ABSTRACT

The Aides to Career Education (ACE) Program employs instructional aides to help disadvantaged vocational education students in Los Angeles develop positive attitudes toward education and employment, more cooperative behavior, pride in their course work, efficiency in completing assigned tasks, and improved attendance. In 1975-76 (the fourth year) there were 289 aides assigned to 49 high schools and 1 regional occupational center plus 13 counselor aides in 13 urban impact schools. The (1975-76) evaluation included analysis of quantitative data, administration of questionnaires to certificated, classified, and student personnel, and onsite visitations by project administrators. Findings indicated that the program was effective in meeting its overall goal of increasing individual assistance to disadvantaged students. The program had a generally positive effect on the students assisted, especially on the slower ones. The greatest efforts of the aides yere in the area of direct assistance to students. Project objectives for median ratings of 3.0 or more (on a 1-4 scale) were met in all areas and were higher than in the previous year; attendance of students in classes with ACE aides was also higher. Monthly inservice education workshops for development of aides' skills and for acquisition of feedback about the program were found to be generally effective. Provision of career quidance counselors and of teacher-developed instructional materials was found by teachers to be valuable. For the third year the number of hours assigned to each aide and the number of aides assigned to each school were reported to be inadequate to meet student needs. (Data analysis and recommendations are included.) (TA)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from the original.

INTRODUCTION

The Vocational Education Amendments (VEA) of 1968 reflect the concern of Congress for vocational assistance for those who are disadvantaged. The Amendments specify that each state's allotment of Vocational Education Part A funds, and at least 15 percent of Part B funds, be utilized to assist disadvantaged persons. The term "disadvantaged", as stated in the California State Plan for Vocational Education, refers to persons who have academic, social, economic, or cultural handicaps which prevent them from succeeding in regular vocational programs. This classification includes persons whose need for extra educational assistance is a result of poverty, neglect, delinquency, or cultural and linguistic isolation from the community at large; it does not include physically or mentally handicapped persons unless they are also affected by the other handicaps listed above.

The Aides to Career Education (A.C.E.) Program was implemented in the Los Angeles Unified School District as a Vocational Education Amendments Part A Project in December, 1972. The purpose of the ACE Program has been to provide assistance to disadvantaged students in vocational education courses by employing instructional aides to assist in improving the educational performance and in enhancing the employment potential of disadvantaged students. Through the extra assistance received from instructional aides, disadvantaged vocational students were to benefit by developing positive attitudes toward their education and employment outlook, more cooperative behavior with teachers and peers, pride in the quality of their course work, efficiency in completing assigned tasks, and improved attendance. Supplementary instructional materials have also been provided through the program.

During the years between 1972 and 1975 the A.C.E. Program has been funded as both a VEA Part A and a Part B project. In the 1975-76 school year the A.C.E. program was funded with VEA Part B funds, with a special augmentation at midyear.

PROGRAM IMPLEMENTATION

When the program was initiated in 1972, the position classification selected for A.C.E. aides was Instructional Aide because it required expertise in one of the subject fields represented in the participating schools. Thirty A.C.E. aides in twelve high schools and four Regional Occupational Centers (ROC) were involved in the first year program. The typical high school or ROC includes the following vocational departments: Agriculture, Business, Health Occupations, Home Economics, and Industrial Education.

By the third year (1974-75) 63 school sites were involved in the program with a total of some 350 instructional aides. In addition, the program had evolved to the point where 16 specialized classes of instructional aide had been created by the district's classified personnel division. Competitive exams for the various classes of instructional aide were then held, making most aide assignments for the 1975-76 school year on the basis of a promotional eligibility list. In the 1975-76 school year there were 289 A.C.E. aides assigned to 49 high schools and 1 Regional Occupational Center. In addition, 13 counselor aides were provided to 13 urban impact schools by the project.

Prospective aides have been identified by one of two methods. Department chairmen and their staffs have identified former students who possessed the necessary skills to serve in a specific field. When the school has not identified individuals, the project coordinator has assisted by recruiting and referring prospective aides to schools.

5

Inservice Education

Workshops were held on a monthly basis beginning in December, 1972. The purposes of the workshops were two-fold: the development of skills of the instructional aides, and the acquisition of feedback about the program. Topics presented included techniques for motivating and working with students and specific information on the various vocational areas. Workshops were held in one central location during the 1972-73 school year. To alleviate transportation problems and to provide smaller group size, area workshops were held for Valley, South, and Central schools during the 1973-74 school year. Lectures and small-group discussion techniques were used in the workshops; occasionally, groups met according to vocational subject areas. A unique addition to the workshops was the introduction of Organizational Development training sessions on a bimonthly basis during the 1974-75 school year and audio-visual training sessions on the alternate months.

Inservice education in 1975-76 was conducted in workshop sessions. Major topics in the nine sessions included the following:

Orientation and Program Overview

The Aide/Teacher Relationship

The Career Ladder

Social Development

Subject Area Seminars

Recordkeeping and Accountability

Use of Audiovisual Equipment and Materials

Motivation of Disadvantaged Students

Planning Instructional Materials and Activities for the Disadvantaged Student

Small Group Planning Seminars

6

Instructional Materials

During the 1975-76 school year the provision of instructional materials became an important element of the A.C.E. program. Three sets of teacher - developed materials were produced and disseminated in the project. They included a 20 minute slide tape presentation for homemaking students entitled "The Supermarket," and a set of language master photo and sound cards for industrial tool identification entitled "500 Tool Technology." Also provided by the project was a 16mm film, entitled "What To Be," which dealt with vocational decisions made by a senior level Spanish-surnamed student.

Thirty-five mm cameras, lenses, projectors, cassette tape recorders, and other related materials were provided to some schools. These resources supported the development of slide presentation accompanied by taped naratives describing vocational offerings available to students.

Handbook

In Spring, 1973, teachers and aides prepared a handbook to provide information on the intent and operation of the A.C.E. Program. The A.C.E. Program handbook was utilized extensively by aides, teachers, and administrators during the 1973-74 school year. Sections on community agencies, teacher/aide relationships, and a bibliography were added in an updated version for 1974-75.

Advisory Committee

In the Fall of 1973 an Advisory committee was formed for Programs for the Disadvantaged in Vocational Education; the committee included members from both the public and private sectors of the community. Institutions represented included the Employment Development Department, Rockwell International, Pacific Telephone Company and the Department of Public Social Services. Also serving were representatives from the school district, including one administrative

coordinator, one principal, two teachers and two students. The committee was enthusiastic and provided invaluable input for improvement of the A.C.E. program.

The advisory committee met three times during the 1973-74 school year, reviewed the ongoing program intensively, and recommended the following: that aides serve an entire school year, that the number of aides be increased, and that students who received assistance be followed up to determine the impact of the program.

The advisory committee met an additional three sessions during the 1974-75 school year. The advisory committee was brought up to date on the status of the recommendations made during the 1974-75 school year, two of which were implemented. The creation of the specialized instructional aide class code made it possible to have the aides serve for the entire school year, and the combined VEA Part A project and VEA Part B set-aside funds made it possible to increase the total number of aides hired during the third and final year of the Part A project.

PROJECT GOALS AND OBJECTIVES

The purpose of the 1975-76 project was to provide disadvantaged vocational students enrolled in regular vocational classes at 12 of the district's most severely impacted schools with the following services: (1) individualized instruction via instructional aides selected by the district's classified personnel branch on the basis of demonstrated competence in vocational skills and interpersonal communication skills, (2) commercially prepared instructional software adaptable to the needs of these young people, (3) materials not available commercially produced and distributed to participating schools by the district, and to students by the district's career advisors.

Continuing project objectives for the 1975-76 school year were as follows:

Teachers and students will rate the effectiveness of the program in improving vocational skills in vocational courses during the 1975-76 school year with a median rating of 3.0 or more on a scale from 1.0 (low) to 4.0 (high).

ERIC Full Text Provided by ERIC

8

Teachers and students will rate the effectiveness of the program in improving academic skills in vocational courses during the 1975-76 school year with a median rating of 3.0 or more on a scale from 1.0 (low) to 4.0 (high).

Attendance of students in vocational education classes with ACE aides during the 1975-76 school year will be higher than attendance of students in comparable classes during the 1974-75 school year.

The impact of the ACE Program will reduce the student dropout rate among students served during the 1975-76 school year as reported by ACE aides.

Teachers and ACE aides will rate the effectiveness of the program in improving student attitude toward self, education, and employment during the 1975-76 school year with a median rating of 3.0 or more on a scale from 1.0 (low) to 4.0 (high).

Students served by the project will be able to correctly identify tools, machines, or terms commonly used in their vocational classes.

EVALUATION PROCEDURE

The evaluation of attainment of project objectives for the 1975-76 Aides to Career Education Program was conducted in three areas: (1) analysis of quantitative data; (2) administration of questionnaires to certificated, classified, and student personnel; and (3) onsite visitations by project administrators.

Analysis of Quantitative Data

Quantitative data relating to the grade level of students, type of disadvantage, and degree of success of the student were accumulated by A.C.E. aides on program data sheets. These data were summarized and tabulated.

In addition a sample of A.C.E. aides completed an aide profile questionnaire. Data from these questionnaires provided an overview of the aide population.

Data on student attendance, grades in vocational education courses, and citizenship marks were gathered from the cumulative record cards of a sample of students. Median grade and citizenship marks were calculated where complete data were available.

The vocational education course grades of a sample of students during Spring, 1976, yielded a median grade point of 2.9 (on a scale from 1-F to 5-A) (see Table 6). Median citizenship marks for the students were satisfactory in work habits and midway between satisfactory and excellent in cooperation (see Table 7).

Analysis of Questionnaire Data

In April, 1976, questionnaires were distributed to the A.C.E. aides; completed forms were returned by 50 respondents. A.C.E. aides were asked to rank the major activities they performed in order of the amount of time devoted to each. Analysis of the rankings in the major tasks performed by the aides related to assistance affective, and academic skills (see Tabic 8). According to project guidelines, supportive tasks, such as clerical duties and preparation of instructional materials, were to be secondary to direct assistance to students. The rankings of most respondents indicated compliance with these guidelines, as they also did during the previous year.

Aides were also asked to rate other aspects of the program. Median ratings of most aspects of the program were positive, ranging from 3.0 to 3.9 on a scale from 1 (low) to 4 (high), showing improvement over median ratings from the previous year (Table 9).

A number of areas of concern arose among recommendations for improving the program which were mentioned by aide respondents (see Table 10). A significant number of respondents indicated a need for increasing the number of hours and days budgeted for A.C.E. aides. A problem cited by ACE aides during the 1973-74 and 1974-75 school years was the need for clarification of the aide's role in the classroom. Results from this year indicate that some improvement is still needed.

The need most ofto the area of inservice education was for work-shop sessions devoted to specific subject areas within vocational education (see Table 10). The need for assistance with discipline-related situations was also mentioned.

Questionnaires were administered in April, 1976, to each of the teachers to whom an A.C.E. aide was assigned. Completed questionnaires were returned by 90 respondents. Median teacher ratings by the respondents of selected aspects of the program ranged from 3.2 to 3.8 on a scale from 1 (low) to 4 (high) (see Table 11), indicating that teachers were generally satisfied with the program. Teacher ratings of many aspects of the program were higher than those of the previous year. Ratings of three new elements of the program, student abilities in identifying tools, career guidance service, and the provision of instructional software and hardware, were given median ratings ranging from 3.2 to 3.7, indicating success in these areas.

Teachers were also asked to rate the adequacy of their A.C.E. aides in a number of areas. Median ratings by teachers ranged from 3.8 to 3.9 on a scale from 1 (low) to 4 (high) (see Table 12), indicating that teachers were well pleased with the quality of the aides, even more so than the previous years.

16

Teachers responded * open-ended questionnaire items relating to contributions of the A.C.E. program, recommendations for improving the program, and further needs for inservice education. Most frequently mentioned as contributions to the program were individual assistance to students, particularly the slower ones, and the release of the teacher for providing increased instruction (see Table 13). These were similar to those mentioned by A.C.E. aides.

Eable 13 is based on Form 2.

Teachers again this year concurred with A.C.E. aides in their most frequently mentioned recommendations for improving the program. They were most interested in increasing the number of hours budgeted for each aide and the number of aides assigned to each school (see Table 199). They also be that aides should be assigned from the opening to the close of the school year.

Concern about selection procedures for aides was not as significant a problem in 1975-76 as in 1974-75.

A major strength of the inservice education activities mentioned by teachers this year was the emphasis on teacher/aide relationships and roles (Table 13). This had been a frequently-mentioned problem area of concern the previous year.

When teachers were asked how the program could help them work more effectively with their aides, many responded that no assistance was needed (see Table 13). Workshops, handbook, and assistance from project administrations were all identified as methods for assisting teachers in working more effectively with their aides.

Questionnaires were distributed to administrators in the schools where A.C.E. aides were assigned during the 1975-76 school year. Questionnaires were returned by 40 respondents. Some were completed by administrative personnel other than the principal. Major contributions of the program identified by administrators were similar to those mentioned by aide and teacher respondents - individual help for students, releasing the teacher to provide more instruction, and assistance to slow students (see Table 14).

The major administrator recommendation for improving the program was to increase the number of aides assigned to each school (see Table 14). For the third year almost all of the respondents reported that no significant administrative problems had arisen as a result of the program. Most felt that no further inservice education was needed.

Most administrator respondents again reported the need for additional A.C.E. aides.

Administrator ratings of selected aspects of the program ranged from 3.1 to 3.8 on a scale from 1 (low) to 4 (high) (see Table 15). Communication between the program and school staffs and parents continued to be an area of some concern during this second year, although improvement in this and other areas was noted in comparing ratings from 1975-76 to those of 1974-75.

Questionnaires were distributed to the six district vocational education supervisors. Three completed questionnaires were returned. Responses to open-ended items indicated that a lack of consistent communication between the program and vocational education supervisors was a continuing problem (see Table 16). All respondents recommended that efforts to involve supervisors in the program be strengthened.

A random sample of five students working with each A.C.E. aides was selected in order to evaluate student feelings about the effectiveness of the program. Questionnaires were completed and returned by 800 of the 950 students to whom they were distributed. Median student ratings of selected aspects of the program ranged from 3.5 to 3.8 on a scale from 1 (low) to 4 (high) (see Table 17). A significant number of students again responded "does not apply" to the item relating to academic assistance, indicating for the third year their perception that most assistance was in vocational and interpersonal areas. This was also indicated in their responses to an open-ended item relating to the type of assistance received from A.C.E. aides (see Table 18). Most identified vocational skills as an area of assistance received from the aide; a much smaller proportion mentioned academic skills.

Most student recommendations for improving the A.C.E. program again related to increasing of hours and days that aides were assigned (Table 18). Student comments indicated that ACE Counselor Aides were of much value, particularly in the areas of scheduling, career planning, and employment.

CONCLUSIONS

The conclusions which follow are based on data gathered to assess the attainment of program objectives and to provide feedback on related areas of the program.

The responses of all categories of respondents indicated that the program was effective in meeting its overall goal of increasing individual assistance to disadvantaged students in vocational and academic aspects of vocational classes.

Respondents indicated again this year that the program had a generally positive effect on the students assisted, particularly on slower students who were behind in their work.

The utilization of aides during this third year that the program has been evaluated was again in complicance with program guidelines which required that the greatest efforts of the aides be in the area of direct assistance to students.

Project objectives for median ratings of 3.0 or more (on a scale from 1-low to 4-high) in selected aspects of the program were met in all areas. Most median ratings by aides, teachers, administrators, and students were higher in 1975-76 than in 1974-75.

The attendance of students in classes with A.C.E. aides was higher in 1975-76 than in similar classes during the 1974-75 school year.

Inservice education was again found to be generally effective. Teacher involvement was reported to be much improved over last year. The need for subject matter oriented sessions was again strongly recommended this year.

Improvement in the understanding of the aide's role by both aides and teachers continued during 1975-76. A few aides and teachers still reported that further improvement was needed. Slight improvement in communication between vocational supervisors and the project was noted, but the need for involvement of supervisors and further improvement in communication continues.

The provision of career guidance counselors and of instructional software and hardware was found by teachers to be valuable. Student abilities in tool identification was also found to have improved.

For the third year the number of hours assigned to each aide and the number of aides assigned to each school were again reported by all categories of respondents to be inadequate to meet student needs.

RECOMMENDATIONS

The following recommendations for improving the Aides to Career Education Program are based on findings and conclusions:

The program should continue its emphasis on providing individual assistance to disadvantaged students in vocational education classes.

Successful program efforts to clarify the role and limitations of aides to teachers, administrators, and aides should be continued through orientation, inservice workshops, and a handbook.

Means of increasing the numbers of hours assigned to aides and the numbers of aides to schools should be examined.

Strong efforts to improve communication between vocational education supervisors and the A.C.E. program should be initiated.

The organization of some inservice education sessions around specific subject matter specialties for aides working in those areas should be continued and given increased emphasis.
