ABSTRACT	
1	The National Council for Accreditation of Teacher
Education (NC)	ATE) Standards for the Accreditation of Teacher

Education were revised to include réferences to multicultural education in May, 1977. To help teacher education Institutions plan for and implement the standards, data on existing conditions were" collected and analyzed. Information in the areas of curricula, faculty, students, management, and research and development was collected from 387 institutional members of the American Association of Colleges for Teacher Education. Over half of the fesponding institutions (78.8 percent) indicated that they had, as part of their education programs, activities that are supportive of the multicultural education concept as described in the NCATE Standards. These institutions were more likely to have courses or departments in ethnic and women's studies, to provide inservice training in bilingual and multicultural education, and to have a higher percentage of minority group faculty members. An analysis of institutional characteristics found significant differences based on: (1) public and private institutions: (2) NCATE-accredited and non-accredited institutions: (3) geographic distribution; (4) rural or urban setting; and (5) size of student population. ACKNOWLEDGEMENTS

This report would have been impossible without the assistance of many individuals during the process. For field testing the survey instrument during its development, special acknowledgement is given to Cordell Wynn, Dean of Education at Alabama A & M University; David Washburn, Professor of Education at Bloomsburg State College; and Alan King, Professor of Education at the University of Missouri at St. Louis. Special thanks is given to H. Prentice Baptiste, Director of Multicultural and Bilingual Education Programs at the University of Houston, , and Frank Morra, President of Morra Associates, for their reactions to the instrument as it was developed. To members of AACTE's Commission on Multicultural Education--Tomas A. Arciniega, Dean of Education at San Diego State University; Henrietta Whiteman, Director of Native American Studies at the University of Montana; Nancy Arnez, Professor of Education at Howard University; Andrew In, Associate Dean of Education of Nevada at Reno, for their reactions and suggestions to various drafts of the survey instrument. Finally, appreciation for the comments and suggestions of members of the advisory committee for this project, the National Committee for Multicultural Teacher Education Standards--

ĉ

INTRODUCTION

Beginning in January 1979, colleges and universities applying for accreditation or reaccreditation of their teacher education programs by the National Council for Accreditation of Teacher Education (NCATE) will be expected to show evidence of planning for multicultural education in their curricula. Currently, 536 teacher education institutions are accredited by NCATE; these institutions prepared over 85 percent of the teachers in the United States.

For the first time in its history, the NCATE <u>Standards for the</u> <u>Accreditation of Teacher Education</u> include references to multicultural education. The language of the standards is developed by a standing NCATE committee, the Committee on Standards. In 1976 the language for revised standards was proposed to the NCATE-accredited institutions and the constituent members of the NCATE council including the American Association of Colleges for Teacher Education (AACTE), National Education Association (NEA), Council of Chief State School Officers, National / Association of State Directors of Teacher Education and Certification (NASDTEC), and National School Board Association (NSBA). Based on the comments of these groups and proposals by AACTE's National Committee on Multicultural Teacher Education Standards, the final language for revised <u>Standards for the Accreditation of Teacher Education</u> included several references to multicultural education. These were adopted by the NCATE Council in May of 1977 to go into effect in January, 1979.

The NCATE standards are divided into two parts: Basic Programs and Advanced Programs. The standards for basic programs are to be applied to I The constituent membership of the NCATE Council has been expanded to now also include the Council for Exceptional Children, National Association of School Psychologists, National Council of Teachers of Mathematics, and Student National Education Association.

all programs beyond the baccalaureate level and beyond the basic programs for the preparation of teachers and other professional school personnel.

The standards for both the basic and advanced programs address six areas of the teacher education program: governance; curricula; faculty; students; resources and facilities; and evaluation, program review, and planning. Each specific standard has a preamble which gives the rationale for the standard, interprets its meaning, and defines terms. According to NCATE, the preamble is to be interpreted as part of the standard which it precedes.²

The major reference to multicultural education occurs in the section on curricula for both the basic and advanced programs. Standard 2.1.1. subsumed under "Design of Curricula," is entitled "Muticultural Education." This preamble provides the rationale for the standard and defines multicultural education for the standard:

- 2.1.1. Multicultural Education

Multicultural education is preparation for the social, political, and economic realities that individuals experience in culturally diverse and complex human encounters. These realities have both national and international dimensions. This preparation provides a process by which an individual develops competencies for perceiving, believing, evaluating, and behaving in differential cultural settings. Thus, multicultural education is viewed as an intervention and an on-going assessment process to help institutions and individuals become more responsive to the human condition, individual cultural integrity, and cultural pluralism in society.

Provision should be made for instruction in multicultural education in teacher education programs. Multicultural education should receive attention in courses, seminars, directed readings, laboratory and clinical experiences, practicum, and other types of field experiences.

Multicultural education could include but not be limited to experiences which: (1) Promote analytical and evaluative "abilities" to confront issues such as participatory democracy; racism and sexism, and the parity of power; (2) Develop skills for values clarification including the study of the manifest and latent transmission of values; (3) Examine the dynamics of diverse cultures and the implications for developing teaching strategies; and (4) Examine linguistic (

2"Standards for the Accreditation of Teacher Education, Washington, D.C.; NCATE, 1977;

variations and diverse learning styles as a basis for the develop-. ment of appropriate teaching strategies.

Standard: The institution gives evidence of planning for multicultural education in its teacher education curricula including both the general and professional studies components.³

Other references to multicultural education in the section on curricula for basic programs are made in Standards 2.2 The General Studies Component and 2.4 Use of Guidelines Developed by National Learned Societies and Professional Associations.

The introduction to the standards on faculty for basic programs states that "Teacher education programs require a competent faculty which has systematically developed into a coherent body devoted to the preparation of effective teachers for a multicultural society."⁴ The standard for 3.1 Competence and Utilization of Faculty includes the sentence, "Institutional policy will reflect a commitment of multicultural education in the recruitment of full-time faculty members."⁵ The preamble for 3.4 Conditions for Faculty Development states that "The plan (for faculty development) includes appropriate opportunities for developing and implementing innovations in multicultural education and for developing new areas of expertise."⁶ The preamble to 3.5 Part-Time Faculty also refers to multicultural education in the statement, "The hiring of part-time faculty can provide unique opportunities for the teacher education institution to employ persons from a variety of ; cultural backgrounds."⁷

The standards related to students in basic programs includes one reference to multicultural education in standard 4.3 Counseling and Advising for Students in Basic Programs. This states that "Qualified counselors and advisers, sensitive to the multicultural character of <u>3Ibid</u>, p.4

61bid, p.8

4Ibid, p.7 5Ibid \mathcal{O}

society, assist students in assessing their strengths and weaknesses and in planning their programs of study."⁸

The standards for resources and facilities for basic programs includes

The institution provides an environment which supports the basic teacher program it offers. This environment includes resources and facilities to support the development of an understanding of and appreciation for the culturally diverse nature of American society.

The preamble to Standard 5.1 Library states that "the acquisition policies should reflect a commitment to multicultural education."¹⁰ The preamble to 5.2 Materials and Instructional Media Center includes the following statement:

... As a means to assist prospective teachers in developing these understandings and skills, the institution makes available and accessible to students and faculty members appropriate teachinglearning materials and instructional media that reflect cultural diversity in American society.

Finally, the standards related to evaluation, program review, and planning for both the basic and advanced programs include a reference to multicultural education. The preamble to Standard 6.3 Long-Range Planning states that "In addition the long-range plan of the institution reflects a commitment to multicultural education."¹²

References to multicultural education are not as abundant in the standards for advanced programs as those for basic programs. In part, this is due to the greater specificity of advanced programs and the focus on research and analytical skills. The main reference, like the standards for basic programs, occurs in the standards for curricula. G-2.1.1. Multicultural Education is similar in language to 2.1.1

8Ibid, p.9 9Ibid, 10Ibid, p.10 11Ibid 12Ibid, p.11 and 19

9

.001

previously quoted. The only other reference to multicultural education in the section on curricula is found under Standard G-2.4 Use of Guidelines Developed by National Learned Societies and Professional Associations which states,

"National learned societies and professional association s with special interest in curricula, including those in ` multicultural education for the preparation of school personnel, have significant contributions to make to the improvement of advanced programs."13

Multicultural education is referred to in the introduction to the standards on faculty for advanced programs and again in the standard (G-3.4) on conditions for faculty development. The final , reference to multicultural education is made in the standard for long-range planning (G-6.3) and reads the same as '6.3 for basic

progrāms.

. Thus multicultural education is addressed in the standards for basic programs in the areas of curricula; faculty; students; resources and facilities; and evaluation, program review, and planning. The standards for advanced programs included such references only for curricula; faculty; and evaluation, program review, and planning.¹³ STATEMENT OF THE PROBLEM

. .

Albuquérque, and Athens, Georgia during January and February, 1977. These conferences brought together administrators from teacher education institutions to discuss the language for the revised standards and to solicit their suggestions and concerns about the nature of proposed changes. During this process, AACTE discovered that institutions had greater concern and questions over the implementation of the multicultural components of the standards than any other proposed changes.

Following the adoption of the revised NCATE standards, AACTE's Board . of Directors asked their Commission on Multicultural Education to provide direction for the membership in the development and implementation of the multicultural education components. In addition, the NCATE staff has informally requested assistance in the development of evidence questions that can guide institutions in knowing whether they are meeting the standard.*NCATE visiting teams will also need to be oriented to evidences that ought to be requested from an institution to show how they are meeting the multicultural components of various standards.

As a starting point, AACTE's Commission on Multicultural Education decided that it was necessary to obtain data concerning the extent to which multicultural education is currently being addressed by teacher education institutions. Such baseline data would aid the Commission in its task in at least three different ways.

First, an examination of the data would show how great a gap there is between where institutions currently are and where the revised standards suggest they ought to be in the planning and implementation of multicultural education. This information would identify the kinds of curricula and research activities now being undertaken and identified as

multicultural education by the institutions. A determination could also be made concerning factors that contributed to or deterred the development of multicultural education in colleges and universities that have already undertaken such activities. The identification of the gap between where institutions now are and where they are expected to be in 1979 will allow the Commission to better plan activities to assist member institutions in the development and implementation of their own multicultural education programs.

Secondly, the collection of this data would allow a more accurate determination of institutions that are currently implementing programs related to multicultural education. In the past, a few institutions have been identified as having programs. The programs in these institutions and individuals coordinating such programs have been used in meetings conducted by AACTE and the information broadly disseminated. The collection of up-to-date information about on-going programs within the AACTE membership will provide a more accurate representation of multicultural education activity as well as other models that institutions might consider.

Finally, the adoption of these revised standards provides the unique opportunity from which to observe the development and implementation of a concept, multicultural education, into teacher education. The data collected during the fall of 1977 will provide a baseline from which the progress of multicultural education can be measured.

OBJECTIVES

The major objective for collecting data concerning multicultural education in teacher education was to assist teacher education

institutions in the implementation of the multicultural components of the revised NCATE standards. An examination of the standards show that references to multicultural education are made in standards on curricula, faculty, students, resources and long-range planning. Based on these standards, it was determined that the following information for each area was needed:

Curricula

- 1. What curricula components or modules are being undertaken that have some relationship to multicultural education (e.g., racism, linguistic differences)?
- 2. What, if any, specific ethnic groups are these courses about at the institution?
- •9. Are there courses about women specifical offered at the in-
- 4. Are there bilingual education courses or programs? In what target languages?
- 5. Are there inservice programs or courses provided by the education unit?
- 6. If there are multicultural or bilingual education components within the offerings of the education unit, what are the titles and levels of the courses? How many students are affected by such programs?
- 7. What provisions are made for multicultural education in the education unit (e.g. component in methodology, separate courses)?

Faculty

۲<u>۲</u>

- 1. What is the ethnic and sexual composition of the faculty in the education unit?
- 2. What types of staff development activities are utilized by faculty members to further their knowledge of multicultural education?

1.5

3. If there are provisions for multicultural education within the education unit, what is the ethnic and sexual composition of the faculty members teaching such courses?

- 4. What are the academic discipline backgrounds of faculty members who teach the components related to multicultural education for the education unit?
- 5. What types of multicultural education products are produced by the faculty?
- 6. Does the faculty undertake any research related to multicultural education? If so, what is the nature of that research?

Students

- 1. What is the ethnic and sexual composition of the student population at the institution? In the education program?
- 2. In what ethnic situations are the education graduates likely to work?

Resoúrćes

1. What types of multicultural education resources (e.g., ethnic heritage center or ethnic community) are utilized by faculty, and students?

Long-Range Planning

- 1. What have been the contributing and deterring factors to the development of multicultural education at the institution?
- 2. If there are provisions for multicultural education at an institution, how is the program managed? How is it financed?
- 3. What is the future of the multicultural education at the institution?

General

- 1. How would the respondent rate the educational desirability of providing experiences in the education program for multicultural education?
- 2. What services related to multicultural education were desired by the institutions?

METHODOLOGY

To solicit the information that would provide baseline data about the state of the scene for multicultural education in teacher education, a survey instrument was developed. The selection of the population to be surveyed and the development of the instruments will be elaborated in

this section.

Population

The general population was limited to higher education institutions which offer basic or advanced programs for education personnel and thus might be initially eligible to apply for accreditation from NCATE. AACTE has a membership of approximately 800 teacher education institutions. All members offer a minimum degree level of bachelors. Because AACTE has a history for surveying its membership concerning teacher education programs, it was appropriate that this survey also utilize the mechanism for conducting such surveys as already exists.

AACTE's membership includes members in all fifty states and Puerto Rico. Institutional members include both private and public institutions that range in student population size from 327 students to 51,000 students. Most of the NCATE-accredited institutions are members of AACTE as well as around 250 institutions that are not accredited. Although only 800 of the approximately 1,200 institutions that prepare teachers are members of . AACTE, the AACTE membership is a représentative sample of teacher education institutions.

Because of the existing mechanisms for surveying the AACTE membership, it was decided to survey the entire membership of 786 institutions during the fall of 1977. This occurred after the NCATE standards had been adopted in May, 1977, and yet almost one-and-a-half years before the standards were to go into effect.

During July, a letter announcing the fall survey was mailed to the chief institutional representative for each institutional member. The letter (see Appendix A) explained the rationale for the survey of multicultural education in teacher education and requested the cooperation of the

10

テロビ 二】

institution in the completion of the survey. For expedience in the handling of the survey at the institutional level, the chief institutional representative was asked to identify a respondent to the survey on a postcard to be returned to AACTE. Almost 700 individuals returned the postcard with a survey respondent identified. When the survey were disseminated in September, they were mailed directly to the individual previously identified as the official.

Instruments

The information that needed to be solicited through this survey was outlined in the section on objectives. Based on those objectives, the survey instrument was first developed by the AACTE staff as a closed questionnaire early in the summer of 1977. This was circulated to members of AACTE's Commission on Multicultural Education and the National Committee for Multicultural Teacher Education Standards for comments and suggestions.

The comments and suggestions of these individuals and other identified experts in the field of surveying and/or multicultural education were incorporated into the next drafts of the instrument. During July and early August, 1977, the survey instrument was field tested at three different sites: Alabama A & M University, Bloomsburg State University, and the University of Missouri at St. Louis, Based on the comments of the field-site respondents, additional changes in format and substance were made to the instrument. Again the instrument was circulated to members of the Commission and National Committee for comments. By the end of August, the final instrument was developed and ready for dissemination. The instrument included 22 questions in six sections related to specific NCATE standards. The first 21 questions required a check response with space for the addition of an "other" where appropriate. The final question was an open-ended question requiring a written response. The text of the "Survey of Multicultural Education in Teacher Education" can be found in Appendix B. An outline of each section and question is presented below:

Section A: Programs

- What specific components or modules related to multicultural education are provided by the education unit? What is the educational desirability for such modules?
- 2. About which ethnic groups are courses provided at the institution?
- 3. Are there courses related specifically to women offered at the institution?
- 4. Does the education unit offer inservice programs in multicultural/bilingual education?

5. Through what means are multicultural/bilingual education addressed in the education unit (e.g., component in foundations course, as a major or minor)?/

- 6. If the education unit has provisions for multicultural/. bilingual education, what are the course titles and levels (i.e., undergraduate dual, graduate, or other)?
- 7. How many students are enrolled in courses or programs related to multicultural education?

Section B: Faculty

- 8. What is the ethnic and sexual composition of the faculty for the education unit?
- 9. In what ways has the concept of multicultural/bilingual education been fostered among faculty members in the / education unit?
 - 10. If there are provisions for multicultural/bilingual education and some faculty members serve only part of their full-time assignment in the education unit, what discipline or areas of study do those faculty members represent?

- 11. What disciplines or program areas do full-time education faculty members teaching multicultural/bilingual education components represent?
- 12. What is the ethnic and sexual composition of the faculty members teaching the multicultural/bilingual education components?

Section C: Management

میں میں میں

- 13. How are the multicultural/bilingual education activities in the education unit developed and managed?
- 14. How are the multicultural/bilingual education activities and programs financed within the education unit?
- 15. What resources are utilized by the faculty and students in the implementation of the multicultural/bilingual education programs?

Section D: Students

- 16. What is the ethnic and sexual composition of the student population at the institution? In undergraduate education? In graduate education?
- 17. In what ethnic-related situations are the education graduates likely to work?

Section E: Research and Development

- 18. What types of research activities related to multicultural/ bilingual education are undertaken in the education unit?
 What is the nature of the research? How is such research financially supported?
- 19. What products related to multicultural/bilingual education are produced by faculty members?

Section F: General

- 20. What factors have contributed or deterred the development and implementation of multicultural education?
- 21. What kinds of services related to multicultural education should AACTE provide its membership?
- 22. What is the outlook for the future of multicultural education in the education unit?

The surveys were mailed with a transmittal letter (Appendix A) and self-addressed, postage-paid return envelope to 786 institutions on September 30, 1977. Respondents were requested to return the survey to AACTE by October 30, 1977. A postcard (Appendix A) was mailed to all

J**. B.**

non-respondents during the last week of October to remind them of the pending deadline for the return of the survey instrument.

During October and November, calls were made to respondents to followup or clarify information that had been provided on the survey instrument.

The initial computer run of the data was conducted during the last week of November with 359 returned cases. A preliminary report of the findings was prepared for "A National Institute on Multicultural Teacher Education Standards," December 14-16, 1977. In January, 1978, twentyeight addition cases were added to the file and additional analyses were made using the Statistical Package for Social Sciences. Thus, the data for descriptive profiles of the responding institutions as found in this report were collected, analyzed, and presented here.

Statistical Analysis

In addition to examining the frequency distribution for the total population responding to the survey, we chose to investigate the relationship among several variables. Six different null hypotheses were tested and are described in this narrative report. Each of the six null hypotheses included 202 variables which were tested separately for significant differences between respondents. Using demographic data about the institutions that responded to the survey, the following null hypotheses were tested

at the .05 level of significance:

- There will be no difference between institutions with provisions for multicultural/bilingual education and institutions without such provisions on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 2. There will be no difference between public and private institutions on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 3. There will be no difference between NCATE-accredited and non-NCATEaccredited institutions on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."

, 614, 13

- 4. There will be no difference in the responses of institutions based on the geographical region of the U.S. in which they are located on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 5. There will be no difference in the responses of institutions based on the population of the city or area in which they are located on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 6. There will be no difference in the responses of institutions based on the size of the student population for the institution on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."

The chi square test of the Statistical Package for the Social 14 Sciences was the system of computer programs used for this analysis. The chi square formula used in this package was $\chi^2 = \int_{-\infty}^{\infty} \int_{-\infty$

Most questions which supplied nominal data were used for this analysis. This included questions 1-5, 6a, 9, 13-15, 18-21. A total of 202 variables were analyzed for each of the six null hypotheses above.

For the second part of question I and for question 20, respondents checked a response along a continuum of five alternatives. Because the frequency of responses in cells at one end of the continuum were often less than five, the response at the ends of the continuum were collapsed to-gether as one. For both questions, the analysis is based on three responses rather than five. On question 1, the responses analyzed ranged from "desirable" to "neutral" to "not desirable." On question 20, the responses analyzed ranged from "contributing factor" to "no influence" to "deterring factor." Responses

14 Norman'H. Nie, et.al., <u>Statistical Package for the Social Sciences</u>, New York: McGraw-Hill Book Co., Second Edition, 1975.

-15-

to all other questions used for this analysis were "yes" or "no".

For this analysis it was determined that a significant difference existed when the level of significance on the chi square test was less than or equal to .05.

Definition of Terms

Several terms are used continuously throughout the survey instrument and this report. These include, the following:

- 1. Multicultural Education is an educational concept which values the culturally pluralistic nature of the United States and thus the community and student population that schools serve. It is preparation for the social, political, and economic realities that individuals experience in culturally diverse and complex human encounters. These realities have both national and international dimensions. This preparation provides a process by which an individual develops competencies for perceiving, believing, evaluating, and behaving in differential cultural settings. Thus, multicultural education is viewed as an intervention and on-going assessment process to help institutions and individuals become more responsive to the human condition, individual cultural integrity, and cultural pluralism in society.
- 2. Multicultural Teacher Education provides teachers with the competencies required to teach from a multicultural perspective. It implies that teachers be able to provide programs where all students are helped to understand that being different connotes neither superiority nor inferiority and programs where students of various social and ethnic backgrounds may learn freely from one another.

- 3. Bilingual Education, is recognized as an integral part of the multicultural education concept. However, it is distinguished by the dimension of two languages as well as cultural diversity. Bilingual education utilizes both English and the native languages of students in the school program and also provides experiences for learning about the cultural heritage of the non-English speaking ethnic group. These programs may range from transitional programs almed at having students learning English after several years to a multilingual/multicultural program in which students learn to function totally in two languages and cultures.
- 4. Bilingual Teacher Education provides teachers with the competencies required to teach in schools with bilingual student populations. It also implies that teachers recognize, accept and value the cultural and language differences of students in their instructional and personal communications with students and the community.
- 5. Education Unit is the organizational structure which is responsible for functions related to education as an academic discipline including undergraduate teacher preparation, all departments/divisions/ areas within that organizational structure, educational research and professional service. The education unit often takes the form of a professional school, college, or academic division or department.
- 6. Institution is the entire complex of departments, professional schools and other organizational units that are present on the campus.

LIMITATIONS

The descriptive profile presented in this report is based on the data from surveys returned by the 387 teacher education institutions which are members of the American Association of Colleges for Teacher Education (AACTE). Although the demographic data about the responding institutions , appears to be a representative sample of higher education institutions training teachers, the sample is a self-selecting sample rather than a radomly selected sample of AACTE's institutional members. All of AACTE's 786 institutional members were mailed the survey instrument; 387, 49.2 percent of AACTE's institutional members, returned the survey. This may bias the descriptive profile especially if the non-respondents are-more likely than respondents to not have provisions for multicultural education.

-17

UČ 22

The descriptive profile presented here can not be construed as a representative sample of all teacher education programs.

The fact that multicultural education had been the focus of discussions concerning the NCATE standards that were being revised during 1976 and 1977 may have affected the survey responses. Respondents may be more likely to feel that their institution should be doing something in this area than if the survey had been conducted prior to such discussions. Respondents may have been more favorably positive to the incorporation of multicultural education in their teacher education programs as a result.

DELIMITATIONS

This study was limited to teacher education institutions which are members of the American Association of Colleges for Teacher Education. The survey instrument was initially mailed to those 786 institutions that were members of AACTE at that time.

DESCRIPTIVE PROFILE OF RESPONDING INSTITUTIONS

As previously indicated, 786 teacher education institutions were mailed the questionnaire. Responses were received and computerized for 387 cases representing a 49.2 per cent return rate. The institutions returning the survey were representative of AACTE's institutional members' as characterized below:

- 51.4% of the responding institutions were public institutions;
 46.6% were private institutions.
- 17.3% were from the Northeast; 23.3% from the Southeast;
 39.5% from the Midwest; 10.3% from the Southwest; and 8.0% from the West. ¹⁵
- 3. 13.7% of the responding institutions were located in cities with a population of over 500,000; 31.0% in cities with a . population between 50,000 and 499,999; 47.8% in cities between (2,500 and 49,999; and 7.2% in towns of less than 2,500.16
- 4. 25% of the responding institutions have a total institutional student population between 327 and 1,366; 25% with 1,367 to 3,609 students; 25% with 3,610 to 9,905 students; and 25% with 9,906 to 50,000 students.
- 5. 70.5% of the responding institutions were NCATE accredited during 1976-77.

15 Northeast includes the states of Maine, New Hampshire, Vermont, New York, Pennsylvania, Connecticut, Massachusetts, Rhode Island, New Jersey, Delaware, Maryland, and the District of Columbia. The Southeast includes West Virginia, Virginia, North Carolina, South Carolina, Kentucky, Tennessee, Georgia, Florida, Alabama, Mississippi, Louisiana, and Arkansas. The Midwest includes Ohio, Indiana, Michigan, Minnesota, Wisconsin, Illinois, Missouri, Iowa, North Dakota, South Dakota, Nebraska, and Kansas. The Southwest includes Oklahoma, Texas, New Mexico, Colorado, Utah, and Arizona. The West includes Wyoming, Montana, Idaho, Washington, Oregon, Nevada, California, Alaska and Hawaii.

16 The population size of the cities in which institutions are located was based on 1970 U.S. Census figures.

'17 The student population of an institution was based on the figures for full and part-time students as listed in the <u>Education Directory</u>: <u>Colleges</u> and Universities--1976-77 by the NCES.

18 The status of the institution's NCATE accreditation was taken from NCATE's 23rd Annual List: 1976-77.

-24

The data presented in this section of the paper represents only the 387 institutions that returned the survey instrument. At this point, no attempt has been* made to discover the make-up of the non-respondents; thus the data presented may be biased and should not be interpreted as representative of the total American teacher education community.

This descriptive profile of the responding teacher education institutions is presented in five sections: (1) programs related to multicultural education; (2) faculty; (3) students; (4) research and development activities related to multicultural education; and (5) other factors affecting multicultural education programs.

PROGRAMS RELATED TO MULTICULTURAL EDUCATION

Respondents were asked to identify whether their education unit had provisions for fifteen different activities. The following indicates the fifteen different activities and the percentage of responding institutions. that indicated that they have such provisions within their education program:

1.	Study of intergroup communications and classroom dynamics	82.2%
2.	A student teaching experience in a school with students who are racially/ethnically different from the student teachers	77.5
3.	Experiences which prepare education per- sonnel to work more effectively with minority students	73.9
4.	Study of values clarification	73.1
5.	Study of the dynamics of diverse [*] cultures and the implications for developing appropriate teaching strategies	71.2
<u>,</u> 6.	Study of cultures and ethnicity of those groups within the geographical region served by the education unit	57.6
• 7.	Study of diverse learning styles related to ethnic/cultural difference and the implica- tions for developing appropriate teaching strategies	55.6
8.	Experiences which prepare education personnel to teach content from a multicultural perspective	51.9
9.	Study of racism	51.7

29

ERIC

22.5 percent of the responding institutions require at least one course related to ethnic groups for completion of a degree program in education. 7.8 percent have the same requirement for completion of non-degree programs in education.

Women's Studies

53 institutions, 13.7 percent of the responding institutions, have a department or division at the college or university related to women's studies. At 225 of the institutions, 58.1 percent of the responding institutions, courses in women's studies are offered. Nine percent or 35 of the institutions require students to take at least one course in women's studies to complete their requirements for a degree program in education. Eight, 2.1 percent, require such coursework to complete requirements for a non-degree program in education.

Inservice Programs

150 institutions, 38.8 percent of those responding to the survey, offer inservice programs in multicultural/bilingual-bicultural éducation either as an independent unit or in cooperation with a local education agency, teacher center, or other agency. The types of inservice programs provided include workshops, seminars, conferences, consultative resource center, and field experiences. These are sometimes offered at the college or university as part of their regular undergraduate or graduate offerings. The education unit most often offers inservice programs in cooperation with a local education agency; the location of these programs is usually in the local school district rather than at the college or university. Inservice programs are also offered by the education unit in cooperation with teacher centers and continuing education centers. Teacher Corps programs were listed as providing such inservice programs in at least three cases.

The majority of these inservice programs are provided for teachers in local education agencies. Some of the programs are for administrators and others for paraprofessionals at the local school level. In a few instances the programs were developed as staff development activities for other faculty members in the education unit. One institution provides inservice programs for recently naturalized citizens with teaching certificates from their mother countries.

The ethnic/cultural/linguistic focus of the inservice programs also varies widely. Bilingual education is often addressed through inservice programs to assist educators in teaching limited-English speaking students or to provide the course work for certification in bilingual education. Many of the inservice programs have a multicultural focus. These address issues of cultural awareness, human relations, and racism and sexism as well as several specific ethnic groups. The, major ethnic groups included in these programs are Afro Americans, Mexican Americans, other Spanish-speaking Americans, American Indians, and Asian Americans. Other ethnic groups mentioned by at least one institution as the focus of inservice programs were Italian Americans, Appalachians, Greek Americans, Arab Americans, and Vietnamese. The language groups which were included as a part of the bilingual education focus included Spanish, several American Indian languages, Portuguese, Italian, and French. Two institutions listed comparative and international education as the focus. Non-standard English and low socio-economic status were also listed as emphases in inservice education programs.

-26-

Provisions for Multicultural/Bilingual Education

305 of the 387 responding institutions (78.8%) have some provisions for multicultural or bilingual education programs in their education unit. These provisions are most often found as components in foundations or methodology courses. 198 institutions (51.2% of the responding institutions) have courses or offer a major or minor in multicultural or bilingual education. The following shows the percentage of all responding institutions with provisions for multicultural and bilingual education. plus the percentage of institutions with multicultural and/or bilingual education:

Provision	Total MCE and/° Or BCE	Multicultural Education	Bilingual Education
Component in Foundations Course(s)	58.9%	72.4%	37.8%
Component in Methodology Course(s)	49.4	58,4 , .	37.5
Major Emphasis in Course(s)	23.5	25.0	18.6
Major or Specialization	18:6	25.0*	18.6
Minor or Supplementary Offered	-18.1	15.0	17.8
Department/Division	10.1	9.0 [#]	10.3
Other	14.0	13.6	8.4

The "others" specified by respondents included courses or workshops in human relations, communications skills, cultural awareness, migrant students, and Latin America. Field experiences were listed by eleven of the respondents. Two programs were also listed - the C.C.T.E. and Title VII Bilingual Education.

-27-

FACULTY

347 (89.7% of the responding institutions) completed the question about the ethnic and sexual make-up of the faculty for the education unit at the institution. The chart that follows indicates the percentage of the 347 institutions responding to this question with faculty members from different ethnic and sexual backgrounds. The range of faculty members from each ethnic group is also shown. Full-time faculty includes persons carrying a full-time load, all of whose activities are devoted to operations of the education unit. Split-time faculty includes fulltime faculty for whom only a portion of their activities are devoted to activities operated by the education unit (e.g., an English professor who teaches one methods course). Part-time faculty includes persons carrying less than a full-time load in the education unit who are not full-time employees of the institution.

			Range	SPLIT- <u>%</u>	Range		lange
	White American Male	87.9	1-160	447	1-43	43.5	1-105
	White American Female	86.7	1-76	38.6	1-19	50.1	1-46

	Other Female	1.4	1-1	•3	2-2	.6	1-1

-28-

As expected, the white male and female are faculty members in the overwhelming majority of teacher education institutions. Blacks appear to be the most likely minority group with faculty positions although less than one-third of the institutions have any full-time black faculty members. The faculty of historically black institutions is also predominantly black. Less than 16 percent of the institutions report Hispanics as fulltime faculty members. Less than seven percent of the institutions have Asian faculty members. The maximum ranges of 21 and 17 for full-time Asian faculty is due to the reports from Hawaiian universities where Asian Americans are more likely to be faculty members. The least represented American minority group is American Indians. Less than seven percent of the institutions have American Indian or Eskimo male faculty, and only two percent have American Indian or Eskimo female faculty.

Approximately one-half of the institutions indicated split-time or part-time faculty members in the education unit. Again the majority of these institutions have white faculty members with the proportion of minority faculty even less than for full-time faculty.

The following chart shows the percentage of the total faculty population from various ethnic and sexual backgrounds at each level of employment:

	Full-Time	Split-Time	Part-Time
Number of Responding Institutions	347	190 .	223
White American Male	61.90%	61.38%	46.39%
White American Female	27.88	27.64.	43.57
Black American Male	3.84 -	3.45	2.38
Black American Female	3.10	2.98	2.27
Hispanic American Male	.97	1.49	2.00
Hispanic American Female	.77	1.49	. 1.14
Asian American Male	. ,79	:74	, .38
Asian American Female	.40	• 34	1.30
American Indian or Eskimo,Male	.23	.27	.16
American Indian or Eskimo Female	.12	.20	.38

The ethnic/racial composition of full-time teacher education faculties is not representative of the U.S. population. Using U.S. Census figures, the following comparison of the pluralistic nature of teacher education faculties and the general population can be made:

	Teacher Education	U.S. Population
White Americans	89.78%	82.40%*
Black Americans	6.94	11.00*
Hispanic Americans	1.74	5.10*
Asian Americans 🔎	1.19	.804
American Indian/Eskimos	35	. 40+

The percentage of women who are full-time faculty members is 32.27 compared to 67.73 percent male. The breakdown at the split-time level is 32.65 percent women and 67.35 percent men. The percentage of women teaching as part-time faculty members increases considerably over this level where 48.66 percent of the part-time faculty is female.

There are also differences between the percentage of women within each ethnic/racial group as shown in the following chart:

· · ·	<u>Full-Time</u>	Split-Time	<u>Part-Time</u>
White American	31.1%	30.9%	48.2%
Black American	45.5	36,5	49.0
Hispanic American	45.0	49-1	40.2
Asian American	33.1 .	31.7	66.7
American Indian or Eskimo	36.5	42.9	69.7

Except for Hispanic females, the percentage of females working as part-time faculty increased over the other levels. The greatest discrepancy between the number of male and female faculty members occurs in the White American group.

*1977 U.S. Census Figures +1970 U.S. Census Figures

Faculty Development Activities

The concept of multicultural/bilingual education has been fostered among faculty members in the education unit through various activities. The following shows the percentage of responding institutions (387) that indicate the specific activity as means by which faculty learn about multicultural and bilingual education:

Activity	<u>Total</u>	Multicultural Education	Bilingual Education
Professional Association Meetings .	53.0%	48.6% ,	27.4%
Faculty is on their own with respect to multi- cultural/bilingual education	48.3	44.7	28.4
	• .	•	
Seminars/symposiums	- 35.4	30.7	,17.6
Cross-cultural field experiences	, 33.9	29.7	a 15.5
Inservice training for faculty	19.4	17.6	8.0
Faculty research grants for multicultural/ bilingual education projects	17.1	12.4	9.9
	1		,
Sabbatical(s) for projects related to multicultural/ bilingual education	13.4	9.5	7.5
		:	` >
Other	6.2	. 4.7	3.2

The "others" specified by several of the respondents included the use of consultants who are not members of the education unit and projects within the institution unit that have a multicultural focus. Also mentioned was faculty participation in university and community activities, federal and state projects, travel, prior teaching and urban experience in multicultural settings, contracts with foreign governments, language classes, and professional periodicals.

STUDENTS

The question about the ethnic and sexual backgrounds of students for the total institution, undergraduate education, and graduate education had the lowest frequency of responses. Using the data provided by those institutions that supplied the figures for their student population as well as the latest available figures from USOE's Office of Civil Rights, figures for the total institution enrollment were compiled for a total of 385 institutions, 99.5 percent of all institutions responding to the survey. The following chart shows the percentage of institutions with students from different ethnic and sexual backgrounds and the numerical range of students at the institutions. The percentages are based on the 385 institutions for which student populations figures for the total institution were

available.		tal tution	Undergraduate Education			duate cation

•						1

22.

Over 96 percent of the responding institutions have a student popula-, tion at their institution that includes some minority students. Both white and black students are enrolled in over 95 percent of the institutions. Hispanic and Asian students are enrolled in 71.2-77.1 percent of the institutions while American Indian or Eskimo students are enrolled in less than 62.1 percent. There was no clarification of "others" on this question. Sometimes this included white ethnic groups, sometimes foreign students, but was usually not specified.

Only 186 of the respondents provided enrollment figures for undergraduate education and only 91 for graduate education. Based on the limited responses to these two sections of the question, it appears that minority enrollments in education is less than the minority enrollment of the total student population. The percentage of institutions reporting minority education students at both undergraduate and graduate levels is less than those reporting minority enrollment for the total institution.

The percent of the student populations from various ethnic and sexual backgrounds is shown for the same three categories below:

	Total Institution	Undergraduate Education	Graduate Education
White American Male	46.91%	36.08%	39.11%
White American Female	41.53	51.64	51.24
Black American Male	3.49	4.30	2.77

		•	

2

 $\cup \{ 2 \}$

-33-

The institutions responding to this survey do not have student populations that, are representative of the ethnic/racial composition of the U.S. population. The percentages of student populations and the U.S. population

follow:	Total Institution	Undergraduate Education	Graduate Education	U.S. Population
White Americans	88.44%	87.72%	90.35%	82.40%*
Black Americans	7.65	8.63	• 6.39	11.00*
Hispanic Americans	2.37-	2.02	1.96	5.10*
Asian Americans	1.05 .	.87	.85	.80+
American Indian/Eskimos	. 49	.76	.44	.40+

The percentage of minority students in undergraduate education is slightly higher for Black and American Indian and Eskimo students than their enrollment at the total institutional level. The percent of undergraduate education students who are White, Hispanic or Asian Americans is slightly less than the percent enrolled in the institution. The percent of all minority graduate education students is less than that at ' any other level.

47.57 percent of the institutions' student population is female. The number of females who are enrolled in undergraduate education programs, however, is 58.26 percent of the undergraduate education students. There are also more women as graduate education students than men. * 56.62 percent of the reported graduate education students are female.

*1977 U.S. Census figures +1970 U.S. Census figures

Employment of Teacher Education Graduates

Institutions with data about the employment of teacher education graduates were asked to indicate the percentage of those graduates working in situations where the student population is likely to be other than majority white. 75 institutions reported that from 1-100 percent of their graduates are employed in inner-city schools. 39. institutions indicated that 1-95 percent of their graduates work in bilingual classrooms/schools. 32 institutions reported that from 1-50 percent of their graduates work on American Indian Reservations. Another 39 institutions indicated that from 2-100 percent of their graduates worked in other situations. These "other" included 26 institutions which listed rural or small towns as the situation in which their graduates worked; 16 respondents listed suburban areas; three listed Appalachia; and three listed overseas.

₽_

RESEARCH AND DEVELOPMENT

Survey respondents were asked to indicate the types of research activities undertaken in the education unit, the nature of these research activities, the financial support for activities, and the types of products produced by members of the education unit. Respondents were to indicate only the research and development activities for multicultural and/or bilingual education.

Type of Research Activities

139 institutions (35.9% of those responding to the survey) reported that there is some type of research in the area of multicultural and/or bilingual education occurring within their education unit. The following chart shows the type of research being pursued in these area by frequency of responses and percentage of the 387 institutions responding to the survey.

11. Multiethnic instructional media;

12. Culturally different gifted students;

13. Legal research; and

14. Community involvement in bilingual education.

Respondents also indicated on this question whether the research was undertaken by graduate students or faculty members. With one exception, a greater number of institutions reported faculty undertaking these research topics than graduate students. The only exception was "research of instructional processes" for bilingual education where the research is more often undertaken by graduate students than by faculty members. Often the research topics are being investigated both by faculty members and graduate students at the same institution. The following chart outlines the level at which different research topics are.being undertaken:(percentages are based on the 387 responding institutions):

Support For Research Activities

123 institutions responded to this question; 103 for multicultural education and 70 for bilingual education. The major support for research activities for both multicultural and bilingual education comes from the institution itself as indicated below. The following indicates the frequency of responses and the percentage of the institutions responding to each section of this question that reported the listed

'Other sources of support for multicultural and bilingual education research efforts included personal funds of students or faculty, professional associations, foreign governments, state government grants, and textbook companies.

Products

Respondents were asked to identify the types of products related to multicultural and/or bilingual education produced by members of their education unit. 140 institutions (36.2% of institutions responding to survey) indicated that there were products produced in multicultural education, and 88 institutions (22.7%) indicated that products were produced in bilingual education. The specific type of products produced in each area are listed below. Both the frequency of responses and percentage of the 387 survey respondents are shown.

Other types of products specified by respondents included modules for classroom use, federation state project reports, seminar papers, audio-visual tapes, slides, bibliographies, and graduate theses and dissertations.

GENERAL

Respondents were asked to indicate factors that either contributed to or deterred the planning, development, and implementation of multicultural/bilingual education programs in their education unit. In addition, they identified the kinds of services that they would like AACTE to provide to institutions to assist them in planning, developing, and implementing multicultural education programs. Finally, respondents were asked to write what they considered the future of multicultural and/or bilingual education to be at their institution.

Contributing Factors to Development

346 institutions (89% of the survey respondents) responded to this question on the survey. Respondents marked that the specific factor either was a "major contribution," of "no influence," or a "major deterrent" to the planning, development, and implementation of multicultural/bilingual education. The following chart presents the responses to the factors indicated on the survey as contributing or deterring the the development of multicultural/bilingual teacher education programs. The percentages shown are based on the 387 institutions that responded to the survey.

ERIC

To analyze the major contributing factors and deterring factors, responses of (1) and (2) were combined as contributing factors and (4) and (5) as deterring factors, Several of the factors appeared concentrated at both ends of the continuum indicating that they were. major contributions for some institutions yet the factors that deterred development of multicultural/bilingual education for others. As an example, "Faculty Qualified to Teach Multicultural/Bilingual Education" was a contributing factor for 36.5 percent of the institutions. At the same time, qualified faculty was a deterrent for 31.7 percent of the institutions. The availability of federal funds was another factor for which institutions responded at both ends of the continuum: 18.9 percent indicated that this was a contributing factor while 25.1 percent reported it as a deterring factor. The availability of curriculum materials for college students also provoked responses at both ends of the continuum. 23.5 percent reported it as contributing and 21.2 percent at a deterrent.

Factors which were considered as contributors to the planning, development and implementation of multicultural/bilingual education by at least 25 percent of the institutions included:

> University/College Administration 39% Various Ethnic Groups 36.7% State Education Agency Guidelines/Regulations 36.2% Encouragement of Professional Associations 35.7% State Legislation 29.8% Federal Legislation 27.4%

> > -43-

AACIE Services

331 institutions (85.5%) responded to this question. The types of . . services that institutions would like AACTE to provide in the area of multicultural/bilingual education are shown below. The percentages are based on the 387 institutions that responded to the survey. AACTE Services Publish a journal or bulletin that informs teacher 58.4% educators of new ideas, approaches, or materials in multicultural education Facilitate the dissemination of information about 56.3 operationally and programmatically successful multicultural education programs. 50.6 Provide a clearinghouse for informational, research and analytical studies of multicultural education 44.4 Catalogue information about funding agencies to disseminate as a directory 43.7 Provide information about federal and state legis*l*ation Convene national or regional meetings of multicultural 38.5 education Maintain a consultative service on multicultural 37.2 teacher education that can match expertise to needs at all levels Stimulate research and analysis on various aspects 33.3 of multicultural education through the convening of task force. Provide consultation on development of proposals and 32.8 research designs for submission to federal agencies Conduct research and analytical studies on multi-27.9 cultural education. 6.2 Other Others listed by the respondents were to encourage scholarly writings in this area, provide information about employment opportunities in non-teaching situations, organize inservice faculty workshops/ institutes, lobby for state monies, develop assessment tool for affective objectives of multicultural education, develop modular and/or

-44-

4<u>)</u>]

audio-visual materials, and assist state associations in helping individual institutions. Other comments includes eliminating multicultural education as a requirement for certification, mandating multicultural education for continuing certification, dropping this area and concentrating on the more critical survival concerns of teacher education (i.e., finance, enrollments, control, accreditation), and "helping ethnic groups to establish some kind of generalized identity so the non-member can more nearly present them as a positive, contributing group."

Two factors were considered deterrent to the planning, development, and implementation of multicultural/bilingual education by at least 25 percent of the institutions:

29.4%

Availability of University Funds 40,9%

Availability of State Funds

Desegregation of school districts near the university/college and teacher organizations have little influence on multicultural/bilingual education at most institutions. The influence that these two factors have is toward contributing rather than deterring.

/ Other factors listed by respondents as contributing factors included the NCATE Standards, human relations requirements, interested faculty members, the interest of local teachers, committed faculty members, student interest, Teacher Corps, the Title IV Project, and community need. Deterring factors listed were lack of interest and felt need, faculty workload, indecision at the state level, homogeneity of student teaching sites, lack of demand from students, lack of ethnic groups in the community, negative attitudes of faculty, degree program requirements, no substantive knowledge base, limited curriculum resources in various disciplines, and lack of philosophical acceptance.

THE OUTLOOK FOR THE FUTURE OF MULTICULTURAL/BILINGUAL EDUCATION

The final question on the survey was open-ended. It asked the respondent to indicate the future of multicultural and/or bilingual education in his/her education unit. Responses fell into three general categories. Roughly half of the respondents were somewhat ambivalent about the future. The future at those institutions is likely to depend on the availability of federal funds, faculty interest, state and federal requirements, and student interest. Without financial support equal to or beyond what is now available, muticultural/bilingual education will not continue or be developed. The second group of approximately twenty percent had a complete lack of interest in multicultural/bilingual education. The third group of approximately thirty percent recognized a need for cultural pluralism in the teacher education programs as both an immediate and longterm goal. This group is comprised of those institutions that are either continuing already established programs or are developing program now. These institutions are also dependent on financial support and feel a "crunch" when the support diminishes.

DESCRIPTIVE PROFILE OF MULTICULTURAL EDUCATION

PROVISIONS IN TEACHER EDUCATION

The fifth question on the survey asked the respondent to indicate. how multicultural and bilingual education was being addressed within the education unit during the fall, 1977 session. The education units in 305 institutions address multicultural and/or bilingual education as components in foundations and/or methodology courses, as a major emphasis in courses, as a major or minor as a department/division and/or through other means of percentage of responding institutions with such provisions is repeated below:

	~	Total MCE and/	Multicultural	Bilingual
	Provision .	or BCE	Education	Education
	Component in Foundations Course(s)	58.9%	72.4%	37.8%
	Component in Methodology	49.4	~ 58.4	37.5
	Major Emphasis in Course(s)	23.5	25.01	18.6
	Major or Specialization Offered	18.6	25.0	18.6
1	· · ·			*
,	Minor or Supplementary Offered	18.1	15.0	17.8
	v	۰ ،	4	• •
	Départment/Division	10.1	. 9.0	10.3
	Other	14.0	13.6	8.4

198 institutions have courses or offer a major or minor in multicultural and/or bilingual education. 110 institutions provide for Multicultural and/or Bilingual Education through components in foundations and/or methodology courses only. These institutions are listed in AACTE's Directory of Multicultural Education Programs in U.S. Teacher Education

In this section the multicultural and bilingual programs of these 305 teacher education institutions will be described. This section is subdivided into six parts: curricula, faculty, students, research and development, management, and general differences between institutions with provisions for multicultural and/or Bilingual Education and other institutions.

CURRICULA

79.7 percent of the institutions with provisions for multicultural and/or bilingual education have courses and sometimes departments or divisions related to specific ethnic groups.' 23.9 percent of these institutions require that education majors complete one or more courses related to specific groups. 8.9 % percent require students to complete such courses certain non-degree programs. The specific ethnic groups which these courses addressed are outlined in the section, "Descriptive Profile of Responding Institutions."

63 percent of these institutions also offer courses related to women's studies. 14.8 percent have departments or divisions withing the institutions whose major focus is women's studies. 9.5% of these institutions require completion of at least one course in women's studies complete an education degree program. Courses in women's studies are required for the completion of certain non-degree programs by 2.3 percent.

Inservice programs in multicultural and/or bilingual education are offered by 43.9 percent of the institutions with provisions for multicultural education. The specific content and types of inservice programs

·48-

offered are outlined in the section, "Descriptive Profile of Responding

Institutions."

Courses Related to Multicultural Education

Institutions which had indicated that they have some provision for multicultural education within their education unit were asked to list the specific courses offered in this area. 233 institutions (76.4% of all institutions with such provisions) listed courses at the undergraduate level which address as a component or major emphasis multicultural education. 51 institutions (16.7%) listed dual level courses; 78 (25.6%) listed graduate courses; and 4 (1.3%) listed courses for some other level, usually inservice workshops. The range for the number of courses offered at these levels and the mean number of courses offered are listed below:

	Cou	rses	Frequency of
Degree Level	<u>Ran ge</u>	Mean	Responses ~
Undergraduate _	1-57	5.0	233
Dual	1-20	3.1	51
Graduate	1-19	3.2	78
Other	1-5	2.8	4

Based on an analysis of the course titles provided by the respondent on the survey instrument or in the institution's catalog, these courses were classified according to what appeared to be the major focus of the course. These are identified with the frequency of occurence at each degree level in the following chart:

Issues in Multicultural Education -

210 (68.9% of the institutions with multicultural/bilingual education provisions) indicated that at least one course with components of emphasis on multicultural or bilingual education is required of education students to complete the requirements for a degree. One or more of these courses are also required by 42 (13.8%) of the institutions for students to complete requirements for certain non-degree education programs.

Bilingual Education courses at the undergraduate level were listed by 95 institutions which have provisions for multicultural and/or bilingual education. This was 31.1% percent of the 305 institutions with such provisions. 26 (8.5%) of the institutions listed dual level courses; 29 (9.5%) listed graduate courses; and 10 (3.3%) listed courses at other levels usually inservice workshops. The range for the number of courses offered at these levels and the mean number of course offered are listed below:

Degree Level		. • Cours Range	ses Mean	Frequency of Responses
Undergraduate	\ 	`1-90 _ -	5.6	95
Dual	 •	1-7	3.3	ź 26

The respondent was requested to list on the survey instrument the course numbers and titles, supplementing the survey with an institution catalog of purses. Based on an analysis of the course titles, the courses related to bilingual education have been classified below by what appeared to be the major focus of the course. These are identified with the frequency of occurence at each degree level in the following chart:

1-14

1-6

Studies in Bilingual Education Methods in Bilingual Education Introduction to Bilingual Education Science and Math for Bilingual Speakers' Reaching Reading to Bilingual Speakers Issues in Bilingual Education Assessment of Bilingual Children Teaching the Bilingual-Bicultural Materials for Bilingual Instruction Linguistics for Bilingual Classrooms Multilinguals in Classrooms Pas't and Present Status of Bilingual Education Bilingual Program Design and Implementation Spanish in Multicultural Environments Educational Problems of Dialect Speakers Community School Relations in Bilingual Settings Second Language Pedagogy for Bilingual Education Child Development and Patterns of Child Rearing in Culturally Different. Groups Seminar: Administrative Issues in Bilingual Education Seminar: Cultural Diversity and Educational Administration Bilinguar Schooling in the U.S.

Institutions with bilingual education programs were requested to identify the target languages for these programs. The following shows the target languages, the number of institutions that indicated these as target languages and the percentage of all institutions with provisions for multicultural and/or bilingual education:

	Target 1	Language	Frequency of Responses	-	Percent of Institutions with Multicultural/ <u>Bilingual Provisions</u>

Thus Spanish is the major target language for bilingual education programs offered at the institutions responding to this survey. American Endian languages are offered with the next greatest frequency (frequency total of 27) followed by French and German. None of the other languages were reported more than 8 times.

FACULTY FOR MULTICULTURAL/BILINGUAL EDUCATION

In the section of the survey on faculty, respondents whose education unit had provisions for multicultural and/or bilingual education were asked to indicate the academic backgrounds and ethnic and sexual composition of faculty members who teach such courses. This data is presented in three different sections: (1) academic background of faculty members

who teach courses related to multicultural and or bilingual education, but are from schools, colleges, or departments other than education; (2) program areas represented by faculty members who teach courses related to multicultural and/or bilingual education and who are faculty members in the education unit; and (3) the ethnic and sexual composition of the faculty members who teach courses related to multicultural and/or bilingual education at each level of employment, i.e., full-time education faculty, split-time education faculty, and part-time education faculty. Academic Background of Split-Time Education Faculty

The respondent was asked to indicate on question 10 the disciplines or areas of study the faculty members teaching multicultural and/or bilingual education courses from units in the institution other than education. 189 respondents completed this question. Listed below are the frequency of responses for each academic discipline listed on the survey and the percentage of the 189 respondents indicating that discipline.

Academic Discipline	Frequency	Percentage

"Others" specified on this question included six institutions with faculty from linguistics, three with faculty from speech, two with faculty from minority groups studies, two with faculty from reading, and two with faculty from Puerto Rican studies. A frequency of one institution was found for faculty members from the academic disciplines of bible, Latin American studies, ethnic studies, geography, religion, journalism, Black studies, library science, continuing éducation, English, integrated studies, folklore, social sciences, museum, allied health, biculturalbilingual studies division, education administration, speech pathology and audiology, special education, and women's studies.

Program Areas of Full-Time and Part-Time Education Faculty

On question 11 the respondent indicated the program areas that fulltime and part-time education faculty teaching multicultural/bilingual, education courses represent. 244 respondents completed this question. Listed below are the frequency of responses for each program area and the percentage of the 244 institutions indicating that area.

	Program Area	•	<u>F</u> 1	equency		Percentage

"Others" specified by respondents included educational foundations (2 institutions), linguistics (2 fnstitutions), reading (1), multicultural education (1), school services - bilingual education (1), and community education (1).

Ethnic and Sexual Composition of Faculty

181 institutions indicated the ethnic and sex background of the faculty members teaching courses related to multicultural education. 73 institutions reported this information for faculty members teaching courses related to bilingual education. Each of these were reported by whether the faculty members are employed by the education unit as full-time, part-time or split time. Faculty for Multicultural Education Courses

The following table indicates the percentage of the 181 institutions responding to this question with faculty members from different ethnic and sexual backgrounds at the three different employment levels. The range of faculty members within the different institutions is also provided.

			1-Time	Sp Ŀi.	t-Time	Part-	
	<u>Ethnic/Sex_Background</u>	%	Range_	<u>/</u>	Range	%	Range
	White American Male White American Female Black American Male	64.6 39.8 22.7		8.8 6.6 5.5	1-10 1-2 1-2	5.5 5.5 6.1	1-7 1-3 1-16
?	Black American Female Hispanic American Male	20.4 9.9	1-17 1-4	3.3 1.1	1-2 1-1	5.5 2.8	1-13 1-5
	Hispanic American Female	6.1	1-1	2.2	∗ 1-1	.6.	1-1
	Asian American Male 🔍	5.5	1-2	.6	1-1	0	0
	Asian Ame ric an Female	8.3	1-2	6 م	1-1.	0	0
	American Indian or Eskimo Male American Indian or	3.8	1-3	1.7	1-1	0	0
	Eskimo Female	.6	1-1	1.1	2-2	1.1	1-1

It appears that the majority of persons teaching courses related to multicultural education are full-time faculty members in the education unit. Less that nine percent of the institutions use split-time faculty to teach such courses, and less than six percent use part-time faculty. For full-time faculty, the majority of the reporting institutions have white male and female faculty members who are responsible for teaching the courses related to multicultural education.

The following chart shows a percentage breakdown by sex and ethnicity of the faculty teaching multicultural education courses at each level of employment:

•	Full-Time	Split-Time	Part-Time
White American Male	38.25%	37.50%	16.95%
White American Female	19.63	17.50	25.42
Black American Male	19.89.	15.00	20.34
Black American Female	13.52	11.25	16.95
Hispanic American Male	2.73	2.50	15.25
Hispanic American Female	1.15	5.00	1.69
Asian American Male	1.27	1.25	-0-

~60-

Asian American Female	2.17%	1.25	-0-
American Indian or Eskimo Male	1.27	3.75	0-
American Indian or Eskimo Female	.01	5.00	3.39

The breakdown by ethnicity of these full-time faculty members is 57.88 percent white, 33.41 percent black, 3.88 percent Hispanic, 3.44 percent Asian, and 1.28 percent American Indian or Eskimo. The percentage of minority faculty teaching these specific courses in the teacher education program increases considerably over the percent of minority faculty in the full-time positions of teacher education in general. For. most groups the percentage of split-time faculty is similar to that of the full-time faculty. The percentages of minority faculty, however, at the part-time level again increases for black male and female and Hispanic males.

The breakdown by sex of full-time faculty members teaching courses related to multicultural education is 36.48 percent female and 63.52 percent male. There are more women teaching these specific courses than women in full-time positions of teacher education in general. For splittime faculty, the percentage of women is 40 percent; at the part-time level, the percentage jumps to 47.45 percent women. The following shows the percentage of females within each ethnic/racial group at the various levels:

• .	- ·	Total Frequency	Full-Time	<u>Split-Time</u>	Part-Time
	White American	94	33.4%	32.1%	48.6%
	Black American	53	40.2	42.7	45.5
	Hispanic American	16	32.0	66.7	10.0
	Asian American	16	60.0	50.0 .	-0-
	Ame r ican Indiañ or Eskimo	5	9.3	57.1	100.0

For both the white and black groups, the percentage of women teaching multicultural education at the part-time level is greater than at any other level.

60 -61Faculty for Bilingual Education Courses

The following table indicates the percentage of the 73 institutions responding to this question with faculty members from different ethnic and sexual backgrounds at the three different employment levels. The range of faculty members within the different institutions is also .

Ethnic/Sex Background	Full- <u>%</u>	Time Range	Split %	-Time Range	Part- <u>%</u> 1	
White American Male White American Female Black American Male Black American Female Hispanic American Male	.41.1 34.2 5.5 4.1 34.2 30.1	1-37 1-1 1-3 1-4	8.2 15.1 1.4 2.7 6.8	- 1-3 1-1 1-2	2.7 1.4 11.0	1-1
Hispanic American Female Asian American Male Asian American		1-8	2.7	1-4	2.7	1-1
Female American Indian or Eskimo Male	•••	1-2 ,,2-2	-0 1.4	- 1-1	1- <u>4</u> ~ -(1-1)-
American Indian or Eskimo Female	2.7	1-1	-0	_	-()-

The majority of persons teaching courses related to bilingual

education are full-time faculty members in the education unit. Less than fifteen percent of the institutions use split-time faculty to teach such course, and less than seventeen percent use part-time faculty. For fulltime faculty, the majority of the reporting institutions have white male and female faculty members teaching bilingual education. Hispanic Americans make up the next largest ethnic group teaching such courses.

The following chart shows a percentage breakdown by sex and ethnicity of the faculty teaching bilingual education courses at each level of

• • • • •	Full-Time	<u>Split-Time</u>	<u>Part-Time</u>
White American Male	26.08%	24.39%	6.97%
White American Female	32.80	•34.15	20.93
Black American Male	.79	-0-	4.65
Black American Female	1.97	2.44	2.33
Hispanic American Male	15.41	19.51	30.23

employment:

-6/2-

30.23 15.41 19.51 Hispanic American Female 1.97 9.75 .4.65 Asian American Male-2.76 -0-2.33 Asian American Female .79 2.44 -0-American Indian or Eskimo Male -0-American Indian or Eskimo Female .79. ·0--

The breakdown by ethnicity of these full-time faculty members is 58.88 percent white, 2.76 percent black; 32.01 percent Hispanic, 4.73 percent Asian, and 1.58 percent American Indian or Eskimo. The percentage of Hispanic, Asian, and American Indian faculty member teaching these specific courses in the teacher education program is an increase over their percentage of full-time positions for teacher education in general. The greatest increase occurs for Hispanic Americans from 1.74 percent of the general teacher education full-time faculty to 32.01 percent of the full-time faculty teaching bilingual education. Black are less involved in teaching such courses than in other parts of the teacher education program. Except for American Indians, there is an increase in the percentage of minority faculty who teach bilingual education as part-time faculty members.

The breakdown by sex of full-time faculty members teaching courses related to bilingual education is 53.73 percent female and 46.27 percent male. There are more women teaching courses related to bilingual education with full-time positions than for the general teacher education faculty or for multicultural education. For split-time faculty, the percentage of women is 56.1 percents at the part-time level it is 55.82 percent. The following shows the percentage of females within each ethnic/ racial group at the various levels:

· .	Total Frequency	<u>Full-Time</u>	<u>Split-Time</u>	Part-Time
White America		56.3%	58.4%	69.2%
Black America		56.0	100.0	33.3

-63-

Hispanic American	, 39 *	48.2	72.7	50.0 ·
Asian American	7	55.9	-0-	33.3
American Indian or Eskimo	2	50.0	-0-	-0-

For the white group, the percentage of women teaching bilingual education at the part-time level is greater than at any other level. More Hispanic women teach bilingual education as split-time faculty than at any other level. The frequencies of the other three groups were too small to make any statements concerning the differences at the various levels.

STUDENTS

Respondents from institutions with provisions for multicultural and/or bilingual education were asked to indicate the total number of students enrolled in multicultural/bilingual education courses or programs at different degree levels. The following chart indicates the frequency of institutions that responded to that section, the range of responses within the responding institutions, and the mean number of students enrolled at each level:

· · ·	Multi	cultural	:	•••	Bi	ling	ùal '	i.	į,
Degree_Level	Frequen	cy Range	Mean	•	Freque	n cy ¯	Range	Mean	
Bachelor Post Bachelor (Fifth Year) Master	190 18 71	2-670 4-610 1-660	119.7 58.6	•	88 14 35		1-295 6-60 1-200	43.9 31.4 40.3	•
Specialist Doctor Other	8 22 4 11	1-52 1-320. 2-125	24.4 29.0 30.3		10 - 14 - 5		9-96 1-100 4-48	29.9 15.9 18.4	•

"Others" specified by the respondent included a bilingual-bicultural certification program, teaching internship, professional improvement beyond certification level, non-degree program, inservice training for teachers, multicultural education certification program, special courses, and training programs for administrators and education consultants.

Without knowing the size of the student population at the various education degree levels, it is impossible to determine the percentage of

•

students who are enrolled in multicultural/bilingual education programs. MANAGEMENT OF MULTICULTURAL/BILINGUAL EDUCATION PROGRAMS

Respondents were asked to indicate the ways in which the multicultural/ bilingual education activities within their education unit were developed and controlled/monitored. 254 respondents completed this question. The following table shows the frequency of responses for each item and the percentage of the 305 institutions with provisions for multicultural/ bilingual education which indicated that type of management:

Management	<u>Free</u>	Develor quency	ped Percentage			d/Monitored Percentage	
By a coldege o institution-wi curriculum com	de , ,	70	23.0	۲ د	68	22.3	
By a person reformed for directing/ the multicultu bilingual efformed for the second secon	coordinating ral/	84	. 27.5	¢	- * *	• • 23.0	•
By each departs within the edu having the pre develop, contr monitor its ow cultural progr	cation unit rogative to ol, and n multi-	144	47.2			31.8	•.
By a consorțiu other colleges districts, and agencies	N m with , school	29	9.5 · ·	;	 16	5.2	
By cooperative with local edu agencies		75	-24.6.	•	22	7.2	
By cooperative with teacher o tions		21 *	6.9	· •	8	2.6	••
° Other	· · .	25	· 8.2 ·	*	.16	5.2	

-65-

"Others" specified by respondents included regional panels of community members, community-based committee, state education agencies, state regulatory commission, individual professors within his/her own course, teacher education students, dean's office, and teacher centers.

Respondents were asked to identify the name and address of the person in their education unit who was responsible for directing/ coordinating the multicultural/bilingual education efforts. This information has been compiled in a <u>Directory of Multicultural Education</u> Programs in U.S. Teacher Education Institutions, 1978.

Different types of consortia for developing and/or controlling and monitoring multicultural/bilingual education programs were identified by the respondents. Most often the consortium was composed of several institutions. Other types of consortia included state education agencies, local education agencies, and teacher centers. Specific ones mentioned were with a Canadian-American Center, Overseas student teaching, and the Cooperative Urban Teacher Education (CUTE) program.

Financial Support

242 different institutions reported the source of financial support for their multicultural/bilingual education programs. The following chart shows the frequency of responses for each source and the percentage of the 305 institutions with provisions for multicultural/bilingual education that indicated that source of support:

Source of Financial Support	Multic Frequency	ultural 'Percentage	Biling Frequency	ual <u>Percéntage</u>
Education Unit	165	54.1	- 88	28.9 [°]
Other University Sources	• م	16.7	37	12.14
- U.S. Office of Education	, 24	7.9	40	· 13.1 · ·
Other Federal Funds	17 .	5.6	16	5.2

State Education Agencies	17	5.6	16	5.2
Private Foundations	6	2.0	2	
Other	32	10.5	6	2.0

"Others" specified by the respondents included private organization, teacher corps, foreign governments, and gifts.

The major support for multicultural/bilingual education programs in teacher education is the budget of the education unit or other institutional sources. Federal funds are more likely to support bilingual education programs than multicultural education programs.

DIFFERENCES BETWEEN INSTITUTIONS WITH PROVISIONS FOR MULTICULTURAL EDUCATION AND OTHER INSTITUTIONS

Of the 387 institutions that returned the survey, 305 reported that they had provisions for multicultural/bilingual education while 82 institutions did not have such provisions.

Using a chi square test, differences between the institutions with provisions and institutions without such provisions were tested. The null hypothesis tested was: At the .05 level of significance, there will be no difference between institutions with provisions for multicultural/bilingual education and institutions without such provisions on their responses to² the questions in the "Survey of Multicultural Education in Teacher Education."

The null hypothesis was rejected for many of the items on the survey. These will be presented in sections on programs, faculty, students, research and development, and general.

, Programs Related to Multicultural Education

Question 1 listed fifteen activities related to multicultural education for which education units might have provisions. Significant differences were found for fourteen of those items. The only activity for which no significant difference was found was the "study of socioeconomics." Activities for which institutions with provisions for multicultural/bilingual education were more likely to have provisions are shown in the table below.

Frequencies for both "Yes" and "No" responses are shown as well as the level of significance based on the chi square test.

· · ·	Provis	Provisions		No Provisions

	Yes	No	<u>P</u>
Provisions	192	99	.0037
No Provisions	33	38	

Inservice Programs

Institutions with provisions for multicultural/bilingual education were more likely to offer inservice programs in multicultural/bilingual education as an independent unit or in cooperation with a local education agency, teacher center or other agency. The following table shows the frequency of responses for the two groups on question 4.

		Yes	No	P
•	Provisions	-134	160	.0001
	No Provisions	16	61*	

Faculty

The percentage of minority faculty in teacher education institutions was greater at institutions with provisions for multicultural/bilingual education than for institutions without such provisions. The ethnic/racial background of faculty members at different employment levels is shown below as percentage of total faculty:

	FULL-T Prov	'IME No Prov	SPLIT *Prov	-TIME ' 'No Prov	PART-TI Prov N	ME Io Prov
White Americans	89.19%	94.40%	87.24%	93.7%	89.79%	94.6%
Black Americans	` 7.29	4.50	6.53	3.9	ر ^{5.51} ،	33
Hispanic Americans	1.83	.90	4.80	· .7	2.95	2.1

Students

Based on the figures reported on question 16, institutions without provisions for multicultural/bilingual education have a higher percentage of black students in the total institution, in undergraduate education, and in graduate education than institutions with such provision. The percentage of Hispanic, Asian and American Indian or Eskimo students, on the other hand, is higher in institutions with provisions. These figures are presented for the five ethnic/racial groups below as a percentage of the total student population at the institution, in undergraduate education, and in graduate education.

•	Total Inst Prov	itution No Prov	UnderGr Prov *	aduate Ed No Prov	Graduate Ed Prov <u>No Prov</u>		
· White Americans	88.27%	89.59%	89.77%	86.52%	89.05%	88.09%	
Black Americans	. 7.64	7.72	7.96	, 12.15	5.59	10.65

indicate the percentage of those graduates working in the following education situations," a greater percentage of institutions with provisions for multicultural/bilingual education reported graduates in inner city schools and bilingual classrooms/schools. A greater percentage of graduates from schools without provisions, however, teach on American Indian reservations. The following table lists the employment situations, the institutions with and without provisions that reported students in the particular situation, and the percentage of all institutions within that group whose graduates are in such situations:

•		isions Percentage			
Inner City Schools	66 _.	21.6	13	15.9	
Bilingual Class- rooms/Schools	34	, <u>11.1</u>	5	6.1	
American Indian Reservations	26 🖷	8.5	8	9.8	

···· 73

Research and Development

Significant differences existed on four items in this section of the survey. Institutions with provisions for multicultural/bilingual education were more likely to have faculty projects related to research in <u>multi-</u> <u>cultural education</u> undertaken. The following table indicates the frequency of responses on this item in question 18 and the level of significance found: Yes to P

Provisions	68	237	.0083
No Provisions	. 7	75	•

Differences were found in the source of support for research activities related to <u>multicultural education</u>. Institutions with provisions for multicultural/bflingual education were more likely to have support from the college or university than institutions without provisions. The following table indicates the frequency of responses on this item in question 18b and the level • of significance found:

		Yes	<u>No</u>	<u>P</u>
Provisions		65.	2 40	.0132
No Provisions	t -	7	75	

For both multicultural and bilingual education, significant differences were found for question 19 concerning products produced by members of the education faculty. Faculty members in institutions with provisions were more likely to make presentations at practitioner-oriented meetings. The following table indicates the frequency of responses on this item and the level of significance for both multicultural and bilingual education.

n	, •	Multie	cultural No	Bilingual . Yes No
Provisions	Frit	90	· 215	58 - 247 -
No Provisions		, 9	73	7 75
۰ م ب		p = .(0011	P = .0369

Differences were found also on the item in question 19 concerned with faculty producing education products for local or regional dissemination in the area of multicultural education. The following table indicates the frequency of responses on this item and the level of significance found:

	Yes	No Response	P=.05
Provisions .	90	215	.0011
No Provisions	9	73 🗪	

In the area of research and development few significant differences existed between institution with and without provisions for multicultural/bilingual education. On only five out of 70 discrete items were significant differences found. General

Differences were found between institutions with and without provisions for multicultural/bilingual education on four factors in question 20. The responses for these factors fell along a continuum from "major contributing" to "no influence" to "major deterrent." Because the frequency of responses in the (4) and (5) cells was often less than five, the cells at both ends of the continuum were collapsed together for this analysis. The four factors for which differences were found on the chi square test are reported in the table below:

Faculty Qualified to Teach

50		Provisions NO PROVISIONS				-		
9		ontri- oution	No Influence	Deter- rent	Contri- bution	No Influence	Deter- rent	₽ _ <u>-</u>
Faculty Qualifi Multicultural/H Edúcation		131	35		10	15	29	.0001
State Education lines and/or Re lated to Multic gual Education	gulations Re-		85 r	23	<u>1</u> 4	23	6	.0370
Stațe L e gislati Multicultural/H Education	on Related to Silingual	105	105	23	/ 10-	26	6	.0365
University/Coll tration	ege Adminis-	134	94	15	17	21	7 [,]	.0278
<u> </u>)	r.	-75-	- δη				

All four factors above were more likely to be felt as contributing factors to the development of multicultural/bilingual education programs by institutions with provisions for multicultural/bilingual education than by institutions without such provisions. In all cases, institutions without provisions were more likely to feel these factors were of no influence or a deterrent to the development of multicultural/bilingual education programs.

On the question concerning services desired from AACTE, significant differences between the two groups were found on five of the items. These are listed in the table below by frequency of responses and level of significance for each of the five items.

	Provisions		-	No P	rovisions	P
,	Yes	No		Yes	No	
Publish a journal or bulletin that informs teacher educators of new ideas, approaches, or materials in multicultural education	189 •	116		37	45	.0088
Provide consultation on develop- ment of proposals and research d designs for submission to federal agencies	ر108	197		19	63 -	•0497
Catalogue information about funding agencies to disseminate as a directory	144	161	•	28	54	.0467
Facilitate the dissemination of information about operation- ally and programmatically successful multicultural pro- grams	1-86	119		33	49	.0012
Provide a clearinghous for informational, research and analytical studies of multi- cultural education	164.	141		33	•49	.0403

Again, institutions with provisions for multicultural/bilingal education are more likely to desire these five services from AACTE than institutions without . provisions.

,76-

Using demographic data about the institutions that responded to the

survey, the following

- There will be no difference between public and private institutions on their responses to the question in the "Survey of Multicultural Education in Teacher Education.".
- 2. There will be no difference between NCATE accredited and non-NCATE accredited institutions on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 3. There will be no difference in the responses of institutions based on the geographical region of the U.S. in which they are located on their responses to the questions in the "Survey of Multicultural Educcation in Teacher Education."
- 4. There will be no difference in the responses of institutions based on the population of the city or area in which they are located on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 5. There will be difference in the résponses of institutions based on the size of the student population for the institution on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."

The chi square test of the Social Science Statistical Package was used to test these null hypothese for all items in the survey that had nominal data response, and which all respondents were expected to answer. 202 variables were tested for significant differences in each of the five null hypothese above. The statistical analysis is described in greater detail under methodology in the first section of this report.

The null hypotheses was rejected for some variables in each of the five categories. These differences will be presented in this section in those same five categories: (1) Public and private Institutions; (2) NCATE Accredited and Non-NCATE Accredited Institutions; (3) Geographical Region of the Institution; . (4) Population of City or Area in which the Institution is located; and (5) Size of the Institution.

PUBLIC AND PRIVATE INSTITUTIONS

, ε

,

Ø

	The respondents to this survey included 199 public institutions
• •	or 51.4% of all those responding. 188 or 46.6% of the respondents were
	from private institutions. Using a chi square test, differences were
	found between some of responses of the two types of institutions at
,	P≤.05. Significant differences reported here include only those items
\.	for which there was a frequency of at least 5 in each cell.
À.	Significant differences in responses were found for 62 different
	titems on the questionnaire. These include fifteen item in the section
1	on programs; two items in the section on faculty; ten items in the
•	section on management; twenty-six items in the section on research and
• • •	development and nine items in the general section. These differences
2	are reportions as identified above.
	Programs Related to Multicultural Education The education units in public institutions were more likely than
, ,	private institutions to have provisions for six different activities:
- •	
	(1) study of diverse learning styles remated to ethnic/cultural differences
	and the implications for developing appropriate teaching strategies; (2)
	experiences which prepare education personnel to teach content from a multi-
	cultural perspective; (3) study of specific ethnic groups within the U.S.;
•	(4) study of linguistic variations and the implications for developing
	appropriate teaching strategies; (5) study of cultural competencies that
	can be transferred from one cultural or multicultural setting to another;
	and (6) study of socioe conomics. The table below lists the observed frequency
	of responses for private and public institutions on question #1 concerning
· · `	provisions for activities related to multicultural education. An asterisk
- ·	(*) indicates those activities for which $P \leq .05$ on the chi square test; the

such which was significant with a P = .0291.

Inservice Programs

98 public institutions provide inservice programs in multicultural/ bilingual education while 52 private institutions provide such inservice programs. Using the chi square test, a P = .0000 was found. Again public institutions were more likely than private institutions to offer multicultural/bilingual education through inservice programs.

Provisions for Bilingual Education

Public institutions were more likely to have provisions for bilingual education than private institutions. The following table shows the frequency of responses for ways in which bilingual education is addressed in the education unit of these two types of institutions as well as the level of significance when $P \leq 05$:

			•	. /
	· · · · · · · · · · · · · · · · · · ·	PUBLIC	PRIVATE	
		Yes No	Yes No	<u>P=.05</u>
	Component in	50 149	30, 158	0357
	Foundations Course(s)	_ '		•2 - 2 - 4 - 2 •
	Component in Methodology Course(s)	50 149	35 153	has a
	Major Emphasis in Course(s)	33 166	• 13 175	.0054
•	Major or Speciali- zation Offered	39 160	17 171	
•	Minor or Supplementary Offered	35 164	15 173	.0077
	Department/Division	. 21 178	7 181	.0166

Although less than 100 institutions had any of the above provisions for bilingual education programs, public institutions were more likely to

provide bilingual adjucation programs than private institutions

-81-

いり

A significant difference between public and private institutions was found on two items in the section on faculty. In the area of faculty development, the faculty members at public institutions were more likely to receive faculty research grants for both multicultural and bilingual education projects than faculty members from private institutions. The following table indicates the responses on this item for both multicultural and bilingual education:

			Public				
	1		Yes	No	Yes	<u>No</u> -	P
*	Multicultural	Ed	32	167	15	, 1,73 ·	.0224
	Bilingual Ed	÷	27	172	10	178	.0097
			- 1.5			-	•

Although faculty research grants in either multicultural or bilingual education were not often used by education units to foster the concept of multicultural/bilingual education, they were more likely to be used in public than private institutions.

Management

`ℓ-Faculty

Differences existed in the ways in which multicultural/bilingual education activities within the education unit were either developed or controlled/monitored. Public institutions were more likely to develop these programs by two means listed in question 13. The responses for these items are listed below with the frequency responses and the level of significance when $P \leq .05$:.

The nature of the research undertaken by the education units of public and private institutions also différed. Faculty members in public institutions, were more likely to conduct research related to <u>multicultural education</u> in the area of social/cultural processes, instructional processes; and culturallybiased tests. Graduate students of public institutions were more likely to do research related to multicultural education in the area of instructional

. .

processes. The table with the frequencies and level of significance for the research activities related to multicultural education where differences were found to be significant on the chi square test follows:

Faculty Research	Pub Yes	lic No	Priv Yes	vate No	P

Both faculty members and graduate students at public institutions are likely to conduct research related to bilingual education in the area of instructional processes. There were no differences found in the research undertaken by faculty and graduate students in all other areas listed in the survey. The one significant difference found is reported in the table below:

Faculty Research	Pub Xes	lic No	Priva Yes	No	P
On Instructional Processes	23.	176	- 7	181	.0071
Graduate Research	5		\ 5 -		· ·
On Instructional · Processes	28	'171	8 -	180	.0016
4		x	、 •		· · · ·

In the area of support for research in multicultural/bilingual education (question 185) a significant difference existed on one item. Support was more likely to come from the college or university itself in public than in private institutions. The following table shows the frequency of responses and level of significance for this item:

	Del 1d a	. Private 4	• /		
Multicultural Education	Public Yes No	Yes No	P		
College or University	54 145	18 170.	` •00Ò0

، College or University	36 İ63	13 '175	.0016		
	•				

Significant differences were found on ten of the items in question 19 which asked about the products produced by member of the education unit related to multicultural/bilingual education. The faculty members of public institutions were more likely to produce products in both multicultural and bilingual education. The following table shows the frequency of responses for both types of institutions and the level of significance when P .05. The first section of the table indicates products for multicultural education specifically; the second section indicates those specifically for bilingual education.

Thus, it appears that more research related to multicultural/bilingual education was undertaken in the education units of public than in private institutions. Faculty members in public institutions were also more likely to produce products for multicultural/bilingual education.

Gene 💴 1

In two areas differences existed between public and private institutions on the factors felt to contribute or deter the development of multicultural/bilingual education. The availability of federal and state funds contributed more to the development and implementation of such programs, at public than private institutions. The availability of state funds

-/-88-

both contributed and deterred the development and implementation of these programs more for public than private institutions. Private institutions were more likely to feel that state funds had no influence on these programs. The chart below shows the frequency of responses for these items and the level of significance for each.

Factor	Contrib Priv	ution Pub	No Inf Priv	luence Pub	Deter Priv	rent Pub	P
Avalability of federal funds	22	• 51	59	55	50	.47	.0064
Anterilability of state funds	15	37	61	50 ; .	50.	64	4.0069

Public institutions also were more likely to feel that AACTE should provide certain services related to multicultural education than private institutions. The services listed on the survey are shown below with the frequencies of responses from public and private institutions. The value . of the significant difference is also shown.

NCATE ACCREDITED AND NON- NCATE ACCREDITED INSTITUTIONS

The majority of the institutions that responded to the survey were 'NCATE-accredited. 273 institutions were accredited; 114 were not accredited by NCATE. Differences between these two types of institutions were found on 25 different variables in the survey. Eight of these differences occured in the section on programs; three in faculty; six in management; four in research and development; and four in the general section.

Programs Related to Multicultural Education

On the first question about specific activities for which the education unit has provisions, differences were observed for five different activities. NCATE-accredited institutions were more-likely to have these five activities than non-accredited Institutions. The following table shows the five activities, the frequency of responses for both types of institutions, and the level of significance.

Women's Studies

170 of the accredited institutions reported that they have courses related to women's studies. 55 non-accredited institutions, on the other hand, have women's studies courses. The responses to this question are shown in the following table:

,	Yes	<u>No</u>	P
Accredited	170	89	•0407 •
Non-Accredited	55	48 -	, <u> </u>

Provisions for Bilingual Education

On question 5 concerning how multicultural/bilingual education were addressed in the institution's education unit, a difference existed for one item. Accredited institutions were more likely to have provisions for bilingual education as a major emphasis in courses than non-accredited institutions. The following table shows the responses to that item.

`	•	~	1	Yes.	No	<u> </u>
Accredited				39	2 3 4	.0371
Non-Accredited			,	`7	107	

Faculty

In the section on faculty, differences existed in the ways in which the concept of multicultural/bilingual education has been fostered among faculty members in the education unit. Faculty members in NCATE-accredited institutions were more likely to learn about multicultural education through professional association meetings and faculty research grants than non-accredited institutions. Faculty members in NCATE-accredited institutions were also more likely to have faculty research grants for bilingual education than non-accredited institutions. This data is reported in the following table:

	,					5

Management

Differences were found on one item in question 13 concerning the ways in which multicultural/bilingual education activities within the education unit were developed and controlled/monitored. Accredited institutions were more likely to have programs developed by each department/ program within the education unit using their own prerogative to develop such programs. The frequency of responses and the level of significance ... are reported in the following table:

• • •	Yes	No	_ <u>P</u>
Accredited	113	160	.0118
Non-Accredited	`31	83	•

For <u>multicultural education</u> programs in the education unit, accredited institutions were more likely to use university sources for funding the multicultural education program in addition to the funds available through the education unit itself. On the question about

-93-、

financial support 'for multicultural/bilingual education programs (question 14), this was the only difference found. The following table . shows the responses for the item, "Other University Sources."

	Yes	No	<u> </u>	
Accredited	43	· 2 30	.0315	۲
Non-Accredited	8	106		

On question 15 concerning resources utilized by faculty and students in the implementation of multicultural/bilingual education, accredited institutions were more likely than non-accredited institutions to have some of the resources. The following table shows the resources listed for this question, the frequency of responses for both types of institutions, and the level of significance when $P \leq 05$.

Research and Development

Differences existed on some of the items in three of the questions in this section of the survey: types of research activities, support for research, and products produced by faculty members in the education unit: NCATE-accredited institutions were more likely to have research activities for <u>bilingual education</u> carried out through faculty projects. The following table shows the frequency of responses for this item:

			•	,	,
, •	•	•	Yes	No	<u> </u>
Accredited			42	231	.0098
Non-accredited		,	6	. 108	-

Accredited institutions were more likely to receive support from the college or university for research activities in both multicultural and bilingual education than non-accredited institutions. Frequency of responses and the level of significance based on the chi square test are indicated below for support from the college or university.

•	· · · · · · · · · · · · · · · · · · ·	2	Accred Yes	<u>lited</u> , <u>No</u>	<u>Non-</u> Yes	Accr	edited • <u>No</u>

Faculty members at accredited institutions were also more likely to make presentations on bilingual education at practitioner-oriented meetings than their counterparts at non-accredited institutions. Frequency of responses for that item are reported in the following

;able:

	Yes	No	<u>P</u> .
Ac cr edited	54	219	.0225
Non-Accredited	11.	1 03	
` `	•	۲.	

Gene ral

Differences between accredited and non-accredited institutions existed for one of the fourteen factors listed in question 20 as contributing or deterring factors in the development and implementation of multicultural/bilingual education. Accredited institutions were more likely to feel that faculty qualified to teach multicultural/bilingual education was either a contributing or deterring factor. Non-accredited institutions were more likely to feel that it had no influence.

The following table shows the frequency of responses and level of significance for this factor:

. 🕫	<u>Contributing</u>	No Influence	Deterrent	P
Accredited •	108	29	93	.0289
Non-Accredited	33-	21	30	*

ERIC

-96-

Accredited and non-accredited institutions also differed on three of the services that they would like to see AACTE provide to assist them in the planning, developing, and implementing of multicultural education programs. Those services where differences were found on the chi square test are indicated in the following table:

	2						
•••	AACTE Services	Accre Yes	dited No	Non-Acc Yes	redited	_ <u>P</u> *	
	Facilitate the Dissemination of information about operationally and programa- tically successful multi- cultural programs	165	108	54	60 <i>\$</i>	.0243	,
	Maintain a forsultative service on multicultural teacher education that can match expertise to needs at all levels	113	160	31	83	.0118	•
	Provide a clearinghouse for informational, research and analytical studies of multicultural education	´ 118 · .	155	.31	83 ⁻	.0045	•

As can be observed from the table, accredited institutions are more likely to desire the provision of these three services than nonaccredited institutions.

GEOGRAPHICAL REGION OF THE, INSTITUTION

The 387 institutions that responded to the survey were located in various geographical regions of the United States. For this analysis, the

U.S. and its territories were divided into five regional areas as follows:

 Northeast included the states of Maine, New Hampshire, Vermont, New York, Pennsylvania, Connecticut, Massachusetts, Rhode Island, New Jersey, Delaware, Maryland, and the District of Columbia;

 Southeast included West Virginia, Virginia, North Carolina, South Carolina, Kentucky, Tennessee, Georgia, Florida, Alabama, Mississippi, Louisiana, and Arkansas;

- The Midwest included Ohio, Indiana, Michigan, Minnesota, Wisconsin, Illinois, Missouri, Iowa, North Dakota, South Dakota, Nebraska, and Kansas;
- 4. Southwest included Oklahoma, Texas, New Mexico, Colorado, Utah, and Arizona.
- 5. West included Wyoming, Montana, Idaho, Washington, Oregon, Nevada, California, Alaska and Hawaii.

Of the 387 responding institutions, 17.3 percent were from the Northeast; 23.3 percent from the Southeast; 39.5 percent from the Midwest; 10.3 percent from the Southwest; and 8.0 percent from the West.

Significant differences in responses were found for 31 different items on the questionnaire. These included twelve items in the section on programs; four items in the section on faculty; eight items in the section on management; three items in the section on research and development; and four items in the general section. These differences are reported by the area in the following section.

Programs Related to Multicultural Education

Institutions in the West were more likely to have certain activities, related to multicultural education than any other region. For the six. activities for which a significant difference was found, institutions in the West were always more likely to have those activities. Institutions in the Southwest were also more likely to have provisions for (1) the study of the dynamics of diverse cultures and the implications for developing appropriate teaching strategies and (2) the study of linguistic variations and the implications for developing appropriate teaching strategies than those in the Midwest, Northeast, and Southeast. For the variable, "study of foreign cultures," the Northeast and West more likely to have that provision than those in other regions of the country. On two of the variables institutions in the Southwest were more likely not to have provisions than any other region. These were the (1) study of foreign cultures and (2) study of socioeconomics. Institutions in the Midwest were more likely not to have provisions for the study of linguistic variations and the implications for developing appropriate teaching strategies than any other region. The following table reports the six variables from question 1 for which significant differences were found:

									,			•

Faculty

On the question of faculty development activities for multicultural/ bilingual education (question 9), four significant differences existed. In Institutions in the West and Southwest professional association meetings

-101- -

were more likely to be used to foster the concept of <u>multicultural</u> <u>education</u> among faculty members than in other regions. Institutions in the Northeast were more likely to <u>not</u> use the professional association meetings as a means than in other regions.

In institutions in the Southwest professional association meetings were more likely to be used to foster the concept of <u>bilingual education</u> among faculty members than in other parts of the country. Institutions in the Southeast were more unlikely to <u>not</u> use this means than those in other regions of the country. For fostering the concept of <u>bilingual</u> <u>education</u> among faculty members, institutions in the West were more likely to use seminars/symposiums than those in other regions. Institutions in the Southwest and West were more likely to use cross-cultural field experiences for this purpose than those in other regions. Institutions in the Southeast were more likely to <u>not</u> use seminars/symposiums and crosscultural field experiences than those in other regions.

The following table summarizes the frequency of responses for the items in question 9 where significant differences were found on the chi square test:

-	•					,

-102-

Management

Significant differences were found on three items in question 13 concerning the ways in which the multicultural/bilingual education activities within the education unit are developed and controlled/ monitored. Programs in the West were more likely to be developed by (1) a person responsible for directing/coordinating the multicultural/bilingual' efforts and (2) cooperative planning with local education agencies than in other regions. Such programs were also more likely to be controlled/monitored by a person responsible for directing/coordinating the multicultural/bilingual efforts in institutions in the West than in other regions. For each of these three items, the programs were more likely to <u>not</u> be developed or controlled/ monitored by a person who coordinated the program or by cooperative planning with local education agencies in institutions in the Southeast than any other " region. The following table reports the data related to the three items that were found to be significant:

	•			· ·		-					
ð ()	Northe Yes	ast No	Southe Yes	east No	Midwest Yes No			West Yes No	<u>P</u>	•
	Developed By A person responsible for directing/ coordinating th program		50	8 	82	29 124	•. 15 .	25	13 18	.0001	•

-103-()

Institutions in the Southwest were more likely to receive financial, support for <u>bilingual education</u> programs from the education unit than institutions in any other part of the country. Institutions in the Southeast were more likely to <u>not</u> receive the financial support from the education unit than those in other parts of the country. The frequency of responses for the only item in question 14 for which a significant. difference existed, are recorded in the following table:

YesNoPNortheast2344.0002Southeast981Midwest30123Southwest1624West1021

Question 15 asked the respondent to indicate the resource utilized by faculty and/or students in the implementation of multicultural/bilingual education programs. There were significant differences between regions in which the institutions are located on four of the resources listed in this question.

Institutions in the West and Southwest were more likely to have a Center for Ethnic Studies, Multicultural Education, and/or Bilingual Education than institutions in the other three regions. Institutions in the Southwest were also more likely to have textbooks related to multicultural/ bilingual education and to utilize consultant who are not part of the university faculty. Institutions in the West were more likely to utilize ethnic agencies and organizations than those in other regions. Institutions in the Southeast and Midwest were more likely to <u>not</u> have textbooks related to multicultural/bilingual education than those in other regions. In addition, institutions in the Southeast were more likely to <u>not</u> utilize ethnic agencies and organization or consultants who are not part of the university faculty than those in other regions. The data for these four items is reported in the following chart a

Research and Development

Significant differences were found for three items in this section. Master theses and faculty projects were more likely to be undertaken for research activities in <u>multicultural education</u> in institutions in the West than in any other region. Institutions in the Southeast were more likely <u>not</u> to use master theses and faculty projects for multicultural education research than other areas of the country. The following table shows the / items in question 18 for which significant differences existed:

,		North	east	Southeast		Midwest	Southwest		West		
	j.	Yes	No	Yes	No	Yes Nor	Yes	No	Yes No	`P	1
	Multicultural Ed								e		
	Master Theses	7	60	7	83	15 138	7	33	9 22	.0160	
	Faculty Projects	•11	56	12	78	28 125 ,	13	27	11 20	۰0175 [°]	

For question 19 concerning the types of multicultural/bilingual products produced by faculty members in the education unit, a significant difference was found for one item only. Faculty members in institutions located in the West and Southwest were more likely to make presentations on bilingual education at practitioner-oriented meetings than faculty members from any other region. Faculty from institutions in the Southeast were more likely to not make such presentations than those from other regions. The following table shows the frequency of responses for this one item:

, ,				Yes	. <u>No</u>	٠	<u>P</u> .,

General

Significant differences existed for four items in this section of the survey. On question 20 respondents were to indicate the factors which contributed to or deterred the present and future planning, development, and implementation of multicultural/bilingual education. Significant differences were found for two of these items. Institutions in the West were more likely to indicate that the availability of federal funds contributed to the development of multicultural/bilingual programs. Institutions; on the other hand, in the Southeast were more likely to indicate that the availability of federal funds had no influence or was a major deterrent in the development and implementation of such programs.

For the factor, "availability of state funds," differences also existed. Institutions in the West were more likely to indicate that state funds were a contributing factor than any other region. Institutions in the Southeast and Midwest were more likely to indicate that this factor was of no influence. Institutions in the Southwest were more likely to indicate that the availability of state funds was a deterrent in the development of their programs.

The following table summarizes the frequency of responses and level of significance for these two items:

	Availabil	ity of Feder	al Funds	Availability of State Funds

Southwest 12 ...9 13 7 8 . 16 West 13 8 5 10 6 7 ... P = .0309 . P = .0368

For question 21 on services that AACTE might provide to assist the education unit in planning, developing, and implementing multicultural education programs, significant differences were found for two of the items. Institutions in the West and Southwest were more likely to indicate that AACTE should stimulate research and analysis on various aspects of multicultural education through the convening of task forces than institutions in other regions. Conversely, institutions in the Northeast and Midwest were more likely to <u>not</u> indicate this as a service that AACTE should provide. Institutions in the West were also more likely to indicate that AACTE should catalogue information about funding agencies to disseminate as a directory than those in other regions while institutions in the Midwest were more likely to indicate that this was <u>not</u> necessary as an AACTE service. The frequency of responses for both of these items is shown in the following table:

.

POPULATION OF CITY IN AREA IN WHICH THE INSTITUTION IS LOCATED

of the 387 institutions responding to the survey, 13.7 percent were located in cities with a population of over 500,000; 31.0 percent in cities with a population between 50,000 and 499,999; 47.8 percent in cities between 2,500 and 49,999; and 7.2 percent in areas with less than a 2,500 population. For discussion purposes in this section, large urban will be used to describe cities with a population over 500,000; urban to describe cities with population between 50,000 and 499,999; small town to describe cities with a population between 2,500 and 49,999; and rural to describe areas with a population of less than 2,500.

Institutions from different population density areas also differed significantly on some of their responses to items on the survey. Significant differences in responses were found for 24 different items on the questionnaire. These included twelve items in the section on programs; seven items in the section on management; one item in the section on research and development; and four items in the general section. These differences are reported by section in the narrative that follows.

Programs Related to Multicultural Education

Institutions located in a large urban area were more likely to have seven of the fifteen activities listed in question 1 than institutions in other areas. For six of those seven activities where significant differences existed, institutions in small towns were more likely to not have those activities than institutions in urban and rural areas. For the activity, "experiences which prepare education personnel to teach content from a multicultural perspective," institutions in urban areas were more likely to <u>not</u> have that activity than those in other areas. The following table reports the frequency of responses

-108-

and level of significance for the seven items for which significant differences were found on the chi square test.

Urban , Urban Town Rural Yes`No Yes No Yes, No Yes No Ρ A student teaching 48 5 99 .22 -19 130, 50 5 .0112 experience in a school with students who are racially/ ethnically different from the student teachers Study of the 100 dynamics of di-40 13 34 80 73 17 11 .0472 ' verse cultures and the implications for developing appropriate teaching strategies Study of linguistic 31 22 57 51 -67 107 13 13 .0248 variations and the implications for developing appropriate teaching strategies Study of diverse 36 15 74 88 17 11 33 84 ,0084 learning styles related to ethnic/ cultural difference and the implications for developing appropriate teaching stratègies Study of specific 34 18 52-55 74 101 13 14 .0351 ; ethnic groups within the U.S. Experiences which 49 4 88 24 128 48 21 .0195 4 prepare education personnel to work more effectively with minority students Experiences which 38.15 68 42 83 13 89 12 .0087 prepare personnel to teach content from a multicultural perspective -10'9-11:1

Women's Studies

Significant differences were found on question 3 concerning courses and departments related to women's studies. Institutions in large urban areas were more likely to have both courses and departments related to women's studies. Institutions in rural areas were more likely to <u>not</u> have courses in women's studies than institutions in other areas while institutions in small town areas were more likely to <u>not</u> have departments or divisions related to women's studies within the institution. The following table shows the frequency of responses and level of significance for those two items:

	Large Urban		.Urban		Small Town		Rural `

Education Unit 21 94 36 149 . 5 23 .0172 Institutions from large urban areas were also more likely to have specific resources that could be utilized by faculty and/or students in the implementation of multicultural/bilingual education programs. This was true for six of the eight items listed as question 15 on the survey. Institutions in rural areas were more likely to not have as resources consultants who are not part of the university faculty or cooperative programs with public or private schools that have a multicultural student population than other institutions. For the other four items institutions in small town areas were more likely to not have those resources than institutions in other areas. The following table shows the frequency of responses for the six items for which significant differences were found:

Research .and Development

A significant difference existed for only one item in the section on research and development. Faculty members of institutions in urban areas were more likely to conduct research of instructional processes for multicultural education than faculty in any other institutions. Faculty of institutions in rural areas are more likely to not conduct such research than institutions. The following chart shows the frequency of responses and level of significance for this one item:

General

Question 20 asked the respondent to indicate factors that contributed to or deterred the present and future planning, development, and implementation of multicultural/bilingual programs in the education unit. A significant difference existed on one of the items. Institutions in large urban areas were more likely to view "faculty qualified to teach multicultural/bilingual education" as a contributing factor than institutions in other areas.

113

-113-

Institutions in rural areas were more likely to view qualified faculty as having no influence or as a deterring factor than institutions in other areas. Institutions in urban and small town areas viewed qualified faculty almost equally as with contributing to or deterring the development and implementation of multicultural/bilingual education programs. The frequency data for this item is presented in the table below:

•	-	- 4		
	Contributing	No	Deterring	• P

Rural	6	7	9	-

A significant difference existed for one item on question 21 concerning the types of services that institutions would like to see AACTE provide to assist the education unit in planning, developing, and implementing multicultural education programs. Institutions in rural areas were more likely to feel that AACTE should catalogue information about funding agencies to disseminate as a directory than institutions in any other area. Institutions in small town areas were more likely to <u>not</u> feel that AACTE should provide that specific service. The data for this question is presented in the following table:

۰,	Large	Urban-	Urb	an	Sma	11 Town	Ru	ral

-114-

SIZE OF INSTITUTION

Institutions responding to the survey ranged in size from 327 to 50,095 students. For purposes of analyzing this data, the institutions were divided by size of student population into four quartiles. The first quartile included institutions with a student population from 327 to 1,366; the second quartile included institutions with 1,367 to 3,609 students; the third quartile included institutions with 3,610 to 9,905 students; and the fourth quartile included institutions with 9,906 to 55,000 students.

More differences were found using the chi square test for size of the institution than for any of the other variables for which the null hypotheses were being tested. Significant differences existed for 47 different items on the questionnaire. These included sixteen items in the section on programs; six items in the section on faculty; fifteen items in the section on management; two items in the section on research and development; and eight items in the general section. These differences are described in this section.

Programs Related to Multicultural Education

The education units of large institutions (fourth quartile) were more likely to have activities related to multicultural education than institutions of other sizes. Of the fifteen activities listed in question, significant differences were found for eight of those. In all cases the large institutions were more likely to have the eight activities while the small (first quartile) institutions were more likely to <u>not</u> have the activities. The following table shows the frequency of responses and level of significance for the eight items for which significant differences existed:

The larger institutions were more likely to encourage faculty to learn about the concept of multicultural/bilingual education through various activities than the smaller institutions. Specifically, the largest institutions, fourth quartile, were more likely to use faculty research grants for multicultural education. For bilingual education, they were also more likely to use professional association meetings and seminars/symposiums to foster the concept among faculty members. Institutions in the third quartile were more likely to use inservice training for faculty in the area of multicultural education and cross-cultural field experiences in the area of bilingual education. The larger instituion, third and fourth quartile, were also more likely to indicate that the faculty was on their own with respect to multicultural/bilingual education. Institutions in the second quartile were more likely to not indicate that the faculty was on their own with respect to multicultural/bilingual education than institutions of other sizes. The smalles institutions were more likely to not indicate that the other five activites were utilized to foster the concept of multicultural/ bilingual education among faculty members. The data for the items with significant differences on question 9 are shown in the following table:

Management

Question 13 asked the respondent to indicate how the multicultural/ bilingual education programs in the education unit are developed and controlled/monitored. Significant differences were found for five of the items in this question. Respondents from the largest institutions were more likely to indicate that the Multicultural education programs were developed by a person responsible for directing/coordinating the multicultural/bilingual education program, by each department/program within the education unit having the prerogative to develop its own multicultural education programs, and by cooperative planning with local education agencies than institutions of other sizes. The smallest institutions were more likely to <u>not</u> indicate these means for developing multicultural/bilingual education programs.

The larger institutions were also more likely to utilize an institutionwide curriculum committee and a person responsible for directing/coordinating the multicultural/bilingual education program to control and monitor the multicultural/bilingual education programs in the education unit. Institutions in the third quartile were more likely to not use the person responsible for directing/coordinating the multicultural/bilingual education programs to

-120-

control and monitor those programs. The smallest institutions were more likely to <u>not</u> have those programs controlled or monitored by an institution-wide curriculum committee. The data for the items in question 13 where significant differences existed is reported in the following table:

		-	Small)			~,			.arge)	,

Respondents were asked to indicate from where the financial support for the multicultural/bilingual education programs comes in question 14. The largest institutions were more likely to indicate that the support came from

-121-

the education unit for both multicultural and bilingual education programs than institutions of other sizes. The smallest institutions were more likely to not indicate the education unit as a source of support than other institutions. The frequency of responses for this item and the level of significance are reported below:

	lst	(Small) Quartile	l) ile 2nd Quartile 3rd Quarti		Quartile		arge) Quartile	Le

Significant differences existed for all eight of the resources that might be utilized by faculty and/or students in the implementation of multicultural/bilingual education program listed in question 15. The larger institutions, third and fourth quartile, were more likely to use these, eight resources than the smaller institutions. Institutions in the third quartile (were more likely to use student experiences in cultural settings different than that of the teacher education student and community-based programs as some phase of the student's work. For the other six items, the institutions in the fourth quartile were more likely to indicate their utilization. Institutions in the first quartile were more likely to <u>not</u> utilize all eight of the resources listed. This data is presented in the following table:

Research and Development

Significant differences were found for only two items in this section. The largest institutions were more likely to report that the research activities related to <u>multicultural education</u> were supported by the college or university than institutions of other sizes. The institutions in the first quartile were more likely to <u>not</u> report the college or university as providing the support for research activities in multicultural education. The frequency of responses for this item in question 18b. is reported below:

-]23-

·	(Small) lst Quartile			Quartile	3rd Qu	2

<u>Multicultural</u> <u>Education</u> Support from the college or university	6	، ۲ 88 [*]	ຮ້	89	23	75	35	61	.0000

The second item for which a significant difference was found was in question 19 about the products related to multicultural/bilingual education produced by faculty members of the education unit. Faculty in the largest institutions were more likely to make presentations related to multicultural education at practitioner-oriented meetings than faculty from institutions of other sizes. Faculty in the smallest institutions were more likely to <u>not</u> make such presentations than those in larger institutions. This data is reported in the following table:

Gene ral

Significant differences were found for eight of the ten items listed in question 21. about services that AACTE might provide to assist the education unit in planning, developing, and implementing multicultural education programs. The larger institutions were more likely to feel that AACTE should provide the services than the smaller institutions. Specifically, institutions in the third quartile were more likely to feel that AACTE should (1) facilitate

-124-

12:

the dissemination of information about operationally and programmatically. successful multicultural education programs; (2) maintain a consultative service on multicultural teacher education that can match expertise to needs at all levels; and (3) convene national or regional meetings on multicultural education. Institutions in the fourth quartile were more likely to indicate that AACTE should provide the other five services. Institutions in the second quartile were more likely to not indicate that AACTE should facilitate the dissemination of information about operationally and programmatically successful multicultural programs. Institutions in both the first and second quartile were more likely to not indicate that AACTE should convene national or regional meetings on multicultural education than the larger institutions. The institutions in the first quartile were more likely to not indicate that AACTE should provide the other six services than institutions of other sizes. The frequency of responses and level of significance for the items in question 21 are presented below:

SUMMARY AND RECOMMENDATIONS FOR FURTHER STUDY

During the fall of 1977, AACTE asked its 786 member institutions to respond to the "Survey of Multicultural Education in Teacher Education." The data collected from this survey was used to compile a state-of-thescene report about how multicultural education was currently being addressed by teacher education institutions. This would allow the examination of where institutions now are in the implementation of multicultural education and where the recently revised "Standards for the Accreditation of Teacher Education," of NCATE suggest that they should be.

Only 49.25 percent of the institutions responded to the survey. The data presented, thus, can be used only to report the state-of-the-scene for the responding institutions and not to generalize to American teacher education. This section will summarize the data in three sections: (1) Descriptive Profile of the Responding Institutions; (2) Descriptive Profile-of. Institutions with Provisions for Multicultural/Bilingual Education; and (3) Multicultural Education as Addressed by Different Institutions.

DESCRIPTIVE PROFILE OF THE RESPONDING INSTITUTIONS

Over half of the 387 responding institutions indicated that they have as a part of their education programs various activities that are supportive of the multicultural education concept as described in NCATE's Standard 2.1.1 Multicultural Education. Specific activities for which education units have provisions include the study of or experiences for (1) intergroup communications; (2) student teaching in schools with students who are racially/ethnically different from the student teachers; (3) working more effectively with minority students; (4) values clarification; (5) dynamics, of diverse cultures and the implications for developing appropriate teaching strategies; (6) cultures and ethnicity of groups within the geographical

-127-

region served by the education unit; (7) diverse learning styles related to ethnic/cultural differences and the implications for developing appropriate teaching strategies; (8) teaching content from a multicultural perspective; and (9) racism.

Over one-third of these institutions have departments or divisions which focus on U.S. Ethnic-groups (e.g., Black Studies, Native American Studies). Over 75 percent offer courses related to specific U.S. ethnic groups. 59.4 percent have courses on Afro Americans; 31.0 percent on American Indians or Eskimos; 28.6 percent on Asian or Pacific Islanders; 27.5 percent on Hispanic Americans; 15.1 percent on Eastern European Americans; 9.6 percent on Western European Americans; and 6.4 percent on Jewish Americans. 6.7 percent of the institutions listed courses in ethnic studies and 6.2 percent listed courses about foreign cultures or with an international focus. 22.5 percent of these institutions require that students complete at least one course related to specific U.S. ethnic groups prior to the completion of their education degree program.

Over half (58.1 %) of the institutions offer courses related to women's studies. 13.7 percent have departments or divisions of women's studies in their institutions. Nine percent of the institutions require students to complete at least one course in this area prior to the completion of the education degree program.

Almost forty percent (38.8 %) of the institutions offer inservice programs in the area of multicultural and/or bilingual education. These are most often offered to teachers and administrators in cooperation with a local education agency or teacher center.

305 institutions (78.8 %) reported having some provision for addressing multicultural and/or bilingual education within the education unt. Most often multicultural/bilingual education is addressed as a component in foundations courses (by 58.9 % of the institutions) or as a component

-128-

in methodology courses (by 49.4 % of the institutions). Less than 25 percent of the institutions provide for either multicultural or bilingual education as the major focus or emphasis in a course. 25 percent offer a major or specialization in multicultural education; 18.6 percent offer a major or specialization in bilingual education. 15 percent of the institutions offer a minor or supplementary in multicultural education while 17.8 percent offer the minor or supplementary in bilingual education. 10.1 percent of the institutions have a separate department or division within the education unit for multicultural/bilingual education.

Institutions do not appear to be very diverse in the ethnic/racial make-up of the faculty. Over 87 percent of the institutions have at least one white faculty member in the education unt; over 28 percent have at least one black faculty member; over 15 percent have at least one Hispanic faculty member; and only six percent have American Indian or Eskimo faculty members. Almost 90 percent (89.78 %) of the full-time teacher education faculty are white; 6.94 percent are black; 1.74 percent are Hispanic; 1.19 percent are Asian American; and .35 percent are American Indian or Éskimo. Of the full-time education faculty, 32.27 percent are female and 67.73 percent male. At the part-time level the number of females increases to 48.66 percent of the part-time faculty for the education unit.

The concept of multicultural/bilingual education has been fostered among faculty members through various activities. Almost half of the respondents indicated, however, that the faculty is on their own with respect to this. The most frequent means was through professional association meetings (53.0 % of the responding institutions). Faculty development activities are not generally organized or structured for multicultural/bilingual education. Less than one-third reported seminars, cross-cultural field experiences, inservice training, faculty research grants, or sabbaticals as being used for this purpose.

-129-121

The student population at the responding institutions appears to be extremely diverse in ethnic/racial composition. Over 99 percent of the institutions have white students; 96 percent have at least one black student; 77 percent have at least one Hispanic student; 75 percent have at least one Asian American student; and 62 pergent have one or more American Indian or Eskimo student. For the student population at the institution level, 88.44 percent of the total student population of the responding institutions are white; 7,65 percent are black; 2.37 percent are Hispanic; 1.05 percent are Asian American; and .49 percent are American Indian or Eskimo. The i percentage of minority students is slightly higher in undergraduage education for black and American Indian students than for the total institution. The percentage of minority students in graduate education, however, is less than at the undergraduate level or for the total institution. Almost half (47.57 %) of the total student population is female. For both undergraduate and graduate education, however, the percentage of females increases to 58.62 percent and 56.62 percent respectively.

Just over one-third of the institutions (35.9%) reported research activities related to multicultural/bilingual education being undertaken in the education unit. Most of the research activity undertaken is through faculty projects. Some research in this area is also done as master theses, sponsored research, doctoral dissertations and special institutes. More research related to multicultural education is being undertaken than for bilingual education. Over half of the respondents that indicated research in multicultural education reported that the research is in the area of instructional processes, social/cultural processes, interethnic attitudes, and acculturaltion/assimilation/cultural pluralism. Of institutions with research in bilingual education, 93 percent reported research of instructional processes. Over half reported bilingual research of social/cultural processes and acculturation/assimilation/cultural pluralism. Ethnographic research and research of culturally biased tests are also being

-130- 133

conducted for both multicultural and bilingual education. The major support for research activities for both multicultural and bilingual education is the institution itself. The U.S. Office of Education provides support for research activities in 24.3 percent of the institutions with multicultural education research and in 35.7 percent of those with _______ bilingual education research. Private foundations, State Education Agencies, local education agencies, and the National Institute of Education provide support in less than twelve percent of the institutions.

Over one-third of the institutions (36.2%) indicated that faculty in the education unit produce products in the area of multicultural education while 22.7 percent indicated that faculty produce products in the area of bilingual education. These products are most often in the form of a presentation at practitioner-oriented meetings. Less than half reported that these were educational products for local or regional dissemination or publications in books or journals.

Factors that contributed to the planning, development, and implementation of multicultural/bilingual education included in 25 to 40 percent of the institutions university/college administration, various ethnic groups, qualified faculty, state education agency guidelines and regulations, professional associations, state legislation, and federal legislation. The availability of funds from the university, state, and federal agencies was considered as deterrent to the development and implementation of multicultural education by 25 to 41 percent of the institutions.

Over half of the institutions indicated that AACTE should provide three services related to multicultural/bilingual education. These included (1) publish a journal or bulletin that informs teacher educators of new ideas, approaches, or materials in multicultural education; (2) facilitate the dissemination of information about operationally and programmatically successful multicultural education programs; and (3) provide a clearinghouse

-131- 135

for informational, research and analytical studies of multicultural education.

The write moments of the respondents concerning the future of multicultur model indual education at their institution suggest positive support generally for multicultural education. State legislation and certification requirements as well as the NCATE standards have increased the planning and probable implementation of such programs. The last money and qualified or interested staff are-clearly the greatest drawback to immediate development of programs that might be viewed as appropriate and desirable. The most common reasons provided for not planning programs were that the student population does not include minorities, graduates will not teach in areas where there are many minorities, and there are not opportupities for preservice teachers to experience multicultural sityations. Comments concerning reasons and goals of multicultural education . would suggest that efforts need to be made to clarify the concept. The majority of institutic ither have programs in multicultural/bilingual education or are planning such programs, and yet comments suggest a need for model programs from which they could implement components that are most appropriate to their own situations.

DESCRIPTIVE PROFILE OF INSTITUTIONS WITH PROVISIONS FOR MULTICULTURAL/ BILINGUAL EDUCATION

As previously indicated, 78.8 percent of all institutions responding to this survey indicated that they have some provision for multicultural and/or bilingual education within their education unit. This section examinies in greater detail only the programs of those 305 institutions with such provisions.

Over 75 percent of these institutions have urses in ethnic studies offered at their institution, not necessarily within the education unit itself. 23.9 percent of these institutions require at least one course in ethnic studies for the completion of the education degree program. 63 percent of

132-137

these institutions offer courses in women's studies while 43.9 percent provide inservice programs in multicultural/bilingual education in cooperation usually with local education agencies or teacher centers.

Respondents were asked to list the courses in multicultural and bilingual education offered at different degree levels. 76.4 percent offer courses with a component in multicultural education of a specific focus related to multicultural education at the undergraduate level. 16.7 percent offer such courses as dual level courses and 25.6 percent offer these courses at the graduate level. The focus of these courses can be classified in five general areas: general studies which includes anthropology, sociology, etc.; international programs; ethnic/cultural studies of U.S. ethnic groups; general education courses; and methodology courses for various disciplines. 68.9% of these institutions require at least one of these courses for completion of the education degree program.

Over thirty percent (31.9%) of these institutions listed courses plated to bilingual education at the undergraduate level. 26.0 percent offer such ourses as dual level and 9.5 percent offer them as graduate courses. The focus of the bilingual courses can also be classified into five general areas: general studies which includes anthropology, linguistics, etc; international programs; ethnic/language studies of U.S. groups; general education courses; and methodology courses for the various disciplines. Spanish is the major target language for these bilingual education programs. 38.7 percent of the institutions listed Spanish as the target language. Between 5 and 10 percent listed American Indian languages, French, and/or German as the target languages; each of the other languages were listed by less than three percent of the institutions.

The academic background of split-time faculty members who teach the multicultural/bilingual education related courses varies. Most often (around ,50%) the faculty members represent either socialogy or foreign language

-133-

disciplines. Over 25 percent of the institutions indicated that these faculty represent history, anthropology, psychology, English, or Afro-American Studies. Full-time education faculty members who taught these courses were most often from the program areas of elementary education (69.7%) or secondary education (60.7%). Over 25 percent of these institutions indicated that the faculty members were from the program areas of sociological foundations/history/philosophy, early childhood education, curriculum and instruction, social studies education, educational psychology, language arts/reading/ special education, or junior high/middle school education.

The majority of the faculty teaching the multicultural/bilingual courses are full-time faculty in the education unit itself. The percentage of minorities teaching multicultural courses increases considerably over the percentage teaching in the education unit generally with 57.88 percent white, 33.41 black; 3.88 Mispanic; 3.44 Asian American, and 1.28 American Indian or Eskimo. The percentage of women teaching courses related to multicultural education also increases to 36.48 percent.

The percentage of minority faculty teaching bilingual education courses also is much greater than in the teacher education program with 58.88 percent white, 2.76 percent black, 32.01 Hispanic, 4.73 Asian American, and 1.58 percent American Indian or Eskimo. The percentage of females teaching bilingual education courses at the full-time level also increases to 53.73 percent.

Almost half (47.2%) of these institutions indicated that the multicultural/ bilingual education programs are developed by each department/program area within the education unit using its own prerogative; this is also the means most often used (31.8%) to control and monitor these programs. The person responsible for coordinating the multicultural/bilingual programs was indicated as developing and monitoring the program by around 25 percent of the institutions. Institution-wide curriculum committees had this responsibility in about 23 percent of the institutions. Almost 25 percent indicated that such

4134

-139

programs were developed by cooperative planning with local education agencies.

The major financial support for both multicultural and bilingual education programs comes from the education unit itself. Other sources of support were listed by less than 17 percent of the institutions.

Using a chi square test, significant differences between institutions with and without provisions for multicultural/bilingual education were determined. Institutions with provisions were more likely to have all of the activities related to multicultural education listed in question 1 except for the "study of foreign cultures." Institutions with provisions were also more likely to have courses and departments/divisions in ethnic studies, courses in women's studies, and inservice programs for multicultural, bilingual education.

Institutions with provisions were more likely to foster the concept of multicultural/bilingual education among faculty members through professional association meeting, seminars or symposiums, and cross-cultural field experiences. For multicultural education, they were more likely also to provide inservice training for the faculty as a mean of fostering the goncept of multicultural education.

In the area of research and development significant differences were found on only five of the seventy variables. There appears to be little differences in the research activities for multicultural or bilingual education undertaken in institutions with or without provisions for multicultural/bilingual education.

Institutions with provisions, however, were more likely to specify four factors which contributed to the planning, development, and implementation of their programs. These factors included faculty qualified to teacher programs, state education agency guidelines and/or regulations for multicultural or bilingual education, state legislation related to multicultural or bilingual education, and the support of the university/college administration. Institutions with provisions were also more likely to feel that AACTE should provide

.140

several services that would aid them in planning, developing, and implementing multicultural education programs.

The percentage of minority faculty members was higher at institutions with provisions than those without provisions. Ther percentage of minority faculty in institutions with provisions was 10.79 percent of the full-time education faculty; 12.75 percent of the split-time faculty; and 10.21 of the part-time faculty. For institutions without such provisions the percentage of minority faculty was 6.30 percent of the full-time education faculty; 6.20 percent of the split-time faculty; and 5.40 of the part-time faculty. The percentage of females in institutions with provisions was slightly higher at the full-time and part-time faculty levels and lower at the split-time level. At the full-time level, females composed 32.48 percent of the faculty in institutions with provisions and 31.3 percent in institutions without. At the split-time level, females made up 29.04 percent in faculty in provisions and 32.79 percent in institutions without. At the part-time level females made up 49.06 percent in institutions with provisions and 45.38 percent in institutions without provisions.

The percentage of minority students at an institution is higher at institutions with provisions for multicultural/bilingual education, with 11.71 percent compared to 10.30 percent at institutions without provisions. In both undergraduate and graduate education, however, the percentage of minority students is slightly higher at institutions without provisions. The percentage of black students at institutions without provisions is higher than institutions with provisions while the percentage of the other minority students is higher at institutions with provisions than those without provisions. For undergraduate education, minority student enrollment at institutions with provisions is 12.03 percent; at institutions without provisions it is 13.55 percent. At the graduate level minority students make up 10.93 percent of the students in institutions with provisions and 11.93 percent in institutions without provisions. The percentage of females is higher for institutions without provisions at the total institutional level and in graduate education. 47.31 percent of the student population at institutions with provisions is female and 49.49 percent at institutions without provisions. At the undergraduate education level 59.22 percent are female in institutions with provisions and 53.22 percent in institutions without provisions. At the graduate level the precentage of females in institutions with provisions is 56.06 and 65.12 in institutions without provisions.

The major differences between institutions with provisions for multicultural/ bilingual education and those without such provisions are in two areas. First, the programmatic activities and required experiences different in that institutions with provisions already claim to have provisions for multicultural education that are somewhat consistent with those suggested by the NCATE standards for multicultural education in teacher education curricula. The second difference is the number of minority faculty in education units with provisions. At the full-time, split-time and part-time levels, institutions with such provisions have a considerably greater number of faculty members who are from minority backgrounds than institutions without provisions.

MULTICULTURAL EDUCATION AS ADDRESSED BY DIFFERENT INSTITUTIONS

Using the chi square test, significant differences were found on the way institutions responded to different variables on the questionnaire. The stillowing five null hypotheses were tested:

- 1. There will be no difference between public and private institutions on their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 2. There will be no difference between NCATE accredited and non-NCATE accredited institutions on their responses to their responses to the questions in the "Survey of Multicultural Education in Teacher Education."
- 3. There will no difference in the responses of institutions based on the geographical region of the U.S. in which they are located.
- There will be no difference in the responses of institutions based on the population of the city or area in which they are located.
- 5. There will be no difference in the responses of institutions based

-137

on the size of the student population for the institution:

Each of the five null hypotheses were rejected for one or more of the 202 variables tested from the questionnaire. These differences are summarized below.

PRIVATE AND PUBLIC INSTITUTIONS

Of the 387 institutions responding to the survey, 51.4 percent were public institutions and 46.6 percent private.

Public institutions were more likely than private institutions to have provisions, activities and experiences in their education units for multicultural and/or bilingual education as listed in question 1. Of the fifteen activities listed, public institutions were more likely to have six of them. Public institutions were also more likely to offer courses or have d'epartments/divisions in both ethnic studies and women's studies. Public institutions were also more likely to offer inservice programs in multicultural/ bilingual education than private institutions. Significant differences did not exist in the way that the two types of institutions provided for multicultural education, but there were differences in the provisions for bilingual education. Public institutions were more likely to provide for bilingual education as a *component in foundations courses, a major emphasis in courses, as a major or specialization, and as a minor or supplementary. Public institutions were also more likely to have a department or division in the education unit for bilingual education.

In the area of faculty development public institutions were more likely to have provisions for faculty research grants for both multicultural and bilingual education projects than private institutions.

Public institutions were more likely to develop their multicultural/ bilingual education programs through individual departments and cooperative planning with the local education agencies than private institutions. These programs were more likely to be controlled and monitored by a college or

-138-143

institution-wide curriculum committee in public institutions than in private institutions. The source of funding for the multicultural programs in public institutions was more likely to come from the education unit itself. For bilingual education the source of funding in public institutions was more likely to be the education unit or the U.S. Office of Education than in private institutions. Public institutions were also more likely to have resources for multicultural/bilingual education than private institutions. Specifically, the resources that they were more likely to use included a center for ethnic studies/multicultural education/bilingual education, textbooks, ethnic agencies/or organizations, and cooperative programs with public or private schools with a multicultural student population.

Pulbic institutions were more kikely to engage in research activities related to multicultural and bilingual education as master theses, doctoral dissertations, faculty projects and sponsored research. The nature of the research was more likely to be research of instructional processes for both multicultural and bilingual education and research on social/ćultural processes and culturally-based tests and measurement instruments in the area of multicultural education. For both bilingual and multicultural education research the financial source of support was more likely to be the college or university itself at public institutions as compared with private institutions. Faculty members of public institutions were also more likely to produce products related to both multicultural and bilingual eudcation than faculty in private institutions.

Public institutions were more likely to view the availability of federal funds and state funds as contributing factors in the development and implementation of multicultural/bilingual education programs than private institutions. Finally, public institutions were more likely to feel that AACTE should provide various services to institutions to assist in the planning, developing, and implementing of multicultural education programs.

-139-

NCATE ACCREDITED AND NON-NCATE ACCREDITED INSTITUTIONS

Based on NCATE's 1976-77 Annual List, 70.5 percent of the responding institutions were NCATE accredited while 29.5 percent were not NCATE accredited.

Ĺ

Although the null hypothesis was rejected, there were fewer differences based on the accreditation status of the institution than other characteristics. For all variables when significant differences were found, the accredited institutions were more likely to provide the activity or service than the nonaccredited institutions.

Accredited institutions were more likely to have provisions for five of the activities related to multicultural education listed in question 1. Accredited institutions were more likely to have. courses and departments/ divisions in ethnic studies and courses in women's studies than non-accredited institutions. There were no significant differences in the way the two types of institutions provided for multicultural education. Accredited institutions, however, were more likely to address bilingual education as a major emphasis in courses than non-accredited institutions.

In the area of faculty development accredited institutions were more likely to provide for faculty research grants for multicultural/and bilingual education projects. Multicultural education was more likely to be fostered through professional association meetings in accredited institutions.

The multicultural/bilingual education programs in accredited institutions were more likely to be developed by individual departments than in non-accredited institutions. Accredited institutions were also more likely to have resources for multicultural/bilingual education than non-accredited institutions. Specifically, they were more likely to use textbooks, consultants, cooperative programs with schools with a student population of different ethnic backgrounds - than the majority of preservice teachers, and student experiences in cultural settings different than that of the teacher education student.

Accredited institutions were more likely to engage in research activities

-140-

related to multicultural/bilingual education on only one variable. They were more likely to have faculty projects in the area of bilingual education. The research activities in accredited institutions were more likely to be supported by the college or university than in non-accredited institutions. Faculty in accredited institutions were more likely to make presentations on bilingual education at practioner-oriented meetings. Totally, difference between accredited and non-accredited institutions on the variables of research and development activities were very few--four out of a possibility of 70.

Accredited institutions were more likely to indicate that faculty qualified to teach the multicultural/bilingual education programs was both a contributing and deterring factor in the development of such programs. For non-accredited institutions this factor was more likely to have no influence. Finally, accredited institutions were more likely to indicate that AACTE should provide some service to assist them in the planning, development, and implementation of the multicultural education programs.

GEOGRAPHIC REGION OF INSTITUTION

Of the responding institutions 17.3 percent were from the Northeast; 23.3 percent from the Southeast; 39.5 percent from the Midwest; 10.3 percent from the Southwest; and 8.0 percent from the West. Institutions in the West were more likely to have experiences and activities related to multicultural education than institutions in other regions. Institutions in the West were also more likely to offer courses in women's studies and inservice programs in multicultural/bilingual education than institutions in other regions; institutions in the Southeast were least likely to offer such. There were no significant differences in the way institutions in different regions addressed multicultural education. Institutions in the West, however, were more likely to offer bilingual education as a component in foundations courses, as a component in methodology courses, as a major emphasis in courses, and as a minor or supplementary than institutions in other regions; institutions in the Southeast were least likely to address bilingual

-141- 140

education through the same four provisions.

Institutions in the West and Southwest were more likely to have professional development activities to foster the concept of multicultural and bilingual education than institutions in other regions.

The way in which the multicultural/bilingual education programs were managed was also different in institutions in different geographical regions of the country. The multicultural/bilingual education programs in Western institutions were more likely to be developed by a person responsible for coordinating the multicultural/bilingual education efforts and by cooperative planning with local education agencies; institutions in the Southeast were least likely to develop their programs through these means. Persons responsible for coordinating the multicultural/bilingual education programs in the West were also more likely to control and monitor the programs than in other institutions. In institutions in the Southwest, the fihancial support for the bilingual education programs was more likely to come from the education unit itself than in institutions in other regions. Institutions in the West and Southwest were more likely to have resources related to multicultural education than institutions in other regions. Institutions in the Southeast were least likely to have a center for ethnic studies/multicultural education/bilingual ' education and to use ethnic agencies and organizations. Institutions in the Southwest were more likely to use textbooks and consultants.

In the area of research only three significant differences were found. Faculty from institutions in the West were more likely to undertake research activities in multicultural education and produce products in bilingual education than other institutions.

Institutions in the West were more likely to contribute the development and implementation of multicultural/bilingual programs to the availability of federal and state funds than other institutions. Institutions in the Southeast were more likely to feel that the availability of federal funds deterred the development

-142-

RIC

and implementation of their programs. Finally, institutions in the West were more likely to feel that AACTE should provide services to assist them in planning, developing, and implementing multicultural education programs than institutions in other regions.

POPULATION OF THE CITY OR AREA IN WHICH THE INSTITUTION IN LOCATED

Based on 1970 census figures for the city in which institutions are located, it was determined that 13.7 percent of the responding institutions were located in cities with a population over 500,000; 31.0 percent in cities of 50,000-499,000; 47.8 percent in cities of 2,500 and 49,999; and 7.2 percent in areas of less than 2,500. Institutions in the large urban areas of over 500,000 were more likely to have provisions for activities and experiences related to multicultural education as expressed in question 1 of the survey. Significant differences between_institutions were found for seven of the fifteen activities listed. Institutions located in cities of 2,500 to 49,000 were least likely to have the same activities for multicultural education. Institutions in the large urban areas were also more likely to have courses and department/divisions in women's studies and to offer inservice programs in multicultural/bilingual education than other institutions. Institutions in the small town and rural areas were least likely to have such provisions. Institutions in urban (50,000-499,000) and small town (2,500-49,999) were more likely to address multicultural education as the major emphasis in courses than institutions in other areas; institutions in rural areas (under 2,500) were least likely to use this approach. For bilingual education, institutions in small towns were more likely to offer a major or specialization in bilingual education than other institutions while those in rural areas were least likely to offer bilingual education as a major or specialization.

There were no significant differences in the way the concept of multicultural or bilingual education was fostered among faculty members.

In the area of management no significant differences existed in the way

-143- 148

in which multicultural/bilingual education programs were developed or controlled/ monitored. Institutions in small town, however, were more likely to receive the financial support for these programs from the education unit itself than other institutions while those in rural areas were least likely to report the education unit as the source of financial support. Institutions in large urban areas were more likely to have resources for multicultural/bilingual education than other institutions. For six of the eight resources listed in question 15, large institutions were more likely to have them while institutions in small town and rural areas were least likely to have them.

In the area of research and development a significant difference existed for only one variable. Faculty from institutions in urban areas were more likely to undertake research of instructional processes in multicultural education than institutions in other areas; those in rural areas were least likely to undertake such research.

Institutions in large urban areas were more likely to feel that faculty qualified to teach multicultural/bilingual education programs was a contributing factor to the development and implementation of such programs in their institutions. Qualified faculty, on the other hand, was a deterrent to the development and implementation of multicultural/bilingual education programs in institutions located in rural areas. Finally, institutions in rural areaswere more likely to feel that AACTE shguld catalogue information about funding agencies to disseminate as a directory than institutions in other areas.

SIZE OF THE INSTITUTION

For this analysis the size of the institution was determined by the total student population. Institutions in the first quartile had a student population between 327 and 1,366; those in the second quartile from 1,367 to 3,609; those in the third quartile from 3,610 to 9,905; and those in the fourth quartile from 9,906 to 55,000 students.

The largest institutions (those in the fourth quartile) were more likely to

143

-144-

have provisions for activities and experiences in multicultural education than the other institutions. Significant differences existed for eight of the fifteen variables in Question 1. The smallest institutions were least likely to have the same activities. The largest institutions were also,more likely. to have courses and departments/divisions for ethnic studies and women's studies. They were also more likely to offer inservice programs in multicultural/ bilingual education. The smallest institutions were least likely to have courses or departments/divisions in ethnic studies or women's studies or to offer inservice programs in multicultural/bilingual education. The largest institutions were more likely to offer a major or specialization in multicultural education. They were also more'likely to address bilingual education as a component in methodology courses, as a major or specialization, and as a minor or supplementary than the other institutions. The smallest institutions were least likely to address multicultural or bilingual education in these ways.

The larger institutions (third and fourth quartile) were more likely to allow for faculty development activities related to multicultural and bilingual education than the smaller institutions. Significant differences existed for six of the sixteen variables in this section.

The largest institutions were more likely to develop their multicultural/ bilingual education programs by a person responsible for coordinating them, by each department/program having the prerogative to develop them, and by cooperative planning with local education agencies. The multicultural/bilingual education programs were also more likely to be controlled/monitored by a college or institution-wide curriculum committee and by the person responsible for coordinating the program in large institution than in others. The smaller institutions, first and second quartile, were least likely to develop and control or monitor their programs by these means. The financial support for these programs was more likely to come from the education unit itself in large institutions; it was least likely to come from the education unit

-150

-145-

in the smallest institutions. The larger institutions, third and fourth quartile, were more likely to have all of the resources listed in question 15 for multicultural/bilingual education than the smaller institution. The smallest institutions were least likely to have these resources.

In the area of research and development significant differences were found for only two variables. The support for research activities related to multicultural education were more likely to come from the college or university in the largest institutions and least likely to come from the college or university in the smallest institutions. Faculty members of the largest institutions were more likely to make presentations on multicultural education at practitioner-oriented meetings than those at other institutions. Faculty of the smallest institutions were least likely to make such presentations.

No significant differences were found concerning factors which contributed to or deterred the development of multicultural/bilingual education programs. The larger institutions, third and fourth quartile, were more likely to indicate that AACTE should provide services to assist them in planning, developing, and implementing multicultural education programs than the smaller institutions.

RECOMMENDATIONS FOR FURTHER STUDY

This report is based on data collected as baseline data from which the progress of multicultural teacher education can be measured. It was possible only be develop descriptive profiles of the 387 institutions responding to the survey. Because less than half of ARCTE's member institutions responded to the survey, it is impossible to generalize this data to American teacher education in 1977-78. It would be advisable to conduct a follow-up study of the institutions that did not initially respond to this particular survey. This would allow the researcher to determine if the responding institutions were representative of the general

-146-

15!

teacher education institutional population or biased toward the development and implementation of multicultural education in their programs. Such a study would provide a more comprehensive picture of multicultural education as addressed in U.S. teacher education institutions today.

The information collected in this survey does not describe in depth the multicultural education activities being undertaken currently in teacher education. The data provides a baseline against which progress can be measured in research studies. It does not, however, provide specific information about programs from which operationally successful characteristics or components can be drawn. Examination of multicultural education programs now practiced in teacher education needs to be undertaken. Specifically, the following recommendations for further study and research are suggested:

- What do the components of multicultural education in foundations and methodology courses include?
- 2. What components of an institution's multicultural education program appear the most successful?
- 3: What is the focus of successful multicultural education programs? Is it ethnic studies, human relations, anthropology?
- Are successful multicultural education programs conducted as classes, field experiences, practicum, or other activities?
- 5. What are the background experiences and training of the faculty who teach or direct multicultural education experiences?
- 6. Why did teacher education institutions develop and implement multicultural education/programs initially? How have the programs changed from the initial planning?
- 7. What was the implementation process utilized by institutions with programs that permeate the curriculum? with program, components that have proven successful?
- 8. Are certain components for multicultural education programs more successful in urban than rural areas, etc.? in monocultural vs multicultural or culturally diverse population areas?

-147-

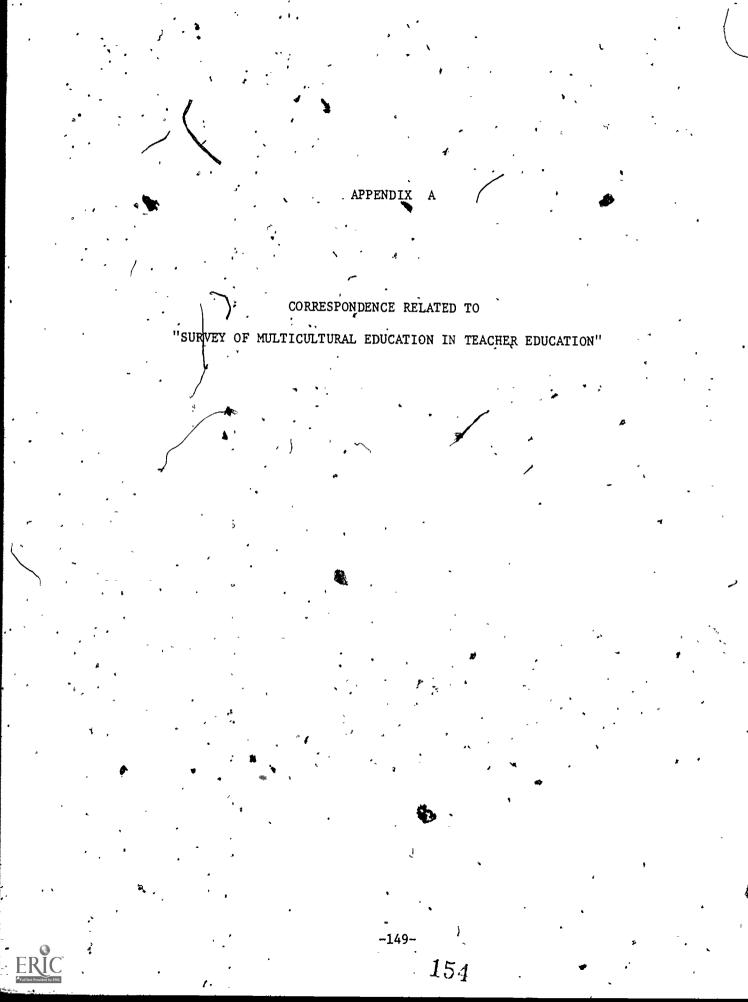

9. Are institutions located in states with legislation and certification requirements for multicultural education providing for multicultural education in their teacher education programs differently than institutions in states without such provisions?

. 152

The data presented in this report should serve as a springboard for further research. The nine recommendations suggested above only examine the programmatic activities within the curricula of teacher education. The impact of multicultural education programs and experiences on the preservice or inservice teacher or education administrator has yet to be examined. Research related to multicultural education needs to be identified, examined and categorized to be used effectively in teacher education.

AACTE hopes that this baseline study will serve as the framework for additional research in this area. AACTE also hopes that this initial identification of multicultural education programs will assist in the further identification and development of components that might be used successfully by other insitutions in the planning, developing, and implementing of their own programs in this area.

AMERICAN ASSOCIATION OF COLLEGES FOR TEACHER EDUCATION One Dupont Circle, Washington, D C. 20036(202) 293-2450

July 1, 1977

Dear Chief Institutional Representative:

At its May, 1977 meeting, the NCATE Council adopted a revised set of standards for Accreditation of Teacher Education" which will apply as of January 1, 1979. The revised standards include a single standard on multicultural education, which is defined in national and international terms, subsumed under the section related to curriculum. The standards addressing faculty, students, resources, and planning also include references to multicultural education.

In an effort to provide assistance to member colleges and universities the AACTE Commission on Multicultural Education is planning a series of leadership training institutes this fall for faculty and administrators. In addition AACTE plans to conduct a national survey in order to (a) identify personnel and program resources for multicultural education; (b) facilitate the machinery for interchange of ideas among the AACTE constituency; (c) develop long range policies and recommendations concerning multicultural education in teacher education; and (d) encourage, assist, and to the extent possible, support developmental efforts related to multicultural goals for teacher education.

The AACTE requests your cooperation in gathering information about multicultural activities in your institution. A "Survey of Multicultural Education in Teacher Education" will be mailed to all AACTE member institutions in September, 1977, to collect such data. In order to facilitate the process of data collection, could you designate an individual within the department, school, or college of education who would have responsibility for completing this questionnaire? This individual should be someone who is familiar with the multicultural, ethnic studies and/or bilingual education at your institution. <u>Please indicate the designated respondent on the enclosed postcard and return it to AACTE by July 15, 1977</u>. Further correspondence concerning the survey will then be directed to that person.

This survey is designed to gather and analyze national baseline data regarding current and planned efforts in multicultural education by teacher education institutions.

-150-

155

Chief Institutional Representatives July 1, 1977 Page two

This information will be used to:

\$

- (1) compile a State of the Art report on multicultural education as practiced in American teacher education;
- (2) compile a directory of multicultural education programs in AACTE member institutions; and
- (3) analyze the way multicultural education is addressed in teacher education.

The final report, which will be available early in 1978, will also include an analysis of state departments of education regulations and professional association positions related to multicultural education.

Your assistance in completing this initial inquiry is sincerely appreciated. If you have questions, please contact Donna Gollnick at AACTE, (202) 293-2450

Sincerely yours,

Frank H. Klassen Director, Multicultural Education Associate Director, AACTE

FHK/pf

150

AMERICAN ASSOCIATION OF COLLEGES FOR TEACHER EDUCATION One Dupont Circle, Washington, D.C. 20036(202) 293-2450

September 19, 1977

Dear Respondent:

The American Association of Colleges for Teacher Education is undertaking a national survey of the multicultural dimension of American teacher education. As the designated respondent of your institution, you are invited to respond to the enclosed questionnaire, "Survey of Multicultural Education in Teacher Education." <u>Please return the questionnaire in the self-addressed</u>, enclosed envelope to AACTE by October 28, 1977.

This survey is prompted first by the long term commitment of AACTE, through its Commission on Multicultural Education, to assist colleges and universities in the preparation of education personnel for a culturally pluralistic and ethnically diverse society. Second, recent changes in the Accreditation Standards of the National Council for the Accreditation of Teacher Education (NCATE) require greater institutional focus on multicultural education in all phases of its teacher education program. It is imperative therefore, that the national progress and the state of the art in this field be analyzed and disseminated for the benefit of teacher educators.

The findings of this survey will be incorporated in a report which will include state regulations and guidelines on multicultural/bilingual education as well. The report, to be disseminated in early 1978, will be of considerable value to institutions whose programs and organization reflect a multicultural perspective as well as to those who are planning to do so. In addition, these findings will be utilized in a leadership training institute to be conducted later this year. Your response will make an important contribution to this national effort to improve the quality of teacher education.

The Survey Instrument

This instrument is designed to ascertain how educators are being prepared to work in multicultural education settings. The information collected from this survey will be used in the compilation of a "State of the Scene" Report and in the preparation of leadership training institutes for teacher educators.

The instrument asks for information about the <u>institution</u> as well as the <u>education</u> <u>unit</u>. Each question identifies the unit for which the information is being requested,

Information is requested in six different areas related to multicultural/bilingual bicultural education as follows.

-152-

- 1) Programmatic activities
- 2) Faculty in the education unit
- 3) Management of programs

4) Students in the education unit

5) Research and development activities

6) General information.

If your education unit does not have multicultural/bilingual-bicultural programs, there are parts of the questionnaire that you should not complete. Bold letters throughout the questionnaire indicate these directions.

Your assistance in completing this survey is sincerely appreciated. If you have questions concerning this, please contact Donna Gollnick at AACTE, (202) 293-2450.

Sincerely yours,

easen

Frank H. Klassen Director, Multicultural Education Associate Director, AACTE

ERI

Survey of Multicultural Education in Teacher Education

Conducted by

160

The Commission on Multicultural Education of the American Association of Colleges for Teacher Education

Edward C. Pomeroy, Executive Director Tomas Arciniega, Gommission Chairman Frank Klassen, Associate Director One Dupont Circle Washington, D.C. 20036 202-293-2450-1 6 1

Fall 1977

PURPOSE OF SURVEY

This survey is being conducted by AACTE's Commission on Multicultural Education to determine the present state of multicultural education, including bilingual education as practiced in teacher education in the United States

DIRECTIONS FOR COMPLETING THE QUESTIONNAIRE

Pretesting has indicated that it takes about 90 minutes to complete the questionnaire. The respondent may call Donna Gollnick at 202-293-2450 to obtain additional information or clarification.

Please return the questionnaire in the enclosed self-addressed envelope by October 30 to AACTE

*

STATEMENT OF CONFIDENTIALITY

The AACTE has established the following policy guidelines for collection, storage and dissemination of data and for treatment of information derived from that data

- 1) The Association's information systems activities are operated under the general control of the Board of Directors
- The Association strives to serve the information needs of all segments of the membership with equal interest and vigors
- 3) The Association s computer-assisted information systems activities are treated with the same concern as are other, existing data files
- 4) The processes of data analysis and dissemination are conducted in such a way that records of individual institutions are not identifiable. Aggregates of data are reported on bases such as institution type, size, nature and type of programs, state, geographic region and nationally. An individual institution's data is made available only to that institution
- 5) In the processes of data collection and dissemination, the primary link between the information system and an AACTE member institution is the position of AACTE Chief Institutional Representative
- 6) The information system is primarily for the use of AACTE member institutions and of the Association. Access by other legitimate, interested agencies to system products and services is controlled by the Bpard of Directors so that such access is clearly in the interest of improving teacher education.

DEFINITION OF TERMS USED IN THIS QUESTIONNAIRE

The terms that follow are used throughout the questionnaire. The respondent should refer to these definitions as necessary

Multicultural Education is an educational concept which values the culturally pluralistic nature of the United States and thus the community and student population that schools serve

Multicultural education is preparation for the social, political, and economic realities that individuals experience in culturally diverse and complex human encounters. These realities have both national and international dimensions. This preparation provides a process by which an individual develops competencies for perceiving, believing, evaluating, and behaving in differential cultural settings. Thus, multicultural education is viewed as an intervention and on-going assessment process to help institutions and individuals become more responsive to the human condition, individual cultural integrity, and cultural pluralism in society *

Multicultural teacher education provides teachers with the competencies required to teach from a multicultural perspective. It implies that teachers be able to provide programs where all students are helped to understand that being different connotes neither superiority nor inferiority and programs where students of various social and ethnic backgrounds may learn freely from one another.

Bilingual-Bicultural Education is recognized as an integral part of the multicultural education concept. It is defined separately for this survey, however, because it is distinguished by the dimension of two languages as well as cultural diversity. Bilingualbicultural education utilizes both English and the native languages of students in the school program and also provides experiences for learning about the cultural heritage of the non-English speaking ethnic group. These programs may range from transitional programs aimed at having students learning English after several years to a multilingual/multicultural program in which students learn to function totally in two languages and cultures

Bilingual bicultural teacher education provides teachers with the competencies required to teach in schools with bilingual student populations. It also implies that teachers recognize, accept and value the cultural and language differences of students in their instructional and personal communications with students and the community.

Education Unit is the organizational structure which is responsible for functions related to Education as an academic discipline including undergraduate teacher preparation, all departments/divisions/areas within that organizational structure, educational research and professional service. The education unit often takes the form of a professional school, college or academic division or department.

Institution is the entire complex of departments, professional schools and other organizational units that are present on the campus

SUPPLEMENTARY MATERIALS

We would appreciate your supplementing your response in this questionnaire with any materials (statements of purpose, course descriptions, syllabi, curriculum guides, pamphiets, etc.) describing the multicultural education programs currently offered or planned Please send documents separately to the Ethnic Heritage Center, AACTE, Suite 610, One Dupont Circle, Washington, D.C. 20036

For purposes of follow-up and/or amplification of your institution's response, AACTE would like the following information about the individual who assumed major responsibility for preparing this report

•			
	NAME OF PRINCI	PAL RESPONDENT	
	TITLE		• •
	INSTITUTION

SECTION B: FACULTY

Please report the sex and ethnic background of faculty members in your education unit for the fall, 1977 session. The following steps will guide you through the completion of this task

Step 1 This question requests a breakdown by sex and ethnic background of the full-time split-time and part-time education unit faculty defined as follows

FULL-TIME EDUCATION FACULTY Persons carrying a full-time load all of whose activities are devoted to operations of the education unit

SPLIT-TIME EDUCATION FACULTY Full-time faculty for whom only a portion of their activities are devoted to activities operated by the education unit (e.g. an English professor who teaches one methods course)

PART-TIME EDUCATION FACULTY Faculty carrying less than a full-time load in the education unit who are not full-time employees of the institution

You may wish to consult your Office of Institutional Research which submits a report of faculty sex and ethnicity to the Equal Employment Opportunity Commission (EEOC): EEOC, 'Higher Education Status Report', Form GAO B-182540

- Step 2 If your institution has adopted a formal policy that information about the composition of the faculty by sex and ethnic background is not for public release, please check the space below and skip to Question 9
 - () This information is not for public release

103

Step 3 Please provide the information requested in the following table

	· FULI	THME	SPLIT-TIME	PARTIME
WHITE AMERICAN (not of Hispanic Origin)- Male		· · · · ·		ŧ,
Female	<u>-</u>	·		•

- 15. Please indicate the following resources that are utilized by faculty and/or students in the implementation of multicultural/bilingual-bicultural programs
 - () Center for Ethnic Studies/Multicultural Education/Bilingual-Bicultural Education
 -) Textbooks
 -) Ethnic agencies/organizations
 - () Consultants who are not part of the university faculty
 - () Cooperative programs with public or private schools that have a multicultural student population
 - Cooperative programs with public or private schools that have a student population with different ethnic backgrounds than the majority of students in the teacher education program
 - Student experiences in cultural settings different than that of the teacher education student
 - () Community-based program as some phase of the student's work
 - SECTION D: STUDENTS -
- 16 Please report the sex and ethnic background of students at your institution and in your education unit for the fall, 1977 session. The following steps will guide you through the completion within task.
 - Step 1 You may use any of the methods listed below: however, please identify the methods used by checking all appropriate boxes
 - Figures reported represent education majors and do not include persons preparing to be teachers who are majoring outside the education unit
 - () ^{*}Figures reported represent all persons taking courses in the education unit, both majors and non-majors
 - () Figures reported are based on headcounts
 - () Figures reported are based on full-time equivalency (FTE)
 - () Other (please specify)

You may wish to consult your Office of Institutional Research or the Registrar where total institutional figures should be available from their Office of Civil Rights, report (Form OCR "Biennial Report")

Step 2	tep 2 Please complete the following table using the information which you gathere in Step 1									
		· .								
		TOTAL INSTITUTION	UNDERGRADUATE EDUCATION	GRADUATE						

	•		
WHITE AMERICAN (not of Hispanic origin) Male		· ·	
Female		•	
BLACK AMERICAN (not of Hispanic órigin) Male	·		*
Female	•		•
HISPANIC Male	· /.		
Female			
ASIAN OR PACIFIC ISLANDER Male			
Female			
AMERICAN INDIAN OR ALASKAN NATIVE Male	+ +		
Female		1	
OTHER (not specified above) Male		• •	-
Female		,	

17 If your institution or education unit maintains data about the employment of the teacher education graduates, please indicate the percentage of those graduates working in the following education situations.

Ínner City Schools	% ′
Bilingual Classrooms/Schools-	%
American Indian Reservations	%
Other (please specify)	
	%

21. Please indicate which of the following kinds of services that you would like to see AACTE provide to assist the *education unit* in planning, developing, and implementing multicultural education programs.

- () Publish a journal or bulletin that informs teacher educators of new ideas, approaches, or materials in multicultural education
 - () Stimulate research and analysis on various aspects of multicultural education through the convening of task forces
 - () Provide consultation on development of proposals and research designs for submission to federal agencies-
- '() Catalogue information about funding agencies to disseminate as a directory
- () Facilitate the dissemination of information about operationally and programmatically successful multicultural programs
- Maintain a consultative service on multicultural teacher education that can match expertise to needs at all levels
- () Convene national or regional meetings on multicultural education
- () Provide a clearinghouse for informational, research and analytical studies of multicultural education
- () Conduct research and analytical studies on multicultural education ,
- () Provide informationabout federal and state legislation

Other (please specify)

()

22 In your opinion, what is the future of multicultural and/or bilingual-bicultural education win your education unit? Please write on the back if additional space is needed

WE REQUEST THAT YOU SUPPLEMENT THIS SURVEY WITH THE COLLEGE CATALOG, COURSE DESCRIPTIONS, SYLLABI, CURRICULUM GUIDES, ETC THAT WOULD ASSIST IN UNDERSTANDING THE MULTICULTURAL/BILINGUAL BICUL TURAL ACTIVITIES UNDERTAKEN IN YOUR EDUCATION UNIT.
