ABSTRACT

Developed during the 1976-77 school year to assist Washington grade 7-8 teachers in small school districts with the . improvement of curriculum and instruction, this learning-objective-based curriculum suggests activities, monitoring procedures and resources for mathematics. Introductory materials describe the organization of Small School materials, relationship to Washington's Student Learning Objectives (SLO) Law, format of the curriculum guide, definitions of format terms, goals for the Washington Common Schools, mathematics program goals and the K-B mathematics curriculum scope. The scope of the grade 7-8 curriculum includes whole numbers (addition, subtraction, multiplication, division and story problems): integers: rational numbers (common fractions, ratios, percentage, proportion and decimals): real numbers: algebraic expression: numeration (number theory, scientific enotation and exponents): geometry (two- and three-dimensional shapes, points, lines, line segments, angles, triangles, circles, perimeter, area, and volume): graphs: probability and statistics; and measurements (time, linear, capacity, weight, temperature and maintenance of English measurement). APPRECIATION

Many educators have been involved in the development of the Small Schools curriculum materials. Of these, Robert Groeschell, now retired from the office of the State Superintendent of Public Instruction, deserves special recognition of his insight, leadership and support in initiating the Small Schools Curriculum Project.

In order to provide assistance to small school districts, a curriculum assessment was conducted by Mr. Groeschell in the spring of 1975. The findings of this assessment pointed out the need for the development of curriculum guidelines to assist small districts in identifying learning objectives and in planning for program implementation. These findings were used to provide the basis for originally funding the Small Schools Curriculum Project.

Mathematics Objectives, Activities, Monitoring Procedures and Resources...... xv

INTRODUCTION

The Small Schools materials were developed through the cooperative efforts of three levels of educational organizations: local, regional and state. Forty primary teachers and ten elementary principals from small districts in Snohomish and Island Counties (Arlington, Darrington, Granite Falls, Lake Stevens, Lakewood, Monroe, Snohomish, Stanwood, Sultan, South Whidbey and Monroe Christian School), developed and sequenced student learning objectives for grades kindergarten through third in five curriculum areas: reading, language arts, mathematics, science and social studies and for grades four through six in three curriculum areas: reading, mathematics and language arts. Suggested activities, monitoring procedures and resources used in teaching the objectives were identified and each student learning objective was correlated to the State Goals for Washington Common Schools and to broad program goals. Educational Service District 109 and the office of the Superintendent of Public Instruction provided technical assistance, organizational leadership and editorial and publication services to the districts. Curriculum specialists from Washington colleges, universities and local school districts also assisted with the development of materials.

On the following pages you will find a portion of the Small Schools Curriculum. Included are student learning objectives, suggested activities, monitoring procedures and resources for Mathematics. These materials were developed during the 1976-77 school year.

ORGANIZATION OF THE SMALL SCHOOLS MATERIALS

Book covers and objective pages for all Small Schools materials have been color-coded for each subject: Reading-green, Language Artsyellow, Mathematics--blue, Social Studies--buff and Science--pink. Following each colored objective page there are several pages which identify activities, resources and monitoring procedures which may be used when teaching to the objectives. See pages viii and ix of this book for more detailed explanation of the format. On those objective pages all objectives for an area of the scope are identified. Within each curriculum book the objectives have been correlated to the Goals for the Washington Common Schools and to the Small Schools Program Goals for that subject area.

RELATIONSHIP TO THE SLO LAW

The purpose of this book and all other Small Schools materials is to assist teachers with the improvement of curriculum and instruction. In addition, it is expected that many smaller districts lacking curriculum personnel will find this book helpful in complying with the SLO Law. (This Law requires districts to identify student learning objectives and to evaluate each student's performance

2

vi

related to the attainment of the objectives.) Contained within this book are many more objectives than any district would choose to identify as their SLO objectives. In order to provide districts with assistance in identifying objectives which might compose their SLO list, selected objectives are marked with an asterisk (*). These objectives have been selected with the understanding that they serve only as a model when.using the Small Schools materials in helping districts to meet the requirements of the SLO Law.

For more information concerning the SLO Law, see the <u>Handbook for School</u> <u>District Implementation of the Student Learning Objectives Law</u> available from the office of the State Superintendent of Public Instruction.

vii

One unique feature of the Small Schools Curriculum is the format arrangement of information on the page. The format was developed in order to facilitate the transportability of the product by allowing districts to personalize the curriculum materials to meet their own educational programs. The Small Schools Format provides a simple arrangement for listing objectives and identifying activities, monitoring procedures and resources used in teaching.

FORMAT

Page One

The first format page lists the sequence of student learning objectives related to a specific area of the curriculum for either reading, language arts, mathematics, science or social studies. For each objective a grade placement has been recommended indicating where each objective should be taught and mastered. The grade recommendation is made with the understanding that it applies to most students and that there will always be some students who require either a longer or shorter time than recommended to master the knowledges, skills and values indicated by the objectives.

Columns at the right of the page have been provided so district personnel. can indicate the grade placement of objectives to coincide with the curriculum materials available in their schools. District personnel may also choose to delete an objective by striking it from the list or add another objective by writing it directly on the sequenced objective page.-

Page Two

On the second format page, one or more objectives from the first format page are rewritten and suggested activities, monitoring procedures and possible resources used in teaching to the objective(s) are identified. The objectives are correlated to the State Goals for Washington Common Schools and to broad K-12 program goals. The suggested grade placement of the objectives and the activities is indicated and, wherever applicable, the relatedness of an objective to other curriculum areas have been shown.

Below is an example of a completed second format page. Teachers and principals in local districts may personalize this page by listing their own resources and by correlating their district goals to the student learning objectives.

DEFINITION OF FORMAT TERMS Small Schools Curriculum Project

<u>Subject</u> indicates a broad course of study. The subject classified the learning into one of the general areas of the curriculum, i.e., reading, mathematics, social studies.

<u>Specific Area</u> indicates a particular learning category contained within the subject. Within the subject of reading there exist several specific areas, i.e., comprehension, study skills, word attack skills.

<u>State Goal</u> indicates a broad term policy statement relating to the education of all students within the State of Washington. In 1972, the State Board of Education adopted 10 State Goals for the Washington Common Schools.

District Goal generally reflects the expectations of the community regarding the kinds of learning that should result from school experience. These goals are employed mainly to inform the citizenry of the broad aims of the school. When district goals are correlated to student learning objectives, community members are able to see how their expectations for schools are translated daily into the teaching/learning process of the classroom.

<u>Program Goals</u> are K-12 goals which do not specify grade placement. These goals provide the basis for generating subgoals or objectives for courses or units of study within a subject area. Program goals are used as a basis for defining the outcomes of an entire area of instruction such as mathematics, language arts or social studies.

Student Learning Objective

٢,

Three major types of learning objectives which have been identified are knowledge, process and value objectives.

Knowledge Student Learning Objectives identify something that is to be known and begins with the words, "The student knows..." Knowledge objectives specify the knowledge a student is expected to learn. These objectives include categories of learning such as specific facts, principals and laws, simple generalizations, similarities and differences, etc.

An example of a Knowledge Student Learning Objective is: "The student knows guide words in a dictionary indicate the first and last words on the page."

Process Student Learning Objectives identify something the student is able to do, and begins with the words, "The student is able to..." These objectives are associated with the rational thinking processes of communication, inquiry, problem solving, production, service and human relationships.

An example of a Process Student Learning Objective is: "The student is able to associate a consonant sound with the letter name."

· · ·

Definition of Format Terms continued

Value Student Learning Objectives identify only the type of values which foster the context of the discipline. These objectives are thought to be most uniformly and consistently approved by society as supporting the major aims of the discipline.

An example of a Value Student Learning Objective is: "The student values reading as a worthwhile leisure time activity."

Suggested Learning Activities describe the behavior of both the teacher and students. The instructional strategies employed by the teacher, as well as the activities undertaken by the students, are included in this section. Each activity includes materials, group size and procedures.

Suggested Monitoring Procedures indicate informal methods for determining the progress a student is making towards the attainment of the objective. These methods include techniques such as teacher observation, student interest and attitude surveys and recording results of classroom instruction.

<u>Possible Learning Resources</u> indicate materials, teacher made or commercially produced, which are needed by both the teacher and students in order to accomplish the learning activities.

* * * * * * * * * * *

Appreciation is extended to Dr. Charles Murray, Superintendent, and the staff of ESD 189 for providing meeting space, equipment and resources which facilitated the development of the Small Schools Curriculum materials.

Additional appreciation is given to the pilot districts and ESDs 171 and 189 for their assistance in field testing and revising the Primary Small Schools Curriculum materials.

SMALL SCHOOLS PROJECT

GOALS FOR THE WASHINGTON COMMON SCHOOLS

- As a result of the process of education, all students should have the basic skills and knowledge necessary to seek information, to present ideas, to listen to and interact with others, and to use judgment and imagination in perceiving and resolving problems.
- 2. As a result of the process of education, all students should understand the elements of their physical and emotional well-being.
- As a result of the process of education, all students should know the basic principles of the American democratic heritage.
- 4. As a result of the process of education, all students should appreciate the wonders of the natural world, human achievements and failures, dreams and capabilities.
- 5. As a result of the process of education, all students should clarify their basic values and develop a commitment to act upon these values within the framework of their rights and responsibilities as participants in the democratic process.
- As a result of the process of education, all students should interact with people of different cultures, races, generations, and life styles with significant rapport.
- 7. As a result of the process of education, all students should participate in social, political, economic and family activities with the confidence that their actions make a difference.
- .8. As a result of the process of education, all students should be prepared for their next career steps.
- 9. As a result of the process of education, all students should use leisure time in positive and satisfying ways.
- 10. As a result of the process of education, all students should be committed to life-long learning and personal growth.

xii

MATHEMATICS PROGRAM GOALS (K-12)

- 1. The student values the study of mathematics for its usefulness and application to everyday life.
- The student develops the ability to communicate with precision and confidence using the vocabulary and symbols unique to mathematics.
- 3. The student develops the concept of number and numeration including counting, place value, reading and writing numbers, various numbering systems, number theory and scientific notation.
- 4. The student develops general mathematical concepts of time-space relationships; equality-inequality; measurement; function; graphs, charts and tables; probability and statistics; and geometry.

5.

- The student develops accuracy in using the computational skills of adding, subtracting, multiplying and dividing.
- 6. The student develops the ability to use problem-solving. techniques.
- 7. The student develops the knowledge and use of the structure of mathematical systems and real numbers.
- 8. The student knows and is able to use the symbols, elements, operations and structure of the following number systems: whole numbers, integers, rational numbers, real numbers and complex numbers.

 Penalties: "Delay of game" ball moves 5 yards backward. Call. next pair of numbers for same student. "Fumble" wrong answer given. Ball goes over to other team at the place it was fumbled. "Interference" talking out of turn15 yards in favor of non-offending team. Student passes the card to the next student in line if he/she answers correctly. If student answers in correctly, the ball goes to the other team and is placed on their corresponding yard line. When ball crosses goal, 6 points are scored for that team. Keep score on chalkboard or overhead. 		
Title:Test Your Math MusclesGroup Size:small groupsMaterials:gameboard, markers, worksheet,Procedure(s):in the state	dents having difficulty.	, , , ,
 One student in the small group does not compete with the others. Instead, he/she chooses the problem to be worked and inserts the card with that problem written on it under the problem holder (see illustration). The answer is written at the bottom of the problem card so that it is visible when the flap with the Muscle Man picture is lifted. The problem is concealed from the others until the selector says go. The other students solve the problem. They may or may not copy the problem. As the students finish, they put their pencils down and place their writing hand on top of their heads. The first player to finish correctly advances one space toward ringing the bell. 	TEST YOUR MATH AN	\mathbf{h}

		Program Goal 5, 8
Related Area(s)		
Suggested Activities: Grade(s) <u>7-8</u>	Suggested Monitoring Procedures	Possible Resources
Title: Basic Facts Solitaire Group Size: individuals Materials: deck of cards consisting of multiplication facts		•
 Procedure(s): Each deck consists of matching pairs of phrase and answer cards. For example, 7 x 8 and 56 make a multiplication fact pair. The difficulty of the game depends on (1) the difficulty of the facts and (2) the number of pairs of phrase and answer cards in the deck. This may vary from ten to 25 	·	,
pairs.Phrase cards are printed in red and answer cards are printed in black.A matching pair consists of a phrase card (red),		6
and answer card (black). Player shuffles cards and turns the first two cards face up. If these cards are a matching pair, player then covers them by placing the next two cards face up on top of the first two cards.	· · ·	District Resources
 If no pair is showing, the player turns up two more cards so that he/she has four face-up cards showing. Once again. he/she examines them for matching pairs, covering any pairs that are show- ing as before. The play continues with the player turning up two cards at a time whenever no more pairs are showing 	•	
on the cards that were already turned up. . When all cards have been played, the player picks up stacks of cards by pairs: she/he picks up each pair of stacks whose top cards form a matching ERIC 42	-15-	43

-

		-
	Suggested Monitoring Procedures	Possible Resources
pair. If player has not made a mistake, he/she will be able to pick up all of the cards in this manner. Note:		
 The player who recognizes all of the matching pairs as they are turned up will generally need to make fewer stacks of cards than a player who overlooks some of the matching pairs. Two or more players may have a contest to see who needs the fewest stacks to complete the game. Example: 		
phase card 8 x 7 56 answer card	• • •	
۶ <u>۲</u> × 8 <u>۶</u>	4.

Title: Integer Rummy -	Observation of the activity.	District adopted text
<u>Group Size</u> : small group <u>Materials</u> : 64 cards (30 negative integers, 1-10; 30 positive integers,	н.	
1-10; 4 zero cards), score card.		;
Procedure(s): Dealer shuffles cards and gives each player seven cards, remaining cards stacked face down in center of the table. Turn top card face up on the		
table to form "draw" pile. . Player on the left of dealer starts play by picking up card that is face up or drawing top card from		
stack. When player has a "run" (at least three consecutive negative or positive integers) he/she puts them on the table and marks 1 point on score card for each		District Resources
card in run. (Three points for a run of three). Player can receive double points for run it his/her run <u>cancels</u> one of the other players. Example:	· . ,	
Player A has a run consisting of -3, -4, -5 on the table. Player B gets double or 6 points if he puts down a run of 3, 4, 5.		
. Game ends when player has played all his/her cards and has only one card to discard; however, the last card discarded must be a "zero" card.		
 Player to go out first receives five points. Shuffle cards and repeat, first player with 50 points is the winner.

SMALL SCHOOS PROJECT - Working Copy.	Suggested Objective	Placement 7-8
Student Learning Objective(s) <u>A. The student knows any i</u>	nteger is either positive, negativ	e or zero. State Goal 1
B. The student is able to add integers. Example: (-6)	+(-3) = -9. C. The student is ab	le to District Goal
subtract integers. Example: (-7) - (-2) = 5.	<u>.</u>	Program Goal 2,7,8
Related Area(s)		·
Suggested Activities: Grade(s) 7-8	Suggested Monitoring	Possible Resources
	Procedures	
<u>Title</u> : Adding and Subtracting Integers with Living Models	Observation of the activity.	District adopted text.
<u>Group Size</u> : entire class or small group <u>Materials</u> : chalk or buy an adhesive number line for the floor		5
<pre>Procedure(s): Draw a number line on the floor. Begin by having a student locate an integer on the number line.</pre>		
Add another integer of the same sign to it by having a student walk off the correct number of units in the correct direction.		
 Then add integers of different signs by reversing direction of travel. To illustrate subtraction have two students stand 		
on the integers that are given and find the difference by counting the units they are apart. Does the order of subtraction make a difference?		District Resources
Title: Integer Relay	Observation of the activity.	
Group Size: entire class (two teams) <u>Materials</u> : index cards with positive and negative integers on them.		
<pre>Procedure(s): Form two teams and give each a stack of integer</pre>		
cards. . The first player picks two cards and adds them to- gether on the board.		
 He/she then tags the next member who picks a card, adds it to the previous sum, etc. Give the lst team to finish, 3 points. 	-53-	₹ <u>4</u>

SMALL SCHOOL ROJECT - Working Copy	Suggested Objective	
Student Learning Objective(s) <u>A. The student knows any</u>		
B. The student is able to find fractions that are equiva	lent to given fractions.	District Goal
		Program Goal 3,5,8
Related Area(s)		<u></u>
Suggested Activities: Grade(s)	Suggested Monitoring Procedures	Possible Resources
Title:Equivalence RelayGroup Size:entire classMaterials:paper, pencilProcedure(s): The teacher divides the room into teams of any size	Observation of activity.	District adopted text
 Incorrections divides the floor fits teams of any size larger than five. The teacher gives to the first member of each team, the same fraction. At a given signal, the first person on each team writes down an equivalent fraction on a blank sheet 		
of paper and passes it to the next person on his/her team. That person writes down another equivalent fraction and passes it to the next person. . The process is repeated until the final team member is finished.		,
 The first team to have its final member obtain a fraction equivalent to the first fraction wins that round. The first team to win a given number of rounds wins the game. 		District Resources
Example: "A" Team 1st person $1/2 = 2/4$ 2nd person $2/4 = 4/8$ 3rd person $4/8 = 8/16$ 4th person $8/16 = 12/24$		
etc.		۰.

<u>Procedure(s):</u> . Each row will be a team with the first person in each designated to be the captain.	Teacher observes to make sure all 'students are doing problems.	
. The teacher will give five problems, one for the second person, third person, fourth person, etc. in each row.	· ·	
<ul> <li>The captain does not receive a problem.</li> <li>The class works their problems. When they are completed, they pass their answers forward to the captain.</li> </ul>	•.	
. The captain adds all the answers together and puts his/her answer on the board.		
. The first team with the correct answer wins that round.		District Resources
. The first team to win a designated number of rounds wins the game.		е на
NOTE: The captain should be someone who has already mastered this type of problem being concen- trated on that day.		· · · ·
Example: 1. $4 \div 1\frac{1}{2} = 2\frac{2}{3}$ 6. $4\frac{1}{2} \div 5 = \frac{9}{10}$		•
2. $8 \div 1\frac{3}{5} = 5$ 7. $4\frac{1}{2} \div 2\frac{1}{2} = 1\frac{4}{5}$		
3. $14 \div 2\frac{1}{2} = 5\frac{3}{5}$ 8. $7\frac{1}{5} \div \frac{1}{5} = 36$	,	
4. $2\frac{1}{2} \div 8 = \frac{5}{16}$ 9. $8\frac{1}{4} \div 2\frac{2}{3} = 3\frac{3}{32}$	-95-	•
$\frac{103}{\text{ERIC}} 9 = \frac{3}{8}  10.  6\frac{1}{3} \div 2\frac{1}{2} = 2\frac{8}{15}$		109

Title:Ratio RaceGroup Size:small groups (up to eight each)Materials:worksheetProcedure(s):. Each player choses a letter from B - I When one player says "GO", both players look for the path of equal ratios from the circled letter at the top to a circle at the bottom The winner is the player who draws his/her path and puts the letter in the circle at the bottom first Path A has been drawn for you. All of the ratios in path A are equal. You can tell that this is so by using the cross products test.Example: $\frac{6}{10}$ is a true proportion since $\frac{10}{15}$ 6x15 = 9x10 Also, the simplest fraction form should be indicated by circling.(See back of page for worksheet.)	Independent project or teacher can check results.	<u>Program</u> , 815 Fourt 98109, 19	Seattle Mathem Seattle Public th North, Seattl 75 Resources	Schools

ggested Activities: Grade(s) <u>7 - 8</u>	Suggested Monitoring Procedures	Possible Resources
Title: Algebraic Expressions	Teacher observation.	Krulik, Stephen, <u>A</u> Handbook
Group Size: small group Materials: 16 small index cards, each	· •	of Aids for Teaching Junior
<u>Materials</u> : 16 small index cards, each card containing a basic phrase		<u>Senior High School Mathemat</u> W. B. Saunders Co., 1971,
Examples:		pages 45-47.
. p multiplied by five		
. one-fifth of p	•	A
. the product of seven and m . m divided by five		
. eight multiplied by a		
. a divided by eight		
. twice an unknown quantity, n		
. an unknown quantity, n, divided by 2		
ocedure(s):		
. The small group is divided into two teams.		District Resources
. The cards are shuffled and placed face down.		
. Players from each team play in turn. . One card is turned over at a time, the basic phrase	,	
is read aloud and the algebraic expression is		1
given orally or written on the chalkboard.	3	
. For example, if the basic phrase is "p multiplied by 5" the student responds orally or in written	•	<b>N</b>
form on the chalkboard"5p. "	14 1	,
. If the team member responds correctly the basic		
phrase card is kept.		
. If the team member responds incorrectly the basic	<b>N</b>	
phrase card is placed in a discard pile. . The winner is the team with the most cards after	<b>.</b>	•
all the cards have been played.

Title:Number CodeGroup Size:individual, entire classMaterials:number code sheet, directionsheet	Quiz with two step equation. Students are to use addition and multiplication principles to solve the problems.	District adopted text.
. Have students solve two step equations and use answers to answer "number codes questions." <u>Direction Sheet:</u> Solve the following two step equations. Circle the answer in the right spot on the number code sheet and connect each circle with a straight lin in order to make a letter. In this case three letters will make a word.	ne

Student Learning Objective(s) A. The student knows wh	hole numbers are	either even or odd. I	3. The	State Goai	1
student knows a prime number is a number divisible i	by 1 and itself o	nly. C. The student i	is able to	District Goal	
find the primes less than 100. D. The student value	es numbers as a n	atural phenomenon and	not man-made	Program Goal	1,2,8
Related Area(s) E. The student values numerals as the	e symbols we use	to represent numbers.			

Suggested Activities: Grade(s) <u>7-8</u>	Suggested Monitoring Procedures	Possible Resources				
Title:Sieve of EratosthenesGroupSize:entire classMaterials:pencil, graph paper		District adopted text.				
Procedure(s):						
. Explain to students that the Greek mathematician						
Eratosthenes discovered a way of finding prime						
numbers around 200 B.C. It is called the Sieve						
of Eratosthenes and can be made by following the						
steps below:						
. Students wake a chart from 1-100 on graph paper. . Cross out #1 (1 is not a prime).						
. Circle #2, then cross out all multiples of 2.						
. Circle #3, then cross out all multiples of 3.	,					
. Circle #5, then cross out all multiples of 5.		. •				
. Circle \$7, then cross out all multiples of 7.						
. Circle all remaining numbers.		District Resources				
. They are all prime.						
Example:	· · · ·

Title:Euclid's Method of Finding G.C.F.Group Size:entire class materials:Paper. pencilProcedure(s):. Give two fairly large toolders to the class The first person in each row works the first step in Euclid's Method and hands the paper back to the next person The second person works the second step and passes the paper back The paper is continually being passed until someone finds the G.C.F. of the two original numbers. Note: In Euclid's Method divide the larger number by the smaller one first, then divide the divisor by the remainder, repeating this process until the 		District adopted text. <u>SEA MATH: Seattle Mathematics</u> <u>Program</u> Seattle Public Schools 815 Fourth North Seattle, Wn. 98109 1975 <u>District Resources</u>

#### THE DO-IT-YOURSELF PROTRACTOR

The <u>unit angle</u> for the scale that is around this "card" was chosen so that the measure of a right angle is 6.

You can use this scale to make your own protractor.

- 1. Use a file card. Mark the center of the bottom edge of your card.
- Place your card so that the bottom edge and center mark is on top of the bottom edge and center mark of this "card."
- 3. Mark the other edges of your card at the points where they meet the unit angle markings.
- Connect each of these points to the center of the bottom edge.

. Label your protractor scale to show the number of unit angles. The scale may be labeled from right to left (as shown), left to right, or both ways.

<u>Materials</u>: two tagboard strips; brass fastener; paper punch; the "Do-it-Yourself" protractor.

- 1. Punch a small hole in one end of each strip. Attach them to each other with the fastener.
- Spread the strips apart to make a right angle. Make angles that are larger than a right angle. Make angles that are smaller than right angles.
- 3. Make an angle that is larger than a right angle. Estimate the measure of the angle in your protractor units. Use your protractor to check the estimate.
- 4. Make other angles. Estimate and then measure in each case.

udent Learning Objective(s) <u>A</u> . The student knows an a	angle is the union of two rays	with a	_ State Goal
common endpoint. B. The student is able to bisect any	angle.		District Goal

6-8

Student Learning Objective(s) <u>A. The student knows that</u>	probability is expressed in ratios	which is a State Goal 1
Comparison. B. The student knows the probability of an	event can be expressed as a fraction	n (common) District Coal
or a per cent. C. The student knows that probability is	the number of desired outcomes com	pared to
the number of possible outcomes. Example: The probabil	ity of heads up if a coin is flipped	Program Goal 1,4
Number desired: 1 (heads). Number possible: 2 (heads	or tails). Probability is 1/2 or 50	)%. D. The
student is able to find the probability of an event.		
Suggested Activities: Grade(s) 7-8	Suggested Monitoring Procedures	Possible Resources
<u>Title:</u> Probability Puzzle <u>Group Size:</u> small groups of two or more	Give students a matching exercise using a ratio or fraction match-	District adopted text.

using a ratio or fraction match-

a. 40%

c. 50%

d. 25%

e. 20%

f. 65% g. 75%

b. 33 1/3%

ed to a per cent, i.e.

1/2

1/4

3/4

1/3

2/5

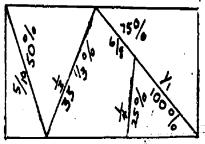

5/8

Procedure(s):

Materials:

. Have each student make a design like the one below. Each segment in the design should have a probability expressed as a fraction or ratio on one side and its per cent on the other side.

paper, ruler, scissors

. Cut apart the design to make a puzzle.

. Have students trade puzzles and try to put them back together by matching probability fraction or ratio and its per cent.

<u>Title:</u>	Probability Flip		
Group Size:	small groups of four to six		
Materials:	one coin for each student, one		
	die per group		

Procedure(s):

- . Have the students flip the coin 100 times and keep data on the number of heads and tails.
- . Have the students roll the die 100 times and keep data on the number of 1's, 2's, 3's, 4's, 5's and 6's rolled.
