ABSTRACT

Teachers can take on the additional responsibility of inservice leadership and can be trained in the processes of curriculum development. Through implementation of those procedures, teachers can initiate an ongoing system of needs-based inservice education. Steps in initiating this process include: (1) Teachers take the major responsibility for identification of needs and strengths and inservice planning; (2) Once needs have been identified, goals and objectives are specified; (3) When goals and objectives have been specified, a validation process allows individuals affected by the inservice process to clarify their needs--an important step in collaborative planning; (4) After teachers validate goals and objectives, they begin to design and develop inservice activities that address specified needs and goals; (5) After activities have been developed, inservice programs are delivered by the designer or by teachers who are proficient at delivery; and (6) Teachers, through evaluating their students' performance and through completing evaluation forms regarding inservice programs they have attended, are capable of sound evaluation of the program they have developed. ## Abstract

Recent literature suggests that effective inservice education is a teacher-directed, continual process of professional development. To explore the feasibility of this concept, teams of special and vocational educators were trained to design, develop, and deliver inservice education. Evaluative data collected from the teams and their audiences, and project staff observations and experiences, indicate that teachers, with some difficulty, can adopt the additional responsibility of inservice leadership. This suggests a method for providing school systems a lasting resource in teachers able to assess and meet their inservice training needs, thereby creating an ongoing process of professional development.

## TEACHING TEACHERS TO TEACH TEACHERS

### THE FIRST PHASE OF A NEW APPROACH TO INSERVICE EDUCATION

#### Need for Improved Inservice Practices

##### Need for Inservice

The need for continuous professional development is recognized today in many professions. Large insurance companies have staff development directors, management consulting firms offer a wide range of courses for business people, medical doctors read journals and take courses, and teachers have inservice education<sup>1</sup>. In Inservice Education: Priority for the '80s, Johnson (1980) discusses the various factors that make inservice education for teachers particularly important in today's world.

##### Need for Improved Inservice Practices

The literature on inservice education abounds with criticisms of inservice practice, and inservice, in general, has a poor reputation among teachers. It is clearly worthwhile for those who seek to facilitate the inservice aspect of teacher preparation to do so through improved inservice practices as well as through delivery of appropriate content.

<sup>1</sup> The terms inservice education, inservice training, staff development, professional development, professional growth activities, and others are used interchangeably by some authors and with specific meanings by others. We use the terms inservice education and professional development interchangeably for variety. We use the terms broadly, to indicate learning activities undertaken by or presented to incumbent teachers to enhance or foster their professional growth.

## Guidelines for Effective Inservice Education

Although there are methodological and reporting problems in many research reviews and in original research (see Cruickshank, Lorish, and Thompson, 1979 for a discussion of some of the problems), the lack of well supported empirical evidence regarding inservice education leaves us with this literature as perhaps the best source of direction regarding effective inservice practices. Some confidence can be placed in guidelines extracted from these analyses for two reasons:

1. The guidelines extracted by different reviewers from different sources tend to be similar and not contradictory.
2. The guidelines tend to be consistent with theories of adult learning and educational change.

Still, we must be cautious, for at best the available evidence suggests that certain practices are associated with, rather than cause, effective inservice. The theories add support to the notion that those practices may indeed be causal factors in effective inservice programs, but they do not support a conclusion that the guidelines are necessary for the establishment of effective inservice programs.

Before proceeding with a set of guidelines on which to base inservice practices, we must clarify just what an effective inservice program is. Typically, the literature uses one or more of the following criteria to define an effective inservice program:

1. it causes or is associated with desired pupil change
2. it causes or is associated with desired teacher change
3. it is rated positively on a number of factors by the audience (e.g., speaker's knowledge of subject).

Many authors promote pupil change as the ultimate criterion of effective inservice programs, although many accept some kinds

of teacher change--such as making the teacher's job easier--as worthwhile even if the teacher change does not directly lead to pupil change. In other cases, teacher change is used as a criterion because it is assumed to lead to pupil change and is easier to measure. Explicit reasons for using audience opinion as a criterion often are not stated. However, it is reasonable to assume that adults will not learn much from programs they don't like because they are unlikely to attend to information being presented or to become involved in scheduled learning activities (cf. Rosenshine and Berliner, 1978).

With the caution that audience appreciation is only one important factor in determining the effectiveness of an inservice program, we will accept it as a minimum criterion. It is important to obtain evidence that audience appreciation leads to teacher change, and that the teacher change is desirable for its own sake or because it leads to desired pupil change. Lacking that evidence, there should at least be strong supporting theory. Unfortunately, when the evidence is not available, the theory is often assumed rather than explicitly stated.

The guidelines for effective inservice presented in Table 1 can serve as theory to direct development of inservice practices. They were extracted from a variety of sources, both reviews of research and reports of original research. The criteria for effective inservice programs were not always specified in the sources, however the guidelines we chose are consistent with theories of adult learning (Knowles, 1978) and appear to be likely to lead to teacher approval of inservice programs and to teacher change.

TABLE 1

GUIDELINES FOR IMPROVED INSERVICE PRACTICES<sup>2</sup>

1. Inservice education programs should be an integral part of the education agency and should receive the explicit support of the administration.
2. Inservice education programs should be collaboratively planned by all those affected (the inservice audience, administration, and providers).
3. Inservice education programs should be based on an assessment of the needs and strengths of the inservice audience.
4. Inservice education programs should have explicit goals and objectives.
5. Inservice education programs should offer a variety of learning activities, including individualized activities, to accommodate individual learning styles of audience members.
6. Inservice providers should be selected for their competence in meeting the needs of the intended audience. Teachers are often competent in meeting their own needs.
7. Inservice education programs should be evaluated by those affected, and evaluation results should be used to assist in planning and implementing ongoing inservice education programs.

---

<sup>2</sup>These guidelines were developed from the following reviews: Skrtic, Knowlton, and Clark, 1979; Skrtic, Clark, and Bolland, 1980; and Hutson, 1979. These reviews included, among other sources, the following: Lawrence, Baker, Elzie, and Hansen, 1974; Edelfelt, 1977; the Rand Change Agent Study (Berman and McLaughlin, 1975 and 1978; McLaughlin and Marsh, 1978); the Inservice Teacher Education Reports (Joyce, Howey, Yarger, Hill, Waterman, Vance, Parker, and Baker, 1976; Joyce, McNair, Diaz, McKibbin, Waterman, and Baker, 1976; Nicholson, Joyce, Parker, and Waterman, 1976; Yarger, Boyer, Howey, Weil, Pais, Warnat, Bhaerman, Duke, Darland, Joyce, and Hill, 1976; Brandt, Mesa, Nelson, Marsh, Rubin, Ashworth, Brizzi, Whiteman, Joyce, Howey, and Boyer with Vance, 1976) a survey by a task force of the National Inservice Network (1980); and texts and articles on adult learning and educational change.

## A Curriculum Development Approach to Inservice Education

One way to meet these guidelines is to, with administrative support, involve teachers in an ongoing system of inservice curriculum development and implementation. Once administrative support has been obtained, teachers can be trained in the processes of curriculum development<sup>3</sup>, and through implementation of those processes, an ongoing system of needs-based inservice education can be initiated. Skilled teachers and supportive administrators can then maintain the system. The following paragraphs will describe how the guidelines can be met through the processes.

Identification of needs. The first stage of curriculum development is identification of needs. Guidelines 2 and 3 suggest that inservice planning should be a collaborative effort of all affected and that programs should be based on an assessment of the needs and strengths of those who are to be the audience. In most cases, teachers will be the most affected by inservice programs, and they will form the bulk of the audience. It is therefore reasonable for teachers to take major responsibility for identification of needs and strengths and inservice planning. They can be taught to use needs assessment strategies that will also tap the perceptions of administrators, support staff, parents, and even students as appropriate.

Specification of goals and objectives. Once needs have been identified, goals and objectives are specified. This curriculum development stage obviously meets guideline 4 and helps to meet guideline 1.

---

<sup>3</sup>Teachers of course have some of the skills of curriculum development, but in general they tend to be users of rather than developers of curricula. Although several packaged inservice programs and sessions exist, there is no inservice curriculum for teachers to review, modify, and use.

If goals and objectives are written for all the needs identified, they can form the basis for an ongoing collaborative system of professional development. Analysis of needs, strengths, goals, and objectives can reveal a picture of schoolwide needs and suggest appropriate audiences and planners for programs to meet those needs.

Validation. For several reasons, after goals and objectives have been specified, a validation process should occur. When teachers analyze needs assessment results, they will order the needs according to apparent priority and write goals and objectives they believe will meet those needs. The validation process requires the respondents to the initial needs assessment to consider both the priority listing and the specified goals and objectives. They may register disagreement with the priority listing and/or with the goals and objectives. The validation process aids in meeting the first four guidelines by allowing individuals affected by the inservice process to clarify their needs, an important step in collaborative planning.

Design and development of inservice activities. After teachers validate goals and objectives, they can begin to design and develop inservice activities. Teachers, of course, are trained to design and develop learning activities for their students in their own subject areas. For many inservice needs, there will be teachers with the requisite content expertise to fill those needs. Therefore, if teachers are taught principles of adult education, they will be ready to design and develop inservice activities that address the specified goals and objectives. When they do not have the expertise, they can research the subject or collaborate in designing and developing the program with someone who does. They will at least be able to explicitly specify

their needs. Thus, this curriculum development stage aids in meeting guidelines 2 and 5.

Delivery of inservice programs. Inservice programs are delivered after activities have been developed. This stage provides an inservice program for an initial audience and serves as a field test of programs that may be delivered to other audiences. The teachers who designed and developed the activities may be best suited to deliver the program. Some teachers may be more proficient at design and development than delivery and if so, someone else may be selected to deliver a program. When possible and appropriate, this can be another teacher who has been involved in the planning process from the beginning. In some cases a provider may be selected from outside the school system. In any case, when the individuals who have assessed needs and planned programs select inservice providers, they are bound to select competent providers, because they will know precisely what they are seeking. Thus, guideline 6 is met.

Evaluation. The final stage of curriculum development, evaluation, feeds into the initial process of needs identification. Teachers already have some background in evaluation, through evaluating their students' performance and through completing evaluation forms regarding inservice programs they have attended. Instruction in purposes for and methods of evaluation will enable them to design and implement multiple evaluation strategies that will provide them information regarding the effectiveness of their inservice programs. They can then use such information to help them decide: (a) what aspects of their programs are effective and should be continued, (b) what aspects need to be changed, and (c) whether further programs are needed on some topics. This final process of curriculum development meets guideline 6.

## Implementation of Guidelines for Effective Inservice

"Training Educators to Design, Develop, and Deliver Inservice Education" is a three-year project based in the University of Kansas Department of Special Education and funded by the Office of Special Education. Its major purpose is to prepare special and vocational educators to meet the career/vocational education needs of handicapped students. The vehicle for this teacher preparation is the facilitation of improved inservice practices. The guidelines for effective inservice were followed in designing the project. The project proposal was written in 1978, however, ongoing needs assessment and evaluation are vital aspects of the project, and thus the guidelines we follow have been updated since the original proposal was written.

After planning meetings and conversations with several special and vocational administrators in Kansas communities, agreement was reached with administrators from three sites. Two sites consisted of special education cooperatives and Area Vocational Technical Schools and the other was a large school district and its Area Vocational Technical School. Administrators agreed to grant released time for inservice team members and to schedule the inservice programs.

Teams of teachers were selected from each site. Each team included at least one vocational instructor, one special education teacher, and one teacher with a role in both areas, such as a work study coordinator for special needs students. Each team comprised three to five teachers.

A graduate level course was conducted in a central location to teach the teams the initial stages of curriculum development. Follow-

ing instruction in needs assessment, goal and objective writing, and validation, the teams implemented each stage in their own schools.

A second graduate course was conducted during the summer on the University of Kansas campus. The teams learned principles of inservice design, development, delivery, and evaluation. While on campus they designed their inservice programs, practiced delivery, and designed evaluation strategies.

In the fall, the teams delivered their inservice programs<sup>4</sup>. All addressed an area of career/vocational education for handicapped students. For example, one focused on tips for teaching special students and another on safety considerations in the vocational classroom. Several were preceded by and were followed up with staff newsletter articles. Some were delivered to joint audiences of special and vocational educators and some to one or the other.

---

<sup>4</sup> The next phase of the project will be an Outreach Phase in which the original teams of teachers will train new teams of teachers from their own and nearby education agencies. This phase has four purposes:

1. It will institute a multiplier effect so that more LEAs will have the benefits of teacher led inservice programs.
2. It will reinforce the inservice curriculum development skills of the original teams (through their teaching of the inservice curriculum development process to others).
3. It will reinforce the institutionalization of ongoing teacher led professional development in the original LEAs as new teams continue the process.
4. It will add to the pool of packaged inservice programs designed and developed for teachers by teachers.

## Conclusions

In our experience with the project thus far we have reached several conclusions we hope may help others who wish to improve inservice practices through facilitating teacher involvement. These conclusions were reached from the following sources:

1. Knowledge tests completed by project participants
2. Project staff observations and experiences throughout the project
3. Formative evaluations completed by project participants
4. Formative evaluations completed by inservice audiences
5. Solicited and unsolicited comments from various involved individuals, e.g. administrators, site contact persons, project advisors<sup>5</sup>.

The conclusions are presented on the following pages as hypotheses, with each hypothesis accompanied by its justification, conclusions and evidence, and recommendations and remaining questions. This represents a "reconstructed logic" (Kaplan, 1964) because although some of the hypotheses were evident from the beginning of the project, others became clear to us as we gained experience with the project. Besides providing advice to those who may wish to replicate some aspects of our project, we hope these conclusions may provide direction for further inservice research.

---

<sup>5</sup> The appendix includes further details on the evaluation strategies used and data collected.

Hypothesis 1: Some teachers can learn to design, develop, and deliver inservice education programs.

Justification. By virtue of their preparation to be and their experience as teachers, many teachers have many of the basic skills necessary to develop and implement an inservice curriculum. The inservice literature suggests teachers want to be and should be involved in all aspects of their professional development. Therefore, following training in areas of inservice curriculum development and implementation where they lack knowledge and experience, teachers should be able to design, develop, and deliver inservice education.

Conclusions and evidence. Some teachers can learn to design, develop, and deliver inservice education. Some teachers are better at certain aspects than others, however.

1. Comparison of pretests and posttests indicates that teachers did not begin with sufficient knowledge to develop and implement an inservice curriculum. However, all teachers involved gained sufficient knowledge to at least contribute to the design, development, and delivery of an inservice program.
2. Teachers' comments on formative evaluations indicated they were confident they were learning skills that would enable them to design, develop, and deliver inservice programs. Degree of confidence varied with the individual teacher and over time, but in general, more and more teachers became more and more confident as the project progressed.
3. Teachers did design, develop, and deliver inservice education programs. Audience responses were largely positive. Project staff who observed the inservice programs were pleased with the teachers' performances, as were administrators. One administrator commented that the inservice was the best he had seen in the fourteen years he had been at the school.

Recommendations and remaining questions. More teachers should be trained to design, develop, and deliver inservice education. In this way, individual teachers can assume the inservice tasks they do best and let other teachers accomplish other inservice tasks. Further, teachers who know how to design, develop, and deliver inservice programs may be better inservice consumers. This suggests that instruction in aspects of inservice curriculum development should be offered at the preservice level. Investigation into the characteristics that can predict which teachers will best be able to accomplish certain inservice tasks should be initiated.

Hypotheses 2: Teachers who volunteer to become part of an inservice team, who are recognized peer leaders, and who exhibit above average teaching ability will make effective inservice team members.

Justification. In order for teachers to be responsible for their own inservice education, they must commit personal time to inservice curriculum development. If they were to receive a great deal of released time, they would no longer be full-time teachers and some of the advantages of teacher-based inservice would be lost. It is reasonable to expect that teachers who volunteer to be part of the team will be willing to commit their time.

Although the literature on adult learning suggests that effective teaching of adults differs in several respects from traditional teaching of children, it is reasonable to expect that those teachers known for their ability to teach children will be able to teach adults. In addition, those individuals may have greater expertise in the areas for which their colleagues express a need for inservice education. This will facilitate the development of inservice activities.

It is likely that an audience of teachers will respond favorably, initially, to an inservice provider they know as a leader. This will enable the provider to concentrate on matters other than gaining audience attention and acceptance in the first teacher-led inservice program.

Conclusions and evidence. Although it was our intention to choose team members who volunteered and met the other selection criteria, many administrators insisted on selecting participants. In instances where teachers did volunteer, there were not enough to institute a thorough selection process. In addition, in some of our sites, it is not likely that the teachers with the greatest teaching ability would measure up to the "best" teachers in other sites. We do know that we spent more time than we intended "selling" the project concept to the team members, that some of the team members were not well respected by their peers, and that several team members complained about the amount of time they had to devote to the project. On the other hand, each team did successfully design, develop, and deliver inservice programs. Further, one of our contacts in a site told us the teachers who began without the respect of their peers were gaining in acceptance.

Recommendations and remaining questions. We are pressing harder in Phase II (see footnote 4) for team members to volunteer and to meet our selection criteria. Many administrators, however, still want to select participants. So, if administrators insist on selecting team members, extra time should be allowed to build team members' commitment. Care should be taken during training and assignment of inservice tasks so that the inservice curriculum development and implementation process does not suffer from team members who are better suited to particular tasks than others. Research is needed regarding the following question: What characteristics of a classroom teacher predict that teacher's inservice leadership potential and how can administrators be persuaded to choose team members accordingly?

Hypothesis 3: Teachers will design inservice programs that incorporate multiple learning activities.

Justification. A typical complaint of teachers regarding inservice programs is that they are often strictly lecture and therefore boring. They often state the need for more "hands on" experiences. It seems reasonable to expect, then, that in designing inservice programs, teachers would avoid lectures. In addition, our guidelines for effective inservice suggest that a variety of learning activities is appropriate, and therefore that was something we stressed in our training sessions on inservice design and development.

Conclusions and evidence. Although our teams voiced disapproval of long lectures, the inservice programs they designed revolved around lectures. Some included warm-up activities, films, and tours, but these were all discrete activities rather than multiple activities geared toward one purpose.

Recommendations and remaining questions. Apparently single rather than multiple learning activities are easier to design, develop, and deliver. Sometimes, a lecture may be the most appropriate learning activity: if knowledge of a subject is low and time is short, for example. If teachers are to design multiple learning activities, perhaps they need even more encouragement and examples, and the inservice schedule should allow more than just a couple of hours. Alternatively, if single activities are chosen, the reason should be explained to the audience.

Hypothesis 4: Inservice programs planned and delivered by teachers will lead to teacher change, which will lead to pupil change when appropriate.

Justification. Teachers will conduct thorough needs assessments to identify the inservice training their colleagues need. Because of their similar perspectives, they will be able to design programs at the appropriate content level. This makes it likely that teachers will be able to learn what they need. In addition, their colleagues (the inservice leaders) will be available to aid them in making changes based on the inservice program. This teacher change should, in turn, lead to pupil change when pupil change is the goal.

Conclusions and evidence. Many members of the inservice audiences have indicated plans to implement suggestions they obtained from the inservice programs. Of course this is not solid evidence that they will, but it is an important first step. Unfortunately, many of the assessed needs were so great that one or two inservice sessions cannot be expected to completely fulfill them. More sessions will be needed before the expected teacher change can be great enough to lead to measurable pupil change.

Recommendations and remaining questions. Teachers should be involved in designing inservice programs because they are able to specify the appropriate content level. If they do not actually design and develop the program, they should work closely with those who do. When needs are great, immediate teacher and pupil change should not be expected. Rather, the necessary inservice should be planned in sequence, with appropriate evaluation at each step, so that eventually demonstrable pupil change will occur. Methods of documenting teacher and pupil change that are valid and yet minimally time consuming should be explored.

Hypothesis 5: Teachers will appreciate inservice programs planned and delivered by their peers more than those planned and delivered by others.

Justification. In response to questions about the best inservice providers, teachers often state that providers should be individuals with classroom experience, rather than "ivory tower intellectuals." Frequently teachers indicate that either inservice providers did not present anything new, did not present anything useful, or did not present enough information to be practically applicable. Teachers clearly do have classroom experience and should, especially following a needs assessment; have an accurate grasp of the amount and level of information their colleagues need, because those needs will be similar to their own.

Conclusions and evidence. Most teachers did appreciate the inservice programs planned and delivered by their peers as much as or more than those planned and delivered by others. In response to an open-ended question about the best aspects of a program, one teacher indicated that it was nice to know there were teachers in her building to whom she could go for advice. Many teachers who indicated that the teacher-led programs were "about the same" as other inservice programs they had attended said that the other programs were also very good. Most teachers who indicated that teacher-led programs were worse than other programs had several negative comments that were irrelevant to the teacher-led aspects of the programs (for example they were forced to attend because of their contract; they did not want to attend past school hours, but that was the only time their contracts allowed).

Recommendations and remaining questions. Because the majority of teachers exposed to teacher planned and delivered inservice programs appreciate those programs, teachers should be given responsibilities for their own professional development. It is reasonable to expect teachers will benefit more from programs they appreciate. Teacher-led programs are not the only programs teachers appreciate, so further investigation should be conducted regarding the inservice characteristics teachers appreciate. This will aid teachers, administrators, and others involved in collaborative inservice planning when they assign inservice responsibilities and specify requirements for the kinds of inservice programs they need.

Hypothesis 6: After experience with one teacher-led inservice program, administrators, team members, and remaining teachers will request the institutionalization of a system of ongoing inservice education planned and implemented by teachers.

Justification. This hypothesis follows from hypothesis 5. If teachers appreciate teacher-led inservice programs, it is reasonable to expect they will want more. If the inservice leaders are appreciated by their peers, they should want to continue to receive that appreciation (and they should be able to enlist some help, following a successful experience). If administrators perceive that teachers appreciate teacher-led inservice programs, they should be willing to share the responsibility of inservice planning and implementation.

Conclusions and evidence. Teachers' appreciation of teacher-led inservice programs is not sufficient to ensure institutionalization of the practice. Many of the team members are not eager to continue to spend so much time on inservice activities, although some have indicated a willingness to serve on an inservice committee. One administrator, after lavishing praise on the teacher-led inservice program, has indicated that there will be no inservice programs next year. On the other hand, one team has been asked to provide more inservice programs in its cooperative, as well as in a neighboring one. This team has a contact person with inservice responsibilities who has been a very active supporter of the project.

Recommendations and remaining questions. The institutionalization of teacher planned and implemented inservice programs is a worthwhile goal, but it will not necessarily occur after one successful program. More detailed plans must be made to provide the impetus. It is probable that an active supporter on-site and close to the administrative level is helpful, but further investigation into the issue is required. The various factors that may facilitate the adoption of teacher-led inservice programs, both those involving teacher willingness and administrator approval, remain open to question.

Hypothesis 7: A university project staff can assist education agencies in implementing an ongoing system of teacher planned and implemented professional development.

Justification. As is stated in more detail in the beginning of this paper, research and theory supports the concept of teachers having major responsibility for their own professional development. Teachers have many of the requisite skills and with administrative support they should be able to learn additional skills and then implement a process of inservice curriculum development.

Conclusions and evidence. With administrative support and training by project staff, teachers can design, develop, and deliver inservice education. Hypotheses 1 through 6 describe some of the conclusions and evidence supporting this summary hypothesis. It is clear from our experience that some teachers are more adept than others and that some administrators are more supportive than others. In addition, a great deal of personal time is required from teachers willing to shoulder inservice responsibilities.

Recommendations and remaining questions. We recommend that further efforts be made to aid education agencies in implementing an ongoing system of teacher-directed professional development. The burden, however, should be shared by administrators as well. They need to provide encouragement and some released time, in addition to cooperating throughout the total process. Investigation into optimal composition of an inservice team should be initiated. For example, what should be the proportion of teachers, administrators, and other involved individuals; what should be the final size, and what should be the selection criteria? Another question that remains is: Can teachers skilled in inservice curriculum development specify their needs to an "outside" inservice provider in such a way that the resultant program will be acceptable to the audience? If the answer is yes, teachers can have a great deal of involvement in their own professional development without having to design, develop, and deliver each inservice session they need. Teachers can collaborate with consultants, completing some inservice tasks and monitoring the consultants' completion of others. This collaboration, then, can become part of a planned system of inservice education, instead of being a quick answer to an apparent inservice need.

(ERIC Document Reproduction Service No. Ed 129735 ).

## Appendix

### Knowledge Tests

Eleven teachers completed a pretest, which included essay questions designed to tap knowledge in the following areas:

1. goals and objectives
2. needs assessment
3. inservice delivery alternatives
4. evaluation

Analysis of their responses revealed that most teachers understand the concept of goals and objectives but few had even an awareness of needs assessment and evaluation principles or of the variety of delivery alternatives available for inservice programs.

A final exam was administered at the conclusion of the second training course. Instead of administering an alternative form of the pretest, a more straightforward exam was developed. This gave teachers who had acquired inservice skills but had not yet generalized them to other situations an opportunity to display their knowledge. Nine essay questions addressed the following topics:

1. Content, presenter style, and audience needs in relation to choosing a delivery format
2. Purposes of warm-up activities
3. Alternative closings for inservice programs
4. Inservice media
5. Lecture "scripts"
6. Inservice evaluations
7. Coping with problem participants

Ten teachers completed the questionnaire. Responses were scored excellent, adequate, or less than adequate. Of the 90 responses, twenty-five were judged excellent; nine, less than adequate; and the remaining, adequate. No individual scored less than adequate on more than two questions.

### Staff Observations and Experiences

Project staff met frequently to discuss planned and completed project activities, perceived results of training activities, communications with team members and administrators, and team members' inservice products. We also met with national, state, and university-faculty advisory committees to discuss our successes and problems.

## Comments

Project staff attended the inservice sessions and noted comments made by audience members and administrators. In addition, some advisory board members attended some sessions and their comments were solicited as well. An example of the comments follow.

1. I am impressed (Professor of Adult Education)
2. This is the best inservice program I have seen in the 14 years I've been here (Director of the Area Vocational Technical School)
3. I'm getting better cooperation from the vocational instructors since this project started (Special education teacher)
4. I understand the special educators' concerns better now (Vocational instructor)
5. These teachers, really have worked hard on this program and it's made a real difference in our school (Interpreter for the deaf)

## Inservice Questionnaire

To add to our knowledge regarding teachers' perceptions of typical inservice programs and the characteristics they believe are important, two questionnaires have been distributed to 200 special and vocational educators in Kansas communities that have and have not participated in the project. Multivariate analyses of the responses will allow us to specify some of the inservice characteristics teachers believe are important and to compare their perceptions of teacher-led versus other-led inservice programs on those characteristics. Twenty-five percent of the questionnaires have been returned to date. Analyses will begin when more questionnaires have been received. The questionnaires are provided in Exhibit B.

TEACHING TIPS FOR SPECIAL STUDENTS

Inservice Evaluation

Circle one: Vocational - 8 Special Education - 11 Other - 0

DIRECTIONS: Please answer the following questions as completely and honestly as you can.

1. Which information or inservice activity was useful to you?

Special Education: The packet (3). Textbook material adaption to sp. ed. students. Good information in several areas. Some. Group discussion on presentations of specific subject matter. When I have time to go through the booklet, I'm sure the techniques will be very good. Howard's Flow Charts, concepts, task orientation. Alternative teaching techniques. Group activity about appropriate teaching techniques.

Vocational Education: All. Getting to know other special educational teachers to know how they handle problems. The Group Sessions. Use of overlay. Angie's Presentation. Little--mostly positive--any negative attitudes? Textbook uses.

2. Do you plan to use any of the techniques presented?

Which Ones?

Special Education: Yes. Yes, positive comments and reading techniques. I already do (2). Yes--all. Yes, flow chart ideas. Yes, textbook use. Maybe flow charts.

Vocational Education: Yes. Yes, unsure at this time, need to read packet first. I already use most of these techniques for regular students.

Which techniques do you already use?

Special Education: None. Most of them. Techniques for teaching EMR & LD. Task analysis. Have used most of them in the past. Skeleton, visual aids. Over-learning and practice. Those appropriate. Some reading techniques, positive approach, oral work for students, and level of students. Outlines, demonstrations, hands-on techniques, etc. Learning techniques. Alternative test taking options and instruction.

Vocational Education: I already use most of them. Demonstration. Oral testing. Reviewing them using the overhead, explain terms.

3. (For vocational educators) Do you feel more confident about working with special education students in your class than you did before the inservice?

Please explain.

Vocational Education: No, I will never be comfortable having special education students in my class. This will all help. No (2). Yes (2). Yes, good tips in the handouts.

4. Do you now feel more comfortable about working with vocational instructors/ special education instructors?

Please comment:

Special Education: Yes. Yes, very good. There wasn't enough interaction with vocational instructors to evaluate this. Yes, I know they are interested in helping the Special Education students. Yes, we are there to help the student. Yes, the Teddie program has been extremely helpful in communicating with the Vo Tech teachers and negotiating with them to integrate my pupils in their classrooms. Yes, more informed. Yes, their real people, they know a lot about their area. Yes, an awareness of their efforts is very commendable. I have always felt comfortable working with them when beneficial for my students. For the gifted area, I'm still not particularly sure as to how to interface these programs.

Vocational Education: (?). Yes, this reinforces. Vocational instructors. I feel about the same. The only problem I see is to help the special education students with the whole class, I tend to lose the interest of the others. Yes, I have common concern. Yes.

5. Would you have made any changes in the format or schedule of the inservice?

Special Education: No (6). No Comment (2). Yes (3).

Vocational Education: Wouldn't had ----- speak. Would have made the atmosphere cooler, but you tried. No (6).

What changes would you have made?

Special Education: No (4). It was excellent. Tasks a little long. More small groups of Special Education and Vo Tech to discuss techniques and approaches. I would have made sure I had sufficient notes and was aware of the microphone. More activities rather than the lecture. Perhaps too much information presented for one meeting. Participant participation in bringing out some ideas might have given concrete example for classroom use. More direct interaction between vocational and special educators--chance to ask each other specific questions. More specific suggestions and activities.

Vocational Education: More group work. Felt somewhat rushed--would have been good to have more interaction. None (6).

TABULATION OF EVALUATIONS OF SALINA AVTS INSERVICE

November 7, 1980

Parts 1-3 Ratings of individual presentations

PRESENTATION	RESPONSES (N=36)														
	Meaningful & Useful Information was Presented					My Needs were Addressed					Presenter was good				
	SA (4)	A (3)	D (2)	SD (1)	$\bar{X}$	SA (4)	A (3)	D (2)	SD (1)	$\bar{X}$	SA (4)	A (3)	D (2)	SD (1)	$\bar{X}$
Simulations	15	16	1	0	3.4	14	15	2	0	3.4	19	12	1	0	3.6
Epilepsy	23	11	0	0	3.7	16	13	1	1	3.4	16	15	0	0	3.5
Special Projects	15	14	2	0	3.4	9	17	3	0	3.2	18	11	1	0	3.6

Part 4 Rating of total program

STATEMENT	RESPONSES					
	SA (4)	A (3)	D (2)	SD (1)	$\bar{X}$	
The presentations were interesting	19	15	2	0	3.5	

KEY

- SA= Strongly Agree (4)
- A= Agree (3)
- D= Disagree (2)
- SD= Strongly Disagree (1)
- $\bar{X}$ = The average

NOTE

Evaluation forms were collected from 36 individuals. However, each individual did not respond to each question.

Part 5

What were the two most important ideas you received from this workshop? \*

Material modification, adapting materials (8)

Simulations: information on hearing impairments and adaptations for physically disabled (6)

Accept the student where he is and go from there (3)

Better understanding of epilepsy, have cots available for boys and girls who need to take a break for medical (epileptic) reasons, what the physically handicapped can do. (3)

The ability of Bonnie Consolo and Paul (armless individuals) (2)

Talk slowly

Repeat

It's necessary to discipline...to work with the disadvantaged

Keep your sense of humor

Greatful I'm not handicapped and how to cope or adapt to it

Consideration for the handicapped

Regardless of the handicap a person can be trained.

Handicapped are not necessarily handicapped other than physically

LD does not mean stupid

RSVP projects and opportunities

Special Projects

Have more inservice

Revisiting of previous acquired knowledge

Nothing for shop or classroom instructions that is for better instruction.

I feel the simulation groups...not beneficial with the...

Handicaps are...handicapping. More assistance available than most of us realize.

\* NOTE

Fourteen individuals wrote two ideas, thirteen wrote one, and nine did not respond to this question. The number in parentheses following some of the statements indicates the number of individuals who wrote similar statements. Ellipses indicate illegible words.

Part 6

QUESTION	RESPONSE			
	College Credit Skill Training	Seminar	Other Workshops	No Answer
If you desire further information, in what format?	8	3	11	15

OTHER COMMENTS \*

---

POSITIVE

I think the day was well planned, well organized, well presented. (4)  
This has been a most constructive and interesting workshop. Thank you.

I average a training station every 2-3 minutes in my regular class and do not have enough time to give the disadvantaged the time they need, so have other students help--some of these students should have seen this workshop.

One hell of a good inservice!

One of the best programs that we have ever had at Vo-Tech. It lets instructor know that they can get professional help from local people, right here at Vo-Tech School, with student learning problems.

Paul was good. Good inservice program!

Various topics were equally interesting

Good material

One of the better if not the best inservice days we have had

---

NEGATIVE

Time span shorter

Did not stick to schedule (3)

Smoking should not be allowed in class sessions

Don't we learn by observing--how or what method do we retain best!  
Reading, listening, observing--feel if we visited industry we could learn a lot by observing especially for ideas to help handicapped.

Guests and speakers should be seated at the front of the room so when they are introduced, the audience does not have to turn around to locate them.

Speaker not here on time.

I feel that RSVP is a good program but question what the purpose was in their presentation to the staff. If SAVTS is interested in becoming involved, the administration should get together with RSVP and draw up specifics to be then presented to the staff.

The last session time schedule should have been...

---

NEUTRAL

Need an extra part-time qualified instructor person to give the disadvantaged this consideration which they really need.

\* NOTE

Fourteen individuals wrote one or more comment; twenty-two did not respond. The number in parentheses following some of the statements indicates the number of individuals who wrote similar statements.

## Formative Evaluations

Open-ended formative evaluation questionnaires were distributed to trainees at various points throughout the training courses. The following questions were included:

1. I appreciate...
2. I was frustrated by...
3. I wish...
4. I think the instructors...
5. The material covered was...
6. I plan...
7. I learned...
8. I hope...
9. I am concerned...
10. I liked...
11. The content of the last 2-3 hours...
12. If I were an instructor...

In addition, more specific questionnaires were distributed regarding several of the presentations made during the courses. The following questions were included, among others:

1. What did you like best about the career education slide-tape show?
2. What did you like least about the presentation on adult education?

Finally, a questionnaire regarding the whole training experience was distributed. It included questions such as:

1. What have been the strengths of this week?
2. Have you learned useful knowledge throughout the training courses?
3. Do you plan to apply principles of designing, developing, and delivering inservice education to other activities?
4. How have your feelings about project goals changed?

Responses to all these formative evaluation efforts ranged from the silly-- "I wish my feet didn't stink" --to the insightful-- "it will take time and easy steps to get total involvement." Responses were tabulated and considered as project staff made plans for upcoming sessions and follow-up activities.

## Audience Evaluations

Team members designed evaluation forms to be completed by their audiences at the conclusion of their inservice programs. A sample of summaries of these forms is provided in Exhibit A.

JANUARY 14, 1981

# SUMMARY OF EVALUATIONS OF SWK AVTS INSERVICE

## Vocational Instructors

January 14, 1981

### 1. I HOPE...

this thing keeps going  
that all handicapped persons can be and will be employable  
everyone understands why safety is first  
we have more inservice conducted by teachers on our staff  
bad accidents do not occur  
we got our point across--what is simple  
we can continue to have the good record of few accidents in  
our shops  
I can use some of the ideas  
that I don't get a student hurt in the shop  
the EMR and LD instructors paid very close attention to the  
problems in the shop  
we learned about safety  
that administrators, special ed. personnel, etc. don't expect  
too much from educators in training of special students.  
we can tour Arrowhead West in the near future

### 2. I AM CONCERNED...

that I cannot measure up to handicapped person's needs  
with people using equipment whether they are familiar with it  
or not. The pros are usually the ones who get hurt.  
that the people who would benefit most from today's demonstrations  
were not present.  
on employment of the handicapped  
about the safety of everyone in the shop  
that the students can benefit from the training  
that one of these days we'll have a really serious accident  
for the safety of the students  
that sometimes that we can get so careless  
about mainstreaming into hazardous occupation areas for training  
about safety for the handicap  
that students don't think SAFETY FIRST--especially when they must  
be reminded quite often  
about the students placed in our classes without the instructors  
knowledge of their handicaps before their admission

3. I LIKED...

Gerald Schmidt  
the demonstrations  
the filmstrip mostly  
the presentations and demonstrations  
the chance to express my feelings about safety  
the films  
the film and demonstrations in the shops.  
the outline  
the looks on some faces as the demonstrations were made  
the film and the shop demonstrations  
the film  
the shop safety demonstrations. Very effective, I hope their  
well made points were made with the right people!

4. THE CONTENT OF THE LAST 1-2 HOURS...

was very worthwhile  
concerns everybody not just handicapped  
was informative  
was very beneficial if it is used  
was very good and informative  
was good  
was interesting--planned  
last  
was informative  
was quite interesting and makes me want to become more aware of  
what goes on in each of our vocational areas.  
was very well paced and informative

5. I PLAN...

to follow up on this  
to review safety in my own program and be aware of it in other  
programs  
to re-evaluate my safety program  
to use parts of the presentations  
to continue being as safe as I can  
to use a more step by step approach  
to be more aware when I walk through the shop areas  
to make some task analysis  
continue to emphasize safety above all other skills of tool and  
machine operation  
to be very explicit concerning safety in the classroom  
use some of the ideas  
to be more careful walking through the shops and to be more aware  
when I must be there

6. I LEARNED...

a lot

that many businesses do not appreciate the fact that handicapped persons are employable

I feel safety is important no more or no less to disabled people as to any one else. Safety is safety.

some safety problems

that simple things can cause safety accidents

that there are many more dangers in the shop areas than I thought

that some people will never change

it is a serious problem

to use ear plugs when Allan pops the balloon. Very good pointers.

more about the handicapped person

I am convinced that safety applies to all and not just to the "special" students. In that sense all are "special" and must strictly follow safety guidelines.

more interesting facts about Arrowhead West and about our own shops

Note: Fourteen instructors responded to this questionnaire

EXHIBIT B.

### INSERVICE QUESTIONNAIRE

Please read through the following statements about inservice programs. Then place a plus (+) next to the 5 statements with which you most agree. Also, place a minus (-) next to the 5 statements with which you least agree (even if you agree with them all, choose the 5 you think are less important than the others).

- An inservice program should lead directly to increased student achievement.
- An inservice program should challenge participants.
- An inservice program should increase teacher morale.
- An inservice session should motivate teachers to try new techniques.
- An inservice program should provide information on required teacher paperwork.
- An inservice program should improve the school's efficiency.
- An inservice program should provide teachers with new skills.
- An inservice program should cover facts related to subject areas.
- An inservice program should make the teacher's job easier.
- An inservice program should improve the curriculum.
- An inservice program should inspire teachers to seek further information on the topics covered.
- An inservice program should cover instructional techniques.
- An inservice program should provide materials teachers can use in their classrooms.
- An inservice program should lead to better cooperation among teachers and administrators.
- An inservice program should provide teachers with ideas they can apply in their classrooms immediately.
- An inservice program should foster unity among teachers.

Please rank the following statements. Use a 1 for the most important statement, a 2 for the next most important statement, and so on, with 7 indicating the least important statement. Do not use any number twice.

- \_\_\_ Inservice providers should model effective teaching strategies
- \_\_\_ The information provided during an inservice session should be compiled in a format that facilitates retrieval.
- \_\_\_ An inservice program should be geared to the appropriate level (e.g., awareness of concepts before practicing of skills...)
- \_\_\_ The inservice provider should capture and hold the attention of the participants.
- \_\_\_ Adequate directions should be given for anything teachers are expected to do after the inservice.
- \_\_\_ Individual participants should not be allowed to disrupt the inservice session.
- \_\_\_ Inservice activities should include on-site demonstrations with learners.

Please rank the following statements. Use a 1 for the most important statement, a 2 for the next most important statement, and so on, with 7 indicating the least important statement. Do not use any number twice.

- \_\_\_ Inservice providers should speak from the teachers' point of view.
- \_\_\_ The format of an inservice should be appropriate for its purpose.
- \_\_\_ Inservice sessions should include planned breaks.
- \_\_\_ Instructions for group activities should be adequate.
- \_\_\_ Inservice providers should encourage questions.
- \_\_\_ The inservice audience should share knowledge and experiences as a planned part of the program.
- \_\_\_ Inservice handouts should be directly applicable to the teachers needs.

Please rank the following statements. Use a 1 for the most important statement, a 2 for the next most important statement, and so on, with 7 indicating the least important statement. Do not use any number twice.

- \_\_\_ Inservice providers should be patient.
- \_\_\_ The goals and objectives of the inservice session should be publicized in advance.
- \_\_\_ Inservice handouts should be limited in number.
- \_\_\_ Inservice providers should display confidence in their expertise
- \_\_\_ The inservice atmosphere should be free and open (teachers should not feel constrained to hide their real problems).
- \_\_\_ The seating arrangement should be appropriate for the type of activity.
- \_\_\_ Inservice sessions should include opportunities for teachers to practice new skills.

Please rank the following statements. Use a 1 for the most important statement, a 2 for the next most important statement, and so on, with 7 indicating the least important statement. Do not use any number twice.

- \_\_\_ The inservice provider should build enthusiasm among the participants
- \_\_\_ Teachers should be treated with personal and professional respect throughout the inservice process.
- \_\_\_ Inservice sessions should be organized.
- \_\_\_ Inservice providers should use language familiar to the participants.
- \_\_\_ An inservice agenda should be given to each participant.
- \_\_\_ Inservice sessions should include an appropriate mix of background theory and practical application.
- \_\_\_ Only media that enhance the learning experience, rather than merely entertain, should be used.

For each pair of statements below, please place a check mark (✓) beside the one statement you agree with more. Even if you agree with both, or do not agree with either, choose the one that appeals to you more than the other.

- \_\_\_ An inservice program should inspire teachers to seek further information on the topics covered.
- \_\_\_ Teachers should leave an inservice program knowing exactly how to apply what they have learned.
- 
- \_\_\_ Inservice programs should be strictly devoted to the content being covered.
- \_\_\_ Inservice programs should include warm-up activities and unstructured discussion sessions.
- 
- \_\_\_ An inservice session should thoroughly cover just one topic.
- \_\_\_ An inservice session should introduce several topics.
- 
- \_\_\_ The best inservice programs are those in which teachers share their experiences and ideas with each other.
- \_\_\_ The best inservice programs have guest speakers who are known for their expertise.
- 
- \_\_\_ An inservice program is worthwhile only if it leads directly to improved student achievement.
- \_\_\_ An inservice program is worthwhile if it helps teachers function more efficiently.
- 
- \_\_\_ Inservice sessions should include individualized activities for teachers.
- \_\_\_ Inservice sessions should be designed for the typical teacher.
- 
- \_\_\_ Inservice sessions should include planned follow-up activities with assistance available.
- \_\_\_ Inservice programs should not require follow-up activities.

Please rank the following statements. Use a 1 for the one you most agree with, then a 2, and so on, with a 5 indicating the one you agree with least. Use each number, from 1 through 5, even if you agree with each statement or disagree with each statement.

- The purpose of an inservice program should be to increase teacher's knowledge.
- The purpose of an inservice program should be to improve teachers' skills.
- The purpose of an inservice program should be to change teachers' attitude.
- The purpose of an inservice program should be to develop classroom materials.
- The purpose of an inservice program should be to plan changes in the curriculum.

Please list any inservice characteristics you think are more important than the ones included on this questionnaire.

1.

3.

4.

5.

When was the last inservice program you attended? If you don't remember the date, approximately how many months ago was it? \_\_\_\_\_

THANK YOU FOR YOUR ASSISTANCE. A SUMMARY OF RESULTS WILL BE SENT TO YOUR SCHOOL FOR YOUR REVIEW.

INSERVICE QUESTIONNAIRE

Please identify the last inservice program you attended. Approximate if you do not remember the exact details.

Topic(s): \_\_\_\_\_ Date: \_\_\_\_\_

Presenter(s): \_\_\_\_\_

Please indicate the purpose(s) of the last inservice program you attended by placing a check mark (✓) in the most appropriate space following each listed purpose.

The purpose of the last inservice program I attended was to...	Only Purpose	A Major Purpose	A Minor Purpose	Not A Purpose
1. increase student achievement.				
2. increase teacher morale.				
3. motivate teachers to try new techniques.				
4. provide information on required teacher paperwork.				
5. improve the school's efficiency.				
6. provide teachers with new skills.				
7. provide facts related to my subject area.				
8. make the teacher's job easier.				
9. improve the curriculum.				
10. inspire teachers to seek further information.				
11. provide teachers with classroom materials.				
12. promote better cooperation among teachers and administrators.				
13. foster unity among teachers.				
14. improve teachers' efficiency.				
15. increase teachers' knowledge.				

In each of the following sets of statements, please place a plus (+) beside the one that most applies to the last inservice program you attended, and a minus (-) beside the statement that least applies. Please assign a plus and a minus in each group, if even all the statements do or do not apply.

During the last inservice program I attended, I was...

- bored.
- bothered by disruptive participants.
- restless from sitting too long.

During the last inservice program I attended, I was...

- challenged.
- attentive.
- able to discuss real concerns.

The handouts at the last inservice program I attended were...

- worthwhile for use in my classroom.
- useful for background information.
- easy to use.
- a concise compilation of information presented.

The handouts at the last inservice program I attended were...

- useless.
- overwhelming (i.e., too many).
- of poor quality (e.g., poorly duplicated).
- hard to understand.

Please indicate the extent of your agreement with the following statement by placing a check mark (✓) in the appropriate space following each statement.

At the last inservice session I attended, the speaker(s)...	Strongly Agree	Agree	Disagree	Strongly Disagree
1. modeled effective teaching techniques.				
2. captured and held the audience's attention.				
3. spoke from the teacher's point of view.				
4. gave adequate instructions for activities.				
5. explained how to apply techniques in the classroom.				
6. encouraged the audience to ask questions.				
7. were patient.				
8. displayed confidence in their expertise.				
9. built enthusiasm among the participants.				
10. were organized.				

Please read through the following statements about inservice programs. Then place a plus (+) next to the 4 statements that best describe the last inservice program you attended and a minus (-) beside the 4 that least typify it. Please assign 4 pluses and 4 minuses even if all the statements are good or poor descriptors.

The last inservice program I attended...

- was geared to the appropriate knowledge level.
- included group discussion.
- followed an agenda that was publicized in advance.
- incorporated useful media.
- included appropriate warm-up activities.
- met my expectations in terms of content covered.
- included opportunities for sharing information and experiences with other teachers.
- included follow-up activities, with assistance.
- included individualized activities.
- included an appropriate mix of background theory and practical application.
- was designed for the typical teacher.

Please read through the following statements about inservice programs. Then place a plus (+) next to the 4 statements that best describe the last inservice program you attended and a minus (-) beside the 4 that least typify it. Please assign 4 pluses and 4 minuses even if all the statements are good or poor descriptors.

The last inservice program I attended...

- did not include adequate instructions for group activities.
- included silly games.
- included too little information about too many topics.
- included too much theory.
- was disorganized.
- had no agenda.
- did not include a question-answer period.
- included too little theory.
- had an inappropriate seating arrangement.
- followed a format inappropriate for its purpose.

Please indicate the effects of the last inservice program you attended by marking the following statements true or false.

As a result of the last inservice program I attended...

- I changed an attitude.  
 I tried a new instructional technique in my class.  
 I sought more advice from other teachers in my school.  
 I used new materials in my class.  
 I developed new materials for my class.  
 I work differently with support staff.  
 I cooperate better with administrators.  
 Administrators cooperate better with me.  
 I complete my paperwork faster.  
 I ordered new resource materials.  
 I did nothing different.  
 I... (please specify what you do differently) \_\_\_\_\_

Please complete the following sentences.

The best thing about the last inservice I attended was...

The worst thing about the last inservice I attended was...
