ABSTRACT

This resource unit is a prototype for others that can be developed as a team effort by vocational and special educators concerned with mainstreaming hearing impaired youth into regular vocational education programs. Although focusing on a specific vocational area (food service), the unit's step-by-step design can be applied to other rocational areas. Section & deals with the step processes undertaken by vocational educators in separating task preparation or performance into its component parts. Characteristics of hearing-impaired students and special considerations in teaching such students are overviewed. Some resources are listed. Inc models illustrate the four-step process: (1) write out directions of task or assignment; (2) the breakdown directions into steps and list materials, processes, tools, etc.: (3) categorize and list from step 2; and (A) continuously add new words to Master Classification List. Section B, for special educators, deals with the seven steps in determining lip-reading capability of words: separate words in syllable(s): group words homophenously, group words by obscurity, group words by blends, categorize into five roles (similar sounding, inadequate visual cues, same initial placement, more than one meaning, unfamiliar words, tally words, and rank words. As overview to lipreading is provided as well as classification of words. Section C is a clossary. (ILB)

TO THE EDUCATIONAL RESOURCES

PREFACE

This resource unit is offered as a prototype for resource units which can be developed as a team effort by vocational and special educators concerned with mainstreaming hearing impaired youth into regular vocational education programs.

Ms. Thompson has unique qualifications to develop this prototype as she is, herself, hearing impaired and has training and teaching experience in vocational home economics and the education of the hearing impaired. This unit was developed while Ms. Thompson was employed as a Graduate Research Assistant on Project SAVE which is an effort at Kent State University, funded by the Personnel Preparation Branch of the Office of Special Education U. S. Department of Education (OE G008001399), focused upon the in-service needs of vocational and special educators involved in the career and vocational education of the handicapped.

## INTRODUCTION

There lies a big "burden and challenge" on the shoulders of vocational educators and special educators in successful implementation of teaching techniques in educating the handicapped student in the vocational classroom. I would be deceiving my colleagues if I used the words "burden" and "challenge" rather lightly. However, it is a challenge in educating the vocational handicapped learner that need not be a burden with the willingness and cooperation between vocational educators and special educators in working together. For our purpose this prototypic resource unit is confined to the hearing impaired student in the vocational classroom.

By what authority or credentials do I possess for developing this unit? I am neither a vocational educator nor a special educator but rather I am both. I am also hearing impaired with a hearing loss of moderate to severe. You'll never how it if you meet mel Educated in public schools from K - 12 with a B.S. in Clothing & Textiles Technology and Education (1976, Framingham State College, Framingham, Massachusetts) along with summer employment as a Food Service Assistant for United Airlines Flight Kitchen (1972 to 1977. Logan International Airport, Boston, Massachusetts) have been experiences for me in functioning and performing to the standards of the hearing culture. In 1977 I was hired by The Boston School to develop and implement a pre-vocational and practical arts program in the eress of foods and clothing. In September of 1978 I was a member of a homen team from The Boston School invited to participate in the II National Working Conference on Career Education for the Hearing Impaired held at NTID and again in September of 1979 to participate in the National Project on Career Education Workshop in Delivery Skills held at NTID to become a facilitator of model workshops in Career Education and Planning Skills. While on leave from The Boston School, I am currently involved as a Craduate Research Assistant in the Special Education Department at Kent State University and am scheduled to receive my M.M. in Hearing Impairment in August, 1981.

This resource unit is a compilation of past reflections of my personal experiences and barriers, professional teaching experiences, research and coursework. Its primary purpose is to focus on a specific vocational area (food service) and show how the vocational educator and special educator can work together. This unit is designed with step by step procedures so that it can be applied to other vocational areas as well. However, please take into consideration that this prototypic resource unit is only a model that may need to be modified for your own personal use. Hopefully it shall be a start in the development and implementation of a working team between the vocational educators and special educators in your school system.

## SECTION A - Vocational Educators

## SECTION A

## Vocational Educators

This section deals with the step processes undertaken by the Vocational Educator in separating the preparation or performance of a task into its component parts: equipment, tools, materials, processes and states. You are the expert in your vocational area and can be the best source for supplying the names of those materials, tools, etc. that are utilized and categorizing them into their respective classifications.

There are 4 steps involved in this section which are summarized as follows:

- Step 1 Writing out the directions of a task or assignment.
- Step 2 Ereaking down the directions into its steps and listing the materials, processes, tools, etc.
- Step 3 Categorizing the word list from Step 2.
- Step 4 An ongoing list to be continually supplied with new words. This will be a Master Classification List for use by you and the Special Educator.

## An Overview to The Hearing Impaired

So you have a hearing impaired student in your vocational education classroom. Don't panic! The student is no different from any of the other students except in one capacity—he can't hear as well. However, with a better understanding of where that hearing impaired student is coming from and what special considerations to utilize when teaching, will enable the vocational instructor to successfully implement his goals and objectives of his vocational field to all students.

## Definitions

- Deaf is one who is born with, or acquires a hearing loss
  so severe that speech and language cannot be learned
  through hearing(auditory channels). A deaf person
  relies heavily on lipreading and manual communication
  (ASL American Sign Language, SEE Sign Exact
  English, etc.).
- 2. Hearing Impaired is one who is born with, or acquires a hearing loss which may range from mild to severe and whose wpeech and language are learned through normal channels. The hearing impaired person utilizes a hearing aid along with lipreading and possibly sign language to supplement his reception.

#### Characteristics

A hearing impaired student is one that may exhibit certain characteristics because of his handicap. Such characteristics are:

- \* actions of the student may seem rude or inappropriate
- \* they may avoid spoken communication by checking things out for themselves rather than asking someone else
- \* they may make unintentional noises
- \* interrupt conversations
- \* speak too loudly or not loudly enough

## Special Considerations

There are some special considerations to consider with a hearing impaired student in your classroom or laboratory. Many of these considerations result in being beneficial to all students in comprehending instructions and materials.

- \* Remain stationary when talking or giving instructions This does not mean that you can't move somewhat, but
  remember that the hearing impaired students relies on
  vision and must see your face.
  - \* Visual Aids are extremely helpful Use overhead projectors which increases the amount of time you are facing the class.

    Captioned films are available in Vocational related areas and are excellent to use since distortion of the sound track can cause difficulty in understanding even for the normal hearing student.
  - \* Speak clearly and use complete sentences so that the individual words can be interpreted in the context of their meaning.
  - \* Utilize written assignments and announcements this is beneficial for hearing students as well!
  - \* Allow breaks for physical activity and short intervals of free time to minimize fatigue and frustration.
  - \* Assign a "hearing buddy" to make an outline or carbon copy of notes, to repeat directions, etc. Buddies could be rotated weekly--great for interaction between the hearing and hearing impaired students.
  - \* Involve the hearing student in all activities it may be necessary to prompt participation by asking him to explain a procedure, etc.
  - \* Do offer guidance in appropriate verbal interactions Is he talking too loud?
    Is he interrupting? Let him know who's talking.

## Special Considerations - cont'd

DON'T1 \* Talk with hands, objects around the face - he must see your face!

- \* Don't screen! Loudness causes distortion which will result in the student not being able to understand what you are saying.
- \* Don't overlook any problems he may be having such as social adjustment, academic performance, etc. Remember that he has a big adjustment too! Any problems may need referral to the special educator or rehabilitative counselor.
- \* Don't underestimate the student's ability to perform -Give him the opportunity by not stereotyping the student into low-level manual tasks or menial jobs.

## Observations

Is the hearing impaired student in your class having counselling services or support services? If so, then some of this problems you may observe in your classroom are in the process of being resolved. However, the resolvent process does not happen overnight and it can be beneficial for you to obtain suggestions from the rehabilitative counselor or special educator in how to help the student overcome his classroom barriers.

If the student is not receiving support services or couselling, there are some observation criteria to be aware:

- \* the hearing impaired student's interaction with his classmates does he have a social adjustment?
- \* his performance in the classroom or laboratory does he have difficulty in following directions?

It may be necessary to refer the student for counseling or for support services(interpreter, etc.).

#### STEP 1

Step 1 consists of writing the directions for a given assignment or process. In this model we used the directions for making Molded Chocolate Mousse in a Food Service Vocational Class.

## Molded Chocolate Mousse

In a small bowl sprinkle 5 teaspoons unflavored gelatin over to cup cold water and let it soften for 10 minutes. In a bowl beat cup sugar with 2 large egg yolks, lightly beaten, until the mixture is thickened and lemon-colored. In a bowl set over simmering water melt 2 ounces unsweetened chocolate. Remove the bowl from the heat, whick in the egg yolk mixture, and combine the mixture well. Add 3/4 cup hot water to the gelatin mixture and stir the mixture until the gelatin is dissolved. Beat the mixture into the chocolate mixture and stir in 1 tablespoon kirsch. Transfer the mixture to a metal bowl, set the bowl in a bowl of crushed ice, and stir the mixture until it is cool and thick but do not let it set. In another bowl beat 3 large egg whites with a pinch each of cream of tartar and salt until they hold soft peaks and fold them gently but thoroughly into the chocolate mixture.

Rinse a 3-cup decorative mold with cold water but do not dry it. Pour in the chocolate mixture, rap the mold sharply on a hard surface to expel any bubbles, and chill it, loosely covered, for at least 2 hours. Run a thin knife around the edge of the mold, dip the mold in warm water for a few seconds, and invert a serving plate over it. Invert the mousse onto the plate and serve it with slightly sweetened whipped cream.

Serves 4 to 6

#### STEP 2

Step 2 involves breaking each step of the directions in Step 1. There are two parts to this step: Each sentence (step) is written with materials, tools, processes, and states underlined the first time it appears. You do not underline words that are repeated (Ex: the word stir may be used several times in the course of the recipe. Underline the first time it is used). The second part is listing those words that are underlined adjacent to its step process.

## Molded Chocolate Mousse

## STEP I

Step I consists of writing the directions for a given assignment or process. In this model we used the directions for making Chocolate Chip Cookies in a Practical Arts Cooking Class.

## Chocolate Chip Cookies

In a bowl sift together 1 cup plus 2 tablespoons all-purpose flour, ½ teaspoon baking sods, ½ teaspoon salt and set aside. Butter cookie sheets. Cream 2 cup butter, preferably unsalted, add 5 tablespoons granulated sugar and 5 tablespoons dark brown sugar, packed. Cream well until fluffy. Beat in 1 egg and ½ teaspoon vanilla extract. Add the flour mixture and stir until well-blended. Stir in one 6-ounce package semi-sweet chocolate bits. Drop by teaspoonfuls (use 2 spoons to make it easier) 1½ - 2 inches apart onto buttered cookie sheets, and bake in a 375\* oven for 10-12 minutes, until lightly browned. Cool on a rack and store in airtight tims. Makes 5-6 dozen.

#### STEP 2

Step 2 involves breaking each step of the directions in Step 1. There are two parts to this step: Each sentence (step) is written with materials, tools, processes, and states underlined the first time it appears. You do not underline words that are repeated (Ex: the word stir may be used several times in the course of the recipe. Underline the first time it is used). The second part is listing those words that are underlined adjacent to its step process.

## SECTION B - Special Educators

## SECTION B

## Special Educators

There is chaos in the classroom! "Help!" screams the vocational educator. You are an expert in your field in understanding handicapped children and their needs. This section deals with the step processes in determining the lipreading ability of words found in Vocational Food Services.

There are 7 steps involved in this section which are summarized as follows:

Step A - Separating words into one syllable, two syllable, etc.

Step B - Grouping words homophenously

Step C - Grouping words by obscurity

Step D - Grouping words by blends

Step E - Categorizing into 5 rules

Rule #1 - Similar Sounding

Rule #2 - Inadequate Visual Cues

Rule #3 - Same Initial Placement

Rule #4 - More Than One Meaning

Rule #5 - Unfamiliar Words

Step F - Tallying the words

Step G - Ranking the words

## An Overview to Lipreading

In lipreading one relies very heavily on vision as a cue of top priority before auditory cues. Articulation of words is not the problem found with poor lipreading ability but rather it lies with the similarities of words in placement, manner and voicing which hampers the person from distinguishing different words of similar value. Many words may have the same initial formation such as beat and meat—but for the hearing impaired person, he may not be able to distinguish the difference of the words by sound. These words are homophenous—meaning that they all take place in the same initial manner within the mouth.

Ex: pat, bat, mat time, dime, nine

There also exists another barrier in lipreading ability in which words can have sounds that are obscured, hidden from vision. Ex: key, gate, camping, There is no visible cue as to what sound is being produced.

One syllable words offer less cues and if used in isolation, no cues are offerred to the lipreader. One can assume that in a list of words—the one syllable words are the most difficult to comprehend unless accompanied with other cues in the form of phrases, sentences.

Two syllable words may cause confusion only when the initial syllable of that word cannot be grasped. This occurs in the initial similarity of words such as simmer and dimmer.

Another consideration to take into account is the familiarity of a word. Hearing impaired people do not acquire a vocabulary as easily as hearing people from an auditory angle. Instead, they rely from associations of words and objects or words and actions, etc. It can be possible for one to decide if a particular word is common in a child's environment. If it is an everyday word—then, most likely a hearing impaired child has had exposure to the word; but, if the word is a specialty word or one used only in a given situation, then it is apt to be outside the child's vocabulary.

What difference does this make? It makes a big difference to the lipreader. It is very difficult for a lipreader to comprehend an unfamiliar word visually just as it is difficult for a hearing person to comprehend an unfamiliar word auditorally. We usually ask, "What as that word?" The hearing impaired person is in the same situation but from a visual aspect.

## Suggestions on Ranking Word Lists According to Lipreading Ability

- STEP A Separate words into lists of one syllable, two syllable, etc.
- STEP B Group words homophenously (the first letter of the words start in similar placement. (Ex: p, b, m and t, d, n, s, and sh, ch, j and k, c(cake), g(gate)).
- STEP C Group words by obscurity (the first letter of the words start with k, c(cake), g (gate) ).
- STEP D Group words by same blends (the first letters are the same such as: bl, br, sl, st, etc.)
- STEP E From the above lists the words should be categorized into the following fules:

## Rule #1 - Words with Similar Sounding

This category in grouping words with similar sounds it is essential that you don't overlook words that are not a perfect match for sound. You can hear the deviations if you possess normal hearing—but, the hearing impaired person may not be able to hear the distinctions. Ex: stir, store or glaze, glass

## Rule #2 - Inadequate Visual Cues

The above examples (stir, store and glaze, glass) can be classified into this category since they both appear similar when produced. Ex: eat, yeast

- Rule #3 Words with Same Initial Placement
  - Ex: meat, beat (they both occur at the lips)
    broil, boil (they both occur at the lips but the
    'r' of broil may be obscured)
- Rule #4 Words with More Than One Meaning
  - Ex: brown (the color or to cook by sauteing)
    cream (a liquid to put in coffee or to mix butter
    and sugar)

## Rule #5 - Unfamiliar Food Terminology or Words

Words can be ranked in this category by utilizing sources of vocabulary norms for deaf children or by determination relative to its complexity or specialty.

#### STEP F - Tally Word List

The words are listed alphabetically and tallied with the rules that apply to that particular word.

- STEP G Words can now be ranked according to the following scale:
  - 5 most barriers to lipreading ability
  - 1 fewer barriers to lipreading ability

\*\*\* In using the foregoing rules you may find that with words with more than one syllable that you will not have as many barriers. Categories such as unfamiliar words and terminology as well as more than one meaning will be the most frequent barriers with these words. The important aspect to lipreading is fewer the barriers, easier the lipreading ability.

## CLASSIFICATIONS OF ONE SYLLABLE WORDS

## 1. Words with similar Sounding

boil broil, oil, foil rice, slice, dice, ice, ripe, spice, whites bake, cake, baste, ate, shake beat, beet, meat, heat, eat, yeast, grease mold, fold, cold bought, pot, hot salt, sauce, saute(may not hear ending) core, pour, store, stir meal, seal, peel cork, pork, fork flour, scour, hour, sour fish, dish grape, grate, scrape pry, fry rare, pare, pear ground, round, pound, brown, mound time, lime, thyme roast, toast, toss place, plate scrub, rub plan, pan glaze, glass chop, shop tea, pea cheese, sheet grill, chill rinse, mince mince, mix sip, dip, whip melt, milk peak, eat, beat pour, pork serve, stir mince, pinch, inch pint, pie whisks, whites mound, pound
