ABSTRACT

This report provides data on 1976 bond elections and bond sales for financing public elementary and secondary school facilities and equipment. The annual report is intended for educators, school boards, legislators, and educational researchers who require up-to-date knowledge of school bond sales for planning future school bond programs. Data, summarized by state, are presented in tables and charts containing information on the number and dollar value of bond issues voted on and passed and the number, dollar value, and net interest of bonds sold. The study revealed several general findings about bond sales nationally. Bond elections reached new lows in fiscal year 1976; only 770 issues were voted on and only 391 were approved. The dollar value (\$970) of bond issues approved was the lowest recorded since the study began in 1958. Bond sales for fiscal year 1976 increased slightly over fiscal year 1975. The average net interest cost for fiscal year 1976 was 6.25 percent, down slightly from the previous year. The monthly average net interest cost reached a new high of 7.1 percent for September 1975. HIGHLIGHTS

Bond elections reached new lows in fiscal year 1976; only 770 issues were voted on and of these only 391 issues were approved.

The dollar value (\$970 million) of bond issues approved during fiscal year 1976 was the lowest recorded since this study was started in 1958.

Bond sales for fiscal year 1976 increased slightly over fiscal year 1975—from 1,060 sales / totaling \$3.6 billion to 1,093 sales totaling \$3.7 billion.

The average net interest cost for fiscal year 1976 was 6.25 percent, down slightly from 6.27 percent for fiscal year 1975.

The monthly average net interest cost reached a new high of 7.10 percent for September 1975, compared with the previous high of 6.94 percent for December 1969 and for August 1974.

FOREWORD

This annual report presents data on bond elections and bond sales for financing the construction of public elementary and secondary school facilities. Data, summarized by State, are presented in tables and charts containing information on the number and dollar value of bond issues voted on and passed, and the pumper, dollar value, and net interest cost of bonds sold.

It is hoped that the data will prove useful to educators, school boards, legislators, educational researchers, and others in planning and financing school construction.

INTRODUCTION

This report provides data on the sale of bonds for financing the acquisition of public elementary and secondary school facilities (land, construction, buildings) and equipment. The National Center for Education Statistics (NCES) issues this report annually for the benefit of school administrators, school members, and others who require up-to-date knowledge of school-bond sales for planning future school bond programs.

Total capital outlay for school facilities and equipment was estimated at \$6.0 billion for 1975-76, amounting to approximately 9 percent of the estimated \$67 billion! currently expended on public elementary and secondary education. NCES projections indicate that capital outlay for public elementary and secondary education will decline to \$5.7 billion in fiscal year 1977?

Sources of Information

Information for this report was compiled for NCES by the Securities Industry Association from reports of sales and elections published in *The Daily Bond Buyer* (New York), generally considered the prime source for information on the municipal securi-

ties market. Daily reports of transactions were totaled for each month and summarized by issuing agency and by State for the fiscal year. This technique has proved satisfactory for gathering information, although the coverage remains incomplete for transactions not reported to *The Daily Bond Buyer*. Information on the rating of bond issues was obtained from Moody's Investors Service³.

Coverage

Data herein cover fiscal year 1976 (July 1, 1975 to June 30, 1976), and were compiled on number of bond sales, average net interest cost, issuing agency, and term of maturity. Summary information regarding bond elections held, number approved or defeated, and par value of the issues put to a vote is also provided. Certain transactions for the State of Delaware were not included in the data set because insufficient data were available. Delaware sells bonds for various purposes, and in FY 1976 these included bonds totaling \$8.9 million for nine public school projects. Of this amount, \$2.4 million is a liability of the local school districts, while the balance is a liability of the State.

BOND ELECTIONS FOR PUBLIC SCHOOL PURPOSES

In FY 1976, 770 school-bond elections were reported, proposing public school bond ssues totaling \$2.1 billion (tables 1, 2, and A). In these elections, 391 issues totaling \$970 million were approved (a 50.8 percent approval rate).

Election Results

The 50.8 percent of elections approved in FY 1976 marked a slight increase over the 46.3 percent approval rate for 1975, but a 9-1 percent decrease in the number of approvals (from 430 in FY 75 to 391 in FY 76). Since FY 1965, when 74.7 percent of the proposed bond issues were approved, the percentage of issues approved declined, reaching low levels in FYs 1971 and 1972 (46.7 and 47.0 percent, respectively), then increased to over 56 percent in FYs 1973 and 1974, dropped to a new low (46.3 percent) in 1975 and then rose to 50.8 percent in 1976 (chart 1).

The \$970 million par value of school bonds approved for FY 1976 is the lowest dollar amount recorded since the study of elections began in 1958. Four States--Colorado, Illinois, Ohio and Texas--accounted for approximately \$457 million (47,1 percent) of elections approved. (See table A) for data for individual States.) These States had a 53.3 percent average approval rate (compared with a 41.1 percent average approval rate for the remainder of the States) and accounted for 35.2 percent of the dollar value of issues failing to win approval.

State Voting Requirements

State requirements differ for voter approval of school bond issues. In 32 States, voter approval is required before any general obligation bonds can be issued for public school purposes. Fourteen of these States (California, Idaho, Iowa, Kentucky, Massachusetts, Mississippi, Missouri, Nebraska, New Hampshire, New York, Oklahoma, South Dakota, Washington, and West Virginia) require specific

percentages in excess of a bare majority for approvide (e.g., for passage, Mississippi requires that 54 percent of those voting approve the issue). In 15 States (noted in table A), voter approval is required by some but not all school systems, depending on the classification of charter of the system. Three States—Alabama, Hawaii; and Indiana—do not require voter approval.

NEW BOND SALES FOR PUBLIC SCHOOL PURPOSES

The \$3.7 billion in sales during 1976 (tables 3, 4 and B), reflects the continuing need for school facilities (amounts of sales differ from annual approvals because not all sales require voter approval and there is an unmeasured backlog of unsold approvals). The 1976 sales were up 3.0 percent (\$109 million) from sales in 1975; however, this increase is less than the 9.6 percent rise in the cost of construction index for the same period, indicating reduced school construction activity.

Monthly Averages

The average monthly amount of bond sales in FY 1976—\$307 million—was 3.1 percent above the 1975 average of \$298 million (table 5). However, actual monthly sales in FY 1976 exceeded \$500 million in both February (\$558 million) and May (\$563 million).

The 12-month moving average of bond sales is an average (arithmetic mean) of monthly sales for the 12-month period ending with each month (table 5). For FY 1976, this moving average rose from \$310 million at the beginning of the year (plotted at February 1975) to \$321 million (plotted at April 1975), then decreased to \$271 million in September 1975, rising again to \$307 million for the year (plotted at January 1970) (chart 2). (The 12-month moving average is plotted at the \$7th month of each 12-month period).

Type of Issuing Agency

Of the 1,093 separate bond sales (totaling \$3.7 billion) reported for various issuing agencies in FY 1976, school districts completed 894 sales totaling \$2.4 billion (tables 4 and B), representing 81.8 percent of the total number of sales and 66.4 percent of the total dollar value of bonds sold.

School bonds issued by public schoolhousing and other revenue authorities accounted for 59 sales totaling \$235.1 million in 1975-76. This was 5.4 percent of the number of sales and 6.4 percent of the dollar value of all new issues sold during the In addition to the schoolhousing authority bonds, these sales consisted of issues pledging special revenues, such as the proceeds of the motor vehicle, tax and racetrack receipts in Florida. Special revenue issues have been adopted as a way of meeting local needs and shifting part of the burden of school construction from the normal local property tax base. The average sale for the schoolhousing authority and other revenue bonds was \$4.0 million, compared with an overall average sale of \$3.4 million for all issuing agencies and an average school district sale of \$2.7 million.

Public schoolhousing authorities were developed as a means of offsetting strict debt limitations in some States. Although, the mechanism may vary from State to State, each authority finances the construction, supervises the erection, and leaves the finished school building to the local education agency. The debt is repaid from the rents collected by the authority, and, when the bonds have been retired and other obligations met, building ownership usually passes to the school district.

Governmental agencies other than school districts—i.e., State, county, city, town, or township civil governments—also sell general obligation bonds to finance construction of public school buildings. In 1975-76, these agencies made 140 bond sales (average sale, \$7.2 million) totaling \$1,004 million (12.8 percent of the number of sales and 27.2 percent of the dollar value). (See tables 4 and B.) Although the number of sales these governmental agencies made in FY 1976 increased 5.3 percent over FY 1975, the total dollar value of these sales decreased by 21.9 percent and the average sale decreased by 25.8 percent.

SOURCE: TABLE 5

FISCAL YEAR

1974-75

1975-76

NET INTEREST COST

At the close of the year, the net interest cost, which had fallen from 6.49 percent for June 1974 to 6.16 percent for June 1975, had risen to 6.75 percent (table 6 and chart 3). The highest monthly average net interest cost during FY 1976 (7.10 percent) was recorded for September 1975 and exceeded the previously recorded high of 6.94 percent (December 1969 and August 1974). The average net interest cost for all bonds in 1976 was 6.25 percent, a decrease of 2 basis points (1 basis point equals 0.01 percent from the 1975 fiscal year average of 6.27 percent [table 3]).

Net interest cost partly reflects general market conditions, and no issuing agency or group of issuing agencies can prevent fluctuation in these conditions. However, local factors, such as the "faith and credit" of the issuing agency, type of community (residential, business, or industrial), outstanding debt of the agency, tax base available for repayment levy, and terms of repayment also affect cost. Two of the key factors influencing interest cost are a bond issue's rating and its life (period until repayment).

Rating as a Factor in Interest Cost

Moody's Investor Service, Inc., rates bond issues on their general desirability as investments. For a fee, Moody rates issues of governmental agencies, including school districts, that have bonds outstanding or proposed in the amount of \$600,000 or more. The more financially sound the issue is judged, the higher its rating and the lower its interest cost.

General obligation bonds receiving Moody ratings (table C) totaled 804 issues and involved \$3.1 billion. The average net interest cost for these rated bonds was 6.24 percent, only 1 basis point below the 6.25 percent-average of all bond issues sold for public school purposes, but 16 basis points below the 6.40 percent average for nonrated bonds (table 3).

The average net interest cost of the "Baa" rated bond issues (the lowest rating sold during this fiscal year) was 7.02 percent, 160 basis points above the 5.42

Chart 3.—Monthly average net interest cost of public elementary and secondary school bond sales:
United States, July 1970 to June 1976

SOURCE: TABLE 6

percent net interest cost for the highest rated ("Aaa") bond issues. The low-rated issues represented 22.1 percent of the number and 9.0 percent of the dollar value of rated issues.

The 23 "Aaa" issues amounted to 2.9 percent of the number and 14.6 percent of the dollar value of all rated bonds sold for public school purposes. The "Aaa", "Aa" and "A" groups combined accounted for 91.0 percent (\$2.8 billion) of the total dollar value and 77.9 percent (626 issues) of the total number of rated bond issues sold.

Since the rating given a bond issue reflects the general credit rating of the issuing agency, the better rating, other factors being equal, naturally commands a lower interest rate.

Life of Issue as a Factor in Interest Cost

The life of an issue substantially influences the net interest cost. Table 7 (a summary of table D) illustrates

the relationship between the life of an issue and net interest cost. Generally, the longer the term of an issue the higher will be the net interest cost. The lowest interest cost (5.80 percent) was for those issues with an average life of 0 to 5 years.

Table 7.—Summary of dollar amount and average net interest cost of general obligation bonds, by average life of issue: United States, fiscal year 1976

Average life of issue (years)	Dollar amount (millions)	Average net Interest cost (percent)
0-5	\$ 407	5.80
6-10	849	6.17
11-15	1,222	6.13
16-20 \	295	6.70
20 and over	52	6.67

SUMMARY

In 1976, approval of public school bond issues, averaging 46.1 percent of the dollar value and 50.8 percent of the number of issues proposed, reflected a decrease of 17.5 percent in dollar value and 9.1 percent in the number of issues from the year before. These decreases are considered significant in light of large decreases in approvals during the preceding year.

Although approvals were down, both in number and dollar value, the \$3.7 billion in reported bond sales represented an increase of \$100 million over FY 1975. The 1976 average net interest cost for all

bonds of 6.25 percent was down 2 basis points from the 1975 average of 6.27 percent, indicating a slight decrease in public school borrowing costs. The 7.10 percent monthly average net interest cost recorded for September 1975 exceeded, by 16 basis points, the previous high (6.94 percent) reported for December 1969 and August 1974.

The number of bond sales has decreased over the past decade. However, reported sales rose from 1,060 in FY 1975 to 1,093 in FY 1976—a 3.1 percent increase. The average amount per sale continued at \$3.4 million in FY 1976.

APPENDIX

APPENDIX

DEFINITIONS

Types of Bonds

A bond is the promise of the issuer to pay the specified amount of money at the specified date and to pay periodically the specified rate of interest. School bonds are part of the group commonly called "municipal bonds" and are generally understood to include bonds issued by a State, county, town, township, school district, or other public authority. They may be "term bonds," with all the bonds in the issue maturing at the same time, or "serial bonds," with the bonds in the issue maturing at intervals over a period of several years. Most school bonds are serial.

Most school bonds are also "general obligation bonds," secured by the issuer's pledge of full faith and credit and taxing power, and are frequently designated more specifically as certificates of indebtedness, building coupon bonds, debentures, unlimited tax schoolhouse bonds school project acts, or building warrants.

Schoolhousing authority issues usually are rental revenue bonds secured by a mortgage on the building and a pledge of repayment from revenues to be received for use of facilities. "Special revenue bonds" pledge the proceeds of a special revenue or tax, such as a motor vehicle license tax, cigarette tax, or racetrack receipts.

Twelve-Mônth Moving Average

The 12-month moving average of bond sales is an average (arithmetic mean) of monthly sales for the 12-month period ending with each month. Each average would properly be plotted at the midpoint of the period being averaged; however, for ease in recording and plotting, the 7th month of each 12-month period is used. For example, the average for the period November 1971 through October 1972 was recorded and plotted as of May 1972, and the average for the July 1973 through June 1974 period was recorded in January 1974. The line formed by connecting these points is a trend line of monthly sales — with the seasonal fluctuations minimized.

Bond Ratings

Moody's Investors Service, Inc., rates bond issues on their general desirability as investments. This service, for a fee, rates issues of governmental agencies, including school districts, that have bonds outstanding or proposed in the amount of \$600,000 or more.

"Aaa" bonds are judged to be the best quality. They carry the smallest degree of investment risk; interest payments are protected by an exceptionally stable margin, and principal is secure.

"Aa" bonds are judged to be of high quality by all standards. They are rated lower than the "Aaa" bonds because margins of protection may be smaller.

"A-1" bonds are "A" bonds which are better than most in the "A" class but do not meet the standards for an "Aa" rating:

"A" bonds are termed higher medium-grade obligations. Factors giving security to principal and interest are considered adequate.

"Baa-1" bonds are "Baa" bonds which are better than most in the "Baa" class but do not meet the standards for an "A" rating.

"Baa" bonds are considered lower medium-grade obligations; i.e., neither highly protected nor poorly secured. Certain protective elements may be lacking or may be characteristically unreliable over a great length of time.

"Ba" bonds are judged to have speculative elements; their future cannot be considered well assured. Protection of interest and principal payments may be very moderate.

Net Interest Cost

Net interest cost is the average cost of borrowing the money, taking into consideration the varying interest rates and redemptions that apply to the bond issue and any premium paid or discount taken at the time of the sale. For any group of bond issues the average for the group is weighted by the size of the issues and their respective redemption schedules.
