**ABSTRACT**

This guide provides procedures and supporting materials for a sex equity workshop, targeted at school counselors, that is intended to expand awareness of sexism and to increase sex-affirmative behavior in the educational environment. The guide describes the content, process, and sequential learning experiences for four sessions, plus an optional fifth session. Sessions 1 and 2 are organized to increase awareness and expand knowledge of sexism and sex-role stereotyping, and to create a common vocabulary. Sessions 3 and 4 focus on Title IX and its impact for counselors. They include activities and material for evaluation and for improving sex equity in counseling and guidance programs. The optional session applies assertiveness training skills to sex equity problems, and is intended to be useful in the development of effective change agents. In addition to session-by-session procedures and supporting materials, this guide includes mini-lectures, activity guides, handout materials for participants (assessment instruments, activity cards, readings, and worksheets), and transparency masters. Transparency Master 30: DESC Script . . . . .	263

Note that there is a Homework section and a Process Evaluation at the conclusion of each session. Sessions 2 and 3 include lists of suggested resources. These materials should be made available by the Coordinator and are valuable resources for you as well as for your participants.

## INSTRUCTIONAL DESIGN

This workshop, EXPANDING OPTIONS, is designed to move participants from awareness and knowledge to action. This format proved to be very successful during our field-testing activity. We strongly recommend the learning progression of Sessions 1-4 for maximum effectiveness.

Sessions 1 and 2 are organized to increase awareness of and expand knowledge of sexism and sex-role stereotyping, and to create a common vocabulary. Sessions 3 and 4 focus on Title IX and its impact for counselors. They include activities and materials for evaluation and for improving sex equity in counseling and guidance programs. The fifth session, on assertiveness, is optional for the Counselor Workshop. This session applies assertiveness training skills to sex equity problems, and it is an important addition for the development of effective change agents.

Within each session, activities are organized so that your presentations (Mini-Lectures, etc.) are followed by some type of group and/or individual activity that requires application of the information presented. This gives participants an opportunity to take some responsibility for their learning and allows you time to catch your breath. Time spent per activity can be lengthened or shortened according to your energy and participants' needs and interests.

By preference of the local counselors, we scheduled the 12- to 15-hour workshop as weekly 3-hour sessions, held after school in the late afternoon. Regular attendance was emphasized for optimal effectiveness.

Investigate the possibility of securing credit for counselors through local university extension programs. This could be a valuable incentive for participants.

## WE RECOMMEND . . .

We recommend that you read the Readings, do the Worksheets and Activities, and become thoroughly familiar with the Mini-Lecture content, coordinating each one with its accompanying Transparencies. Running a mock workshop

## NOTES TO THE FACILITATOR

EXPANDING OPTIONS provides sex equity training models for the K-12 school community. The training workshops are designed to expand awareness and knowledge of the effects of sexism and to increase sex-affirmative behavior in the educational environment. The target audience includes teachers (elementary and secondary), students (junior and senior high), student leaders, parents, administrators, counselors, and support staff.

The EXPANDING OPTIONS package includes a *Coordinator's Guide* and eight *Facilitator's Guides*. The *Coordinator's Guide* contains information on the development of the workshop model and the evaluation design, as well as a Resources List, including books and other supporting instructional materials. Each *Facilitator's Guide* provides session-by-session procedures and supporting materials. The *Facilitator's Guide* also contains all the Mini-Lectures, Activity Guides, handout materials for the participants (Assessment Instruments, Activity Cards, Readings, and Worksheets), and Transparency Masters called for in the workshop sessions.

### FACILITATOR'S GUIDE

This *Counselor Workshop Facilitator's Guide* describes the content, process, and sequential learning experiences for four sessions, plus an optional fifth session on assertiveness. The session-by-session goals and objectives are achieved by a variety of means, such as large group discussion, small group activities, individual Worksheets, brainstorming, Facilitator-delivered Mini-Lectures, and audiovisual presentations.

Turn to Session 1, first page, and follow along as you read this paragraph. The first page of each session contains the title and goal(s) for that session. The far left column provides an outline of the major events. The timeline, the narrow, shaded column, gives an estimated time for each activity or activity group. Use it as a guide, but make adjustments to meet the needs of your participants. Centered on the page are the objectives and events, with step-by-step instructions for you, the Facilitator. The next column to the right includes pictographic cues, which highlight major activities. The final column is a checklist of general and instructional materials to be used in the session. Underlined print in this column indicates those Worksheets, Mini-Lectures, Transparency Masters (TMs), Readings., etc., that are included in the EXPANDING OPTIONS package. All other titles listed are materials to be supplied by the Coordinator or Facilitator.

with a group of five or six counselors or friends will help you anticipate possible snags and give you an opportunity to adjust the materials to meet the needs of your specific population.

Check with the Coordinator regarding responsibility for reproduction and assembly of the reproducible materials for your workshop.

Whenever possible, co-facilitate sessions with a person of the opposite sex. We used male-female teams to demonstrate that the issue is a human one, affecting both sexes. Due to the sensitivity of the subject matter, some participants felt threatened and responded with anger and defensiveness. The sessions offer ample opportunity to work through this initial resistance, provided that the Facilitator is sensitive and accepting.

The workshop facility should be equipped for audiovisual presentation and have a chalkboard and/or wall space on which to post newsprint. The available space should be conducive to both small and large group interaction.

#### TO TEST OR NOT TO TEST

Decide whether you will pre- and post-test participants and adjust workshop times accordingly. Counselors might be interested in reviewing the test instruments even if testing is not used as a part of the workshop design. There are three Assessment Instruments included for pre- and post-testing: What Do You Know About Sex Equity? developed by Resources for Non-Sexist Environments to measure knowledge gain; Adult Rating Scale (ARS), which measures behavior; and Person-Concept Incongruency Scale (PCIS), which measures attitudes. The first test requires 20-30 minutes and records the most changes; the other two measures require about 10 minutes each and show more subtle changes. Answers to the knowledge test and scoring procedures for the other two tests may be found in the *Coordinator's Guide*, pp. 4-5.

#### FROM THOSE WHO VENTURED

Hope for the best but be prepared for the worst. No matter how well you prepare, it will take longer and be harder than you expect. If anything can go wrong, it will. However, the experience will be worth it--more enriching, expanding, and far-reaching than you could ever imagine. Be creative and have fun!

# SESSION 1: INTRODUCTION TO SEX EQUITY

## Counselor Workshop

GOALS: TO INCREASE AWARENESS OF SEXISM, BOTH PERSONAL AND SOCIETAL  
TO UNDERSTAND HOW LANGUAGE CAN REINFORCE SEX BIAS

### GENERAL BUSINESS 10

- Register participants.
- Schedule meeting dates and times.
- Distribute and review the Worksheet "Counselor Workshop Outline." Explain the workshop format, including Homework, Readings, and Worksheets.
- Establish ground rules--e.g., attendance, smoking, breaks.

#### OBJECTIVE #1

Participants will identify personal expectations for the workshop.

### INTRODUCTIONS AND GOAL SETTING 25

- Introduce yourself, giving personal and professional information. Share a personal goal.
- Have the counselor-participants introduce themselves and have each state a personal goal so that they can identify their expectations and a direction for the workshop. (These goals will be used for the wrap-up evaluation in Session 4.) Have participants say, "I'm (name) and I'd like to \_\_\_\_\_ as a result of this workshop."
- Post the goals on newsprint and save them for Session 4.
- Review the overall workshop goals, and present Session 1 goals and overview.

### ASSESSMENT (optional pretesting)

- Explain the Assessment Instruments, and adjust workshop times to accommodate the pretesting. Administer the Assessment Instruments What Do You Know About Sex Equity? Adult Rating Scale, and Person-Concept Incongruency Scale.

Person-Concept Incongruency Scale

DEFINITION AND  
DYNAMICS OF SEXISM

30

OBJECTIVE #2

Participants will be able to define and give operational examples of sexism in the work world, home, school, society at large (media), and personal relationships.

Post and give a working definition of sexism, as follows: Any attitude or action that stereotypes or discriminates against a person on the basis of sex--whether intentionally or unintentionally. Have participants expand and comment on the concept.

Present the Mini-Lecture "Sexism: Definition and Dynamics," using the Transparencies and relating the Mini-Lecture to the participants' comments.

15

IDENTIFICATION OF SEXISM

Conduct a group brainstorming session on a few examples of sexism as it affects males and females in the following areas: the work world, home, school, society at large (media), and personal relationships.

15

Divide the group into triads. Distribute the Worksheet "Where Is Sexism?" and assign each group one or two of the areas to complete, as time permits.

15

In the large group, facilitate reporting back from the triads and record the responses on newsprint. Encourage additional examples from participants.

OBJECTIVE #3

Participants will identify examples of sexist language.

HOW SEXISM IS REFLECTED IN LANGUAGE

10

Give the Mini-Lecture "Bias in Language," using the Transparencies, so that participants can understand the parameters of linguistic bias in the transmission of sex roles.

20

Show the slide/tape presentation *Word Power* or an appropriate alternative.

Briefly facilitate participant reactions.

SELECT OPTION

30

Select from the following options:

Option 1: Conduct a group brainstorming session on three ways sexism is reflected in language:

- Omission
- Demeaning
- Stereotyping

Record the examples. Encourage examples related to counseling situations.

MINI-LECTURE:  
Bias in Language

player

Option 2: Distribute the Worksheet "Language: Make It Equitable" and have participants complete it individually.

Facilitate a large group discussion of the Worksheet, encouraging examples from counseling situations.

Assign the Readings for the next session.

Preview the next session.

Post newsprint, one sheet headed "Women are . . ." and one sheet headed "Men are . . ." Instruct each participant to write at least one adjective to describe men and one to describe women before the participant leaves. Save the lists for Session 2 on stereotypes.

Conduct a process evaluation of the session, using the "Process Evaluation Form."

## WORKSHEET 1

### **COUNSELOR WORKSHOP OUTLINE**

This workshop is designed to increase participants' sex equity awareness, knowledge, and skills. The format includes homework and practical strategies for implementing sex-affirmative counseling in guidance programs.

SESSION 1: INTRODUCTION TO SEX EQUITY

SESSION 4: REVIEW AND APPLICATION

SESSION 2: PERSPECTIVES ON SEX ROLES

SESSION 5: ASSERT YOURSELF FOR EQUITY  
(optional)

SESSION 3: TITLE IX AND COUNSELING

## ASSESSMENT INSTRUMENT 1

### WHAT DO YOU KNOW ABOUT SEX EQUITY?

This Assessment Instrument was prepared by Resources for Non-Sexist Environments to accompany the EXPANDING OPTIONS sex equity workshops.

**INSTRUCTIONS:** DO NOT WRITE ON THIS FORM. Place all answers on the answer sheet.

#### PART 1:

#### LEGAL BACKGROUND

1. Title IX of the Education Amendments of 1972 . . .
  - a. applies only to sex discrimination against women in education.
  - b. is a state law against sex discrimination.
  - c. is a county ordinance against sex discrimination.
  - d. is a federal civil rights law prohibiting sex discrimination in education.
  - e. Both a and d apply.
  
2. Under Title IX regulations, it is required that education agencies . . .
  - a. take all steps necessary to end sex discrimination.
  - b. adopt and publish grievance procedures.
  - c. appoint a Title IX coordinator.
  - d. file an assurance of compliance with the federal government.
  - e. All of the above
  
3. Which is the clearest example of sex *discrimination* according to Title IX?
  - a. Men and women are thought to have some innate differences.
  - b. Boys are discouraged by counselors from going into nursing.
  - c. Girls are not permitted to take auto mechanics.
  - d. Girls and boys are placed in separate sections of a wrestling course.
  - e. All of the above

4. Sex *fairness* is shown when . . .
  - a. the letter of the Title IX requirements is met.
  - b. each person is actively encouraged to do the thing in which he or she has the greatest interest.
  - c. a program is mounted to make up for past sex discrimination.
  - d. efforts are made to stimulate interest in educational areas that are usually "off limits" to one sex or the other.
  
5. Which of the practices below are permitted under Title IX?
  - a. Separate ranking by sex for admissions
  - b. Separate courses for boys and girls
  - c. Ability grouping within P.E. classes
  - d. Different graduation requirements for males and females
  - e. None of these is permitted.
  
6. Sex *bias* is expressed when . . .
  - a. boys are ridiculed for being interested in a dance course.
  - b. boys are not allowed to take home economics.
  - c. women are paid less than men for the same work.
  - d. separate graduation standards are used for males and females.
  - e. All of the above
  
7. A Title IX program that clearly shows *sex-affirmative* actions would include . . .
  - a. appointment of a Title IX coordinator who has many other responsibilities.
  - b. separate sections of sports classes for both sexes.
  - c. active encouragement of women who want to enter executive-level educational positions.
  - d. no discouragement of boys who want to take home economics.
  - e. Both b and c apply.

**PART 2:  
CHANGE**

1. What is usually the last personal change to be made when sexism is effectively reduced?
  - a. Blaming others for the problems of sexism
  - b. Integration of the needed changes into thought and behavior
  - c. Intellectual understanding of the problem
  - d. Feelings of guilt and anger
  - e. Emotional identification with the opposite sex and a major change in personality
  
2. The prospect of change is likely to produce . . .
  - a. resistance in the form of apathy.
  - b. immediate acceptance as a natural process.
  - c. a stimulating sense of challenge for nearly everyone.
  - d. uneasiness about the unknown.
  - e. Both a and d apply.
  
3. When producing change, one should remember that . . .
  - a. each change will have an isolated effect.
  - b. one part of a system is independent of the rest.
  - c. a change in one part of a system may change things in other parts.
  - d. small changes are seldom effective even when added up.
  - e. Both a and b apply.
  
4. Which are the primary roles of a change agent? (Circle all appropriate answers.)
  - a. Disrupter
  - b. Catalyst
  - c. Solution giver
  - d. Controller
  - e. Finance acquirer
  - f. Resource linker
  
5. A good change plan could include which steps? (Circle all appropriate answers.)
  - a. Definition of the problem
  - b. Takeover and control of the system

- c. Evaluation and follow-up
- d. A procedure to minimize knowledge and maximize emotional change
- e. A process for implementing the plan
- f. Straightforward use of a tried-and-true formula from earlier projects

PART 3:  
LANGUAGE

1. What is the most accurate statement about text and reference books?
  - a. Dictionaries and encyclopedias rarely show sexism in their language.
  - b. One of the least sexist dictionaries has been *American Heritage*.
  - c. School texts usually show a good balance of references to males and females.
  - d. Textbooks are generally sex affirmative in their emphasis.
  - e. Legal texts show little sex bias.
2. Examples of inclusive language are in . . .
  - a. use of the word *he* to refer to people in general.
  - b. reference to the office secretaries (female) as *girls*.
  - c. more frequent use of *he* and *him* than *she* and *her* in school textbooks.
  - d. use of the word *homemaker*.
  - e. virtually always showing scientists as males.
3. Identify the phrase that reflects sexist language.
  - a. The pioneers took their wives and children West.
  - b. They grew to adulthood.
  - c. The Smiths are an attractive couple.
  - d. The supervisor was tough on the workers.
  - e. She is not the right person for the job.
4. Sex stereotyping is found in which of the following science and math text examples?
  - a. Jim helped Sally with her math.
  - b. Jane bought five ribbons for \$1.00. How much did each cost?
  - c. John built two houses for \$80,000 each. How much did he spend?
  - d. Leaders in physics include Einstein, Mach, and Roentgen.
  - e. All of the above

5. Which is the most preferred form of speech when one is avoiding sexist language?
  - a. She was an outstanding sculptress.
  - b. The moon landing was a giant leap for mankind.
  - c. Both career men and career girls should consider entering the computer field.
  - d. He was her Prince Charming.
  - e. None of the above is preferred.
  
6. Our language is structured so that . . .
  - a. societal values are not reflected in legal documents.
  - b. words such as *he* and *man* when used as general terms are most often interpreted by children to refer equally to both males and females.
  - c. "female" words tend to name things that are powerful and active.
  - d. "female" words refer to less desirable things as a rule.
  - e. Both a and b apply.

PART 4:  
BIOLOGICAL/  
PSYCHOLOGICAL

1. Sex differences in cognitive function make which of the following true?
  - a. Adolescent girls have, on the average, higher verbal ability scores.
  - b. Tests of analytic ability favor girls.
  - c. Spatial visualization averages are higher for adolescent boys.
  - d. All of the above.
  - e. Only a and c apply.
  
2. Circle the answers for the statements below that are true.
  - a. Males are more resistant to disease than females are.
  - b. Females usually have XX and males XY sex chromosome pairs.
  - c. Genetic defects are more common in females.
  - d. Boys tend to have more muscle tissue than girls do.
  - e. Males tend, at every stage of growth, to be larger and stronger than females.
  - f. Premenstrual tension is innate among women.
  - g. Middle-class American males tend to be more physically aggressive than their female counterparts.
  - h. There is clear evidence that in every culture males are more aggressive than their female counterparts.

3. The word *androgyny* implies . . .
  - a. neutering of traditional sex roles.
  - b. that men take on the traditional sex role of women.
  - c. that women take on the traditional sex role of men.
  - d. that both sexes are free to assume aspects of both sex roles.
  - e. movement toward a homosexual society and away from heterosexuality.
4. Our general concept of mental health for adults tends to be . . .
  - a. negatively related to descriptions of healthy females.
  - b. positively related to descriptions of healthy females.
  - c. negatively related to descriptions of healthy males.
  - d. positively related to descriptions of healthy males.
  - e. Both a and d apply.
5. Sex hormones . . .
  - a. have little to do with the gender of a child.
  - b. tightly control the sex role adopted by a child.
  - c. are found as androgens only in males.
  - d. help produce secondary sex characteristics at puberty.
  - e. clearly are more potent than socialization in the development of sex-typed behavior.

PART 5:  
SOCIALIZATION

1. "All mothers love their children more than fathers do" is an example of . . .
  - a. sex bias.
  - b. sex focusing.
  - c. sex stereotyping.
  - d. sex-role socialization.
  - e. sex-role identification.
2. Sex-role socialization in schools includes . . .
  - a. role models in texts and literature.
  - b. differences in teacher response to boys and girls.
  - c. differences in teacher expectations for boys and girls.

- d. the physical environment of the classroom.
  - e. All of the above
3. According to the research of Money and Erhardt, when surgery, etc., is used to change the apparent sex of very young children . . .
- a. careful socialization leads to good adjustment in the new gender identity.
  - b. gender identity stays the same as the genetic one in spite of changes in sex-role socialization.
  - c. some change in gender identity takes place but much confusion remains.
  - d. the child is likely to become severely emotionally disturbed during adolescence.
  - e. Both b and d apply.
4. Although males and females overlap greatly on all behavioral patterns, reliable average differences are found that show . . .
- a. even as children males are stronger.
  - b. young girls have wider shoulders than boys do.
  - c. when social play begins, boys show more aggression than girls do.
  - d. females are clearly more nurturant than males are in the American middle class.
  - e. Both c and d apply.
5. When learning sex roles from adult role models in the home . . .
- a. girls show more anxiety about their roles than boys do.
  - b. men spend many hours a week with their children.
  - c. the role model for girls is less clear than that for boys.
  - d. boys are more often harshly punished when they deviate from the "male" sex role than are girls when they deviate from the "female" role.
  - e. mothers teach the "female" sex role but have little to do with teaching the "male" role.
6. Stereotypes of female/male behaviors are . . . (Circle all appropriate answers.)
- a. learned almost entirely at home.

- b. reinforced by brothers, sisters, and playmates.
- c. systematically portrayed in films, on TV, and in other media.
- d. vigorously opposed in the typical classroom.
- e. seldom found in everyday language.
- f. used to assign work and play.
- g. mostly learned by casual observation without the need for active reinforcement.

7. Children . . .

- a. are often aware of their gender label by age three.
- b. do not learn the details of their social sex roles until adolescence.
- c. are treated the same, regardless of sex, until age two.
- d. (both male and female) are equally valued by most cultures.
- e. Both a and b apply.

**PART 6:  
EMPLOYMENT**

1. The gap between men's and women's incomes has . . .

- a. widened since 1955.
- b. shown a steady decrease since 1955.
- c. decreased dramatically in the last few years.
- d. shown little change over the years.
- e. always been quite small for comparable work.

2. Which statements about women's place in the world of work are accurate?  
(Circle all appropriate answers.)

- a. Homemaking is still the full-time job of most women.
- b. Most women work only to get luxuries, while their husbands earn enough on which to live well.
- c. Four out of five working women are heads of households.
- d. On the average, men who have not finished high school earn more than women who graduate from college.
- e. On the average, minority women workers earn more than minority men do.

3. Employment for women . . .

- a. has recently shifted toward somewhat better opportunity in professional and technical fields.
- b. will shift by 1985 to lesser percentages in the secretarial and typing fields.
- c. is currently less occupationally segregated than it was 20 years ago.
- d. is moving toward equal pay by 1984.
- e. Both c and d apply.

4. Working women . . .

- a. have median earnings nearly equal to those of men.
- b. are more likely to have more education than women who do not work.
- c. are seldom found in husband/wife families.
- d. mostly work part-time.
- e. Both b and c apply.

5. Which statement is accurate regarding labor force participation?

- a. Women make up 51 percent of the country's labor force.
- b. Middle-aged women are responsible for most of the increase in the female labor force.
- c. In nearly half of all marriages, both husband and wife are wage earners.
- d. Three out of four employed women work full-time.
- e. Both c and d apply.

ASSESSMENT INSTRUMENT 2

**ADULT RATING SCALE**

NAME \_\_\_\_\_ AGE \_\_\_\_\_

SEX: M \_\_\_\_\_ F \_\_\_\_\_ DATE: \_\_\_\_\_

**INSTRUCTIONS:** Rate or characterize yourself according to the following scale. Choose a response from 1-5 (very seldom to very frequently) which best indicates how often you choose to do the thing that is described. Place the number in the blank at the left of each item.

1	2	3	4	5
VERY SELDOM	SELDOM	SOMETIMES	FREQUENTLY	VERY FREQUENTLY

- \_\_\_\_\_ 1. YOU ARE ACTIVE AND ENERGETIC. *EXAMPLE:* You are vigorous and work hard; you are busy and on the move.
- \_\_\_\_\_ 2. YOU ENGAGE OTHERS IN HELPING YOU. *EXAMPLE:* You seek out and get others to show you how to do things; you look for and receive advice.
- \_\_\_\_\_ 3. YOU PLEASE OTHERS. *EXAMPLE:* You are cooperative and conforming; you do what others want you to do.
- \_\_\_\_\_ 4. YOU STAND UP FOR YOUR RIGHTS. *EXAMPLE:* You act assertively; you do not react timidly or shyly.
- \_\_\_\_\_ 5. YOU BUILD AND FIX THINGS. *EXAMPLE:* You put things together; you figure out how to put broken things in working order.
- \_\_\_\_\_ 6. YOU MODEL AUTHORITATIVE ROLES. *EXAMPLE:* You help authorities and try to enforce rules; you imitate the behavior of those in authority.

	1	2	3	4	5
	VERY SELDOM	SELDOM	SOMETIMES	FREQUENTLY	VERY FREQUENTLY
_____	7.	YOU ARE DARING AND ADVENTURESOME. <i>EXAMPLE: You attempt physical feats; you take chances in your daily activities.</i>			
_____	8.	YOU EXPRESS AFFECTION. <i>EXAMPLE: You hug and kiss others; you are tender and loving with others.</i>			
_____	9.	YOU ARE RESPONSIVE TO AUTHORITY. <i>EXAMPLE: You are quick to be obedient; you do not talk back to or question those in authority.</i>			
_____	10.	YOU ARE SENSITIVE TO OTHERS' FEELINGS. <i>EXAMPLE: You treat others in terms of their needs; you are not critical of others.</i>			
_____	11.	YOU SHOW STRENGTH AND PHYSICAL PROWESS. <i>EXAMPLE: You pick up heavy things; you challenge others to feats of strength and speed.</i>			
_____	12.	YOU ARE CAREFUL IN APPEARANCE. <i>EXAMPLE: You take time to keep clean and neat; you call attention to your appearance.</i>			
_____	13.	YOU TAKE CARE OF OTHERS. <i>EXAMPLE: You comfort others when they are hurt; you help others with their problems.</i>			
_____	14.	YOU MAKE YOUR OWN DECISIONS. <i>EXAMPLE: You do not depend on others in deciding what to do; you are decisive in making choices.</i>			
_____	15.	YOU ARE COMPETENT IN DEALING WITH THE ENVIRONMENT. <i>EXAMPLE: You understand how things work; you are persistent and curious in finding solutions to problems.</i>			
_____	16.	YOU ARE PHYSICALLY AGGRESSIVE. <i>EXAMPLE: You push or hit back if another hits or pushes you; you use force if you can't get something.</i>			
_____	17.	YOU DISPLAY MANNERS. <i>EXAMPLE: You treat others very politely and act courteous and well behaved.</i>

## MINI-LECTURE: SEXISM: DEFINITION AND DYNAMICS

This Mini-Lecture provides an introduction to key terms and issues regarding sexism. Information on the nature of sexism in our society and the way it is perpetuated is included.

### SEXISM: A DEFINITION

Sexism is subtle and pervasive. It affects everyone, males as well as females. Sexism is not a woman's issue; it is a human one. Narrowly defined sex roles limit options in every area of our lives. Because most of us are largely unaware of the subtle existence of sexism, the focus of the next series of sessions will be to take a look at sexism as it manifests itself in our personal as well as professional lives, and to identify strategies to overcome its negative effects.

[Display the Transparency "Definitions."]

Sexism may be defined as *any attitude or action that stereotypes or discriminates against a person on the basis of sex--whether intentional or unintentional.*

### SEXISM IS USUALLY UNINTENTIONAL

Discrimination is often unintentional. We have so absorbed our culture's assumptions and expectations about how males and females should be that we are unaware of their influence on our interactions with others. An example of this is the use of the term "room mother." The word assumes that this duty is a female function and unintentionally excludes men. Teachers would be only too glad to have a *room parent* who is *male*. Decisions and assumptions that use sex as a criterion for assignment of job responsibilities, participation in active or quiet play, or determination of academic performance are other examples of unintentional sexism.

We all have sexist attitudes and act in sexist ways. Being *nonsexist* means that our attitudes and assumptions about ourselves and others are not based on stereotypes about men and women, but are based on individual capabilities and interests. It doesn't mean that women shouldn't be homemakers,

or that men shouldn't be the major providers. Being nonsexist means that roles will be assumed according to individual needs, desires, and talents.

## SEXISM IS INSTITUTIONAL

In American institutions, which are supposedly based on the premise of "equality for all," equal participation of females and males is not a reality. Although there are numerous laws supporting "equal opportunity" for groups who have been discriminated against in the past, institutions change slowly. Currently, every major institution in our society is dominated by men: government, law, education, health care, defense, industry, religion, and other spheres of activity. In respect to sexism in education, Title IX prohibits discrimination on the basis of sex. Yet there are educational practices, despite Title IX compliance efforts, that are sexist.

Athletic programs for males, for example, receive more support and promotion than programs for females. Also, career guidance practices and testing services differentiate on the basis of sex.

## DYNAMICS OF SEXISM

Sexism, like any other "ism," is self-perpetuating. This self-perpetuating dynamic can be visualized as a cycle of learning and reinforcement. [Display the Transparency "Dynamics of Sexism" to explain the following example.]

Let's use the stereotype "hot-tempered redheads" as an example of this dynamic.

- Experience: A person with red hair flares up in anger.
- Learning: This person is angered easily and has red hair.
- Generalization: People with red hair are hot-tempered (the generalization becomes the stereotype).
- Prejudgment: Next time you encounter a redhead, you expect her or him to get angry easily. Prejudices distort our perception and experience.
- Behavior That Discriminates: As you expect redheads to get angry, you act differently with them or avoid interactions with them altogether.

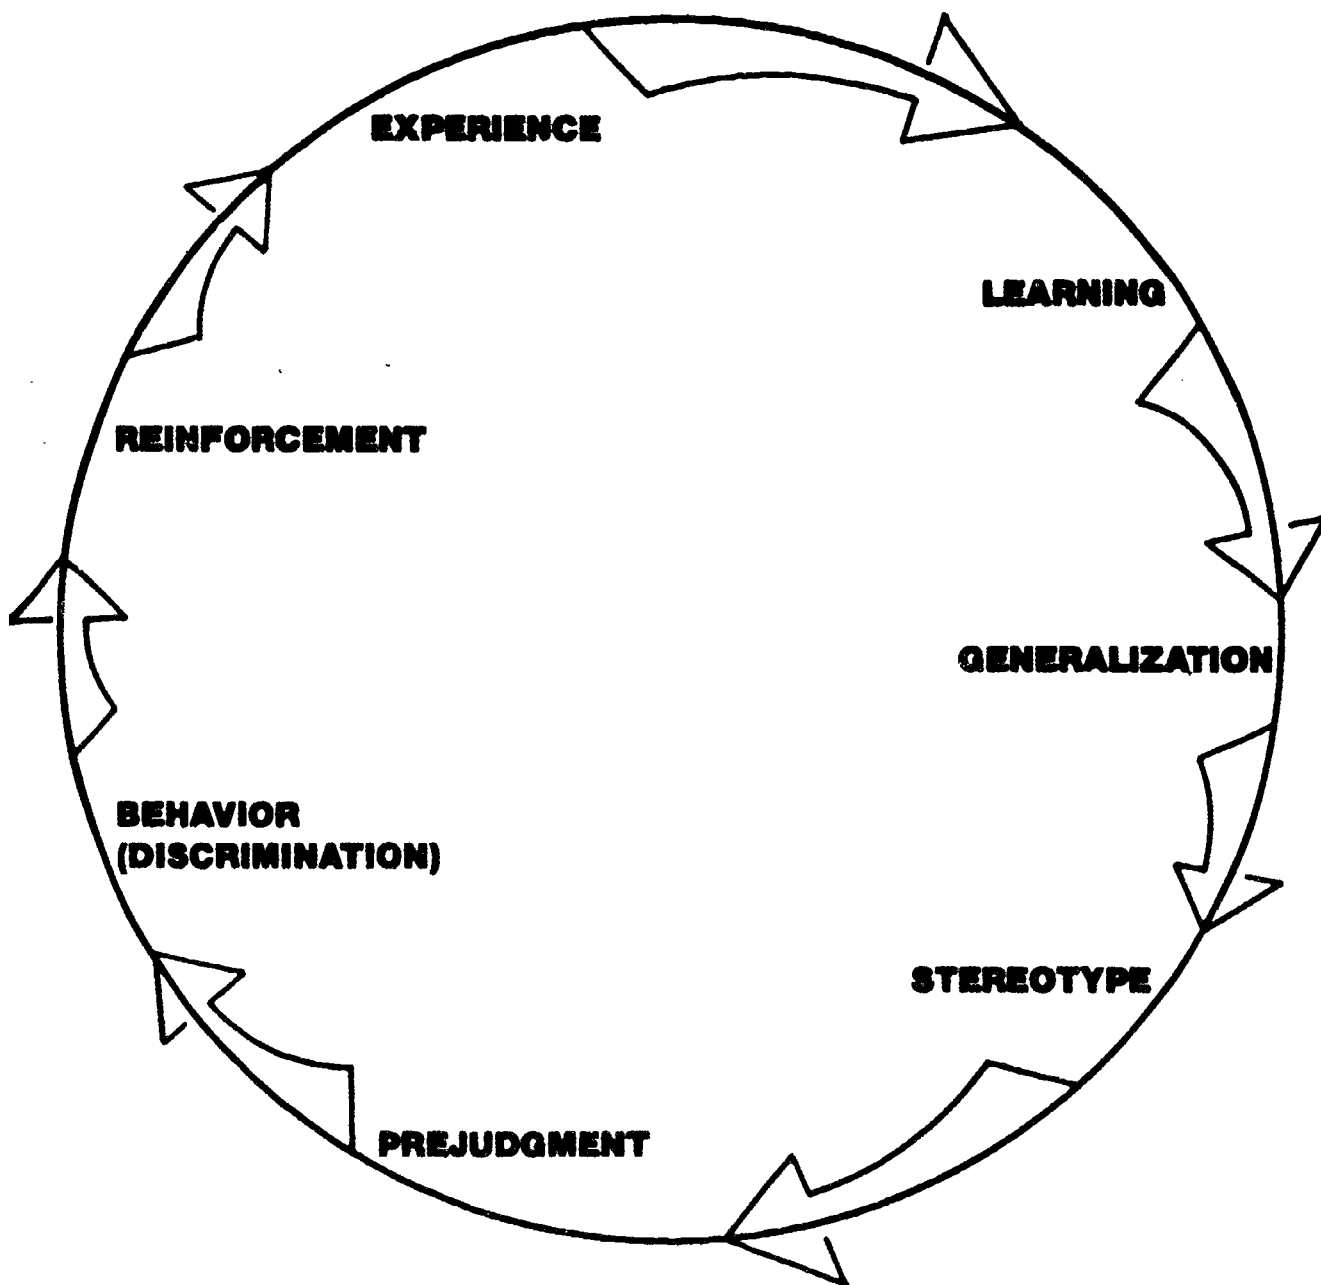

- Reinforcement (Selective Ignoring): Whenever you see a redhead get angry, you make a mental note of the behavior, even though perhaps only one of many redheads you see acts that way. We tend to "see" or notice the behavior we expect. [Have the group give examples.]

# DEFINITIONS

**SEXISM** ANY ATTITUDE OR ACTION THAT STEREOTYPES OR  
DISCRIMINATES AGAINST A PERSON ON THE BASIS OF SEX--  
WHETHER INTENTIONAL OR UNINTENTIONAL

**SEX EQUITY** ATTITUDES OR ACTIONS THAT ENCOURAGE INDIVIDUALS  
TO DEVELOP AND ACHIEVE THEIR OPTIMAL POTENTIAL AS  
HUMAN BEINGS RATHER THAN AS MEMBERS OF A SPECIFIC  
GENDER GROUP

## MINI-LECTURE: BIAS IN LANGUAGE

This Mini-Lecture addresses the importance of language, as well as specific areas of language usage that are considered in the workshop activities.

### SOCIETAL VALUES

Our language both *teaches* and *reflects* societal values. [Use the Transparency "Societal Values" to illustrate.] As a specific example, consider the words *bachelor* and *spinster*. Children learn that in one sex, singleness is valued, while in the other, value is lost.

The societal values of the 1700s are reflected in the language of the Constitution and the Declaration of Independence. These documents use the pseudo-generic\* *man*, which meant only white, property-owning males. This interpretation is still used by the courts. The 14th and 15th Amendments, for minority males, and the 20th Amendment, for women, were necessary to give these groups the right to vote.

The language we use reflects our *culture* and thereby shapes our *thoughts*. But this shaping is not one-way. Language changes as the individuals in the culture alter and expand their values and knowledge. WE CAN HAVE AN EFFECT. The word *Black* instead of *Negro* is an example of rapid change in word usage that reflects changing attitudes--attitudes changed via vigorous civil rights activities and increased Black pride.

### LITERAL UNDERSTANDING

[Use the Transparency "Literal Interpretation" to illustrate.] Children, as well as adults, have a *literal* understanding of language. When we hear the word *policeman*, we visualize a *man*. *Man-hours* means that *men* are working, not women. The Drake University study abstracted in your Reading showed that college students visualized males when the pseudo-generic *man*

---

\**Generic* refers to all members of a class or group.

was used, and that when truly generic words like *people* were used, significantly more female images were included.

#### INCLUSIVE LANGUAGE

[Use the Transparency "Inclusive Language" to illustrate.] Related to our literal understanding of language is the use of *inclusive language*. Expressions such as "man-hours," "men of science," and "man invents the wheel" exclude and omit the contributions and participation of females. *Sex-inclusive* or *sex-fair* language includes *all* relevant people. For example, if *humans* invented the wheel, females may then be visualized as part of this group. A book titled *Famous Scientists* instead of *Men of Science* will more likely be thought to include mention of the Nobel Prize-winning physicist Maria Goepper Mayer.

#### STEREOTYPED LANGUAGE

[Use the Transparency "Stereotyping" to illustrate.] *Stereotyped language* includes *limited assumptions* about how a male or female can be. "The nurse . . . she" and "act like a man" are examples. The assumptions here are that men are not nurses, or that men must not show their feelings. *Stereotyping* occurs as a *pattern of assumptions*. Children perceive these patterns and limit their behaviors and aspirations accordingly.

The stereotype of the female as less important than the male must also be considered, since both girls and boys learn to devalue females through demeaning or belittling language. Examples of this will be found in the Worksheet we will be doing. *Sissy* is an example of language that demeans males, but note that the insult has to do with being "like a woman."

#### SUMMARY

Since children learn about societal values and society's expectations for them through the language used by adults, it is important for us, as people involved in the schools, to examine our language and to see that we are *expanding options* and not inadvertently limiting them.

75

7. Mr. McAllister runs the garage in partnership with his wife, a striking blonde, who mans the pump.

8. sissy, tomboy

III. STEREOTYPING IN TEXTBOOKS

*INSTRUCTIONS: Rewrite the examples so that stereotypes about men and women are not reinforced.*

1. the founding fathers the founders

2. Pioneers moved West, taking their wives and children with them.

3. In New England, the typical farm was so small that the owner and his sons could take care of it by themselves.

4. Al listened tolerantly to the ladies' chatter.

5. Math problem: Susie bought a doll for \$3.68, and Billy bought a toy truck for \$3.50. How much more did Susie pay?

WORKSHEET ANSWER KEY

Language: Make It Equitable

The following are suggested answers, and are not meant to be definitive.

- I. A.
    2. people, humans
    3. cave dwellers
    4. members of Congress
    5. fire fighter
    6. humans
    7. police officer
  8. synthetic, artificial, handmade
  9. the chair, chairperson
  10. homemaker
  11. parenthood
  12. Black History
- 
- B.
    2. people who must be paid, etc.
    3. Make it plural; change "attributes" to "appearance."
    4. Delete the pronoun "her."
    5. Change "fathers" to "parents."
- 
- II.
    2. women
    3. man and woman, or husband and wife
    4. single woman
    5. woman
    6. Delete "Miss" for parallel usage.
    7. Mr. and Mrs. McAllister run the garage as partners.
    8. sensitive
- 
- III.
    2. Pioneer families moved West.
    3. the family could take care
    4. Judy listened tolerantly to the men's chatter.
    5. Change or reverse the toys--let Susie buy stamps and Billy a teddy bear.

## SEX EQUITY DEFINITIONS

*Use the following definitions as a basis for discussions during the EXPANDING OPTIONS Workshop.*

**SEXISM** Any attitude or action that stereotypes or discriminates against a person on the basis of sex--whether intentional or unintentional

**SEX-ROLE STEREOTYPE** A narrowly defined "masculine" or "feminine" behavior or role based on society's expectations that males and females are "naturally" different

**SEX-ROLE SOCIALIZATION** The process by which sex-typed behaviors are taught and reinforced by society through socialization agents, i.e., home, school, peers, institutions, media

**ANDROGYNY** From the Greek roots "andr-" and "gyne," meaning male and female; indicates a balanced expression of "masculine" and "feminine" traits to allow each sex the full range of human characteristics needed for individual actualization

**GENDER ROLE** Everything a person says or does to indicate to others and self the degree to which that person is male or female

**GENDER IDENTITY** The internalized image of oneself as male or female and the internal standards for judging sex-appropriate behaviors

**SEX EQUITY** Attitudes or actions that encourage individuals to develop and achieve their optimal potential as human beings rather than as members of a specific gender group

## READING 2

# SEX ROLES AND THE SOCIALIZATION PROCESS

This Reading was prepared by Resources for Non-Sexist Environments, a federally funded WEEA project, to accompany EXPANDING OPTIONS, sex equity workshops for school communities, K-12.

## INTRODUCTION

How many times have you heard someone turn to another person and with a knowing look say, "Just like a man" or "Just like a woman"? Such expressions point out our cultural expectations concerning the ways males and females should act. And, until recently, these expectations were quite narrow and inflexible. One's sex was a major criterion for assigning tasks and maintaining social order. But today, many people are questioning the value of some sex-typed roles and behaviors. In the worlds of work, sports, and personal relationships, the differences between male and female roles are no longer as rigidly defined as in the past.

### WHAT IS SEX-ROLE SOCIALIZATION?

*Sex-role socialization* is the teaching of sex-typed behaviors. It is a principal means for preparing young people to fit a culture's preconceived adult roles. Often these roles do not take into consideration the natural talents and interests of the individual.

We have been raised to believe that males and females are different, even opposites, as is reflected in the phrase "the opposite sex." It is easy to list qualities that illustrate these conceptual differences. Men should be brave, strong and intelligent. They should hide their feelings and control rather than cooperate. They should also be financially successful and dedicated to their work. In contrast, women should be supportive, soft, and intuitive. They should work outside the home only when absolutely necessary.

Socialization Agents

Our social institutions, such as schools, the government, the legal system, and religious groups, teach and reinforce these stereotypical ideal male and female roles. Language and the media portray glamorized images of the ideal male and the ideal female. The individual's acceptance and modeling of these sex-role ideals will strongly affect expectations of self and others, as well as career aspirations and achievements. Socialization agents also include parents, teachers, reading materials, peers, and toys.

WHAT IS A SEX ROLE?

A *sex role* (sometimes referred to as *gender role*) is a set of behaviors and expectations that are taught and reinforced by society. Through verbal and nonverbal messages, the young child is rewarded for appropriate behaviors, a reward that reinforces the sex role. These behaviors and expectations are internalized by the child, becoming a part of her or his sex or gender identity. *Gender identity*, then, may be described as the internalized image of oneself as being either female or male and the internalized standards for judging self and others. Initially, a child learns appropriate gender identity through interaction with significant adults.

Sex Roles Are Learned

Although the American culture has consistently maintained that males and females are different, researchers have found little evidence in our society to support the theory that sex roles are based on inherent differences between the sexes. In every culture, different sex-role expectations and responsibilities exist for each sex, but anthropologists have found that sex roles vary greatly from society to society. Margaret Mead and others have found instances of societies where some sex-role behaviors are the reverse of those of Western cultures.

Sex-role behaviors are learned. This is the reason that concepts of "masculinity" and "femininity" vary from culture to culture, as sex roles dictate how individuals should act. It is now felt that the interaction of both nature and nurture (genes and the environment) shapes the individual. (See the Reading "Biological Aspects of Sex Differences.")

How Are Sex Roles Learned?

Psychologists believe that by the time children are three, they know their gender labels (Kagen, 1969). By the time they reach school age, they are aware of which sex they are and what behavior patterns and psychological characteristics are expected of them (Kohlberg, 1966). Such expectations are communicated by both adults and peers.

There are differing theories concerning how a child perceives and learns appropriate sex-role behaviors. Three significant theories, summarized below, attempt to explain how sex roles are learned. These theories have had considerable impact upon child-rearing and educational practices.

Psychoanalytic  
Theory

The Freudian and psychoanalytic theories of gender learning are largely related to Freud's belief that both males and females go through stages of "psychosexual" development, and the main source of conflict for the individual is to resolve his or her attachments to and desire for the parent of the opposite sex. At the same time, the psychoanalytic theory emphasizes that the major process for learning sex roles is through the imitation of the same-sex parent, or role modeling. Freud endorsed the view that the pattern of psychosexual development and the development of sex roles was normal, innate, and instinctual (anatomy is destiny), and that all deviations were abnormal.

Social Learning  
Theory

The social learning theory (Mischel, 1970; Bandura and Walters, 1963) tends to de-emphasize biology. Instead it stresses the role of positive and negative reinforcement in the learning of sex-typed behaviors. According to the social learning theorists, sex roles are learned through reinforcement, modeling, and imitation. The individual learns not only on the basis of the consequences of her or his behavior, but also by observing the consequences of the behavior of others. This is called "vicarious" learning or indirect reinforcement. For example, when a young boy sees a classmate being ridiculed for behaving like a "sissy" or when a girl is praised before her friends for neatness, other children learn by observation how they should behave.

Parents are particularly important in the social learning theory. Young children imitate the parent of the same sex (as well as same-sex siblings) and are reinforced for this imitation. In later years, teachers, the media, and books show specific behaviors that are clearly differentiated as more appropriate for females or for males.

Cognitive  
Theory

Kohlberg (1966) has developed a theory of sex typing based on cognitive development of the individual. His theories have been influenced by the work of Piaget, the French educator. Kohlberg believes that the individual first gains a concept of appropriate male and female behaviors through observa-

tion, and then tries to behave in the same manner. An example of the way this works is offered by Jerome Kagan (1969):

A child learns sex-role standards the way he [sic] has learned that certain objects are called boys and men; others girls and women. He learns the definition by noting what they do, how they look, and what they wear, and by listening and watching as others discuss the sexes. The categorization of human beings into the two sexes, usually in place by two-and-a-half years, is one of the earliest conceptual classifications a child makes.

All three theories hold that much in the development of sex roles is learned behavior that starts at an early age. Most authorities believe that these theories highlight three important aspects of sex-role learning, although no one theory covers them all. Sex-role identity is believed to be acquired by (1) the influence and imitation of role models (psychoanalytic), (2) the selective reinforcement of sex-appropriate behaviors (social learning), and (3) the conceptual understanding of masculine and feminine behaviors, followed by the conscious choice by the individual to conform to the appropriate roles (cognitive).

#### WHAT IS SEX-ROLE STEREOTYPING?

Stereotyping means attributing to a group the narrow characteristics of only a few. As a result of stereotyping, ethnic jokes, comments about dumb blondes, and ideas about football jocks exist. Sex-role stereotypes are transmitted through the socialization process, exposing males and females to myopic concepts of masculinity and femininity. The results may be quite damaging for individuals.

For example, if a person has several male friends who are good at fixing cars and generalizes this talent to all males, trouble can develop. This person may become a ready victim for unethical mechanics, assuming that because they are males, they are capable of fixing cars well. The person may assume that his or her son should be able to fix machines, regardless of the son's interests. Assumptions about what people can or cannot do, based on what sex they are, are misleading and can have negative effects, especially where children are involved. Fortunately, many people have begun to realize that rigid sex-role stereotypes are dysfunctional in today's changing society.

HOME AND FAMILY

PARENTS AS SOCIALIZATION  
AGENTS

Parents have the first and probably most enduring effect in a child's life--they are the child's primary *socialization agents*. Parent/child interactions teach *gender identity* and reinforce *sex-appropriate behaviors*. Parents, determining the content of the child's environment exclusively for the first five years, often have the most significant continuing impact on the child's self-expectations.

Parents and family members set the stage for socialization. Culturally shaped behavioral norms are established even before a child is born. In most cultures, male offspring are more valued for reasons such as the continuance of the family name and the economic status associated with the provider role. Parental expectations regarding future roles--becoming a doctor, farmworker, homemaker, or carrying on the family business--govern parent/child interactions.

Concerning sex-role socialization, one researcher, Ellen Mintz, has stated that the extent to which parents teach stereotyped sex roles depends on their own concept of "masculine" and "feminine" qualities and behaviors. Narrow and rigid definitions of masculine and feminine will limit children's experience--they will see and imitate only these narrow roles. Parents will selectively reinforce the kinds of behaviors which they consider appropriate.

Reinforcement  
of Sex Roles

An infant's room typically contains many subtle cues to the child's gender identity. The selection of pink or blue gives the family members and others ideas about how they should act with the baby. Infant boys are tossed in the air and played with actively, while infant girls are more likely to be pampered or treated gently.

Michael Lewis (1972) found that both mothers and fathers respond to boy infants in one way and girl infants in another. He has found that mothers talk to and look at infant girls more than boys, but touch boys more often up to six months of age. However, by 13 months of age, boys play more independently than girls and have less physical contact with their mothers. Lewis related these findings to the differing cultural expectations for males and females. He concludes the following:

The motive [for differential interaction between mothers and infants] appears to be cultural; mothers believe that boys should be more independent than girls and that they should be encouraged to explore and master their world.

Parents may structure activities so that males and females in the family learn to fit traditional "male" and "female" roles and learn only sex-stereotyped skills. For example, requiring an older sister to tend younger children while males are assigned yard work reinforces traditional male/female division of tasks in the home, and limits both male development of nurturing behaviors and female development of strength and stamina. Punishing "brother" for hitting "sister" and dismissing "sister's" behavior when she hits him back reinforce the idea that males should protect females. Other examples of differential activities promoted by parents include praising a son for his competition and achievement in sports and encouraging daughters to be involved in dancing or skating, relatively non-competitive sports.

#### Toys and Games

The choice of toys and activities plays a large part in the reinforcement of traditional sex-typed roles. Concerning the types of toys available, a report by Ms. Magazine found the following (Porgrebin, 1975):

- "Masculine" toys are more varied and expensive, and are viewed as relatively complex, active, and social.
- "Neutral" toys are viewed as most creative and educational, with boys receiving the most intricate items.
- "Feminine" toys are seen as most simple, passive, and solitary.

Stereotypical social values are at work in the production of sex-typed toys. Values and skills taught by "masculine" toys encourage males to solve complex problems and play at active roles of truck driver, fire fighter, or pilot. Females are most often taught skills in cooking and mothering--caring for baby dolls, washing clothes, or dressing fashion dolls. The only imaginative toys for girls are crafts. Toys obviously teach and reflect stereotypical adult roles and behaviors and have some relationship to cognitive development.

Role Models  
In the Home

Children learn much about male and female roles, responsibilities, and relationships from observing significant role models, chiefly parents. Identification with the parent of the same sex and her or his feelings about the marriage relationship may influence an offspring's concept of the ideal relationship and partner. Children also learn how to be parents from these early experiences.

Some studies have shown that girls learn more about their roles than boys do. This is probably because mothers usually spend more time in the home and are more involved in child care and household chores than fathers. Girls who are raised by mothers who do not work full-time outside the home are more aware of the female roles. Boys, on the other hand, do not get the same picture of their fathers' daily activities.

Evidence indicates that boys experience more anxiety in conforming to their sex role than girls do. This appears to be a result of the absence or near absence of male role models in the home. This anxiety is partially due to the lower tolerance of "unmasculine" behaviors in boys than of "unfeminine" or tomboyish behaviors in girls. Hartley, an expert in sex-role socialization, has noted that boys are expected to conform to social notions of what is "manly" very early, and that their conformance is reinforced much more vigorously than girls' conformance to sex-role stereotypes. In fact, a little boy's conformance may be reinforced quite harshly, impressing him with the danger of deviating from his sex role before he fully understands what it is.

Because young boys lack male role models in the home, clear ideas of how to behave must be inferred and observed from the media, peers, and/or siblings. In the media, particularly television, these images are often distorted and emphasize physical strength, aggression, and lack of care for others. Even educational programs such as "Sesame Street" portray stereotypical images of females and males. The effect of all these television models has been well documented in recent years. Children also imitate older siblings of the same sex and are reinforced vicariously by observing disciplinary actions that result from sibling or peer behaviors.

SUMMARY

Males are rarely given the opportunity to observe fathers in parenting and nurturant roles. Few men spend more than an occasional hour in the evening and an afternoon on the weekends with their children. The stereotype has been that fathers should be primarily concerned with providing financial

security for the family and serve as the authority in the home. Mothers, on the other hand, are the ones who teach, guide, nurture, and support children, in addition to numerous other tasks. Thus, nurturance is seen as a feminine quality and is a behavior discouraged in boys. (A good source of additional information on this subject is David and Brannon's *The Forty-nine Percent Majority: The Male Sex Role.*)

## EDUCATION

### DIFFERENTIAL TREATMENT

Young people spend a large chunk of their lives in educational institutions. Schools, reflecting the values of society, play a major role in transmitting standards of behavior to males and females. The dynamics of differential treatment of the sexes are complex and subtle, while the results of this treatment are easier to identify. Traditional social norms stereotype males as aggressive, able to solve problems, independent, and capable of career success, while females are seen as passive, dependent, emotional, and having career aspirations that center on homemaking and marriage. Differing academic achievement is documented in the following:

Results from National Assessment of Educational Progress (NAEP) assessments in eight learning areas show that males generally do better than females in four major subjects: mathematics, science, social studies and citizenship. In the four other learning areas, females consistently outperform males to any large degree in only one (writing); maintain a slight advantage in one (music); and in the remaining two subjects (reading and literature) are above male achievement levels at age 9, then drop to lag behind males by the young adult ages 26-35. (National Assessment of Educational Progress, 1975)

Maccoby and Jacklin (1974), in their research on the psychology of sex differences, have found that, intellectually, girls start off ahead of boys. They begin speaking, reading, and counting sooner; in the early grades, they are also better in math. However, during the high school years, a different pattern emerges and girls' performance on ability tests begins to decline. Indeed, male students exhibit significantly more IQ gain from adolescence to adulthood than their female counterparts do.

Research has found differences in intellectual functioning but has not documented any "innate" biological reasons for differing cognitive achievements. Thus, psychologists and educators are looking to cultural and environmental determinants. The following sections will identify some significant areas and behaviors within the school environment that influence, shape, and often limit potential.

ORGANIZATIONAL  
STRUCTURE AND  
ROLE MODELS

For young people, their reality is what they see. Children, when questioned as to whether a woman can be a doctor or a man a nurse, often respond, "No, because I've never seen one." Role models are significant to a child's reality. The absence of role models can limit aspirations, while the availability of role models can expand aspirations and perceptions.

The structure and organization of schools and school systems, as in other institutions, illustrate an imbalance of males and females in various levels of the hierarchy. Men dominate administrative and policymaking positions, while women are concentrated in elementary classrooms. In elementary schools, while 83 percent of the instructional staff are females, only 14 percent of all elementary principals are women. At the secondary level, these figures are 49 percent of instructional staff and 2 percent of principals. Fifty years ago, over half of school principals in the U.S. were women (Coursen, 1975).

In higher education, 79 percent of the administrative positions at the institutions surveyed by the Ford Foundation were held by white men; white women held 14 percent, minority men held 5 percent, and minority women held less than 2 percent. Students see who is the leader. Boys do not have the opportunity to have a male kindergarten teacher as a role model and girls do not see a woman in a leadership role. Females in decision-making roles and males in nurturant roles are currently few in number in our schools.

CURRICULUM

The instructional program is another factor that inadvertently limits human potential. Examples of this are as follows: course titles that appeal only to males or to females; athletic programs with unequal funding and limited participation; and subject areas that do not integrate the contributions of women and minorities. Furthermore, career and vocational education programs are traditionally based. They have not assisted students to prepare for adult roles by offering guidance and exposure to non-traditional employment opportunity. Activities, classroom tasks and responsibilities, dress

codes, leadership positions, and instructional groupings are frequently divided on the basis of sex rather than some other criterion. These practices limit opportunity, aspirations, and skill development. School personnel and guidance programs can also inadvertently provide unequal treatment regarding behavior, course selection, and career planning.

*Instructional materials* such as textbooks, testing instruments, TV, and other media are contributors to sexism. They reinforce stereotypes by limiting roles and personality characteristics on the basis of the American Dream, which envisions the male worker, the female full-time homemaker. In actuality, almost half the work force is female, half of married women work, and more and more men are venturing into the homemaker role, at least part-time. The reality and complexity of the culture are not portrayed by these restricted images, which narrow rather than expand student experience and thought processes.

Schools often unknowingly reinforce stereotyped notions of sex-role behavior through the *physical environment*. Displays, trophy cases, bulletin boards, symbols and pictures within the school and classroom environment also communicate differential expectations. The exclusion of one sex in visuals or language discourages the participation of the excluded sex.

#### TEACHER EXPECTATIONS AND BEHAVIORS

Teachers are a very influential factor in a student's achievement and aspiration. Teachers most likely find the behaviors they expect. There is a significant interrelationship between expectation and behavior. The experimenter's (or teacher's) initial hypothesis enormously influences both the experiment's participants and the experiment's results. (The leading researchers in this area were Rosenthal and his colleagues in the late 1960s.)

In 1969, Rosenthal and Jacobson extended their laboratory research in "self-fulfilling prophecies" to a real classroom situation. They tested a group of elementary students and told the teachers that certain of those students "showed great promise." In reality, those students named had been selected at random. The experimenters then retested the students at the end of the year. Those students identified as "promising" showed real and dramatic increases in their IQs as compared with the rest of the students. Certain aspects of the teacher's behavior had affected these "brighter" students.

Since this research, there have been several efforts to determine exactly which behaviors convey these differential expectations. Research has now

identified a series of adult verbal and non-verbal interactions that affect student achievement, aspiration, and self-image. These teacher behaviors, identified by Equal Opportunity in the Classroom, a federally funded teacher-training program, are as follows:

- Equal distribution of response opportunities (frequency with which teacher calls on students to recite or perform)
- Affirmation or correction of student's performance
- Physical proximity of and to student
- Individual help from teacher
- Praise and reasons for praise of learning performance
- Personal interest and compliments by teacher
- Latency--time teacher provides between questions and answers
- Attentive listening to student
- Physical contact with student (arm or shoulder)
- Deiving (providing clues) and higher-level questions to help students respond to questions
- Accepting or clarifying students' feelings
- Desisting--correcting behavior in a calm, courteous manner
- Expression of courtesy and respect in interaction with student

Sex-Differentiated  
Behaviors

Most of the above categories were arrived at through research showing differences in teacher interactions with high and low achievers, but these differences also are significant in teachers' differential behavior toward males and females. A detailed analysis by Lisa Serbin and her colleagues of teacher behavior in preschool classes has demonstrated that: (1) Teachers paid more attention to boys than to girls, regardless of whether the boys were misbehaving. (2) When boys asked questions, the teachers gave

longer and more detailed answers and directions than they gave girls. (3) Teachers gave boys directions for doing things on their own, but more often than not they showed girls what to do instead of letting them do it on their own. (4) Girls are more likely to get positive reinforcement, pats on the head, and other affection-rewards from their teachers if they stand close to their teachers or behave dependently, while boys are as likely to get positive reinforcement from their teachers if they are close by or far away (Serbin et al., 1973). (5) Girls are more likely to stay with their teachers, and teachers are most likely to be in the areas of "fine motor skill" activities. If teachers do move to other activity areas (e.g., block areas, outside equipment areas), girls go to these areas. (6) There are correlations between the types of toys a child plays with and the child's later cognitive abilities (Connor and Serbin, 1979).

The teachers reported that they were completely unaware of rewarding boys for independence and activity while discouraging these behaviors in girls. Differing expectations manifested themselves in unconscious behaviors, verbal and non-verbal (smiles, a nod of the head, longer eye contact, pats on the head, etc.), which transmitted stereotyped messages to the students about how they should behave.

Specific Teacher Behaviors

Some researchers, Dweck and her colleagues in particular (Dweck and Gillard, 1975), have attempted to find out what specific behaviors in elementary school students elicit positive and negative feedback from teachers. They found different eliciting behaviors for the sexes. Boys receive most of their negative feedback or criticism for non-academic behavior--not sitting in their seats, making noise, etc. However, the positive feedback boys receive is most likely given for their academic work. For girls, the reverse pattern has been found. When a girl is given negative feedback, it is most likely for academic work. Girls receive positive feedback largely for non-academic tasks--having their work neat, being quiet, etc. Dweck has found evidence that if someone has received largely negative feedback, a failure experience will make the individual give up.

This has been called "learned helplessness." According to several studies, girls give up more easily after academic failure than boys, but if positive feedback for academic work is experimentally substituted, the learned helplessness can be eliminated.

It should be noted here that all of the above research has been done with female teachers, and there is no information as yet on whether male teachers treat students differently on the basis of gender. There are also no data to pinpoint the causes of teachers' differential behavior toward males and females. The research does, however, validate the profound effect of subtle differential behaviors: "Teachers who are aware of the circular sex differences/sex-differential reinforcement pattern can intervene and can stimulate each individual student to his/her fullest intellectual, social and physical potential" (Sargent, 1977, p. 408).

## **SEX DIFFERENCES IN EDUCATION**

by Carol Nagy Jacklin, Stanford University

Adapted from materials developed by the Resource Center on Sex Roles in Education

### **INTRODUCTION**

Do boys and girls differ in ways that are important to their education? If so, what are the causes of the differences? Should education be geared differently for boys and girls in order to achieve equality of education? Do teachers treat boys and girls differently? And if they do, is it because the children act differently, thus bringing out different responses from the teachers?

In the following paper I will review research relevant to these and related questions which bear on sex differences in education. In some areas much research has been done and our conclusions can be relatively firm. In other areas we will find very little research has been done and we will only be able to speculate about these questions.

**CAUTIONS** In all of the research, however, there are some general shortcomings that we must keep in mind: (1) All the discussion about sex differences focuses on average differences between males and females. There is always very much overlap between the sexes. (2) Most of the studies have been done on white middle-class American children. Therefore, many of our conclusions may not be generalizable further than that group. (3) The subtlest methodological problem is a bias in the research toward finding differences. In the social sciences, if you do not find a difference between groups, you usually can't publish your findings. Thus a researcher who finds a difference between boys and girls will have an easier time publishing the results than the same researcher when a difference is not found. If findings of no differences (or

null findings) are published, they are usually a part of a larger study which found some group differences in another area. Null findings are thus difficult to locate even when they are in the literature. The null findings thus don't get into the titles or abstracts of papers and are not indexed. (4) After determining that some ability or behavior is a sex difference, we must then inquire into the reason or cause of that sex difference. It is easy to assume (and absolutely wrong to) that if we find a sex difference we have found an unlearned (or natural or "innate") difference. Again, the cause must be inquired into separately from the question of whether a difference exists. (For further discussion of these and other methodological problems in sex-differences research, see Maccoby and Jacklin, 1974, Chapter 1.)

Keeping all of these caveats in mind, we will now review the materials on sex differences related to education. The following review has two parts. In Part I we will consider intellectual sex differences and discuss some of the current research into the causes of these differences. In Part II we will consider sex differences in social behavior.

#### PART I. INTELLECTUAL SEX DIFFERENCES<sup>1</sup>

There seem to be two intellectual sex differences: (1) verbal abilities and (2) spatial visualization.

##### VERBAL

Girls get higher average scores on tests of verbal ability starting in about the junior high school years. These tests measure a variety of verbal skills, depending on the ages tested. Both boys' and girls' verbal abilities improve throughout high school, but girls' rate of improvement seems to be somewhat higher than boys'. These average differences are quite small. At the upper levels of test scores, there do not seem to be very different numbers of boys and girls, but at the lower levels of test scores, there seem to be more boys than girls (see Maccoby and Jacklin, 1974, for a detailed review).

##### SPATIAL VISUALIZATION

Boys get higher average scores on tests of spatial visualization, again starting in about the junior high school years. These tests measure the ability to rotate objects of two and three dimensions mentally. This ability increases in both boys and girls throughout the high school years, but

boys' rates of increase are higher than girls'. The average differences in spatial visualization are larger than the average differences in verbal abilities.

### The Role of Math

Unlike verbal abilities, spatial visualization is not directly taught in the schools. There is evidence that spatial abilities can be directly and quickly taught. Spatial visualization seems to be learned indirectly in some courses (e.g., mathematics and drafting). One study (Fenema and Sherman, 1976) showed that sex differences in spatial abilities disappeared when the number of math courses taken by students was equated. (Boys take more math courses than girls.) The relationship between mathematical abilities and spatial visualization is not yet clear. Math teachers vary in the amount of verbal or visual instructions that they give. The textbooks used in mathematics and the tests of mathematical ability and achievement are also variable on this dimension.

### Pitfalls of Measurement

Unfortunately, tests of many other intellectual abilities are usually either verbal tests or involve spatial visualization skills. Thus there are many intellectual abilities which are not sex differences, but the tests used in their measurement seem to produce a sex difference. For example, memory does not differ in boys and girls. But if what children are asked to remember are verbal materials, as is often the case, a sex difference favoring girls may be found. Similarly, analytic ability does not differ between the sexes. But if a test is used which is composed of visual-spatial items, a sex difference favoring boys will be found. Statistical methods can be used to "partial out" the effects of verbal or spatial abilities, in which case no sex differences are found. The same pitfalls of measurement exist in testing for creativity and learning. For both abilities, tests can be devised that would show sex differences, but the differences disappear if the verbal or spatial visualization sex differences are first equated.

### POSSIBLE CAUSES

What is known of the causes of the sex differences in verbal and visual-spatial ability? Several possible social and biological causes have been suggested. I will here only briefly list areas of study that have been suggested as contributing to the sex differences. These are treated in detail in Maccoby and Jacklin, 1974. More recent references are given below.

1. Experience with toys (Serbin and Connor, 1979).
2. Socialization by teachers.
3. Socialization by peers. Just when intellectual sex differences appear (junior and senior high school age), peer pressure for sex-appropriate behaviors intensifies.
4. Genetic sex linkage. The relationship of parents' and children's scores on spatial ability tests had suggested a possible sex-linked genetic factor. However, more recent data (and re-evaluation of the older data) have not supported this position.
5. Differential brain organization--laterality differences. When one side of the brain solves problems more quickly (or more accurately) than the other side, the brain is said to be "lateralized" for that type of problem. There are sex differences in brain laterality. These differences have not been directly related to cognitive sex differences, but this is an active area of research.
6. Maturity rate. How quickly or slowly children mature may be related to their cognitive abilities, though psychologists have thus far been unsuccessful in making this link. Other work has also considered maturity rate as it affects brain laterality.
7. Hormones and cognitive ability. At puberty, hormone differences between the sexes increase. Some researchers have tried to relate hormones and cognitive abilities.

#### FEAR OF SUCCESS

One alleged sex difference related to intellectual abilities is achievement motivation. Some years ago "fear of success" was said to have been found in college women but not college men. Fear of success was measured by a projective test. Women and girls were asked to write a story following the first line "Anne was [at] the top of her medical school class." Men and boys were asked to write a story which started "John was [at] the top of his medical school class." It is true that women said terrible things happened to Anne and men said wonderful things happened to John. However, notice that different tests were given to women and men. More recently both the "Anne" and "John" stories have been given to women and men. Both men and women say that Anne has a hard time and John has an easy time. Thus,

there are no sex differences but there are sex of story or "Sex of Stimuli" findings. The top of a medical school class who is female probably does have greater social pressures than a male. The sex of stimuli findings may reflect the real world today. One further problem with projective tests of "fear of success" is they have not been shown to relate to achievement behavior such as applying to graduate schools or medical schools. (For references and a further discussion see Maccoby and Jacklin, 1974.)

## PART II. SOCIAL BEHAVIOR

### AGGRESSION

The clearest sex difference in social behavior is aggression. Boys and men are more aggressive than girls and women. We mean by aggression the intent to hurt another. (Assertion is not the same as aggression. Assertion implies standing up for one's own rights, but not intending to hurt another.) How aggression is measured depends on the age of the subjects. In nursery-age children, aggression is usually very direct and physical, and thus easily measured. As children get older, verbal aggression becomes more common and physical aggression becomes less common. In girls there tends to be more verbal than physical aggression. In boys there tends to be more physical than verbal aggression. But these patterns are differential patterns *within* sex. When either verbal or physical aggression is compared between the sexes, males are more aggressive than females.

Why is this true? We know that aggression can be learned, and we know that there are strong differences in how much aggression is allowed within different cultures (and subcultures). Still, when research is done in other cultures we find males showing more aggression than females. In animal studies aggression has been linked to hormones. Greater amounts of the male hormone testosterone produce more aggression in male and female rodents and primates. However, we also know from animal studies that the male hormone testosterone (and probably other hormones as well) are themselves changed when primates have "success" or "failure" experiences. The relation of hormones to behavior and behavior to hormones is an active area of research (see Maccoby and Jacklin, 1974, for a review).

In school-age children, one area of research related to aggression is cooperation and competition. Whether boys or girls are more cooperative or competitive seems to depend upon the situation and/or culture. Some competitive situations have elements of aggression, but others do not. We cannot conclude that boys or girls are more cooperative or competitive.

**DOMINANCE**

A second related area of research is dominance behavior. "Toughness" hierarchies tend to develop in the early grades so that boys and girls can reliably tell you which kids are "tougher" than which others. But these hierarchies are mostly composed of boys. Hierarchies may grow out of different size play groups of boys and girls. Boys are more likely to play in larger groups than girls. In nursery school children without prior school experience, boys tend to play in groups of five, on the average, while girls tend to play in groups of two or three. These group experiences may have different effects. In groups, dominance hierarchies tend to develop. One possible precursor to the group-size phenomenon is whether the children are playing indoors or outdoors. This may in turn be subtly related to teacher behavior.

The relation of dominance behavior, hierarchies, and aggression is not well understood. We can conclude there is a reliable sex difference in this area, but we have only the beginnings of clues as to its development.

**SOCIABILITY AND  
BEHAVIOR**

Many other social behaviors do not show sex differences. (A fuller discussion with references can be found in Maccoby and Jacklin, 1974.) For example, consider sociability. It is widely believed that girls are somehow more social than boys, but there is no evidence that this is true. In very young infants, both boys and girls are more interested in social stimuli than nonsocial stimuli. Both boys and girls can identify and care about the feelings of others. Sharing behavior and helping behavior are similar in males and females. There are some "sex of stimuli" differences. That is, males and females are both more likely to help a female than a male. (These effects are more pronounced in adults than in children.) It may be the case that girls are more willing to comply with adult requests than boys, but boys are more willing to comply with peer requests than girls. But although there are small differences in patterns, both sexes are social.

**FEAR AND TIMIDITY**

There are some social behaviors that may or may not be sex differences. Fear and timidity are examples. When very young children are observed in frightening situations, few sex differences emerge. Some are fearful and others are not, but knowing the sex of the child does not help one to predict how timid the child is. When older children are given pencil and paper tests, asking them what they are afraid of, girls check off more things than boys. However, if lie scales are included in these tests (sometimes called "defensiveness" tests) boys score higher on the lie

scales. In adults, too, women score higher on fear and anxiety questionnaires and men score higher on defensiveness scales. Both men and women say that women are more fearful, but observational studies do not find differences in behavior. What people say about themselves is called "self-attribution" or "self-perception" in psychology. How you perceive yourself may have a powerful effect even if your behaviors don't match your perceptions (see Bem and Bem, 1970, for a further discussion). In short, we cannot yet conclude whether fear and timidity are or are not sex differences. And we are left with aggression and dominance as the only clear sex differences in social behavior.

#### SUMMARY AND CONCLUSIONS

There are, then, some sex differences in behavior that are relevant to education. There are many more abilities and attributes on which the sexes do not differ. The differences: verbal and spatial visualization abilities and aggression-dominance are average differences and there is much overlap between the sexes. We know these differences have many origins. Many social and possibly many biological factors are involved. Much more work needs to be done before we can pinpoint the developmental course of these differences.

There are many other areas of active research in which we still do not have answers. We don't yet know precisely how to change mathematics teaching, or if spatial visualization remedial courses should be given. We don't yet know precisely how to change teachers' own awareness of their behaviors toward boys and girls. But we must continue to learn as much as we can and to implement our knowledge as fast as we can, so that equality of education will become more than a law. Equality of education must become a reality.

#### NOTES

<sup>1</sup>There is an additional methodological problem in using test results from the school systems. Boys and girls drop out of school at different rates, and for different reasons. In general, more boys drop out of junior high school and high school, and low-scoring boys are more likely to drop out than high-scoring boys. If this fact isn't taken into account, unfair comparisons are made between boys and girls, since all of the girls will be

compared with an increasingly smarter (and smaller) group of boys. (Differential dropout rate can be corrected by the use of longitudinal data, but many studies have not taken this problem into account.)

## READING 4

# BIOLOGICAL ASPECTS OF SEX DIFFERENCES

This Reading was prepared by Resources for Non-Sexist Environments, a federally funded WEEA project, to accompany EXPANDING OPTIONS, sex equity workshops for school communities, K-12.

## INTRODUCTION

The biological aspects of sex differences pertain to physical distinctions in body processes (function) and body structure (composition) between males and females. The major source of clinical and experimental data in this area is by John Money and Anke Ehrhardt (1972). Money, Ehrhardt, and other associates at Johns Hopkins University consider a multidisciplinary approach to gender identity and focus on the *interaction of both heredity and environment*. Research in this area is inconclusive at present, yet offers a foundation from which more definitive data can be obtained and explored.

## BIOLOGICAL BASICS

Money identifies the following as biological constants reflecting basic sex differences in function:

<u>Women</u>	<u>Men</u>
Menstruate	Impregnate
Gestate	
Lactate	

In addition there are other types of structural differences, which are described below.

A normal human has 23 pairs of chromosomes in each cell of the body, with one of the 23 pairs being the sex-chromosome pair. In the female, the sex-chromosome pair consists of two X chromosomes (XX). In the male, the sex-chromosome pair is XY. The egg and sperm each carry half of the normal

number of chromosomes, with the egg always carrying an X chromosome and the sperm carrying either an X or a Y chromosome. It is the sperm, with its X or Y chromosome, that determines the makeup of the sex-chromosome pair, and therefore the sex of the child.

### X and Y Chromosomes

Genes, which determine characteristics to be inherited, are located on all chromosomes. Certain genes are known to be carried on the sex chromosomes, resulting in sex-linked traits. Color blindness is the most common sex-linked human trait and is due to a recessive gene which is contained on the X chromosome. In a male, when this gene or another, such as the hemophilia gene, is found on the X chromosome, there is no corresponding normal gene on the Y chromosome that would be dominant over the "defective" gene. This results in the high incidence of red-green color blindness and hemophilia among males as compared with females. However, females can have color blindness or hemophilia when a "defective" gene exists on both X chromosomes.

It is hypothesized that this differing chromosomal structure is one of the reasons that males are more susceptible to pre-, peri-, and postnatal difficulties. (See Life Expectancy, below.) However, this theory of hormones and sex differentiation is undergoing intensive scientific investigation.

### HORMONES

Current theory states that sex differentiation begins at conception with the dimorphism (two distinct forms) of the sex-determining chromosomes (X and Y). After approximately six weeks of gestation, different internal reproductive organs begin to develop. The reproductive system that develops (male or female) is determined by sex hormones. If androgen (male hormone) is released, the male system develops; if androgen is not released, the female system develops. The fetus will be female unless male hormones are present during this crucial stage. If the hormonal state of the fetus is disturbed during differentiation, sexual abnormalities in both appearance and behavior will result.

Puberty is another critical period. At this time, sex hormones establish sexual appearance and influence behavior. Until approximately thirteen years of age, plus or minus two years, the physical appearance of boys and girls, aside from differences in sex organs, remains relatively stable and similar. At puberty, hormones are released that cause the production of

testosterone (male sex hormone) and estrogen (female hormone), which produce secondary sex characteristics.

Are hormones alone responsible for sex differentiation in behavior? Research evidence with animals and humans suggests that genes and hormones establish only a predisposition toward a particular sex identity prior to birth, which in turn is subject to later modification through learning. For further elaboration, refer to Money and Ehrhardt (1972).

Both males and females secrete the entire spectrum of steroid hormones. Males have higher levels of androgens (testosterone) and lower estrogen levels than females, yet both require androgens for a normal sex drive. Differences in hormonal levels at critical developmental periods are what affect later sexual appearance and behavior.

#### Premenstrual Tension

It has long been thought that premenstrual tension in women (physical and emotional) is inevitable, as a result of hormonal changes. This has not been found to be a constant, since some women experience discomfort while others do not. Cross-cultural studies further discount the notion that hormonal activity results in premenstrual tension. Cultural beliefs play a vital role in shaping consequent behaviors and reactions.

#### LIFE EXPECTANCY

There are approximately 105 male babies conceived for every 100 females. In the population at large there are today approximately 95 males for every 100 females.

From birth on, the rate of attrition is significantly higher for males. There are approximately 115 male fetal deaths for every 100 female deaths. At nearly every age level, from birth to death, the male mortality rate is significantly higher. Specifically, from birth to age 1 the male death rate is 33 percent higher; from age 20 to 24, the male death rate is more than 200 percent higher. After that, the male death rate is about 100 percent higher, or twice as high as that of females. In 1920, the female life expectancy was only one year higher than that for males. Today, the difference is almost eight years, and is increasing.

**OTHER PHYSICAL  
DIFFERENCES**

Females have more fat and less water in their bodies than males; males have more muscle tissue than females. Skeletal differences exist: males have wider shoulders, while females have broader hips.

Prior to adolescence males and females are similar in strength and size, but after adolescence males are stronger and taller. Males have a lower resting heart rate, higher systolic blood pressure, larger muscles, a greater capacity for carrying oxygen in the blood, larger heart and lungs (related to body size), and a greater capacity for neutralizing the chemical products of muscular exercise, such as lactic acid.

Growth patterns also differ, as female physical growth is less variable than that of males. The range of growth in a group of females at a specific age is narrower than the range in a group of males. On the average, females reach puberty two years earlier.

**THE IMPACT OF  
SOCIALIZATION**

Perhaps the most dramatic study reported by Money and Ehrhardt (1972) is the "Twin Study of Sex Reassignment." At age 7 months, one infant twin boy's penis was burned off accidentally during circumcision. Doctors advised sex reassignment, which included genital reconstruction surgery, hormone replacement therapy, and professional guidance for the family. The parents began socializing the child as a daughter (dress, handling, name, reinforcement of sex-appropriate behaviors and interests, etc.). Six years later the girl (a boy at birth) behaved as a girl, and was not at all confused as to her sexual identity. The parents commented on the differences in their own behavior as well as their twin son's toward the daughter.

This study, as well as cases of hermaphroditism (a congenital condition in which the sex of the individual is not clearly differentiated as exclusively male or female) that involve changes in announced sex, illustrates the impact of early socialization on the child. Social factors such as the sex to which the child is assigned and reared can substantially modify biological predispositions. Children behave as they have been taught and reinforced to behave by those primarily responsible for daily confirmation of identity.

Money and Ehrhardt postulate that clear limits of masculine and feminine gender roles are important to enable the child to differentiate gender identity. After 18 months, it becomes increasingly difficult to change gender identity, which is established through learning via social

130

Interaction and through differing expectations regarding male and female play, dress, and discipline.

Refer to the Reading "Sex Roles and the Socialization Process" for elaboration on the socializing factors affecting personality development and behavior.

## **PSYCHOLOGICAL ASPECTS OF SEX DIFFERENCES**

This Reading was prepared by Resources for Non-Sexist Environments, a federally funded WEEA project, to accompany EXPANDING OPTIONS, sex equity workshops for school communities, K-12.

### **INTRODUCTION**

Psychology deals with such concepts as the mind, libido, ego and other emotional/mental constructs. These are inferred rather than observed structures and processes, hence open to dispute by those with differing theoretical orientations. The term "psychology," as used here, refers to behavior that is observable, and consequently available for testing validation. Causes of behavior can only be hypothesized at present, since research studies are often inconclusive and/or contradictory.

Research data and discussion deal with average differences between males and females. Each gender is treated as a generalized whole. Yet data show that there is always more variance *within* the groups of females and of males than exists *between* the average male and female.

In order to determine the realities of psychological sex differences, MacCoby and Jacklin (1974) spent three years compiling, reviewing and interpreting over 1,400 research studies published since 1965. The result of their work showed only four behaviors that were consistently different for males and females:

- Males demonstrated more aggressive behavior.
- Males performed better at visual-spatial tasks.

- Males excelled in mathematical ability.
- Females showed earlier verbal facility and demonstrated greater verbal ability.

Although these significant psychological differences exist, it is yet to be determined whether they are innate or learned. Furthermore, it must be remembered that psychological research is biased toward finding differences. Null findings are not often published.

#### AGGRESSION

Maccoby and Jacklin found that males were more aggressive, both physically and verbally, in all cultures where aggressive behavior had been observed. This sex difference is seen as soon as social play begins, at age two or two and a half. The primary recipients of male aggression are other males, rather than females.

#### Female Aggression

Although males do demonstrate more aggressive behavior, we do not know the reason, so the question is raised: How much of this is an innate sex difference and how much is learned? A study by Bandura at Stanford University (1965) used incentive reinforcement of aggression. The only significant finding was that there was an increase in girls' aggression when girls were positively reinforced for demonstrating observed aggressive behavior. Bandura interprets the results as demonstrating that girls know the behavior of boys, can and have learned it, and do not practice it for fear of punishment.

#### Aggression and Hormones

Aggression may also have a hormonal component. Various research studies have shown that experience affects certain hormones. In one study with monkeys, when the monkeys were given "success experiences," their testosterone levels increased, and when given failure, the levels decreased. This study demonstrated that experience (success and failure) can affect hormone levels, at least in monkeys.

#### NURTURANCE

The commonly held belief that females are innately more nurturing than males has not been documented definitively. Nurturance as a sex difference is as yet unconfirmed.

135

Reported evidence regarding nurturing behavior is inconclusive. Norma McCoy (1977) states that in most subhuman primates, as well as cross-culturally in humans, females demonstrate more nurturance than males. Yet Maccoby and Jacklin found no differences among white, middle-class Americans. Could the difference cited by Norma McCoy be the result of gestation and lactation, biologically placing the female in the primary nurturing role for the young child?

#### INTELLECTUAL ABILITIES

In childhood, males and females have similar visual-spatial, verbal, and mathematical abilities. At about age 11 or 12, differences begin to develop, with males demonstrating greater ability at visual-spatial and mathematical tasks and females showing greater verbal ability. There is little definitive evidence available from which to make conclusions as to the processes involved or from which to identify influencing factors.

#### MENTAL HEALTH

A study done by Broverman, Broverman, and Clarkson at Worcester State Hospital (1970) demonstrated a double standard in criteria for mental health as defined by mental health professionals. These included males and females from the fields of psychiatry, psychology, and social work.

Subjects in this study were asked to participate in a project to identify criteria for mental health. Three groups were formed with equal numbers of male and female subjects representing the various mental health disciplines. Each group was given the same 122-item list of bipolar adjectives (e.g., very aggressive, not at all aggressive) and asked to choose 20 adjectives to describe the concept assigned to that group. Each group thought that the same concept was being described by the other groups. However, each group rated a different concept:

- Group 1 described a healthy, mature, socially competent *adult* (sex unspecified).
- Group 2 described a healthy, mature, socially competent *man*.
- Group 3 described a healthy, mature, socially competent *woman*.

The findings demonstrated a positive correlation between the concepts of healthy adult and healthy male, and a negative correlation between the

concepts of healthy adult and healthy female. In summary, healthy males were described as healthy adults, and healthy females were not.

### Double Standard

What does this double standard mean? Are healthy women expected to behave as adults or as stereotypically passive, dependent people? Are healthy men and adults to be primarily aggressive and independent? Is this concept of a "healthy adult" and "healthy man" a realistic goal to strive for, or does it suggest an adjustment to existing sex roles rather than toward maximum realization of individual potentials? This study provides evidence that mental health professionals do accept and probably unintentionally re-inforce sex-role stereotypes, perhaps to the disservice of their clients, female and male.

### Symptoms of Psychological Distress

A study published in 1970 by the U.S. Department of Health, Education and Welfare, *Selected Symptoms of Psychological Distress*, substantiates an earlier study by the Joint Commission on Mental Health and Illness. The results reported can be summarized as follows for nonhospitalized American adults: greater distress with life and corresponding symptoms are reported by women than by men, with more women being diagnosed as neurotic. Other studies report that women received psychotherapeutic services in greater numbers than men, both in- and out-patient, at private and public facilities. Society apparently expects women to seek professional help with life's problems. Does this reinforce the stereotype of the female as maintaining her dependence on a benefactor (often male)? Are mental health professionals truly addressing the needs of the female or only perpetuating her helplessness?

### Differing Symptoms

Studies of childhood behavior problems show that boys are most often referred to child guidance clinics for aggressive, antisocial behavior, while girls are referred for personality problems such as fears, shyness, and feelings of inferiority. Boys are diagnosed as schizophrenic and learning disabled more frequently than girls. Psychiatric symptomatology for adults parallels childhood problems: men's symptoms are likely to be hostility toward others and pathological self-indulgence such as rape or drinking. Women's symptoms reflect self-critical and self-destructive sets of attitudes, e.g., depression, confusion, and self-depreciation.

Women Seek Care

If the number of physical and psychiatric illnesses is held constant for men and women, women are more likely to seek medical and psychiatric care. Given (1) the pressure on men to succeed, (2) societal sanctions against male displays of emotionality and weakness, (3) lower life expectancy and the greater number of male deaths at every age, (4) greater incidence among males of violence and antisocial behaviors resulting in legal action, is the male stereotype an effective mode of living?

PSYCHOLOGICAL  
ANDROGYNY

Perhaps our concept of mental health must be re-evaluated to ensure that our institutions foster and reinforce the maximization of each individual's potential. A new concept, psychological androgyny, has emerged in response to this need. Psychological androgyny means expanding the range of behaviors available to and acceptable for females and males (Bem, 1974). The origin of the word "androgyny" typifies this concept, "andr-" male, and "gyne" female. According to this concept, both females and males can share attributes formerly identified with one sex or the other:

- Male profile: Looks out for self.  
Gets things done.
- Female profile: Relates to other human beings (sensitive).  
Depends on others for emotional support.
- Androgynous profile: Any individual, male or female, who expresses the full range of human characteristics in the proportions desired or needed for individual actualization.

EXPLORING NEW AVENUES

Psychology and psychiatry have reinforced our sex-role stereotypes for almost a century, helping as well as hindering effective adaptation to life for both males and females, children and adults. Few facts have been gathered as to the "true" nature of females and males, since recent research has been able to indicate only observed behavioral end products, and not causes and/or processes. In recent years psychology and psychiatry have begun to question our long-held beliefs and expectations, exploring new avenues in dealing with life's problems. The information currently available ought to serve as an impetus toward re-evaluation for all of us.

## READING 6

### **HOW SEX ROLES CAN LIMIT**

This Reading was adapted by Resources for Non-Sexist Environments from materials prepared by Project Awareness.

#### INTRODUCTION

Sex roles limit males and females differently. The effects of the limitations vary in intensity, degree, and general area. Men and boys seem to be more limited in the area of the affective domain and in interpersonal relationships, whereas women and girls seem to experience greater limitations in the areas of academic achievement, career aspiration, and self-esteem.

This Reading is divided into two major sections: Academic and Career Limitations, and Personal and Social Limitations. The two areas are considered first with reference to males, then to females. The Reading is sex segregated so that the subtle, isolated instances can provide a comprehensive perspective. These key studies were drawn together in a list, meant to be representative rather than inclusive, to gain some sense of the growth that has been stunted and of the promise that has been denied.

#### ACADEMIC AND CAREER LIMITATIONS--MALES

- ACADEMIC
- At age six, when a boy enters first grade, he may be twelve months behind his female counterpart in developmental age, and by age nine this discrepancy has increased to eighteen months. Thus he is working side by side with a female who not only may be bigger than he, but who seems more competent to handle school (Bentzen, 1966).

- Among boys and girls of comparable IQ, *girls* are likely to receive higher grades. Also, boys who do as well as girls on achievement tests get *lower* grades in school. In fact, throughout elementary school, two-thirds of all grade repeaters are *boys* (Peltier, 1968).
- A study of 12,000 boys produced some interesting findings: the research correlated masculinity scores on the California Psychological Inventory with the students' school grades. It was found that the higher a boy scored on the masculine scale, the lower his report card average tended to be. The author of this study came to the conclusion that many schools and academies themselves must be dehumanizing and unmanly places. He suggested that boys who succeed in school must do so by violating many codes of honor and the norms of "boy culture."
- Boys drop out of school more often than girls, allegedly due to lack of interest and the desire for paid work. Girls reportedly leave due to personal reasons, e.g., marriage, illness, pregnancy (Fitzsimmons et al., 1969).
- Boys are the maladjusted, the low achievers, the truants, the delinquents, the inattentive, the rebellious. National delinquency rates are five times higher among boys than girls, and in New York City, 63 percent of all dropouts are boys.
- Boys receive nine to ten times as many prohibitory control messages (warnings like "That's enough talking, Bill," and "Put away that comic, Joe") as their female classmates. Moreover, when teachers criticize boys, they are more likely to use harsh or angry tones than when talking with girls about an equivalent misdemeanor.
- Boys perceived their teachers' feelings toward them to be less favorable than those toward girls, and teachers rated girls more favorably than boys on behavioral and personality characteristics (Davidson and Lang, 1960).
- In a study by Meyer and Thompson (1965), boys received more praise as well as more disapproval from their teachers than girls did.
- Some researchers have found that three times more boys than girls have trouble with reading (Frazier and Sadker, 1971).

- The male "physical striver" considers it masculine not to care what his teachers think. "Look how much I got away with" is far more masculine than an enthusiastic "Look how much I learned!" Reading difficulty itself is perpetuated by the fear of studying, and by the fear of appearing girlish (Farrell, 1974).

#### CAREER

- Our society offers a wide variety of potential careers for men, but there are some restrictions, especially for males who consider becoming nurses, dancers, secretaries, or teachers of very young children. They are obligated to absorb social criticism or change their decisions (Sadker, n.d.).
- Although acceptable career options for men are socially restricted, at least one characteristic of any acceptable occupation remains constant: It must pay well. The size of a man's paycheck is a measure of his worth and masculinity (Sadker, n.d.).
- Because of the pressure to earn, earn, earn, men often find themselves victims of the career lock-in. With the family's financial well-being totally in his hands, a man's decisions are no longer his own (Sadker, n.d.).
- The other side of the career lock-in is the leisure and retirement lock-out. Without work, men are without direction or purpose. The suicide rate for retired men is several times that of retired women (Sadker, n.d.).
- Almost nothing in the prefatherhood learning of males is oriented in any way to train them for parenting. They are actively discouraged as children from play activities involving baby surrogates, and, except in rare instances of large families with few or no older sisters, they are not usually required to help much in the daily care of younger siblings (Chafetz, 1974).

PERSONAL AND SOCIAL LIMITATIONS--MALES

MENTAL HEALTH

- Most boys build expectations that are higher than their achievements. Boys who score high on sex-appropriate behavior also score highest in anxiety. Striving to maintain a masculine role is stressful enough to be associated with manifested anxiety (Gray, 1957).
- It is common knowledge within the mental health profession that the incidence of schizophrenia (childhood and adult forms) for males is three to four times as high as that for females. In state and county mental hospital units for children, boys outnumber girls by approximately 50 percent. Under the age of 15, males are diagnosed as schizophrenics 42 percent more frequently than girls.

NURTURANCE AND INTERPERSONAL RELATIONSHIPS

- One of the first things an American male learns is to hide his emotions; indeed, the one proscriptive element of the male role concerns the injunction against being warm, open, tender, emotional, and vulnerable. "That's all right for women, but 'men' are not like that" (David and Brannon, 1976).
- Men suffer in their relationships with children. These relationships, already attenuated because of the father's involvement with work, have little closeness and intimacy. However, it is in men's relationships with each other that the proscription against having "feminine" feelings is most costly (David and Brannon, 1976).
- Elementary school pupils (9-12) were given the Elementary Form of Mental Health Analysis. Girls scored higher than boys on total assets (close personal relationships, interpersonal skills, social participation, satisfying work and recreation, adequate outlook and goals), and lower on total liabilities.

AGGRESSION

- Six volumes of studies document that violence in American society is taught, learned, and acted upon. Boys are actually encouraged by parents to be aggressive, while girls are not. Almost all television models encourage aggression in men. Childhood aggression predictably results in continued, undisguised aggression when boys become men (Farrell, 1974; Liebert, 1972).

- While everybody seems to know that men commit significantly more crimes, it is perhaps less well known that they are also significantly more likely to be the victims. Males are the victims of aggravated assault 14 percent more often than women; men are 104 percent more often the victims of burglary, 150 percent more often the victims of larceny, and 45 percent more often the victims of robbery. According to the 1972 *Uniform Crime Reports*, men were the victims of murder in approximately 80 percent of cases.
- When boys are referred for professional help, it is generally because of deviant behavior that externalizes hostility toward others or the environment (McIntyre, 1972).

#### CONFORMITY

- Demands that boys conform to social notions of what is manly are reinforced with much more vigor than similar attitudes with respect to girls. Several research studies, using preschool children as their subjects, indicate that boys are generally aware of what is suitably "masculine," and therefore carefully restrict their interests and activities accordingly, while girls amble gradually in the direction of "feminine" patterns for five more years.
- Expected behavior for young boys usually is communicated in terms of what not to do, rather than in terms of how they should behave. This occurs both at home and in the classroom. The damage of stereotyping may be as irreparable for the boy as for the girl. When boys learn stereotyped male behavior there is a 20 percent better chance that it will stay with them for life than when girls learn stereotyped behavior (Mussen, 1962).

#### ROLE MODELS

- Given the relative absence of male figures during his waking hours, the male toddler is hard pressed to find out what he is supposed to do. When the father is present, he often surpasses the mother in punishing the boy for being too "feminine." The boy finds out that "boys don't cry," "boys don't cling," and so on, but often on the basis of negative sanctions from parents and peers (Chafetz, 1974; Lynn, 1969).
- Because of the relative absence of fathers from boys' experience, the elementary-aged boy looks to his peers to fill in the gaps in his information about his role as a male. Since his peers have no better sources of information than he has, all they can do is pool the impressions and

anxieties they derive from the media and their early training. Thus, we find overemphasis on physical strength and athletic skills, with almost complete omission of tender feelings or acceptance of responsibility toward those who are weaker.

HEALTH

- According to recent statistics, more males than females suffer from serious diseases, both infectious and stress-related. What is more, men are more likely to die from these maladies. Men are four to five times more likely than females to die from bronchitis, emphysema, or asthma. Pneumonia and influenza are fatal for males 64 percent more often than for females; and there are twice as many male as female tubercular patients in hospitals. According to 1975 figures from the American Cancer Society, the annual death rate for males from cancer is almost 40 percent higher.
- Chafetz correlates the higher rates of alcohol and drug abuse with the pressures of the male sex role. Males also have a higher suicide rate than females. "The proscription on expressing emotions entailed in the masculine role definition probably exacerbates the stresses inherent in the obligation to support a family--financially and emotionally--and to succeed in an often highly competitive 'rat race'" (Chafetz, 1974).

ACADEMIC AND CAREER LIMITATIONS--FEMALES

ACADEMIC

- In the early elementary years, girls typically outperform boys, especially in reading and verbal skills. Developmentally, girls start off ahead of boys. They begin speaking, reading, and counting sooner; in the early grades they are even better in math. However, during the high school years, a different pattern emerges, and girls' performance on ability tests begins to decline. Indeed, male students exhibit significantly more IQ gain from adolescence to adulthood than their female counterparts do (Maccoby, 1966).
- A report of the National Assessment of Educational Progress (NAEP) indicates major disparities in educational achievement of males and females, with males outperforming females in four major subject areas: mathematics, science, social studies, and citizenship (NAEP, 1975).

154

- At age nine, boys and girls show understandings in these subjects that are fairly equal. However, by 13, young women begin a decline in achievement that continues into adulthood. Only in writing and music do females outperform males (NAEP, 1975).
- Along with the drop in achievement, there is a trend for girls' IQ scores to decline in late adolescence and early adulthood.
- Although women earn much better high school grades than men do, they are less likely to believe that they have the ability to do college work (Cross, 1968).
- Of the brightest high school graduates who do not go to college, 75 to 90 percent are women (Women's Equity Action League, n.d.).
- Studying mathematics is essential if a female wants to reach the higher levels of a career or discipline, even in fields that are traditionally female, such as social science, nursing, and the humanities. Yet in high school only 40 percent of college-bound females study math for three or more years, compared to 60 percent of males.
- College women respond negatively to women who have achieved high academic or vocational success, and at times display an actual desire to avoid success (Horner, 1969).
- In 1900, women earned 6 percent of all doctoral degrees; in 1920, 15 percent; but by 1968, only 13 percent. In 1977, the trend showed an upswing, with women earning almost 25 percent of all doctorates (WEAA, 1978).
- College women believe that men desire a woman who is extremely passive and who places wifely and familial duties above her own personal and professional development (Steinman, Levi, and Fox, 1964).

#### CAREER ASPIRATIONS

- By the time they are in the fourth grade, girls envision only four occupations open to them: teacher, nurse, secretary, or mother. Boys of the same age do not view their occupational potential through such restrictive glasses (O'Hara, 1962).
- By the ninth grade, 25 percent of boys and only 3 percent of girls are considering careers in science or engineering (Bem and Bem, 1970).

- A decline in career commitment has been noted in girls of high school age. This decline is related to their feelings that male classmates disapprove of a woman using her intelligence (Hawley, 1971).
- In a survey conducted in 1966 throughout the state of Washington, 66.7 percent of boys and 59 percent of girls stated that they wished to have careers in professional occupations. However, 57 percent of the boys and only 31.9 percent of the girls stated that they actually expected to be working in such an occupation (Slocum and Boles, 1968).

#### ECONOMIC

- More than two-thirds of the poor over age 65 are women.
- The largest body of workers not covered by social security is homemakers. There are no social security credits for the homemaker's unpaid labor, so that her credits are tied to the breadwinner. The pitfalls of this dependency are many, especially after a divorce or widowhood before age 60.

See the Reading "Realities of the Work World" for additional information regarding employment.

#### PERSONAL AND SOCIAL LIMITATIONS--FEMALES

#### MENTAL HEALTH

- On the Bernreuter Personality Inventory, norms show that women are more neurotic and less self-sufficient, more introverted and less dominant than men (Bernreuter, 1932). Later studies have had similar results, with women reporting higher levels of neuroticism and extroversion (Hannah, Storm, and Caird, 1965).
- A study published in 1970 by the U.S. Department of Health, Education and Welfare, *Selected Symptoms of Psychological Distress*, substantiates an earlier study published in 1960 by the Joint Commission on Mental Health and Illness. The results reported for nonhospitalized American adults can be summarized as follows: Greater distress with life and corresponding symptoms are reported by more women than by men, with more women being diagnosed as neurotic. Other studies report that women received psychotherapeutic services in greater numbers than men, both in- and out-patient, in private and public facilities (U.S. DHEW, 1970).

- Studies of childhood behavior problems show that boys are most often referred to child guidance clinics for aggressive, antisocial behavior, while girls are referred for personality problems such as fears, shyness, and feelings of inferiority. Boys are diagnosed as schizophrenic and learning disabled more frequently than girls. Psychiatric symptomatology for adults parallels childhood problems: men's symptoms are likely to be hostility toward others and pathological self-indulgence such as rape or drinking, while women's symptoms reflect a self-critical and self-destructive set of attitudes, e.g., depression, confusion, and self-depreciation.
- More married women than married men show phobic reactions, depression, and passivity, greater than expected frequency of symptoms of psychological distress, and mental health impairment.
- Studies have shown that of the four categories--married men, married women, single men, single women--married men and single women are the happiest, while married women and single men are the unhappiest.

LOSS OF SELF-ESTEEM

- According to one study, women as well as men do consider the female sex inferior. Women college students were asked to make critical evaluations of articles written by professionals. The same article was presented, with a male author or a female author--John T. McKay or Joan T. McKay. Both male and female participants found an article more valuable--and its author more competent--when the article bore a male name as author.
- Sex-role stereotypes ascribe greater social value to masculine than to feminine behavior (Smith, 1939).
- Both male and female college students feel the characteristics associated with masculinity are more valuable and more socially desirable than those associated with femininity (McKee and Sherriffs, 1957).
- As boys and girls progress through school, their opinions of boys grow increasingly more positive and their opinions of girls increasingly more negative. Both sexes learn that boys are valued more by society (Smith, 1939).

- Fewer high school women than men rated themselves above average on leadership, popularity in general, popularity with the opposite sex, and intellectual as well as social self-confidence (Cross, 1968).

CONFORMITY

- Girls and women have also been found to be more conforming to others than boys and men (Mock and Tuddenham, 1971; Ender, 1966).
- Girls have also been found to adhere to the stereotype that they should seek help more often than boys (Einmerich, Goldman, and Shore, 1971).

# SESSION 2: PERSPECTIVES ON SEX ROLES

## Counselor Workshop

GOALS: TO INCREASE AWARENESS OF THE PSYCHOLOGICAL AND BIOLOGICAL ASPECTS OF SEX ROLES  
TO UNDERSTAND THE SOCIALIZATION PROCESS AND ITS IMPACT ON MALES AND FEMALES

### GENERAL BUSINESS

5

Invite comments from the last session and the homework.  
Present Session 2 goals and overview.

#### OBJECTIVE #1

Participants will list at least four biological differences between males and females.

### BIOLOGICAL PERSPECTIVES

5

Post the word *biological* and the following definition:  
*Biological as considered here refers to internal and external physical differences in structure (such as skeletal differences) and in function (such as menstruation).*

Have participants, in small groups, generate a list of the biological differences between males and females.

10

Post the lists and obtain a large group consensus to compile a final list of the agreed-upon differences and similarities in structure and function.

large group

projector

Poster with  
Session 2 goals  
and overview

small group

10

Give the Mini-Lecture "Biological Aspects of Sex Differences" to clarify any questions or make any additions to participants' findings. Use the Transparencies.

OBJECTIVE #2

Participants will identify at least three examples of mental health expectations that differ for males and females.

Conduct a simulation of the Broverman et al. study (1970) by forming three groups--A, B, and C. Assign them to separate areas of the room. Distribute the Worksheet "Psychological Descriptors." Assign tasks as follows:

- Group A: Describe a healthy, mature female.
- Group B: Describe a healthy, mature male.
- Group C: Describe a healthy, mature adult.

Do not allow groups to compare tasks. Have each group compile a list of adjectives on newsprint.

Post the lists and conduct a large group discussion, addressing the following:

- What are the similarities and differences among the lists?
- What are the implications?
- What are the real or actual differences (rhetorical)?

10

Give the Mini-Lecture "Psychological Aspects of Sex Differences," using the Transparency.

SOCIALIZATION  
AND STEREOTYPING

10

Share the following resource (suggested): "Sex-Role Stereotypes and Clinical Judgments of Mental Health," by Broverman, Broverman, and Clarkson.

Recall the Reading "Psychological Aspects of Sex Differences," distributed for homework in the first session, and respond to participants' questions and comments.

OBJECTIVE #3

*Participants will identify three role expectations for males and three for females.*

Give the Mini-Lecture "Sex Roles and the Socialization Process," using the Transparency.

Respond briefly to questions.

16

Distribute the Worksheet "If I Were . . . , I Could . . ." and introduce the exercise.

Conduct a large group sharing and post the results on newsprint.

Have participants identify common themes from the list and discuss how these expectations affect our life-styles and career choices.

**SELECT OPTION 45**

Select one of the following options:

Option 1: Show the film *Men's Lives*.

Option 2: Have a local resource person with experience and knowledge in men's socialization available to present perspectives on the male role.

Option 3: Select an appropriate film substitute.

**ALL OPTIONS 15**

Conduct a discussion to identify major themes of male/female role expectations.

Discuss the following question: *What are the costs and rewards of male role expectations? Of female role expectations? Share personal experiences and analyze where these messages come from.*

**OBJECTIVE #4**

Participants will identify at least one negative effect of sex-role stereotyping in each of the following categories: (a) personal, (b) social, (c) academic, and (d) career and employment.

**10** Give the Mini-Lecture "How Sex Roles Can Limit."

## MINI-LECTURE: BIOLOGICAL ASPECTS OF SEX DIFFERENCES

This Mini-Lecture provides background information on the biological influences on males and females and looks at sex differences and similarities.

### DIFFERENT, BUT EQUAL

As we consider the biological aspects of sex differences, we will refer to *physical* differences between the sexes and their relationship to gender identity. The major source of clinical and experimental data is John Money and Anke Ehrhardt's Man and Woman, Boy and Girl (1972). These authors emphasize a multidisciplinary approach to gender identity that focuses on the interaction of heredity and environment. Gender identity and biological considerations are issues undergoing intensive research at present. Whatever biological differences exist, it is important not to use them to justify "natural" inferiority and superiority of the sexes.

### FUNCTION AND STRUCTURE

Physical differences between the sexes fall into two categories--body processes or *function* and body composition or *structure*. Money, from Johns Hopkins University, has identified the following as biological constants. They reflect functional differences between males and females.

- Women: menstruate, gestate, lactate
- Men: impregnate

Structural differences include *skeletal*, *genetic*, and *hormonal* differences. Females have more fat, less water, and broader hips, and reach puberty, on the average, two years earlier than males. Males have more muscle tissue and wider shoulders, and show more variability in physical growth than females.

[Use the Transparencies "Biological Basics" and "Similarities and Differences" to illustrate.]

## GENETIC DIFFERENCES

A normal human has 23 pairs of chromosomes in each cell, with one pair being the sex chromosome pair. In the female, the pair consists of XX chromosomes. In the male, the chromosome pair is XY. The egg and sperm each carry half of the normal number of chromosomes. The egg always carries an X chromosome, and the sperm carries either an X or a Y. Thus, the sperm, with its X or Y chromosome, determines the sex of the child.

Genes, which determine the characteristics to be inherited, are located on all chromosomes. Certain genes are carried on the sex chromosomes. This results in sex-linked traits such as color blindness and hemophilia. When these genes occur, they are carried by the X chromosome. In the male, there is no corresponding dominant gene on the Y chromosome to suppress the "defective" gene. This results in the high incidence of color blindness and hemophilia in males as compared to females. It is hypothesized that due to chromosomal structure, males are more susceptible to pre-, peri-, and postnatal difficulties.

## HORMONES

In human gestation, after approximately six weeks, different internal reproductive organs begin to develop as determined by the *sex hormones*. The female system will develop unless *androgen* (male hormone) is released, causing the male system to develop. Sexual abnormalities in appearance and behavior will result if the hormone state of the fetus is disturbed during this period.

Sex hormones are also influential in establishing adult appearance during the critical period of *puberty*. Until puberty, the physical appearance of boys and girls is relatively similar and stable, aside from differences in sex organs. At puberty, hormones are released that cause secondary sex characteristics to develop. Estrogen and progesterone are female sex hormones; androgens are male sex hormones.

Research with animals and humans suggests that genes and hormones establish a *predisposition* toward a particular behavior prior to birth. This predisposition may be modified through learning. Cultural beliefs play a significant role in shaping behavior.

## TWIN STUDY

The sex reassignment of a male identical twin described by Money and Ehrhardt (1972) demonstrates the impact that learning has on gender identity. At seven months of age, one boy's penis was accidentally burned off during

circumcision. Doctors advised sex reassignment, which included genital reconstruction surgery, hormone replacement, and professional guidance for the family. The parents socialized the child as a daughter. Six years later the girl (a boy at birth) behaved as a girl and was not confused as to her gender identity.

This study and others illustrate that *social factors* such as the gender to which a child is assigned can substantially modify biological predisposition.

## MINI-LECTURE: PSYCHOLOGICAL ASPECTS OF SEX DIFFERENCES

This Mini-Lecture covers the fundamental aspects of psychological differences and similarities between females and males.

### PSYCHOLOGY AND RESEARCH

When considering the various psychological aspects of sex differences, we will look only at behavior which is *observable*. The field of psychology does also include theories regarding the sources or causes of behavior, but these theories are based on *inferences*, which are developed through observation and speculation. Causes of behavior can only be *hypothesized*.

Research data in the area of sex-role stereotyping deal with the *average* differences between males and females as a group. It is important to note here that there are always more differences among males and among females than between the average male and average female. [Use the Transparency "Maccoby and Jacklin Research Findings to illustrate the foregoing and then discuss.]

### FOUR CONSISTENT DIFFERENCES

Two Stanford psychologists, Maccoby and Jacklin (1974), spent three years reviewing and interpreting over 1,400 research studies in the area of sex differences. Their work showed only four behaviors that were consistently different for females and males. It is not known whether these differences are *innate* or *learned*. They are as follows [use the Transparency to illustrate]:

- Males demonstrated more aggressive behavior, both physically and verbally
- Males performed better at visual-spatial tasks.
- Males excelled in mathematical ability.
- Females showed earlier verbal facility and demonstrated greater verbal ability.

**Note:** One behavior thought to be particularly sex-related was nurturance. Yet there is still no conclusive evidence to identify nurturance as a sex difference.

## COGNITIVE DIFFERENCES

During childhood, males and females demonstrate similar visual-spatial, verbal, and mathematical abilities. At age 11 or 12, differences begin to develop, with males demonstrating greater ability at visual-spatial and mathematical tests, and females showing greater verbal ability.

## SOCIAL DIFFERENCES

Males have been found to be more aggressive (physically and verbally) in all cultures where aggressive behavior has been observed. The primary recipients of male aggression are other males. At Stanford, Bandura used incentive reinforcement of aggression. He found that young females increased in aggression when they were positively reinforced for demonstrating aggressive behavior.

This study, as well as others, points to the age-old question and debate: How much of a particular behavior is innate and how much is learned?

## MENTAL HEALTH

The Broverman study (1970) with mental health professionals demonstrated a double standard in criteria for mental health. The subjects were divided into three groups, each asked to describe a different concept:

- Group 1 described a healthy, mature, socially competent adult (sex unspecified).
- Group 2 described a healthy, mature, socially competent man.
- Group 3 described a healthy, mature, socially competent woman.

There was a positive correlation between the concepts of healthy adult and healthy male, but a negative correlation between the concepts of healthy adult and healthy female. In summary, healthy adults and healthy males were expected to be independent and aggressive, and to control emotion. Healthy females were expected to be passive and dependent.

It would appear that mental health professionals (both males and female) expect their female clients to be less than healthy adults. Females are

placed in the dilemma of trying to be "healthy, well-functioning adults" who are assertive and independent, while trying to be "healthy, well-functioning females" who are pleasing and somewhat dependent. In this description, female traits and adult traits are *antagonistic* to each other. In addition, stereotypic masculine traits are more socially desirable.

#### ANDROGYNY

The traditional concept of mental health needs re-evaluation. A new concept, psychological *androgyny*, has emerged to expand the range of acceptable behaviors for females and males.

Androgyny is a balanced expression of "masculine" and "feminine" traits to allow each sex the full range of human characteristics needed for individual actualization.

## **MACCOBY AND JACKLIN (1974) RESEARCH FINDINGS**

- MALES DEMONSTRATED MORE AGGRESSIVE BEHAVIOR, BOTH PHYSICALLY AND VERBALLY.
- MALES PERFORMED BETTER AT VISUAL-SPATIAL TASKS.
- MALES EXCELLED IN MATHEMATICAL ABILITY.
- FEMALES SHOWED EARLIER VERBAL FACILITY AND DEMONSTRATED GREATER VERBAL ABILITY.

## MINI-LECTURE: SEX ROLES AND THE SOCIALIZATION PROCESS

This mini-lecture provides basic information concerning sex role learning. It includes definitions of key terms and a discussion of family and school as primary agents of socialization.

### SEX ROLES AND STEREOTYPING

By the age of three, children know their sex roles. A sex role is a set of behaviors and expectations taught and reinforced by society. Concepts of "masculinity" and "femininity" vary from culture to culture, as do sex-role expectations and responsibilities. Many people assume that sex roles are related to inherent differences between females and males, but researchers have found little evidence to support this assumption. In this session we will look at the "how" of sex-role socialization, or *learning*.

Our roles as female and male reflect an outward statement of our *gender identity*. When a gender label limits development to narrowly defined behavior or characteristics, we call that *stereotyping*. The consequences are damaging and stifling to individual potential and talent.

Researchers have found that sex roles are acquired in the following ways:

- Through the influence and imitation of *role models*
- As a result of selective *reinforcement* of sex-appropriate behaviors
- Through the conceptual *understanding* of masculine and feminine behaviors, and the conscious choice by the individual to conform to the appropriate roles

### AGENTS OF SOCIALIZATION

Sex-role socialization, or the teaching of sex-role behaviors, is carried out by parents, teachers, literature and textbooks, peers, social institutions, and the media. Every part of a society teaches individuals to conform to cultural expectations. The socialization process is ongoing, as society dictates the parameters for proper behaviors for every stage of

our lives, from childhood to old age. [Use the Transparency "Society and the Individual" to demonstrate.] The following lists illustrate ways in which the family and school function as primary agents:

### SCHOOL

- instructional programs, such as course titles, unequal funding of athletic programs, unequal treatment in guidance and career planning
- differential staffing patterns
- classroom management
- teacher expectations and behaviors
- instructional materials

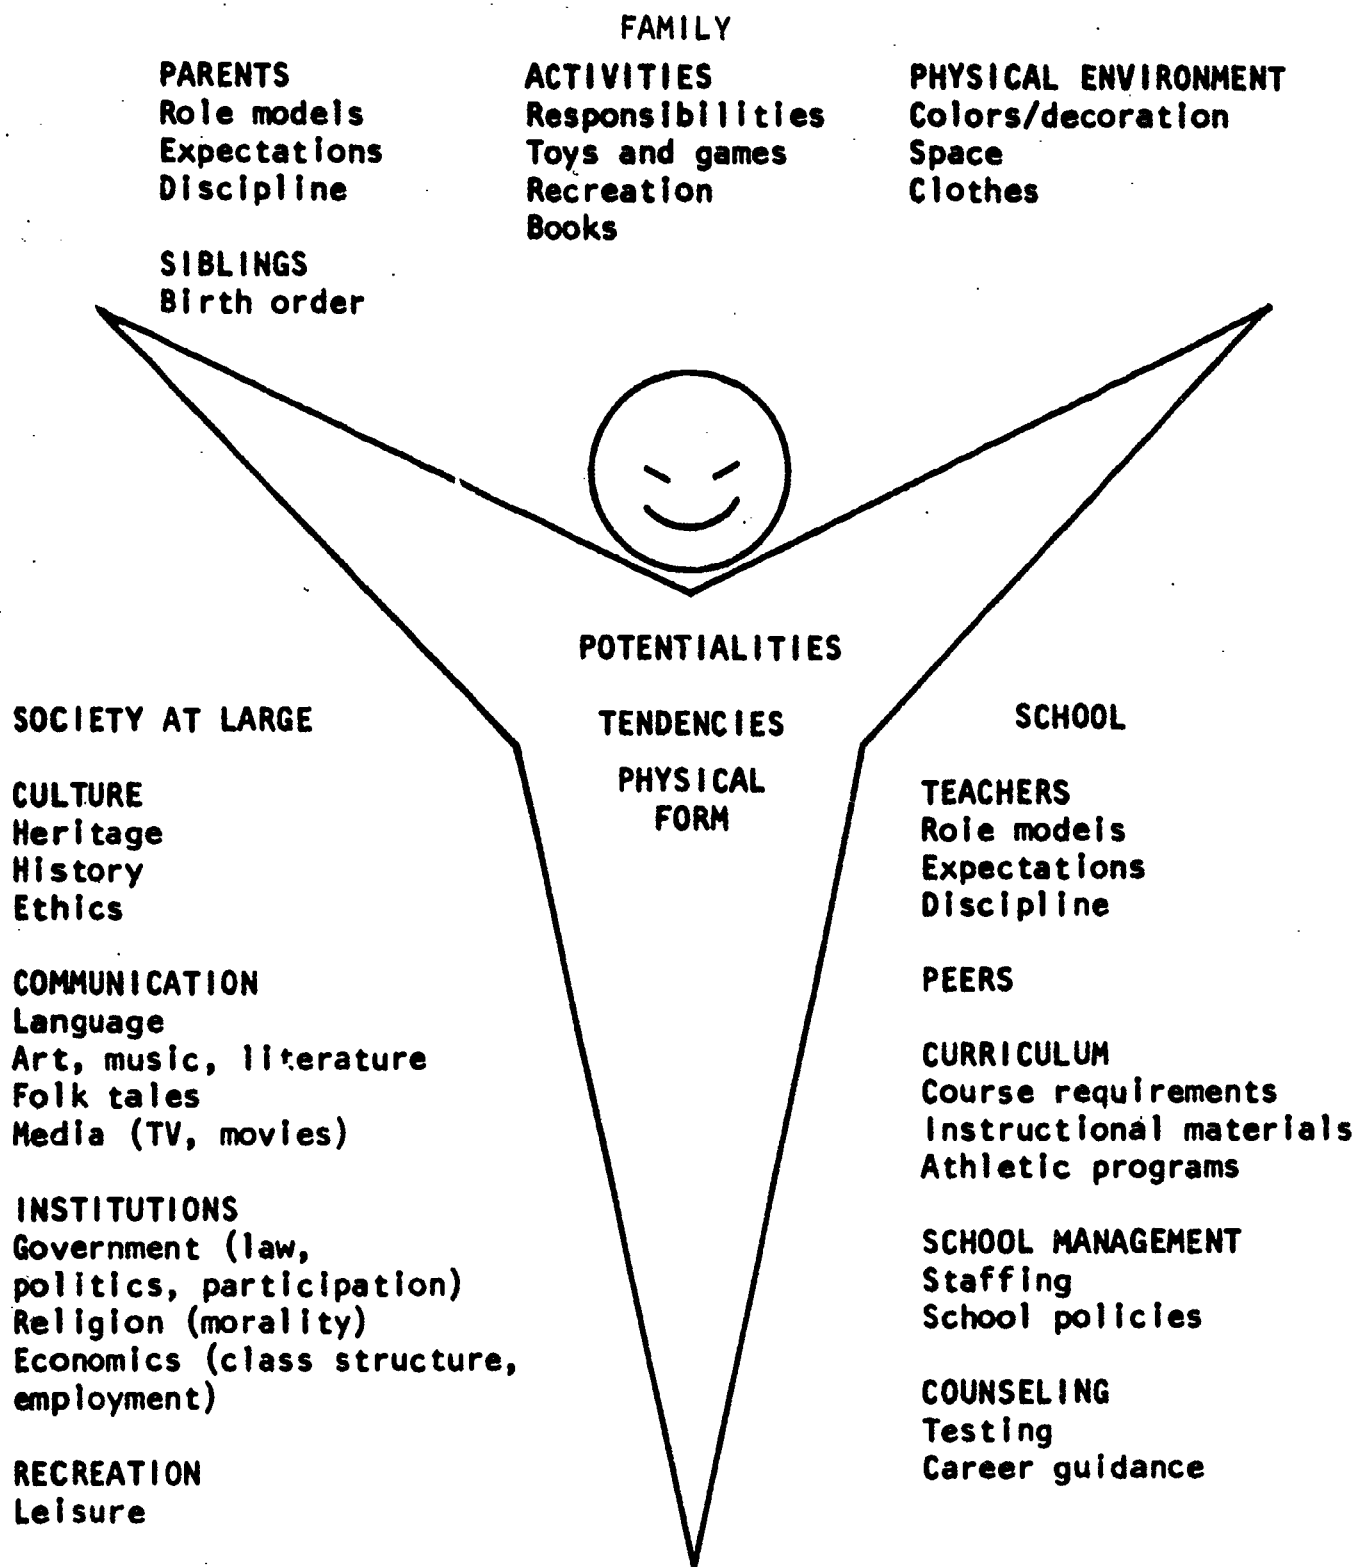

### HOME

- parental expectations and behaviors
- role models--adults, siblings, peers
- parent-assigned activities and responsibilities
- television and children's literature, including fairy tales
- toys and games

[Have participants suggest other examples.] As we become aware of the circular pattern of sex-role reinforcement, we can intervene to stimulate each student to reach full individual development.

## **MINI-LECTURE: HOW SEX ROLES CAN LIMIT**

This Mini-Lecture provides a general overview of the limitations and damaging effects of sex-role stereotyping. The four areas covered overlap, but provide a useful guideline to examine these effects.

### **LIMITING EFFECTS**

Sex roles can place limitations on both females and males. These limiting effects vary in intensity, degree and general area for each sex. Men and boys seem to be more limited in the areas of interpersonal relationships and expression of tender feelings, while women and girls seem to be more affected in the areas of academic achievement, career aspiration, and self esteem.

Before completing the Worksheet "Limiting Effects," let us look at some specific examples of the limitations of sex-role stereotyping for males and females in each of the following areas: academic and career/vocational; personal and social.

### **ACADEMIC AND CAREER/VOCATIONAL**

#### **FEMALE**

Academic: In elementary school, females typically outperform males; but during high school years, female performance on ability tests begins to decline.

Career/Vocational: By the fourth grade, girls limit their career choices to four areas: teacher, nurse, secretary, or mother.

#### **MALE**

Academic: In elementary school, most discipline problems and most low achievers are male.

Career/Vocational: Males are restricted by social criticism when they consider nontraditional career areas such as nurse or dancer.

**PERSONAL AND SOCIAL**

**FEMALE**

Personal: Women and men consider the female sex inferior and place greater value on characteristics associated with masculinity.

Social: Women tend to underrate their popularity and their leadership ability.

**MALE**

Personal: Males suffer a high health cost, as they have a 50 percent higher rate of stress-related diseases than women do.

Social: Men learn to hide emotions and suffer consequently in relationships with their families and with other men.

## **MINI-LECTURE: REALITIES OF THE WORK WORLD**

This Mini-Lecture covers the basic realities of women in the work world, with a look at the present picture and a projection into the future.

### **FACTS**

Since limitations on women have been dramatic in the work arena, this Mini-Lecture will concern itself with facts about women workers. Nine out of ten women work at some time in their lives; three out of four working women work full-time. Currently, women are entering the labor force in ever-increasing numbers, as shown by an increase of two million women in a one-year period (1977-78). The U.S. Department of Labor projects that by 1990, 57 percent of all women 16 and older, and 72 percent of women in the prime working ages of 25 to 54, will be working or seeking jobs. By then, women will make up 45 percent of the total civilian labor force. [Use the Transparency "Labor Force Participation" to illustrate.]

### **SOCIOLOGICAL FACTORS**

There are many sociological factors that contribute to the significant increase of women in the work force. Some of these factors are the rising divorce rate, the declining birthrate, later marriages, increased education, inflation, the women's movement, and legislation. [Discuss the effects of these factors.]

On the average, a woman can expect to work for about 25 years if she is single. [Use the Transparency "Married Women--Adult Years" to illustrate data on married women.]

### **OCCUPATIONAL SEGREGATION**

Although the increased number of women in the labor force is dramatic, women tend to be employed in the same traditional fields (secretarial, nursing, and teaching) as they have been for the past 25 years. [Use the Transparencies "Occupational Distribution of Men and Women," "Occupational Distribution of Working Women," "Occupational Segregation in Nontraditional Jobs," and "Clerical Segregation" to illustrate.]

Even when a female's educational level is comparable or superior to a male's, a disparity in income is apparent. In 1981, the median weekly earnings for a female college graduate working full-time were \$301. For men, median earnings were \$471. [Use the Transparencies "Education and Earnings in Male- and Female-Intensive Occupations" and "Education and Earnings."]

#### EQUAL PAY FOR EQUAL WORK?

Is there equal pay for equal work? According to the data, this equality does not exist. On the average, women employed full-time in 1980 earned about 60 cents for every dollar earned by men. Women worked nearly 8.3 days for the same gross wages men earned in five days. And this earnings gap has actually increased over the past 25 years. When calculated in constant 1967 dollars, the differential between men's and women's median annual incomes has grown from \$1,911 in 1955 to \$3,004 in 1980.

In a comparison of some of the highest-paid occupations for both sexes for 1981, where there were comparable categories with employment of 50,000 or more, the differences were all more than \$100 per week, and some neared \$200. For example, male computer systems analysts earned a median weekly income of \$546, while females earned only \$420; men employed in personnel and labor relations earned \$514 per week, and women \$330. Women in the highest-paid occupation earned a median income of \$85 per week less than the occupation ranked twentieth in terms of income for men.

[Use the Transparency "Earnings Gap Between Women and Men" to illustrate.]

#### MINORITY WOMEN

In general, minority women experience a comparatively high rate of unemployment, and are concentrated in low-paying, low-status jobs. They earn less than all men and less than white women. [Discuss the implications of the data presented in this Mini-Lecture for your participant audience.]

## READING 7

### **REALITIES OF THE WORK WORLD**

This Reading was researched and written by Lynn Stuvé, Interface Network, in collaboration with Gene Tendler, San Diego Unified School District, ROP. Interface Network is an Educational Nonprofit Corporation, San Diego, California.

#### INTRODUCTION

There are more women working than ever before in our nation's history. More women are participating in politics; more are managing, teaching, learning, but. . . .

Most Americans work in sex-segregated environments. Most women hold low-status jobs and draw lower salaries than men for the same work; many live in poverty. Inequity is the reality.

This reading documents the inequities of women and work. It covers labor force participation, marital and family status, occupational segregation, education and parity, the earnings gap, and women and poverty. Finally, it suggests a focal issue for the 1980s.

#### LABOR FORCE PARTICIPATION

According to the Department of Labor, unprecedented numbers of women entered the work force during the 1970s. An average of over a million women were added to the work force each year during that decade, and the trend is continuing in the '80s. This rate of labor force participation signals the beginning of one of the most unique and dramatic periods of change in the role of women in our country. Most of this record gain occurred among women under the age of 35 (U.S. Dept. of Labor, Bureau of Labor Statistics, 1979).

In 1981, about 46.8 million women were working for pay outside the home, comprising 43 percent of the country's entire labor force. About three

out of every four employed women work full-time--35 hours or more per week (U.S. Dept. of Labor, Bureau of Labor Statistics, 1981a).

In 1981, 52 percent of the female population 16 years of age and over was employed, rising from 43 percent in 1970. Of the same age male population, 76 percent was employed. Until 1965, middle-aged women dominated the increases in female labor force participation. Since 1965, these increases have shifted to women under the age of 35, and are concentrated in the 25-34 age group. This is remarkable because most women in this age group are married, live with their husbands, and have children under 18 at home--factors that have traditionally tended to keep women out of the labor force (U.S. Dept. of Labor, Bureau of Labor Statistics, 1979).

Factors that account for this increase in women workers are varied. A high inflation rate has made a second income necessary for some families to survive, or to maintain their standard of living. More women are single family heads. Jobs have been available, particularly in those rapidly growing fields--sales, clerical, service--where there is a preponderance of women. Social changes--rising divorce rates, declining birth rates, later marriages--have had their effects. The standard of living has risen, and a large cohort of the post-World War II (baby boom) generation is reaching labor force age. Increasing numbers of educated women--particularly college graduates--now want to pursue careers. Finally, the women's movement has raised consciousness, making work for pay outside the home more socially acceptable for mothers and fostering the view that through work, women can find additional intellectual and personal fulfillment.

Looking ahead, the U.S. Department of Labor projects that the number of women in the labor force will continue to increase. By 1990, 57 percent of all women 16 years and older will be working or seeking jobs, and they will make up about 45 percent of the labor force. In addition, it is projected that 72 percent of all women of prime working age--ages 25 to 54--will be in the 1990 labor force (U.S. Dept. of Labor, Women's Bureau, 1980).

#### MARITAL AND FAMILY STATUS

Marital and family status, factors that affect women in the work force, have changed significantly over the past 25 years. In March 1981, more than half (54 percent) of the nation's children under the age of 18 had mothers who worked away from home. The numbers have risen steadily, from 39 percent in 1970. The most recent year-to-year increase in the number of children with working mothers occurred among those under six years of

age. Looking at the statistics from another perspective, 50 percent of all mothers with children under 18 were in the labor force in 1981 (U.S. Dept. of Labor, Bureau of Labor Statistics, 1981b).

Among more than half (59.8 percent) of the married couples with children, both wife and husband were wage earners. The median family income for these two-earner families was \$27,745, compared to \$20,743 if only the husband worked and \$13,612 if only the wife worked.

In the second quarter of 1982, a record 5.9 million families, or one out of every six, were maintained by a woman who was divorced, separated, or widowed, or who had never married. The monthly incomes of families maintained by women averaged \$1,012; families maintained by men averaged \$1,676 per month (U.S. Dept. of Labor, Bureau of Labor Statistics, 1982a).

#### OCCUPATIONAL SEGREGATION

Although the number of working women outside the home has increased significantly, there has been little change in the types of work they do. Most of the 46.8 million working women are occupationally segregated. More than half of them are employed in just 20 of the 144 jobs listed in the Census Occupational Classification System. What's more, the Department of Labor predicts that women will continue to choose jobs along traditional lines in the future (U.S. Dept. of Labor, Women's Bureau, 1980).

In the first quarter of 1982, 71 percent of female workers were employed in three occupational groups: clerical (38 percent), service (13 percent), and professional (20 percent). Male workers comprised only 33 percent of the same occupational groups (U.S. Dept. of Labor, Bureau of Labor Statistics, 1982a).

Occupational segregation by sex is primarily the result of sex-role stereotyping of appropriate roles and jobs for men and women. While traditional roles may be satisfying, they often have the effect of limiting options and opportunities. For example, when junior high or high school girls are advised to avoid difficult mathematics and science courses and to think of themselves primarily as future wives and mothers, it does them a great disservice. According to the labor trends reviewed above, they are likely to be not only wives and mothers, but wage earners as well. Avoidance of mathematics and science courses eliminates many job options and limits employment to jobs that are generally lower-paying than those requiring

mathematical, scientific, or technical skills. (See the section on the earnings gap, below, for details.)

Not only are most women segregated into three major occupational groups, but even within these major categories they are concentrated in sex-segregated subgroups. To illustrate, in the clerical category, with over 14 million workers in 1981, women were concentrated in jobs as bookkeepers, secretaries, cashiers, and typists, while men were concentrated in jobs as stock clerks and storekeepers, shipping and receiving clerks, ticket agents, dispatchers, mail carriers, and estimators and investigators. Jobs that had the highest percentages of male workers had the highest wages. Specifically, secretaries (99 percent female) averaged \$230 per week, while stock clerks (66 percent male) earned \$264 per week; mail carriers (88 percent male) were paid \$406 per week, while bookkeepers (91 percent female) earned only \$227 per week (Rytina, 1982).

Even within occupations, women are segregated. As medical doctors, they are overrepresented in pediatrics, psychiatry, anesthesiology, and pathology, but grossly underrepresented in surgery and surgical specialties--the higher-paying practices. In law, few women are in the upper echelons of law firms, on judicial benches, or in prominent positions in state and national legislatures. In education, women account for nearly 82 percent of the nation's elementary teachers, but less than 50 percent of the secondary teachers and only 20 percent of college-level teachers (Rytina, 1982).

In insurance, more women are found in the less lucrative personal lines than in commercial lines. Women work in "inside" jobs where opportunities for advancement are limited, while men are placed in "outside" sales positions, which are better paid and lead to higher-level positions. Women in business are concentrated in personnel, staff, and administrative departments, where salaries are lower and opportunities limited. In retail sales, women sell low-priced items while men are placed in the "big ticket," higher-commission departments (Women Employed Institute, 1980).

When measured as a rate of increase, women's entry into nontraditional occupations shows impressive growth, but the absolute numbers of women in such occupations are extremely small (see Chart 1).

224

CHART 1.  
WOMEN IN TRADITIONALLY MALE JOBS, 1971-1981

OCCUPATION	FEMALES EMPLOYED (THOUSANDS)		CHANGE 1971-1981 (THOUSANDS)		FEMALES EMPLOYED AS % OF TOTAL	
	1971	1981		% CHANGE	1971	1981

Religious Workers	33	25	8	24	11.6	9.3

Source: U.S. Department of Labor, 1980-1981.

For the most part, women have crowded into the clerical and service fields; projections indicate that over the next decade two-thirds of the total increase in employment of women will be in traditionally female occupations.

As Chart 2 indicates, employment of women in clerical fields has increased by 8 percent over the past 20 years, while the number of women employed as managers and in administration has increased by only 2.7 percent, and as craft workers by only 1.3 percent.

CHART 2.  
OCCUPATIONAL DISTRIBUTION OF WORKING WOMEN, 1960-1981

EDUCATION AND PARITY

With respect to educational attainment, the relationship between working men and women did not change between 1970 and 1980, except among the youngest group. The proportion of men with a year or more of college continued to be almost six percentage points above that of women, while women remained less likely to be high school dropouts. However, among workers 25 to 34--the age group comprising the largest part of the baby boom generation--the male-female difference in the proportion with some college education narrowed substantially. Close to half of all workers in that age group had completed some college by 1980.

Educational attainment has historically been associated with higher rates of labor force participation, a pattern that persisted in March of 1981. College graduates had the highest labor force participation rates, and high school dropouts the lowest. However, a woman's payoff for educational achievement is much less than a man's. To illustrate, Chart 3 compares the

earnings in occupations employing large numbers of women to those in predominantly male fields that are characterized by similar or even lesser educational credentials.

**CHART 3.

Sources: U.S. Department of Labor, BLS; U.S. Department of Commerce, Census Bureau.

\*Based on weekly medians

Clearly, the economic return on greater educational achievement is typically low in occupations where women predominate. These jobs pay consistently less than male-dominated fields, regardless of educational achievement or economic demand. Secretarial work is a prime example of designating "women's work" as automatically lower paid. Even the current secretarial shortage has not produced significant wage increases. Companies classify jobs as clerical and set salary rates and ceilings for these jobs with little or no consideration of the actual job content or skills required. Corporate salary schedules commonly fail to differentiate between lower-skilled and higher-skilled clerical jobs. Further, employers make few provisions for a schedule of salary increases, after the initial years, to reward seniority and reflect the abilities developed over time in a company. The principle used to set salaries is that women hold these jobs; wage rates are not based on an objective analysis of the actual skills involved (Women Employed Institute, 1980).

#### THE EARNINGS GAP

The magnitude and persistence of the earnings gap between men and women are familiar and important issues among working women. First, most women work because of economic need, and women have assumed a significant role in their own and their families' economic support. Women's concentration in low-paying, dead-end jobs makes their budget problems more difficult. Second, the sustained earnings differential is in sharp contrast to the gains women have made in the numbers and kinds of jobs they hold. Women who worked at year-round, full-time jobs in 1980 earned only 60 cents for every dollar earned by men. In fact, men's median weekly earnings exceeded women's by about \$143, so that women had to work nearly 8.3 days to gross the same earnings men grossed in 5 days (U.S. Dept. of Labor, Women's Bureau, 1979).

The earnings differential has not changed substantially in recent years. In 1980, the median annual \$18,612 earned by men exceeded women's \$11,197 by 66 percent. When the absolute difference between the earnings of men and women over a 25-year period is expressed in constant dollars to take into account the reduced purchasing power of the dollar, the disparity is even more evident. As Chart 4 indicates, the earnings gap in constant 1967 dollars increased from \$1,911 in 1955 to \$3,004 in 1980 (U.S. Dept. of Labor, Women's Bureau, 1979).

Some major gains for working women have been made over the past ten years. Women have access to jobs previously closed to them. Lawsuits have

established legal precedents for equal opportunity, equal pay, and affirmative action. Nevertheless, the 1981 labor statistics do not show any significant changes in the wage differential between men and women. Even in occupations dominated by women, men earn more.

CHART 4.  
COMPARISON OF MEDIAN EARNINGS OF YEAR-ROUND, FULL-TIME WORKERS, BY SEX  
1955-1980  
(Persons 14 years of age and over)

YEAR	MEDIAN EARNINGS WOMEN	MEDIAN EARNINGS MEN	EARNINGS GAP IN DOLLARS	WOMEN'S EARNINGS AS % OF MEN'S	% MEN'S EARNINGS EXCEEDED WOMEN'S	EARNINGS GAP IN CONSTANT 1967 DOLLARS
1980	\$11,197	\$18,612	\$ 7,415	60.2	66.2	\$ 3,004
1975	7,504	12,758	5,254	58.8	70.0	3,259
1965	3,823	6,375	2,552	60.0	66.8	2,700
1960	3,293	5,417	2,124	60.8	64.5	2,394
1955	2,719	4,252	1,533	63.9	56.4	1,911

Source: U.S. Department of Labor, Bureau of the Census.

Notes: For 1967-80, data include wage and salary income and earnings from self-employment; for 1955-56, data include wage and salary income only.

**POVERTY**

Poverty and low-income levels are determined annually by the Department of the Census, in accordance with the Consumer Price Index. Poverty is now defined as an annual income of about \$8,000 for a family of four. Poverty, a long-standing social problem, hits women with particular force.

According to a 1981 report of the National Advisory Commission on Economic Opportunity, reported in the *Los Angeles Times* in January 1982 (Mall, 1982):

- Two out of every three American adults classified as living in poverty are women.
- Women and children comprise 75 percent of poor people.
- Although only 5 percent of families headed by men are at the poverty level, 25 percent of families headed by women live in poverty. Families headed by women live on 40 percent of the income of those headed by men.
- Up to one-third of the women on welfare work, but cannot earn enough to support their families.
- The average stay on welfare is 18 months. Long-term recipients are a minority.
- If the present trends continue, the poverty population will be composed solely of women and their children by the year 2000.

The report claims that welfare programs designed to get people out of poverty aren't helping women, because they do not address women's problems. For example, when a family breaks up, the usual result is that the man becomes single and the woman becomes the single family head. A study by Arlene F. Saluter of the Census Bureau, reported in the *San Diego Union* in August 1982 disclosed that 90 percent of the children in one-parent families live with their mothers and that 20 percent (12.6 million) of children under 18 in the United States live with only one parent (*San Diego Union*, 1982).

Generally, poor women have marginal jobs; that is, there are usually no fringe benefits. So when the women lose their jobs, they go on welfare. To get out of poverty and dependence on the welfare system, they need job training and support services such as day care for their families. They need training to get jobs in which they can be economically independent. But current publicly funded job training programs tend to keep women in jobs with lower pay, higher unemployment, less overtime, less union protection, and less opportunity for advancement (*Time Magazine*, 1982).

THE ISSUE FOR THE '80S

According to a recent report by the California Commission on the Status of Women (1981), the big issue for the '80s is *comparable worth*. It provides a viable approach to the problem of wage disparity. Comparable worth is

equal pay for jobs of equal value, according to the level of skills, responsibility, effort, and working conditions. Comparable worth differs from the principle of equal pay for equal work stated in the 1963 Equal Pay Act, in that it allows for the comparison of different jobs.

Comparable worth delves into comparisons of pay differentials between "men's" work and "women's" work. These comparisons can be made through a system of job evaluation. Evaluation of jobs to determine wages should be conducted to assess the worth of the job, not the prevailing market wages or other means that perpetuate bias in categorizing wages.

The Equal Employment Opportunity Commission is currently investigating Title VII of the Civil Rights Act of 1964 as a legal foundation for developing guidelines for and enforcing comparability. There are, however, some legal experts who disagree that Title VII provides the necessary justification for comparability.

Most of the opposition to comparability relates to economics. The cost of raising women's wages to the median of men's wages would be in the billions. Comparability is a significant and timely vehicle for women to gain equity in the work force, but it will also be the subject of great controversy and debate. It represents a worthy challenge for the '80s.

## PEER (PROJECT ON EQUAL EDUCATION RIGHTS) SUMMARY OF TITLE IX REGULATIONS

This introduction was prepared by Resources for Non-Sexist Environments to accompany the attached PEER summary of Title IX regulations.

**TITLE IX IS:** a federal civil rights law (Public Law 92-318) passed by Congress, and signed by the President on June 23, 1972. It prohibits sex discrimination in education programs and activities receiving federal funds.

**THE PREAMBLE  
TO TITLE IX STATES:** *No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any educational program or activity receiving federal financial assistance.*

History: Title IX was passed by both houses of Congress after congressional hearings held in 1970 documented the pervasiveness, perniciousness, and long-range consequences of sex discrimination in educational policy, practice, and attitude.

After Title IX was passed, the Department of Health, Education and Welfare spent three years drawing up the regulation which interprets Title IX. Citizen input on the provisions of the regulation was sought. Requests for comments on how Title IX should be implemented brought 10,000 responses-- the largest number HEW had ever received on a single issue. The final regulation was published on July 21, 1975.

Scope: The scope of Title IX extends from preschool through graduate school, and protects students, professional staff, and support staff from sex discrimination. Title IX also covers any program, organization, or agency that receives federal education dollars, including professional organizations, training programs, research institutes, and so on.

**Exemptions:** Congress has specifically exempted all military schools as well as religious schools to the extent that the law would be inconsistent with the basic religious tenets of the school.

Textbooks and other materials are not covered under the governing regulations. These are considered the responsibility of local education agencies.

**Enforcement:** The Office for Civil Rights in the Department of Education, Washington, D.C., is responsible for the enforcement of Title IX.

**Sanctions:** Aside from the general moral and legal reasons for ending sex discrimination, it is important to remember that noncompliance could result in a cut-off of all federal funds.

---

### TITLE IX...because it's only fair\*

*"No person . . . shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving federal financial assistance. . . ."*

Title IX of the Education Amendments of 1972, as stated above, has significantly improved the quality of life for countless women and men. For some individuals, Title IX aided their pursuit of better-paying, non-traditional careers. Under Title IX, some women teachers have received higher salaries; other women have won their battle against sexual harassment with Title IX's help. But most women (and their school-age daughters), whether or not they realize it, have seen the benefits of Title IX in school sports programs. Organized athletics for girls is now an integral part of school curricula.

This brochure will answer some of the most frequently asked questions about this law that has made such a difference in many lives and will tell you how you can make Title IX work for you.

#### WHAT IS TITLE IX?

Title IX of the Education Amendments of 1972 is a law enacted by Congress to prohibit sex discrimination in schools and colleges receiving federal money.

#### WHO IS PROTECTED BY TITLE IX?

Under Title IX, female and male students of all ages and races are entitled to equal access and treatment. This means kindergarten, high school and university students, as well as all those who attend vocational and technical schools. Title IX also protects teachers and other adults involved in the field of education.

\*SOURCE: PEER, Project on Equal Education Rights, a project of the NOW Legal Defense and Education Fund, 1413 K Street, N.W., Washington, D.C. 20005.

**WHAT KIND OF PROTECTION  
DOES TITLE IX OFFER MEN?**

Boys and young men are sometimes victims of society's stereotypical view of them as "macho." Before Title IX, boys were often forced to take industrial arts or vocational training to prepare for traditionally male careers.

With Title IX's coverage, young men, just as young women, must be given equal encouragement and opportunities to study whatever interests them--music, writing, nursing, computer science --and not what society deemed appropriate.

**ARE THERE ANY PROGRAMS OR  
ACTIVITIES WHICH ARE EXEMPT  
FROM TITLE IX COMPLIANCE?**

Yes, there are certain exceptions which are excluded from the provisions of Title IX:

- Schools whose primary purpose is training for the U.S. military services or the merchant marine
- Practices in schools controlled by religious organizations whenever compliance with Title IX would be contrary to their religious beliefs
- Membership policies of the Girl and Boy Scouts, the YMCA and the YWCA, Campfire Girls and other single-sex, tax-exempt "youth service" organizations whose members are chiefly under age 19
- University-based social fraternities and sororities
- Activities relating to the American Legion's Boys' State, Boys' Nation, Girls' State and Girls' Nation conferences
- Father-son or mother-daughter activities, so long as opportunities for "reasonably comparable" activities are offered to students of both sexes
- Scholarships or other aid offered by colleges and universities to participants in single-sex pageants which reward the combination of personal appearance, poise and talent.

**WHY IS TITLE IX CONSIDERED  
SUCH AN IMPORTANT LAW  
FOR WOMEN?**

Women are increasingly responsible for their own economic survival. Many are the heads of single-parent families; others find that their families cannot survive in today's inflationary world on a spouse's earnings, so they choose to work. Unfortunately, when a woman does enter the work force, she earns only 59 cents for every dollar earned by a man. Title IX has enabled many girls and women to receive scholarships and training at professional and vocational schools which, in turn, better equip them to compete in a man's world. Another reason Title IX is so important to women is its broad protection in four areas of major concern to women: school admissions policies, students' rights, sports programs and jobs in education.

**WHAT WERE THE CONDITIONS  
THAT NECESSITATED THE PASSAGE  
OF TITLE IX?**

Just ten years ago, before Title IX became law, there were often double standards in education programs throughout this country:

- Many colleges required women to have SAT scores 30-40 points higher than those of entering men.
- A major standardized test which measured interests and aptitude of high school students used a separate scoring system for females and males. For example, although a female student may have exhibited similar skill and interest in science as her male peer, she was advised to pursue nursing rather than medicine.
- No colleges or universities offered women athletes scholarships.
- Some schools assigned male teachers to grades 4-7 and females to the lower grades.

**WHAT IMPROVEMENTS HAVE BEEN  
MADE SINCE THE PASSAGE OF  
TITLE IX?**

School Admissions

Under Title IX, admissions policies have broadened to include more women. Between 1972 and 1980 the number of women:

- in medical school rose from 112 to 262
- in law school, from 102 to 342
- in veterinary school, from 122 to 392
- awarded doctorates, from 162 to 302

Student Rights

Title IX guarantees equal treatment of students, both inside and outside the classroom:

- School counselors have begun to test and score all students in the same way and encourage both boys and girls to pursue the career which would be right for them.
- School districts cannot expel pregnant students or prevent them from participating in school activities.
- Some colleges have established policies which prohibit sexual harassment and have set grievance procedures for dealing with it.

Sports

Now schools offer girls and young women more opportunities to participate in all sports programs. Playing school sports is important because it helps girls to develop an appreciation for hard work, learn self-respect, teamwork and leadership skills. Since Title IX:

- The number of women in college sports has increased 250%.
- The number of girls playing high school sports has increased from 7% to 35% of all students in sports.
- 10,000 young women are now attending college on athletic scholarships, including many who could not afford to go without this assistance.

Jobs

Almost one-third of the nation's professional women work in the field of education. Title IX protects their rights:

- School systems are upgrading salaries and benefits for all teachers to insure that men and women teaching similar courses receive equal pay.
- More women educators are becoming school administrators and principals . . . jobs which currently are held by men.

**HAS TITLE IX TOTALLY  
ELIMINATED SEX DISCRIMINATION?**

Although Title IX has been extremely successful in ridding our school systems, classrooms and playgrounds of sexual discrimination, many inequities still exist. For example:

- In 1979, women comprised only 18% of the total number of students enrolled in technical vocational education programs.
- In the academic year 1979-80, women represented only one out of every ten engineering graduates.
- Boys still outnumber girls on the playing field 3 to 2 and girls' teams often receive inferior facilities, equipment, less coaching time and publicity.

**HOW IS TITLE IX ENFORCED?**

If a student, school employee, or other interested party becomes aware that a school or college is not treating students in accordance with Title IX regulations, she or he can file a complaint with the U.S. Department of Education's Office for Civil Rights (OCR), which will investigate the complaint. If OCR identifies unequal treatment, it will order the school or college to make changes. If the institution refuses, then OCR has the power to withdraw the institution's federal money. Fortunately, OCR has never had to go so far as to cut off funds. Most schools and colleges have been willing to make the required changes.

In addition to responding to complaints, OCR can independently initiate "compliance reviews" of educational programs.

**ISN'T TITLE IX ONE OF THOSE LAWS WHICH REQUIRE BURDENSOME PAPERWORK AND RECORDKEEPING AT THE EXPENSE OF THE TAXPAYER?**

Title IX does not require recordkeeping or reporting to the government. When the Office for Civil Rights of the U.S. Department of Education investigates a Title IX complaint involving a particular school, the investigators look at that school's existing records, such as the budget and the salary scale.

**WILL TITLE IX CONTINUE TO EXIST?**

Although it is unlikely that Title IX will be repealed, it has experienced some trouble during the last two years. For example, a Title IX amendment was introduced in the Senate in 1981 which would have restricted the comprehensive reach of Title IX--many fewer programs and activities would be covered by the law.

In addition, there have been several attempts to change the regulation that implements Title IX in ways that would reduce its scope and effectiveness.

So far none of these efforts have succeeded. This is due, in part, to immense concern expressed by parents, teachers and key public leaders, including members of Congress and officials in the Executive Branch.

**WHAT SHOULD SOMEONE DO IF SHE OR HE FEELS DISCRIMINATED AGAINST?**

As previously mentioned, one key option is to file a complaint with the Office for Civil Rights of the U.S. Department of Education. More information about filing a Title IX complaint is contained in "Anyone's Guide to Filing a Title IX Complaint" available from PEER.

It might be wise to try to resolve the problem through less formal channels before filing a complaint. For example, a parent might raise the issue at a PTA meeting or have a talk with the high school athletic coach or write a letter to the principal. Sometimes these activities can yield good results. If these efforts fail, it may be necessary to bring the matter to the attention of the federal government.

**WHAT CAN CONCERNED INDIVIDUALS DO TO LEARN MORE ABOUT TITLE IX AND TO INSURE ITS ENFORCEMENT IN THEIR LOCAL SCHOOL SYSTEMS?**

An excellent source of information and assistance is the Project on Equal Education Rights of the NOW Legal Defense and Education Fund. Since 1974, PEER has worked to promote policies and practices that further the goal of equal education for males and females.

Individuals can receive valuable information about the requirements of Title IX and important events in Congress, the courts and the Executive Branch which affect equal education by reading PEER's newsletter and a host of other publications.

PEER also works with parents in local communities to give advice, information and in-depth training on how to create change in schools.

## **NOTES TO A CHANGE AGENT**

This Reading was prepared by Resources for Non-Sexist Environments, a federally funded WEEA project, to accompany EXPANDING OPTIONS, sex equity workshops for school communities, K-12.

### **INTRODUCTION**

Change may be defined as any significant alteration in the current state of affairs for an individual, a group, or an organization.

In the natural processes of growth and maturation, and with the passage of time, all things inevitably change. But people are often resistant to change, and apathy is a common form of resistance. We feel more comfortable with the status quo, or the situation as we know it, and feel uneasy with the unknown, which would come with change.

Change may be considered a challenge to one's present situation, which for some individuals is a stimulating experience. For others change causes uneasiness, as new, unknown behavior may be called for. Fear of change can encompass fears that relate to failure, the unknown, giving up the familiar, and diminished power or control.

In attempting to bring about change, it's important to remember that change in one part of a system causes changes in other parts of the system, which may not be anticipated or controlled. Many small changes added together result in real change.

### **ROLE OF THE CHANGE AGENT**

A change agent, or one who is seeking change in a system or an organization, must be sensitive to other people's sense of being threatened or feeling uncertain. Two ways of responding effectively to others' fear are to provide information and to offer understanding and empathy.

According to Ronald Ellis in *The Change Agent's Guide to Innovative Education* (1973), the change agent can function in any or all of at least four primary ways. These include the following roles:

- Catalyst
- Solution giver
- Process helper
- Resource linker

Catalyst

The catalyst works at helping the group overcome its inertia and actually paves the way for change by lessening people's resistance to it. In education today, this role can be taken by parents, students, staff, or school board members who are concerned with the present workings of a school system. These individuals or groups do not necessarily have the answers, but they are dissatisfied with the way things are. They can energize the problem-solving process by voicing their dissatisfaction.

Solution Giver

The solution giver has definite ideas about what changes ought to take place. Although the right solutions are of central importance, another factor in any change process is timing. The solution giver must know *when* and *how* to offer the solutions so that they can be implemented effectively.

Process Helper

The process helper is the key role of the change agent. This person can assist in numerous ways, for example:

- Facilitating recognition and definition of needs by the group.
- Assisting the group in setting objectives for change.
- Showing the group how to find resources.
- Helping the group select or create solutions.
- Aiding the implementation of these solutions.

- Assisting in evaluation of the process and checking to see that needs are met adequately.

### Resource Linker

The resource linker has the job of bringing together all the necessary ingredients to support the desired change. Resources might include financial backing; identifying and procuring people with time, motivation, and needed skills; and expertise in the process of change itself. A person who can link resources and needs both inside and outside the system in question is truly valuable in any change process.

One really needs to be able to assess one's own skills to be able to work effectively for change within a system or organization. One must be able to tap the resources of any group to help facilitate the desired change. Active listening is necessary, to find the talents, motivations, and interests of individual members, and to find the sources of resistance in the group.

### REACTIONS TO CHANGE

People will not respond well if they are told that they must change. Therefore, an effective change agent will attempt to gain a trusting and cooperative working relationship with the group in question. If the group includes a few key people in positions of power, their support should be gained. Then the process can begin at various levels.

The types of reactions a change agent might find to proposed changes vary. However, the following stages describe human reactions that are a normal part of the learning or change process:

- Shock or surprise--"What?" (reacting strongly to any significant challenge to our perception)
- Disbelief--"Ah, come on, that doesn't happen to me (them)." (active disbelief and resistance to new information)
- Guilt--"Oh, I did that?" (feeling inadequate or guilty for past and present actions)
- Projection--"This lousy system, etc." (projecting one's guilt onto other persons and/or circumstances, blaming them)

- Rationalization--"It's the result of our cultural heritage." (a form of resistance that aims to explain and/or excuse behaviors)
- Intellectualization--"Let me think about it for a while." (may be resistance or the beginning of problem solving)
- Acceptance (admission that new behavior and perceptions are necessary for personal and organizational growth)
- Integration and action (incorporation of new awareness and knowledge into behavior and action)

These are not always clear-cut stages; they may overlap or be experienced in a different sequence, or they may not occur at all.

#### CHANGE PLANNING

It is important to remember that in teaching people *how* to change, you must provide not only cognitive information concerning *why* change is necessary, but also motivational influences or payoffs that are *emotionally satisfying*. Our knowledge that change is needed, for whatever reasons we can think of, is not sufficient to cause people to go through the uncertainty and risks that come with change. Motivational supports for each group affected must be ascertained.

The change agent needs a personal power base in order to be effective. This includes a support group, the ability to be assertive, knowledge of the subject area, and commitment to the task at hand.

A good change plan requires a systematic approach, with careful thought and planning. It could include the following steps:

- Identify the problem.
- Develop a plan.
- Do your homework.
- Implement your plan.
- Evaluate and follow up.

## WORKSHEET 7

# CHECKLIST FOR COUNSELORS AND OTHER PUPIL PERSONNEL

Adapted from materials in the *Project Awareness Training Manual*, Olympia, Washington, Public Schools.

*INSTRUCTIONS: Consider the following questions in light of your own practices. Check the appropriate answer.*

	YES	NO
1. Are basic readings on sex-role stereotyping available to staff?	_____	_____
2. Have I given special help to girls and young women by		
a. encouraging them in a wide range of job choices, including traditionally male occupations?	_____	_____
b. motivating girls toward leadership positions and job goals that lead to the highest levels of responsibilities?	_____	_____
c. providing detailed assistance with scholarship and loan applications and opportunities?	_____	_____
d. assuring an equal distribution of scholarships among females and males?	_____	_____
e. making an all-out effort to understand barriers that young women raise for themselves in response to socialization pressures?	_____	_____
f. scheduling discussion groups for girls about mutual problems, future alternatives?	_____	_____

- g. subscribing to some of the newer publications for women (e.g., The Spokeswoman or Women's Studies Newsletter)? \_\_\_ \_\_\_
- h. asking interesting and knowledgeable women in the community to talk with large and small groups? \_\_\_ \_\_\_
- i. publicizing educational and career opportunities available to girls? \_\_\_ \_\_\_
- j. giving girls realistic information about their probable job futures (e.g., most of them can expect to hold paying jobs even if they marry)? \_\_\_ \_\_\_
- k. reminding girls about physical education and shop courses when they are arranging their schedules? \_\_\_ \_\_\_
- l. informing pregnant girls about the options they have for continuing in school? \_\_\_ \_\_\_
- 3. Have I given special help to boys and young men by
  - a. encouraging them in a wide range of job options, including traditionally female occupations? \_\_\_ \_\_\_
  - b. helping them to understand women's changing priorities, the problems women face, and the effects this may have on men? \_\_\_ \_\_\_
  - c. arranging discussion groups and speakers to help them understand the socialization pressures on males? \_\_\_ \_\_\_
  - d. counseling young men who are involved in pregnancy situations? \_\_\_ \_\_\_
  - e. reminding them about cooking and child-rearing courses when they are arranging their schedules? \_\_\_ \_\_\_

- 4. Have I acted as consultant to the faculty by
  - a. scheduling information sessions and suggesting specific activities to reduce sexism?
  - b. scheduling information sessions and suggesting specific activities to expand understanding of the combined effects of sexism and racism?
  
- 5. Concerning the materials I use:
  - a. Am I on the mailing lists of companies and groups developing non-sexist and non-racist work awareness and testing materials?
  - b. Have I been ordering materials from such lists?
  - c. Have I discontinued use of vocational preference tests that have separate forms or marking keys for females and males?
  - d. Have I written publishers of standardized tests about the sex and race biases in the content of test items?
  - e. Am I encouraging a district-wide review of counseling materials that might reinforce bias and stereotyping?
  
- 6. Has my training and in-service education provided me with up-to-date information on sexuality (including homosexuality)?
  
- 7. Have I been trying to develop closer school contact with fathers as well as mothers?
  
- 8. Have I provided assertiveness training for girls and for boys?

# SESSION 3: TITLE IX AND COUNSELING

## Counselor Workshop

GOALS: TO INCREASE AWARENESS OF TITLE IX AND ITS IMPACT ON THE COUNSELING PROCESS  
TO INCREASE SEX AFFIRMATIVE COUNSELING PRACTICES

### GENERAL BUSINESS

5

Discuss questions or comments regarding the previous session and homework.

Share the following resources (suggested):

- *And Jill Came Tumbling After*, edited by Stacey, Bereaud, and Daniels.
- *Cracking the Glass Slipper: PEER's Guide to Ending Sex Bias in Your Schools*, by Verheyden-Hilliard.

Present Session 3 goals and overview.

#### OBJECTIVE #1

*Given certain situations, participants will correctly identify stages of Title IX compliance using the terms sex discriminatory, sex biased, sex fair, and sex affirmative.*

### TITLE IX

25

Introduce and present the filmstrip/cassette *Title IX and the Schools* or an appropriate alternative.

Present the Mini-Lecture "Title IX," briefly reviewing major areas and responding to questions. Use the Transparencies. Define and give examples of the following terms: sex discriminatory, sex biased, sex fair, and sex affirmative.

large group

Name tags  
Sign-in sheet  
Chalkboard

MINI-LECTURE:  
*Title IX*

TRANSPARENCY  
MASTERS:  
Overview of General Categories: Title IX  
Defining the Terms (A, B, C)

APPLICATION OF TITLE IX  
FOR COUNSELORS

30 Divide participants into small groups and have them complete the Worksheet "Complying with Title IX--Counselors."  
In the large group, conduct a follow-up discussion and sharing of responses.

30 Divide participants into small groups. In the small groups, have counselors share their findings on the Worksheet "Checklist for Counselors and Other Pupil Personnel Workers" (homework assignment from Session 2).  
Conduct a large group sharing of problem areas. Post and prioritize the results. Save the list for the action planning activity later in this session.

OBJECTIVE #2

*Participants will identify the principal stages of change and the roles of change agents.*

THE COUNSELOR AS  
CATALYST FOR CHANGE

20 Conduct the Mini-Lecture "Elements of Change," using the Transparency.  
In the large group, facilitate a brief discussion period, having participants identify stages of change and their change roles as counselors.

WORKSHEET:  
Complying with  
Title IX--Coun-  
selsors

MINI-LECTURE:  
Elements of  
Change

TRANSPARENCY  
MASTER:  
Roles of a  
Change Agent/  
Reactions to  
Change

OBJECTIVES #3 and #4

Participants will demonstrate the ability to use force-field analysis to solve problems in sex equity situations.

Participants will prioritize and design elements of an action plan for their school community.

PLANNING FOR ACTION 60

Introduce force-field analysis action planning.

Distribute the Worksheet "A Guide to Action: Force-Field Analysis." Conduct a force-field analysis, using the process outlined in the Worksheet.

ASSESSMENT  
(optional posttesting)

Conduct posttesting, if desired, adjusting workshop times accordingly. Use the Assessment Instruments What Do You Know About Sex Equity? Adult Rating Scale, and Person-Concept Incongruity Scale. Plan to share the results with participants in Session 4.

HOMEWORK 5

Preview the next session.

PROCESS EVALUATION 5

Conduct a process evaluation of the session, using the "Process Evaluation Form."

## MINI-LECTURE: TITLE IX

This Mini-Lecture will provide some background information and give a general scope of Title IX of the Education Amendments of 1972. Also, there is an explanation of key terms dealing with the stages of compliance with the law.

### THE LAW

Title IX was passed by Congress, and signed by the President on June 23, 1972. It is a civil rights law prohibiting sex discrimination in education programs and activities receiving federal funds.

The preamble to Title IX states: *No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any educational program or activity receiving federal financial assistance.*

### SCOPE

The scope of Title IX extends from preschool through graduate school. It protects students, professional staff, and support staff from sex discrimination.

Professional organizations, training programs, research institutes, and so on must also comply with Title IX if they receive federal dollars.

*Exemptions: Military and religious schools are exempted if the laws would be inconsistent with the basic religious tenets of those schools.*

### SUMMARY OF THE FOUR CATEGORIES

1. The first area, General Provisions, states that all education institutions receiving federal funds must:
  - Complete a *self-evaluation* and take appropriate remedial steps to eliminate the effects of discrimination resulting from past policies or practices.

- Choose a *responsible employee* to be the *Title IX Officer*. She or he will coordinate compliance and investigate complaints.
  - Include a *policy statement* in all publications. No publication should suggest by text or illustration that the recipient treats applicants or employees differently on the basis of sex.
  - Give and continue to give *notification of Title IX compliance* to applicants for admission, students, parents, employees, unions, and professional organizations.
  - Develop *grievance procedures* for resolution of student and employee complaints.
  - File *assurance of Title IX compliance* with the federal government by October 1, 1975.
- II. The second area prohibits sex discrimination in Admissions policies and criteria for selection.
- III. The third area, Treatment of Students, covers discrimination in:
- housing facilities
  - access to courses and activities
  - counseling and guidance--tests, materials and practices
  - financial aid and scholarships
  - health and insurance benefits
  - marital or parental status
  - athletics
- IV. The fourth area deals with employment and prohibits sex discrimination in recruitment, job classifications, fringe benefits, rates of pay, advertising, or pre-employment inquiries.

## ENFORCEMENT

The Office for Civil Rights in the Department of Education, Washington, D.C., is responsible for enforcement.

Noncompliance could result in a cutoff of all federal funds to a school district or institution.

## UNDERSTANDING THE TERMS

[Use Transparencies 16-19.] Within the context of equal educational opportunity for females and males, practices and behaviors can fall into the following categories:

### ■ Sexist Practices and Behaviors

- Sex Discriminatory (SD): those specifically prohibited by Title IX.
- Sex Biased (SB): those that are still discriminatory and may be the subjects of grievances, but are not specifically covered by the Title IX regulation.

### ■ Non-Sexist Practices and Behaviors

- Sex Fair (SF): those affecting males and females similarly, meeting the letter of the law.
- Sex Affirmative (SA): those that go beyond sex fair, by attempting to overcome the past effects of discrimination and bias for the affected sex.

# OVERVIEW OF GENERAL CATEGORIES: TITLE IX

## COMPLYING WITH TITLE IX -- COUNSELORS

Adapted from materials developed by the Resource Center on Sex Roles in Education.

*INSTRUCTIONS: Each of the following situations falls in one of these categories. Decide if the example is Sex Discriminatory (SD), Sex Biased (SB), Sex Fair (SF), or Sex Affirmative (SA). Label the blanks with the correct letters.*

This worksheet outlines a number of situations that occur in the day-to-day experiences of school counselors and pupil personnel staff. Within the context of equal educational opportunity for females and males, practices and behaviors can fall into the following categories:

### SEXIST practices and behaviors

- Sex Discriminatory (SD)--those that are specifically prohibited by Title IX
- Sex Biased (SB)--those that are still discriminatory and may be grievable, but are not specifically covered by the Title IX regulation

### NONSEXIST practices and behaviors

- Sex Fair (SF)--those that affect males and females similarly
- Sex Affirmative (SA)--those that go beyond sex fair by attempting to overcome the past effects of discrimination and bias for the affected sex

Situation A: Students are consulting counselors regarding the courses they should be taking next semester.

1. "Susan, are you sure that you want to sign up for trigonometry? That is a most difficult course and it is really unlikely that you will ever need that course. You know, very few girls ever enroll in that course."
2. "Carlos, I understand that you've been working with Gree. Gardens Nursery and want to enroll in the horticultural class. That's a good way of finding out whether you want to be a landscape architect. Jeannie, that's a most attractive outfit you are wearing today."
3. "Jim, your records indicate that you're interested in office occupations and have done well in typing and business management. Have you considered taking shorthand so that you would have the skills for secretarial work?"
4. "Joyce and Kevin, I understand that the two of you are interested in using the computer terminal services to find information on technical schools offering programs in environmental technology. It's great that you found out about the computer terminal and decided to use it."

Situation B: A counselor is giving directions to the class for completing a series of tests.

1. "The next section of the test deals with mathematical concepts. Try to work as quickly as you can to complete the questions. Girls, don't be concerned if you are having difficulty with the items, because most girls can't understand mathematics."
2. "The next section of the test deals with abstract reasoning problems. Read each item carefully and try to select the best answer. If you're having difficulty with a question, move on to the next one."

Situation C: Patterns of non-verbal behavior for counseling situations:

- \_\_\_\_\_ 1. Maintaining direct eye contact with same-sex students and indirect eye contact with opposite-sex students.
- \_\_\_\_\_ 2. Standing or sitting as close to students of one sex as you do with students of the other sex.
- \_\_\_\_\_ 3. Smiling at students of one sex as you meet them in the hall.

Situation D: A 16-year-old student who is pregnant comes to you for assistance in deciding whether or not she should remain in school.

- \_\_\_\_\_ 1. "Trying to continue in school and taking care of a baby at the same time will be difficult for you and the baby."
- \_\_\_\_\_ 2. "You can continue in school. There's no reason for you to leave unless you want to."
- \_\_\_\_\_ 3. "Of course, you have the right to remain in school here, but you'll probably find it embarrassing to do so. There's a special school for girls in your condition that we recommend. You should contact Ms. Dwyer to enroll in that program."
- \_\_\_\_\_ 4. "There's no reason whatsoever why you can't complete your academic work. Why don't we look at some of the ways you may wish to complete your work and see what might work out best for you, both before and after your baby is born."

Situation E: You're responsible for setting up a career day for students.

- \_\_\_\_\_ 1. You arrange for female and male speakers who are in careers traditional for their sexes and assign students to sex-traditional areas (female students hear representatives of women's colleges and talk to women in office management, nursing, social welfare, etc.; male students hear representatives of scientific and technical institutions and talk to men who are executives, insurance agents, crafts workers, etc.).

- \_\_\_\_\_ 2. You arrange for speakers without regard to their sex and encourage students to self-select the presentations of greatest interest to them by providing them with detailed information about the speakers.
- \_\_\_\_\_ 3. You arrange for female and male speakers in careers traditional and non-traditional for their sex and schedule the presentation in a way that requires students to hear nine out of twelve speakers.

Situation F: Julia, a high school senior, needs summer work to help pay tuition to attend a computer technology school in the fall. She comes to you to ask about summer work. You ask what she likes to do, and she reports that she likes to fix things. You suggest the following possibilities.

- \_\_\_\_\_ 1. She might investigate the "openings for girls" listing on the "jobs for summer" board.
- \_\_\_\_\_ 2. She might call an agency that provides temporary office services--typing, filing, answering the phone, etc.-- and try to find a placement.
- \_\_\_\_\_ 3. She might join a group of students who are organizing a service for doing minor home repairs and lawn and garden work during the summer.
- \_\_\_\_\_ 4. She might investigate a new municipal summer jobs program that attempts to place young people in non-traditional jobs.

Situation G: Mike, a high school junior, would like to enroll in the child development class given by the home economics department. He has always enjoyed baby-sitting and last summer worked as a counselor at a day camp. He thinks he might eventually like to be an early childhood or elementary school teacher, but he's afraid he'll be the only boy in the class and the other students will make fun of him. You say to him:

- \_\_\_\_\_ 1. "In this school you have the right to take any class you want."

- \_\_\_\_\_ 2. "Why don't you see if some of your friends will sign up for the class so you won't have to be the only male in the class?"
- \_\_\_\_\_ 3. "You're probably right about having jokes made about your being in the class. Why don't you wait to take that type of course when you're in college and sign up now for some other elective courses?"

Situation H: Anita, a high school sophomore, comes into your office to talk about enrolling in auto body shop next fall. She indicates that she is very interested in taking the course but is afraid she won't be able to participate in the work placement activities that are part of the program. She has heard that the cooperating businesses will not accept female students. You say to her:

- \_\_\_\_\_ 1. "Well, you know that there are still many employers who are reluctant to hire females in this kind of job. Maybe we'd better look at some other vocational program for you."
- \_\_\_\_\_ 2. "You're really interested in this class but are afraid you'll be excluded from the work experience. Under Title IX the school cannot participate in a program that is discriminatory. If we find that employers are discriminating in accepting students, the school can't continue to use those employers as placement resources."
- \_\_\_\_\_ 3. "Under Title IX, students are assured the right of non-discrimination in all educational programs. Although some employers are reluctant to accept females in job placements, they are required to do so if they are to be involved in the school's program. I think you'll find that many attitudes are beginning to change. You may wish to talk to Sara Jackson, who is now an auto mechanic with the Benavедiez Car Agency, to learn more about her experiences going into a non-traditional job."

Situation I: The following are excerpts from student scheduling forms, which parents are required to sign.

- \_\_\_\_ 1. "Dear Mr. and Mrs. \_\_\_\_\_:"
- \_\_\_\_ 2. "A student in Stivers High School has many options open to him. He may enroll in four basic programs."
- \_\_\_\_ 3. "To the family of (student's name):"

Situation J: As part of an elementary school's career education program, you've brought a female police officer and female fire fighter to discuss their jobs. The children listen carefully to their comments. Afterwards, during a discussion of the visit by the police officer and fire fighter, several children insist that being a "fireman" and a "policeman" are jobs for men. You say:

- \_\_\_\_ 1. "These days, people can be anything they want to be."
- \_\_\_\_ 2. "A few women are tough enough to want to go into police work or fire protection work."
- \_\_\_\_ 3. "It may seem strange to some of you to see women working as police officers or fire fighters because these jobs used to be limited to men. Our ideas about work and our laws are changing. There is more opportunity for people to select jobs that interest them regardless of their sex."

Situation K: Carol, a high school senior with a good academic record, comes in to talk about her post-high school plans. She had planned to go to college but is now engaged to be married during the summer. Her fiancé has a reasonably well-paying job, but insists that if Carol attends college, a severe strain would be placed on their budget. Carol has no definite career plans.

- \_\_\_\_ 1. "Well, you don't want your marriage to get off on the wrong foot. As long as you're unsure of yourself and college would be a financial strain, you probably should not plan to go to college. If anyone goes to college, it should be your fiancé because the man has to earn a living."

- \_\_\_\_\_ 2. "Since you seem unsure of yourself, let's evaluate your grades and interest scores. Most women will be working outside the home at some time in their lives. It would make sense for you to begin to formulate some definite plans and gain skills that could be used in work outside the home."
  
- \_\_\_\_\_ 3. "As long as your future husband can support you, there's no immediate need to worry about your future."

## MINI-LECTURE: ELEMENTS OF CHANGE

This Mini-Lecture provides information on the change process, reactions to change, and the roles of a change agent.

### DEFINING CHANGE

Change may be defined as any significant alteration in the current state of affairs for an individual, a group, or an organization. Change is inevitable as part of the natural process of growth and maturation. People are generally more comfortable with the status quo, for change entails risk as well as challenge.

### SENSITIVITY: THE KEY

Fear of change can encompass fears of failure, of the unknown, of giving up familiar satisfactions, and of diminished power or control.

It is important to remember that change in one part of a system produces change in other parts. Many small changes added together result in real change.

A *change agent* must be sensitive to other people's sense of being threatened or uncertain. Two ways of responding effectively to others' fear are to provide information and to offer understanding and empathy.

### ROLES OF A CHANGE AGENT

[Use the Transparency "Roles of a Change Agent/Reactions to Change."]  
A change agent can function in any or all of at least four primary ways. These include a *catalyst*, who helps initiate change; a *solution giver*, who has definite ideas regarding what changes ought to take place; a *process helper*, who plays a key role in facilitating problem solving by the group; and a *resource linker*, who brings together necessary ingredients to support the desired change.

## BUILDING POSITIVE RELATIONSHIPS

To work effectively within any system, a change agent must assess personal skills and tap the resources of the group. An effective change agent attempts to gain a trusting, cooperative relationship with the group. People will not change if they're told to change.

A change agent needs a personal power base that includes a *support group*, *assertiveness*, *knowledge*, and *commitment* to the task at hand.

## REACTIONS TO CHANGE

Reactions to change vary. The following stages of reactions usually accompany a change or learning process. They are not always clear-cut, they may overlap, they may appear in a different sequence, or they may not occur at all. [Refer again to the Transparency.]

- *Shock or surprise*--strong reaction to any significant challenge to perception
- *Disbelief*--active disbelief and resistance to new information
- *Guilt*--feeling of inadequacy or guilt for past and present actions
- *Projection*--projecting one's own guilt onto other persons and/or circumstances, blaming them
- *Rationalization*--a form of resistance that aims to explain and/or excuse behaviors
- *Intellectualization*--resistance, or the beginning of problem solving
- *Acceptance*--admission that new behavior and perceptions are necessary for personal and organizational growth
- *Integration and action*--incorporation of new awareness and knowledge into behavior and action

## **SYSTEMATIC APPROACH**

A good change plan requires a systematic approach, which might include:

- Step 1--Identifying the problem
- Step 2--Developing a plan
- Step 3--Doing your homework
- Step 4--Implementing the plan
- Step 5--Evaluating and following up on the plan

## REACTIONS TO CHANGE

<b>CATALYST</b>	Helps initiate change
<b>SOLUTION GIVER</b>	Has definite ideas regarding what changes ought to take place
<b>PROCESS HELPER</b>	Plays a key role to facilitate problem solving by the group
<b>RESOURCE LINKER</b>	Brings together necessary ingredients to support the desired change

## ROLES OF A CHANGE AGENT

<b>SHOCK or SURPRISE</b>	Strong reaction to any significant challenge to perception
<b>DISBELIEF</b>	Active disbelief and resistance to new information
<b>GUILT</b>	Feeling of inadequacy or guilt for past and present actions
<b>PROJECTION</b>	Projection of one's own guilt onto other persons and/or circumstances, blaming them
<b>RATIONALIZATION</b>	A form of resistance that aims to explain and/or excuse behaviors
<b>INTELLECTUALIZATION</b>	Resistance, or the beginning of problem solving
<b>ACCEPTANCE</b>	Admission that new behavior and perceptions are necessary for personal and organizational growth
<b>INTEGRATION and ACTION</b>	Incorporation of new awareness and knowledge into behavior and action

## **A GUIDE TO ACTION: FORCE-FIELD ANALYSIS**

Adapted from materials developed by Resource Center on Sex Roles in Education.

The systematic approach in this action guide will help you clarify the "what" and "how" of your change efforts.

**Step 1: IDENTIFY THE PROBLEM**

- a. Assess your interests.
- b. Collect information.
- c. Find out who's interested.

**Step 2: DEVELOP A PLAN  
(force-field analysis)**

- a. Formulate your change goal(s).
- b. Analyze the forces for and against change.
- c. Identify possible actions/strategies.
- d. Select action steps.
- e. Develop timeline and assign responsibilities.

**Step 3: DO YOUR HOMEWORK**

- a. Prepare for the specified actions.
- b. See the right people.
- c. Involve relevant groups.
- d. Continue to collect information.
- e. Continue to assess your plan.
- f. Make necessary modifications/adaptations.

**Step 4: IMPLEMENT YOUR PLAN**

- a. Carry out specified actions.
- b. Adapt plan if necessary.

**Step 5: EVALUATE AND FOLLOW UP**

- a. Assess the outcome of your actions.
- b. Identify necessary follow-up steps.
- c. Determine the goals for the next session.

A GUIDE TO ACTION

INSTRUCTIONS: Use this worksheet to complete Step 2: DEVELOP A PLAN, a-e (force-field analysis).

FORMULATE YOUR CHANGE GOALS

What is the goal of your action efforts--what change do you wish your schools to implement? Consider the following questions:

- What change do you wish to make?
- Whom do you want to change?
- How will you bring about the change?
- When will the change be accomplished?
- Where will the change be accomplished?

Now write a goal statement that includes the answers to the foregoing questions.

ANALYZE THE FORCES FOR AND AGAINST CHANGE

What are the major forces that can support the change (driving forces) or inhibit the change (restraining forces)?

DRIVING FORCES	RESTRAINING FORCES

Questions that may assist you in the identification of forces include:

- Who will be involved in or affected by the change? How will they perceive it? How will they react to it?
- Who will support change efforts? How will they show it?
- Who will oppose changes? How will they show it?

294

**IDENTIFY POSSIBLE  
ACTIONS/STRATEGIES**

List possible actions and strategies and consider the consequences of employing each.

ACTION STEP	CONSEQUENCES

**SELECT ACTION STEPS**

After evaluating the action steps, list the major ones you are going to implement, making sure they have a good chance for success.

**MAJOR ACTION STEPS**

---

**DEVELOP TIMELINES AND  
ASSIGN RESPONSIBILITIES**

List the action steps you will utilize to achieve your goals, the individual or group responsible for each, and the timetable for completion of each.

ACTION	PERSON(S) RESPONSIBLE	DATE TO BE COMPLETED

# SESSION 4: REVIEW AND APPLICATION

## Counselor Workshop

**GOALS:** TO APPLY NEW AWARENESS AND KNOWLEDGE TO COUNSELING SITUATIONS  
TO EVALUATE THE WORKSHOP EXPERIENCE

### GENERAL BUSINESS 5

- Invite comments and questions on the previous session.
- Post Session 4 goals and overview.
- Present the option of having an extra session on assertiveness training and discuss such a possibility.

### PRE/POST ASSESSMENT RESULTS (if applicable) 20

Share the results of the pre- and post-assessment with participants.

#### OBJECTIVE #1

*Participants will role play simulated counseling situations, using sex equity awareness skills.*

Select from the following options:

### ROLE PLAYING: SELECT OPTIONS 35

Option 1--Given Situations: Distribute the Worksheet "Role-Play Situations for Counselors" in envelopes.

Divide participants into structured groups so that all are involved as observers or participants.

Allow time for people to study their roles.

Initiate presentations of the role-play situations (with no prior instructions).

large group

optional

worksheet

Name tags  
Sign-in sheet  
Chalkboard  
Newsprint  
Masking tape  
Markers

Poster with Session 4 goals and overview

Assessment results

WORKSHEET:  
Role-Play Situations for Counselors

Option 2--Situations from Experience: Divide participants into two groups.

Have each group create a problem situation that is based on a real counseling situation, using the same format as that of the role play exercise.

Have the groups exchange their role-play situations.

Facilitate the presentation.

ALL OPTIONS 30

Have participants give players feedback on the role-play situations.

Use the following questions to facilitate the discussion:

- *What did you like about the presentation of the situation? Consider each characterization.*
- *Were any sexist attitudes and behaviors present?*
- *If so, were the players sensitive to these attitudes and behaviors?*
- *Did the presentation reflect awareness of sex equity?*

OBJECTIVE #2

*Participants will evaluate their experiences in the workshop by identifying their three most valuable learnings.*

302

303

WORKSHOP EVALUATION

60

Divide participants into three groups to conduct an evaluation of the workshop experience. Assign a session to each group. Hand out the Assessment Instrument "Final Assessment" and include lists of session titles, Readings, Worksheets, and activities (films, role plays, etc.).

Have groups discuss the workshop and record their opinions on the form.

Reconvene in the large group and share the results.

OBJECTIVE #3

Participants will state whether the workshop goals were met.

GOAL EVALUATION

15

Post and review the list of goals set at the first session.

In the large group, have participants check the goals that were met.

Facilitate a discussion.

WRAP-UP

15

Provide a way for each participant to make a personal statement of her or his experience.

Present Certificates of Completion.

ASSESSMENT INSTRUMENT: Final Assessment

Newsprint with Session 1 goals

Certificates of Completion

## WORKSHEET 10

# ROLE-PLAY SITUATIONS FOR COUNSELORS

This Worksheet was prepared by Resources for Non-Sexist Environments, a federally funded WEEA project, to accompany EXPANDING OPTIONS, sex equity workshops for school communities, K-12.

*INSTRUCTIONS: Role play this situation for the large group.*

Characters: Counselor, Auto Shop Teacher

Counselor: You have been informed that the male Auto Shop teacher has been making it very uncomfortable for the female students in his class. He is constantly making jokes about women and cars and refers to the girls in the class as "little gals." He is protective of the females and is concerned about their getting hurt. The female students who are in the class have asked you to talk to him about the differential treatment they have been receiving in auto shop.

Auto Shop Teacher: One of the counselors has asked you to come in for a conference. You are wondering what it might be about. Maybe it's the joker who has been counseling girls to take auto shop. This equality stuff is for the birds. What do women know about cars and mechanical things? It doesn't seem right to see a little gal full of grease playing around under a car. What's this crazy world coming to? Maybe you can talk some sense into the career counselor's head. Equality or not, girls and auto mechanics just don't mix!

*INSTRUCTIONS: Role play this situation for the large group.*

**Characters: Counselor, Black Female Student**

**Counselor:** As a counselor in a big-city high school, you are required to interview each student in the fall of the senior year. Few of the students plan to go to college, and the dropout rate is high. There is one female student with high grades and academic interests whom you are looking forward to helping with college plans and scholarship applications. This student has visited you several times during the year. In your last meeting she seemed to have undergone a change. Although her grades are still high, she denied interest in going to college and said that she had a good job waiting for her after graduation. You have asked her to come in for a conference. You hope to determine what has caused her change in plans.

**Black Female Student:** You have excelled in math and foreign languages and were invited to attend a language camp last summer. It was your first intimate experience with middle-class white teenagers, and you felt uncomfortable and unaccepted. In the fall of your senior year, you began dating a young man whose social consciousness has led him to join a militant Black community group. He encouraged you to attend meetings with him. Your experiences last summer have made you question your goals. Your boyfriend says you feel "too good" for your own people. Staying with him and working in the community seem more real to you than going to college. Your counselor has asked you to come in for a conference. You are sure it is about your change of plans.

307

308

*INSTRUCTIONS: Role play this situation for the large group.*

Characters: Counselor, Male Student, Mother, Father

Counselor: One of your male students has come to you about his career plans. He would like to go to nursing school. His grades are average, and he has an aptitude for nursing. He is interested in the many opportunities available to him in the field of nursing--cardiovascular technician, inhalation therapy, etc. His parents would like him to pursue an "appropriate" career for a male and do not see nursing as a male profession. One of his sisters is a nurse at a local hospital. He has not yet told his parents of his plans. He has asked you to help break the news to his parents.

Male Student: You want to be a nurse. Your parents are traditional, conservative people. Your mother is a homemaker. Your father is an electrician. Both are concerned about your lack of interest in athletics and would like to see you become "more of a man." They are not receptive to a career in nursing for their only son; they are concerned about the implications of your interests. You have two sisters; the elder is a nurse. You are determined to pursue your career goal. You have enlisted the support of your counselor to break the news to your parents.

Mother: The high school counselor has asked you and your husband to attend a conference to discuss your son's career plans. He is graduating and has not made a decision about his future. He is a sensitive boy, warm and caring; your husband is concerned about his lack of masculinity. You are confused; you want what is best for your son's future, but don't know what that is. Maybe the counselor can help. Maybe you will get some answers.

Father: The counselor has called you and your wife to school to discuss your son's career plans. You are concerned about his lack of interest in sports and his quiet nature. You go to the meeting with many questions about your son's future. When will he behave as a man should? What is the counselor going to discuss with you? You hope to get support from the counselor for a plan to make a man out of your son. Perhaps he should join the Navy and learn a trade, as you did.

**INSTRUCTIONS:** Role play this situation for the large group.

**Characters:** Female Counselor, Female Hispanic Student, Father, Mother

**Female Counselor:** A female senior of Hispanic background comes to you with a problem. She wants to go to college and major in English. She is a bright student with a talent for writing. Her father feels that college is not important for girls and wants her to attend secretarial school. She has asked you to talk with her parents and to present the advantages of a college education and the possibility of scholarships.

**Female Hispanic Student:** You are about to graduate. Your parents want you to go to secretarial school. You want to go to college, major in English, and pursue your interest in writing. Your counselor has presented scholarship opportunities and has encouraged you with your plans. You have asked her to meet with your parents.

**Father:** You are of Hispanic background, a high school graduate employed in an aircraft factory. You are proud that your wife does not have to work. You feel that a woman's place is in the home. You have a daughter and two sons. You plan to send the boys to college and your daughter to secretarial school. The career counselor has requested a conference with you and your wife. You wonder why. You are surprised that the counselor is a woman.

**Mother:** You are a homemaker of Hispanic background. A conference has been scheduled with your daughter's counselor. Your daughter is a senior and wants to go to college. You are aware of your husband's negative attitude toward women and college. You know he plans to send her to secretarial school. You secretly hope that the counselor will change his mind. You are pleased that the counselor is a woman.

TO USE ASSERTIVENESS SKILLS TO ENHANCE INTERPERSONAL RELATIONSHIPS (COMMUNICATION)

### GENERAL BUSINESS 10

Introduce yourself, giving personal and professional information.

Share resources (suggested list):

- The Assertive Woman, by Phelps and Austin
- Your Perfect Right, by Alberti and Emmons
- Asserting Yourself, by Bower and Bower

Present Session 8 goals and overview and have participants share their expectations. Use participant input as a guide for session direction and examples.

### OBJECTIVE #1

Participants will integrate the terms "non-assertive," "aggressive," and "assertive" into their personal lives by identifying situations and feelings that accompany these behaviors.

### INTRODUCTION TO ASSERTIVENESS 20

Give the Mini-Lecture "Introduction to Assertiveness" to define terms and concepts, using the Transparencies "Definitions," "Behavior Descriptors," and "Components of Assertive Behavior."

Sign-in sheet  
Name tags  
Chalkboard  
Newsprint  
Masking tape  
Markers  
Overhead projector

10  
10  
5  
15

Have participants imagine themselves in each type of situation and then brainstorm the emotions and feelings that accompany each state (non-assertive, assertive, and aggressive). Record participants' responses on the chalkboard.

**OBJECTIVE #2**

Participants will be able to write "I" messages, as measured by completion of Worksheets.

Give the Mini-Lecture "'I' Messages," using the Transparency.

Distribute the Worksheet "'I' Messages." Explain the Worksheet and give examples. Divide participants into small groups and have them complete the Worksheet.

Facilitate a large group discussion and sharing of responses.

**OBJECTIVE #3**

Participants will be able to apply assertiveness skills while giving and receiving compliments and criticism.

Give the Mini-Lecture "Giving and Receiving Compliments," and have participants share their personal perceptions and experiences.

Give the Mini-Lecture "Giving and Responding to Criticism." Explain and give examples of how to respond to criticism without becoming disabled. Use the Transparencies, and respond to group questions and concerns as appropriate.

Responding to Criticism (A and B)

**SELECT OPTION**

50

Select from the following options:

**Option 1:** As a class or in a few large groups, participants should brainstorm situations or use the Worksheet "Assertiveness Role-Play Situations" for application and practice of giving and responding to criticism.

Divide participants into groups of three. Have each group choose one or two situations to role play. Have two group members role play each situation, with the third person monitoring. Then have them reverse roles.

Facilitate a large group sharing of the role-playing activity.

**Option 2:** Explain the Worksheet "DESC Script," and emphasize its use in conflict situations. Provide an example, using the Worksheet as a guide. Use the Transparency to illustrate.

Divide participants in pairs and have each pair fill in the Worksheet, choosing an appropriate situation from their personal or professional experience related to the issue of sex equity.

Facilitate a large group sharing of responses.

Conduct a process evaluation of the session, using the "Process Evaluation Form."

## MINI-LECTURE: INTRODUCTION TO ASSERTIVENESS

This Mini-Lecture provides basic information regarding the philosophy, value, and learning process for developing assertive behavior.

### PHILOSOPHY AND VALUE

Assertiveness training provides a *framework for looking at behavior*. Using this framework, an individual can look at personal behavior, analyze problem situations, and identify behaviors that are no longer functional or effective.

Assertiveness training is based on the belief that when a person values others and communicates in an honest and direct way, she or he can:

- Maintain *self-respect* by taking responsibility for her or his own feelings, needs and actions.
- Improve *interpersonal relationships* by letting others know where they stand.
- Increase her or his ability to make *choices* about personal behavior in a given situation (improve *personal power*).
- Increase the likelihood of reaching *goals* (*self-confidence* increases with more success experiences).

### BECOMING ASSERTIVE

Assertiveness training involves learning new *terms* and *skills* through *practice* and *perseverance*. Role-playing, or assertiveness practice in a group, is an effective way to develop new assertive behavior. It is difficult to respond assertively in a situation where there are strong feelings or the stakes are high.

Behavior change also requires *time* and *introspection*. You can't become a new person overnight, and looking at your own behavior is difficult, but

the payoff is high. Remember that when you change, it can be threatening to those around you. They may resist the "new" you and attempt to change you back to the way you were.

Understanding the terms non-assertive, aggressive, and assertive is an essential first step in becoming assertive and standing up for your own rights.

## DEFINITIONS

[Use the Transparencies "Definitions," "Behavior Descriptors," and "Components of Assertive Behavior."]

- **Non-assertive:** not recognizing or expressing personal needs, wants or desires; allowing others to choose for you; seldom achieving your goal; denying responsibility for your own actions. It results in *self-denial* and *inhibition*.
- **Aggressive:** expressing personal desires, values, and needs while violating the rights of others; accomplishing your goal at others' expense. It results in feelings of *temporary satisfaction* and *guilt*.
- **Assertive:** recognizing and expressing personal wants, values, needs, and feelings without violating the rights and feelings of others; choosing how to act in a given situation; usually achieving your goal; creating a win-win situation. This results in *self-enhancement* and *self-respect*.

### AN EXAMPLE: DINING OUT

Mr. A and Ms. B are at dinner in a moderately expensive restaurant. Mr. A has ordered a rare steak, but when the steak is served, Mr. A finds it to be very well done, contrary to his order. He can respond in one of three ways:

- **NON-ASSERTIVE:** Mr. A grumbles to Ms. B about the "burned" meat, and states that he won't patronize this restaurant in the future. He says nothing to the waitress, responding "Fine!" to her inquiry, "Is everything all right?" His dinner and evening are highly unsatisfactory, and he feels guilty for having taken no action. Both Mr. A's and Ms. B's estimates of Mr. A are deflated by the experience.

- **AGGRESSIVE:** Mr. A angrily summons the waitress to the table. He berates her loudly and unfairly for not complying with his order. His actions ridicule the waitress and embarrass Ms. B. He demands and receives another steak, this one more to his liking. He feels in control of the situation, but Ms. B's embarrassment creates friction between them and spoils their evening. The waitress is humiliated and angry, and loses her poise for the rest of the evening.
- **ASSERTIVE:** Mr. A motions the waitress to his table. Noting that he had ordered a rare steak, he shows her the well-done meat, asking politely but firmly that it be returned to the kitchen and replaced with the rare-cooked steak he originally requested. The waitress apologizes for the error, and returns shortly with a rare steak. Both Mr. A and Ms. B enjoy dinner, tip accordingly, and Mr. A feels satisfied with himself. The waitress is pleased with a satisfied customer and an adequate tip.

# DEFINITIONS

- NON-ASSERTIVE** not recognizing or expressing personal needs, wants, or desires
- AGGRESSIVE** expressing personal desires, values, and needs while violating the rights of others
- ASSERTIVE** recognizing and expressing personal wants, values, needs, and feelings without violating the rights and feelings of others

# BEHAVIOR DESCRIPTORS

<b>NON-ASSERTIVE</b> <b><u>(as actor)</u></b>	<b>AGGRESSIVE</b> <b><u>(as actor)</u></b>	<b>ASSERTIVE</b> <b><u>(as actor)</u></b>
self-denying	self-enhancing at expense of another	self-enhancing
inhibited	expressive	expressive
hurt, anxious	depreciates others	feels good about self
allows others to choose for her/ him	chooses for others	chooses for self
does not achieve desired goal	achieves desired goal by hurting others	may achieve desired goal
<b><u>(as acted upon)</u></b>	<b><u>(as acted upon)</u></b>	<b><u>(as acted upon)</u></b>
guilty or angry	self-denying	self-enhancing
depreciates actor	hurt, defensive, humiliated	expressive
achieves desired goal at actor's expense	does not achieve desired goal	may achieve desired goal

# COMPONENTS OF ASSERTIVE BEHAVIOR

## MINI-LECTURE: "I" MESSAGES

This Mini-Lecture provides a definition and background information regarding the use of the assertive "I" message.

### RATIONALE FOR USAGE

An "I" message is used to establish and maintain close and honest interpersonal relationships. It facilitates *cooperation* and *open communication*. An "I" message communicates personal feelings and experiences (positive and negative) and states the effect another's behavior has on you. "I" messages do not judge or interpret another's behavior, nor do they place blame on another. They are less likely to provoke resistance because they relate your *perception of fact* rather than stating your evaluation.

The "I" message response is also effective when you are communicating positive feelings. It affirms or supports without evaluating--for example, "I really like the colors in your picture" instead of "You're such a good artist."

### "YOU" MESSAGE

On the other hand, a "you" message is a direct attack on another's behavior, and usually throws the other person into a *defensive position*, making her or him less free to listen to your statement. For example, if someone constantly interrupts you, the "you" message response might be "You always interrupt me," or "You're rude," attacking and causing the other person to take the defensive. The "I" message response might be, "When I am interrupted, I find it difficult to get my work done, and I get irritated," describing behavior and explaining the effect a behavior has had on you; the other person cannot deny your perceptions or feelings.

### FRAMEWORK

It's important to have a *framework* or model when learning new behaviors. This model can serve as a guide to learn the assertive "I" message. [Use the Transparency.]

**MODEL:** When \_\_\_\_\_ (describe the behavior), then \_\_\_\_\_  
\_\_\_\_\_ give the effects of the behavior on you), and I feel  
\_\_\_\_\_ (state your own feelings).

## **“I” MESSAGE MODEL**

**WHEN . . . (describe the behavior),**

**THEN . . . (give the effects of the behavior on you),**

**AND I FEEL . . . (state your own feelings).**

## **"I" MESSAGES**

The "I" message is used to establish and maintain close and honest interpersonal relationships. Open communication and cooperation are enhanced because the speaker assumes the responsibility for stating how a situation affects her or him, rather than blaming someone else.

**INSTRUCTIONS:** Complete the situations below by writing an "I" message. Use the following model and example as guides.

**MODEL:** When . . . (describe the behavior), then . . . (give the effects of the behavior on you), and I feel . . . (state your own feelings).

**EXAMPLE:** You have a friend who talks continuously and drives you crazy!

You say: When you talk without stopping, then I don't get a chance to say anything and I feel frustrated and left out of the conversation.

1. A person you live with leaves the kitchen in a mess constantly.  
You say:
  
2. You're trying to get some work done, and a co-worker (neighbor) keeps interrupting you. You say:

3. A friend borrows an object that you value and doesn't return it.  
You say:
  
4. You are on your way home from a party where your partner told a sexist story. You say:
  
5. You and a friend agree to go to a movie together. After the movie the friend complains that it was awful, that he or she didn't want to go to it in the first place, and that it's your fault the evening was boring. You say:
  
6. A person has agreed to share an important project with you and then does not follow through. You say:

## MINI-LECTURE: GIVING AND RECEIVING COMPLIMENTS

This Mini-Lecture provides background information on compliments and how to give and receive them assertively.

### ASSERTIVE COMMUNICATION

Individuals give and receive compliments in ways that are often dysfunctional. In other words, communication systems do not always *enhance relationships*, but often tend to make things worse. There are ways to learn to deal with compliments assertively. We will consider some aspects of dysfunctional responses (often socialized), as well as positive, assertive responses.

### GIVING COMPLIMENTS

An assertive person regards compliments as sincere, specific expressions of appreciation and avoids false flattery or inappropriate statements used to cover up negative or inadequate feelings. You can learn to give sincere compliments by using both verbal and non-verbal messages (a warm touch, a smile, nod, wink, okay sign, pat on hand or back, etc.). When giving a compliment, remember to be honest and specific. Describe the other person's actions and state how you feel--for example, "I really liked the way you said no when that salesperson was pressuring you to buy that appliance," instead of "You're great!" The more information you can give others about their behavior, the more helpful and appreciated the information will be.

### RECEIVING COMPLIMENTS

Many of us have been programmed to respond to compliments with a humble denial of protest and embarrassment. This type of response can make the complimenter feel uneasy or put down and negates a sincere expression. The following are assertive ways to receive a compliment.

- Accept and enjoy a compliment and do not be concerned about the motives behind it. (One could ponder motives at length and miss enjoyment of the compliment.)

- Acknowledge the compliment, either verbally or non-verbally.
- Give free information regarding your feelings about the compliment, so that the sender knows its meaning to you.
- Don't feel obligated to give a compliment in return for one; just acknowledge the message.

## MINI-LECTURE: GIVING AND RESPONDING TO CRITICISM

This Mini-Lecture outlines suggested assertiveness skills for giving and responding to criticism without becoming disabled.

### ASPECTS OF CRITICISM

Giving and responding to criticism are difficult for most individuals. There are two basic aspects of criticism that may account for this. First is the *fear of rejection* and second is the element of *surprise*.

### FEAR OF REJECTION

Criticism *threatens our need to be liked and accepted*, and often causes us to inhibit our actions. We fear people won't like us if we criticize them or, if criticized, we feel people do not like us personally. By learning some assertive responses and approaches to criticism, we can prepare, enabling ourselves to evaluate criticism more effectively, and establishing respect with others.

### ELEMENT OF SURPRISE

The element of surprise is the other factor that makes it difficult to deal with criticism. When critical statements are not expected, they catch us off balance and *can cause hurt and embarrassment*. To overcome our fear of criticism and to cope with the surprise element, it is necessary to desensitize ourselves. First, we will look at our own strengths and weaknesses. An easy way to do this is to make a list of your positive and negative qualities. Second, we will prepare for different types of criticism and learn some *effective, self-confident responses*. This provides us with choices about how to respond and gives us a method by which we can make more clearly defined decisions about whether or not we want to change. As we become more confident, it becomes easier to look at and share faults with others without feeling rejected. It's important to remember that *ideas and behaviors are rejected, and not people*.

## TYPES OF CRITICISM AND RESPONSES

Criticism can fall into one of three categories:

- (1) unrealistic criticisms
- (2) put-downs
- (3) valid criticisms.

[Use the Transparency "Types of Criticism and Responses."]

- An *unrealistic criticism* is a statement that is totally invalid and exaggerated. The best response to this type of criticism is to *contradict it openly*.

For example: Speaker: "You're a lazy bum."

Responder: "I don't agree. I have worked hard and I want to rest."

- A *put-down* is a patronizing insult rather than a legitimate criticism, but it may contain an element of truth.

There are two effective responses to this type of criticism: (1) use *humor* and/or (2) *state your feelings* using an "I" message.

For example: Speaker: "It's nice you have time to rest while the rest of us are still working."

Responder: (Humor) "I supervise better from a prone position."

("I" message) "I feel put down by that remark."

- A *valid criticism* is a realistic statement made in a straightforward way. It can provide helpful information about the effects of our actions on others.

The assertive response is to *acknowledge the criticism* as valid and perhaps add a statement that you're aware of the problem and are working to change it.

For example: Speaker: "I get irritated when you rest and the rest of us have to do your share of the work."

Responder: "I can see that it's annoying for you. My system seems to require a lot of rest lately, and I am concerned about that."

## RESPONDING TO CRITICISM

Here are some *dysfunctional* ways of responding to criticism. When they are used, effective communication stops.

[Use the Transparency "Responding to Criticism (A)."]

- **Reverse attack:** Criticize right back, attacking the other person with a critical statement. This is a defensive action, which accelerates conflict.
- **Apologize:** Accept the fault without cause. This is not a sincere apology but a non-assertive statement used to accept blame and avoid confrontation.
- **Ignore or divert:** Pretend not to hear, or change the subject to avoid confrontation.
- **Excuse and explain:** Offer excuses and detailed explanations to rationalize your actions.
- **Withdraw, clam up, or cry:** Avoid confrontation with non-assertive tactics.

[Give examples or have participants give some.]

Below are some responses that are not dysfunctional but ego-supportive, which will assist you in responding to criticism without becoming disabled. They will also help you maintain your balance while the surprise factor is operating:

[Use the Transparency "Responding to Criticism (B)."]

- "Tell me more about that," or "Please be more specific."
- "Any suggestions?" or "How would you like me to change?"
- "How does that bother you?"

- "Thanks for your opinion."
- "That may be true; I agree."
- "I don't agree, I am not . . ."
- "I would like to think about that and get back to you later."
- "Yes, that's a problem for me, and I'm working on it."
- "When you say that, I feel . . ." (acknowledge your feelings).

## GIVING CRITICISM

Giving criticism, like responding to criticism, calls for the same principles of *honesty*, *specificity*, and *expression of feelings*. Check whether your message is unrealistic, a put-down, or a valid statement. If the criticism is a valid one, the "I" message format is most effective, as it is less likely to create defensiveness in the other person.

[If you wish, use the Transparency "'I' Message Model," presented in an earlier Mini-Lecture in this session.]

Use the following as a guide when giving criticism:

- *Clarify or describe* the behavior.
- *Give specific examples*--a particular time or place.
- *State your feelings* about the behavior or situation.

For example: "When we make arrangements to meet at 6:00 P.M. and you arrive 20 minutes late, I get annoyed and angry."

# TYPES OF CRITICISM AND RESPONSES

## CRITICISM

Unrealistic criticism

Put-down

Valid criticism

## RESPONSE

Open contradiction

Humor

Statement of feelings

Acknowledgment

310

# RESPONDING TO CRITICISM (A)

## DYSFUNCTIONAL RESPONSES

Reverse the attack

Apologize

Ignore or divert

Exclude and explain

Withdraw, clam up or cry

341

# RESPONDING TO CRITICISM (B)

## EGO-SUPPORTIVE RESPONSES

"Tell me more about that," or "Please be more specific."

"Any suggestions?" or "How would you like me to change?"

"How does that bother you?"

"Thanks for your opinion."

"That may be true; I agree."

"I don't agree, I am not . . ."

"I would like to think about that and get back to you later."

"Yes, that's problem for me, and I'm working on it."

"When you say that, I feel . . ." (acknowledge your feelings).

## **ASSERTIVENESS ROLE-PLAY SITUATIONS**

Adapted from materials in the Project Awareness Training Manual.

**INSTRUCTIONS:** Use the following role-play situations to practice and perfect assertiveness skills.

### GROUP 1

- a. On an elementary school playground, a girl is being chased by several boys who are taunting her by trying to lift her skirt up. You are the teacher she runs to, crying, to tell about this. Before you have a chance to respond, another teacher says to the girl, "If you didn't tease the boys, they wouldn't chase you."
- b. You see a 12-year-old boy hurt himself and begin to cry. A teacher you are with tells the boy to "stop crying and act like a man."
- c. In the teachers' lunchroom, the subject of women's liberation comes up. After the initial jokes, someone says, "Those Libbers are just putting down women by rejecting their natural--and needed--role as wives and mothers."
- d. As a 40-year-old woman, you've decided to go back to the university for your teaching certificate. Your teenage children say, "Oh, Mom, don't be silly; you're too old."

GROUP 2

- 3
- a. Your school hires a male secretary. You hear some students making fun of him. "I bet he does all the cooking and cleaning for his family, too," they say.
  - b. At a workshop discussing racism and sexism, some of the people say, "The real problem in our society is racism. Sexism is just fogging the issue."
  - c. You watch another teacher settle a verbal battle between a girl and a boy by separating them. The teacher later tells you that she can't stand the constant bickering and name-calling between the boys and girls. Then she shrugs and says, "This is just a stage they're going through. It's natural for nine-year-old girls and boys to hate each other."
  - d. As a high school senior, you've heard of a construction trades apprenticeship program for women and you decide to apply. You tell your math teacher and he jokes, "Oh, you'll look cute in a hard hat."

GROUP 3

- a. You are told by another woman that her husband (who is a junior high school principal) didn't hire you to teach because "those kids need a man to control them."
- b. As a teacher, you read aloud your school's morning bulletin to your homeroom class. The bulletin contains a statement that, in accordance with a new district policy, schools are encouraged to have male cheerleaders for women's teams. Your announcement is met with loud laughter and jeers by the males present.
- c. Your daughter, Mei-Lin, who has always received the highest grades in school, gets somewhat lower grades when she begins to play varsity basketball. "We had such high expectations of Mei-Lin's academic achievement," the school advisor tells you. "This sports image really doesn't fit her."

344

345

- d. One of the boys in your school has enrolled in a modern dance class. You hear some students calling him a "queer" ("femme," "fag") behind his back.

GROUP 4

- a. After hearing some put-downs, you decide to defend the women's rights movement. You answer two charges; then someone says, "Oh, you're one of them!"
- b. You and another teacher are standing on the playground. Beth and Tom, two seven-year-olds, go racing by. The other teacher says to you, "That Beth! I wish she'd stop acting like a boy."
- c. You are discussing Yolanda, a student from a migrant family, with the school psychologist. "She told me she wants to be a teacher when she grows up," the psychologist says. "But you know those Mexicans, they're always moving around and never amount to anything." How do you respond?
- d. As you are walking down the hall, you overhear the science teacher (male) scolding some disruptive boys in his class (which is mostly male) for "acting like a bunch of girls. . . . That's all you are . . . a bunch of girls."

GROUP 5

- a. After reading a chapter in your social studies book about how Columbus "discovered" America, some of the students in your fifth-grade class start to call Patricia, a Native American, "Pocahontas." She complains about this.
- b. You are standing in a group with a male teacher. A female student wearing a new outfit passes by. The male teacher says, "Wow! Aren't you a knockout today. You're one foxy chick." The female student looks at him coldly and walks away. He turns to you and says, "Well, what's with her?"

- c. A kindergarten teacher tells you, the school psychologist, that she is concerned about Jerry because he often plays in the doll corner. "What should I do about it?" she asks. "Maybe it's because he lives with just his mother and never sees his dad."
- d. Linda and Bill have similar grades and similar results on vocational interest inventories. Their counselor urges Bill to consider becoming a doctor and Linda to consider becoming a nurse. "Yes, I'm interpreting their scores differently. That's what the real world is like," the counselor tells you.

GROUP 6

- a. As a 50-year-old woman, you've applied for a job as a receptionist in the main office of your school district. The personnel interviewer tells you, "If it were up to me, you're qualified for the job. But-- off the record--the superintendent said to find a young woman. It's the public image, you know."
- b. Mary and Maria have similar grades and similar results on vocational interest inventories. Their counselor encourages Mary, who is Anglo, to think about college, and Maria, who is Chicana, to think about secretarial school. "Yes, I'm interpreting their grades and interest results differently. . . . That's what the real world is like," the counselor tells you.
- c. Three five-year-old girls are sitting at the sewing table, stitching around designs they've drawn. Their classmate Steve approaches, watches for a while, and picks up a piece of cloth. You hear one of the girls say, "No, Steve, you shouldn't play here. Boys don't sew." Steve drops the cloth and starts to turn away.
- d. You are talking with the school secretary about how girls' sports programs get so much less attention and money than boys'. You explain that when you were in high school, you set some records for track and you would have liked to continue, but there was no opportunity for you to do so. The secretary says, "But Babe Didrikson made it in sports-- why couldn't you?"

348

349

GROUP 7

- a. Another teacher tells you that Joan, one of your students, wants to become a doctor. The teacher is skeptical because "people who come from poor families like Joan's never have enough initiative--or persistence."
- b. In a work awareness course, you inform students that nine out of ten girls can expect to work outside their homes at some time during their adult lives. A young woman in the class says she plans to be a full-time wife and mother.
- c. Your 16-year-old daughter tells you, "But Mom and Dad, if I do all that work for my report, the boys will think I'm too smart."
- d. Six-year-old Victor suddenly, impulsively, hugs you, his teacher, and you hug him in return. The other boys in the class start jeering, "Victor loves the teacher, Victor loves the teacher." Victor leaps on one of the taunting boys, wrestling and punching.

GROUP 8

- a. You are coaching a group of boys who are playing baseball. Two girls are standing around watching wistfully. You call out, "Don't you girls want to play too?" "No!" shout the boys, "we don't want them . . . they're no good."
- b. You have just been named head of your department. A man who expected to get the job approaches you and says, "The only reason you were appointed is that you are a woman and the district needs to fulfill its affirmative action program."
- c. Your daughter, Keiko, an eighth-grader in a mostly white school, uses a Japanese lantern theme in her campaign signs for president of student government. Her teacher tells you that Keiko writes so neatly that she would be better as secretary of student government. The teacher also tells you that Keiko shouldn't use the Japanese lantern theme--"She doesn't want to set herself apart from the other children, does she?"

- d. When discussing future jobs in your elementary class, most of the girls say they plan to be "mommies." The boys say they want to be firemen, policemen, doctors, astronauts, etc.

352

353

## DESC SCRIPT\*

Reprinted with permission from Asserting Yourself,  
by Sharon Bower and Gordon Bower. Reading, Mass.:  
Addison-Wesley, 1976.

**INSTRUCTIONS:** Choose a conflict situation to use the DESC Script model.  
In the four spaces below, write what you would say to the  
other person. One or two sentences for each step are suf-  
ficient.

D ESCRIBE the other person's behavior *objectively* to him or her..

E XPRESS your feelings to the other person in a positive way.

S PECIFY one or two behavior changes you would like the person to make.  
Ask for agreement!

C ONSEQUENCES: Tell what you can do for the other person if the agreement  
to change is kept (*positive consequences*).

If necessary, tell the person what you will do if the  
agreement is not kept (*negative consequences*).

RULES FOR ASSERTIVE DESC SCRIPTS

PURPOSE: The DESC Script is used to negotiate for positive change in conflict situations. This approach provides a framework for analyzing conflict, determining your needs and rights, proposing a resolution, and negotiating for change.

DO

DO NOT

D ESCRIBE

Describe the other person's behavior objectively.  
Use concrete terms.  
Describe a specific time and place, and the frequency of the action.  
Describe the action.

Describe your emotional reaction to it.  
Use abstract, vague terms.  
Generalize for "all the time."  
  
Guess at or infer motives or goals.

E XPRESS

Express your feelings.  
Express them calmly.  
State feelings in a positive manner, as relating to a goal to be achieved.  
Direct yourself to the specific offending behavior, not to the whole person.

Deny your feelings.  
Unleash emotional outbursts.  
State feelings negatively, making a put-down or attack.  
  
Attack the entire character of the person.

SPECIFY

DO

Ask explicitly for a change in behavior.  
 Request a small change.  
 Request only one or two changes at one time.  
 Specify the concrete actions you want to see stopped, and those you want to see performed.  
 Take account of whether the other can meet your request without suffering large losses.  
 Specify (if appropriate) what behavior you are willing to change to make the agreement.

DO NOT

Merely imply that you'd like a change.  
 Ask for too large a change.  
 Ask for too many changes.  
 Ask for changes in nebulous traits or qualities.  
 Ignore the other's needs or ask only for your satisfaction.  
 Consider that only the other person has to change.

CONSEQUENCES

Make the consequences explicit.  
 Give a positive reward for change in the desired direction.  
 Select something that is desirable and reinforcing to the other person.  
 Select a reward that is big enough to maintain the behavior change.  
 Select a punishment of a magnitude that "fits the crime" of refusing to change behavior.  
 Select a punishment that you are actually willing to carry out.

Be ashamed to talk about rewards and penalties.  
 Give only punishments for lack of change.  
 Select something that only you might find rewarding.  
 Offer a reward you can't or won't deliver.  
 Make exaggerated threats.  
 Use unrealistic threats or self-defeating punishment.

# DESC Script\*

D ESCRIBE the other person's behavior objectively to her or him.

E XPRESS your feelings to the other person in a positive way.

S PECIFY one or two behavior changes you would like the person to make.  
Ask for agreement!

C ONSEQUENCES: Tell what you can do for the other person if the agreement to change is kept (positive consequences).

If necessary, tell the person what you will do if the agreement is not kept (negative consequences).
