ABSTRACT

This ninth in a series of ten learning modules on coordination of cooperative education is designed to give secondary and postsecondary vocational teacher cccrdinators skill in designing the in-school instruction students receive in conjunction with their on-the-job training. The terminal objective for the module is to prepare for students' related instruction, while serving as a teacher-coordinator in an actual school situation. Introductory sections relate the competencies dealt with here to others in the program and list both the enabling objectives for the three learning experiences and the resources required. Materials in the learning experiences include required reading, self-check quizzes with mcdel answers, case studies of students to prepare training plans for, model training plans, a techniques/materials checklist, and the teacher performance assessment form fcr use in evaluation of the terminal objective. (The modules on cccrdiration of cooperative education are part of a larger series of 100 performance-tased teacher education (FBTE) self-contain∈d learning packages for use in preservice or inservice training of teachers in all occupational areas. Each of the field-tested modules focuses on the development of one or more specific professional competencies identified through research as important to vocational teachers. Materials are designed for use by teachers, either on an individual or group tasis, working under the direction of one or more resource persons/instructors.) (JT)

FOREWORD

This module is one of a seills of 100 performance-based teacher education (PBTE) learning packages focusing upon specific professional competencies of vocational teachers. The competencies upon which these modules are based were identified and verified through research as being important to successful vocational teaching at both the secondary and post secondary levels of instruction. The modules are suitable for the preparation of teachers in all occupational areas.

Each module provides learning experiences that integrate theory and application; each culminates with criterion referenced assessment of the teacher's performance of the specified competency. The materials are designed for use by individual or groups of teachers in training working under the direction and with the assistance of teacher educators acting as resource persons. Resource persons should be skilled in the teacher competency being developed and should be thor oughly oriented to PBTE concepts and procedures in using these materials.

The design of the materials provides considerable flexibility for planning and conducting performance-based preservice and inservice teacher preparation programs to meet a wide variety of individual needs and interests. The materials are intended for use by universities and colleges, state departments of education, post-secondary institutions, local education agencies, and others responsible for the professional development of vocational teachers. Further information about the use of the modules in teacher education programs is contained in three related documents. Student Guide to Using Performance-Based Teacher Education Materials, Resource Person Guide to Using Performance-Based Teacher Education Materials and Guide to Implementation of Performance-Based Teacher Education.

The PBTE curriculum packages are products of a sustained research and development erfort by The Center's Program for Professional Development for Vocational Education. Many individuals, institutions, and agencies participated with The Center and have made contributions to the systenatic development, testing, revision, and refinement of these very significant training materials. Over 40 teacher educators provided input in development of initial versions of the modules, over 2,000 teachers and 300 resource persons in 20 universities, colleges, and post-secondary institutions used the materials and provided feedback to The Center for revision and refinement

Special recognition for major individual roles in the direction, development, coordination of testing, revision, and refinement of these materials is extended to the following program staff: James B Hamilton, Program Director; Robert E. Norton, As-

sociate Program Director, Glen E. Fardig, Specialist, Lois Harrington, Program Assistant, and Karen Quinn, Program Assistant. Recognition is also extended to Kristy Ross, Technical Assistant, Joan Jone Lechnical Assistant, and Jean Wisenbaugh, Artist for their contributions to the final refinement of the materials. Contributions made by former program staff toward developmental versions of these materials are also acknowledged. Calvin J. Cotrell directed the vocational teacher competency research studies upon which these modules are based and also directed the curriculum development effort from 1971–1972. Curtis R. Finch provided leadership for the program from 1972–1974.

Appreciation is also extended to all those outside The Center (consultants, field site coordinators, teacher educators, teachers, and others) who contributed so generously in various phases of the total effort. Early versions of the materials were developed by The Center in cooperation with the vocational teacher education faculties at Oregon State University and at the University of Missouri-Columbia. Preliminary testing of the materials was conducted at Oregon State University, Temple University, and University of Missouri-Columbia.

Following preliminary testing, major revision of all materies was performed by Center Staff with the assistance of numerous consultants and visiting scholars from throughout the country.

Advanced testing of the materials was carried out with assistance of the vocational teacher educators and students of Central Washington State College; Colorado State University; Ferris State College, Michigan; Florida State University; Hclland College, P.E.I., Canada, Oklahome State University; Rutgers University; State University College at Buffalo; Temple University, University of Arizona; University of Michigan-Flint; University of Minnesota-Twin Cities; University of Nebraska-Lincoln; University of Northern Colorado, University of Pittsburgh, University of Tennessee, University of Vermont, and Utah State University.

The Center is grateful to the National Institute of Education for sponsorship of this PBTE curriculum development effort from 1972 through its completion Appreciation is extended to the Bureau of Occupational and Adult Education of the U.S. Office of Education for their sponsorship of training and advanced testing of the materials at 10 sites under provisions of EPDA Part F, Section 553. Recognition of funding support of the advanced testing effort is also extended to Ferris State College, Holland College, Temple University, and the University of Michigan-Flint.

Robert E. Taylor
Executive Director
The Center for Vocational Education

The Center for Vocational Education's mission is to increase the ability of diverse agencies, institutions, and organizations to solve educational problems relating to individual career planning, preparation, and progression. The Center fulfills its mission by

- . Generating knowledge through research.
- Developing educational programs and products
- Evaluating individual program needs and outcomes.
- Installing educational programs and products
- Operating information systems and services.
 Conducting leadership development and training programs.

AMERICAN ASSOCIATION FOR VOCATIONAL INSTRUCTIONAL MATERIALS

Engineering Center University of Georgia Athens, Georgia 30602

The American Association for Vocational Instructional Materials (AAVIM) is an interstate organization of universities, colleges and divisions of vocational education devoted to the improvement of teaching through better information and teaching aids.

INTRODUCTION

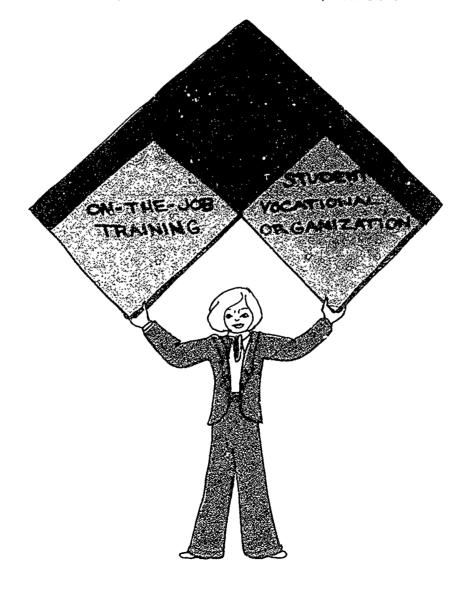

Related instruction is the in-school instruction which students in a cooperative vocational education program receive in conjunction with their onthe-job training. It is one of the three basic components of the cooperative program: (1) Related Instruction, (2) On-the-Job Training, and (3) the Student Vocational Organization. Related instruction is undoubtedly the most important of the three components since it provides the students with the theory, background, and technical skills they need to profit from the other components. In addition, it provides students with an opportunity for unifying the experiences gained through all three different components.

As a teacher-coordinator, you will be responsible for planning and conducting related instruc-

tion classes to meet the needs and career goals of your students. This module is designed to help you develop the skills you need to determine what should be taught during related class and when it should be taught, and to select the supporting materials which should be used for these classes.

NOTE: Due to the nature of the skills involved, it would be beneficial to complete this module concurrently with the following modules:

- Develop the Training Ability of On-the-Job Instructors. Module J-6
- Coordinate On-the-Job Instruction, Module J-7
- Evaluate Co-Op Students' On-the-Job Performance, Module J–8

ABOUT THIS MODULE

Objectives

Enabling Objectives:

- 1. After completing the required reading, demonstrate knowledge of the steps and procedures to follow in preparing for students related instruction (Learning Experience I).
- 2 Given selected information about five hypothetical students in a multi-occupational cooperative program, prepare for their related instruction (Learning Experience II).

Prerequisites

To complete this module, you will need to prepare related instruction for students who have been placed at training stations and whose on-the-job training has been structured by the development of training plans. If such a situation has not been established, meet with your resource person to determine what method you will use to gain the skills needed to actually place a student in a training station. One option is to complete the following series of modules:

- Establish Guidelines for Your Cooperative Vocational Program, Module J-1
- Enroll Students in Your Co-Op Program, Module
- Secure Training Stations for Your Co-Op Program, Module J-4
- Place Co-Op Students on the Job, Module J-5

In addition, in order to effectively prepare and present related instruction, you must have minimal competency in instructional planning, execution, and evaluation. If you do not already have competency in these areas, meet with your resource person to determine what method you will use to gain these skills. One option is to complete the information and practice activities in selected modules in Category B. Instructional Planning, Category C: Instructional Execution, and Category D: Instructional Evaluation

Resources

A list of the outside resources which supplement those contained within the module follows. Check with your resource person (1) to determine the availability and the location of these resources, (2) to locate additional references in your occupational specialty, and (3) to get assistance in setting up activities with peers or observations of skilled teachers, if necessary. Your resource person may also be contacted if you have any difficulty with directions, or in assessing your progress at any

A teacher-coordinator experienced in preparing for students' related instruction with whom you can discuss preparation techniques and procedures.

Related instruction classes in an actual cooperative program which you can observe.

Sources (e.g., catalogues, educators, curriculum centers, etc.) through which you can locate materials which could be used as part of related instruction.

Learning Experience II

No outside resources

Learning Experience III

Required

An actual school situation in which, as part of your duties as a teacher-coordinator, you can prepare for students' related instruction.

A resource person to assess your competency in preparing for students' related instruction.

This module covers performance element numbers 379, 383, 384 from Calvin J. Cotrell et al. Model Curricula for Vocational and Technical Teacher Education. Report No. V (Columbus. OH: The Center for Vocational Education. The Ohio State University. 1972). The 384 elements in this document form the research base for all The Center's PBTE module development

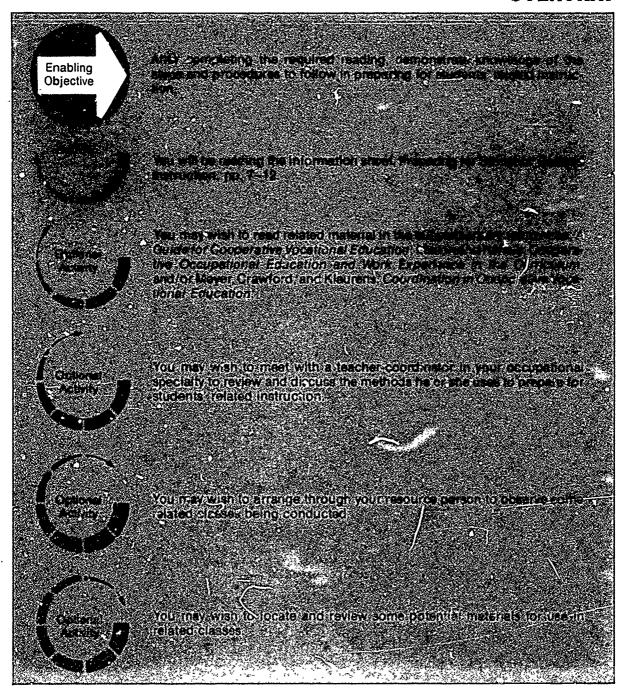

For information about the general organization of each module, general procedures for their use, and terminology which is common to all 100 modules, see About Using The Center's PBTE Modules on the inside back cover

We would like to give special thanks to Elaine F. Uthe for the use of many of her ideas and materials in the development of modulas in the J category Information about the complete set of Uthe materials on the cooperative vocational program which were developed as part of a project at Michigan State University is available from Dr. Uthe at 3345 Carriage Lane, Lexington, KY 40502.

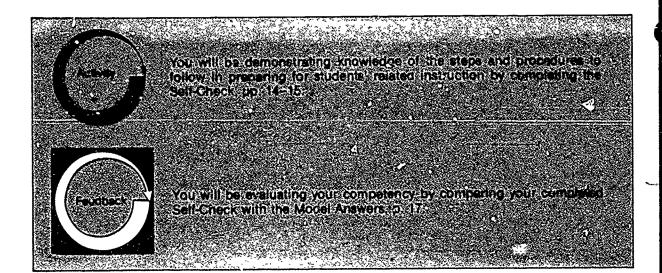

Learning Experience I

OVERVIEW

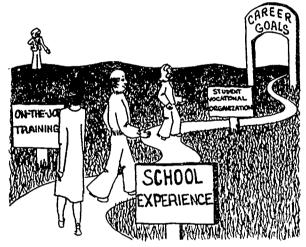

For information on the purposes and types of related instruction, and on the methods to use in selecting topics, locating materials, and planning schedules for related instruction, read the following information sheet.

PREPARING FOR STUDENTS' RELATED INSTRUCTION

As a teacher-coordinator of a cooperative vocational education program, you will be working with students who have been placed in training stations to receive on-the-job instruction. On-the-job instruction is only part of the students' training program, however. Ideally, the students will be progressing toward their career goals through experi-

ences they have (1) on the job, (2) in school, and (3) in the student vocational organization.

Your responsibilities would include (1) supervising the on-the-job instruction, (2) planning and conducting in-school instruction related to the students' experience on the job and in the student vocational organization, and probably (3) serving as an advisor for the student vocational organization. The related instruction you provide is critical since it serves as a basis for the other activities and, in addition, ensures that all experiences are interrelated at some point.

Types of Related Instruction

In order to meet most effectively the needs of all the students in your related instruction class, you need to provide three types of instruction: (1) general related instruction, (2) technical related instruction, and (3) specific related instruction.

General related instruction includes all those basic skills and general occupational information that all your students need if they are to succeed in achieving their career goals. This could involve working with students to improve their reading, grammar, and math skills, or basic occupational skills such as typing, making change, accurately measuring materials, etc. Students also need training in the general skills, concepts, and attitudes needed by all workers. For example, they need training in such areas as—

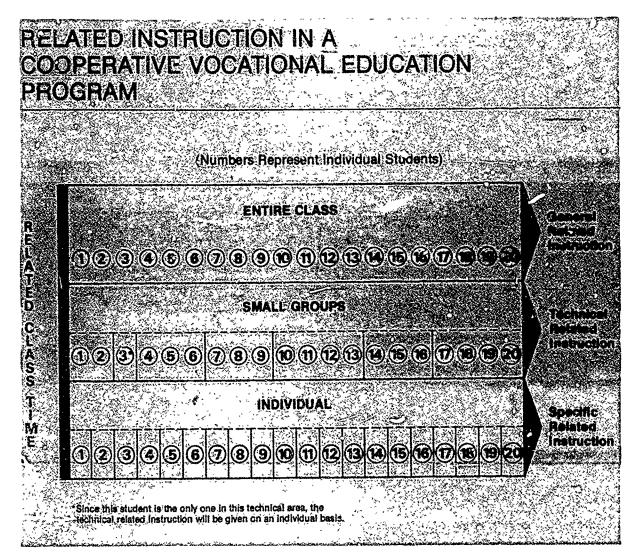

- attitudes needed to succeed in the occupation
- employer-employee relations
- payroll procedures
- employee benefits
- locating, interviewing for, and selecting a job

Technical related instruction includes the skills, attitudes, and concepts not needed by all your students, but needed by two or more students. These topics are generally grouped by specific occupations (e.g., dental terminology for students studying to be dental hygienists). Thus, while your general related instruction can be geared to an entire class of 20 students, your technical related instruction must be prepared separately for the students in each of the different occupational areas.

Specific related instruction is totally individualized instruction. Each student in your program has individual needs, interests, and a bilities. Each has a specific and unique career goal. Each has been assigned to a particular job in a training station. These individual characteristics will require that each student receive training specially geared to his or her needs and situation. Figure 1 is a chart depicting how a class of students is organized for each of these three types of related instruction.

FIGURE 1

Determining Topics for Related Instruction

As each student is placed on the job, you, the student, and the on-the-job instructor develop a detailed training plan to structure that student's training. This plan should include a list of skills to be developed and tasks to be undertaken. Thus, the basic ingredients of your students' training plans should at least partially dictate what will be taught (content), when it will be taught (sequence), and how it will be taught (methods, activities, resources) in the related class.

By reviewing the training plans of all your students, you can identify needs which all your students have in common (general related instruction), skills needed by two or more students in a given occupation (technical related instruction),

and needs unique to individual students (specific related instruction).

Topics for general and technical related instruction can also be identified by working with your vocational advisory committee. Members of this committee can suggest concepts, skills, and attitudes which are needed by all workers or all workers in a specific occupation.

In addition, many states and/or school districts will have a suggested or approved common curriculum for general related instruction. In such a case, you will need to base your instruction on this curriculum. However, you need not limit your instruction to this one document. These curricula suggest the minimum that should occur or the

9

general areas that should be covered. By supplementing the suggested curriculum with topics identified through the training plan or the advisory committee, you can more effectively meet your students' needs.

Occupational analyses are another source of information. An occupational analysis breaks an occupation or job down into the skills needed to succeed in that occupational area. Analyses of almost every major occupation have been prepared and are readily available, or you could prepare such an analysis yourself.¹ By referring to the appropriate occupational analysis for students in your program, you can identify skill areas in which students need training as part of related class instruction.

The activities of the student vocational organization are another source of topics for related instruction. As part of the student vocational organization, students take part in competitive events, community service projects, leadership activities, public relations activities, and decision-making activities. The skills students need to participate successfully in these activities can be included within the related instruction class. For example, if your students were about to compete in a public speaking contest, you could provide students with instruction and practice in public speaking skills during related instruction class.

Your coordination visits and the reports you receive on student progress can also provide you with topics or skills which should be included in related instruction. As a result of this feedback, you might discover that all of your students need more training in grooming, or that the students who must deal with customers need more training in how to handle dissatisfied customers tactfully, or that an individual student needs help in following directions.

A final source of topics for related instruction is the **student**. During class, during coordination visits, or as part of individual conferences, students will indicate, either directly or indirectly, additional areas in which they need instruction. Data from student follow-up studies should also be examined for clues to important information or skills needed by workers in the field.

Selecting Instructional Methods

General related instruction is the most teachercentered of the three types of related instruction. Because the general instruction includes material needed by all students, it lends itself to largegroup presentations. However, general instruction should not be limited to teacher-centered, large-group presentations.

For example, assume you were planning to provide your students with training on applying for a job. You could choose to present the basic information through an illustrated talk, however, it would also be appropriate to have students work individually and in small groups to apply this basic information. Students could work in pairs to roleplay job interviews or individually to complete sample application forms. They could also participate in small-group discussions covering various aspects of the topic.

During technical and specific related instruction, your students will, of necessity, be divided up. You will not be able to work with all of these groups at once. Thus, you will need to structure these activities very carefully so that students have adequate supervision, direction, and assistance. Having students work on **projects** is an excellent device if you (1) prepare students for planning and conducting projects, (2) ensure that their planning is clear and thorough, and (3) monitor their progress on a regular basis.²

In addition to projects and teacher-made presentations, a variety of other techniques should be used for student instruction. The following types of techniques should be considered.

Role-playing.—It is very beneficial for students to experience various work roles in simulated situations. In a role-play situation involving a salesperson and an irate customer, both students benefit. The student role-playing the salesperson gains experience in dealing with dissatisfied customers. The student role-playing the customer can experience what it feels like to be on that end of the situation. This can be enlightening, and may make that student a more sensitive salesperson.

Reading assignments.—Students can get the background information they need from short reading assignments in books, pamphlets, journals, and modules or other instructional packages.

Practice/Application. When students listen to a presentation or read information, they should have an opportunity to apply that information. For example, as previously mentioned, if students receive instruction in how to complete a job application form, they should then have a chance to complete sample forms for practice.

Case studies.—Case studies can be used to provide information or practice. A case study is a

^{1.} To gain sk. i in preparing these analyses, you may wish to refer to Module A-7. Cr nduct an Occupational Analysis

² To gain skill in providing instruction through projects, you may wish to refer to Module C-9, Employ the Project & thod.

short description of a problem situation which must be solved. Students read the case and then discuss, or describe in writing, how the problem should be solved.

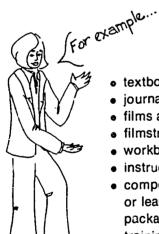

Observations/Interviews.—Students can learn a great deal outside the classroom by simply observing experienced employees on the job, or interviewing employees and employers to determine what is expected of employees in a particular occupation. This also helps students to evaluate their career goals in light of actual situations.

Oral reports.—Students reading special information, working on projects, conducting interviews, or making observations can share their experiences with a small group or the total class by preparing and presenting oral reports

Guest speakers.—Persons from the "real world" with expertise or experience in an area you are covering can provide needed information and add variety to the instruction.

Locating Instructional Materials

Many excellent materials are available which can meet the needs of the students in your related class, and which fun be used by students on an individual or small-group basis, for example-

textbooks

- iournals
- films and film loops
- filmstrips
- workbooks
- instructional packages
- competency-based modules or learning activity packages (LAP's)
- training manuals
- programmed instruction

You will probably be aware of many possible instructional materials from your own experience and training. In addition, there are a number of other excellent sources for locating relevant materials for all three levels of related instruction: general, technical, and specific,

Advisory (or craft) committee.—The persons selected for your advisory committee should be knowledgeable of the trades and occupations for which you offer training. Many of these persons also represent businesses and industries in those occupational areas Thus, they may be able to provide you with information concerning (1) training materials they use on the job, (2) booklets on general job skills and attitudes that have been produced by businesses for their workers, and (3) other relevant materials they are familiar with. Furthermore, the persons on this committee can review materials you obtain from other sources to determine if the materials are realistic and accu-

Employers and/or on-the-job instructors.-These persons, and other personnel employed at the training stations at which your students are placed, may also be able to offer suggestions concerning potential materials for your classes

Other educators.--Vocational teachers, the vocational supervisor in your district, and personnel at the state department of education should be well qualified to alert you to related materials which are both up to date and generally effective.

Commercial publishers.—Most publishing firms will send you catalogues of their materials at no cost. These catalogues are often also available somewhere within the school or school district. By reviewing recent catalogues you can locate many excellent printed and audiovisual materials.

Curriculum guides.—If your state or district has an approved curriculum prepared for related instruction classes, this will usually include references to related materials.

Educators Progress Service.—This organization prepares catalogues, usually available in the library, containing exhaustive lists of the titles of various audiovisuals available free to educators.

The Nat inal Network for Curriculum Coordination in Vocational and Technical Education (NNCCVTE).—This is a network of six regional centers funded by the U.S. Office of Education (USOE) to facilitate uniform sharing of curriculum materials on a nationwide basis. If you and your supervisor identify a need for instructional materials covering a specific topic, you could contact your NNCCVTE state representative in the state department of education and describe that need. Your center would then contact the other five centers, and staff at each of the six centers would conduct searches to identify all related materials.

For example, assume you needed materials to use with distributive education students in your class during technical related instruction. Assume further that you wanted these materials to be competency-based, individualized learning packages. Your regional center would initiate the search, and the search would yield the information that the Interstate Distributive Education Curriculum Consortium (IDECC) has developed 500 competency-based learning activity packages (LAP's) covering occupational skills and attitudes needed by distributive education students.

The center would provide you with this information and, in addition, can handle the ordering, shipping, and receiving of the materials for you The six regional centers and the states they serve are listed in Table 1. These centers are refunded at intervals, so the locations may change in this process.

Scheduling Related Instruction

When the topics and the sources of materials have been identified, you need to prepare some type of logical sequence for the instruction. This

scheduling can best be accomplished if you allot certain days of each week for each of the three types of related instruction. For example, assume that your related class meets every day Monday through Friday for a 50-minute period each day. A very typical organization of this time would be to devote two days per week to general related instruction, one day per week to technical related instruction, one day per week to specific related instruction, and one day per week to youth club activities.

However, there are three additional guidelines for scheduling: (1) it is generally agreed that early in the year, more time should be devoted to general rather than specific related instruction, and later in the year more time should be devoted to specific related instruction, (2) specific related instruction should be included as necessary continuously throughout the year, and (3) scheduling should remain flexible to meet students' changing needs.

The exact amount of time you need to spend on each area of related instruction and when each topic should be covered can be identified by identifying students' needs. These can be easily assessed by reviewing each student's training plans, checking with the on-the-job instructors and the students themselves, and through your cwn observations during coordination visits. In this way, using the training plans as a basis for planning flexible, comprehensive, individualized instruction, your related classes should effectively assist students in meeting their training needs

For further information on related instruction, you may wish to read sections dealing with this topic in the supplementary references, A Guide for Cooperative Vocational Education, Mason and Haines, Cooperative Occupational Education and Work Experience in the Curriculum, and/or Meyer, Crawford, and Klaurens, Coordination in Cooperative Vocational Education.

You may wish to arrange through your resource person to meet with a teacher-coordinator in your occupational specialty who is experienced in preparing for students' related instruction. During your meeting, you could ask some of the following types of questions.

- How often does his or her related class meet?
- How does he or she schedule the topics to be covered in each class?
- Does he or she provide for all three types of related instruction: general, technical, and specific?
- What materials does he or she use for related instruction?
- What sorts of problems typically arise in conducting related instruction and how can these be avoided or solved?

You may wish to arrange through your resource person to observe some related classes. This could allow you to see each of the three types of related instruction being conducted and/or to compare how different teacher-coordinators handle these classes.

You may wish to attempt to locate instructional materials which could be used in related instruction classes in your occupational specialty. You could check catalogues available in libraries or curriculum centers. You could check with other educators. You could determine if your state has an approved curriculum for these classes. If you can identify a very specific type of material you would like to use, you and your resource person could try to locate it through the established channels of the National Network for Curriculum Coordination in Vocational and Technical Education (NNCCVTE).

The following items check your comprehension of the material in the information sheet, Preparing for Students' Related Instruction, pp. 7–12. Each of the five items requires a short essay-type response. Please explain fully, but briefly, and make sure you respond to all parts of each item.

SELF-CHECK

 There are some excellent curricula and course outlines available which can be used as a basis for your related instruction classes. How would it affect the effectiveness of your classes if you used only an approved course outline to determine subject matter for your classes? Why?

2. Why is it important to provide three separate types of related instruction: general, technical, and specific?

3. In addition to yourself as teacher, who else should be involved in the selection of topics, materials, methods, and scheduling? Why?

4. Training plans should be continuously reviewed, revised, and updated throughout the training period. How will this affect the content of your related classes?

5 Why should role-playing, projects, case studies, and similar devices be an integral part of related instruction?

NOTES

Compare your written responses on the Self-Check with the Model Answers given below. Your responses need not exactly duplicate the model responses; however, you should have covered the same major points.

MODEL ANSWERS

 If the content of your related instruction classes were solely based on an established curricula or course outline, your classes might be only minimally effective. In order to provide effective related instruction, the instruction must be geared to the needs, interests, abilities, occupational objectives, and career goals of your students.

This cannot be accomplished by simply following a general course outline. A course outline can help you structure your classes in part, but you must also use the students' training plans and feedback from students, on-the-job instructors, advisory committee members, employers, and your own observations to determine what you need to cover and when it should be covered.

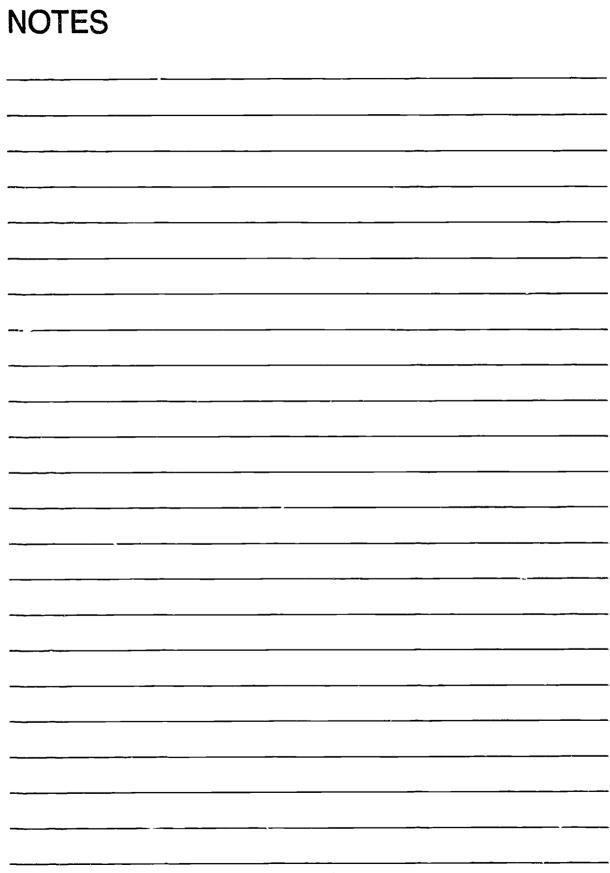

2. The students in your related classes have levels of needs and these can best be met by providing instruction at three distinct levels. There are some needs concerning the world of work which all students have in common. These needs (e.g., filing income tax returns) can be handled in general related instruction. Some needs are occupation-specific (e.g., all students training for positions as stenographers need shorthand skills). These can be handled with small groups of students, grouped by occupation, in technical related instruction.

Finally, there are some needs which will be different for each student depending on the student's own characteristics and goals and on the particular job or training station at which he or she is placed. These can best be handled during specific related class. By dividing the instruction into these three types, you can effectively, and most efficiently, meet most student needs.

- In selecting topics, methods, materials, and scheduling, you should involve the following other persons.
 - Students.—Students can provide information as to what additional contentor skills they feel they want or need, and problems they are having which could be solved through instruction.
 - On-the-job instructors and/or employers.—
 These person can suggest topics which should be covered and materials which could be used, and they can review your curricular decisions to see if the content and materials are realistic, accurate, and appropriate. These functions can also be served by advisory committee members and other educators.
- 4. Training plans must be reviewed and adjusted continuously in order to meet students' changing needs on the job. As the training plans change, your related instruction should be adapted accordingly, so that you are providing instruction that is, in fact, related to each student's current needs.
- 5. If students are to be adequately prepared to perform competently on the job at their training stations, they need more from related class than teacher-centered presentations, discussions, and reading assignments. Students need a chance to practice each new skill or concept in which they receive instruction before they are actually asked to apply it on the job. Roleplay activities, projects, case studies, and other simulations can provide students with this necessary practice.

LEVEL OF PERFORMANCE: Your completed Self-Cl ack should have covered the same **major** points as the model responses. If you missed some points or have questions about any additional points you made, review the material in the information sheet, Preparing for Students' Related Instruction, pp. 7–12, or check with your resource person if necessary.

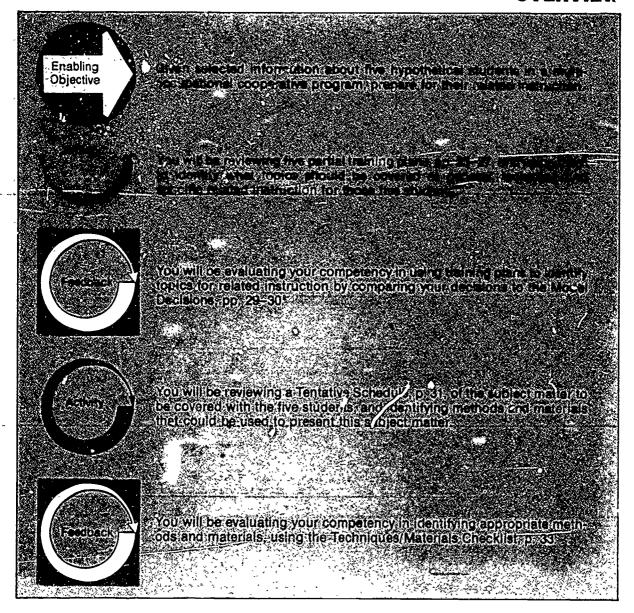

Learning Experience II

OVERVIEW

NOTES (3)

Assume you are a teacher-coordinator for a multi-occupational cooperative program. On pp. 23–27 are the first pages of the training plans for five students presently enrolled in your program.³ The training plans include both the students' career objectives and their current jobs. You, as the teacher-coordinator, must review these plans and identify the general instruction that you should provide these students during related instruction class. Read and analyze the plans, and complete in writing the following Tasks.

TASKS

1. List at least three topics for general related instruction.

2. Divide the students into occupational groupings and list at least three topics for technical related instruction for each group.

^{3.} The training plan forms and the information on Betty and Mary Lou are adapted from Elaine Uthe, The Cooperative Vocational Program. Coordination Techniques.

3. List at least three topics for specific related insuluction for each student.

4. Describe what further input you would need to determine the related instruction needed by these five students.

TRAINING PLAN A

Date	April 22, 1971	Student Mary Lou Dickson
Ву	Terry Andrew/State Farm	Ву
	SUPERVISOR/COMPANY	COORDINATOR

The job supervisor and the coordinator are responsible for designing a training program that assists the student-learner in making a successful transition from an inexperienced student worker to a competent adult worker. This TRAINING PLAN is an INFORMAL contract between the job supervisor and the coordinator about the responsibilities for the student's training. The job supervisor trains the student for specific tasks on the job and provides as many different learning experiences as possible throughout the year. The coordinator, by knowing the type of tasks assigned to the student and the training that is provided, can then design in-school learning projects that (a) provide remedial training in basic skills if necessary, (b) utilize the job tasks and complement the training provided by the job supervisor. (c) provide training for skills that a student needs prior to rotating to a new task on the job, and/or (d) prepare the student to advance to a level nearer the stated pareer objective. The Training Plan should be reviewed periodically and adjusted to meet changed circumstances.

Code No. 14.0702 Code No. 202.388	CÂREER OBJECTIVE	STENOGRAPHER	USCE Code No.	14.0702	DOT Code No.	202.388
-----------------------------------	------------------	--------------	------------------	---------	-----------------	---------

DOT DESCRIPTION:

STENOGRAPHER (clerical) 202.388 clerk-stenographer

Takes dictation in shorthand of correspondence, reports, and other matter, and transcribes dictated material, using typewriter. Performs variety of clerical duties [Clerk, General Office], except when working in stenographic pool.

CLERK, GENERAL OFFICE (clerical) 219.388 administrative clerk

Performs variety of following or similar clerical duties, utilizing knowledge of systems or procedures: copies data and compiles records and reports. Tabulates and posts data in record books. Computes wages, taxes, premiums, commissions, and payments. Records orders for merchandise or service. Gives information to and interviews customers, claimants, employees, and sales personnel. Receives, counts, and pays out cash. Prepares, issues, and sends out receipts, bills, policies, invoices, statements, and checks. Prepares stock inventory. Adjusts complaints. Operates office machines, such as typewriter, adding, calculating, and duplicating machines. Opens and routes incoming mail. May prepare payroll. May keep books. May purchase supplies.

CURRENT JOB CLERK-TYPIST	USOE DOT Code No. 209.388				
MAJOR TASKS Type from rough drafts Answer telephone and place calls File correspondence Duplicate reports Maintain petty cash fund Take dictation later in year	SPECIFIC ATTITUDES DESIRED Dependability Good attendance Accuracy in typing Good grooming Punctuality

MACHINES TO BE USED	SPECIAL KNOWLEDGE/CONTENT NEEDED						
Cash register	How to measure for clothing						
Ticketing machine	Product knowledge						
Credit card machine	Department codes						
	Stocking procedures						
	Use of cash register						
	How to set up displays						

Compare your written decisions concerning the students' related instruction needs with the Model Decisions given below. Your decisions should closely match the model responses.

MODEL DECISIONS

- General Related Instruction: Almost all the qualities listed under the "Specific Attitudes Desired" headings should be covered during general related instruction. In each of the five training plans, the same basic attitudes are included: courtesy, dependability, good grooming, punctuality, accuracy, etc. Although "initiative" is listed on only one training plan, it is a quality that should be encouraged in all students.
- 2. Technical Related Instruction: Three logical occupational groupings for these five students would be as follows:

Office Occupations	Food Service Occupations	Sales Occupations
Mary Lou Betty	Tim Charlene	Louis

The technical related instruction needed by Mary Lou and Betty would include typing, filing, using the telephone, and taking dictation and/or shorthand. The technical related instruction needed by Tim and Charlene would include serving dinners and learning correct place settings, serving procedures, and replenishing/supply procedures. Because Louis is alone in the technical area, his technical instruction and specific instruction would be provided at the same time. However, he could perhaps be grouped occasionally with Tim and Charlene, since all three ultimately wish to hold management positions and some of these skills would be similar.

3. The topics each student would need to cover in specific related instruction would be as follows:

Mary Lou

- use of spirit duplicator
- · use of the electronic calculator
- use of the Selectric typewriter
- knowledge of insurance terms and forms
- knowledge of petty cash fund procedures

Вещу

- use of date stamper
- use of postage meter
- use of Royal electric typewriter
- knowledge of postal regulations
- knowledge of mail delivery procedures

Tim

- skill in setting tables
- skill in clearing tables
- skill in making coffee
- skill in polishing silver
- skill in general clearing tasks
- use of the refrigeration units
- use of the beverage dispenser

Charlene

- skill in carrying trays
- skill in seating diners
- skill in arranging seating stations
- skill in cutting meat

Louis

- All topics on Louis' training plan not covered in general related instruction would be included in his specific instruction because his technical and specific related instruction would be combined.
- 4. Before finalizing your plans for the topics to be covered during related instruction, you would need to identify additional areas that need to be covered and to verify that all topics are appropriate and realistic. There are, for instance, many areas which should be covered in general related instruction that do not show up on the training plans, such as:
 - procedures in applying for a job
 - knowledge of job benefits
 - procedures for filing income taxes
 - methods of budgeting your income

Input concerning these other areas that need coverage can be gotten from advisory committee members, employers, on-the-job instruc-

tors, other educators, and from printed resources.

LEVEL OF PERFORMANCE: Your written decisions should have closely matched the model responses If you missed some points or have questions about any additional points you made, review the material in the information sheet, Preparing for Students' Related Instruction, pp. 7–12, or checkwith your resource person if necessary.

Assume that after reviewing the training plans for the five hypothetical students and getting additional input as needed, you prepared the following tentative Week's Schedule for areas you need to cover during related instruction class each day. Review the schedule and then (1) plan in writing what methods or techniques you would use each day, and (2) locate at least three actual instructional materials you could use for the general instruction, and list and describe each piece of material.

Keep in mind that you are not expected to be an expert in the selection of methods and techniques. You may not have experience or skill in this area as yet. This assignment does not require that kind of expertise. Using your general experience and creativity, you should be able to generate appropriate techniques you could use.

WEEK'S SCHEDULE

Related Instruction Class: 8:55-9:45

Monday -General Instruction

Topic: The Job Interview

Tuesday -General Instruction

Topic: The Job Interview

Wednesday -Technical Instruction

Mary Lou and Betty: typing skills Tim and Charlene: serving procedures

Louis: writing up purchases

Thursday -Specific Instruction

Mary Lou:

will be starting to take dictation next week at work

Betty:

is having difficulty mastering the company's filing system

Tim:

wants to start an individual project

Charlene:

has trouble being courteous to customers who are rude to her

Louis:

has been consistently late to work

After you have identified your methods and materials, use the Techniques/Materials Checklist, p. 33, to evaluate your work.

TECHNIQUES/MATERIALS CHECKLIST

Directions: Place an X in the NO, PARTIAL, or FULL box to indicate that each of the following performance components was not accomplished,. partially accomplished, or fully accomplished. If, because of special cir-Date cumstances, a performance component was not applicable, or impossible to execute, place an X in the N/A box. Resource Person LEVEL OF PERFORMANCE In selecting techniques, you: 1. identified at least one technique for each topic 2. selected techniques that seem to be: a. appropriate to the topic b. appropriate to the students' needs c. realistic in terms of the allotted class time d. potentially motivating e. realistic in terms of how much supervision or direction you can be expected to provide The techniques you selected: 3: provided students with adequate direction 4. were primarily student-centered in nature (as opposed to requiring the teacher to dominate each activity) 5. provided for large-group, small-group, and individualized instruction 6. provided for students to have access to the materials they need to adequately cover the topic The three materials you selected for general instruction: 7. were selected after you checked a variety of sources 8. were appropriate to students who are gaining entry-level skills...

LEVEL OF PERFORMANCE: All items must receive FULL, or N/A responses. If any item receives a NO, or PARTIAL response, review the material in the information sheet, Preparing for Students' Related Instruction, pp. 7-12, study the Model Plan on the following page, revise your selections accordingly, or check with your resource person if necessary.

9. included a variety of types (printed, audiovisual, etc.)

10. allowed for students to apply what they learned

MODEL PLAN

Monday

On the first day for the topic, "Job Interview," it would be appropriate to have a large-group, teacher-centered presentation (or presentation made by a guest speaker) covering the basic information students need to know. This presentation could be scheduled for the full period and could be supported by illustrations, films, transparencies, or other illustrative devices. Or, the presentation could be brief, with the rest of the period devoted to having students read related materials or participate in small-group discussions structured by guideline questions you have prepared.

Tuesday

On the second day, students should have an opportunity to apply what they have learned about job interviews. This could be accomplished by involving students in role-play activities. You could prepare a script or a variety of scripts which include only half the dialogue, only what the interviewer says. Students could then pair off and take turns taking the roles of both interviewer and interviewee. Case studies could also be used to give students practice in responding to difficult interview situations.

Wednesday

You could set up three stations in advance: (1) typewriters and skill building books or rough drafts for Mary Lou and Betty, (2) a table, table service, and serving utensils for Tim and Charlene, with written instructions describing the tasks they are to complete, and (3) a simulated store counter with priced items similar to those Louis is used to selling and a pad of sales slips. Mary Lou, Betty, Tim, and Charlene would then require only minimal supervision which would allow you to take the role of the customer so Louis can practice writing up purchase orders.

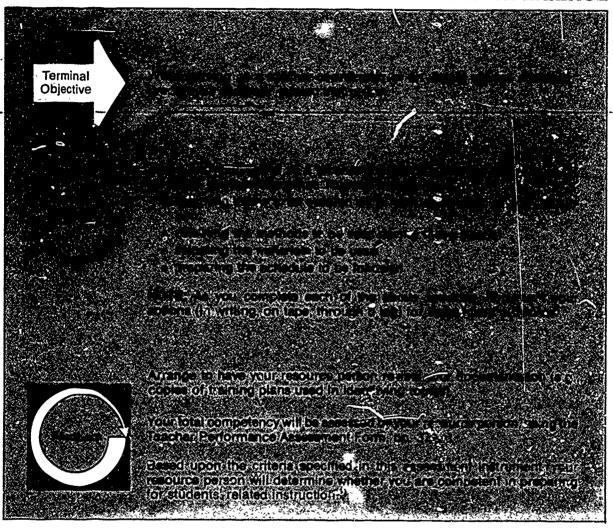

Thursday

Assuming Mary Lou has minimal skill in taking shorthand already, what she needs now is practice. This could be handled by securing or preparing audiotapes from which she can take dictation For Betty, you could obtain a written description of the filing system from her on-the-jc'ວ ແລະtructor, and obtain or prepare samples of the types of materials she is expected to file. She could then read the description and mark on each sample where it should be filed. Tim would need either a verbal or written explanation of the guidelines and procedures he is expected to follow in planning and completing a project. He might also need assistance in selecting a project to complete. He could then spend the remainder of the period drafting preliminary plans. Charlene could be provided with audiotapes of rude customers with time allowed for her to respond, or with case studies involving rude customers to respond to. She could also be provided with filmed, taped, or written examples of persons handling rude custc mers effectively. Louis, who has been consistently late to work, needs to have a personal conference with you to identify the cause of the problem and discuss possible solutions.

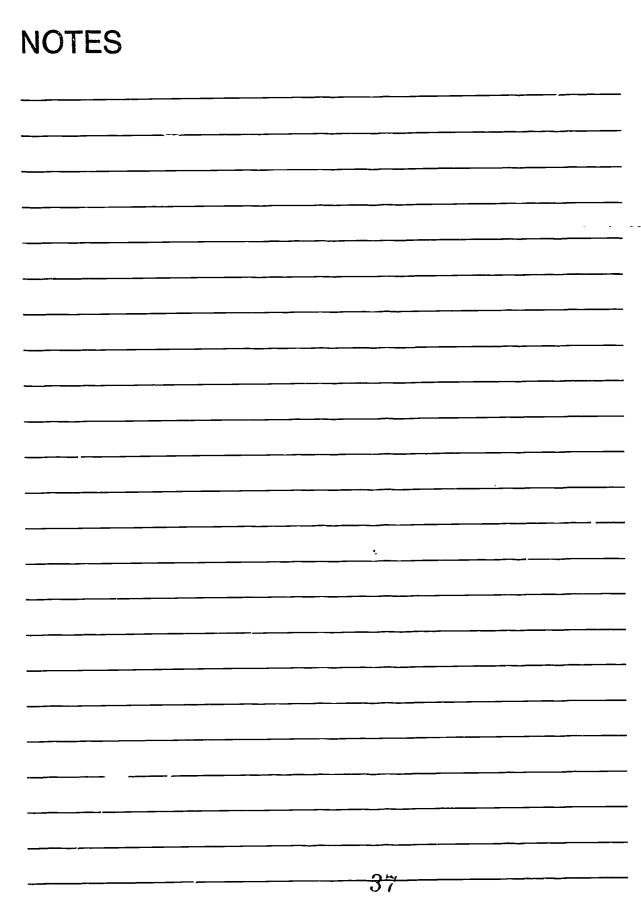

Learning Experience III

FINAL EXPERIENCE

^{*}For a definition of "actual school situation," see the side back cover.

TEACHER PERFORMANCE ASSESSMENT FORM

Prepare for Students' Related Instruction (J-9)

Directions: Indicate the level of the teacher's accomplishment by placing an X in the appropriate box under the LEVEL OF PERFORMANCE heading. If, because of special circumstances, a performance component was not applicable, or impossible to execute, place an X in the N/A box.

lame		
Date

area(s).

LEVEL OF PERFORMANCE: All items must receive N.A, GOOD, or EXCELLENT responses If any item receives a NONE, POOR, or FAIR response, the teacher and resource person should meet to determine what additional activities the teacher needs to complete in order to reach competency in the weak

ABOUT USING THE CENTER'S PBTE MODULES

Organization

Each module is designed to help you gain competency in a particular skill area considered important to teaching success. A module is made up of a series of learning experiences, some providing background information, some providing practice experiences, and others combining these two functions. Completing these experiences should enable you to achieve the terminal objective in the final learning experience. The final experience in each module always requires you to demonstrate the skill in an actual school situation when you are an intern, a student teacher, or an inservice (eacher.

Procedures

Modules are designed to allow you to individual ze your teacher education program. You need to take only those modules covering skills which you do not already possess. Similarly, you need not complete any learning experience within a module if you already have the skill needed to complete it. Therefore, before taking any module, you should carefully review (1) the Introduction, (2) the Objectives listed on p. 4, (3) the Overviews preceding each learning experience, and (4) the Final Experience. After comparing your present needs and competencies with the information you have read in these sections, you should be ready to make one of the following decisions:

- that you do not have the competencies indicated, and should complete the entire module
- that you are competent in one or more of the enabling objectives leading to the final learning experience, and thus can omit that (those) learning experience(s)
- that you are already competent in this area, and ready to complete the final learning experience in order to "test out"
- that the module is inappropriate to your needs at this time

When you are ready to take the final learning experience and have access to an actual school situation, make the necessary arrangements with your resource person. If you do not complete the final experience successfully, meet with your resource person and arrange (1) to repeat the experience, or (2) complete (or review) previous sections of the module or other related activities suggested by your resource person before attempting to repeat the final experience.

Options for recycling are also available in each of the learning experiences preceding the final experience. Any time you do not meet the minimum level of performance required to meet an objective, you and your resource person may meet to select activities to help you reach competency. This could involve (1) completing parts of the module previously skipped; (2) repeating activities; (3) reading supplementary resources or completing additional activities suggested by the resource person; (4) designing your own learning experience; or (5) completing some other activity suggested by you or your resource person.

Terminology

Actual School Situation... refers to a situation in which you are actually working with, and responsible fcr, secondary or post-secondary vocational students in a real school. An intern, a student teacher, or an inservice teacher would be functioning in an actual school situation. If you do not have access to an actual school situation when you are taking the module, you can complete the module up to the final learning experience. You would then do the final learning experience later, i.e., when you have access to an actual school situation.

Alternate Activity or Feedback . . . refers to an item or feedback device which may substitute for required items which, due to special circumstances, you are unable to complete.

Occupational Specialty rafers to a specific area of preparation within a vocational service area (e.g., the service area Trade and Industrial Education includes occupational speciaities such as automobile mechanics, welding, and electricity).

Optional Activity or Teedback ... refers to an item which is not required, but which is designed to supplement and enrich the required items in a learning experience.

Resource Person ... refers to the person in charge of your educational program; the professor, instructor, administrator, supervisor, or cooperating supervising classroom teacher who is guiding you in taking this module.

Student . . . refers to the person who is enrolled and receiving instruction in a secondary or post-secondary educational institution.

Vocational Service Area ... refers to a major vocational field: agricultural education, business and office education, distributive education, health occupations education, home economics education, industrial arts education, technical education, or trade and industrial education.

You or the Teacher . . . refers to the person who is taking the module.

Levels of Performance for Final Assessment

N/A The criterion was not met because it was not applicable to the situation.

None ... No attempt was made to meet the criterion, although it was relevant.

Poor... The teacher is unable to perform this skill or has only very limited ability to perform it.

Fair... The teacher is unable to perform this skill in an acceptable manner, but has some ability to perform it. Good... The teacher is able to perform this skill in an effective manner.

Excellent . . . The teacher is able to perform this skill in a very effective manner.
