ABSTRACT

Based on an examination of financial data collected from a nationwide sample of 184 two-year colleges, this five-part report facilitates the comparison of an individual institution's financial status with national averages and with averages for other colleges of the same size. Part I discusses the use of the report as an aid in comparative analysis, examines the representativeness of the sample, and summarizes major findings. Part II presents explanations, possible interpretations, and the limitations of median findings as they relate to: (1) expenditures for academic programs, support services, scholarships, credit and non-credit instruction, utilities, and plant maintenance; (2) revenues from tuition and fees; government appropriations; and gifts, grants, and contracts; (3) the proportion of full-time equivalent staff utilized for credit and non-credit instruction, public services, academic support, student services, instructional support, and plant operation; and (4) the average size of classes offered for credit. For comparison purposes, Part III examines findings for each of the above categories in terms of upper and lower quartiles, and Part IV presents a breakdown of median and quartile findings for colleges with enrollments less than 1,000, less than 5,000, between 5,000 and 15,000, and over 15,000. Finally, Part V presents scattergrams illustrating the relationship of selected findings, such as the ratio of enrollment to expenditures per student. (JP)

ACKNOWLEDGMENTS

The continuation of this project into a second year was made possible by funding from the National Association of College and University Business Officers (NACUBO) and the American Council on Education (ACE), with support from Lilly Endowment. In addition, the American Association of Community and Junior Colleges (AACJC) provided project support, the National Center for Education Statistics (NCES) contributed technical assistance and computer time, and NCES made possible the early use of 1978-79 HEGIS finance data, as AACJC did enrollment data.

The task force that guided the initial project also designed the current one. Responsible for defining the project's purpose, scope, and content, the members of the task force were as follows:

Donald K. Young, chairman
Business Manager
Monterey Peninsula College
California

Maurice P. Arth
Vice Chancellor for Financial and
Management Services and Treasurer
Cuyahoga Community College
Ohio

Donald Weichert
President
College of the Redwoods
California

W. L. Prather
Business Manager
Amarillo College
Texas

John J. Pateros, special consultant
to the project
Pateros & Associates
Maryland

William R. Odom
Bureau Chief, Research and Information Systems
Division of Community Colleges
Florida Department of Education

Guidance was provided by the NACUBO Two-Year Colleges Committee, whose members are listed on the next page. Special thanks are due to W. L. Prather, committee chairman, and Maurice P. Arth for their concentrated and extraordinary contribution to the project, which led to a more incisive and pertinent report.

W. L. Prather, chairman
Business Manager
Amarillo College
Texas

Maurice P. Arth
Vice Chancellor for Financial and
Management Services and Treasurer
Cuyahoga Community College
Ohio

David C. Briegel
Vice President, Business Affairs
Southwestern Michigan College
Michigan

William B. Cutler
Director of Business Services
Foothill-DeAnza Community College District
California

Robert L. Goudie
Dean of Administration
Atlantic Community College
New Jersey

Thomas F. Murphy
Dean of Administration
Tompkins-Cortland Community College
New York

Wayne R. Powers
Dean of Financial and Administrative Affairs
Jackson State Community College
Tennessee

John T. Moss
District President
Washington State Community College, District 5
Washington

K. Scott Hughes initiated this project as director of the Financial Management Center and coordinated the early stages of the second year of the project. Since leaving NACUBO, he has continued to provide substantive and editorial assistance to the project. M. J. Williams, Jr., Director of Special Projects, NACUBO, once again provided encouragement and enthusiasm. It was through his effort, along with that of James W. White, Vice President for Administration, AACJC, that the significant participation of community and junior colleges was made possible. Victor Wenk, Deputy Administrator, NCES, also provided encouragement and support. Norman Brandt, Survey Director, NCES, acted as liaison and provided a great deal of effort and cooperation. Anna Marie Cirino, Staff Assistant, NACUBO, was the survey coordinator and was responsible for the integrity of the statistical data.

PREFACE

This report is the second in an annual series of comparative data studies of community and junior colleges. It is the result of an intensive six-month study involving three national education associations--the National Association of College and University Business Officers (NACUBO), the American Council on Education (ACE), and the American Association of Community and Junior Colleges (AACJC)--as well as the National Center for Education Statistics (NCES) and 184 community and junior colleges. The study is experimental and is intended to elicit comments for improvement while providing information to community and junior college administrators, representatives of state and local agencies, and federal policy makers.

In 1977 members of NACUBO's Two-Year Colleges Committee decided to undertake a comparative data study of public community colleges.* They were frustrated by the lack of information available to members of governing boards, presidents, and taxpayers who requested comparative data. The committee members thought that these data could be an important part of the information necessary for such decisions as appropriation requests, salary increases, and proposed expenditures by function (instruction, institutional support, plant operation and maintenance). Further, "current" information, rather than historical summary, was needed. Because the committee members were also concerned about potential problems involved in trying to establish comparative data for community and junior colleges (see chapter 1, "Limitations"), they approached the task cautiously. Further information on the method used is given in appendix A.

The intent of this report is to provide comparative information derived from a sample of 184 community and junior colleges. Comments on the first year's report from community college presidents and business officers were used to determine the usefulness of the data and the additional information needed, as well as to make necessary changes.

One of the study's primary objectives is to learn how comparative information can be used to improve community and junior college decision making. The project also seeks to shed greater light on the financial and operational aspects of community colleges. The report may be useful in comparing the operational and financial statistics of an individual community college to national medians; the report format is designed to facilitate such comparison.

Comments from readers regarding the need for and improvements to this report are encouraged.

*The term "community colleges" is assumed to include all postsecondary institutions offering up to the first two years of higher education.

REPORT HIGHLIGHTS

This report contains financial statistics for fiscal year 1978-79 and explanations derived from three surveys of 184 community and junior colleges from across the nation. The report includes:

- Sample findings from the surveys.
 - Half the institutions surveyed spent more than 61% of their operating budget on instruction, research, public service, and academic support.
 - Half the institutions surveyed spent more than 36% of their operating budget on student services, institutional support, and plant operation and maintenance.
 - Half the institutions surveyed spent more than 3.6% of their operating budget on utilities.
 - Half the institutions surveyed enrolled at one time during the year for credit or noncredit course work more than one in every 25 people in their service area.
 - Half the institutions surveyed had student:faculty ratios for credit instruction of less than 19:1.
- Space to compare institutional statistics with national sample medians.
- Space to compare institutional statistics with sample medians from four different peer groups of institutions based on enrollments.
- Quartile data for the national sample and peer groups.
- Explanations of the statistics, definitions, and clarification as to what is included in and excluded from each calculation.
- Possible interpretations derived from institutional and peer group statistical comparisons, which may be useful for management reports based on this analysis.

CHAPTER 1
INTRODUCTION TO THE PROJECT

How to Use This Report

Potential Uses

The primary purpose of this report is to assist an institution in preparing a meaningful analysis of how its financial performance relates to peer group norms. Unlike internal institutional analysis, where performance in terms of revenue and expenditure patterns is related to goals, this analysis compares certain data from an institution with data from other institutions. Comparison is useful only to the extent that the comparison group is similar and that data on revenue and expenditure performance of that group are based on common understandings. Comparative data may be used to define high standards for assessing institutional financial success or to justify average performance, depending on the aspirations of an institution with respect to the norms of the comparison group. Both types of comparison can lead to meaningful analysis of an institution's financial data; such analysis could, in turn, affect the institution's financial policies in cases where an institution appears significantly out of line with its peers.

The unique characteristics of an institution may be revealed by comparison. An institution may have relatively high--or low--cost areas, such as utilities or faculty salaries, or high--or low--quality (and cost) programs, such as instruction or student services. Unique characteristics are reflected in the differences between the cost structure of an institution and the norms for all institutions surveyed. Comparison of an institution's cost structure to those of other institutions serves to highlight these differences. Depending on goals and other perceptions, comparison may reassure or cause concern to governing boards and others regarding whether an institution is monitoring and managing itself in a fashion appropriate to its singular character.

Comparisons are useful for confirming and challenging perceptions. If an institution has high cost areas, are they perceived to be of high priority? For example, if student services costs are above the median, is the institution's priority for these services the cause?

Comparisons also help an institution to set performance goals, which may be planned in terms of budget proportions for various functions, revenue proportions, expenditures per student by various functional categories, staff patterns, or class size distributions. In areas where an institution has revised an internal priority, the median or high quartile scores might provide a reasonable goal for performance. The soundness of a given goal, a question any board member may raise, can, at least in part, be established with reference to the performance of other institutions.

In addition to its primary purpose in providing meaningful comparisons, this report may serve as an internal management document for self-review and self-analysis. Comparisons provide a starting point for finding institutional strengths and weaknesses. For example, costs per student that are far above the median and staff:faculty ratios that appear high when compared with others may be indicators of problems in institutional management.

These comparisons may suggest new ways for an institution to record data in order to monitor potential trouble points; they may also suggest areas in which more detailed study is required. The analysis this workbook allows can thus suggest areas where new policies or new methods of monitoring performance may be required.

Step-by-Step Use of This Report

The following steps should serve as a guide to this report:

1. Read the "Findings" section that follows. It should contribute to an understanding of the report's highlights, the kinds of statistics presented, and the range of results from sampled institutions.

2. Fill in the columns designated "Your Institution." Each institution that participated in the survey will be given computer printouts of its statistics. Other institutions will have to use their own data sources to derive these statistics.

3. Fill in peer group data under the column marked "peer group." These data are available in chapter 4 of this report. For the purpose of this study, peer groups are defined by the headcount of the total student body, plus a special group for institutions with less than 1,000 full-time-equivalent (FTE) students. This column provides a refinement of national sample data to show where significant differences may occur because of an institution's particular size. For the most part, however, the medians of the national sample do not differ significantly from the medians of each size group.

4. Note the quartile ranges. One may wish to add special notations to institutional statistics that deviate far enough from the median to be outside the first or third quartiles. Quartile scores are given in chapter 3.

5. Examine the work pages for exceptions. Which institutional statistics vary most from the sample medians?

6. Compare all data with institutional goals and perceptions for expenditures, revenues, staff ratios and course enrollment distributions. Examine each statistic and determine whether it was anticipated in comparison with other institutions.

7. Select ten or fewer statistics as a basis for a report on how the institution compares with this sample of institutions. For most institutions, only a few of the statistics carry a new, significant, and perhaps surprising meaning for the institution. A short report interpreting these statistics would be useful to presidents, key faculty members, and members of governing boards.

8. Communicate with the author of this report regarding its usefulness. Which statistics are particularly useful for assessing institutional financial policies? What statistics are missing? How can the report be made more reliable? What reports were generated based on this document?

Limitations

The results of a comparative data study of this nature must be used with care. Discussion of some of the more obvious concerns follows.

Extrapolation

The 184 public community colleges in this study may very well not reflect the financial and operational patterns of their 550 sister institutions (counting systems of branch campuses as single institutions).^{*} Though care was taken to select institutions that are geographically representative as well as representative of enrollment levels, this study may not be fully representative of the total population of institutions. Because of the need to use only data from those cooperating institutions that filed both timely and complete reports, the sample is not random. Generalizing the sample statistics in this study to all public community colleges should be done with care because nonrespondents or late respondents to HEGIS and other surveys may be beset by particular administrative difficulties, thereby somewhat biasing the sample. However, the last 25% of the returns did not significantly affect the median scores calculated up to that point, indicating that late respondents may not be significantly different.

Original Data

Lack of well-established definitions for such terms as "full-time-equivalent student" and lack of consistency in reporting such expenditure functions as "Academic Support," "Institutional Support," and "Student Services" create difficulties in generating accurate comparative data. Moreover, some survey responses are estimates because some institutions do not keep precise data in all the areas surveyed. All these factors affect the quality of the results.

Institutional Comparability

There is no way to establish truly homogeneous peer groups for community colleges. Such major factors as mission, location, academic preparation of entering students, local area salary levels, local nonsalary costs, and methods of financing create unique financial and operating patterns. Peer group comparisons that lead to administrative financial policy changes require sensitivity to the many factors not readily apparent from the statistics.

The Myth of the "Typical" Institution

No group of institutions exists whose data show them to be completely "typical." In fact, all institutions had fewer than three-quarters of

^{*}For the purpose of this study, the lowest level of administrative unit where financial records are maintained was sought. Thus Foothill-DeAnza (made up of several campuses) was counted as a single entity, whereas the California system of community colleges was not treated as a single entity.

their statistics within the middle two quartiles; on some statistics all institutions were higher or lower than 75% of the other institutions. There is no typical institution, and institutions should use this report only to find what makes them unique--not to pressure an institution toward some nonexistent "median" performance. This study has found a great diversity of expenditure, revenue, and staffing patterns. Diversity is clearly a characteristic--and no doubt a great strength--of community and junior colleges.

Findings

The following summary of important financial characteristics is based on (1) the financial data section of the "Higher Education General Information Survey" conducted by the National Center for Education Statistics (NCES), (2) a survey, resulting in a directory, conducted by the American Association of Community and Junior Colleges (AACJC), and (3) a supplemental survey conducted by the National Association of College and University Business Officers (NACUBO). Analysis was performed by the American Council on Education (ACE). The study sample of 184 institutions was not randomly selected but was dependent on the willingness of NACUBO or AACJC member institutions to participate. As previously mentioned, the findings that follow are representative only of the sample; they may not fully reflect all characteristics of the universe of community and junior colleges. Limitations of the statistics were discussed earlier in this chapter. The findings that follow are intended only for comparative and internal use.

Medians represent the number that will split the group of schools in half for a given statistic; half the schools will be above the median, while half will be below.

Expenditures

1. Half the institutions surveyed spent more than 61% of their budgets on instruction, research, public service, and academic support.

Including library, faculty salary, research, public service, and academic support expenditures, academics accounted for 61% of the budget for the median institution in the sample of 184 institutions. The budget base used excluded auxiliary enterprise expenditures and mandatory and nonmandatory transfers. Capital costs were also excluded. Included in the base for the total budget were academic expenditures as listed above, student services, institutional support, plant operation and maintenance, and scholarships and fellowships (unrestricted and restricted).

Of the institutions surveyed, 25% spent more than 65% of their budgets on academics, while another 25% spent less than 56%. For the median institution five-sixths of academic expenditures were for instruction, while nearly one-sixth was expended on academic support, including libraries. Only a small proportion was expended on research and public service.

The median institution dedicated 2% of its expenditure base to noncredit instruction.

On a dollar basis, the median institution spent \$1,528 per credit FTE student for instruction, research, public service, and academic support.

2. Half the institutions surveyed spent more than 36% of their expenditure base on student services, institutional support, and plant operation and maintenance.

The median institution spent 36% of its expenditure base on the administrative areas of student services, institutional support, and plant operation and maintenance. The academic expenditures of the median institution were 68% higher than its administrative expenditures. While one-quarter of the institutions surveyed dedicated 40% or more of their expenditure base to administration (as defined above), one-quarter spent less than 33% of their base on administration.

The median institution spent \$965 per credit FTE student for student services, institutional support, and plant operation and maintenance.

3. Half the institutions surveyed spent more than 3.6% of their expenditure base on utilities.

The median institution spent \$100 per credit FTE student on utilities, such as electricity, gas, oil, coal, steam, water, and waste disposal.

One-quarter of the institutions spent more than \$125 per credit FTE student on utilities.

Revenues

4. Tuition and fees accounted for more than 16% of the (nonauxiliary) current fund revenues of the median institution in the survey.

Including restricted and unrestricted current funds and excluding auxiliary enterprise revenues, half the institutions in the survey received more than 16% of their revenues from tuition and fees. The median institution had credit tuition revenues equivalent to \$403 per year per credit FTE student. One-quarter of the institutions received more than \$596 per year per credit FTE student.

The median institution received \$13 per year per noncredit student (not per FTE student).

5. The median institution received 69% of its current fund (excluding auxiliaries) revenues from appropriations.

At the median institution, each credit FTE student enjoyed the benefits of \$1,797 in federal, state, and local appropriations. If noncredit students are included (at an estimated rate of twenty enrollments for one FTE), the appropriation per FTE student drops to \$1,636 at the median institution.

Service Area

6. One of every 25 people in the median institution's service area is served by that institution.

One-quarter of the institutions served at least one in twelve people in their service areas during fiscal year 1978-79. This "market penetration" figure is computed from the ratio of service area population to estimated unduplicated student headcount.

Staffing

7. The median institution had a credit FTE student to credit instruction FTE faculty ratio of 19:1.

One-quarter of the institutions maintained better (lower) than a 16:1 FTE student:FTE faculty ratio. Another quarter of the institutions surveyed exceeded a 23:1 FTE student:FTE faculty ratio.

8. Half the institutions surveyed had one nonfaculty staff member (FTE exempt and nonexempt) per 67 unduplicated headcount students.

One-quarter of the institutions had unduplicated student headcount to FTE (nonfaculty) staff ratios greater than 100:1. Another quarter of the institutions had unduplicated student headcount to FTE (nonfaculty) staff ratios less than 45:1. The discrepancy may be due to wide variations in noncredit enrollments and to limited services offered these students in some institutions.

9. At the median institution there was one exempt or nonexempt student services staff member for every 110 credit FTE students.

One-quarter of the institutions had more than 146 credit FTE students per student services staff member. Another 25% had fewer than 86 credit FTE students per student services staff member.

Comparing student services staff to unduplicated credit and noncredit student enrollment, the median institution has 369 full- or part-time unduplicated enrollments per student services staff member.

10. The median institution had equal numbers of FTE nonfaculty staff (exempt and nonexempt) and FTE faculty staff.

One-quarter of the institutions had more nonfaculty than faculty staff by a ratio of at least 1.31:1. Another quarter of the institutions surveyed had nonfaculty to faculty staff ratios equivalent to less than .75:1. (Student employees were not included in the ratios.)

CHAPTER 2
MEDIAN FOR THE FULL SAMPLE
(INSTITUTIONS OF ALL SIZES)

The statistics in this chapter are medians for the entire sample of 184 institutions, excepting unusable or blank responses. The total number of usable responses for each statistic is shown in parentheses beside the statistic. Medians represent the number that will split the group in half; half the schools will be below this number, and half will be above. For that reason, the "median institution" will be different for each separate statistic, and the proportions may thus not add to 100%.

Careful interpretation of expenditure and revenue proportions is urged. High costs in any given area, such as utilities, will naturally the expenditure proportion for other areas, such as instruction, below sample medians--even if the budget support for instruction is perfectly adequate.

Expenditures

TABLE 1
EXPENDITURES BY MAJOR CATEGORIES

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Total E & G Expenditures	100 % (184)	_____ %	_____ % ()
Academic Expenditures	61.2 (184)	_____	_____ ()
Support Expenditures	36.5 (184)	_____	_____ ()
Scholarships and Fellowships	1.2 (184)	_____	_____ ()

Meaning and Explanations

Total expenditures include only current fund activities and exclude auxiliaries and transfers. Both restricted and unrestricted expenditures are shown. Each expenditure is shown three ways: as a proportion of total expenditures (as defined above), as the ratio of the expenditure to credit FTE students, and as the ratio of the expenditure to computed credit and noncredit FTE students calculated by adding credit FTE students to one-twentieth of the noncredit, full-year headcount as submitted to AACJC.

Academic expenditures include instructional expenditures (for both credit and noncredit courses), research expenditures, public service expenditures, and academic support expenditures (including libraries, audiovisual centers, academic computing, and academic administration).

Support expenditures include student services, institutional support, and plant operation and maintenance.

Credit FTE students were calculated using full-time students plus one-third part-time students.

Scholarships and fellowships include both restricted and unrestricted funds and do not include BEOGs.

<u>Expenditures per Credit FTE Student</u> (in dollars)			<u>Expenditures per Credit Plus</u> <u>Noncredit FTE Student (in dollars)</u>		
<u>Median for</u> <u>the Full</u> <u>Sample</u>	<u>Your</u> <u>Institution</u> <u>(fill in)</u>	<u>Median for</u> <u>Your Peer</u> <u>Institutions</u> <u>(fill in, see</u> <u>chapter 4)</u>	<u>Median for</u> <u>the Full</u> <u>Sample</u>	<u>Your</u> <u>Institution</u> <u>(fill in)</u>	<u>Median for</u> <u>Your Peer</u> <u>Institutions</u> <u>(fill in see</u> <u>chapter 4)</u>
\$2528	(184)\$ _____	\$ () _____	\$2317	(173)\$ _____	\$ () _____
1528	(184) _____	() _____	1414	(173) _____	() _____
965	(184) _____	() _____	823	(173) _____	() _____
29	(184) _____	() _____	26	(173) _____	() _____

Possible Interpretations

Institutions above the median on the proportion of expenditures devoted to instruction may rate themselves as more efficient than other institutions. On the other hand, some institutions may have achieved this "efficiency" by deferring administrative costs (especially some building maintenance) that will inevitably have to be paid. Moreover, some institutions, especially those serving disadvantaged populations, fund higher student support expenditures than necessary, pushing down the instructional cost proportion while remaining consistent with their goals and mission.

Institutions that are above the median on costs per student may find several interpretations possible: higher regional costs, a concentration of higher cost programs, and an attempt to provide a higher level of service. Higher instructional costs per student are almost always the direct result of higher faculty salaries than the median, lower ratios of students to faculty (see staffing distributions, pp. 20-21), or both.

Governing boards will be most interested in these deviations from the norm and how accurately they correlate with their own perceptions of institutional quality, program efficiency, and overall level of program cost.

Limitations

Certain differential practices make the comparability of these statistics somewhat limited. Institutions where certain costs, such as fringe benefits, are paid directly by the state and are not included in institutional figures will show an "incorrect" low cost level.

Moreover, the calculation of FTE students may not in fact reflect the actual FTE experience of the institution. The one-twentieth ratio for noncredit headcount conversion to FTE is especially arbitrary.

TABLE 2
EXPENDITURES BY DETAILED CATEGORIES

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Total E & G Expenditures	100 % (184)	_____ %	_____ % ()
Academic			
Instruction (and Research)	51.8 (184)	_____	_____
Public Service	0.0 (184)	_____	_____
Academic Support	8.1 (184)	_____	_____
Support Services			
Student Services	8.6 (184)	_____	_____
Institutional Support	14.8 (184)	_____	_____
Plant Operation and Maintenance	12.0 (184)	_____	_____
Scholarships and Fellowships			

Meaning and Explanations

Total expenditures include only current fund activities and exclude auxiliaries, transfers, and independent operations. Both restricted and unrestricted expenditures are shown. Each expenditure is shown three ways: as a proportion of total expenditures (as defined above), as the ratio of the expenditure to credit FTE students, and as the ratio of the expenditure to computed credit and noncredit FTE students calculated by adding credit FTE students to one-twentieth of the noncredit, full-year headcount figure submitted in response to the AACJC directory survey.

In this display, academic expenditures are split into three categories: instruction (and research), public service, and academic support. Support expenditures are broken down into student services, institutional support, and plant operation and maintenance. In conformance with HEGIS definitions, any expenditures for instruction, even for noncredit instruction, that were included in public service were transferred and are included in the instruction line. Standard definitions are given in appendix B.

Research expenditures have been included with instruction because few institutions reported such expenditures. Approximately 10% of the sample institutions reported some research expenditures.

Credit FTE students were calculated by adding full-time students to one-third the part-time student enrollment. This is the standard formula used by NCES to determine full-time equivalents.

Scholarships and fellowships include both restricted and unrestricted funds.

Possible Interpretations

Budget proportion statistics may clarify factors making an institution

Expenditures per Credit FTE Student (in dollars)			Expenditures per Credit Plus Noncredit FTE Student (in dollars)

374 (184)	_____	_____ ()	325 (173)	_____	_____ ()
306 (184)	_____	_____ ()	271 (173)	_____	_____ ()

different from other institutions. Its unique qualities may stem from a strong commitment to instruction, with student services perhaps sacrificed somewhat to maintain the academic program. Alternately, a high plant maintenance commitment or a strong concern for academic support may serve to differentiate the institution from national norms. Analysts should examine data carefully to see if the unique characteristics revealed in the statistics are at variance with commonly held perceptions about the institution on campus. For example, if the institution prefers a low commitment to student services, while data reveal that the institution is far above the norm, a case exists for reexamining the current efficiency of the delivery of student services.

Examining costs on a per-student basis adds another dimension to the analysis. Higher costs per student may be due to relatively higher costs in a given geographic location, to falling enrollment, or to an inefficient educational delivery system--or to an institutional mission of providing high-quality services. At community colleges, fixed costs may be more predominant in administrative areas than in instructional areas because many institutions use varying proportions of part-time faculty to reduce instructional costs and to increase flexibility in adapting program costs to instructional needs. Institutions with enrollments below their physical capacity may have above-median costs per student in administrative areas because of fixed costs, coupled with median costs in the instructional areas.

Limitations

The FTE student conversions of twenty noncredit or three part-time enrollments to one FTE student are approximations and may not fit the experience of each institution.

Finally, it must be emphasized that being above or below the median is not necessarily good or bad unless such information conflicts with the stated goals of the institution.

TABLE 3
SPECIAL CATEGORIES OF EXPENDITURE

Expenditures by Major Function:	As a Proportion of Total Educational and General Expenditures (excluding auxiliaries and transfers)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in see chapter 4)
Credit Instruction	48.0% (184)	_____ %	_____ % ()
Noncredit Instruction	1.9 (184)	_____	_____ ()
Utilities Expenditures	3.6 (181)	_____	_____ ()
Plant O & M without Expenditures	8.2 (181)	_____	_____ ()

SPECIAL RATIOS

<u>Utilities</u> Building Gross Area (sq. ft.)	\$0.74 (175)	\$ _____	\$ _____ ()
<u>Plant O & M without Utilities</u> Building Gross Area (sq. ft.)	\$1.65 (175)	\$ _____	\$ _____ ()
<u>Plant O & M without Utilities</u> Building Replacement Value (est.)	\$0.04 (162)	\$ _____	\$ _____ ()

Meaning and Explanations

Two important breakdowns are given first. Instructional expenditures are split into credit and noncredit categories, and plant operation and maintenance is broken into utilities and nonutilities maintenance costs. Utility expenditures include electricity, gas, oil, coal, steam, water, and waste disposal. Noncredit instruction costs per student are calculated by dividing the expenditures by noncredit headcount only. The breakdown between credit and noncredit is based on a percentage split estimated by each institution.

Plant operation and maintenance less utilities per square foot (gross area of building) is the cost of maintaining buildings, not including heating, cooling, and lighting per square foot of space. Utilities per square foot (gross area of building) include the cost of heating, lighting, and cooling per gross square foot of space. Plant operation and maintenance, not including utilities per estimated building replacement value, is the cost of maintaining the plant in terms of its replacement value. Estimated building replacement value per total FTE students is an estimate of the current value of buildings per student. The previously discussed conversion of twenty noncredit enrollments to one FTE has been made.

Total scholarship and BEOG funds include most of the funds an institution handles that are to be used as scholarships. All restricted, unrestricted, and agency fund (such as BEOG) awards should be included.

Expenditures per Credit FTE Student (in dollars)			Expenditures per Credit Plus Noncredit FTE Student (in dollars)		
Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)

N/A			35*(173)	_____	_____ ()
100 (181)	_____	_____ ()	88 (170)	_____	_____ ()
213 (181)	_____	_____ ()	184 (170)	_____	_____ ()

*No credit FTE students included in denominator; noncredit enrollment used.

SPECIAL RATIOS

<u>Building Replacement Value (est.)</u> Total FTE Students (cr. + ncr.)	\$5111 (155)	\$ _____	\$ _____ ()
<u>Total Scholarships and BEOGs</u> Credit FTE Students	\$ 171 (182)	\$ _____	\$ _____ ()

Possible Interpretations

Credit instruction costs per student reveal differences among institutions with regard to class size and faculty compensation. Interpretations of these costs should acknowledge differences in faculty ratios and pay levels.

These statistics, except total scholarships and BEOG funds per credit FTE student, are expansions on the analysis of plant operation and maintenance expenditures. A variance from the national sample median in overall costs may be due to high utility costs or to high energy consumption per square foot and may be driven by low space:student ratios.

Building value per student gives an indication of how much has been "built" per student. This figure may reflect declining or rising student enrollment, availability of funding for this purpose, or both.

Scholarship and BEOG funds per student give a measure of the financial need of attending students plus the effort expended by students and the institutional financial aid office in securing grants. It also reflects the institution's commitment to serve lower income students.

Limitations

In making comparisons, careful attention should be given to the institution's special situation. Well-paid faculty, cold climates, age of buildings, preventive maintenance plans, and numbers of needy students could easily justify above-median expenditures.

Revenues

TABLE 4
REVENUES BY MAJOR CATEGORIES

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Total Revenues (current fund, not including auxiliaries)	100 % (184)	_____ %	_____% ()
Tuition and Fees	16.5 (184)	_____	_____ ()
Appropriations (all governments)	69.4 (181)	_____	_____ ()
Gifts, Grants, and Contracts (all sources)	7.1 (184)	_____	_____ ()
Other Revenues (not auxiliaries)	2.7 (184)	_____	_____ ()

Meaning and Explanations

Total revenues exclude sales and services of auxiliary enterprises, hospitals, and independent operations as defined on the HEGIS finance form for lines A-16, A-17, and A-19.

Appropriations (all governments) includes federal, state, and local appropriations.

Gifts, grants, and contracts (all sources) includes restricted and unrestricted revenues from federal, state, local, and private sources.

Other revenue includes unrestricted and restricted endowment income, sales and services of educational activities, and "other sources" as defined on the HEGIS finance form for lines A-13, A-14, A-15, and A-18.

Revenue per Credit FTE Student (in dollars)			Revenue per Credit Plus Noncredit FTE Student (in dollars)		
Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
\$2635 (184)	\$ _____	\$ _____ ()	\$2435 (173)	\$ _____	\$ _____ ()
439 (184)	_____	_____ ()	396 (173)	_____	_____ ()
1797 (181)	_____	_____ ()	1636 (170)	_____	_____ ()
190 (184)	_____	_____ ()	168 (173)	_____	_____ ()
75 (184)	_____	_____ ()	69 (173)	_____	_____ ()

Possible Interpretations

Interinstitutional revenue mix comparisons are difficult to make and have limited uses. States and localities finance their institutions in many ways. Grants may be for student aid or for special programs such as Title III. These variations make comparison difficult.

Limitations

In some states institutions charge no tuition; revenues come from state and local sources only. This shows the great variability of these statistics.

Most revenue analyses would best be done on a state-by-state basis. Comparison is easiest among institutions within the same state or among institutions within states having similar financing for community colleges. Many institutions will want to rely on special home state revenue analyses.

The large range of financing strategies makes medians and quartiles of dubious statistical value.

TABLE 5
REVENUES BY DETAILED CATEGORIES

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Tuition and Fees			
Tuition and fees for credit instruction	15.2% (171)	_____ %	_____% ()
Tuition and fees for noncredit instruction	.8 (172)	_____	_____ ()
Appropriations			
Federal	0.0 (184)	_____	_____ ()
State	53.3 (184)	_____	_____ ()
Local	11.7 (184)	_____	_____ ()
Gifts, Grants, and Contracts			
Federal grants and contracts	4.5 (184)	_____	_____ ()
State and local grants and contracts	1.0 (184)	_____	_____ ()
Private gifts, grants, and contracts	0.1 (184)	_____	_____ ()
Other Revenues			

Meaning and Explanations

Tuition and fees were split into credit and noncredit portions using the estimated percentage breakdown given by each survey respondent.

All categories include both restricted and unrestricted funds.

State and local grants and contracts have been combined to save space.

Other revenues and total revenues are defined on the previous pages.

Table 6 shows state and local appropriations combined to improve state-by-state comparisons where the only variance in funding is the state or local portion provided.

Revenues per Credit FTE Student
(in dollars)

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 4)</u>
---	---	---

Revenues per Credit Plus Noncredit
FTE Student (in dollars)

<u>Median for the Full Sample</u>	<u>Your Institution (fill in)</u>	<u>Median for Your Peer Institutions (fill in, see chapter 4)</u>
---	---	---

\$ 403 (171)	\$ _____	\$ _____ ()	N/A		
N/A			\$ 13*(172)	\$ _____	\$ _____ ()
0 (184)	_____	_____ ()	0 (173)	_____	_____ ()
1409 (184)	_____	_____ ()	1242 (173)	_____	_____ ()
344 (184)	_____	_____ ()	278 (173)	_____	_____ ()
114 (184)	_____	_____ ()	106 (173)	_____	_____ ()
28 (184)	_____	_____ ()	24 (173)	_____	_____ ()
3 (184)	_____	_____ ()	2 (173)	_____	_____ ()

*No credit FTE students included in denominator; noncredit enrollment used.

Possible Interpretations

Of interest to some analysts is the range of tuition and fee revenues per noncredit headcount student discovered by this survey. Being lower than the median, for example, may indicate a preponderance of inexpensive courses, subsidized noncredit courses, or a hasty estimate of the split between credit and noncredit tuition revenue.

Most of the other figures can be useful for pinpointing how differently the institution is financed compared to national sample medians. Given the lack of control most administrators have over the setting of tuition and appropriation levels, this is more "interesting" than useful for making policy.

Limitations

Comparisons among institutions of budget proportions or revenues per student will become more useful when data for a number of previous years are also available.

TABLE 6
SPECIAL CATEGORIES OF REVENUE

Revenues by Major Function:	As a Percentage of Total Current Fund Revenues (excluding auxiliaries)		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
State and Local Appropriations (combined)	68.4% (181)	_____ %	_____ % (_____)

SPECIAL RATIOS

<u>Total Appropriations</u> Unduplicated Student Headcount	\$ 484 (181)	\$ _____	\$ _____ (_____)
<u>Service Area Population</u> Unduplicated Student Headcount	\$ 24.66 (180)	\$ _____	\$ _____ (_____)

Meaning and Explanations

Three additional statistics are included:

1. The combination of state and local appropriations shows the combined funding from the two sources.

2. Total appropriations per unduplicated headcount adds federal, state, and local appropriations to arrive at the numerator. Unduplicated headcount was requested on the NACUBO survey (see appendix B). Where no response was given in the survey, the sum of the noncredit headcount, full-time credit enrollment, and part-time credit enrollment was used as a proxy for unduplicated headcount.

3. Service area population per unduplicated headcount is derived from the NACUBO survey responses (see appendix B), using the same approximation for unduplicated headcount as above when necessary.

Revenue per Credit FTE Student
(in dollars)

		Median for Your Peer Institutions
Median for the Full Sample	Your Institution (fill in)	(fill in, see chapter 4)

\$1786 (181) \$ _____ \$ _____ ()

Revenue per Credit Plus Noncredit
FTE Student (in dollars)

		Median for Your Peer Institutions
Median for the Full Sample	Your Institution (fill in)	(fill in, see chapter 4)

\$1595 (170) \$ _____ \$ _____ ()

Possible Interpretations

State and local appropriation statistics are derived from financing characteristics and vary greatly from state to state.

Total appropriations per unduplicated headcount gives the dollar amount provided by appropriations per student served. The more an institution is above the median, the more appropriation support the institution receives per student served.

Service area population per unduplicated headcount gives the "market penetration" of the institution. Being above the median may indicate good reception of the institution's programs within the community. This statistic will also be affected by the number and size of competing institutions and reflects the competitive strength of the institution.

Limitations

The median for state and local appropriation financing is based on a large range of financing strategies and may be of limited analytic value.

Unduplicated headcounts are not monitored by all institutions; thus, these figures are often estimates and may be in error.

Service area populations may vary in the proportion of people who are generally eligible for college, i.e., 18 years and over. This somewhat limits the comparability of the statistic among institutions. In addition, many of the students counted in the headcount may be drawn from outside the service area, weakening the "market penetration" interpretation of the statistic.

Staff Ratios and Course Enrollment Distributions

TABLE 7
STAFF RATIOS

Staff by Major Function:	FTE Staff as a Percentage of Total Instructional and Administrative Staff (excluding auxiliaries)

Total	100.0 (176)	_____	_____ ()

SPECIAL RATIOS

<u>Unduplicated Student Headcount</u> FTE Staff (nonfaculty)	66.7 (173)	_____	_____ ()
<u>FTE Staff (nonfaculty)</u> Total FTE Faculty (cr. + ncr.)	1.0 (173)	_____	_____ ()

Meanings and Explanations

Institutions provided FTE staff counts according to the NACUBO functional categories. Instructional staff were further categorized as credit instruction, noncredit instruction, and all other staff instruction. The final category was used for clerical, laboratory, or administrative staff (all nonteaching) who may be classified in the instruction function but not as faculty. FTE staff statistics are calculated in three ways: proportion of staff in each category for the median institution, median ratio of FTE staff in each category to FTE credit students, and median ratio of FTE staff in each staff category to number of unduplicated headcount students (an estimate of all those enrolled as students during the year).

Two other ratios are provided: unduplicated student headcount per total FTE nonfaculty staff and FTE nonfaculty staff per total FTE faculty staff, including credit and noncredit faculty. FTE nonfaculty staff includes the sum of all staff categories excepting credit instructional faculty and noncredit instructional faculty. FTE nonfaculty staff to total FTE faculty staff, including credit and noncredit faculty, is a comparison of administration staffing with faculty staffing.

Total FTE Student (credit & noncredit) per FTE Staff			Unduplicated Student Headcount (credit & noncredit) per FTE Staff		
Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
19	(176)	()	N/A		()
N/A			1365*(174)		
203	(164)	()	659 (174)		()
2396	(165)	()	9434 (175)		()
125	(165)	()	426 (175)		()
110	(165)	()	369 (175)		()
81	(165)	()	274 (175)		()
90	(166)	()	295 (176)		()
9	(165)	()	32 (175)		()

*Includes noncredit enrollment only in numerator.

Possible Interpretations

These ratios may provide a starting point for an institution to judge whether it has too many or too few faculty or other staff. Comparison of administrative staffing must be made with care because of the wide range of administrative services provided by institutions; the median institution may be providing a very different level of administrative support and services than any other college.

An institution may want to use comparative data as a rough guide to "standard behavior in the industry," but alert management also requires careful year-to-year monitoring of trends in its own staffing patterns.

Limitations

Some institutions could not provide staffing ratios by functional categories because they maintained only exempt, nonexempt, and faculty breakdowns.

Many respondents had difficulty in determining whether an employee who did not teach but who worked exclusively in the instructional area was instructional or academic support. There may be considerable overlap between these two categories. Some confusion may also exist over the difference between noncredit instructional faculty and public service personnel.

Some institutions also had difficulty converting part-time noncredit instructional faculty to FTE. Although class hour conversions were suggested, some difficulty must be expected when the noncredit offerings might be for such extremes as one weekend or six months on an irregular schedule.

TABLE 8
COURSE ENROLLMENT DISTRIBUTIONS

Course Enrollment by Major Function:	Median Percentage of Classes (including sections) Offered for Credit as Distributed Among Size Categories		
	Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
Class Size			
More than 50 students	1% (142)	_____ %	_____% ()
From 25 to 50 students	28 (142)	_____	_____ ()
From 15 to 24 students	40 (142)	_____	_____ ()
From 6 to 14 students	14 (142)	_____	_____ ()
Less than 6 students	2 (142)	_____	_____ ()

Meanings and Explanations

Course enrollment distributions are given for credit and noncredit courses separately. Medians were calculated by ordering in each size category the proportion of courses that each responding institution had in that category. Thus, for the category "class size more than 50," the proportions given by individual institutions might range from 0% (no classes with more than 50 students including individual sections) to 100% (all classes at the institution with more than 50 students). (Note that there were no schools with all classes this large.) The median (1%) split this distribution in half, such that half the schools had more than 1% of their classes with more than 50 students and half had less than 1% of their classes with more than 50 students. Because each median is calculated separately, a different school may be at the median for each class size. This may result in the sum of the proportions not adding to 100%.

Median Percentage of Classes
(including sections) Not Offered for
Credit as Distributed Among Size
Categories

Median for the Full Sample	Your Institution (fill in)	Median for Your Peer Institutions (fill in, see chapter 4)
0% (135)	_____ %	_____ % ()
11 (135)	_____	_____ ()
40 (135)	_____	_____ ()
27 (135)	_____	_____ ()
0 (135)	_____	_____ ()

Possible Interpretations

Institutions that found their instructional costs per student to be above the median may wish to examine the course size distribution to see if high costs may have been a result of their distribution of class sizes. A large proportion of small classes is costly. Some institutions may find that they have a predominance of very large and very small classes, with few in the mid-range when compared with the national sample. They may wish to reevaluate methods of delivering instruction.

Limitations

These questions had the fewest respondents and the largest spread among responses. Few institutions seemed to have kept records of course size distributions in this format. The large amount of variation that exists also makes it questionable whether any sort of a "national norm" for class sizes can really be said to exist.

CHAPTER 3
QUARTILES FOR THE FULL SAMPLE
(INSTITUTIONS OF ALL SIZES)

This chapter includes quartiles for the entire sample.

The first quartile is the value for a given statistic that separates the lowest 25% of the institutional values from the top 75% of the institutional values.

The median is the value that separates the lowest 50% of the values from the top 50% of the values for each statistic.

The third quartile is the value that separates the lowest 75% of the values from the top 25% of the values for each statistic.

N is the number of institutions that provided the data necessary to calculate the statistic. Hence, N is the number of values used to find the quartiles and median. N varies with each statistic.

Because each statistic has a different institution at its median and quartile values, proportions will not add to 100%. This is especially true of the first and third quartiles. An institution that has a low instructional budget proportion will have a high administrative budget proportion. Thus, the quartiles are formed from very different institutions. As a result, the sum of the first quartile proportions will generally be much less than 100%, while the sum of the third quartile proportions will tend to exceed 100%.

3

Expenditures

CHAPTER 4
MEDIANS AND QUARTILES FOR PEER GROUPS
CLASSIFIED BY ENROLLMENT SIZE

This chapter shows medians and quartiles for peer groups classified by enrollment size as follows:

- Group 1: Total credit and noncredit enrollment less than 5,000 (71 institutions).
- Group 2: Total credit and noncredit enrollment from 5,000 through 15,000 (63 institutions).
- Group 3: Total credit and noncredit enrollment greater than 15,000 (50 institutions).
- Group 4: Total FTE enrollment less than 1,000 (29 institutions).

Total enrollment includes part-time, full-time, and noncredit students.

FTE enrollment is made up of full-time students, part-time students divided by 3, and noncredit students divided by 20.

CHAPTER 5 SCATTERGRAMS

The scattergrams in this chapter were drawn to demonstrate some of the research possibilities of the data. These graphs illustrate some interesting relationships revealed by the data, such as the relationship between enrollment and instructional budget proportion. These relationships have been the subject of much speculation concerning the effect of size appropriations and revenues per student on institutional operation and efficiency.

GRAPH 1
THE RELATIONSHIP BETWEEN APPROPRIATIONS PER STUDENT AND MARKET PENETRATION

This graph provides insight into the hypothesis that higher levels of appropriations per student are helpful in increasing community participation. The vertical axis represents the number of people in an institution's service area divided by the institution's unduplicated headcount. The higher the number, the more residents per student and the lower the market penetration. The horizontal axis represents total appropriations per unduplicated credit and noncredit student enrollment.

Although the relationship is not perfectly clear due to the great variability in the way the institutions have scattered in the plot, it appears (based on a least squares regression line) that higher appropriations per student from all levels of government can be associated with lower market penetration. A more detailed analysis of other factors, such as tuition levels and urban vs. rural college-going population ratios, will be necessary to begin to explain this relationship more fully, especially since the relationship contradicts the hypothesis. One possible explanation of this contradiction is that legislatures tend to better support community colleges in areas where need is greatest. In other words, support flows to institutions in the areas where the smallest proportion of the community is currently attending the institution. This explanation must be regarded as speculative.

GRAPH 2
THE RELATIONSHIP BETWEEN REVENUES PER STUDENT AND PROPORTION OF THE BUDGET
DEDICATED TO INSTRUCTION

This graph provides insight into the hypothesis that higher amounts of revenue per student allow the institution to offer more noninstructional services. The additional services alter the institution's budget mix by lowering the proportion of the budget dedicated to instruction.

Once again, the scatter of the points could easily allow many interpretations. However, a least-squares regression line through the points indicates some support for the hypothesis that more revenues allow more services. The trend is small, with a \$2500 per student increase in revenue lowering the proportion of the budget dedicated to instruction by only four percentage points. The scatter of points indicates that actual behavior is much more varied.

GRAPH 3
THE RELATIONSHIP BETWEEN ENROLLMENT AND EDUCATIONAL AND GENERAL EXPENDITURES
PER STUDENT

This graph provides insight into the hypothesis that larger institutions can be run at a lower cost per student. The horizontal axis gives enrollment size in credit FTE students. The vertical axis gives educational and general expenditures per credit FTE student.

A least-squares regression line through the points supports the hypothesis. It should be noted, however, that the line is largely determined by very few large institutions with low costs per student and very few small institutions with high costs per student. Most institutions cluster in a way that is not suggestive of economies of scale.

The resulting line suggests that an institution with 2,000 more FTE students than another may have fewer educational and general expenditures per student by \$2,300.

GRAPH 4
THE RELATIONSHIP BETWEEN ENROLLMENT AND PROPORTION OF THE BUDGET DEDICATED TO INSTRUCTION

This graph provides insight into the hypothesis that larger institutions may be administered more efficiently and thus may be able to spend a larger proportion of their budget for instruction.

The wide scatter of points and virtually flat regression line suggest that these data offer no support for the hypothesis that larger enrollments allow greater administrative efficiency.

APPENDIX A METHOD

Beginning in October 1978, staff members of three national education associations met with a task force composed of community and junior college business officers from various regions of the country, a community college president, and several consultants to identify information that might be useful to community and junior college administrators. They decided to emphasize the provision of basic comparative data for general use at community colleges and to create peer groups on the basis of institutional size.

A review and evaluation of the first year of the project in September 1979 served to streamline the method used in the second year. The National Center for Education Statistics agreed to provide computational support, a liaison between the staff and NCES, and copies of the HEGIS finance survey from sampled institutions as soon as the surveys were returned to NCES. NACUBO, ACE, and AACJC provided the remaining financial support, and NACUBO's Two-Year Colleges Committee assumed a guiding role for the project. Two members of the task force from the first year who are members of the Two-Year Colleges Committee, Maurice P. Arth and W. L. Prather, provided project continuity and made several special trips to Washington to assist in designing the NACUBO survey and in preparing this report.

The project made use of unedited Higher Education General Information Survey (HEGIS) finance data. These data were due to be submitted to NCES on October 1, 1979. Thus, community colleges that were to be included in the sample had to complete their HEGIS forms by the stated deadline and had to complete them accurately. Each participating institution was asked to carefully complete the HEGIS survey and to submit it on time.

In addition to the use of HEGIS finance data, a separate survey of 400 public institutions was conducted to gather information not currently available at the national level. Such information included data on:

1. Revenues and expenditures for noncredit institutional activities.
2. Utilities expenditures.
3. Student aid disbursements.
4. Building space.
5. Service area population.
6. Unduplicated student headcounts.
7. Staffing levels by function.
8. Course enrollment distributions.

One hundred and eighty-four of those surveyed provided usable responses, and their data are used in this report. Appendix B contains a copy of the questionnaire, while appendix C contains definitions of terms. Appendix D lists all responding institutions.

The NACUBO Two-Year Colleges Committee met in January 1980 and approved the substance and format of the comparative data study report. Based on task force recommendations, the following peer groups were established:

1. Total credit and noncredit enrollment less than 5,000.
2. Total credit and noncredit enrollment from 5,000 through 15,000.
3. Total credit and noncredit enrollment greater than 15,000.
4. Total FTE enrollment less than 1,000. (These institutions are also included in the larger first group.)

These categories differ from the first year's breakdown only by the deletion of the branch campus category and the addition of the under-1,000 FTE student category.

Both because cost structures for branch campuses vary markedly from those of consolidated or single-campus institutions--therefore adding an element of noncomparability of data--and because the response rate from branch campuses was low in the initial year, only single institutions or systems were encouraged to provide data in the second year. Thus, data for branch campuses where fiscal records are kept at a central office are not included in this sample.

The conversion of noncredit headcount to FTEs remains unchanged from the method employed in the first year. It is generally understood that community colleges offer courses that encourage part-time, noncredit participation. Courses may range from two-week workshops to full-term courses. Relating such headcount numbers to FTEs has been a major problem in developing comparative data among community colleges.

To resolve this issue, the task force in the initial year established a standard for converting full-year, noncredit headcount to a proxy for the fall term FTE enrollment. The conversion ratio of 20:1 established then was also used in the second year. Thus, for the purpose of this report, noncredit headcount enrollment for the 1978-79 year was divided by 20 and the result was defined as the number of FTE students. This number is added to the 1978 fall term FTE credit student count, which is used as a proxy for the activity level of community colleges. One of the purposes of this study is to obtain reactions from readers to the calculation for conversion and the resulting statistics.

Institutions unable to obtain all the necessary information were retained in the study; however, where individual pieces of data were missing, the institution was not included for the calculation of that particular median or quartile.

According to the AACJC directory, there are 750 systems or single-campus public community and junior colleges. Two-year branch campuses of universities were not included in the sample because of difficulty in separating the financial statistics of each from those of its university.

Data were gathered and coded from December 1979 through March 1980. Analysis and publication were conducted during April 1980. All financial statistics are for fiscal year 1978-79; enrollments are for fall 1978 (except noncredit enrollments, which are based on 1978-79 year-long enrollment estimates). The AACJC directory survey was the source of enrollment data.

Institutions participating in the second year of the study were sent a copy of their survey data as they were entered into the computer, as well as the statistics generated from the data. Institutions were asked to verify the data and check the reasonableness of the statistical calculations. In this way, statistics from individual institutions have been thoroughly reviewed, resulting in a reliable final report.

APPENDIX B
SAMPLE SURVEY

**Comparative Financial Statistics
For Public Community and Junior Colleges
1978-79**

National Association of College and University Business Officers
American Council on Education
American Association of Community and Junior Colleges

Comparative financial data survey form, fiscal year 1978-79. These data should come from the same records used to prepare the HEGIS finance form due October 31, 1979.

Leave blank or estimate any items for which the data are unavailable. A partially completed form is of use to us. Please return the completed form by December 20 to NACUBO, Suite 510, One Dupont Circle, Washington, D.C. 20036, ATTN: Financial Management Center.

1. Estimate what percentage of instructional expenses (line B-1, HEGIS finance form) is used for noncredit teaching. (Include only faculty salaries if that is all that is available.)
Percentage instructional expenses which is **noncredit**: _____%
2. Is the "public service" category on the HEGIS finance form (line B-3) used to indicate some or all of the dollars spent on teaching noncredit courses?
Public service includes some noncredit instruction (YES): _____ (NO): _____
If yes, estimate the percent of public service which is noncredit instruction: _____%
3. How much was spent for utilities in 1978-79 that is included in the operations and maintenance amount shown on the HEGIS finance form (line B-8)? Include electricity, water, waste disposal, gas, heating oil, and coal.
Utilities costs: \$ _____
4. How much was awarded to students in the form of scholarships and fellowships? Include all federal, state, local, private, and institutional awards. *Do not include loans or payment for work (work study).* This amount may differ from that which is recorded on the HEGIS form because of the inclusion of BEOG, for example.
Scholarships and fellowships (from HEGIS
finance form, lines B-9 & 10): \$ _____
Add BEOG (if not included above): _____
Total: \$ _____
5. What proportion of tuition and fees (HEGIS finance form, line A-1) was received as payment for **noncredit** instruction?
Percentage tuition and fees for **noncredit**: _____%
6. What is the total gross space of all campus buildings in square feet?
Gross area of buildings: _____ square feet
7. Estimate the population of the geographic area which your institution serves.
Service area population: _____

8. How many students took some form of instruction from your institution at some time during the year?
 (Answer only if readily available.)

Unduplicated student headcount for credit students: _____

Unduplicated student headcount for noncredit students: _____

9. What proportion of your course sections in 1978-79 enrolled:

	<i>Credit</i>	<i>Noncredit</i>
More than 50 students:	_____ %	_____ %
From 25 - 50 students:	_____	_____
From 15 - 24 students:	_____	_____
From 6 - 14 students:	_____	_____
Fewer than 6 students:	_____	_____
	<u>100%</u>	<u>100%</u>

10. How many full-time equivalent personnel were authorized in 1978-79 in the following functional categories for educational and general operations? Where significant services were performed by contract, enter the estimated full-time equivalent. Exclude student assistants, both regular and work study.

<i>Functional Category</i>	<i>Number of Full-Time Equivalent Personnel</i>
Instruction	
Instructional Faculty—Credit	_____
Instructional Faculty—Noncredit	_____
All Other Staff	_____
Public Service	_____
Academic Support	_____
Student Services	_____
Institutional Support	_____
Plant Operations	_____
Total	_____

APPENDIX C
DEFINITIONS OF TERMS

Educational and General

Instruction. This category should include expenditures for all activities that are part of an institution's instruction program, with the exception of expenditures for remedial and tutorial instruction, which should be categorized as Student Services. Expenditures for credit and noncredit courses, for academic, occupational, and vocational instruction, and for regular, special, and extension sessions should be included.

Expenditures for departmental research and public service that are not separately budgeted should be included in this classification. This category excludes expenditures for academic administration when the primary assignment is administration—for example, academic deans. However, expenditures for department chairmen, in which instruction is still an important role of the administrator, are included in this category.

Research. This category should include all expenditures for activities specifically organized to produce research outcomes, whether commissioned by an agency external to the institution or separately budgeted by an organizational unit within the institution. Subject to these conditions, it includes expenditures for individual and/or project research as well as those of institutes and research centers. This category does not include all sponsored programs (training grants are an example) nor is it necessarily limited to sponsored research, since internally supported research programs, if separately budgeted, might be included in this category under the circumstances described above. Expenditures for departmental research that are separately budgeted specifically for research are included in this category.

Public Service. This category should include funds expended for activities that are established primarily to provide noninstructional services beneficial to individuals and groups external to the

institution. These activities include community service programs (excluding instructional activities) and cooperative extension services. Included in this category are conferences, institutes, general advisory services, reference bureaus, radio and television, consulting, and similar noninstructional services to particular sectors of the community.

Academic Support. This category should include funds expended primarily to provide support services for the institution's primary missions—instruction, research, and public service. It includes (1) the retention, preservation, and display of educational materials—for example, libraries, museums, and galleries; (2) the provision of services that directly assist the academic functions of the institution, such as demonstration schools associated with a department, school, or college of education; (3) media, such as audiovisual services and technology such as computing support; (4) academic administration (including academic deans but not department chairmen) and personnel development providing administrative support and management direction to the three primary missions; and (5) separately budgeted support for course and curriculum development. For institutions that currently charge certain of the expenditures—for example, computing support—directly to the various operating units of the institution, such expenditures are not reflected in this category.

Student Services. This category should include funds expended for offices of admissions and registrar and those activities whose primary purpose is to contribute to the student's emotional and physical well-being and to his intellectual, cultural, and social development outside the context of the formal instruction program. It includes expenditures for student activities, cultural events, student newspaper, intramural athletics, student organizations, intercollegiate athletics (if the program is operated as an integral part of the department of physical education and not as an essentially self-

Reprinted from College and University Business Administration (Washington, D.C.: NACUBO, 1974), pp. 188-189.

supporting activity), supplemental educational services to provide matriculated students with supplemental instruction outside of the normal academic program (remedial instruction is an example), counseling and career guidance (excluding informal academic counseling by the faculty), student aid administration, and student health service (if not operated as an essentially self-supporting activity).

Institutional Support. This category should include expenditures for: (1) central executive-level activities concerned with management and long-range planning of the entire institution, such as the governing board, planning and programming, and legal services; (2) fiscal operations, including the investment office; (3) administrative data processing; (4) space management; (5) employee personnel and records; (6) logistical activities that provide procurement, storerooms, safety, security, printing, and transportation services to the institution; (7) support services to faculty and staff that are not operated as auxiliary enterprises; and (8) activities concerned with community and alumni relations, including development and fund raising.

Appropriate allocations of institutional support should be made to auxiliary enterprises, hospitals, and any other activities not reported under the Educational and General heading of expenditures.

Operation and Maintenance of Plant. This category should include all expenditures of current operating funds for the operation and maintenance of physical plant, in all cases net of amounts charged to auxiliary enterprises, hospitals, and independent operations. It does not include expenditures made from the institutional plant fund accounts. It includes all expenditures for operations established to provide services and maintenance related to grounds and facilities. Also included are utilities, fire protection, property insurance, and similar items.

Scholarships and Fellowships. This category should include expenditures for scholarships and fellowships in the form of outright grants to students selected by the institution and financed from current funds, restricted or unrestricted. It also should include trainee stipends, prizes, and awards, except trainee stipends awarded to individuals who

are not enrolled in formal course work, which should be charged to instruction, research, or public service as appropriate. If the institution is given custody of the funds, but is not allowed to select the recipient of the grant—for example, federal Basic Educational Opportunity Grants program or ROTC scholarships—the funds should be reported in the Agency Funds group rather than in the Current Funds group. The recipient of an outright grant is not required to perform service to the institution as consideration for the grant, nor is he expected to repay the amount of the grant to the funding source. When services are required in exchange for financial assistance, as in the federal College Work-Study Program, the charges should be classified as expenditures of the department or organizational unit to which the service is rendered. Aid to students in the form of tuition or fee remissions also should be included in this category. However, remissions of tuition or fees granted because of faculty or staff status, or family relationship of students to faculty or staff, should be recorded as staff benefit expenditures in the appropriate functional expenditure category.

Mandatory Transfers. This category should include transfers from the Current Funds group to other fund groups arising out of (1) binding legal agreements related to the financing of educational plant, such as amounts for debt retirement, interest, and required provisions for renewals and replacements of plant, not financed from other sources, and (2) grant agreements with agencies of the federal government, donors, and other organizations to match gifts and grants to loan and other funds. Mandatory transfers may be required to be made from either unrestricted or restricted current funds.

Nonmandatory Transfers. This category should include those transfers from the Current Funds group to other fund groups made at the discretion of the governing board to serve a variety of objectives, such as additions to loan funds, additions to quasi-endowment funds, general or specific plant additions, voluntary renewals and replacements of plant, and prepayments on debt principal. It also may include the retransfer of resources back to current funds.

APPENDIX D
PARTICIPATING COLLEGES AND
PEER GROUP COMPOSITION

Group 1: Total credit and noncredit enrollment less than 5,000.

Group 2: Total credit and noncredit enrollment from 5,000
through 15,000.

Group 3: Total credit and noncredit enrollment greater than 15,000.

Group 4: Total FTE enrollment less than 1,000.
