ABSTRACT

Presented are science units for kindergarten and first-grade classes which include one or more non-verbal test items constructed to determine whether the student has learned the material presented in the unit. Units include: light, senses, gerbils, beans and peas, animal activities, and hatching chicks. (SL)

A SCIENCE ASSESSMENT PROGRAM  
FOR  
KINDERGARTEN  
AND  
FIRST GRADE STUDENTS

Gary A. Greening  
Bloomington Public Schools  
Bloomington, Minnesota

### Acknowledgements

I would like to thank the kindergarten teachers, Mrs. Nancy Tilbury and Mrs. Doris Stenberg, and the first grade teachers, Mrs. Wendy Shearer and Mrs. Priscilla Sondergaard, who spent many hours helping me and collecting the items used in the various pictures.

## ABSTRACT

Measurement of learning in science education has always been an elusive goal which all science teachers who have a desire for effective teaching are always attempting to reach.

The program described in the following paper is an attempt to reach this goal. The primary effort of this program is to measure the degree of learning in science for kindergarten and first grade students in such a way that no reading ability is needed. Further, the material is designed so that the classroom teacher can administer and interpret the results so that teaching techniques can be adjusted to improve instruction and learning.

Sample objectives, description of corresponding test items, sample test items, sample answer sheets, and preliminary test results are included after the description of the program is given.

## I. Introduction:

Learning, at its best, is difficult for many students, especially students with little if any, reading ability. Evaluating the amount of learning for students with some reading ability is also difficult at best, but measurement of learning for the non-reading student is particularly difficult since few if any evaluative tools have been developed in this area that can be used by the classroom teacher.

The concern for the need of such an evaluative tool especially for elementary science, is what prompted the development of the project which is described in this paper. The underlying premise for this project has been aptly stated by Blackwood and Porter 1 :

We know enough about learning to say with confidence that children engaged in formal or informal, systematic or unsystematic, planned or unplanned approaches to a study of the world around them will learn something. Each child will learn to a degree related to his involvement in the process and his capacity at any time. The challenge of science teaching in school is to assist children in every way possible to learn more of what is interesting and hopefully significant, in science.

Is science being taught in your school? If the answer is YES, then it is fair to move to the next question: How well are the children doing? A premise that cannot be avoided and one that teachers must hold ever present is that children tend to learn those things they have an opportunity to learn and they do not learn those things they have no opportunity to learn.

If teachers accept this premise wholeheartedly and believe that their school has an excellent program in science, they should have some way to evaluate their teaching of science.

For too long now science achievement in elementary schools has been assumed, but no real effort has been made to measure the degree or amount of learning. Victors' point made in relation to the many elementary science curriculum projects is relevant here (2). He points out that provision must be made for

adequate evaluation. Too much emphasis is given to teacher testimonials and pupil enthusiasm and too little to develop other evaluative means. Learning has been assumed even though objectives were vaguely stated and evaluative techniques, where they existed, were equally as vague or were attempted using a paper and pencil technique that required at least some proficiency in reading and writing.

A major function of a classroom test is to measure student achievement, and thus contribute to an evaluation of educational progress. Tests that measure only verbal memory fail this function. What the teacher needs is evidence of a student's understanding - of his command of the idea as a tool in thinking - and not the recall of the conventional verbal expression of the concept or principle. Reasoning, critical thinking, and the ability to see relationships are the attributes of the learning process that must be selected as standards of achievement against which student performance should be evaluated if we are to provide actual, understandable, and meaningful data to those demanding accountability from schools.

The instructional research literature indicates that questions are usually directed toward the verbal medium, with little or no concern for the potential role of the pictorial medium. However, examination of science textbooks reveals a heavy reliance upon the picture to help communicate information to the learners (3). With this as a premise, why has there not been a concerted attempt to test students in the same way? An attempt, such as the one made by Podrasky (4), would at least display an awareness of the value of the use of pictures as a testing medium.

At another level of learning, a recent study of the science students at Jefferson High School in Bloomington, Minnesota, indicated that most of the students' verbal I.Q. is lower than their non-verbal I.Q. Yet even at this level there seems to be an insistence that the student be evaluated with verbal techniques which is for many students their weakest learning mode.

With these feelings and attitudes in mind the material presented here was prepared in an attempt to provide an evaluative technique which meets the following criteria:

1. Clearly stated criterion referenced objectives with test questions constructed to fit the objective.
2. Test questions constructed in such a way that no reading knowledge would be needed by the student.
3. Test questions designed in such a way that a classroom teacher could administer the test and interpret the results.

## II Content

The project being presented here is concerned only with the science units which are taught during kindergarten and first grade in the Bloomington Public Schools.

For Kindergarten the units taught are:

- Unit I: Watching and Wondering
- Unit II: Getting Ready Activities
- Unit III: Lights and Shadows
- Unit IV: Using our Senses
- Unit V: The Curious Gerbils
- Unit VI: The Life of Beans and Peas

For First Grade the units taught are:

Unit I: Changes

Unit II: Growing Seeds

Unit III: Animal Activities

Unit IV: Material Objects

Unit V: Hatching Chicks

Unit VI: Organisms

Each unit has been divided into various numbers of objectives, ranging from four in Unit I to eight in Unit II for Kindergarten, and each objective has had one or more non-verbal test items constructed that attempts to determine whether the student has learned the material set forth in the objective. (See Appendix 3 and 4)

### III Numbering and Coding

For purposes of record keeping and specific identification of areas where learning has or has not taken place the objectives and corresponding test items have been assigned a number.

Numbering in this manner proved to be of great value when test results indicated something was wrong in one or more areas of the unit. When indications of difficulty on a test item showed up it was possible to analyze the test item, rewrite the objective or examine the method used to teach that topic. This it is hoped will eventually result in a higher quality science program for the students.

The same system of numbering was used for both kindergarten and first grade in an attempt to provide some consistency. It should be pointed out that the numbering and coding of questions was done primarily so the teachers and examiners could keep more accurate records, but the students did not use the numbering to keep track of the questions and answers. Students kept track of questions

by another method which will be explained later.

As an example, the fourth objective in Unit II for Kindergarten would be numbered in the following way; K - II - 04, where:

K - indicates the objective written for kindergarten

II - indicates the objective is written for the second unit of the kindergarten program

04 - indicates the 4th objective written for the second unit of the kindergarten program

The corresponding test items, for which there is more than one in most cases, would have the number K-04-a which can be explained as follows:

K - indicates the test item is for kindergarten

04 - indicates which objective the test item is written for

a - indicates that the test item is the first test item for that objective. Further questions would merely have to be b, c, d, etc.

The number indicating the unit was omitted from the test item because the teachers working on the project felt that the coding system should not get too complicated. Thus a different colored background for the picture of different units was used to keep track of the units. The colors used for each unit are:

Unit I - yellow, Unit II - Green, Unit III - Orange, Unit IV - Tan, Unit V - Red, and Unit VI - Pink.

#### IV Test Items

The test items in this program are a series of 2 x 2 slide pictures which are projected on a screen during testing. Each test item consists of two slides; a stimulus slide and a response slide. (See appendix 5 and 6 for examples)

The stimulus slide, which is shown first, consists of a single picture which indicates a given condition to the student that he is to consider. The response slide, which is then shown beside the stimulus slide, consists of four pictures, one of which is related to the stimulus slide. To answer the question the student chooses the one picture out of the four on the response slide that is related to the condition given pictorially by the stimulus slide and/or verbally stated by the examiner.

The test items are not numbered for the students since it was felt that especially for kindergarten students this would be too difficult for them to handle. Instead, both the stimulus and response slide, has a small familiar figure in the lower left hand corner which also appears on the answer sheet so the student will know where to indicate his response to the question.

For the kindergarten program, each picture in the response slide also has a figure design which is used in all the test items so that the student might better be able to identify the choice he or she wants to make. The figures are  ,  ,  and .

Then, if the picture the student feels is the correct answer contains the  the student merely makes an X in the box on the answer sheet that contains a  for the appropriate question. See appendix 7 for a sample answer booklet for kindergarten.

The use of figures to indicate different answers was not used for the first grade students since it was felt they would be able to transfer their choice on the screen to their choice on the answer sheet without the added references. See appendix 8 for a sample answer sheet for first grade.

For example, if an attempt were being made to see if a kindergarten student could recognize a geometric shape in a red object, the test item would be the one given below.

Stimulus Slide

Response Slide

The stimulus slide would be projected first and then the response slide. would be projected so that both slides would be on the screen at the same time. This allows the students to make visual comparisons, and then the student is asked to pick the object in the response slide that has the same shape as the object in the stimulus slide.

The student would then refer to the "monkey" question and mark the box containing the  to indicate the correct answer if that were the student's choice.

## V. Test Results

The program has not been in existence long enough for extensive testing, so no attempt has been made to standardize the units or to determine reliability and validity. Once the program has been used more extensively, however, these parameters can be determined with some degree of accuracy.

As a matter of preliminary testing and to give those working in the program some idea of how the program would work, one test was administered to a kindergarten class and to a first grade class. I administered the kindergarten test, and a teacher who did not work on the program administered the test to the first grade class.

The preliminary statistical results for kindergarten can be found in appendix 1 and for first grade the results can be found in appendix 2.

Looking only at difficulty, it can be seen that the test for kindergarten seemed easier (.80) than the first grade test (.61), but the larger number of students tested and the fact that the test was administered by someone not working on this program could be a possible explanation for the difference.

It is interesting to note that none of the distractors for the first grade test were completely ignored, while all of the questions in the kindergarten test, except number 8, had at least one distractor which was not picked by anyone.

Each test had one perfect score, and each test had one question that seemed significantly more difficult than the others (question 8 for kindergarten and question 9 for first grade) with the final results showing the potential for accurate evaluation which was desired at the onset of the program.

## VI. Conclusion

All early indications would indicate that the program has a great deal of potential, especially if time is spent carefully analyzing and evaluating each question and each objective for each unit.

Both teachers, students and administrators who have used the program, been tested, or have been asked to offer their opinions have been very enthusiastic about the program.

Teachers have found it to be a very useful teaching aid instead of a testing medium. Students don't seem to feel threatened, find it easy to follow the testing procedure after a few examples, and maintain a high attention level because of the changing colored slides.

The ultimate goal in a program such as this is to apply it to all grade levels K-12, and if it can be effectively applied to kindergarten and first grade then it would only be a matter of time and effort until all students could be tested without a dependency on reading.

Unit IV  
USING OUR SENSES

Kindergarten - UNIT IV

K-IV-01: Given a picture of a part of the body that uses one of the senses (i.e. eyes - sight, ear - hearing, etc.), the student will indicate his ability to describe an object using one of the senses by picking one picture out of four that would require the use of the sense given to identify.

Test Number and Symbol	Stimulus Slide	Characteristic being tested	Response Slide				
K-01-a Frog	Picture of an eye	What can't you see?	<table border="1"> <tr> <td>Balloon</td> <td>All black section</td> </tr> <tr> <td>Bicycle</td> <td>Bananas</td> </tr> </table>	Balloon	All black section	Bicycle	Bananas

Rainbow	Bunny						
Sun	Cloud						

K-IV-02: Given a sound that is familiar to the student, the student will be able to identify an object by the sound it produces, by picking one picture out of four that shows an object which is commonly associated with that sound.

Note to the teacher: For this objective there is no stimulus slide, but rather a short piece of recorded tape for each question.

Test Number and Symbol	Stimulus Tape	Characteristic being tested	Response Slide	
K-02-a  Nut	<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: 0 auto;">           Sound of telephone         </div>	Object which makes sound	<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Piano</div>	<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Type-writer</div>
			<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Fire engle</div>	<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Telephone</div>

K-IV-03: Given a sound produced by vibrations (i.e. drum, guitar, etc.), the student will show his ability to associate a sound with a particular instrument by picking one picture out of four that shows the object that produces the sound given.

Note to the teacher: For this objective there is no stimulus slide, but rather a short piece of recorded tape for each question.

Test Number and Symbol	Stimulus Tape	Characteristic being tested	Response Slide	
K-03-a  Sun	<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: 0 auto;">           Sound of man singing and playing guitar         </div>	Instrument producing sound	<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Boy playing guitar</div>	<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Guitar</div>
			<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">People playing drum</div>	<div style="border: 1px solid black; padding: 5px; width: 50px; margin: 0 auto;">Drum</div>

K-IV-04: Given a picture of a glass half full of water that is colored and a tape correlating the sound of the original glass of water half full and four other glasses contain water, the student will show his ability to determine pitch by picking the picture that gives the same pitch as the original glass of water.

Note to the teacher: For this objective the sound of a glass that is half full of water being struck, is played as a picture of a glass half full of water as shown, as a stimulus slide.

Test Number and Symbol	Stimulus Slide and Tape	Characteristic being tested	Response Slide				
K-04-a Zipper	<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: 0 auto;">Glass half full of water</div> <p>Sound of glass being struck</p>	Which glass would give the same sound?	<table border="1" style="width: 100%;"> <tr> <td>full glass</td> <td>half full glass</td> </tr> <tr> <td>1/4 full glass</td> <td>1/8 full glass</td> </tr> </table>	full glass	half full glass	1/4 full glass	1/8 full glass
full glass	half full glass						
1/4 full glass	1/8 full glass						

K-IV-05: Given a picture of a child experiencing a bad or a good odor, the student will illustrate his ability to describe objects by their odor by picking one picture of an object out of four that would give the student the same or a similar reaction as originally pictured.

Test Number and Symbol	Stimulus Slide	Characteristic being tested	Response Slide				
K-05-a Key	<div style="border: 1px solid black; padding: 10px; width: fit-content; margin: 0 auto;">Face react- ing to a bad odor</div>	What makes a bad odor?	<table border="1" style="width: 100%;"> <tr> <td>Flower</td> <td>Ice cream cone</td> </tr> <tr> <td>Apple</td> <td>Skunk</td> </tr> </table>	Flower	Ice cream cone	Apple	Skunk

PERFORMANCE OBJECTIVES

and

Test Items

Unit II

Growing Seeds

I-II-01: Given a picture of a real seed, the student will demonstrate his ability to identify at least two parts of the seeds by selecting one picture of a seed out of four that correctly indicates two possible parts.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-01-a Alligator	<div style="border: 1px solid black; width: 150px; height: 100px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">           Bean Seed         </div>	Parts of a seed	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">Open bean One part missing</td> <td style="width: 50%;">Open bean, One part missing</td> </tr> <tr> <td>Open bean All parts missing</td> <td>Open bean, All parts showing</td> </tr> </table>	Open bean One part missing	Open bean, One part missing	Open bean All parts missing	Open bean, All parts showing
Open bean One part missing	Open bean, One part missing						
Open bean All parts missing	Open bean, All parts showing						

I-II-02: Given a picture of a seed, the student will indicate his ability to devise a method of grouping seeds with similar characteristics by selecting one picture out of four that has seeds grouped according to the original characteristic given in the picture of the single seed.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-02-a Axe	<div style="border: 1px solid black; width: 80px; height: 60px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">           Peach Seeds         </div>	Group according to bumpy surface	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">poppy seeds</td> <td style="width: 50%;">pea seeds</td> </tr> <tr> <td>bean seeds</td> <td>marigold seeds</td> </tr> </table>	poppy seeds	pea seeds	bean seeds	marigold seeds
poppy seeds	pea seeds						
bean seeds	marigold seeds						
I-02-b Banana	<div style="border: 1px solid black; width: 80px; height: 60px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">           Bean Seeds         </div>	Group according to color	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">red seed</td> <td style="width: 50%;">dark green</td> </tr> <tr> <td>brown seeds</td> <td>light green</td> </tr> </table>	red seed	dark green	brown seeds	light green
red seed	dark green						
brown seeds	light green						
I-02-c Car	<div style="border: 1px solid black; width: 80px; height: 60px; margin: 0 auto; display: flex; align-items: center; justify-content: center;">           Small Seeds         </div>	Group according to size	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">small seeds</td> <td style="width: 50%;">large seeds</td> </tr> <tr> <td>medium seeds</td> <td>very small seeds</td> </tr> </table>	small seeds	large seeds	medium seeds	very small seeds
small seeds	large seeds						
medium seeds	very small seeds						

I-II-02 (cont.)

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-02-d  Dog	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">                     Bean Seed                 </div>	Group According to Shape	<table border="1"> <tr> <td>circular</td> <td>oval</td> </tr> <tr> <td>same shape</td> <td>long</td> </tr> </table>	circular	oval	same shape	long
circular	oval						
same shape	long						

I-II-03: Given a picture of a planted seed at some stage of development, the student will illustrate his ability to identify the next expected change in the planted seed by selecting one picture out of four that represents the next expected change.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-03-a  Elephant	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">                     Sprouting Seed                 </div>	What is next stage of development?	<table border="1"> <tr> <td>Bud Forming</td> <td>Flower Dropping</td> </tr> <tr> <td>Flower in full bloom</td> <td>Flower starting to bloom</td> </tr> </table>	Bud Forming	Flower Dropping	Flower in full bloom	Flower starting to bloom
Bud Forming	Flower Dropping						
Flower in full bloom	Flower starting to bloom						
I-03-b  Fish	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 0 auto;">                     Flower starting to bud                 </div>	What is next stage of development?	<table border="1"> <tr> <td>Sprouting</td> <td>Flower Dropping</td> </tr> <tr> <td>Flower Full Bloom</td> <td>Flower Starting to Bloom</td> </tr> </table>	Sprouting	Flower Dropping	Flower Full Bloom	Flower Starting to Bloom
Sprouting	Flower Dropping						
Flower Full Bloom	Flower Starting to Bloom						

I-II-04: Given a picture of a seed, the student will indicate his knowledge of how that seed differs after it has been planted by selecting one picture that represents a possible product of the plants growth from three others that are not possible products.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-04-a Jeep	Apple Seed	Possible Products of seed Growth	<table border="1"> <tr> <td>Apple</td> <td>Rabbit</td> </tr> <tr> <td>Car</td> <td>Hatch Chicks</td> </tr> </table>	Apple	Rabbit	Car	Hatch Chicks
Apple	Rabbit						
Car	Hatch Chicks						
I-04-b Ladybug	Corn Seed	Possible Products of seed Growth	<table border="1"> <tr> <td>Bath Tub</td> <td>Ear of Corn</td> </tr> <tr> <td>Chair</td> <td>Dog</td> </tr> </table>	Bath Tub	Ear of Corn	Chair	Dog
Bath Tub	Ear of Corn						
Chair	Dog						

I-II-05: Given a picture of a bean, pea, radish or beet being planted, the student will demonstrate his knowledge of which seed will sprout first and develop fastest by selecting the picture of that seed from a group of pictures including the seeds given above.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-05-a Leaf	Child Planting Seeds	Which seed will sprout first?	<table border="1"> <tr> <td>pea</td> <td>bean</td> </tr> <tr> <td>beet</td> <td>radish</td> </tr> </table>	pea	bean	beet	radish
pea	bean						
beet	radish						

I-II-06: Given a picture of a planted seed, the student will illustrate his knowledge of the sequence of events from germination to full growth by selecting one picture representing the correct sequence from three other pictures depicting incorrect sequences.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-06-a  Lion	Seeds Planted In Pot	What is the correct sequence of growth	+ <table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">Incorrect</td> <td style="width: 50%;">Incorrect</td> </tr> <tr> <td>Incorrect</td> <td>Correct Sequence</td> </tr> </table>	Incorrect	Incorrect	Incorrect	Correct Sequence
Incorrect	Incorrect						
Incorrect	Correct Sequence						

I-II-07: Given a picture of a ruler, the student will determine the proper base line for measuring plant growth by selecting one picture out of four that shows the ruler in the proper position in relation to the pot for measuring plant growth.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-07-a  Gloves	Ruler	What is proper way to measure plant growth?	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">Ruler on Plant</td> <td style="width: 50%;">Ruler at base of plant</td> </tr> <tr> <td>Ruler at base of pot</td> <td>Ruler on turned over pot</td> </tr> </table>	Ruler on Plant	Ruler at base of plant	Ruler at base of pot	Ruler on turned over pot
Ruler on Plant	Ruler at base of plant						
Ruler at base of pot	Ruler on turned over pot						

I-II-08: Given a picture of a potted plant, the student will demonstrate his ability to predict what will happen in a normal day's growth by selecting one picture out of four that correctly depicts a logical growth expectation in one day.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide				
I-08-a  Octopus	Potted Plant	What is a logical growth expectation for one day?	<table border="1" style="width: 100%;"> <tr> <td style="width: 50%;">Empty pot</td> <td style="width: 50%;">Flower growing out bottom</td> </tr> <tr> <td>Full grown Tree</td> <td>Plant showing some growth</td> </tr> </table>	Empty pot	Flower growing out bottom	Full grown Tree	Plant showing some growth
Empty pot	Flower growing out bottom						
Full grown Tree	Plant showing some growth						

I-II-09: Given a picture of a potted plant, the student will indicate his ability to devise a method of measuring and recording growth over a period of time by selecting one photograph out of four photographs of different measuring instruments that would be the most appropriate for measuring plant growth.

Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide	
I-09-a Pear	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;">Potted Plant</div>	Which instrument is best for measuring plant growth?	Stop Watch	Price Marker
			Tape Measure	Geiger Counter

I-II-10: Given a picture of a plant, the student will identify one possible reason for growth spurts on certain days by selecting one picture of a condition that helps plant growth from three other pictures of other conditions that do not aid plant growth.

?Test Number and Symbol	Stimulus Slide	Topic being Tested	Response Slide						
I-10-a  Tire	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;">Plant</div>	What condition helps plants grow	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">rain</td> <td style="padding: 2px;">snow</td> </tr> <tr> <td style="padding: 2px;">dry</td> <td style="padding: 2px;">rock</td> </tr> <tr> <td colspan="2" style="padding: 2px;">soil</td> </tr> </table> </div>	rain	snow	dry	rock	soil	
rain	snow								
dry	rock								
soil
