ABSTRACT

This report on the status of bilingual vocational training programs for adults was the result of a mandate requiring the Commissioner of Education and the Secretary of Labor to develop and disseminate information on the status of such programs in all parts of the United States and to evaluate the impact of such training on the shortages of well-trained personnel, the unemployment and underemployment of persons with limited English-speaking ability, and their ability to contribute fully to the economy of the United States. Chapter 2 summarizes the educational attainment and labor force participation of adults with non-English-speaking backgrounds. An inventory of bilingual vocational training programs for adults sponsored by the United States Office of Education and the Department of Labor and other public funds in each of the fifty states is provided in chapter 3. Chapter 4 gives a brief legislative history of the programs which have provided training for the limited-English-speaking populations. Chapter 5 consists of a brief literature review. A list of bilingual vocational training programs funded since June of 1976 is given in the appendix, as well as statistical information concerning the number and distribution of such programs by state and vocational offerings. The President
The White House
Washington, D.C. 20500

Dear Mr. President:

In our joint capacities as U.S. Commissioner of Education and Secretary of Labor, we are pleased to submit this report on "The Status of Bilingual Vocational Training" as required by Section 192 of the Vocational Education Act of 1963, as added by Section 841(a)(7) of Public Law 93-380.

This report includes findings from a number of sources, and provides national estimates of the educational attainment and labor force status of populations which include limited-English-speaking persons. Chapter Three is an Inventory of Bilingual Vocational Training Programs for adults sponsored by the U.S. Office of Education and the U.S. Department of Labor and other public funds in each of the 50 States. Chapter Four provides a brief legislative history of the programs which have provided training for the limited-English-speaking populations; this chapter identifies and describes the kinds of programs funded.

Faithfully yours,

Edward Aguirre

U.S. Commissioner

of Education

CHAPTER ONE

INTRODUCTION AND SUMMARY

This report on the status of bilingual vocational training programs was prepared as the first response to the report mandated by Section 192 of the Vocational Education Act of 1963 as added by Section 841(a)(7) of Public Law 93-380, which requires that the Commissioner of Education and the Secretary of Labor:
(1) develop and disseminate accurate information on the status of bilingual vocational training in all parts of the United States;
(2) evaluate the impact of such bilingual vocational training on the shortages of well-trained personnel, the unemployment and underemployment of such persons with limited English-speaking ability, and the ability of such persons to contribute fully to the economy of the United States; and (3) report their findings annually to the President and the Congress.

The U.S. Department of Labor and the U.S. Office of Education report on several tasks which have been completed or are now in progress to meet the legislative requirements.

The Survey of Languages

Populations with limited English ability have significantly less education, generally participate in the labor market _n relatively lower numbers, and have higher unemployment rates than those from English-speaking backgrounds, according to the Survey of Languages conducted by the Bureau of the Census for the National Center of Education Statistics in July 1975. The survey provides data on the social, economic, and language profiles of persons with language backgrounds other than English. While the survey does not report precise numbers of persons in the United States with limited English-speaking abilities, it does identify broad categories of such persons. In terms of these categories, data show years of school attended and labor force characteristics. The study indicates that for the total population 19 years of age or older, 9 percent have completed only the eighth grade or less. Fifty-eight percent of those whose usual language is not English report that they have completed only the eighth grade or less. The largest group, those from Spanish-speaking backgrounds, has an unemployment rate more than 5 percent greater than those from English-speaking backgrounds.

The Inventory

The Inventory of Bilingual Vocational Training Programs for Adults assesses the status and need of bilingual vocational training in all 50 States. The Inventory identifies 98 programs in 21 States for persons 16 or older who are no longer attending elementary or secondary schools. Approximately 13,000 students are enrolled at any given time in bilingual programs which provide occupational training in nearly 400 courses in seven major occupational areas. The largest area, trade and industrial, has about 170 courses in 35 different skills.

- 1 -

Thirty-seven (38 percent) of the programs are in California. Sixty-nine (81 percent) are in eight States: California, New York, Texas, Arizona, Pennsylvania, New Mexico, Massachusetts, and Connecticut. Most programs are offered by local education agencies, junior and community colleges, regional occupational centers, ethnic institutes, Job Corps and manpower agencies.

Authorizing Legislation

Although vocational education and manpower programs have served persons from non-English-language backgrounds for many years, the first legislation which specifically mandates persons with limited English-speaking abilities as target populations is the Education Amendments of 1974 and the Comprehensive Employment and Training Act of 1973 (CETA). Of these two Acts, only the 1974 Amendments to the Vocational Education Act (Part J) mandate bilingual vocational training. CETA, acting through local prime sponsors, can and does provide a wide range of employment and training services to the limited-English-speaking populations.

Vocational Education

State vocational agencies report that 702,243 students from Hispanic populations enrolled in vocational training programs during fiscal year 1975, but data do not indicate what percentage of this group or any other have limited English-speaking abilities. Prior to the 1974 Amendments some bilingual classes were found in some areas of high concentration where local officials hired bilingual instructors who, when necessary, used a language other than English to teach some or all of the students. These programs exist primarily in New York, California, and the southwestern States. However, the usual approach is to provide instruction in English as a second language prior to or concurrent with vocational training.

Part J, authorized under the 1974 Amendments as a categorical program for bilingual vocational training, in June 1975 funded 21 projects in nine States and Guam to train about 2,500 persons. In June 1976, 22 projects were funded in eight States to train 1,845 persons.

Employment and Training under CETA

State and local prime sponsors report about 46,200 limited-English-speaking persons as participants in 1975 in the many kinds of programs and services available under Title I--on-the-job training, classroom training, work experience, and support services. Title II, which provides for public employment programs, reports 18,200 limited-English speakers. Under the national programs funded under Title III for special groups, about 7,200 participants were reported as limited-English-speaking.

CETA can and does fund bilingual vocational programs as indicated in the Inventory. A wide variety of employment-related bilingual programs and services are provided, often under contract with local minority organizations for such services as outreach, recruitment, orientation, and job placement. In other CETA programs, prevocational and adult education (basic or remedial) are offered bilingually. Many prime sponsors have hired bilingual staff, and some neighborhood centers are staffed entirely with bilingual persons.

In recent years, Job Corps has placed increasing emphasis on ways to improve their programs for limited-English speakers. Six of the Job Corps centers, serving about 3,600 students, have occupational training programs in which many of the staff are bilingual; several other centers are now developing programs and materials to serve these limited-English-speaking populations.

Review of the Literature

An examination of the literature, evaluation reports, research, and other available data reveals some issues to be considered in providing bilingual vocational training for adults. However, few data directly relating to the results of such programs are reported.

Work in Progress

Another report is expected to include data from the Survey of Income and Education conducted by the Bureau of the Census. Data from this report, to be available in 1977, will more precisely identify the limited-English-speaking population in all 50 States. The report will provide information about an ongoing effort to determine the impact of the bilingual occupational training programs.

CHAPTER TWO

EDUCATIONAL ATTAINMENT AND LABOR FORCE PARTICIPATION OF ADULTS WITH NON-ENGLISH-SPEAKING BACKGROUNDS

Although the identification of non-English-language background groups can provide gross estimates of persons who are likely to have difficulty in speaking English, no information is available of the precise number of persons in the United States who have limited English-speaking abilities. An effort is in progress to obtain this information through the Survey of Income and Education conducted for the National Center for Education Statistics by the Bureau of the Census during the spring of 1976. The 1976 Survey does include questions which can be used to provide estimates of persons who have difficulty speaking and understanding instruction in English. Analyses from these data (to be available in 1977) will be provided as part of another report on the status of bilingual vocational training.

The present report uses parts of the Survey of Languages supplement to the Current Populations Survey (CPS), also conducted for the National Center for Education Statistics by the Bureau of the Census in July 1975 as a basis for estimating populations with a non-English-language background. The CPS is a household survey conducted monthly by the Bureau of the Census for the Bureau of Labor Statistics primarily to obtain national estimates of the labor force status of the U.S. population.

The Survey of Languages does offer a social, economic, and language profile for persons with non-English-language backgrounds. While the survey does not offer precise calculations of the numbers of limited-English-speaking persons, it does, by identifying broad categories of persons with non-English-language backgrounds, provide data to show years of school attended and labor force characteristics. These data show that persons from non-English-speaking backgrounds have significantly less education, generally participate in the labor market at a lower rate, and have higher unemployment rates than those from English-speaking backgrounds.

Approximately 42,000 households in each State and the District of Columbia responded to the questions about language. The data were collected by trained interviewers who interviewed responsible adult household members. Questions asked include those on place of birth, language spoken in the household, and the usual language spoken by

each of the individuals in the household. 1/ Results of these questions are reported as a means of estimating the size and nature of populations which contain persons with limited-English-speaking ability, and to use definitions consonant with those provided in the Bilingual Education Act.

The Bilingual Education Act provides the following definitions:

- (1) "The term 'limited English-speaking ability,' when used with reference to an individual, means--
 - (A) individuals who were not born in the United States or whose native language is a language other than English, and
 - (B) individuals who come from environments where a language other than English is dominant, as further defined by the Commissioner through regulations and, by reasons thereof, have difficulty speaking and understanding instruction in the English language.
- (2) "The term 'native language,' when used with reference to an individual of limited English-speaking ability, means the language normally used by such individuals, or in the case of a child, the language normally used by the parents of the child." (Section 703(a), Bilingual Education Act, Title VII, Elementary and Secondary Education Act, as amended by P.L. 93-380)

As a result, the Survey of Languages identified persons of non-English-language background as those who had one or more characteristics concerning non-English-language background: birth outside the United States, usual language spoken is not English, and the use of a non-English language in the household, either as a primary or secondary language. All persons in this report are limited to those 14 and older. Survey data by sex was not available at the time the report was prepared.

Limited English-Speaking Ability

It should be emphasized that these characteristics do not necessarily indicate limited English-speaking ability. For instance, some foreign-born persons come from countries where the dominant language is English, while other foreign-born persons may have learned English before moving to the United States. Also, a non-English language may be the primary language in the household for reasons other than an inability of most household members to speak English.

^{1/} Usual individual language was obtained only when a language other than English was spoken in the household as a first or second language.

Though this report cannot provide precise estimates of the number of persons in the United States who have difficulty speaking and understanding instruction in English, it can establish the broad population subgroups of which persons with limited English-speaking abilities are a part. Two gross estimates of non-English-language background are provided: (a) the total number of persons in households where a language other than English is spoken either as a first or second language and other persons who are foreign-born (see Table I); (b) the number of persons for whom the usual household or individual language is not English or additional persons who are foreign-born (see Table II).

Table I

Persons In Households Where A Language Other

Than English Is Spoken As A First Or

Second Language And Other Persons

Who Are Foreign-Born, Age 14 And

Over, In The United States

	<u>Categories</u>	Number of Persons
Α.	Persons who usually speak a language other than English	5,474,000
В.	Persons (other than the above) who live in households where the usual household language is not English	1,052,000
C.	Persons (other than A and B) who live in households where the usual household language is English, but another language is spoken	12,911,000
D.	All others who are foreign born or whose usual household or individual language is not English	208,000
E.	Additional foreign-born persons	3,041,000
F.	Persons for whom the usual household and individual language were not reported but who live in a household where a non-English language is spoken and who are native born	614,000
	Total	23,300,000

J.	All others for whom a non-English language is the usual household language or who are foreign-born		208,000
	TOTAL		12,715,000

Years of School Completed

Other information available from the CPS study is that relating to years of school completed, shown in Table III. For the total population, aged 19 or older, 19 percent have completed only eighth grade or less. From the foreign-born or those with non-English household or individual language, 40 percent have completed only eighth grade or less and for persons with non-English as their usual language, 58 percent have completed only the eighth grade or less.

because of rounding.

Years of school attained by the population varies by age. The younger the person, the more likely that he or she has completed high school. However, even for the youngest groups, persons with non-English-language backgrounds have significantly less education than those from English environments (see Table IV).

Foreign-born persons and persons with non-English the usual household or individual language	48%	. 67%	56%	34%

Labor Force Participation and Unemployment

According to the Survey of Languages, about two-thirds of the entire U.S. population of labor force age is in the labor force. The labor force participation for the non-English-language background groups, however, is lower than for other groups.

For example, using the broad definition of persons, aged 14 and over with non-English-language background, the Survey of Languages identifies persons from all non-English-language backgrounds according to language. Of the 23,300,000 in this group, 7,261,000 or 31.2 percent are from a Spanish-language background. The next largest non-English group, Italian, represents about 10.4 percent of the total. About 1,308,000 or 5.6 percent are from selected Asian-language backgrounds (Chinese, Filipino, Japanese, or Korean).

Table V shows that persons living in households where the usual household language is not English generally participate in the labor force at a lower rate and have higher unemployment rates than persons living in households where the usual language is English. The lower rates of labor force participation are probably attributable

to a combination of economic and cultural factors. However, of those who are looking for work, the unemployment rate for persons living in households in which Spanish is the usual language is over 5 percentage points above the unemployment rate for persons from households where English is the only language. Unemployment for the Italian-language group is 2 percentage points higher than those with English-language background. The selected Asian group varies widely according to specific language. The Filipinos have the highest unemployment rates, similar to that of the Spanish speaking. The employment rate among Chinese speakers is lower than the English group, and the unemployment for those of Japanese-language backgrounds is reported as nonexistent.

Tables VI and VII show the number of persons with non-English-language backgrounds, using the broad and narrow definitions by selected age groups.

In summary, preliminary data from the Survey of Language indicates a sizeable number of persons of labor market age are from non-English speaking backgrounds and have had limited schooling either in the United States or in their native country. The largest group, those from Spanish language backgrounds, appears to have severe unemployment problems.

CHAPTER THREE

INVENTORY OF BILINGUAL VOCATIONAL TRAINING FOR ADULTS

This chapter discusses The Inventory of Bilingual Vocational Training Programs for Adults 16 or older who are no longer attending elementary or secondary schools. The Inventory was conducted under contract by the U.S. Office of Education with the co-sponsorship of the Employment and Training Administration of the U.S. Department of Labor. It was prepared in response to the legislative mandate to report on the status of bilingual vocational training in all 50 States.

Ninety-eight programs were identified in 21 States with enrollments which vary greatly from one program to another, but total enrollments for the 98 programs were estimated to be about 13,000 at any given time. Thirty-seven programs (38 percent) were located in California; New York had 14; Texas, Arizona, and Massachusetts, six each; Connecticut, four; and Pennsylvania and New Mexico, three each. Therefore, eight States had 81 percent of all programs.

State Education administrators from all States were asked to respond on the status of bilingual vocational education for their State as the Act requires. The status and need of bilingual vocational training is indicated for each State in the Inventory.

Forty-five (46 percent) of the programs had open-entry components, which means that students could enroll for training on any Monday or when they were referred. Some programs had occupational classes with both open-entry classes and classes with specified starting and ending periods.

The programs identified were sponsored by public school districts (23) junior or community colleges (30) regional occupational centers (11) ethnic institutes (9) manpower organizations (6) Job Corps (6), and government agencies (20). Programs were also sponsored by State departments of Education, 4-year colleges, and other organizations. Some were sponsored by more than one organization.

Eighty-three programs (87 percent) enrolled Spanish-speaking persons. Twenty-two (21 percent) had multi-lingual programs which included students from various language backgrounds enrolling in different classes within the same program or students from more than one language background in the same class.

Further information about the target populations and program characteristics are shown in Appendix Table I: Number of Bilingual Vocational Training Programs Reporting Selected Characteristics, by State.

Vocational offerings included about 370 courses in seven major occupational areas: agriculture, distributive, health, office occupations, home economics and child care, technical occupations,

and trade and industrial. The largest included about 170 courses in 35 different skills. Detailed listings are provided in Appendix Table II: Distribution of Bilingual Vocational Training Programs, by State and Vocational Offerings.

Survey data for compiling the Inventory were collected during the last 4 months of calendar year 1975. Programs included in the inventory were in existence during that period or were planned and funded to begin in 1976.

Criteria For Inventory

Criteria developed for selecting programs to be included in the Inventory are based on the provisions of Part J of the Educational Amendments of 1974, Part J regulations prepared by the U.S. Office of Education for funding and operating bilingual vocational training programs, and discussions with program administrators in the Office of Education. The criteria are:

- 1. The program is supported, at least in part, by public funds.
- 2. The population served is limited in Englishspeaking ability.
- 3. Those served are at least 16 years of age.
- 4. Those served are not presently in traditional elementary or secondary schools. They may be graduates, drop-outs, or may have never entered school.
- 5. The training given is skills training for gainful employment.
- 6. The skills training is provided on a group basis.
- 7. The skills training is sub-professional in preparation for skilled, semi-skilled, or para-professional occupations.
- 8. The skills training is conducted in a non-English language as well as English either through bilingual instructors or translators.
- 9. English-language training is provided, either in conjunction with skills training or in separate classes, for the purposes of enabling trainees both to speak and understand job-specific English and to communicate effectively with English-speaking supervisors, other employees, and (where applicable) customers.

The criteria includes nationally funded Part J programs and several Job Corp centers but eliminates a large number of existing programs. The above definition excludes, for instance, programs which offer English-as-a-second-language courses either before or along with skills training in English. These are not included in the Inventory since vocational training is in English. The criteria also exclude programs which train individuals who are already bilingual upon entering the program, as well as programs which train English-speaking persons to work with limited-English-speaking populations. The most common programs of this latter type provide training in secretarial, teacher aide, and health aide occupations for English-speaking or bilingual persons so that they may work with supervisors, co-workers, and populations of limited English-speaking ability.

Programs offering only the following types of activities, even if conducted bilingually, were excluded because they do not provide vocational training: basic or remedial education, pre-vocational training, cultural awareness and enrichment, job orientation, job placement, outreach and referral, aptitude testing and assessment, and counseling. (These types of activities often are also provided as supportive services by bilingual training programs either directly or by referral.)

How The Inventory Was Developed

The information included in the Inventory was obtained in person or by telephone by administering a questionnaire to staff of the 10 Regional Offices of both the U.S. Department of Labor and the U.S. Office of Education and to officials of the 50 State Education Agencies. In a few States in which the delivery of vocational services is decentralized, it was necessary to contact some local administrators who were suggested by State officials. Interviews and discussions were held with approximately 200 officials of USDOL and USOE in the Federal Regional Offices, and more than 200 State Education Agency officials were contacted during the survey.

The Inventory of programs reflects with reasonable accuracy the status of bilingual vocational training in the United States. It documents all programs known to the State Vocational Education officials contacted in each State. In several States, these officials contacted other State agencies and local administrators to verify the existence or nonexistence of bilingual vocational training programs. In California, New York and Texas the magnitude, diversity, and decentralization of training programs and bilingual activity are so extensive that it is not possible to be sure that all programs were located. For example, some adult evening vocational programs have bilingual instructors who may use non-English with some or all of the students.

Notes For Program Inventory Descriptions

The inventory and program descriptions were current as of the beginning of calendar 1976. The following explanation may be useful to decode the Inventory listings.

- 1. Some programs have multiple sponsors and as many sponsors are listed as necessary to identify the program. All satellite locations where training is provided are not listed; these often change according to need.
- 2. Target groups refer to language groups. The Spanish language group is identified by four areas of origin: Mexican, Puerto Rican, Cuban, and South American.
- 3. Occupational areas listed comprise the instructional offerings at the time the inventory was completed. Instructional areas change according to local need.
- 4. The duration of training is identified for each occupational offering when reported. The information regarding cycles of training classes is on an annual basis. "Three cycles," for example, indicates that the class is conducted three times a year. The term "closed-entry" indicates that there is an enrollment period and an ending date for the training, and trainees are accepted only at designated periods. "Open-entry" means trainees are accepted continuosuly.
- 5. The total number of trainees enrolled at a time is a fairly accurate figure for each program if all classes are operating. At any given time, however, some classes may be between cycles or sessions. Other classes are always open, and students may enroll and leave as they wish.
- 6. "Predominant language of instruction" refers to the language used in vocational skills training. Some programs have the prime objective of increasing the amount of English used in the non-English classroom as the trainee progresses in his/her understanding. There are other instances when programs and classes accept students with varying proficiency in English, and the classes are conducted primarily in English with translations as necessary. The precise extent of the use of each language is not known.
- 7. Programs offer training in English language skills through a variety of methods in class and in supplementary classes which re-inforce the English the students learn during their occupational training program. Supplementary

programs may include English-as-a-second-language classes, tutoring, or some combination of these. Several programs apparently have as their objectives the development of general language usage; others, often short-term programs, emphasize job-related terminology which will help the students learn English names for the tools, the equipment, or the basic English phrases and sentences which are related to their occupational skills.

CHAPTER FOUR

VOCATIONAL AND MANPOWER LEGISLATION PROVIDING TRAINING FOR PERSONS WITH LIMITED ENGLISH-SPEAKING ABILITY

Problems of workers and those seeking work with limited English-speaking ability are not new; however, legislative responses to these problems are relatively recent. The Comprehensive Employment and Training Act of 1973 and the Educational Amendments of 1974 are the first legislation which specifically identifies persons with limited English-speaking abilities as target populations for training. However, vocational education, and employment and training programs have, for several years, provided skills training programs and services to persons from non-English-language backgrounds.

This chapter briefly describes the various legislative authorities which have served persons with limited English-speaking ability even though data are not always available to indicate the extent to which such programs have served these persons.

Vocational State Grant Programs

The Federal government has supported vocational education programs since the passage of the Smith Hughes Act in 1917. Funds specifically for vocational education programs and services for specific target population groups were first authorized in 1968 when Congress amended the Vocational Act of 1963. Section 122(a)(4)(A) authorized training for persons who have academic, socioeconomic, or other handicaps that prevent them from succeeding in the regular vocational education program. Under this authority, schools have conducted a wide variety of programs and services. For example, Hispanic enrollments for fiscal year 1975, as reported in the spring of 1976, totaled 702,243 or 5.6 percent of the estimated total vocational student population of 12,488,377. (These data do not include nine States and territories which had not reported.) The data reported for Hispanic populations do not provide an indication of the numbers of limited-English-speaking persons served within Hispanic or other groups.

The Education Amendments of 1974 (P.L. 94-380) first provided specific language in Section 122(a) (4) (C) to authorize the training of those with limited English-speaking ability. The Act also provided for a categorical program, Part J, to be administered by the Commissioner for bilingual vocational training.

The State grant program under Part B of the Vocational Education Act empowers States to set their own priorities within broad guidelines to assure that all who desire vocational training have access to programs which prepare them for skilled, semiskilled,

and paraprofessional jobs. State plans are now beginning to address the issue of limited English-speaking populations which were formerly mentioned only in terms of disadvantaged populations or persons with special needs.

It is important to emphasize that programs funded prior to Part J were primarily local programs or classes planned to meet local needs. The schools hire bilingual instructors and the instructors use the other language as they consider necessary with some or all of the students. Some schools use peer instruction or teacher aides to work with students who have problems understanding a monolingual instructor. These "de facto" bilingual programs appear to exist primarily in California, New York, Texas, and Arizona. There is no efficient way to report their precise enrollments as current reporting systems cannot identify those with limited-English ability, and local education agencies do not keep records in this manner.

The practice of providing English-as-a-second language (ESL) training prior to or concurrent with vocational training is the common approach in training programs serving persons of limited English-speaking ability. This approach may be the most common because ESL instruction programs and capability exist in many locales. Thus, ESL instruction is a widely available and visible option for program planners.

As shown in the Inventory, bilingual vocational programs usually develop in areas where there are substantial concentrations of limited-English-speaking persons. This pattern of development results from factors other than need alone, because limited-English-speaking populations exist in many areas without bilingual vocational training programs. Programs appear to exist in locations where there is a greater awareness of needs and more resources for serving the limited English-speaking in ways other than ESL training.

Bilingual Vocational Programs Under Part J

Under the authority of P.L. 93-380, Section 194 (a), the Commissioner first authorized grants and contracts for bilingual vocational training ir June 1975. Twenty-one projects were funded in nine States and Guam for the training of about 2,500 persons. Languages in the projects included Spanish, French, Chinese, Indian, and Chamorro. Seven of the projects were located in community or junior colleges, six in local education agencies, four in institutions of higher education, two in State education agencies, and two in private non profit agencies. Each of these programs conducted training in both English and non-English languages; trainees acquired sufficient competence in English to enable them to perform satisfactorily in a work situation. These programs are included in the Inventory.

The purposes of the bilingual vocational training programs are to provide persons who have left or completed elementary or secondary

school and who are unemployed or underemployed because they are limited English-speakers with training which will enable them to enter the labor market or re-enter with increased skills.

El Paso Community College in El Paso, Texas, has made a substantial commitment to alleviate the high unemployment rate of limited-English speakers by providing bilingual training in the areas of industrial sewing machine operation and repair, optical lens technology, building trades, and radio and television repair.

A bilingual vocational program at the Triversity of California at Los Angeles is providing training for persons with limited English to work as dental assistants. Stugare able to gain work experience both in dental clinics and with the lists with private practices. All students have been placed in j

Two programs in New York City are offering training to members of the Chinese community who are limited-English speakers. The China Institution in America is providing training for service as professions to the sets of the Chinatown of the set of the State of the S

Bilingual secretaries are sought by many agencies and firms. Two programs for training persons to become bilingual secretaries are offered at New Mexico Highlands University and at Borough of Manhattan Community College. Students learn shorthand and typing skills in both languages.

Twenty-two Part J projects were funded in June 1976 in eight State to train some 1,850 persons. Most of these were scheduled to begin September and they are not listed in the Inventory. listed in the Appendix. Languages in the projects include Spanish, Chinese, French, Vietnamese, Russian, Indian, and Eskimo. Seven of the projects are located in community-based agencies, six in community colleges, four a institutions of higher education, three in local educational agencies, and two in vocational technical schools. Training is offered for a number of job titles including: bilingual secretaries, mental health technicians, agricultural workers, geriatric aides, auto mechanics, machinists, emergency medical technicians, home heating repair persons, welders, house framers, data processors, dental assistants, workers in native arts and crafts, graphic designers, professional chefs, para-legal aides, para-accounting aides, health assistants, food service workers, printers, sewing machine operators, sewing machine repair persons, radio and television repair persons, butchers, meat cutters, slaughterers, and office machine repair persons.

Adult Basic Education

The Adult Basic Education Act (P.L. 91-230) provides Federal assistance to encourage State-administered programs for adult public education that will enable any individual 16 years or older to continue his/her education to at least the level of completion of secondary school. The Education Amendments of 1974 (P.L. 93-380) amended the Adult Education Act to provide for bilingual adult education programs for persons with limited English-speaking ability.

For many years, States have funded English-as-a-second-language (ESL) programs. Several of these were coupled with manpower training programs in those States and localities which established priorities to meet needs of those limited-English-speaking persons who required both training opportunities. In addition, other trainees with limited English-speaking abilities were referred to ESL programs, and after the trainee had mastered some basic English he or she was referred to occupational training programs. At present, both kinds of programs continue to exist.

Approximately one m. lion students are estimated to be enrolled in adult basic education sograms; of these about one-third (330,000) are estimated as having non-English speaking backgrounds.

Manpower Programs

Modern manpower legislation dates from the passage of the Manpower Development and Training Act of 1962 (MDTA). Programs aimed at reducing the level of unemployment, offsetting skill shortages, and enhancing the skills and productivity of the Nation's work force. One of the broadly defined target groups, the disadvantaged worker, was served through MDTA and through programs authorized by the Economic Opportunity Act (EOA) of 1964.

A variety of manpower programs were established during the late 1960's which provided skill training in which persons of limited English-speaking ability enrolled. These programs included MDTA skills training classes, Job Corps, Concentrated Employment Program, Operation Mainstream, Neighborhood Youth Corps, New Careers, Public Service Careers, and others. Additionally, some special programs were created that impacted primarily on workers of Spanish origin. These latter programs included migrant and seasonal farmworker programs and MDTA institutional training and other Jobs for Progress projects operated by Project SER (Service, Employment, and Redevelopment).

Neither MDTA nor EOA legislation specifically authorized or mandated bilingual training or bilingual services for program enrollees, and neither of these Acts designated persons of limited Englishspeaking ability as a specific target group. Programs authorized under these Acts, however, could and did serve non-English-speaking persons and sometimes provided bilingual services, although their precise numbers were not reported.

Comprehensive Employment and Training Act

The most comprehensive Federal manpower legislation passed to date is the Comprehensive Employment and Training Act (CETA) of 1973. Its purpose is to provide training and employment opportunities for the economically disadvantaged, the unemployed, and the underemployed. The passage of CETA decentralized the control of manpower efforts and eliminated most categorical programs. Title I authorizes State and local governments, as prime sponsors, to design and operate employment and training programs within the broad purposes of the Act to meet local needs. Both Title I and Title III of CETA specifically names persons of limited English-speaking ability as target groups. Special manpower programs for Native Americans and migrant and seasonal workers are also authorized under Title III; both of these groups include many persons of limited English-speaking ability.

The Job Corps program, begun under EOA, is retained under Title IV. Youth of limited English-speaking ability, although not named specifically in Title IV, constitute a part of the target group.

CETA Title I Programs

Title I CETA prime ponsors are required in their annual project operating plans to describe "how persons of limited English speaking ability will be served if they represent a significant portion of an applicant's (prime sponsor's) program." When such persons are served in significant numbers, CETA rules and regulations require prime sponsors to develop operating plans for:

- 1) Teaching occupational skills in the primary language for occupations which do not require a high proficiency in English;
- 2) Conducting training and employment programs in the primary language;
- 3) Developing new employment opportunities for persons limited in English;
- 4) Developing opportunities for promotion within existing employment situations;
- 5) Disseminating appropriate information and providing job placement and counseling assistance in the primary language;
- 6) Conducting programs to increase English speaking a ility.

While none of the above appear to f t precisely the definition of bilingual vocational training as mandated in the Education Amendments of 1974, each of the categories is concerned with the provision of training and services to those whose limited command of English is or may be a hindrance to success in the labor market. CETA prime sponsors can and have developed bilingual vocational programs such as those described in the Inventory.

_ 51 _

A review of most of the CETA prime sponsor plans conducted as part of this assessment revealed that the plans varied widely in their treatment of services to persons of limited English-speaking ability. (Many of the plans reviewed were prepared before the cited rules and regulations were published.) The common response by Title I prime sponsors with either low or high proportions of limited English-speaking enrollees was to provide ESL training for these persons, usually through an existing ESL program. This was also the approach generally used by State Vocational Education Boards with the 5 percent CETA set-aside grants.

Some CETA programs include bilingual vocational training, and some include a wide variety of bilingual employment-related services. Several CETA sponsors contract with minority organizations for these services. Local Spanish organizations and Project SER often provide such services as outreach, recruitment, orientation, and job placement. Project SER is also a frequent contractor for ESL training. In some CE programs, prevocational and adult education (basic or remedial) are offered bilingually. Bilingual cultural awareness classes are available in some programs. In a few programs, Project SER or other organizations provide placement services for program completers or for the on-the-job training component. Many prime sponsors have hired bilingual staff and some have neighborhood centers staffed entirely with bilingual persons.

CETA Title III Programs

In June 1976, the Department of Labor announced that a total of \$5 million has been allocated for about 52 programs to strengthen the job skills of persons whose English is limited. An initial distribution of \$2.5 million in April and May by the regional offices created 27 programs in 15 States for jobless persons whose primary or only language is not English. They include the Spanish-speaking in several New England cities and the Southwest, recent Russian immigrants in Philadelphia, and the Gullahs in South Carolira whose African dialect has been preserved for generations in isolated coastal communities. Programs are also serving workers from Vietnam, Cambodia, Laos, and other Asian countries.

ESL programs are described as "mainst, of the local projects which also include basic education, preparation for high school equivalency examinations, on-the-job training and vocational skills taught in the learner's native language. One project is preparing vocational education courses to train drug abusers whose primary language is not English.

The programs are authorized by Title III of CETA and are conducted by selected CETA prime sponsors. Title III provides for services to special groups such as those with limited English-speaking ability, Indians, youths, migrants and others.

Bilingual services of various kinds are common in migrant and seasonal farmworker projects. Not all of these projects offer occupational training for gainful employment. Those that do often

have bilingual instructors in Spanish and English. Bilingual staff provide a variety of services: adult education, job referrals, counseling, housing, day care, health, and others.

The migrant and seasonal farmworker project and State Migrant Councils are involved in activities related to CETA Title I programs in some States. These include provision for referral services and ESL training.

A survey of selected Indian CETA prime sponsors disclosed few bilingual vocational programs. A consortium of tribes offers bilingual vocational training in arts and crafts in the Southwest, and at least one Indian group in the Northwest is planning a bilingual vocational program. Bilingual occupational training apparently has been provided in the past on the Navajo reservation, but no programs are reported for the winter of 1975-76.

The estimates of the number of limited-English-speaking persons participating in CETA ationally in its first full year of operation are as follows: $\underline{1}/$

Title	I	46,200
Title	ΙΙ	⊥8 , 200
Title	III	7,200
Total.		71,600

Since some CETA Title I programs were included in the Inventory conducted for this report, the two sets of numbers are not additive.

Job Corps

In recent years, the Job Corps has placed increasing emphasis on improving its programs for limited English speakers. Six of the centers with a total enrollment of about 3,600 are heavily involved in bilingual occupational training programs, supplemented with ESL programs specifically geared to three language competency levels. Other centers are developing programs to serve these populations.

A common definition of "limited English-speaking ability" was not used for these CETA estimates. The estimates are an aggregation of reported numbers of CETA prime sponsor staff or place enrollees in the limited-factish-speaking category if, it are staff's judgment, they belong there. These decisions as based, presumably, on the enrollees' facility with English in intake interviews and other enrollee-staff interactions.

Extracted from CETA Progress Report, Fiscal Year 1975, prepared by the Office of Administration and Management, ETA/USDOL. Title II and VI are public employment service employment programs. Some Title I enrollments overlap with those included in the count obtained during the survey.

The Job Corps sponsored a bilingual workshop to provide for an exchange of experiences, training techniques, and materials among the centers having bilingual problems. The national office has invited representatives of other organizations concerned with bilingual programs including farmworker/migrants, CETA prime sponsors, and ESL contractors.

CHAPTER FIVE

REVIEW OF THE LITERATURE

The examination of the literature concerning bilingual education and vocational training disclosed few existing studies relating to bilingual vocational training. Most of the literature addresses bilingual or bilingual/bicultural education for children, instruction of children through a second language, English-as-a-second language training, and vocational training for the disadvantaged, such as urban and rural low-income persons, undereducated youth, and blacks.

When the literature review was initiated, it was hoped that a review of the literature, evaluation reports, research, experimental and demonstration project reports, and other available data would provide additional information about the enrollments, characteristics of enrollees, dollars spent, and outcomes. These data are not available in terms of the limited-English speaker.

Two evaluations conducted for MDTA 1/ institutional training programs indicated that persons with Hispanic backgrounds fared better than any other group in terms of improved earnings, employment intensity, and improvement in basic education as recorded by pre-and post-achievement tests. However, findings cannot be translated as meaningful for the limited-English speaker because the average educational attainment level of Hispanic participants in MDTA studies was the 10th grade. In most studies of occupational training, the findings do not indicate the success of the limited-English-speaker because representative samples have not included them in sufficient number so that outcomes can be discussed in a generalized fashion.

There are some studies which address the problems of how to essist limited English-speaking persons in obtaining and retaining employment or how to earn promotions, but none of the employment/vocational studies specifically sought to test one or several models for providing bilingual vocational training to adults of limited-English speaking ability. Few of the studies concerning bilingual/cultural instruction have involved adults as subjects of study.

Because of the absence of research directly concerned with bilingual vocational training or bilingual instruction for adults of limited English-speaking ability, few conclusions can be drawn on the basis of existing literature. Studies conducted among children, however, can provide some indication of the issues involved in developing programs of bilingual instruction for adults. The literature concerning instruction of children through a second language seems to indicate that the level of achievement in learning basic subjects is not necessarily affected by the process of learning through a second language which is being learned simultaneously.

Decision Making Information, MDTA Outcomes Study. (Santa Ana, Calif.: 1.72).

North American Rockwell Information Systems, MDTA Basic Education Study (Arlington, Va.: 1973).

It appears that other factors—such as minority group status, motivation to learn a second language, attitudes toward speakers of that language, and self—concept or self—esteem—are more important predictors of success in learning basic subject matter through a second language.

An annotated bibliography is available upon request to indicate the types of research projects completed which relate to the issues of providing occupational training programs and related services for those who have limited English-speaking abilities.

Notes to Table 1

response.

- General: Numbers of programs in parentheses refer to programs funded under Part J of the Educational Amendments of 1974.

 Part J and other programs have separate totals. The inventory is restricted to the 50 States; therefore, a Part J program located in Guam is excluded. Column totals are not shown because certain data items are missing for some programs and multiple entries are allowed for some items. N/A not available, DK Don't know, NR No
 - A. These are numbers of programs; some programs operate multiple projects and/or at multiple sites.
 - B. Geographic area coverage refers to the area from which trainees usually are drawn; most programs do not have residency or other geographic requirements for enrollment.
 - D. The sponsoring organization was often difficult to identify precisely. Therefore, multiple sponsors are sometimes counted. For example, if a CETA Prime Sponsor contracted with a community college for a bilingual Vocational training, the sponsors would be indicated as Government or Government Agency and Junior or Community College.
 - F. The Spanish-language group is subdivided into four origin groups: Mexican, Puerto Rican, Cuban, and South American. The row labeled "Multilingual" refers to programs with more than one language group served either through bilingual or multilingual instructors, translators or some combination of these.
 - G. Refers to type of English language competency for trainees that was expressed as a program goal. "Overall" English ability indicates that a program goal is to provide trainees with more than job-specific English skills.
 - H. The total number of trainees enrolled at a time is a roughly accurate figure for each program if all classes are operating. At a given time, however, some classes may be closed between cycles or sessions. Other classes are always open and students are free to enroll and leave as they wish.
 - I. The item "Both" refers to programs with vocational classes that are open-ended and others that have specific starting and/or ending dates.

- J. The entrance requirements for English language proficiency vary greatly among the programs. English reading and/or speaking requirements of programs generally are minimal. Those programs such as health occupations which require State licensing, often recruit only students with some language proficiency. Even so, bilingual instruction may be necessary to clarify terminology.
- K. Skills training is reported as in the trainees' native language only or as combination of the native language and English. Respondents were asked which language was used predominantly in the skills training, but the precise degree of use of each language is not known. In some programs, either English or the non-English language(s) may be predominant, depending on the skills being taught or the English capabilities of the trainees. In some programs, progress from primarily non-English instruction to using predominantly English as the students' comprehension improves.
- N. The number of program staff is shown as a rough indicator of the distribution of program staff. Many respondents had difficulty in estimating program staff numbers, particularly when the program was a component of a larger one.

Notes to Table 2

Numbers of programs in parentheses refer to programs funded under Part J of the Educational Amendments of 1974. Part J and other programs are tallied separately. The inventory is restricted to the 50 States; therefore, a Part J program located in Guam is excluded because all territories were not surveyed.

All identifiable occupational areas for each program were included under the vocational offerings; therefore, the column totals exceed greatly the number of BVT programs.

- 68 -
