*Urban American Indians: Urban Centers

ABSTRACT

Twenty five urban centers, 70 Indian trikes, and 60 public television stations responded to questionnaires in an attempt to collect information useful to the process of making programmatic decisions about future goals and activities of the Mative American Public Broadcasting Consortium (NAPBC). The Trital and Urtan Center questionnaires were concerned with facilities, information sources, media involvement, media equipment, and programming preferences of respondents. Radio and television were generally available to tribes and populations served by urban centers, and educational television was the preferred source of information. Most respendents in both categories wanted a trained media specialist available or cn staff. Culture, history, survival skills, employment, economics, and developing a positive self-image were seen as important fregram topics. Of the responding public tellevision stations, only about 25% had 5 to 10 hours of Native American programming per year, despite having Native American audiences. Lack of money and knowledge prevented production of such special interest programs. Indian culture, arts, and social issues were topics perceived as interesting to Native American viewers. Cverall, top priority Native American media needs were determined to be programming, training, and information delivery systems. The questionnaires are included with complete data tabulations for each. (SE)

SECTION I OVERVIEW

NATIVE AMERICAN MEDIA NEEDS: AN ASSESSMENT

Overview

The Native American Public Broadcasting Consortium (NAPBC) of public television stations began operations in August, 1977. The NAPBC national headquarters is located at the NETV Telecommunications Center in Lincoln, Nebraska: During its first year of operation the primary NAPBC goal was to establish a library to pool and distribute quality programming BY, FOR and ABOUT Native Americans to public television stations and educational institutions.

As the NAPBG became known as the national Native American media resource center, the office began receiving daily requests for information and/or assistance. These requests came from tribal, educational, urban and governmental organizations as well as public television stations. Inquiries ranged from television programming and production consultations to job training and placement. Additionally, NAPBC representation was requested at Native American conferences. Inquiries were also received concerning satellite distribution and Native American radio and television facilities development.

In many instances the NAPBC acted as a liminon between parties, Occasion-.

ally, the office became a facilitator. It was obvious from the requests,
however, that many Native American media needs were not being met by existing
services and programming.

The purpose of this study was to collect information useful to the process of making programmatic decisions about future goals and activities of the Native American Public Broadcasting Consortium. The purpose was fulfilled. The full Native American Media Needs Assessment (NAMNA) report of survey results includes comments which are designed to alert the reader to those data which

may be difficult to interpret. By doing so, we hope to reduce the potential for misusing data and to offer guidance to those who may attempt similar studies in the future.

Three individual survey components of the NAMIA were developed: (1)
Tribal Media Questionnaire (TMQ), (2) Urban Center Media Questionnaire
(UCMQ), and (3) Public Television Questionnaire (PTQ). These were seen to
be the major potential service areas of the NAPBC

The questionnaires were mailed in September and October, 1978. Preliminary results were tabulated in November, 1978. Questionnaires were accepted through January 11, 1979, at which time final results were tabulated.

The preliminary results of the survey were presented to the semi-annual meeting of the NAPBC Board of Directors in November, 1978. The Board made long-range planning decisions concerning NAPBC operations at that time. The Board planned NAPBC services to make the most efficient and effective use of available and potential resources to meet existing Native American media needs.

Native American programming, training and information delivery systems were determined to be top priority Native American media needs. Comprehensive programs are currently being developed by NAPBC to address these needs.

The following is the full Native American Media Needs Assessment (NAMNA) Report. This report includes the executive report and tabulations for each questionnaire.

We wish to thank all who responded. We are pleased to include your creeds and views in our tabulations and considerations.

SECTION II EXECUTIVE SUMMARIES

Tribal Media Questionnaire <u>Executive Summary</u>

Proceduce

The Tribal Media Questionnaire (TMQ) component of the Native American
Public Broadcasting Consortium (NAPBC) Native American Media Needs Assessment
(NAMMA) was mailed to 276 tribal groups in the United States. The major portion
of the mailing list included all tribes listed in "Governing Bodies of Federally
Recognized Indian Groups (Excluding Alaska)" published by the United States
Department of the Interior, Bureau of Indian Affairs (June, 1975). In addition
to the BIA listings, this list was expanded to include Alaskan tribes and
several other groups of which the NAPBC was aware. The goal was to query every
Native American tribe in the United States for which an address was available.
Questionnaires were addressed to tribal heads (i.e. chief, chairman, president,
governor). The accompanying cover letter requested that the tribal head
or a "qualified spokesman" reply to the questionnaire.

The initial questionnaire was pilot tested in early September, 1978. The revised questionnaire was mailed September 29, 1978. Two follow-up letters were sent during October, 1978, to encourage response to the questionnaire.

One questionnaire was sent to each tribal head. A second questionnaire was supplied upon request in those cases where the first questionnaire was lost. Only one questionnaire was completed by each of the responding groups.

Response Rate

Of the total 276 questionnaires sent one percent (N=3) were returned as undeliverable; twenty-six percent (N=71) were returned by respondents. Of these one percent (N=1) was not filled out completely enough to be usable. Thus the final response rate was twenty-five percent (70 of 276) usable returned questionnaires.

A-1

Respondent Characteristics

The seventy questionnaires tabulated represented responses from eightythree tribes. (Some responses came from multiple-tribes as in tribal coalitions.)
These tribes self-reported a total of 324,458 members. Size of responding tribes
varied from the Cuyapaipe (California) tribe with six members to the nation's
largest tribe--the Navajo (Arizona)--with over 150,000 members. Responses were
divided into four (4) categories by number of tribal members for clarification
in interpreting data. Categories and number of responses in each category
include: (1) Under 1,000 (N=30), (2) 1,000-4,999 (N=28); (3) 5,000-19,999
(N=11), and (4) 20,000 and Over (N=1). The distributions of the responding
total groups by geographical location and tribal size generally correspond to
the overall Native American population.

Most responses (58 of 70) came from tribes west of the Mississippi-River. Responses by state included California (N=13); Oklahoma, Washington (N=8); Arizona (N=7); New Mexico (N=5); Minnesota, Wisconsin (N=4); Michigan, Montana, Nevada (N=3); Florida, South Dakota (N=2); Idaho, Louisiana, Maine, Mississippi, Nebraska, New York, Oregon, Wyoming (N=1).

Survey Findings

facilities. Over half of the respondents (43 of 68) reported 76-100% of the homes in their tribal land area had electricity. Twice the number of tribes responded that 76-100% of the homes had radios than had television sets (43 versus 20). Considerably more respondents reported not having cable television service as did (47 versus 18). Several respondents indicated that cable television service was available only in some parts of the tribal land area. A very low percentage of homes had cars or trucks equipped with CB radios. Most responses

(51 of 68) fell in the 0-25% category.

Information sources. Twice as many respondents reported receiving programs from a public educational television station (N=44) than received programs from a public educational radio station (N=22).

Only nine percent (6 of 68) reported receiving programs in the native tongue. Of these, most (5 of 6) were broadcast to larger tribes (5,000+).

When asked how most people in the tribal land area got information about Native American issues, 106 of 157 responses (68%) indicated print media, while 42 of 157 responses (27%) indicated broadcast media.

If a regional/national Native American news program was produced, forty-eight percent of the respondents (31 of 64) indicated that public ETV pould be the most preferred way to receive it, while thirty-four percent (22 of 64) indicated that public radio would be most preferred. Nine percent (6 of 64) indicated that both ETV and public radio were preferred.

Tribal media involvement. Few respondents (17 of 68) reported a "very active" media office or staff. Of those services provided, most (22 of 40) involved news dissemination or tribal promotion (12 of 40).

Forty-one percent (27 of 66) of the respondents reported having a media specialist available to help run the equipment. Fewer (28%) reported having a media specialist to help with productions.

Fifty-one of sixty-six (77%) respondents indicated that they would like to see someone from their tribe trained to operate media equipment or to produce or assist with productions. Twenty-four (47%) would prefer training in the area of public television, twenty-four (47%) in public radio, and thirty-one (61%) training as a media specialist. It was much more likely that the

traines would be a college/junior college student (32%) or member of the tribal council (20%) than a teacher (9%).

Media equipment. The seven most available types of media equipment were reported to be (from highest to lowest): (1) cassette tape recorder (59 of 70), (2) 8-track cartridge tape recorder (39 of 70), (3) carquisel slide projector (37 of 70); (4) 16mm film projector (35 of 70), (5) 35mm slide camera (33 of 70), (6) filmstrip projector (29 of 70), and (7) overhead projector (27 of 70). (Note: not limited to one response.)

Of those planning to purchase new equipment) there was no clear trend toward a particular type of equipment.

Schools: Over half (37 of 70) of the respondents indicated that 75% or more Native American students are presently enrolled in public schools. One hundred percent of the respondents (68 of 68) indicated that they would like to see more programs about Native Americans developed for school children.

The most preferred media for programs about Native Americans developed for school children were 16mm film (44 of 68) followed by filmstrips (23 of 68). (Note: not limited to one response.)

Programming. "Cultural," "heritage," and "historical" were clearly first choices for Native American programming for school children. Second preferences included legal, tribal government, importance of education, health and self-concept issues.

Respondents' adult programming choices primarily involved coping (survival) skills, including health (alcoholism, nutrition); employment (training, job seeking); economic; social (child care, assertiveness, education); and

A-5

integration of traditional views with contemporary life styles.

Program topics for elderly were less clear than for children and younger adults. There were numerous requests for survival skill information—especially related to health and social services. Also mentioned frequently were language and heritage preservation along with transmission of culture.

Native American Public Broadcasting Consortium Lincoln, Nebraska January, 1979

11

Urban Center Media Questionnaire

Procedure

The Urban Center Media Questionnaire (UCMQ) component of the Native American Public Broadcasting Consortium (NAPBC) Native American Media Needs Assessment (NAMNA) was mailed to sixty-two (62) Indian urban center executive directors in the United States (including Alaska). The NAPBC goal was to query every Indian urban center for which an address was available.

The initial questionnaire was pilot tested in September. The revised questionnaire was mailed October 23, 1978. A follow-up letter was sent November 3, 1978, to encourage response to the questionnaire. Questionnaires were accepted through January 11, 1979, at which time final results were tabulated.

One questionnaire was sent to each executive director. A second question—
naire was supplied upon request in those cases where the first questionnaire
was lost. Only one questionnaire was completed by each of the responding urban
centers.

Response Rate

Of the total sixty-two questionnaires sent, one (2%) was returned as undeliverable. Twenty-five (40%) were returned by respondents. Of these all were filled out completely enough to be usable. Thus, the final response rate was 40% (25 of 62) usable returned questionnaires.

Respondent Characteristics

The questionnaires tabulated represented responses from twenty five Indian urban centers.

While the mailing list did not include every Native American urban center in the United States, it was comprehensive in that it offered a wide geographic distribution representative of major areas of Native American urban concentration.

Responses came from urban centers located in most parts of the United States with the exception of the Southeast. Responses by state and city include: California (N=3), Los Angeles, San Bernardino, (? city); New York (N=3), Buffalo, New York City, Syracuse, Oklahoma (N=3), Holdenville, Lawton, Tulsa; Arizona (N=2), Flagstaff, Phoenix; Michigan (N=2), Lansing, Michigan Indian Benefit Assn.; Missouri (N=2), Kansas City, St. Louis; Washington (N=2), Tacoma, Yakima; Alaska (N=1) Kotzebue; Illinois (N=1), Chicago; Maryland (N=1), Baltimore; Massachusetts (N=1), Boston; Minnesota (N=1), Minneapolis; North Dakota (N=1), Bismarck; Ohio (N=1), Cleveland; Wisconsin (N=1), Milwaukee.

Survey Findings

Facilities. Most respondents, 72% (N=18), reported 76-100% of the homes in their community service area had electricity. None reported less than 50% of the homes had electricity. Eighty-four percent (21 of 25) reported over half of the service area homes had television sets and ninety-six percent (24 of 25) mad radios. Cable television service was available to 60% (15 of 25) of the homes. Forty-eight percent (12 of 25) reported a quarter or less of the homes had cars or trucks equipped with CB radios.

<u>Information sources</u>. Ninety-six percent of the respondents (24 of 25) reported receiving programs from a public educational television station, while fifty-six percent (14 of 25) reported receiving programs from a public

radio station. Of the twenty-four responses to the question dealing with quality of television reception, seventeen (71%) judged it "Good most of the time." Of the fourteen responses dealing with quality of radio reception. nine (64%) judged it "Good most of the time." Only 8% (2 of 25) reported receiving programs in the native tongue.

When asked how most people in the community center area got information about Native American issues, 38 of 64 responses (59%) indicated print media. while 19 of 64 (30%) indicated broadcast media. (Note: not limited to one response.)

If a regional/national Native American news program was produced, 83% (19 of 23) of the respondents indicated public educational television was the preferred media, while 13% (3 of 23) indicated public radio as the preferred media.

Tribal media involvement. Several urban centers (9 of 24) reported having "very active" staffs working in media. Of those services provided, most involved news dissemination (11 of 32) and clearinghouse for outside media (5 of 32).

Twenty-two of the twenty-three respondents indicated that there were people in their community center who would like to work in media. When asked in what areas of media people would like to work, "media specialist" was first with thirteen responses, "public radio" second with twelve and "public educational TV" third with nine.

Forty-eight percent (12 of 25) of the community centers reported having a media specialist available to help run the equipment. Thirty-six percent (9 of 25) reported having a media specialist to help with productions.

· Twenty-two of twenty-five respondents (88%) indicated that they would

like someone trained to operate media equipment or to assist with productions.

When asked who that person would most likely be, twenty of twenty-six responses were "member of urban center staff." (Note: not limited to one response.)

Media equipment. The six most available types of media equipment were reported to be (from highest to lowest): (1) cassette tape recorder (22 of 25).

- (2) 16mm film projector (15 of 25), (3) carousel slide projector (14 of 25),
- (4) 35mm camera (13 of 25), and (5) 8-track cartrige tape recorder (12 of 25).

Of those planning to purchase new equipment, there was no clear trend toward a particular type of equipment.

Schools. Over three-fourths (19 of 25) of the respondents indicated that 75% or more Native American students are presently enrolled in public schools. One hundred percent (25 of 25) of the respondents indicated that they would like to see more programs about Native Americans developed for school children.

The most preferred media for programs about Native Americans developed for school children were 16mm film (22 of 25) followed by filmstrips (16 of 25).

<u>Programming.</u> Culture and history were clearly first choices for Native American programming for school children,

Respondents' choices for adult programming involved coping with urban society and developing a positive self-image.

There was no clear trend toward a particular program topic for elderly Native Americans:

Native American Public Broadcasting Consortium Lincoln, Nebraska January, 1979

Public Television Questionnaire <u>Executive Summary</u>

Procedure

The Public Television Questionnaire (PTQ) component of the Native American Public Broadcasting Consortium (NAPBC) Native American Needs Assessment (NAMNA) was mailed to public television licensee executive officers in the United States. The mailing list was taken from the public television stations listed in the 1978 NAEB Directory of Public Telecommunications. It included 154 of the 155 names on the list. One questionnaire was sent to the executive officer of all licensees.

Nebraska Educational Television received only one questionnaire although it holds two licenses. The same executive officer was listed twice--once for each of Nebraska's two licenses.

A second questionnaire was supplied upon request in those cases where the first questionnaire was lost. Only one questionnaire was completed by each of the responding public television licensees.

The initial questionnaire was pilot tested in October, 1978.

The revised questionnaire was mailed October 21, 1978. A follow-up letter was sent November 7, 1978, to encourage response to the questionnaire. Questionnaires were accepted through January 11, 1979, at which time final results were tabulated.

Response Rate

Of the total 154 questionnaires sent, sixty-four (42%) were returned by respondents. Of these sixty were filled out completely

enough to be usable. Thus, the final response rate was 39% (60 of 154) usable returned questionnaires.

Respondent Characteristics

Three-fourths (45 of 60) reported having a Native American (NA) population within their licensee broadcast signal coverage area. The largest NA viewership reported was 5%. The NA viewership was reported to be about equally divided between urban (N = 16) and rural (N = 18). Four respondents indicated both urban and rural and seven did not respond to the question.

The sixty respondents represented licensees in thirty-two states including Alaska and Hawaii. California reported the greatest number of responses with 7. It was followed by Ohio (6); Tennessee (4); Indiana, Texas (3); Arizona, Florida, Idaho, Maine, Missouri, New York, Oregon, Pennsylvania, South Carolina, Wisconsin (2); Alabama, Alaska, Colorado, Hawaii, Iowa, Kansas, Louisiana, Massachusetts, Minnesota, Mississippi, Nebraska, Nevada, South Dakota, Utah, Washington, West Virginia, Virginia (1).

Programming

When asked to indicate when they had broadcast the most recent program of special interest to NA's, nineteen of forty-eight (39%) answered "within the last six months." The most frequently reported quantity of such programming was five to ten hours per year (9 of 41) followed by under five hours per year (8 of 41): one to three hours per month (7 of 41); and over ten hours per year (6 of 41).

When respondents were asked how they decided to book this type of programming, forty-three percent (23 of 53) cited overall quality as the first criterion. General viewership interest was second with twenty-five percent (13 of 53). Twenty-three percent (12 of 53) noted Native American audience potential.

Licensees were asked to comment on their <u>criteria</u> for determining the <u>quality</u> of programming of special interest to Native Amapicans.

Sixty-four percent (27 of 42) of the respondents did not distinguish among programming categories (i.e., pocumentary, public affairs, etc.).

These respondents stressed overall quality and general viewership interest.

Respondents stressed quality criteria for individual programming categories as follows:

Documentary--objectivity
Public affairs--information quality
Realistic drama/docu-drama--production quality
Arts and culture--performance quality, authenticity and general
viewership potential
Sporting events--competence of talent and importance of event

When asked what form of ascertainment respondents used to determine a need for NA programming in their broadcast area, "regular" (FCC) ascertainment procedures were noted with numerous references to personal NA contact and community interviews (29 of 40). Seventy-six percent (41 of 54) reported "no response" from viewers to previously broadcast NA programming. Where response was noted (12 of 54), all responses (12 of 12) were "somewhat positive" to "very positive."

Indian culture and heritage was selected by the greatest number (21 of 47) of respondents as first preference of program topics of

general interest to their viewership. Indian arts (9.of 47), Indian social issues (8 of 47), and Indian political issues (8 of 47) followed.

Success in promoting minority programming included local promotional meetings; local newspaper, magazine and on-air promotion; minority newsletter ads and contact through local minority churches, agencies and organizations.

Thirty of fifty-eight (52%) respondents reported that they had not recently (within the past three years)) produced nor did they plan to produce any programs of special interest to NA's. Lack of financial and personnel resources, along with lack of sizeable NA populations and lack of knowledge about NA interests and needs were cited as reasons for not producing this type of programming. Respondents noted that increased funding, personnel and local NA interest would encourage this type of production.

Production Capabilities

Seventy-seven percent (53 of 69) listed 2" Quad as their primary broadcast format. (Note: some respondents listed more than one preference.)

When asked whether they were considering changing their primary broadcast format, fifty-seven percent (32 of 56) said "no," twenty-one percent (12 of 56) said "yes," and twenty-one percent (12 of 56) said "maybe." Of those considering a change eighty-three percent (20 of 24) indicated a change to 1" VT format. Nine of the twenty (45%) indicated 1979-1980 as the anticipated date of change.

Station Production

Seventy-one percent (39 of 55) indicated that their station was interested in contract production. Production staffs were provided by thirty-one-of the fifty-five (56%) responding stations. Stations rather than outside contractors retained administrative control of production grants in most cases (44 vs. 1).

Forty-seven percent (26 of 55) controlled distribution rights, while forty percent (22 of 55) were willing to negotiate this.

NAPBC Services

Twenty-nine of fifty-three (55%) had received the NAPBC catalog.

Of those, seventy-two percent (18 of 25) reported it "very easy to use."

One hundred percent (26 of 26) said it provided sufficient information.

Seven of fifty-three had used the library. Increased awareness of available programming (18 of 25) and greater number of available programs (7 of 25) were cited as first choices for services the NAPBC could provide to increase native American program bookings.

When asked what production assistance services the NAPBC could provide stations, locating funding sources ranked highest in total responses (N = 48). It was followed by writing/developing proposals (N = 47), NA consultants (N = 46), and NA production personnel (N = 43). "Great need" was cited by twenty-nine of the forty-eight needing assistance in locating funds; eighteen of forty-six needing NA consultants; fifteen of forty-three requesting NA personnel and thirteen of forty-seven needing writing assistance.

C-8

Native American Employment

Thirty-six percent (20 of 56) respondents reported now having or having had NA employees or trainees on staff. Data concerning current hiring practices were difficult to interpret due to apparent sensitivity noted by several respondents to equal employment opportunity (EEO) requirements. However, sixty-five percent (35 of 54) respondents did report that they currently had positions that could be filled by qualified Native Americans. Several underlined or otherwise stressed the word qualified.

Professional publications (PACT) was frequently mentioned (42 of 57) as the most effective method for recruiting people to fill available positions.

Training

When asked if a training program for NAs in the media were developed, which location would be best, eighty-two percent (46 of 56) selected individual PTV stations (and/or transmitters) located near NA populations over a central national facility or regional facilities.

Nearly one-half (25 of 51) preferred to hire a Native American who had completed training elsewhere to one trained at their own station (14 of 51). Twelve of fifty-one had no preference. Comments by respondents stressed the importance that the job candidate be "qualified." Lack of money to train and station understaffing were cited as deterents to in-house training.

Thirty-five of fifty-four licensees reported having the resources necessary to train NAs to work in their stations. Funding and staff

time were the resources most often mentioned as necessary to train a NA. Lack of qualified applicants and lack of openings were seen as obstacles to hiring. Fifteen saw no obstacles to hiring NAs by their station.

SECTION III
VALIDITY

Native American Hedia Needs Assessment

Validity

Validity: The degree to which the questionnaire measured what it was designed to measure.

A double asterisk (**a) before a question indicates that the validity of all or a portion of the responses to that question may be misleading for one or more of the following reasons:

- Form of responses given leads us to believe that a significant number of respondents did not understand the intent of the question.
- will . Range of responses indicates no clear pattern of preferences.
- Lack of responses by a significant number of respondents makes interpretation of results difficult.
- well Response 6185 may have been provoked by form and content of question.
- Responses to question too general for meaningful interpretation.
- wey! Lack of internal consistency of responses within the questionnaire indicates respondent either did not have adequate information to answer question(s) or did not understand the intent of the question(s).

Note: Details may not add to 100% due to rounding!

Traditional parenting and discipline for modern kids
Health
Social customs and how they relate to their children. Continuing education
Native American history
Educationally designed programs--all issues
Self-motivation
Health education
Health--chemical dependence, etc., family problems--mental health
Specific topics such as rights, law, taxes, etc.
Technical information
Child care
Alcoholism
Reading

#### 5,000-19,999

c) Language and history and culture Indian culture Learning and preserving the Indian culture through the media Career development with counseling Culture Educational GED Development of [tribal] resources and human potentials 30. What is the most important program topic to be developed for elderly Native Americans?

### Under 1,000

a) How they lived/live now
Nutrition
To teach the younger children Indian culture
Retirement benefits
Changes in game population, all game fish and wildlife
Preservation of Quin's graves
Social Security and Federal programs that held supplement living
conditions
The need for elders to reclaim their place in the community as prime
exponents of the culture
Home care--visits, letters, pen pals, movies, trips, transportation
Senior citizen programs,
Documentary
Assistance, medical and social which is available
Information on services specifically for elders

#### 1,000-4,999

b) Tribal self-government That they are still needed Health safeguards Health, safety, mental health Health, living on fixed income Ask the elderly, opinions vary Native American news Locally relevant news Tribal history Importance of maintaining your good health and how to accomplish this feat Health care->recognizing health problems Nutrition Resources available to the aging community
Resources available to them such as Social Security, weatherization, housing, nutrition, etc. Services available (SSA, etc.) Guides for health problems with a Native American orientation--dealing with such topics as hypertension, diabetes, diet and nutrition Show them our battles fought and gained that they were concerned with but limited in their approach How to serve as useful role models in contemporary Indian society Retirement and Social Security program How to communicate with modern young people so that their knowledge and wisdom will not be forever lost [Tribal] cultural values and relationship of young to the future environ-

#### 5,000-19,999

c) Culture
Services for our elderly
Indian culture
Historical information about their heritage as they learned it from their forefathers
History retention
Current events

#### 20,000 and Over

- d) Learn advantages and disadvantages of modern technology
- 30. 'b) What is the second most important program topic?

#### <u>Under 1,000</u>

a) Nutrition--surviving on small income
The best way to survive and where to look for help
Assistance offered to the elderly
To develop the reservation to its full potential without constraint
with funds provided by the government--flexibility to develop locally
Travel films as entertainment
Senior citizen consumer awareness
Clinical services
Social Security
Modern movements in Indian country
Language preservation
Health
The development to give past history of the tribes to the children
Available social services
How to use the services in larger cities
Spreading of cultural values
Community activities

#### 1,000-4,999

b) Health
Preserving heritage and family relationships
Housing
Services available to Native Americans
Transmission of culture
Coping with aging
To pass the culture to the children
Leisure
Make them laugh and smile
How to deal with the financial aspects of various elderly programs
Medicine and welfare
All aspects of health care

30. b) (continued)

5,000-19,399

c) Teaching of tradition Life coping skills Health maintenance

there are media services you need that we have not asked about please describe.

#### Under 1,000

 a) Tribal newspaper (monthly) needed Havasupal letter Videotape--we are interested in this Information booklet publications—<u>important</u>
We plan to develop several slide-tape shows concerning tribal projects
and the tribe in general. We we get a "youth grant" from NEH we will
be doing several short ones on traditional aspects of technology and culture. We could use help in organization of material and planning the shows. The reservation 18 in dire need of good television reception. Besides, the enjoyment, the local school district at times refers to programming on the T.V. The children on [name] are not able to receive television because of the location of the reservation. Making school gap just that much larger.

#### 1,000-4,999

b) Public service radio station. This tribe has recently been awarded a grant from the Department of Labor (NESP) for a tribal telecommunscations program which would train 7 tribal members, 4 in radio and 3 in video. One of our tribal goals is to have a public service radio station on L.C.O. Perhaps NAPBC could be helpful in our endeávor?

Undated equipment

Our comprehensive plans call for the development of an educational T.V. station, a newspaper and the radio station now being implemented. Although our programs have not had an important media priority we are working towards incorporating equipment and materials into our programs. Our Ed Dept will be responsible for this, but has only recently been established. Satellite communications systems

think we need media presentations aimed at non-Indians as an information and educational tool. We need P.R. explaining history, rights, cultural differences, etc. For example: Instead of spending money on attorneys, for water rights we should be spending it on P.R. because it always comes down to political solutions.

Educational programs for children. Particularly through public T.V. (1.e. Sesame Street, Electric Company) Both at the public school and a community college level we could use-urgently--an inventory of N.A. media resources--including films, videotapes, and a guide to obtaining them. The tribe could also use a guide to N.A. publications--tribal newspapers and materials.

on law, politics and economic development,

#### 5<u>,000-19,999</u>

c) (Name) Native American newspaper I would like to be a part of a news coalition for the dissemination of Indian news in newspapers, radio and television. The promotion of cable TV systems for Indian reservations and urban centers. We would be very interested in media training.

#### 20,000 and Over

Enough respondents failed to provide the "approximate number" of members in each tribe (or provided a percentage rather than the estimated population) that no total population estimate

can be made.

**I 2) How large is the urban area you serve?

It appeared from responses that some respondents interpreted the question to mean how many Native Americans are in the urban area while others interpreted it to mean how large is the total population of the urban area. The later was the intent of the question.

What percent (%) of the homes in your community service area have electricity?

			number	7a ·

Comment: Although respondents were asked to indicate a first preference with a "1." second preference with a "2" many simply checked responses or ranked all the alternatives. This summary includes only those responses which were checked or ranked "1" or "2."

25) Are there funds to rent programs for school use?

•	• .	Number %
Yes No NR		8 32 14 56 3 12

26) a) What do you feel is the most important program topic to be developed for Native American children?

Individual Tribal History and Culture History Treaty Rights Self-Image Indian Values The Dangers of Miscegenation **Culture** Language, Culture, History Indian Cultures Nationwide Calture "Life Coping Survival Skills" for Today--with Roots in the Past Heritage Philosophies and Value System of Heritage Indian History Programs that emphasize their cultural heritage Cultural Identity and Self-Awareness. True history of Native Americans. Language training Cultural topics--showing the Indian children that they can keep their traditional values and still live in the white man's society Cultural identity of tribes past and present Educational programming that would utilize the traditional teaching. methods and symbols of Indian cultures. This program should be directed to pre-school age children. The purpose of the program should be twofold: to assist Indian children in school and in learning about contemporary society as well as providing them with information about Indian cultures and a sound understanding of their heri tage Indian History and Urban Adjustment
Self-esteem. Coping with family health problems
Legends (local area). "Language (local area). History, culture, customs, etc. (2) Factual History

26) b) What is the second most important program topic?

Contributions of Native Americans to the development of the United States Language Sports, culture, education Career-Indian Survival in non-Indian world Achieving success Vocational opportunities Crafts Indian vs. white man's values (a comparison) History Tribal histories--emphasizing pride in being Indian Community and school involvement History of treaties, controversial contemporary issues, i.e. land and water rights, sovereignty, present governmental structure of the Indians Programs dealing with different kind of employment and training components True history of N.A.'s Language training History--real Indian history and not what is printed in some history books History/current Indian issues. Programming designed to inform Indian children about contemporary Indian life around the country. What events are taking place, different activities and plans and what forces affect the Indian community Cultural awareness Dance, crafts, art (2) Pride in past and present Indian people who are doing things for their people Career development

27) a) What is the most important program topic to be developed for Native American adults?

Adjustment of Native Americans in White Society as compared to the past History
Treaty Right
Self-Image
Keeping youth Indian in two worlds
How to gain success but keeping heritage
Following up on tribal heritage
Self-pride
Self-worth
"Life Coping"--survival skills--consumerism
Tcommunity involvement
Coping skills in urban setting
Educational programs concerning employment and life coping skills
Self-awareness related to positive self-images
Encouragement to remain Indian but better their living conditions

t) i

#### 27) a) (continued)

Host Indian programs are governed by Boards--some good training programs for Board and staff responsibilities.

Current Indian issues

Adults should be kept informed about what is taking place around Indian country and the events and decisions that affect the Indian community both here in Arizona and in other parts of the country health—esteem. Coping with family health problems

Legends (local area). Language (local area). History, culture, customs, etc. (2)

Factual history

27) b) What is the second most important program topic?

Steps that adults should be taking toward the betterment of living standards for all our Indian people Dance **Legis**ation Carees Indian Property raising young with same principles Language Alcohol prevention Cultura? Tribal histories--emphasizing treaties, and tribal rights Employment Gaining skills and training to cope with urban environment Cultural topics--showing the Indian children that they can keep their traditional values and still live in the white man's society Cultural awareness--past and present Indian culture and history with emphasis on Indian/white relationships throughout the history of the nation to examine the course of this relationship should shed some light on the present time. Cultural awareness Dance, crafts, art (2) Any health-related topic. Alcoholism and chemical dependency especially

28) a) What is the most important program topic to be developed for elderly Native Americans?

Contributions of Indians from the discovery of America up until the present date.

Arts and crafts
Treaty Right
Self-image
Resurgence of youth's interest in Indian culture
Recognizing their role as teachers
Instructional lines for others to follow
Ways to express continuing values for the younger generation

.

*J.* 

#### 28) a) (continued)

"Life Coping Skills"
Nutritional Traditional foods, wills, land transfers, etc.
Community involvement
Cultural pride--their place in traditional Native community
I really have no idea--except possibly just good entertainment
programs. Or programs dealing with their rights as elderly
citizens and things that are available for them.
Service delivery, availability, eligibility and location
Contemporary life--what affects them as senior citizens and as
Native Americans
Self-esteem. Coping with family health problems
Legends (local area). Language (local area). History, culture,
customs, etc. (2)
Factual history

28) b) What is the second most important program topic?

Tribal culture and traditions--maintaining these values for the younger generations (importance)
History
Culture
Career-Indian
Elderly program available (a study of types)
Tribal histories, emphasizing "The Place of the Elder"
Economics
Life skills to deal with urban environment
Traditional type programs
Entertainment
Cultural awareness
Dance, crafts, art (2)
Pride in past and present Indian people who are doing things for their people

29) How do most people in your community center area get information about Native American issues?

•	Number
Newspaper	19
Tribal bulletin board/newsletter	- 15
Commercial television	6
Public educational television	1
Public educational radio	3
Commercial radio	8
Other	
Indian Center	1

Comments: Special interest if defined as by, for and about Native Americans, we have broadcast none. However, a number of the programs in our schedule, including Sesame Street, regularly feature Native American role models, and information about Native American culture!

We believe that all of our programming should be of interest to Native Americans and that they should be integrated within all programs that enrich our culture and our awareness of the world.

### Without Native American Population

Although respondents were asked to indicate a first choice with a "l" and a second choice with a "2," several simply checked responses or ranked all the alternatives. This summary included only those responses which were checked or ranked "l" or "2."

6

6) What is your station's <u>criteria</u> for determining the <u>quality</u> of programming of special interest to Native Americans? Please comment.

NR: Yes = 12; No = 6

#### Criteria - With Native American Population

#### a) Documentary

What need does program fulfill? Does the program address the problem or interest the local tribe? Form, structure
Does the documentary fairly represent the situation? Is it free from bias? Is it true to the Native American experience?
It is very difficult to say: (1) tight journalism, (2) good production values, (3) coherence and pacing
Balance in point of view, technical quality
Journalistic elements—general objectivity
How informative the program is to the viewing audience. Is it of interest to Native Americans? Was it produced by Native Americans? Also the general audience's interest.
Program must be actual, non-biased, realistic
Topic—fairness
Subjects of interest or concern. Is treatment fair? Are production values reasonably good?
Mould react favorably to having good documentary on Native Americans, past, present and future
Balance, who produced, their interest in subject. Timely toverage of subject: (1) Is it an important story that won't be told elsewhere?
(2) Is the story well told? (3) Is the story visual and dynamic?

### Criteria - Without Native American Population

#### a) Documentary

Quality--source--content Accurate, balanced--not one sided

## Criteria - With Native American Population

### b) Public affairs

What is extent of impact on community?
Coverage of tribal problems--will the coverage provide program material, that, as well as covering the problem, does it have importance to the general viewer?

Are the people involved qualified spokespersons? Do they speak from direct knowledge of Native American affairs?

Balance--relevance
Balance in point of view, technical quality
Informational quality
Issues of interest to Native Americans
Information must be of value to Native Americans and interesting to general viewer

## Criteria - With Native American Population

### b) Public affairs (continued)

Timeliness
Current importance
Mill program attract and hold audience
We produce nightly public affairs program and on occasion have a
feature related to Native Americans
Balance, who produced, their interest in subject. Timely coverage
of subject. The subject should have appeal to a more general
audience also: (1) is it an important story that won't be told
elsewhere? (2) Is the story well told? (3) Is the story visual
and dynamic?

### Criteria - Without Native American Population

### b) Public affairs

Current importance--objectivity--applicability to coverage area Accurate balanced--not one sided

#### Criteria - With Native American Population

### c) Realistic drama/docu-drama

What is purpose of production?
Have not produced—have produced programs concerning culture of tribe
Is the script good? What are the production values? Is it interesting?
Production values—content—tight script—good acting—subject matter
Quality of performance, technical quality
General interest and talent quality
Issues of interest to Native Americans
Program must not cause the dignity of the Native Americans to suffer
Quality of script and acting
Interest, importance of subject/event, production quality
Good acting—good locations
Balance, who produced, their interest in subject. Timely coverage of
subject. The subject should have appeal to a more general audience
also: (1) Is it an important story that won't be told elsewhere?
(2) Is the story well told? (3) Is the story visual and dynamic?

## Criteria - Without Native American Population

#### c) Realistic drama/docu-drama

Quality--content Not paternalizing or corney

## Criteria - With Native American Population

### d) Ants and culture

ſ

Interest to non-Native American
Have produced programs on dance culture and crafts culture. For
general viewer interest
Production values--relevance
Quality of performance, technical quality
Type of art and general interest
Issues of interest to Native Americans
The arts and culture presented must reflect the true heritage
of the Native American
Subject and production quality
We have on occasion produced arts and culture segments dealing
with Catawba Indian arts
Balance, who produced, their interest in subject. Timely coverage of
subject. The subject should have appeal to a more general audience
also: (1) Is it an important story that won't be told elsewhere?
(2) Is the story well told? (3) Is the story visual and dynamic?

## Criteria - Without Native American Population

### d) Arts and Culture

Quality--audience potential

## Criteria - With Native American Population

### e) Sporting events

Same as consideration given for rest of audience
Is of general viewer interest
Competent talent; competent coverage of action; potential audience interest
Know of none offered
Size and importance of event
Due to the low percentage of the total population, Native American
participation is limited, especially in terms exclusive of Native
American events
Interest level; uniqueness of sport; quality of coverage
Limited interest at this time
No interest nor available programming that I am aware of
Never thought of sports events that were of special interest to
Native Americans

## Criteria - Without Native American Population

### e) Sporting events

Don't air any sports

ERIC Fruided by ERIC

### Criteria - With Native American Population

#### All categories

We could debate the definition of "quality" for days. Our criteria for acceptance would include (1) the determination that there is potential audience for the program sufficiently large to merit service via a broadcast transmitter, (2) the determination that the program has sufficient journalistic and/or artistic integrity to maintain the "quality" of our overall program service. For all topics below, it does not differ from criteria used to determine quality of programming for any audience segment.

Production quality, fairness and journalistic credibility Availability--general quality technical standards Production values, content Quality inherent in our programs; of secondary importance to content in acquisitions Basically all programming for Native Americans must be relevant to the needs of the people, of good quality technically. Local interest programs have first priority, then regional and finally nationally. Program information, production quality Same as for any PBS program Overall production and technical quality and general viewership interest We do not have a separate criteria statement for programming for Native Americans - or any other special audience group. We apply generally accepted guidelines for "quality" to all programs. Amount of detail to Native American interests paid Value to the population and applicability to and interest of the general audience We ask the Native Americans in our coverage area view meetings held every few months, from their ideas programs will be made. This has just started under a grant. Programs have not yet been produced. Some criteria as applied to all programs: (1) quality of production, (2) depth of insight, (3) relevance of subject. We do not apply special criteria for programming about or aimed at any minority group: Relevance to area Same criteria applied to all programs: (1) meet minimum technical standards, (2) appropriateness to instructional program, (3) professionalism of production Network standards We would not use these particular items as precise criteria. We would probably look at the show that was being offered as a total and then apply the previous question criteria. Much of our programming comes from PBS. We use discretion and have standards that we abide by, but usually we broadcast most of what PBS feeds. For our local productions and programs we acquire from other sources, we use programs that are (1) not commercial in natures (2) potentially appealing to an audience, (3) not of too narrow interest, (4) journalistically sound and (5) of a technical quality that meets certain standards. We do acquire programs from sources other than PBS or local productions. They must meet the standards indicated.

## Criteria - Without Native American Population

#### All categories

Quality
We apply the same standards of quality to any product we consider
for broadcast
Same as any other programming
General coverage of subject area; overall view; technical quality;
aesthetic (7) quality
Good production
Objective and well researched (criteria for quality is the same
regardless of intended audience)

Comment: Several respondents indicated that criteria for determining quality of programiting was the same for all audiences.

7) If you have previously broadenst Native American programming, what was the audience response?

Free a		th NA ulation	With Popu	out NA lation	To	tal	
Very positive Somewhat positive No response Somewhat negative Somewhat positive	4 6 30 ,0	9 13 67 0	0 2 11 0	0 4 24 0	4 8 41 0	7 13 68 0	
no response Very negative NR Comments:	0 0 5	0 0 11	1 0 1	4 0 4	0 6	2 0 10	•

## With Native American Population

Little reaction
Thievas of Time brought good response, but none from Native Americans
We got very little positive response to anything—the series was "The
Artists of the Southwest" which PBS offered
Not enough audience interest or knowledge of the broadcast
Other than the direct program participants, we received no phone or
mail response
A recent documentary, "On the Tunica Trail," was very positive—because
it was about local Indians. Non-local programs are less positive.
Good programs get favorable response, bad programs get unfavorable response.
None broadcast
(w VP) This dealt with a story/15:00 report on cash or land for the
Catamaba reservation.

7) Comments (continued):

### Without Native American Population

Greatest enthusiasm for Indian artists

S) What form of ascertainment do you use to determine a need for Native American programming in your broadcast area?

# With Native American Population (RR = 5)

ene beyond regular ascertaliment... We generally work through the Indian Studies program carried on by School District 81, our licensee, to determine what kinds of needs cen be met. Community leader interviews
Standard FCC Ascertainment procedures. No special approach. Each supervisory staff member is assigned at least one Native American interview. Interviews with community leaders and random survey
Segiming to study new methods but at Seesent: (1) staff input; (2) community group meetings; (3) formal asometainment studies.

Interviews with Indians Same as for license renewal ascertainment Extensive on reservation interviews (re: Pagago) Contacts with community leaders, survey whata, atc. No special data only about Native Americans Personal interviers Face-to-face or telephone interview with Indian leaders Talk with Native American leaders and phone outs Direct questioning Attempt to identify need and interest by the Native American in personal contact and general audience survey
This research has been in my opinion, unacceptable, and is not being revamped for greater utility and effectiveness. We'll likely be moving in the direction of convening 2x-monthly meetings with "community leaders" and other individuals and/or groups. Personal contact. Through direct contact with Native American groups throughout the state. Native Americans have been invited to ascertainments. In 1979 plans are underway to ascertain the Native American representatives from the Tama reservation. Regular ascertainment procedures -- group interviews, some individual interviews with community leaders
The usual method of asking the particular minority group its opinion of
the problems, needs and interests of the community the follow FCC escentainment guidelines for public IV stations, which include random public surveys and on-going community leader surveys. Personal contact with Indian leaders. Little contact in last year due to lack of personnel for such led programming.

### With Native American Population (continued)

We have consulted census and school enrollment records and a variety of other sources to determine the size of the Native American population which is very small (probably less than 100). We have been unable to locate or identify any organizations of or for Native Americans in our viewing area. There are no reservations that we know of in our area. No Native Americans or Native American groups have contacted the station about problems or concerns of Native Americans or about programming. We have consulted all possible sources of this information in our area. Face-to-face interviews with members of Native American population o None Community ascertainment as required by the FCC Personal interviews with Native Americans in our area None--as far as we know there is no Native American population outside of the university community. To the south, in Connecticut, there are Naragansetts, (R.I.) Piquot, Micmac in Boston, Wampanoag on Cape Cod, etc., but none in the western Massachusetts area. Community leaders, as well as intensive staff communication with native community [Network name] has just completed the first on reservation audience ascertainment project Open-air solicitation of comments, advisory boards, travel within the state General ascertainment Community leader interviews Standard community leader ascertainment interviews Interviews with local Indian organization Standard, by communicating with representative members of the Native American population in broadcast coverage area Consultation with tribal council, Indian club members at Idaho State University, general Indian community membership during general ascertainment studies Member of advisory committee General public surveys; community leader interviews; census information; monitoring other media; viewer inquiries and comments

# Without Native American Population (NR = 2)

Community leader, viewer letters

Same as with all other ascental ment -- interviews primarily

Annual mail survey; annual community leader meetings; monthly friends meetings

None in area -- I have actually sought Native American resources in area but

have found only a few who are in the military services based here. The

bases state only that the number probably does not exceed 10-20 total.

Same as for other pregramming

## Mithout Native American Population (continued)

None
Standard ascertairment procedures
Total population is less than 1% so their needs are not brought forward
Our general ascertairment vehicle relates to community needs. It is
done with a good deal of depth and vigor
Standard FCC requirements used by commercial broadcasters plus viewer
response to phone in shows
Public surveys; community leader interviews

9) What Native American program topics are of greatest interest to your viewership? Please indicate with a "l" your first choice and with a "2" your second choice.

#### Respondent Comments:

No desire for another ghetto program. Thanks, but we do not need "Native American Perspective" on the news.

Without Native American Population. Cannot comment-but would assume #2.

Comment: See comment under question #5.

10) How has your station been most successful in promoting Native American or other minority programming?

## With Native American Population (NR = 11)

Advertising in minority papers, periodicals, etc.

Programs which specifically feature Native American cultural - talent have been successful. Local production is most successful.

General minority programming has been balanced. Very difficult to get Indian population to participate in any suggested programs.

The success or failure of promotion has been difficult to determine due to relatively little feedback from audience-at-large.

Through local Indian organizations

Direct mailing to Indian agencies members of community - liaison.

Motices to minority media, newspaper ads

So-so

Advertising in publications (local newspapers, for instance) which are of particular interest to the state's minorities

### With Native American Population (continued)

Until recently we were unsure of any success in promotion, now with the completion of the ascertainment we know where to do the promotion. Thru schools and Native corporations One shot specials -- heavily publicized ' Local advertising Other (black) Haven't Depending on the nature of the program, newspaper ads, promotional mailings, local radio spots, and listings in the station program guide, TV Guide, and newspaper TV supplements are used. Promotional mailings are sent to groups and organizations that might find the program of special interest. Nord of mouth within reservation and Indian Center newsletter We have done no special promotion Send information to mailing list directed at Native Americans or minorities He have had limited success with minority programming, due to the small minority population in the state. Good responses have been received from women, Blacks and Latinos. We cooperatively produce a Black series--AFROMATION--1/2 hr./wk. Good contacts between the program producers--host and Black media editors Small success in reaching Blacks--none to Native Americans By dealing with specific issues Paid ads Through minority publications Public service announcements By bringing minorities into all our <u>regular</u> programs: e.g., host of daily news show, co-anchors of national production Much more success re: Mexican American--little success re: Native **Americans** Not as successful as we could be on any programming, but we're getting better Station has no promotion department Newspaper ads and special interest mailings General publicity, indigenous newsletters, churches and word of mouth By contacting different groups that represent minority groupings in the area and having them help us promote a program Tribal meetings, news releases

#### Without Native American Population

Hasn't. Target audience too small.
Guide listings
Yes for Black programming
Program guide features, written promotion material and on-air promotion
Thru special "festival type" weeks--flyers to Black churches, etc.
Local promotion through active groups and organizations
Have had none
Yes, Spanish-speaking
Placement of local social organizations
Utilizing newspaper ads
Newspaper/on-air

## With Native American Population

Do not know since we have not used your service.

We do not have 2" Quad VTR. Availability on other formats (3/4 in.;

l-inch NC = 960) would help.

With such a small population and located on the fringe of the broadcast

area--in fact I suspect they view TV from a different market due to

the mountains.

Please send the catalog

Mork for greater participation of Native Americans within all phases of PTV. Production; on-air; atc. in broadcast programs

### Without Native American Population

Awareness of materials appealing to general audience An audience Screenings

See comment under question #5.

14) Has your station recently (within the past three years) produced or does it plan to produce any programs of special interest to Native Americans?

		٠.			h NA lation		out NA lation	To	tal
Yes No NR			 Àr.	26 17 2	58 38 .4	2 13 0	13 87 0	28 30 2	47 50 3

If yes, please provide the following information:

Comment: Information related to the second part of this question is considered confidential and is not included in this report.

15) If your station has not produced any programs of special interest to Native Americans please tell us why not, noting the problems you have experienced:

### * With Native American Population

Has not been a priority for local production
Little genuine concern for minority problems, interests
We are a very poor station and have limited funds for local production
Limited financial and personnel resources
We have done in past 3 years—nothing recent—programming priorities
We have produced one special program—problems continue to occur due
to a failure of guests to show up for taping sessions; lack of interest
in attending advisory meetings.
Lack of funding
The most dominant minority group in [station's name] viewing community is Hispanic
and it is the station's first priority to produce programs which meet
the special needs of that group.
In our viewing area the audience for programs of special interest to Native
Americans is very small and narrowly defined. We cannot at this time
ascertain any Native American issues that are either dommunity concerns
or news and public affairs issues. We have not been gontacted by any
Native American groups about problems we could be add besing.
We have not produced any programs specifically for any minority. We have
had appearance on local programs specifically for any minority. We have
had appearance on local programs specifically for any minority. We have
had appearance on local programs specifically for any minority. We have
had appearance on local programs specifically for any minority. We have
had appearance on local programs specifically for any minority. We have
had appearance on local programs specifically for any minority. We have
had appearance on local programs and interests in this area.
Lack of knowledge regarding local interest from local audience
Several attempts to produce Native American programming have failed because
lack of follow thru on proposals made to various groups in the state
No knowledge of need of an audience—constitutency for such problems

No page C-21, pagnation

## With Native American Population (continued)

Size of special audience—newindication of desire of our producing.

Very hard to produce for such a small population. We feel that their problems are similar to others in area—no reservation or concentrated area that they live in.

Mo significant population we are developing our delivery system. We are not in a good production posture yet.

Inability to obtain consensus of approval of projects due to inability of population to determine a single effective spokesman for the population. New station

This should be addressed to program manager

Other local needs had higher priority

Insufficient interest.

Raising necessary funding

## Without Native American Population

Limited production capability—no identifiable segment of Native American population
Because the audience is almost non-existent
No audience in our area
Made proposal to CPB which was rejected
There are no proper resources or constitutency here for such a program
No substantive Native American audience
Lack of resources for program material—no local or area Native Americans
No request; no known audience
Our primary special "interest" group is Spanish speaking
No particular local interest or background to justify spending limited
local production budget
Not a priority subject

16) What would encourage your station to produce programs of special interest to Native Americans?

### With Native American Population

A significantly larger Native American population in the coverage area Some specific requests from local Native American organizations Money!
As usual, more money Funding
Closer relationship between station and Native American population.
Due to problems incurred several years ago with a local commercial station, Indians are hesitant to get involved with any station.
More staff
Larger audience potential and greater response from community Funding

## With Native American Population (continued)

Cooperation on the part of the Native American Indians--we are interested in including them in our on-going productions Larger budget production funding Funding: If there was a need expressed through the Native American community Additional funding and personnel The station seeks to produce programs of interest regardless of topic. At this time the Native American population in our viewing area is too small a group to produce <u>special interest</u> programming for. If the Native American population was larger we would produce more programs of special interest for them. An expressed need for such programming More information (regarding local Native American population and its interests and problems) Larger potential audience among Indian population--increased feedback on need to provide this service Improved cooperation in assisting the network identify the needs and interest of Native Americans that would result in meaningful programming Showing a significant available audience and likely achievement of minimum audience share of 1-2% determination of interest. We are considering a 20-minute in-school presentation of area Indian sites for field trips. This program is aimed at grades 4-8. The knowledge we have a Native American audience More personnel, better facilities Increased availability of funds and better coordination and cooperation from and within the population Funding of production

This is a semantic problem. We do not wish to produce "ghetto programs";
but you tell us if "The Trial of Inez Garcia" was of special interest
to Hispanics. We think it was not. It was for everybody. (1) financing, (2) independent producers with innovative proposals Funding Awareness of sufficient local need and interest

## Without Native American Population

Total fundament projects
Nothing
A potential audience
A greater Native American audience
Probably not in view of lack of Native American population
Local interest; outside funding
Our population base is extremely small
Money and content expertise
The right subject, available funding in sufficient amounts

### 17) What are your production capabilities?

### With Native American Population

(With who knows) Depends upon university and legislative appropriations. Awailable for CPB reports.
On a slow phased basis by 1980-81
Libely result 50-50 1" VY/2" Quad
(With 1" VT) Technology has progressed rapidly and the monetary savings would be substantial

### Without Native American Population

Until state-of-art on cassette is improved very few programs will be air on 3/4 format--quality and stability so costly and unreliable

### 21) Is your station interested in contract production?

	erist Alika						With Popul	NA ation	Witho Popul	ut NA	Total
٧			· 6		 ~ *	 •	20	<b>5</b>	11	73	7 X
No NR		•		•		 , . , .	13	29	~\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	20 7	16 27 5 8

At present [station's name] first priority is to produce programs of special interest to the Hispanic community, which comparises over 20% of our local population.

As a state agency this is an impossibility! We are interested in producing segments and could do more if grant funds became available. We have done contract productions on a regular basis for national agencies. Being a state agency, contracts can be very much of a red-tape problem.

I believe we would consider an offer to produce (with other). We are primarily devoted to production of local programming and local needs. We do some contract work, but only on a "sandwich in" basis

We have undertaken many contract production jobs. Perhaps.

Perhaps. New management must decide.
When it does not interfere with local program production. We are presently doing a variaty of contract productions.

Negotiate for program and cost Not unless additional full-time staff added

Not at this time Depending on cost and time involved

### 22) Who provides production staffs?

and the second s		Population	Population

## With Native American Population

Depends on position—Native American heritage is implevent his preference. Mould depend on credentials/qualifications so real choice.

This is a hard one to answer, since the likelihood of us training beganeous at our own station is very slim. Obviously we would know them better. Actually, we would probably go either way. Have attempted training programs in past; find difficult to administer with small staff—would prefer to hire individuals who can bring some outside experience to us.

Assuming the individual is qualified, it matters little where he or she received training someone who is already trained and making use of their skills, but sometimes it is preferable to train a person specifically to your station operation. Depending on the individual, previous training is slightly preferable.

Our small staff prohibits the time needed for proper training. The network would find either one acceptable.

Due to red tape and low starting salary not able to obtain experienced people thus me end up having to train ourselves.

Actually, it doesn't matter if the training covers the required fundamentals.

It would depend on the ability of the person to do the job. Hould hire any qualified Native American would have basic training would be completed. We could participate in training grants for specific positions:

Small staff, 53 full-time employees. Budget restrictions make station Doesn't matter.

Training is very time consuming and costly.

# Without Native American Population

Mo. difference
Again qualification is the critarion, regardless of where training took
place.
Most positions require college level training—but actual on-the-job work
experience is acceptable from anywhere

33) Do you have the resources necessary to train a Native American to work in your station?

			With NA	Without NA Population	Total
Yes No Other NR	1		25 56 14 31 2 4	10 67 3 20 0 0	35 58 17 28 .2 3

Note: Same comments were with "No." NR. and other responses

If not, what resources do you need?

#### With Native American Population

We are training one now on a CPB grant Inadequate but getting better--(need) training grants for personnel and Yes and no--depends upon type of position. Don't have the staff time to provide much formal training in complex positions such as engineering The resources are training money Training grants for personnel and materials
Depends upon type of position. Don't have the staff time to provide much
formel training in complex positions such as engineering
Money. It costs money to train people and it costs money to pay them
while they are being trained. We do not have any excess funds.
We are already understaffed, so staff time available for training upnecomers is for all practical numbers. n-comers is, for all practical purposes, non-existent Do Native Americans require special resources? (with NR) More and better trained personnel At this point, money and space are the two resources we lack for training Native Americans or anyone else. With limited payroll funds of small station, need to spend money on individuals who can carry full responsibilities. Will attempt other training programs in future, but for only one individual at a time. Funding/staff time Personnel for replacing time consumed. Workload here is such that we don't have time to release a person for training Adequate staff Outside agency or shared assistance Larger staff to absorb additional supervisory and training functions. We have no training programs at this time.

Marginal at best. Need larger full-time staff [Station name] will soon be considering broadcast trainee positions. Again we don't have enough money and training personnel.

33) (continued

#### Without Native American Population

As part of regular training Financial CPB grants--not any local funds Training personnel separate from serit. We would need a fully-funded training grant we already run an intensive training program for students at [name] university desiring to work at the tolecommunications center

34) What obstacles do-you see to hirting on Fraining Native Americans by your station?

#### With Native Aperican Population

Hiring. No obstacles if they are post dualified applicant. Training-lack of staff time; lack of funds to pay trainess during the training period.

period:

(3) effective recruiting

Availability of qualified applicants

Availability. Limited entry level in production positions due to close affiliation with telecommunications and film department at [university name]. Higher priority for other minorities No problem in hiring, but the same problem we have with everyone in training, we don't have the funds available to train Funding Qualification Size of population to obstacles to hiring highly trained proples. No resources to accomplish training. (I assume you are not interested in unskilled or semi-skilled jobs-white are, of course, open to 172). None other than as noted above (need larger staff to absorb additional supervisory/training functions) Lack of qualified personnel, lack of hot wated personnel, lack of funds None Lack of an open position (at present) and qualified applicants.

The personnel requirements for each Position that requires education level and prior experience and the various federal guidelines on grant employment None-given-qualifications for the job and will induces to do the work assigned. We would not "make work" to their (or anyone else's) special interest. None interest. None None: They must have FCC license prior to Start of employment for tech. positions

C-38

#### 34) (continued)

## Mith Native American Population (continued)

None
Do not know of any
Lack of training grants and applicants living in the area
Obstacle to hiring—lack of qualified applicants. Obstacle to training—lack of staff time and funding
Having to use already over-extended staff to take time to time. No problem
to hire—if qualified
Not any to mention
Low salaries; no applicants
Training—personnel for replacing time consumed. Workload there is such
that we don't have time to release a person for training. None for
hiring—provided we have vacancies.
New positions not authorized
Limited funds
Availability of trained person; receiving approval for adding a defined
position to organization
None—we have had good experience.
School district hiring/financial situation—Proposition 33
None
Nore to hiring except to find qualified Native American applicants

#### Without Native American Population

None other than very little turnover in personnel
Time and manpower--not presently training
Lack of any full-time positions--extremely small turnover of employees-time jobs when and if they are available
None
Same as hiring or training any others
None other than getting applications from qualified candidates
None other than budget
Absence of Native Americans in our coverage area
We need to hire only highly qualified personnel because our small staff
and inability to expand it at this time because of financial restraints
and lack of facilities and equipment
