#### **ABSTRACT**

The report examines progress for the school years 1981-82 and 1982-83 in implementing P.L. 94-142, The Education for All Handicapped Children Act. Following an executive summary, an analysis of four major aspects of the law's implementation is detailed. A section on students receiving a free appropriate public education cites data on the number of students served, services for children from birth through age 5, services to secondary and postsecondary aged students, services to institutionalized and previously institutionalized students, and personnel. The next section provides an update on the implementation of key provisions of the Act assuring the rights of handicapped children. Information is provided on the least restrictive environment provision, precedural safeguards, protection in evaluation, and initiatives of the Department of Education, Special Education Programs (SEP). The third section reports on assistance to states and localities in educating handicapped children. Discussed are the amounts and use of federal, state, and local funds for serving handicapped children; technical assistance to the states; SEP review of state programs; and other SEP administrative responsibilities. The final chapter examines efforts to assess and assure the effectiveness of programs educating handicapped children. Reported are federal evaluation efforts and studies, procedures being implemented for state and local evaluation efforts and state and local evaluation studies. A major portion of the document consists of appendixes concerned with evaluation of the Education of the Handicapped Act, discretionary programs administered by SEP, and data tables. The data tables include Child count tables (by state, age, and handicapping condition); personnel tables (special education teachers, other staff, and student teacher ratio); least restrictive environment tables (number and percent of children served in different educational environments by age and state); population and enrollment tables (census projections by state and age); and a financial table showing state grant awards under P.L. 94-142 for the fiscal years 1977-84. A final appendix provides background and methodology concerned with determining the costs of special education and related services. Additional tables and figures present data throughout the report. Madeleine Will, Assistant Secretary

#### Foreword

This Sixth Annual Report to Congress on the Implementation of Public Law 94-142: The Education for All Handicapped Children Act examines the progress being made in implementing the Act and in meeting its purposes. The past six years have seen a shift from the initial procedural activities to implement this legislation affecting all handicapped children to a strengthened concern for the quality and comprehensiveness of special education programs.

During the past eighteen months the Administration has completed an extensive review of the rules governing the Education of the Handicapped Act (EHA). As a result of this review the Department has concluded that there is general satisfaction with the rules. Thus, the Administration is recommending no changes in the Act or in the rules governing the Act in this report. Instead, the Department will provide technical assistance to help States and localities with problems arising from the current rules. The Department is currently formulating the regulations which will implement the Education of the Handicapped Act Amendments of 1983, P.L. 98-199.

The goals of the Act are being achieved. The data contained in this report show steady improvement in the provision of educational services to handicapped children. At the same time, there are areas where further improvement is needed. There are needs (1) to expand and improve services to young handicapped children; (2) to serve more handicapped children in the least restrictive environment with the maximum appropriate integration; and (3) to improve preparation for the transition of adolescents from school to work, with increased coordination among the agencies involved. The Federal Government will continue its efforts to assist the States in maintaining the gains achieved over the years since the passage of the EHA and to improve the effectiveness of special education programs to assist all handicapped children in realizing their full potential.

Madeleine Will
Assistant Secretary for Special
Education and Rehabilitative
Services

#### **Preface**

Section 618(d)(1) of Part B of the Education of the Handicapped Act (EHA-B) (20 U.S.C. §§1401,1411 et seq.) requires the Secretary to transmit to Congress an annual report which describes the progress being made in implementing the Act. This is the sixth annual report that has been prepared to provide Congress a continuing description of our National experiences in making available a free appropriate public education for all handicapped children.

Section 601(c) of the Education of the Handicapped Act (EHA) describes the purposes of the Act. These are (1) to assure that all handicapped children have available to them a free appropriate public education, (2) to assure that the rights of handicapped children and their parents or guardians are protected, (3) to assist States and localities to provide for the education of all handicapped children, and (4) to assess and assure the effectiveness of efforts to educate handicapped children.

Each of the chapters of this report will provide information describing the progress being made in meeting one of these four purposes.

The information presented in this report was obtained from several sources. National statistics on numbers of children receiving sp cial education and related services, numbers of school personnel available and needed to provide such services, and numbers of handicapped educational education in different special receiving children. environments are reported to Special Education Programs (SEP) by the States. The EHA-B child count information was recorded on December 1, 1982; the rest of the information was provided for school year 1981-82. Information regarding the number of children needing and not receiving a free appropriate public education is not included in this Prior to 1980, States reported data on unserved and underserved handicapped children (the two categories of children given priority under Section 612(3) of EHA-B). Since 1980, however, each participating State has been required to provide all handicapped children with a free appropriate public education and would be out of compliance with the Act if all known handicapped children did not receive such an education. Thus, since 1980, the issue of handicapped children not receiving a free appropriate public education has been a compliance issue dealt with through monitoring and complaint processes rather than through Federal reporting mechanisms.

SEP's monitoring visits to the States have provided additional National data on the status of implementation. The report also includes information concerning technical assistance activities supported by SEP's Division of Assistance to States, training activities supported by the Division of Personnel Preparation, and research and model demonstration projects funded through the Division of Innovation and Development and the Division of Educational Services. Finally, information for school years 1981-82 and 1982-83 is presented from a series of special studies supported by SEP, to describe, analyze, and disseminate findings of the progress being made and remaining barriers to implementing EHA-B.

#### **Executive Summary**

This is the sixth Annual Report to Congress on the status of education and related services for the Nation's handicapped children and youth in fulfillment of the provisions of Part B of the Education of the Handicapped Act (EHA-B) (20 U.S.C. §§1401, 1411, et seq.), as amended by P.L. 94-142. In Section 601(c), Congress stated the purposes of the Act, which are: (1) to assure that all handicapped children have available to them a free appropriate public education, (2) to assure that the rights of handicapped children and their parents are protected, (3) to assist States and localities to provide for the education of all handicapped children, and (4) to assess and assure the effectiveness of efforts to educate handicapped children.

The report is submitted by the Secretary of Education in accordance with the provisions of Section 618, which requires that the impact of the program authorized by the Act be evaluated and that updated information, including information regarding the number of children requiring and receiving a free appropriate public education, be provided annually. The Education of the Handicapped Act Amendments of 1983, P.L. 98-199, have modified the reporting requirements in a number of respects. This report, however, was prepared to cover a period of time during which the previous version of Section 618 was controlling. The report provides, as have previous reports, current information which describes the progress that has been made in meeting the purposes outlined in Section 601(c) of the Act.

#### Number of Students Served

The number of handicapped children who are receiving special education and related services continues to rise as it has each year since the initial child count in 1976-77. The 1982-83 total of 4,298,327 served by States under the provisions of EHA-B P.L. 89-313 is an increase of 65,045 (or 1.5 percent) over the previous school year, and 16 percent since The number of handicapped children served in proportion to the number of children enrolled in preschool through twelfth grade rose from 10.47 percent in 1981-82 to 10.76 percent in 1982-83. This overall increase becomes more significant when compared with the Nation's total school-age population, which has been steadily decreasing in the past decade.

-xv-

- Variations continue in the number of children served within the different handicapping conditions. Large increases in the number of learning disabled children served overshadow the decreases in number of children served in most other categories. Since 1976-77, the learning disabled population has grown by 119 percent. This rate of growth appears to be slowing, in part due to increased efforts by States to assure that children are not erroneously classified. The category of emotionally disturbed has also increased, possibly as a result of the increased capacity of State educational agencies (SEAs) and local educational agencies (LEAs) to provide services, especially at the local level.
- The total number of multihandicapped and other health impaired children served has declined, although this is not uniformly true within the States. Some of this be attributed to definitional and decline can procedural changes in reporting, especially in a few populous States. During the past year and since 1976-77, the number of children served in every other category except visually handicapped has decreased. Trend data from National totals is often at odds with the data from individual States. Therefore, many factors, such as population shifts and procedural or definitional changes, must be examined in order to account for changes in the number of handicapped children served.

## Services for Children from Birth through Age Five

- The implementation of the Education of the Handicapped Act, as amended by P.L. 94-142, has brought concomitant increases in the nature and extent of programs to provide education and related services to the population of young handicapped children. Early intervention with handicapped children results in a significant decrease in services required later; in some cases it eliminates or reduces the services which would otherwise need to be provided when the child enters school, thereby resulting in notable cost savings.
- States continue to report increases in the number of preschool-age handicapped children served, especially those aged three through five. This age group

represents nearly a quarter of the total increase in the number of children ages three through 21 who received special education services last year. Since 1976-77, there has been an increase of more than 23 percent in the number of preschool children served.

- Thirty-eight States now mandate services to at least some portion of the preschool handicapped population from birth through age five. The specific ages and areas of handicap for which services are provided vary among States; however, a larger percentage of the three-through five-year-old population is reported to be served in those States which mandate services than in those that do not.
- Four Federal initiatives -- EHA-B, the Preschool Incentive Grant Program (20 U.S.C. §1419), the State Implementation Grant Program, and the Handicapped Children's Early Education Program -- have played a critical role in encouraging preschool programs. The number of States choosing to participate in these preschool programs has more than doubled since fiscal year (FY) 1978. A recent National analysis of the impact of demonstration and outreach programs found the accomplishments of the HCEEP projects to be "greater and more varied than those of any other documented education program identified."

#### Services to Secondary- and Postsecondary-Age Students

A noticeable expansion of services to secondary- and postsecondary-age handicapped students has occurred, in (1) increased recognition of the due to: importance of a successful transition from school to work and community life; and (2) the need to preserve Information educational gains from earlier education. from selected States indicates a more rapid growth in services at the secondary level than for younger school-aged children. The 1982-83 child count data school-aged children. indicates an increase of 9 percent from the previous year for postsecondary-age students aged 18 through 21, and an increase of 70 percent over the number served in Although all States have mandates to provide 1978-79. services to handicapped students through age 17, 24 States have mandates to serve handicapped youths through the age of 21 if they have not graduated from

high school. In addition, many States permit local schools to provide services at least through age 21 even when a mandate does not exist.

- There is a growing trend toward expansion of vocational services and use of community resources to provide vocational skills to secondary—and postsecondary—age handicapped youth. Through such programs, there is also greater opportunity to receive education with and interact with nonhandicapped students.
- Through combining resources from other public and non-profit service agencies and prospective employers, financing of programs for older handicapped youth is being shared among other human service agencies and the private sector.
- The Education Department will assist the expansion and improvement of transitional services for handicapped children and youth through development of curriculum materials, research on the accessibility of employment training, follow-up studies of secondary-age students, and dissemination of successful demonstration communication between the education practices. community and the business community, and development of workable interagency agreements.

## Services to Institutionalized and Previously Institutionalized Students

- the past decade, judicial and professional • Over decisions have led to dramatic reductions in the handicapped children of in enrollment institutions. Many States have now adopted policies to keep or return students to their home communities whenever possible thereby avoiding institutional Local educational agencies are increasing placement. resources to assist with previously institutionalized students.
- Changes in SEA, other State department, and LEA
  policies and practices for provision of educational
  services to students who remain in institutions suggest
  improved capability to meet the needs of these
  handicapped students.

• The primary source of Federal support to children in State-operated or State-supported schools is P.L. 89-313. These funds can also "follow" children who leave the State programs to enter local programs. The number of children supported in LEAs has increased by 700 percent since 1975 to a total of 49,601 in 1983.

#### Personne1

• Overall, there was a slight increase between 1980-81 and 1981-82 (the two most recent years for which data are available) in the total number of special education and related services personnel.

#### Least Restrictive Environment

- Fewer than 7 percent of all handicapped children are educated in either separate schools or separate environments. Of the more than 93 percent who are educated in regular schools, about two-thirds receive their education in the regular classroom with nonhandicapped peers.
- The overall proportion of handicapped students served in various settings has remained relatively stable over the years. However, through the development of a continuum of placement options within LEAs, there have been changes within specific handicapping categories to serve children in less restrictive settings. This is particularly notable for the visually handicapped, emotionally disturbed, orthopedically impaired, and hard of hearing and deaf. Placement and review procedures designed to improve the quality of the placement decision—making process is an important factor in assuring education in the least restrictive environment.

#### Procedural Safeguards

• The use of mediation as a process to bring about a reconciliation between schools and parents before going to a due process hearing is evident in a large percentage of States. However, the extent to which mediation serves to deter the need to go on to the hearing stage is unclear.

-xix-

#### Protection in Evaluation

 Concern over the continually rising number of students counted as learning disabled has stimulated concerted State efforts to assure the consistent application of eligibility criteria and to strengthen the capacity of the regular education program to address learning problems.

#### Funds for Serving all Handicapped Children

- States use a mixture of resources Federal, State, and local to finance services for handicapped children and youth. EHA-B funds are important in both the support of administrative activities in SEAs, including support of personnel, and in the funding of direct and indirect services at the local educational agency level, including exemplary demonstrations, and resource and information systems.
- Numerous studies of the structure of education finance have demonstrated the complexities of attempting to determine the cost of providing education and related services to handicapped children and youth in the States. Case studies were conducted by SEP in 1983 to examine the available expenditure data from four selected States. Development and use of more sophisticated accounting systems is contributing to the increased availability of detailed cost information in some States.
- Through various discretionary programs and through the monitoring of State plans and administration of EHA-B funds, Special Education Programs continues to provide technical assistance to the States as required by Section 617(a)(1)(A) of EHA-B.

#### Impact and Effectiveness of EHA-B

Special Education Programs continues to conduct special studies, as required by Section 618 of EHA-B, to determine the extent to which the purposes of the Act are being met. A longitudinal study of selected local educational agencies recently concluded that the impact of EHA-B has been primarily positive and that the law has been a major factor in effecting change in special education, specifically through increasing the scope and comprehensiveness of special education programs and related services at the local level.

 State and local educational agencies are also recognizing the need to have good evaluation information with which to make decisions affecting special education within the States. They are supporting numerous studies relating to policies, procedures, and cost and effectiveness of the provision of special education and related services.

## Students Receiving a Free Appropriate Public Education

Of all the data and information in this report, perhaps the most important is that describing the number of handicapped children now receiving an education according to the provisions of Part B of the Education of the Handicapped Act (EHA-B) (20 U.S.C. §§1401, 1411, et seq.), as amended by P.L. 94-142. The provision of such an education to all handicapped children is required by the Act. It is also the goal toward which all requirements and provisions of the Act are directed. In the final analysis, all activities pertaining to the Act have but one purpose -- to provide an appropriate education for our Nation's handicapped children.

This chapter provides the number of handicapped children receiving a free appropriate public education reported by the States. It also looks at segments of the handicapped population that traditionally have been underserved in our country — preschool children, secondary— and postsecondary—age youth, and institutionalized children. It describes efforts being made to serve these populations better. The chapter concludes with a discussion of the number of personnel available to serve handicapped children and how the numbers of teachers and other personnel have grown over the years along with the number of handicapped children served.

#### Number of Students Served

The percentage of handicapped children receiving special education and related services rose slightly. During the school year 1982-83, 4,298,327 handicapped children were served by the States under EHA-B and P.L. 89-313 (see Table 1), $\frac{1}{2}$  an increase of 65,045 over the previous school year. Since the initial child count in 1976-77, when 3,708,588 handicapped children were reported by the States, the number

<sup>1/</sup> The age range for children counted under the EHA-B State grant program is three through 21. The age range for children counted under the P.L. 89-313 program is birth through 20. Tables reporting the combined child count under the two programs are labeled using the age range for the larger EHA-B program although some children from birth through two years of age may be included in the P.L. 89-313 count.

THESE ARE NEW MEXICO'S CHILO COUNT FIGURES. HOWEVER, NEW MEXICO DOES NOT PARTICIPATE IN P.L. 94-142.

of handicapped children served has grown by more than half a million, an increase of about 16 percent. The increase of 65,045 children from 1981-82 to 1982-83 reflects a change of 1.5 percent.

The percentage of handicapped children served based on the number of children enrolled in school (preschool through twelfth grade) has also increased slightly. This percentage rose from 10.47 percent in 1981-82 to 10.76 percent in 1982-83. Table 2 shows the percentage change for each handicapping condition.

Table 2

Percentage\* of School Enrollment Served as Handicapped, by Handicapping Condition, during 1981-82 and 1982-83 for the 50 States and the District of Columbia

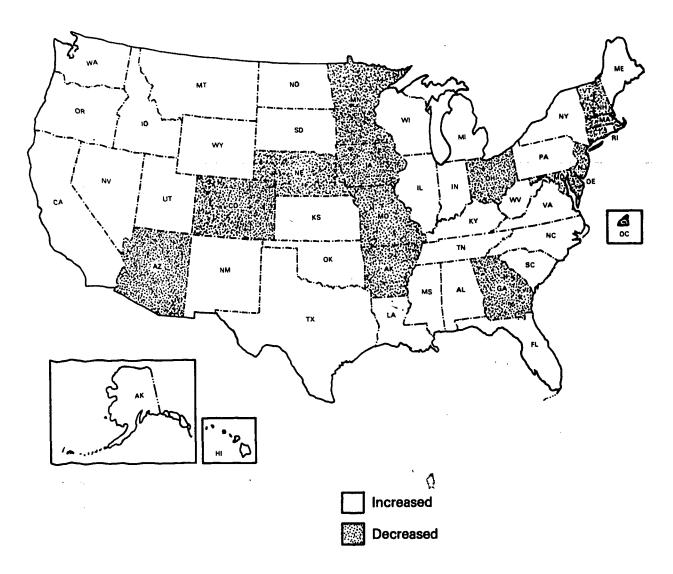

Handicapping Condition	1981-82	1982-83

Visually handicapped	.07	•07
Deaf-blind	.01	.01
Total	10.47	10.76

<sup>\*</sup>The percentages are based on school enrollment for preschool through twelfth grade children and handicapped enrollment for children ages three through 21.

The total number of handicapped children increased during the past year, but this increase did not occur uniformly in every State. (See Figure 1.) In fact, the number of handicapped children actually decreased in 19 States and territories between 1981-82 and 1982-83. Between 1980-81 and 1981-82, 15 States showed such a decrease. From 1979-80 to 1980-81, no State reported a decrease in the number of handicapped children served. Given the decreasing size of the general

Figure 1 Change in Number of Handicapped Children Ages 3-21 Reported in Child Count Between 1981-82 and 1982-83

#### NOTES:

The number of handicapped children reported decreased for Guam and the Bureau of Indian Affairs.

The number of handicapped children reported increased for Puerto Rico, American Samoa, and The Virgin Islands.

No data were available for the Northern Marianas and the Trust Territories.

school population, a decrease in the total of handicapped children served was anticipated at the point where services became available for most handicapped children. Between 1981-82 and 1982-83, all but seven States experienced a decline in school-age population. However, this trend may not continue, as the three-through five-year-old population increased from 9,513,753 to 9,604,274 between 1981-82 and 1982-83. Appendix 3, Tables 3D1-3D4, shows the school-age population for recent years.

The relatively stable total figures in the number of children served can mask changes which are occurring within the different handicapping conditions. (See Figure 2 and Appendix 3, Tables 3A1-3A5.) The number of children served has decreased for most categories. This decrease has been more than offset, however, by the large increase in the number of learning disabled children.

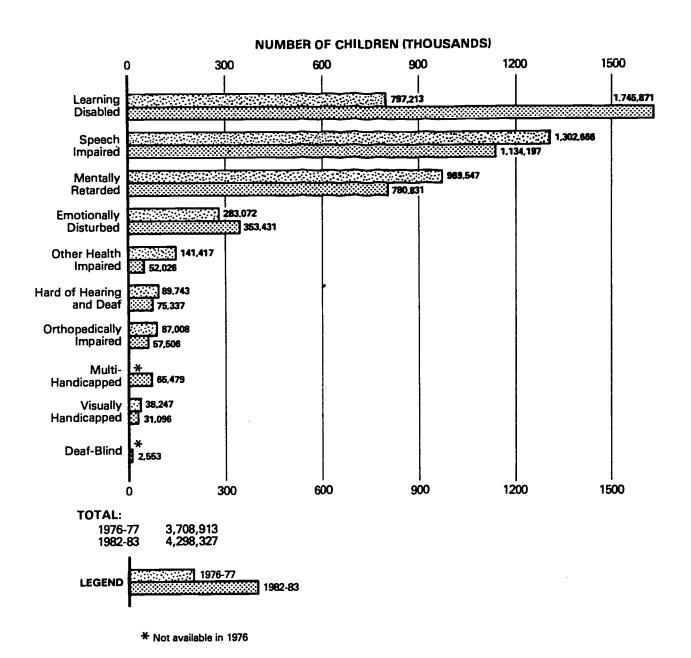

As in past years, the number of children identified and served as learning disabled increased markedly between 1981-82 and 1982-83, from 1,627,344 to 1,745,871. The number of Learning disabled children now represents 4.3 percent of the school-are enrollment and more than 40 percent of all children who receive special education services. Since 1976-77, the learning disabled position has grown by 948,658 children, an increase of 119 percent.

Reasons for this rapid growth in the number of children served as learning disabled were detailed in the 1983 Report to Congress. They include improved assessment procedures, liberal eligibility criteria, social acceptability for the learning disabled classification, and a lack of general education alternatives for children who experience problems in regular classes. Those reasons are still valid, but many States have expressed concern about the dramatic increase in the numbers of learning disabled children and have taken steps to assure that children are not classified erroneously. These efforts appear to be having some effect. Although the learning disabled population increased between 1981-82 and 1982-83, it increased at a considerably slower rate than in previous years. The increase from 1979-80 to 1980-81 was 15 percent; from 1980-81 to 1981-82 it was 11 percent. The increase of 118,527 children between 1981-82 and 1982-83 reflects a growth rate of 7 percent.

A significant portion of the increase in learning disabled children in the past year (47,264 of the 118,527 additional learning disabled children) came from one State, New York. New York's count increased by 68 percent between 1981-82 and 1982-83 for two major reasons. First, a definitional change resulted in many children who were previously counted as other health impaired being counted as learning disabled. New York children diagnosed as neurologically impaired have traditionally been counted as other health impaired, but in 1982 the

Figure 2 Distribution of Children Ages 3-21 Served by Handicapping Condition, School Year 1976-77 and 1982-83

State changed its regulations so neurologically impaired children are now reported as learning disabled. Second, a large percentage of the New York increase in learning disabled children lives in New York City. The city's child count has risen dramatically in the past year in response to pressure to extend services to all handicapped children. Apparently many of the city's handicapped children who are newly identified and served have been classified as learning disabled. State's learning disabled population dramatically in the past year, it has long had a low percentage of children served as learning disabled compared to other States. second chapter of this report discusses State efforts to prevent children from being classified erroneously as learning disabled.

The other group of handicapped children that increased noticeably between 1981-82 and 1982-83 was the emotionally disturbed. This group increased from 341,786 to 353,431, a change of 3.4 percent. Since 1976-77, the number of emotionally disturbed children reported by the States has increased by 25 percent. Reasons for this steady increase, as noted in the 1983 Annual Report to Congress, include efforts by State and local agencies to serve this previously underserved population. Many of these children were formerly served by agencies other than the State educational agency, but as programs at the local level become available, more and more of them can be educated in public schools.

With a relatively stable count, increases in some areas mean decreases in others. The number of multihandicapped children declined for the first time between 1981-82 and 1982-83. The number of children reported in this category dropped from 77,832 to 65,479. There were 50,772 multihandicapped children counted in 1978-79, the first year a count of multihandicapped children was taken. It appears that the recent decline in the number of multihandicapped students is largely the result of definitional and procedural changes in reporting by a few large States. For example, one State experienced a 96 percent decline in its multihandicapped population because such children are now reported on the basis of one primary handicapping condition rather than as multihandicapped. A State with a 47 percent decline in the number of multihandicapped children has changed its definition so that a child three handicapping conditions to Ъe considered must have multihandicapped. This State previously counted children with two handicapping conditions as multihandicapped. Although the number of multihandicapped children declined nationally, 26 States actually reported an increase in the number served.

The number of other health impaired children changed from 80,171 to 52,026 between 1981-82 and 1982-83. This change is also readily explainable. It can be attributed almost entirely to the State of New York, which reported 27,000 fewer other health impaired children in

1982-83 than in 1981-82 as a result of the previously described definitional change which considers neurologically impaired students as learning disabled rather than as other health impaired. In fact, the number of other health impaired children increased in 26 States during the past year.

In nearly every other category not specifically discussed here (mentally retarded, speech impaired, hard of hearing and deaf, deaf-blind, orthopedically impaired, and visually handicapped), the number of children served has decreased, both in the past year and since 1976-77. The one exception is the visually handicapped category, which decreased by nearly 19 percent since 1976-77 but increased over the past school year by 117 children or 0.4 percent. The shifts that are occurring in some States raise questions but seem explainable as changing State rules are identified. A few large States have, a significant impact on National totals when definitions are refined. Overall, however, the number of school-aged handicapped children appears to have stabilized. The following sections show that States are focusing more resources on older and younger children an event both anticipated and encouraged by the Administration.

#### Services for Children from Birth through Age Five

A recent survey of State directors and preschool program coordinators in eight States conducted by the National Association of State Directors of Special Education (NASDSE, 1983) confirmed that preschool services were much less comprehensive before passage of EHA-B than they are today. Federal oversight hearings and a review of professional literature have confirmed this finding. Programs that previously existed were mostly half-day programs operated primarily for mildly handicapped children. School districts did not have sufficient numbers of personnel, especially in related services (such as speech therapists and physical therapists). However, despite the lack of services, the beneficial effects of programs for preschool handicapped children became increasingly evident. Since the passage of EHA-B, evidence of the immediate and long-term effectiveness of preschool Studies have shown that programs has become even more impressive. handicapped infants and children (and those at risk of developing handicaps) who receive early intervention show significant improvement in development and learning along with a decrease in need for costly special education programs, compared with peers who do not receive intervention (Weiss, 1981; Lazar, 1979; Moore, Anderson, Frederick, Baldwin, and Moore, 1979; Weikart, Bond, and McNeil, 1978). findings of several studies recently reported in the literature indicate:

- Of 688 children in a study of Handicapped Children's Early Education Program (HCEEP) projects, about one-third needed no special education classes upon entering first grade and were placed in the regular classrooms; another third of the children were placed in regular classes with some special education support; and the remaining children were placed in special education programs (Stock, et al., 1976).
- A 1982 study of the benefits of preschool education by the Colorado Department of Education found that special education for preschool handicapped children resulted in a larger percentage being able to begin public education in regular classrooms with no special education. An even larger number of these students were found to require fewer special education services when they entered public school because they had received preschool service (Colorado Department of Education, 1982).
- A 248 percent return on the cost of the original investment in the preschool program was projected by the end of high school (Schweinhart and Weikart, 1980).
- In a study conducted in four school districts, \$1,560
  was saved per child over a three-year period, even
  after the costs of the preschool program were
  subtracted (Weiss, 1981).

Evidence further indicates that the earlier an infant and his or her family receive services to prevent or remediate a handicapping condition, the greater the long-term benefits. One study which extrapolated from three studies that included large numbers of children whose handicaps were apparent in the early years found that if intervention began at birth, education costs to age 18 were projected to be \$37,272. If, however, intervention was delayed to age six, the cost was projected to be \$53,350 (Garland, Stone, Swanson, and Woodruff, 1981).

Although caution must be used in making generalizations from the studies cited above, States have worked to improve services to preschool handicapped children. Previous reports to Congress have described the progress States have made in serving preschool handicapped children since the passage of EHA-B. The following sections describe the current status of preschool education of handicapped children in the United States, including changes in preschool services; specific Federal assistance and programs; and Department of Education initiatives to improve preschool services.

#### Numbers of Preschool Children Served

Although the increase in the number of children reported as handicapped by SEAs was 1.5 percent in the past year, the percentage increase was considerably greater among children ages three through five. The number of children reported in this age group grew from 227,612 to 242,113, an increase of 6.4 percent. This growth represents almost one-quarter of the total increase in the number of children ages three through 21 receiving special education services last year. Since 1976-77, the increase in preschool children served has been more than 23 percent. (See Figure 3.) Despite this progress, there are many preschool handicapped children who do not have services available. The number of preschool handicapped will probably continue to grow as States develop model programs to identify and serve them.

#### State Mandates

Thirty-eight States (including the District of Columbia) now mandate services to some portion of the population of preschool handicapped children from birth through age five. Seventeen States mandate services for all three—through five—year old handicapped children and another 21 mandate services for some portion of the three—through five—year old population. Some State mandates require localities to provide services to all handicapped children from a specified age. Other mandates cover only certain types of handicapping conditions. Some States (e.g., Delaware) mandate early services only for children who are visually or hearing impaired; others require preschool services for severely and profoundly handicapped children. The number of States with preschool mandates has increased since the passage of EHA-B. Most recently, New Jersey has lowered its mandate for services from age three to birth.

Table 3 presents the current mandated ages by State.

An examination of this year's child count data indicates that States with mandates reported serving a larger percentage of three-through five-year-old handicapped children than those without mandated services. States with mandates reported serving 3.15 percent of the three-through five-year-old population, those with partial mandates reported serving 2.5 percent, and States without preschool mandates reported serving 2.1 percent of this population. States report that the various programs supported under EHA-B for three-through five-year-olds have been instrumental in increasing services to this population. Even States with limited mandates (such as Colorado, Maine, and North Carolina) have developed and increased services to preschool handicapped children, and have also developed a systematic plan and structure that eventually will provide services statewide.

#### Changes in Programs

#### Three- Through Five-Year-Olds

Before passage of EHA-B, relatively few education programs existed for preschool handicapped children and few of these early programs were located in public schools. Most were university based and geographically scattered. Immediately after EHA-B became effective, the number of programs for preschool handicapped children within the public schools expanded.

A study conducted by SRI International (1982) found that about half of all school districts in their sample provided preschool services to handicapped children during 1978-79. By 1982, nearly all the school districts in the SRI sample had developed programs for previously unserved preschool children or had expanded and refined existing programs, and reported that this was primarily the result of the stimulus of Federal assistance.

Early efforts to expand services to preschool age children have progressed during the past six years. According to the NASDSE (1983) study, these changes have occurred primarily in three areas: service delivery, personnel and certification, and interagency cooperation.

- Service Delivery. Service within States has been dispersed. For example, Colorado had five local programs serving preschool children in 1977, all in metropolitan armas. Now there are 30 programs located in various parts of the State. States also report they now serve a wider range of handicapping conditions and levels of severity. This dispersion of services means that more children, regardless of geographic location or severity of handicapping condition, now receive services.
- Personnel and Contification. The number of trained personnel qualified to plan and provide programs for preschool handicapped children has increased since the EHA was enacted, primarily because new university training programs have been developed. For example, Virginia had no university training programs before passage of the EHA; now it has eight. Despite increases in the number of training programs and available personnel, all States surveyed by NASDSE reported they need still more qualified personnel with experience in serving preschool handicapped children.

Interagency Cooperation. More cooperative interagency services to preschool activities now deliver Although such cooperation was handicapped children. slow to develop, all States surveyed by NASDSE report an increase in the number of operational interagency agreements and cooperative arrangements. States report increased awareness of services provided by other agencies, such as public health screening, and more cooperation to reduce duplication of services. cooperative provision of services has also increased. For example, in some Colorado districts the educational agency provides teachers and educational programming while the Health Department provides nursing or physical therapy services. In some North Carolina LEAs, Headstart provides an educational program for preschool handicapped children and the LEA provides services such as necessary related occupational, and physical therapy.

#### Birth through Age Two

Education agencies have assumed a larger role in delivering services to handicapped infants since the enactment of EHA-B. States with mandates for services report an increase in the number of infants served in recent years. For example, Maryland served 435 infants in 1980; by 1982 this number increased by nearly 50 percent. In its study NASDSE (1983) found that States without mandated services serve smaller proportions of their children from birth through age two than those ages three through five.

Few university training programs prepare professionals to work with handicapped infants. Thus, States report a critical need for trained educational professionals, even though the number of trained and qualified personnel has increased somewhat. States also report a modest increase in the number of related services personnel (0.T., P.T., speech and language therapists) trained to work with infants.

Infant programs are in a stage of intense development. Five States mandate programs for infants; several others mandate programs for certain types of handicapped infants. Because infants have unique needs, public schools face a major challenge in developing services within traditional administrative structures and guidelines. Fortunately, excellent examples of success in meeting this challenge now exist, many as the result of initiatives flowing from EHA.

## Federal Efforts in the Expansion of Services

States report that several Federal initiatives have helped State and local educational agencies improve and increase services to preschool handicapped children. These include the use of EHA-B State grant program funds, the Preschool Incentive Grant program, the State Implementation Grant Program, and the Handicapped Children's Early Education Program.

#### EHA-B State Grant Program Funds

A review of 1984-86 State plans indicates that at least 35 percent of the States are using some portion of their discretionary funds available under the EHA-B State grant program to expand preschool services. EHA-B State grant program discretionary funds are being used to help finance the development of infant programs (in Maryland, Florida, and California), operate child find activities (in Montana, Nevada, Pennsylvania, North Dakota, South Dakota, and Tennessee), support interagency activities and develop guidelines and handbooks for preschool programs (in South Dakota), and disseminate information on the importance of early identification and intervention (in Arizona).

#### Preschool Incentive Grants

The Preschool Incentive Grant Program for preschool handicapped children was established by Congress in 1975 as a part of EHA-B (20 U.S.C. §1419) to encourage States to provide educational opportunities to handicapped children ages three through five. The grants are awarded upon submission of an approvable EHA-B State Plan and completion of a specific Preschool Incentive Grant application. In this application, States must describe how they will provide special education and related services to children ages three through five (34 CFR §§301.4 and 301.5). The grants are described as an "incentive" because these children can be counted twice, once for EHA-B purposes, a second time for this grant. The States then receive the basic EHA-B allocation plus the additional Preschool Incentive Grant money.

The amount of each State's allocation under the Preschool Incentive Grant is determined by the annual count of handicapped children ages three through five who are receiving special education and related services. The child count submitted by the State on December 1 of each year determines the amount of funds it will be eligible to receive.

In the first year of implementation of the program, fewer than half of the SEAs chose to participate. However, since FY 1978, the number of SEAs applying for Preschool Incentive Grant funds has increased significantly. During the funding cycle for FY 1983, 55 of 58 eligible

agencies elected to participate in the program. The funds available have grown from \$12,500,000 in FY 1978 to \$25,000,000 in FY 1984.

The State educational agencies have some latitude in how they use Preschool Incentive Grant funds. Before enactment of the Education of the Handicapped Act Amendments of 1983, they provided direct services five-year-old handicapped children, through discretionary awards to LEAs or other agencies to provide preschool services, or allowed the money to "flow through" to all LEAs on the basis of child count. The EHA amendments now provide for services to be provided from birth through five years of age. In early years of program, most SEAs supported preschool services discretionary awards. Increasingly, however, SEAs are distributing the Preschool Incentive Grant funds to all LEAs and allowing them to decide how to spend the money to benefit the three- through five-year-old handicapped population. Twenty-eight States still award Preschool Incentive Grant monies on a discretionary basis, 17 States use the flow-through method, four States do both, and six still provide services directly.

Preschool Incentive Grant funds are used in numerous ways, depending on the State needs. These funds were used last year for direct services to preschool handicapped children; to develop collaborative interagency agreements; to create statewide networks of technical assistance centers; to provide comprehensive diagnostic assessments; for parent training and counseling programs; for inservice training of administrative and ancillary personnel; and to provide partial support for development of instructional television programs for teachers and support staff.

States report that services to preschool handicapped children through Preschool Incentive Grant funds have made an impact on the overall services to handicapped children in these ways:

- Identification and assessment procedures have been refined.
- More effective training has been available for personnel who provide preschool services to handicapped children.
- The capability of LEAs to meet the individual needs of handicapped children ages three through five has increased.
- Rural service delivery programs have been expanded for handicapped chiliren ages three through five.

 Dissemination of information on available services for handicapped children ages three through five has increased.

### State Implementation Grants

State Implementation Grant funds are separate from those described above and are authorized by Section 623 of Part C of the EHA, the Early Childhood Education program -- a large developmental demonstration Since iks inception in 1976, the State program described below. Implementation Grants (SIG) program has awarded grants to 43 States and territories. Unlike the Preschool Incentive Grants, SIG program grants provide no direct services to children, but help the State plan and coordinate a comprehensive preschool service delivery system (34 CFR NASDSE's (1983) study and a 1981 SEP analysis of SIG programs reveal various outcomes of the program. One cited in several States is the development of States' capacity to initiate planning. A second is the creation of structures within States to help ensure the The structures have facilitated statewide provision of services. systematic and coordinated planning and thus reduced the likelihood of fragmented service delivery to children. State organizations are also important because they set the standards for teacher certification, which influences the content of university training programs and standards for local programs. All States receiving SIG funds that were studied indicated that their accomplishments would not have been realized without this program.

### Handicapped Children's Early Education Program

The Handicapped Children's Early Education Program (HCEEP) is also authorized by Section 623 of EHA-C. It was established in 1968 to support experimental/demonstration activities to pioneer innovative and effective strategies for serving preschool handicapped children and their families. A recent analysis of the impact of the demonstration and outreach components of the program (Roy Littlejohn Associates, 1982) described the accomplishments of the HCEEP projects as "greater and more varied than for any other documented education program identified." When HCEEP began, few models, assessment tools, or curriculum guides and materials existed for serving young handicapped children. This made program implementation difficult. Now HCEEP projects have developed more than 3,000 products to assist local agencies.

The HCEEP program has also directly supported the expansion of services to preschool handicapped children. For each child served directly in the federally-funded demonstration projects, another 6.4 children were served through local continuation and replication

projects. HCEEP programs have also proved cost effective. For every HCEEP dollar expended in programming, \$18.37 in combined State and local funds has been generated to serve children and their families.

### Department Initiatives

The SRI study (1982) documents the growth of services to preschool handicapped children since the passage of EHA-B. Because of the success of the Preschool Incentive Grants, State Implementation Grants, the Handicapped Children's Early Education Program, and the EHA-B State grant program, preschool programs for the handicapped are now available for many three- through five-year-old handicapped children. States agree that Federal assistance contributed materially to this progress.

There is still room for improvement, however. The critical need now is to expand services for children from birth through age two. As mentioned previously, only five States now mandate services for this age group. Federal efforts in this area will focus on educating professionals and communities about the value of early intervention to assure that each handicapped child receives the services. To achieve this end, SEP intends to revise funding priorities to emphasize programs that provide education for handicapped infants.

### Services to Secondary- and Postsecondary-Age Students

As services to preschool children have grown more rapidly than services to handicapped children in general, so too have services to secondary- and postsecondary-age students. Again, this is because this segment of the population has been traditionally underserved. Educational agencies have recently begun to expand services to secondary- and postsecondary-age handicapped students. The increased emphasis on educating this group of handicapped students stems from recognition of two factors: (1) improved secondary programming is necessary if handicapped youth are to make a successful transition from school to work; and (2) improved secondary programming maintains and builds upon the benefits students gain in elementary-level education. The following pages describe the current status of education for secondary- and postsecondary-age handicapped youth. Included are the number of students served, State mandates, changes in programming for these students, use of EHA-B funds in these programs, and current Department initiatives.

#### Number of Students Served

Although National data on the number of handicapped secondary mage students served are not available (until the enactment of the EHA amendments of 1983 child count information was reported by States only for age groups three through five, six through 17, and 18 through 21), information from a survey of eight States conducted by NASDSE (1983) shows that the number of students served in this age group has increased more rapidly than the number of students served in younger age groups. Table 4 illustrates trends in this area, showing that all of the eight States surveyed increased the number of students served for ages 12 through 17 (ranging from an additional 62 students in Minnesota to an additional 11,730 secondary-age students in Maryland, as measured between 1979-80 and 1982-83). This growth is even more dramatic when compared to the change in the total handicapped school-age population: seven of the eight States showed an increase in 12- through 17-year-olds that was greater than the increase for the total population of three- through 21-year-olds. For axample, the number of handicapped secondary-age students in Maryland increased by 45.1 percent in the past three years, while the total handicapped population in that State from ages three through 21 declined by 2.2 percent. Similarly, the number of handicapped secondary-age students in Illinois rose by 9.8 percent between 1979-80 and 1982-83 while the total handicapped population grew by only 2.4 percent in the same Missouri is the only State surveyed that did not show a greater increase in the number of handicapped secondary-age students over the general handicapped population. This is probably related to that State's overall decrease in general enrollment for grades seven through 12.

Data from all 50 States show that the number of postsecondary-age handicapped students (ages 18 through 21) has also grown steadily over the past four years. (See Figure 4.) The number of 18- through 21-year-old handicapped youth rose from 15^,399 to 173,642 between 1981-82 and 1982-83, an increase of 9 percent. This increase is particularly impressive because the total age 18 through 21 population decreased by about 200,000 during this period. Since 1978-79, when 18-through 21-year-old handicapped youth were first counted separately, their number has increased by 70 percent. Figures from the eight States shown in Table 4 corroborate this large increase: seven of the eight States surveyed showed gains of from 14.7 to 45.1 percent since 1979-80. These increases again stand in contrast to the relatively stable changes for the total school-age handicapped population.

TABLE 4

Number and Percentage of Change of Secondary- and PostsecondaryAge Students 1979-80 to 1982-83 in Selected States

	Secondary-Age Handicapped Children 12 through 17		Postsecondary-Age Handicapped Children 18 through 21		Total Handi- capped Children 3 through 21

Source: Data for 12- through 17-year-olds from NASDSE telephone survey conducted September 1983; all other data extracted from State-reported data, 1982-83.

- 1/ Iowa data do not include speech impaired in any age group.
- 2/ Minnesota experienced a large increase in the number of handicapped students between the ages of 12 through 17 about the time of the enactment of the P.L. 94-142 amendments to EHA-B. This was because the State's mandate predated EHA-B, as amended by P.L. 94-142. Thus the figures for Minnesota reflect a slower rate of growth over the past four years.
- Missouri data reflect the change in number of students in grades 7 through 12, roughly equivalent to the 12- through 17-year-old age group.

Figure 4 Number and Percent Change in Postsecondary-Age Students Served by P.L. 94-142

From 1978-79 to 1982-83, the percent change was +69.9.

#### State Mandates

In 1983, 24 States had mandates to serve handicapped youth through the age of 21 if they had not graduated from high school. Of these, two States (West Virginia and Michigan) mandate services through the ages of 23 and 25, respectively, and one (Texas) mandates services through age 22 for certain types of handicapping conditions. Sixteen States mandate services through age 20, two States through age 19, six States through age 18, and two States through age 17. Table 5 presents the current mandated ages by State.

About one-third of the 26 States that do not mandate services to youth through age 21 permit local school systems to provide services at least through age 21.

### Changes in Programs

### Secondary-Age Students

School districts have also expanded the range of program options available to secondary-age students. LEAs recognize that a new range of secondary-level alternatives is needed to help prepare students for life after high school. The new or expanded programs are vocationally-oriented and seek to provide secondary-age handicapped students with specific work-related skills. Several trends can be observed:

- School districts are hiring vocational specialists and using non-educators from the local business community to teach vocational skills to handicapped students. Gwinnet County Public Schools in Georgia, for example, established the Related Vocational Instruction program (RVI) in which nine vocational specialists were hired to work with secondary-age students and special education teachers. The specialists provide career counseling, vocational evaluations, and on-the-job experience for students whose IEPs identify a need for these services. They also coordinate all ancillary services on behalf of the students.
- Many school districts are expanding vocational assessment services, and some are starting vocational and prevocational programs in earlier grades. The Cape Cod Regional Technical High School in Harwich, Massachusetts, for example, established an Assessment Center to provide long-range vocational plans for handicapped students before the eighth grade.

Table 5
State Mandates for Upper Age Limit for Service Eligibility

<sup>1/</sup> Texas extends services through age 22 for visually impaired, hearing impaired, and deaf-blind.

Similarly, the Office of the Riverside County Superintendent of Schools in California, as part of its total career education program, developed a comprehensive vocational assessment instrument and a prevocational skills checklist to determine handicapped students' vocational interests and abilities as early as seventh grade.

These expanded vocational programs at the secondary level give handicapped students — in some cases even those who are severely handicapped — the opportunity to receive vocational services in classes with nonhandicapped students. For example, the Moore-Norman Vocational Technical High School in Oklahoma integrates handicapped students into regular vocational classes and provides supplemental support from teacher aides. A special core curriculum made up of sequential modules allows handicapped students to work from the same materials as nonhandicapped students but at a different pace.

### Postsecondary-Age Students

In addition to developing new programs for handicapped high school students, some school districts have created programs designed to meet the specific needs of 18- through 21-year-olds. The following examples illustrate these new programs:

- The Lenawee Intermediate School District covering 12 LEAs in southern Michigan is the fiscal agent for a demonstration project that provides case management services to developmentally disabled persons age 18 and older. All students ages 18 through 21 are referred to the case manager, who develops an individualized service plan that reflects a coordinated set of social, recreation, health, employment, economic, and education services to be provided the client in the community.
- The Houston Independent School District began a program for 18- through 21-year-olds that seeks to familiarize handicapped students with the business community. In 1982-83, about 75 mentally retarded, learning disabled, and deaf students, some of whom began the program at age 16, participated in the program at three high schools. Employers such as Texas Commerce Bank and United Gas Pipeline worked with the students on job acquisition and job maintenance skills, and took them on field trips through their companies. Some of the students became interns and were later employed by these firms.

Both of these programs and others like them in other districts were designed to facilitate the transition from school to work for 18-through 21-year-olds. The program in Lenawee, Michigan, recognizes the crucial need for coordination of community services to help handicapped youth become independent after they leave high school. The Houston business/school partnership reflects a similar awareness of the need to help 18- through 21-year-olds move into the work place.

### Use of EHA-B State Grant Program Funds

To encourage programming for secondary-age handicapped students, State agencies have increasingly used EHA-B State grant program discretionary money to support secondary-level programs. For example, three SEAs have used these funds as seed money to promote the development and improvement of secondary programs at the local level:

- The Massachusetts Department of Education used \$6.2 million of its EHA-B State grant program funds and \$3.2 million from its P.L. 94-482 (vocational education) funds over a five-year period to help 46 local districts develop vocational programs for handicapped youth.
- The Rhode Island Department of Education also used part of its EHA-B State grant program monies plus vocational education funds to award grants to LEAs for vocational programming.
- The California Department of Education used about \$1.5 million of its EHA-B State grant program funds during the past two years (combined with Employment Development Department and Vocational Rehabilitation funds) to establish 34 local model projects in which classroom and worksite training in private sector employment is provided to secondary-age handicapped students.

In a recent survey by the Center for the Study of Social Policy (1983) 65 percent of LEAs said they used EHA-B State grant program funds to develop collaborative arrangements with vocational education programs and vocational rehabilitation programs to serve secondary-age handicapped youth.

These examples illustrate another trend in financing services for secondary-age students: the use of shared funding among human service agencies. LEAs are beginning to realize that secondary-age programming, in contrast to many other areas of special education, does

not necessarily entail significant new costs. Thus in a time of shrinking State and local budgets, SEAs and LEAs may be able to start or expand secondary programs without substantial new expenditures. By leveraging resources from other agencies (such as the Department of Vocational Rehabilitation and/or the Division of Vocational Education), States or districts can expand their vocational programs with only moderate new investments. For example:

- The Oklahoma Department of Education and the Division of Vocational Rehabilitation have developed a joint Cooperative School/Rehabilitation Work-Study Program to provide vocational training to 4,653 handicapped high school students in 60 high schools in the State. The program is based on a cooperative agreement among relevant agencies at the local level in which LEA funds are sometimes used as the 20 percent share required to match 80 percent of program costs from Federal Vocational Rehabilitation funds.
- The Special Education and Vocational Education Divisions within the Michigan Department of Education and the Department of Rehabilitation Services developed a model delivery system to improve access to and preparation for employment. Some 10,000 secondary-age handicapped students are served in 30 local programs.

e)

### Department Initiatives

Despite some progress, there is much to be done in programming for secondary-age handicapped students. Program changes as described here need to be expanded so they become the rule rather than the exception.

The Department plans to give highest priority to the improvement of programs and services that will help handicapped individuals make a successful transition from school to community. Under the discretionary programs authorized by Parts C through F of the EHA, the Department plans to:

- Develop and disseminate career development curriculum materials for handicapped students of all ages. This is a particular problem because many handicapped children participate in regular education programs that do not emphasize career development.
- Conduct research related to the accessibility of vocational education programs and other employment training options of the public schools. Too few

handicapped students are now enrolled in vocational education programs.

- Conduct follow-up studies of students who leave public school programs to determine variables that enable and/or inhibit individuals who try to secure employment or continued programs and services.
- Support model demonstration activities to develop, identify, and disseminate successful practices that can be replicated in other school systems.
- Enhance communication between schools and potential employers to incorporate the expectations of employers in the educational process and enlist their support in helping students make the transition from school to work.
- Identify agencies having responsibility for providing programs and services to handicapped adults and formulate working agreements to coordinate transitional efforts.

Through such activities, the Department expects to play a major leadership role in improving transitional services for handicapped children and youth.

### Services to Institutionalized and Previously Institutionalized Students

Another group of children who have traditionally been inadequately served includes those who are educated in an institution or who have recently left an institution.

State and local educational agencies are continuing their efforts to improve services to students residing in public and private institutions. Many of these institutions are operated by other State agencies, including departments of mental health, developmental disabilities and mental retardation, corrections, and children's services. At the same time, school districts are trying to improve services for students who have been moved out of institutions and enrolled in local district programs. These two groups of handicapped students pose special problems for administrators, because the development of more appropriate programs for them has often required altering long-standing patterns of service.

The following pages discuss current trends in deinstitutionalization, changes in policies for institutionalized and previously institutionalized children, use of Federal funds in supporting programs and carrying out policies, and current Department initiatives.

### Deinstitutionalization: Trends in Service Delivery

The deinstitutionalization movement has grown since the early 1970s when various factors converged to force a reduction in unnecessary institutional care. Court rulings in a number of cases decreed that residents of State institutions, especially those for mentally retarded and mentally ill persons, were entitled to treatment, care, and education (for those under age 21) in small community facilities where they could live in more "normal" environments. These court actions were supported by a widespread professional consensus that institutional care was inappropriate, even inhumane, for many children who would be more appropriately served in their home communities.

Accordingly, enrollment in State institutions for children was dramatically reduced. Deinstitutionalization efforts occurred simultaneously in a number of children's service fields.

Local school districts and school administrators had to cope with the effects of <u>all</u> of these changes because public schools became responsible for the handicapped children who had previously lived in institutions.

As State and local educational agencies have become responsible for greater numbers of formerly institutionalized handicapped students and students still in institutions, they have adopted new policies to serve these children better. For students in institutions, SEAs and LEAs have tried to improve the quality of education provided in these facilities. SEAs have also tried to limit the number of students placed in institutions and have developed policies to bring students back to their local districts. LEAs have developed programs to help students who are brought back benefit from education programs located on regular campuses.

## Changes in Policies Designed to Move Students out of Institutions and Serve Them in Their Local Districts

SEAs have adopted policies to reduce the number of students living in institutions. For example:

Colorado has a law that allocates State funds to counties to develop community alternative programs that enable children placed out-of-home to return or remain in their home communities. As a result, students are more often served in their home communities, and the rate of increase in residential service costs in Colorado has declined from 21.5 percent in 1978-79 to only 7.9 percent in 1982-83.

SEAs have also devised policies to minimize the placement of handicapped students in State institutions or private residential facilities. For example:

The Maryland Department of Education has established a process at the local, regional, and State levels whereby recommendations for residential placements are carefully considered by a committee composed of multiple human service agency staffs (known as Admissions, Review, and Dismissal Committees or ARDs). Committee members representing several agencies must demonstrate that а sequence of alternatives to residential placements has been seriously considered before residential placements are recommended.

In both examples, the SEA sought practical mechanisms to reduce the number of students unnecessarily placed in institutions. Colorado gave counties a financial incentive to develop programs at the local level that could help students remain in their own community. Maryland is moving toward mandating the participation of other agencies in the ARD system to make it even more likely that residential placements will be used only as a last resort.

LEAs have also taken a number of steps to expand services for previously institutionalized students. Many school boards have developed strong commitments to bring back into the district severely handicapped students who previously lived in private facilities or State institutions.

• One local agency that illustrates a strong stance in this regard is the East Central Cooperative in Illinois where all 45 students formerly served in five private residential schools were moved back to the public schools, all on regular campuses. Despite opposition from parents, area private schools, and even some public school administrators, officials proceeded with their plan, which these same groups subsequently approved.

In rural areas, LEAs have found that consortia are an effective way to combine resources to create new public school programs for previously institutionalized students. For example:

- Eleven districts in north central Maine formed a regional cooperative to serve students in the public schools who formerly lived in private residential or State-operated facilities. By 1982-83, all but about eight students from these districts were moved to the regional public program.
- School districts in Tillamook County, Oregon, formed a consortium to develop new public school programs for handicapped children who had been in State training schools. The number of children placed out-of-district was reduced significantly.

### Changes in Policies Regarding Institutionalized Students

At the State level, SEAs have taken various steps to strengthen the educational programs provided to students in State institutions. In Louisiana, for example, a special school district was formed to provide special education and related services to institutionalized handicapped children:

 The Louisiana legislature, pursuant to an SEA request, established Special School District Number One, which is responsible for ensuring that each handicapped child residing in a corrections facility or in a State institution for the mentally retarded or emotionally appropriate with is provided disturbed School District Special education services. The provides a strategy for achieving adequate financing for education through a separate line item in the State budget and operates as any other district in the State, employing 600 principals, teachers, and aides.

Using another approach, the California State agency that operates an institution takes the lead in developing new educational programs, with support and technical assistance from the SEA:

 The California Youth Authority (CYA) and the California Department of Education entered into an agreement in which CYA accepted responsibility for providing appropriate educational services to handicapped youth in its institutions. As a result, CYA implemented

procedural reforms and new programs designed to meet the unique needs of handicapped students in correctional facilities.

A third approach to improving service to students in institutions was taken by the Florida Department of Education, which decided to assign LEAs the responsibility for educational programs in institutions:

• The Florida SEA transferred responsibility for the education of mentally retarded and developmentally disabled children in State institutions from the State Department of Mental Health and Developmental Disabilities to local school districts. By making LEAs responsible for educating these students, the SEA assured that institutional students would have access to a range of services comparable to those provided to noninstitutional students.

Some LEAs have also made special efforts to improve the education of institutionalized students. For example:

.....

- Metropolitan Madison Schoo1 District children who live at Central Wisconsin Center, a State institution for the mentally retarded. The school district first accepted children from the institution in the fall of 1979, when 20 children were enrolled. In the fall of 1980, the number of institutionalized children accepted into the public schools rose to 85. Now 102 Central Wisconsin children attend Madison The school system accepts the Public Schools. institution's most severely handicapped children, except those for whom institutional physicians have not given medical clearance.
- The Northville School District in Michigan has assumed responsibility for students living in the two public institutions located within its boundaries. The LEA devised its own curriculum and training program for these students and moves all but eight of the 325 students onto the campuses of regular schools during The LEA also designed a Communication the day. Enhancement Resource Center that provides specially programmed personal computers to multiply-impaired students in institutions, allowing the students to direct their computers to talk and write for them.

### Use of EHA-B State Grant Program and P.L. 89-313 Funds

Both EHA-B State grant program and P.L. 89-313 funds may be used to support children in institutions; however, the proportion of each source of funds used to support children in each of these programs is not known. Children who are the responsibility of the State and are served through State-operated or State-supported programs may receive funding under P.L. 89-313. In general, institutionalized children served through locally-operated or locally-supported programs may receive funding under EHA-B.

There is one exception to this pattern. As a result of a 1975 amendment to P.L. 89-313 (P.L. 93-380), program funds are permitted to "follow" a child who leaves a State-operated or State-supported program and enters a locally-operated or supported program; however, the current impact of this provision on "deinstitutionalization" or the placement of children in other than institutional environments is difficult to measure, since fewer and fewer children served under P.L. 89-313 are actually in institutions.

Since 1975, when the provision for the "following" of funds was enacted, the number of children supported in LEAs by P.L. 89-313 has steadily increased. The number grew from about 7,000 in 1975 to 49,601 in 1983. Table 6 shows the number of children supported by P.L. 89-313 in the past five years.

Number of Children Served under P.L. 89-313

Fiscal Year of Use	Total Count	Number of Children in State-Operated or State-Supported Programs	Number of Children in LEA-Operated or LEA-Supported Programs
1978-1979	222,732	197,732	25,000
1979-1980	225,480	191,941	33,539
1980-1981	233,170	194,312	38,858
1981-1982	243,356	197,526	45,830
1982-1983	242,936	193,335	49,601

In addition, the States are permitted to use some of their funds under EHA-B, as amended by P.L. 94-142, for deinstitutionalization efforts. Under EHA-B, States may retain up to 25 percent of their grants for discretionary uses in areas of specific State need. Some States use part of this money to aid in the deinstitutionalization process.

One State has developed a program to give technical assistance and support to LEAs initiating services for severely handicapped students previously in institutions. Another State has a full-time consultant, paid out of EHA-B funds, whose duties include coordinating services for developmental day centers and community residential programs through on-site visits.

### Department Initiatives

The Department is funding a variety of projects to help children move from institutions to community-based settings. Under the Severely Handicapped Program authorized by Section 624 of EHA-C, SEP is supporting programs such as Centers for Independent Living, Comprehensive State-Wide Delivery Systems, and Model Programs for Deinstitutionalization and Integration of Severely Handicapped Children into Public School Settings. These projects are functioning in a number of States, and though each has its own specific focus, the basic goal is the same -- to permit institutionalized and previously institutionalized handicapped children to participate as much as possible in the community and the regular education environment.

#### Personnel

A measure of the capacity of States to provide a free appropriate public education for all handicapped children is the number of personnel employed to serve these children. This section of the report provides information about the availability of personnel to provide all handicapped children a free appropriate public education. (Note that the latest personnel counts are for the school year 1981-82, while the latest child count information is for school year 1982-83. In this personnel section of the report, when comparisons are made between numbers of teachers and numbers of students, the child count information is from 1981-82 rather than 1982-83).

The total number of special education personnel appears to have increased slightly from 1980-81 to 1981-82; however, because of a change in the form that States use to report their personnel counts, an absolutely accurate comparison is not possible. The category for

home-hospital teachers, of which 8,159 were counted in 1980-81 under Related Services Personnel, is no longer reported by the States. A random survey of several States indicated that these personnel are being reported under other categories or are not reported at all.

The change in the form also permits States to add a new type of teacher, the non-categorical teacher, in reporting the number of special education teachers employed. In 1981-82, States reported 16,177 non-categorical teachers. Uncertainty exists as to what categories these teachers were reported under in previous years, although some States indicated that their non-categorical teachers were formerly teachers of mild handicapping conditions (such as learning disabilities or mental retardation), or teachers of preschool children. Another change in the reporting form appears to have caused a decrease in numbers of teachers of the speech impaired and a concomitant increase in the number of speech pathologists.

Despite the change in form, comparisons from year to year are still possible. For special education teachers and related services personnel combined, the increase from school year 1980-81 to 1981-82 was about 1 percent (from 440,109 to 446,695). This increase would probably have been slightly greater if home-hospital teachers were still reported. The changes in the number of personnel available from 1976-77 to 1981-82 are shown in Appendix 3, Tables 3B1 and 3B2.

### Special Education Teachers

The number of special education teachers increased slightly (from 232,627 to 235,386) between 1980-81 and 1981-82. Again, this number might have been somewhat larger but for the decrease in teachers of the speech impaired caused by the new reporting format. The total number of special education teachers has climbed steadily since 1976-77 when 179,804 teachers were employed. This trend reflects the steady increase in the number of handicapped children served as well as efforts of States and the Federal government to prepare trained personnel.

While the total number of special education teachers has increased, decreases have occurred in many of the categories of teachers. One reason for this is undoubtedly that most of the 16,177 non-categorical teachers were previously reported as teachers of a specific handicapping condition. This is most evident considering that the number of teachers of the learning disabled declined from 84,867 in 1980-81 to 83,673 in 1981-82. During this same period the number of learning disabled children increased by 159,330. The number of teachers of the learning disabled probably did not actually decrease, but many of them are now reported as non-categorical teachers.

Possibly a significant percentage of the 16,177 non-categorical teachers would have been reported as teachers of the learning disabled.

The number of teachers of the mentally retarded and emotionally disturbed decreased from 1980-81 to 1981-82. A decrease, though not one directly proportional, also appeared in the number of children reported as mentally retarded and emotionally disturbed during this period. A decrease in the number of teachers of the hard of hearing and deaf and visually impaired also corresponded to a decline in the number of children reported in these categories between 1980-81 and 1981-82. Teachers of the multihandicapped and orthopedically impaired, on the other hand, increased, as did the child counts for these categories.

An exception to the tendency of the teacher count to follow the child count was the other health impaired category. The number of teachers of the other health impaired increased from 3,168 to 3,518 as the number of such children declined from 98,653 to 80,171.

### School Staff Other than Special Education Teachers

The number of school staff other than special education teachers (social workers, psychologists, etc.) has increased from 151,649 in 1976-77 to 213,900 in 1981-82. These numbers must be interpreted with caution, however, because of differences across States and across years in how full-time equivalents are calculated and reported for related services personnel. During the next year efforts will be made to work with States in improving the consistency of this data.

### Department Initiatives

State estimates suggest that 280,000 special education teachers will be needed in the 1984-85 school year. This is an increase of 17,000 teachers over the 263,000 that were estimated as needed for the 1983-84 school year. The attrition rate of special education teachers is estimated at 6 percent. Thus, approximately 16,000 replacement teachers are needed each year in addition to the teachers needed to fill new positions.

The Department of Education will continue to focus attention and commit resources to personnel preparation efforts to ensure that trained personnel are available to meet the needs of our Nation's handicapped children. In addition, a major priority for the Department's personnel preparation effort will be to train teachers who are specialists in early intervention and services to infant and

preschool handicapped children. Research such as that cited earlier shows that early intervention can be the most beneficial both for the child and for the long-term cost to society, yet the infant and preschool population continues to be underserved. As services to this segment of the handicapped population expand, quality personnel must be available to provide those services.

### An Update on the Implementation of Key Provisions of the Act Assuring the Rights of Handicapped Children

Part B of the Education of the Handicapped Act (EHA-B) contains provisions that assure that the rights of handicapped children will be protected. These include the least restrictive environment provisions, Section 612(5)(B) (20 U.S.C. §1412(5)(B)); the procedural safeguard provisions, Section 615(a)-(e), (20 U.S.C. §1415(a)-(e)); and the protection in evaluation procedures, Section 612(5)(C) (20 U.S.C. §1412(5)(C)). Previous reports to Congress have detailed steady progress by State and local educational agencies in implementing procedures to comply with these provisions. Previous reports have also identified remaining issues in assuring the rights of handicapped children. This chapter provides a brief update on some of these issues.

### Least Restrictive Environment

An assessment of the implementation of the least restrictive environment (LRE) provisions of the Act requires an examination of the settings in which handicapped children are served, the options available to children with various handicapping conditions, and the decisionmaking processes used to place children in appropriate settings.

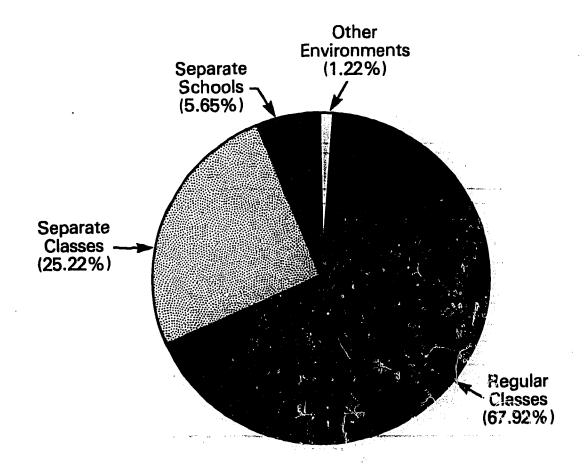

#### Settings

During the school year 1981-82, large numbers of handicapped students continued to be served in less restrictive settings. Almost 68 percent of all handicapped children received most of their education in regular classes. Another 25 percent received services in separate classes within a regular education building (see Figure 5). Together, these settings accounted for 3,940,640 children who received special education services in proximity to nonhandicapped peers. Fewer than 7 percent of all handicapped children were educated in separate schools or other environments (e.g., homebound, hospitals, etc.). Furthermore, most handicapped children were educated in public rather than private settings (Appendix 3, Table 3C5).

Though the overall proportion of students served in various settings has remained relatively stable over the years, progress has been made within specific handicapping categories to serve children in less restrictive settings. Some groups of students, including the visually handicapped, emotionally disturbed, orthopedically impaired,

Figure 5 Percent of Handicapped Children Served (Ages 3-21) in Four Educational Environments, School Year 1981-82

and hard of hearing and deaf, showed a proportionate increase in the size of the population served in regular classes and a concomitant decrease in the proportion of those children served in separate classes, separate schools, or other environments between 1980-81 and 1981-82. For example, in 1980-81, 143,671 emotionally disturbed children were served in regular classes and 149,147 were served in separate classes. In 1981-82 the number of emotionally disturbed students served in regular classes increased to 146,738 individuals while the students served in separate classes decreased to 140,923 individuals. Similarly, the number of orthopedically impaired children in regular classes increased from 17,854 to 18,552 between 1980-81 and 1981-82 while those children in separate classes decreased in number from 22,323 to 19,078.

Thus, while the overall proportions indicate relatively little change among the four types of settings in which handicapped children receive educational services, gains are evident for individual categories of the handicapped population.

A longitudinal study recently completed by SRI International (1982) also indicates that changes have occurred in the settings in which bendicapped children are served. In its final report SRI summarized the following trends it observed:

- There was an increase in the number of students served in resource rooms rather than in self-contained classes. In some instances this was brought about by State funding formulas that provided incentives for serving students in resource rooms.
- Several States developed the non-categorical placement option, particularly for mildly handicapped students. In many instances this allowed students to remain in their neighborhood schools rather than being placed in categorical placements in more distant locations.
- LEAs participating in the study were serving an increased number of severely handicapped students locally, sometimes because of deinstitutionalization activities in their communities.

#### Options Available

Although most handicapped students receive services in regular schools, the options and alternatives for delivering these services differ from school to school and district to district. The SRI study (1982) traced the development of options and alternatives by districts

in their sample over a period of four years. They found considerable variation among LEAs in the options available for particular types of handicapped children. This was particularly true during the first year of the study, which was also the initial year of implementation of the Act. Some LEAs that year provided only self-contained classes for mildly and moderately mentally retarded children, resource rooms for learning disabled children, and itinerant speech teachers for children exhibiting communication problems. Other LEAs provided a variety of services and placement options, not only to the mildly handicapped but also to children who were deaf, blind, and severely and profoundly handicapped.

Over four years the SRI data showed a trend toward expanding the continuum of placement options within LEAs. This study found that more options tended to be available to the mildly handicapped, though some LEAs also expanded options for the more severely handicapped. The rate of expansion slowed during the final two years of the study.

### LRE Decisionmaking

The quality and scope of the decisionmaking process are critical to the implementation of the LRE provisions of the Act. The SRI longitudinal study (1982) documented that during the early years of implementation of the Act placement decisions were frequently dictated by the location of particular services or by placement openings. In subsequent years, as the range of placement options expanded, SRI found more LEAs consciously considering the least restrictive environment provisions in making placement decisions. However, in a number of sites they found that constraints still linked closely the choice of program and setting to the handicapping condition.

Monitoring visits by SEP have also raised concerns that placement decisions are too often dictated by the student's handicapping condition. During the 1982-83 monitoring cycle, problems in the LRE area were identified in 40 percent of the States visited. Frequently the problems resulted from categorical placement patterns — all students with a specific handicapping condition being served in a certain type of placement.

A recent study by the Center for the Study of Social Policy (1983) shows that some SEAs and LEAs are attempting to alleviate such problems by establishing placement and review procedures that emphasize and improve the quality of the placement decisionmaking process. For example:

- The Gwinnett County, Georgia, School District has developed explicit policies for placement of handicapped children. Its operations manual specifies the considerations that are required before placing any child. The district policies have been refined to ensure that they encourage placement in the least restrictive environment unless strong justifications can be given for more restrictive settings.
- The Connecticut Department of Education approves or disapproves all LEA requests for placing students in any out-of-district placement, including placements in State institutions or private schools. In reviewing such requests, the SEA checks to be sure that a range of options is tried at the district level.
- The Ohio SEA requires that when a child is placed in a separate educational facility the IEP must specify the needs that necessitate placement in such a facility. The following factors may not be used to justify such placements:
  - a classroom unit for multihandicapped children is not available;
  - needed related services are not currently available through the school district; and
  - the child meets the eligibility criteria for programs of the county board of mental retardation.

Such strategies are important because they not only assure that the least restrictive environment provisions are considered in making placement decisions, but also because they focus attention on alternatives and options that are needed but not available to educate children with certain handicapping conditions in less restrictive environments.

### Procedural Safeguards

Previous reports to Congress took note of the provisions of EHA-B requiring LEAs to provide due process hearings, at the request of parents or the LEA, if parents and school officials disagree about a decision and cannot resolve the disagreement informally. These reports also documented an increasing number of due process hearings and escalating costs associated with these hearings. At the same time

concerns have been expressed that parent-school relationships were becoming increasingly adversarial. To deal with this, many States have adopted mediation procedures or informal dispute settlement procedures to offset the need for due process hearings. This section examines these procedures.

Mediation is the process of bringing about a reconciliation between school personnel and parents before the due process hearing. The use of mediation as an intervening step before a formal hearing is not required by statute or regulation, but many States and LEAs have found this technique useful. In many cases mediation is a non-adversarial way to settle disputes that involve identification, evaluation, and placement.

A study examining the use of mediation in 38 States (NASDSE, 1983) found support for mediation in 87 percent of the States through rules and regulations (11 States) or by administrative direction (22 States). Where mediation was referenced in State rules or regulations, the requirements for initiating the process differed. For example, in one State mediation is required within 15 days of a request by either party, while in another State mediation is required within five days of a parental request. In other States, schools or State mediators must offer mediation, although parents may refuse the offer.

Where mediation was supported administratively, the nature of the support differed considerably among the States. A number of States used SEA staff to conduct mediation. Other States conducted workshops to train local staff in mediation techniques. Still other States offer written guidelines or include mediation as a suggested alternative in State plans or in descriptions of due process procedures. Five States reported that mediation was neither provided for in State rules or regulations nor supported administratively.

Although the NASDSE study shows a 7.2 percent decrease across States in the number of due process hearings between 1979-80 and 1981-82, it is unclear whether this decline is related to mediation procedures. Of 10 States reporting that mediation was provided for in rules or regulations, six indicated declines in the number of due process hearings that occurred in 1981-82 vis-a-vis school year 1979-80. One State reported an increase in the number of hearings for these two years, another reported no change, and two had no information to provide.

Of the 22 States supporting mediation through administrative mechanisms, nine reported a decrease in the number of hearings, eight reported that the number of hearings increased, four States reported no change, and one State had no information to provide.

Lastly, in States where mediation is not supported by rule, regulation, or administrative mechanism, three reported a decline in the number of hearings, one indicated an increase, one saw no change, and another State had no information to provide.

The relationship between mediation and due process hearings seems unclear. Although mediation may prevent some disagreements from reaching a hearing stage, available information does not suggest that this approach has been effective in all States.

### Protection in Evaluation

#### Efforts to Prevent Erroneous Classification

As in past years, States are continuing to make progress in eliminating the misclassification of handicapped children. Previous reports have described some of the difficulties associated with erroneous classification and some of the reasons for such difficulties. During the past year, States have begun to examine how, children are referred and identified. Particular attention has been directed to the identification of learning disabled students.

The dramatic increase in recent years in the number of children served under EHA-B as learning disabled has raised concerns that some of these children are being erroneously classified. Last year's report described some of the reasons cited by States for growth in the number of learning disabled children reported. Among these reasons were eligibility criteria that permit children with a wide range of learning problems to be classified as learning disabled and the inconsistent application of existing criteria within States. Also, the lack of general education alternatives for children who experience problems in the regular class, coupled with liberal eligibility criteria, had resulted in the placement of children with learning problems in learning disabilities programs in some States.

Concern over the continuing growth of the learning disabilities category has been particularly pronounced at the State level. A study sponsored by the Colorado Department of Education found substantial variability across its districts in the percentage of children served as learning disabled. In 1980, rates varied from 2.1 percent to 8.6 percent. It was estimated that slightly more than 50 percent of the Colorado children classified as learning disabled did not meet the State's legal definitions for learning disabilities or the definitions accepted in the professional literature. This study also found, however, that more than 80 percent of the learning disabilities population required special assistance not available in the regular

classroom. Evidence such as this has led a number of States to examine the policies and procedures they use to identify, refer, and assess children who experience learning problems in the regular classroom. Although the National count of learning disabled children continues to rise, the rate of increase has dropped sharply over the last two years, in large part because of concerted State efforts. In fact, in the past year, nine States experienced an increase of less than 2 percent in the number of school age children served as learning disabled or the number remained stable. In another 10 States, the number of children reported as learning disabled actually decreased.

Recently the National Association of State Directors of Special Education (1983) asked the State directors in several States where the rate of increase in the learning disabilities count has slowed or the number has actually decreased over the last year to explain these changes. Some cited declining school enrollments as a factor, but most described concerted efforts undertaken by their agencies in recent years to prevent erroneous classification as the primary reason for changes in the size of their learning disabilities programs. The efforts described were of two types: activities to assure the consistent application of eligibility criteria for the learning disabilities category and efforts designed to strengthen the capacity of the general program to serve children who experience learning problems in the regular classroom.

## Assuring the Consistent Application of Eligibility Criteria

Several States surveyed by NASDSE have undertaken activities to assure that definitions and criteria for the learning disabilities category are consistently applied in determining eligibility for services.

• Vermont, Iowa, and Colorado, which had found their State definitions and criteria ambiguous and lacking the precision necessary to assure their consistent application across districts, have clarified their eligibility criteria in the last three years. The clarification of eligibility criteria has reduced the heavy reliance on the clinical judgment of district personnel in determining eligibility for learning disabilities programs. Two other States surveyed are now clarifying their learning disabilities definitions and eligibility criteria. • Closer monitoring of districts' use of State criteria is occurring in several States, including Georgia. In addition, on an informal basis this SEA is encouraging districts to centralize eligibility determinations at the district level per yet another strategy to assure more consistent application of existing criteria.

### Strengthening the Capacity of General Education

Some of the States responding to the NASDSE survey described recent activities they have undertaken in cooperation with general education to enhance the ability of the regular classroom teacher to (1) serve children with learning problems who do not qualify for special education, and (2) improve student identification, referral, and assessment practices.

- To help districts in meeting the needs of children with learning problems who would not meet the State's new eligibility standards for learning disabilities, the Colorado SEA has been conducting workshops for building principals on how to implement new instructional strategies within the general education program. The SEA has also encouraged school boards to commit local funds freed as a result of decreases in the size of their learning disabilities programs for the development of specialized services for children with learning problems.
- The Maryland SEA has been conducting training seminars with educators, focusing on issues, practical problems, and staff needs related to the instruction and assessment of four groups of children: the language delayed, slow learners, children with dyslexia, and the emotionally disturbed. The SEA reports that this initiative has resulted in more appropriate educational disgnoses of handicapped children and has also focused attention on effective strategies for meeting the needs of children with learning problems who do not qualify for special education services.
- In Minnesots, an SVA task force comprised of general and special educators and parents has been meeting regionally to develop policies and recommend procedures for preventing the erroneous classification of handicapped children. According to the SEA, this task force has been highly visible statewide and its

efforts, although still in progress, have resulted in widespread district review of local identification, referral, and assessment practices and of how the general education program can be structured to accommodate the needs of children with learning problems in the regular classroom.

### Department Initiatives

The information presented in this chapter suggests that SEAs and LEAs continue to implement procedures to assure that the rights of handicapped children are protected. At the same time, the least restrictive environment provisions of the Act, in particular, continue to challenge SEA and LEA administrators. Related to LRE is a particular need for SEAs and LEAs to develop standards to be used as the basis for placement decisionmaking. Such standards should include very specific criteria for determining when placements away from the regular class or regular school building are necessitated by the child's individual educational needs. During the next year, SEP will encourage SEAs and LEAs to develop such standards. Where appropriate, SEP will also provide relevant technical assistance.

# Assisting States and Localities in Educating All Handicapped Children

One major goal of the EHA-B State grant program is to help States and localities provide for the education of all handicapped children. This assistance is provided in various ways. One is through the financial assistance to State and local educational agencies authorized by the Act. Another, mandated by Section 617, is technical assistance activities provided to State educational agencies to help them implement the Act. Through the program review process, States are assisted in identifying problems or inconsistencies in implementing the Act and providing educational and related services to all handicapped children. This chapter describes each of these types of Federal assistance.

### Funds for Serving All Handicapped Children

The legislative mandate for an annual report to Congress on the progress in implementing the Education of the Handicapped Act requires that financial information be included to indicate the Federal, State, and local expenditures in each State specifically available for special education and related services. This section will provide information regarding the amount and use of Federal funds as well as information regarding State and local expenditures.

### Use of EHA-B State Grant Program Funds by the States

Information is readily available from the Department of Education with respect to the appropriations under the EHA-B State grant program, the distribution of these funds among the SEAs, and increases in amounts available per handicapped child since the enactment of the law. These data, combined with proposals for use of funds as described in State Plans submitted to receive funding under the EHA-B State grant program, present a picture of the varied uses that States make of these monies.

Overall, the funding has increased from fiscal year 1977, when \$200,000,000 was available for formula distribution to the States and Territories, to \$1,017,900,000 for fiscal year 1984. The average per-child amount has increased from \$72 in FY 1978 to \$251 in FY 1984. This per-child average is not a per-capita expenditure, but represents

the distribution formula on which the allocation to the States is based. A table showing State grant program awards under EHA-B for fiscal years 1977-1984 is contained in Appendix 3, Table 3E1.

EHA-B requires that at least 75 percent of the EHA-B State grant program funds to States flow through to LEAs and intermediate education units to support the education of handicapped students (20 U.S.C. §1411(C)(1)(B)). The local educational agencies expend these funds to assure provision of an appropriate education and related services to district handicapped children determined to be in need of and eligible for such services in a manner that does not supplant State and local expenditures.

Twenty-five percent of EHA-B State grant program monies can be used by the State educational agencies. SEAs may use up to one-fifth of this amount, or \$300,000, whichever is greater, to pay costs of administration (20 U.S.C. §1411(c)(2)(A)(i)). Review of the 1984-86 triennial State Plans suggests that SEAs currently use most of their administrative dollars to support personnel positions needed to implement the law. A total of 829 full-time equivalent (FTE) professional personnel are employed by the States using EHA-B State grant program funds. The number of FTE professional personnel employed in the States using EHA-B State grant program funds ranges from a high of 71 in a populous State to a low of three in a State with a smaller population of handicapped children and fewer EHA-B State grant program dollars.

Positions held by these professional staff members include a wide variety of specialized educational consultants in all areas of handicapping conditions: curriculum and training specialists; media and technology experts; parent and volunteer coordinators; persons with expertise in data analysis and information systems, planning, research, and evaluation; auditors, accountants, and budget and finance officers; coordinators of interagency liaison services for the handicapped; Federal project coordinators; and special education administrators. A number of clerical and other support positions are also funded by EHA-B State grant program administrative dollars. The States may also use administrative funds to support other activities, such as recruiting hearing officers, compliance monitoring, οf training development of management procedures. Some administrative resources also support State advisory panels that help SEAs identify unmet needs, develop policies and procedures for distribution of EHA-B State grant program funds, and design evaluation and information systems.

The remaining 20 percent of the discretionary dollars under the EHA-B State grant program are used by the SEAs and LEAs to support various programs and exemplary projects determined to be most needed.

Examination of State Plans shows that EHA-B State grant program funds support much of the inservice training of teachers, other professionals, parents, surrogate parents, and hearing officers; model programs for hard-to-reach and underserved populations (such as career and transition services for postsecondary-age youth); seed money to encourage development of services to particular populations (such as preschool programs for children below the age at which programs are mandated in the particular State); and summer programs and direct service to low-incidence populations (such as the deaf-blind). are also using EHA-B State grant program funds extensively strengthen the evaluation capability of SEAs and for child find, assessment, and information systems. The provision of resource and service centers as well as materials development and technical assistance are commonly supported by EHA-B State grant program funds. Some States sponsor competitions in which they solicit proposals that address topics identified by the SEA as reflecting special education needs or having statewide implications for improving special education programs and their administration.

The following is a sampling of special purpose activities carried out by States using EHA-B State grant program discretionary monies:

State found that physical and occupational therapists were seldom located near the children who needed their services. Consequently, there was no one bridging the gap between the specialized knowledge of the physical and occupational therapy professional and the every day practical application of some of the professional's skill which should be known to the persons who were involved with the daily routines of the handicapped child, as for example persons who lift and transport disabled children and their equipment. This led to several years of effort that started with talking to parents, teachers, bus drivers, and kitchen workers, etc., to determine the needs of the students; State's physical with t he communication occupational therapists and coordination with training institutions that produce these specialists to arrange for a continuing supply of services; and finally, workshops for school personnel, bus drivers. special education teachers, and parents in the use of physical equipment and aspects of adaptive As a result of this oscupational therapy services. project, an estimated 12,000 children will benefit from services they might not otherwise have received.

- One State uses EHA-B discretionary monies to produce films for TV commercials and brochures to create statewide awareness of services for handicapped children. It operates a toll-free hot line for referrals and complaints.
- Parent information services are emphasized in a State that arranges extensive training throughout the State to inform parents of their rights and responsibilities and help them perform their role in placement and individualized education program (IEP) meetings. The State provides information about due process hearings and gives directional services to parents for programs and services about which they might not otherwise know. The State also provides extensive training for surrogate parents.
- In a State without mandated services for very young handicapped children, home intervention services are provided using EHA-B funds to serve children from birth to age four.

Other examples of the use of EHA-B monies to support services at the preschool, secondary, and postsecondary levels are cited in the first chapter of this report.

## Studies of Federal, State, and Local Expenditures for Special Education and Related Services.

The description of expenditures associated with education is always difficult. This is due to many factors including (1) varying sources of funding, (2) existence of equalization strategies, (3) differences in the formulae or bases on which costs are allocated within the States, (4) the absence of standard cost reporting procedures, and (5) difficult to calculate costs, e.g., determining the value of volunteered services or prorating a share of the cost of the physical plant.

For example, local and intermediate units often use a combination of local, State, and Federal revenues to finance related services for handicapped children and youth. There is only very limited information available, however, on the nature and extent of various sources of funding. A recent study supported by SEP queried 100 selected school districts and intermediate units to identify the sources of Federal funding they have used to provide related services for handicapped children (Center for the Study of Social Policy, 1983).

Table 7 shows the percentage of queried school districts and intermediate educational units that used various Federal funding sources to pay for related services.

Because of the complexity of obtaining finance data, the legislative language of Section 618 states that expenditure information may be based on a sampling of data available from State agencies, including the SEA and local educational agencies.

Two approaches can be used. One approach is to build costs from the bottom up -- that is, to collect detailed district-level data and to document the resources that comprise each data item. State and National costs are then estimated from these district data. Past studies reported in the annual reports to Congress have used this approach (Rossmiller, et al., 1970; Kakalik, et al., 1981). The first of these studies, the National Education Finance Project (Rossmiller, et al., 1970) examined the costs of special education programs relative to regular education in school districts in five States. When all handicapping conditions were aggregated, an average composite index of slightly over two was obtained, indicating that programs for the handicapped were about twice as costly as regular education programs. Other studies using the NEFP methodology have tended to support its relative cost findings (Marinelli, 1976).

After EHA-B was amended by P.L. 94-142, SEP supported another multi-year study of the cost of special education and related services. This study carried out by the Rand Corporation (Kakalik, et al., 1981) presented the estimated costs of these services based on National averages of salaries and other prices so that service levels and programs could be compared consistently across districts. The study found that the estimated cost of special education and related services per handicapped child served in 1977-78 was 2.17 times greater than the cost of regular education for a nonhandicapped child.

A second approach to obtaining cost data is to build from the top down -- that is, to focus on State-level data and to document how States collect data from their districts. Since education is a State function, the State exerts considerable influence on what district cost data are collected and how costs are reported by districts. Using this approach in 1983, SEP initiated the first of a series of small and detailed analyses of State and local financing of special education for The first of these inquiries was the Annual Report to Congress. conducted by Decision Resources (1983) and examined per-pupil expenditure data in a small group of States, most of which use an excess-cost funding formula. The study included detailed analysis by handicapping condition, type of placement, and funding source for costs of special education, as well as information on expenditures for related services and costs paid by noneducational agencies.

.The study departed from other recent studies in its use of a case study approach, and its emphasis on actual expenditure data. The degree to which information was available is indicated in Appendix 4, Background and Methodology: The Costs of Special Education and Related Services.

The excess-cost model establishes the costs for special education that are over and above the normal costs of educating a nonhandicapped child. About 20 percent of the States use an excess-cost formula for reimbursement of local districts (Project Forum, 1982). Because 1981-82 data were unavailable from several excess-cost States when this report was prepared, one State that uses a so-called "resource-based" formula for reimbursement was also included. (This State's formula is based on time sheets which are maintained for every handicapped student and every staff member who provides services to handicapped students, including regular education personnel.) Data are presented here for four geographically diverse States. These States were selected to illustrate various features concerning costs of special education and related services and because of the completeness of their data. The data presented should not be used for generalization to other States.

Marked differences exist in the percentages of total funding for special education and related services that come from Federal, State, and local sources. This is displayed graphically in Figure 6, titled Federal, State, and Local Shares of the Costs of Special Education and Related Services in Four Selected States.

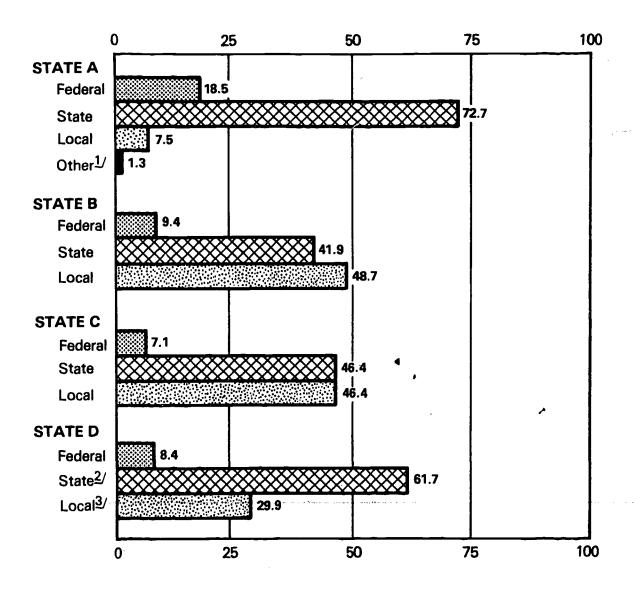

### State A

State A, located in the southeastern part of the country, provides a high proportion of State aid for all education programs. This State was selected because the available cost data were explicitly detailed for each line item, showing the various sources of funding. This is presented in Table 8. In 1979, State A developed a new formula for State funding of special education. It was to be based on a child count, but some LEAs would have lost money under this system. Hence, at three-year hold harmless provision for the years 1980-83 was adopted, and it has been extended for a fourth year. Now 80 to 90 percent of the State allocation for special education comes under the hold harmless provision that contains cost-of-living adjustments. The remainder of the State allocation is based on child counts. For 1984-85, 50 percent of the State allocation is supposed to be based on child counts; for 1985-86, child counts are to be used exclusively.

Analysis of expenditure data. Special education expenditures for 1981-82 are shown in 30 line items; total expenditures for each line item show the percentage contributed by each funding source. (See Table 8.) One major cost item not presented on the table is special

a/ These columna include expenditures for the gifted and talented. 5/ Rounding error.

education transportation. Also, most expenditures for special education and related services provided by noneducational State agencies are not included in Table 8.

Table 8 includes expenditures for gifted and talented programs, which are funded with State and local monies. Expenditures for the gifted and talented, who are one-third of the exceptional child population in State A, cannot be factored out of these expenditure data because they are not accounted for separately and are not distributed proportionately across all cost items.

About three-fifths (61.3 percent) of all special education expenditures in State A are used for teacher salaries. Salaries for all other personnel represent 15.7 percent of expenditures; fringe benefits, 15 percent; and substitute pay and fringe benefits, 0.7 percent. Salaries, fringe benefits, and substitutes thus account for 92.7 percent of all special education expenditures.

Salaries of teachers, directors of special education, clerical staff, work-study coordinators, substitutes, and bus monitors, as well as the costs of fringe benefits, substitutes, staff development, developmental day centers, and out-of-LEA placements are supported primarily with State monies. The major source of funding for related service personnel, audits, and indirect services is EHA-B funds. Community residential schools are paid primarily with local monies. A mixture of funding sources is used to support aides, psychologists, travel for itinerant teachers, supplies, materials, and equipment.

### State B

In State B, located along the eastern seaboard, the local share of the cost of all education programs is more than 50 percent and the State share is about 40 percent. This State was selected because it has data that show expenditures by restrictiveness of placement. This is illustrated in Table 9. The special education funding formula is now under review. The current formula is based on the total number of all students in the school system with adjustments for wealth and financial contribution to special education before initiation of the formula. The formula was devised to provide 70 percent State reimbursement and 30 percent local support. However, there has been no increase in State educational aid since 1980, so the local share has increased to make up the difference.

Analysis of expenditure data. Expenditures for 1981-82 in State B are shown by levels of special education services, ranging from consultative services (Level.I) to residential placements (Level VI). (See Table 9.) These levels describe the restrictiveness of special education placement. Each level has been defined in terms of (1) the

Table 9

### Students and Expendituresa/ by Level in State B 1981-82

Level	Number of b/ Students	Percent of All Handicapped Students	Expendituresc/	Percent of All Expenditures
I	4,015	4.2	\$ 6,010,365	3.9
II	33,186	34.9	18,012,578	11.6

V	11,643	12.2	45,948,115	29.7
VI	1,717	1.8	13, 211, 577	8.5
Home and Hospital	778	0.8	3,293,889	2.1
Total	95,131	100.0	\$154,682,064	99.9 <u>4</u> /

a/ Includes salaries, contracted services, equipment, supplies, and materials; excludes expenditures for local special education administration, personnel development, substitutes' wages, and indirect costs, which total \$77,779,621. Includes Federal, State, and local revenues. Since expenditures are charged to levels based on teacher assignment and not on caseload, per pupil costs cannot be calculated.

b/ Students in Levels I through IV may receive services in more than one level, but they are counted in only the most restrictive placement. Student data include 1,595 handicapped children served in State-operated and State-supported programs for which expenditure data are not included.

c/ For Levels I through IV, teacher salaries are recorded in the level of the teacher's major assignment, although the teacher may provide services to students in more restrictive placements.

d/ Rounding error.

5.40

amount of time each week students receive the services, and (2) the location of the services. Case load or class size limits have been established for each level. For Levels V and VI, placements may occur in State-operated, nonpublic, or local public programs.

As the level increases for Levels I through V, indicating that the placement is more restrictive, the percentage of the total special education expenditures for each level increases. (See Table 9.) For example, 3.9 percent of all special education expenditures go for Level I; this increases to 29.7 percent for Level V. The greater cost of the more restrictive placements becomes apparent when the percentage of students placed in the various levels is compared to the percentage of total special education expenditures reflected by each level. For example, Level II represents 34.9 percent of all handicapped students in the State, but only 11.6 percent of all special education expenditures are used for these students. Levels I through IV combined include 85.2 percent of the handicapped students but only 59.6 percent of the expenditures.

Students in special schools or in specially-equipped wings, Level V, are 12.2 percent of the handicapped population but reflect 29.7 percent of the expenditures. Students in residential placements, Level VI, represent 1.8 percent of the handicapped population but account for 8.5 percent of the expenditures. Expenditure data for Levels V and VI do not include State expenditures for educating handicapped students in State-operated programs. Students 1n State-operated programs are 5 percent of the Level V students and 59 percent of the Level VI students. Thus, particularly for Level VI, the values listed as total expenditures and the percentage of all expenditures are much lower than the actual expenditures for these students.

More than one-fourth of the expenditures for special education are contained in indirect costs, which are <u>estimated</u>. This approach has been used as an alternative to the costly and time-consuming task of collecting special education expenditure data for indirect-cost items.

#### State C

In State C, a midwestern State, expenditures are split 50-50 by the State and localities after EHA-B money has been deducted from the total expenditures for special education. This State was selected because data for the various handicapping conditions show the Federal, State, and local contributions and provide details of support services and instructional costs. By law, the State legislature must reimburse LEAs 50 percent of what they actually spend. The State distributes money for special education first, then money for general education is distributed.

58

Analysis of expenditure data. In State C, State and local expenditures for 1981-82 are shown for six kinds of programs, 11 support services, and three types of out-of-district placement. (See Table 10.) However, expenditures of Federal money have been itemized for only five instructional programs and a total for support and non-programmed services. Thus a complete analysis of the data is not possible. A small portion of the expenditures for psychological services, improvement of instruction, and other administration is used to support programs for the gifted; this portion could not be factored out of the totals because no separate accounting is maintained for support services for the gifted.

Data from State C do not include expenditures for special education and related services provided by the Board of Charities and Corrections, which delivers services to the severely and profoundly handicapped; by the Board of Regents, which maintains the State schools for the visually and hearing impaired; or by the Departments of Social Services and Health, which provide support and evaluation services.

About half of all the funds for special education in State C are used for LEA instructional programs; the other half are used for support services and out-of-district placements. The Federal share of the cost of special education in State C is 7.1 percent; State and local shares are each 46.4 percent.

Per-pupil expenditures for several instructional programs (not including support services), which can be calculated from the data presented in Table 10, are as follows: mentally retarded, \$1,675.77; emotionally disturbed, \$701.07; learning disabilities, \$1,159.48; all handicapped students, \$995.44. Per-pupil expenditures for "Other Special Programs" could not be calculated because the speech impaired have been included in the student counts for this category.

#### State D

State D, located in the West, has a unit-reimbursement special education funding formula. This State was selected because data are available to show for each handicapping condition the proportion of expenditure for various expenditure categories such as teachers, aides, and support and other services, as well as comparisons across categories of the per-student costs. Most items are reimbursed by the State at an 80 percent fate. If the State legislature does not appropriate sufficient money to fund fully the State portion of the expenditures for special aducation, all reimbursements are prorated. For the 1981-82 school year, the State appropriated 51.7 percent of its share of the expenditures. Recently, the State has established a cap on the total number of district FTE staff members that can be approved for reimbursement; the cap for each LEA is determined by a formula

Table 10

under Psychological and Speech.

b/ The majority of the physically handicapped are classified under "Other Special Programs" because they are multiply handicapped.

c/ Includes expenditures for the gifted.

a/- Includes students who are speech impaired, but expenditures for the speech impaired are listed

based on the student-staff ratio with adjustments for the amount of student turnover, the number of out-of-LEA placements, and sparsity-density factors.

Analysis of expenditure data. All direct special education expenditures for 1981-82 in State D are itemized by handicapping condition; total expenditures for each handicapping condition are shown in Table 11 by the percentage spent on six types of services. Total direct special education expenditures for each handicapping condition were used to calculate per-student direct special education costs, which are shown in Table 12.

In State D, special education expenditure data are based on time sheets maintained for every handicapped student and every staff member who provides services to handicapped students. These time sheets contain data on services to handicapped students in the regular education program, and the costs of these services are calculated. The direct special education expenditures plus the expenditures for educating students in the regular education program are used to calculate the per-student attributable cost as shown in Table 12. The table also shows per-student excess cost by handicapping condition.

The data for State D do not include expenditures for special education and related services provided by other State agencies and nonpublic programs. Also, SEA expenditures for the administration of special education are not represented.

When all handicapping conditions are combined, about 65 percent of all expenditures are used for teacher and aide salaries and benefits. The remaining 35 percent of special education expenditures are used for support and other services.

For the areas of educable mental retardation, perceptual/
communicative difficulties, hearing handicapped, visually handicapped,
and speech/language problems, more than half of all expenditures are
for teachers of the primary disability. For multihandicapped students
the largest cost item is indirect support services. About one-third of
the expenditures for the trainable mentally retarded, students with
emotional/behavioral problems, and the physically handicapped are used
for teachers of the primary disability, and another one-third for
indirect support services. (Note: All of these terms for handicapping
conditions are categories used by State D. The category perceptual/
communicative difficulties includes learning disabilities.)

When total direct special education expenditures for each handicapping condition (Table 11) are compared to the total number of students for each handicapping condition (Table 13), it is evident that the most money is spent on perceptual/communicative problems (37.2)

	Teachers of Primary Disability	Other Teachers	Aides	Support Services	Indirect Support	Other Services	Total Direct Special Education	centage of

/ Includes children with learning disabilities.

c/ Includes other health impaired.

d/ Rounding error.

Notes: Teachers of Primary Disability refers to teachers whose primary role is to teach students who have the handicapping condition listed in the first column. For example, for trainable mentally retarded (DMR) students, the teachers of primary disability are TMR teachers.

Both salaries and benefits are reflected in this category.

Other Teachers are all other teachers who provide services to each particular group of handicapped students. For TMR students this category includes teachers who specialize in the areas of educable mental retardation, emotional/behavioral problems, perceptual/communicative difficulties, hearing, speech/language, and the multiply handicapped. Both salaries and benefits are reflected in this category.

Support Services refers to direct work with nanoicapped students by nurses, occupational therapists, physical therapists, paychologists, social workers, and audiologists.

Indirect Support Services includes assessing, staffing, consulting, planning, traveling, supervising, and administering by all support staff sembers.

Other Services are supplies, equipment, transportation, and other purchased services.

83

84

Table 12

Per Student Direct Special Education Cost, Per Student Attributable
Cost, and Per Student Excess Cost in State D
1981-82

Speech/Language	925	3,319	810
Multiply llandicapped	6,561	7,609	5,100

Term used by State D.

Notes: Per Student Direct Special Education Cost has been calculated by dividing the total direct special education expenditures for each handicapping condition (Table 11, 7th column) by the total number of students with that handicap. It includes all expenditure items listed in Table 11: teacher of primary disability, other teachers, sides, support services, indirect support services, and other services.

Per Student Attributable Cost is the Per Student Direct Special Education Cost plus the per pupil cost of educating the handicapped students in the regular education program, hence it is the <u>total</u> per pupil cost of educating the handicapped students.

Per Student Excess Cost is the Per Student Attributable Cost minus the average per student cost of educating a nonhandicapped student (\$2,509).

b/ Includes children with learning disabilities.

c/ Includes other health impaired.

percent of all expenditures), but this category includes almost one-half (47 percent) of all handicapped students in the State. Students with speech and language problems represent 18.7 percent of all handicapped students but only 7.6 percent of all direct special education expenditures. Students with emotional/behavioral problems represent 18.1 percent of all handicapped students, and 23.6 percent of all direct special education expenditures are used for them. The six remaining handicapping conditions represent only 15.8 percent of all handicapped students but almost one-third of all expenditures are allocated for them.

The per-student excess-cost ranges from \$810 for speech/language problems to \$5,100 for the multiply handicapped. (See Table 12.) A comparison of per-student direct special education cost with per-student attributable cost reveals that most of the costs of educating multiply handicapped and TMR students are allocable to special education, whereas most of the costs of educating students with speech/language difficulties are allocable to the regular education The wide variation in per-student costs is a function of several factors that contribute to expenditures and vary for different These factors include the variation in handicapping conditions. student-teacher ratios (see Table 14), the nature of the placement (e.g., intermittent services in a regular class in a local public school vs. placement in a residential facility), and the number and nature of specialized personnel required to provide a dvices.

Data from the four States examined in this study provide important insights into the financing of special education and related services in the States. These findings should not be used for generalization to other States or local situations, but they at suggest the existence in many States of sufficiently sophisticated accounting and information systems that permit continuing dotabled examination of the financing of special education and related services. States clearly recognize the importance of having accurate cost information and are willing to share that information to improve the administration and provision of services to handicapped children.

### Technical Assistance to States

Section 617 of EHA-B requires the Department to provide technical assistance to States to help them implement the provisions of the Act. Over the years, technical assistance has been provided directly by SEP staff and indirectly through discretionary contracts and grants. Initial technical assistance focused on policy development. This type of assistance was well suited to State needs during the early years of implementation, when States were concentrating on developing and implementing policies and procedures consistent with the Act.

> Teacher/Student Ratio includes total FTE teachers (both teachers of the primary disability and other teachers) utilized to provide services.

b/ Includes children with learning disabilities.
c/ Includes other health impaired.

SEP monitoring visits and special studies find that most States now have policies and procedures consistent with the Act. Certain policy and procedural questions remain concerning issues such as private schools and interagency agreements, but many of the issues States currently face are administrative or programmatic. To resolve such issues, States need access to the most recent special education research and practice information from federally sponsored research, development, and demonstration efforts, and from the experience of States facing similar problems. Thus, although the goal of SEP technical assistance efforts remains the same as in the early stages of implementing the Act -- helping SEAs provide handicapped children with a free appropriate public education -- SEP has refocused its technical assistance efforts to conform to changing State needs.

State technical assistance is provided by SEP primarily through the Division of Assistance to States (DAS); within DAS the Program Assistance Branch (PAB) is specifically charged with technical assistance development and delivery. This branch includes the Regional Resource Center Section and the State Program Assistance Section.

To meet changing State needs, DAS is now implementing a technical assistance approach that seeks to:

- capitalize on the National perspective provided by various SEP data bases to identify, across States, problems in providing a free appropriate public education to all handicapped children;
- draw on a variety of resources within SEP to provide States with information about the most recent developments in special education research, technology, programs, and practices relevant to identified problems;
- identify problem areas for which policy clarification or development of compliance standards is necessary and help appropriate SEP units initiate such activities; and
- draw together States that are experiencing similar problems for mutual problem solving.

This approach provides for direct and indirect technical assistance service delivery with some activities developed and delivered by DAS staff and some by contractors, grantees, staff from other Federal programs, or by the States themselves. DAS activities will focus heavily on remediating needs and problems that cut across States and regions.

The Regional Resource Center (RRC) program, authorized by Section 621 of EHA-C, continues to be the primary mechanism for delivering technical assistance to individual States. This program — established by contract in fiscal year 1969 — now supports six regional centers that help SEAs and LEAs develop quality programs and services for handicapped children. (More information about the RRC program is provided in Appendix 2.)

DAS staff work closely with the RRCs to develop technical assistance activities and provide cross-State and cross-regional assistance. The RRCs also work with individual States and provide cross-regional assistance to States. Drawing on the wide scope of information available to SEP, the RRCs deliver assistance based on identified State and regional problem areas, sharing scarce resources efficiently among States.

Through a needs assessment process DAS has identified six principal areas in which States need technical assistance. These areas of need will be addressed by the RRCs, in conjunction with DAS, during the 1983-84 school year. They are:

- comprehensive services for handicapped adolescents and young adults -- 50 States identified a need for integration of education, health, and rehabilitation services for adolescents and young adults;
- special education program development and evaluation -- 39 States identified as a need the enhancement of State and local efforts in the areas of monitoring, program development, and evaluation of the quality of educational programs;
- 3. special education applications of technology --32 States identified as a need the enhancement of State and local efforts in the efficient use of technology in the program administration and instructional delivery of special education services;
- 4. parent/community-based services for handicapped persons -- 30 States identified a need to promote available integrated service systems in the community through the active involvement of parents and professionals in the special education service delivery system;
- 5. placement alternatives -- 26 States identified a need to continue to explore programming options for severely handicapped students in less restrictive

environments and to address interagency issues for program development and improvement; and

6. comprehensive services for special populations, e.g., emotionally disturbed and preschool handicapped children -- 19 States identified a need to improve the quality of services for preschool and emotionally disturbed handicapped children.

DAS also administers another project that plays an important part in helping SEP provide technical assistance to States. This contract, Project Forum of the National Association of State Directors of Special Education (NASDSE), provides technical assistance to States by analyzing important special education issues and practices in SEAs and LEAs. SEP considers these analyses in determining technical assistance needs and activities. The project has also established a communication network of SEAs and LEAs that gives SEP timely feedback about current and emerging trends in special education. These SEAs and LEAs, in turn, receive technical assistance through their participation in the communication network.

The Division of Educational Services (DES) administers a three-year technical assistance contract, Project EduTech, that helps SEAs and LEAs use appropriate technological alternatives in special education service delivery. The project is designed to unite educators and technologists in efforts to improve the delivery of services to handicapped children. Ongoing activities include selecting persistent and widespread special education issues on which to focus during each year, developing and disseminating information about technological developments that may resolve these issues, and establishing and maintaining an information system.

The Technical Assistance Development System (TADS) is an SEP-funded technical assistance center administered by the Division of Innovation and Development. TADS has provided services to SEP and its Handicapped Children's Early Education Program (HCEEP) since 1971. In addition to 54 HCEEP about development assistance to providing program demonstration projects, the center assists approximately 20 Early Childhood Outreach Projects and States receiving State Implementation Grants. The project also maintains a functional information system for the benefit of the HCEEP projects, analyzes information relating to the early education of handicapped children, and provides other ad hoc technical assistance as requested by SEP.

Another way in which SEP carries out its responsibilities to provide technical assistance to States as mandated by EHA+B is by disseminating the Annual Report to Congress. This document is routinely provided to State administrators responsible for providing

special education and related services to handicapped children and to professional organizations that represent the handicapped. The report is also provided to hundreds of individuals who request it each year. These individuals include parents of handicapped children, educators, teacher trainers in colleges and universities. IU and LRA administrators, members of advocacy organizations, and the general public.

SEP will continue to seek ways to provide timely and effective technical assistance to States. SEP believes that the steps it has taken have resulted in enhanced technical assistance as well as closer coordination and cooperation among Federal, State, and local agencies as they strive to provide improved services to our Nation's handicapped children.

### SEP Review of State Programs

The program review process has two parts -- review of plans submitted by States for use of their EHA-B State grant program funds and monitoring to assure adherence to State Plans.

### State Plan Review

During the past year, SEP's Division of Assistance to States (DAS) has completed the review and approval of FY 1984-86 State Plans. This is the second time SEP has accepted three-year plans from the States. FY 1981-83 State Plans were reviewed and approved in 1980. For fiscal years 1980 and earlier, States were required to submit annual plans. Submission of State Plans is required by Section 613 of EHA-B.

The review of the 1984-86 plans, which teman in February 1983 and continued throughout the year, consisted are eral stages. In the first stage, several staff members independ are ead and analyzed each State Plan to identify procedures that did not appear to conform to EHA-B requirements.

The second stage involved feedback to the SEA regarding specific issues that required resolution. Issues that needed resolution generally consisted of omissions, wording problems that required clarification, or conflicts with the requirements of EHA-B. As part of the negotiation process States were required to submit additional information to SEP. When this information was received, the State Plan was reviewed again and, if necessary, additional negotiations were carried out. Before State Plans were finally approved, reviews were conducted by the Office of the Director of SEP and the Office of the Assistant Secretary, Special Education and Rehabilitative Services.

The most important problem issues identified during the review process were in procedural safeguards, IEPs, least restrictive environment, right to education, participation of private school children, confidentiality, and general supervision.

The largest number of problems surfaced under procedural safeguards. Requirements that needed clarification or revision in the procedural safeguards section of the plans included: use of State educational agency personnel or officials as hearing officers (40 States); inconsistency with the hearing process and EHA-B regulations (17 States); selection of surrogate parents (11 States); and inaccurate timelines (7 States).

Table 15 illustrates the areas of deficiency (other than procedural safeguards) noted most often in State Plans.

Once these deficiencies in the State Plans were resolved, SEP moved into the second phase of program review -- monitoring of States as they carry out the approved State Plans.

### SEP Monitoring

SEP monitoring of States has undergone procedural and conceptual changes in the past year. It is now viewed as a continuous process rather than simply as site visits to States. The monitoring process begins with the development of an initial screening document and profile for each State. One major purpose of this document is to help SEP identify deficiencies before the on-site visit. The State profile is updated continually as part of the monitoring process.

Three types of monitoring are available to SEP: off-site monitoring; on-site monitoring at the SEA only; and on-site monitoring of the SEA and other agencies (including LEAs). To date, off-site monitoring has not been used; in most cases the SEA-only model has been employed. In a few cases, on-site monitoring has included visits to the SEA and other agencies.

Although the State profile serves as a primary resource for identifying potential problem areas, the site visit team does systematically explore a core of requirements regardless of whether the State profile indicates possible problems. Among these are the State Advisory Panel; Complaint Management; Monitoring; General Supervision; LEA Applications; Preschool Incentive Grants; SEA Administration of Funds; Right to Education; Procedural Safeguards; Comprehensive System of Personnel Development (CSPD); and State-Operated Programs (SOPs). An in-depth examination of some other area may be the result of complaints.

Table 15

Areas of Deficiency Other than Procedura! Safeguards
Identified in FY 1984-86 State Plans

Provision	Number of States	Nature of Deficiencies
Individualized Education Program	21	Two recurring issues per- tained to the requirements that IEP meetings be held within 30 calendar days of a determination that a child is handicapped, a that IEPs be in effect the beginning of the
Least Restrictive Environme	nt 18	The most frequent problem was the unavailability of a continuum of alternative placements.
Right to Education	16	The major problem was the failure to include the requirement that a free appropriate public education be provided to children in all public agencies.
Participation of Private School Children	12	The major problem was the plan's failure to address the regulatory provisions adequately.
Confidentiality	9	Wording problems and the absence of certain specific requirements were noted here.
General Supervision	8	Plans contained inadequate information to show that the SEA was responsible for all educational programs.

ur.Mac.com

After the site visit is completed, a debriefing is held for the SEA staff. The next step is the writing of the Program Review Letter (PRL). The letter contains commendations, recommendations (not mandatory), and areas of concern (instances of noncompliance with Federal requirements that must be addressed). When the State receives the PRL, it has the option of refuting the findings or preparing a Voluntary Implementation Plan (VIP). In the VIP, the State develops its own measures to remedy the areas of noncompliance cited in the PRL. The VIP must also include reasonable timelines for implementing proposed changes.

Upon receipt of the VIP, SEP staff analyze the plan Carefully, negotiate further with the State if had analyze the plan close out this phase of the monitoring. The implementation of the VIP is closely monitored thereafter until the State has submitted sufficient documentation to assure that the changes have been made.

Table 16 illustrates the areas and frequency of noncompliance from 1982-83 on-site visits. The table shows that the major problem areas are monitoring, general supervision, procedural safeguards, least restrictive environment, complaint management, IRPs, right to education, and SOPs. States were found to be in noncompliance with nine other requirements of the Act, though these were isolated instances.

Saying that a State is in noncompliance in a particular area does not always tell the whole story, however, as the nature of the findings is frequently complex. For example, in the case of monitoring, the State may have been conducting all the required afte visits but not considering all the Federal requirements. Such a situation would result in a finding of noncompliance. In another instance, a State might be visiting LEAs only and overlooking SOPs, correctional facilities, etc. This too would result in a finding of noncompliance.

In the area of general supervision, a finding of noncompliance usually resulted from the SEA lacking adequate authority, by statute or agreement, or from the SEA failing to exercise its authority properly. Concerns about procedural safeguards ranged from inadequate content of notice to parents and prior written consent to problems with the due process hearing procedure. Regarding least restrictive environment, the deficiencies usually pertained to categorical placement of handicapped children or the lack of a continuum of alternative placements. Complaint management problems were usually the result of a violation of regulatory requirements of a lack of documentation. IEP and right to education were usually cited as areas of concern when services were not being provided to a handicaped child. SOP was fixed when any inconsistency with a Federal requirement was noted a state-operated or State-supported program. Thus a finding of

Table 16

Areas of Noncompliance Identified during the 1982-83

Monitoring Cycle

Elements/Requirements	Number of States with Areas of Noucompliance in PRLs, 1983
*State Advisory Panel	1
Least Restrictive Environment (LRE)	8
*Complaint Management

Individualized Education Program (IEP)	7
*Procedural Safeguards	9
Confidentiality	2
Protection in Evaluation Procedures (PEP)	1
*Comprehensive System of Personnel	
Development (CSPD)	1
Participation of Private School Children	2
LEA Administration of Funds	1
*State-Operated and State-Supporced	
Programs (SOPs)	5

Note: Starred items constitute the core of SEA or State Agency Review.

noncompliance in an SOP could refer to any one of the 21 Federal requirements that are routinely examined.

The process of SEP program review monitoring is subject to continual evaluation to determine its efficiency and effectiveness. Internal evaluation is achieved through third-party examination of SEP team procedures and their effectiveness, as well as the appropriateness of the materials and data used for monitoring. External evaluation is achieved in part through structured feedback from members of the primary group monitored by SEP, the State directors of special education. The results of internal and external evaluation indicate that the process is working to the benefit of the purposes of the law and is improving administration of special education programs and the provision of related services throughout the country.

### Other SEP Administrative Responsibilities

SEP is responsible not only for the administration of the activities supported under EHA-B, but also for a variety of discretionary programs. These provide important ancillary models, services, and training that help improve educational opportunities for handicapped children and youth throughout the country. The administration of these programs has been reported in previous annual reports to Congress. A current review of each of these discretionary programs is contained in Appendix 2.

# Efforts to Assess and Assure the Effectiveness of Programs Educating Handicapped Children

Section 601(c) of the Education of the Handicapped Act (EHA), states that "it is the purpose of this Act ... to assess and assure the effectiveness of efforts to educate handicapped children" (20 U.S.C. Section 618 of the EHA-B further specifies that "the §1401(c)). shall measure and evaluate the impact of programs [Secretary] authorized under this part and the effectiveness of State efforts to assure the free appropriate public education of all handicapped §1418(a)). carrying out In children" (20 U.S.C. responsibilities, the Secretary is authorized to "conduct, directly or by grant or contract, such studies, investigations, and evaluations as are necessary" (20 U.S.C. §1418(b)), and must "update at least annually, programmatic information concerning programs and projects assisted under [EHA-B] and other Federal programs supporting the education of handicapped children, and such information from State and local educational agencies and other appropriate sources necessary for the implementation of this part..." (20 U.S.C. §1418(b)(1)). Education of Handicapped Act Amendments of 1983, P.L. 98-199, have, in a number of respects, modified the reporting requirements. report, however, was prepared to cover a period of time during which the unamended version of Section 618 was controlling.

States are required under Section 613(a)(11) of EHA-B to "provide for procedures for evaluation at least annually of the effectiveness of programs in meeting the educational needs of handicapped children (including evaluation of individualized education programs)...."
(20 U.S.C. §1413(a)(11)). These procedures are to be included in each State's program plan, which is submitted to SEP every three years.

Past annual reports have focused primarily on the Federal effort to evaluate the impact of special education and related services being provided to handicapped children. This year's report continues to describe the Federal effort but also reports to a greater extent on State and local (and intermediate) evaluation efforts to provide the Congress with a more comprehensive picture of efforts under way Nationwide to analyze the impact and effectiveness of policies, procedures, and programs for the Nation's approximately 4,000,000 handicapped children.

### Federal Evaluation Efforts

In carrying out its responsibilities to evaluate the impact of EHA-B and report annually to the Congress, SEP has over the years provided for and reported on a number of special studies (see Appendix 1). Evaluation studies in the late 1970s focused primarily on State and local efforts to implement the provisions of the EHA-B as SEAs and LEAs struggled to comply with the mandates of the new law. Examples of these implementation studies include:

- e "A National Survey of Individualized Education Programs," conducted by Research Triangle Institute from 1977 through 1980 to determine the nature and quality of the IEPs being designed for handicapped children.
- "Longitudinal Study of the Impact of P.L. 94-142," conducted by SRI International from 1977 through 1982 to follow a small sample of school systems over a five-year period to observe their progress in implementing the Act, as well as the effects of the Act.
- Restrictive the Least for Determining Children." Environment Placement of Handicapped conducted by Applied Management Sciences from 1978 through 1980 to investigate the rules or criteria used by the courts and State hearing officers to determine the placements of handicapped children, the guidance given by States to school districts in making placement decisions, and the actual placement procedures used by school districts.
- "A Study to Evaluate Procedures Undertaken to Prevent Erroneous Classification," conducted by Applied Management Sciences from 1979 to 1983 to examine LEA procedures for referring, assessing, and placing students to determine whether procedures were in place to prevent the erroneous classification of children, particularly misclassification on the basis of race or culture.

With tightened budgets and increased State experience in implementing EHA-B, attention was then focused on actual quality and cost-effectiveness of the special education and related services provided to handicapped children, as well as on the impact of the Act. SEP evaluation studies in the early 1980s reflected this shift in emphasis. Consequently, studies were funded to examine effective

practices and cost issues related to educating handicapped children. Two such studies were:

- "Analysis of State and Local Implementation Efforts," conducted by Newtek Corporation from 1979 to 1980, which investigated the special education budgetary process at the State level and examined in detail budgetary processes in four selected LEAs.
- "Verification of Procedures to Serve Handicapped Students," conducted by Applied Management Sciences from 1979 through 1981. One component investigated the assessment process in school systems; another identified and documented promising strategies for serving secondary—age handicapped students.

Appendix 1 provides a summary of all Federal evaluation activities supported by Special Studies monies from 1976 to the present. The section that follows presents the findings of a major study that has been completed recently as well as a new study that is being initiated.

### Federal Evaluation Studies

# SRI Longitudinal Study of the Impact of P.L. 94-142

A major SEP-funded longitudinal study that evaluated the impact of EHA-B at the local level was recently completed by SRI International (1982). This study was based on case studies of local school systems (in 22 LEAs the first year and 16 LEAs the following three years) in nine States during the school years 1978-79 through 1981-82. The study sites were selected to represent a variety of local and State educational systems throughout the United States. Interviews were conducted with various types of LEA personnel and community members these site8 (e.g., administrators, principals, parents, and representatives of human psychologists, The study began just as the Congressionally-mandated effective date for providing a free appropriate public education for all handicapped children was reached. The following section describes some of the study's findings concerning the overall impact of EHA-B on special education services as well as on particular groups of individuals, including handicapped children, their parents, and school personnel.

### Impact of EHA-B on Special Education Services

The SRI study found that EHA-B had two specific effects on special education from 1978-79 through 1981-82. First, as anticipated, the law required LEAs in the study to make many procedural changes. For example, LEAs implemented such procedural requirements as child identification, parent notice and consent, multidisciplinary evaluation, IEPs, and due process.

Second, the study found that LEAs significantly increased the scope and comprehensiveness of their special education programs and related services. For example, districts expanded programs and services to handicapped children at the preschool, elementary, and secondary levels, particularly for children who were learning disabled, seriously emotionally disturbed, and mentally retarded. Half of the LEAs in the study also increased the range of handicapping conditions they identify and serve. The study also found, however, that despite progress in providing special education and related services (including more placement options for a wider range of children with handicapping conditions), fiscal constraints have slowed advancement.

### Impact of EHA-B on Handicapped Children

The study concluded that the largest single impact on handicapped children studied was probably the cweation of distinctly different special education and related services that burgeoned in 1978-79. All LEAs in the study were expanding their programs and opening up their special Education delivery systems to additional beneficiaries when the study began. However, by the last two years of study, the expansion of new placement options had lessened considerably as program expansion slowed. For the most part, children who had been unserved before passage of the law were being served. Underserved children were being served more appropriately than when the study began. In most LEAs, children in need of special education were identified earlier, and the level of programs and services provided them was raised over time. While recognizing that more services do not automatically mean better services, the study found that individuals interviewed at the local level believed that the quality of programs and services had improved along with the quantity. Various special education administrators commented:

"There are more services and the kids are better off."

"Programs have grown tremendously, and I have to believe that services are better."

"The impact on kids has been 98 percent positive.... We're providing services to those we wouldn't be otherwise."

"The level of services has increased both with regard to breadth and depth."

"As a result of P.L. 94-142 dollars, we have improved the quality of our special education program."

Another major positive impact on the handicapped children studied was the increased contact between them and their nonhandicapped peers and the resulting acceptance of handicapped children. In addition to increased efforts to integrate handicapped with nonhandicapped children in nonacademic (e.g., art, music, physical education) and academic areas, more handicapped children were being served in public school settings rather than in separate facilities. A positive change in attitude toward the handicapped was found, although this did not develop without some resistance. One high school principal, who earlier led an effort to keep an orthopedically handicapped child in a wheelchair from being placed in his school, said during 1981-82 that he thought having such pupils in his school was "a plus to the campus." His change of attitude was not atypical, the study notes.

# Impact of EHA-B on Parents of Handicapped Children

For parents of handicapped children, too, the overall impact of EHA-B was found to be positive. In most of the LEAs studied, parental awareness of their rights under the law had heightened over the four-year study. The study found that parent-school contact increased as a result of the law, and this increased contact helped parents gain a greater understanding of their children's special education programs.

The study also found, however, that while parents' involvement, awareness, and knowledge had increased, their contributions did not significantly affect decisions about appropriate programs and services for their children. The study concluded that the quality of parental involvement did not change to a large extent over the four-year period.

### Impact of EHA-B on School Personnel

The SRI study found that the impact of EHA-B on school personnel -principals and teachers -- was also generally positive. The
involvement of principals in educational decisionmaking varied a great
deal among LEAs and across schools within LEAs over the four-year study
period. However, by 1981-82 principals in all but two LEAs had
increased sophistication about the Act and greater awareness of the
nature of special education classes in their schools. Principals
became more accepting of handicapped students in some LEAs. In large
part, the study found that greater awareness and acceptance were
facilitated by the dispersal of more special education classes across

districts, which increased principals' exposure to a wider range of handicapped students. One principal commented:

"P.L. 94-142 has made everyone more sensitive to the needs of special education students. The law has been a real eye-opener for regular educators."

EHA-B affected regular classroom teachers in the study through the increased number of handicapped children being educated, at least in part, in regular classroom settings. The study found that despite progress in integrating these children into regular classes over time, the day-to-day demands of teaching and increased regular class size often made it difficult to provide coordinated mainstreaming activities.

Generally, regular education teachers had become much more aware of special education and more accepting of handicapped children, but some resistance to integrating these children into regular classes lingered. Many of these teachers expressed resentment about the smaller size of special education classes compared to regular classes.

Most special educators interviewed by SRI thought that EHA-B had helped to open communication between special education teachers and parents, and that special education teachers became more accountable for their work with children. A negative impact of the law and regulations on special education teachers, however, was the increased time and paperwork they required. Principals and regular educators also cited paperwork as having a negative impact.

### Overall Impact of EHA-B

All LEAs in the SRI study agreed that the impact of EHA-B has been primarily positive and that the law has been a major factor in effecting change in special education. The main reason given was that the regulations, money, and clout associated with the passage of EHA-B increased the capacity of LEA personnel to deliver programs and services to handicapped children over the four-year study period. The major positive effect of the law, according to this study, has been to increase the scope and comprehensiveness of special education programs and services at the local level.

## RTI Study of the Impact and Effectiveness of Special Education Service Delivery

SEP funded another major study in September 1983 that will evaluate the impact and effectiveness of EHA-B. It is being conducted by the Research Triangle Institute (RTI). This research study focuses on assessing special education service delivery provided in accordance

Over the next three years, RTI will with the mandates of ENA-B. examine the impact and effectiveness of three factors in providing a handicapped public education to appropriate (1) administrative requirements and procedural safeguards mandated under EHA-B, (2) interagency cooperation, and (3) funding and costs associated with providing special education and related services. Policy issues in these three areas that policymakers and administrators perceive as critical will be examined. Information obtained from the study will be used to develop topical papers to help Federal, State, local policymakers and administrators make sound decisions affecting the provision of services to the handicapped.

### Procedures Being Implemented for State and Local Evaluation Efforts

States are also engaged in a range of activities to evaluate the impact and effectiveness of the special education and related services they provide to handicapped children. Characteristic of these efforts are evaluation studies directed by the SEA at the State level and program evaluations conducted at the local level by intermediate units and LEAs. Evaluation studies performed by SEA staff or contractors, although generally more expensive than local studies, are often used when the study topic requires statewide information, a concentration of resources, or evaluation by external personnel (for example, when controversy is involved). This type of study is particularly advantageous when a critical problem needs to be highlighted or when an issue cuts across school districts — for example, the efficacy of alternative service delivery models.

Local program evaluations performed by local personnel, for which the SEA often provides impetus, technical assistance, and incentives, have their own advantages. LEAs gain information they need through this type of study to validate and improve their programs and demonstrate program efficacy to school boards, government agencies, and others. Many evaluation topics are most effectively studied by local personnel who are familiar with the program under study and thus are in the best position to ask the right questions and interpret and use the information they collect.

Both approaches to evaluation are used in some States. Iowa, Massachusetts, and California are examples of States using both in varying degrees to obtain evaluation information. Some evaluation activities supported by these States are described in the following sections. These sections are not intended to describe all the evaluation activities under way in these States, but rather to illustrate how varied State approaches work in actual practice.

### Iowa Evaluation Efforta

Evaluation in Iowa is very much a "grass roots" activity, with the major responsibility for conducting program studies at the local and intermediate levels. The SEA is involved in some evaluations on topics of statewide interest, but its primary role in evaluation is to provide technical assistance to educational agencies that voluntarily undertake evaluation studies. Local motivation for conducting evaluation studies commonly stems from the need to maintain funding levels by demonstrating the benefits of special education programs.

The SEA has developed three basic approaches to providing technical assistance for local evaluation studies in response to the expressed need for evaluation information by administrators, teachers, and related service providers. These approaches are (1) a guide that describes best evaluation practice and evaluation instruments, (2) a consultative program that provides technical assistance, and (3) help in designing longitudinal studies.

Each of Iowa's 440 LEAs is assigned to one of 15 intermediate units called Area Education Agencies (AEAs). As part of the first approach to technical assistance, the SEA in 1982 convened task forces composed of AEA, LEA, and SEA personnel along with outside consultants to develop descriptions of best professional practice and evaluation instruments in 13 areas representing all types of handicapping conditions and all areas of professional service (e.g., psychology, speech and hearing, physical therapy). The descriptions were widely reviewed and revised. They are currently being compiled to form a complete package that includes instructions for using the package and evaluation instruments that address each of the 13 specific areas. The package may be used in total or in part, and evaluation instruments may be tailored to the needs of the user. AEAs or LEAs may use the package for self-evaluation or SEA staff or others may use it for external The final compilation is not complete yet, but 15 evaluations using the materials from the package have been performed, and thus far AEAs and LEAs have given it positive response.

AEAs often ask the SEA to take the lead in conducting evaluations. A team of SEA and AEA personnel specializing in the area being evaluated interviews practitioners, principals, and parents, and reviews case records, policies, and procedures. AEAs may also enter into reciprocal agreements to provide specialists for the evaluation team, a practice that increases communication and knowledge among AEAs. Following data collection, the team meets with practitioners to share information and then submits recommendations to the AEA administration. One such recent evaluation of social work services in an AEA found that although social workers were doing a good job with the children, they were often called on to perform additional work and thus spread themselves too thin.

In the second approach to technical assistance, the SEA provides consultants to AEAs that have established education programs based on model programs. The consultants then help the AEAs conduct evaluations of these programs to determine their effectiveness in meeting the needs of handicapped children. One study performed with consultative assistance tracked students who had completed early intervention programs based on a particular preschool service delivery model (the CAPERS model) some years earlier.

The third approach the SEA has taken to help local districts has been to encourage all AEAs and LEAs to begin longitudinal studies to track the progress of special education students throughout their educational careers. SEA evaluation specialists are working with AEA personnel to design models for longitudinal studies that will assure consistent data across all LEAs assigned to a particular AEA. These initial studies will yield data at the AEA level but not at the State level. The SEA considers it important to involve the LEAs in longitudinal studies that yield data useful to them and their AEAs before attempting to obtain statewide longitudinal data. This effort is consistent with the State's emphasis on local responsibility for collecting evaluation data coupled with SEA concern for providing technical assistance that limits the imposition of State data requirements.

### Massachusetts Evaluation Efforts

Evaluation studies are required in Massachusetts by State law, Chapter 766, passed in 1972 and implemented in 1974. The SEA reviews and monitors local studies as required by State law and provides technical assistance through its own initiatives. Although the law provided an impetus for evaluation studies, a stronger motivation has arisen during recent years as tax limiting statutes have increased pressure on education administrators to support their budget requests with evaluation information on programs and services. Education administrators in Massachusetts are now increasingly competing with other municipal agencies for critical funding. Thus, even though the number of students eligible for special education and the costs of special education are leveling off in this State, the need for evaluation information remains high. The need for more information is voiced by local administrators, the legislature, and legislative affiliates.

The SEA has made three major contributions to evaluation efforts in the State. First, the SEA produces an Annual Special Education Briefing Paper that provides comparative information from 1974 to the present on the number of students served; local, State, and Federal funding; and placement patterns by program prototype and cost. The

Briefing Paper is not required  $by^{qh}$ State law but is produced at the initiative of the SEA.

the 00statewide aurvey focusing comprehenative Second. a implementation and effects of Massachusetts' special education law, Chapter 766, was conducted in 1979 and 1980. The survey addressed financial issues, special education services, secondary education services, special education interface with regular education, IEP and LRE requirements, SEA/LEA relations, and parent/school relations. Nine contractors conducted aspects of the study, which included interviews with parents of handicapped and nonhandicapped students, regular and special education teachers, administrators, and the general public. A history of special education services in the State, case studies of 15 representative communities, and a Gallup poll resulted from the study. The Gallup poll topics included general awareness and knowledge of the special education law, attitudes toward its underlying concepts (e.g., LRE), an evaluation of its implementation, and an assessment of its Overall, the results of the survey indicated widespread support for Chapter 766 among education professionals, parents, and the public. They not only endorsed the law's primary goal of aiding the handicapped, but also judged it a success in meeting that objective. Interestingly, respondents most often mentioned progress toward meating the educational goals of all children as the best result of Chapter In addition to collecting baseline data for future comparisons, the study provided a plan for follow-up activities in each area addressed. Half the cost of the statewide survey was covered by State funds and half by discretionary monies authorized by the EHA-B State grant program.

Third, the SEA has developed an evaluation package — with input from 35 LEAs — to help local administrators conduct program studies. The package consists of a handbook and training manual that emphasize program evaluation as an efficient district management tool. The handbook reviews the literature on program evaluation and sets forth an evaluation model that provides the user with program goals and objectives, derives evaluation questions from the goals and objectives, describes data collection strategies for each evaluation question, provides actual evaluation instruments, and specifies guidelines for generating recommendations based on the information gathered during the evaluation. An addendum to the handbook will contain sections on evaluating early childhood programs, alternative secondary programs, vocational secondary programs, and management aspects of evaluation efforts.

The training manual was developed to facilitate peer training in use of the evaluation model. After the package was completed, workshops were held to train representatives of 109 of Massachusetts' 375 districts to use it. The training-of-trainers approach prepared

workshop participants to return to their districts and teach others to use the model as well as to train other local administrators. The SEA also has set up a consultant pool of those who have been trained. Field testing has shown, however, that the evaluation materials can be used alone, without extensive training.

Local plans for conducting annual evaluations and findings must be submitted to the SEA, but use of the evaluation model in conducting However, the SEA gives special these evaluations is voluntary. consideration to local mini-grant applications that address problems Thus districts identified by evaluations in which the model was used. are offered an incentive to use the model. Study reports do not have to be shared with the SEA unless desired, thereby mitigating any concern about a stigma or penalty being attached to unfavorable As in Iowa, the desired result is that districts will findings. perform more thorough and extensive evaluations if they do so voluntarily to meet their own internal needs rather than merely to meet reporting requirements. Many districts voluntarily share their reports with the SEA and evidence shows that the use of findings helps LEAs justify their budgets in addition to improving programs.

### California Evaluation Efforts

California's approach to special education program evaluation emphasizes statewide coordination that seeks to improve local programs and avoid duplication of evaluation activities by local agencies and the State Department of Education. Evaluation studies are required by legislative mandate at both State and local levels. In 1980, the State legislature enacted Chapters 797 and 1353, which provide for ongoing comprehensive evaluation of special education programs. The mandate requires the superintendent of education to submit to the State board of education, the legislature, and the governor an annual evaluation report on special education programs in the State. The purposes of the report are (1) to provide information to State policymakers on the effects of special education programs operated by the State's 103 intermediate units, termed Special Education Local Plan Areas (SELPAs), including how such local evaluation information is used to improve local programs; and (2) to convey to SELPA staff members what other SELPAs are doing, what they found in their local evaluation studies, and how they used the information to improve their programs. legislation requires that evaluation studies be conducted on issues of statewide concern, specifically on pupil performance; education in the least restrictive environment; provision of services according to the IEP; parent, pupil, and educator attitudes; and program costs.

To meet the requirements for evaluation studies, the statewide Cooperative Evaluation System was developed. The system includes the SEA and, through the State's SELPAs, its 1,042 local districts. Each SELPA must submit to the SEA an annual plan that includes provision for at least one study investigating a locally-selected evaluation concern from among the issue areas mandated by the legislature. Through its Office of Program Evaluation and Research, the SEA provides technical assistance to the SELPA in defining answerable questions; designing and conducting the studies; and analyzing, reporting, and using the data for program improvement. The SEA coordinates the distribution of study topics and maintains a central bank of local evaluation data. Examples of local evaluation studies performed in 1981-82 are included in the following section.

The California Evaluation Improvement Program of the SEA's Office of Program Evaluation and Research has also published an evaluation package to help local administrators conduct program evaluations. The basic manual, entitled Program Evaluation Guide, describes the sequential steps considered essential to planning and implementing program evaluation. The Workbook on Program Evaluation is designed to assist educators in planning and monitoring the procedures, techniques, and methods of evaluation. The SEA plans to revise its evaluation package in 1983-1984 in response to requests from local administrators for more sophisticated information.

In addition to information from the local evaluation studies, the SEA's Annual Evaluation Report must include data from the State Special Studies Program. This program uses discretionary funds authorized by the EHA-B State grant program to sponsor statewide studies on priority Priorities are established each year with input from the Some of the studies field, the State board, and the legislature. performed under this program are mandated; others are SEA- or The studies may be performed by the SEA, private field-initiated. contractors, SELPAs, local districts, or colleges and universities, and may be awarded using an RFP mechanism or through field-initiated These special studies address issues in implementing proposals. instruction, policy, administration, education mandates, planning, and other current issues. Their products include guidebooks, efficiency analyses, and other development efforts as well as research One recent project produced a Practitioner's Guide to Nondiscriminatory Assessment; another studied the effects and costs of Other State evaluation studies are local interagency agreements. described in the following section.

California's approach to program evaluation is more structured than that of Iowa or Massachusetts, and has resulted in more evaluation studies than any other State. The communication and cooperation that exist between the California districts, SELPAs, the SEA, and the

legislature enable the State to pursue a coordinated approach to evaluation in special education.

### State and Local Evaluation Studies

The following section describes some evaluation studies conducted at the State and local levels. These studies were provided by State and local educational agencies (and intermediate units) in response to a request for such evaluation information by the National Association of State Directors of Special Education in July 1983. The purpose of this section is not to describe comprehensively all evaluation studies conducted by State and local educational agencies but to provide examples of specific efforts SEAs and LEAs are making to assess the effectiveness of their programs. These studies are presented by five areas representing topics frequently evaluated by SEAs and LEAs.

- Least restrictive environment (LRE)
- Individualized education programs (IEPs)
- Parent participation
- Unserved and underserved handicapped children
- Costs of providing a free appropriate public education (FAPE)

# Example of State and Local Evaluation Studies Pertaining to LRE

State and local educational agency responsibilities for educating handicapped children in the least restrictive environment are specified under Section 612(5)(B) and 614(a)(1)(c)(iv) of the EHA (20 U.S.C.  $\S 1412(5)(B)$  and 1414(a)(1)(c)(iv). Some State and local educational agencies have attempted to determine how well they are meeting their responsibilities by undertaking evaluation studies to examine whether, their educational programs are effectively educating fact, handicapped children in the least restrictive environment. studies typically identify problems that have emerged in serving these children, as well as strategies for improving the appropriateness of Among the State and local educational placements in the future. studies pertaining to the education of handicapped children in the least restrictive environment are evaluations that examine the effects of regular classroom placements on academic achievement, social adjustment, and skill acquisition of handicapped children and their nonhandicapped peers. Two such studies are described here.

### Social Adjustment at the Secondary Level

Purpose. In the 1981-82 school year the California SEA, through its grant program, sponsored a study to investigate the social adjustment of orthopedically-impaired high school students, comparing their status with that of their nonhandicapped classmates (Kailes, 1982). This study took a multidimensional approach, bringing together data from different sources (students, parents, teachers, and former students).

Results of this study suggested that while Findings. exhibited orthopedically-impaired high school students involvement, better class performance, and closer adherence to classroom rules than their nonhandicapped peers, acceptance orthopedically-impaired students by their classmates did not occur, and this fact was not recognized by the classroom teachers. Authors of this evaluation study indicated that the nonhandicapped students appeared to be keeping their distance from the orthopedically-impaired students and that teachers interpreted the handicapped students' competent social behavior to mean they were accepted by their peers. The authors of the study suggested that efforts to integrate handicapped students into regular classes might be more beneficial if they focused instead on the attitudes of the nonhandicapped students and teachers.

## Implementation of a Mainstream Model for Kindergarten

Purpose. The School District of Philadelphia, Pennsylvania, conducted an evaluation in 1981 of a model it had developed to demonstrate how a least restrictive environment for kindergarten-age handicapped children could be implemented (Silber, 1982). The goals of the model, which served handicapped and nonhandicapped children in the same classroom, focused on the acquisition of academic, social, language, and physical skills; fostering acceptance and social relationships between the handicapped children and their nonhandicapped classmates; and developing strategies to prepare staff for serving young handicapped children in mainstream settings.

Findings. The evaluation results indicated that nearly all of the handicapped children attained most of their IEP objectives, and that the academic achievement of their nonhandicapped classmates was comparable to the performance of nonhandicapped children with other kindergarten classes. Teacher observations also supported objective data that indicated positive interactions and social adjustment by both groups of children. Parents were also highly satisfied with the progress their children had made in the model classroom.

## Examples of State and Local Evaluation Studies Pertaining to IEPs

In requiring that States develop procedures for evaluating the effectiveness of programs in meeting the educational needs of handicapped children at least annually under Section 613(a)(11) of EHA-B, the Congress specifically singled out the need for evaluating the effectiveness of IEPs (20 U.S.C. §1413(a)(11)). The studies being conducted by States (at both State and local levels) to carry out this requirement include studies that examine the role of IEP team members in developing and implementing the IEP and studies which attempt to determine the effectiveness of the IEP itself in promoting student learning.

### Role of the Regular Classroom Teacher in the IEP Process

Purpose. In the 1980-81 school year, the California Department of Education funded a study to investigate the role of the regular classroom teacher in developing and implementing individualized education programs (Nevin, et al., 1981). The study was based on data obtained from a review of 100 student IEP records, a teacher survey, and teacher interviews. Each IEP was reviewed for information on regular class teacher involvement in referral, planning, reviewing, and implementing IEPs; the extent of participation in and modification of regular programs; student goals and objectives; placement changes and review actions; service coordination; and distribution of IEP copies. The teacher survey and interviews were used to collect information on such topics as interaction between the regular class teachers and support service personnel, and regular teacher satisfaction with various aspects of IEP development and implementation.

Findings. Study results indicated that regular classroom teachers serving handicapped students were generally uninvolved in the formal aspects of IEP development and implementation. Teachers serving handicapped students typically did not attend IEP planning or review meetings, and did not receive their own copies of the completed IEPs. Teachers who did receive copies of the IEPs were found to be more likely to refer to them than teachers who merely had access to them. Regular class teachers were found to be highly involved in many informal aspects of IEP implementation, however. For example, these teachers implemented various modifications to the regular education program not specified in the IEPs to meet the needs of handicapped students in their classes. They also met frequently with special education teachers to discuss students' needs, programs, and progress.

Among the recommendations resulting from the findings of this study were that (1) regular teachers should be included in IEP meetings

wherever possible; (2) informal meetings between regular and special educators should be facilitated or arranged by administrators; (3) regular teachers should receive their own copies of IEPs for handicapped children in their classrooms; and (4) these teachers should be given time for IEP planning and meetings along with knowledge and training to improve teaching skills related to the handicapped children they serve.

### Achievement of IEP Objectives and Goals

Purpose. The Sacramento City Unified School District in California conducts an annual evaluation of its special education program, each year selecting specific aspects of its program for study (Sacramento City Unified School District, 1982). In 1981-82, the district concentrated its evaluation in two areas: (1) the reasons students did not achieve their IEP objectives in reading, math, spelling, and behavior, and (2) factors that contribute to the decline in the level of goal attainment as students progress to higher grades. The study was limited to students in learning-handicapped special classes and focused on a sample of students who had failed to achieve their IEP objectives. Data for this evaluation were obtained from IEP team chairpersons, principals, counselors, psychologists, and teachers.

Findings. The study found that students' failure to achieve IEP objectives across skill areas at the elementary level was related primarily to the IEP team's unrealistic expectations for the child, sulting in the establishment of inappropriate goals. This reason was found to be significant at the secondary level also, but poor attendance was cated as a major cause of older students' failure to achieve, especially in math. To a limited but notable extent, the use of incorrect or questionable data in establishing IEP goals was cited at both elementary and secondary levels as a reason for some students' failure to achieve learning goals.

### Examples of State and Local Studies Pertaining to Parent Participation

EHA-B emphasizes the importance of providing opportunities for parents to participate with the schools in planning their child's educational program. Section 602(19) specifies that parents be invited to participate in the IEP meeting, and Section 615 affords parents raious procedural safeguards and due process rights. State and local functional agencies, recognizing the importance of parent support and continuing communication, have established procedures and provided opportunities for parents to participate. These same agencies are also engaged in studies that assess parent involvement and their attitudes towards the services the schools provide. Among these assessments are

92

periodic parent surveys to ascertain their perceptions and satisfaction with the special education delivery system, and studies that examine particular problems parents and schools face in achieving effective parent participation. The studies described next illustrate some recent activities.

### Barriers to Participation by Low Income Parents

Purpose. In the 1981-82 school year, the California State Department of Education sponsored a study to identify barriers that low income parents of special education students encounter when they try to participate in their child's educational program (Lynch, 1981). The study examined parent participation in education decisionmaking for their children and in school activities such as parent group meetings, contrasting their involvement with that of parents of nonhandicapped students.

Findings. Sixty-two percent of parents in this study felt they were active participants in developing their child's IEP, 30 percent felt they were not, and the remainder were unsure or did not know. Parents of severely handicapped students reported being more active in the IEP meeting than parents of children with other disabilities. Although 44 percent indicated they offered suggestions about their child's IEP, 40 percent said they did not. The remainder were unsure or felt the question inappropriate. Parents of handicapped children reported attending school activities such as parent group meetings significantly more often than parents of nonhandicapped children.

Special education teachers and low income parents of handicapped students were also asked to identify barriers to parent participation. The study found significant discrepancies between the barriers identified by parents and those identified by teachers. Parents cited logistical problems (i.e., lack of transportation, babysitting, time), communication problems (i.e., language and cultural differences), lack of understanding of the school system, feelings of inferiority, and uncertainty about their child's disability and their own and the school's abilities to help the child. In contrast, special education teachers reported that the primary barriers to parent participation were apathy; parents' lack of time, energy, and understanding; and the school not valuing parent input. Authors of this study suggested that the discrepancy between parent and teacher perceptions of barriers to parent participation must be reduced if parents and schools are to interact effectively.

### Parent Evaluation of Special Education Services

Purpose. As part of its annual program evaluation, the Northwestern Suburban Special Education Organization (NSSEO), Illinois,

surveys parents to ask about their participation in planning their child's education and their satisfaction with the intermediate unit's programs for handicapped children (Northwest Suburban Special Education Organization, 1983).

Findings. Most parents responding to the NSSEO survey were highly satisfied with the services their children had received and their communication with school personnel about their children's education. Parents also indicated that the intermediate unit had followed established procedures to involve them in educational decisionmaking for their child and provided opportunities that enabled them to exercise their rights. The overall response to NSSEO programs was positive, but 61 percent of the respondents indicated the need for more integration of handicapped children with nonhandicapped peers.

# Examples of State and Local Evaluation Studies Pertaining to Unserved and Underserved Handicapped Children

State and local educational agencies have put special emphasis on educating handicapped children who were unserved or underserved before the enactment of the law. These children are given priority in Section 612(3) of EHA-B. Some of these children are preschool and severel handicapped children, handicapped students; secondary particularly the multihandicapped and emotionally disturbed; and handicapped children who require special consideration because differences. Program expansion ethnic and cultural particularly dramatic for certain groups of handicapped children. growth is characterized by improvements in existing services and by development of entirely new program opportunities for children the schools had not served before. Preschool and secondary-age handicapped children and youth have been the focus of many State program expansion State and local educational agencies are conducting activities. evaluation studies to determine the effectiveness of their efforts to educate these children and improve the services provided to them. Among these activities are cost/benefit analyses, longitudinal studies, and evaluation of specific delivery models.

### Effectiveness of Early Special Education

Purpose. In 1982 the Colorado Department of Education conducted a study, commissioned by the Colorado General Assembly, to examine the effectiveness of early special education for handicapped children (Colorado Department of Education, 1982). This study consisted of a review of existing research and cost data on early intervention in special education; an analysis of National trends in preschool education; an evaluation of the effectiveness of the University of

Colorado's INREAL program (an experimental preschool program emphasizing language development that operates in the State); and an analysis of longitudinal data that tracked the educational placements of handicapped children who had received preschool services in the State over the last decade.

Findings. The study found that providing special education for preschool children identified as handicapped enabled more of them to begin public education in regular classrooms needing no further special education. For an even larger number of children, special education at the preschool level meant that they required fewer special education services when they first entered public school and over time. In analyzing the costs associated with its preschool programs, the SEA found that school districts using the INREAL model saved more than \$1,500 in real dollars per handicapped child over the three years after these children completed preschool.

### Effectiveness of a Rural Secondary Vocational Model

Purpose. Between 1981 and 1983, Education Service Unit Number Nine (ESU #9), Nebraska, developed, implemented, and evaluated a cooperative service delivery model to improve the vocational training opportunities available to secondary-age handicapped students living in a rural region covering about 3,000 squares miles of the State. An evaluation of this model was conducted to determine the approach and strategies that were most effective in meeting the vocational training needs of students from 18 school districts in the region (Schalock, 1983). Service delivered through this model included student identification and referral, vocational evaluation, individual program development, job exploration, and on-the-job training.

Findings. A centralized model of service delivery in which a core staff delivered vocational services to a sample of high school students was implemented and evaluated in the first year. Evaluation results indicated that the centralized model, when compared to the traditional non-centralized vocational training approach of districts in the region, did not result in more appropriate job placements or a longer job retention record for participating students. As a result of these findings, ESU #9 modified its service delivery model and implemented a decentralized approach designed to train local secondary resource teachers in the skills and knowledge they needed to deliver vocational services at the district level. Students participating in the model who graduated were employed for fewer hours and weeks than other students in the past (reflecting, in part, the recent economic recession), yet the decentralized model of service delivery was found to have a positive impact on the number of students placed in part-time or full-time jobs. In contrast to 1979 when 47 percent of students in the region graduating with vocational education experience were placed in jobs, 72 percent of students involved in the model program secured job placements.

### Vocational and Social Adjustment of Graduates of a Secondary Program

<u>Purpose</u>. A study was conducted by the Little Falls Public Schools, Minnesota, to determine how well former students of a secondary program for the mentally retarded adjusted vocationally and socially as adults, to what extent they had been able to live independently, and how they felt about the high school program in which they were involved (Little Falls Public Schools, 1978). Graduates were interviewed to determine how well they had adjusted to society and what life style they had adopted.

Findings. The results of the study revealed that graduates of this district's vocational development center had acquired jobs that paid well, and they expressed satisfaction with what they were doing. However, the graduates were considerably dependent on parents in living and financial matters. Many of them were receiving financial assistance, several from more than one source. Most of these former students did not receive further vocational training after graduation. The post-school education they did receive was primarily for personal enjoyment rather than job-skill training. The graduates also had problems with social adjustment. They tended not to be involved in group activities or social clubs and organizations, and found few ways to use their leisure time. Most had not married.

# Examples of State and Local Evaluation Studies Pertaining to the Costs of Providing FAPE

Congress, recognizing the financial implications of giving State and local educational agencies the responsibility for providing FAPE to all handicapped children, directed that States be given financial assistance under Section 611 of EHA-B. How to meet the costs of providing FAPE in an effective manner continues to be of major concern to State and local educational agencies as well as to the Congress. Determining the efficiency of expenditure of resources in serving handicapped children is also an important factor in measuring the overall effectiveness of special education and related services. Among the challenges facing State and local educational agencies in determining costs are issues related to differences in the type, amount, and variety of services individual children receive; the appropriate assignment of long- and short-term indirect costs on a per-pupil basis; and the costs covered by non-educational agencies for

services they provide. Illustrative of State and local studies related to the cost of educating handicapped children are analyses of different service and program costs, evaluations to determine the relationship between costs and benefits, and studies to determine the most cost-effective strategies for meeting the needs of handicapped children.

### Actual Cost vs. Funding Formula

Purpose. In 1977 South Carolina enacted an education finance law to insure every child in public school (handicapped and nonhandicapped) an educational opportunity meeting State standards. The law included the concept of "base student costs." Several years prior to enactment of this law, the legislature had approved program standards developed by the State Department of Education that were intended to guarantee to all children the availability of a "Defined Minimum Program (DMP)." Concern then arose about whether the amount of money appropriated to cover the base student cost under the education finance act was consistent with the actual per-student cost of the DMP. In response to this concern, the State Department of Education commissioned a study of the cost of the DMP in 1981 (Beazley and Taylor, 1982).

Findings. The results of the study revealed discrepancies between the costs and funding of various education programs, including several categorical special education programs. The findings indicated that programs for mildly retarded students served in resource/itinerant programs and for learning disabled students in self-contained programs were underfunded by only 4 percent and 7.5 percent, respectively, but self-contained programs for "trainable mentally retarded" and emotionally handicapped students were underfunded by about 50 percent.

### Cost of Assessment and Identification

Purpose. In 1980 the Colorado Department of Education responded to a State legislative mandate by funding a study of children identified as having perceptual-communicative disorders (PCD) (Shepard and Smith, 1981). The purpose of this study was to describe and evaluate the procedures used to identify, assess, and place PCD (i.e., learning disabled) students. One component of this study was an analysis of the costs incurred in assessing and identifying these children.

Findings. Two separate cost analyses were undertaken, using independent data sources and separate estimation rules. The cost of identifying the average PCD child during the 1978-79 school year was found to be between \$505 and \$525. This represented the average amount per pupil attributable to all specialist and personnel time spent in assessment and staffing. When compared to instructional costs for the same school year, the cost of personnel time spent in the assessment and staffing process was found to be roughly equal to the cost of

personnel time spent in providing direct services to PCD children. The State of Colorado has since revised its legal definition and eligibility criteria for this category of children.

### Cost Benefits of a Transportation Model

Purpose. In 1981 the San Diego East County Special Education Service Region, California, conducted an evaluation of the transportation operations of its districts in response to concerns about rising costs and the need for a new management model for transporting handicapped children. The purpose of this study was to determine whether coordination among districts for routing, scheduling, vehicle usage, and procedures for contracting could improve the efficiency, economy, effectiveness, and safety of transportation services for handicapped children served by the districts (San Diego East County SESR, 1983).

Study results indicated that although participating Findings. effective individual special education districts had operating and economic substantial operations, transportation advantages would result from a coordinated system. Among the benefits of a cooperative transportation operation would be the need for fewer special education buses and drivers and increased efficiency in the management and purchase of services. The authors of the study estimated that cooperating districts could collectively save \$300,000 in operating expenses per year and \$250,000 in capital expenditures in the near future using a coordinated transportation system.

#### Conclusion

A range of studies has been conducted at Federal, State, and local levels to carry out their respective responsibilities to evaluate the impact and effectiveness of special education and related services for handicapped children in accordance with the mandates of EHA-B. These studies contribute to the limited but growing body of knowledge from a National, State, and local perspective on the impact and effectiveness of special education and related services. The studies conducted thus far have provided much valuable information on the implementation of EHA-B, identified effective programs and practices in educating handicapped children, and examined cost-effective strategies for meeting the needs of these children. Yet information is not always shared across levels, though local, State, and Federal educational agencies have mutual interests in assessing the effectiveness of efforts to educate handicapped children. All levels need further evaluation studies that focus on the impact and effectiveness of services, but more must be done to promote an exchange of information from these studies. The resultant body of information would enhance the efficacy of all efforts to improve educational opportunities and services for handicapped children.

# Appendix 1

## EVALUATION OF THE EDUCATION OF THE HANDICAPPED ACT, AS AMENDED BY P.L. 94-142

This appendix summarizes the specific evaluation activities supported by Special Studies monies from 1976 through 1983. The studies have been designed to provide information requested by Congress concerning the impact and effectiveness of the EHA as described in the fourth chapter of this report.

#### SPECIAL STUDIES CONTRACTS

	Contractor and	Contract Period
Title	Contract Number	and Amount
1. Assessment of State Information Capabilities under P.L. 94-142	Management Analysis Center (MAC), Inc. Cambridge, MA 300-76-0562	9/30/76 - 9/30/77 \$298,840

Description: The purpose of this study was to determine the States' capacities to respond to the new reporting requirements inherent in P.L. 94-142. MAC analyzed the data requirements in the law and the reporting forms being developed by program staff. After visiting 27 States to test their capacity to respond, MAC reported on State capacity to provide information in four categories: children, personnel, facilities, and resources. They found capacity was relatively high in the first category and decreased across the remaining categories. They recommended deleting requirements for fiscal data, since States could not respond adequately to such requests.

2. Development of a Sam- SRI International 10/1/76 - 9/30/77 pling Procedure for Menlo Park, CA \$267,790 validating State Counts of Handicapped Children

Description: The purpose of this study was to develop a sampling plan and a method that could be used by program staff to validate the State counts. SRI International evaluated all previously available data on the incidence of handicapped children and concluded that the data reported by States were at least as accurate as other data sources, if not more so. SRI concluded that procedures for validating the information should be incorporated into the counting procedures themselves. SRI developed a handbook showing States how to do this.

	Title	Contractor and Contract Number	Contract Period and Amount
3.	An Analysis of Categorical Definitions, Diagnostic Methods, Diagnostic Criteria, and Personnel Utilization in the Classification of Handicapped Children	Council for Exceptional Children Reston, VA 300-76-0515	10/1/76 - 9/30/77 \$110,904

Description: The purpose of this study was to determine the extent to which State policies (a) provided for services to children with disabilities other than those provided for under EHA-B, or (b) used varying definitions or eligibility criteria for the same categories of children. CEC found that neither the types of children served nor, the definitions varied widely. However, there were some instances in which eligibility criteria did vary.

4. Implementation of the Individual Education Portland, OR Program 300-74-7915

David Nero & Associates 9/30/76 - 12/30/77 \$433,000 \$433,000

Description: The purpose of this study was to estimate the difficulty of implementing the IEP provision of the Act. The work was performed by Nero and Associates and by internal staff. Four States were visited and a variety of individuals affected by the Act were interviewed. The study revealed that (a) similar concerns were identified both in States that already had provisions and in those that did not, and (b) similar concerns were raised by both special education and regular teachers. The findings were used to design technical assistance and inservice training programs.

5. Analysis of State Data Team Associates 9/29/76 - 9/11/77
Washington, D.C. \$192,698
300-76-0540 9/12/77 - 6/30/78
\$175,396

Description: The purpose of this study was to analyze data already available from the States. The work was performed by TEAM Associates and by internal staff. The State data contain all numerical information required in the Act as well as extensive information on policies and procedures. Analysis of the information contained in these State documents and information obtained from Special Studies form the backbone of the Annual Report to Congress.

108

<del>-</del>	Title	Contractor and Contract Number	Contract Period and Amount
6.	Longitudinal Study of the Impact of P.L. 94-142 on a Select Number of Local Educa- tion Agencies	SRI International Menlo Park, CA 300-78-0030	1/16/77 - 9/16/78 \$197,707 9/16/78 - 9/15/79 \$566,838 9/15/79 - 2/28/81 \$498,112 2/28/81 - 10/31/81 \$249,993 11/1/81 - 12/15/82 \$250,006

Description: The purpose of this study was to follow a small sample of school systems over a five-year period to observe their progress in implementing the Act. Because Congress asked that the annual report describe progress in implementation, this in-depth study of processes was designed to complement the National trends reported by States. In this study, SRI International described the implementation process for the school districts and identified problem areas.

7. Criteria for Quality

Thomas Buffington Associates Washington, D.C. 300-77-0237 5/19/77 - 2/28/79 \$395,162

Description: This study was designed to lay the groundwork for future studies of the quality and effectiveness of P.L. 94-142's implementation. It was conducted by internal staff with the assistance of Thomas Buffington Associates. The study focused on four principal requirements of the law: provision of due process, least restrictive placements, individualized education programs, and prevention of erroneous classification. The study solicited 15 position papers on evaluation approaches for each requirement for LEA self-study guides. Four monographs addressing the evaluation of these four provisions of the law were produced. Each monograph includes the relevant papers and a review by a panel of education practitioners.

	Title	Contractor and Contract Number	Contract Period and Amount
8.	National Survey of Individualized Education Programs	Research Triangle Institute (RTI) Research Triangle Park, NC 300-77-0529	1/16/77 - 9/16/78 \$197,707 10/1/78 - 9/30/79 \$661,979 10/1/79 - 10/30/80 \$125,181

Description: The purpose of this study was to determine the nature and quality of the individualized education programs being designed for handicapped children. These programs are at the heart of the service delivery system, and the Congress asked for a survey of them. RTI spent the 1977-78 school year designing a sampling plan and information-gathering techniques. Data collected in school year 1978-79 provided descriptive information about IEP documents. The study found that 95 percent of handicapped children have IEPs. Most IEPs meet minimal requirements of the Act, except for the evaluation component.

9. A Descriptive Study of Teacher Concerns Said to Be Related to P.L. 94-142 Roy Littlejohn & Associates Washington, D.C. 300-76-0328

7/9/76 - 10/30/78 \$328,758

The purpose of this study was to assess the array of Description: concerns raised by teachers regarding the effects of the Act on their professional responsibilities. Several concerns were raised by teachers during the course of the FY 1976 study on the implementation of the individualized education program and several have been raised by National teachers' organizations. Roy Littlejohn and Associates analyzed general types and the concerns into organized these categories of concerns between relationships They visited six school districts to requirements of the Act. analyze in detail a small number of examples. Recommendations were made for school districts to provide teachers with more information about P.L. 94-142.

	Title	Contractor and Contract Number	Contract Period and Amount
10.	Case Study of the Implementation of P.L. 94-142	Education Turnkey Systems Washington, D.C. 300-77-0528	9/30/77 - 5/31/79 \$484,452

Description: The purpose of this study was to assess the first year of implementation of the Act. Education Turnkey Systems observed nine local school systems during the 1977-78 school year and the first half of the 1978-79 school year to determine how priorities were established and how implementation decisions were made at each level of the administrative hierarchy. P.L. 94-142's implementation was observed to be well under way at each LEA despite varying levels of resources and organizational differences among sites. Problem areas were identified.

11. Clarification of P.L. 94-142 for the Classroom Teacher

Research for Better Schools Philadelphia, PA 300-77-0525 10/1/77 - 1/31/78 \$24,767

. . . . .

Description: The purpose of this project was to provide regular teachers with accurate information about P.L. 94-142 and its probable effects on their classrooms. A field-tested guide entitled Clarification of P.L. 94-142 for the Classroom Teacher was produced by Research for Better Schools for this purpose. The guide contains (1) a self-evaluation pretest; (2) an explanation of the law, its background, purpose, and major provisions; (3) questions most frequently asked by teachers about P.L. 94-142 and their answers; (4) activities to help classroom teachers prepare themselves and their students for implementation of the law; and (5) two appendices, one containing the P.L. 94-142 regulations, and the other an annotated bibliography.

	Title	Contractor and Contract Number	Contract Period and Amount
12.	Study for Determining the Least Restrictive Environment Placement of Handicapped Children	Applied Management Sciences (AMS) Silver Spring, MD 300-78-0427	9/12/78 - 1/10/80 \$369,770

Description: The purpose of this study was to investigate the rules or criteria used by the courts and State hearing officers to determine the placements of handicapped children, the guidance given by States to school districts in making placement decisions, and the actual placement procedures used by school districts. Placement decision rules and interpretations of the Act's least restrictive environment requirement were compared across arenas. Exemplary practices at the State and local educational agency levels were described.

13.	Special Teens and	Abt Associates, Inc.	10/1/78 - 9/30/79
	Parents: Study of P.L. 94-142's Impact	Washington, D.C. 300-78-0462	\$47,220 10/1/79 - 9/30/80 \$53,687

Description: This case study was originally intended to continue for five years but was terminated at the end of the second year because of a cutback in Special Studies money. The study examined the impact of P.L. 94-142 on learning disabled secondary students and their the law--protection requirements of families. For four evaluation, individualized education programs, least restrictive environment, and procedural safeguards--the study investigated how the requirements were implemented by the secondary school special education program, the impact of the school program and practices on the students, and the implications of the experiences of the students for those concerned with the education of learning adolescents.

	Title	Contractor and Contract Number	Contract Period and Amount
14.	Activist Parents and Their Disabled	American Institutes for Research (AIR)	10/1/78 - 9/30/79 \$55,641
	Children: Study of P.L. 94-142's Impact	Cambridge, MA 300-78-0463	10/1/79 - 9/30/80 \$63,374

Description: This case study was originally intended to continue for five years but was terminated at the end of the second year because of a cutback in Special Studies money. The study focused on parents who responded energetically to the invitation to activism offered by P.L. 94-142, and examined the benefits of parent activism for the child. Effective strategies were identified and the history of their development described. The cost of parental involvement was described in emotional and economic terms, and program benefits to children were shown.

15.	The Quality of Educa-	Huron Institute	10/1/78 - 9/31/79
	tional Services: Study	Cambridge, MA	\$51,239
	of P.L. 94-142's Impact	300-78-0465	10/1/79 - 8/31/80
	•		\$60,000

Description: This case study was originally intended to continue for five years but was terminated at the end of the second year because of a cutback in Special Studies money. The study examined the extent to which school district implementation of P.L. 94-142 results in quality educational services to the handicapped child and the consequences to the child and family. The first year focused on entry into special education during the preschool years, the emotional consequences of the diagnostic process, parental education about P.L. 94-142, and early programming for preschoolers. The second year focused on factors that influence mutual adaptation between families and school staff.

	Title	Contractor and Contract Number	Contract Period and Amount
16.	Children with Different	Illinois State	9/1/78 - 8/31/79
	Handicapping Condi-	University	\$46,060
	tions: Study of	Normal, IL	9/1/79 - 8/31/80
	P.L. 94-142's Impact	300-78-0461	\$55,295

Description: This case study was originally intended to continue for five years but was terminated at the end of the second year because of a cutback in Special Studies money. It focused on differences in the impact of P.L. 94-142 implementation on children with various handicapping conditions and their families. The study looked at the consequences to families from five theoretical perspectives and related these to the provisions and implementation of the Act.

17. Institutional Responses and Consequences: Study of P.L. 94-142's Impact	High/Scope Educational Research Foundation Ypsilanti, MI 300-78-0464	10/1/78 - 9/30/79 \$48,387 10/1/79 - 9/30/80 \$56,228
---	---	--

Description: This case study was originally intended to continue for five years but was terminated at the end of the second year because of a cutback in Special Studies money. The study investigated the relationship of school district responses to P.L. 94-142 to handicapped child and family outcomes, such as self-concept, social skills and competencies, academic achievement, and economic activity.

18.	Project to Provide Technical Assistance in Data Analysis	Decision Resources Corporation Washington, D.C. 300-78-0467	10/1/78 - 9/30/79 \$142,614 10/1/79 - 9/30/80 \$199,714 10/1/80 - 5/31/81 \$ 89,919
		300-82-0001	10/1/82 - 9/30/83 \$125,071 10/1/83 - 10/31/84 \$144,171

Description: The purpose of this project is to analyze data already available from States. The work is being performed by Decision Resources and by internal staff. State data available to SEP annually contain all numerical information required in the Act as well as extensive information on policies and procedures. Analysis of the State data is conducted throughout the year for dissemination to the field and for inclusion in the Annual Report to Congress.

Title		Contractor and Contract Number	Contract Period and Amount
19.	Identification of Future Trends in the Provision of Services to Handicapped Students	Newtek Corporation Reston, VA 300-78-0302	6/1/78 - 9/30/78 \$10,000

Description: This project was designed to provide information on potential future changes in values, economics, social institutions, technology, and medicine that may affect the provision of services to handicapped children. In 1978, Newtek Corporation held a conference with experts in the five areas who discussed the trends in their areas and the implications of those trends for the handicapped with panel members representing various aspects of services to the handicapped. Although in many cases the projected trends were too speculative to guide policymaking, the conference highlighted some potentially important trends about which policymakers should be aware. A summary of the conference was published in Focus on Exceptional Children.

20. A Project to Develop
BEH Waiver Requirements, Procedures, and
Criteria

Planning and Human Systems, Inc. Washington, D.C. 300-78-0128 5/1/78 - 12/15/78 \$64,500

Description: States that provide clear and convincing evidence that all handicapped children have a free appropriate public education available to them may receive a partial waiver of the law's fiscal nonsupplant requirement. A six-month study was undertaken by Planning and Human Systems in 1978 to develop guidelines to be used in reviewing a State's request for a waiver. The guidelines were developed based on (1) an evaluation of experiences in conducting a review of a request by Massachusetts for a waiver in 1978; (2) information provided by Federal, State, and local agencies and by State consumer, advocacy, and professional associations; and (3) a review of monitoring procedures used by other Federal agencies.

	Title	CONTRACT MANDEL	Marie Innovation
21.	A Study to Evaluate Procedures Undertaken to Prevent Erroneous Classification of Handicapped Children	Applied Management Sciences (AMS) Silver Spring, MD 300-79-0669	10/1/79 - 9/30/80 \$200,403 10/1/80 - 9/30/81 \$480,092 10/1/81 - 9/30/82 \$179,906 10/1/82 - 3/31/83 \$37,310

Description: This study focused on describing LEA procedures for identifying, assessing, and placing students to determine whether procedures were in place to prevent the erroneous classification of children, particularly misclassification on the basis of race or culture. AMS collected data from 500 school buildings in 100 school districts and reviewed selected documents for 10,000 individual students. Five topics were addressed: (a) the extent to which LEAs use evaluative data such as adaptive behavior and classroom observations in their assessments; (b) a comparison of evaluation procedures for minority and nonminority students; (c) assessment training needs as identified by the respondents; (d) the extent to which school staff members document evaluation decisions; and (e) the extent to which school systems have students waiting to be evaluated.

22.	Survey of Special Education Services	Rand Corporation Santa Monica, CA 300-79-0733	10/1/80 - 9/30/81 \$225,402
		300-13-0133	

Description: The purpose of this study was to survey and describe the services provided by school districts and the number and nature of services actually received by handicapped children. As a result of cutbacks in Special Studies monies, this contract was terminated at the end of the first year.

	Title	Contractor and Contract Number	Contract Period and Amount
23.	Study of Student Turn- over between Special and Regular Education	SRI International Menlo Park, CA 300-79-0660	10/1/79 - 3/31/81 \$220,299

Description: The purpose of this study was to provide information about student flow between special and regular education. SRI International (1) described the characteristics of children leaving special education and the reasons for their departure, (2) identified the extent to which handicapped children transfer successfully into regular education programs, and (3) identified children who may receive treatment of short duration and therefore may not be receiving services when Federal counts are taken.

24. Legal Conference on the Surrogate Parent Requirement Federation for Children 5/1/79 = 8/31/79 with Special Needs \$35,358 Boston, MA 310-1-76-BH-02

Description: This project investigated the legal issues surrounding P.L. 94-142's surrogate parent requirement and explored as many approaches as possible for responding to these issues. The Federation for Children with Special Needs held a conference in July 1979 that included a person from each of four States involved in the legal aspects of implementing the parent surrogate requirements, two persons from National organizations, and representatives from the General Counsel's Office of HEW, the Justice Department, and program staff. Information provided at this conference, information reported by several States on their experience in implementing the parent surrogate requirement, and independent legal research were used as a basis for analyzing the issues involved. The analysis was used to review the need for policy clarification.

	Title	Contractor and Contract Number	Contract Period and Amount
25.	Analysis of State and Local Implementation Efforts	Newtek Corporation Reston, VA 300-79-0722	10/1/79 - 5/15/80 \$31,854

Description: This study was designed to provide information on the budgetary factors at State and local levels that affect the implementation of P.L. 94-142. The study, conducted by Newtek Corporation, investigated the special education budgetary process at the State level and examined in detail budgetary processes in four LEAs selected on the basis of demography. A guidebook was produced describing the Federal funding process for P.L. 94-142 as well as State and local special education funding processes.

26.	State/Local Communica- tion Network for Exploring Critical Issues Related to P.L. 94-142	National Association of State Directors of Special Education (NASDSE) Washington, D.C. 300-79-0721	10/1/79 - 9/30/80 \$159,175 10/1/80 - 9/30/81 \$195,759 10/1/81 - 9/30/82 \$151,320 10/1/82 - 9/30/83 \$192,249
	•		10/1/83 - 9/30/84 \$183,505

Description: The Forum project, conducted by NASDSE, provides a communication network for local, State, and Federal levels. All 50 SEAs and more than 100 LEAs are Forum participants. The project conducts analyses of important issues and practices in SEAs and LEAs to assist SEP in providing technical assistance to the field as specified under Section 617 of EHA. The communication network provides SEP a mechanism for obtaining timely feedback on current and emerging trends related to issues and practices in providing a free appropriate public education to all handicapped children. Technical assistance is also given by the project to participating SEAs and LEAs through the communication network.

	Title	Contractor and Contract Number	Contract Period and Amount
27.	SEA/LEA Technical Assistance Training	TRISTAR University of North Carolina Chapel Hill, NC 300-79-0661	10/1/79 - 9/30/80 \$87,000 10/1/80 - 9/30/81 \$73,937

Description: In response to needs identified by SEAs and LEAs for information in specific areas of implementation of P.L. 94-142, SEP funded TRISTAR (a cooperative organization of the North Carolina Department of Public Instruction, the University of North Carolina, and the Wake County Public Schools) in FY 1980 and FY 1981. During its first year, TRISTAR conducted two conferences for SEAs, LEAs, and the Regional Resource Centers on problems and successful practices in the following areas: child count, child find, individualized education programs, and interagency cooperation. The contractor then provided follow-up technical assistance to participants who requested it. In its second year, TRISTAR focused on providing information to educational agencies on how to reduce adversarial relationships between parents and schools. Technical assistance materials were developed by the project, other resources were identified, and a National topical conference was conducted in June 1980.

	Title	Contractor and Contract Number	Contract Period and Amount
28.	Verification of Pro- cedures to Serve Handi- capped Children	Applied Management Sciences (AMS) Silver Spring, MD 300-79-0702	10/1/79 - 8/31/80 \$97,939 9/1/80 - 8/31/81 \$70,000

Description: This study had two components -- an assessment component and a secondary component. The assessment component investigated three processes that influence the timeliness with which a school system conducts evaluations for students who have been identified as potentially handicapped--referral/screening, case coordination, and quality control. This component of the study was conducted in the school districts of three cities of moderate size. A total of 94 personnel involved with the evaluation process participated in the study. The secondary component was conducted in two phases. first phase examined the class schedules of 458 handicapped students in 11 public high schools in two States for information concerning the number and type of handicapped students who received services, the type of coursework the students took, the extent to which they received services in integrated settings, and the extent to which they received services comparable to those of nonhandicapped The second phase of the study involved the identification students. and documentation of promising strategies for serving secondary handicapped students. Strategies were grouped into the following personnel utilization, special education curriculum development, internal special education strategies, regular education education preparation/support, special preparation/support, and vocational options.

# Appendix 2

## DISCRETIONARY PROGRAMS ADMINISTERED BY SPECIAL EDUCATION PROGRAMS

SEP administers 10 discretionary grant/contract programs designed to support and encourage the discovery, development, and dissemination of innovations and improved practices in the education of handicapped children. These discretionary programs complement SEP's direct administrative efforts by focusing on areas of concern such as personnel preparation, early childhood education, education for the severely handicapped, vocational and adult education, media, and technology. Activities funded during fiscal year 1983 are described in the following sections.

Handicapped Children's Early Education Program -- This program, authorized by Section 623 of Part C of the EHA (20 U.S.C. §1423), provides funds for the development, demonstration, and dissemination of experimental educational practices for adoption and adaptation by SEAs, LEAs, and private agencies. There are five components in the program: demonstration projects to introduce innovative approaches; outreach projects to stimulate replication of successful demonstration projects; State implementation grants to develop and implement coordinated statewide plans for serving all preschool handicapped children; early childhood institutes to conduct research; and technical assistance to assist in the demonstration and outreach projects. During fiscal year 1983, SEP funded 163 projects for \$16,800,000. It is expected that between 85 and 95 percent of the demonstration programs will continue and that support for their continuation will come from sources other It is also expected that the outreach projects will stimulate services to 4,700 previously unserved or underserved preschool handicapped children and their families.

Regional Postsecondary Programs -- The Regional Postsecondary Program, authorized by Section 625 of Part C of the EHA, provides funds for the continuation and expansion of support services needed by the deaf and other handicapped persons so that they may benefit from technical-vocational, postsecondary, or adult education (20 U.S.C. year 1983, the program funded §1424a). During fiscal stipulated (\$2,389,000) Congressionally projects to technical-vocational and postsecondary education for deaf persons. Under one project, \$75,000 was spent on an Evaluability Assessment of the centers which found satisfactory attainment of program objectives and recommended several ways of improving program functions. addition, seven grants were awarded for \$368,000 to develop and demonstrate model innovative approaches in the provision of support services to, or in the modification of programs for, handicapped students in postsecondary institutions. This program directly provided services to about 5,000 handicapped students and is estimated to have

had an impact on tens of thousands more as a result of disseminating the model practices. Further, 80 to 90 percent of the deaf students affected by the program obtained employment or went on to advanced educational opportunities. It is expected that 75 percent of the demonstration grants will generate cost-effective support service models.

Deaf-Blind Program -- The Deaf-Blind program is authorized by Section 622 of Part C of the EHA (20 U.S.C. §1422). Currently, six . centers are funded for \$10,796,000. These centers provide diagnostic and evaluative services; educational and training services; and consulting and counseling services for parents, teachers, aides, and others working with deaf-blind children. During fiscal year 1983, the Deaf-Blind Program also provided \$4,564,000 for 26 projects which focused on the development of models for the integration of deaf-blind children and youth with nonhandicapped children of their own age, children into deaf-blind deinstitutionalization of placements, design of vocational training for deaf-blind adolescents, development of approaches to total life planning, identification of risk of becoming deaf-blind, and adaptation and children at modification of curriculum.

Severely Handicapped Programs -- Establishment of the Severely Handicapped Children and Youth Program, authorized by Section 624 of Part C of the EHA (20 U.S.C. §1424), was consistent with the EHA mandate that the most severely handicapped children receive priority attention. In fiscal year 1983, 24 demonstration projects were funded at \$2,880,000. These projects will result in the development of models for the integration of severely handicapped children into less restrictive environments, innovative educational approaches, education of autistic children, vocational education in technological areas, and designs for comprehensive service delivery to severely handicapped children. It is expected that the projects will provide educational or training services to 2,890 severely handicapped children, inservice training to 2,200 professional and paraprofessional personnel, and guidance and other services to 2,100 parents of severely handicapped children. Finally, it is expected that through replications of these demonstration projects, an additional 2,160 severely handicapped children will receive new or improved educational programs. Although the needs of the severely and profoundly handicapped are both extensive and expensive, Federal initiatives such as these are making continuous progress toward improving services to this priority population of handicapped children.

Personnel Preparation Program -- Part D of the EHA (20 U.S.C. §§1431-1436), authorizes a program which supports the preparation of personnel required to provide all handicapped children a free appropriate public education. In fiscal year 1983, 837 grants were

funded at \$49,200,047. This program is designed to (a) provide fully trained and certified special education teachers, including early supervisors, specialists. administrators, childhood speech-educators; (b) train doctoral and postdoctoral teacher trainers, researchers, and administrators; (c) train support personnel, including career educators, recreation specialists, health services personnel, school psychologists, social service providers, physical therapists, occupational therapists; (d) train SEA personnel and constituencies; (e) develop innovative instructional models for use by providers of preservice training so that they can train regular classroom teachers; and (f) provide instruction for trainers of volunteers, including parents of handicapped children.

Recruitment and Information Program -- The Recruitment Information Program authorized by Section 633 of Part D of the EHA (20 U.S.C. §1433) provides a systematic method of disseminating comprehensive information about programs, services, and resources available to handicapped children and youth. Through an outreach program utilizing print, radio, and television, the general public receives information designed to enhance their awareness and acceptance of handicapped people. Recruitment activities include dissemination of information pertaining to the professional training opportunities related to the education of handicapped children and youth, as well as the coordination of personnel needs and the availability of appropriate professional training opportunities. FY 1983 the program funded two contracts to carry out recruitment and information activities nationwide.

Innovation and Development Program -- This program, authorized by Part E of the EHA (20 U.S.C. §§1441-1444), is designed to (1) identify, conduct research, and demonstrate solutions to problems of educating handicapped children; (2) develop and disseminate innovative support systems and techniques to improve the performance of handicapped children, their teachers, and other practitioners serving them; and (3) create mechanisms that will produce the broadest possible dissemination and use of the products of research and development.

The program contains four major components: (1) field-initiated research, which in fiscal year 1983 supported 30 new projects and eight continuation projects for \$3,500,000 to conduct a wide range of research activities initiated by investigators in the field; (2) student initiated research, with \$230,000 to fund 26 special education research projects directed by students (primarily doctoral candidates) to enhance research training opportunities in special education graduate training programs and thereby encourage new personnel to enter the field of special education research; (3) directed research in which 50 projects about six selected priority area topics not adequately addressed through other funding mechanisms were funded for

approximately \$6,000,000; and (4) research institutes providing \$2,300,000 for relatively long-term and relatively large-scale research, supporting two new institutes on minority handicapped children. The programmatic research on the new information and products developed by the institutes is disseminated to several target audiences, and particularly to direct service providers.

Media Services and Captioned Films — As authorized by Part F of the EHA (20 U.S.C. §§1451-1454), this program mandates the Captioned Films for the Deaf Program and is also designed to adapt, distribute, develop, and disseminate innovative applications of educational media, materials, and technology for the handicapped. The program has included providing captioned television for the deaf, providing assistance to Recording for the Blind, providing support for the National Theatre of the Deaf, funding two media and materials centers for the handicapped, developing a marketing program, and assisting in the development of new media and technology. During fiscal year 1983, this program provided \$12,000,000 for 93 awards. The program represents the primary National effort to make films and television accessible to the deaf and hearing impaired.

Another goal of this program is to assure that appropriate technology is available, of good quality, and used efficiently to improve the education, independent functioning, and employment of handicapped individuals. The marketing activities of the program complement these efforts. They focus on developing innovative materials for handicapped learners and their teachers by providing technical assistance to developers and by increasing the National dissemination of materials not ordinarily distributed by the commercial sector.

Regional Resource Center Program — The Regional Resource Center (RRC) Program is authorized by Section 621 of Part C of the EHA (20 U.S.C. §1421a). Its purpose is to assist SEAs and LEAs in providing quality, coordinated services to handicapped children. In 1983, the program consisted of six regional centers funded at \$4,114,442 that assist States in identifying and solving their most persistent problems in providing quality educational evaluations and programs for handicapped children. By expanding the dissemination of research, technology, and successful practices, the RRCs help States develop the foundation needed to assure the provision and maintenance of full educational opportunities to all handicapped children. The increased emphasis on States to assure the availability of a free appropriate public education while at the same time trying to contain special education costs has resulted in the increased need for the RRC support initiative.

Special Studies Program -- The Special Studies Program authorized by Section 618 of EHA-B (20 U.S.C. §1418) is responsible for describing National progress in the education of handicapped children. During fiscal year 1983, the program supported three projects for \$480,000. These projects provided the information for preparing this report to Congress and helped SEAs and LEAs to assess and improve their current policies, procedures, and practices. The studies funded by this program provide an information base for analyzing how effectively the Act is being implemented. The information provided makes it possible to compare variations in children being served, personnel available and needed, and placement of handicapped children across States.

THE FIGURES REPRESENT THE AMOUNT OF FUNDS THAT NEW MEXICO WOULD HAVE RECEIVED IF IT CHOSE TO PARTICIPATE IN THE P.L. 94-142 PROGRAM. SINCE NEW MEXICO HAS CHOSEN NOT TO PARTICIPATE, THE FUNDS IT WAS ELIGIBLE TO RECEIVE HAVE BEEN DISTRIBUTED ON A PRO RATA BASIS TO THE OTHER STATES. THIS END OF YEAR DISTRIBUTION IS NOT REFLECTED IN THE ABOVE FIGURES.

## Notes for Appendix 3

Sources: December 1, 1982 State Child Count Reports and FY 1982 State End-of-Year Reports. A dash in the tables indicates that the data were not available for the State.

#### Table 3A6

1. The age range for children counted under the EHA-B State grant program is three through 21. The age range for children counted under the P.L. 89-313 program is birth through 20. Tables reporting the combined child count under the two programs are labeled using the age range for the larger EHA-B program although some children from birth through two years of age may be included in the P.L. 89-313 count.

### Tables 3B1 and 3B3

- The pupil/teacher ratios in Table 3B3 for the United States and Territories are calculated by dividing the total child count (sum of the State child counts) by the total teacher count (sum of the State teacher counts).
- California -- The State reported estimates of the number of special education teachers because teaching assignments in California are not categorized by handicapping condition. The estimated numbers were calculated using the ratio of pupils served by handicapping condition to total pupils served and applying the resulting factor to the total of FTE special education teachers.
- 3. Delaware -- The State included other personnel such as psychologists as non-categorical teachers; these personnel were not included by the State in the personnel total.
- 4. District of Columbia -- The State count of special education teachers did not include staff in private State-supported residential facilities.
- 5. Florida -- The State combined teachers of the hard of hearing with teachers of the deaf and speech impaired; the data were presented under the deaf category. The

State reported students in the area of their major handicap so no multihandicapped students were reported. The non-categorical teachers reported taught students with various handicaps although each child was categorized as having a particular handicap.

- 6. Georgia -- The State reported the same number of speech pathologists as teachers of the speech impaired. This number was included only once in calculating total personnel as the State could not differentiate the two groups.
- 7. Hawaii -- The State reported a combined count of teachers of the orthopedically impaired and of the other health impaired; the data were presented under the category of orthopedically impaired. The teachers of the speech impaired reported by the State were speech pathologists responsible for instructing speech impaired students.
- 8. Illinois -- The State reported no counts of teachers of the other health impaired or of the deaf-blind as teachers serving these students are not so certified in Illinois and were reported under another condition.
- 9. Indiana -- The State reported the same number of speech pathologists as teachers of speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 10. Massachusetts -- The State reported the same number of speech pathologists as teachers of speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 11. Mississippi -- The total number of teachers of the handicapped reported by the State included speech pathologists and preschool speech/language teachers; 458.5 of these teachers were not included in the personnel total.
- 12. Missouri -- The non-categorical teachers reported by the State were early childhood special education teachers.
- 13. Nebraska -- The number of teachers reported by the State was the number of certified personnel employed by local educational agencies. The number of teachers of the multihandicapped reported included teachers of the other health impaired and of the deaf-blind.

- 14. North Dakota -- The total of teachers of the handicapped reported by the State did not include 35.8 teachers of the preschool handicapped. The State reported the same number of speech pathologists as teachers of speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 15. Oklahoma -- The State reported the same number of speech pathologists as teachers of the speech impaired. The number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 16. Oregon -- The number of non-categorical teachers reported by the State included instructors for pregnant students.
- 17. Pennsylvania -- The number of teachers of learning disabled students included teachers of brain injured in approved private schools. The number of teachers of non-categorical students reported included teachers in mixed category classes; typical student combinations in these experimental programs include EMR/LD, EMR/SED, etc.
- 18. Utah -- The State reported 21.3 psychologists and school social workers as non-categorical teachers of the handicapped; these teachers were not included in the personnel total.
- 19. Wisconsin -- The State counts of teachers of the hard of hearing, deaf, and visually handicapped included teachers at DPI-administered residential schools for the deaf and visually impaired. The State's early childhood teachers were placed in the non-categorical group. The State reported the same number of speech pathologists as teachers of the speech impaired; this number was included only once in calculating the total personnel as the State could not distinguish the two groups.
- 20. Wyoming -- The State could not itemize special education teachers by handicapping condition taught.
- 21. Bureau of Indian Affairs -- The same number of speech pathologists and teachers of the speech impaired were reported by the Bureau. This number was included only once by the State in calculating the total personnel as the Bureau could not distinguish the two groups.

### Table 3B2

- Delaware -- The State included other personnel such as psychologists as non-categorical teachers; these personnel were not included by the State in the total personnel.
- District of Columbia -- State counts of personnel did not include staff in private State-supported residential facilities.
- 3. Georgia -- The State reported the same number of speech pathologists as teachers of the speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 4. Hawaii -- The teachers of the speech impaired reported by the State were speech pathologists responsible for instructing speech impaired students.
- 5. Idaho -- The number of vocational education teachers reported by the State included teachers of home economics; physical education teachers reported were general education teachers.
- 6. Illinois -- The total number of personnel reported by the State included 2,388.5 other instructional personnel; these personnel included art therapists, daily living skills specialists, driver education instructors, guidance counselors, home economics teachers, interpreters, music therapists, orientation and mobility specialists, and home and hospital teachers.
- 7. Indiana -- The State reported the same number of speech pathologists as teachers of the speech impaired. This number was included only once in calculating the total personnel as the State could not distinguish between the two groups.
- 8. Massachusetts -- The State reported the same number of speech pathologists as teachers of the speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 9. Minnesota -- All vocational education teachers in the State are licensed to provide instruction to handicapped children. No data were available on the number of teachers actually serving handicapped children.

- 10. Mississippi -- The total number of teachers of the handicapped reported by the State included speech pathologists and preschool speech/language teachers; 458.5 of these teachers were not included by the State in total personnel.
- 11. Nebraska -- Personnel reported by the State were the number of certified personnel employed by local educational agencies. There were 120 physical and occupational therapists and agencies serving orthopedically handicapped children as private providers.
- 12. North Carolina -- The State's reported count of home-hospital teachers was included under the category of other noninstructional staff.
- 13. North Dakota -- The State reported the same number of speech pathologists as teachers of the speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups. The total personnel included 35.8 teachers of the preschool handicapped.
- 14. Oklahoma -- The State reported the same number of speech pathologists as teachers of the speech impaired. This number was included only once in calculating the total personnel as the State could not differentiate the two groups.
- 15. Oregon -- The count of vocational education teachers included all vocational education teachers in the State.
- 16. Utah -- The State reported 21.3 psychologists and school social workers as non-categorical teachers of the handicapped; those personnel were not included by the State in total personnel.
- 17. Wisconsin -- The State reported the same number of speech pathologists as teachers of the speech impaired; the number was included only once in calculating the total number of personnel as the State could not distinguish the two groups.
- 18. Bureau of Indian Affairs The same number of speech pathologists and teachers of the speech impaired were reported by the Bureau. This number was included only once in calculating the total number of personnel as the Bureau could not differentiate the two groups.

#### Tables 3C1 - 3C4

- 1. The number of students served is based upon State reports of the number of children served under the FAPE requirements of EHA-B.
- 2. California -- The State combined counts of children served in other educational environments with those served in regular classes.
- 3. Florida -- The State included counts of hard of hearing children served with the counts of speech and hearing impaired. The State categorized students by their major handicap so no multihandicapped counts were reported.
- 4. Idaho -- The State count of students 18 to 21 years of age served in other educational environments were students participating in vocational rehabilitation.
- 5. Michigan -- The State included counts of deaf-blind students served with the counts of hard of hearing or visually handicapped students. The State also combined counts of orthopedically impaired and other health impaired students; the data were presented under the category of orthopedically impaired.
- 6. Missouri -- The State counted children served in homebound and nonpublic educational institutions as children served in other educational environments.
- 7. Nebraska The State count of mentally retarded students served in separate school facilities consisted of children counted in P.L. 89-313 and other service agencies; no listings by age were generated. The State reported this count under the 6 to 17-year-old group.
- 8. Ohio -- The State combined counts of orthopedically impaired and other health impaired students; the data were presented under the category of orthopedically impaired.
- 9. Pennsylvania -- The State count of learning disabled students served in separate school facilities included brain-damaged students.
- 10. Virginia -- The State reported June counts rather than December 1 counts, which it maintained were "slightly higher" than the December 1 counts.

11. Wyoming -- The State counts of speech impaired students served were incomplete as all LEAs had not reported. Students in non-categorical placements were described as socially maladjusted, a category required by State law.

# BACKGROUND AND METHODOLOGY: THE COSTS OF SPECIAL EDUCATION AND RELATED SERVICES

(The following is excerpted from an Issues Study performed by Decision Resources Corporation, September 1983, as a deliverable under Department of Education Contract 300-82-0001 and reported in the third chapter of this Annual Report to Congress.)

Congress and Special Education Programs (SEP) in the Education Department have been particularly interested in determining the costs of special education and related services. Both have received numerous requests for cost data from government agencies and advocacy groups. Accurate information on the cost of special education and related services will improve policymakers' ability to make informed choices on the allocation of resources for the education of handicapped students. First, cost data will help determine the amount of funding needed to provide handicapped students with an appropriate education. Second, data on the costs of different types of services and education placements will help in setting policies, thereby encouraging more cost-effective service practices and clarifying interagency obligations to pay for required special education and related services. information on the cost of education will help Federal and State policymakers adjust funding formulae to match local needs and reduce fiscal incentives for inappropriate classification and placement of students (Kakalik, Furry, Thomas, and Carney, 1981).

The needs of SEP and Congress for cost data on special education and related services served as the impetus for the current study. One approach to obtaining cost data is to build costs from the bottom up — that is, to collect very detailed district—level data and to document the resources that comprise each data item. State and National costs are then estimated from these district data. A second approach is to build from the top down — that is, to focus on State—level data and to document how States collect data from their districts. Since education is a State function, the State exerts considerable influence on what district cost data are collected and how costs are perceived by districts.

The bottom up approach is beyond the scope of the current study, because it requires a considerable amount of time and money. Instead, the top down approach will be used to provide SEP with cost data from a sample of States for the 1984 Annual Report to Congress. This report provides a research design for Decision Resources' study of special education costs. The problems associated with the collection of data on special education costs are described first. Then previous studies of special education costs are reviewed. Finally, the methodology of the current study and preliminary findings are reported.

## Difficulties in Studying Special Education Costs

Many problems arise when researchers study special education costs. Interstate and intrastate differences produce variations in cost data, making comparisons invalid. Many of the costs of special education are difficult to calculate and define, and they are not always included in standard cost reports by State departments of education.

For several reasons, cost data within a State are often not comparable. First, there are systematic variations in the costs of resources -- for example, teacher salaries may vary substantially within a State. Second, the costs of education differ in rural and In sparsely settled rural areas, the cost of urban areas. transportation may be quite high compared to transportation costs in Third, costs are affected by economies of scale. jurisdiction lacks sufficient students to fill a given program. per-pupil costs are greater; this is most likely to occur in small school districts. Fourth, district wealth may influence the types of services provided, and hence the total cost of the special education use State accounting districts Finally. inconsistently, producing data that are not comparable (Clifford, Newton, Kuligowski, Singh, and Lillie, 1983).

Intrastate differences are compounded when cost comparisons are made across States because of:

- 1. different funding formulae used by States;
- 2. various purposes for which data are collected by States; and
- 3. differing State definitions and interpretations of special education and related services.

States use various formulae for providing State special education monies to their districts, and the type of formula used influences the type of cost data collected from districts. For example, formulae in which the State reimburses for particular cost items generally produce more detailed cost data than weighted formulae in which the State distributes money on the basis of the number and type of handicapped students. In some cases, State special education money is distributed as part of a block grant, and the State has no way of knowing how it is spent. States also differ in the kinds of costs that are allowable for State aid; data on local expenditures not reimbursed by the State may be available only at the district level.

States collect cost data for different purposes, such as providing reimbursement to districts, auditing, and reporting to various State and Federal agencies. The data collected by a State depend in part on the political culture of the State. The political power of the State legislature and administrative agencies, number of districts, role of intermediate levels of government, and State tradition of local control or strong central government all have an impact on what data are collected (Simonsick and Milne, 1981).

States differ in their definition and interpretation of what constitutes "special education" and "related services" (Moore, Walker, and Holland, 1982; Thomas and Reese, 1982). Handicapping conditions are defined differently from State to State, and States use different eligibility criteria that influence the number of students receiving special education services and thus affect costs. Many States regulate how special education services are provided by establishing class size limitations. These limits, which contribute 1oad significantly to the costs of special education, vary substantially across States (Moore et al., 1982). For example, the State case load limits for resource room teachers of speech impaired children vary from 15 to 100 (Mack, Barresi, and Bunte, 1980). Differing State interpretations of what constitutes related services have significant cost implications.

Some costs of special education and related services are difficult to calculate; others are not included in cost reports by educational agencies. In a survey of special education costs, the National School Boards Association (1979) found that costs for transportation, in particular, tended to be underestimated. Determining the indirect costs of special education (such as administrative time and cost of building space) can be problematic because proration is generally necessary. Finally, the costs of special education and related services borne by agencies other than education departments must be included in a comprehensive study of costs. Agencies such as the Departments of Public Welfare, Mental Health, Health Services, Human Resources, Children and Family Services, Labor, and Corrections provide services to handicapped children, but the costs of these services are not usually included in cost reports prepared by educational agencies.

The term "cost of special education" generally refers here to the dollars used to support a particular special education program (Moore et al., 1982). Most researchers use expenditure data to describe these costs. However, certain costs (such as the value of volunteer time) are not reflected in expenditure data. Also, some costs (such as the impact of special education on the regular classroom teachers) are nonmonetary.

## Previous Studies of Special Education Costs

Most previous studies of special education costs have centered around two major themes: (1) determining current expenditures for special education, and (2) developing models for estimating future costs of special education. As a part of the National Education Finance Project (NEFP), Rossmiller, Hale, and Frohreich conducted a special study on the costs of programs for exceptional students. The purposes of the study were to determine the costs of special education programs relative to the regular education program in districts judged to have high quality special education programs, and to use the data to project future costs of special education. Expenditure data on regular and special education programs were obtained from districts in five States. These data were itemized by handicapping condition; a cost index was calculated for handicapping condition by dividing the average per-pupil expenditure for children with the disability by the average per-pupil expenditure for children in the regular education program. When all handicapping conditions were aggregated, an average composite index of slightly more than two was obtained, indicating that programs for the handicapped were about twice as costly as regular education programs. studies using the NEFP methodology have tended to support its relative cost findings (Marinelli, 1976).

In contrast to Rossmiller's approach, in which actual expenditure data were used, a recent study by the Rand Corporation (Kakalik, Furry, Thomas, and Carney, 1981) documented the mix of resources used to educate handicapped children. The study presented the estimated costs of these resources based on National averages of salaries and other prices so that service levels and programs could be compared consistently across districts. The study found that the estimated cost of special education and related services per handicapped c'ild served in 1977-78 was 2.17 times greater than the cost of regular education for a nonhandicapped child. Cost estimates were shown by handicapping condition, type of placement, and age level. The estimated costs of various types of services (such as instruction, assessment, and transportation) were also included. Documentation of the estimated costs of these resources in the special education program entailed an extensive data collection effort.

A theoretical approach for estimating the costs of special education has been developed by Hartman (1981). Elements in his resource cost model are student characteristics, programs and services offered, resources needed for each program, price for each resource, the distribution of students across the various programs and services, and student-personnel ratios. For each of these elements, values may be inserted to determine the most likely cost estimate as well as low and high estimates.

Estimates of future special education costs are usually based on information on current expenditures and projected enrollments in special education programs. Recent research of special education costs, however, has moved away from the use of actual State expenditure data; frequently National average costs are used in an effort to make data comparable. In addition, past research has usually involved an extensive amount of data collection in a limited number of districts. This type of data collection is impractical for the purpose of obtaining State-level cost data, yet as noted above, statewide data are frequently needed by National policymakers. An early NCES study (Metz, Ford, and Silverman, 1975) examined the excess costs of special education by using expenditure data available from nine SEAs for the 1972-73 school year. The findings were:

- no State surveyed had all the data needed for a detailed analysis of excess costs of educating the handicapped;
- few States maintained detailed accounting systems for their programs for the handicapped;
- none of the States surveyed maintained (at the requested level of detail) an information system on resources used for educating the handicapped;
- expenditure data were not comparable; and
- few States provided expenditure data on institutionalized children under the care of the other State agencies.

It would be reasonable to assume that some of the problems with special education expenditure data that were identified in the NCES study have been resolved. Since the study was completed, Congress passed the P.L. 94-142 amendments to the Education of the Handicapped Act, producing an expansion of special education programs that can be expected to lead to a concomitant improvement in all special education data systems. Section 618(b)(1)(E) of EHA-B specifically requires the Department of Education to report Federal, State, and local expenditures for special education in a sample of States. Although States are not required to report such data to the Department of Education, data are presumably maintained by some SEAs. Also, the years since the NCES study have seen a tremendous growth in automated data processing, which should enhance the ability of SEAs to provide more complete expenditure data.

## Methodology

This study was different from other recent cost studies in two major respects. First, actual expenditure data were emphasized rather than cost estimates. Recognizing the problem of comparability of data, study staff planned to document as completely as possible the elements that made up the various expenditure items. Second, only data already available would be requested so no additional data collection efforts would be necessary. Data by handicapping condition, type of placement, and funding source would be requested in addition to information on the expenditures for related services and costs paid by non-educational agencies.

Given Congressional and SEP concerns and needs, a sample of excess-cost formula States was selected to be studied. Actual per-pupil expenditure data would be requested from these States since it was expected that States using this type of formula would have the most complete expenditure data.

An optimal matrix of expenditure data was developed. The matrix consisted of line items commonly used in education cost reports (e-g., certified personnel salaries, pupil transportation, textbooks, capital outlay, and maintenance and operation). For each of these line items, per-pupil expenditures by handicapping condition, by type of placement, by age or grade, and by Federal, State, and local sources of funding were to be requested. Data requests were limited to the 1981-82 school year, the most recent year for which the data would likely be complete.

States using excess cost formulae were then identified based on the Project Forum report on special education formulae (NASDSE, 1982). Two States that use combinations of excess cost and weighted formulae were included. One excess cost State was excluded because reimbursement is made two years in arrears; thus it was assumed that 1981-82 data would not be available prior to completion of the study. About one-fifth of the States were identified as having excess cost formulae.

Initially, Decision Resources planned to visit six States that collected the most complete data and several LEAs within those States. The purposes of the site visits were to be: (1) to document the process by which expenditures are determined; (2) to establish which elements make up special education expenditures; (3) to learn how States justify these expenditures; (4) to discover whether LEAs view these expenditures similarly; and (5) to document expenditures by non-educational agencies.

State Directors of Special Education were contacted to determine the availability of the data in the optimal matrix. Calls to individual State Directors were tailored to the special education

formula and administrative practices of the State. Copies of forms by which LEAs supply cost data to the SEA and summary expenditure data reports for 1981-82 were also requested.

The phone calls revealed that:

- Wide variation exists in special education expenditure data available at the State level. In one State the expenditure data are handled by a separate State agency, and the SEA personnel had little idea about what data might be available. Several States collect a great deal of data, but it cannot be used efficiently because of a lack of automation. In some States the presence of intermediate educational units adds complexity to the reporting of expenditure data.
- The excess cost States do not calculate per-pupil expenditures. Rather, total expenditures are reported. When it was suggested that total expenditures might be divided by child count, State personnel usually said that this would distort the data because wide variations in expenditures would be lost.
- Most excess cost States have a list of allowable costs. LEAs report total expendatures for each of these items. In a few cases this information is shown by placement or program.
- Expenditure data for students receiving contracted services are usually more detailed than expenditure data for other students. However, students receiving these contracted services represent only a small percentage of the population of handicapped students.

and LEAs would not be productive because desired data were not available. Also, information about available data could be adequately obtained through phone calls and copies of forms and reports regularly prepared by the States. For the States with more complete data, SEP asked Decision Resources to collect the total expenditures for the cost items used by each State rather than per-pupil costs since these data were more often available.

Follow-up phone calls were made to the States with the more complete data. While all of these States had collected extensive expenditure data, most had difficulty in providing requested expenditure data because (1) their data processing systems were not automated or were not fully automated, or (2) the 1981-82 data were just becoming available.

Available State data were not comparable and varied substantially in how they were reported; therefore, a case study approach was used. Expenditure data from four States were examined. One State was used to show costs by funding source; a second State served to illustrate detailed costs by programs and services; a third State's data showed expenditures by level of service; and a fourth State showed expenditures by functions. Data from the second State were not available for 1981-82 at the time of publication of this Report. A State with a resource-based funding formula was substituted because of the extensive data collected and the sophistication of its data processing system.

The findings of this study are reported in the third chapter of the 1984 Annual Report to Congress.
