#### ABSTRACT

The study was intended to determine how many special education personnel in Kansas were not returning each year and their reasons for leaving. Attrition tables were developed for each school district and for the total state via analysis of computer data tapes for the years 1976-1983. Reasons for termination were analyzed from the viewpoints of special education directors as well as of personnel. Extensive statistical data are reported showing local and state attrition rates. Rates were relatively constant for the five years from 1977 to 1982. Rates are presented for 24 categories, including adaptive physical education, administration, gifted, and early childhood education. Problems in data analysis are noted. Sections 2 and 3 report data on reasons for termination and on the individuals' willingness to return to special education. Family relocation (including moving, maternity and marriage) was the largest category cited as reason for leaving. Of those personnel citing many reasons for not returning, lack of administrator support and paperwork burdens were frequently reported as major problems. (CL)

## Introduction

Since the passage of federal and state mandates specifying that special education services be provided to all exceptional students, there has been a shortage of special education personnel in Kansas. According to reports of headcount vacancies prepared by the Kansas State Department of Education (KSDE) on about October 1st of each year, there were 270 vacancies in 1980, 204 in 1981, and 117 in 1982. A vacancy is deemed to exist when a cooperative has budgeted for a position, has submitted the position to the KSDE for approval, but can find no one to fill the position.

Two of the reasons for the vacancy problem are presented in Table 1. Table 1 shows the number of special education personnel erployed in Kansas each school year from 1976-77 through 1982-83; the number of new programs, obtained by subtracting the number of programs in the previous year; the number of replacements for personnel who had quit the previous year; and the number of personnel needed to equal the total employed for the year. The data in Table 1 suggest that at least two factors have contributed to the large number of vacancies. First, every year the local districts have expanded the number of special education programs. Second, each fall a number of teachers have not returned to the position they held the previous year. The universities have not been able to prepare enough personnel for the new programs developed by districts to meet the legal mandates, and at the same time to fill vacancies caused by the loss of previously trained personnel.

The purposes of the study were to determine how many personnel were not returning each year and why they were not returning. To answer the first question, computer data tapes for 1976-1983 were analyzed to build attrition tables for each school district and for the total state in order to determine the number of special education personnel annually who did not return to their position of employment.

### Special Education Personnel Needs for Kansas

Table 1

<u>Year</u>	Total <u>Employed</u>	New Programs	Replacements Needed*	Heeded to Equal Total
1976-77	2,460	-	-	-
1977-78	2,894	434	372	808
1978-79	3,272	378	479	<b>85</b> 6
19 <b>7</b> 9-80	3,551	279	573	852
1980-81	3,955	404	573	977
1981-82	4,110	155	601	<b>7</b> 56
1982-83	4:215	1.05	458	563

Interpretation: In 1977-78, there were 2,894 certified special education personnel employed. This was an increase of 434 from the previous year. In addition, 372 personnel from the previous year did not return, and they had to be replaced. Therefore, 806 new persons were needed to obtain 2,894, the final number employed.

<sup>\*</sup>This number, later referred to as "state attrition" is the number of personnel who were not employed in the state the next year. There were others who resigned but took positions in the state, and therefore did not need to be replaced in the "state pool". These are ater referred to as "local attrition".

The second question of why individuals did not return is more complicated to answer. Very few persons quit for one easily identifiable reason. For example, when one ex-teacher was interviewed, she indicated that the reason she gave her director for quitting was that she was pregnant, which was true. However, she explained that she had reached the point in her classroom where she "couldn't take it anymore." Therefore, she dedided to have a child in order to have an "acceptable" reason for leaving. Her official reason for leaving was "pregnancy." However, the true reasons were more complicated.

Even though definitive reasons may not be readily available to answer why special education personnel do not return, even rudimentary data may prove beneficial in any attempt to decrease attrition\* in special education.

Two approaches were used to determine why special education personnel were terminating. Personnel employed during the 1981-82 year who did not return for the fall of 1982-83 year were the subjects of the study. First, the directors of special education were asked to give their opinions of why personnel did not return. Second, the personnel who had not returned were contacted to give their opinions about why they had terminated.

There results are reported in three parts. Part 1 consists of the attrition data for each special education cooperative and for the state. Part 2 reports the results of the directors' opinions of why personnel did not return. Part 3 reports the results of a questionnaire sent to the personnel who did not return.

<sup>\*</sup>Several terms could be used for "attrition": career change, teacher turnover, teacher migration, occupational mobility, occupational stress, teacher recruitment, teacher termination, teacher transfer, teacher persistence, and teacher attrition. Attrition was selected because it appeared to be the more current term and the dictionary definition of attrition, "the process or state of being gradually worn down" had an appeal to the author.

## Local Education Agen y Attrition Data

Using computer data tapes provided by the Kansas State Department of Education, the number of special education personnel employed each year was determined for each of the academic years from 1976-77 to 1982-83. Using social security numbers, the computer data tapes for two consecutive years were compared, and the personnel who did not return for the second year were identified. Using this data, an attrition table was developed for each cooperative\* showing the number of personnel employed, the number and percent who did not return for each categorical area (referred to as "lost" in the tables), and totals for each year. All counts are headcounts, and not FTE. The attrition tables for each cooperative employin; special education personnel are found in Appendix A. They are arranged in order by USD numbers.

The attrition tables in Appendix A report "local attrition." There were two different attrition rates addressed in this study, local attrition rates and state attrition rates. "Local attrition" refers to the turnover at the cooperative level. It consists of all personnel employed for the cooperative one year who did not return to that cooperative the next year. However, all of these persons did not leave the state. Some moved to other cooperatives in the state to continue special education employment. "State attrition" refers to those who were employed in the state one year but were not employed anywhere in the state the next year. For example, a psychologist working for Cooperative A who resigns and takes a position with in-state Cooperative B would be an example of local attrition, not state attrition.

The directors of special education might be more concerned with local attrition because they need to find replacements for those individuals who

<sup>\*</sup>Cooperative is used as the generic name to refer to all local education agencies that provide special education services, including interlocals and districts that do not belong to a cooperative.

leave. The universities might be more concerned with state attrition because it would indicate the number of individuals who need to be prepared to fill vacancies in the state.

There will not be an attempt to list the cooperatives with the most or least attrition or to discuss the specific tables in Appendix A. They were developed to give an indication of attrition rates and to establish a data base to be used to determine if programs to decrease attrition, such as the Kansas Regent Institutions Special Project, are effective. It is possible that some of the cooperatives with higher attrition rates are doing a commendable job of keeping attrition rate: as low as they are, considering variables such as isolation, travel requirements of personnel, and the number of wives of military officers and graduate students employed.

Table 2 displays total local attrition for the state. It is a summary table of all tables in Appendix A. It shows the total number employed, number lost, and percent lost for each special education category for each year from 1976-77 to 1981-82.

Table 3 displays the total state attrition, showing the number employed (this column would be identical to the similar column in Table 2), the number lost, and the percent lost. The number lost column would be less than the similar column in Table 2 because it does not include those who have continued to be employed in special education but changed cooperatives. An analysis of both Tables 2 and 3 indicates that the attrition rates were relatively constant for the five years from 1977 to 1982, with a drop in 1982. However, each year there tended to be an increase in the total number of those who did not return accompanying the increase in the total number of persons employed.

Except for the drop in 1982, the total local attrition has been about 20 percent. While the total rates have been consistent each year, the rates for the different categorical areas have varied widely. To determine average attrition rates for each special education category for the six years of the study, the total lost for each year was added together and divided by the total employed for the six years. The results have been rank ordered, and they are reported in Table 4 for local attrition and in Table 5 for state attrition. Table 6 shows a rank order of attrition rates by category for 1982, the most recent year.

For the six years of the study, the category of "other" had the highest local attrition rate. "Other" includes such occupations as music therapists, art therapists, work-study coordinators, and federal grant employees. The high attrition rate is due in part to the temporary nature of soft money grant positions.

One method to interpret the attrition rates of a particular cooperative would be to refer to Table 7, which displays a frequency count of attrition rates for each year. For example, in Table 7 for 1977, if a cooperative had an attrition rate of 7 percent, it would fall in the next to the bottom category of 5 - 9.9 percent attrition. The attrition rates for a particular cooperative could be plotted year-by-year on Table 7, to determine the relative amount of attrition for each year.

Table 4

## Local Attrition Rank Ordered Total for 1977-1982

23	Physically Impaired	16	0	0
24	Homebound	22	0	0

Interpretation: For 1982, the most recent year studied, the category of "other" (art therapy, music therapy, work-study coordinators, federal grant employees, etc.) had the highest local attrition rate. There were 56 employed and 19 did not return for a 34 percent attrition rate.

Interpretation: In 1977, there were three cooperatives with attrition rates above 50 percent.

## Problems in Analyzing the Data

There were six problems faced in attempting to determine the attrition rates for the special education cooperatives in Kansas. Each is explained along with the solution taken to address the problem.

The first problem involved the organizational system of special education services in Kansas. There were 306 public school districts in 1982-83. All of them are mandated to provide special education services. To meet the mandate, districts have adopted five different systems to provide special services. First, according to the 1982-83 State Educational Directory, there were 29 special education cooperatives. A cooperative is two or more districts which have entered into an agreement to provide special education services on a shared-cost basis. One district is designated as the sponsoring district and the school board of the sponsoring district is the legal body for the cooperative.

Second, there were 15 interlocal agreements. An interlocal is a group of districts who have signed a contract to join together to provide special education services, but it operates as a separate legal entity.

Third, there were 23 school districts that provided for their special education needs without belonging to a cooperative. Some of these districts provide comprehensive services, others provide for some services, such as EMR, LD, PSA, and school psychology, but contract with other education agencies for services for the low incidence categories.

The fourth approach to providing services was for some individual districts, which are members of interlocals or cooperatives, to hire personnel in addition to personnel provided by the contractual agreement. Since 1976, there have been 60 or more districts that have hired additional personnel.

There might be a fifth delivery system. Interlocal 609 does not provide comprehensive special education programs but instead provides personnel for low incidence populations to their regional districts and educational staff for some of the state institutions.

With the various systems of employment, it was a challenge to determine where to assign the attrition, particularly when personnel were being provided to a local district by more than one agency. In every case, the attrition was assigned to the unit which was receiving the categorical reimbursement.

A second complicating problem in determining attrition rates was that various school districts have not maintained the same organizational system of providing special education services during the time span of this study. Some cooperatives have changed to interlocals. Some member districts have changed cooperatives. Some districts have made more than one change during the six years.

When a cooperative, or part of a cooperative, reorganizes, the personnel who change are all given new district numbers on the computer data tapes. During the analysis of the data, it would appear to the computer that these individuals have terminated employment with one district and switched to another. Since, in fact, many of these personnel continued with the exact same position, only for a different district, to include them as part of the attrition pool would not be appropriate. Therefore, for every district that had changed cooperative organizations during the time of the study (Fall 1976 - Fall, 1982), an analysis of the employment of their personnel for the year or years in question was conducted, and those who had not quit were not counted. For example, the latest change in the state was when Sumner County Special Education Cooperative was formed. The computer indica-

ted that eighteen persons terminated their employment with !!ellington, USD #353, the previous cooperative sponsor. Actually, nine persons moved to the new interlocal, and they were not counted in the attrition otals. This was determined by hand-checking computer printouts to determine where the eighteen were employed the next year. The same approach was followed with every district in a similar situation for each of the years.

A third problem was how to count personnel who continue to work for the same cooperative, but who changed categorical areas. Many individuals have been reclassified as inter-related teachers, making it appear statistically that there had been a loss of teachers in other categorical areas. It did not seem appropriate to count these individuals in the attrition pool. However, a question arose about the individuals who move to a school psychology position from one of the teaching categories, such as learning disabilities? It was decided that if a cooperative determines an employee is more useful to the cooperative in a different category, the change should not be counted in the attrition pool. This was consistent with the definition of local attrition which indicates that the individual had to change districts.

The fourth problem dealt with the accuracy of the data tapes. For the amount of data they contain, they appear to be extremely accurate. However, six instances were found where an individual's social security number was different from one year to the next. These were all found accidentally while examining computer printouts. Because the social security number is the variable on which the personnel were sorted, if it changes from one year to the next, it would make it erroneously appear that an individual has terminated. There is no reasonable method to discover these errors using the computer, and there are probably more that were not found. This

type of error would make it appear in Appendix A that a cooperative lost a person when they did not.

The fifth problem concerned a change in the state's computer coding system. Currently the State Department of Education categorizes special education personnel into twenty-three categorical areas of special education and a twenty-fourth area of "other". During the first year addressed by this study (1976-77) a slightly different assignment of codes was used. Where necessary, the code numbers for 1976-77 were changed to be consistent with the current system. For example, the category of "non-categorical" was combined with "inter-related", and "audiology" was given the former ID number of "non-categorical". When determining the attrition for 1976-77, every person who was a member of a category that had a different computer code in later years had their 1976-77 code changed on the data tapes, thus the analysis could be consistent and accurate.

The sixth problem was whether to count personnel on the basis of head-count or FTE. Headcount was selected because it appeared to more accurately represent the personnel problems of a cooperative. For example, if a district loses a .5 FTE speech clinician, it causes at least as much difficulty for the director to replace this person as it does to recruit a 1.0 FTE speech clinician.

## The Director's Responses of Why Personnel Did Not Return

Using the computer data tapes provided by the Kansas State Department of Education, all personnel who were employed during the 1981-82 year, but who did not return to the same district for the 1982-83 school year, were identified. Table 8 shows the number of persons, listed by category, who did not return to the same position for the fall of 1982, representing local attrition.

Fall 1982 Local Attrition by Category

Using the list of names of those who did not return, the directors of special education were contacted for several reasons. They helped to verify the accuracy of the information on the data tapes, they identified those who were deceased, and they made suggestions on how to contact those personnel who had left employment. The directors also provided their opinions of why each person left. It was realized that it would be impossible to expect 100 percent of the personnel who had quit to respond to the questionnaire sent to them. The directors, being a more captive audience, were a more likely source for complete data.

Every director of special education was contacted by mail to explain the research. They were informed that they would be telephoned in order to verify the lists of names for their districts, to get opinions of why each person quit, and to obtain from them some idea of where each employee could be located, so that the former employee could be sent a questionnaire. In a few cases, a different official, such as a superintendent (when the district was not part of a cooperative) or an assistant director of special education (if that individual dealt with personnel matters) was interviewed. If there was a small number of names on the list, the list was read by telephone and the director gave his opinions of why each person left along with information about the individual's current location and/or current employment. For those districts which had longer lists, the director was called, the project was discussed, and the list was mailed to the director to be completed and returned. The directors were asked to give a "free response" as to why each person left, mainly because it was believed that free responses would take less time over the telephone.

According to the 1982-83 Kansas Educational Directory, there are 65 special education units in Kansas, and all 65 (100 percent) responded.

In addition, ten districts, which belonged to various special education cooperatives, snowed losses of personnel which those districts had hired to supplement the personnel provided by the cooperative. In each case, the director of the cooperative that contained the district also was able to respond concerning those personnel.

The original computer list of those who did not return to the same district in 1982 contained JOI names. However, in interviewing the directors, they indicated that due to clerical errors, either when they submitted the data or perhaps when it was tabulated by KSDE, that 19 persons who were on the list had not quit and an additional nine, who were shown as havin, continued their employment had actually terminated. Also, one cooperative had divided into two separate units, with the new unit employing nine persons from the original cooperative. While these nine persons technically did not return to their previous 1981-82 district, they were not counted in the attrition total. The final total, with the above corrections, was 582 persons who did not return for the 1982-83 year.

It should be noted that, in contrast to the 1982-83 data, errors more than likely do not exist on the tapes for previous years. This is because during the course of a year, the director of special education is sent printouts from the KSDE to verify. By the end of the year, the tapes are correct. The 1982-83 tape was secured from KSDE as soon as it had been compiled, before the directors had submitted their corrections.

A set of 14 categories was developed in order to tabulate the directors' responses of why personnel terminated. Two raters, one the author, the other a graduate assistant, discussed the categories and then both independently read and scored the responses. The two raters' lists

were compared to obtain inter-rater agreement. Agreement was said to exist if both raters marked the same response. Of the 14 categories, six had sub-categories. For agreement to be obtained for those with sub-categories, the same sub-category had to be marked.

Out of 582 ratings, there were 544 agreements and 38 disagreements, which equates to 93 percent agreement. Nineteen of the disagreements resulted when one rater consistently marked "care of children" while the other marked "maternity" to a response of "she had a baby" (the verb "had" suggested to the rater that she was no longer pregnant, but caring for the child). A more formal training period would have perhaps yielded a higher reliability. Other disagreements were discussed and reconciled. The results are displayed in Table 9.

Interpretation: For those who were employed in special education in 1981-82, the directors of special education believe that 45, or 8 percent, quit to get married.

## <u>Discussion of Selected Categories</u>

The largest category was Family Relocation (N=151), which also included the largest single sub-category, Relocation Due to Spouse's Employment (N=91). During the year covered by the survey, the economy was in a recession, with nationwide unemployment above 10 percent. Many special education teachers being women, they were forced to move as their husbands attempted to locate employment. This sub-category also included personnel whose husbands were in medical school, who left to start a practice or complete a residency, and the wives of military officers who were transferred. There were 89 female and two male personnel who terminated because of their spouse's employment.

Nineteen individuals left because of family responsibility. This included the caring for young children, and in a few cases for aging parents.

There were 12 individuals providing contracted services who did not return, including six physical therapists, three occupational therapists, two SMH, and one speech clinician. All but one were employed on a part-time basis, and the total FTE for the 12 was only 3.2. There were two typical employment patterns. The cooperative would contract with a facility, such as a hospital, for services, or the cooperative would contract directly with the individual, who was employed by a hospital but did the special education work during other hours. Often the individual was contracted to provide services to a single student. When the student moved or no longer needed the service, the contract was not renewed. Therefore, while the individual appears on the list of those who left employment, it was under different circumstances compared to other personnel, and in most cases they actually continued employment with their main employer without interruption.

Likewise, there were seven nurses, filling only a total of 2.5 FTE, who had been assigned on a part-time basis to special education. The nurses all remained in regular education for the same district, but they are reported as having left their 1981-82 position because they no longer appeared on special education reimbursement lists.

There was a total of 23 persons who had their contracts non-renewed (not tenured) or terminated (tenured). There were 11 persons who were dismissed because the position was no longer needed (reduction in force).

The directors indicated that 37 persons had resigned. In conversations with the directors, it was clear that in several cases the resignations were requested or offered by the persons only after the directors indicated that they were prepared to non-renew or terminate the person.

Twenty individuals retired from special education, having reached retirement age.

Five persons were reported as being deceased. Four individuals did not return because they had been on a temporary contract to replace individuals who were on leave. There were 19 individuals where the directors had no idea why they left or where they went.

Finally, there were 19 responses which could not be categorized. They were almost all the nature of "She moved to Kansas City" without any additional explanation. Most of these responses were from reports the directors mailed in, without the opportunity for questioning that the telephone interviews provided.

They all had continued employment with their districts, but they were no longer assigned to special education. There were twelve individuals on contracted services (0.T., P.T., etc.), and most were employed for less than .2 FTE. Their primary employer had been another agency, such as a hospital. There were four persons who had been hired on one-year temporary contracts to replace other staff members on leave. Five of the persons were deceased. Finally, no address could be determined for 47 of the persons. Table 10 summarizes the attempted contacts and the number of responses.

Summary of Contacts and Responses

Table 10

Total Sample	582		
Individuals Not Contact	ed		
Nurses Contracted Service Temporary Contrac Deceased No Address			
Sample Contacted	507		
Responses

Total Responses	325		
Percent Response - Tot Con	al Sample (325 out of 583) 56% tacted Sample (325 out of 507) 64%		

In summary, there were 325 responses out of a total of 582 (56%). However, with the 75 individuals removed who were not contacted, there was a total of 325 responses out of 507 (64%).\* This included a total of 54

<sup>\*</sup>At the time of the final typing, there had been 329 responses (65%). The additional reports were not included in the analysis.

responses from 24 different states, and 271 responses from Kansas.

The three-page questionnaire was written by selecting and re-writing items from previous research, including Boland and Selby (1980), LaShier, Heffley, and Ryoo (1982), Thorndike and Hagen (1960), and Smith (1980). The first page contained some basic identification data such as name, age, gender, and the number years taught in both regular and special education. The second page determined the current employment or other activity, feelings about returning to special education, and whether there was one overriding factor for not returning. The last page consisted of a list of 40 possible reasons (counting sub-parts) that influences the decision not to return. A copy of the questionnaire is found in Appendix B.

The same questionnaire was used for the mail and telephone contacts. The procedure for the telephone questionnaire was to call, to explain the project, to read the items from the questionnaire, and to mark responses. For the mail questionnaire, each individual was sent a letter explaining the project, a questionnaire, and a return envelope. All respondents were promised a summary of the results.

The primary reason for telephone interviews was to provide the opportunity to question some of the responses, with emphasis on the two questions concerning support from regular and special education administrators. In LaShier (1982), a frequent reason given by Kansas regular educators for leaving a teaching position was a "lack of support from administrators." However, it was hypothesized that the idea of "lack of support" would have very different meanings for those involved. Through telephone discussions, it was hoped that the persons who gave "lack of support" as a reason for quitting would provide details and examples, so that a better understanding could be gained about this issue.

All respondents were asked to provide their names and social security numbers so that the data from the directors of special education, the KSDE data tapes, and the respondents could be compared. The respondents were promised confidentiality, and of those interviewed on the telephone, none appeared to be concerned. However, one person, who returned a questionnaire by mail, omitted all identifying data, but answered all of the other items. This questionnaire was not included in the results.

The data from the questionnaires were entered by terminal into an IBM 4341 computer. The statistical operations involved the use of several of the procedures from the Funstat statistical package.

## Results

This section describes the sample of 325 who participated and summarizes their responses concerning why they did not return.

#### Gender

There were 58 males (18%) and 267 females (82%) who responded.

## <u>Age</u>

Ages were available on 320 of the personnel who responded. The mean age was 34.25 (S.D.=9.8). The median age was 31.37. A frequency distribution of ages is presented in Table 11. The mean age for 57 males was 34.65 (S.D.=7.11) and for the 263 females was 34.16 (S.D.=10.31). One male and four females did not respond to this item.

Frequency Distribution of Ages

Table 11

<u>Ages</u>	Frequency

35-39	45
30-34	85
25-29	104
20-24	20
Did not respond	5
•	325

Mean age = 34.25 (S.D.=9.8). Median age = 31.37.

#### Marital Status

Table 12 represents the marital status of the respondents. For the total sample, 18 percent were single, 75 percent were married, and 6 percent divorced. Separate results are also presented for

men and women. There were no significant differences in marital status, based on gender.

#### Marital Status

## Level of Certification

In Kansas, for some categories of special education, it is possible to obtain a provisional certificate, enabling the holder to teach while the full certificate is being obtained. For the respondents, 264 were fully certified (81%), 57 were provisionally certified (18%), and four did not respond (1%).

## Years Employed in Special Education

The respondents indicated the number of years that they had worked in special education. The results are reported in Table 14. Fractions of years were dropped from the analysis and are not reported in the table. The mean years employed in special education was 5.3 (S.D.=3.9).

Years Employed in Special Education

#### Willingness to Return to Special Education

Table 16 summarizes the responses to a question concerning the individual's feelings about returning to special education. Those who had continued in special education, but for a different district, and some clinicians who had entered into private practice, are not included, since they had not left the field. The responses were about evenly divided among the four ratings, ranging from "would not return under any circumstances" to "definitely plan to resume employment", for the total group. However, there was a difference between males and females, with the females appearing more willing to return.

## Plans to Resume Employment in Special Education

TOTAL	58	267	325

One of the major reasons for contacting the persons who did not return was to elicit from them the reasons why they terminated. Each respondent was asked if there was one main reason why they quit or several. Those who indicated that there was one reason were asked to indicate the reason. The others were asked to respond to a list of 40 items, and indicate all of the reasons they quit.

There were two purposes for this two-part approach. The first was to determine how many people quit for only one reason. Second, the intent of the two questions was to determine why persons did not return, and not to get a list of all their irritations. For example, most special education personnel get exasperated on occasion from all of the time it takes to write an IEP. However, few people will quit because of this factor. If everyone would have been required to mark the 40 item list, some would have disclosed not only their reasons for not returning, but also their annoyances.

There were 194 persons who indicated that there was only one reason why they did not return. Their reasons were read and assigned to one item from a set of categories, of which only ten resulted in a frequency of four or greater. The top ten responses are listed in Table 17.

5.	Inadequate salary	46	69	<b>16</b> ]
6.	No chance for promotion	41	46	12{
7.	Too many meetings and conferences	34	42	110
8.	Lack of intellectual stimulation	30	48	108
9.	Amount of driving required (tie)	33	35	<b>10</b> 1
9.	Lack of support from faculty colleagues (tie)	27	47	101

Interpretation: Lack of support from the director of special education was the highest ranked reason why personnel quit. The 77 major factor responses were multipled by a weight of 2 (77x2=154) and added to 36 minor factor responses for total 190.

Those respondents who replied that there were several reasons why they did not return were asked to respond to 40 different items, using the qualifiers "Major Factor", "Minor Factor", or "Not a Factor" to indicate the extent the item influenced them to not return.

In order to determine what weight should be given to a response of "Major Factor" versus "Minor Factor", two different weighting systems were computer simulated. On one, a major factor was given a weight of two and a minor factor a weight of one. On the second simulation, a major factor was given a weight of three, and a minor factor, one. The 40 items were placed in order from 1 to 40, using both systems. For either, the first ten items were in identical order, and all of the other items were practically in the same order. Since it appeared that the same relative results would be obtained with either system, the procedure of weighting each major factor by two was adopted, mainly because it had been used by Thorndike and Hagen (1960).

Table 18 shows the ten items (with a tie at number 9) that the respondents indicated most influenced them to terminate their 1981-82 positions.

In comparing the responses of those who did not return for one reason (Table 17) with those who did not return for many reasons (Table 18), for Table 17 the reasons essentially are for reasons of their own choosing and under their own control, such as moving, maternity, and marriage. These would also be reasons that are not readily addressed by a program to decrease personnel attrition. However, for those personnel who had more than one reason, of the top ten all of the reasons could be targets for a program to improve conditions and decrease attrition.

APPENDIX B

Questionnaire

111

1.	Name (first)
2.	Social Security Number
3.	1981-82 district number
4.	Location
	Category
	A m. type
7.	l vel
8.	C rrent Address (street) (city) (state) (zip)
9.	Telephone - (Ext.)
10.	Sex Male Female
11.	1981-82 Teaching Assignment City School
12.	Age
13.	Marital Status Single Married Divorced
14.	What is your highest level of educational preparation?
	Bachelors Masters Specialist Inctorate
15.	At which college(s) did you receive your preparation for your 1 81-82 special education assignment?
	What was the level of that preparation? Provisional certifics te Bachelors
	Masters Specialist Doctorate Fully certifies (but not a degree)
16.	List the major source of funding for your education (self, scholarship, parent, other)
	a. Undergraduato degree
	h. Special education training
17.	How many years have you taught in special education?
	How many years have you taught in regular education?
	What was your subject area or grade level in regular education?
18.	What was your special education certification at the time you left your 1981-82 special education position?
	Full Provisional Area (L.D., P.S.A., etc.)
20.	When you were growing up, what was the head of your household's occupation?
21.	Explain why you selected special education as an occupation.

		Continue	employment in education
	^.		
		'osition	(be specific: 9-17 LD teacher, 1st grade teather, Jr. High Principal
		Jistrict	Location
	В.		ly left employment in education
		Indicate	which best applies to why you have temporarily left:
			Maternity leave
			Care of Young children
			lliness (not pregnancy)
			Leave of absence (to do:
			Other family reasons
			Other
	c.		d, but seeking a position in education (position desired:)
	D.		ly left education
		Did you:	.,
		1.	Change to employment outside of the field of education.
			Position: (be specific: real estate agent, meat cutter at IRP, etc
			Why did you select the above position?
		2.	Retired (reached retirement age) Do you miss teaching special education? Please explain.
		3.	"Retired" but had not reached retirement age. (not employed and no seeking employment) Why did you "retire"? (spouse wanted you to; spouse retired and wants to travel; don't need the money, raising a family, etc.)
		4.	Unemployed, but seeking a position.
		5.	Other
. If	/OU &	re not emp	loyed in special education this year:
			l about returning to special education? (mark one)
		1.	
		2.	I sometimes think I might if the conditions would improve.
		3.	
			I definitely plan to teach special education again.
