ABSTRACT

A survey of attrition in professional special education personnel in Michigan was undertaken through an analysis of computer tape copies of the Michigan Professional Personnel Register and of the Teacher Certification Master File. Among findings was that the number of new positions continued to grow in assignments with mentally impaired, speech disabled, emotionally impaired, visually impaired, hearing impaired, and learning disabled students. Social work, school psychology, consultation for the mentally handicapped, and occupational/physical therapy positions also increased. The annual attrition rate for special education teachers was approximately 11%. Recommendations are made for establishing a common coding system for data files and conducting a statewide study on teacher absence and substitute teacher qualifications. (CL)

CERTIFICATION, EMPLOYMENT AND ATTRITION OF SPECIAL EDUCATION
PROFESSIONAL PERSONNEL IN MICHIGAN

by

Dr. Gary R. Smith

Detroit, Michigan

September 8, 1980

PERMISSION TO REPRODUCE THIS
MATERIAL HAS BEEN GRANTED BY

Gary R. Smith

TO THE EDUCATIONAL RESOURCES
INFORMATION CENTER (ERIC)

This report was prepared at the request of the College and University Task Force on Special Education Delivery Systems and the Special Education Services of Michigan Department of Education. However, the author's conclusions are not necessarily those of the Committee, the Michigan Department of Education or any of its Divisions.

EC 1400 32

1

This study was undertaken to update a previous investigation(1) of Special Education professional personnel employed in Michigan Public Schools. The following questions or tasks were posed:

1. How many beginning professional personnel (zero years teaching experience) were newly employed in Special Education assignments in Michigan Public Schools in the 1979-80 school year?
2. How many professional personnel with one or more years teaching experience were employed in Special Education assignments in 1979-80?
3. How many Special Education professional personnel who were employed in 1978-79 returned to Special Education assignments in 1979-80?
4. For those Special Education professional personnel employed in 1979-80, provide descriptive summaries for each disability category using the following variables:
 - A. Age distribution
 - B. Salary distribution
 - C. Employment levels
 - D. Highest degree achieved
5. For each disability category, determine the cumulative attrition (loss of professionals) for each year through 1979-80.
6. For each disability category, determine the number of new endorsements recommended by Michigan teacher education institutions.

7. Provide some empirical estimate of the availability of qualified substitute teachers employed to replace absent teachers in Special Education assignments in Michigan Public Schools.

PROCEDURES

For information regarding employment, the researcher used computer tape copies of the Michigan Professional Personnel Register for the school years 1973-74, 1974-75, 1975-76, 1976-77, 1977-78, 1978-79, and 1979-80. These tapes were provided by the Teacher Preparation and Certification services, Michigan Department of Education(2). The Register includes descriptive information about the professional personnel employed in Michigan Public Schools in the following Special Education assignments: mentally handicapped, speech impaired, orthopedically handicapped, school social worker, emotionally impaired, psychologist, homebound, teacher counselor for physically handicapped, blind, deaf, teacher of trainable, consultant for mentally handicapped, learning disabled, occupational/physical therapy.

In dealing with the question of attrition, the researcher used the social security number of each person to determine whether or not he/she returned to a Special Education assignment in Michigan Public Schools.

For information regarding certification, the researcher used

computer tape copies of the Teacher Certification Master File, which were provided by the Teacher Preparation and Certification Services, Michigan Department of Education. This file indicates the endorsements for each certified teacher as well as the institution and year when the endorsements were recommended.

The Michigan Department of Education customarily counts the number of provisional certificates and endorsements issued during a fiscal year, July 1, 1978 through June 30, 1979. However, it takes time to secure, verify, and process the certificate recommendations from each teacher education institution. Since the annual report including graduates of December 1979 would not be completed until about September 1980, the researcher elected to use the calendar year, January 1 1979 through December 31 1979, for the count of provisional certificates and endorsements issued.

A sample of data for Special Education teachers was selected from eight school districts in southeastern Michigan. The data indicated the number of teacher absences during the 1978-79 school year as well as the qualifications of substitute teachers employed by the districts to replace the absent Special Education teachers.

The social security numbers of these teachers and substitute teachers were used with the Michigan Professional Personnel Register and the Certification Master File to expand the available information about these teaching personnel.

FORTRAN and STDS programs were used with the conventional statistical programs to collect and analyze the data in order to answer the preceding questions.

RESULTS

Total Employed: Table 1 shows the total number of professional personnel who had either a major or secondary assignment in Special Education for each year from 1973-74 through 1979-80. The table shows the number of persons in each category of Special Education, while the number in parentheses shows the annual change in number of persons in that category. For example, there were 2245 teachers of mentally impaired (SA) pupils in 1973-74 and that number increased in 1974-75 to 2314 teachers which represents a 3% increase. The total number of teachers in this category has increased each year, with the largest increase occurring in 1976-77 when 2898 teachers were employed representing an 18% increase over the preceding year. Similar interpretations may be obtained for each row in Table 1.

The data indicate substantial increases in the total number of assignments in emotionally impaired (SE), learning disabled (SM), school psychologist (SG), and therapists (NU). There are modest increases in the number of social workers (SD), speech impaired (SB), mentally impaired (SA), consultant for mentally impaired (SU), blind (SK), deaf (SL). There appears to be a stable balance of personnel employed to work with orthopedic (SC), homebound (SH), teacher consultant for physically impaired (SI), and trainable (ST). The

classification of diagnostician (SF) is being replaced by the school psychologist and this explains the decrease in this category.

Newly Employed: Table 2 shows the number of newly employed professional personnel for each category from 1974-75 through 1979-80. The total number of newly employed teachers has been stable at slightly more than 2000 persons employed each year for the last three years. Although there are small increases in new positions in mentally impaired (SA) and learning disabled (SM), the general impression indicates stability with slight annual increases or decreases.

Table 3 provides descriptive statistics for employment of beginning professional personnel (zero years teaching experience) in each category for the 1979-80 school year. Table 4 contains descriptive statistics of newly employed professionals who had previous teaching experience. For each category, the tables show the number of newly employed persons, sex, average age, highest degree, instructional levels, and average salary.

Table 5 provides a similar summary of the characteristics of all Special Education professional personnel who were employed in 1979-80. For this group, Table 6 shows the age distribution of persons employed in each category of Special Education. Approximately 3/4 of the teachers were under the age of 41 years. This was also characteristic of the large Special Education areas of mentally impaired (SA), speech impaired (SB), emotionally impaired (SE), and learning disabled (SM).

Somewhat older personnel were found among social workers (SD), homebound (SH), consultant for physically impaired (SI), school psychologist (SG), and consultant for mentally impaired (SU).

Table 7 provides a comparison of the number of Special Education professional personnel who returned from the preceding year and the number of newly employed professional personnel for that year.

The total number of Special Education professionals has increased about 6% each year since 1976-77. As the total number has increased, the number of returning Special Education teachers has also increased each year. The number of returning teachers represents about 83% of the total group.

On the other hand, the number of newly employed Special Education professionals (experienced and beginning teachers) has remained very stable at slightly more than 2000 persons for each of the last three years. The percent decrease shown in Table 7 is due to the same number being divided by a larger and larger base number.

Attrition: Table 8 shows the cumulative loss of Special Education professionals during six years. Of the 6889 teachers employed in 1973-74, there were 4109 or 60% of them remaining in Special Education assignments in 1979-80. If one looks along the diagonal rows of data in Table 8, the percent returning after one year is 88% to 89%. For the second year the rate of returning teachers is about 81%. For the

years 3 through 6, the rates are approximately 73%, 68%, 64%, and 60% respectively. It is also notable that the rate of loss is decreasing slightly. That is, the expected loss of 1973-74 teachers after 2 years was 21% or 79% returning in 1975-76. However, Table 8 shows that the expected loss of 1977-78 teachers after 2 years was 18% or 82% returning in 1979-80. This trend toward decreasing attrition is consistently found among Michigan teachers in assignments other than Special Education.

Table 9 shows the annual loss of Special Education personnel in various teaching assignments during the six years between 1973-74 and 1979-80. Columns "A" and "B" show that there were 2149 teachers of mentally impaired pupils (SA) employed in 1973-74, but only 1258 or 58% were employed in Special Education assignments in 1979-80.

Table 10 shows the estimated number of initial provisional certificate endorsements in Special Education for the calendar years 1977 and 1978. Overall, there was an increase of 50 endorsements or 3.2% increase. There were slight decreases in the number of teachers of speech (SB), emotionally impaired (SE), and hearing impaired (SL), while all other areas increased in total endorsements.

Table 11 shows comparable data for the calendar years 1978 and 1979. There was an overall decrease in the number of total initial provisional certificate endorsements by -162 or -10%. In 1979, endorsements for emotionally impaired (SE) and hearing impaired (SL)

displayed slight increases, while all other areas decreased in the number of initial endorsements.

Table 12 shows the initial provisional certificate endorsements for Special Education teachers by Michigan institutions in the calendar year 1979. The institution is identified in the first column. The next eight columns show the Special Education code letters and the number of initial provisional certificate endorsements recommended by the institution for each Special Education area. The last three columns of Table 12 show the total endorsements recommended by an institution, the number of persons recommended, and the total number of certificates (persons) recommended for all teaching fields in calendar year 1978.

Table 13 provides similar information about the institutions and recommendations made in the calendar year 1978.

Table 14 indicates the total number of new endorsements in various categories of Special Education. When considered with information presented about initial provisional certificate endorsements in Table 12, it may be seen that 30% to 40% of the new endorsements recommended by Michigan institutions are made for beginning teachers. The remaining 60% to 70% of the endorsements in Special Education for 1979 were added to provisional/permanent/continuing certificates of experienced teachers. It appears that as teaching opportunities have diminished in some teaching fields in

general education, experienced teachers have taken additional coursework at Michigan institutions in order to obtain an additional endorsement in one of the areas of Special Education. The magnitude of this change is about two experienced teachers receiving a new endorsement for every beginning teacher endorsed. In the case of endorsements for learning disabled (SM), more than 90% of the recommendations by Michigan institutions were to persons with certificates acquired prior to 1979.

Substitute Teachers: A sample of 841 substitute teachers was obtained from eight school districts in southeastern Michigan. These substitutes were employed during the 1978-79 school year. Within the sample there were substitutes who had some Special Education endorsement on a provisional/permanent/continuing certificate. The endorsements were determined by using the social security numbers of the substitutes to select the endorsement records from the Certificate Master File.

A second sample of 2751 teachers was obtained from these districts. It indicated the number of paid absences of all teachers employed by the districts during the 1978-79 school year. For this group, the average teacher was absent 7.8 days and the absence rate (days absent / 130 days) was 4.3.

The social security numbers of these teachers were used to select the corresponding records from the Professional Personnel Register for

1978-79. In this way it was possible to relate the number of absences to teaching fields, age, experience, salary, and other factors.

The set of 257 Special Education teachers was selected from the sample of 2751 teachers. Table 15 shows some of the characteristics of this group. Some special areas (SA, SB, SD, SE, SM) had samples greater than 25 persons and the indications of days absent, absence rate, estimated total absences may be fairly accurate indicators of traits of Special Education personnel in public schools in southeastern Michigan.

As shown in the table, the absence rate is high for teachers of mentally handicapped (SA), speech impaired (SB), and emotionally impaired (SE) when compared to the absence rate for all teachers in the sample.

In section B of Table 15 there were other special areas reported, but the samples are very small and the numeric values may be unreliable. They are reported in order to provide some crude indication of the extent of absences among teachers in these special areas.

In Table 16 a comparison is drawn between absences of teachers in seven areas of Special Education and substitute teachers available in the district who had provisional/permanent/continuing certificate endorsements in these areas. Although the substitute teachers with

Special Education endorsements also had endorsements in other teaching fields, it was assumed, that all of their days as a substitute were in one of the areas of Special Education. This assumption was made in order to consider the maximum number of Special Education substitute teachers available to replace absent teachers in Special Education assignments.

If one considers only the totals in Table 16, it appears that there are shortages of qualified substitutes in learning disabilities (SM) and speech impaired (SB). However school districts B, D, and F did not have a sufficient number of qualified substitutes for absent teachers of mentally impaired (SA). Similar deficiencies may be observed in the table for other school districts in providing qualified substitute teachers in the other areas of Special Education.

When qualified Special Education teachers were not available, the school districts evidently used teachers with general education endorsements on provisional/permanent/continuing certificates or persons with 90-day permits. Of the 841 substitutes in the sample, 59 had some Special Education endorsement, 529 others had provisional/permanent/continuing certificates, and 253 had special teaching permits requested by the school districts.

It may be that substitute teachers with some training in helping pupils with special impairments were used in all the districts to replace absent teachers in Special Education assignments. However, it

is also possible that the districts may often be compelled to use substitute teaching personnel with little or no training in working with handicapped pupils.

The writer assumes that each and every one of the 180 days in the school year is important. This is slightly less than 1/2 of the calendar year. The loss of any one of these school days and the learning opportunities which they provide is a substantial loss to the pupils.

Need For Special Education Teachers: The balance of supply and demand for teaching personnel depends upon the availability of adequate funds to employ the teachers needed by the schools. If we assume that local, State, and federal funds will be sufficient to enable school districts to comply with the provisions of the Mandatory Special Education Act, then we may estimate the level of demand for Special Education teachers in Michigan.

The number of new teaching positions continued to grow in the following teaching assignments: mentally impaired (SA), speech impaired (SB), social worker (SD), emotionally impaired (SE), school psychologist (SG), visually impaired (SK), hearing impaired (SL), consultant for mentally handicapped (SU), learning disabled (SM), occupational/physical therapy (NU). The data indicate that the increase of new positions has ended in orthopedic (SC), homebound (SH), consultant for physically impaired (si), and trainable (ST).

One should be mindful that the extent of annual growth is small for some areas such as hearing impaired (SL), which may involve an increase of less than a dozen new positions each year. On the other hand there have been annual increases of 200 to 300 new positions in learning disabilities (SM).

The annual attrition rate for Special Education teachers is about 11%, which is substantially higher than the 5% to 7% attrition rate which characterizes other teaching fields in K-12 school districts.

It seems evident that there will be a continued demand for more teachers in those areas where new positions have been created. The need for new personnel will be greater in areas where many new positions are created each year (learning disabilities (SM) and speech (SB)). In other Special Education areas the need will be dependent upon a relatively high attrition rate and the district's determination to secure qualified substitute teachers to replace absent Special Education teachers.

Recommendations: The two main recommendations of the previous study are reiterated:

1. The accuracy of future studies of the supply and demand for Special Education personnel will be substantially improved by establishing a common coding system so that data files collected by the Special Education Services and by the Teacher Preparation and

Certification Services can be related. It is the writer's understanding that efforts are underway to establish this common coding system within the Michigan Department of Education. This is a valuable contribution.

2. There should be a statewide study to determine the extent of absence among Special Education personnel, the qualifications of substitute teachers used in their classes, and an annual census of substitute teachers utilized in Special Education classes in Michigan Public Schools.

The small sample of data collected in this study indicates that there is a need to improve the supply of qualified Special Education teachers who will be substitute teachers in their areas of expertise. The absence of data makes it difficult to estimate the extent of the deficiency throughout Michigan, but it may be a formidable one.

Providing qualified teachers to assist handicapped pupils every day of the school year is an important goal. The modest gains in learning and personal achievement are hard won by handicapped pupils and their teachers each and every day. We can only speculate upon the consequences of using untrained substitute teaching personnel to replace Special Education teachers who are absent several days during the school year.

Footnotes

1. Gary R. Smith, "Certification, Employment and Attrition of Special Education Professional Personnel in Michigan," Wayne State University, Detroit, Michigan, September 1979.

2. Although the raw data were provided by Teacher Preparation and Certification Services, the writer is responsible for the analysis and interpretation of that data.

TOTALS	1,712	2,224 (.30)	2,646 (.19)	2,020 (-.24)	2,043 (.01)	2,053 (.01)

Interpretation: The social security numbers of 1978-79 personnel were compared to social security numbers of professional employees in 1979-80. Those not matched were defined as "newly employed." here were 480 newly employed teachers of mentally impaired (SA) in 1978-79 and 547 newly employed in 1979-80. This was an increase of 14%.

TABLE 3 - BEGINNING PERSONNEL NEWLY EMPLOYED IN 1979-80 IN SPECIAL EDUCATION ASSIGNMENTS

TOTALS	775	98	677	25	638	137	262	268	107	91	47	12,305

Interpretation: Only teachers with primary assignment in special education were included in the analysis. Beginning teachers had no previous teaching experience. There were 228 beginning teachers of mentally handicapped pupils employed in 1979-80. Of this group 30 were male and 198 were female, with an average age of 24 years.

Interpretation: Only teachers with primary assignment in special education were included in the analysis. Experienced teachers had one or more years of teaching experience. There were 304 experienced teachers of mentally handicapped pupils newly employed in 1979-80. Of this group 49 were male and 255 were female with an average of 30 years.

NUMBER	7,672	8,935	10,412	11,009	11,696	12,410
PROPORTION:	(1.00)	(1.00)	(1.00)	(1.00)	(1.00)	(1.00)

INTERPRETATION. A COMPARISON OF SOCIAL SECURITY NUMBERS WAS USED TO ESTABLISH WHETHER A TEACHER WAS NEWLY EMPLOYED OR RETURNING FROM THE PRECEDING YEAR. THERE WERE 5,960 SPECIAL EDUCATION PROFESSIONAL PERSONNEL EMPLOYED IN 1974-75 WHO WERE ALSO EMPLOYED IN 1973-74. THIS 5,960 REPRESENTS .777 OF THE SPECIAL EDUCATION STAFF OF 7,672 EMPLOYED IN 1974-75. THERE WERE 1,712 OR .223 NEWLY EMPLOYED PROFESSIONAL PERSONNEL. COL. C TOTALS INCLUDE PERSONS WHO BECAME SUPERVISORS OF SPECIAL EDUCATION (AY)

TOTALS	6,733	4,035 (.60)	7,457	4,809 (.64)	8,660	5,903 (.68)	9,945	7,514 (.76)	10,545	8,668 (.82)	11,307	10,108 (.89)

Interpretation: Col. A shows that there were 2,149 teachers of mentally handicapped (SA) employed in 1973-74. Col. B shows 1,258 or 58% of the (SA) teachers were still employed in 1979-80 in special education assignments in Michigan Public Schools. This represents a loss of 42% of these personnel after six years.

TABLE 10

INITIAL PROVISIONAL CERTIFICATE ENDORSEMENTS IN SPECIAL EDUCATION
FIELDS IN CALENDAR YEARS 1977 AND 1978

	<u>Calendar Year</u>		<u>Change</u>	<u>Prop. Change</u>
	<u>1977</u>	<u>1978</u>		
Mentally Handicapped (SA)	572	603	31	5.4%
Speech Correction (SB)	196	180	-16	-8.2%
Orthopedically Hand. (SC)	109	135	26	23.9%
Emotionally Dist. (SE)	319	279	-40	-12.5%
Homebound (SH)	108	134	26	24.1%
Visually Handicapped (SK)	59	64	5	8.5%
Hearing Impaired (SL)	62	59	-3	-4.8%
Learning Disabilities (SM)	<u>135</u>	<u>156</u>	<u>21</u>	<u>15.5%</u>
*TOTAL ENDORSEMENTS	1,560	1,610	50	3.2%

Interpretation: In 1978 there were 603 initial provisional certificate endorsements of teacher of mentally handicapped. This was 31 endorsements more than preceding year or 5.4% change.

TABLE 11

INITIAL PROVISIONAL CERTIFICATE ENDORSEMENTS IN SPECIAL EDUCATION
FIELDS IN CALENDAR YEARS 1978 AND 1979

	<u>Calendar Year</u>		<u>Change</u>	<u>Prop. Change</u>
	<u>1978</u>	<u>1979</u>		
Mentally Handicapped (SA)	603	503	-100	-16.6%
Speech Correction (SB)	180	170	-10	-5.6%
Orthopedically Hand. (SC)	135	120	-15	-11.1%
Emotionally Dist. (SE)	279	290	11	3.9%
Homebound (SH)	134	120	-14	-10.4%
Visually Handicapped (SK)	64	48	-16	-25.0%
Hearing Impaired (SL)	59	61	2	3.4%
Learning Disabilities (SM)	<u>156</u>	<u>136</u>	<u>-20</u>	<u>-12.8%</u>
*TOTAL ENDORSEMENTS	1,610	1,448	-162	-10.1%

Interpretation: In 1979 there were 503 initial provisional certificate endorsements of teachers of mentally handicapped. This was 100 endorsements less than the preceding year or -16.6% change.
