ABSTRACT

Current data for the State of New York and the nation as a whole are reviewed to determine the status of women in postsecondary education in New York. Areas of progress are noted and other areas where problems still exist are described. It is hoped that this paper will serve as a background document for reviewing statewide policy and will assist those who must respond to the provisions of Title IX. Included in this report are data on: population profiles by age cohorts and educational attainment: college participation by age groups, by level of enrollment, and by degree level attainment; participation by type of attendance and by sector; faculty hiring patterns and salaries; administration; and programs. It is concluded that women have made progress in access to postsecondary education, although they are more likely than men to be part-time students. At the advanced degree levels, they have historically received fewer degrees and rank correspondingly lower among faculty and other educational staff. More women are needed on faculties, particularly at the upper levels, and an expanded . curriculum is needed in which sex role stereotyping is no longer an issue. (LBH)

Director, Resource Center on Women in Higher Education SHERRY H. PENNEY

Foreword

New York's colleges and universities have responded well to Regents policies for increasing opportunities for women in postsecondary education. While there is much that still needs to be done, New York's record of accomplishment in this area is foremost in the nation.

In adopting their Position Paper No. 14, Figual Opportunity for Women, the Regents re-emphasized their policy, established in their 1972 Statewide Plan for Postsecondary Education, of extending opportunities for women in postsecondary education.

In 1975, the New York State Education Department established a Resource Center on Women in Higher Education to assist colleges and universities as they voluntarily establish programs to reassess the imbalance in opportunities available to women and men in this State. Through information exchange, conference sponsorship, and direct help in Title IX compliance reports, the Resource Center has assisted colleges and universities in responding to Regents and Federal policies in this area.

The Department, while pleased with the accomplishments of these past several years, will continue its efforts to advance Regents policy to eliminate sex stereotypes and biases based upon sex that deprive our society of the full use, of all of the State's available talent.

This paper has been prepared to examine the current status of our endeavors, to review our achievements, and to point to those areas where we need to continue to focus and strengthen our efforts.

I want to thank Sherry Penney and Charles Treadwell for developing the attached paper.

Ewald B. Nyquist 4

INTRODUCTION

Historically, women have been underserved by postsecondary education in several ways, including admissions
practices, program major choices, ultimate degree level
attainment, and access to faculty and administrative
positions. Underlying these issues is the problem of the
perpetuation of sex stereotyping throughout the educational
system. Beliefs that women should study particular subjects
and enter certain fields have predominated. Similarly,
curricular and textbook materials and counseling services
often present women in traditional or "acceptable" roles.

At the Federal and State levels, several steps have been taken to end discrimination based on sex throughout the educational system. In 1972, the Regents of The University of the State of New York issued Position Paper #14, Equal Opportunity for Women, which reaffirmed the Regents commitment to equal educational opportunities for women. The Regents proposed affirmative action to eliminate discriminatory practices in New York's educational system, and they established three major priorities: (1) recruiting and promoting qualified women in professional and managerial positions in education, (2) ending sexual stereotyping at the elementary and secondary level, and (3) providing equal opportunity for women as students and faculty members of higher education. The Regents paper also suggested that educational institutions exercise a leadership role in providing equal opportunity.

The goals outlined in the Regents position paper are in accord with Federal laws which call for the development of affirmative action plans by institutions that are Federal contractors. More recently, the Department of Health, Education and Welfare issued Regulations for implementing Title IX of the Education Amendments of 1972. Title IX requires that sex discrimination be eliminated in federally assisted education programs. It calls for an end to discriminatory practices in admissions, financial aid, housing, rules and regulations, employment practices, and athletics. Almost all of the nation's 2,700 postsecondary institutions are subject to Title IX, and institutions are required to undertake extensive reviews of institutional practices in order to ensure equity between the sexes.

State and Federal regulations, as well as a variety of steps underway at institutions, are bringing about changes in the educational system. This paper reviews current data for the State of New York and the nation as a whole in order to determine the status of women in postsecondary

education in New York. Areas of progress will be noted and other areas where problems still exist will be described. It is hoped that this paper will serve as a background document for reviewing statewide policy and will assist those who must respond to the provisions of Title IX.

I. Population Profiles: Age Cohorts and Educational Attainment

Discussion of the participation of women in postsecondary education must take into account the representation of women in the State's population. In 1975, women accounted for 52 percent of the State's total population, but less than half of the traditional college freshman-age cohort in New York State. Statewide, 83 percent of all college freshmen are between the ages of 15 and 19. In 1975, women represented 49 percent of that age cohort in New York's population. Projected data indicate that women will continue to be a slight minority of the 15-19 year old cohort through the millenium.

Within other selected age cohorts, women are a majority but their percentages are declining. In 1970, over 54 percent of the 20-24 year olds and 52 percent of the 25-34 year olds in the State were women. By 1975, these proportions decreased to 51 percent and 51.3 percent respectively; by 1985, the proportions will decline even further to 50 percent and 49.5 percent. (See Appendix, Table A, p. 19.) By 2,000 A.D., women are expected to become a slight minority proportion of every age group between the age of 15 and 44.2

According to 1970 State census data for people over the age of 25, the sexes are nearly equal in the number completing 1-4 years of college, with 32,400 more men indicating such attainment out of 1.6 million respondents at this level. However, among those adults who at least graduated from high school, 26 percent of the men and only 15 percent of the women experienced 4 or more years of college. Both men and women over the age of 25 in New York State indicated a median of 12 school years completed. More women than men completed 1 or 3 years of college (postsecondary education), while more men completed 2 or 4 years. (See Appendix, Table B, p. 20.) This is not surprising because women, historically, have selected careers in areas (nursing, medical technology, cosmetology, business office technology) that require 1-year or 3-year diplomas and certificates from postsecondary institutions. This trend is changing, however, as will be discussed later.

¹Nationally, the percentage is 94 percent. See:

<u>American Freshman: National Norms for Fall 1975</u>, Alexander W.

<u>Astin</u>, American Council on Education, UCLA, p. 41.

²Demographic Projections for New York State Counties, (Preliminary), New York State Economic Development Board, November 1975.

II. College Participation - By Age Groups

Nationally, New York State ranks first among major states in the nation in terms of the proportion of female students in higher education. In recent years, women in New York State have also made significant progress in terms of increasing college attendance and the balance between the sexes.

The statewide collegiate participation rates for 1975 (enrollment as a percentage of available population) are approximately 8.0 percent for men and 6.5 percent for women. In 1970, these rates were 6.7 percent for men and 4.4 percent for women. Thus, over 161,000 more women are enrolled as degree-credit students now than were enrolled in 1970, or 51.7 percent more than the number enrolled in that year. The corresponding increase for men is only 24.6 percent, or 103,000 more enrolled (Table 1).

Overall, in 1975, 45,000 fewer women than men (or about 9.5 percent less) were enrolled as degree-credit students in New Work State (including all age groups, full- and parttime, and undergraduate and graduate attendance). Women do, however, represent a clear majority of the hon-degree credit enrollment at colleges and universities in the State. In terms of total enrollment (degree and nondegree), the male/female proportion is 51/49, with only 37,000 more men enrolled out of a total enrollment of 1.08 million.

Mature women (beyond the age of 34) participate in higher education in New York State more than their male counterparts (Table 1). In 1975, approximately 5,000 more women than men age 35 and above enrolled as degree-credit students in colleges and universities in New York State. The total number of men and women age 35 and above, so enrolled, is over 100,000.

³In 1974, only Alaska, Maryland, Mississippi, Vermont and Virginia had a higher proportion of women enrolled as. degree-credit college students, as a percentage of total degree-credit enrollment.

In Fall 1975, women comprised an estimated 55 percent (45,000 out of 82,000 students) of the total nondegree credit course enrollment at colleges and universities in New York State: Because of a dearth of historical data on nondegree enrollment, all remaining enrollment statistics will refer to degree-credit attendance only.

Opening fall 1975 degree credit enrollment, by sex, distributed by age proportions indicated by preliminary sample of institutions within their 1976 Master Plans. Note: Detail may not add to total due to rounding.

Source: Demographic Projections for New York State Counties, - (Preliminary), New York State Economic Development Board, November 1975.

Women of the 15-19 year old (traditional lower division undergraduate) cohort also participate at a higher rate than men in New York State. Men participate at a much higher rate, however, in the age group that represents the largest proportion of college enrollments, 20-24 years of age. This disparity correlates somewhat with the fact that more women than men freshmen expect to obtain an associate degree or lower as their highest degree. More women than men choose careers, such as nursing or medical technology, which can be initiated professionally with a 2-year degree or less, or with a 3-year diploma. Nationally, 22.7 percent of the 1975 women college freshmen expected to enter nursing or other health professional (non-medical doctor) career areas, while only 5.5 percent of the men indicated similar patterns of career choices.

III. College Participation - By Level of Enrollment and Degree Level Attainment

A. Enrollments

There are more men than women enrolled at every degree level of college in New York State. However, in New York State, women comprise a larger proportion of the total enrollments at every degree level than is true nationally. Even though New York has made great strides toward improving access to higher education for women, some imbalance still exists. At the combined undergraduate and graduate (master's and doctoral) degree levels, the ratio of men to women is about 52/48, or approximately the reverse proportions of the State's 15-59 year old population? (see Table 2).

Astin's 1975 freshman study found that, nationally, 9.4 percent of the women and 6.3 percent of the men expected to achieve an associate degree or lower as their highest degree.

Other studies indicate that women of the 20-24 year old range who have experienced some college work are likely to be working to finance their spouse's graduate studies or are starting families.

⁷The 15-59 year old population segment is significant in that, in New York, over 99 percent of all degree credit students are from that age group.

TABLE 2

TRENDS IN DEGREE CREDIT ENROLLMENT AT COLLEGES AND UNIVERSITIES IN NEW YORK STATE, BY SEX OF STUDENT FALL 1970 AND FALL 1975

	Fall	1970	Fall	1975
	Men	Women	Men	·Women
Type of Enrollment	Number %	Number %	Number / %	Number %
(1)	(2) (3)	(4) (5)	(6) (7)	(8) (9)
Total Enrollment Undergraduate	437.099 ,57.2%	327,060 42.8%	519,954 52.3%	475.050 47.7%
Enrollment	339,956 55.9%	268,195 44.1%	420 251 52.1%	386,382 47,9%
Graduate Enrollment (Master's and Doctoral)	82,389 58.9%	57,491 .41.1%	85,257 50.3%	84,245 49.7%
First-Professional Enrollment	14,515 90.0%	1,613 10.0%	14,446 76.7%	4,423 23.4%

At the college freshman level, women in New York State participate proportionately to their representation within the traditional 15-19 college freshman age cohort. In 1975, women represented 49.2 percent of that age cohort, while recent enrollment statistics indicate that women comprised 49.1 percent of the State's full-time first-time college freshmen. Nationally, the proportion of freshmen who are women is about 47 percent. Women are, however, considerably underrepresented at the first-professional level (law, medicine, dentistry, etc.), with the 1975 enrollment ratio being 77/23, men to women. Nationally, this ratio is 82/18. This pattern, however, appears to be changing rapidly.

The humber of female college students in New York State has grown faster than its male counterpart. This is especially true at the advanced degree (post-baccalaureate) levels. The number of women enrolled as first-professional degree students has more than doubled in the last five years, while the number of men has declined. The growth rate of graduate (master's and doctoral) enrollments of women has been more than three times as great as the rate for men in the last five years.

Between 1970 and 1975, the number of women enrolled at all advanced degree levels increased by nearly 30,000, or 50 percent. The corresponding increase for men was only 200 or 0.2 percent. Between 1970 and 1975, the number of men enrolled at the first-professional level declined by 69, while the number of women increased by over 2,800. While women still represent only 23.4 percent of the first-professional enrollments, they have more than doubled in total numbers and as a percent of those enrolled at the first-professional level.

There are some significant changes in fields which have traditionally evidenced low participation rates by women. Nationally, the number of women in the entering class of medical school has tripled since 1964-65. Women constituted 17.8 percent of the 5,800 students enrolled in New York in 1973-74. Similarly, there has been an increase in the number of females enrolled in law schools. In New York State; women represented 18.1 percent of the 9,000 students enrolled in 1973-74. In some areas, however, women are still underrepresented. In dentistry, females accounted for only

⁸Opening fall 1975 enrollment. In 1970, the percentage of women among all freshmen was 44 percent, and of the 15-19 age cohort, 50.1 percent.

⁹Chronicle of Higher Education, July 22, 1974.

5.2 percent of the enrollments in 1973-74. In engineering, at the undergraduate level, enrollment of women is low at 2.3 percent (see Appendix, Tables C, D and E). While women continue to be somewhat underenrolled in several areas, the overall trend clearly demonstrates their increased participation in postsecondary education.

B. Degrees Awarded

The increased participation of women in higher education in New York State becomes especially evident when longer term data on degrees awarded are examined. Women now annually receive nearly the same number of associate, baccalaureate, and master's degrees combined, annually, as men do (77,500, as compared to 85,500 for men, see Table 3). Between 1968 and 1974, the number of women who received a college degree in New York increased 68 percent, as compared to an increase of 48 percent for men. If present New York State trends continue, by 1979-80 men and women will receive an equal number of total collegiate degrees annually. Within several degree levels, the degrees-awarded growth rates for women were several times those for men. As can be noted in Table 3, the number of advanced degrees awarded to women has increased rapidly, and is equal between the sexes at the master's degree level. It will still be some time, however, before an equal representation of the sexes is evident at the doctoral and first-professional levels, if historical patterns continue. The male-to-female fatios of degrees received in 1973-74 were 3-to-1 at the doctoral level and 7-to-1 at the first-professional level (see Appendix, Table F, p. 24).

Astin notes that most of the recent national increase in the number of freshmen planning to go to graduate schools can be attributed to women. The percentage of freshmen women indicating that they are interested in advanced degrees has doubled in only the last four years, while the percentage of men interested in graduate school increased only slightly. This will further accelerate the growth rates of graduate degrees received by women.

It is predicted that by 1979-80, nearly 30 out of every 100 degrees awarded to women will be advanced degrees. For men, the proportion will be only 25 out of 100. To put it another way, by 1979-80 women may be receiving several thousand more advanced degrees annually in New York State than will men.

Several factors will work both to promote and to retard the realization of this projected trend. While in 1973-74, 55 percent of all advanced degrees earned by women in the State were in the field of education (see Appendix, Table G, p. 25), (

TABLE 3

Source: Annual Educational Summary, 1967-68 and 1973-74, New York State Education Department.

1

the number of current college Treshmen selecting education as a field of study has declined dramatically as a result of poor job prospects. Thus, future advanced degree growth in this area will be curtailed accordingly (see Appendix, Table H, p. 26).

Countering the decline of education graduates is a dramatic increase in the number of women selecting a "first-professional" career such as law, dentistry, and medicine. Women currently enrolled as college freshmen are three times as likely to pick such a field as were the women freshmen of 1966.

Table I, p. 27, provides trend data on all degrees awarded in New York State, by field. Education, the social sciences, and letters are still the major program choices by women, but they are becoming less so. More women are selecting fields such as psychology, the health professions, the biological sciences, and business. Men continue to select business as their major field of study, while some increases are noted in education, the arts, and psychology.

IV. Rarticipation - By Type of Attendance and By Sector

More women attend college on a part-time basis than do men in New York State. In 1975, 42.1 percent of all female degree credit students were studying part-time, compared to 35.2 percent of the male students. Table J in the Appendix shows that 16,700 more women than men were part-time degree-credit students in the fall of 1975.

Tables K and L in the Appendix indicate the distribution of women students among the sectors of postsecondary education in the State. Women represent the majority of part-time students at nearly every sector and for several degree levels. More importantly, women are equally served by the three major sectors—the State University, the City University, and the independent institutions—of postsecondary education in the State. In each sector, the percentage of women students enrolled parallels the proportion of the total statewide degree—credit enrolled (see Appendix, Table L, p. 30). That is, each sector's share of both total degree—credit enrollment and total women enrolled is roughly one—third.

V. Summary - Enrollments

In summary, in the area of enrollments, women have made significant gains in New York. There are more women on campuses and in a greater variety of fields than have been seen for some time. The advent and implementation of Title IX will enhance the trend of increased female participation. No longer may graduate and professional schools maintain quotas in admissions, and, at all levels, financial aid must be awarded in a manner which does not discriminate on the basis of sex. 10 Consequently, the place of the woman student in postsecondary education should show continued improvement in the years ahead.

VI., Faculty

A. Hiring Patterns

There are areas in education, however, where change for women has been minimal. An examination of Miring patterns for college and university faculty shows that there has been no significant change and that the proportion of women faculty members has increased only slightly. There also continues to be considerably fewer women than men employed as professional staff. In 1959-60, the national proportion of women faculty members was 19.1 percent. Nationally, the largest increase has been at the instructor level, while the percent of women as professors fell from 9.9 percent in 1959-60 to 9.4 percent in 1974-75. In New York, the figures are somewhat better with 24.4 percent of the full-time institutional instructional faculty posts held by women in 1972-73, and 26.2 percent in 1974-75 (see Table 4), but statistics for New York indicate the same trend. Women continue to be underrepresented at the higher faculty ranks,

¹⁰ A recent State Education Department study showed that male graduate students, doctoral and master's, generally acquired larger mean grant amounts than female students during the 1974-75 academic year. The largest difference occured at The City University of New York, where male doctoral students (\$1,710) received nearly twice the amount that female students did (\$881).

comprising only 10 percent of the full professors and 19 percent of the associate professors in the State. However, this corresponds somewhat with the fact that more men than women faculty have advanced degrees beyond the master's. (Nationally, in 1972-73, 45 percent of the men college faculty had advanced degrees beyond the master's, while only 24 percent of the women faculty did.)

Data on the numbers of faculty gaining tenure follow the same trend. Fewer women than men have continued to receive tenure in New York. Only 23 percent of the faculty positions leading to tenure are held by women while 42 percent of those faculty positions outside the tenure-eligible structure are held by women.

B. Salaries

Women faculty, nationally and in New York, continue to earn less than their male colleagues. 12 The difference in national average salaries for men and women for all ranks was about 21 percent in 1972-73 (\$14,360 vs. \$11,901). In New York State, the difference in salaries for men and women ranges from three to ten percent, depending on rank.

As noted earlier, enrollment by women for advanced degrees is growing at a rapid rate and could theoretically alter the faculty employment trend described above. The long-term employment gains possible for women, however, are difficult to predict. Many colleges are expecting enrollment stabilization and decline in the next 10 to 15 years and consequently are not hiring new faculty. At the same time, they are curtailing promotions and tenure appointments among current faculty members. These factors may inhibit the opportunities for women to fully participate and advance within the college faculty profession.

VII. Administration

Women are also underrepresented at the highest levels of administration in higher education. While the goal in the Regents Position Paper #14 is that, "...priority should be given to the appointment of qualified women as superintendents, principals, college presidents, and deans... there are still only a few female college presidents. With the

¹² Ibid.

exception of "women's colleges," relatively few women hold top administrative positions in postsecondary education. When women are appointed to an administrative position, it often is as assistant to the president or dean and not as president or dean.

Nationally, less than five percent of the presidencies of colleges and universities are held by women, and three-fourths of those that are held by women are in church-related institutions. In New York, there were 21 degree-granting institutions out of 242 (nine percent) headed by females in 1974-75; 15 of these were church-related (or formerly church-related institutions. In 1975-76, 22 postsecondary institutions out of 238 had female presidents (see Table 5), 21 in the nonpublic sector and only one public institution, and all but four were nonsecular institutions. At the level of executive or academic vice president, the numbers continue to be small. Women held 27 percent of the positions designated as assistant to the president, but only 15 percent of the positions as chief academic officer (see Table M in the Appendix). "The higher the fewer" is still the rule, both nationally and in New York.

VIII. Programs

Institutions have become more aware of the adult learner, and throughout the State and nation are designing special programs to serve this clientele. Special programs are being established to be more compatible with the schedules of students who have additional job and family responsibilities. A preliminary survey of New York collegiate institutions indicates that over 30 have some type of special program for the adult woman student. Another 50 or so lack specific programs but do offer special courses and/or services to meet the needs of adult women students. Most of these students, as indicated earlier in this paper, attend college part-time, and their participation rate has continued to grow.

The problem of sex stereotyping remains, but some changes are underway. The advent of women's studies courses and programs has shown marked growth nationally and in New York. Such courses and programs are now offered at 102 campuses in the State, and degrees in women's studies can be obtained at seven institutions, with advanced degrees available at three more. In addition to the courses themselves, new scholarly research, particularly in the social sciences, is

beginning to challenge sexual stereotyping in texts and curricula, not only at the elementary and secondary level but in postsecondary education as well. More attention is/now given to women in instructional materials, sexist remarks are challenged, and women as well as men students are encouraged to look at the problems which have been created by past stereotyping. (For women, it has meant the lack of encouragement at successive levels in the educational system and the lack of support for entering certain vocational and professional fields.) As the enrollment data indicate, change is beginning to occur in this area.

IX. Summary

Women have made progress in access to postsecondary education. They outnumber men in college at more mature age levels, but are more likely to be part-time students. At the advanced degree levels, however, they have historically received fewer degrees and rank correspondingly lower among faculty and other educational professional staff. Within certain occupational categories, their numbers are stronger, although the numbers may shift here as both sexes choose careers in previously stereotyped areas.

More women are needed on faculties, particularly at the upper levels, and women presidents should no longer be a rarity. An expanded curriculum, in which the problem of sex role stereotyping is no longer an issue, is in order. In 1976, New York State is closer to achieving the goals outlined in the Regents Position Paper, and the full implementation of the Regulations for Title IX will result in an educational system which is responsive to the needs of all persons—male and female.
