ABSTRACT

A comprehensive analysis of state arts agencies in the 50 states and in the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, and American Samoa is presented. Data were collected from interviews with agency directors and agency reports as of fiscal year 1974. The report is organized into eight chapters. Chapter 1 examines budget and finances at state and federal levels, private funds, expenditures, and types and methods of budget presentations. Chapter 2 describes mandated purposes, functions, practices, and trends of the agencies. Chapter 3 focuses on program emphases, restrictions, mandates, criteria of funding decisions, matching funds, and associated foundations. Chapter 4 details the distribution of project funds in terms of primary and secondary recipients, distribution by art form in each state, types of activity assisted, initiation and location of projects, audiences, and matching funds. Chapter 5 discusses arts agencies' relationships with departments of education, other state agencies, and local government. Chapter 6 outlines management practices and organizational structure. Chapter 7 describes characteristics, number, salaries, organization, and adequacy of state paid staff. The final chapter analyzes past developments and the future financial outlook. (KC)

INTRODUCTION

and flowered in this country to become a major force for the arts and culture. With the exception of the Utah Arts Institute, founded in 1899, the state arts agency movement can be said to have begun with the creation of the New York State Council on the Arts in 1960. This was soon followed by other state agencies set up by executive orders or legislative acts, with most agencies being founded during the mid-1960's. Today there is an official agency for the arts in each of the 50 states as well as in the District of Columbia, Puerto Rico, the Virgin Islands, Guam and American Samoa.

In 1966 the Associated Councils of the Arts (ACA) began an annual compilation and publication of data on the funds administered by the state arts agencies. In 1972 the National Research Center of the Arts, on behalf of Associated Councils of the Arts, collected more extensive data on the fiscal 1971 and fiscal 1972 funds of the agencies, published by ACA under the title State Arts Councils. However, these data were limited to funds received and expended and the number of projects in various categories, and within these areas only the most basic information was obtained.

It was evident to many people in the state arts agency field, and to those interested in support of state arts agencies, that the programs and policies of the agencies were being severely hampered by the lack of comprehensive information. In 1974 directors of state arts agencies endorsed the undertaking of a study of the agencies by the National Endowment for the Arts, and the Endowment contracted with the National Research Center of the Arts to conduct this study.

During 1974 three series of meetings were held with state arts agency directors and chairmen, National Endowment for the Arts representatives and staff of the National Research Center of the Arts, the first to block out the substantive areas to be covered in the study, the second to review a questionnaire developed by the Research Center, and the third to approve a final questionnaire. The collection of data was planned to begin in late 1974, and the questionnaire focused on fiscal 1974. However, necessary clearances by the Office of Management and Budget were unexpectedly delayed, and the actual collection of data did not begin until mid-1975.

Coverage of the Study

Using questionnaires and forms developed with the assistance of consultant state arts agency directors and chairmen, the study collected data on a wide spectrum of agency activities and programs, including the basic organization and structure of the agency, its relationship to other agencies within the state and with other states and the federal government, the council or commission governing the agency and the chairman of that council/commission, the director and staff of the agency, the agency's functions, practices and programs, expenditures (grants, contracts, etc.) made for projects, and so on.

The broad scope of the study was intended to provide a compendium of data that would serve as a base point for continuing research on particular aspects of the agency movement. Similarly, the Research Center was charged with the responsibility for collecting and interpreting the data so as to provide an in-depth picture of the state arts agencies as of the time of the survey. This report attempts to do that; it is not in any way an evaluation of the agencies nor an analysis of causal factors.

It should be noted that, although the survey covered an extensive range of subjects related to state arts agencies, there are areas of importance that it was impossible to include in this research. Perhaps the most important of these is an inventory of a state's cultural resources; this information, which is vital for a complete understanding of the arts and culture on a statewide basis, can be obtained only through a survey of the arts organizations and cultural institutions themselves. It should also be pointed out that information on arts and cultural activities of other state agencies included in this report was supplied by the directors of the state arts agencies, and not by those other state agencies, so that data on their activities may be incomplete; furthermore, it was impossible to put any dollar values on other agencies' activities in support of the arts without direct contact with the agencies.

Collection of the Data

The data were collected through a questionnaire administered in in-person interviews conducted by representatives of the National Research Center of the Arts with the directors of the state arts agencies. The directors were notified of the study and the areas of coverage through a memorandum from the Chairman of the Endowment, Nancy Hanks, which also explained that they would be contacted directly by interviewers from the Research Center. The interviewers subsequently telephoned the directors and set up appointments for the personal interviews. These interviews were usually conducted in two sessions of approximately three hours' length each. (The questionnaires for Guam and American Samoa were completed in writing and returned by mail.) The questionnaires were divided into four sections: Section I, Structure and Organization and Relationships with Other Groups

and Organizations; Section II, Council/Commission and Staff; Section III, Functions and Practices; and Section IV, Programs.

It should be stressed that in all cases the interviews were conducted with the director of the agency; in some cases the position was held by an interim or acting director who was interviewed. (The American Samoa questionnaire was completed by the chairman, since the position of director did not exist.) Thus information on council/commission chairmen and members is based on the directors' knowledge and was not obtained from the chairmen and members.

In addition to the in-person interviews, three self-administered forms were left with the agencies for completion by them. One of these self-administered forms covered the race, age, length of service and occupation of members of councils/commissions and of boards of associated foundations, if any, and the number, type and characteristics of paid staff, including their salaries, and of staffs of associated foundations, if any. Another form detailed the amount and sources of funds received during fiscal 1974, and the funds expended by the agency during that year, as well as total state appropriations and total amounts received during fiscal 1972, fiscal 1973, fiscal 1975 and fiscal 1976; information on amount and sources of funds received and amount expended in fiscal 1974 by the associated foundation, if any, was also obtained on this form.

The third form was completed by agencies for <u>each</u> project expenditure made in fiscal 1974, and indicated the amount and sources of funds for the expenditures, the primary and secondary recipients, the initiator of the project, the previous and anticipated funding of the project, the primary and secondary type of activity assisted, the art form, the locations of the

project, the audiences and attendance, and artists and organizations involved, and the matching funds and total costs of the project.

All agencies had to complete multiple numbers of these forms, and for some agencies the numbers ran into the hundreds. Almost all agencies were able, however, to provide all data necessary on their project expenditures; in a few cases, National Research Center personnel were required to assist the agencies in the completion of the project expenditure forms. In the case of the Louisiana Council for Music and Performing Arts, the forms remain somewhat incomplete even after all efforts were exhausted, but the figures for that state art agency used in the report are believed to be reasonably accurate.

Agency Groupings

In the tabulation of findings, the data were assembled not only in total but also by groups of agencies. These groups were chosen to see if an agency's geographic location, the total and per-capita amounts of expenditures, the population size/density of the state, the proportion of the state's population living in metropolitan areas, and the percentage of the state arts agency's funds derived from state appropriations had significant effects on agency programs and policies.

Generally, the data did not indicate that these groupings revealed significant differences in agency programs and policies. In some cases, however, the regional expenditures and total expenditure groupings did reveal interesting differences or similarities among agencies, and where this occurred, the tables include these groupings. The states in each group are shown in the following:

Regions (Not including Puerto Rico, Virgin Islands, Guam and American Samoa)

Northeast Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey and Pennsylvania

South Delaware, Maryland, District of Columbia, Virginia, West Virginia, Worth Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma and Texas

North Central

Limitations of the Data

In considering the findings contained in this report, the reader should keep in mind certain limitations of the study. First, as already noted, is the fact that the information was obtained from state arts agency directors, and therefore is based on the directors' knowledge and perceptions. Thus much of the data, particularly those sections referring to other persons and other agencies, must be considered as subjective on the part of the director rather than as objective factual material.

It should also be pointed out that the survey employed a large number of open-end questions. In recording the answers to these questions, in which the directors were not offered structured responses but were allowed to volunteer any answers, interviewers provide the verbatim responses of the directors, which were then coded by National Research Center technicians for computer tabulations. In a basic study such as this, these open-end questions are especially necessary, since the range of possible answers is unknown. However, they should be interpreted as offering the information that came to the directors' minds when asked the question, and because a director did not cite an item in response to such a question does not mean necessarily that that item does not pertain to that agency. For example, in response to an open-end question on what restrictions or prohibitions affect program activities, three directors volunteered that they could make grants only to non-profit or tax-exempt organizations, but this does not mean that other agencies could make such grants. It only indicates that such a restriction did not occur to them in the context of the question.

It should always be remembered that unless specifically stated otherwise, all data refer to the fiscal year 1974, i.e., the fiscal year ending in 1974.

Acknowledgements

This study could never have been completed without the aid and cooperation of the directors and staff of the 55 arts agencies that were surveyed, and the National Research Center is grateful for the time and effort that were put into the careful completion of the interviews and self-auministered forms.

Of particular help and guidance were the consultant directors and chairmen (representing in number nearly half the states) who participated in the meetings to develop the survey instruments and in two meetings held in November 1975 and March 1976 to consider the significance of the findings and to review the initial draft of this report. The participants in the five meetings were:

James Backas, then Executive Director, Maryland Arts Council

Robert Bernat, then Executive Director, Commonwealth of Pennsylvania Council on the Arts

Polly Buck, then Chairman, Delaware State Arts Council

Charlotte Carver, Executive Director, South Dakota State Fine Arts Council

Maurice D. Coats, Executive Director, Texas Commission on the Arts and Humanities

John G. Coe, Executive Director, New Hampshire Commission on the Arts

Nash Cox, Executive Director, Kentucky Arts Commission

James Edgy, Executive Director, Ohio Arts Council

James D. Forward, them Executive Director, California Arts Commission

Terrell Glenn, then Chairman, South Carolina Arts Commission
Roy H. Helms, Executive Director, Alaska State Council on the Arts
Jonathan Katz, Executive Director, Kansas Cultural Arts Commission

Anthony S. Keller, Executive Director, Connecticut Commission on the Arts

David Morton, then Chairman, Missouri State Council on the Arts Wayne A. Norman, Sr., Chairman, Iowa State Arts Council

S. Leonard Pas, Jr., then Executive Director, Fine Arts Council of Florida

Lida Rogers, Executive Director, Mississippi Arts Commission

R. Sandra Perry, Executive Director, The Office of Arkansas State Arts and Humanities

E. Ray Scott, Executive Director, Michigan Council for the Arts

Louise G. Tate, Executive Director, Massachusetts Council on the Arts and Humanities

Anne Vermel, Executive Director, Rhode Island State Council on the Arts

Norman Worrell, Executive Director, Tennessee Arts Commission

The staff of the National Endowment for the Arts played an essential role in the study in every phase, notably the leadership and encouragement provided by Nancy Hanks, the Chairman, and the advice and counsel given by Harold Horowitz, Director of Research, Ana Steele, Director of Planning, David Waterman, assistant to Mr. Horowitz, and other members of the Research Staff, Clark Mitze, then Director of the Office of the Federal-State Partnership, Donald Dillon, Assistant Director, and other members of that office.

Finally, a special word of thanks is due Bernard Lacy and Michael Edison of the Research Center staff for their outstanding analytical and managerial skills brought to bear in this research.

CHAPTER I

BUDGET AND FINANCES

BUDGET AND FINANCES

This chapter considers the budget and finances of the state arts agencies for fiscal 1974, i.e., the fiscal year that ended in 1974. The financial picture is viewed first from the amount of funds received during the fiscal year and then the total expenditures made during the year by the state arts agencies. The funds received are analyzed in total and by the sources of the funds, including:

--State funds, with a closer look at the distribution of funds from legislative appropriations and from other state sources.

--Municipal/county funds

-- Private funds, with a closer look at the distribution of funds from foundations, individuals, corporations, earnings, and other private sources.

--Federal funds, including funds from the National Endowment for the Arts -- both from the basic state agency grant and other.

Endowment sources -- and from other federal sources, with an alalysis of the latter by the federal agencies from which they were received.

The funds received by separate foundations associated with the state arts agencies are also detailed by their sources, including the state arts agency itself, other state sources, the National Endowment for the Arts, and private and other sources.

The expenditures of the state arts agencies are shown in total, as well as by amounts expended for programs, including expenditures for administration and development of programs, for other personnel costs, and for other administration expenditures.

The final section of the chapter concerns budget practices of

the agencies, focusing on the types of appropriations (annual or bienial) received, the fiscal year covered, the type of budget submitted, and the means of submission, with directors' views of changes that may be expected in budget submissions.

Funds received in fiscal 1974

The total appropriations, grants and other funds from all sources to the 55 state arts agencies of the United States — in the 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam and the Virgin Islands amounted to \$45,536,517 in fiscal 1974. Of that total, \$44,155,072 was received by the agencies and an additional \$1,381,445 by separate foundations* associated with twelve of the agencies from sources other than the agencies.

The funds of the New York State arts agency -- the New York State Council on the Arts -- and its associated foundation were by far the largest of any single agency, totaling \$16,895,243. However, seven other agencies did receive more than \$1,000,000, and even excluding New York State the average amount of funds per state was above \$500,000.

The per capita amount of total funds varies widely, with the highest per capita funds in the states with very small populations — e.g. American Samoa, the Virgin Islands and Alaska — where the funds received from the National Endowment for the Arts in the basic state agency grants alone would result in high per capita amounts.

^{*}Associated sparate foundations are foundations set up by the state art agency to supplement its own activities and/or to serve as a private fund-raising arm of the agency.

 $[\]boldsymbol{\star}$ Includes funds received by associated foundation.

Sources of Funds Received by State Arts Agencies

Of the total \$44,155,072 received in fiscal 1974 by the agencies (not including funds received by associated foundations), 71% or \$31,273,166 was received from the state governments, 27% or \$12,008,050 from the federal government, less than 0.5% from local municipal or county sources, including school districts, and 2% from private and other sources.

The far above average legislative appropriation made to the New York State Council on the Arts is a major factor in the high proportion of funds derived from state governments but, even excluding New York State, states were still the source for a majority of the funds received during the year. Fifty-four percent of the total of \$27,554,072 received by the 54 agencies other than New York in fiscal 1974 — or \$14,828,166 — represented state funds, with 43% or \$11,852,050 from the federal government, less than 0.5% from local governments and 3% from private and other sources.

However, sharp variations can be seen in the proportion of funds by source received by individual agencies, with federal government funds ranging from only 1% of New York State's total funds, 7% of funds received by the Puerto Rico agency and 18% in California, to 93% of total funds in Wyoming, 94% in Idaho and 97% in North Dakota. In fact, 33 of the 55 state arts agencies received at least 50% of their funds from federal government sources.

A Closer Look at State Funds

Appropriations from state legislatures accounted for almost all of state funds to the arts agencies in fiscal 1974. Of the total \$31,273,166 from state sources (\$14,828,166 excluding New York), and a minimal \$516,672 or 1% of total funds received (2% excluding New York) was derived from sources other than legislative appropriations. In fact only ten states received any state funds in addition to the legislative appropriations.

However, state funds from sources other than the legislative appropriation-did account for a significant amount of total funds in a few agencies. In Hawaii, in fact, state funds other than the legislative appropriation represented 44% of the total funds received by the Hawaii State Foundation on Culture and the Arts, a larger amount than that from any other source. The major reason for this was Hawaiian legislation setting aside 1% of the appropriations for original construction of any state building to be used for the acquisition of works of art. The State Foundation on Culture and the Arts received \$327,787 (43% of total funds) for this purpose in fiscal 1974, plus \$8,223 from the state university and \$3,500 from the state's Bicentennial commission. With an additional state appropriation of \$221,307 (28% of total funds), state sources accounted for 72% of total funds received by Hawaii in fiscal 1974.

Eleven percent of total funds (\$47,708) received by the Kentucky Arts Commission was derived from the governor's contingency funds, and in Tennessee 8% of total funds came from other state sources: 4% (\$19,469) from the department of conservation, 2% (\$11,117) from the department of personnel, and 2% (\$10,550) from the economic department. In Maine, 6% of total funds was from other state sources: 3% (\$12,046) from the department of education, and 3% (\$10,000) from the executive council. In no other state, though, did other state sources account for as much as 5% of total funds received.

^{*}The 1967 legislation places the responsibility for the commissioning of artists for: reviewing of design, execution and placement, and the acceptance of works of art for state buildings with the state comptroller and the Hawaii State Foundation on Culture and the Arts.

35

The directors of the agencies were asked what percentage of their state appropriations in fiscal 1974 -- excluding any federal funds -- were for the administration of the state arts agency. The proportion reported for administration ranged from less than 10% to 100%, with 15 agencies reporting that all funds appropriated by the state legislature were used for administrative purposes.

Table 5
PERCENTAGE OF STATE APPROPRIATION IN FISCAL 1974 FOR ADMINISTRATIVE AND FOR PROGRAM PURPOSES

100% Average percentage		51%

The proportion of appropriated funds available for program purposes is greater among the larger agencies, with the percentage of state appropriations for administration of the agency declining sharply with an increase in total expenditures. This is a reflection of the fact that the major proportion of funds received by agencies in the lowest expenditure group are derived from the basic state agency grant, with correspondingly low appropriations, most of which must thus go for administrative purposes. The larger the appropriation, the higher the expenditures will be, and the greater the proportion of appropriations available for non-administrative purposes.

A Closer Look at Federal Funds

Funds from the federal government to the state arts agency were derived almost entirely from the National Endowment for the Arts. Funds from other federal sources totaled only \$391,030, or 1% of the total funds received, while National Endowment for the Arts funds amounted to \$11,617,020 or 26% of total funds. Excluding New York, National Endowment for the Arts funds represented 42% of total funds received.

The majority of funds from the National Endowment for the Arts were accounted for by the basic state agency grant. This block grant is given each year to all of the states in equal amounts: in fiscal 1974, \$150,000. This sum was received by all of the agencies except those in American Samoa and Guam, which received basic state agency grants of \$60,000 and \$55,509 respectively. The basic state agency grants totaled \$8,065,509, 18% of total funds received, and 29% excluding New York State.

In addition to the basic agency grant, every agency except those in American Samoa, the District of Columbia and Puerto Rico received other Endowment grants amounting to \$3,551,511, 8% of total funds received. (Other Endowment grants accounted for 13% of total funds excluding New York State.)

However, the proportion of total funds accounted for by other Endowment grants

rose as high as 31% (\$147,838) of total funds received by the Washington State Arts Commission and 32% (\$92,150) of total funds received by the Louisiana Council for Music and the Performing Arts.

Endowment grants other than the basic state agency grants were largely accounted for by grants for the Artists-in-Schools and Dance Touring Programs, and by program grants. A very small portion, \$77,158, represented Endowment Treasury Fund grants (not including private portions) that were received in four states: Arkansas, Minnesota, Nebraska and South Carolina.

The only major sources of federal funds aside from the National Endowment for the Arts were the Office of Education and the American Revolution Bicentennial Commission. Eighteen agencies received \$90,341 during their fiscal year 1974 in manpower training funds from the Office of Education; these funds for a poetry program were distributed through the St. Paul Arts Council. An additional \$158,500 from the Office of Education was received by agencies in Puerto Rico (\$61,500) and Texas (\$97,000). The American Revolution Bicentennial Commission was the source of \$51,776 received in Texas and \$50,000 in Washington.

Less than 0.5%

A Closer Look at Private Funds

As noted earlier, only 2% of total funds received by state arts agencies in fiscal 1974 came from private sources. Foundations accounted for almost half of this amount, with \$386,673 or 1% of total funds coming from foundations. Individuals accounted for \$92,312, corporations \$13,160, earnings \$191,622, and other private sources \$66,348...

Private sources provided a minimal amount of support overall to the state arts agencies in all but four states: in Indiana, 27% of total funds was received from private sources, the entire amount of \$137,356 from foundations. In Texas 19% of total funds represented private support, 18% (\$132,000) from foundations, 1% (\$5,365) from individuals and less than 0.5% from earnings. In Michigan, 16% of total funds was from private sources, 3% (\$25,000) from foundations, and 13% (\$122,275) from earnings in revenue from Artrain. And in Alaska 14% of total funds (\$70,153) was from the private sector, all of it from individuals.

Unlike the proportion of funds received from state appropriations, the percentage and sources of private funds was not significantly affected by the size of the total expenditures of agencies.

Overall, private funds do not constitute an important source of funds for state arts agencies. However, as noted in Chapter IV, private support of the arts was greatly stimulated by the agencies through matching ads.

Funds Received by Separate Associated Foundations*

A total of \$2,041,251 was received in fiscal 1974 by the 12 active separate foundations associated with state arts agencies, and 40% of this amount, or \$824,814, was from private sources. However, the large proportion of funds from private sources, particularly from earnings, is a result of the unique situation of the Connecticut Foundation for the Arts. This foundation, associated with the Connecticut Commission on the Arts, is the primary grant-making body for state funds, and the Foundation has been given an annually renewable loan by the state on which the interest may be used for the Foundation's activities. The Connecticut foundation received \$482,240 in earned interest in fiscal 1974, 92% of the total funds received of \$530,275.

Excluding Connecticut, separate associated foundations received \$1,510,976 in fiscal 1974, with the largest proportions coming from the state arts agencies -- 44% or \$659,806 -- and the National Endowmen for the Arts -- 34% or \$515,950 -- and only 20%, or \$306,774, coming from private sources.

^{*} The activites and programs in which the associated foundations are involved are described in Chapter III.

1.1

Expenditures

Expenditures of the state arts agencies in fiscal 1974 totaled \$43,78),286. Eighty-six percent of this amount, or \$37,491,082, was accounted for by expenditures for programs. \$1,976,886 was expended by the separate foundations associated with the state arts agencies. (Specific project expenditures are detailed in Chapter IV.)

Program expenditures accounted for a strong majority of total expenditures in almost all states. However, accounting procedures differ in the means by which program administration and development costs are attributed, with some agencies including these costs as program expenditures and others not doing so. For this reason, *gencies were asked to indicate the percentage of program expenditures used for development and administration of programs, and this percentage figure has been translated into a dollar amount on the following tables. It should be kept in mind that these are only estimates, and that percentages will vary according to accounting procedures. Furthermore, it should be remembered that those state agencies that conduct and administer their own programs will inevitably incur more administration costs than agencies that primarily fund projects administered by others.

^{1/} Expenditures for administration and development of programs are projections from figures on the percentages of program funds used in this area.

An addition to the expenditures made directly by the state arts agencies, \$1,976,886 was expended by separate foundations associated with them. As noted earlier, the Connecticut foundation is the primary grant-making body for state funds, and the \$405,264 expended was accounted for by such grants.

Budget Submissions

In the area of budget and finances, the survey explored the procedures and processes through which budget requests are submitted to the state legislature, including the period for which appropriations are made.

. A majority of agencies receive an annual state appropriation, but slightly more than one—third receive a biennial appropriation, usually with. different amounts specified for the two years.

Type of Budget Submitted

In a slight majority (53%) of the states the budget submitted to the state legislature in fiscal 1974 is, at least in part, a line-item budget, while in 36% of the states the budget is for broad categories only and in 11% only an overall amount is submitted to the legislature. A strong majority of those agencies that submitted line-item or broad category budgets, or a combination of both, were required to make such submissions.

Table 14

Line-Item Budget Requirement Preference	10 9 1	18 16 2
Overall Amount Only	<u>6</u>	<u>11</u>

A somewhat larger proportion of low expenditure agencies -- in which, as previously noted, a larger proportion of state appropriation are for administrative purposes -- submit line-item budgets, but no consistent pattern in the type of budget submitted is evident by expenditure size.

Table 15
TYPE OF BUDGET SUBMITTED

Combinations of broad categorical line items	19	35	3	20	8	40	3	30	5	50
Line-item budget	10	18	5	33	3	15	i	10	1	10
Overall amount only	6	11	3	20	1	5	1	10	1	10

Agencies that submit line-item budgets most often cited as the line items detailed in those budgets specific activities or art forms (4 agencies), salaries and personnel costs, and administration (3 agencies each). The broad categories most often cited were program areas and programming in general (9 agencies), types of activities and art forms (7), and administration (6).

In most of the agencies with line items in their budget submissions, funds that are budgeted for one line item can be used for other purposes, although this usually requires permission from another person or agency.

Table 16
WHETHER FUNDS BUDGETED FOR ONE LINE ITEM CAN BE USED FOR OTHER PURPOSE
AFTER STATE APPROPRIATION HAS BEEN MADE

(Base: Agencies whose (iscal 1975 budget submission was a line-item budget or included line items)

<i>'</i>	Total	Agencies %
Total	<u>29</u>	100
Funds Can Be Used for Other Purposes Necessary to obtain permission Not necessary to obtain permission	19 12 7	66 42 24
Funds Cannot Be Used for Other Purposes	10	· <u>34</u>

In 8 of the 12 agencies in which permission must be obtained, this permission must be sought from the state budget officer or comptroller, in 2 from the department of administration, and in 1 each from the department of finance and from the governor.

Observation

Thus, although a majority of agencies submitted a line-item budget, at least in part, in fiscal 1974, the types of line items varied widely, and even where funds are appropriated for a line item, in most cases these funds can be used for other purposes.

In submitting budgets to the state legislature, a majority (55%) of agencies make separate requests for program and for administrative funds, and another 9% request program and administrative funds together with a percentage of the allocation.

Table 17
SEPARATION OF PROGRAM AND ADMINISTRATIVE FUNDS IN BUDGET SUBMISSIONS

Program and administrative funds request together with percentage allocation	ed 5	9
No separation between program and adminitrative funds	s- 5	9
No state program funds	<u>15</u>	<u>27</u>

The Program Planning Budgeting System (PPBS) or a similar type of system -- in which budgeting is done under a system of categories of public service and subcategories of the program results expected in terms of serving the public -- is being used in more than a third of the states. When asked whether they were required to use PPBS or a similar system, 21 agencies (38%) reported such requirements.

Methods of Submission of Budget

An overwhelming majority of agencies must submit their budget to the legislature through another individual, agency or office -- including most agencies that are autonomous state agencies -- and in most of these the budget is substantially revised by that person or office before final submission to the legislature.

In 95% of the state agencies the director or other members of the agency had the opportunity actually to appear before commissions, committees or subcommittees of the legislature in behalf of the budget requests covering fiscal 1974, with appearance being made before a wide variety of senate, house and joint committees and subcommittees on finance, budget, appropriations, ways and means, education, human resources, and the arts.

Table 20 WHETHER DIRECTOR OR MEMBER OF THE AGENCY APPEARED BEFORE LEGISLATURE IN BEHALF OF FISCAL 1974 BUDGET

· ***	Total	Agencies %
Total	<u>55</u>	<u>100</u>
Did appear before committee, commission or subcommittee of legislature	52	95
Did not appear	3	5

Of the 52 agencies in which members appeared before the legislature, 33 generally make annual appearances and 18 biennial appearances, with the time period varying in the remaining agency. Testimony in behalf of the budget requests of the 3 agencies from which no member personally appeared was made by the Director of the Office of Planning and Budget in one case, the head of the department of human resources in one, and the head of the budget and fiscal office in the third.

In the exploration of budget submissions, the directors were asked what if any trends or shifts in the manner of such submission they foresee in the near future. Approximately half do feel that such trends and shifts will occur.

CHAPTER II
PURPOSES, FUNCTIONS AND PRACTICES

PURPOSES, FUNCTIONS AND PRACTICES

This chapter explores the purposes and functions of state arts agencies from three primary viewpoints:

- -- mandated purposes: The first section of the chapter reviews the enabling legislation or executive orders under which the state arts agencies function, and the purposes of the agencies as spelled out in these.
- -- functions and practices: The second section details which of a list of 49 possible functions and practices agencies are now engaged in, which they may have been engaged in in the past and discontinued, and which they would like to be engaged in but are not now.
- -- factors affecting functions and practices: The third section

 presents the directors' evaluation of the importance of a number of

 specific factors on the functions and practices of their agencies.

Mandated Purposes

The basic purposes of state arts agencies are mandated in the legislation or executive orders by which they were created. These mandated purposes, however, are usually broadly stated; their implementation can be brought about through a great variety of functions and practices. Furthermore, in a majority of the states, the mandated purposes are either identical or very similar to one another.

These mandated purposes are based for the most part on the legislation that created the New York and the Missouri agencies. The legislation for the New York State Council on the Arts, which was originally established as a temporary commission in 1960 and was made a permanent agency in 1965, was based in turn on the arts-agency experience of Great Britain. In view of

the subsequent development in the several states, and especially in light of the recent arts funding levels in New York, it is interesting to note that New York's enabling legislation clearly did not contemplate a funding agency on a significant scale, as the New York State Council later became, nor did it provide for an organization appropriate to that purpose. When the funding of the New York State Council was greatly increased, during the early 1970s, the language of the enabling legislation was in effect superseded by that of the appropriation acts, which themselves set forward numerous conditions, including the purposes for which the enlarged funds were being provided, namely, "to the end that grants hereunder will provide maximum encouragement and assistance for the maintenance and development of the <u>public availability</u> of the cultural resources of the State" (emphasis added).

The purposes mandated for the New York agency at the time of its creation were:

- "1. To stimulate and encourage throughout the state the study and presentation of the performing and fine arts and public interest, and participation therein;
- "2. To make such surveys as may be deemed advisable of public and private institutions engaged within the state in artistic and cultural activities, including but not limited to music, theatre, dance, painting, sculpture, architecture, and allied arts and crafts, and to make recommendations concerning appropriate methods to encourage participation in and appreciation of the arts to meet the legitimate needs and aspirations of persons in all parts of the state;
- "3. To take such steps as may be necessary and appropriate to encourage public interest in the cultural heritage of our state and to expand the state's resources."

The legislation for the Missouri agency -- first established as a Governor's Committee in 1962 and officially approved as a Council by the legislature in 1965 -- retained those three purposes and added a fourth:

"4. To encourage and assist freedom of artistic expression essential for the well-being of the arts."

The laws setting up most state arts agencies contain either the three originally mandated purposes of the New York agency or all four of the Missouri agency. Indeed, a handbook published in 1966, The Politics of Art, Forming a State Arts Council*, contains a model law which includes the four purposes and which was copied by many states. (The text of the model law is contained in Appendix A.)

The states in which the mandated purposes conform generally to this model are: Alabama, Alaska, Arizona, Colorado, Connecticut, Delaware, Indiana, Iowa, Maine, Massachusetts, Michigan, Mississippi, Montana, Nebraska, New Jersey, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Tennessee, Virgin Islands, West Virginia, Wisconsin and Wyoming. In Colorado, Massachusetts and Pennsylvania the agencies are in addition mandated to assist communities and/or organizations on the local level in creating their own cultural and artistic programs.

Tennessee follows the model law but specifies the study and encouragement of "performing, visual and literary arts"; furthermore, the Tennessee agency -- like that of American Samoa -- is mandated to administer a museum and govern its operation.

^{*} Published by Associated Councils of the Arts.

Mew York/Missouri model tend to have either very broadly conceived general purposes or specific mandates for more detailed goals. Among those states with broad, general mandates — with no specific purposes mentioned other than the encouragement, support, stimulation or development of the arts within the state — are American Samoa, District of Columbia, Guam, Kansas, Kentucky, Louisiana, Minnesota, Nevada, Vermont, Virginia and Washington.

The <u>Politics of Art</u> handbook also contains a model preamble, defining the conditions or circumstances which require the existence of the agency.

The text of this model is as follows:

"It is hereby found that many of our citizens lack the opportunity to view, enjoy, or participate in living theatrical performances, musical concerts, operas, dance and ballet recitals, art exhibits, examples of fine architecture, and the performing and fine arts generally. It is hereby further found that, with increasing leisure time, the practice and enjoyment of the arts are of increasing importance and that the general welfare of the people of the state will be promoted by giving further recognition to the arts as a vital aspect of our culture and heritage and as a valued means of expanding the scope of our educational programs.

"It is hereby declared to be the policy of the state to join with private patrons and with institutions and professional organizations concerned with the arts to insure that the role of the arts in the life of our communities will continue to grow and will play an even more significant part in the welfare and educational experience of our citizens."

With minor variations, a preamble similar to this is found in the enabling legislation or executive orders creating a state council or commission in Alabama, Arizona, California, Colorado, Delaware, Idaho, Iowa, Maryland, `Nevada, New Hampshire, New Mexico, North Dakota and the Virgin Islands.

A number of states manage to avoid the emphasis placed in the preamble on "lack of opportunity" by describing the more positive purposes for a state arts agency. A number refer to the importance of the arts in developing the economy (American Samoa, Idaho, Iowa, Maryland, Rhode Island and South Dakota) while a smaller number (Guam and Texas) specifically mention the promotion of tourism and, in the case of Texas, the attraction of permanent residents. A number also refer to the potential for increase in employment (California, Iowa, Maryland and New Mexico), and to the aiding and training of individual artists (Alaska, Illinois and Oregon). Washington, uniquely, points out that it has already produced many artists of national and international reputation.

It is rare that the mandated purposes go beyond the range of the model Again only Washington speaks of the "preservation and development of beauty" as one of its objectives, and only Arkansas and Florida acknowledge the encouragement of "creativity" as a legitimate purpose for a governmental entity. As might be expected, American Samos and Alaska make special mention of maintaining and encouraging native or ethnic arts, but a surprisingly large number of states (Alaska, Arkansas, Florida, Maryland, New York, Oregon, and Tennessee) refer to the maintenance of professional artistic standards or "excellence." A surprisingly small number of states, on the other hand, make any reference to the relationship between the arts and education, among them Guam, Delaware, Maryland, Minnesota, Tennessee and Utah -- Delaware going so far as to refer to the capability of the arts to "inspire" children. The language of the Tennessee legislation is particularly eloquent: "The arts are an essential tool for the cultivation of sensibility, for just as muscular development and intellectual vigor are fruitless unless directed to some worthy human work, so increased perceptive power is barren without the discrimination of value that is the creative force of the arts."

Beginning in 1965, many state councils or commissions were officially designated as the state agency to receive federal funds for the arts. These include Alabama, Alaska, Arizona, Arkansas, Delaware, Maine, Mississippi, Missouri, Montana, Nebraska, Nevada, New Jersey, North Dakota, Rhode Island, Vermont, West Virginia and Wyoming. Many others had been, or soon became, authorized to apply for, receive, and disburse federal funds, or to co-operate or enter into agreements with the federal government. These include California, the District of Columbia, Florida, Illinois, Indiana, Iowa, Kansas, Kentucky, Massachusetts, Minnesota, Ohio, Oregon, South Dakota, Utah, Virginia and Wisconsin. A number (Oklahoma, Texas and Washington are examples) are simply authorized to receive funds, grants, or gifts from any source. During the same period of the late 1960s a number of agencies also either came into being, or redesignated themselves, with the phrase "and humanities" added to their title, reflecting the parallelism of arts and humanities at the national level. These include Alabama, Arizona, Arkansas, Colorado, the District of Columbia, Georgia, Idaho, Maine, Massachusetts, North Dakota, Oklahoma and Texas, Virginia and West Virginia.

In two cases (Guam and Tennessee), it is specifically declared that arts programs under the act are not intended for an elite but for the general public broadly defined, Louisiana going so far as to speak of enriching and fulfilling the lives of its citizens. One or two specific programs assigned to an agency also give a sense of purpose, as in the naming of a poet laureate in Washington, or in the honors program of Oregon. More often, however, it is the powers given to, or withdrawn from, the agency that suggest an intention behind this action. For example, a small number (Mississippi, Tennessee and Texas) authorize the arts agency to promote and advise on the use of art in state facilities. In terms of powers withdrawn, though many adopt the clause

relating to artistic freedom from the Missouri model, at least one (Colorado) goes further and includes a strong non-interference clause prohibiting the agency from attempting to influence or determine the artistic decisions of arts organizations.

The purposes of a number of the agencies are set out in a more detailed way, although frequently these do parallel the purposes of the model law:

-- The Arkansas agency is mandated to carry out a program of grantsin-aid to groups or individuals engaged in or concerned with the arts to enable
them to provide or support productions of substantial artistic and cultural
significance, giving emphasis to creativity and the maintenance and encouragement
of professional excellence, to carry out projects that will encourage and assist
artists and enable them to achieve standards of professional excellence, and
other relevant projects including surveys, research and planning in the arts.

mandated to make a comprehensive survey of public and private institutions engaged in artistic and cultural activities; to determine the legitimate needs and aspirations culturally and artistically of citizens; to ascertain how resources in existence and those which should be brought into existence are to serve the cultural needs and aspirations of the citizens; and to assist communities in originating and creating their own cultural and artistic programs. In 1975 the Commission was applied and a 1975 legislative act established the California Arts Council for the purpose of encouraging artistic awareness, participation and expression, helping independent local groups develop their pwn arts programs, promoting employment of artists and those skilled in crafts, and providing for the exhibition of art works in public buildings throughout California.

-- In Florida, where the original enabling legislation was based on the model law, a 1975 act mandates the arts agency to provide fine arts grants to supplement the financial support of productions with substantial artistic and cultural significance emphasizing American creativity, and of productions meeting professional standards that, without such assistance, would otherwise be unavailable to citizens of Florida.

-- The Hawaii law states that the agency shall assist in the coordination of plans, programs and activities concerned with the preservation and furtherance of culture and the arts; devise programs to bring the arts to those who would otherwise not have the opportunity to participate; stimulate, guide and promote culture and the arts; devise and recommend legislative and administrative action for the preservation and furtherance of culture and the arts; study the availability of private and governmental grants, and accept, disburse and allocate funds from such sources for the preservation and furtherance of culture and the arts.

-- The Illinois law states that the agency should identify existing legislation, policies and programs affecting the arts and evaluate their effectiveness, stimulate public understanding and recognition of the importance of cultural institutions in Illinois, promote an encouraging atmosphere for creative artists residing in Illinois, and encourage the use of local resources for the development and support of the arts.

-- The Maryland agency is mandated to design new or expanded programs in the arts, to encourage and assist in the formation of community arts councils, to provide technical and consultative assistance to arts organizations, to assist in the touring of professional performances and exhibitions from within and without the state, to make awards for excellence in the arts, and to make grants to arts organizations and individual artists.

- -- The New Mexico agency is mandated to advise and assist public agencies in planning civic beautification, to foster appreciation for the fine arts, to make New Mexico more appealing to the world, to encourage creative activity in the arts by residents, and to attract to the state's residency additional outstanding creators in the field of the fine arts.
- The purposes of the North Carolina agency are focused on the study, collection, maintenance and dissemination of factual data and pertinent information relative to the arts; assistance to local organizations and the community at large; the exchange of information, promotion of programs and stimulation of joint endeavors between public and non-public programs; the identification of research needs in the arts and encouragement of such research; and the bringing of the highest quality arts to the state and promoting maximum opportunity for the people to experience and enjoy those arts.
- -- The Ohio agency is mandated to foster and encourage the development of the arts in the state and the preservation of the state's cultural heritage, with specific function set forth in the law to conduct a survey of the state's cultural and artistic resources and needs and to maintain a continuing inventory of such resources, to develop a plan for better and fuller use of such resources by all the people of the state, and to assess the role of the arts in the growth and development of the state.
- The Oregon law states that the agency's objectives are to complement, assist and strengthen existing or planned programs and acrivities of public and private associations in the arts to promote the broadest public benefit, to encourage and give greater opportunities and recognition to Oregon artists, and to stimulate and encourage private and local

64-

initiative and financial support in connection with programs and activities in the arts.

- -- The South Dakota agency is mandated to promote, stimulate and encourage the arts, to conduct research and provide a plan for the development of the arts in the state, to coordinate activities of the federal, state and local governments and the state's institutions in relation to the arts, and to approve projects for federal and state aid for the arts.
- of a receptive climate for the arts that will enrich and benefit the state's citizens, make visits to Texas more appealing to the world and attract additional creators in the fine arts to residency in the state, and to direct other activities such as sponsoring art lectures and exhibitions and the central compilation and dissemination of information on the arts. The agency is also mandated to act as an advisor to other state agencies to provide a concentrated effort for the arts, to act in an advisory capacity relative to the creation, acquisition, construction, erection or remodeling by the state of any work of art and to the artistic character of buildings constructed, erected or remodeled by the state.
- -- The Utah agency, whose origins reach back to 1899, is mandated to e-vance the interests of the fine arts, including literature and music; to develop the influence of art, literature and music in the adult educational field; to associate manufacturers, agriculturalists and industrialists in these endeavors; to utilize broadcasting and newspapers in disseminating information on the arts; and to take all necessary and useful means to stimulate a more abundant production of an indigenous art, literature and music.

-- The Wisconsin agency is mandated continually to study the artistic and cultural activities within the state, assist arts activities, assist communities in creating and developing their own arts programs, and encourage and assist freedom of artistic expression.

In summary, the mandated purposes of the state arts agency are generally broad in scope and allow for diverse activities within the agency. Even those legislated purposes that are more specific in nature tend to include such an objective as "encouragement of the arts", in the rulfillment of which a variety of functions and practices can be undertaken.

Functions and Practices

The study of functions and practices in state arts agencies was centered on a list of 49 pc sible functions and practices that was drawn up by consultant agency directors to represent, as far as possible, the broad range of arts agency activities. For each of these functions and practices, agency directors were asked whether they had done it in fiscal 1974 -- on a scale of "did a lot", "did some", "did not do", and "not a proper function and practice of the agency" -- and, if they had done it, whether they planned to continue, or if not, whether they had in the past or would like to in the future.

The responses thus indicate the subjective evaluations by directors of their agencies' degree of involvement in the functions and practices listed, and the data should be considered in this light.

Of the 54 agencies responding to this question, all but nine did a majority of the 49 items in fiscal 1974, and on the average agencies were engaged in 32 of the 49 functions and practices. Every agency reported that

in fiscal 1974 they did "make expenditures to cultural organizations for specific projects: and did "make accessible quality arts", with the number of agencies doing a listed function and practice declining to 14 who did "make expenditures directly to individual artists in the form of awards" and 8 who did "make expenditures to audience groups/sponsors/presenters for them to spend as they wish." The 49 functions and practices and the numbers of agencies who did them in fiscal 1974 are shown on the following table:

Almost all of the agencies who were engaging in a function or practice in fiscal 1974 reported that they plan to continue doing so. For only 10 of the listed items did any agency say that it would not continue (and a maximum of 2 agencies for any single item), and for 2 other items a state agency was not sure that it would continue. The reasons given by those few agencies not planning to continue centered on limited funds, lower ranking among the agency's priorities and the limited number of people affected.

It is evident that state arts agencies do not see their functions and practices as diminishing, considering the minimal number who plan to discontinue any of the items. Furthermore, as discussed below, many of those agencies who were not engaged in a practice in fiscal 1974 would like to do so and are primarily limited by funds.

Those agencies that were not doing a listed item in fiscal 1974 were asked whether or not they had done so in the past and, if so, why they no longer did so. Furthermore, they were asked whether they would like to engage in the practice and, if so, why they are not doing it now. The total number who did not do the item in fiscal 1974 (not including those who do not believe it is a proper function), those who did it in the past and those who would like to do it are shown in the following table:

Of the few states which reported <u>having discontinued engaging</u> in a function or practice, the primary reason given for no longer doing it was limited funds. For 15 of the 28 items which at least one agency did in the past but no longer does, one of the reasons given for stopping was the lack of funds. Other reasons given include a lack of applications or interest, a change in policy or legislation, and lack of staff or time.

Lack of funds was also by far the most mentioned reason for not now engaging in a practice that an agency's director would like to do:

- -- Lack of funds was given as a reason for not doing 40 of the 44 items that at least one agency would like to do but did not do in fiscal 1974. For 28 of those items, lack of funds was ranked at least equal to or above any other reason.
- mentioned reason. This was ranked highest as a reason for not making expenditures for ticket subsidy, not making expenditures. for writers' seminars, not providing funds to visual arts groups for professional jurors, not making expenditures for training in arts management, not funding programs or organizations like Model. Cities, community action agencies, etc., and with lack of staff was highest ranked as a reason for not engaging in cooperative activities with arts unions and professional arts organizations.

 Lack of staff was also ranked highest as a reason for not conducting an agency's own program of arts management training,
- conducting an agency's own program of arts management'training, not having agency-administered programs, not having cooperative programming with community arts councils, and was ranked highest along with the <u>low priority assigned to a practice</u> as a reason for not encouraging state and local education agencies to increase their

arts commitment.

The fact that the practice is against agency's policy or guidelines was the highest ranked reason for not employing different standards in reviewing fund applications for different levels of professionalism and for not making non-monetary awards to individual artists.

In addition, for 32 of the 44 items that agencies would like to do but did not do in fiscal 1974, at least one agency reported that they were engaging in the practice in fiscal 1975.

Trends and Shifts in Functions and Practices

When asked whether they foresee any trends or shifts in the functions and practices of their agencies during the coming three to five years, approximately three in four directors reported that they do foresee such trends or shifts:

Table 25
WHETHER TRENDS OR SHIFTS IN FUNCTIONS AND PRACTICES OF AGENCY

^{*}Volunteered responses to an open-end question

A majority of the agencies that believe these trends will occur feel that they will result from increasing public awareness of and demand for the arts:

Table 27

tions and council/commission Increased touring as a result of regional program Increased growth of local arts agencies	1	2 2

^{*}Volunteered responses to open-end questions

Agency directors tend to be optimistic in their perception of the trends in agency functions during the coming years. Except for one agency that foresaw a lessening of support for the performing arts, all the trends foreseen are generally positive.

CHAPTER III PROGRAMS

PROGRAMS

This chapter explores the overall programs of state arts agencies and the rules and policies of agencies that affect these programs. The ar as covered include:

- program emphases: the directors' description of the major program emphases of their agencies
- restrictions and mandates: restrictions and prohibitions on the agencies' programs, other activities and fiscal practices, as well as programs that agencies are mandated to carry out.
- <u>subgranting</u>: the use of subgranting to effect those programs or projects an agency is prohibited from doing or prefers not to do directly
- <u>carmarked funds</u>: the earmarking or restriction of funds so that an agency has no discretionary power over the final distribution and use of the funds
- criteria for funding: the criteria employed for the consideration of application for funding, and the causes for the denial of such applications
- matching funds: agencies' policies concerning matching funds, including the percentage requirement for matching funds and the type of funds allowed as matches
- <u>non-funding programs</u>: the activities of the agencies in support of the arts other than the distribution of funds to organizations, institutions and individuals

- programs of associated foundations: the programs of the associated separate foundations and the earmarking of funds received by the associated foundations.

Program Emphases

In the examination of agency programs, directors were initially asked in an open-end question what were the various major program emphases of their agencies; the volunteered responses covered both broad program areas -- such as touring -- as well as specific art forms. The most mentioned program by far was support of community arts activities and councils, which a slight majority of 53% of directors listed among the major program emphases. Artists-in-schools, touring and expansion arts (such as multi-ethnic, prisons, aging, etc.) were each cited by approximately one-third of the agencies.

Table 28

None	. 1	. 2

^{*} Volunteered respones to an open-end question.

Observation:

The following chapter will analyze the programs in terms of projects and actual dollars expended on them. Consultant agency directors indicated, however, that the amount of money spent is not necessarily indicative of program emphases and priorities; e.g., a few project expenditures of relative high amounts to large organizations may require little time and effort by the agency and represent a small part of its programs, though the dollar amounts are large.

Ø.

In judging whether the program balance in the future will tend more toward projects providing impact on various parts of the state, or more toward local or community projects than at the present time, a majority of directors estimate that programs will stay at about the same level as at the time of the survey, with approximately 1 in 5 agencies seeing a movement in each of the directions.

Table 29 PERCEIVED FUTUR & BALANCE OF PROGRAMS

	Tota1	Agenci ès
,	#	· 1 %
Total ,	<u>55</u>	<u>100</u>
Stay about the same Toward local/community projects	29 12	53 22
Toward projects for various parts		-,-
of state	10	18
Not sure	3	5
Not applicable .	1	2

Directors who feel future programs will tend more toward local or community projects cited the need for and requests for such assistance, the increasing local activity and development of community councils, and pressure

for per capita distribution of funds. Those who feel the direction is toward statewide projects cited the commitment of the state in that direction, the development of state institutions and organizations, the needs within the state falling that way, and the general direction of the council/commission.

The directors' concern with support of community activities was again evident in estimation of program emphases during the coming years. When asked whether they feel that trends or shifts in program emphases will occur in the near future, a substantial majority of 64% of the directors do foresee such trends, and in an open-end question on what these trends will be community activities ranked highest among the trends foreseen. (Although regional programming was not mentioned in connection with this question, in another part of the interview directors indicated, as discussed in Chapter V, that they foresee a trend toward more regional programming.)

Restrictions and Mandates

The emphasis of an agency's programs will obviously be significantly affected if restrictions or prohibitions are placed upon the agency's activities, or if the agency is mandated to conduct specific programs. Directors were questioned about fiscal and program restrictions and mandates. In response to the questions on fiscal restrictions, directors of 8 agencies reported that the agencies are legally prohibited from receiving any operating revenues, such as earnings from sale of publications, posters, or other goods and services.

^{*}Volunteered responses to an open-end question.

Observation:

It should be remembered that the list of other fiscal prohibitions was derived from an open-end question, and what some directors mentioned as a prohibition could also be prohibited in other states even though not mentioned in response to this question. For example, prohibitions against deficit spending, entertainment expenditures, etc. are widespread, but may not be thought of by directors in terms of "fiscal prohibitions." This is also true in the question concerning program restrictions discussed next.

Almost half the agencies report some type of restriction or proaibition on program activities, with grants to individual artists volunteered most frequently among types of such restrictions.

Volunteered responses to an open-end question.

Although a number of agencies reported either fiscal or program restrictions, no single type of restriction was widely cited. Furthermore, some restrictions cited by agencies are probably not considered as restrictions.

tions generally, even though they may be so. For example, most state arts agencies are probably not in a position to grant funds to organizations unless they are non-profit and/or tax-exempt, and all work within some federal guidelines, but these were mentioned by only a minimal number of directors.

ities that cannot be funded directly sometimes receive assistance from the agencies through indirect channels. When asked whether they use subgranting to provide funds to individuals or organizations, 21 agencies reported the use of subgranting; 12 use subgranting to fund individuals or organizations they are prohibited from funding directly and 13 to make grants they prefer not to make directly (4 agencies subgrant for both reasons).

\$150.000 Median amount: \$9,500 No maximum amount	١	· <u>'47</u>	<u>85</u>

Observation:

Legal restrictions do not limit state arts agencies significantly, it seems. Even the funding of individual artists, which has been seen to be the major restriction, can sometimes be effected through an intermediary organization.

The reverse of legal restrictions -- i.e., legal requirements to conduct particular programs -- is even more uncommon. Only two agencies -- New York and Minnesota -- were required at the time of the survey to conduct programs in certain areas or arts types, and in both stat s at least a partial amount of funds it required to be distributed according to a geographical, population basis. (However, it should be remembered that by earmarking funds for specific programs or projects, legislatures can effectively achieve similar ends as that of mandating.)

When asked about legislative mandates to conduct specific activities or to serve particular groups, agencies mentioned the broad areas discussed in the analysis of legislation in Chapter II. However, ten directors do see trends or shifts in a direction towards mandated activities that can lead to less control of programs by the agency.

^{*} Volunteered responses to an open-end question.

Another way in which programs can be specified, in addition to legislative mandate, is through earmarked or restricted funds. The greater the proportion of such funds — defined in the survey as "funds whose use is designated and over which the state arts agency has no discretionary granting power" — the less the ability of the agency to determine its program directions. In a slight majority of states — 29, or 53% — at least some portion of the legislative appropriation for fiscal 1974 was earmarked or restricted, either for administrative purposes or for specific program activities or recipients, and in 15 of those states the entire appropriation was earmarked.

However, of the total state legislative appropriations of \$30,756,494, only 7%, or \$2,234,628, was earmarked or restricted, with the remaining 93%, or \$28,521,866, being discretionary, unrestricted funds.

Observation:

Restricted funds are seemingly defined differently by different agencies. For example, appropriations for administrative purposes may be considered earmarked by some agencies and not be considered so by others. Any examination of restricted/earmarked funds should take this difference of evaluation into account.

Funds from other state sources, as well as from federal and municipal and county sources, can also be received for specific activities. However, the only other division by source between earmarked and discretionary funds determined here was made in funds received from private sources. Of the 31 states that received private funds (including earnings) in fiscal 1974, 21 or 67% had at least a portion of those funds earmarked, and in 15 of those states all private funds were earmarked. Overall, just under half of total private funds received were restricted. Of the total of \$720,115 received from private sources by the 31 states, \$347,119 (48%) was earmarked or restricted and \$373,650 (52%) was discretionary or unrestricted.

by the type of private sources from which funds were received, it is not unexpected to see that all corporate contributions to state arts agencies in fiscal 1974 were earmarked and almost all contributions from individuals, as well as a majority of funds received from foundations, were given for restricted purposes. However, it should be remembered that these represent only a minor part of funds received from state arts agencies; as noted in Chapter I, total private funds were only 2% of total funds received.

Table 41
SOURCES OF PRIVATE FUNDS RECEIVED IN FISCAL 1974,
BY EARMARKED VS. DISCRETIONARY

The restriction or earmarking of funds was also studied from amother perspective, i.e., by expenditures. In this aspect of the analysis of earmarked funds, only program funds were considered. Although 25% or more of program expenditures were earmarked or restricted in 13 of the states, earmarked funds did not account for a significant proportion of total program expenditures in fiscal 1974. Of the total program funds from all sources of \$37,491,082, only 8% or \$3,104,083 was earmarked, with the remaining 92% or \$34,386,999 being expended at the discretion of the agency.

Observation:

Again it should be pointed out that differences exist among agencies in defining whether funds are earmarked or discretionary, particularly with regard to program grants from the National Endowment for the Arts.

Criteria for Funding or Danial of Funding

The criteria employed in decisions concerning the funding of projects are central in the determination of an agency's program emphases. In most agencies these criteria are codified to at least some extent; 89% of the agencies have some form of written general grants provisions and/or regulations governing the funding of projects, 75% have written program guidelines covering the funding of projects, 75% have written program guidelines covering the funding of specific types of projects, and 91% at least one of the two.

Table 43

of specific types of projects	<u>50</u>	<u>91</u>
Agency has written provisions	49°	89
Agency has written guidelines	41	7 5
•		}

Agencies that have guidelines distribute them primarily in response to requests and to mailing lists (40 of the 41 agencies do this). Other means employed include press releases, newsletters, personal contact and conferences and inclusion with grant applications.

Written grant provisions and guidelines can be of great assistance to potential recipients of funds, and it is unexpected that as many as one

in four agencies do not have guidelines. Interestingly, the agencies with larger total expenditures, and consequently the greater likelihood of having to make more funding decisions, are no more likely to have written provisions or guidelines; in fact, agencies in the highest budget category are even somewhat less likely to have this material:

Table 44

	Has written program guidelines	41	75.	\ 13	87	14	70	8	80	6	60

Observation:

It should be noted that guidelines generally are directed towards means and methods of making applications for funds rather than being descriptive of an agency's program emphases.

To determine how decisions are made concerning the funding of projects, directors were given a list of seven items, with the opportunity provided for the adding of more items, and asked which are usually a part of the agency's decision-making process for funding projects. The formal appli-

cation form or proposal letter and a staff review of applications are each a part of the decision-making process in more than nine in ten agencies, and in a majority of agencies there is a review and clearance by a council/commission subcommittee, a decision by the council/commission and/or a panel review.

Specific Criteria Used in Funding Decisions

Nineteen criteria that might enter into a project-funding decision were drawn up by the National Research Center of the Arts with the advice and counsel of consultants, and directors were asked to rate the importance of each on a scale of very important, somewhat important, of minor importance and not important at all. Later in the interview, they were asked which of the list were reasons for the denial of formal applications during fiscal

1974, and which two or three were responsible for the denial of the greatest number of formal applications. Not surprisingly, the availability of agency funds ranked highest in the number of directors rating it very important in funding decisions, followed by ability of the individual or group to accomplish the project and the quality of the project. The project's quality or lack thereof was top ranked as a reason that projects were denied in fiscal 1974, followed by the availability of funds and artistic quality of applicants. In contrast, the political implications of the project ranked last both in terms of importance and as a reason for denial of fiscal 1974 applications.

Table 46 indicates that funding decisions are largely based on quality of projects — the highest ranked criterion among the two or three reasons for the denial of the greatest number of applications — artistic quality of applicants, and ability of applicants to accomplish the project, in addition to the very basic availability of funds. Integrity of applicants is not a problem: although this criterion ranked fifth in ratings of very important, it was fourteenth among reasons for denial of the greatest number of applications.

Quantity in terms of number of audience members is relatively unimportant (ranked sixteenth in very important ratings and ninth among reasons for the denial of the greatest number of applications). Agency directors also do not see their funding role as primarily one of priming the pump to gain additional funds, with the generation of additional support ranked low in both areas; however, the ability of recipients to raise matching funds does rank in the upper half of the criteria.

Additional criteria volunteered by directors as important in the agency's decision centered on the making of arts accessible to the public and the development of new and innovative arts forms, while other reasons for denial of applications in fiscal 1974 were headed by the duplication of efforts.

Matching Funds

Matching funds -- those funds raised by recipients of project expenditures to equal a percentage of the expenditure -- are required by approximately half the state arts agencies for all project grants, and by almost all agencies for a least some grants. In response to a question of matching funds, directors of only 2 agencies reported not requiring matching funds for any project grants.

Table 49
REQUIREMENTS FOR MATCHING FUNDS

	Total	Agencies %
Total	<u>55</u>	<u>100</u>
Matching funds required for all project grants	27	49
Matching funds required for some project grants	26	47
Matching funds required for no project grants	2	4

When a match is required, it is likely that it must equal the grant; in two-thirds of the agencies asking for matching funds the required match is 100%. In the remaining agencies, the required match varies according to recipient, type of grants, etc.

Table 50

, 0,,		

Average percentage of applications denied

Observation:

Consultant directors indicate that agency guidelines and and pre-screening as well as discouragement of applications by the agency, are important factors in limiting the number of requests that even reach the formal application stage, so that the actual denial of requests for funda at all stages was substantially higher than the 38% indicated in the table.

Interestingly, larger budget agencies tend to deny a larger proportion of applications. However, the higher proportion of denials at the upper levels is a result primarily of agencies in which per capital expenditures were less than \$.17; the average percentage of applications denied by agencies with higher per capita expenditure was equal to or less than the overall average in all expenditure levels.

Non-Funding Programs

Average percentage of applications denied

State arts agencies provide support to the arts and culture of their states in many other ways in addition to the funding of projects. When asked in an open-end question what they felt are the most important non-funding activities undertaken by the agencies, directors focused on consultation, technical assistance, public promotion and information services, and program development/administration, with a wide range of other activities also volunteered as important in addition to grant-making.

Table 54

Volunteered responses to open-end questions.

The non-funding activities account for a large portion of the man hours of state arts agencies. Although 5 agencies report that less than 20% of work time by the director and staff is devoted to such activities, 23 agencies estimate that more than half the time of the staff is spend in this work.

Table 57
PERCENTAGE OF WORK TIME BY DIRECTOR
AND STAFF DEVOTED TO NON-FUNDING ACTIVITIES

Average percentage work time devoted to	ο ,	44%	-	43%	44%	48%	44%,	

Observation:

That 42% of the agencies devote more than half of their staff work time to non-funding activities reflects the importance given by the agencies to this "service" aspect of their work, especially since the average percentage of work time given to non-funding activity remains closely within the same range, regardless of the expenditure level of the agency.

Programs of Associated Foundations

As noted in Chapter I, 12 state arts agencies had separate foundations associated with them in fiscal 1974, with funds totaling \$2,041,251 for the year. In fiscal, 1975, 17 (31%) of the state arts agencies had a separate foundation associated with them, two of which were inactive. Various types of programs and activities are conducted through these foundations, with the foundations most widely used to raise funds. In a number of cases, though, they conduct activities either paralleling or extending the activities of the agency itself.

¹²³

Foundations are likely to be on the rise in number as well. Of the 38 agencies with no associated separate foundation as of fiscal 1975, 9 (or 24% of the 38) have plans for the establishment of such a foundation.

And of the foundations in existence, 7 (or 41%) had been founded within the two years prior to the survey.

In the exploration of the program activities of associated separate foundations, all directors were asked in an open-end question what they believed to be the benefits of having such a foundation and the problems involved. The benefits volunteered by directors centered on the existence of fewer restrictions governing the foundation's activities, while problems mentioned most often concerned competition and confusion and relationships with state government.

Table 61

^{*}Volunteered responses to an open-end question.

Although fewer restrictions on the use of funds was the most cited benefit of having an associated separate foundation, more than half the funds received by the 12 active foundations in fiscal 1974 actually were earmarked. Surprisingly, only 6% of corporate contributions to associated foundations were earmarked (in comparison with 100% of corporate funds directly to the state arts agencies); in contrast, all of the funds from the state government, other than the state arts agency, were earmarked.

PROJECT EXPENDITURES

PROJECT EXPENDITURES

This chapter discusses the project expenditures including grants, contracts, etc. made by the agency in fiscal 1974. (In the definition used in the survey, "a project refers to a specific individual project usually within a program area, such as a specific dance company's tour in the state, the assignment of an advisor to provide technical assistance to a particular arts organization, the support of concerts by a particular symphony orchestra, the assignment of an artist to a school, etc.") The expenditures are analyzed in terms of four major areas. These are:

- -- Sources of funds, the sources from which the funds for projects were derived, i.e., the amount of funds for expenditures received by the state arts agency from its legislative appropriations, from other state funds, from the National Endowment and other federal sources, and from local and private sources.
- -- Recipients, the individuals or organizations to whom the expenditures were made. Two different groups of recipients were identified in the research: (1) the primary, or direct, recipients, those individuals or organizations who received the funds directly from the state arts agency, and (2) secondary, or indirect, recipients, the individuals or organizations to whom primary recipients distributed some part of the expenditures.
- -- Art form, the art form for which the expenditure was made, such as music, dance, literature, visual arts, etc.
- -- Type of activity assisted, the use for which expenditures

 were made, such as basic support, touring, research, etc.

 Two different levels of activities were identified: (1) the

 one primary activity, the main use for which the expenditure

was made; and (2) <u>secondary activities</u>, other activities for which the expenditure was used in addition to the main use.

In addition to these four major areas, the project expenditures are also discussed in terms of:

- -- How the project was initiated, i.e., whether the project was initiated by the grantee, the state arts agency, or a combination of the two.
- -- The location of the project, in urban, suburban, or rural area.
- -- The previous funding of the project, i.e., whether the expenditure was made for an ongoing project, was one-time funding, or was for a pilot project.

As the final stage in the analysis of project expenditures, the funds generated by the expenditures as matching funds and the total costs of the projects are discussed.

Throughout the chapter the project expenditures are shown in total for all 55 state arts agencies; in most areas of analysis, the expenditures are also detailed for each arts agency individually. It was felt that such an agency-by-agency breakdown was the most significant one for project expenditures, and for this reason the analytic grouping of total expenditures used elsewhere in the report are referred to only where significant variations occur. (Because of the disproportionate amount of pro-

ject expenditures made by the New York agency, it is not included in the analytic groupings in this chapter.)

In addition to the state-by-state breakdowns, the art forms and types of activity for which expenditures were made are also analyzed in terms of who received the expenditures and the sources from which the funds for these expenditures were derived.

Total Expenditures

The state arts agencies expended a total of \$43,780,286 in fiscal 1974. Of this amount, \$6,289,204 represented personnel and other administrative expenditures, with the remaining \$37,491,082 expended for programs. Ninety-two percent of these total program expenditures -- or \$34,553,000 -- was actually distributed by the agencies in grants, contracts, etc. (This includes only funds expended by the agencies, and does not include recipients matching funds nor funds from other sources.) The \$34,553,000 was distributed by the agencies to 6,903 projects, or an average of \$5,000 per project.

Project expenditures of the New York State Council on the Arts alone accounted for \$15,113,000 during fiscal 1974, or 44% of the total project expenditures, with expenditures made for 996 projects in New York State. Removing New York from the calculation, the remaining 54 agencies expended \$19,440,000 for a total of 5,907 projects, or an average of \$3,000 per project.

^{*}The remaining 8% of program expenditures was expended primarily in the area of program development and administration.

Highlights of the Distribution of the Project Expenditures

The distribution of project expenditures described in this chapter refers to the dollar amounts of those expenditures rather than the number of projects, and the analysis of project expenditures will be primarily concerned with these dollar amounts, since they more accurately reflect the flow of financial support. For example, one agency might consider funds granted to a single recipient but covering several phases of a project as one project expenditure, while another agency could consider the same amount as constituting three project expenditures. It is true that the number of institutions or organizations in a state will determine to some extent the number of projects, while the size of the institutions within a particular field will determine to some extent the dollar amounts of the project expenditures, but the latter nevertheless provides a more realistic view of support from state arts agencies.

The performing arts accounted for the largest portion of the agencies' project expenditures in fiscal 1974. Twenty-seven percent of all expenditures was received directly by performing arts organizations, and performing arts organizations were among the secondary recipients of another 16% of project expenditures made directly to other recipients. Furthermore, in the distribution of the funds by art forms a full 50% of the expenditures was made in one or more of the performing arts, with music accounting for 23% of total projects expenditures, theatre for 12%, dance for 10%, and combinations of the three for another 5%.

The majority of the expenditures were not made for a specific project, but for the more general support of organizations or institutions.

Twenty-nine percent of the funds went to program support of the organizations

or institutions, 16% for staff salary support, and another 14% for basic operating support.

Significant amounts were directed to individual artists, although these funds were not likely to be granted directly to these individuals.

Only 1% of project expenditures was made directly to individual artists, but professional artists were among the secondary recipients of 13% of project expenditures and non-professional artists among the secondary recipients of 2% of the expenditures. (Secondary recipients, however, may not receive the total amount of funds; they may share funds with the primary recipient, and there may also be a number of secondary recipients sharing the funds.) Agencies also reported that 12% of the expenditures was made for the direct support of individual artists for specific services and another 1% for direct support of individual artists in pursuit of their art.

A majority of the project expenditures made in fiscal 1974 represented continuing support of ongoing projects, with 67% being expended for such funding. Furthermore, an additional 6% represented first-time expenditures in planned ongoing funding.

The project expenditures of the agencies generated more than the total amount expended in matching funds, and the expenditures accounted for less than one-third of the total costs of projects supported, and for only 13% of the total operating budgets of those organizations and institutions which received basic support

Sources of Funds for Project Expenditures

Approximately \$2.00 out of every \$3.00 (66%) of the \$34,553,000 in project expenditures in fiscal 1974 was derived from the state appropri-

ations to the state arts agencies, with 29% coming from funds from the National Endowment for the Arts. As noted in the analysis of sources of total funds in Chapter I, however, the high proportion of funds from the state is strongly affected by New York State, where 99% of the total project expenditures of \$15,113,000 came from the state appropriations. Without New York, state appropriations accounted for only 40% of project expenditures.

- -- \$22,709,000 (66%) came from state appropriations and another \$471,000 (1%) from other state sources.
- -- \$10,088,000 (29%) was from National Endowment for the Arts funds: \$7,638,000 (22%) from the basic state agency grants, \$50,000 (less than 0.5%) from Treasury Fund grants, and \$2,400,000 (7%) from other Endowment grants.
- -- \$296,000 (1%) from other federal funds.
- -- \$21,000 (less than 0.5%) from <u>local governments</u>.
- -- \$968,000 (2%) from private funds: \$494,000 (1%) from foundations associated with the state arts agencies and \$474,000 (1%) from other private sources.

The sources of funds for project expenditures naturally parallel the sources of the agencies' total funds. The proportion of project expenditures derived from state appropriations, as noted, ranges from 99% in New York State -- where state appropriations also constituted 99% of total funds received -- to 0% in Arizona, the District of Columbia, Guam, Idaho, Louisiana, Montana, Nebraska, Nevada, New Hampshire, New Mexico, Wisconsin and Wyoming, states in which a relatively low percentage of total funds were received from state appropriations.

The basic state agency grant distributed by the National Endowment for the Arts to all states is a major source of funds for project expenditures; not including New York State, the basic state agency grant accounts for almost as large a proportion as the state appropriation (39% and 40%, respectively).

Primary, or Direct, Recipients of Project Expenditures

The differences among states in the distribution of project expenditures to primary recipients are naturally a result of many factors, including legal restrictions or mandates, the earmarking of agency funds, council/commission policies, the ability of recipients to generate matching funds, the state's cultural resources, etc. These controlling factors should be remembered in the consideration of the distribution of project expenditures.

Performing arts organizations received the largest amount of funds expended by the state arts agencies in fiscal 1974, with more than \$1.00 out of every \$4.00 (27%) going to performing arts organizations. The state arts agencies themselves were the recipients of 12% of project expenditures, while museums received 10% of funds expended.

The amount of funds distributed to the primary recipients -- i.e., the organizations or individuals who received the funds directly from the agencies -- were:

Arts and cultural organizations

- -- \$9,197,000 (27%) went to performing arts organizations.

 Most of this amount, \$7,949,000 (23% of total project expenditures), went to professional performing arts organizations, with only \$1,248,000 (4%) to non-professional performing arts organizations.
- -- \$3,343,000 (10%) to <u>museums</u>, of which \$1,651,000 (5%) went to art museums, \$950,000 (3%) to general museums, \$411,000 (1%) to science museums, and \$331,000 (1%) co history museums.

- -- \$2,151,000 (6%) to <u>cultural centers</u>.
- -- \$1,755,000 (5%) to community or municipal arts councils.
- -- \$1,097,000 (3%) to foundations not associated with the state.
- -- \$1,063,000 (3%) to visual arts organizations other than museums.
- -- \$699,000 (2%) to foundations associated with state arts agencies
- -- \$644,000 (2%) to regional organizations and another \$8,000 (less than 0.5% to other state arts agencies.
- -- \$497,000 (1%) to <u>arts fairs or festivals</u>.
- -- \$5,925,000 (17%) to other arts and cultural organizations, including such groups as performing arts presenters (concert associations, opera guilds, etc.), libraries, poetry societies, arts associations, etc.

Other organizations

- -- \$2,473,000 (7%) to educational institutions, of which \$1,447,000 (4%) went to colleges and universities and \$1,026,000 (3%) to schools or school systems.
- -- \$311,000 (1%) to civic groups.
- -- \$265,000 (1%) to public radio or public television stations.

Individuals

-- \$285,000 (1%) to <u>individuals</u>, of which \$271,000 (1%) went to <u>artists</u> and \$14,000 (less than 0.5%) to <u>non-artists</u>.

It should be pointed out that the term "regional organization," as used by states in reporting project expenditures, refers to organizations serving or representing a region within the state, as well as to regional organizations of state arts agencies. In the questionnaire, directors of state arts agencies reported a total of \$104,812 contributed only to regional organizations of state arts agencies in fiscal 1974.

Other

- -- \$4,137,000 (12%) to the <u>state arts agencies</u> for projects undertaken by themselves.
- -- \$142,000 (less than 0.5%) to other state agencies within the state.
- -- \$217,000 (1%) to a combination of recipients.
- -- \$343,000 (1%) to miscellaneous other recipients.

Observation:

Museums, which are a larger industry nationally in dollar terms than the performing arts, are getting only approximately a third of the project expenditures from the state arts agencies that the performing arts organizations receive. However, it should be remembered that in many parts of the country museums are governmental or quasi-governmental institutions

In <u>Museums USA</u> it was found that 1 in 3 museums (34%) are government run: 6% of museums are federal museums, 12% are state museums and 16% municipal or county museums. Being under government control, these museums are naturally more likely to receive funds through government channels other than the state arts agency than are the performing arts organizations.

Primary Recipients by State

The proportional distribution of the primary recipients of project expenditures differed sharply among individual states. Professional performing arts organizations, which received 23% of total project expenditures, were not primary recipients of any project money in Alabama, Alaska and North Dakota or in American Samoa and Puerto Rico. In contrast, a majority of project expenditures went to professional performing arts organizations in

Missouri (84%), Maryland (63%), Utah (59%), the District of Columbia (55%), and Penn ylvania (51%). Non-professional performing arts organizations were recipients of a majority of project expenditures in North Dakota (52%).

The proportion of funds received by museums also varied significantly by state, with the 10% of funds received by museums overall rising to 16% in Massachusetts, and 19% in Tennessee where a unique museum program is underway; even more importantly, 17% of project expenditures in New York State — whose project expenditures totaled \$15,113,000 — went to museums (7% to art museums, 5% to general museums, 3% to science museums, and 2% to history museums).

Sharp variations were also seen in the proportion of funds to cultural centers — the overall average of 6% rising to a plurality (39%) of project expenditures in Arkansas; to community councils — recipients of a plurality of funds in both West Virginia (29%) and Georgia (34%), in comparison with 5% of project expenditures overall; and to colleges and universities — recipients of 4% of project expenditures overall but higher pluralities in Nevada (25%), Idaho (32%), and Nebraska (42%).

The widest differences in distribution of project expenditures, however, occurred in the proportion of expenditures received by the state arts agency itself. The state arts agency was not a recipient of project expenditures in 11 states (Alabama, California, District of Columbia, Illinois, Kansas, Massachusetts, Nebraska, New Hampshire, New York, Pennsylvania, and the Virgin Islands). In contrast, a majority of project expenditures went to the state arts agency for its own projects in Arizona (51%), Hawaii (51%), Iowa (51%), Vermont (59%), Louisiana (62%), South Carolina (66%), Alaska (67%), Puerto Rico (68%), and Texas (73%).

The differences in the proportion of expenditures that is made to the agency itself is dependent upon the degree of agency-administered programs. Many state arts agencies undoubtedly see it necessary to undertake projects that are not otherwise being done privately or for which no other qualified organization exists. Thus, the state agencies may conduct their own touring programs or present arts events under their own auspices. For example, state arts agencies in such states as Alaska and Puerto Rice administer most of the projects in those states. Furthermore, such programs as artists-in-schools are generally run by the agency.

Observation:

The existence or non-existence of cultural resources within a state -- such as the lack of professional performing arts organizations, or science museums, or local councils -- will obviously be reflected in the distribution of project expenditures. This is reflected, for example, in the higher than average proportion of expenditures to non-professional performing arts organizations in North Dakota, where professional recipients are limited or non-existent.

It is such diversities among states that is more likely to affect the distribution of project expenditures than such common qualities as size of total operating budget. Thus although a higher than average 10% of expenditures of agencies in the lowest budget category of below \$250,000 went to non-professional performing arts groups — a result of the fact that those agencies are generally located in states with fewer professional resources — in all budget size groups performing arts organizations (including professional and non-professional) received a greater proportion of expenditures than any other type of recipient except the state arts agency itself.

153

It is important to note that, as mentioned previously, project expenditures of the New York State Council on the Arts accounted for 44% of total project expenditures of the 55 agencies. The distribution of project expenditures by the New York State Council naturally affects the overall distribution to a large degree, yet removing New York State from the total does not change the distribution of primary recipients significantly. The exceptions are that the proportion received by museums drops from 10% of the expenditures of all 55 agencies to only 4% of the project expenditures of the 54 excluding New York, while the proportion going to the state arts agency itself rises from 12% to 21%.

Sources of Funds for Expenditures to Primary, or Direct, Recipients

The distribution of project expenditures among the different types of recipients was not greatly affected by the sources of the funds for those expenditures, with a few exceptions.

Federal funds used for project expenditures were much more likely to be directed to the state arts agency itself than were state funds. Only 5% of the total state funds of \$23,181,000 used for project expenditures went to the state arts agency, compared with 24% of the funds for project expenditures derived from the National Endowment for the Arts (a total of \$10,088,000) and 92% of the funds derived from other federal sources (a total of \$295,000). A large portion of the project expenditures to the state arts agencies themselves derived from the Endowment are accounted for by grants for artists—in-schools programs that are administered by the agencies.

Coleges and universities also accounted for a higher proportion of Endowment funds (9%) than of state funds (2%). In contrast, the proportion of state funds directed toward museums was higher than that of federal funds, with 13% of state funds used for project expenditures going to museums compared with 3% of Endowment funds. This difference, however, is a direct result of the previously noted higher proportion of New York State project expenditures made to museums.

Secondary, or Indirect Recipients

Portions of funds that are granted directly to some types of recipients may ultimately find their way to important secondary recipients; often there are one or more such secondary recipients of project expenditures in addition to the primary recipients already described. For example, an expenditure to a concert series may ultimately be channeled to a performing arts group presented by that association, or a grant to a college may be channeled to an indiv dual to serve as an artist-in-residence.

In considering the proportions of expenditures received by secondary recipients it should be kept in mind that they are likely to be receiving only a portion of the funds in question, with the expenditures possibly shared with the primary recipient and/or other secondary recipients.

Not surprisingly, individual artists did figure much more prominently as secondary recipients of fiscal 1974 project expenditures than as primary recipients. Although among primary recipients professional artists accounted for only 1% of project expenditures and non-professional artists for less than 0.5%, professional artists were among the secondary recipients of 13% of project expenditures and non-professional artists among the secondary recipients

Project expenditures made directly to the state arts agencies themselves and to schools and to colleges are the most likely to be channeled to individual artists as secondary recipients (looking only at direct primary recipients that received at least \$1,000,000 project expenditures);

of 35% of the expenditures to the state arts agencies themselves, 22% of expenditures to schools and school

systems, and 20% of expenditures to colleges and universities. As will be seen later in this chapter, onequarter of the project expenditures made to the state
arts agencies were for artists-in-school projects, accounting for the relatively high proportion of individual artists and schools as secondary recipients.

Performing arts organizations were also among secondary recipients of a significant part of the project expenditures, with professional performing arts organizations among secondary recipients of 13% and non-professional performing organizations of 3% of project expenditures. Professional performing arts organizations were among secondary recipients of at least \$1.00 in every \$5.00 that went directly to non-associated foundations, cultural centers, colleges and miscellaneous other arts organizations:

-- Professional performing arts organizations were among the the secondary recipients of 49% of expenditures to foundations not a sociated with state arts agencies, 38% of expenditures to cultural centers, 33% of expenditures to colleges and universities, and 22% of expenditures to miscellaneous other arts and cultural organizations.

Colleges and universities and schools and school systems were also more likely than average to be secondary recipients of expenditures to the state arts agency itself, with schools being among the secondary recipients of 27% and colleges and universities among the secondary recipients of 14% of such expenditures.

Observation:

The very high 49% of expenditures directly to non-associated foundations that went to professional performing arts organizations as secondary recipients reflects to some extent the large number of such foundations, particularly in New York State, established to obtain support for dance companies, as will be seen also in the discussion of the distribution of expenditures by art form.

secondary, or indirect, recipients of project expenditures in fiscal 1974, by primary recipients \(\frac{1}{2} \) (Dollar amounts in thousands)

Distribution of Project Expenditures by Art Form

The dominance of the performing arts in project expenditures of the state arts agencies — which was indicated in the top ranking of performing arts organizations among recipients — is clearly seen when the expenditures are analyzed in terms of the specific art forms in which they were made. The performing arts accounted for half of the project expenditures in fiscal 1974, with 23% of expenditures made in music, 12% in theatre, 10% in dance and 5% in a combination of performing arts forms.

The amounts of the project expenditures made for each art form were:

- -- \$7,771,000 (23%) in <u>music</u>, with 13% in orchestral, chamber music, etc., 4% in opera, 1% in jazz, folk or ethnic, 1% in choral, less than 0.5% each in rock, popular and in other types of music, and 4% in combinations of forms within music.
- -- \$4,195,000 (12%) in theatre, with 12% in plays and musicals and less than 0.5% in other forms of theatre.
- -- \$3,547,000 (10%) in dance, with 3% in modern dance, 2% in ballet, less than 0.5% each in ethnic, folk, 'n mime, pantomime, and in other forms of dance, and 4% in /combinations of forms within dance.
- -- \$1,741,000 (5%) in combinations of the performing arts.
- -- \$4,909,000 (14%) in the visual arts, with 1% each in painting,

drawing, graphics, in crafts, and in sculpture, less than 0.5% in photography, 1% in other visual arts, and 10% in combinations of the visual arts.

- -- \$1,673,000 (5%) in <u>public media</u>, with 2% each in film and in television, and less than 0.5% each in video, in radio, in other forms of public media and in combinations of forms within public media.
- -- \$1,097,000 (3%) in <u>literature</u>, with 1% in poetry, less than 0.5% each in playwriting, in fiction, in translations and in other forms of literature, and 2% in combinations of forms of literature.
- -- \$962,000 (3%) in architecture and environmental arts.
- -- \$291,000 (1%) in folk arts.
- -- \$184,000 (1%) in multi-media.
- -- less than 0.5% in other art forms.
- -- \$6,042,000 (17%) in combinations of art forms.
- -- \$1,745,000 (5%) in the non-arts humanities field.

It should be remembered, however, that the dollar amounts expended are governed to a certain extent by financial needs; e.g., a visual arts or literature project may not cost as much as a musical project, museums may have more readily available support elsewhere, etc. Another important factor is the amount of funds requested in each art form. As will be seen later, the large majority of project expenditures is made for projects initiated by the

grantee who has requested the funds. The distribution of requests, therefore, will significantly affect the distribution by art form, as well as by recipient. Furthermore, the factors previously mentioned will also significantly affect the distribution by art form, such as restrictions or mandates, earmarking, the state's cultural resources, etc.

Observation:

Many project expenditures were made for a combination of art forms, with 5% of expenditures being spent for a combination of performing arts forms and 17% for a combination of art forms generally. It is impossible to determine at this level exactly which art forms are involved in these combinations. In the former instance, for example, a state arts agency may make a grant to a local civic concert organization to support the performances of a number of different types, such as theatre performances, ballet performances, musical recitals, etc. In the latter instance, a grant may be made to a community council, for example, whose programs encompass a wide range of performing and visual arts.

Distribution by Art Form by State

When the distribution of project expenditures by art form is viewed state by state, sharp differences are again apparent, with the emphasis on some art forms varying widely among individual states.

-- Music, in which a plurality of 23% of total project expenditures was made, accounted for only 8% of expenditures in Texas, 7% in Tennessee and 4% in Puerto Rico. In contrast, a majority of the expenditures were made in music in Missouri (77%), Pennsylvania (57%), Guam (52%) and Maryland (51%), and half (50%) of the expenditures in New Jersey.

- -- Theatre, in which 12% of total project expenditures was made, accounted for more than one-quarter of the expenditures in Kansas (30%), North Dakota (33%), and South Dakota (29%), a plurality of the expenditures in each of those states.
- -- Similarly, more than one-quarter of project expenditures

 were in dance -- which accounted for 10% of expenditures

 overall -- in Louisiana (a plurality of 28%, based on incomplete

 information), Virgin Islands (28%) and Wisconsin (a plurality of 43%):
- -- <u>Visual arts</u>, in which 14% of total project expenditures
 was made, accounted for more than one-third of expenditures in American Samoa (35%), pluralities of 36%
 in Puerto Rico, 37% in Tennessee and 39% in Wyoming,
 and 50% in Oregon expenditures, and a majority of 57% in Hawaii.
- -- More than 10% of expenditures was made in <u>public media</u> -- which accounted for 5% of expenditures overall -- in New Hampshire (12%) and South Carolina (13%).
- -- More than 10% of expenditures was made in <u>literature</u> -- which accounted for 3% overall -- in Delaware (11%), Utah (11%), Arizona (12%), North Carolina (12%), South Carolina (19%) and Wyoming (a much higher than average 22%).

As with the distribution of expenditures by recipient, the diversity among states in the proportion of expenditures in the various art forms resemble a result of circumstances in the individual states rather than a reflection of some common attribute. Looking at the distribution by art form by the total budgets of the agencies, for example, shows little change from budget size to budget size, except for a slightly higher percentage of expenditures in the visual arts in the smallest budget group, and a higher percentage in music in the highest group.

^{*}Without New York State

The project expenditures of the New York State Council on the Arts did not differ greatly in fiscal 1974 from the distribution by art form of all 55 agencies in total, so that removing New York from the calculations does not significantly change the overall distribution. For no single art form did the total without New York differ by more than three percentage points from the total of all 55 state arts agencies.

Distribution by Art Form of the Recipients

The art forms in which project expenditures were made naturally vary by the recipients of the expenditures. Not unexpectedly, for example, 85% of project expenditures to art museums in fiscal 1974 was in the visual arts and 94% of the expenditures to visual arts organizations other than museums. Correspondingly, 99% of expenditures made to professional performing arts organizations and of expenditures to non-professional performing arts organizations was in the performing arts.

Some interesting patterns do appear, however, in looking at the distribution of art forms by those primary recipients that received at least \$1,000,000 in project expenditures. Expenditures made to the state arts agency itself focused on the visual arts (23%), with a lower than average 5% in music and 4% in theatre. A relatively high 36% of expenditures to the state arts agency itself was in a combination of art forms. Similarly, half (50%) of project expenditures to local councils assisted a combination of art forms, i.e., the funds were for the support of a number of art forms.

One of the sharpest divergences from the overall distribution of project expenditures by art forms was seen in the foundations not associated with arts agencies. A majority (59%) of expenditures to these foundations was in dance, which accounted for only 10% of total project expenditures.

^{*}As noted earlier, many dance companies have formed foundations associated with them as a means of obtaining financial support, and thus in those cases the project expenditure may be made to the foundation rather than to the performing arts organization itself.

Sources of Funds for Expenditures in Art Forms

The distribution of project expenditures among the various art forms differed only slightly by the sources of the funds for those expenditures. Of the relatively small amount of funds (\$295,000) derived from federal sources other than the National Endowment for the Arts, a higher than average 25% was in literature, all of it in poetry.*

Similarly, of the \$989,000 derived from local government grants and private funds, a higher than average 14% went into architecture and the environmental arts.

Otherwise, however, there was no pattern evident in the distribution of funds by source among the art forms.

As noted in Chapter I, a large proportion of funds from federal sources other than the National Erdowment for the Arts was accounted for by Office of Education grants made through the St. Paul Council on the rts for the poetry program.

Types of Activity Assisted by Project Expenditures

In addition to determining the recipients of project expenditures and the art forms in which the expenditures were made, the survey asked the agencies to specify the activities assisted by the expenditures, i.e., the use to which the funds were put. The types of activity were spelled out to the agencies in a list of 29 activities drawn up in cooperation with the consultant directors and other experts.

Approximately \$3.00 in every \$10.00 of project expenditures in fiscal 1974 was primarily made for the program support of an institution or organization, by far the largest amount for a single type of activity. Another \$1.60 of each \$10.00 went for staff salary support, \$1.40 for basic or general operating support of an institution or organization, and \$1.20 for direct support of individual artists for specific services. The amounts of project expenditures by the primary activity for which they were made were:

- -- \$10,120,000 (29%) for program support of institution or organization.
- -- \$5,571,000 (16%) for staff salary support.
- -- \$4,876,000 (14%) for <u>basic</u> (or general operating) support of institution or organization.
- -- \$4,294,000 (12%) for direct support of individual artists

 for specific services, such as classroom teaching, park

 programs, etc.
- -- \$2,330,000 (7%) for touring, with \$1,532,000 (4%) for in-state touring, \$703,000 (2%) for touring from out of state into

- the state, and \$95,000 (less than 0.5%) from within the state to out of state.
- -- \$1,743,000 (5%) to artists-in-schools projects.
- -- \$902,000 (3%) to artists-in-residence projects.
- -- \$754,000 (2%) to miscellaneous education projects (scholar-ships, fellowships, lectures, courses, etc.).
- other information sources (\$478,000), commission by organization of visual arts creations (\$437,000), commission by organization of performing arts creations (\$312,000), conservation and preservation (\$310,000), audience development (\$304,000), improvement of the visual environment (\$281,000), community or neighborhood arts development (\$239,000), support of programming via the media (\$237,000), technical assistance (\$230,000), direct support of individual artists in pursuit of their art (\$218,000), and research (\$200,000).
- -- less than 0.5% each for experimentation within art forms

 (\$156,000), documentation (oral history, etc.) (\$130,000),

 literary publications (\$109,000), establishment of new

 cultural organizations (\$98,000), purchase by arts organ
 ization of visual arts objects (\$71,000), arts management

 training (\$43,000), communication/collaboration between

 sections of the cultural community (\$27,000), humanities

 projects (\$18,000) and miscellaneous other activities (\$65,000).

The "program support" category, for which a plurality of expenditures were made, is a somewhat all-encompassing type of activity; and the large proportion of expenditures made for this purpose indicates that state arts agencies tend to view project expenditures going more for general types of activities than for the specific uses listed. This could be interpreted as a leaning toward general rather than project support, an interpretation reinforced by the relatively high 16% of expenditures for staff salary support and 14% that actually did go for basic operating support.

The 13% of project expenditures made for direct support of individual artists (12% for services and 1% in pursuit of their work) is another indication that despite the small percentage of artists among primary recipients the states were making an effort to support the individual artists as secondary recipients. Furthermore, a substantial 8% of project expenditures are largely for individual artists, 5% through artists-in-schools projects and 3% in artists-in-residence projects.

The only other type of activity accounting for a major proportion of project expenditures was touring, with more than half of the 7% expended on touring being used for tours entirely within the state boundaries.

Types of Activity Assisted by Project Expenditures, by State

Some states describe a very large proportion of their project expenditures under the "program support" category; 75% of the fiscal 1974 project expenditures in Puerto Rico was characterized under this category, as was 79% in California, 90% in Utah, and all 100% in Alabama.

The proportion of funds going to some of the specific types of activities varied greatly among individual states. Staff salary support, for example, which was an activity assisted by 16% of total project expen-

ditures, accounted for none of the expenditures in 19 agencies, but rose as high as 30% each in New Mexico and New York. Even sharper differences were seen in project expenditures for basic support of institutions and organizations: 18 agencies made no project expenditures for basic support and another 26 spent less than \$1.00 in \$4.00 for this, but the proportion rose as high as 49% of expenditures for basic support of institutions and organizations in Missouri and 73% in North Dakota.

Touring was another activity for which the proportion expended differed sharply among states. Touring within the state, which accounted for only 4% of project expenditures overall, received at least \$1.00 in every \$4.00 in Kansas (27%), Wisconsin (28%), Indiana (41%) and Maryland (47%), indicating the movement of indigenous cultural resources throughout those states. In contrast, states with a lack of cultural resources were naturally more likely to bring in outside touring organizations or individuals, and touring from out of state into the state -- 2% of overall project expenditures -- accounted for 33% of the expenditures in Alaska and 25% in Guam.

In New York State, a high 26% of project expenditures was for direct support of individual artists for specific services; in this respect it should be remembered that individual artists were not primary recipients of any project expenditures of the New York agency. The entire 26% was subgranted.

As noted in Chapter I, in Hawaii 1% of the funds for the construction of state buildings is spent for art works, and these funds are reflected in the high 50% of project expenditures in Hawaii going for the commission of visual arts creations.

No major differences in the distribution of project expenditures by primary activity was seen by the size of the total budgets of agencies, except that a somewhat larger proportion (51%) of project expenditures of the larger budget agencies (\$750.000 and over in total expenditures), not including New York, were for program support, and a smaller proportion (5%) for touring.

Without New York.

Primary Activity by Art Form

by primary activity is seen within the art forms in which the expenditures were made. Higher proportions of the expenditures were made for basic support within the performing arts (music 23%, theatre 22%, and dance 14%)than in public media (9%), visual arts (5%), or literature (3%). Direct support of artists for specific services accounted for larger proportions of expenditures in the performing arts (17% each in music, theatre and dance), and in literature (16%), compared with only 4% in public media and the visual arts. A much higher than average 26% of expenditures in literature was for artists—in-schools projects, accounting for a plurality of such project expenditures. In other art forms, however, a plurality of expenditures were made for program support.

Primary Activity by Primary Recipient

As would be expected, the type of activity assisted differs with the recipient of the funds. For example, 48% of project expenditures made to art museums was for Staff salary support, compared with only 2% of expenditures to colleges and universities for such support. The channeling of funds to individuals through intermediary grantees is again evident here, with 18% of the expenditures made to professional performing arts organizations, 22% of the expenditures to foundations not associated with the state arts agencies, and 29% of the expenditures to miscellaneous arts and cultural organizations being made primarily for the direct support of individual artists for specific services.

. Artists-in-schools projects accounted for a plurality of 25% of project expenditures made to the state arts agencies themselves and 36% of funds to schools and school systems.

Primary Activity by Source of Funds

The primary activity for which a project expenditure was made differed significantly by source of funds. Only 6% of funds from the National Endowment for the Arts used for project expenditures was made for staff salary support, compared with 21% of state funds. Similarly 9% of Endowment funds went to basic support of organizations and institutions compared with 17% of state funds, and only 2% of Endowment funds was for the direct support of individual artists for specific services, compared with 17% of state funds.

Artists-in-schools projects, on the other hand, depended greatly on federal funds. Twelve percent of total Endowment funds — but 41% of funds from the Endowment other than basic state agency grants — used in project expenditures was for artists-in-schools projects, as was 44% of funds from other federal sources, but only 1% of state funds was for this type of activity.

Includes local government grants and private funds.

Secondary Activities

In addition to the <u>one</u> primary activity or use for which project expenditures were made, agencies were asked to indicate any secondary activities or uses that were also assisted by a project expenditure. As with secondary recipients, the proportion of project expenditures shown as being used for a secondary activity indicates only that these funds were expended in part for such a purpose; the secondary activity is only a supplemental use, and there may be multiple secondary activities for any project expenditure.

Among secondary activities, the general category of program support again ranked highest; however, some types of activities that ranked low on the primary activity list are among the higher secondary activities, particularly support of individual artists for services, educational projects, audience development, and community or neighborhood arts' development.

Initiation of Projects

The great majority of project expenditures made in fiscal 1974 was for projects initiated by grantees:

- -- 72% of expenditures was in response to grant requests
 submitted for grantee-initated projects.
- -- 9% was for projects that were a joint effort of the state arts agency and recipient.
- -- 8% was for projects offered by the state arts agency to recipient.
- -- 11% was for projects <u>initiated</u> and administered by the state arts agency.

^{*} Percentages add to more than 100 since multiple responses were possible.

^{**} Less than 0.5%.

At least half of project expenditures in 37 states was made for grantee-initiated projects, and in Alabama, the District of Columbia, and Pennsylvania, 100% of expenditures was for projects initiated by the grantee.

Expenditures for projects offered by the agencies to recipients accounted for relatively small proportions of funds in almost all states, rising to at least \$1.00 in \$4.00 only in Maine (25%), Puerto Rico (33%), Virgin Islands (34%), and Rhode Island (36%). Joint efforts, on the other hand, produced projects for which a substantial percentage of expenditures were made in a number of states: more than \$1.00 in \$4.00 supported projects that were joint efforts of the agency and recipient in 12 states, the proportion rising as high as 41% of expenditures in New Jersey, 42% in Tennessee, 45% in Michigan, and 48% in Maryland.

Sharp differences were also seen among states in the proportion of expenditures for agency initiated and administered projects. No expenditures were made for agency initiated and administered projects in 13 states, but at least half of the funds were for such projects in Alaska (50%), Louisiana (50% of incomplete project expenditures), Vermont (58%), South Carolina (61%), Puerto Rico (67%), Hawaii (69%), Texas (72%), and American Samoa (100%).

Location of Projects

The state arts agencies were also asked to indicate the type of location — urban, suburban, or rural — in which each project funded took place. Many of the projects covered more than one type of location; for example, a touring project might go to all three types of locations, an artists—in—schools project might be conducted in a school system located in two of the types, etc. This overlapping in locations is reflected in the fact that the distribution by types of location adds to more than 100%:

- -- \$30,196,000 (87%) was expended for projects in <u>urban</u> locations.
- -- \$15,507,000 (45%) went to projects in <u>suburban</u> areas.
- -- \$10,499,000 (30%) went to projects in <u>rural</u> areas.
- -- \$391,000 (1%) was expended for projects in other types of locations (prisons, islandwide, etc.).
- -- \$998,000 (3%) was for projects for which location was not applicable (certain research projects, publications, etc.).

The overlapping of locations is evident if the 87% of funds expended for urban projects is analyzed in terms of other locations in which projects receiving those funds also took place. Projects receiving almost half (46%) of the funds designated as going to urban locations also took place in suburban locations, and in addition some of these took place in towns and rural locations. Projects receiving 28% of the funds designated as going to urban locations also took place in town and rural locations.

The budget size of the agency did not significantly affect the location of projects for which expenditures were made. The proportion of

funds for projects that took place at least partially in urban locations ranging only from 73% and 72%, respectively, in the below \$250,000 and \$250,000-\$499,999 agencies to 83% and 81%, respectively, in the \$500,000-\$749,999 and \$750,000 and over agencies.

Previous Funding of Projects

Approximately \$2.00 in every \$3.00 in project expenditures in fiscal 1974 went to the continued funding of ongoing projects, with an additional 6% being made as the first expenditure in planned ongoing funding by the agencies:

- -- \$23,194,000 (67%) was expended for the <u>continued funding</u> of <u>ongoing projects</u>.
- -- \$4,734,000 (14%) was for the <u>anticipated one-time funding</u> of projects.
- -- \$4,396,000 (13%) was expended for pilot projects.
- -- \$2,109,000 (6%) was the <u>first expenditure</u> in planned ongoing funding of projects.

Observation:

Clearly patterns of distribution of project expenditures have been established and govern the granting of funds to a large extent.

Although ongoing funding accounted for the major part of expenditures overall, pilot projects or one-time funding accounted for a greater proportion of expenditures in some states.

- -- Pilot projects accounted for a plurality of 47% of funds in Florida and 48% in South Carolina, and a majority of 86% in Indiana.
- -- Anticipated one-time funding accounted for a plurality of 42% of expenditures in Massachusetts and majorities of 51% in Washington, 55% in Iowa, 56% in Mississippi, 57% in Oklahoma, 57% in Georgia, 62% in Delaware, and 87% in California.

A majority (64%) of the ongoing projects for which project expenditures in fiscal 1974 represented continued funding had been funded before that time for two to three years, and another 20% had been funded for four years:

. Table 86
NUMBER OF YEARS ONGOING PROJECTS HAD BEEN FUNDED

	$\frac{\texttt{Total agencies}}{\#}$

ditures were made in fiscal 1974 as part of continued funding	2570 %
	100
Anticipate further funding Do not anticipate further funding Not sure	76 4 20

Observation:

Since most state arts agencies have been in existence for much longer than 3 years, it is possible that the 3-year average period of continuing funding might indicate an unwillingness to be tied in to recipients on a support basis, similar to the pattern of private foundations. It is more likely, however, that as the funds available to the state arts agencies have increased, new projects have been added, as well as the initiation of new projects by previous recipients of expenditures

Audiences and Attendance

The data supplied by the state arts agencies on audiences and attendance at projects for which expenditures were made was in many cases limited, and information was not available for many project expenditures. On the basis of the data supplied, however, the state arts agencies indicated that 41% of the expenditures in fiscal 1974 was made for projects in which audiences were not involved (such as staff salary support, research, conservation, arts management training, etc.), while 51% of the expenditures went to projects that were primarily directed toward general audiences. Among special audiences, which may overlap each other as well as the general audiences, children and/or youths in school groups accounted for the largest propotion of expenditures:

- -- \$15,574,000 (51%) was expended for projects primarily directed toward general audiences.
- -- \$5,686,000 (16%) was for projects directed to children/youth
 in school groups.
- -- \$3,053,000 (9%) was for projects directed to children/youth outside of school groups.
- -- \$3,09,,000 (9%) was for projects directed to college/university students.

- -- \$2,981,000 (9%) was for projects directed to ethnic or racial minorities.
- -- \$2,286,000 (7%) was for projects directed to the <u>economically</u> <u>disadvantaged</u>.
- -- \$1,408,000 (4%) was for projects directed to the elderly.
- -- \$926,000 (3%) was for projects directed to the physically or mentally handicapped.
- -- \$364,000 (1%) was for miscellaneous other special audiences.
- -- \$14,069,000 (41%) was for projects in which no audience was involved.

Attendance figures were also limited in many cases. Furthermore, state arts agencies generally rely on project recipients for attendance figures, and these are likely to be estimates at best. Care should thus be taken in drawing any conclusions or making any interpretations of the significance of these data.

Attendance figures were reported for 3,600 projects that accounted for \$16,295,000, or 47% of the total expenditures. Attendance at these projects were reported at 57,101,000 people, or an average attendance of 15,900 per project — any one of which may have covered a number of performances, exhibitions, etc. — for those projects for which attendance was reported.

Agencies were also asked the number of artists and/or organizations that were involved in projects. The number of artists was reported for 2,554 projects, accounting for \$8,345,000, or 24% of total expenditures. A total of 52,765 artists were involved in these projects, or an average of 21 per project.

The number of organizations or institutions was reported for 6,298 projects, accounting for \$32,063,000, or 97% of total expenditures. A total of 13,526 organizations or institutions were involved in these projects, or an average of 2 per project.

Matching Funds

As noted in Chapter III, where matching funds are required, the requirements are likely to be either 100% or to vary with the project expenditures, and in some cases there are no matching requirements. In total, requirements for matching funds amounted to slightly less than half the project expenditures, but it is important to note that the actual amount of matching funds exceeded the total project expenditures:

- -- State arts agencies <u>required</u> a total of \$15,841,000* in matching funds, 46% of the total project expenditures of \$34,553,000.
- -- Actual matching funds totaled \$42,395,000, constituting 123% of the total project expenditures.
- -- 35% of actual matching funds came from earned income, 7% from National Endowment for the Arts funds, 1% from other federal funds, and 48% from other cash, with only 9% representing in-kind contributions.

In only a few states required matching funds amount to 100% of all project expenditures -- Alabama, District of Columbia, and Nebraska -- and in one, California, matching ds were 192%. However, the actual matching exceeded 100% in all but 11 states.

^{*}Data on matching funds were not obtained from American Samoa and Louisiana.

Cost of Projects

In reporting their project expenditures for fiscal 1974, state arts agencies were asked as a final question concerning these expenditures to report the total cost of the projects for which the expenditures were made. In those cases where the expenditure was made for the basic operating support of an institution or organization, the agency was asked to indicate the recipient's total operating budget.

Agencies did not always have available data on the total costs of project or total operating budgets. The incomplete information that was reported, however, indicates that on the average project expenditures by the state arts agencies amounted to slightly less than one-third of the costs of the projects for which they were made and that expenditures for basic support were approximately one-eighth of the operating budgets of the organizations receiving such support. However, because of the second-hand reporting of total costs of projects, care should be taken in drawing any conclusions from these data.

Observation:

It is clear that, although the state arts agencies supply valuable funding, the agencies' project expenditures do not constitute the main support of most projects — although certain projects such as audience outreach may be primarily dependent on this type of support — nor is the basic support provided by state arts agencies to institutions and organizations the primary component of operating budgets. Consultant directors have suggested, though, that future survival of the arts may lie in a support partnership between the private and public sectors, with the strong participation of government.

-197-

CHAPTER V

INTRASTATE AND INTERSTATE RELATIONSHIPS WITH OTHER AGENCIES AND ORGANIZATIONS

INTRASTATE AND INTERSTATE RELATIONSHIPS WITH OTHER AGENCIES AND ORGANIZATIONS

In addition to the state arts agency, other state agencies are likely to provide some type of support, directly or indirectly, to the arts. Any consideration of the state picture should take into account the activities of other agencies. Furthermore, that relationships between the state arts agencies and other agencies, organizations and groups within the state — as well as in other states and on a federal level — can strongly affect the arts agencies' program and activities.

The survey explored many aspects of these relationships, and this chapter presents the findings in these areas:

Intrastate

- <u>departments of education</u>: the support of the arts by education departments and commissions, and the relationship between state arts agencies and education departments, including any joint programs.
- other state agencies and departments: support for the arts that may be derived from other states agencies and departments, and cooperative relationships between the state arts agency and these other state agencies, including the provision of services, either free or paid, to the state arts agency by other agencies.
- community councils: the importance of community councils to the arts within the state, and the support provided by the state arts agency to the community councils.

Interstate

- regional programming: agencies' participation in regional programming, including involvement with agencies in other states and with regional organizations, and the perceived benefits of and developments expected in regional programming.

General

- <u>evaluation of relationships</u> with individuals, agencies and organizations on the local, state and federal levels.

Departments or Commissions of Education

Education and the arts have long been associated in the United States, and the most likely other state agency to be providing funds for the arts is the department(s) concerned with education. The study explored the known activities of these departments. However, it should be kept in mind that these data are based on the knowledge of the state arts agency directors only and were not derived from the education departments. Directors of 49 state arts agencies reported that, as far as they know, the departments or commissions of education in their state — covering all levels of education including higher education — do provide funds for the arts, with only 6 reporting no funds for the arts coming from the education departments.

A majority of those departments of education providing funds do so on all levels of education:

Types of Arts Activities of Education Departments

Funds for the arts from state education departments cover a very wide range of types of activities. When directors were asked in an open-end question the types of arts activities for which education department funds are provided, to the best of their knowledge, they volunteered many different types of specific activities as well as general areas of programming and means through which activities were funded:

Table 91

^{*}Volunteered responses to an open-end question.

It is evident, then, that at least two agencies in most states are to at least some degree active in support of the arts -- the state arts agency and the department(s) of education. However, their programs are not mutually exclusive, and in fact most of them do at least some work together, with almost all in direct contact and a majority conducting joint programs:

Table 92

^{*}Volunteered responses to an open-end question.

In addition to questions concerning their knowledge of the existence of support by the departments of education, the state arts agency directors were also asked an open-end question on which areas they feel the support
of the arts by education departments is most effective and which most lacking.
The directors ranked the artists-in-schools programs highest among those most
effective, and the level of funding as most lacking. The areas volunteered
in both categories by more than one director are shown in the following tables:

Evaluation of Relationship With Education Departments

The directors of the state arts agencies report generally good working relationships with the education departments. In rating these relationships only 3 directors felt the relationship was negative and 1 reported no relationship:

Table 96

RATING OF RELATIONSHIP WITH EDUCATION DEPARTMENTS

(Base: Agencies that report furds for the arts from state education departments)

	Total	Agencies %
Total	49	100
Very positive Somewhat positive Somewhat negative	19 26 3	39 53 6
Very negative No relationship (volunteered)	1	2

Directors of approximately two-thirds of agencies in states where education departments provide arts funding see trends and shifts in their relationships with those departments, and these directors generally tend to believe these trends will be in a positive direction:

^{*}Volunteered responses to an open-end question

between the agencies and education departments are good and getting better.

If the trends foreseen towards more cooperation and planning do come about, they will even improve. However, a full picture of the state arts agency relationship would require a survey of the education departments, including amount of funding going to the afts from the education departments.

Activities of Other State Agencies and Departments

In addition to the departments or commissions of education, other agencies and departments in many states provide support of some type to the arts and culture, and directors of 44 state arts agencies reported that they knew of at least one other agency or department that did provide support to the arts. Again, all information was collected only from the state arts agencies, and it was thus impossible to place any dollar amount on the arts support by other agencies.

NOT SOLE		

^{*}The lists of reasons for increase, decrease or remaining the same comprise volunteered responses to an open-end question.

In addition to other agencies providing support for the arts, directors of ten state arts agencies reported — in response to a question on funds, from other state agencies — that in fiscal 1974 the state arts agency had responsibility for planning or administering funds appropriated by the legislature to other state agencies, including the Bicentennial Commission, and such departments as economic development, conservation, public works, health and welfare and the state museum. The funds were appropriated — according to the directors — for such purposes as purchasing art work, salaries for personnel, circulating exhibitions, Bicentennial programs, institutional programs, visiting artists programs, architecture, special urban programs, international exchange of art exhibitions, and museum operations. During fiscal 1974, the directors of the 10 agencies report that the agencies administered an average amount of \$58,000 each that was appropriated to another agency.

In response to a question on future relationships with other agencies in the state, 26 directors believe that the situation will change during the coming three to five years in regard to their agencies having responsibility for the planning and/or administering of funds appropriated by the legislature to other agencies, while 28 foresee no change and 1 is not sure. The change, foreseen by the 26 directors include larger amounts of funds to be administered, planning assistance, consultation to other departments, joint planning, and responsibility for other departments, as well as various reorganizations of state government.

In a final line of questioning concerning interstate relationships with government agencies, the directors were asked whether any member of the agency's staff or of the council or commission sat in fiscal 1974 as a representative of the arts agency on the commission or advisory panel of another agency within the state, and vice yersa. A majority of the arts agencies had a representative on another agency's commission or panel, but less than one-third had such representatives on their own council or panels:

Table 102 REPRESENTATION TO AND FROM OTHER AGENCIES

_ '	• ,	Total A	gencies %	
<u>Total</u>		<u>55</u>	100	
Representative of arts agency sat on commission or panel of other agency in fiscal 1974 No representative to other agency	-tin	29 26	53 `47	•
Representative of another agency sits on council/commission or panel of state art agency	S	15	27	
No representative of another agency		40	73	

The agencies on whose commission or panels representatives of the state arts agency sat included the Bicentennial Commission (10 of the 29 agencies had a representative on the Bicentennial Commission), the Title III advisory council (9 agencies), the education department (5), the historical society or historical preservation board (3), parks and recreation (3), and such miscellaneous other agencies as tourism, corrections, highways, housing, etc. Agencies which had representatives on the arts agency's

^{1/}The federal elementary and secondary education act for innovative programs in education.

council/commission or advisory panels included the department of education (represented on 9 arts agencies' councils or panels), the legal department (2), the state historical society (2), the state university (2), and such other departments and offices as economic development, planning, parks, etc.

Services from Other State Agencies

In addition to the support of the arts by other state agencies, the state arts agency can benefit from the provision of services -- such as printing, legal or accounting services -- if these services are provided free. Thirty-two of the agencies received at least some such services without having to pay for them:

Table 103 WHETHER REQU \pm RED TO PAY FOR SERVICES PROVIDED BY OTHER STATE AGENCIES

	Total #	agencies %
Total	<u>55</u>	100

Required to pay for some services, not pay for others	. 17	. 31
Not required to pay for services of other state agencies	15	. 27
Receive no support services (volunteered)	2	4

The types of services that state arts agencies are required to pay for include printing, reproduction and photography (34 pay for such services from other state agencies), motor pools, transportation and car rentals (12), telephone WATS lines (10), accounting, auditing and book-keeping (8), office supplies (5), data processing (4), personnel services (3), insurance (3), mailing services (3), legal services (2), office machine repairs (2) and maintenance (2).

When asked whether the state provides <u>any</u> support services free of charge, even more agencies -- 43 -- reported that they did receive some services without payment. Fiscal services were most often mentioned (by 23 agencies), followed by legal services (22), advisory and consultative services (9), administrative and management services (7), printing (7), janitorial and maintenance (4), utilities and heating (4), data processing (4), personnel services (3), publicity and public information (2), office supplies and equipment (2), and insurance (2).

'A majority of state arts agencies pay rent -- either to the state or to a landlord -- but 14 do not have to pay rent on their facilities.

Interstate Relationships with Community Councils and Citizens' Groups

Parallel with the rise of the state arts agency movement throughout the United States has been the increasing formation of community arts councils. These councils -- which may be private or governmental -- generally serve neighborhoods, cities, counties or regions. The major programs and activities include coordinating and information services, grant-making, arts festivals, booking and sponsoring of exhibitions and performances, educational programs, and arts centers.

In only two of the states and territories included in the study—Guam and American Samoa — did directors report that there were no community arts councils; in most states, in contrast, community arts councils. are important to the arts, and, in fact, a majority of directors of state arts agencies believe community arts councils are very important:

Table 105
EVALUATION OF THE IMPORTANCE OF COMMUNITY ARTS COUNCILS

!		Total	Agencies
,		#	%
Total	١	<u>55</u>	100
Very important Somewhat important Only slightly important Not important at all Not applicable		30 17 5 1 2	54 31 9 2 4

The state arts agencies are largely active in serving this significant group, although only 5 state agencies are actually legislatively mandated to support community councils. Of five types of assistance about which the survey inquired, a majority of agencies reported for each that they provided such assistance. A funding relationship between the state arts agencies and community arts councils is almost universal with only 2 state agencies not providing project funding grants.

As noted in Chapter IV, 5% of all project expenditures in fiscal 1974 went to community councils. The provision of technical assistance is almost as idespread, only 5 of the agencies in states with councils not providing them technical assistance.

Table 106

Provide technical assistance to community councils	48	91
Assist in establishment of community councils	43	81
Provide basic operating support	32	60
Reimburse community councils for		
assistance in carrying out state projects.	31	 58

In addition, 5 agencies mentioned other types of assistance, including programming ideas, and cooperative programs, aid in applying for funds and developing information sources.

This relationship between the state arts agency and the community arts councils will become even closer, if the outlook of the directors is correct. Approximately 3 in every 4 directors feel that their relationship with community arts councils will change, and the changes foreseen in response to an open-end question are all positive:

^{*} Volunteered responses to an open-end question.

As noted above, some agency directors foresee the formation of statewide or regional associations for community arts councils, and already there is a trend in this direction. In fiscal 1974 there were seven such associations of community arts councils, according to the state arts agency directors, and in fiscal 1975 two more associations of community councils were created. The state arts agency assisted in the formation of each of these nine associations and participated in their activities.

In addition to questions about community councils and organizations of community councils, state arts agency directors were also asked about any group or groups of citizens that were organized primarily to advocate the arts in their states, and almost half of the directors — 26 — reported that such groups do exist. In some cases the directors mentioned the associations of community councils in this regard, while other types of groups were organized under such names as Artists for Economic Action, Citizens for the Arts, Committee for the Arts, Advocates for the Arts, Alliance for the Arts, Percent for Art and Allied Arts.

Interstate Relationships and Regional Programming

In the exploration of interstate relationships, directors were first asked about their provision of funds to agencies in other states, not including regional organizations. Only a minority of state arts agencies reported having ever given funds to a state arts agency in another state, or to a state agency other than a state arts agency in another state, to act on its behalf.

Table 109
WHETHER FUNDS WERE EVER GIVEN TO AGENCY IN ANOTHER STATE TO ACT ON BEHALF OF STATE ARTS AGENCY

Funds to an agency other than a state arts agency in another state Have been given Have never been given	•	7 48	13 87

The giving of funds to agencies in other states is a rare occurrence among state arts agencies, except in the Northeast region. A majority of state arts agencies in that region have given funds to another state arts agency to act on their behalf. The following table shows the number and percentage of state arts agencies that have given funds to agencies in other states, by region:

Table 110

	12	100	2	17	1	8	9	75
	13	100	1	8	3	23	9	69

Have Not Given

Observation:

Consultant directors from that region indicate that the fact that the New England Regional Committee is not a formal organization that can receive funds is the primary reason for the giving of funds directly to another state arts agency.

Regional programming, however, is far more widespread, and, in fact, a majority of state arts agencies are involved in some type of regional programming, with participation in regional organizations climbing over the past few years. Regional organizations in this context was defined as a regional organization of state arts agencies.

Participation in regional of zations in fiscal 1975	rgani-	34	62

^{*}Twenty-four agencies also reported that they participated in regional programming on an ad hoc basis in fiscal 1974, and of this number 9 were not participating in regional organizations.

The regional organizations and the number of agencies that reported participation in them in fiscal 1974 and fiscal 1975 were:

Table 112

Participation in regional organizations can, naturally, take a number of forms. Most often such participation implies funding on some level, and a majority of agencies participating in regional organizations did contribute funds in both fiscal 1974 and fiscal 1975:

^{*} Data based on information from survey and data from the National Endowment for the Arts.

Approximately half of the 21 agencies that were not participating in a regional organization in fiscal 1975 do have plans either to join or to form a regional organization, or to participate in an ad hoc regional project. Four agencies reported planning to join a regional organization and 6 others to participate in an ad hoc regional project. The organizations and projects mentioned are:

Table 114 - REGIONAL ORGANIZATIONS OR PROJECTS IN WHICH PARTICIPATION IS PLANNED

Regional programming is evidently increasing and state arts agency directors believe that it will continue to do so. A large majority feel that it will increase during the coming years, and no director believes that it will decrease.

Table 115

Will stay at the same level Is not getting off the ground Reaching financial limit Unique programming situation of agency	3 1 1 1	5 2 2 2
Not sure	<u>1</u>	2

^{*}Lists of reasons of increase or staying at same level comprise volunteered responses to an open-end question.

The belief that regional programming will increase is paralleled by a widespread belief that such programming is generally a benefit to the state. Only 5 directors of state arts agencies feel that regional programming does not benefit their state, while 45 feel that regional programming is beneficial; 4 were not sure and 1 believes that "it depends."

The reasons mentioned in response to an open-end question by those who feel regional programming is beneficial are similar to the reasons given for the foreseen increase, with the exception of the emphasis on the federal level:

^{*}Volunteered responses to open-end questions.

In the discussion of regional programming, state arts agency directors were finally asked in an open-end question what they would prefer to see happen in regional programming, and again many of the reasons for which they foresee an increase in such programming and, naturally, their views of its benefits are reflected in their desires.

· < -230-

The tables indicate that regional programming is a definite trend throughout the country. Most state arts agency directors feel that it is a positive trend, and one that is very beneficial to their state, but there is some indication that it is felt to be directed at them from the federal level. There is a strong recognition, however, that more and better programming at a more efficient cost is possible if the regional planning and execution is carried out well.

Evaluation of Relationships

In the study of intrastate and interstate relationships, directors were asked to rate their relationships with nine types of groups, agencies or individuals on a scale of very positive, somewhat positive, somewhat negative, or very negative. The list and ratings given them -- which, it should be remembered, only reflect directors' perceptions -- are shown in the following table.

Table 119

CHAPTER VI

MAN AGEMENT

MANAGEMENT

This chapter concerns the management of the state arts agencies, covering the following areas:

- position within the state government, i.e., the state arts agency's autonomy as a government agency or office.
- the council or commission, i.e., the governing board of the agency. A number of significant aspects of the council/commission are studied, including:
 - -- the composition and characteristics of members of the council/commission
 - -- the selection and terms of members of the council/
 - -- meetings of the council/commission and any of its committees
- the chairman of the council/commission, including the selection and term of office of the chairman, and the communications between the chairman and the state hierarchy. (It should be remembered, that all information was derived from the director, and not from the chairman.)
- the director of the agency (including persons who were serving as acting or interim directors at the time of the survey), including the selection of the director, the characteristics, experience and salaries of directors, activities in which directors engage, and the communications between the director and the state hierarchy.

The final section of the chapter focuses on the decision-making responsibilities of the agency among its management, the state government and the arts community.

Position within the State Government Structure

The position of the state arts agency within the state government structure -- i.e., its independence of other agencies or offices -- could affect the management and decision-making hierarchy of the agency. The greater autonomy an agency has, the greater freedom it possibly could enjoy developing and initiating programs and projects. Approximately half of the state arts agencies are set up as autonomous agencies of the state government and another one-fourth have autonomy as an agency although positioned within a larger agency or department.

Table 120
POSITION OF STATE ARTS AGENCY WITHIN THE STATE GOVERNMENT

•	Total #	Agencies %
Total Autonomous agency of state government	<u>55</u> 28	100 52
Autonomous agency within a larger agency or department	14.	25
Subordinate agency of a larger agency or department	3	5
Office in an agency or department that has purposes other than the arts	5	9
Part of the executive office of the governor	5	9

Being within another agency, department or office, however, does not necessarily mean that an agency is restricted in its activities. Indications are that there may be a trend toward umbrella agencies and departments, in which arts and culture occupy only one section; certainly recent reorganizational legislation in a number of states has been in this direction. As of the end of fiscal year 1974, though, a full majority of 42 of the state arts agencies were autonomous either on their own or within a larger agency. The management structure within the state arts agencies is considered below.

Councils and Commissions

All 55 state arts agencies have some type of council, commission or board. The size of these councils/commissions ranges from 104 in Louisiana to 7 each in Oregon and Puerto Rico. The membership of councils/commissions (not including American Samoa, for which data on councils/commissions were not obtained) totaled 887 at the time of survey, or an average of 16 members per council. (However, the Louisiana council is far larger than any other; the second largest membership after the 104 in Louisiana is 25 each in Connecticut and Delaware.) The median membership is 15, which is also the actual membership in 21 states.

In 14 states, however, there were vacancies on the council/commission at the close of fiscal 1974, the number of vacancies totaling 27. The number of members actually serving was 756 (excluding American Samoa and Louisiana), or an average of 14 per council/commission.

Composition of Councils/Commissions

A somewhat higher proportion of council/commission members are men than women. A large majority of members are white and are between the ages of 35 and 64. The male majority on councils/commissions is particularly high among agencies with expenditures of \$750,000 and above, where almost two in three council/commission members are men.

 $^{1/}_{\rm Does\ not\ include\ Louisiana}$.

Observation:

The male majority on councils/commissions reverses the population ratio; in the 1970 census 53% of adult Americans 21 years and older were women and only 47% men.

The proportion of white members, on the other hand, exactly matches the 89% of the adult population classified as white in the 1970 census.

Occupations of Council/Commission Members

Councils/commissions are to a very large extent populated by people whose professions are not in the arts. People whose occupations are in the arts and cultural fields accounted for only 1 in 5 members, including 15% who are artists, 14% who are on staffs of cultural organizations, 1% who are architects or urban planners, and the less than 0.5% each who are music or dance teachers or gallery owners. In some states — Florida, Hawaii, Minnesota, Missouri, Mississippi, Nobrasks and Tennessee — no members of the councils/commissions work in the arts and cultural areas.

Business people (22%), educators (16%), professional people (6%) and volunteers (18%) constitute a majority of councils/commissions, with an additional 8% identified as homemakers. Elected or appointed state officials accounted for only 3% of council/commission memberships overall, but at least 1 in 5 members were elected or appointed officials in California, the District of Columbia, Maryland and Pennsylvania.

The table indicates that generally boards represent a wide range of occupations that could bring expertise from many fields to the work of the agency. It should also be noted that members from occupations not in the arts and cultural fields may still have a great deal of arts expertise even though their professions are elsewhere.

Boards of Separate Associated Foundations

In addition to the councils/commissions, eleven states had boards of separate associated foundations in fiscal 1974. (The Massachusetts foundation was not fully operational at that time.) The total membership of the eleven boards was 126, and at the close of fiscal 1974, 5 vacancies existed, for a total of 121 board members, or an average of 11 members per board, serving at that time. The size of boards ranged from 25 in Michigan to 5 in Wyoming. (In all eleven states, there is at least some duplication among council/commission members and board members.)

Table 125

Observation:

The even larger proportion of business on the boards of associated foundations than on the councils/commissions is not unexpected, considering the thrust of most foundations toward such areas as fund-raising in the private sector rather than government funding and specific arts activities as in the agencies themselves.

Selection of Council/Commission Members

Directors of state arts agencies report that the governor of the state is influential in the selection of new members of the council or commission. Since the council or commission members are nominally chosen by the governor (or secretary of state) in all states except Vermont, where all members are elected by a membership body, this is not surprising. When directors were asked how much influence each of a list of twelve people or types of people has in selecting new members — on a scale of "a great deal," "some but not a great deal," "only a little," or "no influence at all" — more than 90% of the directors reported that the governor of the state has a great deal of influence, and in only 2 states did the governor have no influence at all. The list of twelve and the number of agencies reporting that each had a great deal of influence in selecting new members are shown in the following table:

Table 127
PEOPLE WITH A GREAT DEAL OF INFLUENCE
ON SELECTION OF NEW MEMBERS OF COUNCIL/COMMISSION

	Total	Agencies
,	#	%
Total	<u>55</u>	100 91

Individual artists The staff of the agency	3 2	5 4
Community councils	1	2
Elected local and municipal officials Other political leaders	1 7	13
Newspaper editor (volunteered) 31	1	2

Observation:

The directors' responses indicate that the arts community—with the exception of any members of that community serving on the current council/commission and the executive director of the agency — is influential in very few states in the selection of new council/commission members. Basically, the selection process is a political one, and this is reflected strongly in the reasons for which members are chosen.

From a list of nineteen possible reasons — drawn up by the National Research Center of the Arts in conjunction with consultant agency directors and representatives of the National Endowment for the Arts — with the opportunity given to add others, directors were asked which were the two or three most predominant as reasons for the selection of members of the council/commission, and which were the two or three that the directors feel should be most predominant in the selection of members of the council or commission. A political reason ranked highest in the former category, while arts—related reasons were selected most often in the latter.

Having political influence was high ranked among the two or three most predominant reasons in the selection of members, but was relatively low ranked among the reasons directors feel should be predominant; further-

more, being friends of officials or politicians was cited by the largest proportion of directors as one of the two or three most predominant reasons, but was selected by only one director as a reason that should be predominant. These differences indicate that the directors believe the councils/commissions are more politically-oriented than they should be.

In contrast, being expert in the administration of production of the arts == picked by 35 directors, more than for any other factors as one of those that should be predominant -- was actually one of the most predominant in only 11 councils/commissions. Successful, practicing artists are, however, high ranked among both the actual predominant reasons and those that should be predominant.

Observation:

Despite the low proportions of directors selecting politically—associated reasons as among those that should be predominant, consultant directors have pointed out that the political influence of the council/commission can be an important factor in the successful operations of a state arts agency. The responses indicate, and the consultant directors confirmed, that the general desire is for a board with a balance of business, political and arts members.

Significant variations in reasons for the selection of council/
commission members can be seen when the state arts agencies are considered
in terms of regional subgroupings. Council/commission members in the Northeast are, according to the directors, much more likely to be chosen for
arts-related reasons -- such as being artists, arts educators, are experts
in the administration of the arts -- than those in any other part of the
country. Only 20% of agency directors nationally reported that expertise

in arts administration -- highest ranked among reasons that should be predominant in selection -- actually was predominant, but a majority of those in the Northeast reported arts expertise as a predominant reason for the selection of members in fiscal 1974, and in fact this was highest ranked as an actual reason for selection in that area. In contrast, only 6% of the directors of agencies in the South reported that council/commission members had been chosen for their arts administration expertise, while 53% noted that being friends of officials or politicans, and an equal 53% that having political influence, as a reason for selection.

Practicing artists are more likely to be picked for councils/commissions in the West, where 62% of agency directors said being a successful practicing artist was a predominant reason, compared with 44% in the Northeast and only 18% and 17% respectively in the South and North Central regions.

Not only are political reasons important in the selection of council/commission members now, but some directors see even more of a trend in that direction. When asked whether they foresee any trends or shifts in the reasons for which council or commission members might be selected during the coming three to five years, 28 directors said they do foresee trends or shifts, with 24 feeling no trends or shifts will

take place and 3 not sure. Becoming more political was the most mentioned trend in response to an open-end question on which trends were expected.

^{*}Volunteered responses to an open-end question.

Observation:

Except for the 11 directors who feel that the selection of members will be more politically oriented, there is little consensus on any movement in this area, and the directors' volunteered responses indicate that it is unlikely that any major change will occur in the bases on which council/commission members are selected.

Terms of Service of Council/Commission Members

Once a commission member is selected, it is likely that he or she will serve for many years. In more than half of the agencies the term of service is at least four years. (Most councils/commissions have staggered terms of service.)

Table 132
TERMS OF SERVICE OF COUNCIL/COMMISSION MEMBERS

	₽.	
•	Total Ag	gencies %
Total	<u>55</u> °	100
Specified terms 1 year 2 years 3 years 4 years More than 4 years	54 2 24 15	98 4 43 27 24
No specified terms	<u>1</u> ,	2
Members' terms are staggered All terms end at same time	48 7	87 13

Furthermore, on more than three in four councils/commissions members may serve two or more terms consecutively, while on the remaining councils/commissions two or more non-consecutive terms are possible. And, in practice, members of most councils/commissions do serve at least a few terms.

Table 133

NUMBER OF TERMS ELIGIBLE TO SERVE

AND NUMBER OF TERMS MOST COUNCIL/COMMISSION MEMBERS DO SERVE

_		,	
•		Total_	Agencies

Eligible to serve Two or more terms consecutively Two or more terms non-consecutively Only one term		43 12 -	78 22 -
Length actually served by most members One term Few terms As long as wish or able Not in operation long enough to tell It varies (volunteered)	r	15 29 8 2 1	27 52 15 4 2

The likelihood of council/commission members serving at least a few terms is reflected in the fact that a majority of the members serving at the close of fiscal 1974 had been on the council/commission at least three years, and almost one in five had served six years or more. (Most agencies themselves were established in the mid-1960's.)

When asked in an open-end question what change, if any, they would like to see in terms of service of the council/commission members, more than two in five directors expressed satisfaction with the current procedures; however, one in five would prefer a greater turnover of members. Many of the answers to this question hark back to the questions on reasons for the selection of members rather than pertain to terms of service, and they reflect the fact already discussed that members tend to be selected for rea-other than those the directors feel should be the basis of selection.

^{*}Volunteered responses to an open-end question.

Meetings of the Council/Commission and Its Committees

One indication of the activity of the council/commission in the programs and policies of the agency is the number of meetings held both of the full council/commission and of its committees. Just under half the councils/commissions are not mandated to meet a specified number of times

and only one in ten are mandated to meet more than four times a year, but a majority do meet that often. The average frequency of meeting of at least once every other month indicates that the councils/commissions are relatively active, certainly more active than state laws require.

It is not unreasonable to conclude that the greater the total expenditures of an agency, the more work there may be for a council/commission, and it is true that the average number of meetings during fiscal 1974 rose steadily with an increase in total expenditures.

Table 138

In all a total of 127 committees were reported by the state arts agencies. A majority of these committees function primarily in the area of policy, or of a combination of policy and grant review.

Table 142

Heetings of Council/Commission and Its Committees in Public Sessions

Public sessions of council/commission meetings are much more the rule than the exception. Most councils/commissions are required to have them, and the number in that group is rising. Even among those not so required, most do have them.

Table 144

Required to meet in public session for some meetings		8	15	8	15
Not required to meet in public session at all	ı	15	27	11	20

Of the 8 councils/commissions that were required to meet in public sessions for some meetings, the meetings included such types as those related to personnel, security, real estate and, for 1 council, grants. One council/commission must meet publicly only once a year.

Of the 11 councils/commissions not required to meet in public session at all in fiscal 1975, 8 nevertheless do meet publicly at least for some of their sessions.

Observation:

So-called "sunshine laws" have been enacted in a number of states during recent years that require greater public disclosure of governmental transactions, meetings, etc. These relate to many types of state agencies, of course, in addition to the arts agency, but as a result state arts councils/commissions are increasingly required to conduct their meetings in public.

Smaller committee meetings are, not surprisingly, far less likely to be subject to requirements pertaining to public sessions, with fewer than one-third of those councils/commissions with such committees subject to requirements for public sessions of all committee meetings.

Of the 20 agencies in which committee meetings are not required to be public at all, 9 report that at least some committee meetings actually are held in public sessions.

Compensation to Members for Attendance at Meetings

In the discussion of meetings of the councils/commissions and their committees, the type of compensation, if any, made to members was explored. Although honoraria are relatively rare, in 80% of the agencies members are at least reimbursed for their expenses, while in 16% they receive neither reimbursement nor an honorarium.

Table 146

Members receive neither reimbursement nor honorarium	9	16
Flexible policy	1	2
		•

It is reasonable to conclude that unless members are at the very least reimbursed for their expenses in attending meetings, membership on councils/commissions will be much more likely to be restricted to an upper income level that can afford the costs involved in attendance. On the other hand, agencies with limited funds may find it difficult to provide reimbursement, particularly with the relatively frequent occurrence of meetings.

The expenditures of an agency are related to the compensation policy; the lower the total expenditures, the more likely that no compensation will be made most probably because funds are not available for this purpose in those agencies:

Chairman of the Council/Commission

In all state arts agencies the council or commission is headed by a chairman; in 29 agencies the chairmanship is an appointive position, and in the remaining 26 agencies the chairman is elected. In response to a question on who is most likely to suggest a person for chairman or to initiate the selection process, directors reported that suggestions for persons to serve as chairman are most likely to come from the council or commission itself; the governor was also cited as a source of suggestions or the initiator of the selection process in more than 2 in 5 states, and the executive director in one agency in four.

The high proportion of agencies in which the chairman does meet personally with the governor and legislature is an indication that the opportunity for personal presentations of the needs of the agencies does exist widely. The existence of this personal bridge to the executive and legislative branches is likely to some extent a reflection of the fact that in a majority of states the chairman is selected by the governor and is therefore probably personally known to the governor. In the 6 states in which the chairman does not meet with the governor, the primary reasons given why this is so were that the governor does not wish to or is not interested (in 3 states), the chairman is not involved with the governor (2 states), and the chairman does not know the governor (1 state).

Directors of State Arts Agencies

Almost all state arts agencies have the position of a paid director, usually called the executive director. Only 2 states do not have a paid director; in one the position of director is unpaid and in the other (American Samoa) there is no position of director, with the chairman -- a member of the governor's staff -- handling all administrative matters. The director is largely chosen by the council or commission, but in one in five states the governor selects the director.

Age of director 25 - 34 years 35 - 44 years 45 - 54 years 55 and over Median age: 41.2 years	16 17 17 4	30 31 31 8
Education of director High school graduate College graduate Additional higher education Master's degree Doctor's degree	1 17 10 23 3	2 31 19 42 6

Undergraduate degrees were earned by directors in a wide variety of fields, including such subjects as political science, history, 'ication, psychology and business administration, as well as more arts-oriented subjects such as architecture, music and theatre. Master's degrees, however, were more likely to be arts-oriented. especially in the areas of literature, arts administration, visual arts and music.

Arts administration is a relatively new field of study for advanced degrees, but 4 directors did report having received a master's degree in arts administration.

Moreover, a majority of agency directors have taken arts management courses, and 2 in 3 had arts management experience before working with a state arts agency, with approximately the same proportion having non-arts management experience. All told, more than 9 in 10 directors have some type of management experience or education.

Table 158
ARTS AND NON-ARTS MANAGEMENT EXPERIENCE
(Base: Agencies with director)

	Total A	gencies %
Total agencies with directors	54	100

Director has taken arts management courses, seminars or workshops	28	52
Director had previous arts management experience	36	67
Director had previous non-arts management experience	35	65

The previous arts management experience was primarily as a manager or director of an arts organization, with agency directors also reporting that they had been active in arts education, gallery work and as a council member. Non-arts management experience centered on education, municipal, social and recreational agencies, communications and non-profit organizations.

The length of experience within state arts agencies ranges from 5 directors with less than one year's experience to 2 with more than ten years' experience, a majority having five years' or more experience. The length of time in the current position of director, however, was more limited, with a majority being in the job three years or less.

9 - 10 years	6	11
Median number of years: 2.5		

State arts agency directors are generally a highly experienced group, with both arts and non-arts management backgrounds. Considering the relatively recent history of state arts agencies, their experience in such agencies is on the average not inconsiderable. However, 1 in 3 directors in the job one year or less indicates a high rate of turnover.

Almost 1 in 5 state arts agency directors are paid a salary of less than \$15,000 a year, with less than 1 in 5 receiving a salary of \$25,000 or over.

Table 161
SALARY OF DIRECTOR
(Base: Agencies with director)

	Total Agencies %	
Total agencies with directors	<u>54</u>	<u>100</u>
\$10,000-14,999 \$15,000-19,999 \$20,000-24,999 \$25,000-29,999 \$30,000 and over	10 21 13 7 2	19 39 24 13 4
Median salary: \$18,900		
Non-paid	1	2

The funds for the salaries of paid directors — all of whom are full-time — are derived from the regular agency budgets in all cases except one, where funds come from a combination of the regular agency budget and an associated foundation. In only 14 agencies — or 26% of those with directors — is the director's position a civil service or merit system job, and in only 5 — 9% of those with directors — was the director required to pass an examination in order to assume the position.

The salaries of directors tend to increase with the size of the agency's budget, a not unexpected rise, in light of the greater responsibilities and administrative duties likely to accompany increase expenditures.

Table 162

Activities of Directors

When asked in an open-end question what they felt should be the major functions of their jobs, i.e., the most important of their responsibilities, directors were most likely to cite work with the council/commission and administration of the agency:

Table 163

were asked how much time they spend -- on a scale of "a great deal of time," "some time," "only a little time," and "do not do" -- on each of a list of 18 specific activities that directors may be involved in. (The list was drawn by The National Research Center of the Arts, in cooperation with consultant directors and the National Endowment for the Arts.) Ranking the 18 activities according to the proportion of directors who spend a great deal of time on them, general administrative activities rank highest, with a majority of directors noting that they also spend a great deal of time in liaison with the council/commission, program and budget preparation,

communication with the arts community and representing the agency. The 18 activities, and the number and percentage of directors who do them a great deal, are shown in the following table:

The grouping of activities on the tables into administrative tasks, liaison with the arts and cultural community, liaison with state and federal groups, and miscellaneous other activities indicates that although administrative tasks occupy a great deal of time among the largest proportions of directors, working with the arts community is a major activity of directors, as is work with the state public and private hierarchy.

When asked what other activities they were involved in, in addition to the 18 listed, directors cited such activities as contemplating programs (8 directors), regional arts activities (5), office work (5), coordinating advisory panels (4), serving on a National Endowment for the Arts panel (4), serving on an arts education task force (4), Alliance for Art Education (4), and such miscellaneous activities as those concerned with Bicentennial commissions, cultural centers, the National Assembly of State Arts Agencies, etc.

A slight majority of directors feel that the amount of time spent on different types of activities will change in the near future, with the most likely changes volunteered by directors being in increased time on long-range planning, liaison with the legislature, and budget and fund raising activities.

The director, like the chairman, plays an important role as a representative of the state arts agency to the state government. Although in Table 164 only 17 directors reported spending a great deal of time communicating with the legislature, governor and other state officials, a majority of directors do meet personally with the governor, members of the governor's staff, and/or members of the legislature.

^{*} List of changes comprises volunteered responses to an open-end question.

Of the 11 directors who do not meet with the governor, 8 reported that such meetings were not their responsibility but were someone else's job, 1 that members of the council/commission have more influence with the governor, 1 that it was not necessary, and 1 that the governor is not interested.

Although chairmen are somewhat more likely to meet with governors, directors who do meet with governors do so more frequently than chairmen; directors are also more likely to have personal contact with the governor's staff and members of the legislature:

^{*} List o. trends comprises volunteered answers to an open-end question.

In the inquiry into the relationship between the director and the state hierarchy, the directors were asked what other government officials, either administrative or legislative, are most critical, by nature of the office they hold, to the programs and activities of the agency; key budget people in both the legislative and executive branches were mentioned by almost half the directors.

 $^{^{\}star}$ Volunteered answers to an open-end question.

The survey investigated the grant-making authorities of the chairman and of the executive director -- as well as of combinations of persons in the agency -- and the involvement in and final responsibility for decisions by the chairman, the director and key persons within and without the agency.

In fiscal 1974 less than 1 in 5 chairmen had discretionary power — that is, with the approval of no one else — to make a grant to an individual or organization requesting funds, but 2 in 5 directors or other staff members did have such discretionary powers. Among those chairmen and directors who had discretionary grant-making powers, the median amount of an individual grant was the same, but the annual limit was higher for directors.

Table 176

No discretionary power	46	83	32	<u>59</u>		

Interestingly, a larger proportion of chairmen of agencies in the lowest total expenditures group had discretionary grant-making powers, while a smaller proportion of directors of these agencies had such powers:

In addition to discretionary powers to make grants in general, the survey also explored the authority of the exeutive director or other staff to make discretionary grants within the agency's broad program areas approved by the council/commission, and in a bare majority of agencies the executive director or other staff did have the discretionary power in fiscal 1974 to fund individuals or organizations for services in the fulfillment of the agencies' programs.

Decision-making Powers

In probing further into decision-making powers, the survey broadened its invetigation to include — in addition to the chairman and the director — the governor, the legislature, the council/commission members, committees of the council/commission, staff members other than the director, panels of experts, other advisors or consultants, and the state budget or finance office, with opportunities provided for the citing of other persons. Six types of deliberations were listed, and for each the director was asked which of the persons or groups were involved in various stages of deliberations and who has the final responsibility for making decisions of that type. The types of deliberations were: overall policy and long-range planning; budget; formulation of guidelines and program planning grants or project funding; follow-up evaluation; and administrative matters.

1. Overall policy and long-range planning. The council/commission members and the executive director are each involved in stages of deliberations concerning policy and long-range planning in more than 9 in 10 agencies, and the chairman and other staff members in a majority of agencies. Final responsibility for decisions in this area lies largely with the council/commission members, but the chairman at least shares this responsibility in 1 in 3 agencies and the executive director in approximately 3 in 10.

6. Administrative matters. As noted in the discussion of the director's functions, administration of the agency is the most important of these functions, and this is reflected in the fact that in 95% of agencies the director is involved in deliberations on administrative matters (it should be remembered that in 1 agency there is no director), and in 3 out of 4 the director has final responsibility for decisions in this area.

After a decision has been reached it can, in some states, be vetoed by officials or agencies outside the state arts agency. In 2 in 5 states outside officials have this power, with the governor most often being able to veto decisions.

^{*}List of officials comprises volunteered answers to an open-end question.

The members of the council/commission bear primary responsibilities for decisions concerning policy and long-range planning, guidelines and program planning, and grants or porject funding, and are second only to the legislature in the area of budget. Executive directors, however, are involved in decision-making in all areas in a strong majority of the

agencies, and the director and staff have the major responsibility for evaluation and administrative matters. Furthermore, consultant directors indicate that decisions made by the council/commission are often an adoption of positions prepared by the director and staff.

Observation:

The respective roles of the chairman and executive director seem to have not been clearly defined in a number of areas; indications are that their responsibilities may develop into those of a chief executive and chief operating officer, respectively, more clearly than at the present time.

CHAPTER VII

MAN POWER

MANPOWER

This chapter focuses on the manpower available to state arts agencies to effect their programs and other activities. The manpower comprises paid staff, outside advisors, and volunteers:

- paid staff: the basic personnel of the agency, including the director. The analysis of paid staff covers:
 - -- number and type of personnel, such as full-time or part-time, executive-professional or clerical, etc.
 - -- characteristics of personnel, i.e., sex and racial/
 - -- salaries of staff
 - -- staffs of associated foundation, if any
 - -- organization of staff, by function or art form
 - -- adequacy of staff, in terms of number and of experience and training
 - -- adequacy of staff, in terms of salary, and comparison of salaries with other state agencies
 - -- payment of staff in whole or in part by funds from the National Endowment for the Arts
 - outside advisors or consultants, including the existence
 of panels and the types of panels
 - volunteers and their use by state arts agencies

Number of Paid Staff

The 55 state arts agencies were staffed by a total of 483 personnel at the close of fiscal 1974 -- including the director as well as consultants and contract personnel serving in a staff capacity -- or an average of 9 paid staff per agency. The size of paid staff, however, varied widely -- from none in American Samoa in fiscal 1974, 1 in Guam and 2 in Nevada, North Dakota and Wyoming, to 29 each in Michigan and Puerto Rico, 30 in Tennessee and 82 in New York.

TOTAL	483	418	<u>65</u>

The size of an agency's staff is naturally related to the agency's expenditures, those agencies with greater expenditures logically requiring a larger staff. This is seen clearly in the sharp increase in the average number of paid personnal by budget category:

Table 189
AVERAGE NUMBER OF PAID STAFF AT CLOSE OF FISCAL 1974,
BY TOTAL EXPENDITURES

• .		Expenditures						
	Total Agencies	Below \$250,000	\$250,000- \$499,999	\$500,000- \$749,999	\$750,000 and Above			
•	#	#	#	#	#			
Average staff	. 9	3	6	. 12	20			
	_	1	•					

Another significant factor affecting staff size is the administration by the agency of its own programs, such as agency-administered touring programs, museums, etc. For example, Tennessee and Puerto Rico have a large number of agency-administered programs, requiring larger numbers of staff members generally to conduct these programs.

Type of Personnel

Of the total 483 staff members, 87% were full-time and 13% were part-time. Again, the size of an agency's expenditures was a significant factor, with part-time personnel constituting 30% of total staff in agencies in the under \$250,000 expenditure group compared with only 7% of those with expenditures of \$750,000 and above.

^{*}Full-time was defined as a minimum of 35 hours a week on a regular basis, part-time as fewer than 35 hours a week on a regular basis or any number of hours for only a part of the year.

Approximately two in three (65%) staff members were classified by the agencies as executive or professional personnel and the remaining 35% as clerical personnel. Thirty-four percent of total paid staff were civil service employees, 20% were contract personnal and 46% neither civil service nor contract. Only a minimal number of paid staff (8%) were union members, with no union members on the staff of agencies with expenditures below \$250,000 and only 1% in the \$250,000-499,999 group, but 6% of staffs of agencies in the \$500,000-749,999 group and 15% of those with expenditures of \$750,000 and above.

nor contract	46	47
Union members	' 6	12
Non-union members	· 94	88

Characteristics of Paid Staff

Three out of every five paid staff members of state arts agencies are women. However, a majority (57%) of the executive-professional staff are men; in contrast, only 10% of the clerical staff are men.

The 83% of paid personnel who are white does not vary greatly by executive-professional vs. clerical classifications or full-time/part-time status, rising only to 84% of executive-professional staff and dropping to 79% of clerical staff. The proportion of black staff members, however, is somewhat higher among clerical staff (12%) than executive-professional (7%).

*Less than 0.5%

Observation:

Although women constitute a majority of agencies' staffs, they are likely to occupy lesser positions than men, and this is reflected, as will be seen in the following section, in lower salaries paid them.

The 83% of paid staff who are white is actually below the proportion of whites among the population. In the 1970 census, 89% of the adult population 21 years and over were classified as white.

Salaries of Paid Staff

One in three (33%) staff members of state arts agencies received salaries of less than \$7,500 at the close of fiscal 1974, and the median salary paid was \$9,700. Excluding part-time workers, the median was a somewhat higher \$10,500 for full-time staff, but still more than one in four (28%) were earning less than \$7,500.

Executive-professional personnel earned a median \$12,100, while clerical personnel were paid a median \$6,600.

Table 193
SALARIES OF PAID STAFF
(Base: Paid staff at close of fiscal 1974)

9			=			
	•		Executive-			, , m.
•		Total (483)	Professional (314)	(169)	(418)	(65)
	•	\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	%	%	%	%.
*		100	100	100	100	100

\$15,000-17,499		8	12		. 9	-
\$17,500-19,999		4	6	, -	. 4	
\$20,000-24,999		4	5	-	4	-
\$25,000 and over	-	2	- 3	•	. 2	
Median salary		\$9,700	\$12,100	\$6,600	\$10,500	\$3,700

The \$10,500 median salary paid to full-time staff members rose to \$14,000 for male staff and dropped to only \$8,400 for female staff.

This sharp difference is explained in part by the much greater likelihood of women being in clerical positions. However, even among executive-professional personnel only, women were paid a lower median \$10,000 compared with \$13,800 for men:

Table 194

MEDIAN SALARY OF MEN AND WOMEN

.(Base: Paid staff at close of fiscal 1974)

	Men \$	Women \$
Total [°]	13,400	7,800
Executive-professional Clerical	13,800 7,100	10,000 6,600
Full-time . Part-time &	14,000 5,000	8,400 3,300
	•	

Observation:

The difference in median salaries between men and women is not a result of women in professional-executive positions being concentrated in smaller budget agencies, as might be conjectured. More than half the professional-executive women are in agencies with expenditures of \$500,000 and over. However, women may be occupying lower level positions, although still within the executive-professional group, than male staff.

Staffs of Associated Foundations

The separate foundations associated with eleven state arts agencies had paid staffs totaling only 17 at the close of fiscal 1974 (apart from the paid staff of the agencies themselves). Two of the states, Colorado and Nebraska, had no separate personnel for the associated foundation, and in only three states did the foundation's staff exceed one person -- Michigan (2), Connecticut (4) and New York (5).

^{*}The foundation associated with the Massachusetts agency was not fully operative in fiscal 1974 and did not have paid staff.

Twelve of the 17 foundation personnel, or 71%, were in executiveprofessional positions, and the ratio of men to women was a close 9 men to
8 women.

Table 195 / NUMBER OF PAID STAFF OF SEPARATE ASSOCIATED FOUNDATIONS AT CLOSE OF FISCAL 1974

Organization of Staff of State Arts Agencies

The professional staff of the state arts agencies is most likely to be organized by function. When asked in an open-end question whether the organization or structure of the professional staff was by function (such as touring, technical assistance, etc.), by art form (such as music, etc.), or by some other division, 60% of the agencies reported functional organization, compared with only 7% organized by art form.

Table 197
ORGANIZATION OF PROFESSIONAL STAFF APART FROM DIRECTOR * >

	Total	Agencies %.
<u>Total</u>	<u>55</u>	<u>100</u>
By function By art form/discipline By program By target audiences of population groups	33 4 1 1	. 60 7 2 2
By art form and function By administration and program By program and discipline	4 2 1	, 7 , 4 2
Small staff, jobs overlap No other staff	6 3	11 5

Observation:

Professional staff of state arts agencies usually work more as administrative generalists in such areas as artists—in—schools, grants, public information, touring, etc., rather than as specialists in a particular discipline, regardless of what might be their special interests or background. Within many of the functional areas, of course, divisions by art form could be made, but few agencies have anywhere near the number of staff for such division of responsibilities. And, in fact, in most agencies the size of the staff is felt to be inadequate, as discussed below.

Adequacy of Staff

When asked whether the paid staff of the agency at the time of the survey was adequate in terms of current activities and responsibilities, in more than 4 in 5 agencies the staff was not considered to be adequate.

^{*} Volunteered answers to an open-end question.

Civil Service/merit Systems

In almost 2 in 3 agencies at least some staff members other than the director are under the state's civil service or merit system, with clerks, secretaries and administrative assistants most likely to be under such a system:

 $[\]star$ Volunteered answers to an open-end question.

Table 200
WHETHER STAFF MEMBERS OTHER THAN DIRECTOR
ARE UNDER STATE CIVIL SERVICE OR MERIT SYSTEM

Some positions must be filled in system's order	3	5
(Secretarial/clerical)	(2)	(3)
(Administrative)	(1)	(2)
No positions must be filled in system's order	9,	16,

Paralleling the high proportion of agencies with staff under state civil service or merit systems is the 83% of agencies in which at least some staff salaries are set by the state. For those positions for which the salaries are not set by the state, the council/commission most often has the power to establish salary levels:

Table 202 WHETHER SALARIES OF STAFF OTHER THAN DIRECTORS ARE SET BY THE STATE

	Total	Agencies · %
<u>Total</u>	<u>55</u>	<u>100</u> ,
All salaries are set by the state	38	68
Some salaries are set by the state and some not set by state No salaries set by state No other staff	8 7 2	15 13 4

However, despite the fact that 52% of agencies report salaries on a par with other state agencies, a higher 74% feel that current salary levels are not adequate to attract or keep needed personnel:

^{*}Volunteered answers to an open-end question.

Observation:

State arts agencies see salary levels as a problem in terms of recruiting and retaining qualified staff; nevertheless, they largely share this problem with other state agencies, since a majority report salaries on a par with these agencies. Raising salary levels is difficult in view of the limited funds available to the agencies as well as because of the fact that in most agencies authority for setting salaries is outside the agency itself. The next chapter indicates that higher salaries would be a priority if increased funds were available.

Salary Support from the National Endowment for the Arts

Problems related to the adequacy of salaries as well as the number of staff have to some extent been eased through salary support provided by the National Endowment for the Arts. Most agencies report that staff members and/or consultants or contract personnel serving staff-like functions were paid in whole or in part by funds from the National Endowment for the Arts in fiscal 1974 and in fiscal 1975, with the proportion rising from 76% in the former to 89% in the latter year:

Consultants or contract personnel were paid by funds from National Endowment for the Arts Average number in administrative areas: 0.5 Average number in program areas: 2.4	32	58
No consultants or contract personnel were paid by funds from National Endowment for the Arts	23	42

The funds from the Endowment are primarily helping to pay for personnel in program areas, with an average, in agencies in which staff members were paid by Endowment funds in 1975, of less than one staff member in administration being paid by such funds but more than two in program areas. A similar situation prevails with regard to consultants/contract personnel. The Endowment, then, is a significant source of support for personnel as well as for program funds.

Outside Advisors or Consultants

In addition to staff members and staff-like consultants, most state arts agencies use the services of outside advisors or consultants in their activities. The most common role in which such advisors are used is that of serving on panels, and more than two in three agencies report having panels of experts (other than the council/commission and its committees).

Table 208
USE OF PANELS OF EXPERTS BY AGENCY

	1	Total	Agencies %
Total	•	<u>55</u>	<u>100</u>
Fiscal 1974: Did have panels of experts No panels of experts		37 18	67 33
Fiscal 1975: Did have panels of experts No panels of experts		38 17	69 31

Among those agencies not using panels in fiscal 1974, the reasons given included the fact that the director prefers not to deal with panels and finds them unnecessary (6 agencies), the lack of funds for panels including inability to reimburse for travel (6), the use of professional advisors instead (5), the fact that the state is too small (1), and the fact that no one ever suggested setting them up (1).

The use of panels is more widespread in the Northeast and North Central states than in the rest of the country, with only 1 agency in the Northeast and 2 in the North Central region not using panels in fiscal 1974:

Table 209

^{*}Volunteered responses to an open-end question.

Not surprisingly, in light of the organization of most panels by art form, a majority of panels function primarily in grant review, and only a small percentage exclusively in policy. In response to a question on the functions of panels, directors indicated that of the panels listed by agencies, 56% were in grant review, 8% in policy, and 31% were a combination of both, with the remaining 5% functioning in miscellaneous other areas.

Agencies also reported that panels were useful to the agencies in almost all cases, and a great majority of panels were described as very useful. Eighty-six percent of panels were evaluated as very useful in actual practice, and another 9% somewhat useful, with a minimal 3% only slightly useful and 2% not useful at all.

Observation:

The organization of panels primarily by art form contrasts with staff organization by function. Art form expertise seems to lie more with outside experts serving on panels, particularly in decisions on grant-making, while staff members are responsible for a wider range of functional duties in all aspects of programs.

Selection of Panel Members

In selecting members of panels, the executive director and the agency staff are most active in suggesting or initiating the selection process, but the final approval is usually left to the council/commission or chairman:

Table 211
SELECTION OF MEMBERS OF PANELS
(Base: Agencies that had panels in fiscal 1974)

	Total	Agencies %
<u>Total</u>	<u>37</u>	100
Suggest or initiate selection of members Executive director Members of agency's staff Council/commission Chairman of council/commission Panel chairman Other panelists	30 21 15 14 1	81 57 41 38 3
Final decision on appointment of members Council/commission Chairman of council/commission Executive director Members of agency's staff	16 12 10 2	43 32 27 4.

Not only are council/commission members responsible to a large extent for the appointment of members to panels, in most cases some members of the council/commission themselves serve on the panels. In 22 agencies (59% of the 37 agencies with panels) council/commission members do serve on panels, with an average of 5.7 council/commission members also being panel members in those agencies.

One reason given for not having panels, as noted earlier, was the inability to reimburse expenses of members. In most agencies panel members were at least reimbursed for expenses, but in 19% of the agencies they did not receive either reimbursement or an honorarium:

Table 212
WHETHER PANEL MEMBERS ARE COMPENSATED

Panel members are reimbursed for expenses and also receive honorarium or fee	΄β	8
Panel members receive honorarium or fee	É	8
Panel members receive neither reimbursement nor honorarium	7	19
It varies (vol.))	14

A majority of agencies believe that trends or shifts in the use of panels will occur in the near future, and the direction of these trends is strongly toward greater participation by panels in the activities of the agencies:

^{*}List of trends foreseen comprise volunteered answers to an open-end question.

In addition to the panels of experts, a majority of state arts agencies also use other outside advisors and consultants, particularly as a source of professional expertise in policy and program planning:

The use of outside advisors or consultants rather than staff members is sometimes a result of state restrictions that make it impossible for the agency to hire sufficient staff or to obtain sufficiently qualified

^{*} Volunteered responses to an open-end question.

staff. Of the 35 agencies using outside advisors or consultants, 26, or 74%, reported in response to another question that they sometimes find it necessary to hire consultants or contractual personnel to fulfill staff functions because of the restrictions of state regulations.

The executive director and agency staff are not only most likely to suggest or initiate the selection of outside advisors or consultants, as with panel members, but the director also most often makes the final decision on the selection of such advisors.

Table 215

Advisors and consultants are reimbursed for expenses	4	11
Advisors and consultants receive neither reimbursement nor honorarium or fee It varies (volunteered)	6 4	17 11

In a final aspect of the investigation of the manpower of state arts agencies, the use of volunteers generally -- apart from the council/commission -- was explored. A majority of agencies report they do not use volunteers and only 15% that they use volunteers on a regular basis:

Table 217
USE OF VOLUNTEERS OTHER THAN COUNCIL/COMMISSION MEMBERS

	Total .#	Agencies %
Total_	<u>55</u>	100
Agency regularly uses volunteers Agency uses volunteers at times Agency does not use volunteers	8 15 32	15 27 58

Those agencies that do use volunteers reported a wide variety of types of work done by the volunteers, particularly office and clerical work (in 7 agencies), special projects (5 agencies), evaluation (3), and staff conferences and workshops (3).

Although a minority of agencies do use volunteers, some of those that do so report a large number of volunteers involved in agency activities in fiscal 1974. Eleven agencies had more than 20 volunteers each active during the year, and the average number of volunteers per agency using them was 32.6; the median, however, was a lower 15.5, because of a large number of volunteers (more than 50) reported by a small number (7) of agencies.

CHAPTER VIII

PAST DEVELOPMENTS AND FUTURE OUTLOOK

PAST DEVELOPMENTS AND FUTURE OUTLOOK

This final chapter reviews the growth of the state arts agency movement since the 1960's and looks forward to the perceived directions of change in the future. In the analysis of growth during the past years, the chapter focuses on state appropriations and on total funds:

- state appropriations, funds appropriated by states to the state arts agencies in fiscal years 1966 through 1976, the changes in appropriations and the per capita amount of appropriations.
- total funds, funds received by state arts agencies from all sources in fiscal years 1971 through 1976, changes in amount of total funds, and per capita amount of total funds.

The perceived adequacy of total funding is then covered, and the expected trends in the level of funding. The existence of future plans and goals is detailed, and the effects of possible increases in fundings analyzed from two viewpoints:

- the perceived <u>direction of programming</u> with possible increases in the basic state agency grants
- areas in which funds would be spent, on a short-term and long-term basis, if sufficient funds were available.

State Appropriations

Funds appropriated to state arts agencies by the state legislatures have grown steadily during the past decade. In fiscal 1966, state appropriations to arts agencies totaled only \$2,664,640 (\$1,898,745 excluding New York State), while in fiscal 1975 appropriations had increased to \$57,189,285 (\$21,536,285 excluding New York).

In the five-year period between fiscal 1970 and fiscal 1975, state appropriations increased 646% over the fiscal 1970 appropriations of \$7,561,912, or an annual growth rate of 49%. However, a major factor in this increase was the dramatic jump in New York State appropriations of 1,480% over the fiscal 1970 appropriation of \$2,256,474 to \$35,653,000 in fiscal 1975. Excluding New York State from the calculations, though, the rise in state appropriations to state arts agencies has still been a sign-nificant one, with appropriations in fiscal 1975 amounting to 300% more than the fiscal 1970 appropriations of \$5,305,438, or an annual growth rate of 32%.*

In that five-year period growth rates of state appropriations varied widely by state, some states recording dramatically large increases, others very low, ranging from an actual decrease of 5% in Delaware to an increase ab_ve 1,000% in five states -- New Jersey (up 1,003%), Michigan (up 1,386%), New York (up 1,480%), Massachusetts (up 1,500%), and Virginia (up 2,621%). It should be noted that many large increases were based on severely low initial levels in 1970.

^{*}The fiscal 1970 appropriations to American Samoa and Louisiana are not included in the percentage comparisons because comparable data for fiscal 1975 were not available.

In the one-year period between fiscal 1974 and fiscal 1975 state legislative appropriations rose 51% (excluding New York) over the fiscal 1974 total appropriations of \$14,311,494, a greater increase than the five-year annual growth rate of 32%. However, in six states appropriations dropped during the one-year period (the drop was less than 10% except in Georgia, down 29%, and Alaska, down 31%), continuing the somewhat erratic pattern.

The state appropriations for fiscal 1976 continue the upward trend, but at a lower rate of increase. State arts agencies appropriations for fiscal 1976 totaled \$61,416,405, or \$25,713,505 excluding New York State, an increase of 19% (excluding New York) over 1975. (States that receive biennial appropriations that cover fiscal 1975 and fiscal 1976 would naturally not have received any substantial increase for the second year.)

The commitment by states to support of arts agencies has been matched by an increasing commitment by the federal government to the state arts agencies. The basic state agency grant of the National Endowment for the Arts rose during the five-year period from \$36,363 per state in fiscal 1970 to \$75,377 in fiscal 1971, \$101,320 in fiscal 1972, \$127,250 in fiscal 1973, \$150,000 in fiscal 1974, and \$200,000 in fiscal 1975, an overall rise of 450% — or an annual growth rate over the period of 41% — and a rise between fiscal 1974 and 1975 of 33%.

Data are unfortunately not available for the entire period on private funds received by the agencies, but indications are that private funds, through relatively modest, have also risen. In fiscal 1971, dollar amounts received from private sources totaled approximately \$340,000, and in fiscal 1974 private funds reached \$750,115, a rise of 147% in just a three-year period.

Observation:

The sharp increases in state appropriations during the past decade to the arts agencies reflect the increasing commitment by governors and state legislatures to support of the arts, a commitment that ten years ago was practically non-existent in all but a handful of states.

This commitment by states to support of the arts agencies has been matched by an increasing commitment by the federal government to the state arts agencies. The basic state agency grant of the National Endowment for the Arts rose during the five-year period from \$36,363 per state in fiscal 1970 to \$75,377 in fiscal 1971, \$101,320 in fiscal 1972, \$127,250 in fiscal 1973, \$150,000 in fiscal 1974, and \$200,000 in fiscal 1975, an overall rise of 450%, or an annual growth rate over the priod of 41% and a rise between fiscal 1974 and 1975 of 33%.

Unfortunately, data are not available for the entire period on private funds received by the agencies, but indications are that private funds, though relatively modest, have also risen. In fiscal 1971, dollar amounts received from private sources totaled approximately \$304,000, and in fiscal 1974 private funds reached \$750,115, a rise of 147% in just a three-year period.

Less than 0.5%.

1/ Estimated or requested,

1/ Information not supplied.

1/ The Virginia State Huseum was off the official state artifagency in fiscal 1906-1908.

1/ Does not include American Samoa and Louisiana.

1/ Comparative data not available.

1/ No state appropriations in fiscal 1970.

Change in State Appropriations Per Capita

The rise in state appropriations can also be seen clearly when total appropriations are translated into per capita figures. Total state appropriations of \$7,761,912 in fiscal 1970 represented 3.7 cents per person in the national population (including Puerto Rico, the Virgin Islands, American Samoa and Guam), with a per capita amount of 2.9 cents excluding New York State. The appropriations per capita rose to 27.2 cents per capita in fiscal 1975, or 11.2 cents not including New York State.

The agency with the largest per capita appropriation, \$2.22 in fiscal 1975, was the Virgin Islands Council on the Arts, followed by New York State with a per capita appropriation of \$2.02. At the lower end of the scale, the Wisconsin and Texas agencies received appropriations amounting to only 1.3 cents per capita and the North Dakota agency only 0.8 cents per capita.

The per capita rankings of state appropriations changed greatly for many states between fiscal 1970 and fiscal 1975, with five states rising sharply during that period. New Jersey, which ranked 40th with a per capita appropriation of 1.0 cents in fiscal 1970, rose to 21st in fiscal 1975 with a per capita of 10.8 cents; Michigan rose from 33rd (1.6 cents) in fiscal 1970 to 12th (22.9 cents) in fiscal 1975; Pennsylvania from 32nd (1.7 cents) to 17th (12.6 cents); Massachusetts from 29th (1.8 cents) to 6th (27.6 cents); and Colorado, with the sharpest rise, from 37th (1.2 cents) to 4th (53.1 cents).

The sharp rise in Colorado was largely accounted for by funds earmarked for Denver arts and cultural organizations.

Per capita calculations for fiscal 1970-1973 are based on U.S. Census figures for 1970; fiscal 1974-1975 per capita are based on updated Census figures.

^{2/} Not available.

^{3/} Does not include Louisiana.

[/] Does not include American Samoa and Louisiana.

Total Funds Received

The increasing commitment of both state and federal governments to support of state arts agencies, and an increase in private support, have naturally resulted in substantial rises in total funds received. In fiscal 1971, the first year for which data on total funds received are available, state arts agencies received a total of \$30,667,292 (not including funds received by associated foundations), but the major part of that was accounted for by New York. Excluding New York, state arts agencies received \$10,458,722 in fiscal 1971; total appropriations for the other 54 agencies rose each year, climbing by fiscal 1975 to \$40,156,115,* up 249% over fiscal 1971 for an annual growth rate of 40%.

In the one-year period from fiscal 1974 to fiscal 1975 alone, total funds received by state arts agencies rose 47% (excluding New York State), but in the period from fiscal 1975 to fiscal 1976 the rise was lower, with total funds amounting to \$83,584,732 (and \$47,486,422 if New York State is excluded), a rise of 10% over fiscal 1975, or 18% excluding New York.

^{*}The percentage increase does not include amounts received by American Samoa, Guam and Puerto Rico, since this information was not available for fiscal 1971.

Data for fiscal 1971 from State Arts Councils, Associated Councils of the Arts. Figures for 1976 are estimates.

Not available.

Comparable data are lacking.

Does not include American Samoa, Guam and Puerto Rico. Does not include American Samoa and Louisiana.

Total Funds Received per Capita

The pattern of total funds per capita parallels that of the state appropriations, i.e., the areas with the smallest populations tending to rank relatively high, with the largest per capita funds in 1975, \$5.03 received by the Virgin Islands Council on the Arts. The states with small populations will naturally tend to rank high in per capita terms even with low appropriations, since the basic state agency grant of The National Endowment for the Arts is distributed at the same level regardless of population. The lowest ranked states were California (6.6 cents), Wisconsin (6.6 cents) and Texas (6.1 cents).

From fiscal 1971 to fiscal 1975, the total funds per capita rose from 15.1 cents to 36.1 cents. Excluding New York State, total funds per capita rose from 5.7 cents to 20.8 cents.

Adequacy of Funding on Functions and Practices

In the study of agencies' funding levels, directors were asked how adequate current funding levels are for the agencies' functions and practices, and 'the outlook for the future.

A majority of directors do not feel that the fiscal 1974 funding level was at all adequate, and approximately half that the fiscal 1975 funding was not adequate at all for the functions and practices of their agencies.

The perceptions of the adequacy of funding levels do vary somewhat according to the total expenditures of an agency, and particularly among the higher levels in terms of per capita expenditures. The proportion of agencies that feel the fiscal 1974 funding levels were not adequate at all actually was greater among those agencies with greater total expenditures that year, but sharp differences can be seen within those expenditure groups; those with higher per capita expenditures were less likely to feel funding was completely inadequate:

Table 222

^{*} There were no "completely adequate" responses.

A great majority of directors do see trends or shifts in the funding levels during the coming 3 to 5 years, and again when asked in an openend question what the trends would be, directors tended to be optimistic:

Table 224

^{*} Volunteered responses to an open-end question.

When directors were asked why they felt the shifts and trends would occur, many diverse reasons were mentioned, topped by increasing interest in and demand for the arts. The reasons that were volunteered by at least two directors are shown on the following table:

Table 226 REASONS WHY TRENDS OR SHIFTS IN LEVEL OF FUNDING ARE FORESEEN*

Future Plans and Goals

In investigating the future plans and goals of the state arts agencies, the survey determined the existence of formal long-term plans, the likely directions of programming if the basic state agency grant were raised, and the desired areas of activity, on a short-term and long-term basis, if sufficient funds were available.

Just under half the agencies have formally drawn up long-term plans and goals, with a median length of time of 4.5 years for which these plans have been set. Most of the other agencies, however, reported that they expected to formulate long-term plans and goals within a year's period after the survey.

Table 227
EXISTENCE OF LONG-TERM PLANS AND GOALS

<u>Total</u>	<u>55</u>	100
Have drawn up formal long-term plans and goals *Number of years for which plans have	<u>27</u>	<u>49</u>
been set: 2 years 3 years 4 years 5 years 7 years 8 years More than 10 years Median number of years: 4.5	5 6 3 13 1 1	9 11 5 24 2 2 2
No long-term plans and goals	28	<u>51</u>
Expect to formulate long-term plans and goals within one year	21	38
Do not expect to formulate long-term plans and goals within one year	7	13

^{*}Multiple responses were possible.

With the trend of increasing funds available to state arts agencies, long-term plans and goals would seem essential to chart the effective and efficient use of these funds. The association of formal plans with increased funds is seen in the fact that agencies with higher than average total expenditures were more likely to have such plans:

Table 228

Effect of Possible Increases in Basic State Agency Grant

The directors of the state arts agencies were asked what directions their programs would take if the basic state agency grant from the National Endowment for the Arts were increased to the \$250,000 level and to the \$750,000 level. For both levels they were specifically queried whether they would tend to expand the programming now engaged in or would the increased level of funding enable them to engage in new areas of programming.

At both levels of increased basic state agency grants, a majority of directors would engage in new areas of programming. At the \$250,000 level, 18% indicated they would engage in new areas and another 35% that they would both engage in new areas and expand present programming. At the \$750,000 level, a higher 38% would engage in new programming and 46% would do both. (No significant differences were recorded by the budget sizes, either in total or per capita.) New areas of programming most often volunteered were support of individual artists, educational programs, community development and support of major institutions.

Table 229

DIRECTIONS OF PROGRAMMING
WITH POSSIBLE INCREASES IN BASIC STATE AGENCY GRANT

	Total A	gencies %,
<u>Total</u>	<u>55</u>	100
Increase to the \$250,000 level Would expand programming now engaged in Would engage in new areas of programming Would do both	26 10 19	47 18 35
Increase to the \$750,000 level Would expand programming now engaged in Would engage in new areas of programming Would do both	9 21 25	16 38 46

Increases in the basic state agency grant would result in expanded support for individual artists in most agencies, with such support most often volunteered among the new areas of programming. In general, however, the areas cited by directors indicate an extension of what is now being done to include more organizations and to serve more people.

^{*}Volunteered responses to an open-end question.

As a final phase of the exploration of future directions, directors were given the hypothetical situation of the agency's having sufficient funds to make improvements or changes in programming, staffing or other activities. Given this possibility, they were asked in which two or three areas they would most want to spend those funds, both within the near future and over the next five to ten years.

In both the long-term and short-term outlook, staff development was the most mentioned area in which funds would be spent. This reflects the previously discussed (in Chapter VII) inadequacy of the number of staff and salaries expressed by directors.

Observation:

The emphasis on staff seems to indicate an interest by the agencies to supply more in the way of service than simply project funding, the desire to fulfill a role as ombudsman, counselor, technical advisor, back-up on management, promoter, communicator, etc., in behalf of the arts and cultural interests in the states.

Funding remains a primary purpose, however, with high priority given to increased funds to the arts and cultural organizations. The emphasis on arts in the community is also strong, continuing the direction toward community programming expressed earlier. Further, the emphasis is on functions and problems, rather than on specific art forms. By and large, however, the responses do not indicate any major deviations at higher funding levels from present program patterns.

APPENDIX A

MODEL STATE ARTS COUNCIL ACT

Model State Arts Council Act*

(Title should conform to state requirements. The following is a suggestion.)

AN ACT

Relating to the establishment of a State Council on the Arts, and defining the Council's powers and duties.

BE IT ENACTED BY THE GENERAL ASSEMBLY OF THE STATE OF (state), AS FOLLOWS:

Section 1. (optional introductory declaration of public policy) It is hereby found that many of our citizens lack the opportunity to view, enjoy, or participate in living theatrical performances, musical concerts, operas, dance and ballet recitals, art exhibits, examples of fine architecture, and the performing and fine arts generally. It is hereby further found that, with increasing leisure time, the practice and enjoyment of the arts are of increasing importance and that the general welfare of the people of the state will be promoted by giving further recognition to the arts as a vital aspect of our culture and heritage and as a valued means of expanding the scope of our educational programs.

It is hereby declared to be the policy of the state to join with private patrons and with institutions and professional organizations concerned with the arts to insure that the role of the arts in the life of our communities will continue to grow and will play an ever more significant part in the welfare and educational experience of our citizens.

Section 2. There is hereby created and established a state commission, to be known as the "(state) State Council on the Arts," to consist of fifteen members, broadly representative of all fields of the performing and fine arts, to be appointed by the governor from among citizens of (state) who are widely known for their competence and experience in connection with the performing and fine arts. In making such appointments, due consideration shall be given to the recommendations made by representative civic, educational, and professional associations and groups, concerned with or engaged in the production or presentation of the performing and fine arts generally.

Section 3. The term of office of each member shall be five years; provided, however, that of the members first appointed, five shall be appointed for terms of one year, five for terms of three years, and five for terms of five years. Other than the chairman, no member of

^{*}Reprinted from The Politics of Art: Forming a State Arts Council, published by Associated Councils of the Arts.

the council who serves a full five-year term shall be eligible for reappointment during a one-year period following the expiration of his term. The governor shall designate a chairman and a vice-chairman-from-the-members-of-the-council to serve as such at the pleasure of the governor. The chairman shall be the chief executive officer of the council. All vacancies shall be filled for the balance of the unexpired term in the same manner as original appointments. The members of the council shall not receive any compensation for their services, but shall be reimbursed for their actual and necessary expenses incurred in the performance of their duties as members of the council.

- Section 4. The chairman may employ, and at pleasure remove, such officers, experts, and other employees as may be needed and fix their compensation within the amounts made available for such purposes.

 Section 5. The duties of the council shall be:
 - (1) To stimulate and encourage throughout the state the study and presentation of the performing and fine arts and public interest and participation therein;
 - (2) To make such surveys as may be deemed advisable of public and private institutions engaged within the state in artistic and cultural activities, including but not limited to, music, theatre, dance, painting, sculpture, architecture, and allied arts and crafts, and to make recommendations concerning appropriate methods to encourage participation in and appreciation of the arts to meet the legitimate needs and aspirations of persons in all parts of the state;
 - (3) To take such steps as may be necessary and appropriate to encourage public interest in the cultural heritage of our state and to expand the state's cultural resources; and
 - (4) To encourage and assist freedom of artistic expression essential for the well-being of the arts.
- Section 6. The council is hereby authorized and empowered to hold public and private hearings, to enter into contracts, within the limit of funds available therefor, with individuals, organizations, and institutions for services furthering the educational objectives of the council's programs; to enter into contracts, within the limit of funds available therefor, with local and regional associations for cooperative endeavors furthering the educational objectives of the council's programs; to accept gifts, contributions, and bequests of unrestricted funds from individuals, foundations, corporations, and other organizations or institutions for the purpose of furthering the educational objectives of the council's programs; to make and sign any agreements and to do and perform any acts that may be necessary to carry out the purposes of this act. The council may request and shall receive from any department, division, board, bureau, commission, or agency of the state such assistance and data as will enable it properly to carry out its powers and duties hereunder.
- Section 7. The council is the official agency of this state to receive and disburse any funds made available by the National Foundation on the Arts.
- Section 8. The council shall make an interim report to the governor and the legislature not later than (date), and from time to time thereafter.

APPENDIX B

GLOSSARY

GLOSSARY

GENERAL TERMS:

Fiscal 1974 +- The fiscal year ending in 1974.

Earmarked or restricted funds -- Funds received by a state arts agency for which the recipient has been designated and over which the state arts agency has no discretionary granting power.

Program and project -- A program refers to a broad area of funding or activity such as an agency's touring program, technical assistance program, music program, artists-in-schools program, etc. A project refers to a specific individual project usually within a program area, such as a specific dance company's tour in the state, the assignment of an advisor to provide technical assistance to a particular arts organization, the support of concerts by a particular symphony orchestra, the assignment of an artist to a school, etc.

Grants -- The word "grants" is used to cover the funding of recipients by the state arts agency, whether such funding is done as a grant or through a contract.

Agency -- An agency refers to a government agency, usually a state agency; if a federal or local agency is referred to, it will be indicated.

Cultural organization or institution -- A "cultural organization or institution" or "arts or cultural organization or institution covers all types of organizations, institutions or groups, such as performing arts organizations, museums and other similar institutions, visual arts groups, writers' projects, cultural centers, non-governmental arts councils, etc.

Commissions to artists -- Funds provided an artist for the creation of a new work (painting, drawing, musical composition, dance, play, novel, etc.)

Purchase grant -- Funds provided an artist for the purchase of a work already created.

Work grants -- Funds provided an artist for general support and not for the purchase or commissioning of a work.

SELF-ADMINISTERED FORM B:

Art museum -- A museum whose collection/exhibitions are exclusively or predominantly art, including paintings, drawings, sculpture, graphics, etc.

History museum -- A museum whose collections/exhibitions are exclusively or predominantly history, including historic houses and sites and museum villages.

Science museum -- A museum whose collections/exhibitions are exclusively or predominantly science, including natural history museums, science and technology centers, zoos, aquariums, botanical gardens, etc.

BEST COPY AVAILABLE

-370-

General museum -- A museum whose collections/exhibitions are a relatively equal combination of art and history, art and science, history and science, or art, history and science.

Cultural center -- A structure or complex of structures designed for the public presentation of more than one art form.

Civic group -- A group of citizens primarily organized for non-arts purposes (e.g., the PTA, Chamber of Commerce, etc.) but conducting some arts-related activity such as sponsorship of performances, etc.

Occhestral/chamber, etc. -- Including all types of orchestral and chamber music, solo recitals, etc.

Theatre -- Including all types of theatrical presentations, such as musicals, drama, children's theatre, revues, dramatic readings, etc.

Literature -- The publication of presentation of non-dramatic literary material such as poetry or fiction, but does not include non-literary publications such as newsletters or pamphlets.

Earned Income -- Operating revenues received from admission fees and box office and subscription ticket sales, tuition fees, contract fees, membership dues, sales of merchandise, parking fees, monies from concessions, etc.

SELF-ADMINISTERED FORM C:

Full-time -- a paid staff member (or "consultant" serving in a staff capacity) who works a minimum of 35 hours a week on a regular basis.

Part-time -- a paid staff member (or "consultant" serving in a staff capacity) who works fewer than 35 hours per week on a regular basis or who works any number of hours for only a part of the year.

PERSONAL INTERVIEW:

Subordinate agency of a larger agency -- The situation in which the state arts agency is a full agency but is under the direction of another state agency.

An office in an agency that has purposes other than the arts -- The situation in which the state arts agency is not actually a full agency, but is only an office within a state agency that has purposes other than the arts.
