ABSTRACT

The booklet describes the conceptual approach and operation of the evaluation plan used by Project CAST (Community and School Together), a community-ased career education program for handicapped students. Three levels of evaluation are proposed for providing data for both formative and summative evaluation; these levels are: (1) effort evaluation, (2) performance evaluation, and (3) outcome evaluation. Sample evaluation strategies described include summative evaluation of student outcomes, such as acquisition of life skills and basic skills; summative evaluation of the impact of other program activities on the community (specifically the resource persons and parents); and formative evaluation of program process objectives. The booklet concludes with sample instruments, including the interview protocol and questionnaires for resource persons, the parent opinion survey, and the student survey and interview protocol. (CL)

Reproductions supplied by EDRS are the best that can be made from the original document.

This document was prepared under grant number G007804955 from the United States Education Department, Office of Special Education and Rehabilitative Services, Division of Innovation and Development, Program Development Branch. The opinions expressed herein do not necessarily reflect the position or policy of the United States Education Department, and no official endorsement by U.S.E.D. should be inferred.

INTRODUCTION

The evaluation of a novel demonstration program, such as Project CAST, is needed for both operational and dissemination purposes. From an operational viewpoint, it is important that program planners, administrators, and line staff have access to information that indexes the extent which an intervention is achieving anticipated outcomes. The timing of the acquisition of such information can be critical to the success of a project. Of course, certain outcomes require specific time frames over which they must be measured. Many student outcome objectives fall into this category. However, other program objectives can be assessed without such temporal restrictions. Enabling (or process) objectives generally can be examined at any time after the operations relating to their accomplishment have been initiated.

A major thrust of this document is related to the distinction made regarding outcome and process objectives. In evaluation that is geared exclusively to the evaluation of outcome objectives is less useful than one that encompasses both outcomes and processes. This is particularly true when an organization is attempting to implement a program which differs radically and significantly from previous efforts with a particular population. In such cases, it is not appropriate to wait for in extended period of time (e.g., one or two years) to

collect data that relates only to outcomes. The danger in such a strategy rests in the fact that inadequate or inappropriate operational procedures (i.e., enablers) go undetected. Thus, it would be possible for a program to operate for an extended period of time only to discover, after the fact, that desired outcomes were not Had the processes used to achieve outcomes been assessed during their implementation, corrective actions could have been taken that would have enhanced the probability of success, or if $\mbox{\it appropriate}$, outcome objectives (based on natural, pragmatic and relevant judgements) could have been revised.

The major point being made is that the function of evaluation is to optimize the probability of program success. It behooves program implementors to provide for continuous assessment of activities. Often it is difficult for those intimately engaged in design, development and implementation activities to view . ~ ~ these efforts in a detached, dispassionate manner; therefore, it may be beneficial for the program to provide for comprehensive evaluation services that are/ external to the project. These services may come from within the system if quality resources are available or be provided by organizations external to the system.

This introductory discussion has focused on operational considerations. Evaluation activities are also important for dissemination purposes. Adopters

of a program should be provided information regarding the conditions under which the intervention was made in addition to information related to outcomes. Such "treatment conditon" information is available if process as well as outcome evaluation has occurred. The potential adopter can be provided with documentation related to potential problem areas and critical operational and administrative issues.

The next section presents the conceptual approach to evaluation that was used by Project CAST. It is not offered as the only approach, merely one that was found useful in addressing both outcome and process evaluation.

· 3

EVALUATION PLAN

The evaluation plan for this project derived its conceptual basis from the works of both Michael Scriven and Phillip Suchman. These individuals articulated the concepts of formative versus summative evaluation (Michael Scriven) and levels of evaluation (Phillip Suchman).

Formative evaluation, in general, is concerned with the processes that enable the achievement of propram goals. The refinement of curriculum materials, he methods used to communicate program intent to carents, and the planning of dissemination/outreach conferences are all examples of events that are evaluated formatively. Summative evaluation, in general s concerned with assessing the achievement (or extent) of achievement) of program outcomes or impact. Student earning outcomes, parental and/or resource person titudes, and the number of participants at outreach conferences are examples of the types of phenomena that involve summative evaluation.

Formative evaluation can be thought of as a uidance mechanism which allows for "in-course" orrections. By providing a continuous examination, escription, and assessment of on-going project ctivities, information is made available to decisionakers which allows them to insure project success.

Within the context of the formative-summative model, Suchman's "levels of evaluation" concept applies. The concept of "levels of evaluation" provides program planners a framework within which they can examine and assess program phases both singularly and interactively. Three (3) interdependent levels of evaluation are proposed that will provide data capable of satisfying both formative and summative objectives. The three levels are: (1) effort evaluation, (2) performance evaluation, and (3) outcome evaluation.

EFFORT EVALUATION

The objects of investigation here are those which establish, activate, and maintain a program. Effort evaluation has two major goals. The first is to describe the conditions under which various activities are performed. Planning, staff selection, preservice training, selection of materials, and scheduling are examples of activities that must be described. The second goal is to assess the quality of these activities using both historical and consequent data. To summarize briefly, effort evaluation attempts to specify the mechanics and nature of treatments.

PERFORMANCE EVALUATION

Performance evaluation is concerned with the description and measurement of instrumental program forces. The objects of investigation can be defined as program behaviors. In one sense, performance evaluation can be thought of as an

extension and refinement of effort evaluation in that it represents a more rigorous specification of treatment conditions. Whereas effort evaluation attempts to get at what was done (and why), performance evaluation addresses itself to the issues of how and when (i.e., how much). Whenever possible. performance evaluation attempts to quantify the independent variable (treatment conditions) of a program. The range of instructional procedures employed, the distribution of material usage, and teacher/student interactions are examples of factors perceived to be relevant for performance evaluation. A major goal of performance evaluation is the explication of a range of potential causal factors that can be related to outcomes. In addition, data on these factors may provide useful insights for long-range program planning independent of the cause-and-effect relationships obtained.

OUTCOME EVALUATION

Outcome evaluation is concerned with the description and measurement of specific objectives and target population behaviors. The primary concern is the specification (quantitative when possible) of the status of the relevant dependent variables. Student gains and other student behavior are examples of outcome evaluation factors.

SAMPLE EVALUATION STRATEGIES

This section discusses the specific procedures.

that were used for Project CAST and can be used to provide the necessary evaluative information for other similar career education programs.

Both formative and summative evaluation procedures are provided.

SUMMATIVE EVALUATION (OF STUDENT OUTCOMES)

The evaluation of Project CAST student outcomes is based on six (6) major questions:

- 1. How well do handicapped students deal with activities at experience sites?
- Do students acquire specific knowledge and opinions/attitudes about their career goals as a function of Project CAST experiences?
- 3. Do students acquire life skills?
- 4. Will normative growth in basic skills (academics) be maintained?
- 5. What are student attitudes/opinions regarding their participation in Project CAST?
- 6. Do students acquire salable skills?

The specific methodology that has been used by Project CAST for obtaining the answers to these questions follows:

Student Site Functioning

Five measures have been used to determine the extent to which students were able to function at experience sites. At the end of each site placement the resource person, the learning coordinator, and the student complete 'evaluation forms which rate student behavior and performance along a variety of dimensions. A fourth documented measure is a resource person questionnaire. This instrument provides overall attitude and opinion information regarding Project CAST. Finally, interviews were conducted with a sample of all involved parties (i.e., resource person, learning coordinator, student) regarding experience site activities.

Acquisition of Career Goal Knowledge, Opinions and Attitudes

Two means were used to acquire information relating to this question. A student questionnaire/interview instrument was developed. This instrument is designed so as to obtain data relating to student perceptions and motivations. The second data source pertaining to this issue is the Individual Education Plan. The career education objectives found therein were examined in terms of the extent to

which they were achieved by the students.

Acquisition of Life Skills

As with the previous question, the Individual Education Plan is a major data source in assessing student outcomes. Life skills objectives (particularly those derived from the curriculum developed by Project CAST staff) were reviewed in terms of extent of achievement. A second data source is the Social and Prevocational Information Battery (SPIB). This instrument was administered on a pre-test - post-test basis.

Basic Skill Achievement

Three data sources will be used to collect information regarding basic skill and academic achievement. The Woodcock-Johnson Psychoeducational Battery was administered on a pre-test - post-test basis. This instrument provides information in reading, mathematics, written language, knowledge, and skills. A second data source is the student's Individual Education Plan. The academic objectives were examined in terms of extent of achievement.

Student Attitudes/Opinions Regarding Project CAST

In order to determine student perceptions of the program, a questionnaire has been developed. This questionnaire can be administered in written or oral form. These data were augmented with student interviews which were conducted on a sample of students.

Acquisition of Skills by Phase IV

A major goal for Phase IV students

The student has the skills for entry level

The student has the skills for entry level

The student in a self-selected occupation.

Data regarding attainment of this objective

The student has the skills for entry level

The student in a self-selected occupation.

Data regarding attainment of this objective

The student in a self-selected occupation.

The student in a self-select

MINE EVALUATION (OF OTHER PROGRAM ACTIVITIES)

In addition to student outcomes, a second major of the area involves the impact the program has on the community. This evaluation focuses on two sub
parties of the community: the experience site

parties and attitudes of these groups regarding

parties and attitudes of these groups regarding

parties are the key issues. In order to determine

parties are the key issues. In order to determine

parties and attitudes, separate questionnaires

parties and administered to the targeted

The evaluation questions are important as they a the key summative issues. That is, what

effect has the program had on students in terms of the program objectives, and what effect has the program had on the community? In addition to the summative issues, there are key formative issues related to processes (i.e., effort and performance evaluation) that must be answered.

FORMATIVE EVALUATION OF THE PILOT SEMESTER.

The formative evaluation procedures to be carried out focus on the process objectives identified by the project. The following strategies can be used to obtain the needed information:

- 1. Student case studies,
- Project specific criterion referenced instruments
- 3. Survey questionnaires
- 4. On-site visitations to project and employer sites
- 5. Structured interview sessions with project staff, local school staff, employers, students, parents, and representatives from the community
- 6. Analysis of project documentation
- Review of key project products such as, student learning outcome objectives
- 8. Advisory Council review

SAMPLE FORMATIVE EVALUATION STRATEGIES

The following are sample evaluation designs for selected process objectives:.

Sample Strategy # 1

Process Objective Adapt and modify materials and techniques for use with handicapped secondary students

Evaluation Purpose

The evaluator provides formative assistance by reviewing the key project activities for this objective - Student Learning Outcome Objectives, Service Delivery Techniques adapted for use with handicapped students, and other student activities.

Evaluation Instrument

Jointly developed checklist

Data Source and Time of Administration

Completed checklists as materials and techniques are adapted or modified

Criteria of Review the student Success learner outcome objectives and adapted delivery techniques for: (1). comprehensiveness of curriculum areas (2) relevance to: current working conditions appropriateness to the target population (4) comprehensiveness of student career development needs (5) ability of objectives to be measured Reporting The results will be reported to the project personnel with recommendations for revision or approval.

Sample Strategy # 2

Process Objective

Provide students with individualized instructional plans that

include career education concepts infused into their academic instructional objectives.

Evaluation Purpose

The evaluator will analyze the Individual Instructional plans that include capeer education concepts infused into the academic instructional objectives.

Evaluation Instruments

Jointly developed Review Checklists and Content Analysis Chart

Data Source and Time of Administration XII student Individual Education Plans will be analyzed.

Criteria of Success

Student's Individual Education Plans should illustrate:

- (1) career education concepts infused with basic skills development
- (2) work experience related activities infused with basic skills development

- (3) good educational planning
- (4) EBCE delivery techniques

Reporting

The results of the checklists-will be reported to project personnel and indicate if the existing strategies will meet established objectives of the program.

Sample Strategy # 3

Process Objective

Provide students with career explorations at work experience sites and at least one indepth career exploration in an occupation of their own choosing.

Evaluation Purpose

The evaluator will analyze student work relating to work site experiences - student journals, student assessments of the experiences, employer evaluations, student attendance records, etc. - to determine

the kinds of activities performed by students and the reaction of students to the project.

Student case studies, interviews with students, parents, and staff, survey questionnaires, analysis of documentation.

Student interviews and document review will be conducted throughout the project year. Parent interviews and survey questionnaires will be administered near the end of each semester.

Responses to the student case studies checklist and content analysis charts should indicate:

- (1) variety of
 activities
 student per formed in school,
- (2) variety of activities student performed on site.
- (3) the infusion of career education

Evaluation Instruments

Data Source and Time of Administration

Criteria of Success

7

concepts with
basic skill
development, and

(4) individing individing distruction all plan and rk experience.

Resembses to survey questionnaires and interviews should indicate:

- (1) positive attitudes of students, parents, and project staff to EBCE project,
- (2) an understanding by staff to the value of work experiences for handicapped students, and
- (3) an understanding by students of the value of work experience.

The results of the student case studies, content analysis, and survey questionnaires will be reported to the project personner periodically. These results should indicate

the effectiveness of project activities as critiqued by staff, employers, and students.

Sample Strategy # 4

Process Objective

Provide local employers with the experience of working in a structured work experience program with handicapped students.

Evaluation Purpose

The evaluator will analyze employer reaction to the program.

Evaluation Purpose

Evaluator-developed survey questionnaire

Criteria of Success

Results from the survey questionnaires should indicate that employers:

- (1) view the project as beneficial to them as employers,
- (2) view the project as a valuable method for teaching handicapped

students about current work situations, and

(3) view the project as a successful way to bring the world of work and the world of education together.

Reporting

The results from the survey questionnaires and employer evaluation forms will be reported to project personnel. These results should indicate the reaction of employers to the project and the need for alternative strategies for employers; and students.

sample instruments

28

community

INTERVIEW PROTOCOL - RESOURCE PERSON

Key áreas:

- 1. Apprehensions vis-a-vis "handicapped"
- 2. Student site functioning:
 - a. evidence of attitudes
 - b. evidence of maturity
 - c. evidence of interest
- 3. Were there any students you worked with who you feel would be unable to function at a site on a permanent basis? (Probe why, what characteristics, etc.)
- 4. Did you get enough information about student prior to his/her arrival? (Probe more information, different information)
- 5. Staff behavior

RESOURCE PERSON QUESTIONNAIRE

This questionnaire gives you a chance to express your feelings about the Project CAST program. The questionnaire consists of a series of questions. There are no right or wrong answers. Your thoughts and feelings are the important things in this questionnaire. The answers you give will help determine how well the program is doing. These answers will also help improve the program in future years.

Thank you for taking the time to fill out this questionnaire.

INTERVIEW PROTOCOL FOR PHASE I STUDENTS
GROUP INTERVIEW

Responses will be obtained to questions that get at the following issues:

- Awareness of the many occupations that exist within the community
- Awareness of jobs that interested the student
- 3. Awareness of jobs which did not capture their interest
- 4. Aspects of jobs they liked. Specific probes will be made to get at factors, such as:
 - a. people
 - b. nature of work
 - c. self perceptions of maturity,
 responsibility
 - d. knowledge of job related tasks
- 5. Student aspirations that stemmed from Phase I experiences
- 6. Attitudes toward CAST. Probes regarding:
 - a. comparison with previous school experience
 - b. staff
 - c. worthiness/value (e.g., would you recommend CAST to a friend)
