ABSTRACT

A guide to the implementation of the Entry Level Skills Program (ELSP) and a conceptual framework for evaluation research is presented. Attention is directed to strategies for the attainment of goals and management of the ELSP project, which is a developmental program for freshmen students who have not acquired the full range or level of cognitive skills needed for college. Overall, the project was designed to provide professionals, and particularly women and minorities at the postdoctoral and predoctoral levels, the opportunity to design and implement the evaluation research component of the ELSP. The competency-based skills program is based on the planning, management, and evaluation (PME) systems concept to instruction and student testing using a standardized pre- and post-test battery and a series of criterion-referenced tests (e.g., the Comparative Guidance and Placement Program battery). The role that a management information system (MIS) plays in ELSP implementation and development is addressed, and a MIS open-systems model that can be utilized in the curriculum development process is presented, along with a theoretical model for the development of a PME plan for the ELSP. The process for the flow of information and data management is also described. The major functions of the PME are identified and defined: planning, organizing, coordinating, monitoring, and assessing. Additional objectives of the program--to assist participating institutions in the development of instructional systems (i.e., instructional strategies, recordkeeping, and classroom management) -- are also noted. Various questionnaires, forms, flow charts, and data elements are appended, along with a bibliography. (SW)

INTRODUCTION

The Entry Level Skills Program is a cognitively oriented developmental education program in communications skills, mathematics and science developed in collaboration with approximately 23 developing institutions.

Generally, the ELSP reflects the philosophy and educational practices of competency-based education and a number of other current approaches to teaching/learning, including mastery learning, interdisciplinarity, programmed instruction, and personalized instruction. The unique features of the program include: the preparation of disadvantaged students to cope with standardized tests as a normal part of the instructional process and related support systems; focus on the mastery of learning at a level indicative of moving disadvantaged students into mainstream higher education and, ultimately, mainstream jobs. Moreover, ELSP, emphasizes a holistic approach to curriculum design and evaluation.

Presented here is a guide to the installation of the ELSP, and an institutional-wide systems approach that will guide the project through various levels of implementation.

The <u>ELSP Implementation Guide</u> includes an overview of the ELSP and a conceptual framework for Evaluation Research. The guide focuses on managing the ELSP project and emphasizes strategies for the attainment of goals.

The Institute for Services to Education, Inc. (ISE) is well qualified to provide the services stipulated in this guide. Since its establishment in 1965, the firm has provided technical assistance to more than one hundred colleges and universities ranging in size from 400 to 40,000 students in thirty-six states and the aggregate territories of the United States.

The ISE staff includes individuals with diverse training and experiences in the developing institutions as well as other major institutions.

ISE does not separate faculty and curriculum development, but rather combines these two activities as they relate to the ELSP. The faculty is developed by increasing its capabilities in curriculum development using a team approach. Faculty representatives are involved in the following: development workshops; establishment of course goals and objectives; and in the writing of course modules and accompanying criterion-referenced tests.

The Entry Level Skills Program

Overview

The Entry Level Skills Program is a response to the need to translate the promise of equal opportunity and equity for the disadvantaged student in postsecondary education into a programmatic approach that guarantees results. Ultimately, the program aims to:

- improve student performance scores on standardized tests, including increasing students' median performance in reading, and improvement in basic computational skills.
- improve written auditory and verbal communications skills of entry level students.
- reinforce the abilities of the students to achieve and persist in a college environment through structured learning of academic procedures and processes.
- improve teaching strategies and the use of alternative approaches to instruction by assisting teachers in rewriting or supplementing their course outlines-syllabi to reflect standardized test content skills.
- assist institutions in implementing procedures for carrying out skill-building efforts within the framework of their administrative system, including fixing of responsibility at every level involved, the setting up (in collaboration with researchers and evaluators) of manageable recordkeeping, monitoring, and reporting activities and the documentation of system changes as required.

Implicit in the above set of objectives are a number of assumptions which are fundamental to making the program work. The ELSP recognizes the utility of standardized tests for distinguishing the better student from

the poorer student and, thereby, serving as a source of guidance for instructional planning. Of equal importance, the program underscores the interdisciplinarity of the concepts, processes and skills assessed through the use of such tests. That is, scholastic aptitude tests, whether in reading, mathematics or science, tend to examine a common set of verbal, analytical and critical thinking competencies, as well as specific competencies in test-taking. Further, mastery of such competencies requires an objectives-driven learning system which facilitates systematic diagnosis of where students are and the use of the results of diagnosis to prescribe the proper match between student needs and instructional plans.

Hence, the heart of the Entry Level Skills Program in concept and at its current level of development is systematic student assessment within the framework of an instructional management and reporting system ultimately aimed at guaranteeing equality of output for the disadvantaged in higher education.

Expected Outcomes

The primary expected outcome of the ELSP is an improved and expanded learning system which consists of a teacher's manual, syllabus, student manual for each of the discipline areas, a PME system, an appropriate test package and a monitoring system. Related outcomes of critical importance are:

- establishment of qualitative data bank, which includes detailed faculty logs, progress reports prepared by the ELSP director, the research coordinator, the ISE research staff and the Faculty and Curriculum Development Program staff; minutes of theilocal task force; reports of the ISE task force and an external panel of experts;
- quantitative data base addressed to the following: achievement as measured by the standardized test battery, criterionreferenced tests, and GPA's: attendance, attrition, and demographic/psychosocial characteristics;
- an improved student information and instructional management system in each of the participating institutions; and
- improved faculty and student performance in each participating institution.

Evaluation Research: A Conceptual Framework

In light of the current stress on total instructional accountability and documentation of program impact, it appears that the evaluation research component of the entry level skills program must meet two important requirements:

- Facilitate ongoing assessment of student needs, and (2) ongoing decision-making regarding performance objectives, course content, instructional strategies and placement of students.
- Facilitate systematic determination of the impact of the curriculum model on students enrolled in the program.

Implicit in these two requirements is a set of evaluation principles, or in essence, a philosophy of evaluation research, which deserves mention at this point.

- Evaluation research should be based on a sound understanding of (1) the purpose of evaluation; (2) what is to be evaluated (i.e., inputs, processes, or outcomes); and (3) how the results generated by evaluation research are to be used.
- Evaluation research should be designed to facilitate (1) instructional decision-making and (2) the determination of the effectiveness of instructional programs.
- Evaluation research should be multivariate in nature and comprehensive Decisions about the readiness of students to proceed to various points in the instructional program should be based on a variety of indicators; for example, GPA's, standardized test scores and behavioral ratings. Hence, the evaluation research approach should exemplify a sound synthesis of the use of both quantitative and qualitative data.
- Evaluation research should be <u>systematic</u> and <u>vigorous</u>, beginning with the initial point of instructional planning and continuing through program development, implementation and monitoring.
- Evaluation research should be <u>dynamic</u>, not static. As the instructional program unfolds, unanticipated events in the teaching-learning process may call for changes in the original plan.
- Evaluation research should be <u>growth-oriented</u>. The evaluation process should force us to think through what we're doing, to ask new kinds of questions and, perhaps, to propose new kinds of answers.

(Chart 1 summarizes a number of basic concepts which facilitate the establishment of a viable evaluation plan.)

, ,

A second characteristic implicitin an evaluation research plan is the systems approach. This approach becomes the basic theory that guides the development of the evaluation plan.

Needs analysis, feedback, the establishment of performance tasks, separating out component tasks are all characteristics of the systems modality. The systems modality also raises three basic questions essential to rational planning for evaluation research:

- Where are we going?
- How are we going to get there?
- How will we know when we have gotten there?

Based on the above requirement, the ELSP evaluation research model at the local level should be geared toward the utilization model (Patton, 1980). Emphasis should be on the evaluation of effort, process and treatment.

The effort approach is designed to provide an assessment of all entities required to successfully accomplish the goals. This includes—time, funds, space, equipment, etc., all factors that are necessary to accomplish the task. The process approach centers around the basic question of what is the present procedure. It is basically the creative component describing, developing, defining, and refining current implementation and practice, both quantitatively and qualitatively. Finally, the treatment approach measures intervention, the variable that is to make the difference, to what degree (if any), for whom and under what circumstances.

This conceptual framework represents various conceptualizations of the evaluation process (e.g., Stufflebeem, Krathwohl, Taba, Campbell, and Patton). Although they differ in detail, each demonstrates a systems approach to evaluation and the need for the evaluation process to measure more than output.

In educational research, outcome evaluation is represented by pretest versus posttest performance on standardized achievement tests. This kind of outcome information is extremely inadequate. Simply knowing that outcomes are high, low, or different, does not tell decision-makers very much about what to do. What is missing is information about the actual implementation of the program being evaluated. Thus, where outcomes are evaluated without knowledge of implementation, the results seldom provide direction for action because the decision-makers lack information about what produced the outcomes.

-6-

MANAGING THE ELSP PROJECT

Institute for Services to Education's primary focus in the installation of the Entry Level Skills Program (ELSP) is to provide technical assistance in the development of a Management Information System (MIS) that will guide the project through the various levels of implementation.

Prior to program implementation, !SE will conduct an assessment of the institution's MIS capability and make recommendations that are compatible with the existing MIS resources.

A brief explanation of the pivotal role that a sound MIS plays in ELSP implementation and development follows. An MIS open-systems model, that can be utilized in the curriculum development process, is presented along with a theoretical model for the development of an ELSP Planning Management and Evaluation (PME) plan. The process for the flow of information and data management is also described. (See Annencix C)

The Role of MIS in ELSP Implementation

A Management Information System (MIS) is a collection of facts, procedures, people and (often) machines which develop information designed to serve as a basis for decision making and policy formation. It is important to realize that a MIS cannot work effectively without the involvement and commitment of the various people that play an essential role in the institution's decision making process. These include: students, faculty, counselors, data coordinators, program directors, ISE consultants, the academic dean, and the president of the institution. Involvement and commitment, in this context, can be defined as a thorough understanding of the ELSP objectives as well as an understanding of the importance of generating and maintaining ac-

curate data that will facilitate the attainment of the program's instructional and administrative goals.

Another basic requirement to the proper functioning of a MIS is the accuracy and timeliness of information. This is quite an important aspect as it is not uncommon for a counterproductive situation to exist in a program for some time before it is brought to the attention of program managers. It is also not uncommon for the situation to continue for a period of time before corrective action is implemented.

Herein lies one of the basic values of a MIS. Situations that require corrective management action are detectable sooner and they can be clearly and accurately defined.

Detection, of course, is only one side of the coin. Detection of problems and/or opportunities demand decisions. Evaluation of the implications and results of decisions are critical areas of the MIS. Uncertainties underlie every decision. The bigger the decision, the more desirable it becomes to predict and offset risks. As a management decision begins to impact on the current operations of the ELSP project an effective MIS should be able to provide immediate feedback to program managers concerning the results of their actions. As a result, adjustments or corrections to refocus on project objectives can be made on a more timely basis than is ordinarily possible.

It cannot be stressed strongly enough that a MiS cannot be implemented until users are properly trained. Proper training ensures conformity with project guidelines and also fosters an ambiance of security and knowledge which is prerequisite to involvement and commitment. A necessary focus of ISE is therefore to provide training and on-going assessment of the management and instructional aspects of the ELSP.

As with any other successful undertaking, success lies in the finding of a proper balance between responsibility and authority. This brings the program into reality. A vital first step is to organize personnel and policies. Decision makers and information users must be informed and thoroughly convinced of the need for the system. This, in itself, makes initiation of a MIS design high in both priority and importance.

The following description of an open-systems model is presented as an example of a functional MIS.

A Management Information System Model

Figure 1 illustrates a simplified picture of an open system model containing the basic components of a management information system (MIS).

The MIS is made up of five systematic information loops which feed information to decision makers. They are: a "market future" loop; an "external feedback" loop; an internal "quality control" feedback loop; an internal "personnel support" feedback loop, and a "pending resources" loop. Based on systematic information received from the five loops, the decision makers can carry out an on-going process of institutional development that is in balance with the environment.

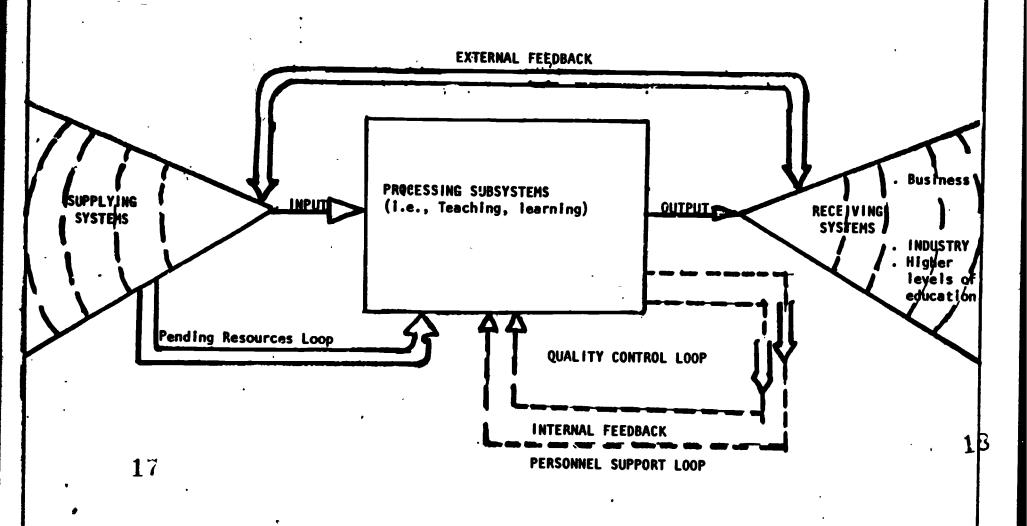

The special characteristics of the information look and the decision makers' control mechanism which make up the MIS are as follows:

The "Market Future" Loop. This information cycle closely monitors the changing needs of the market places (which receive graduates) by accumulating such information as specific person-resource projections, new work technologies, changing college admission requirements and job skill breakdowns.

The "External Feedback" Loop. This information cycle informs decision makers about the level of success the output or 'student' has on the market

FIGURE 1
MIS OPEN SYSTEMS MODEL

place. This type of feedback can be obtained through follow-up studies, telephone calls and letters exchanged between educators and employers, discussions with graduates and on-site visits by educators to those institutions which receive graduates.

The Internal Feedback "Quality Control" Loop. This information cycle provides data on the effectiveness of the teaching-learning process as derived from comparing test scores with pre-determined objectives. The test scores can be from standardized tests, criterion-referenced tests or teacher-made tests. Measures of the teaching-learning process are important because they inform the teachers and administrators about student achievement, and classroom instruction. However, the measures do not necessarily tell the educators if they are teaching the right things in the first place. The "market future" loop should be depended upon to provide information about program content.

The Internal Feedback "Personnel Support" Loop. In order for a program to be successful, there is a need for support from the people who are directly involved, such as parents, students, teachers and administrators. The "personnel support" information cycle provides data on the degree of backing or resistance that key individuals lend to specific programs. Programs that otherwise seem desirable and feasible as determined by information loops may fail completely if sufficient backing is not received from personnel. In fact, a program is doomed to failure if full support is not provided by decision makers.

The "Pending Resources" Loop. This information cycle provides decision makers with a picture of the human resources and material resources that a school will receive over a period of time. These data set parameters around what is economically feasible in the way of projects for the students entering the education system.

The decision makers of the school serve as the "control mechanism" for the MIS and are recipients of data derived from the five systematic information cycles already defined: information on the changing nature of the market place; information comparing internal measures of student performance against pre-determined objectives; information on what happens to the output once it arrives on the market place; information on the availability of resources to support specific programs; and information on the levels of support and resistance found among the personnel who will be directly involved or affected by the program.

PLANNING, MANAGEMENT AND EVALUATION (PME): A THEORETICAL MODEL:

The planning, management and evaluation system (PME) that can be utilized for the ELSP, can be described as a process of decision making leading to the implementation and accomplishment of project goals by the execution of a set of tasks by people within time, cost and performance specifications. The major functions of the PME can be divided into five categories and defined as follows:

<u>Planning:</u> a set of initial definitions about the allocation of resources and human effort to an optimal set of tasks, to attain specific desired goals.

<u>Organizing:</u> involves the arranging of selected people in patterns of relationships relative to authority, responsibility, roles and accountability to facilitate accomplishment of desired goals.

<u>Coordinating:</u> involves the employment of diverse forms of human interaction aimed at leading, motivating and guiding people in performance of their tasks.

Monitoring: involves the detection of what is actually happening,

the analysis of the deviation from what is actually occurring and its resulting solution (decision), and the implementation of corrective actions to ensure successful accomplishement of the goals.

Assessing: involves the development of procedures and necessary instrumentation for gathering data about the performance of the development/management systems for the purpose of decision-making about improvement.

Some specific examples of actions that should be carried out within each of these functions by either faculty, administrators or both, follows:

The <u>planning function</u> is the first and most essential function, and the quality of the system depends on the thoroughness with which it is performed. The key components of the planning function are:

- Setting goals
- Specifying work to be done
- Descriptive flow of the tasks
- Determining time schedule
- Determining costs and people-resource needs
- Developing a budget

The <u>organizing function</u> of management is concerned primarily with assignment of job responsibility. The components of this function are:

- Definition of jobs
- Assignment of specific tasks
- Establishing lines of responsibility and accountability
- Establishing working relationships

The <u>coordinating function</u> of management is essential to the completion of the system objectives and primarily involves the human interaction of

the management system. It includes:

- Developing methods of communication
- Identifying needs of the staff or other people who play a role in the instructional process.
- Developing a reward system based on the needs assessment.

Of these, communication is the most crucial element. It must be an open two-way process. Managers must have specific methods of getting feedback and should also have a mechanism for providing relevant information.

Monitoring is the next function of management. Monitoring is primarily concerned with identifying any deviation from the plans of the system. Monitoring includes:

- Identifying the deviation between what is planned and what is happening, through the communication process
- Clarifying problem areas
- Analyzing problem areas
- Collecting the information
- Drawing conclusions from the information
- Making decisions about the system

Assessing is the last function and is concerned primarily with the design and process for gathering data about the development/management system for the purpose of deciding what part of the system should be improved. Assessing includes:

- Defining the purpose of assessment
- Determining the kinds of information that should be collected
- Determining how the information should be collected and analyzed
- Collecting the information
- Drawing conclusions from the information
- Making decisions about the system

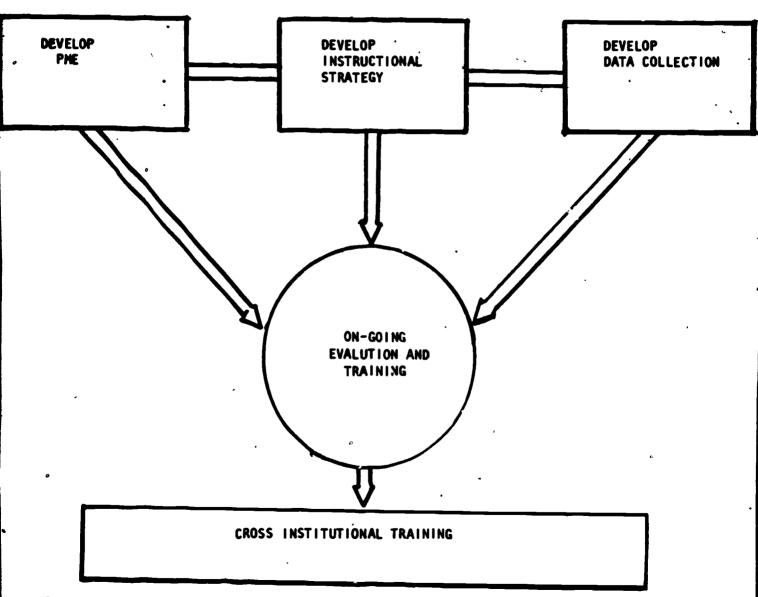

Once all five functions (planning, organizing, coordinating, monitoring and assessment) have been applied, managers -- be they faculty, administrators, curriculum developers or other staff -- will have a detailed operational plan, be organized to comiete the project, have a coordinating system established, be informed as to progress and have a specific design for assessing the management of the entire project.

ISE management consultants will focus special attention on assisting participating institutions in designing an efficient PME system that accomplishes the objectives of the Entry Level Skills program. Figure 2 depicts the concurrent phases of a PME that will be tailor-made for each participating institution. Chart 2 illustrates the functions of the PME system that can be used as an initial discussion item in developing the ELSP institutional PME. This chart also itemizes information pertinent to each function within the ELSP project.

FIGURE 2 : ELSP IMPLEMENTATION MODEL

ج.

DATA MANAGEMENT:

The collection, organization, storage and retrieval of data in useable form is critical to the successful implementation of the ELSP project. Consequently, the data management component of the project will include, in the initial stage of development, an information system designed to generate instructional management reports, administrative reports, and flowcharts summarizing the documents, personnel and functions of the data management system. Additionally, to facilitate the manual and computerized data management effort, a data elements directory and coding system will be developed.

ISE consultants will assist in establishing procedures for the management of data and will provide necessary forms and train appropriate staff in the collection and synthesis of project information.

Following is a brief description of the instruments utilized to collect program data.

instrumentation:

Reflective of the goals and objectives and underlying assumptions of the overall curriculum model, the assessment program of the ELSP includes both the use of standardized and criterion-referenced tests.

The pre-test package includes the Comparative Guidance and Placement
Test Battery, the ISE Student Information Survey From and the ISE Faculty
and Administrator Survey Form.

^{*} Collaborative Planning

Test instruments-Students:

The Comparative Guidance and Placement (CGP) Test Battery which is prepared by the Educational Testing Service, is designed to assist two-year, vocational technical institutes and four-year coileges with open door admission policies, and in making decisions about curricular guidance placement,

Five of the six placement tests of the battery are included in the ELSP assessment program: Reading, Written English Expression, Applied Arithmetic Computation and Elementary Algebra. Administration of the total test battery requires 1 hour and 50 minutes exclusive of the time for self-scoring.

The posttest battery of the assessment program includes the use of the same form of the Comparative Guidance and Placement Tests Battery, the Student Evaluation Questionnaire and the Counseling Questionnaire. The Student Evaluation Questionnaire examines students' perceptions of the ELSP. Questions are raised about the kinds of learning activities provided, the leadership style of teachers, whether the course was related to the students' background of experiences, whether the course implemented students' motivational systems and the students' endorsement of the program. The Counseling Questionnaire aims to determine the students' awareness and utilization of ELSP counseling services, as well as the effectiveness of such services.

The criterion-referenced test package includes a mastery test and a series of unit tests for each of the disciplines as follows:

Communication Skills

Reading: mastery, 2 unit tests

Writing: mastery, 4 unit tests

Mathematics: mastery tests, 8 unit tests

Biology: mastery tests, 4 unit tests

These tests, which sample the extent to which students have mastered or have not mastered a specified set of objectives, are the foundation of the assessment program. The mastery test, which is administered prior to and at the end of each semester, facilitates diagnosis of the students' mastery of the objectives for the entire course. The unit tests, which are administered prior to and at the end of specified instructional sequences throughout the semester, assist faculty in (1) assessing the students' performance on an on-going basis and mastery of objectives throughout the semester and (2) prescribing responsive instructional plans, including the use of support services such as personal counseling and academic tutoring.

Each test package (standardized and criterion-referenced) includes guidelines for the administration and scoring of tests as well as the use of such information in planning educational opportunities.

Information Survey Form. Specific catergories of student characteristics investigated include demographics (i.e. race, age, financial aid, education and occupation of parents); self-concept, feelings about racial preferences regarding the delivery of educational services; and educational plans (Appendix B) Personnel:

The Faculty and Administrator Survey Form is designed to provide back-ground information on all staff participants in the ELSP. The survey form investigates four categories of behavior regarding faculty and administrators: background of experience (e.g., training, previous work experience); current position, including academic rank and teaching load; orientation to the ELSP; and attitudes toward selected educational goals (Appendix B)

Management Reports:

Currently, the information system of the ELSP assessment program includes seven reports. (See Appendix B)

The M-I report summarizes the results of the Comparative Guidance and Placement tests and can be used at the program level and the course level. This report is used to randomly assign students to classes as well as to determine the performance level of students from a global perspective upon entry into the program. At the course or instructional level, this report is used to summarize the standardized test scores of individual classes.

The M-2 report is the Class Performance Analysis which summarizes the performance of students on the criterion-referenced tests by class and individual student. This report is used to diagnose student mastery of objectives and to prescribe the appropriate learning opportunities.

The M-3 report is an Item Analysis which further facilitates the diagnostic process and curriculum revision. This report facilitates identification of items which need to be revised, deleted or retained as written. The report also provides assistance in identifying difficulties of the class as a whole and analyzing student and class performance on each item.

The M-4 report is a comparison of pre and post CRT scores and assists faculty in determining the growth of individual students and the class at the end of each period of treatment based on the total number of correct answers. The report provides the pre-test and post-test scores for each student, and, further, the percentage gain.

The M-5 reports on the frequency distribution of total correct responses and presents the distribution of total correct responses by number and percent of students. This report is useful in determining the extent to which the class mastered a selected group of objectives for the

mastery tests and interim tests as well as variability in scores and making comparisons between pre-test and post-test data.

The M-6 report gives cumulative percentage gain in CRT performance, summar'zes the percentage gain achieved by individual students and class for all CRT's and the cumulative gain sustained over a per'od of time. This report is useful for assessing the progress which students have made during the semester.

The M-7 report facilitates the summarizing of cost data for the ELSP per semester.

M-1 is primarily for the use of program directors and data coordinators; M-2 through M-6, for faculty in support of the instructional management process; and M-7, for the program directors and data coordinators.

Three forms other than the management reports themselves are included in the assessment program. A referral form is provided for requesting counseling resources. This form prescribes the kinds of services required, including the identification of objectives and related instructional materials and techniques. The bottom of the form is for summarizing the results of such assistance, including the objectives mastered or not mastered, the materials used, and recommendations for further improvement.

The remaining two forms are used for summarizing class attendance and attrition by month and the reason for withdrawal. All three of these forms are to be incorporated in the faculty log, a document used in the pilot study for documenting the results of the criterion-referenced tests.

A pre-assessment questionnaire (See Appendix R) is utilized by ISE personnel to obtain information regarding students and participating institutions prior to program implementation.

Appendix C illustrates a flow of information process for managing the project.

Institute for Services to Education's Strategies for Implementation of Program Goals

The Institute for Services to Education in cooperation with participating institutions will develop a model for the implementation of program goals.

Following is a list of the five major goals of the ELSP project and recommended actions to insure optimal program implementation.

GOAL: To develop a planning management and evaluation (PME) framework which is compatible with the institution's Planning, Management, and Evaluation (PME) system.

ACTIONS:

- Assessment of the institution's current PME
- * Dissemination of results to decision makers
- Collaborative planning to assist institutions in the development or refinement of current PME
- Develop custom-tailored ELSP PME that is compatible with the institution's system
- Training workshops focusing on the ELSP PME system
- Periodic evaluation of the effectiveness of the PME and to make recommendations to upgrade and update the system.

GOAL: To implement a research evaluation plan for ELSP that is compatible with the institution's planning, management, and evaluation (PME) system.

ACTION:

- Assessment of the level of implementation of ELSP
- Dissemination of results to decision-makers
- Collection of data (e.g., implementation process, student data, supportive programs)
- Analysis of data
- Document, publish, and disseminate results
- Collaborative planning to assist in the refinement of the implementation process.

GOAL: To assist participating institutions in the establishment and implementation of a viable data collection, processing, analysis and reporting system.

ACTION:

- Assessment of the institution's current approaches to data management including assessment of resources and capabilities
- Collaborative planning with the institutions' administration and support staff regarding approaches to data management and dissemination of the results of assessment
- Assistance in implementing a data management effort for the ELSP project that is compatible with the institution's capability and resources
- Assistance in establishing lines of communication and authority to maximize the data management effort
- Provide institutions with requisite forms and instruments for data collection processing, analysis, and reporting
- Conduct training workshops focusing on the data management effort
- Periodic assessment of implementation process, make recommendations for updating and upgrading data management
- Monitor data management effort on an ongoing basis
- Publish and disseminate information to the institution's decisionmakers.

GOAL: To assist in the development of instructional systems (i.e., instructional strategies, recordkeeping, classroom management)

ACTIONS:

- * Assessment of the level of curriculum (ELSP) implementation
- Dissemination of results to decision makers
- Collaborative planning with administrators and faculty
- Development /refinement of instructional approaches, and classroom management practices

26

- Periodic documentation of classroom implementation and on-going feedback of findings
- Coordinate and implement training workshops

GOAL: To provide on-going in-service training and summer workshops focusing on individual and group needs of program participants.

ACTIONS:

- Assessment of training needs
- Dissemination of results to decision makers
- Collaborative planning to develop a priority list of training needs. Development strategies to improve skills of program participants
- Coordinate and implement training
- Document, publish, and disseminate results and training efforts.

APPENDIX &

QUESTIONNAIRE USED BY CURRICULUM FACULTY DEVELOPMENT STAFF

Rationale:	This	questionnaire	attempts	to	get	at:
------------	------	---------------	----------	----	-----	-----

or diagnostic measures.

- Whether students are adequately prepared for college work, at the latest, by the end of their first three semesters
- Instruments used to assess this preparation . . .
- Kind of data available that will demonstrate the degree of preparation
- Creation of an awareness of how to meet the needs of students poorly serviced by the secondary school system, in terms of programs, methods, materials, monitoring, etc.

1.	What percentage of		_'s full time freshman have ninth			
	gra	ade level or below skills in:	Numbers	<u>x</u>	Tests used	
•	a.	English usage				
	b.	Reading	<u> </u>			
•	c.	Quantitative reasoning			,	

This supposes measurement by use of standardized achievement tests

- 2. Does have a policy pertaining to minimal level skills required in the above categories for going beyond the second year of college? If yes, then please describe. (Use supplementary sheet)
- 3. Do administrators and supervisory personnel responsible for general education courses covering the above listed areas take entry level skills into account when: a) orienting teachers of high risk students? b) planning instructional strategies? and c) selecting course materials? If yes, please explain. (Use supplementary sheet)
- 4. Are student services in place to supplement the above ? e.g. personal and vocational counseling, tutorial services, training leading to improved study skills, etc.

Questionnaire used by Curriculum Faculty Development Staff Con't

- 5. What kind of data are collected or methods used to: 1) ensure the correct selection in the three skill areas identified in item 1 and 2) facilitate monitoring and evaluation of performance in the areas described?
- 6. Can you estimate additional cost, if any, that these programs entail over the general curriculum? If so, what is the estimated dollars or percent of additional cost per student? (Use supplementary sheet)
- Does the above impact on the numbers and percentages of students:
 graduating; 2) going on to graduate and professional schools?

This questionnaire is designed to help ISE Curriculum and Faculty Development staff assess:

- 1- the degree to which students' academic needs are recognized
- 2- the degree to which programs are in place to meet these needs.

Questionnaire used by Curriculum Faculty Development Staff Con't

SUPPLEMENTARY SHEET

APPENDIX B

Management Reports are basically summaries, comparisons and statistical analyses of student performance on the CGPP and CRT testing components. These reports which are generated periodically for both the Pretest and Post-test stages are key items in the program evaluation stage.

The Management Reports are listed below and samples are provided on the following pages.

- HI Results of Comparative Guidance and Placement Test (CGPT);
- . M2 Class Performance Analysis (on the CRT);
- M3 Item Analysis (on the CRT);
- M4 Comparison of Pre and Post-test CRT Scores;
 - M5 Frequency Distribution of Total Correct Responses; and
 - M6 Cumulative Percentage Gain in CRT Performance.

Other Source Documents

Other Source Documents provide information on students, faculty and institutions. These documents also are key elements of the program.

The source documents which are to be generated are listed below, and samples are provided on the following pages.

STUDENT INFORMATION SURVEY FORM

DIRECTIONS: The information requested in this survey form will help us to learn more about your background, educational plans, and feelings in regard to your potential for academic success. Please respond to each question carefully.

Your response will be read by an optical scan reader. Your careful observance of these few rules will be very important:

- (1) Make heavy marks that fill the circles.
- (2) Erase cleanly any answer you wish to change.
- (3) Write only in designated areas.
- (4) Answer all applicable questions.

1.	Name of high school last attended:
	Anacostia
	Wilson
1	· · · · · · · · · · · · · · · · · · ·
	Dunbar
	Cardozo
	Roosevelt
	Coolidge
	Chamberlain Vocational
	Bell Vocational
	Other (Specify)
2.	The geographic location of your last high school was in:
	S.E
	N.W
	N.E
	S.W
	Suburban
	Other (specify)

<u>1</u> 53

J.	high school was: (Mark one)	• • • • • • • • • • • • • • • • • • • •
	All or predominantly white	
	All or predominantly black	
4.	Did you graduate from high school:	Yes
		No
5.	If yes, give the year you graduated:	
	1979	· · · · · · · · · · · · · · ·
	1978	• • • • • • • • • • • • • • • • • • • •
	1977	
	1976	
	1975	
	1974	
	Other (specify)	•
6.	Race:	
	White	· · · · · · · · · · · · · · · · · · ·
	Black	
	Hispanic	• • • • • • • • • • • • • • • • • • • •
	Asian	• • • • • • • • • • • • • • • • • • • •
	Native American	
	Other (specify)	
7.	Number of dependent children:	•
	One child	.
		• • • • • • • • • • • • • • • • • • • •
•	Three

	· •	5
	, Ł	or more
16.	How many of these dependents other than yourself are attending college?	
	None 2 4 or more	
	1 3	
		

ERIC PRUIT AND THE PROVIDED BY ERIC

17. What was the highest educational level that each of your parents or quardian(s) completed? If you are not sure, please give your best guess. In the column headed "Father" mark one space to show the highest educational level achieved by your father. Do the same for your mother in the column headed "Mother." Please answer this question even if your parents or quardian(s) are deceased.

(Mark one number in each column)

	Father or Male Guardian	Mother or Female Guardian
Some grade school or less		_
Finished grade school		
Did not complete high school (12th grade)		
Some business, vocational, technical or trade school	 .	
Finished business, vocational, technical or trade school.		
Some college (including two-year degree)		
Finished college (four-or five-year degree)		
Attended graduate or professional school (for example, law or medical school), but did not attain a graduate or professional degree		
Obtained a graduate or professional degree (for example, M.A., Ph.D., or M.D.)		
I don't know		

	,		
From the list be	low, select the type of work wh	ch comes clos	est to the
job/your father	osually has and mark the number	in the column	n headed
"Father". Then	do the same for the job your mo	ther usually h	ias and
mark the number	in the column headed "Mother"	If one of your	· parents
or quardians is	currently unemployed, retired.	or deceased.	pick the
vpe of work thi	s parent usually did. (Mar	rk one number	in each column

FACULTY AND ADMINISTRATOR SURVEY FORM

Entry Level Skills Program

FACULTY AND ADMINISTRATOR SURVEY FORM*

<u>DIRECTIONS</u>: The Faculty and Administrator Survey Form is designed to provide background information on all staff participating in the 1979-1980 pilot study of the Entry Level Skills Program. No attempt will be made to identify individual responses and individual data will not be reported in any way.

Your responses will be read by an optical scan reader. Your careful observance of these few rules will be appreciated.

- (1) Make heavy marks that fill the circles.
- (2) Erase cleanly any answer you wish to change.
- (3) Write only in designated areas.
- (4) Answer all applicable questions.

SECTION 1. BACKGROUND INFORMATION

1. Your age is: (Mark one)			3.	Do you have a: (Mark all that appl	ly)

SECTION 3. EDUCATIONAL GOALS

<u>Directions</u>: Indicate the extent that you agree with the following statementsby responding Strongly Agree (SA), Agree (A), Disagree (D), Strongly Disagree (SD) or Uncertain (U).

The ELSP should give special attention to these educatioal goals:

_	•					
23.	To increase the desire and ability of students to undertake self-directed study.	O SA	0 A	0	O SD	0 U
. 24.	To help students identify their own personal goals and develop means of achieving them	O SA	0 A	Q D	O SD	0
25.	To help students prepare for advanced academic work (e.g., gracuate and professional school).	O SA	0 A	0	0 SD	0 U
26.	To encourage students to make concern about the welfare of all mankind a central part of their lives.	O SA	0 . A	0	°C SD	O U
27.	To provide opportunities for students to prepare for specific occupational careers (e.g., engineering, health professions, business administration)	U SA	. O A	0 ~ D	0 SD	0 U
28.	To encourage students to become conscious of the important moral issues of our times.	O SA	0 A	0 D	0 SD	0
29.	To help students develop a sense of self-worth, self-confidence, and a capacity to have an impact on events.	O SA	0 A	0 D	O SD	0

30.	To teach students methods of scholarly inquiry, scientific research, and/or problem definition and solution.	O SA	O A	0	, O , SD	0
31.	To instill in students a lifelong commit- ment to learning.	O SA	0 A	0	0 SD	0
32.	To insure that students who graduate have achieved some level of reading, writing and mathematics competency.	O SA	0 A	/ O D	O SD	0 U
33.	To facilitate involvement of students in neighborhood and community-service activities.	O SA	.0 A	. O	O SD	0
34.	To provide educational experiences relevant the evolving interest of women in America.	O O SA	0 A	0 D	O SD	0

OBSERVATIONS

 $\overline{\Lambda}$

In the process of any given classroom experience, a number of events occur which were not anticipated or which deserve special note because they were inconsistent with one's expectations (high or low) or they document or invalidate hypotheses which have been formulated. Examples of such observations include:

- too much or too little time specified for accomplishment of a given objective;
- student comments related to the effectiveness of a particular activity, instructional mode or new idea;
- ' high or low interaction level for a particular learning activity;
- a particular method that students used in group sessions to facilitate learning, understanding; and
- the developmental stages in student attitude formation (attitude toward learning generally, test taking, other students, other courses).

Additionally, faculty may wish to use the log to record progress made each day, along with recommendations for improved instructional planning.

APPENDIX C

The flowcharts presented on the following pages suggest a flow of information process for managing the project. The charts which are self explanatory trace the movement of most management reports and other source documents from their point of origin through the various reponsible officials. Students faculty, counselors, data coordinators, program directors and ISE consultants all play a role in either generating, reviewing or analyzing project documents. The charts also indicate the number of copies of each document that are to be made available and identifies the office responsible for retaining each document.

It is essential that the role and responsibility of each individual involved in the process be clearly established as early as possible to insure adequate accountability and the efficient flow of information.

APPENDIX D

The information management system of the ELSP readily lends itself to manual as well as automated data processing techniques. To facilitate this a data elements directory for the project has been designed. The directory has the following purposes:

- Provides a central source of information pertinent to the program;
- provides a uniform approach to data collection and dissemination;
- provides a system for classifying and summarizing data;
- provides a mechanism for identifying all test instruments and other documents utilized in the programmatic and administrative aspects of the project;
- provides a system for identifying and defining all data elements (information items) found in the project documents;
- provides a basic structure for the development of a data base
 (computerized system) for the project.

The data directory along with a users guide can be made available to participating institutions.

A coding structure that can be utilized in the automated data processing effort appears on the following pages. The coding structure identifies each document, and data element within these, with a unique numeric or alphanumeric code. The numbering system is quite flexible and allows for the addition or deletion of particular documents or data elements as necessary without altering the essential character of the coding sequence.
