was based on
_____ portfolio
_____ employability profile filled out by _____
_____ vocational instructor's recommendation

Date of evaluation _____

The student at mid-term has been re-evaluated and is
_____ progressing satisfactorily
_____ moved back to level of competence (may be able to finish
quarter's work, may have to take Incomplete)

Student's signature _____ Instructor's signature _____
Date _____

The student at the end of the first quarter of work
_____ successfully completed EGT _____ (grade _____) on _____ (date).
_____ received an incomplete
_____ dropped out before the end of the quarter
because of _____

Student's status at the end of the first year of work - _____

I GIVE MY PERMISSION FOR THE INFORMATION ON THIS SHEET TO BE RELEASED TO GREENVILLE COUNTY SCHOOL SYSTEM.

DATE _____ LEGAL SIGNATURE _____ SIGNATURE OF PARENT IF UNDER 18 _____

ARTICULATED DRAFTING UNITS

FIRST QUARTER

1. Instrument Drawing (One View)
2. Lettering
3. Geometric Construction
4. Sketching and Shape Description
5. Dimensioning
6. Reproduction and Control of Drawing
7. Multiview Projection

SECOND QUARTER

8. Section Views
9. Auxiliary Views
10. Revolutions
11. Screw Threads and Fasteners
12. Isometric Drawings
13. Oblique Drawings
14. Intersections and Developments

THIRD QUARTER

15. Shop Processes
16. Working Drawings

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
1.0 Instrument Drawing (One View)		
1.1 Demonstrate the use of drafting instruments	Given a drafting assignment to do on the drafting board where instruments and other basic drafting equipment is necessary	To the instructors' satisfaction
1.2 Do the assigned one view drafting problems	Drawings will be drawn to scale using the proper pencils on the assigned sheet size and title block layout. Drawing will be centered on the sheet.	ANSI Standards will be used to the instructors' satisfaction
1.3 Letter the necessary notes on the drawing and in the title block	Use the proper pencil to get dark, sharp lettering	It must be dark enough to make a good readable reproduction
2.0 Lettering		
2.1 Perform legible lettering exercises (letters, numbers, fractions symbols)	Drafting standards and handout examples will be followed. Proper number of strokes and direction of stroke must be used.	Lettering must be easy to read, reproducible and not more than a 5% variation away from vertical. Spacing between letters must have equal area within a 5% variation. Spacing between sentences must be uniform using two letter heights as the optimum.
2.2 Perform lettering exercises of words, sentences, and paragraphs.		

14
71

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
3.0 Geometric Construction		
3.1 Bisect lines, angles and construct figures.	Use drafting instruments as required to do the problems on the handout sheet or as assigned by instructor.	Bisected lines must measure within a tolerance of 1/64". Angles must be within 1/2 constructed figures must be to instructors' satisfaction.
3.2 Draw regular polygons.	Same as above.	To instructors' satisfaction.
3.3 Draw tangents to arcs, lines and circles.	Same as above.	Arcs and lines must be tangents to the instructors' satisfaction. ✓
3.4 Make drawings that show the above techniques applied.	Complete one view drawings with points of tangency indicated.	To instructors' satisfaction.

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
4.0 Sketching and Shape Description		
4.1 Illustrate the six principle views used in describing the shape of an object graphically.	On paper using drafting instruments,	100%
4.2 Illustrate the three principles dimensions.	Make 3 view drawings and label on each view length, width and/or depth as appropriate.	100%
4.3 Convert an isometric picture drawing on grid paper to three view sketches on grid paper.	Use the problems assigned in the text and do them on the grid paper provided.	All three views must be shown to scale in their proper positions.
4.4 Sketch 3 views of assigned objects on grid paper.	Problems assigned in text shows 2 views on grid paper, the third one is to be added.	The 2 views as shown plus the 3rd view must be shown in its proper position to scale with all necessary lines.
4.5 Add missing lines to complete the shape description of objects.	3 view problems are given with missing lines.	All lines must be added before assignment is complete.

16 73

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
5.0 Dimensioning		
5.1 Demonstrate an understanding of how and where shape dimensions are placed on a drawing.	Problems will be given which show undimensioned views of a part. The student will measure the shape and place the dimensions on the view.	To the satisfaction of the instructor.
5.2 Demonstrate an understanding of how and where size dimensions are placed on a drawing.	Same as above, except that some additional information may be partially given i.e., thread class.	The same as above.
5.3 Demonstrate ability to completely define a part by selecting the views necessary to completely and correctly dimension it.	Both textbook problems and layout drawings will be used. The student must prepare the drawings and dimension them using drafting instruments.	To the satisfaction of the instructor: ANSI Y14 will serve as a standard for dimensioning practices. (Emphasis will be placed on linework, lettering, proper placement of dimensions, and choice of optimum method of dimensioning.)
6.0 Reproduction and Control of Drawing		
6.1 Demonstrate an understanding of a drawing identification system.	He will provide drawing and/or part number identification for a set of detail and assy drawings (See Para 5.2 & 5.3).	Drawing numbers must be chosen so as to avoid duplication, to the satisfaction of the instructor.
6.2 Demonstrate the ability to make a diazo print from a tracing.	Given a tracing, he will properly and safely operate a diazo print machine.	To instructor's satisfaction using both vellum and polyester base drawings
6.3 Demonstrate an understanding of the preparation and use of brownline drawings.	He will prepare a brownline of a tracing using similar technique as 6.2 above.	Ditto

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
<p>7.0 Multiview Projections</p> <p>7.1 Make 3 view sketches.</p> <p>7.2 Do the assigned Missing View Problems.</p> <p>7.3 Do the assigned Missing Line Problems.</p>	<p>To be made on 8 1/2 X 11 cross section paper from Isometric Sketching Problems on handouts or the ones in the textbook.</p> <p>Given: 2 orthographic views to copy on cross section paper and the third view.</p> <p>Given: 3 orthographic views with lines missing--Lines to be sketched in. May be either on a handout sheet or problems in the textbook.</p>	<p>All three principal views must be in their proper positions and sketching must be to the instructors' satisfaction</p> <p>Same as above.</p> <p>All lines must be shown.</p>

18
54

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
8.0 Section Views		
8.1 Demonstrate a proficiency in the correct terminology relating to section views.	Written	Pass as a written test.
8.2 Make section drawings of cylindrical shaped objects.	Apply good standard sectioning principles to simple cylindrical shaped objects. Drawings will consist of one circular view and a full or half section as assigned by instructor.	Problems will be drawn until they show clearly to the instructor's satisfaction that the principles of sectioning are being applied in a neat and orderly manner.
8.3 Make section drawings of irregular shaped objects.	Same conditions as above.	Problems will be assigned until they are done to instructor's satisfaction.
8.4 Make section drawings showing revolved sections and broken-out sections.	Problems will be assigned from textbook or handouts.	To instructor's satisfaction.

19
7/6

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
9.0 Auxiliary Views		
9.1 Demonstrate a proficiency in the use of correct terminology relating to auxiliary views.	Written	Make a passing grade on a written test.
9.2 Construct primary auxiliary view of objects with symmetrical planes	Problems showing orthographic views of objects will be given from which the auxiliary view will be drawn.	To the instructor's satisfaction.
9.3 Construct auxiliary view of objects that have asymmetrical planes.	Textbook problems or handout sheets will be provided.	To the instructor's satisfaction.
9.4 Construct auxiliary views of objects with curved surfaces.	Problems to be assigned.	Same as above.

20
77

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
10.0 Revolutions		
10.1 Construct a three view drawing of an object with a revolution of the given front view about an axis perpendicular to the frontal plane.	Given a 3-view drawing and direction and/or degree of revolution.	100% correct projection methods I.01 accuracy answers line quality.
10.2 Same as above except revolve the right view about an axis perpendicular to profile plane.	"	"
10.3 Same as above with top view revolved about axis perpendicular to horizontal plane.	"	"
10.4 Successive revolution	"	"
10.5 Revolve a point about a normal axis.	Given axis, point and degrees of revolution.	<ol style="list-style-type: none"> 1. To I.01 accuracy 2. Answers, line quality 3. And example
10.6 Revolve a point about an inclined axis.	"	"
10.7 Revolve a point about an oblique axis.	"	"
10.8 Revolve a line about as normal, inclined or oblique axis.	Given axis, line and degrees or position criteria for revolved line	<ol style="list-style-type: none"> 1. To I.01 accuracy 2. To answer standard of line. 3. By example 4. Using revolution & auxiliary view methods as required.

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
<p>11.0 Screw Threads & Fasteners</p> <p>11.1 Demonstrate knowledge concerning terminology used with screws, bolts, nuts, threads, and fasteners.</p> <p>11.2 Make drawings that show simplified, Schematic and detailed threads complete with notes and dimensions.</p> <p>11.3 Make drawings that show square head and hex head bolts and nuts assembled. Complete with notes, and dimensions.</p>	<p>Written</p> <p>Problems as assigned by instructor.</p> <p>Problems assigned by instructor.</p>	<p>Make a passing grade on a written and/or performance test.</p> <p>To instructor's satisfaction.</p> <p>To instructor's satisfaction.</p>

22
79

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
12.0 Isometric Drawing		
12.1 Draw an isometric drawing of a cube.	Given cube size and instruction to use principles of isometric construction.	To instructor line quality and accuracy standards ansi lines and <u>+.01</u> accuracy to isometric form.
12.2 Draw ellipse in face of cube using template.	Given cube size and circle size.	"
12.3 Draw ellipse in each face of cube using approximate four-center ellipse method.	Given cube size and circle size.	"
12.4 Draw an isometric view of object that has inclined planes and angles.	Given object in 3-view, oblique or physically.	"
12.5 Draw an isometric of an object that has an irregular curved surface.	Given object, 3-view drawing or pictorial.	"
12.6 Draw and dimension completely an isometric view of an object having angles and circles.	Given object or pictorial of object.	"

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
13.0 Oblique Drawing		
13.1 Draw an oblique view of a cube using oblique pictorial method.	Given size of cube and angle of sight, percent of depth reduction and viewing direction (cabinet, cavalier, etc.)	Ansi line quality $\pm .01$ accuracy to oblique form.
13.2 Draw oblique view of object having angles and inclined surfaces.	Given object, 3-view of object or pictorial of object.	"
13.3 Draw oblique view of object having circular planes or features.	"	"
14.0 Intersection and Developments		
14.1 Construct prisms and cylinders by parallel line development.	Assigned problems to be done on the drafting board using standard drafting techniques.	To the instructors' satisfaction
14.2 Construct pyramids and cones by radial line developments.	Assigned problems to be done on the drafting board using standard drafting techniques.	When cut out and folded or rolled they must form into the intended shape.
14.3 Construct transition pieces by triangulation.	Same as above.	Pieces must join together to form the intended shape when cut out, rolled, folded and stuck together.

24
81

COURSE

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
15.0 Shop Processes		
15.1 Make working drawings of machine parts	Parts are to be machined from castings. Correct terminology must be shown in the notes and specifications.	To the instructors' satisfaction
15.2 Make working drawings of fabricated parts	Parts are to be shown assembled by welding.	To the instructors' satisfaction
15.3 Take a test on terminology relating to shop processes	Written test to cover terms, notes, machine tools, manufacturing processes, dimensioning, techniques and applications, etc.	85%

25
82

CONCEPT/PERFORMANCE	CONDITIONS	CRITERIA
16.0 Working Drawings		
16.1 Demonstrates an understanding of a detail part drawing	The student will prepare part drawings from problems assigned by the instructor.	Each drawing must include all information necessary to properly fabricate the parts to the satisfaction of the instructor.
16.2 Demonstrate an understanding of assembly drawings and the relationship that detail and assembly drawings have to each other.	Problems will be given in either of two formats: a) Exploded pictorial drawings with dimensions and materials noted b) Cross sectioned assembly layout drawings with design parameters defined.	The student must determine which part require detail part drawings, and the must prepare these drawings as noted above. He then must prepare all necessary sub-assembly and assembly drawings which will include a listing of parts in family-tree order.
16.3 Advanced student work: Demonstrate an understanding of the responsibilities of a layout draftsman.	The advanced students will be appointed as job leaders and will be assigned one or more detail draftsmen. The job captain will prepare a layout of a more complicated device from a problem assigned by the instructor. When the layout is complete, he will assign detail drawings to the draftsmen and supervise their work.	The layout will be completed to the satisfaction of the instructor, and will include a sequenced assembly procedure. The responsibility for handing in a complete drawing package will be on the job leader. (The job leader will check all detail and assembly drawings for completeness and correctness.

INDUSTRIAL ELECTRICITY ARTICULATION

Greenville Technical College GREENVILLE, SOUTH CAROLINA 29606

GREENVILLE TECHNICAL COLLEGE - ARTICULATION GRANT

INDUSTRIAL ELECTRICITY

MAY, 1976

OVERVIEW

The vocational school graduate will have the opportunity to exempt some of the Industrial Electricity courses at Greenville Technical College that are repetitious of his vocational school studies. The student may exempt a course after attaining an acceptable proficiency level on the appropriate placement test. Each placement test may be taken once a quarter with a limit of one retake during another quarter.

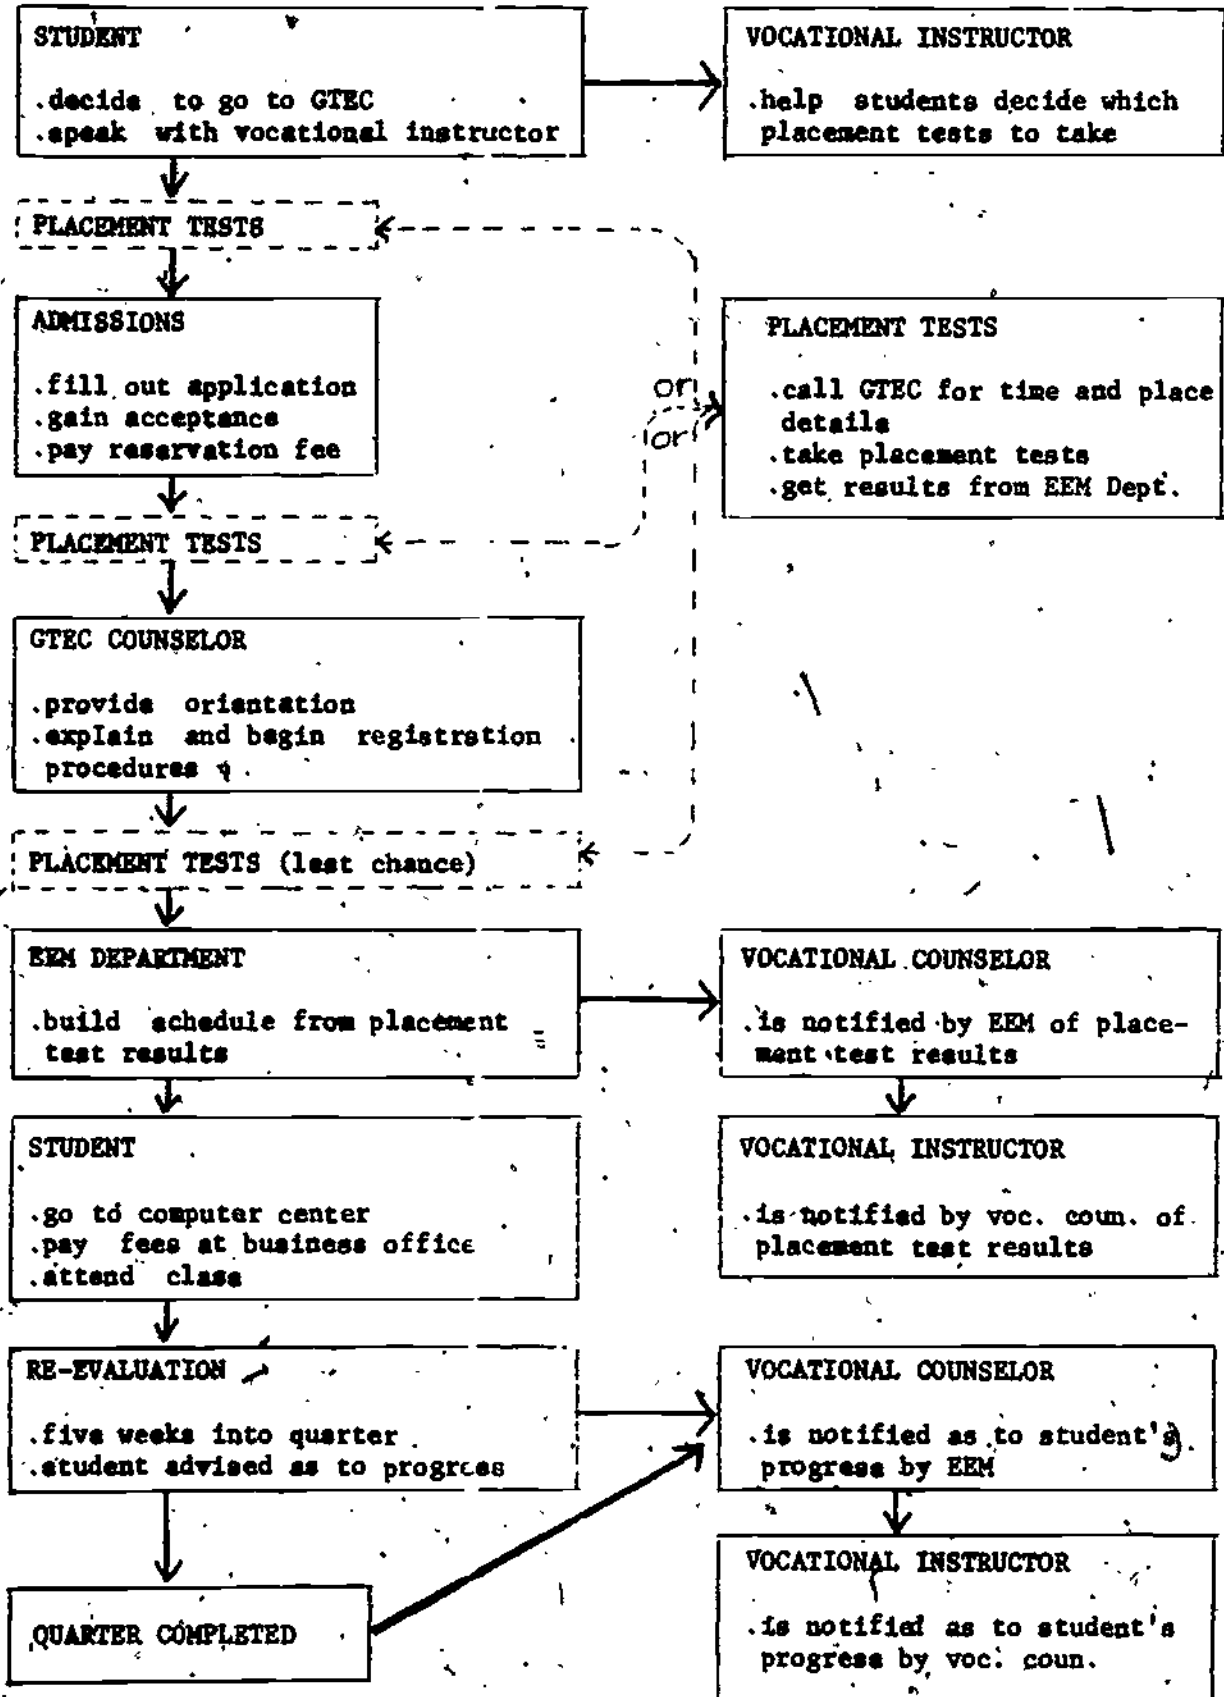

The course objectives that are covered in each placement test will be given to each vocational electricity instructor. They are also available for inspection at GTEC's Industrial Electricity department.

The first placement tests for exemptions will begin during the regular registration days just before fall quarter. They will continue to be offered during each pre-registration time in a testing center at Greenville Technical College. Mr. J.D. Warren, Industrial Division Chairman, or the Industrial Electricity department may be contacted for details.

Specifically, the following courses will be considered for exemption upon completion of the placement test:

<u>Course Title</u>	<u>Course Number</u>
Applied Electricity	REM 101
Residential Electricity-Codes and Ordinances-A	REM 345
Residential Electricity-Codes and Ordinances-B	REM 346
DC Electricity	REM 113
AC Electricity	REM 123
AC Machines and Devices	REM 127
Electrical Control Circuits	REM 136
Electrical Math I	MAT 115
Electrical Math II	MAT 126

PROPOSED FLOW CHART OF ARTICULATION STUDENTS - EEM

TUITION SCHOLARSHIP

Greenville Technical College is proud to offer tuition scholarships in each of the Articulation Grant programs: Machine Tool Technology, Industrial Electricity, and Engineering Graphics Technology. These scholarships were suggested at an Articulation Grant Advisory Committee meeting and hardily approved by the Greenville Technical College administration. It is hoped their inception will stimulate interest in continuing quality education and training in these fields.

The Donaldson, Enoree, and Foothills Vocational Centers will each select their most outstanding and/or worthy student in their drafting, electricity, and machine shop programs. Wade Hampton High School will select a student from their electricity program. The three scholarship students from each center will receive one quarter of tuition free study at Greenville Technical College. After their first quarter, each student may receive an extension for another quarter based upon review and approval by his or her instructors and department head.

After the selection of the students by their instructors, the director or principal of each school should send a copy of all the names to the heads of the Industrial and Technical Divisions, Mr. J.D. Warren and Mr. Les Caraway. This is necessary to insure the tuition waiver be available when the student begins.

PLACEMENT TESTS

Course objectives for each course offering a placement test are in this booklet and on file in the Industrial Electricity department at Greenville Technical College. Each vocational instructor may review these objectives and advise his students as to which placement tests would be most appropriate to take.

The placement tests will be offered at Greenville Technical College during the registration days immediately preceding each quarter. They will begin just before fall quarter, 1976, and be offered each quarter thereafter.

It is the student's responsibility to find out the location of the testing center and schedule him/herself so that all the desired placement tests may be taken in the time the center is open. The Industrial Electricity department and Mr. J.D. Warren, Industrial Division Chairman, may be called for details. It is planned that the guidance counselors at TEC will also know specific details.

Tentative schedules for registration (and therefore the placement tests) for the next year are as follows:

Fall, 1976 - Sept. 1,2,3

Winter, 1976 - Nov. 29,30

Spring, 1977 - March 1,2

Summer, 1977 - May 24,25

It is hoped that through the urging of the vocational instructors that each vocational student will take full advantage of these placement tests.

GUEdance INFORMATION FORM

This form was designed to supply feedback to guidance counselors, instructors, and administrators. It will be sent by the Greenville Technical College department involved to the vocational center each time there is a horizontal line of asterisks. The information on the form will supply data to evaluate our effectiveness and suggest continuation or change in our procedures.

+++++

IT IS EXTREMELY IMPORTANT THAT THE STUDENT OR HIS/HER PARENT IF THE STUDENT IS UNDER 18 SIGNS THE PERMISSION BLANK ON THE SIDE OF THE FORM. IT WOULD BE ILLEGAL TO DISEMINATE THIS INFORMATION FROM GREENVILLE TECHNICAL COLLEGE WITHOUT THE PROPER SIGNATURE.

INDUSTRIAL ELECTRICITY
ARTICULATION STUDENT'S PROGRESS

Your student, _____, from _____

Vocational Center has exempted the following courses:

EEM _____, MAT _____

The student will be enrolling in the following EEM courses next quarter: _____, MAT course: _____

This placement was based on
_____ placement test score(s)
_____ vocational instructor's recommendation
_____ interview requested by _____ and conducted by _____

The student
_____ readily accepted placement
_____ requested a lower placement, outcome _____
_____ requested a higher placement, outcome _____

Date exemption(s) granted: _____

The student at mid-term has been re-evaluated and is
_____ progressing satisfactorily
_____ not progressing satisfactorily

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered?

SC, C, or NC

When is it covered? 1-1, 1-2, 2-1, 2-2

Concept 1.0 Special Purpose Outlets

1.1 Given a blueprint, recognize special-purpose outlet designations.

1.2 Given nameplate reading, or specs, or equipment, calculate the load to be connected to a special outlet and use configuration chart for selection of outlet.

1.3 Illustrate the proper grounding connections when using armored cable and nonmetallic-sheathed cable.

1.4 Illustrate the proper connections to insure grounding continuity between a grounded outlet box and the grounding circuit of the receptacle.

Concept 2.0 Special Purpose Outlets for a Water Pump and Heater

2.1 List the basic requirements for a motor to be used on deep-well jet pump.

2.2 Given the rating of a motor, calculate the conductor size and over-current protection required for the pump circuit.

2.3 List the basic steps in various water heating methods which can be used.

2.4 Describe the operation of the water heating system, including the functions of the tank, the heating elements, and the thermostats.

2.5 Illustrate the proper grounding connections for the water heater.

Concept 3.0 Special Purpose Outlets for Dryers and Over Garage Door Openers

3.1 Illustrate the proper wiring and grounding connections for large appliances based on the type of wiring method to be used.

3.2 List the requirements for using service entrance cable to connect large appliances.

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered
 SC, C, or NC
 When is it covered? 1-1, 1-2, 2-1, 2-2

3.3 Illustrate the proper connections involved in remote control switching such as in an overhead garage door opener based on manufacturer's installation recommendations.

3.4 Given Code tables, select the proper overcurrent protective device based on the amperage rating of the device.

Concept 4.0 Special Purpose Outlets for Kitchen Appliances

4.1 Interpret electrical plans and construction blueprints to determine any special installation requirements for electrical appliances.

4.2 Given NEC table 310/16-19 and notes and based on the ratings of appliances, select proper conductor sizes for wiring installation.

4.3 Illustrate how to ground all appliances properly regardless of the wiring method used.

4.4 Illustrate proper wiring of 7-heat control and 3-heat control for a dual element cooking unit-heating unit. (phasing out)

4.5 List the advantages of infinite over 7- and 3-heat control.

4.6 Illustrate the 3 options in the installation of various types of stove and oven units: group circuit, single circuit, and load center.

Concept 5.0 Telephone, Television, and Signal Systems

5.1 Describe the proper precautions to prevent line voltage interference with television signals.

5.2 Given specifications, describe the installation of outlet boxes, outlets, and provide cable or conduit to which the telephone installer will make final connections.

Define what is meant by signal circuit.

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered?
 SC, C, or NC
 When is it covered? 1-1, 1-2, 2-1, 2-2

5.4 Describe the operation of a two-tone chime and a four-tone chime with one or more extension chimes.

Concept 6.0 Heating Systems

6.1 List the advantages of electric heat.

6.2 Describe the several types of electric heating systems.

6.3 Describe the various thermostat control systems for electric heating units.

6.4 Describe the installation of electric heaters with appropriate temperature controls according to NEC requirements.

6.5 Interpret typical schematics provided by heating system control manufacturers.

6.6 Describe the functions of the control devices provided in a typical system.

6.7 Explain the principle of the thermopile and the thermocouple.

6.8 Compare and contrast the electrical requirements for the following heating systems: oil, gas fire - water gravity, gas fire - self-contained.

Concept 7.0 Service Entrances, Equipment, and Calculations

7.1 Define these terms: electrical service, overhead service, service drop, and underground service.

7.2 Describe the installation of a mast-type overhead service and an underground service.

7.3 Discuss the NEC requirements for disconnecting the electrical service by means of a main panel and load centers.

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered?

C, SC, or NC

When is it covered? 1-1, 1-2, 2-1, 2-2

7.4 Differentiate between the various types of fuses and select the proper fuse for a particular installation.

7.5 Explain the operation of fuses and circuit breakers.

7.6 Explain the term, "interrupting capacity".

7.7 Determine available short-circuit current using a simple formula.

7.8 Determine the total calculated load of a residence using the methods in Article 220 of the NEC.

7.9 Calculate the size of the service entrance conductors, including the neutral conductor.

Concept 8.0 Remote Control Systems for Lighting Control Circuits

8.1 Explain the operation of the various components of a low-voltage, remote control system for lighting circuits.

8.2 Interpret the wiring diagrams of various types of low-voltage, remote control circuits.

8.3 Describe the installation of a low-voltage, remote control system using the proper conductors, wiring, and components according to NEC requirements.

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963-A

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
Concept 1.0 Fundamentals of Controls	
1.1 Define and recognize the difference between manual, semi-automatic, and automatic controls.	
1.2 Label components of manual, semi-automatic, and automatic controls on provided diagrams.	
Concept 2.0 Control of Motor Starting	
2.1 Explain low-voltage (3 types) and line voltage starting.	
2.2 Explain 3 types of acceleration control: current limit, definite time, and voltage drop.	
2.3 Identify components for the controls of squirrel-cage, wound-rotor, synchronous and dc motors on provided wiring diagrams.	
2.4 State the purpose and give one example of each of eight types of motor protection.	
Concept 3.0 Control Components	
3.1 Identify and list the limitations of switches, breakers, contactors, and relays as motor starters.	
3.2 Given diagrams, explain the functions of the various components in different types of motor controls.	
Concept 4.0 Pilot Devices	
4.1 Explain how a pilot device functions and its location in a circuit.	
4.2 Identify seven or more pilot devices.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? SC, C or NC When is it covered? 1-1, 1-2, 2-1, 2-2
Concept 5.0 Control Circuit Diagrams	
5.1 Identify and explain control diagram symbols.	
5.2 Identify and explain schematic, wiring, wireless, one-line, and block diagrams.	
Concept 6.0 Development of Control Circuits	
6.1 Compare and contrast two-wire and three-wire control.	
6.2 Given a control problem, develop a control circuit to handle the problem, draw a schematic for that circuit, transfer that information into a wiring diagram, then wire the circuit with provided components. (There will be 37 such control problems to complete during the remainder of the quarter.)	
Concept 7.0 Analysis of Control Circuits	
7.1 Given a control diagram, analyse the function and relationships of component parts. (Continue to develop control circuits.)	
Concept 8.0 Maintaining Control Circuits	
8.1 Discuss the value of proper and preventative maintenance of control equipment and how to avoid the most prevalent troubles. Continue to develop control circuits.	
Concept 9.0 Troubleshooting Control Circuits	
9.1 Given electrical circuits or diagrams, locate problem(s) and correct or propose a correction for the malfunction(s). Continue to develop control circuits.	

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered
SC, C, or NC
When is it covered? 1-1, 1-2, 2-1, 2-2

Concept 10.0 Basic Concepts of Static Control (This concept is not always covered.)

10.1 Identify and state the function of basic logic circuit elements, and determine their appropriate function in given circuit diagrams.

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? <u>1-1, 1-2, 2-1, 2-2</u>
Concept 1.0 - Current	
1.1 List the fundamental atomic particles and label the parts of a model of the atom.	
1.2 Explain the role of the electron in carrying electricity and contrast it to random drift of electrons.	
1.3 Define a coulomb and explain the behavior of charged bodies in terms of Coulomb's law	
1.4 Given a diagram, label a diagram of a complete (closed) circuit and a schematic diagram of a simple circuit containing a power source, a load, a switch, and conductor wires.	
1.5 Given a diagram, label the diagram of the direction of current flow in a circuit.	
1.6 List the components of an electric circuit and compare them with those of a simple hydraulic system.	
1.7 Define an ampere as a rate of coulombs of charge per second and calculate current from this.	
1.8 Write the common symbols for current, charge, and time, as distinguished from standard (SI) abbreviations for their units of measure.	
1.9 Calculate measurements in power of 10, express figures in scientific notation, and convert from one metric unit to another by means of powers of 10.	
1.10 List the steps for placing and connecting an ammeter into a circuit to measure current.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? <u>1-1, 1-2, 2-1, 2-2</u>
2.0 Voltage	
2.1 Compare and contrast definitions of emf and potential difference as separate forms of the same force.	
2.2 Define and calculate voltage.	
2.3 Define voltage rise and voltage drop, and identify the symbols used to differentiate them.	
2.4 Tell how dry cells produce emf.	
2.5 Explain the process of separating charges in a battery.	
2.6 Recognize a diagram of a series and parallel connection of cells, and calculate total voltage of each.	
2.7 Tell how an opposing voltage affects total output voltage.	
2.8 Given a voltmeter and components, connect a voltmeter to load and source of a circuit and make voltage measurements.	
Concept 3.0 - Resistance	
3.1 Define resistance, the parameters that vary it, and the effects of temperature upon it.	
3.2 Given resistivity and dimensions, calculate resistance.	
3.3 Identify the classes of resistors, circuit symbols that represent them, resistor ratings, and the codes by which they are designated.	
3.4 Given an ohmmeter and components, connect an ohmmeter in a circuit and make resistance measurements.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? <u>1-1, 1-2, 2-1, 2-2</u>
Concept 4.0 Measuring Voltage and Current in Series Circuits	
4.1 Define, compare, and contrast parallel and series circuits.	
4.2 State Kirchhoff's voltage law.	
4.3 Define the relation between voltage drop across a resistor and the ohmic value of its resistance.	
4.4 Given a multimeter and components, use a multimeter to measure voltage in a dc and ac circuit.	
Concept 5.0 - Relationships of Current, Voltage, and Resistance	
5.1 Tell how varying voltage or resistance in a series circuit effects current when the alternate element is held constant.	
5.2 Use Ohm's Law to calculate values and power expended in a series circuit.	
5.3 State, explain, and derive all equivalent equations for Ohm's law.	
5.4 List the effects of source internal resistance and how it can be determined.	
5.5 Define a short circuit and an open circuit, and locate each using an ohmmeter or voltmeter.	
Concept 6.0 - Parallel Circuits	
6.1 Define a parallel circuit.	
6.2 Define the relation of source voltage to parallel branches and source current to branch currents.	
6.3 State Kirchhoff's current law.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
6.4 Given two of the following, current, resistance, or voltage, calculate source and branch currents, using Ohm's law.	
6.5 Calculate total circuit resistance.	
6.6 Reduce complex circuit schematics to simple form by redrawing.	
6.7 Given a multimeter and a problem circuit, use a multimeter to troubleshoot a given parallel circuits.	
6.8 Tell how a parallel circuit is fused.	
6.9 Use variational analysis as a tool in explaining how circuit quantities interact.	
Concept 7.0 Series - Parallel Circuits	
7.1 Find missing values and apply variational analysis to explain and compute values in a series-parallel circuit	
7.2 Define the concept of voltage reference.	
7.3 Define the terms ground and floating ground.	
7.4 Given voltage supply, design a voltage divider to give desired voltage.	
7.5 Practice complex circuit reduction by redrawing.	
Concept 8.0 Magnetism and Electromagnetics	
8.1 List the properties of a magnetic field.	
8.2 State the laws governing magnetic fields.	

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered?
C, SC, or NC

When is it covered? 1-1, 1-2, 2-1, 2-2

8.3 Define 3 types of magnetism.

8.4 Identify types of magnetic materials.

8.5 Tell how magnetic shielding works.

8.6 State the magnetic domain theory.

8.7 Distinguish between various types of magnets.

8.8 State the relationship between electricity and magnetism.

8.9 Label a diagram of the magnetic field around a current carrying loop and coil.

8.10 Tell how a solenoid and a relay (mechanical and electrical) work.

8.11 List the factors affecting flux density in an inductor.

8.12 State and interpret Lenz's law.

8.13 State the principles of electromagnetic induction.

8.14 List the factors affecting generated emf.

Concept 9.0 Mutual Induction and RL Circuits

9.1 Define mutual induction, including the direction of the induced emf in a conductor.

9.2 Name the units of inductance and state the rules for solving total inductance.

9.3 Tell how mutual inductance takes place between two coils.

9.4 Explain the behavior of an idealized RL circuit.

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered?
 C, SC, or NC
 When is it covered? 1-1, 1-2, 2-1, 2-2

9.5 Plot: a) current rise, b) resistor voltage, c) coil voltage, d) decay of current, e) collapse of flux lines, f) decay of voltage in an RL circuit from opening of the switch (time $T=0$) until steady state.

9.6 Define the RL constant.

9.7 Make calculations of energizing and decaying RL circuits using the universal time-constant chart.

Concept 10.0 Capacitance

10.1 Describe the different kinds of capacitors and how they charge and discharge.

10.2 Tell how a capacitor charges and discharges in an RC circuit.

10.3 Define capacitance.

10.4 Define the unit of capacitance in terms of farads and micro-farads.

10.5 Calculate capacitance from type and size of dielectric.

10.6 Calculate the value of total capacitance for capacitors in series, parallel, and series-parallel

10.7 Define and calculate the RC time constant

10.8 Solve RC time-constant problems, using the universal time-constant chart.

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
<p>Concept 1.0 The Synchronous Motor and Electro-dynamometer (Intro.)</p>	
<p>1.1 Explain how to connect a three-phase synchronous motor.</p>	
<p>1.2 Demonstrate how to connect the electro-dynamometer.</p>	
<p>Concept 2.0 Split-Phase Induction Motor</p>	
<p>2.1 Explain or disassemble and reconstruct a split-phase motor.</p>	
<p>2.2 Measure the resistance of split-phase windings.</p>	
<p>2.3 Explain the basic motor wiring connections of a synchronous motor.</p>	
<p>2.4 Given an ammeter, measure the starting and operating characteristics of the split-phase motor under load and no-load conditions.</p>	
<p>2.5 Calculate the power factor and efficiency of the split-phase motor.</p>	
<p>Concept 3.0 Capacitor Start and Run Motors</p>	
<p>3.1 Given an ammeter, measure the starting and operating characteristics of the capacitor start motor.</p>	
<p>3.2 Compare the capacitor-start motor's starting and running performance with the split-phase motor's.</p>	
<p>3.3 Explain or disassemble and reassemble a capacitor run motor.</p>	
<p>3.4 Determine the capacitor-run motor running and starting characteristics.</p>	
<p>3.5 Compare the capacitor-run motor running and starting performance with the split-phase and capacitor start motors.</p>	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? <u>1-1, 1-2, 2-1, 2-2</u>
Concept 4.0 Universal Motor	
4.1 Explain or disassemble and reconstruct a universal motor.	
4.2 Given appropriate meters and equipment, determine a universal motor's no-load and full-load characteristics while on ac.	
4.3 Given appropriate meters and equipment, determine a universal motor's no-load and full-load characteristics while on dc.	
Concept 5.0 Repulsion Start and Induction-Run Motors	
5.1 Explain or disassemble and reconstruct a repulsion start - induction run motor.	
5.2 State the properties of the repulsion start - induction run motor under no-load and full-load conditions.	
5.3 Explain the construction of the three-phase wound rotor induction motor.	
5.4 State the effect of the variation of the revolving field and rotor speed upon the voltage induced in the rotor of a wound rotor induction motor.	
Concept 6.0 Wound Rotor Induction	
6.1 Given appropriate meters and equipment, determine the starting characteristics of the wound rotor induction motor.	
6.2 Given an ammeter, measure and record the rotor and stator currents at different motor speeds in a wound rotor induction motor.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
Concept 7.0 Squirrel Cage Motor	
7.1 Explain or disassemble and reconstruct a three-phase squirrel cage motor.	
7.2 Given an ammeter, determine the squirrel cage induction motor's no-load and full-load characteristics.	
Concept 8.0 The Synchronous Motor	
8.1 Explain or disassemble and reconstruct a three-phase synchronous motor.	
8.2 Demonstrate how a synchronous motor can act as a variable inductance or capacitance.	
8.3 Obtain the dc current versus ac current characteristics curve for the synchronous motor.	
8.4 Given an ammeter and tachometer determine the full-load characteristics of the synchronous motor.	
8.5 Given a dynamometer, determine the pull-out torque of the synchronous motor.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? G, SC, or NC When is it covered? <u>1-1, 1-2, 2-1, 2-2</u>
<p>Concept 1.0 Underwriters and Codes</p>	
<p>1.1 State the function and purpose of UL.</p>	
<p>1.2 State the function and purpose of NEC</p>	
<p>1.3 State the function and purpose of local electrical inspector and ordinances.</p>	
<p>Concept 2.0 Basic Principles and Measurements</p>	
<p>2.1 Use Ohm's Law to calculate values (amps, ohms, volts, watts) in a circuit.</p>	
<p>2.2 State and contrast definitions of conductance and resistance.</p>	
<p>Concept 3.0 AC and DC; Power Factor; Transformers</p>	
<p>3.1 Compare and contrast the generation, distribution, and usage of ac and dc.</p>	
<p>3.2 Explain power factor - cause and correction.</p>	
<p>3.3 Define alternation, cycle, hertz, phase, poly-phase, and frequency.</p>	
<p>3.4 Given all values except one, solve for each element of the power formula in ac and dc circuits.</p>	
<p>3.5 Explain how a transformer works and where it is used.</p>	

CONCEPT / PERFORMANCE

Concept 4.0 Basic Devices

4.1 Recognize differences between incandescent and fluorescent lights.

4.2 Recognize various wiring devices: switches, receptacles, and lighting outlets

4.3 Recognize various types of fuses and circuit breakers.

4.4 Explain the reason for, location of, and function of fuses and circuit breakers

Concept 5.0 Circuits

5.1 Define branch circuit and feeder

5.2 Recognize series and parallel circuit diagrams

Concept 6.0 Types and Sizes of Wires

6.1 Explain how to determine wire sizes with an American wire gauge.

6.2 Given load, ambient temperature, overcurrent protection, or use requirements, match size and type of wire and insulation appropriate for usage

Concept 7.0 Selection of Proper Wire Sizes

7.1 Given current, distance, or wire size, calculate voltage drop and determine type and size of conductor to overcome the drop.

Concept 8.0 Wire Connections and Joints

8.1 Given the devices or pictures of the devices, recognize and select proper application of UL listed splicing and terminating devices

8.2 Recall the restrictions on use of solder for service and grounding requirements.

CONCEPT / PERFORMANCE-

(Sometimes) Covered or Not Covered?
 C, SC, or NC
 When is it covered? 1-1, 1-2, 2-1, 2-2

Concept 9.0 Theory and Importance of Grounding

9.1 State the purpose of grounding electrical equipment and systems and the consequences of the lack of good grounding.

9.2 State possible materials used for grounding, their color, and their installation.

9.3 Recognize proper and inferior basic grounding installations in light of NEC code requirements.

9.4 Differentiate between a ground fault and short circuit.

9.5 State when G. F. C. I. (Ground fault circuit interrupter) should be used.

Concept 10.0 Outlet and Switch Boxes

10.1 Recognize and match usage of outlet boxes, junction boxes, and switch plates.

10.2 Use NEC table 370-6A & B to determine size of boxes needed.

Concept 11.0 Different Wiring Methods

11.1 State the usage of non-metallic sheath cable and armored cable

11.2 Given pictures or actual material, identify and list the advantages of and fittings used with the four basic types of conduit

11.3 Given pictures or actual material, identify and list the advantages of and fittings used with the two basic types of flexible conduit.

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
Concept 12.0 Adequate Wiring	
12.1 Explain the difference between minimum-standard and adequate wiring and lighting.	
Concept 13.0 Service Entrance and Branch Circuits	
13.1 List the main considerations in choosing electrical service and equipment for residential occupancies.	
13.2 Explain the usage of the Code demand factor tables for determining size of service and service entrance conductors	
13.3 Define branch circuit and feeder	
Concept 14.0. Good Lighting	
14.1 Define lumen and footcandle	
14.2 Compare suitability of various types of lighting in different occupancies.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
<p>Concept 1.0 General Information for Electrical Installations</p>	
<p>1.1 Explain the purpose of (electrical) blueprints</p>	
<p>1.2 Given a specific set of specifications, explain how specifications are used in estimating costs and making electrical installations.</p>	
<p>1.3 Explain why symbols and notations are used on electrical drawings.</p>	
<p>Concept 2.0 Electrical Symbols and Outlets</p>	
<p>2.1 Identify and explain the electrical outlet symbols used in the plans of the single family dwelling.</p>	
<p>2.2 Identify the types of outlets, boxes, fixtures, and switches used in the residence.</p>	
<p>2.3 Explain the methods of mounting the various electrical devices used in the residence.</p>	
<p>Concept 3.0 Determining the Number of Circuits Required</p>	
<p>3.1 Given the dimensions of a dwelling, Calculate the occupied floor area of a dwelling.</p>	
<p>3.2 Given floor area or dwelling's dimensions, determine the total load requirements in amperes for general lighting.</p>	
<p>3.3 Given floor area or dwelling's dimensions, determine the minimum number of lighting branch circuits required.</p>	

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not covered?

C, SC, or NC

When is it covered? 1-1, 1-2, 2-1, 2-2

3.4 Recall the number of small appliance circuits required in a residence.

3.5 Given the NECode and the floor area or dwelling's dimensions, use the NECode (Article 210 & 220) to determine the basic requirements for the various branch circuits in a dwelling.

Concept 4.0 Conductor Sizes and Types

4.1 Define the terms used to size and rate conductors.

4.2 Describe the types of cables used in the majority of residential installations.

4.3 List the basic installation requirements for wiring cables.

4.4 Describe the uses and installation requirements of electrical metallic tubing and rigid metal conduit.

4.5 Describe the requirements for grounding a service entrance.

Concept 5.0 Switch Control of Lighting Circuits

5.1 Distinguish between the various types of toggle switches for lighting circuit control.

5.2 Use Ohm's law to calculate circuit load and select a switch with the proper rating for the specific installation conditions.

5.3 Describe the operation that each type of toggle switch performs in typical lighting circuit installations.

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
5.4 Demonstrate the correct wiring connections for each type of switch per Code requirements.	
Concept 6.0 Bedroom Lighting Branch Circuits	
6.1 Explain the difference in determining circuit wattage requirements in residential versus other occupancies.	
6.2 Given information from the residence plans, specifications, and Code requirements, draw a cable layout and a wiring diagram.	
6.3 Select the proper wall box for a particular installation.	
6.4 Explain how wall boxes can be grounded.	
6.5 List the requirements for the installation of fixtures in clothes closets.	
6.6 Explain the operation and connections of ground-fault circuit interrupters (GFCI).	
Concept 7.0 More Bedroom Lighting Branch Circuits	
7.1 Given a cable layout, draw a wiring diagram.	
7.2 Explain how outlets in one room can be connected to a circuit in another room.	
Concept 8.0 Bathroom and Passage Lighting Branch Circuits	
8.1 Connect recessed fixtures, both prewired and nonprewired types, according to Code regulations.	
8.2 Recall the separation regulations for installation of recessed fixtures.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
8.3 List the equipment grounding requirements for bathroom installations.	
Concept 9.0 Lighting Branch Circuit for Halls and Front Entrances	
9.1 Install 3-wire circuits, making the proper connections to prevent overloads.	
9.2 Demonstrate the proper methods of installing pilot light switches in circuits.	
9.3 Explain how outdoor lighting can be installed using UF type underground cable.	
9.4 Describe two methods of bringing conduit into a residence from an external location.	
9.5 Define a wet location.	
Concept 10.0 Lighting Branch Circuits for Kitchen and Rear Entry and Small Appliance Circuits for Kitchens	
10.1 List three methods of installing under-cabinet lighting fixtures.	
10.2 Explain the use of exhaust fans for humidity control.	
10.3 Install split circuit (two-circuit) convenience receptacles.	
10.4 Discuss the general grounding considerations for a residence.	

OUTLINE FOR PROGRAM PERFORMANCE REPORTS
ADULT, VOCATIONAL, AND EDUCATION PROFESSIONS DEVELOPMENT ACT (EPDA) PROGRAMS

1. PROJECT NO. 498AH50303	2. GRANT NO.: G00-75-00453
3. TITLE OF PROJECT: OCCUPATIONAL EDUCATION PROGRAM ARTICULATION BETWEEN SECONDARY EDUCATION CENTERS AND	
4. GRANTEE ORGANIZATION: GREENVILLE TECHNICAL COLLEGE Office of Education	PROJECT DIRECTOR: Clifford L. Shisler
6. PERIOD COVERED: FROM July 1, 1975	TO September 30, 1976
7. ACCOMPLISHMENTS (including significant findings) DURING THIS PERIOD. (Key to approved project objectives. For educational personnel training programs, include progress made toward placement of trainees and institutionalization of programs.)	

SEE ATTACHED REPORT FOR NARRATIVE

8. MAJOR ACTIVITIES AND EVENTS.

9. PROBLEMS * (Describe any departures, including timing, from the original project plan, discuss special problems encountered or expected.)

10. PUBLICITY ACTIVITIES * (Itemize all newspaper or magazine articles or other published materials about your project. A copy of each item should be attached. List all visits to the project site by educators from other organizations.)

11. DISSEMINATION ACTIVITIES. * (Describe method of dissemination; identify recipients of dissemination activities.)

12. PROGRESS ON DATA COLLECTION AND EVALUATION PLANS AND PROCEDURES.

13. OTHER ACTIVITIES.

14. STAFF EMPLOYMENT AND UTILIZATION. * (Note any changes in staff personnel or staffing plans by additions, departures, or revisions of percentage of time or other commitments to the project.)

15. STAFF DEVELOPMENT. * (Describe any inservice training for teachers, counselors, and supervisors and any other activities of a professional nature for project staff.)

* IF THERE IS NOTHING TO REPORT IN THIS SECTION, WRITE N/A.

10. PARTICIPANT CHARACTERISTICS:

a. FOR ADULT EDUCATION TEACHER TRAINING (13.402) AND ALL EDUCATION PROFESSIONS DEVELOPMENT PROGRAMS (13.418, 13.417, 13.803, 13.804, 13.808, 13.809, 13.848, and 13.849) PROVIDE THE FOLLOWING DATA FOR PARTICIPANTS:

PARTICIPANTS	AMERICAN INDIAN		ORIENTAL		NEGRO/BLACK		SPANISH-SURNAMED		ALL OTHERS		TOTALS
	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered?

C, SC, or NC

When is it covered? 1-1, 1-2, 2-1, 2-2

Concept 11.0 Lighting Branch Circuit for the Living Room

11.1 Explain how to install multi-outlet assemblies.

11.2 Determine load restrictions of multi-outlet assemblies as per NEC.

11.3 Connect the proper dimmer controls for incandescent lamp circuits and for fluorescent lamp circuits.

11.4 Define incandescent inrush current.

11.5 Define a class P fluorescent ballast.

Concept 12.0 Lighting Branch Circuit for the Dining Room, Porch, Garage Storage Area, and Attic

12.1 Install a three-way switch and a dimmer control.

12.2 Restate the Code requirements for the installation of outlets and receptacles in damp or wet locations.

12.3 Describe the installation of attic wiring according to Code requirements.

Concept 13.0 Lighting Branch Circuit for the Garage

13.1 Given conditions in the cable layout and/or blueprints, select the proper wiring method (cable or conduit) based on the conditions of installation.

Concept 14.0 Lighting and Receptacle Branch Circuits for the Terrace, Recreation Room; and Utility Room

14.1 Select the proper size boxes for installation in areas where the construction makes it impossible to install deep boxes.

CONCEPT / PERFORMANCE

(Sometimes) Covered or Not Covered
 C, SC, or NC
 When is it covered? 1-1, 1-2, 2-1, 2-2

14.2 Describe the installation steps of conduit in concrete floors and on cinder block walls.

14.3 List the basic requirements for the proper installation of conduit in an exposed location.

14.4 Explain which convenience receptacles should be connected to separate circuits.

Concept 15.0 Lighting and Convenience Receptacle Branch Circuits for the Bathroom, Workshop, and Storage Room

15.1 Select the proper wiring method and outlet boxes for exposed wiring.

15.2 Select the proper outlet box for surface mounting in a basement area.

15.3 Given Code tables 310/16-19 and notes on ampacity, wattages, or load requirements for the load involved, determine the appropriate wire size for a specific ampacity and apply derating factors if necessary.

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? .1-1, 1-2, 2-1, 2-2
Concept 1.0 - Generating AC Voltage, AC and DC Generators	
1.1 Tell how ac voltage is generated.	
1.2 Define the terms that describe an ac wave: amplitude, frequency, and phase relationship.	
1.3 Given a diagram, label the parts of an ac generator	
1.4 State the function of slip rings.	
1.5 State the function of a commutator.	
Concept 2.0 - AC Relationships	
2.1 State how a coil reacts to ac.	
2.2 Define and state the factors affecting inductive reactance.	
2.3 Given circuit parameters, calculate inductive reactance and current in an inductive circuit.	
2.4 Define a vector.	
2.5 Given magnitude and direction, calculate the sum of two vectors and plot rotating vector sine wave.	
2.6 Define the phase relationship between current and voltage in an inductive and capacitive ac circuit.	
2.7 Define and state the factors affecting capacitive reactance.	
2.8 Given circuit parameters, calculate capacitive reactance.	
2.9 Add ac voltages vectorially.	
2.10 Define and calculate impedance.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
2.11 Define, real, apparent, and reactive power.	
2.12 Define and compute the power factor.	
Concept 3.0 The Transformer	
3.1 State and explain the function and construction of a transformer.	
3.2 Given a schematic of a transformer with multiple secondary windings, determine the stepdown ratios required for circuit voltages and loads.	
3.3 Draw the schematic symbols for the various kinds of transformers.	
3.4 Determine the direction of induced voltage in the secondary conditions.	
3.5 Define current and voltage relationships.	
3.6 Calculate power in a transformer.	
3.7 Define copper, eddy current, and hysteresis loss.	
3.8 State transformer efficiency.	
3.9 Name transformer ratings.	
3.10 Define transformer impedance relationships.	
3.11 Given typical circuit values, solve impedance matching problems for a transformer.	
3.12 Define the function of an auto transformer.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
Concept 4.0 Power Supplies	
4.1 State the functions of a power supply.	
4.2 Define the functions of a rectifier.	
4.3 Diagram a full and half-wave rectifier.	
4.4 Explain the rectification of ac input utilizing diode rectification.	
4.5 Define ripple frequency and its relationship to half and full-wave rectification.	
4.6 Diagram a 1) choke-input filter, 2) capacitor-input filter, and 3) pi filter and explain the relative advantages and disadvantages of each.	
Concept 5.0 AC Computations	
5.1 Define the trigonometric functions of sine, cosine, and tangent.	
5.2 Solve vectors by graphical analysis.	
5.3 Solve vectors by the Pythagorean Theorem.	
5.4 Solve circuit problems by trigonometry.	
5.5 Define rectangular coordinates.	
5.6 Define polar coordinates.	
5.7 Make impedance calculation using rectangular and polar coordinates.	
Concept 6.0 Series Resistive - Reactive Circuits	
6.1 Analyze a series RL circuit by varying frequency, resistance, applied voltage and inductance; prove the effects by mathematical calculations.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
6.2 Define the terms cut-off and half-power point	
6.3 Determine the cutoff frequency of an RL circuit.	
6.4 Define an RL low-pass and high-pass filter.	
6.5 Solve vector diagrams for series RC circuits.	
6.6 Analyze a series RC circuit by variational analysis; prove the effects by mathematical calculations.	
6.7 Determine the effects of frequency on RC circuits.	
6.8 Define an RC low-pass and high-pass filter.	
6.9 Solve mathematically for impedance in a series RLC circuit.	
6.10 Define the figure of merit (Q) for a coil and determine its value mathematically.	
6.11 Define skin effect.	
6.12 Define proximity effect.	
Concept 7.0 Series Resonance	
7.1 Define the conditions for series resonance	
7.2 Derive the expression for the resonant frequency.	
7.3 Explain and calculate voltage gain across the reactive elements in resonance.	
7.4 Diagram current and impedance curves at the resonant frequency.	

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? <u>1-1, 1-2, 2-1, 2-2</u>
7.5 Define bandwidth and contrast it with voltage gain and explain their use in amplifiers and receivers.	
7.6 Explain the effects of Q on bandwidth.	
7.7 Tell how many series resonant circuits may be employed as filters.	
Concept 8.D Parallel-Reactive Circuits	
8.1 Explain the current and voltage relationships of series versus parallel circuits.	
8.2 Calculate current, impedance, power, and power factor in a parallel RL circuit.	
8.3 Analyze a parallel RL circuit by varying frequency, resistance, applied voltage, and inductance; prove the effects by mathematical calculations.	
8.4 Calculate current, impedance, power, and power factor in a parallel RC circuit.	
8.5 Calculate current, impedance, power, and power factor in an RLC circuit.	
8.6 Analyze an ideal parallel LC circuit.	
8.7 Define the conditions for parallel resonance.	
8.8 Diagram current and impedance curves at the resonant frequency.	
8.9 Define a tank circuit.	
8.10 Analyze a practical tank circuit.	
8.11 Analyze circuit behavior above and below the resonant frequency.	

69960x

CONCEPT / PERFORMANCE	(Sometimes) Covered or Not Covered? C, SC, or NC When is it covered? 1-1, 1-2, 2-1, 2-2
8.12 Tell how parallel resonant circuits may be used as filters.	
8.13 Define when the effective resistance of the coil in an RL circuit must be considered.	
8.14 Calculate figure of merit, impedance, and current in a practical RL circuit.

TITLE: FINAL EVALUATION REPORT ON CAREER ALTERNATIVES MODEL FOR 1975-76.

DESCRIPTOR: *CAREER PLANNING; *INFORMATION SEEKING; *PROGRAM EVALUATION;
*STUDENT EVALUATION; *VOCATIONAL MATURITY; *DECISION MAKING; CAREER CHOICE;
ELEMENTARY SECONDARY EDUCATION; STATISTICAL ANALYSIS; TABLES (DATA);
QUESTIONNAIRES; SCHOOL SURVEYS; OCCUPATIONAL GUIDANCE

IDENTIFIER: HIGHLINE SCHOOL DISTRICT; SEATTLE; WASHINGTON

EDRS PRICE: MF AND HC AVAILABILITY WILL BE ANNOUNCED IN VOL. 10, NO. 3.

DESCRIPTIVE NOTE: 102P.

ABSTRACT: FOUR MAJOR COMPONENTS OF THE HIGHLINE SCHOOL DISTRICT'S CAREER ALTERNATIVES MODEL PROGRAM WERE EVALUATED IN THIS PROJECT. RESULTS ARE SUBDIVIDED INTO DISCUSSIONS OF THE FINDINGS FOR THE FOUR COMPONENTS OF: (1) "BREAD AND BUTTERFLIES" (GRADE LEVEL FOUR TO SIX), (2) WORK SAMPLES LABORATORY (SEVEN TO NINE), (3) COMPUTER GUIDANCE (10 TO 12), AND (4) CAREER INFORMATION CENTERS (10 TO 12). OBJECTIVES EXAMINED BY VARIOUS MEASURES RELATED TO AWARENESS AND KNOWLEDGE OF WORK, RESPONSIBILITY AND MATURITY IN CAREER DECISIONS, SKILLS APPROACH TO JOB KNOWLEDGE, AND THOUGHT AND RESOURCE USE DIRECTED TOWARD CAREER DECISIONS. EVALUATION OF THE "BREAD AND BUTTERFLIES" COMPONENT DID NOT RESULT IN A DEMONSTRATION OF SIGNIFICANT DIFFERENCES ON ANY MEASURE USED. RESULTS OF THE WORK SAMPLES COMPONENT SHOWED SIGNIFICANT DIFFERENCES WHEN TWO KNOWLEDGE TESTS WERE COMBINED. EVALUATION OF THE COMPUTER GUIDANCE COMPONENT AT HIGHLINE HIGH SCHOOL DEMONSTRATED SEVERAL SIGNIFICANT DIFFERENCES BETWEEN VARIOUS TREATMENT GROUPS, AND STUDENT DATA FROM THE CAREER INFORMATION CENTER SURVEY INDICATED A NUMBER OF SIGNIFICANT RELATIONSHIPS BETWEEN THE USE OF SERVICES AND STUDENT KNOWLEDGE AND CHARACTERISTICS. FINALLY, THE FACULTY SURVEY INDICATED THAT THE MAJORITY OF FACULTY FELT THAT ATTENTION TO CAREER CONCERNS HAD INCREASED DURING THE SCHOOL YEAR. TABLED STATISTICAL DATA IS PROVIDED FOR EACH OF THE SCALES USED AND THE EVALUATION INSTRUMENTS ARE APPENDED. (NJ)

SUMMARY AND IMPLICATIONS OF FINDINGS	38

INTRODUCTION

During the 1975-76 school year, the Bureau of School Service and Research (BSSR) at the University of Washington worked with personnel in the Highline School District in designing and implementing an evaluation of the Career Alternatives Model (CAM) program. The evaluation focused on assessing the impact of several key components of the CAM program while at the same time attempting to resolve certain evaluative concerns identified during the previous year's evaluation. A general emphasis of the 1975-76 evaluation was upon short-range changes in student behavior which might be more readily attributed to the particular components or treatments of interest than was possible in the previous evaluation. In addition, the current year's evaluation reflected a greater concern for selection controls and statistical controls to ensure that the various treatment and control groups were equated on such variables as socio-economic status and academic ability.

The following four major components of the CAM program were evaluated: (1) Bread and Butterflies (grade level 4-6), (2) Work Samples Laboratory (grade level 7-9), (3) Computer Guidance (grade level 10-12), and (4) Career Information Centers (grade level 10-12). The objectives which were examined in relation to each of these components and the basic activities which were required for evaluation are summarized in Table 1.

The Evaluation Results section of this report which follows is subdivided into discussions of the findings related to each of the major components. A final section of the report summarizes the results and focuses on the implications of findings in terms of general program impact.

TABLE 1

EVALUATION MATRIX

Objectives/Treatments/Activities

Objective	Treatment Group			
	Bread and Butterflies	Work Samples Laboratory	Computer Guidance	Career Information Centers
1. Increased awareness of and knowledge about work	D/E	E	R/E	E
2. Increased acceptance of responsibility for career decisions.	E	N	N	D/E
3. Increased maturity in career decision-making	D/E	N	N	N
4. Increased use of a skills approach to job knowledge	N	D/E	N	N
5. Increased thought and/or resource use directed toward career decisions	N	N	R/E	D/E

N = No evaluation activities

D = Development and/or instrument field testing

E = Evaluation and testing of project participants

R = Review and analysis of data already collected

EVALUATION RESULTS

Bread and Butterflies

The film series Bread and Butterflies, together with the various auxiliary activities which accompany the program, was the primary mechanism oriented toward producing changes in outcome areas for grade levels four through six. The objectives expected to be most directly affected by the film series were those concerned with increased acceptance of responsibility for future career development and increased maturity in career decision making, although a secondary objective reflecting increased knowledge about the world of work was also evaluated.

Ten separate groups of students, totaling approximately 270 students, participated in the evaluation of the Bread and Butterflies treatment component. Six separate elementary schools were represented in the sample. The majority of students tested were fifth graders, although a small number of fourth- and sixth-grade students were included. The original intent in sample selection was to select classroom groups so as to represent pairs of classrooms which were roughly matched on socioeconomic background and ability level of students. Whenever possible, members of class pairs were to be chosen from the same school, and when this was not feasible, members of a class pair were to be chosen from two schools which reflected comparable student populations. Members of each pair were then to be randomly assigned to treatment or control conditions. In actuality, this selection procedure was altered somewhat due to problems involving some control groups which secured access to the series and some treatment groups which did not view

the series in its entirety. In the end, however, treatment and control groups were roughly equated using IQ measures from the Short Form Test of Academic Aptitude (SFTAA), grade 5, and the Basic Skills Battery, Total Grade Equivalent Score.

During May, students in the treatment and control groups were tested in classroom-size groups. Each student was administered:

1. Career Knowledge Assessment test, grade 5-6, a locally-developed 20-item instrument in multiple-choice format designed to measure the student's knowledge of the world of work. A portion of the items in the instrument are specifically oriented to the North-west job market and industries. The instrument is a revision of the Career Knowledge Assessment test, grade 8-9, developed for use in the 1974-75 evaluation. Revision involved lowering the reading level of the instrument. A copy of the instrument is included as Appendix A.
2. Perceived Responsibility Scale (PRS), a locally-developed instrument with 48 items (and two filler items) in true-false format. This instrument measures the extent to which the student feels he is able to exercise influence and control over his life. Specifically, the scale is designed to reflect the individual's degree of responsibility for his own actions, both successful and unsuccessful; ability to perceive himself as independently accountable for decision making and planning; and belief in his own potential for effecting personal change. Items are expressed in terms of school situations, career situations, and general situations. The scale is to be interpreted in terms of attitudes essential to success in future careers, as revealed in the Bread and Butterflies series. Some revisions in the PRS were made following analysis of its use in the 1974-75 evaluation. The instrument, as used for the 1975-76 evaluation, is included as items 1-50 of Appendix B.
3. Inventory of Occupational Maturity (IOM), a locally-developed 35-item instrument in true-false format with a supplementary portion designed to obtain students' preferred occupational choices. The 35 items are statements which reflect students' interests, abilities, values, and desired living or working conditions. Individual statements are keyed to some 30 occupational fields in order to measure the compatibility of students' endorsed statements about themselves and their job choices. Keying was facilitated through the use of judges. Scoring of the instrument requires the computation of a percentage of the statements endorsed in the keyed direction which are pertinent to the student's chosen occupation. The IOM is included as items 51-85 of Appendix B of this report. [A single test

booklet was used for the PRS (items 1-50) and the IOM (items 51-85). The same instructions were used for both instruments.]

For the Career Knowledge Assessment test, the answer sheet used was Form EAC 74T (Appendix C), which was directly machine scored at the Educational Assessment Center, University of Washington. A t-test for the significance of the difference between means was carried out to compare treatment group to control group. As Table 2 shows, the obtained t-value of -.90 was nonsignificant at the .05 level, indicating that no significant difference between treatment group and control group on the measure of career knowledge was demonstrated.

TABLE 2
CAREER KNOWLEDGE ASSESSMENT, GRADES 4-6
t-test for Difference Between Means

Group	Mean	Standard Deviation	<u>n</u>	<u>t</u>
Treatment	6.746	3.16	173	-.90
Control	7.102	2.93	88	

Responses to the PRS and IOM were transcribed from true-false answer sheets (Appendix D) to punched cards and then submitted for computer scoring. For the PRS, each subject received a total of six subscale scores, the subscales containing items which reflect: (1) acceptance of personal responsibility for successful or neutral events, (2) acceptance of personal responsibility for unsuccessful events, (3) attributing responsibility for successful or neutral events to other persons, (4) attributing responsibility

for unsuccessful events to others, (5) attributing responsibility for successful or neutral events to luck, and (6) attributing responsibility for unsuccessful events to luck. Tables 3a - 3f provide summaries of the t-tests used to determine the significance of the differences between means for treatment and control groups on each subscale. In each case, the t-value was nonsignificant at the .05 level of significance.

For the IOM, four scores were calculated for each individual, one for each of the three occupational choices and an overall score obtained by taking the mean of the scores associated with the three occupational preferences. As noted previously, each score represents a percentage of items considered pertinent to the job or job area which are responded to in the keyed direction. Results of data analysis for the IOM are shown in Tables 4a - 4d. t-tests for the difference between means of treatment and control groups were nonsignificant at the .05 level for both individual occupational choice scores and the overall averaged score.

Work Samples Laboratory

At the junior high level, the major CAM component was the Work Samples Laboratory experience during which students were given the opportunity to engage in activities associated with a variety of jobs at all skill levels. To evaluate this component, a sample of approximately 240 ninth-grade students from two junior high schools in the Highline School District were selected. According to the schedule for attendance at the Work Samples Laboratory, approximately one half of the students from each of the schools was exposed to the treatment for the purpose of evaluation, while the other half of the students from each school did not attend the laboratory until completion of the evaluation. This latter group of students served as a control.

Group	Mean	Standard Deviation	<u>n</u>	<u>t</u>
Treatment	.531	.190	118	.52
Control	.514	.212	59	

Several weeks after treatment groups from a given school completed the Work Samples Laboratory experience, all members of the treatment and control groups in that school were administered the evaluation instruments. Testing was accomplished at Seahurst Junior High School in January and at Pacific Junior High School in April. Tests were administered to groups either in the classroom or in the school cafeteria.

Three instruments were administered:

1. Career Knowledge Assessment test, grades 8-9, a locally-developed 20-item instrument in multiple-choice format designed to measure the student's knowledge of the world of work. A portion of the items in the instrument are specifically oriented to the Northwest job market and industries. The instrument has essentially the same content as that used for grades 5-6 but is written at a higher reading level. It is attached as Appendix E, items 1-20.
2. Subscale C of the Career Development Inventory (CDI), developed by Super and Forrest at Columbia University. A 30-item instrument in multiple-choice format, this test is likewise designed as a measure of knowledge of careers and career-related information. It is included in Appendix E as items 21-50. The Career Knowledge Assessment test, described in 1. above, and Subscale C of the CDI were answered on a single answer sheet, Form EAC 74T (Appendix C).
3. Job Skills Test (Appendix F), a locally-developed seven-item instrument which requires that the student provide from three to five "short-answer" responses to each item. The items are written so as to elicit responses regarding basic skills necessary for specific occupations, skills common to pairs of occupations, and skills which the student can identify within himself/herself. Responses are recorded directly on the instrument and scoring is accomplished by hand.

For the Career Knowledge Assessment test and Subscale C of the CDI, answer sheets were machine scored at the Educational Assessment Center, University of Washington. Scores were obtained for each student on the instruments separately and in combination. These three scores as well as the scores on the Job Skills Test were then placed on punched cards for analysis by computer. In addition, students' IQ scores on the Short Form Test of Academic Aptitude (SFTAA), grade 7, were obtained from school

district records to serve as the covariate in an analysis of covariance. The intent of using an analysis of covariance was to obtain a reduced estimate of experimental error by statistically controlling for any pre-existing differences in students' intelligence levels in the treatment and control groups, thereby increasing the power of the test of significance between group means.

The results of the analysis of covariance for the Career Knowledge Assessment test, Subscale C of the CDI, and the total knowledge measure are presented in Tables 5a - 5c. For the treatment and control conditions, mean IQ scores, unadjusted mean test scores, and adjusted mean test scores are reported. As may be noted, the difference between mean IQ for treatment and control groups was minimal. Nonsignificant values of F ($\alpha = .05$) were found for each instrument taken separately. However, when scores on the two instruments were combined to obtain a total knowledge score, a significant difference between the means of the treatment and control groups was demonstrated. The observed difference was in the expected direction, with those persons who attended the Work Samples Laboratory, the treatment group, scoring significantly higher on the measure of total career knowledge than the control group.

With regard to the Job Skills Test, results of data analysis are reported in Table 6. A highly significant value of F was obtained for the analysis of covariance. Again, the observed difference between means was in the expected direction with the treatment group attaining a score significantly higher than the control group.

TABLE 5

ANALYSIS OF COVARIANCE, KNOWLEDGE TESTS, GRADE 9

5a. Career Knowledge Assessment

Group	<u>n</u>	Mean IQ	Mean Test Score ^a	<u>F</u>
Treatment	104	102.79	12.576 (12.598)	2.540
Control	80	102.65	11.914 (11.900)	

5b. Subscale C of the CDI

Group	<u>n</u>	Mean IQ	Mean Test Score ^a	<u>F</u>
Treatment	104	102.79	16.641 (16.654)	3.817
Control	80	102.65	15.642 (15.625)	

5c. Total Knowledge

Group	<u>n</u>	Mean IQ	Mean Test Score ^a	<u>F</u>
Treatment	104	102.79	29.216 (29.240)	4.520 (sign.)
Control	80	102.65	27.556 (27.525)	

^aUnadjusted means are reported in parentheses. Adjusted means used in the analysis of covariance are not in parentheses.

Treatment	104	102.79	10.945 (10.952)	209.633 (sign.)
Control	80	102.65	3.184 (3.175)	

^aUnadjusted means are reported in parentheses. Adjusted means used in the analysis of covariance are not in parentheses.

Supplementary data -- Chinook Junior High School. Prior to the formal testing for evaluation purposes, selected eighth- and ninth-grade students at Chinook Junior High School were administered the three instruments used for evaluating the Work Samples Laboratory component. This testing was undertaken for two reasons: (1) interest on the part of the CAM staff in examining the impact of career activities at Chinook, which was viewed as having a more developed career education program than other junior high schools in the district; and (2) an opportunity for field testing the newly-developed Job Skills Test. (As a result of this field testing, instructions for the Job Skills Test were changed somewhat for clarity.)

Table 7a presents the results of the analysis of covariance for the 20-item Career Knowledge Assessment test. The covariate was SFTAA, grade 7, IQ score. The obtained value of F (5.280) is significant at the .05 level of significance. Furthermore, as shown in Table 7b, paired comparisons for the several groups revealed that: (1) the mean of the ninth-grade control group was significantly higher than the mean of the eighth-grade control group; (2) the mean of the ninth-grade treatment group was significantly higher than the mean of the eighth-grade control group; and (3) the mean of the ninth-grade control group was significantly higher than the mean of the eighth-grade treatment group.

Table 8a contains the results of the analysis of covariance for the 30-item Subscale G of the CDI. Again, a significant value of F (5.069) was obtained. In this case, paired comparisons on the means of the groups demonstrated that the mean of the eighth-grade control group was significantly less than the mean for each of the remaining three groups. (Table 8b). While for eighth graders, the treatment and control groups differed significantly, no such findings were indicated at the ninth-grade level.

TABLE 7

SUBSCALE C OF CDI

8a. Analysis of Covariance

Group	n	Adjusted Mean	F
8th grade Control	63	12.615	5.069 (sign.)
8th grade Treatment	46	14.662	
9th grade Control	24	15.051	J
9th grade Treatment	28	15.378	

8b. t-tests for Comparisons of Means

	1	2	3	4
1 - 8th grade Control	.00			
2 - 8th grade Treatment	2.78 (sign)	.00		
3 - 9th grade Control	2.68 (sign)	.41	.00	
4 - 9th grade Treatment	3.21 (sign)	.79	.31	.00

When scores on the two knowledge tests were summed to produce a total knowledge score, results of data analysis (Table 9a) were comparable to those for the CDI Subscale. The obtained F value (6.551) is significant at the .05 level. Paired comparisons on the means revealed that the mean of the eighth-grade control group was significantly less than the means for the other three groups (Table 9b). Again, differences in treatment and control group means were found at the eighth-grade level but not at the ninth-grade level.

Finally, Table 10a presents the results of the analysis of covariance for the Job Skills Test. The obtained value of F (18.035) is highly significant. As shown in Table 10b, paired comparisons revealed that: (1) the mean of the eighth-grade control group was significantly less than both the mean of the eighth-grade treatment group and the mean of the ninth-grade treatment group; and (2) the mean of the ninth-grade control group was significantly less than both the mean of the ninth-grade treatment group and the mean of the eighth-grade treatment group. At each grade level, significant differences between treatment and control groups, in the desired direction, were demonstrated.

Computer Guidance

Reanalysis of 1974-75 Computer Guidance data. As a portion of the 1975-76 evaluation, the evaluation staff reanalyzed Computer Guidance data from the previous year's evaluation. A summary of the rationale, procedures, and findings of this reanalysis was submitted with the Interim Evaluation Report in January. A copy of this summary is included as Appendix G.

Highline High School Data. At Highline High School, approximately 275 tenth-, eleventh-, and twelfth-grade students were administered the complete CDI. Tests were administered by the Vocational Information Specialist at the school, and data were analyzed with the aid of computer programs by the evaluation staff at the BSSR.

The complete CDI is composed of three subscales. Subscale A is designed to measure the amount of thought, planning, general information seeking, and decision making that the student has engaged in with regard to careers. Subscale B is a measure of the type and amount of assistance the student is inclined to seek from various sources of information. Subscale C has been previously defined as a career knowledge measure. A total CDI score is also obtainable. Appendix H of this report contains a copy of the instrument as used at Highline High School with a cover sheet developed to obtain pertinent background information on the student.

The analysis which was undertaken involved the comparison of four treatment groups on each of the subscales and on the total CDI score. The four treatment groups were: (1) students who had computer experience both during the 1974-75 school year and during the 1975-76 school-year ["both years" group], (2) students who had computer experience in 1974-75 but not in 1975-76 ["last year only" group], (3) students who had computer experience in 1975-76 but not in 1974-75 ["this year only" group], and (4) students who had no computer experience in 1974-75 and no computer experience in 1975-76 ["neither year" group]. An analysis of covariance was used with the covariate being IQ score from the Short Form Test of Academic Aptitude (SFTAA), grade 10, obtained for each student from school district records.

Results of the analysis of covariance for Subscale A are presented in Table 11a. The overall F of 6.417 is significant at the .05 level of

TABLE 11

HIGHLINE HIGH SCHOOL COMPUTER GUIDANCE DATA
SUBSCALE A OF CDI

11a. Analysis of Covariance

Group	n	Mean IQ	Mean Subscale Score ^a	F
"Both years" group	49	98.33	107.6 (108.53)	6.417 (sign.)
"Last year only" group	36	98.87	116.3 (117.42)	
"This year only" group	40	95.16	106.4 (106.42)	
"Neither year" group	151	91.14	101.2 (101.54)	

11b. t-tests for Comparison of Means

	1	2	3	4
1 - "Both years" group	.00			
2 - "Last year only" group	2.05 (sign)	.00		
3 - "This year only" group	-.29	-2.23 (sign)	.00	
4 - "Neither year" group	-2.02 (sign)	-4.21 (sign)	-1.52	.00

^aUnadjusted means are reported in parentheses. Adjusted means used in the analysis of covariance are not in parentheses.

significance. Paired comparisons on the various group means revealed four significant values of t : (1) the mean of the "last year only" group was significantly higher than the mean of the "both years" group; (2) the mean of the "last year only" group was significantly higher than the mean of the "this year only" group; (3) the mean of the "last year only" group was significantly higher than the mean of the "neither year" group; and (4) the mean of the "both years" group was significantly higher than the mean of the "neither year" group. Table 11b on the previous page summarizes these comparisons.

For Subscale B, results of the analysis of covariance are reported in Table 12a. A significant value of F (4.489) was obtained. Paired comparisons using t -tests (Table 12b) revealed two findings of significant differences between group means: (1) the mean of the "last year only" group was significantly higher than the mean of the "neither year" group; and (2) the mean of the "last year only" group was significantly higher than the mean of the "this year only" group.

Results of the analysis of covariance for Subscale C are reported in Table 13a, which shows a nonsignificant value of F (1.078). Hence, the lack of significant differences among paired comparisons on the various group means (Table 13b) are to be expected. On the career knowledge subtest, no significant differences among group means were noted.

Finally, the results of the analysis of covariance for the total CDI score are presented in Table 14a. The value of F (6.368) is significant at the .05 level. Paired comparisons on the group means (Table 14b) demonstrate that the "last year only" group scored significantly higher on the CDI than (1) the "both years" group, (2) the "this year only" group, and (3) the "neither year" group.

Career Information Centers

Student data. Each high school in the Highline School District operates a Career Information Center designed to direct and coordinate a variety of career education activities within these schools. Each center is under the direction of a full-time Vocational Information Specialist. An evaluation of these centers comprised the fourth major project for the 1975-76 CAM evaluation.

A test booklet entitled Career Information Center Survey (Appendix I) was developed for administration to students from each high school. The booklet contains four sections:

1. A Biographical Information sheet designed to provide categorical data on the student and brief information on the student's career plans and current career education activities.
2. Inventory of Service Use (ISU), a locally-developed "check list" type of instrument which collects data on the student's familiarity with the various center services, the amount of use which he/she made of the services during the school year, and his/her evaluation of particular services received. Six separate center services are listed on the form. The form was developed with the assistance of the Vocational Information Specialists from the five schools.
3. Subscale C of the Career Development Inventory (CDI), as previously described.
4. Perceived Responsibility Scale (PRS), as previously described:

A sample of 66 students (22 tenth graders, 22 eleventh graders, and 22 twelfth graders) were randomly selected from each of the five high schools using school rosters provided to the evaluation staff by the school district. Each Vocational Information Specialist was contacted individually, given the list of selected students, and advised of testing procedures. The Vocational Information Specialists then arranged for all selected students within each school to be tested by evaluation personnel in a single testing

00034

session. Testing of students was accomplished during April and May.

Responses to the several instruments contained in the survey form were recorded by students directly on the survey booklet. These responses were then placed on punched cards for submission to computer analysis. Of primary interest was the possibility of: (1) a relationship between familiarity with, use of, and evaluation of the center services (as reflected in responses to the ISU) and students' knowledge of the world of work (as measured by Subscale C of the CDI); and (2) a relationship between familiarity with, use of, and evaluation of center services (again, as measured by the ISU) and the amount of responsibility assumed by students for career and life decisions and outcomes (as measured by the PRS subscales).

Table 15 presents a matrix of correlations between the variables of interest for all students. As may be noted, CDI knowledge scores and each of the PRS subscale scores were correlated with the measures of "familiarity with service," "level of use of service," and "value of service" calculated from ISU responses. "Familiarity with service" scores were obtained by assigning a value of 2 to the "yes" response and a value of 1 to the "no" response and summing these values for the six services for each student. For the services with which the student was familiar, "level of use of service" scores were calculated by assigning a value of 3 to the "very much" response, a value of 2 to the "some" response, and a value of 1 to the "not at all" response. The student's score was obtained by summing the values over all services. Finally, "value of service" scores were the sum of responses for all familiar services with a value of 3 representing "very helpful," a value of 2 representing "somewhat helpful," and a value of 1 representing "little or no help."

00035

TABLE 15

CAREER INFORMATION CENTER SURVEY

Correlations of Knowledge and Responsibility Measures
with Measures of Service Familiarity,
Use, and Evaluation^a

Service Measures	CDI (Knowledge)	PRS #1 Personal Responsibility for Successful or Neutral Events	PRS #2 Others Responsible for Successful or Neutral Events	PRS #3 Luck Responsible for Successful or Neutral Events	PRS #4 Personal Responsibility for Unsuccessful Events	PRS #5 Others Responsible for Unsuccessful Events	PRS #6 Luck Responsible for Unsuccessful Events
Familiarity	<u>.259</u>	- .084	- <u>.169</u>	- <u>.275</u>	- .018	- <u>.255</u>	- <u>.274</u>
Level of Use	.097	- .011	- <u>.171</u>	- <u>.141</u>	.108	- <u>.169</u>	- <u>.178</u>
Value of Service	.053	.066	- <u>.206</u>	- .106	<u>.226</u>	- <u>.153</u>	- <u>.149</u>

^aThose correlations which are significantly different than zero at the .05 level are underlined.

In Table 15, those correlation coefficients which are significant at the .05 level of significance are underlined. For significance, a value of r equal to or exceeding .138 is required ($N = 214$). The significant correlation coefficients represent:

1. A significant positive relationship between familiarity with services and career knowledge (as measured by CDI Subscale C).
2. A significant negative relationship between familiarity with services and attributing responsibility for successful or neutral events to others.
3. A significant negative relationship between familiarity with services and attributing responsibility for successful or neutral events to luck.
4. A significant negative relationship between familiarity with services and attributing responsibility for unsuccessful events to others.
5. A significant negative relationship between familiarity with services and attributing responsibility for unsuccessful events to luck.
6. A significant negative relationship between level of use of services and attributing responsibility for successful or neutral events to others.
7. A significant negative relationship between level of use of services and attributing responsibility for successful and neutral events to luck.
8. A significant negative relationship between level of use of services and attributing responsibility for successful events to others.
9. A significant negative relationship between level of use of services and attributing responsibility for unsuccessful events to luck.
10. A significant negative relationship between value of service and attributing responsibility for successful or neutral events to others.
11. A significant positive relationship between value of service and assuming personal responsibility for unsuccessful events.

00037

12. A significant negative relationship between value of service and attributing responsibility for unsuccessful events to others.
13. A significant negative relationship between value of service and attributing responsibility for unsuccessful events to luck.

Supplementary Data--Faculty Survey. In addition to student data, the Vocational Information Specialists at the five high schools in the district expressed a desire to obtain information from the faculties and staffs of each high school regarding knowledge, use, and evaluation of Career Information Center services. To meet this need, a second survey form was developed and is included as Appendix J.

Individual meetings were held with the Vocational Information Specialists from each school to discuss the most efficient method of distributing the survey forms. The methods of distribution varied from school to school and included placement in individual mail boxes, personal delivery to faculty members, and distribution at general faculty meetings. In all cases, an effort was made to provide a thorough explanation of the purpose and importance of evaluation and how the data would be used. Survey forms were forwarded by mail from respondents to the evaluation staff at the BSSR. The original deadline for receipt of the forms (May 1, 1976) was extended in order to obtain as high a response rate from each school as possible.

Data from the faculty survey forms were placed on punched cards and submitted to computer analysis. Because the items on the survey form reflect a composite of the areas of interest of the five Vocational Information Specialists, with some items relevant to some schools but not to the others, it was not considered appropriate to make a direct comparison of

00078

responses to these items between schools. Whereas an examination of these item responses summed over all schools may provide relevant feedback to CAM personnel concerning district-wide impact, each school should be examined on an individual basis with regard to these items. This is an important point to keep in mind--respondents may have noted little impact of a career activity in a particular school setting not because this activity was ineffective but rather because it was deemphasized in favor of another activity. Hence, most of the descriptive data on individual schools which follow must be interpreted in terms of the objectives emphasized and the particular means used for attainment of these objectives within each school. However, two comparisons of item responses (including tests of significance between schools) were made and are discussed later in this part of the report.

Tables 16 thru 19 summarize the data from the faculty survey with attention to each school individually and to the five schools in combination. Table 16 provides data on respondents' overall impression of the change in amount of attention given to career concerns during the school year. Table 17 summarizes the data on faculty familiarity with the six key center services. Table 18 presents mean responses to items referring to contact and referral to the center and general impact of the center, and Table 19 presents mean responses to items reflecting career activities in the classroom.

For item 5 of Part II ("How much of an impact do you feel the center has had in creating a career awareness at your school?"), a Chi-square test of independence was performed to determine if there were a significant relationship between responses to the items and particular schools, that is, to determine if schools differed in the frequencies of responses in the several response categories of the item. Table 20 presents these frequencies for

FACULTY SURVEY

Response Frequencies, Part II, Item 5

School	Response Frequencies ^a				Total Number of Respondents
	0	1	2	3	
Evergreen	0	8	19	36	63
Tyee	0	1	4	19	24
Glacier	1	8	10	9	28
Highline	1	3	14	40	58
Mt. Rainier	1	11	10	16	38

^aThe scale used here was None 0 1 2 3 Quite a Bit and the question was as follows: "How much of an impact do you feel the center has had in creating a career awareness at your school?"

the five schools. The obtained Chi-square value of 24.69 was significant at the .05 level, indicating an association between school and pattern of responses. Perusal of Table 20 would seem to indicate that Tyee and Highline High Schools tended to have a greater percentage of responses in the higher response category (3) while Glacier and Mt. Rainier High Schools had a greater percentage of responses in the lower response categories (0 and 1).

Similarly, for item 4 of Part III ("How much of an impact do you feel the Career Information Center has had on the amount of attention given to career concerns in your classroom teaching?"), a Chi-square test of significance was performed to determine if there were a significant relationship between school and response frequencies. The obtained value of Chi-square (16.34) was significant at the .05 level, indicating the presence of a significant relationship. As Table 21 suggests, Tyee and Highline High Schools tended to have a greater percentage of responses in the higher response categories (2 and 3), while Glacier and Mt. Rainier High Schools tended to have a greater percentage of responses in the lower response categories (0 and 1).

SUMMARY AND IMPLICATIONS OF FINDINGS

The evaluation of the impact of the Bread and Butterflies component of the CAM program did not result in the demonstration of significant differences between treatment and control groups on any of the measures used. The reasons for such lack of significant differences are indeterminate, but several possibilities may be offered.

For the Career Knowledge Assessment test, based on the obtained variances of the treatment and control groups and the number of subjects within each group, the difference between group means required for significance would be .657 or approximately .22 standard deviation units. This rather low value

TABLE 21

FACULTY SURVEY

Response Frequencies, Part III, Item 4

School	Response Frequencies ^a				Total Number of Respondents
	0	1	2	3	
Evergreen	8	14	19	16	57
Tyee	1	5	10	6	22
Glacier	4	6	7	3	20
Highline	6	10	17	17	50
Mt. Rainier	8	14	4	6	32

^aThe scale used here was None 0 1 2 3 Quite a Bit and the question asked was, as follows: "How much of an impact do you feel the Career Information Center has had on the amount of attention given to career concerns in your classroom teaching?"

indicates that there were probably sufficient numbers of subjects in the test of significance to detect differences in groups if they existed. However, the instrument itself might be critically examined with regard to its appropriateness. In retrospect, it appears that the difficulty level of the Career Knowledge Assessment test for elementary school students may have detracted from its ability to demonstrate differences between groups. That is, the test may have been too difficult to be a reliable measure of individual differences in student awareness of careers. This problem was not foreseen when the test was developed but was supported by post-evaluation item analysis of the data.

With regard to the data from the PRS and IOM, again it was determined that there were sufficient numbers of students in the two groups to detect significant differences. The finding of no significant differences between groups might therefore be a function of either weaknesses in the instruments themselves or lack of adequate impact of the program upon students. Especially when one considers the objectives related to this portion of the evaluation--changes in student's self-awareness, degree of personal responsibility, and maturity in career decision making--the difficulty in demonstrating program impact becomes apparent. It may be that to effect change in these affective areas requires a more intensive long-term learning experience than could be offered by the district's career education program.

The results of the evaluation of the Work Samples Laboratory component at the junior high school level were more encouraging. While significant differences between the means of treatment and control groups for the Career Knowledge Assessment test and Subscale C of the CDI were not demonstrated, the differences which were found in these tests were in the expected direction and suggestive. Furthermore, when scores on these measures were

combined to form a total knowledge score and a test of significance was performed, a significant difference between groups was demonstrated. It appears that the increased reliability gained from combining the two knowledge measures into a single instrument provided for a more powerful test of significance and thus the detection of differences between groups.

The Job Skills Test was more specific to the actual objectives and activities of the Work Samples Laboratory. The finding that the treatment group scored significantly higher than the control group thus seems to indicate that students who attended the Work Samples Laboratory did gain an ability to identify skills necessary for various occupations and to analyze the similarities between occupations using a jobskills approach. The value of F obtained (209.633) represents a finding of differences between groups which is extremely unlikely to have occurred on the basis of chance alone.

The evaluation of the Computer Guidance component at Highline High School demonstrated a number of significant differences between the various treatment groups. In general, the group which had computer experience during the 1974-75 school year but did not repeat that experience during the 1975-76 school year performed better on the CDI than the other groups. It is somewhat puzzling why the group which had experience on the computer both years and the group which had experience only during the 1975-76 school year did not, in general, score as highly as did the "last year only" group. However, on Subscale A, for example, the "both years" group did score significantly higher than the "neither year" group; and the data do demonstrate a distinct tendency for those who had computer experience to some degree (whether it be one year or both years) to perform better on the instrument. For Subscales A and B and the total CDI, the "neither year" group was consistently the lowest-scoring group.

00048

Analysis of the data for Subscale C of the CDI, composed of career knowledge items, did not result in significant differences between groups. This would seem to suggest that the impact of the Computer Guidance experience is not highly related to increased knowledge of careers. Rather, its impact may be more accurately focused upon an increased awareness of the need for planning and information seeking, as represented by Subscales A and B.

Student data from the Career Information Center Survey indicated a number of significant relationships between use of services and student knowledge and characteristics. Perhaps most interesting is the finding that familiarity with the various services was significantly related to student's performance on the CDI knowledge measure. The significance of the obtained correlation coefficient suggests that, in general, there is a tendency for students who are more familiar with services to score higher on the instrument. Whether the difference is attributed to knowledge gained through use of the center or from a generally higher ability or information level remains problematical.

The interpretation of correlations between service measures (familiarity, use, and value) and the PRS subscales is somewhat more difficult. However, the pattern of negative correlations between service measures and PRS subscales 2, 3, 5, and 6 would seem to indicate that those persons who are externally-oriented tended to be less involved in utilization of center services. That is, those students who tend to attribute responsibility for events to others or luck were also likely to not have knowledge of, utilize, or value center services. If we can infer that these same externally-oriented students demonstrate less personal responsibility or initiative, then we can reasonably conclude that, for them, the center services are less

00049

meaningful. Conversely, for students who do not attribute responsibility to external sources, the services are more meaningful.

Finally, the faculty survey indicated that the majority of faculty in the school district (61.5%) felt that attention to career concerns had increased during the school year. Generally, they were aware of Career Information Center services, and, in the cases of field trips, career counseling, and availability of career literature, the majority of faculty (51.2% - 69.5%) considered themselves very familiar with the services. Items reflecting degree of contact with or referral to the centers revealed, again, that the majority of faculty (57.9% - 78.3% in the five schools) responded on the upper half of the range of the rating scales. Responses to questions regarding impact of the centers on the classroom were also generally on the upper range of the rating scales (50.2% - 66.3% of faculty surveyed in the five schools).

00050

This booklet contains questions about jobs and career planning. Some questions ask about career facts; some ask about job skills; and others ask you to judge students' abilities, interests and job plans. Give the best answers you can.

All answers are to be marked on the answer sheet provided. Make no marks in the booklet. For each question, find the number of the question on your answer sheet and mark the space that is the same as the letter of your answer. Completely erase any changed answers or any other marks on the answer sheet.

Answer all questions. If you are unsure of an answer, guess. There is no time limit, but work as fast as you can.

You must use a NUMBER TWO PENCIL. Ask for a pencil if you do not have one.

The questions begin on the next page.

00051

Choose the one best answer to each question. Mark the letter of your answer on the answer sheet.

1. A longshoreman might be expected to do which of the following?
 - A...give advice on boat-building
 - B...sell beachfront land
 - C...lift and carry heavy boxes ✓
 - D...measure the length of lumber
 - E...operate a steamboat

2. A computer programmer needs to know how to do which of the following?
 - A...repair tape recorders
 - B...give artificial respiration
 - C...read mathematical symbols
 - D...replace broken windows
 - E...operate a television camera

3. A real estate salesman is best described by which of the following?
 - A...works best under the direct supervision of others
 - B...likes to work with his hands
 - C...has good depth perception ✓
 - D...is not afraid of heights
 - E...does not mind working on weekends

4. A surveyor is best described by which of the following?
 - A...enjoys classical music
 - B...is able to work well under stress.
 - C...does not mind large crowds of people
 - D...likes to work evenings and nights
 - E...likes outdoor activities

5. A bookkeeper might be expected to do which of the following?
 - A...check for overdue library books
 - B...write book reviews
 - C...keep records for a business
 - D...put books in alphabetical order
 - E...operate a printing press

6. A stock clerk in a grocery store might be expected to do which of the following?
 - A...decide on the prices of items
 - B...give out paychecks
 - C...cut and package meat
 - D...arrange employees' work schedules
 - E...put food products on shelves

7. A lens grinder might be expected to do which of the following?
- A...adjust a television camera
 - B...work with precision tools
 - C...operate a concrete mixer
 - D...give eye examinations
 - E...advise people about the stock market
8. Which of the following best describes the working hours of an insurance salesman?
- A...odd hours and weekends
 - B...regular hours five days a week
 - C...only nights
 - D...mostly mornings
 - E...only on weekends
9. A person who has a talent for public speaking might be successful in which occupation?
- A...trial lawyer
 - B...model
 - C...family doctor
 - D...newspaper reporter
 - E...shoe salesman
10. Which of the following gives information about higher education and training opportunities in Washington State?
- A...Mapping Your Education
 - B...Northwest Quarterly
 - C...Chamber of Commerce Weekly
 - D...Dictionary of Occupational Titles
 - E...Seattle Times
11. What has most influenced the job market in the last ten years?
- A...television
 - B...microwave cooking units
 - C...widespread use of computers
 - D...steam-powered engines
12. If supertankers bringing oil from Alaska were allowed to unload their oil cargo in the Puget Sound area, the most direct effect on the local job market might be:
- A...increase in tourism and related industries
 - B...decreased banking and other financial activities
 - C...decreased need for doctors, lawyers, and other professional people
 - D...increased need for construction workers and other blue-collar workers
13. High rates of unemployment are likely to occur during a period of:
- A...economic stability
 - B...warfare
 - C...economic expansion
 - D...inflation
 - E...recession

00052

14. Which of the following represents a current trend in the job market?
- A...more women in professional jobs
 - B...longer work weeks
 - C...greater reliance on individuals rather than machines
 - D...less need for professional service jobs
15. Which of the following represents a current trend in the job market?
- A...more middle-level technician jobs
 - B...few, if any, early retirements
 - C...more agriculture-related jobs
 - D...more assembly-line jobs

For each group below, select the line which best shows how a person may advance within a career field without additional education.

16. A...store cashier becomes store manager
B...nurse's aide becomes head nurse
C...dog groomer becomes veterinarian
D...welder becomes aeronautical engineer
17. A...reservation agent becomes airline pilot
B...school custodian becomes principal
C...lawyer becomes judge
D...short-order cook becomes dietitian
18. A...TV repairman becomes TV producer
B...swimming instructor becomes oceanographer
C...hospital orderly becomes surgeon
D...parts assembler becomes plant foreman

In each group below, choose the industry or occupational field which is not likely to be found in the Puget Sound area.

19. A...ranching
B...recreation
C...fishing
D...forestry
20. A...automobile assembly
B...pulpmills
C...shipbuilding
D...aerospace

00053

On the following pages are sentences which might describe you or what you believe. Read each sentence and then decide whether you think that the sentence is true or false. On the answer sheet, find the number of the sentence. Circle T if you decide that the sentence is true, and circle F if you decide that the sentence is false. Be sure to respond to every sentence.

00054

1. If I decide to do something, I always get it done.
2. Teachers usually have good advice for someone who has a problem.
3. I believe in luck.
4. People who get fired from jobs are the ones who deserve it the most.
5. Other people usually decide what is best for me.
6. Getting a traffic ticket is mostly a matter of bad luck.
7. The only way to get good grades is to study hard.
8. Other people are often getting me into trouble.
9. There's no use in planning because plans are usually changed by unexpected events.
10. If I play around too much in school, I probably will never get a good job.
11. Success depends mostly on knowing the right people.
12. Trouble often finds me without my doing anything.
13. I am responsible for the things that happen to me.
14. It is almost impossible to get ahead if you don't know the right people.
15. What is going to happen in my future is pretty much already determined.
16. If you lose a contest, it is because you did not try hard enough.
17. I depend on the teacher to tell me when I am doing a good job.
18. Getting in trouble once in a while is something that just can't be helped.
19. Students who win class elections are the ones who work the hardest.
20. Other people are the greatest cause of my problems.
21. Finding an interesting job is mainly a matter of luck.
22. I have been unable to buy things that I wanted when I did not plan ahead and save for them.
23. Pay raises are given to the workers that the boss likes the most.
24. If I am late for dinner, it is usually not my fault.
25. If I try hard, I can be anything I want to be.

00055

26. Low grades go to the students the teacher doesn't like.
27. Many things happen to me that I don't know how to control.
28. People who cannot find a good job have simply not tried hard enough to find one.
29. Decisions by other people will determine my future.
30. Students who fail tests are bad guessers.
31. Being a hard worker is most important in getting ahead.
32. If I don't understand something in class, it's usually because the teacher wasn't clear enough.
33. On most jobs it takes a lot of luck to get everything done on time.
34. When I don't do well on a test, it is because I did not study hard enough.
35. To get most job promotions you need to know the right people.
36. Most of the time I can't help doing the things that get me in trouble.
37. If I really tried, I could become a class officer.
38. Many teachers get angry at students for no good reason.
39. Luck has been very important in my life.
40. Teachers give low grades to those students who don't work hard enough.
41. I don't have much control over what happens to me.
42. Many people's problems are caused by bad luck.
43. What you get out of school depends entirely upon what you put into it.
44. I get blamed for lots of things that really aren't my fault.
45. Successful people have simply had better luck than unsuccessful people.
46. When I get into trouble, I know pretty well what it is that I did wrong.
47. It is easy to get good grades if the teacher likes you.
48. Bad luck explains a lot of my misfortunes.
49. Most teachers really care about their students.
50. Kids get into trouble at school because of other students.

00056

51. I like to spend my free time doing things outdoors.
52. I plan to live in Seattle when I grow up.
53. I don't mind getting dirty if I am doing something I enjoy.
54. I enjoy doing things like drawing, painting, or making things out of clay.
55. I like to work in groups on projects.
56. I plan to get a college education.
57. I like to meet new people.
58. I work at keeping physically fit.
59. My favorite games are those in which I can compete as an individual against other people.
60. I like quiet activities when I can do things by myself away from other people.
61. I want to be able to travel a lot in my life.
62. I like to follow a project through from the beginning to the end.
63. After high school, I plan to spend about one to two years getting some type of special training.
64. I enjoy doing things which require physical hard work.
65. I like to be in charge and direct other people.
66. I like to think things through and come up with new ideas on how to accomplish a task.
67. Being able to help other people is very important in my life.
68. I like to work jigsaw puzzles.
69. If I had my choice, I would live in a very small town or near farmland.
70. I do my best work when I work alone on something.
71. It's very easy for me to talk to other people.
72. I enjoy going to school.
73. I don't mind doing the same thing everyday.
74. Making a lot of money is one of my chief goals in life.
75. I enjoy having my ideas carried out to produce something.
76. After high school, I want to get a job right away.

00057

- 77. I like to give talks in front of the class.
- 78. When I have a job to do, I like to work at my own speed.
- 79. I like to play games which really make me think.
- 80. I make better grades than most of the other students in my class.
- 81. I do my best work when I am given specific directions.
- 82. I am interested in machines and how they work.
- 83. I avoid situations which could be dangerous.
- 84. It is easy for me to do fine work like threading needles or stringing beads.
- 85. I like a specific time during the day to do my work.

Name _____

Please list below the 3 jobs that you would like to have in the future:

My first choice is _____

My second choice is _____

My third choice is _____

00061

This booklet contains questions about jobs, the job market, and career planning. Some questions ask about career facts; some ask about job requirements and skills; and others ask you to judge students' abilities, interests, and future job plans. Give the best answers you can.

All answers are to be marked on the answer sheet provided. Make no marks in the booklet. For each question, find the number of the question on your answer sheet and mark the space which corresponds to the letter of your answer. Completely erase any changed answers or any other marks on the answer sheet.

Answer all questions. If you are unsure of an answer, guess. There is no time limit, but work as rapidly as you can.

You must use a NUMBER TWO PENCIL. Ask for a pencil if you do not have one.

The questions begin on the next page.

00062

PART 1. Choose the one best answer to each question. Mark the letter of your answer on the answer sheet.

1. A longshoreman might be expected to do which of the following?
 - A....give advice on boat construction
 - B....sell beachfront property
 - C....lift and carry heavy boxes
 - D....measure the length of lumber
 - E....operate a steamboat

2. A computer programmer needs to know how to do which of the following?
 - A....repair tape recorders
 - B...give artificial respiration
 - C....read mathematical symbols
 - D..replace broken windows
 - E....operate a television camera

3. A real estate salesman is best described by which of the following?
 - A....performs best under the direct supervision of others
 - B..likes to work with his hands
 - C....has good depth perception
 - D..is not afraid of heights
 - E....does not mind working on weekends

4. A surveyor is best described by which of the following?
 - A....enjoys classical music
 - B..is able to perform well under stress
 - C....does not mind large crowds of people
 - D..prefers to work evenings and nights
 - E....likes outdoor activities

5. A bookkeeper might be expected to do which of the following?
 - A....check for overdue library books
 - B..write book reviews
 - C....keep records of business transactions
 - D..arrange books in alphabetical order
 - E....operate a printing press

6. A stock clerk in a supermarket might be expected to do which of the following?
 - A....determine prices of items
 - B..dispense paychecks
 - C....cut and package meat
 - D..arrange employees' work schedules
 - E....shelve merchandise

7. A lens grinder might be expected to do which of the following?
 - A....adjust a television camera
 - B..work with precision tools
 - C....operate a concrete mixer
 - D..conduct eye examinations
 - E....advise people about stock market investments

00063

8. Which of the following best describes the working hours of an insurance salesman?

- A....irregular hours and weekends
- B..regular hours five days a week
- C....only nights
- D..mostly mornings
- E....only on weekends

9. A person who has a talent for public speaking might be successful in which occupation?

- A....trial lawyer
- B..model
- C....family doctor
- D..newspaper reporter
- E....shoe salesman

10. Which of the following gives information about advanced education and training facilities throughout Washington State?

- A....Mapping Your Education
- B..Northwest Quarterly
- C....Chamber of Commerce Weekly
- D..Dictionary of Occupational Titles
- E....Seattle Times

11. What technological advancement has most influenced the job market in the last ten years?

- A....television
- B..microwave heating devices
- C....widespread use of computers
- D..steam-powered engines

12. If supertankers bringing oil from Alaska were allowed to unload their oil cargo in the Puget Sound area, the most direct effect on the local job market might be:

- A....increase in tourism and related industries
- B..decreased banking and other financial operations
- C....decreased need for doctors, lawyers, and other professional people
- D..increased need for construction workers and other blue-collar workers

13. High rates of unemployment are likely to occur during a period of:

- A....economic stability
- B..warfare
- C....economic expansion
- D..inflation
- E....recession

14. Which of the following represents a current trend in the job market?

- A....increase in the number of women in professional jobs
- B..longer work weeks
- C....greater reliance on individuals rather than machines
- D..decreased need for professional service jobs

MICROCOPY RESOLUTION TEST CHART
NATIONAL BUREAU OF STANDARDS-1963-A

15. Which of the following represents a current trend in the job market?

- A...increase in middle-level technician jobs
- B...few, if any, early retirements
- C...increase in agriculture-related jobs
- D...increase in assembly-line jobs

For each group below, select the line which best shows how a person may advance within an occupational field without additional formal education or training.

- 16. A...store cashier becomes store manager
 - B...nurse's aide becomes head nurse
 - C...dog groomer becomes veterinarian
 - D...welder becomes aeronautical engineer
- 17. A...reservation agent becomes airline pilot
 - B...school custodian becomes principal
 - C...lawyer becomes judge
 - D...short-order cook becomes dietitian
- 18. A...TV repairman becomes TV producer
 - B...swimming instructor becomes oceanographer
 - C...hospital orderly becomes surgeon
 - D...parts assembler becomes plant foreman

In each group below, choose the industry or occupational field which is not likely to be found in the Puget Sound area.

- 19. A...ranching
 - B...recreation
 - C...fishing
 - D...forestry
- 20. A...automobile assembly
 - B...pulpmills
 - C...shipbuilding
 - D...aerospace

21. Which one of the following is the best source of information about job duties and opportunities?

- A...The Encyclopedia Britannica
- B...World Almanac
- C...Scholastic Magazine
- D...The Occupational Index
- E...The Occupational Outlook Handbook

00065

22. Which one of the following would be most useful for detailed information about getting into college?

- A....The World Book Encyclopedia
- B..Webster's Collegiate Dictionary
- C....Lovejoy's College Guide
- D..Reader's Digest
- E....The Education Index

23. Which one of the following pairs of occupations involves the same level of training and responsibility?

- A....Tailor, Sales Clerk
- B..Engineer, Banker
- C....Tailor, Engineer
- D..Banker, Sales Clerk

24. The occupational fields expected to grow most rapidly during the next ten years are:

- A....Professional and service
- B..Sales and crafts
- C....Crafts and clerical
- D..Labor and sales

25. Between 1910 and 1970, the industry employing the greatest number of workers changed from:

- A....Agriculture to wholesale and retail trade
- B..Manufacturing to agriculture
- C....Wholesale and retail trade to manufacturing
- D..Agriculture to manufacturing

26. In the 9th and 10th grades, plans about jobs and occupations should:

- A....be clear
- B..not rule out any possibilities
- C....keep open the best possibilities
- D..not be something to think about

27. Decisions about high school courses can have an effect on:

- A....the kind of diploma one gets
- B..the kind of training or education one can get after high school
- C....later occupational choices
- D..how much one likes school
- E....all of these

00066

28. Decisions about jobs should take into account:

- A....strengths, or what one is good at learning and doing.
- B..what one likes to do
- C....the kind of person one is
- D. the chances for getting ahead in that kind of job
- E....all of these

29. One of the things that great artists, musicians, and professional athletes have in common is the desire to:

- A....make money
- B..have large audiences
- C....be the best there is at what they do.
- D. teach others to do what they do

30. Mary thinks she might like to become a computer programmer, but she knows little about computer programming. She is going to the library to find out more about it. The most important thing for Mary to know now is:

- A...what the work is, what she would do in it
- B..what the pay is
- C...what the hours of work are
- D..where she can get the right training

31. Jane likes her high school biology and general science courses best. She likes to do her schoolwork alone so she can concentrate. When she begins to think about her future occupation, she should consider:

- A...Nurse
- B..Accountant
- C...Medical Laboratory Technician
- D..Elementary School Teacher

32. Peter is the best speaker on the school debating team. The school yearbook describes him as "our golden-tongued orator--a real nice guy who can listen as well as talk--he could sell refrigerators to the Eskimos." Peter will probably graduate in the bottom half of his class, although his test scores show that he is very bright. His only good grades (mostly B's) are in business subjects. His poorest grades are in English and social studies (mostly C's).

Peter's desire to become a trial lawyer is not very realistic because:

- A....with his grades he will have difficulty getting into a four year liberal arts college
- B..he has poor grades in the subjects that are most important for law
- C...there is much more to being a lawyer than being good at public speaking
- D..all of the above are good reasons for thinking that Peter will have a hard time becoming a trial lawyer

00057

33. The facts about Peter suggest that he should think about becoming:
- A....an accountant
 - B...a salesman
 - C....an actor
 - D..a school counselor
 - E....a lawyer
34. Ernie took some tests which show that he might be good at clerical work. Ernie says, "I just can't see myself sitting behind a desk for the rest of my life. I'm the kind of guy who likes variety. I think being a traveling salesman would suit me fine." He should:
- A....disregard the tests and do what he wants to do
 - B..do what the tests say since they know better than he does what he would be good at
 - C....look for a job which will let him use his clerical abilities but not keep him pinned to a desk
 - D..ask to be tested with another test since the results of the first one are probably wrong
35. Joe is very good with his hands and there isn't anybody in his class who has more mechanical aptitude. He is also good at art. His best subject at school is math. Joe likes all of these things:
- What should Joe do? Should he:
- A....look for an occupation in which he can use as many of his interests and abilities as possible?
 - B..pick an occupation which uses math since there is a better future in that than in art or in working with his hands?
 - C....decide which of these activities he is best at, or likes the most, and then pick an occupation which uses that kind of activity?
 - D..put off deciding about his future and wait until he loses interest in some of these activities?
36. Batty gets very good science grades but this isn't her favorite subject. The subject she likes best is art even though her grades in it are only average. Batty is most likely to do well in her future occupation if she:
- A....forgets about her interest in art since she is so much better in science
 - B..doesn't worry about the fact that she isn't very good at art, because if you like something you can become good at it
 - C....looks for an occupation which uses both art and science, but more science than art
 - D..looks for an occupation which involves both science and art, but more art than science

00068

37. Bob says he really doesn't care what kind of work he gets into once he leaves school as long as it is working with people. If this is all Bob cares about he is likely to make a bad choice because:

- A....this kind of work usually requires a college degree
- B..employers usually hire girls for such work.
- C....people look down on men who work with people because such work is usually done by girls
- D..occupations in which one works with people can be very different from each other in the abilities and interests which are needed.

PART 2 Occupations are different in the amount of education required for employment. Match the occupation in Column A with the amount of education usually required (Column B) by making the letter of the correct answer on the answer sheet:

COLUMN A

Occupation

- 38. Stenographer
- 39. Dental Technician
- 40. Family Doctor (Physician)
- 41. Mail Carrier
- 42. Plumber
- 43. Computer Operator
- 44. Bank Clerk
- 45. Social Worker

COLUMN B

Education

- A. High School Graduation
- B. Apprenticeship Training
- C. Technical School or Community College (2 year)
- D. College Degree (4 year)
- E. Professional Degree Beyond College

PART 3 Many occupations use special tools. Below is a list of special tools or equipment and a list of occupations. Match the occupation in Column A with its equipment (Column B) by marking the letter of the correct answer on the answer sheet.

COLUMN A

Occupation

- 46. Electrician
- 47. Bookkeeper
- 48. Bricklayer
- 49. Dressmaker
- 50. Medical Technician

COLUMN B

Equipment

- A. Manikin
- B. Ammeter
- C. Centrifuge
- D. Trowel
- E. Ledger

00069

Below you are asked to identify skills which are necessary for specific jobs. Give the best answers you can, and work as rapidly as possible. You will be allowed 12 minutes to complete this portion.

1. List 4 skills that a teacher must have:

- a. _____
- b. _____
- c. _____
- d. _____

2. List 4 skills that a school bus driver must have:

- a. _____
- b. _____
- c. _____
- d. _____

3. List 3 skills that a chef and a carpenter have in common:

- a. _____
- b. _____
- c. _____

4. List 3 skills that an actor and a pro quarterback have in common:

- a. _____
- b. _____
- c. _____

5. List 3 skills that a veterinarian and a psychiatrist have in common:

- a. _____
- b. _____
- c. _____

6. List 3 skills that a typist and a mail sorter (Post Office) have in common:

- a. _____
- b. _____
- c. _____

7. List 5 skills which you already have that could be required on a job:

- a. _____
- b. _____
- c. _____
- d. _____
- e. _____

00071

REANALYSIS OF 1974-75 COMPUTER GUIDANCE DATA

One of the components of the Career Alternatives Model (CAM) receiving attention in the evaluation of 1974-75 was the Computer Guidance program at the senior high school level. The evaluation team was particularly interested in how students using the Computer Guidance program for varying lengths of time scored on the Career Development Inventory (CDI) as developed by Super and Forrest. The mean scores as shown in Table 1 are taken from the CAM Final Evaluation Report, 1974-75. While these figures show significantly higher scores for the subgroup of CAM students using Computer Guidance, there existed no controls in the earlier analysis for any differences in general ability. Since the Computer Guidance program involved some degree of self-selection, there is always the possibility that differences between the groups other than the educational program in question may affect the outcome scores on the dependent measure.

In the Final Evaluation Report, 1974-75, students who had participated in the Computer Guidance program were reported to have scored significantly higher than the overall group of CAM students on all of the subscales and the total score. The largest difference (in terms of separation in standard deviation units) was observed on Subscale A with differences on the other two subscales showing a lesser effect. In addition to the difference observed between the groups which had the Computer Guidance and the overall CAM treatment, there was also a difference between the group which had spent one hour or less using the computer and the group which had more than one hour of computer usage. The finding suggested that the longer the participation in the Computer Guidance program, the higher the scores on the CDI.

00072

As mentioned above, these results were somewhat troubling to both the evaluation team and the project staff. Even though appropriate parametric statistical procedures had been used, the subjects both self-selected themselves into the Computer Guidance program and decided on the amount of time spent on the computer. While there are a large number of possible differences between those who decide to use the Computer Guidance program and those who do not, the variable which seemed most necessary to try to exclude as an alternative explanation of the results was the basic intelligence of the subjects. The concerns were that scores on the CDI may be related to the intelligence of the subjects and that subjects who are more intelligent may be those that decide to investigate careers using the computer. In order to investigate this hypothesis and to eliminate the possible effects of differences in intelligence, a supplementary grant was obtained from the Washington State Commission for Vocational Education to reanalyze the data using the intelligence of the students as a covariate in an analysis of covariance using the levels of participation as the independent variable and scores on the CDI as the dependent measure.

The evaluation data for the Computer Guidance program included CDI scores of subjects from the 10th, 11th, and 12th grades at two high schools -- Evergreen and Glacier. The IQ's which were used for the covariate in the reanalysis were obtained from 10th-grade testing done in the school district. These tests were at most then two years old. The roster of students for the last three years for each high school was scanned to match the IQ's with the CDI test scores for all those students for whom data were available from the CAM project.

CAM evaluation data were available for a total of 325 students, 205 of whom came from the two high schools using Computer Guidance. Of these 205 students, 16 had more than one hour on the computer, 66 had one hour or less on the computer, and the remaining 123 had no Computer Guidance exposure. The reanalysis

00073

was done for all students for whom IQ's could be found. This reduced the groups to ten with more than one hour on the computer, 51 with one hour or less, and 97 with no exposure. It is unfortunate that the small sample of students with more than one hour on the computer was reduced to as great a degree as it was. This unanticipated phenomenon reduces the power of the following tests to identify significant differences should they be present.

The results of the analysis of covariance provide uniformly nonsignificant tests of significance. The adjusted means are presented in Table 2. This adjusted mean is the predicted mean score for each of the groups if the intelligence level of each group were the same. The actual mean score of the groups is presented in parentheses immediately below the adjusted means. The most striking feature of the table is that it really appears that the group which spent the most time on the computer is different from the other groups. The adjusted means for this sample group are clearly higher than for the other two groups. The F's listed below each column of means, however, show that the differences did not prove significant at the commonly accepted five percent level of significance. This apparent paradox is directly related to the smallness of the sample of students who spent more than an hour on the computer. It is simply difficult to prove significance of differences when the sample size is only ten students.

The means for the covariate, the IQ scores, are also presented in Table 2. In general, brighter students are attracted to the computer. The average of all students involved in the program differs significantly from the students with no involvement. There appears to be some indication, however, that the amount of time spent on the computer is inversely related to intelligence. Further division of the one hour or less group into those who spent less than 31 minutes and those who spent 31-to-60 minutes produces a clear trend in the mean IQ's. The

group with less than 31 minutes had a mean IQ of 108.8, the group with 31-to-60 minutes had a mean of 103.2, while the group with greater than 60 minutes had a mean of 101.9. This effect of decreasing IQ associated with increased participation is interesting but not statistically significant.

The IQ's were obtained for the students in the other Highline District high school as well to determine whether the other findings reported in the Final Evaluation Report, 1974-75, were influenced by intelligence. Score-IQ pairings were obtained for 55 more students. An analysis of covariance was conducted using sex and school as the classifications of students. This showed no significant finding for either sex or school. This contradicts to some extent the finding of the earlier report indicating differences existing between the sexes in CDI scores. In inspecting the data, the females tend to score higher than the males on all subscales, but the effects are not significant. An analysis was also run to check on the effect of the OVIS. As reported in the final report, the difference between those having the OVIS and those not having it was non-significant.

As suspected, the results of the analysis of covariance differ from the results previously reported in the final report. In general, the students who were attracted to the Computer Guidance program tended to be those who were brighter than the students who did not use the computer. When the scores on the CDI subscales and total were compared for students who had the same average level of intelligence, there was no significant difference between the groups. Thus, the earlier result was at least partially a reflection of the differing levels of intelligence rather than differences caused by the Computer Guidance program.

While the overall test of significance as reported in the Final Evaluation Report, 1974-75, was changed due to the interference of intelligence, the

00075

TABLE 1

Means for Computer Guidance Treatment Group on CDI Scales

CAM Treatment Group	Number of Students	Subscale			Total
		A	B	C	
Computer Guidance (up to 1 hour)	66	112.4	265.2	18.8	395.4
Computer Guidance (more than 1 hour)	16	121.4	295.3	20.0	436.7
Total CAM Students	327	106.6	257.6	18.0	382.3

TABLE 2

Adjusted Means and Tests of Significance for the CDI and Intelligence
According to Student Involvement in Computer Guidance

Level of Involvement.	Number of Students.	Mean IQ	Career Development Inventory (CDI) ^a			
			Subscale			Total
			A	B	C	
None	97	96.8	104.3 (103.9)	256.2 (253.5)	18.7 (18.1)	379.2 (375.5)
One Hour or Less	51	105.6	109.5 (111.2)	257.7 (262.6)	18.3 (19.3)	385.6 (393.2)
More than One Hour	10	101.9	118.9 (119.5)	284.8 (286.5)	19.5 (19.8)	423.2 (425.8)
F Test for Mean Differences ^b		8.63	2.34	1.39	0.54	1.90

^aThe scores in parentheses below the adjusted means represent the actual mean score for the designated group.

^bCritical values for $F_{.05} = 3.07$. Above tests are all analyses of covariances with two and 154 degrees of freedom with the exception of the test for IQ's, which is an analysis of variance with two and 155 degrees of freedom.

CAREER DEVELOPMENT INVENTORY

NAME _____

DATE _____

The Career Development Inventory (CDI) asks you about school, work, your future career, and some of the plans you may have made. The only right answers are the ones which are right for you. Later, some questions ask you about career facts; others ask you to judge plans of other students. Give the best answers you can.

Following the initial page of background information, you will find nine distinct sets of questions. The instructions for each set are explained in the test booklet. Please mark all answers directly on the test booklet and ask questions of the test monitor as needed. This is not a time test, but you are urged to work as rapidly as you can.

Background Information

Please circle the number corresponding to the response that is right for you.

1. Please indicate your sex.	1 Female 2 Male
2. Please indicate your grade level.	1 10th grade 2 11th grade 3 12th grade
3. Have you taken the Ohio Vocational Interest Survey (VIS) within the past year?	1 Yes 2 No 3 Don't Remember
4. Did you use the Computer Guidance System (sometimes called Mr. Wizard) during the last school year (1974-75)?	1 Yes 2 No
5. How much time have you spent on the Computer Guidance System this school year (in 1975-76)?	1 None 2 0 - 30 minutes 3 31 - 60 minutes 4 61+ minutes
6. Have you taken the Armed Services Vocational Aptitude Battery (ASVAB)?	1 Yes 2 No 3 Don't Remember
7. Have you visited the Career Information Center (Room 154) since the beginning of this school year?	1 Yes 2 No

00078

Your Future Occupation

In your present thoughts and plans, what kind of work would you like to do when you finish all of your education and training? What kind of occupation do you plan to enter? For example, bookkeeper, machinist, lawyer, registered nurse, small store owner, waitress, engineer, shop foreman, elementary teacher, truck driver, etc. Write the name(s) of the occupation(s) you have thought about on the lines below:

If you have given more than one occupation, put an "X" in front of your first choice, the one you prefer more than the others.

FINISHED! Please wait for further instructions. Thank you.

I. How much thinking and planning have you done in the following areas? What kinds of plans do you have? For each question below choose one of the following answers to show what you have done. Place the number corresponding to your selected response to the left of each item.

- 1) I have not given any thought to this.
- 2) I have given some thought to this, but haven't made any plans yet.
- 3) I have some plans, but am still not sure of them.
- 4) I have made definite plans, but don't know how to carry them out.
- 5) I have made definite plans, and know what to do to carry them out.

- ___ 1. Finding out about educational and occupational possibilities by going to the library, sending away for information, or talking to somebody who knows about the possibilities.
- ___ 2. Talking about career decisions with an adult who knows something about me.
- ___ 3. Taking high school courses which will help me decide what line of work to go into when I leave school or college.
- ___ 4. Taking high school courses which will help me in college, in job training, or on the job.
- ___ 5. Taking part in school or out of school activities which will help me in college, in training, or on the job.
- ___ 6. Taking part in school or after school activities (for example, science club, school newspaper, Sunday School teaching, volunteer nurse's aide) which will help me decide what kind of work to go into when I leave school.
- ___ 7. Getting a part-time or summer job which will help me decide what kind of work I might go into.
- ___ 8. Getting a part-time or summer job which will help me get the kind of job or training I want.
- ___ 9. Getting money for college or training.
- ___ 10. Dealing with things which might make it hard for me to get the kind of training or the kind of work I would like.
- ___ 11. Getting the kind of training, education, or experience which I will need to get into the kind of work I want.
- ___ 12. Getting a job once I've finished my education and training.
- ___ 13. Doing the things one needs to do to become a valued employee who doesn't have to be afraid of losing his job or being laid off when times are hard.
- ___ 14. Getting ahead (more money, promotions, etc.) in the kind of work I choose.

II. High School students differ greatly in the amount of time and thought they give to making choices. Use the statements below to compare yourself to the typical students of your sex in your grade on each of the following kinds of choices. On all except Item #22, place the number corresponding to your selected response on the space to the left of each item.

Compared to my classmates I am . . .

- 1) much below average, not as good as most
- 2) a little below average
- 3) average
- 4) a little above average
- 5) much above average, better than most

. . . in the amount of time and thought I give to:

- 15. Choosing high school courses.
- 16. Choosing high school activities.
- 17. Choosing out-of-school activities.
- 18. Choosing between college, junior college, business school, technical school, work, military service, marriage, homemaking, etc.
- 19. Choosing a college, branch of military service, wife or husband, etc.
- 20. Choosing an occupation for after high school, college, or job training.
- 21. Choosing a career in general.
- 22. How would you rate your plans for "after high school?" (Please circle the number corresponding to your appropriate response.)
 - 1) Not at all clear or sure.
 - 2) Not very clear
 - 3) Some not clear, some clear.
 - 4) Fairly clear.
 - 5) Very clear, all decided.

8

III. Below are five possible answers to use in answering questions 23 through 33, questions about how much you know about the occupation you said you like best on page two. Mark the number of your choice to the left of each question.

I know

- 1) hardly anything
- 2) a little
- 3) an average amount
- 4) a good deal
- 5) a great deal

. . . about:

- ___ 23. What people really do on the job.
- ___ 24. Specialties in the occupation.
- ___ 25. Different places where people might work in this occupation.
- ___ 26. The abilities and traits needed in the occupation.
- ___ 27. The physical working conditions.
- ___ 28. The education or training needed to get into the occupation.
- ___ 29. The courses offered in high school that are the best for the occupation.
- ___ 30. The need for new people in the occupation.
- ___ 31. Different ways of entering the occupation.
- ___ 32. The starting pay in the occupation.
- ___ 33. The chances for getting ahead in the occupation.

00082

IV. Here are five answers which can be used for questions 34 through 47. Use these answers to show whether or not, you would go to the sources of information listed below for help in making your job or college plans. Mark the number of your choice on the space to the left of each question.

I would . . .

- 1) definitely not
- 2) probably not
- 3) not be sure whether to
- 4) probably
- 5) definitely

. . . go to:

- ___ 34. Father or male guardian.
- ___ 35. Mother or female guardian.
- ___ 36. Brothers, sisters, or other relatives.
- ___ 37. Friends.
- ___ 38. Coaches of teams I have been on.
- ___ 39. Minister, priest, or rabbi.
- ___ 40. Teachers.
- ___ 41. School counselors.
- ___ 42. Private counselors, outside of school.
- ___ 43. Books with the information I needed.
- ___ 44. Audio or visual aids like tape recordings, movies, or computers.
- ___ 45. College catalogues.
- ___ 46. Persons in the occupation or at the college I am considering.
- ___ 47. TV shows, movies, or magazines.

00083

V. Here again are five answers which are to be used with the following items. This time use the statements to show which of the sources of information below have already given you information which has been helpful to you in making your job or college plans.

I have gotten

- 1) no useful information
- 2) very little useful information
- 3) some useful information
- 4) a good deal of useful information
- 5) a great deal of useful information

. . . from:

- ___ 48. Father or male guardian.
- ___ 49. Mother or female guardian.
- ___ 50. Brothers, sisters, or other relatives.
- ___ 51. Friends.
- ___ 52. Coaches of teams I have been on.
- ___ 53. Minister, priest, or rabbi.
- ___ 54. Teachers.
- ___ 55. School counselors.
- ___ 56. Private counselors, outside of school.
- ___ 57. Books with the information I needed.
- ___ 58. Audio or visual aids like tape recordings, movies, or computers.
- ___ 59. College catalogues.
- ___ 60. Persons in the occupation or at the college I am considering.
- ___ 61. TV shows, movies, or magazines.

00084

VI. Here, each question has its own set of possible answers. Please circle the number corresponding to your response.

62. Which of the following is the best source of information about job duties and opportunities?

- 1) The Encyclopedia Britannica
- 2) World Almanac
- 3) Scholastic Magazine
- 4) The Occupational Index
- 5) The Occupational Outlook Handbook

63. Which one of the following would be most useful for detailed information about getting into college?

- 1) The World Book Encyclopedia
- 2) Webster's Collegiate Dictionary
- 3) Lovejoy's College Guide
- 4) Reader's Digest
- 5) The Education Index

64. Which of the following pairs of occupations involves the same level of training and responsibility?

- 1) Tailor, Sales Clerk
- 2) Engineer, Banker
- 3) Tailor, Engineer
- 4) Banker, Sales Clerk

65. The occupational fields expected to grow most rapidly during the next ten years are:

- 1) Professional and Service
- 2) Sales and Crafts
- 3) Crafts and Clerical
- 4) Labor and Sales

66. Between 1910 and 1970, the industry employing the greatest number of workers changed from:

- 1) Agriculture to wholesale and retail trade
- 2) Manufacturing to agriculture
- 3) Wholesale and retail trade to manufacturing
- 4) Agriculture to manufacturing

00085

VII. Occupations are different in the amount of education required for employment. Match the occupation in Column A with the amount of education usually required (Column B) by inserting the number of the correct answer to the left of the item in Column A.

COLUMN A	COLUMN B
<u>Occupation</u>	<u>Education</u>
___ 67. Stenographer	1) High School Graduation
___ 68. Dental Technician	2) Apprenticeship Training
___ 69. Family Doctor (Physician)	3) Technical School or Community College (2-year)
___ 70. Mail Carrier	4) College Degree (4-year)
___ 71. Plumber	5) Professional Degree Beyond College
___ 72. Computer Operator	
___ 73. Bank Clerk	
___ 74. Social Worker	

VIII. Many occupations use special tools. Below is a list of special tools or equipment and a list of occupations. Match the occupation in Column A with its equipment (Column B).

COLUMN A	COLUMN B
<u>Occupation</u>	<u>Equipment</u>
___ 75. Electrician	1) Mawikin
___ 76. Bookkeeper	2) Ammeter
___ 77. Bricklayer	3) Centrifuge
___ 78. Dressmaker	4) Trowel
___ 79. Medical Technician	5) Ledger

IX. Here again, each question has its own set of answers. Circle the number corresponding to your selected response.

80. In the 9th and 10th grades, plans about jobs and occupations should:

- 1) be clear.
- 2) not rule out any possibilities.
- 3) keep open the best possibilities.
- 4) not be something to think about.

00086

81. Decisions about high school courses can have an effect on:

- 1) the kind of diploma one gets.
- 2) the kind of training or education one can get after high school.
- 3) later occupational choices.
- 4) how much one likes school.
- 5) all of these.

82. Decisions about jobs should take into account:

- 1) strengths, or what one is good at learning and doing.
- 2) what one likes to do.
- 3) the kind of person one is.
- 4) the chances for getting ahead in that kind of job.
- 5) all of these.

83. One of the things that great artists, musicians, and professional athletes have in common is the desire to:

- 1) make money.
- 2) have large audiences.
- 3) be the best there is at what they do.
- 4) teach others to do what they do.

84. Mary thinks she might like to become a computer programmer, but she knows little about computer programming. She is going to the library to find out more about it. The most important thing for Mary to know now is:

- 1) what the work is, what she would do in it.
- 2) what the pay is.
- 3) what the hours of work are.
- 4) where she can get the right training.

85. Jane likes her high school biology and general science courses best. She likes to do her schoolwork alone so she can concentrate. When she begins to think about her future occupation, she should consider:

- 1) Nurse.
- 2) Accountant.
- 3) Medical Laboratory Technician.
- 4) Elementary School Teacher.

00087

86. Peter is the best speaker on the school debating team. The school yearbook describes him as "our golden-tongued orator—a real nice guy who can listen as well as talk—he could sell refrigerators to the Eskimos." Peter will probably graduate in the bottom half of his class, although his test scores show that he is very bright. His only good grades (mostly B's) are in business subjects. His poorest grades are in English and social studies (mostly C's).

Peter's desire to become a trial lawyer is not very realistic because:

- 1) with his grades he will have difficulty getting into a four-year liberal arts college.
- 2) he has poor grades in the subjects that are most important for law.
- 3) there is much more to being a lawyer than being good at public speaking.
- 4) all of the above are good reasons for thinking that Peter will have a hard time becoming a trial lawyer.

87. The facts about Peter suggest that he should think about becoming:

- 1) an accountant.
- 2) a salesman.
- 3) an actor.
- 4) a school counselor.
- 5) a lawyer.

88. Ernie took some tests which show that he might be good at clerical work. Ernie says, "I just can't see myself sitting behind a desk for the rest of my life. I'm the kind of guy who likes variety. I think being a traveling salesman would suit me fine." He should:

- 1) disregard the tests and do what he wants to do.
- 2) do what the tests say since they know better than he does what he would be good at.
- 3) look for a job which will let him use his clerical abilities but not keep him pinned to a desk.
- 4) ask to be tested with another test since the results of the first one are probably wrong.

89. Joe is very good with his hands and there isn't anybody in his class who has more mechanical aptitude. He is also good at art. His best subject at school is math. Joe likes all of these things.

What should Joe do? Should he:

- 1) look for an occupation in which he can use as many of his interests and abilities as possible?
- 2) pick an occupation which uses math since there is a better future in that than in art or in working with his hands?
- 3) decide which of these activities he is best at, or likes the most, and then pick an occupation which uses that kind of activity?
- 4) put off deciding about his future and wait until he loses interest in some of these activities?

00088

90. ~~Betty gets very good science grades but this isn't her favorite subject. The subject she likes best is art even though her grades in it are only average. Betty is most likely to do well in her future occupation if she:~~

- 1) forgets about her interest in art since she is so much better in science.
- 2) doesn't worry about the fact that she isn't very good at art, because if you like something you can become good at it.
- 3) looks for an occupation which uses both art and science, but more science than art.
- 4) looks for an occupation which involves both science and art, but more art than science.

91. Bob says he really doesn't care what kind of work he gets into once he leaves school as long as it is working with people. If this is all Bob cares about he is likely to make a bad choice because:

- 1) this kind of work usually requires a college degree.
- 2) employers usually hire girls for such work.
- 3) people look down on men who work with people because such work is usually done by girls.
- 4) occupations in which one works with people can be very different from each other in the abilities and interests which are needed.

Thank you for completing the survey. Your responses will be useful in evaluating career education efforts in our schools.

00089

CAREER INFORMATION CENTER SURVEY

NAME _____

STUDENT NUMBER _____

Your high school has operated an extensive Career Information Center during the 1975-76 school year. This Career Information Center has provided a number of services to both students and faculty and has had as one of its major aims the provision of vocational information for students. The present survey is intended to survey the extent to which students have actually used the several services provided by the Career Center and the students' opinion of those services received. The survey also will be used to identify any relationships between use of the Career Information Center and knowledge of the working world. You are asked to complete successive parts of the questionnaire within the next 45 minutes and to return the survey instrument directly to the test administrator from the Bureau of School Service and Research, University of Washington. All analysis will be completed by the Bureau and your individual responses will remain confidential.

00090

Part I -- Biographical Information

Please circle the number corresponding to the response that is right for you.

1. Please indicate your school.	1 Evergreen 2 Glacier 3 Highline 4 Mt. Rainier 5 Tyee
2. Please indicate your grade level.	1 10th grade 2 11th grade 3 12th grade
3. Please indicate your sex.	1 Female 2 Male
4. a) What are your plans for the year immediately following high school graduation? (Circle all that apply; if you have absolutely no plans following high school, please circle #6 for uncertain and proceed to Question #5.)	1 Continue Formal Education (as full-time student) 2 Continue Formal Education (as part-time student) 3 Work Full-Time (if job can be found) 4 Work Part-Time (if such a position can be found) 5 Other (please specify) 6 Uncertain as to plans following high school
b) How certain are your plans as described in #4a above?	1 Quite Certain 2 Rather Tentative 3 Very Tentative
5. a) How many different classes are you taking at the present time?	1 one 2 two 3 three 4 four 5 five 6 six or more
b) How many of your classes have a definite vocational emphasis (i.e., the class is focused on teaching skills which are used in the world of work)?	1 one 2 two 3 three 4 four 5 five 6 six or more

00091

Part II -- Use of Career Information Center Services

For each of the following service areas, please check first your familiarity with the service as listed. The critical question here is whether or not you are aware that the service exists in the Career Center. For those you are familiar with, you are asked next to indicate the extent of your use during the 1975-76 school year. Finally, for those services actually used, please indicate your own judgment as to whether the service was very helpful, somewhat helpful, or of little or no help.

Service Area	Familiar With Service		Your Level of Use			Value of Service to You		
	Yes	No	Very Much	Some	Not at All	Very Helpful	Somewhat Helpful	Little or No Help
Utilizing Computer Guidance System (sometimes called Mr. Wizard)								
Reviewing Materials and Pamphlets in the Career Center								
Discussing Career Plans with Career Information Center Staff Including Career Center Teacher Aides								
Taking Vocational or Career Tests (e.g., OVIS, ASVAB)								
Utilizing Job Placement Information Available in the Career Center								
Participating in a Career-Oriented Field Trip (using mini-bus)								

00092

Part III -- Information About Jobs

The following are a set of questions testing your knowledge about jobs and related educational requirements. In each case, please circle the number corresponding to the best answer.

1. Which one of the following is the best source of information about job duties and opportunities?
 - 1 The Encyclopedia Britannica
 - 2 World Almanac
 - 3 Scholastic Magazine
 - 4 The Occupational Index
 - 5 The Occupational Outlook Handbook

2. Which one of the following would be most useful for detailed information about getting into college?
 - 1 The World Book Encyclopedia
 - 2 Webster's Collegiate Dictionary
 - 3 Lovejoy's College Guide
 - 4 Reader's Digest
 - 5 The Education Index

3. Which one of the following pairs of occupations involves the same level of training and responsibility?
 - 1 Tailor, Sales Clerk
 - 2 Engineer, Banker
 - 3 Tailor, Engineer
 - 4 Banker, Sales Clerk

4. The occupational fields expected to grow most rapidly during the next ten years are:
 - 1 Professional and service
 - 2 Sales and crafts
 - 3 Crafts and clerical
 - 4 Labor and sales

5. Between 1910 and 1970, the industry employing the greatest number of workers changed from:
 - 1 Agriculture to wholesale and retail trade
 - 2 Manufacturing to agriculture
 - 3 Wholesale and retail trade to manufacturing
 - 4 Agriculture to manufacturing

00093

6. In the 9th and 10th grades, plans about jobs and occupations should:
 - 1 be clear
 - 2 not rule out any possibilities
 - 3 keep open the best possibilities
 - 4 not be something to think about
7. Decisions about high school courses can have an effect on:
 - 1 the kind of diploma one gets
 - 2 the kind of training or education one can get after high school
 - 3 later occupational choices
 - 4 how much one likes school
 - 5 all of these
8. Decisions about jobs should take into account:
 - 1 strengths, or what one is good at learning and doing
 - 2 what one likes to do
 - 3 the kind of person one is
 - 4 the chances for getting ahead in that kind of job
 - 5 all of these
9. One of the things that great artists, musicians, and professional athletes have in common is the desire to:
 - 1 make money
 - 2 have large audiences
 - 3 be the best there is at what they do
 - 4 teach others to do what they do
10. Mary thinks she might like to become a computer programmer, but she knows little about computer programming. She is going to the library to find out more about it. The most important thing for Mary to know now is:
 - 1 what the work is, what she would do in it
 - 2 what the pay is
 - 3 what the hours of work are
 - 4 where she can get the right training
11. Jane likes her high school biology and general science courses best. She likes to do her schoolwork alone so she can concentrate. When she begins to think about her future occupation, she should consider:
 - 1 Nurse
 - 2 Accountant
 - 3 Medical Laboratory Technician
 - 4 Elementary School Teacher

12. Peter is the best speaker on the school debating team. The school yearbook describes him as "our golden-tongued orator -- a real nice guy who can listen as well as talk -- he could sell refrigerators to the Eskimos." Peter will probably graduate in the bottom half of his class, although his test scores show that he is very bright. His only good grades (mostly B's) are in business subjects. His poorest grades are in English and social studies (mostly C's).

Peter's desire to become a trial lawyer is not very realistic because:

- 1 with his grades he will have difficulty getting into a four-year liberal arts college
- 2 he has poor grades in the subjects that are most important for law
- 3 there is much more to being a lawyer than being good at public speaking
- 4 all of the above are good reasons for thinking that Peter will have a hard time becoming a trial lawyer.

13. The facts about Peter suggest that he should think about becoming:

- 1 an accountant
- 2 a salesman
- 3 an actor
- 4 a school counselor
- 5 a lawyer

14. Ernie took some tests which show that he might be good at clerical work. Ernie says, "I just can't see myself sitting behind a desk for the rest of my life. I'm the kind of guy who likes variety. - I think being a traveling salesman would suit me fine." He should:

- 1 disregard the tests and do what he wants to do
- 2 do what the tests say since they know better than he does what he would be good at
- 3 look for a job which will let him use his clerical abilities but not keep him pinned to a desk
- 4 ask to be tested with another test since the results of the first one are probably wrong

15. Joe is very good with his hands and there isn't anybody in his class who has more mechanical aptitude. He is also good at art. His best subject at school is math. Joe likes all of these things.

What should Joe do? Should he:

- 1 look for an occupation in which he can use as many of his interests and abilities as possible?
- 2 pick an occupation which uses math since there is a better future in that than in art or in working with his hands?
- 3 decide which of these activities he is best at, or likes the most, and then pick an occupation which uses that kind of activity?
- 4 put off deciding about his future and wait until he loses interest in some of these activities?

16. Betty gets very good science grades but this isn't her favorite subject. The subject she likes best is art even though her grades in it are only average. Betty is most likely to do well in her future occupation if she:
- 1 forgets about her interest in art since she is so much better in sciences
 - 2 doesn't worry about the fact that she isn't very good at art, because if you like something you can become good at it
 - 3 looks for an occupation which uses both art and science, but more science than art
 - 4 looks for an occupation which involves both science and art, but more art than science
17. Bob says he really doesn't care what kind of work he gets into once he leaves school as long as it is working with people. If this is all Bob cares about he is likely to make a bad choice because:
- 1 this kind of work usually requires a college degree
 - 2 employers usually hire girls for such work
 - 3 people look down on men who work with people because such work is usually done by girls
 - 4 occupations in which one works with people can be very different from each other in the abilities and interests which are needed

Occupations are different in the amount of education required for employment. Match the occupation in Column A with the amount of education usually required (Column B) by inserting the number of the correct answer to the left of the item in Column A.

COLUMN A	COLUMN B
<u>Occupation</u>	<u>Education</u>
_____ 18. Stenographer	1 High School Graduation
_____ 19. Dental Technician	2 Apprenticeship Training
_____ 20. Family Doctor (Physician)	3 Technical School or Community College (2-year)
_____ 21. Mail Carrier	4 College Degree (4-year)
_____ 22. Plumber	5 Professional Degree Beyond College
_____ 23. Computer Operator	
_____ 24. Bank Clerk	
_____ 25. Social Worker	

Many occupations use special tools. Below is a list of special tools or equipment and a list of occupations. Match the occupation in Column A with its equipment (Column B).

COLUMN A		COLUMN B	
<u>Occupation</u>		<u>Equipment</u>	
_____ 26.	Electrician	1	Manikin
_____ 27.	Bookkeeper	2	Ammeter
_____ 28.	Bricklayer	3	Centrifuge
_____ 29.	Dressmaker	4	Trowel
_____ 30.	Medical Technician	5	Ledger

Part IV -- Beliefs About Career and Life Decisions

Following are sentences which might describe you or what you believe. Read each sentence and decide whether you think that the sentence is true or false. Circle T if you decide that the sentence is true, and circle F if you decide that the sentence is false. Be sure to respond to every sentence.

- | | <u>True</u> | <u>False</u> | |
|-----|-------------|--------------|---|
| 1. | T | F | If I decide to do something, I always get it done. |
| 2. | T | F | Teachers usually have good advice for someone who has a problem. |
| 3. | T | F | I believe in luck. |
| 4. | T | F | People who get fired from jobs are the ones who deserve it the most. |
| 5. | T | F | Other people usually decide what is best for me. |
| 6. | T | F | Getting a traffic ticket is mostly a matter of bad luck. |
| 7. | T | F | The only way to get good grades is to study hard. |
| 8. | T | F | Other people are often getting me into trouble. |
| 9. | T | F | There's no use in planning because plans are usually changed by unexpected events. |
| 10. | T | F | If I play around too much in school, I probably will never get a good job. |
| 11. | T | F | Success depends mostly on knowing the right people. |
| 12. | T | F | Trouble often finds me without my doing anything. |
| 13. | T | F | I am responsible for the things that happen to me. |
| 14. | T | F | It is almost impossible to get ahead if you don't know the right people. |
| 15. | T | F | What is going to happen in my future is pretty much already determined. |
| 16. | T | F | If you lose a contest, it is because you did not try hard enough. |
| 17. | T | F | I depend on the teacher to tell me when I am doing a good job. |
| 18. | T | F | Getting in trouble once in a while is something that just can't be helped. |
| 19. | T | F | Students who win class elections are the ones who work the hardest. |
| 20. | T | F | Other people are the greatest cause of my problems. |
| 21. | T | F | Finding an interesting job is mainly a matter of luck. |
| 22. | T | F | I have been unable to buy things that I wanted when I did not plan ahead and save for them. |
| 23. | T | F | Pay raises are given to the workers that the boss likes the most. |

24. T F If I am late for dinner, it is usually not my fault.
25. T F If I try hard, I can be anything I want to be.
26. T F Low grades go to the students the teacher doesn't like.
27. T F Many things happen to me that I don't know how to control.
28. T F People who cannot find a good job have simply not tried hard enough to find one.
29. T F Decisions by other people will determine my future.
30. T F Students who fail tests are bad guessers.
31. T F Being a hard worker is most important in getting ahead.
32. T F If I don't understand something in class, it's usually because the teacher wasn't clear enough.
33. T F On most jobs it takes a lot of luck to get everything done on time.
34. T F When I don't do well on a test, it is because I did not study hard enough.
35. T F To get most job promotions you need to know the right people.
36. T F Most of the time I can't help doing the things that get me in trouble.
37. T F If I really tried, I could become a class officer.
38. T F Many teachers get angry at students for no good reason.
39. T F Luck has been very important in my life.
40. T F Teachers give low grades to those students who don't work hard enough.
41. T F I don't have much control over what happens to me.
42. T F Many people's problems are caused by bad luck.
43. T F What you get out of school depends entirely upon what you put into it.
44. T F I get blamed for lots of things that really aren't my fault.
45. T F Successful people have simply had better luck than unsuccessful people.
46. T F When I get into trouble, I know pretty well what it is that I did wrong.
47. T F It is easy to get good grades if the teacher likes you.
48. T F Bad luck explains a lot of my misfortunes.
49. T F Most teachers really care about their students.
50. T F Kids get into trouble at school because of other students.

Thank you for your assistance in completing this survey relating to the Career Information Center services in your school, and please return the completed survey form to the last administrator.

CAREER INFORMATION CENTER SURVEY

NAME _____

During the 1975-76 school year, your school has operated a Career Information Center designed to provide vocational-oriented information and guidance to both students and faculty. The present survey is intended to determine the impact of the Career Information Center upon the overall school program; specifically, the extent of faculty-Center interaction, faculty knowledge of Center services and opinions of those services, and the amount of career-oriented activities in the classroom. You are asked to complete the attached questionnaire and return it in the envelope provided to the Bureau of School Service and Research, University of Washington, no later than May 1, 1976. Please note that Part III is to be completed only by those directly involved in classroom teaching. The analysis of survey data will be completed by the Bureau and your individual responses will remain strictly confidential. Your assistance in this evaluation will be greatly appreciated.

00100

School: _____

Subject(s) Taught (if any): _____

Grade Level(s) Taught (if any): _____

Part I.

1. What change, if any, has occurred in the amount of attention given to career concerns in your classroom this year? [Please circle the number corresponding to your response. Those persons not directly involved in classroom teaching should respond in relation to the school as a whole.]
 - 1 Decreased
 - 2 Remained the same
 - 3 Increased

2. The following is a list of student services provided by the Career Information Center. Please indicate your own level of familiarity with each service by checking (✓) the appropriate response column.

<u>Service</u>	<u>Very Familiar with Service</u>	<u>Aware of Service but not Well Informed</u>	<u>Not Aware of Service</u>
Computer Guidance System ("Mr. Wizard")	_____	_____	_____
Availability of career pamphlets and other materials	_____	_____	_____
Career Counseling with Career Information Center staff	_____	_____	_____
Vocational or career testing (e.g., OVIS, ASVAB)	_____	_____	_____
Availability of job placement information in the Center	_____	_____	_____
Career-oriented field trips sponsored by the Center	_____	_____	_____

Part II. For the questions that follow, select a single whole number which most closely approximates your response. Indicate your selection by placing the number in the space to the right of the scale.

1. How often have you been encouraged to visit your school's Career Information Center by either Center personnel or other school personnel?

Never 0 1 2 3 Quite Often _____

2. How often have you actually visited the Career Information Center?

Never 0 1 2 3 Quite Often _____

3. How often have you referred students to the Career Information Center for vocational guidance or other career-related information?

Never 0 1 2 3 Quite Often _____

4. To what extent have your contacts with the Career Information Center personnel been initiated by you (rather than by Center personnel)?

Not at All 0 1 2 3 Entirely _____

5. How much of an impact do you feel the Center has had in creating a career awareness at your school?

None 0 1 2 3 Quite a Bit _____

Part III. Please respond to the following questions if you are directly involved in classroom teaching.

1. How much assistance have you received from the Career Information Center in obtaining career-oriented materials for use in the classroom?

None 0 1 2 3 Quite a Bit _____

2. How often have you conferred with Center personnel specifically for the purpose of obtaining help in relation to career activities in the classroom?

Never 0 1 2 3 Quite Often _____

3. How often do you attempt to incorporate career concepts and activities into your ongoing classroom curriculum?

Never 0 1 2 3 Quite Often _____

4. How much of an impact do you feel the Career Information Center has had on the amount of attention given to career concerns in your classroom teaching?

None 0 1 2 3 Quite a Bit _____

Part IV.
