ABSTRACT

This report presents the Energy Research and Development Administration (ERDA) program plan for solar heating and cooling of buildings and for agricultural and industrial process applications. An overview of the program plan is followed by a description of the ten paths to the solar heating and cooling of buildings and a brief discussion of the agricultural and industrial process applications. The appendices present detailed information on the tasks, including flow diagrams for the heating and cooling tasks, brief descriptions of these tasks and of the nonengineering tasks, and an indication of the importance of each nonengineering task to the overall research and development program. FOREWORD

This interim report on a National Program Plan for Research and Development in Solar Heating and Cooling was prepared by the Research and Development Branch of the Division of Solar Energy of the Energy Research and Development Administration (ERDA). The report was first drafted by the Solar Energy Group of the Los Alamos Scientific Laboratory. It is based on a thorough assessment of the present status of solar heating and cooling technology and presented with the confidence that the emerging solar energy industry will continue to conduct a broad range of R&D activities. This plan describes the Federal R&D program plan for solar heating and cooling, including those activities to be funded in whole or in part by the Federal Government. The program plan is compatible with, but more detailed than, that described in the *National Plan for Solar Heating and Cooling*, ERDA 23A. It is intended that this interim report be circulated widely for review and comment by all those concerned with the R&D aspects of solar heating and cooling. It is also planned that several groups, such as ASHRAE, ASME, and SEIA, will conduct formal reviews of this plan and provide ERDA with their recommendations. Comments received by March 1, 1977 will be considered in the preparation of the final report on the Program Plan for Research and Development in Solar Heating and Cooling. Comments should be sent to:

Dr. Frederick H. Morse, Chief
Research and Development Branch
Division of Solar Energy
Energy Research and Development Administration
Washington, D.C. 20545

As with most planning documents, it is anticipated that this R&D program plan will be revised and improved as results from the current research, development, and demonstration projects, both Federally and privately supported, become available. Comments received after March 1 will be considered for incorporation in future revisions of this plan.

A-8 Advanced Non-Concentrating Collectors With Absorption or Rankine Cycle Chiller for Space Cooling: Path C2 Task Flow Chart	72
A-9 Flat Plate Collectors with Desiccant Chiller for Space Cooling: Path C3 Task Flow Chart	73
A-10 Evaporative and Night-Effect Cooling: Path C4 Task Flow Chart	74

TABLES

Table		Page
I-1	Path Descriptions for Heating and Cooling of Buildings	7
I-2	Path Descriptions for Agricultural and Industrial Processes	8
I-3	Task Classifications	9
III-1	Paths to Solar Heating and Cooling of Buildings	18
C-1	Importance Numbers for Collector Tasks	169
C-2	Importance Numbers for Thermal Storage and Heat Transfer Tasks	174
C-3	Importance Numbers for Air Conditioning and Heat Pump Tasks	177
C-4	Importance Numbers for System Study Tasks	179
D-1	Priorities for Non-Engineering Tasks	186

Part I. PLAN

Cost identification: survey of current system costs

System Testing

Techniques and implications of retrofitting

Data gathering on test systems

Architectural integration

Model and theory validation

Simplified performance prediction methods

Preparation of handbooks

The performance of systems using exterior radiation collectors (essentially unglazed flat plate collectors used as night-sky radiators)

Combination with space heating systems

Architectural integration

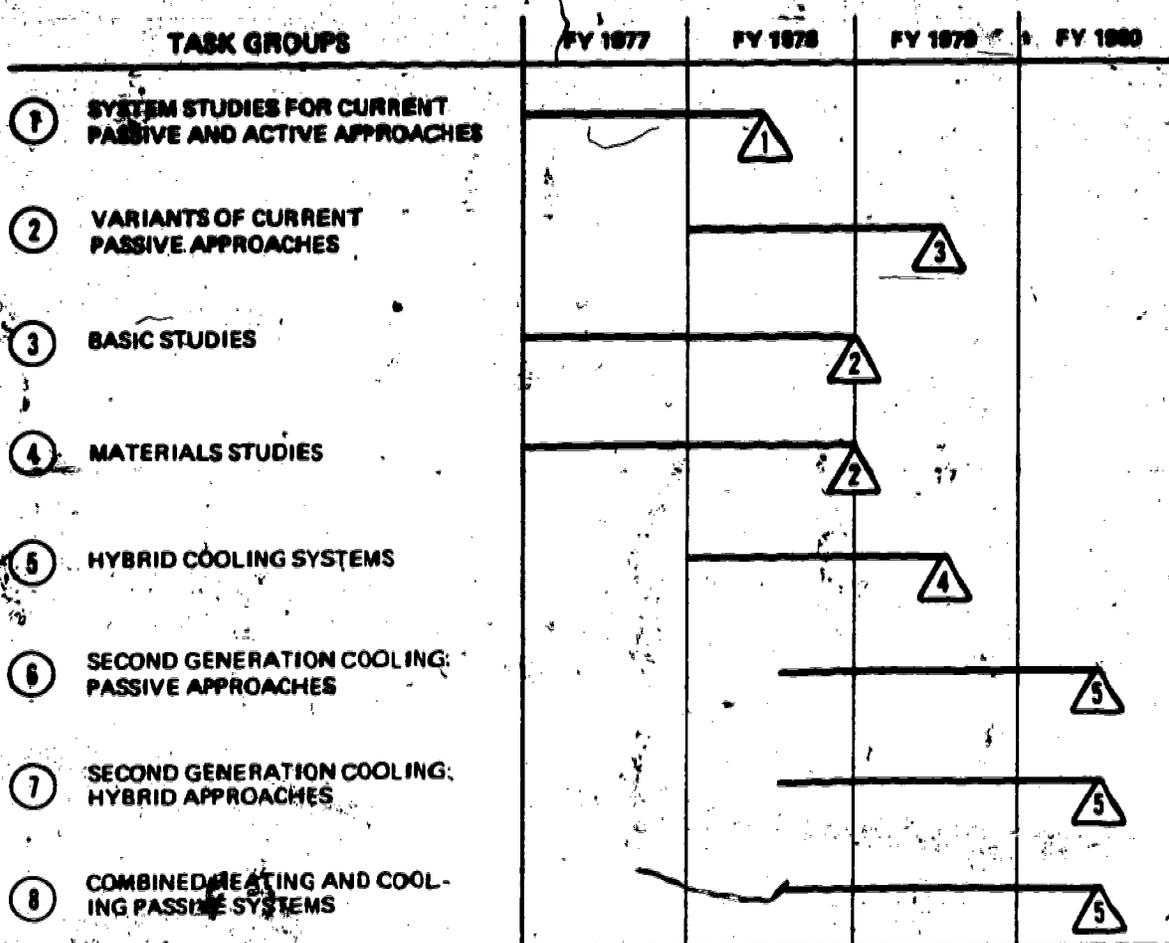

Retrofit potential

System Testing

Data gathering on operating systems

Model validation

Evaluation of the long term effect of humidification on rock bed storage in various climates. If adverse effects are noted, evaluation of fungicides or other remedies.

MILESTONES

Each milestone refers to the preparation and distribution of a handbook on current designs for buildings that will be cooled predominantly by evaporative and night-effect techniques.

- 4/78 ① Based on first round system studies of passive and active techniques.
- 10/78 ② Based on results from basic and materials studies.
- 4/79 ③ Based on variants and improvements of correct passive cooling techniques.

- 4/79 ④ Results from hybrid system tests.
- 4/80 ⑤ Based on second generation passive cooling systems, hybrid cooling systems, and combined heating and cooling passive systems.

**FIGURE III-22
EVAPORATIVE AND NIGHT-EFFECT COOLING
PATH C4 ACTIVITY SCHEDULE**

II-E-5. Investigate the use of organic materials such as paraffins or waxes for phase-change thermal storage. Study micro-encapsulated paraffin spheres in packed beds or a water slurry and paraffin-encapsulated in a thermally-conducting honeycomb structure.

PATH	SERVICE HOT WATER		SPACE HEATING				SPACE COOLING			
	W1	W2	H1	H2	H3	H4	C1	C2	C3	C4
IMPORTANCE NO.			6		6		8	8	3	6

II-E-6. Investigate cost-effective methods for containerizing phase-change storage materials for thermal storage systems. Container designs must satisfy heat exchange requirements, both from air to water or other fluids and within the material.

PATH	SERVICE HOT WATER		SPACE HEATING				SPACE COOLING			
	W1	W2	H1	H2	H3	H4	C1	C2	C3	C4
IMPORTANCE NO.			5	3	5		8	8	3	6

II-E-7. Compare phase-change storage materials with the other storage materials used in several different experimental solar heating systems. The comparison should be either a side-by-side test, in which the phase-change storage is set up so that it can be used within the building, or a test in which the phase-change storage replaces the current storage. Perform detailed tests to compare the performance of the phase-change storage with the conventional storage media.

PATH	SERVICE HOT WATER		SPACE HEATING				SPACE COOLING			
	W1	W2	H1	H2	H3	H4	C1	C2	C3	C4
IMPORTANCE NO.					5		7	5		7

APPENDIX C
Importance Numbers for Solar Heating and Cooling Tasks

APPENDIX D
Priorities for Non-Engineering Tasks

APPENDIX D

Priorities for Non-Engineering Tasks

The following table gives the importance of non-engineering tasks. The rating system used for the engineering tasks is not used here. Instead, tasks are simply given a high, medium, or low priority. In all cases, priority indicates importance of a task to the total R&D program.
