Education Consolidation Improvement Act Chapter 1;

Elementary Secondary Education Act Title I

#### ABSTRACT

ESEA Title I, now Chapter 1 of the Education Consolidation and Improvement Act of 1981, was designed to provide financial assistance to local education agencies to meet the special needs of educationally deprived children, with funds used to provide supplemental instructional support service. Starting with the 1979-80 school year, each state education agency reported annually on the number of students served and their achievement gains, as well as on the number of staff members and parents involved in the program. This report summarizes the state reports for the 1979-80, 1980-81, and 1981-82 school years from the 43 states with complete data for all 3 years. Information is provided on the following: (1) funding for Title I students; (2) the number and grade levels of students served; (3) services received; (4) number of staff members employed in Title I projects; (5) number of staff members who received Title I funded training; (6) advisory council and parent activities; (7) number of Title I participants, services received, and staff employed during the summer term; and (8) nonpublic school participants. Finally, achievement data are reported by grade level for reading and math during each of the three years. A list of references is included, along with two appendixes providing (1) achievement test results for students\_tested fall-to-spring and (2) tables for 1981-82 Title 1 data. (TE)

ESEA Title I Grants to Local Education Agencies

A Summary of State Reports\* for 1979-80, 1980-81, and 1981-82

Office of Planning, Budget and Evaluation

U. S. Department of Education

October 1983

This document was prepared by Judith Anderson of the State and Local Grants Division of the Office of Planning, Budget and Evaluation with the assistance of Rhonda Lewis. Data were collected by the Office of Elementary and Secondary Education, whose staff assisted in verification of the data. Questions about the report can be addressed to Judith Anderson, ED/OPBE/SLGD, FOB #6 Room 4032, 400 Maryland Ave. SW, Washington, D.C. 20202 (telephone 202-245-9401.)

# Highlights'

States submitted reports on their ESEA Title I programs in local educational agencies to the U.S. Department of Education using a common reporting format for the 1979-80, 1980-81, and 1981-82 school years: Based on these reports, we found that:

- o Approximately 5.4 million children were served by Title I programs in local educational agencies during 1979-80, 5.3 million were served in 1980-81, and 4.9 million were served in 1981-82.
- o The majority of participants--over two-thirds--were in grades 1 through 6:
- of Approximately 3.5 million students (72 percent of the 4.9 million in the program) received reading services, 2.1 million (42 percent) received mathematics services, and 950,000 (19 percent) received language services in 1981-82.
- o Approximately 85 percent of the Title I staff members were reported to be teachers or teacher aides; only 3 percent were administrators.
- o Approximately four percent of the Title I students were in non-public schools. (Over 180,000 nonpublic school students were served each year.)
  - Nonpublic school students were most likely to receive reading (84 percent in 1981-82); mathematics (40 percent in 1981-82); and language arts (21 percent in 1981-82) assistance.

Based on the results of annual achievement testing, we found that:

- o In reading, the "average" Title I elementary student is at about the 24th percentile when selected for the program.
- o In mathematics, the "average" Title I elementary student'is around the 30th percentile when selected for the program.
- o In reading, modest achievement gains were found in nearly all grades each year.
- o In mathematics, modest gains were found in nearly all grades each year.
- o Students in the higher grades tended to have lower achievement gains than did students in the elementary grades.

# Background

ESEA Title I, which is now Chapter 1 of the Education Consolidation and Improvement Act of 1981, is the largest program of federal education aid to elementary and secondary school students. The program was designed to provide financial assistance to local educational agencies to meet the special needs of educationally deprived children, with funds used to provide supplemental instructional and support services.

Evaluation requirements have been part of the law from its beginning, but States were not required to report to the Federal government in a uniform way until 1979. Beginning with the 1979-80 school year, each State education agency (SEA) compiled reports from each of its school districts (or from a one-third sample of its districts) and submitted a State report to the U.S. Department of Education by February 15 of the following year. Information was reported on the numbers of students served and their achievement gains as well as on the numbers of staff members and parents involved in the program. Data were reviewed and edited by ED staff.

This report summarizes the State reports for the 1979-80, 1980-81, and 1981-82 school years. Only the 45 States with complete data for all three years were included in the achievement summaries. Since a subset of States were used, the 1979-80 and 1980-81 achievement data will not match the data reported previously. FN 1/

# Title I Funding

The amount of money appropriated by Congress for ESEA Title I programs for each of the three years covered by this reporty is shown in Table 1. Note that Title I is an "advance funded" program, so that FY79 monies are expended in FY80 (the 1979-80 school year) and so forth.

The amount of funds available for Title I programs in local school districts declined over the three year period. However, States may carry-over funds from one fiscal year to the next, and in States with a large amount of carry-over money, effects of funding reductions may not be felt immediately.

Table 1. ESEA Title I Funding for Title I Programs in Local School Districts

Appropriation	Basic Grants	Concentration	Total
Year	to Districts	Grants	
FŸ79	2,629,533,157	147,044,344	2,776,577,501
	2,633,326,343	98,325,121	2,731,651,464
	2,512,614,124	98,772,848	2,611,386,972

# How Many Students Were Served by Title I?

Based on the data submitted by the States, we found that:

- o The number of students served by Title I in public and non-public schools declined nearly 10% from the 1979-80 school year, when over 5.4 million students were served, to the 1981-82 school year, when fewer than 4.9 million students were served.
- o Approximately 7% of the Title I students in each of those years were in pre-kindergarten or kindergarten.
- o The majority of the participants--over two-thirds--were in grades 1 through 6.
- o Less than 20% of the participants were in grades 7 through 9.
- o Relatively few participants (about 5%) were in grades 9 through 12.
- o Approximately 96% of the students in Title I were public school students.

Table 2 presents data for both public and nonpublic school students combined. Data for nonpublic school students are presented on pages 12 and 13.

The number of students served in Title 1 programs declined each year, with nearly 2% fewer students served in 1980-81 than in 1979-80 and about 8% fewer served in 1981-82 than in 1980-81. The reduction over two years is nearly 10%, which is somewhat greater than the reduction in funds (not including inflation)\_to\_local school districts over this time (a 5.9 percent reduction from FY79.)

Table 2. Number of Students Served in Title I in Different Grade Levels FN 2/

Grade Span `	1979-	80	. 1980-81		1981-82

Grades 10-12	237,877	(4)	259,018	(5)	268,429	(6)
Total	5,402,341	J.	5,301,488		4,866,108	

The reported reductions in the numbers of students served could be due to changes in reporting practices in the States, including less complete, reporting of the numbers of students served. However, these findings on overall numbers served are consistent with the findings of the District Practices Study (Advanced Technology, 1982). District administrators reported that the number of children served with Title I funds parallels, on the average, the overall budget cuts in public schools.

The District Practices Study also found that budget changes influenced the grades served by Title I. Administrators reported that when budget cuts forced them to reduce the number of grades served, they were more likely to drop Title I services from preschool and secondary programs in order to preserve services in the elementary grades. The study did not indicate what level of reduction of funds triggered reductions in the number of grades served.

In contrast to this finding, the data in the State reports suggest that the proportion of students in each of the grade spans (see Table 2) did not vary much over the three years. While the number of pre-kindergarten and kindergarten students declined from 1979-80 to 1981-82 the same proportion of students (7%) were served in both years. Furthermore, the number of participants in grades 10 through 12 actually increased over the three years. Decreases occurred in grades 1 through 3, despite administrators' reports in the District Practices Study that they tried to trim elsewhere first. The administrators in that study may have been talking about fairly substantial budget cuts, however, whereas the changes in Title I funds over the three years were modest.

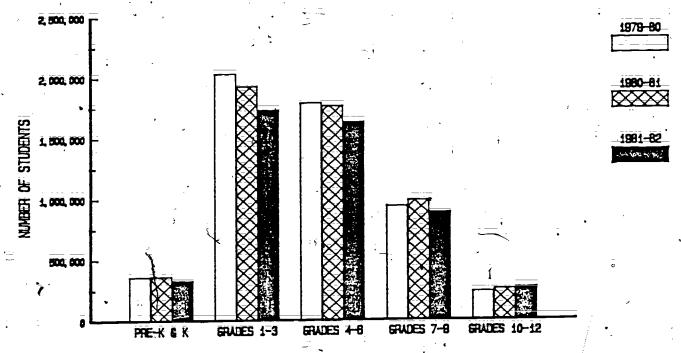

Figure 1. Number of Title I participants in 1979-80, 1980-81, and 1981-82.

# What Services Did Title I Students Receive?

The numbers of public and nonpublic school students who received different types of services are presented in Table 3. We believe that the participation counts for the major service areas—i.e., reading, mathematics, and language arts—are fairly good estimates of the numbers of students served by these programs. However, numbers in other categories—particularly the "other instructional" and "other supporting" categories—may be influenced by local variation in how to count students in these categories. This variation may account for year-to-year changes observed nationally.

#### We found that:

- o The number of students served in reading and mathematics declined lover three years. Over 700,000 fewer students were served in reading in 1981-82 than were served in 1979-80, and over 400,000 fewer were served in mathematics.
- o The numbers of students receiving health and nutrition services declined over 665,000 over the three years, while the number receiving attendance and guidance services increased by over 200,000.
- o The number of students receiving English for limited-English profit ent students increased from fewer than 375,000 in 1979-80 to over 480,000 in 1981-82.

Table 3. Number of Students Served by Service Area FN 3/

Service Area	1979-8	0	1980-8119		1981-	1981-82	
	Number	(%)	Number	(%)	Number	(%)	
Instructional Reading Mathematics Language Arts Other Instructional Limited English Vocational Special for Handicapped	4,197,336 2,483,044 1,053,144 1,039,651 374,590 5,571 9,084	(78) (46) (19) (19) (7) () ()	3,846,228 2,225,264 832,130 273,831* 447,547 6,565 15,704	(73) (42) (16) (5) (8) ()	3,485,024 2,066,220 945,804 1,078,113 481,224 11,094 12,587	(72) (42) (19) (22) (10) (0) (0)	
Supporting Health, nutrition Attendance, guidance Other Supporting Transportation Total Number Served	1,518,798 792,615 421,070 138,148	(28) (15) (8) (3)	1,112,883 1,184,701 555,549 302,579 5,301,488	(22) (21) (10) ( 6)	851,479 1,014,881 714,409 343,941 4,866,108	(17) (21) (15) (7)	

The decrease is due largely to California, which did not report the number of students served in other instructional areas in 1980-81.

One apparant change needing further explanation is the large reduction in the number of students served in reading and mathematics. The reduction for reading from 1979-80 to 1981-82 was over 700,000, while the total number of students served declined only slightly over 535,000. It may be that fewer students are served in multiple service areas, e.g., both reading and mathematics; than was true in the past. It may also be related to the increased count students served in programs for limited-English proficient students; that is, students who formerly would have been served in reading were served in programs for limited-English proficient students or in other similar programs (which would have been listed under "other instructional".). Subject areas listed under "other instructional" included preschool, kindergarten, art, music, science social studies and child development. Subject areas listed under "other supporting" included library, media center, audio-visual, speech and hearing therapy and dental.

1980-81

1981-82

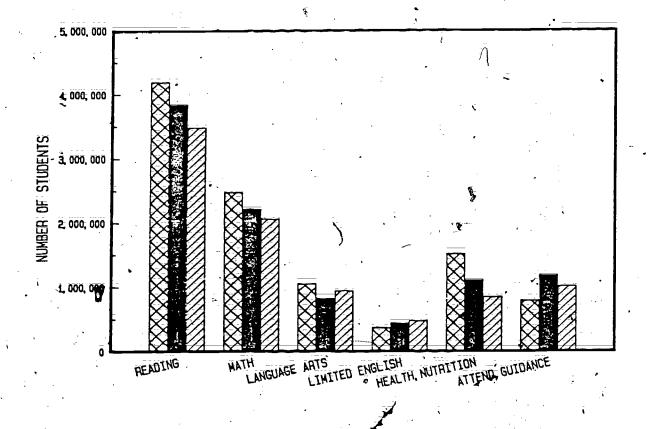

Figure 2. Number of participants by service area in 1979-80, 1980-81, and 1981-82.

# How Many Staff Members Provided Title I Services?

The number of full-time equivalent staff members employed in Title I projects has shown a steady decline over the three years. The relative proportion of personnel in each of the job classifications has remained fairly constant, however.

From Table 4, one can see that

- o Over 200,000 full-time equivalent staff members were employed in the 1979-80 term as compared to fewer than 173,000 in the 1981-82 term, a decrease of about 13 percent.
- o The 13 percent reduction in number of staff from 1979-80 to 1981-82 is only slightly higher than the 10 percent reduction in number of students served.
- o Approximately 86 percent of the personnel were teachers or teacher aides, staff who generally provide direct services to children in the program.
- o Three percent of the full-time equivalent staff members are administrators.

Table 4. Number of Etaff Employed in Title I Projects During the Regular Term in Full-Time Equivalents

	<u>(                                    </u>		
Job Classification	1979-80	1980-81 Number (%)	1981-82 Number (%)
Teachers Aides Teachers Other Administrative Staff Support Staff Curriculum Specialists Clerical Staff	91,457.2 (46) 78,494.8 (39) 6,607.6 (3) 6,312.0 (3) 6,303.7 (3) 6,241.8 (3) 5,076.4 (3)	81 <u>022.3 (42)*</u> 6,405.5 (3) 4,367.2 (2) 6,566.5 (3) 2,073.7 (1)*	71,697.6 (41) 75,552.1 (44) 8,237.1 (5) 4,824.4 (3) 5,740.7 (3) 2,626.4 (1) 4,766.0 (3)
Total	200,493.5	191,038.3	173,444,3

<sup>\*</sup> The increase in number of teachers and decrease in number of curriculum specialists from 1979-80 to 1980-81 was due to changes in reporting procedures in two States. Staff who had been reported as curriculum specialists in 1979-80 were reported as teachers in 1980-81.

The decline in the number of staff members employed in Title I projects parallels the changes in the budget. The District Practices Study found that local school districts spend a large proportion of their Title I funds (between 75 and 80 percent) on instructional services to children, and that local allocation of funds to instruction will mirror funding changes.

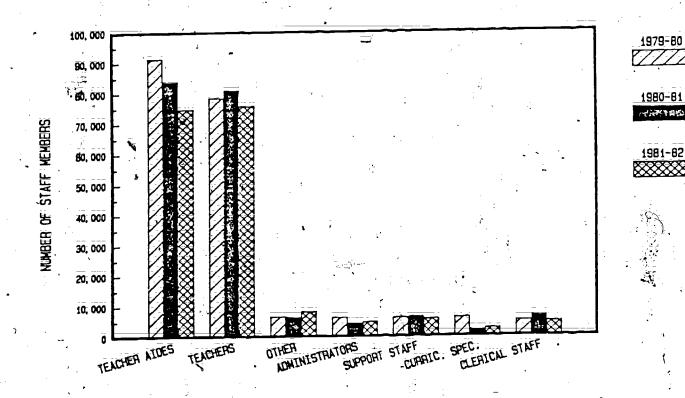

Figure 3. Number of full-time equivalent staff employed in Title I.

# How Many Staff Members were Trained?

Over 274,000 Title I and non-Title I staff members received Title I-funded training each year (see Jable 5). These counts do not include staff who received non-Title I-funded training. Also, the figures are not directly comparable to the FTE staff figures in Table 4, since in Table 5, for example, a half-time staff person would count as a "1", not as a "0.5".

### We found that:

- o Approximately half of the staff members who received training were teachers.
- o Approximately one-third of the staff members who received training were teacher aides.

The State reports do not provide information on the types of training provided/to staff.

# Advisory Council and Parent Activity Information

Information on parent advisory council activities and parent activities is provided in Table 6. We found that:

- o Over 250,000 parents of Title I public school children were elected members of an advisory council each year.
- o The number of people receiving training related to advisory councils declined from nearly 400,000 in 1979-80 to under 200,000 in 1981-82. (In 1981, ECIA eliminated the requirement for parent advisory councils.)
- o Over 350,000 parents of Title I children were involved in project planning, implementation, or evaluation each year.
- o The number of parent volunteers in the classroom declined from 126,000 to 76,000; while the number of volunteers outside of the classroom increased.

# Table 6. Title I Advisory Council and Parent Activities

			-	
Area	•	1979-80	1980-81	1981-82

## Advisory Councils

Number of elected members of an advisory council who:
were parents of Title I public school pupils 272,556 288,029 254,218
were parents of Title I non-public school pupils: 19,390 25,505 16,879
received training related to councils 398,952 207,295 199,477

Number of Local Education Agencies that provided funds for advisory council activities: 6,624 6,216 8,553

#### Parent Activities

Number of parents of Title I students involved in the following Title I activities:

Project planning, implementation, or evaluation 387,235 352,493 351,060 Volunteers in the Title I classroom 126,238 119,253 76,843 Volunteers in Title I activities outside of the classroom 90,410 122,912 120,960

Number of other parents involved in the activities listed 163,32

163,322 190,781 172,079

# What Services Were Provided During the Summer Term?

Reporting on summer term activities was less complete than was reporting on regular term activities; therefore, the information provided should be considered to be a minimum estimate of activities during the summer.

Based on the reports received, we found that:

- o There was a decline of nearly 41 percent for 1979-80 to 1981-82 in the number of students served in Title I during the summer.
- o The number of staff employed showed a 42 percent decline during the same period.
- o Approximately 84 percent of the staff are teachers or teacher aides, a comparable proportion to the regular school term. However, a slightly higher proportion of staff are teachers than are aides during the summer than during the regular term.
- o The proportion of students served in mathematics is higher during the summer than during the regular term (63 to 70 percent versus 42 to 46 percent.)

# Participation by Students in Non-public Schools

States reported information on Title I students in non-public schools as well as in public schools. The data are summarized in Tables 10; 11; and 12.

From the tables, it can be seen that:

- o Approximately 200,000 non-public school students were served each year in Title I projects.
- o Non-public school students represent about four percent of all Title I students.
- Three-quarters of the Title I non-public students are in grades 1 through 6.

Table 10. Number of Nonpublic School Participants by Grade Level

- o Over three-quarters of the non-public Title I students receive reading instruction.
- Over one-third of the non-public Title I students receive mathematics instruction.

The District Practices Study (Jung, 1982) found that 45 percent of Title I districts had nonpublic school students residing in Title I attendance areas during the 1981-82 school year. Fifty-six percent of these districts served nonpublic students in Title I. In 1979-80, approximately 5 percent of the students in private elementary and secondary schools received Title I services, compared to 13 percent of public elementary, and secondary school students.

# Achievement Data

States reported Title I achievement information for participants in grades 2 through 12. Data were reported separately for students tested on a fall-to-spring test cycle and for those tested on an annual cycle. While the majority of students are tested fall-to-spring, several studies including an ED sponsored review of the Title I evaluation and reporting system (Linn, in Reisner, et. al., 1981), have indicated that the fall to-spring testing cycle may produce biased results. For that reason, only annual test data are provided here. Linn also indicated that the annual gains have a small positive bias of from 1 to 2 NCE units, but we did not implement a correction and have reported observed gains.

Furthermore, in order to permit comparisons across years, only the 45 (out of 51) States with comparete achievement data for all three years were included in these analyses. For this reason, the data will not be the same as presented in other reports. For complete 1979-80 data, see Stonehill and Anderson (1982); for complete 1980-81 data, see Anderson (1983); and for complete 1981-82 data, see Lewis (1983).

# How Needy are Title I Students?

Table 13 and Figure 5 show the pretest standing of Title I students. The national norm—that point which represents the median achievement of all students—is the 50th percentile. Title I students are far below this norm. FN 6/

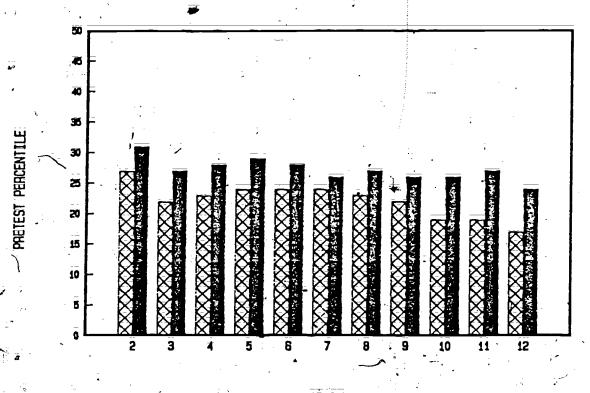

Table 13. Reading and Mathematics Pretest Standing (for Students Tested on a Fall-to-Fall or Spring-to-Spring Schedule)

#### We found that:

- o . In reading, the "average" Title I elementary school student is at about the 24th percentile when selected for the program.
- o In mathematics, the "average" elementary school Title I students is around the 30th percentile—higher than was found for reading—despite the smaller proportion of students served in mathematics, which might have suggested that the students served would have been needler.
- o High school students who are selected for Title I tend to be needler compared to their peers than are students selected at the elementary grades. (A smaller proportion of high school students are served by Title I.)
- o, In general, the three years' worth of students in Title I tended to be at about the same level of achievement.

GRADE

Figure 5. Pretest standing of Title I participants in reading and mathematics in 1981-82.

# What Were the Title I Students' Achievement Gains in Reading?

The reading achievement results of Title I students in grades 2 through 12 are presented in Table 14 and Figure 6. We found that:

- o Gains were found in all grades for all three years with the exception of grade 10 in 1979-80.
- o In all three years, Title I students in grades 3 through 9 started in roughly the low to middle 20th percentile range and ended in the upper 20th percentile area. Grade 2 students started a little higher and ended roughly the same, while students in grades 10-12 started lower and ended roughly the same.

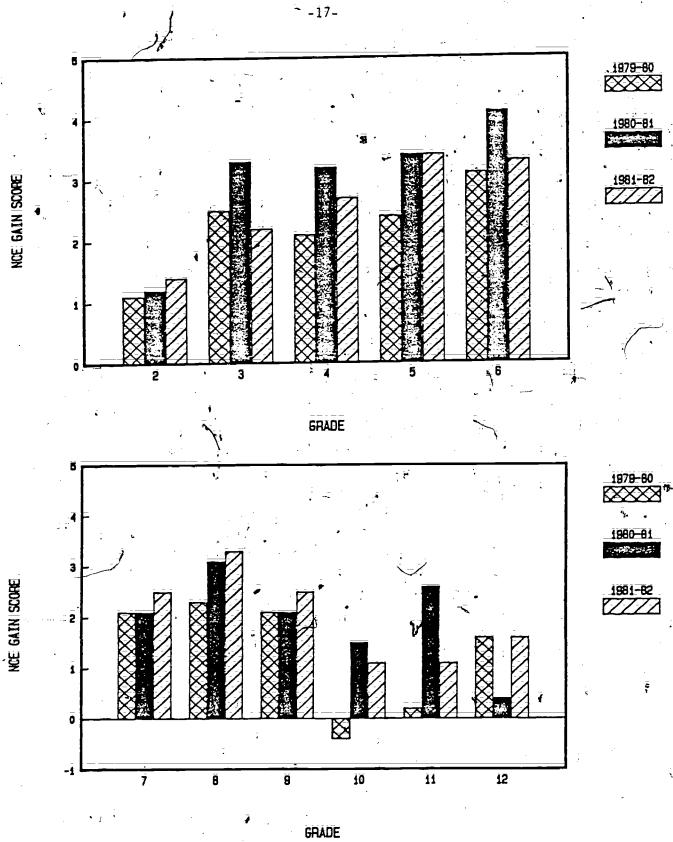

Unlike the Sustaining Effects Study, higher gains were found in grades 5 and 6 than were found in grades 2 and 3. The differences between the gains found in these grades were very small, however.

o At the high school level; there was a tendency for the gains to be smaller than in the elementary grades.

Reading achievement gains in 1979-80, 1980-81, and 1981-82.

# What Were the Title I Students' Achievement Gains in Mathematics?

The mathematics achievement results of Title I students in grades 2 through 12 are presented in Table 15 and Figure 7. We found that:

- o Gains were found for students in grades 2 through 8 for all years.
- o Gains were highest in grade 6 and were lowest in grades 10 through
- o Mathematics gains were not uniformly higher than reading gains—in fact, the mathematics gains were as likely to be lower than reading gains as to—be higher when comparing any grade/year combination (in contract to the findings of the Sustaining Effects Study)

#### Footnotes

1. For the most part, data were accepted from States on an "as is" basis. In some cases, particularly where data fell out, of a reasonable range, States were asked to check the data; and data were changed as necessary. It should be noted that quality control procedures differ markedly among the States.

The following States had fewer than three years of complete achievement data:

The insular areas and the Bureau of Indian Affairs also submitted achievement results. These data were not included in the summaries because of differences in testing procedures (such as testing in different languages than English) or using different metrics (with a Focally-developed test in a language other than English, it would be difficult to obtain NCE scores.) We do not mean to imply that the results of the testing were not valid, but rather that the data were not comparable to the data reported by other SEAs.

- 2. Some States reported serving students in ungraded settings. Therefore, the total number served is not equal to the sum of the grades.
- 3. The number of students served in the two "other" categories may include students who were "double-counted." That is, a student who was served in two "other" instructional areas was counted twice, rather than once. In any case where a State reported serving more students in any service area category than they reported serving in total, the service area number was reduced to the total number served.
- 4. The total includes staff whose Title I/non-Title I/designation was not known.
- 5. The total number includes students whose public/nonpublic status was not known:
- 6. The figures used in Table 13 were calculated by finding the weighted taverage normal curve equivalent scores for each grade and subject and converting them to percentiles.
- 7. The Normal Curve Equivalent is a standard score metric with a mean of 50.0 and a standard deviation of 21.06.

#### APPENDIX A

1979-80, 1980-81, and 1981-82 Achievement Test Results for Students Tested Fall-to-Spring

# Fall-to-Spring Achievement Test Results

States reported Title I achievement information using either a fall-to-spring or an annual (usually spring-to-spring) testing cycle. The majority of students--over twice as many in most elementary grades in reading--were tested on a fall-to-spring schedule. However, several studies, including an ED sponsored review of the Title I evaluation and reporting system (Linn, in Reisner, et. al., 1981), have indicated that the fall-to-spring testing cycle may yield biased results. Districts which evaluate on a fall-to-spring cycle should pay particular attention to using correct procedure to implement the model and in addition may want to do follow-up evaluations which look at student growth over a longer period of time.

The data presented here are based on 45 States which submitted complete achievement data for the 1979-80, 1980-81, and 1981-82 school years.

# Pretest Standing

Table A-1 shows the pretest standing of Title I students who were tested on a fall-to-spring schedule. The percentiles were calculated by obtaining a weighted average NCE score for each grade and subject and converting that score to a percentile. The national norm-+that point which represents the median achievement of all students--is the 50th percentile. Title I students are far below this norm.

Table A-1: Reading and Mathematics Pretest Standing (for Students Tested on a Fall-to-Spring Schedule)

# Reading Achievement

The reading achievement results for students tested on a fall-to-spring schedule are presented in Table A-2. The number of students tested varies greatly across the grades. (In 1981-82, nearly 30 times as many grade 2 students as grade 12 students were tested.)

#### We found that:

- o Gains were found in all grades for all three years.
- o Gains for elementary students tended to be higher than the gains for older students, particularly students at the high school level.

# Mathematics Achievement

The mathematics achievement results for students tested on a fall-to-spring schedule are presented in Table A-3.

### We found that:

- o Gains were found in all grades for all three years.
- o Gains for elementary students tended to be higher than the gains for students in junior.high and high school.
- o Gains for mathematics tended to be somewhat higher than the gains for reading.

Served 2/	4,618,793		184,084	i, D	49,792	7 · i	4,866,108	•	

The public number is an estimate obtained by subtracting all local Meglec'ted or Delinquent participants from the total number of Public participants. Since some local Neglected or Delinquent participants may be in Nonpublic institutions, the number underestimates the number of Public participants not in Neglected or Delinquent programs. For the same reason, the number of Nonpublic participants is an overestimate.

Table 3. Title I Parent Activity Information for 1981-82

# Advisory Councils'

Number of elected members of a school advisory council who:

were parents of Tithe I public school students:	254,218
were parents of Title I nonpublic school students:	16,879
received training related to school advisory council activities:	199,477
activities	

Number of local education agencies that provided Title I funds = 8,553

# Parent Activities

Number of parents of Title I students involved in the following Title I activities:

project planning.	implementation, and/or evaluation:	•	351,060
volunteers in the	Title I classroom; *	•	76,843
.volunteers in Tit	le I activities outside the classroom:	٠	120,960

Number of other parents involved in the activities listed: 172,079

Average number of people who attended school advisory council meetings: Range 4.7 - 39.7

Table 4. Number of Staff Employed in Title I Projects During the 1981-82 Regular School Term in Full-Time Equivalents
