ABSTRACT

Part of a 13-volume series designed to be used as a group inservice or a self-learning system to train school administrators and counselors for their role in career education, this second section (5.2) of module 5 (implementation--for administrators) centers on aiding in the implementation of a career education curriculum. Module 5 is one of six modules for administrators and four for counselors developed in Phase IV of a five-phase career education project in Hawaii. Module 5.2 contains three lessons. Lesson 1 focuses on the community as a source for the development of curriculum materials and includes materials on using community resources as part of the curriculum, using the community as curriculum, onsite visitations, a sample of onsite visitation forms, and a resource inventory. Lesson 2 consists of criteria for evaluating career education materials, an evaluation form, and a materials section which contain 46 1-page evaluations of specific commercially prepared career education materials. Lesson 3 is designed to demonstrate to principals one action plan for infusing career education into an elementary school curriculum. Appendixes contain a directory of resource personnel for vocational-technical programs in Hawaii, and an example of a business information packet prepared for educators. (TA)

Documents acquired by ERIC include many informal unpublished materials not available from other sources. ERIC makes every effort to obtain the best copy available. Nevertheless, items of marginal reproducibility are often encountered and this affects the quality of the microfiche and hardcopy reproductions ERIC makes available via the ERIC Document Reproduction Service (EDRS). EDRS is not responsible for the quality of the original document. Reproductions supplied by EDRS are the best that can be made from addinal.

CAREER EDUCATION ADMINISTRATORS AND COUNSELORS IMPLEMENTATION MODEL

PHASE IV, HAWAII CARRER DEVELOPMENT CONTINUENT PROJECT

"Comprehensive Staff Development Model for Delivery of Career Development System igr the Public Schools of Hawaii"

MODULE V--IMPLEMENTATION (5.2) CURRICULUM EVALUATION

College of Education, University of Hawaii Office of Instructional Services, Department of Education State of Hawaii

SEPTEMBER 1976

FINAL REPORT

Project No. 498AH50291 Grant No. G00750051

Hawaii Career Development Continuum, K-14

Conducted Under Part C of Public Law 90-576

This project was funded by P. L. 90-576 funds awarded to the State Board of Vocational Education but sponsored by the Department of Education. The actual development was undertaken by the College of Education of the University of Hawaii under contract to the Department of Education.

The project reported herein was performed pursuant to a grant from the Bureau of Adult, Vocational, and Technical Education, Office of Education, U. S. Department of Health, Education, and Welfare. Grantees undertaking such projects under Government sponsorship are encouraged to express freely their professional judgment in the conduct of the project. Points of view or opinions stated do not, therefore, necessarily represent official Office of Education position or policy.

September 1976

DISCRIMINATION PROHIBITED

Title VI of the Civil Rights Act of 1964 states: "No person in the United States shall, on the ground of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance." Title IX of the Education Amendments of 1972, Public Law 92-318, states: "No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance." Therefore, career education projects supported under Sections 402 and 406 of the Educational Amendments of 1974, like every program or activity receiving financial assistance from the U. S. Department of Health, Education, and Welfare, must be operated in compliance with these laws.

PROJECT OVERVIEW

The overall plan for the development of Career Education in the state of Hawaii was conceived as the Hawaii Career Development Continuum Project. To date the continuum consists of the following phases:

- PHASE I (1972) Development of a Continuum for Career Development K-12.
- PHASE II (1972-73) Development of Curriculum Guides K-12 and an ETV series for grades 4-6.
- PHASE III (1974-75) Development of teacher education models and training of teacher cadre, etc.
- PHASE IV (1975-76) Development of model and materials for counselors and administrators.

As can be seen, Phase IV was designated as the training component for administrators and counselors.

The initial segment of Phase IV was to develop a model to characterize the training procedures. The next task was to collect and/or develop a set of materials for each module of the training program. The initial set of materials is designed to present the administrators and counselors an opportunity to seriously examine Career Education and its implications for their institutional roles. The balance of the materials tend to focus on the various administrative functions which affect implementation of Career Education.

The series of documents comprise the materials for an in-service program for a variety of administrative positions at the school and district level. There is a certain flexibility since the materials are designed to be used as a group inservice or a self-learning system.

Program Organization

There are six (6) modules for administrators, four (4) for counselors in the phase. The first two are common while the balance are specific to either counselors or administrators. The modules are:

Module I--Information

Module II--Orientation

Module III--Teacher Information and Orientation for Administrators

3.1 Identify Change Strategy

Module IV--Planning

- 4.1 Develop Plans for Curriculum Preparation and Infusion
- 4.2 Plans for Resource Allocation
- 4.3 Plans for Scheduling
- 4.4 Plans for Community Involvement

Module V--Implementation

- 5.1 Supervision of Teaching
- 5.2 Curriculum Evaluation

Module VI--Evaluation of Career Education (Administrator)

Module VII--Develop and Implement Needs Assessment

Module VIII -- Implementation

- 8.1 Preparation and Evaluation of Counselor Material
- 8.2 Consultation to School Personnel
- 8.3 Integration of Coordination of School and Community Resources

Each module has a similar format. A short introduction provides an overview of the material to be covered, and a set of goals which are to be addressed in the module. In the common modules a time frame and a description of the materials are suggested for use with each goal statement.

In the administrator and counselor specific modules a lesson format is suggested, since the use of these materials may vary widely from situation to situation.

In addition, there are specific comments for use by a workshop facilitator, instructor, etc., for those lessons where such teaching suggestions are appropriate. Several of the modules contain simulations or other learning activities to reinforce the appropriate goal statement.

Each module has supplementary readings which can be duplicated and handed to the participants either prior to or during the workshop. When there is a time frame for a module, the estimated time has included a period for perusal of the article during the workshop. If the materials are read in advance, the time estimates should be adjusted accordingly. A bibliography is also attached for those modules where it is appropriate.

Again, it should be noted that this set of materials is a guide to training administrators and counselors in the implementation of career education. It is not a prescription which should be followed unwaveringly. Some modules may be inappropriate for certain groups. It is the responsibility of the workshop facilitator to consider the individual differences within and between groups and to gauge the presentations accordingly.

It should further be noted that this implementation program is based upon the notion that there will be a time span between the end of one module and the beginning of the next. Since the entire program would take twenty to thirty hours at a minimum, and given the workshop regulations of the Department of Education, that would be a logical supposition.

IMPLEMENTATION MODULE

Curriculum Evaluation

Several aspects of the planning of curriculum in career education were presented in the Planning Module IV (4.1). This module centers on aiding in the implementation of the curriculum.

When a career education curriculum is used in the schools, the relationship between the school and the community becomes more and more obvious and the need to develop a working partnership between the two parties becomes evident. At this point a career education community relations program should already be functioning and the time is ripe for school administrators and staff to begin to explore and develop the counterpart of chool curriculum—that of community resources which could be used in career curriculum. Input from the community should be sought and this input may be acquired through the development of materials at the local level. There are a number of considerations to be kept in mind in selecting and utilizing community resources for career education. Selection of resources should be based on the nature of the population(s) being served, the student characteristics and career needs, objectives of the program, the setting in which it is to become operational, methods to be utilized, and the budget available.

The above listed criteria for selecting career resources can also apply to the educator who needs to evaluate commercial material. By focusing on the career implications of all academic areas as a reference point, the relevance of commercially produced materials in these areas of instruction may be ascertained. This is the basis used in the second lesson on the evaluation of commercially produced curriculum materials.

Career education curriculum must be found which facilitates student career development. Human and nonhuman resources which can be made available to both students and teachers must be located and students must be assisted in relating these resources, materials, and programs to their individual occupational explorations and to classroom projects. By acquainting teachers with the explorations and information available, they will be in a position to develop learning activities which will facilitate the development of individual potentialities, positive self-concept, sense of control over one's life, and the sense of purpose which are major goals of career education.

When evaluating career education materials, the educator must be aware that there has been a tremendous growth in the amount of commerical materials produced in the past few years. These materials vary in the degree to which they express the concepts and principles of career education. One must be cautious in evaluating the materials in terms of their accuracy, recency, readability, usability, appeal, comprehensiveness, and so forth. Are they actually career education materials because their titles portray them as such? Will they have a significant impact on the career education curriculum? Do they contribute to the larger goals of career education of the 1970's? These questions form the basis of a set of evaluation of commercial materials which is included in this module.

The final lesson in this module is an example of a practical use a principal might make of several of the other modules in developing a school level project in career education. Each activity is stated and an accompanying milestone chart is used to time frame the activity

This module consists of one lesson for each of the three goals. The goals covered are:

- To make administrators aware of community resources which can be utilized in the development of a career education curriculum.
- 2. To present as a guide to administrators an evaluation of commercially produced curriculum materials, done by local teachers.
- 3. To utilize materials in this and other modules to prepare an action plan for a practical implementation of a career education project in a school.

Lesson 1

The first lesson focuses on the community as a source for the development of curriculum materials. There are many activities by industry and other community agencies that directly and indirectly involve the concept of career education. The alert administrator should be quick to recognize that a partner-ship might well be developed between the schools and the community. For example, the Bell-Telephone System has an "Aids to Education Program," and the following is a statement of their rationale for establishing this program:

"In today's rapidly changing society, the effectiveness of basic institutions such as business and education is of the greatest importance. Concurrently, the increasing interdependence of these basic institutions has become a crucial factor in that effectiveness. In recognizing their responsibility to education, the Bell System companies endeavor to serve the needs of the educational system especially in those areas where we have particular competencies.

Toward this end, the Bell System has developed and is continuing to expand its Aids to Education Program"

The full ramifications of school-community relations will be explored in the module on career education and community involvement (Module IV, 4.4). For curriculum proposed, we will present examples of types of curriculum resources from the community which can be used in the schools as well as off of the school grounds, in the work setting.

Goal 1: To make administrators aware of community resources which can be utilized in the development of a career education curriculum

Content

Career education has an occupational emphasis and for this reason some mistake strong community ties as making career education another term for vocational education. We have already established the fact that career education and vocational education are not identical, although there is a relationship. Likewise, we have stated that the thrust of the career education movement is that the curriculum of schools should provide a wide range of methods, alternatives and materials so that each may achieve to his or her best potential. Therefore, as a career education curriculum is developed in a school, the administrator and his staff must recognize that there are community resources in the form of people, materials and services that are useful and valuable for educational purposes. Any individual within or outside the school who can provide expertise to augment the learning situation by providing information about occupations, career training, life styles, skills, and/or career ladders, clarify requirement for obtaining jobs, or show the relationship between school learning and later job requirements is a valuable resource. Occasionally educators overlook the wealth of talent, expertise, and valuable experience available from individuals in the school environment. They are part of the larger community and through their hobbies, avocational interest, job experiences, life styles and leisure time activities, they, too, are valuable resources in the search for enrichment of the curriculum.

Service resources are also provided from the community and involve primarily the exchange of personnel and/or facilities between school and community. Participation in educational advisory committees, workshops, work experiences, and company training opportunities for both students and educators are available. For example, many school programs can use community volunteers to work with school staff in providing volunteer resources in a wide variety of career, occupational and enrichment areas. These volunteers talk to students, classes, or small groups about specific occupational or subject matter concerns. In addition, they can arrange for students to visit career resource people at their work sites and/or to observe the occupational area.

Tutoring is another area for educators to explore as a method of adding resources to the curriculum. As an industry or school initiated activity, companies can be encouraged to offer employees released time to participate in an established student tutoring program, either on campus or at the industry site.

The business sector is generally very willing to cooperate with schools, especially in the area of career education. A major concern of business and industry, as pointed out in the Information Module, is that often applicants for jobs appear to know little about the world of work, are unable to fill out application forms, or to sit through an interview.

A well developed career education curriculum at the secondary level should provide each student with opportunities to sharpen his skills in these areas, whether or not he intends to enter the labor market upon graduation, or at a later time. Training students to be aware of these essential activities should be a cooperative venture with the school providing initial learning experiences followed by trial interviews with professionals from the business community.

Since the first contact a student generally has with a potential employer is the personnel division, a special effort should be made to involve this segment of industry in the school program. The use of a simulated interview with a student before a class and the resulting critique will provide valuable lessons to the entire group.

The principal should encourage activities of this type by providing scheduled time, the relevant pre-interview curriculum, and the linkage with the business community which facilitates such endeavors. When working with the community and utilizing its resources as a vital part of career education curriculum, a mechanism needs to be established by the educator to assure smooth and continued community use and involvement. There needs to be proper use of the resources, clear communication, and most importantly a clear understanding of responsibilities to the program and to the students as well as an understanding by the educator of the time constraints and interests of business.

The State Department of Education (DOE) has compiled a directory of resources from some of the major occupational clusters in the state: health, business, construction, etc. They have included the name of the organization, its address, and telephone number as well as the name of the contact person (see Appendix 1).

Many educators, aware of the need for community resources, may still be hesitant in using community resources because they are unsure of the procedure

to use in locating and gathering these resources. For this reason, we have as the first reading, "How to Use Community Resources as Part of the Curriculum." This suggested procedure is delivered to the reader on a step-by-step basis beginning with the initial on-site interview and ending with step 7, the follow-up. The next article deals with specific activities which an educator may decide to implement from the school. In this article, we propose the role of the educator, industry, and the student, and the responsibilities of each. One of these activities, the on-site visitation, is further explored in the final article of this lesson, and we demonstrate what could be accomplished in such a visitation, complete with forms and brochures which can be provided by the industry.

HOW TO USE COMMUNITY PESOURCES AS PART OF THE CHRRICULUM

A Step by Step Procedure*

You are a teacher, counselor, administrator, or district staff person. You need some stimulus for career education and you want to use community resources. How do you do it? Are there others in your school who have information they might share with you? How can you find out who would be best to assist you?

These and other questions are addressed in the following step by step instruction.

Community Resource Use: Step by Step

Before undertaking any new project that involves the community, one should find out if there are other efforts in the school that already use resources in the local community. If so, what are these resources, how are they being used, how often are they used, how many students are involved, and finally, are there any problems with the present program?

- Step 1: Use a personal on-site interview as frequently as possible and practical. The visit to the site will provide an opportunity to see the contact's place of work and to view, on a limited basis, the work environment and kinds of activities carried out there.
- Step 2: Establish rapport with the contact. Remember, the better one can communicate the more effectively you'll work together over a long period of time.
- Step 3: Be specific about what you expect the community resource to do. Find out what limitations are and how much time can be devoted to your project. Pespect the limits.
- Step 4: Bring a brief project description to the personal interview. Leave it when you depart. Describe your activities briefly. Ask for feedback and questions. The interview can be the key to successful school/community projects.
- Step 5: Keep communication channels open to the community. Stay in touch as the project operates. Correct and revise procedures where necessary.
- Stay alert to new possibilities. Your own list of community resource prospects will expand if you take every opportunity Step 6: to seek additional contacts from community representatives.
- Step 7: Follow-up. If a contact has been established and there is no follow-up, one may permanently alienate a valuable resource for yourself and others. Find out if there are problems and correct them.

^{*}Community Involvement in Career Education. Kindred, L. L. and Weimer, Thomas (co-editors), 1974. 6

EXAMPLES AND TIPS ON HOW TO UTILIZE COMMUNITY AS CURRICULUM

Implicit in the concepts of career education is the ability to bring the real world of the community into the classroom and to send students out into the community. Thus, the school has an added dimension in helping students to prepare for productive lives since the community gives the students practical application of the theories and concepts they are being asked to learn in the classroom.

Community resources make a significant contribution to the education of students in almost every situation. People, places, and organizations provide the student with the sense of agency he or she needs in order to function effectively in society. However, this growing recognition of the effectiveness of the community may place a strain on the community members who are being asked to participate. School administrators and the career education coordinators need to be aware that the system of internal operation exists in different industries to assure that the use of the valuable time of the community resource is used to the optimum.

Pre-planning, which includes a clear description of the role and function of each of the three groups of participants, i.e., community resource personnel, school staff and the students, is properly delineated to all concerned. The next several pages include planning statements for five potential types of community-school involvement. Each statement contains a program description, criteria to be observed, the roles of the community person, the school personnel and the student. While these are not as inclusive as, for instance, a lesson plan, they provide tips which should be the minimum for school participation.

Program Activity: Field Trips

Purpose of Program. Field trips assist the teacher in relating subjects being taught in the classroom to job skills and tasks. They are also beneficial in broadening the students' knowledge of the unlimited occupations available in the community.

Grade Level. K-12.

Other Criteria. Criteria for field trips depend upon limitations placed by the sites being visited, such as:

- 1. Number of students,
- 2. Time of day,
- 3. Length of the visit,
- 4. Number of trips allowed per month, and
- 5. Grade level of students.

What the Educator Has To Do.

- 1. Be sure the tour guide has a clear understanding of what the educator expects the students to learn as a result of the trip.
- 2. Instruct the students on proper behavior, dress, and acceptable conduct during the vist.
- 3. Prepare an evaluation of the trip.

· martiners and

What Business and Industry Have To Do:

- 1. Attempt to show as many levels of occupations (with respect to education, experience, responsibility, salary, etc.) and working conditions as possible.
- 2. Consider allowing certain employees to display and/or demonstrate tools and equipment used in their occupations.
- 3. Point out the relationship between subject(s) the students are studying in school and the various types of work being done by the employees.
- 4. If possible, allow time for workers to be interviewed.

What the Student Has To Do.

- Assist the teacher in preplanning.
- 2. Be courteous and observe the tour guide's directions.
- 3. Be observant and keep in mind the purpose of the field trip looking for those points on which you may be asked to make a report.
- 4. Express appreciation to the tour guide for the opportunity to visit.

Program Activity: Guest Speakers

Purpose of Program. The use of guest speakers in the classroom help to give the students accurate, firsthand information about the world of work.

Grade Level. K-12.

Other Criteria. Most speakers limit their presentations to one class period and one class. However, in some cases they will agree to make more than one presentation and/or to larger groups.

What the Educator Has To Do.

1. Advise the speaker of the general characteristics of his audience-ages, interests, abilities, and background in the topic area.

- 2. Inform the speaker of what is expected of him.
- 3. Prepare the students in advance of the presentation regarding proper behavior, etc.

What Business and Industry Have To Do.

- 1. Relate their topic to the immediate experiences and concerns of the students.
- 2. If possible, actively involve the students in the presentation.

What the Student Has To Do.

- 1. Be courteous and attentive during the presentation.
- 2. Come prepared to ask questions of the speaker, relating career education curriculum to information given by the speaker.

Program Activity: Occupational Advisor (Interviews)

Purpose of Program. Personal interviews can be arranged for a student or small groups of students as a means of obtaining firsthand information outside the classroom that is related to current course work or career interests on the part of the student.

Grade Level. 7-12.

Other Criteria.

- 1. Experience limited to sincerely interested and capable students.
- 2. Experience limited to time frame business and industry can allow.
- 3. Purpose and intent should be clear in the mind of the student.
- 4. This experience may be tape recorded or videotaped for later classroom use.
- 5. Contact person should be given prior knowledge of purpose, intent, and specific topic(s).

What the Educator Has To Do. They must prepare the student thoroughly as to direction, purpose, and technique. They should require a simulation before the interview and a report upon completion of the interview.

What Business and Indust; Have To Do. Be willing to meet students and take time before the interview to think about the subject to be discussed to insure an unhurried, successful meeting. This type of experience often requires a student who is quick thinking and has the ability to ask clear, concise questions. Every opportunity should be given to help the student clarify interviewing procedures.

What the Student Has To Do. The student must carefully think through his purpose and decide the questions and direction he wishes the interview to take. Not only should he be as prepared as he can be, he should be well-groomed and courteous. The student should give the contact person prior knowledge as to the content of the interview so that the interviewee can have time to think about the subject which will be discussed.

Program Activity: Work Experience Program

Purpose of Program. To help high school students, especially grades 11 and 12, appreciate the work setting, determine the potential of that particular field for their life, and help them recognize that school and the outside world are not completely separate considerations.

Grade Level. High school.

Program Descriptors.

- 1. Students not only observe the world of work, but they also have actual involvement which may approach developing the entry level skills needed for any particular field.
- 2. Student involvement is for an average of eight hours per week for a minimum of eight weeks.
- 3. Students' work experience may occur in lieu of class participation. This participation may occur during either the regular school day or at other specified times.

What the Educator Has To Do. As the sponsor, he will:

- 1. Hold an informal conference with the student to determine the types of experiences the student desires. At this time, go over the memorandum of understanding the student will be developing with the employer.
- 2. Be sure the student receives his/her appointment form for the interview with the employer.
- 3. Collect all applications, appointment forms, memorandums of understanding, evaluations, and attendance reports from the student and forward them to the company.
- 4. Hold a conference with the student at the completion of the experience and possibly once during the experience.
- 5. Be the contact person for the student if a problem should arise.
- 6. Make sure the student receives the proper credit for participation in the program.

The coordinator of career education (counselor) will:

- Be the liaison between the community and the schools.
- 2. Contact the business community to find placements for the students.
- 3. Set up an interview between the employer and the student. An appointment form will be sent to the sponsor for transmittal to the student.
- 4. Send a copy of the appointment form to the employer, along with suggested questions to be used during the interview. An employer/sponsor packet should be prepared.
- 5. Send a letter to the employer confirming the placement.
- 6. Send a copy of the confirmation to the sponsor and student. The student will also receive a supply of attendance reports.
- 7. Be the collecting agent for the applications, evaluations, attendance reports and any other necessary documents.
- 8. Send copies of the students and sponsors evaluations to the employers if requested.
- 9. Send copies of the employers' evaluations to the students and sponsors, if requested.

What Business and Industry Have To Do.

- 1. Interview the student to determine whether to accept or reject placing the student in a work experience station based on the interview.
- 2. If he decides to accept the student, discuss and assist the student in completing a memorandum of understanding.
- 3. Provide necessary work orientation for a successful experience.
- 4. Evaluate the student at the completion of the experience and possibly once during the experience.

What the Student Has To Do.

- Have signed consent from his/her parents.
- 2. provide his/her own transportation.
- Participate in an interview with the prospective employer.
 After the interview, return the appointment form to his/her sponsor.

- 4. Develop a memorandum of understanding with the employer to determine the types of experiences he/she is to receive on the job, and give to his/her sponsor.
- 5. Be faithful in attendance.
- 6. Arrive punctually at the assigned position.
- 7. Return the attendance report to sponsor at the end of each week.
- 8. Provide an evaluation of the experience to his/her sponsor at the end of the experience.

Program Activity: Work Exposure Program

<u>Purpose of Program</u>. This program is built around an expressed student interest in several occupational clusters and encourages the student to explore the occupations so that he or she can expand their understanding of those occupations.

Grade Level. Grades 6-12 with focus on 7-9.

Program Descriptors.

- 1. Students observe work settings and worker environments for at least ten hours.
- 2. The ten hours of work exposure may be limited to one site or can be designed to include several sites.
- 3. Students may be encouraged to participate in work exposure programs where they would limit their observations to several settings within a single job cluster, rather than attempt to observe several occupational clusters.
- 4. Observations may be arranged (1) on an individual basis, (2) in small groups, (3) as an extension of a class with a group, or (4) for double classes.
- 5. Work exposure programs are usually conducted as part of an existing class.
- 6. Student observations are normally accomplished during the school day.
- 7. No credit is awarded beyond that which is earned in the student's regular class.

What the Educator Has To Do.

1. The counselor will be the liaison between the community and the schools.

- 2. The counselor will contact the business community to find placements for the students.
- 3. The teacher will conduct pre- and post-activities to the occupations being explored in order to make the experience meaningful.
- 4. The teacher will evaluate the experience.

What Business and Industry Have To Do.

- 1. Attempt to give the students as much information regarding their occupation as possible.
- 2. Relate the subjects being taught in school to the type of work being observed.
- 3. If possible for individual work exposure situations, provide some "hands on" activities.
- 4. The participating agency may be asked to evaluate the experiences.

What the Student Has To Do.

- 1. If it is an individual work emposure, the student must provide his own transportation.
- 2. The student should be prepared with questions to ask employees.
- 3. The student should have some awareness of the occupations they will be viewing and some type of preparation or knowledge of what to expect.

ON-SITE VISITATIONS

One outstanding type of community resource which may be over-used and even on occasion misused by educators is the on-site visitation. Operational considerations in planning and executing on-site visitations are most adequately chronicled in the Department of Education publication, A Manual of Educational Field Trips to Business and Industry for Hawaii's School Teachers and Students (TAC 72-4234, March 1972), and do not need restatement in this module. The purpose of this section of the module is to suggest a quality control mechanism which can be used by schools to aid administrators and career education coordinators in scheduling the most productive community visitation. Some of the tours developed by business and industry for use with student groups have been ill-prepared in at least two ways. First is the lack of awareness of how to speak to students of different age groups, and the second is the lack of understanding of what the students need to know about the particular work situation as it is related to their stage of career development. The educational personnel must share responsibility in this regard and need to spend time with members of the occupational community in aiding them to see what is needed and to beginto consider the particular developmental level of the students who will be involved.

A sample of on-site visitation forms that have been used by educators is provided on page 16. Depending on the purpose of the visitation and the age level of the students, different froms or briefings should be utilized to maximize the uses of the visitation. The following materials are provided as an example of what can be done. Portions of the form may even be used as a post evaluation by students. As the visitations occur over time, the file will become more complete which in turn will allow teachers to do more complete per visitation teaching about a particular industry.

All of the uses of the occupational information collected from business and industry need to be fully explored by educators and students.

Several businesses, well aware of and interested in the development of better rapport between the school and the community, have compiled information packets for the use of educators. These are primarily informative with generalities about the industry. However, upon request by the educator, with the cooperation of the contact person in industry, these packets can include specific information such as types of jobs in the industry, job descriptions, and career ladders, as well as pay scales for different jobs. We have included part of a packet which was compiled by Island Holiday Resorts (Appendix 2). Island Holiday Resorts is part of the Hawaii visitor industry which operates ten hotels throughout the islands. Depending upon the grade level of the students and the classroom curriculum provided by the teacher, these types of materials could be excellent in introducing students to many facets of career education. For example, an elementary teacher may wish to have information of general occupations in an industry and perhaps some pictures of people at work. An intermediate level teacher would be able to use the materials in Appendix 2, which contains a comprehensive introduction to the industry, as well as the many people and types of jobs needed to keep things moving smoothly. Wages are shown next to the appropriate job classification. Also included is a list of

the jargon used in the business and the definition for each. The high school teacher may need a different type of information depending on their class and their lesson plan.

Additional Comments:				٠.

Schools need to identify and to classify business and industry resources that support educational programs. The following inventory is to locate work stations, facilities, speakers, and funds to support Career Education. 1. What size groups could visit your Business or Plant? (Large: 20+) (Small: 2 - 10) (Medium: 10 - 20) (Individual: 1 to 1) Would you be willing to speak or demonstrate your occupation in the School? No What funds are earmarked by your company to support local educational agencies? (\$100/year) (\$1000+/year) (\$100 - \$500/year) (Other:) (\$500 - \$1000/year) Would your firm hire part-time employees from the school? Yes Would you be willing to explore cooperative activities with the School? Yes Are there career information materials, seminars, or on-site training opportunities in your business? Would you be willing to share these with the School? Yes

Would you be willing to participate in career development activities spon-

sored by the school?

Yes ·

Lesson 2

A commonly used definition of the word evaluation is that it is for the purpose of improving future performance. Curriculum has previously been defined as the set of learning experiences of the student while he is in school. Generally, a major part of any curriculum is the materials used by the students and teachers to enhance the student experience. Since prepared materials are often quite expensive and constitute a major portion of the supply budget of a school, careful analysis is an important aspect of the curriculum. While it is impossible to analyze and evaluate all of the materials currently developed for career education, this lesson provides a reasonable sampling.

Goal 2: To present as a guide to administrators an evaluation of commercially produced career curriculum materials done by local teachers.

Content

The second lesson consists of a sampling of curriculum evaluations by Department of Education teachers who have been trained through the career education teacher cadre training workshops. From their evaluations we have prepared a brief analysis of the types of curriculum materials available as well as some of the implications that commercially prepared materials have for Hawaii's youth. We also recognize that as of this date, career education is not a formal part of the Department of Education's Approved Instructional Materials (AIM). Realizing that career education curriculum should not be a separate subject area in the AIM, it is hoped that career education concepts and philosophy will be incorporated into the criteria that the AIM utilizes.

Curriculum Evaluations

During the summer of 1976 three teachers from the Hawaii public schools agreed to evaluate a representative sampling of current career education materials that were available from school districts, the Department of Vocational Education (Career Information Center), and from personal sources.

The teachers who were engaged in this task represent all three levels-elementary, intermediate and secondary-of schools which are part of the organizational structure of the Department of Education. Each teacher was supplied with the curriculum materials to be evaluated, evaluation forms, and a set of criteria which she was to employ in making her evaluation. A sample of the evaluation sheet and the criteria employed in the evaluation follow.

The completed evaluation of the curriculum materials are found in the section of this lesson marked 'Materials Section." The evaluation forms indicate that there are several commercially produced materials which the teachers rated strong and recommended for use with students in the appropriate grade levels. Others appear to be satisfactory but will need to be supplemented by teacher developed subsidiary materials. Others grade out as weak on certain

aspects and the recommendation is to defer. The comments also infer that the teacher attitude and manner of teaching will be important in the final determination of the value of the material.

Although this section on materials evaluation deals just with evaluation of the materials, the administrator must realize that the next step for using career education resources is to assure that the materials are indeed used. How to get the career education materials and community resources used in meaningful ways becomes a key to the effectiveness of career education in the school. This is not just up to educators, but students, if they are to become independent decision makers controlling their own destiny, will need ways to develop this independence in use of resources in planning and decision making and not be spoon fed every step of the way. They will need to learn to identify those resources most appropriate to their own goals but also appropriate to their own learning styles.

Teaching Tips

This lesson has little similarity to most of the others presented in the various modules. It is essentially an information lesson about a sampling of materials which principals and teachers may wish to purchase when infusing the career education concepts into the curriculum.

Perhaps the more important aspects of the lesson is that it establishes a model for an in-school evaluation of materials, either before or after purchase. The criteria are quite suggestive, as well as inclusive. The form contains a wealth of information on a single page, which can easily be stored in a curriculum materials file. Use of the model will enhance the probability that the materials to be purchased will give the greatest utility to the school and the teachers therein.

CRITERIA FOR EVALUATING CAREER DEVELOPMENT MATERIALS

1.0 Technical considerations

- 1.1 Is the material presented in a suitable package (i.e., durable and easy to store and access)?
- 1.2 If the materials are in a kit or program format, can individual parts or sections be used separately and/or replaced separately?
- 1.3 Does the material have quality composition, photography, sound production?
- 1.4 Is the type of media appropriate for the intended audience?
- 1.5 Is the material physically easy to use?

2.0 Scope

2.1 Does the material generally address itself to: (indicate in comments)

career awareness?
decision making?
value structure?
skill awareness?
educational awareness?

self awareness? attitudes and appreciations? economic awareness? employability skills?

- 2.2 Does the material have a clear focus?
- 2.3 Does the material go beyond job/occupation and reflect the psychological and sociological involvement of the worker?
- 2.4 Is the material internally consistent?
- 2.5 Can the material be integrated into the existing curriculum?
- 2.6 Does the material have inter- and/or multi-disciplinary implications?
- 2.7 Will different learner outcomes be realized if the material is used independently as opposed to using it within an instructional sequence within the total program?

3.0 Validity of materials in terms of need

- 3.1 Would the content appeal (be motivational) to the intended audience?
- 3.2 Is the reading level/vocabulary commensurate with the intended audience?
- 3.3 Is the concept load appropriate for the intended audience?
- 3.4 Do students need to have specific basic entry skills to use the material effectively?
- 3.5 If the reading level is appropriate but the content lacking in some respects, can the latter be supplemented adequately so that the material is acceptable?
- 3.6 Are conversational messages communicated in appropriate "forms of usage?"

4.0 Methodology

- **4.1** Can the material be used effectively without adaptation or modification?
- 4.2 Can the material be used effectively without special expertise?
- 4.3 Can the material be used without a detailed introduction or explanation?
- 4.4 Does the material require considerable additional followsp?
- 4.5 Does the material include suggestions for effective strategies and/or related instructional activities? (teacher's guides)
- 4.6 Does the material require any testing or surveying of students?
- 4.7 Can the material be utilized within normal time constraints?
- 4.8 Is the material designed to be used individually? Is it suitable for small groups? entire class? (indicate)
- 4.9 Can the material be used without teacher direction?

5.0 Authenticity

- 5.1 Are the authors authorities in their field?
- 5.2 Has the material been field-tested?
- 5.3 Does the material present a realistic picture (positive and negative aspects of career)?
- 5.4 If the material is vocationally oriented, does it reflect true attitudes of workers?
- 5.5 Is the information presented current? (What is the original copyright?)

6.0 Viewpoint

- 6.1 Is there equal representation of women in varied positions?
- 6.2 Is there equal representation of minorities in varied positions?
- 6.3 Are women shown at policy-making levels?
- 6.4 Are women shown in authority positions over both men and women?
- 6.5 Are minorities shown at policy-making levels?
- 6.6 Are minorities shown in authority positions over both other minorities and whites?
- 6.7 Does the material avoid stereotypes (certain types of people or sexes in particular occupations, levels, etc.)?
- 6.8 Is the material truly multi-cultural (showing several cultural groups)?
- 6.9 Does the material deal with interpersonal relations at the student level? at the occupational level?
- 6.10 Does the material accurately reflect a range of values as opposed to emphasizing only white, middle-class values?
- 6.11 Is the author's bias non-existent in the material? (Are their obvious put-downs or ridicule?)
- 6.12 Are all people treated with dignity regardless of age, economic position, etc.?

7.0 Special considerations

- 7.1 Is there an existing alternative for presenting the same concepts?
- 7.2 Have all special strengths or weaknesses of the material been covered?
- 7.3 If the material has identifiable weaknesses, can they be tolerated?
- 7.4 Can supplementary aids be prepared to strengthen any weakness? (Specify)
- 7.5 Is cost justified on the basis of: number of students reached?
 No other comparable and less expensive material available? The need to buy equipment necessary for using the material? District philosophy and goals?

	T		Can be	
		•	supple-	Explanation/Comments: Strengths,
	Strong	Weak	mented	Weaknesses, Supplementary Uses
MECHNICAL CONSIDERATIONS	x			Volume includes teacher resource units and activities in one manual.
SCOPE			х	Careers introduced described generally; basically to develop awareness on the part of the student.
VALIDITY: NEED			x	Activities could be motivational factor. How- ever, as mentioned in "methodology" concepts need to be identified and developed beyond activities presented in the lesson plan.
CETHODOLOGY			х	Lesson plans emphasize activity oriented procedure integrating basic reading, math skills, and caree awareness. Lesson plans are general and therefore need to be modified by individual teacher.
AUTHENTICITY	х			Written under the statewide curriculum develop- ment project conducted by the New Jersey Curricu- lum management center.
VIEWPOINT			X.	Dependent on nature of resources selected by the teacher.
SPECIAL •!ONSIDERATIONS			х	Suggestions: use as a resource unit. Strength activity oriented Weakness teachers need to develop or adapt lesson to include development of concepts related to careers in transportation.

Lesson 3

The purpose of this lesson is to demonstrate to principals one action plan for infusing career education into the curriculum of an elementary school. It is recognized that there are many methods of inserting a new curriculum idea into a school. The activities presented in this lesson are one method which may be appropriate for certain schools. A major part of this short lesson is to demonstrate to trainers of administrators that the materials in the various modules have a direct relationship to the everyday practical world of the school administrator.

Goal 5: To utilize materials in this and other modules to prepare an action plan for a practical implementation of a career education project in a school.

CONTENT

Implementing a Career Education Infusion Project

There are many ways for principals to operationalize a planned change in the curriculum of the school. Undoubtedly each principal will have his own techniques for that activity. The following is a stylized step-by-step method to initiate career education as an infused curriculum in a school.

This example is a step-by-step procedure to infuse career education concepts into an elementary school curriculum. Certain assumptions have been made about the conditions which prevail at the school, and they are as follows:

- 1. Principal and teachers have participated in a workshop(s) on Information (Module I) and Crientation (Module II), and there is agreement on the desirability of pursuing the concepts of career education.
- There is sufficient lead time to plan, budget, develop materials, and in-service staff.

<u>Activities</u>

The activities will be differentiated and they are identified in the following manner: Principal activities with the letter \underline{A} with a subscript decimal following; Committee activities with a \underline{B} ; Teacher activities with a \underline{C} ; Others with a \underline{D} .

- A.1 Principal identifies teachers who appear to be interested in career education [Nodule III (3.1)].
- A.2 Principal makes tentative identification of subject areas and grade level(s) to infuse career education [Module IV (4.1)].
- A.3 Principal establishes a committee to plan the change in curriculum.

71

- B.1 Committee meets with principal to finalize identification of subject areas and grade level(s) and to determine its planning strategies such as:
 - B.1-1 Identify teachers who will be involved in project.
 - B.1-2 Set up a time sequence for planning.
 - B.1-3 Identify human resources outside the school to use as resource personnel.
 - B.1-4 Identify curriculum goals for project.
- A.4 Principal solicits consent from teachers to be involved.
- A.5 Principal supplies committee and identified teachers with data which can be used in their planning.
 - A.5-1 Names of resource persons from the community, district, state and University of Hawaii [Module V (5.2)].
 - A.5-2 Exemplary programs in Hawaii [Module V (5.2)].
 - A.5-3 List of businesses and industry which are willing to contribute resources [Module V (5.2].
- B.2, Committee and teachers establish time for visitation of exemplary C.1 programs.
- A.6 Principal identifies and establishes a Career Education Advisory Committee [Module IV (4.4)].
- B.3, Committee and teachers meet with Career Education Advisory
- C.2 Committee to get the community perspective on goals, objectives, and possible activities for the students [Module V (5.1)].
- A.7 Principal approves goals developed by committee.
- C.2 Teachers begin to develop instructional objectives [Module IV (4.1)].
- D.1 Career Education Advisory Committee plans campaign to alert parents of career education [Module IV (4.4)].
 - A.1-1 P.T.A. presentations.
 - A.1-2 Alerting community organizations (Lions, Kiwanis, League of Women Voters, etc.).
 - A.1-3 Parent newsletter.
- A.8 Principal arranges in-service for teachers (including one or more of the following possibilities) [Module III].

- A.8-1 Credit course from the university.
- A.8.2 Non-credit workshop by district consult.
- A.8-3 Workshops by curriculum personnel.
- A.9, Principal and planning committee review and principal approves
- B.4 instructional objectives [Module IV (4.1)].
- C.3 Teachers begin to plan and write instructional activities based upon approved objectives.
- A.10 Principal supplies teachers with evaluations of commercially prepared materials [Module V (5.2)].
- C.4 Teachers itemize needed commercially produced supplies, school districts developed materials, and supplies necessary to effectuate the instructional activities.
- A.11, Principal and school budget committee evaluate requests and
- D.2 order them into the budget document [Module IV (4.2)].
- D.3 Career Education Advisory Committee begins effort to alert parents and the community to career education concepts [Module IV (4.4)].
- A.12 Principal orders necessary supplies.

During the initial years of the project the principal will have several other duties to perform both to maintain the project and to plan for increasing the scope of career education to other grades and/or departments. The following tasks are involved. Many of the tasks from the previous year will be recycled; they are not addressed in this section.

- A.13 Reactivate Teacher Planning Committee to develop goals and to provide for articulation among grades [Module IV (4.1)].
- A.14 Initiate supervisory activities for teachers in the Career Education Project [Module V (5.1)].
- A.15 Appoint the counselor (or some other staff member if appropriate) to serve as Career Education Coordinator [Module VIII (8.2)].
- D.4 Career Education Coordinator will plan an execution of a needs assessment among students to determine the type and scope of career education activities necessary in the school [Module VII].
- D.5 Career Education Coordinator will organize and coordinate offcampus visitations and speakers who are to come to the campus [Module VIII (8.3)].
- A.16 Principal will initiate formative evaluation activities for the first year of the project [Module VI].

Teaching Tips

The trainer should emphasize to the administrators that this is not a prescription for infusing curriculum. Rather it is one of the methods possible. It is placed in this module as a vehicle to promote discussion among the participants on the actual infusion techniques. The milestone chart could be altered if the principal believed the times designated were unrealistic (either too long or too short for a particular activity). The number of steps might vary depending upon the complexity of the school organization.

Much has been written about the infusion technique. In a state which has much of the curriculum change imposed from the top down, it may well be that many building administrators have not been involved with setting up curriculum advisory councils, working closely with community groups, etc. Therefore, this plan may stimulate thinking on a wide variety of matters.

Activity 1

Have senior high school principals draw up a plan for an infusion project in a particular subject matter such as English in grades ten and eleven.

Activity 2

Have principal prepare a responsibility chart along the lines of the example on the next page.

The column headings are the activities listed in the lesson. The rows are the various people/positions which will be involved in the activity. The caption denotes the type of activity that the role incumbant will take with regard to each of the activities.

The first four activities on the responsibility chart have been identified as an example. Have principals complete the chart for each of the activities listed in the lesson.

A DIRECTORY OF RESOURCE PERSONNEL FOR VOCATIONAL-TECHNICAL PROGRAMS IN HAWAII

Βv

Lawrence A. Inaba, Program Specialist Vocational-Technical Education Department of Education

Herbert Kaneko University of Hawaii, Intern Program

Yoshiaki Shimizu University of Hawaii, Intern Program

PREFACE

It has been increasingly recognized that for today's young people, the transition from education to work is one of the most difficult aspects of their overall transition from youth to adulthood. An indication of this difficulty can be seen in the persistently high youth unemployment rate. With this recognition has come the realization that society needs to do more in bridging the gap between education and the world of work.

To promote better education-to-work linkages, both vocational and career education programs have been expanded or newly developed in Hawaii's and the nation's schools. A key to developing successful vocational and career education programs is related to the level of participation of representatives from business, industry, labor, and government. In the past, this participation has been limited because of a lack of established mechanisms for communication between educators and the representatives of these community groups.

For this reason the State Commission on Manpower and Full Employment (State Advisory Council on Vocational Education), in cooperation with the Department of Education, is publishing this directory which will enable educators to better utilize the resources of business, industry, labor, and government in improving the quality of education and bridging the gap between education and the world of work.

ACKNOWLEDGMENTS

The Department of Education gratefully acknowledges the following people for their efforts in collecting, compiling, and recording the data for this directory:

Mr. Herbert Kaneko -- University of Hawaii Intern Program Mr. Yoshiaki Shimizu -- University of Hawaii Intern Program.

Special recognition is also given to the Honolulu Chamber of Commerce for their cooperation in providing their directory of business organizations and professional associations, and to Mr. David Thompson, Education Director, ILWU, for providing a directory of union representatives and organizations.

INTRODUCTION

In recent years, increasing interest has been shown in utilizing resource people from Industry, Business, and Labor. This interest reflects the emphasis being placed on Vocational-Technical personnel to work closely with the business, industry, and labor communities in the State. Because of this need to utilize more community resource people in our occupational programs it became apparent that a directory was needed to assist teachers, counselors, and administrators in locating the proper agency or key personnel to recommend people to serve as resource persons for specific purposes.

The listing in this directory includes the key personnel in business establishments, professional associations, industrial complexes, and labor organizations from both the public and private sectors. Needless to say, all the business, industry, and labor organizations are not listed because of limited resources. However, it represents a good cross section of Hawaii's business, industry, and labor sector and may also serve as a reference point to obtain information on other agencies not listed.

The sections in this directory are classified according to the eight occupational clusters used by the Department of Education's vocational programs. Hopefully, this will make it easier to find the appropriate person or agency in the directory.

Guidelines to Follow in Seeking Assistance

This is a directory of business leaders, union officers, presidents of associations, and key personnel in industry who can be contacted when seeking resource speakers, advisory committee members, or information about industry, business, and union functioning and policy.

It should also be noted that when a general viewpoint is desired of any business, industry or labor organization the proper protocol or point of contact would be the highest official representing business, industry, or labor. The Division Offices of the labor organizations are also presented for each island. (See Appendix I for the Division Offices of the labor organization).

It should be noted that the names in this directory may change from time to time. However, the name of the organization will stay constant in most instances.

LISTING OF KEY RESOURCE PERSONNEL FOR THE EIGHT OCCUPATIONAL CLUSTERS

ISLAND HOLIDAYS, LTD.: SUMMARY

Background

Island Holidays was started in 1953 by Mr. Lyle L. Guslander with the leasing of the 24-room Coco Palms Lodge. By 1958 the company had grown to three hotels on the three major neighbor islands of Maui, Hawaii and Kauai. In 1969 Island Holidays was acquired by Amfac, Inc. as that company expanded into various service industries.

Position in the Visitor Industry

Today Island Holidays operates ten (10) hotels throughout Hawaii with a total of 3,578 guest rooms (8.0% of the State total):

Oahu	-	Waikiki Beachcomber Holiday Isle	496 284
Maui	-	Royal Lahaina Kaanapali Beach	737 432
Kauai	-	Coco Palms Kauai Beachboy Waiohai Poipu Beach	420 243 47 142
Hawaii	=	Keauhou King Kamehameha	317 460

In 1975 the Island Holidays Division of Amfac, Inc. produced consolidated revenues in excess of \$51 million. Island Holidays' ten hotels produced total revenues of \$48 million. At the end of 1975, Island Holidays employed 2,500 people in Hawaii and in its mainland sales offices.

Island Holidays' relative strength within the visitor industry has improved during the past four years. Comprehensive industry surveys by a public accounting firm have reported the following statewide average occupancies:

*	Industry Sample	Island Holidays	Difference
1972	70.2%	70.1%	- 0.1 pt.
1973	78.1%	80.4%	2.3 pts.
1974	78.4%	83.0%	4.6 pts.
1975	75.3%	81.5%	6.2 pts.
First Quarter			•
1976	84.4%	86.3%	1.9 pts.

2222 KALAKAUA AVE . P. O. BOX 8519 . HONOLULU, HAWAII 96815

Cornerstones of Success

The major keys to Island Holidays success are its wide reaching marketing and sales programs along with its centralized management and operational control.

Today Island Holidays' marketing force includes approximately 100 employees in Hawaii and on the mainland. Its <u>marketing</u> and <u>mainland sales offices</u> consist of:

Marketing: resort sales, advertising & public relations and marketing executive staffs located in Honolulu.

Mainland Sales: Offices located in San Francisco, Los Angeles, Seattle, Denver, Chicago, Dallas, Toronto and New York City. Additionally, some sales representatives are based in cities other than those listed above.

The mainland sales offices serve as a direct contact with retail travel agents for sale of both resort hotel accommodations and Travel Service tour packages. Sales representatives assigned to various regions throughout the mainland United States and Canada keep in contact with these travel agents. Of the more than 12,000 retail agents on the mainland, Island Holidays' hotels do business with about 7,500 and Travel Service with about 6,300.

The sales offices handle daily contacts with retail agents to book hotel and tour reservations. The San Francisco sales office serves as the nerve center of the mainland sales efforts. During 1975, the mainland sales offices serviced reservations which produced 52% of Island Holidays' occupied room nights. This does not include rooms generated from retail travel agents contacted by the mainland sales offices which in turn contacted the Honolulu Central Reservations Office directly.

Another major reason for Island Holidays success is its travel division. Island Holidays Travel Service is a wholesale travel agency which sells tour packages to the ultimate customer either through retail travel agents or through its own retail departments (the Conventions Department, travel desks at the Waikiki Beachcomber and Holiday Isle hotels and the Kalakaua Street Sales Office). The Travel Service benefits from both the mainland sales efforts as well as its operational staffs in Waikiki. Currently a computerized reservation system is being developed for the tour division which will greatly enhance the efficiencies in handling its blocks of hotel rooms (including several non-Island Holidays hotels) and airline seats.

Island Prolidarys, LTD. in Morter company

2222 KALAHAHA AVE. + P.O. DOX USIN + HONOLULU, HAWAH 90015

The Central Reservations Department, located in Island Holidays' Waikiki headquarters, handles reservation activities for its ten hotels. Utilizing a computerized reservation system since April, 1973, the department's efficiency has improved greatly even though the volume of business for 1976 will be 39% higher than in 1972.

When the tour reservation system is completed, the mainland sales offices will have direct access to the resort reservation system further enhancing the overall marketing efforts to maximize the revenue potential of each hotel property.

The Honolulu Administrative Services include:

- Hotel Operations Staff: Hotel Operations Manager, Food & Beverage Director, Executive Housekeeper, Real Estate (Concession) Manager, Entertainment/ Special Projects Manager, Engineering & Construction.
- Controller's Staff: Operations Controller, Internal Auditor, Computer Systems Planning Manager, Financial Planning Manager.
- Accounting: Centralized general ledger, accounts receivable, accounts payable, payroll, cashier and credit departments.
- Personnel & Industrial Relations: Coordinated personnel policies & benefits plans, on-the-job management trainee program, etc.
- Centralized Purchasing
- Administrative Services

Additionally, Amfac, Inc. provides staff support in labor relations, benefit planning, risk management, energy management, financial management, tax services and the like.

Overall, Island Holidays' success has been due to its people in all phases of marketing, operations and support services. Its composition is probably unique because of its centralized nature and its basic business philosophy. But even at the bottom line, the success of all of its systems still depends heavily on its people.

TRAVEL AGENCY

A firm who, for compensation, engages in the business of arranging and planning the travel of persons or group of persons.

RETAIL AGENT

An agent who sells only on a direct basis to the public.

WHOLESALE AGENT

An agent who packages tours that may be purchased by the public direct and/or sold to the public through a retail travel agent.

TOUR OPERATOR

An agent who operates tours including pricing, packaging, selling, ticketing and couponing package tours and/or components. He can also be a retail and wholesale agent.

TRANSPORTATION COMPANY

Operates the ground transportation and sightseeing as contracted by tour operators. These same services may be purchased by any agent or the public directly from the transportation company.

CARRIER

Refers to transportation and includes the airlines, steamship companie railroads and all ground transportation and sightseeing companies.

F.I.T.

Formerly translated to "Foreign Independent Tour". Now is sometimes labeled "Free Independent Tour" or just "Independent Tour". Generally from one to 15 people. Over 15 people falls into the group category. A published package tour must bear an "IT" number to be commissionable on the air ticket.

G.I.T.

Group Inclusive Tour. Tourists travelling as a unit in pre-determined group of 10 or 40 to avail themselves of special air rates and ground packages. Travel must be completed within 30 days.

GROUP TOUR

Special group packaged for sale to meet the marketing requirements of retail agents or affinity groups. These groups consist generally of lor more people travelling as a unit.

P O BOX 0319 . HONOLULU, HAWAII 96815

February 26, 1975 Page Two

AFFINITY GROUP

Groups formed from only members or employees of the same association, corporation, company or other legal entity, which has principle purposes, aims and objectives other than travel, and has sufficient affinity to distinguish and set it apart from the general public. All members must travel together as a single group on the same flight for each portion of the entire journey.

GROSS

Total amount of a component, special event, hotel or complete package before commission is deducted.

NET

Total amount of sale after commission is deducted.

COMMISSION

Commissions vary depending on purveyor and volume. Standard commission policy to all agents is 10 percent. Commission is payable to agents, no airlines, hotels, or the public. Commission in excess of 10 percent is referred to as override commission.

REVIEW DATE

This applies to group bookings and a review of reservations held is required 60 days prior to check-in. Cutback of reservations is expected if sales are not up to expectations.

OPTION DATE

This is the date deposit or final payment is due. For groups this can vary from 120, 90, 60 or 30 days depending on the size and type of group. For individual hotel bookings, it is 10 days from the issuance of confirmations.

COUPON OR VOUCHER

Many agents issue coupons or vouchers to accompany deposits. Coupons from agents with established credit are accepted by hotels and tour operators as a guarantee of payment.

REBOOKING

Reservations for hotels or tours may be revised, cancelled and rebooked several times before finalization.

DOUBLE BOOKING

Two or more bookings for the same party made by a tourist with one or more airlines and/or travel agents or directly with hotels.

February 26, 1975 Page Three

NO SHOW

A no show is a tourist who did not arrive and for whom the airline, tour operator, and hotels were holding reservations. No show deposits are not refunded.

CONCESSION POLICIES

Concessions for tour conductors and/or leaders based on the numbers travelling.

SIGHTSEEING -

A tour with a driver guide as opposed to straight transportation or transfers.

TRANSFER

Straight transportation from point to point as opposed to sightseeing.

A.P.

American Plan, all meals included.

M.A.P.

Modified American Plan, based on breakfast and dinner; lunch not included

E.P.

European Plan, no-meals included.

CAB

Civil Aeronautics Board. A federal agency regulating both domestic air travel and international air travel to and from the United States.

IATA

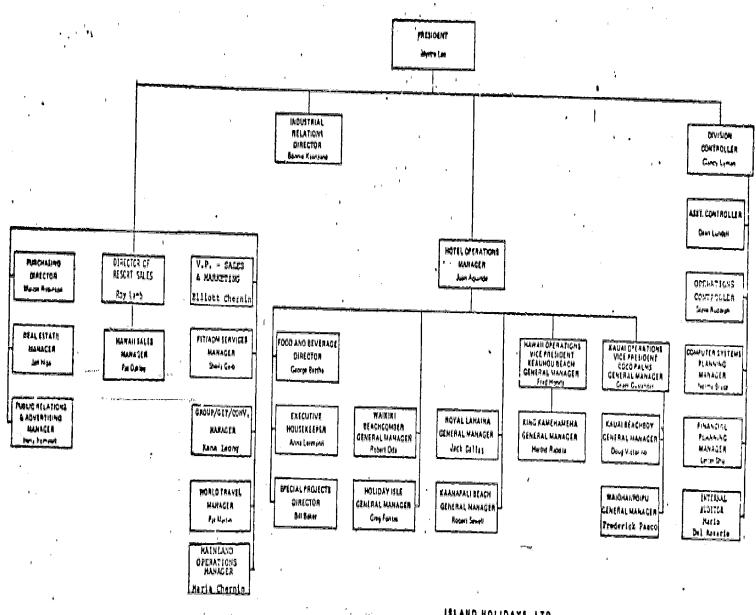

International Air Transport Association. The organization responsible for regulating international air routes and rates.

ATC

Air Traffic Conference. The organization responsible for establishing the standards by which domestic carries deal with each other and the industry as a whole.

IPSA

International Passenger Ship Association. Regulates fares and standards of steamship routes.
