#### **ABSTRACT**

This report describes a project which targeted two-person teams of leadership-level personnel in special education and speech/language pathology for training in child language to serve severely handicapped non-verbal children. A "pyramid" training model was used and these primary trainees conducted additional training with teachers and clinicians in their home districts/agencies upon completion of their own training. Five primary workshops, each including five to seven interdisciplinary teams of leadership-level, inservice professionals were conducted over a period of about 2 years. Training consisted of 6 days of intensive workshop activity which involved reading, group discussion, and viewing of eight instructional videotape programs. The content areas covered included: (1) an overview of the nature of human communication and language; (2) cognitive bases of early communication and language; (3) social bases of early communication and language; (4) early stages and processes in the development of receptive, expressive and discourse linguistic skills; (5) nature and role of caregiver-child interaction in early communication and language development; (6) specific taxonomies or units of analysis to describe child performances; (7) principles of communication assessment and treatment for nonverbal students/clients; and (8) principles of communication assessment and treatment for language using, but severely language-deficient students/clients. Project staff also followed up with each team of primary trainees to obtain feedback on the applications that were made of this material in each trainee's home agency; and to assist trainees in planning, implementing and evaluating training activities they conducted in their home agencies. The evaluation of this project focused on both effectiveness and cost benefits. In terms of long-term impact, these trainees provided training to an additional 826 inservice professionals and impacted on a total of 12,853 severely handicapped children. (Author/CL)

University of Kansas

Lawrence, KS (Project based at Parsons, KS)

November 1, 1984

The work reported herein was performed pursuant to a grant with the )ffice of Special Education & Rehabilitation Services, U. S. Department of Education. Grantees undertaking such projects under government sponsorship are encouraged to express freely their professional judgment in the conduct of the project. Points of view or opinions stated do not, therefore, necessarily represent the official position of the Office of Special Education & Rehabilitation Services.

U. S. Department of Education Office of Special Education & Rehabilitation Services

#### Abstract

This report describes a project which targeted two-person teams of leadership-level personnel in special education and speech/language pathology for training in child language. Specifically, trainees were drawn from positions of leadership in agencies serving preschool or school-aged severely handicapped, nonverbal students or clients. A "pyramid" training model was used and these primary trainees conducted additional training with teachers and clinicians in their home districts/agencies upon completion of their own training.

The training objectives sought by this project were that each trainee would: a) demonstrate criterion level performance on tests of the substantive information covered in this workshop in the areas of both normal communication/language development and principles of assessment and training for children with severe communication deficits; b) demonstrate competence to apply this knowledge in simulation activities; c) conduct at least one inservice workshop for fellow professionals in the trainee's home agency; and d) initiate efforts to implement this treatment approach in the trainee's home agency.

Five primary workshops, each including five to seven interdisciplinary teams of leadership-level, inservice professionals were conducted over a period of about two years within this 3-year project. This training consisted of six days of intensive workshop activity which involved reading, group discussion, and viewing of eight instructional videotape programs. The content areas covered by these eight modules included: 1) an overview of the nature of human communication and language; 2) the cognitive bases of early communication and language; 3) the social bases of early communication and language; 4) early stages and processes in the development of receptive, expressive and discourse linguistic skills; 5) the nature and role of caregiver-child interactions in early communication and language development; 6) specific taxonomies or units of analysis that can be used to describe child performances in each of these different aspects of early communication and language development; 7) principles of communication assessment and treatment for nonverbal students/clients; and 8) principles of communication assessment and treatment for language using, but severely language-deficient students/clients.

In addition to conducting these workshops, project staff followed up with each team of primary trainees to obtain feedback on the applications that were made of this material in each trainee's home agency; and to assist trainees in planning, implementing and evaluating training activities they conducted in their home agencies. (Videotape and print materials needed to conduct this training were developed by this project staff through a previous USDE/SEP/DPP Special Project and were provided to trainees for use in their own workshops at no cost.)

The evaluation of this project focused on both effectiveness and cost benefits. Over the course of this project, a total of 70 professionals, representing 33 service agencies in 20 different states, participated in the primary training provided by this project. The mean pretest score for these

trainees over all 8 instructional modules was 37% and the mean posttest score was 80%. On a scale of 1 to 6, the mean rating given by these trainees of their overall satisfaction with both technical and substantive aspects of this training was 5.5%. In terms of long-term impact, these trainees provided training to an additional 826 inservice professionals and impacted on a total of 12,853 severely handicapped children served by themselves and their colleages. Evaluation of the impact of this training on the children, parents and professionals affected indicated a generally very positive response to this approach; with 66% of affected children reported demonstrating improved rates of communication skill development in the first year of followup. The final cost of this training, including local costs, were \$130 per professional trainee and \$9.04 per affected child/client.

# I. Overview of Project Background and Objectives

## A. Rationale

A primary concern of both special educators and speechlanguage pathologists involves productive integration of language programming in overall treatment plans for severely disabled children, including the severely mentally retarded and autistic. great proportion of children in diagnostic/descriptive categories are non-verbal children, understandably, a major target of any educational program must be communication and language in some mode. Obviously, children with such severe biological and behavioral deficiencies must receive educational treatment which is both pervasive and In essence, this means that for severely handicapped, non-verbal students: (1) treatment goals must be pertinent to communication and language; (2) treatment procedures must reflect the manipulable variables most pertinent to the overall processes critical to communication and language; and (3) treatment contexts must reflect the optimal representation of the manipulable variables and the operational value of the training targets themselves. This means, then, that the treatment milieu for these severely deficient populations must be developed on the basis of the most thorough knowledge of these handicaps and about communication and language that is available.

Given such demanding child and substantive problems, it is clear to those who must deliver clinical educational services to these severely deficient children and youths, that the design and implementation of such services demand competent manpower and appropriate treatment models. The most recent models for language and communication programming with severely language-deficient persons (e.g., Hart & Risley, 1980; MacDonald, 1979; McLean and Snyder-McLean, 1978; Muma, 1978) call for treatment contexts which are considerably beyond those traditionally made available in even exemplary special education systems. That is,

these current treatment models for such children call for much broader treatment ecologies including home, classroom, and special resource centers.

All of these needs .ated by the severe nature of the deficiencies of these severely handicapped children and the more pervasive and complex treatment models necessary to serve them, put extradordinary pressures on the resources that are readily available to public educational agencies at any level of organization.

The general and substantive knowledge about language that has been available to both special educators and speech-language specialists in the past has proved to be inadequate for generating pervasive and broadly applied treatment systems for The knowledge that has been available has such children. generally been polarized in psycholinguistic models concerned with language structure and behavioral models concerned with developing "functional" utterances. Recent knowledge and perspectives in child language promise much more specific help for professionals in all disciplines who must assess and target for handicapped children and youths who have severe (often multiple) handicapping conditions and who are essentially nonverbal in any formal language mode. These new perspectives are specifically productive in the following areas:

- l. They provide an overview of communication and language which establishes it as a complex integrative behavior which can only be effectively enhanced by an integrated program which is in place in the child's total environment including the classroom and the home;
- 2. They enable definitive behavioral inventories of nonverbal repertoires which allow assessment of both the cognitive and social bases for communication and language;
- 3. They enable the prescriptive targeting of the ognitive and social behaviors deemed generic to the acquisition of communication and language repertoires;

- 4. They provide the substantive bases needed to design bo a physical and social environments that evoke, model, and reinforce communicative behaviors and language;
- 5. Finally, they enable the integrated targeting of first communication and, then, language in all of its dimensions of form, content, and function.

As such, then, these most recent perspectives on language and communication clearly demand and support the development of a treatment model in which the services of special education teachers and speech-language clinicians are integrated in children's total education programs. In our experience, both special educators and speech-language clinicians are strong in the desire to develop and implement such cooperative and integrated service delivery systems with severely handicapped, non-verbal children.

In order to attain such complementary and integrated functions, clinical teachers and communication specialists must share a common body of knowledge about communication behaviors and their most basic underpinnings in cognitive and social behaviors. To arrive at such a point of integrated competencies and productive cooperation, requires a specific process of <u>dual training</u> of speech-language specialists and clinical teachers in these critical elements of the overall treatment process for severely handicapped, non-verbal children.

The special inservice training program supported by this grant was designed to offer both special educators and speech-language specialists training which would:

1. Update and expand participants' knowledge of the most recent data-based models regarding the acquisition of <a href="mailto:pre-linguistic">pre-linguistic</a> communicative and language behaviors and the relationship of these models to the models for skill and adaptive behavior sought by clinical teachers;

- 2. Analyze these models in terms of their implications for designing appropriate, prescriptive assessment processes for severely handicapped non-verbal persons including the autistic;
- 3. Analyze these models and data in terms of their implications for the development of appropriate educational and home <u>contexts</u> for intervention programs for such severely handicapped persons;
- 4. Analyze these models and data in terms of their implications for ordering and systematically applying the instructional variables most likely to be functional in effecting positive change in the abilities of these persons to interact more effectively with the social and physical elements in their environment.
- 5. Enable professionals in special education and speech-language pathology to work effectively in developing interdisciplinary service systems and settings for the education and training of severely handicapped, non-verbal populations of children and youths.
- 6. Provide textual, audio-visual, and other instructional materials which will enable the participants in this inservice training program to carry-out comparable inservice training with other staff in their own professional work settings.

# B. Background on the Substance of this Training

Obviously, the heart of any training project is the integrity of its substance and the importance of that substance to its intended audience. While the overall area of language and language acquisition is complex, the issues which have become paramount in the past eight years are quite basic to those professionals who are charged with providing the special educational and clinical services needed by severely handicapped, non-verbal children and youths. We have alluded in general terms

to the incompleteness of the theories which have undergirded language intervention for severely language deficient persons. At this point we would like to discuss this relative incompleteness, the implications of it for language intervention, and the recent supplements to language theory which have significantly altered the bases of intervention programs in education.

Past theories of language. In the past two decades language intervention has been dominated by two opposing theories. theory was that held by Chomsky (1957, 1965) which viewed language as a set of grammatical relationships and, as such, a system of structured responses controlled by these relationships in the form of "rules". These views are quite correct, of course, if one wishes to describe one aspect of the product produced by those who have acquired a language system. second major theoretical base for language intervention programming in education and speech pathology is that based on Skinner's (1957) views of language. Skinner viewed human language as a set of "verbal behaviors" which were controlled by the stimuli which preceded them and occurred as a consequence of them. This view is correct if one limits his or her view to just this perspective.

The problem with both of these views becomes readily apparent to those who attempt to translate them into treatment programs for human organisms who are severely deficient in language behavior. First, although they can be cranslated into quite specific sets of response structures (grammar) which would be controlled quite tightly by certain antecedent stimulus events and whose rates should respond in predictable directions to certain consequent events—these theories did not account for other important dimensions of language, such as its meaning content or its overall social function for its users. Thus, these two dominant theories produced language targets which were theoretically and descriptively sound—but which had little

connection with the individual child for whom they were being generated. Since these targets were generated from theories of language (and descriptive ones at that) they were not sensitive to a particular target child's unique abilities or needs. the contrary, the targets generated by these two theories were designed primarily for consistency with Chomsky's and Skinner's theories -- not for the needs of children who failed to acquire or develop normal language abilities. We should hasten to state that this was not intended to be so, but that it seems true in light of today's knowledge. Both Chomsky and Skinner designed systems which described language with complete honesty and Those who applied them to attempt to generate appropriate programs for training handicapped children also did so with conviction and integrity. It was not until the research of the 1970's that the shortcomings in both the polarized psycholinguistic and behavioral theories became apparent. this recent research, the process of language acquisition by normally developing children has been carefully observed and analyzed and has revealed dimensions of both language and the language learning process which were not apparent if one applied only the previous theories of Chomsky and Skinner.

Revisions in language theories. While it is impossible to fully cover the radical changes brought about he the more recent research in language, the overall findings show rather conclusively that both language structure and communicative control are influenced by several factors which had been essentially ignored in previous theoretical bases. These factors include the cognitive holdings of the language learner and the purposeful interactions between the learner and a mature language user in a facilitating environment of both high responsiveness and considerable reciprocal activity.

Naturally, when our understanding of language and the language acquisition process undergo such important changes, treatment targets and processes which seek to enhance language

acquisition among handicapped children must also undergo changes. These new data have made it clear that language acquisition by severely handicapped children cannot be adequately enhanced by the process of simply targeting a general store of grammatical structures or responses under contrived sets of antecedent and consequential stimulus conditions. While some "verbal behaviors" might be so trained, the attainment of a truly generative and functional communication system requires programming of vastly extended procedures which apply entirely new sets of independent The importance of the recent findings and their critical implications for training are dominant in current literature in special ed: ion and speech and language, (e.g. Blank, Rose & Berlin, 19/8; Bricker & Carlson, 1981; Hart & Risley, 1980; MacDonald & Horstmier, 1978; McLean, 1977; Milean & 1978.) It is encouraging to note that the Snyder-McLean, professional disciplines concerned with language training procedures have begun to react constructively to these recent developments. New intervention programs are emerging which reflect them danna, Lippert & Harris, 1982; MacDonald & Horstmier, 1976, 1978; Miller & Yoder, 1974; Owens, 1982; Waryas & Stremel-Campbell, 1978.) Additionally, training programs in both speech and language pathology and special education are beginning to incorporate these new perspectives in their preservice training programs. Thus both the range and the nature of these new perspectives, and the wide-ranging response to them among professional trainers, testify to the importance of the substantive content of an interactional training program.

Overview of program content. The instructional programs used in this project consisted of 8 modules. The titles and major objectives of these 8 modules are summarized in Table 1. (More complete outlines of the content of each of these modules are presented in Appendix A.)

Table 1. Summary of Eight Instructional Modules

#### Module 1 A Continuum of Human Communicative Behavior

Introduction to the function and intents of communication and language

Introduction to the knowledge bases of communication and language

Rationale for the Transactional Approach

#### Module 2 The Social Bases of Communication and Language

Interaction strategies: response and
initiation

Development from pre-intentional through intentional communication

Functions of early child communications

# Module 3 The Cognitive Bases of Communication and Language

Development of skills for relating to objects

Means-ends relational concepts

Representation skills

Universal meanings expressed in child language

#### Module 4 The Development of Linguistic Skills

Comprehension skills

Production skills

Discourse skills

# Module 5 The Teaching and Learning of Communicative Language: A Transactional Process

Nature of interactions between language learning children and mature language users

Adult "facilitation strategies"

Child "language acquisition strategies", preverbal and verbal

A transactional model of child language acquisition

## Module 6 Summary: Systems for Analysis of the Function, Content, and Form of Child Communicative Behaviors

Systems for analysis suggested by function

Systems for analysis suggested by content bases

Systems for analysis suggested by form/structure bases

# Module 7 Assessment and Treatment of Communicative Behaviors in Non-Verbal Clients

Etiologies and general characteristics of non-verbal clients

Assessment: targets, procedures and interpretation of results

Treatment program implementation: contexts, procedures, and critical change agents

# Module 8 Assessment and Treatment of Language Behaviors with Severely Language Deficient Clients

Etiologies and general characteristics of severely language deficient clients

Assessment: targets, procedures and interpretation of results

Treatment program implementation contexts, procedures, and critical change agents

# C. Project Goals and Principal Objectives

To this point, we have discussed the major goals or purposes of this training project in the most general terms. More specifically, the activities on this project were directed towards the achievement of the following four goals:

- A. To identify and enroll appropriate project trainees for five primary workshops
- B. To plan and conduct each primary workshop.
- C. To evaluate the effectiveness of workshops in terms of:
  - a) measurable changes in trainee's knowledge of substantive content; b) documented evidence of impact on programs and personnel in trainees' home school districts; and c) cost effectiveness of training
- D. To revise and amend all training procedures and materials as the need for such changes were indicated by evaluation data.

In Table 2, we have indicated the principal objectives that were projected for each of the four major goals of this project.

# D. Training Objectives

The primary objective of this training was for trainees to understand the information presented and, further, to apply this new information in their service roles. More specifically, each trainee was to:

- 1. Demonstrate, through written performance on specifically designed post-tests that he/she attained criterion level knowledge of the substance presented in each of the 8 instructional modules included in the training.
- 2. Demonstrate, through written responses to simulated clinical/classroom case profiles that he/she had acquired competence to apply this knowledge in designing appropriate assessment plans and intervention programs for non-verbal, severely handicapped clients/students.

	Ι.7.	To prepare simulated case pro- files and standards for evalu- ating adequacy of trainee's assessment and treatmert plans	II.6.	To obtain follow-up feedback and evaluation data from Year I Primary Trainees	111.5.	To obtain follow-up feed- back and data from Year I and II Primary Trainees
	1.8.	To develop recording forms for documentation of remaining project and training objectives			III.6.	To summarize all data from three-year project
	1.9.	To collect and tabulate evalu- ation data on all Year I activiti	es			
DEVELOP- MENT AND REVISION OF TRAINING	I.10.	To prepare Instructor's Manuals and other print materials not previously prepared		To revise and amend all program materials as need indicated by evaluation data	III.7.	To complete final revisions of all program materials on basis of training evaluations and to incorporate new data/
MATERIALS	I.11.	To revise materials on basis of evaluation of Workshop #1	11.8.	To revise and amend all		developments in the content areas
RIC 17				program materials as needed to incorporate new data/ developments in content areas		To disseminate training $18$ materials and model

- 3. Have agency support and training materials needed to conduct an in-service workshop for professionals in his/her home agency.
- 4. Return to his/her home agency, and as a consequence of this training, initiate efforts to work with administration and colleagues within this agency to implement any identified areas of needed change in current language/communication programming procedures.

## II. Project Design and Procedures

# A. <u>Selection of Trainees</u>

This project targeted participants who had the ability and the potential for acting as resource persons for the application of the most recent perspectives in communication and language to the educational programming for the severely handicapped non-verbal students in their city, region, or state educational agency. Grant staff felt that such resource persons needed to represent both of the academic disciplines critical to such educational programming -- namely, special education teachers and speech-language specialists. The target of this training was the development of integrated professional services, and it was clear that both disciplines required representation and that both disciplines needed to contribute equally in the workshop process. Additionally, each team member had to be able to function effectively if they were to carry these new perspectives to their respective co'leagues in their home professional setting.

In order to recruit trainees who would fulfill these requirements, descriptive brochures were distributed at national meetings and announcements were published in professional newsletters and journals. These announcements briefly explained that this training would be available with all expenses paid, to qualified teams of professionals. Interested professionals were sent a complete application package containing a detailed description of the goals of this project; training content and procedures; workshop schedules; and 2 application forms, one to be completed by the Special Education Teacher (SET) and one by the Speech/Language Clinician (S/LC). (Copies of these application forms are presented in Appendix B). Instructions emphasized the need for potential trainees to apply as interdisciplinary teams; and further encouraged applicants to submit documentation of administrative support.

Application packages were reviewed on a competitive basis, since funds and time/space resources limited the number of teams which could participate in this training. For each of the 5 primary workshops conducted, we received qualifying applications from many more teams than could be accommodated. These applications were rank-ordered by our project staff according to how well they met the following criteria:

- 1. Applicants were fully credentialed in their respective educational disciplines. Teachers were certified in at least one of the categories appropriate to severely handicapped, non-verbal children in their state (e.g. severely mentally retarded, severely emotionally disturbed, autistic, aphasic). Speechlanguage pathologists held ASHA certification in speech pathology and/or held appropriate state credentials for practicing in their respective educational agencies;
- 2. Trainees from both disciplines were either supervisory personnel or were the <u>specific designees</u> of supervisory/administrative personnel in their LEA or SEA and thus, assumed to have potential for applying this training if they judged it to be adequate and appropriate to their target population;
- 3. All participants in this training had some experience with the types of children targetted by this project;
- 4. Each trainee showed interest and motivation in communication programming for severely handicapped, non-verbal children or youths.

When choosing between teams with tied ranks, consideration was given to geographic location and distribution factors. A total of 12-16 individuals, or 5 to 8 teams, were selected for each primary workshop.

# B. Training Procedures

The training provided by this project was offered in a workshop format over a one-week period. The trainees (12 to 16 for each workshop) were brought together at the Hilton Plaza Inn in Kansas City, Missouri and instruction was conducted in a group

format with additional opportunities for tutorial review of materials and additional discussion afforded as need. (See Appendix C for agenda).

Each instructional module outlined in the program (see Appendix A) consisted of both print and supporting visual media. Each trainee was provided with a set of print materials which consisted of:

- 1. A narrative text covering the basic elements of the substantive information for each module;
- 2. A criterion-referenced test desi nd to assess mastery of program content;
  - 3. A list of references cited in each unit; and
  - 4. Charts/overheads used within each module.

In addition to these print materials, each module was supported by audio-visual materials. Overhead transparencies of summary charts and outlines were used to guide group discussion on each module. In addition, narrated videotape programs (developes on a previous BEH [OSE] special projects grant from the Personnel Preparation Program) accompanied each module.

These supplementary video-tape materials served three major purposes in the present inscructional program: 1) Illustrated examples of types of behavior, language performance, and the intervention activities described in the narrative text; 2) provided the trainee with simulated experiences through which to develop specific intervention competencies targeted by a particular instructional unit; and 3) provided simulated experiences through which to assess the trainee's mastery of specific competencies, as part of the criterion-referenced test for a particular unit. Simulated experiences provided through video-taped casseltes include such things as: observing a young child in his classroom interactions and then being asked to list the first assessment targets for that child; observing a handicapped child in a language-sampling session and trying to record the relevant contextual details; observing a nonverbal

child and listing the forms and functions of his nonverbal communicative behavior; etc.

Residual materials following training. Upon completion of this training, each trainee retained his or her training materials and was given the <u>Instructor's Manual</u> utilized in the training process. This manual contained copies of all the print materials used in this workshop, as well as scripts for each of the 8 videotapes and additional suggestions for conducting workshops. In addition, each trainee was guaranteed availability of the videotapes used in the training program.

### C. Evaluation Procedures

The evaluation plan for this project was designed to allow three types of evaluation questions to be addressed:

- 1) To what extent was this project successful in carrying or: the activities projected in our project plans? (Evaluation of project performance);
- 2) To what extent was the training offered through this project successful in achieving the training objectives set forth in our project plans? (Evaluation of training effects); and
- 3) To what extent was this project cost-effective in achieving these objectives? (Evaluation of cost effectiveness.)

Evaluation of project performance. During the course of this project, all activities, and the results of those activities, directed towards the objectives of trainee recruitment/selection and project evaluation were carefully documented. This documentation has been included in our progress reports to OSE and will be reviewed in the following sections of this report.

In order to assess trainee-satisfaction with the arrangements and overall workshop format a specific trainee-satisfaction questionnaire was developed (see Appendix D). The questionnaire was administered at the conclusion of each of the five workshops offered by project staff and the results of this

questionnaire will be discussed in Section III - Project Results.

Evaluation of training effects. In order to assess trainee's acquisition of substantive material, objective, paper and pencil tests, covering the major informational prints of each unit were prepared and administered. These criterion-referenced unit tests were used as both pre-and post-tests and were administered to all primary trainees. The results were tabulated and will be discussed in Section III of this report.

In order to determine whether trainees acquired sufficient mastery of the training content to actually apply it in making clinical/educational programming decisions, their performance was measured in a number of simulated application situations. A total of eight different case profiles, four for the preschool population and four for the older SMH population were prepared. At the outset of the workshop, each trainee was asked to fill in several critical blanks in simulated assessment and IEP plans after watching a five minute videotape. These same videotapes were viewed later in the week during videotape Modules 7 and 8. Specific program plans for these students were presented at that time. At the conclusion of the workshop, trainees completed a similar simulation exercise involving a second series consisting of two videotape profiles. Further assessment plans and program plans for these cases were reviewed by the group. (A sample simulation exercise form is provided in Appendix E.)

Finally, documentation regarding: a) secondary workshops conducted by primary trainees in their home districts/agencies; b) program change needs analyses; and c) client change data were collected. Feedback from primary trainees was collected at six-month intervals following their participation in a workshop, and following completion of any secondary workshop(s) offered by the trainees. (See Appendix F for feedback forms.)

Cost effectiveness. Since the design of this project reflects a particular interest in the issue of cost

effectiveness, records were maintained which provided accurate and detailed cost-effectiveness information. Obviously, in order to measure cost effectiveness of any effort, one must have good documentation of all costs involved, and some meaningful measure of the actual effectiveness achieved. Our cost data include: a) ecords of expenditures by this project directly related to the provision of training; b) records of additional expenditures required of primary trainees, whether these be paid from the trainee's personal funds or by his/her home agency; and c) records of expenses incurred by sponsoring agencies/districts in the provision of secondary training workshops.

The effectiveness data collected are those involved in our project evaluation efforts (described above) and provide documentation regarding the number of trainees who received training through this project; and the number of severely handicapped students/clients affected by actual changes in programming procedures and policies implemented as a result of this training experience.

From these data, we can report: Cost per trainee; cost per agency/district; and cost per handicapped student/client of this training effort. Further, we can report these figures in terms of: overall cost; cost to OSE; and cost to participating trainees/agencies.

serving preschool

# III. Project Results

# A. Participants in Primary Workshops

Five intensive, week-long inservice training workshops for leadership-level professionals were given. Of the workshops, two were held for professionals serving the handicapped preschool population, and three workshops were held for professionals providing service to clder, severely impaired adolescents. A total of seventy professionals, twenty-eight serving the preschool population and forty-two providing services to the older SMH population attended the training sessions. The workshop trainees represented twenty states. A breakdown of representation is as follows:

works	of trainees attending shop for professional serving SMH	ls workshop for pro serving pres	fessionals chool
State	population	populati	on
Connecticut	3		
Florida	3 2 2	2	
Georgia	2	_

serving SMH

### B. Workshop Evaluation Results

At the conclusion of each primary workshop, an evaluation of the workshop was conducted. Section I of the evaluation was designed to assess how relevant the information presented was to serving the educational needs of the clients of workshop professionals. (See Appendix D). Participants were asked to respond to each of 5 statements regarding information value and relevance on a Likkert scale of 1 to 6. A mean score was derived by taking the total points assigned to Section I divided by the number of workshop participants. An analysis by workshop is as follows:

Workshop	#	Mean	Score,	Section	I
1			5.70		
2			5.01		
3			5.87		
4			5.76		
5			5.68		

Individual mean scores ranged from 4.20 to 6.0, with 6.0 being the highest possible rating. An overall mean information value score was 5.60. These high mean information value scores correlated with comments made by individuals throughout the week, and also with six month follow-up comments which will be shared later in this report.

Section II of the trainee satisfaction evaluation was designed to assess the overall organization and format of the workshop. (See Appendix D.) Again, a 6-point Likkert scale was used for racing each of the 6 items in this section.

As with Section I, a mean score was computed for each workshop presentation. A breakdown is as follows:

Workshop	#	Mean Score, S	ection	ΙI
1		5.72		
2		5.53		
3		5.20		
4		5.68		
5		5.64		

Mean scores by individual participants ranged from 4.33 to 6.0, with 6.0 again being the highest possible rating. An overall mean format score was 5.55. Thus, a high level of trainee satisfaction was demonstrated for both the information presented, the method of presentation, and for arrangements made. An item by item analysis revealed a frequently expressed need for more time to be allotted for the training sessions. Participants felt that an incredible amount of information was packed into a sixday training period. The raw data for this evaluation is included in Appendix G.

# C. Pre and Post-Test Evaluation Results

These seventy professionals represented thirty-three teams. As described earlier, criterion referenced pre-tests were administered before the inservice training was conducted. After the videotape module and accompanying lecture, the post-test for each unit was administered. An analysis of team pre-and post-test scores is as follows:

		X Pre-Test Score	X Post-Test Score
SMH Workshop	Team #1 2 3 4 5 6	55% 62% 50% \( \overline{X} \) Pre 41% Test 39% Score= 59% 51%	88% 91% 79%
Preschool Workshop	7 8 9 10 11	34% X Pre 26% X Pre 25% Test 40% Score= 51% 34%	87% 85% X Post 95% Test 85% Score= 90% 88%
Preschool Worksh <b>op</b>	12 13 :4 15 16 17 18 19	31% 35% 28% X Pre 15% Test 38% Score= 35% 28% 17% 30%	91% 90% 96% X Post 78% Test 86% Score= 89% 83% 49%

SMH Workshop	20 21 22 23 24 25	43% 23% 33% 20% 35% 42%	X Pre Test Score= 32%	80% 46% 83% 90% 84% 89%	X Post Test Score= 78%
	26 27	39 % 40 %	_	88% 87%	
SMH	28	51%	X Pre	90%	X Post
Workshop	29	26%	Test	85%	Test
	30	62%	Score=	95%	Score=
	31	42%	47%	84%	888
	32	55%		808	
	33	59%		91%	

A combined <u>pre-test</u> mean score for all SMH participants was 43% correct. The combined <u>post-test</u> mean score for these same SMH workshop participants was 84% correct.

A combined pre-test mean score for individuals serving the handicapped preschool population was 31% correct. The combined mean post-test score for this group was 86% correct. These data indicate that, although the information provided was new to most participants, after lectures, videotape samples, and discussion most trainees demonstrated comprehension of the material. From the group of seventy trainees, only two individuals scored below 75% correct on the post-test. Raw data and item by item analysis for pre and post training assessments for one SMH and one preschool workshop are located in Appendix H.

#### D. Follow-up Evaluation Results

At six-month intervals after attending the training workshop, participants received a Follow-Up Questionnaire (see Appendix F). This questionnaire was designed to obtain information regarding the workshops the primary trainee conducted for his/her home agency, and to obtain information on the implementation of the training model in the trainee's home district or agency. In regard to implementation of the model and changes in client programming, the following comments were made:

<sup>7</sup>a. How successful have you been in actually achieving the changes you have sought to make in programming and/or administrative procedures and policies?

"Very successful. We were able to incorporate some of the major concepts presented in the transactional approach into the curriculum used by our staff. As they have not received an inservice on these changes yet, the effects are unknown."

"The input has been enthusiastically received and we are seeing some gradual changes toward implementing this model. At this time the changes are primarily limited to very selected cases programming. The entire speech and hearing staff have modified many of their assessment and treatment procedures and additional modifications are anticipated. Further odifications at various levels are currently in planning stages."

"The only change is general awareness of other colleagues in my intermediate unit working with severely handicapped children. Some classroom activities and outlooks seem to change in the area of their children's language use and development."

"W have had some reasonable success although it has been very difficult to promote any social skills in children with "autistic-like" behaviors. Other than that it has been helpful to stress pre-requisite skills before expecting any language productions or evidence of understanding."

"Very successful - the major obstacles are lack of experience and time. My intention is to focus on implementation of play rituals by developing appropriate set for my setting."

"It's a very slow process. Two students are partially integrated, primarily for social interactions. "Remediation", except for language, is still being done out of the classroom."

"We are a self-contained program and can make changes easily."

"We find actual programming for children to be fairly similar to that done previously due to low level of function of clients—the model has provided a new framework for understanding the kids pre-language behavior and offered new insights."

"It is difficult to determine the success. Because we are still in the process of making these changes."

"In regards to programming, I have been very successful. Unfortunately administrative procedures and policies have

not been as easy to change."

"Very successful. The letter of administrative support written by our superintendent was valid. Generally, the administration, interdisciplinary professional team, and paraprofessional staff have accepted the transactional approach and all programming recommendations I have made for my unit to date. Requests for overtime staff for staff to attend in-service training, materials, and workshop space have all been granted in order to implement the proposed program. The clients residing in the Communication Cottages have all participated in evaluations of social, cognitive, and structure/form areas and are presently receiving programming on a daily basis from all 1st and 2nd shift staff during the daily cottage routine."

The comments regarding the success and effectiveness of these materials and of the workshops conducted by primary trainees were very supportive of both the training materials and of the "Transactional Approach". This can be seen in the comments received in response to item 14, summarized below.

14. Overall, what is your evaluation of the success and effectiveness of these materials, and of your workshop as a whole?

"The time constraint of two days was difficult to overcome. We feel we brought staff to an awareness level with the information presented so they would see the program as an alternative available to them."

"The workshop was well received but could have been more successful if: 1) The students have more knowledge of the Transactional Approach and the Generic Skills concept.

2) We could have had more time with them."

"We were very satisfied with the workshop and the materials we shared such as the videotapes and handouts. They really helped illustrate a lot of points more clearly. The exciting outcome from the workshop is the support we have from the administration to utilize the teaching techniques."

"Materials were extensive and extremely informative. If carefully re-structured, considering time and participants of our workshops, the materials will be extremely effective."

"Very positive reaction. They were enthusiastic and responsive. I think most of these people will implement this approach (or part of it) immediately."

"We used Modules 1-5 with speech/language clinicians, preschool teachers and special education teachers as an overview of natural language development. We found the tapes, tests and written materials to be very useful to all of these staff members to establish a common focus when referring to 'language'."

"The participants seemed interested because it was a new approach to teaching and understanding language. Two more classes would probably have been helpful for those attending to more readily visualize the whole picture. More class participation probably would have made it more effective."

"Overall, we feel the workshop was a success and received positive comments from those who were truly interested. Most of our audience were strongly encouraged or required to attend, so many of the comments were critical. These people also tended to discount the value of the method if it was not directly related to their immediate professional assignment. The tapes were excellent and well received by all."

"We think the materials are excellent, a wonderful resource. We hope that the tapes will always be available to us. We believe that this short workshop was successful in stimulating interest in a transactional approach, and in presenting a different angle on our students communicative development and needs."

"Workshop was very well accepted, and I think at least some of it will be implemented."

"I feel that the materials are well organized and very sequential. They were extremely effective because of their thoroughness. The workshop was a success in my opinion. Several of the participants gave me thank you cards at the end and all the participants were enthusiastic and excited about the knowledge contained within the modules. Also the majority of the participants felt that the material was relevant to their students and could parallel their students' behaviors to those shown in the videotapes."

"Well received by students and staff, again we felt need for more time. Reall, gave an overview."

"We thought it went very well; but were disappointed in the post-test scores. Attendance was good; however all but one of our students took the course on an audit basis and didn't spend sufficient time reading the text."

"We have had an overwhelming positive response from our workshop participants. The primary comment is "we wish we had this sooner". Our experience is that we are more successful at programming for our students."

The six month follow-up questionnaire and the Workshop Information and Feedback form (mailed with the videotape sets sent out for each secondary workshop) provided insight into the problems trainees were facing conducting secondary workshops. The major problem appeared to be setting aside enough time for the workshop to be conducted at a reasonable pace. The primary trainees repeatedly told members of this grant staff that one week was not enough time for them to become familiar with the information, and so it was to be expected that less time for a secondary workshop would elicit similar responses. Other than the issue of time, the comments regarding the approach and training materials were very positive. An unedited collection of trainee's responses to both questionnaires is located in Appendix I.

# E. Project Impact on Students/Clients and Professionals in Home Agencies

The seventy professionals who attended the five primary workshops conducted by this project had direct contact with a total of 2,285 clients. Many of the professionals were in supervisory positions and, thus, supervised staff directly in contact with handicapped children and adolescents. A combined total of clients served by primary trainees and their staff (referred to as Level #1 clients) is as follows:

Workshop #	Total Direct Child Contact	Total Children Served by Supervised Staff	Total Level %1 Clients
1	318	1,419	,
2	208	530	õ
3	779	468	47
4	578	875	453
5	402	465	8€7
Total	2,285	3,757	6,042

If primary trainees had returned to their home agencies and only talked informally with staff under their supervision, potentially over six thousand clients could have been affected by this training. However, the primary trainees did not just return home. Eighteen of the thirty-three teams returned to their home agencies and conducted forty-eight secondary workshops, involving a total of 826 secondary trainees. Numerous shorter presentations were made at the state and local level. By conducting these forty-eight workshops, the children/adolescents potentially affected by this training swells to over 12,000. A breakdown by workshop is as follows:

WS#	Type	Clients Served by Trainees & Supv. Staff	# of Work- shops Held	# of Sec. Trainees	Clients Served by Sec. Trainees	Total Clients Served
1	SMH	1,737	31	459	3,727	5,464
2	PS	738	4	71	285	1,023
3	PS	1,247	1	16	40	1,287
4	SMH	1,453	7	142	1,379	2,832
5	SMH	867	5	138	1,380	2,247
	Total	6,042	48	826	6,811	12,853

# F. Child Change/Progress Attributed to Trainee's Participation in Transactional Approach Workshop

In earlier sections of this :eport the need for interactional language training was described, the format of the workshops was detailed, and the trainee's evaluation of the workshop content and structure was reviewed. The fact that 48 secondary workshops were conducted was reported, and yet, the most critical element of the program's evaluation has yet to be discussed - child progress. Project staff wanted to determine if

changes in training contexts and educational goals made as a result of the trainee's participation in the Transactional Approach affected child progress. To address this critical question, a final questionnaire was designed and distributed to all primary trainees at the conclusion of this project. This questionnaire (reproduced in Appendix J) asked trainees to summarize the effects this training seemed to have on themselves, their agencies, and the children they served.

The raw data from this evaluation are included in Appendix Globally, responses to this questionnaire indicate that: J. trainees incorporated Transactional Approach ideas/materials into the assessment process; b) the quality of communication with parents and with professionals from other disciplines improved; and c) the educational goals for individual students changed as a result of the trainee's participation in the Transactional Approach workshops. The scheduling/service delivery model for communication programming changed, and the individuals who assisted or shared responsibility for communication programming The trainees reported that both speech/language changed. pathologist and special educator were involved in communication training, and that students were not removed from the classroom nearly as much as in previous years. Materials and context/setting of communication programming also changed.

The data reported on 490 level #1 clients indicated that 324 or 66% of these individuals were progressing at a rate greater than in previous communication programming. Trainees reported that 163 students (33%) were progressing at about the same rate as in previous communication programming. Less than 1%, three students, were reported to be progressing at a rate less than in previous communication programming. Interestingly, at least two of these three students were autistic and thus, were uncomfortable with the social-interactional nature of this approach. The autistic clients performed at a higher rate under controlled, massed trial presentations.

The following questions addressed reactions to changes made as a result of the Transactional Approach. An item by item analysis is included in Appendix J. For the purposes of this report, a mean score was calculated to indicate degree to which the trainees agreed with these "overall reaction" statements.

 Parents were very accepting and supportive of the changes we made in our programming approach as a result of participation in Transactional Approach workshops.

The mean score on a four point scale, where four corresponded with very true and one with not true, was 3.13. Comments from a few trainees indicated that in their residential institutions and daycare settings parents were not really involved with programming issues and thus the "supportive" portion of this question was difficult to determine.

2. Colleagues and staff were very accepting and supportive of the changes we made in our programming approach as a result of participation in the Transactional Approach workshops.

The mean score for this question was 3.13. Interestingly, the majority of the trainees rated their colleagues support at the three level, but no trainee reported that their colleagues were not supportive of this approach.

Administrators were very accepting and supportive of the changes we made in our programming approach as a result of participation in the Transactional Approach workshops.

The mean score was 3.40. The trainees reported throughout the project that administrators, on the whole, were supportive of the interactional, within context training approach.

4. Children/clients seemed to enjoy and be more actively engaged in communication programming which used Transactional Approach than in previous programming approaches.

The mean score for this question was 3.80, indicating very strong agreement.

5. I found communication programming that incorporated Transactional Approach to be more satisfying and enjoyable.

The mean score for this question was 3.88. Trainees repeatedly reported that training felt more comfortable and that they were more at ease with their programming goals, and thus, enjoyed their interactions with their students more than previously.

# G. <u>Cost-Benefits</u> <u>Aralysis</u>

As discussed earlier in this report, the following expenses were recorded: a) cost of training materials and salary of individuals responsible for training; b) cost of bringing the primary trainees to Kansas City for the six-day training period; c) cost to the trainee's sponsoring agency for releasing the trainee; d) cost related to conducting the secondary workshops; and e) cost related to releasing secondary trainees from their duties in order to attend the inservice training. these costs may result in an inflated amount for the cost of training. Many of the agencies reported that "professional level individuals were 'expected' to further their training and that no substitute could be hired for their positions", thus the reported costs to the agency (e.g., for participants' release time) were not always actual costs. Along the same lines, administrators reported that their states required a certain number of inservice training days per year and thus, the reported secondary trainee costs were often not additional costs to the agency, but previously budgeted items. Figures reported include these somewhat "artificial" costs and consequently, result in costs that may be higher than the actual cost per trainee.

In order to calculate the cost of conducting the initial workshops, the following formula was used: salary and fringe benefits for grant personnel + travel and expenses for staff to

attend the Kansas City workshop + cost of preparing notebooks :
number of trainees per workshop = general expenses per trainee.
The following is a breakdown of grant and home agency expenditure.

Cost for Providing Workshops to Primary Trainees

	Cost to Bring Teams to K.C.	Local Cost	General Cost	Total Cost	Cost/Primary Trainee
#1	\$7,587.08	\$ 5,951.65	\$ 6,236.30	\$19,775.03	\$1,412.50
#2	7,859.00	1,245.38	6,235.32	14,979.70	1,248.31
#3	8,945.60	990.00	4,759.36	14,694.96	918.44
#4	6,822.00	2,271.00	4,714.56	13,807.56	1,150.63
# 5	9,797.60	4,923.80	4,757.28	19,478.68	1,217.42
	\$41,211.28	\$15,381.83	\$26,702.82	\$82,735.93	\$1,181.94

By combining grant and potential cost to sponsoring agencies, a total cost for conducting the five workshops was computed. By dividing this amount (\$82,735.93) by the number of trainees (70) a mean cost per trainee was figured. On the average, it cost \$1,181.94 per trainee to provide the six-day workshop and make training materials available. If the cost was computed without figuring the costs incurred by the sponsoring agency, a figure that administrators tell us is more accurate, the cost per trainee drops to \$962.20.

If the trainees had returned to their home agencies and made program changes, but had not conducted any workshops, the per child cost would be only \$13.69.

			Cost Per I	-ev	/eı	₩⊥	Client	
Total o	cost o	of d	conducting	5	wor	ksh	ops	\$82,735.93

Total Level #1 clients 6,042
Cost per Level #1 client \$13.69

Training was conducted at home/district agencies, and thus

the cost per client continues to decrease. The cost figured with all potential expenditures included and dropped to an average \$9.04 per client.

Cost Per Primary and Secondary Client

Total cost of conducting 5 workshops \$82,735.93

Total cost of conducting secondary workshops 33,475.23

Total Level #1 and #2 clients 12,853

Cost per client \$9.04

If local expenditures of \$15,381.83 are subtracted, as administrators suggested, the cost per client averages \$7.85.

In summary, providing intensive training to leadership-level professionals proved to be an efficient, cost-effective means of conveying a complex body of information to a large audience. (See Appendix K.)

#### IV. Summary

In accordance with the objectives of this grant, leadership level professionals in speech/language pathology and special education participated together in an intensive workshop designed to present current perspectives on communication and language development thought to be critical to the educational programs of handicapped children and adolescents. These professionals returned to their respective agencies and conducted similar workshops. As a result of this training, the new perspectives were brought to classrooms across the country. Reports by the trainees indicate that critical changes have taken place in training procedures, materials, and in students' educational goals. Clients seemed to "enjoy" communication more and made good progress toward reaching program goals. Professionals reported that they found their interactions with their students more satisfying and enjoyable. Professionals were excited about the information presented and continue to revise procedures within their settings. Materials that trainees created as a result of their participation in this project are included in Appendix L.

#### APPENDIX A

Discussion Outline for 8 Training Modules

# Module 1 CONTINUUM OF HUMAN BEHAVIOR

- I. IMPORTANCE OF LANGUAGE TO HUMAN CONDITION: ENABLING COOPERATIVE RELATIONSHIPS
  - A. FOR SURVIVAL
  - B. FOR TRANSMISSION OF SKILLS AND KNOWLEDGE
- II. NATURAL LANGUAGE LEARNING
  - A. LANGUAGE IS LEARNED AS MEANS OF COMMUNICATION, NOT AS SYSTEM OF RULES.
  - B. LANGUAGE IS LEARNED IN CONTEXTS OF DAILY INTERACTIONS WITH PEOPLE AND THINGS.
  - C. CHILDREN WHO 'DO NOT ACQUIRE LANGUAGE, OR WHO ACQUIRE IT VERY SLOWLY IN THESE NATURAL WAYS, WILL REQUIRE EARLY LANGUAGE INTERVENTION.
- III. DATA BASES FUR A TRANSACTIONAL MODEL OF LANGUAGE ACQUISITION
  - A. DATA REGARDING EARLY COGNITIVE DEVELOPMENT
  - B. DATA REGARDING THE FUNCTION AND INTENTS OF HUMAN AND CHILD LANGUAGE.
  - C. DATA REGARDING CONTENT AND FORM OF CHILD LANGUAGE
  - D. DATA REGARDING INTERACTIONS BETWEEN CAREGIVERS AND YOUNG CHILDREN

- IV. Sources for Understanding the Dimensions of Language
  - A. <u>Function</u>: Study Early Social experiences and Sociocommunicative development.
  - B. <u>CONTENT</u>: STUDY EARLY EXPERIENCES WITH ENTITIES AND EVENTS IN THE ENVIRONMENT AND RESULTANT COGNITIVE SCHEMA DEVELOPMENT.
  - C. FORM: STUDY EAR'LY EXPERIENCES WITH MATURE LANGUAGE USERS AND LANGUAGE STRUCTURE DEVELOPMENT.
- V. IMPLICATIONS FOR ASSESSMENT AND TREATMENT OF SEVERELY LANGUAGE DELAYED CHILDREN
  - A. STRESSES DEVELOPMENT OF COMMUNICATION ALONG A CONTINUUM
  - B. STRESSES <u>FUNCTION</u> OF <u>CHILD</u> COMMUNICATIVE BEHAVIOR
  - C. STRESSES CONTENT OF CHILD COMMUNICATIVE BEHAVIOR
  - D. STRESSES FORM OF CHILD COMMUNICATIVE BEHAVIOR
  - E. STRESSES PROCESSES OF ACQUISITION OF THESE BEHAVIORS

#### THE SOCIAL BASES OF COMMUNICATION & LANGUAGE

- NATURE & IMPORTANCE OF SOCIAL COMMERCE IN HUMAN SOCIETIES
- NEWBORN'S SOCIO-COMMUNICATIVE CAPABILITIES Π.
  - A. INITIATION MECHANISMS
  - B. RESPONSE MECHANISMS
  - COMMUNICATIVE SIGNALS
- SOCIO-COMMUNICATIVE SKILLS IN THE YOUNG INFANT III.
  - REACTIVE PERLOCUTIONARY COMMUNICATION
  - PROACTIVE PERLOCUTIONARY COMMUNICATION Β.
- IV. SOCIO-COMMUNICATIVE SKILLS IN THE OLDER INFANT
  - PRIMITIVE ILLOCUTIONARY COMMUNICATION
  - CONVENTIONAL ILLOCUTIONARY COMMUNICATION
  - DEVELOPMENT OF SKILLS FOR PARTICIPATION IN DYADIC INTERACTION
    - A. TURN FILLING ROUTINES
      - -PROTO CONVERSATIONS

      - -RITUAL PLAY -AGENCY EXCHANGE
    - IMITATION
- SOCIO-COMMUNICATIVE SKILLS IN EARLY CHILDHOOD VI.
  - A. Performatives
  - CONVERSATIONAL SKILLS

#### THE COGNITIVE BASES OF LANGUAGE

- I. GENERAL RELATIONSHIP OF COGNITION TO LANGUAGE
  - A. SENSORI-MOTOR ABILITIES CORRELATED WITH COMMUNICATION AND LANGUAGE DEVELOPMENT.
  - B. GENERIC SENSORI-MOTOR EXPERIENCES FORM THE KNOWLEDGE BASES FOR THE CONTENT-MEANING OF LANGUAGE.
  - C. Language Helps structure cognitive Holdings for Higher Level cognitive functions.
- II. THE ROLE OF CAREGIVERS IN EARLY COGNITIVE DEVELOPMENT
  - A. "SLAFFOLDING"
  - B. ULTIMATELY, CHILD MUST CONSTRUCT OWN COGNITIVE ORGANIZATION
- III. GENERIC COGNITIVE ABILITIES CORRELATED WITH LANGUAGE ACQUISITION
  - A. SCHEMAS FOR RELATING TO OBJECTS
  - B. DEVELOPMENT OF MEANS-ENDS RELATIONSHIPS
  - C. DEVELOPMENT OF REPRESENTATIONAL SKILLS INDEX, SYMBOL, TRUE SIGN
- IV. COGNITIVE HOLDINGS: THE SUBSTANCE OF EARLY CHILD LANGUAGE
  - A. Knowledge reflects child's own experience and organization of the world
  - B. EARLY CONCEPT CLASSES ARE "MAPPED" BY EARLY SEMANTIC CATEGORIES
  - C. THESE EARLY CONCEPTS AND SEMANTIC CATEGORIES REFLECT
    THE ASPECTS OF THE WORLD THAT ALL HUMANS FIND IMPORTANT AND INTERESTING IN THE ENVIRONMENT.

#### THE DEVELOPMENT OF LINGUISTIC SKILLS

- I. COMPREHENSION DEVELOPMENT: 0-3 YEARS
  - A. REACTIVE
  - B. DIFFERENTIAL RESPONDING ON BASES OF PARA- AND EXTRA-LINGUISTIC FEATURES
  - C. COMPREHENSION OF SINGLE (SUBSTANTIVE) WORDS
  - D. COMPREHENSION OF MAJOR SUBSTANTIVE WORDS -- RESPONDS ON BASIS OF PAST EXPERIENCE
  - E. RESPONDS ON BASIS OF GRAMMATICAL RELATIONSHIP BETWEEN WORDS AND GRAMMATICAL MORPHEMES
- II. PRODUCTIVE LANGUAGE DEVELOPMENT: 0-3 YEARS
  - A. REACTIVE PERLOCUTIONARY
  - B. PRO-ACTIVE PERLOCUTIONARY
  - C. PRIMITIVE ILLOCUTIONARY
  - D. CONVENTIONAL ILLOCUTIONARY
  - E. LOCUTIONARY (EARLY)
    - A. TRUE WORDS
    - B. EARLY 2 WORD COMBINATIONS
      - 1) SUCCESSIVE SINGLE-WORDS
      - 2) FUNCTIONAL RELATIONSHIPS
  - F. LATER LOCUTIONARY
    - A. TRUE SEMANTIC RELATIONSHIPS
    - B. USE OF MORPHEMIC MARKERS AND EARLY FUNCTION WORDS
- III. DISTINCTION BETWEEN DESCRIPTIVE GRAMMARS AND ACCOUNTS OF PSYCHOLOGICAL REALITY
  - A. SEGMENTS OF ACTIONS/EVENTS
  - B. TOPIC AND COMMENT

- IV. CONVERSATIONAL SKILL DEVELOPMENT
  - A. EVOKING LISTENER'S ATTENTION
  - B. FILLING TURN IN TEMPORAL SEQUENCE
  - C. CONTINGENT/RELEVANT RESPONDING
    - 1) CONTEXTUAL
    - 2) LINGUISTIC
      - A) QUESTION ANSWERING
      - B) PARTIAL REPETITION
  - D. PRE-SUPPOSITIONS
    - 1. RE: IMMEDIATE CONTEXT
    - 2. RE: SPEAKER'S VS. LISTENER'S PERSPECTIVE (I VS. YOU)
    - 3. RE: ESTABLISHED TOPICS (PRONOMINALIZATION)

- I. INTRODUCTION: THE NATURAL TEACHING-LEARNING PROCESS
  - A. CLINICAL IMPLICATIONS OF AN "INNATE-NESS" MODEL
  - B. GENERAL CHARACTERISTICS OF TEACHING-LEARNING PROCESS
    - 1. CHILD = ACTIVE PARTICIPANT
    - 2. RESPONSIVE CAREGIVER SCAFFOLDS/FACILITATES
    - 3. Dynamic interactions and interactive routines/
    - 4. MOTIVATED BY NEED TO COMMUNICATE--NOT CONSCIOUS EFFORT TO TEACH OR LEARN LANGUAGE

#### II. ADULT FACILITATION STRATEGIES

- A. RESPOND TO APPARENT INTENT
- B. SCAFFOLD
- C. TALK ABOUT THINGS THAT ARE MEANINGFUL TO CHILD
- D. Use child-sized Language ("Mother-ese")
- E. EXPAND AND EMEND

#### III. CHILD ACQUISITION STRATEGIES

- A. DRIVE TO ACT ON ENVIRONMENT
- B. ATTENTION TO SALIENT ENTITIES/EVENTS
- C. ATTENTION TO JOINT REFERENTS
- D. EFFORT TO RESPOND APPROPRIATELY
- E. SELECTIVE LISTENING
- F. SELECTIVE LISTENING
- G. QUESTION ASKING
- H. UTTERANCE PRODUCTION (EVOKES FEEDBACK)

- IV. CLINICAL IMPLICATIONS
  - A. CHILDREN WHO ENTER WORLD WITH LESS THAN A FULL SET OF "ACQUISITION STRATEGIES"
  - B. APPLICATION OF ALL POSSIBLE "FACILITATION STRATEGIES" TO WORK WITH THE SERIOUSLY LANGUAGE DEFICIENT CHILD
- V. THE TEACHING AND LEARNING OF LANGUAGE: A TRANSACTIONAL PROCESS
  - A. COMPONENTS OF THE MODEL
  - B. IMPLICATIONS OF THE MODEL

#### MODULE 6

# THE TEACHING AND LEARNING OF COMMUNICATION LANGUAGE: A TRANSACTIONAL PROCESS

- I. Units of Analysis for the Social Bases of Language
  - A. LEVELS OF COMMUNICATIVE INTENTIONALITY
  - B. PERFORMATIVES
  - C. Proto performatives
  - D. DYADIC INTERACTION SKILLS
  - E. DISCOURSE SKILLS
- II. Units of Analysis for the Cognitive Bases of Language
  - A. SEMANTIC CATEGORIES
  - B. SCHEMES FOR RELATING TO OBJECTS
  - C. MEANS-ENDS SKILLS
  - D. REPRESENTATIONAL ABILITY
- III. Units for Analyzing the Form Dimension of Language
  - A. COMMUNICATIVE MODES
  - B. RECEPTIVE LANGUAGE SKILLS
  - C. UTTERANCE CONSTRUCTIONS
    - 1. ONE-WORD UTTERANCE (SEMANTIC "NOTIONS")
    - 2. Multi-word utterances (semantic relationships/ grammatical word order)
  - D. GRAMMATICAL MORPHEMES

#### MODULE 7

# ASSESSMENT AND TREATMENT OF COMMUNICATIVE BEHAVIORS IN NON-VERBAL CLIENTS

- I. ORGANIZING PERSPECTIVES
  - A. CHARACTERISTICS OF THE NON-VERBAL CHILD
  - B. APPLICATION OF A TRANSACTIONAL MODEL TO CLINICAL INTERVENTION DOMAINS OF CONCERN
- II. ASSESSMENT DOMAINS
  - A. SOCIAL BASES FOR LANGUAGE
  - B. COGNITIVE BASES FOR LANGUAGE
  - C. STRUCTURAL BASES FOR LANGUAGE
  - D. TEACHING AND LEARNING PARTNERSHIPS
- III. ASSESSMENT PROCEDURES
  - A. MAJOR APPROACHES
  - B. THE BEHAVIOR SAMPLE
    - 1. CHARACTERISTICS/PRINCIPLES FOR STRUCTURING
    - 2. Uses
- IV. REVIEW OF STUDENTS SEEN ON VIDEOTAPE
  - A. STUDENT #1: JODENE (17 YEARS OLD, PROFOUNDLY MENTALLY RETARDED)
    - 1. HYPOTHESES RE: BASES FOR LANGUAGE FUNCTION, CONTENT AND FORM BASED ON OBSERVED BEHAVIOR SAMPLE
    - 2. QUESTIONS FOR FURTHER ASSESSMENT
    - 3. PROBABLE TARGETS FOR INTERVENTION
  - B. STUDENT #2: CURTIS (13 YEARS OLD; SEVERELY MENTALLY RETARDED)
    - 1. HYPOTHESES RE: BASES FOR LANGUAGE FUNCTION, CONTENT AND FORM, BASED ON OBSERVED BEHAVIOR SAMPLE
    - 2. QUESTIONS FOR FURTHER ASSESSMENT
    - 3. PROBABLE TARGETS FOR INTERVENTION 51

- C. STUDENT #3: MARK (15 YEARS OLD; SEVERELY MENTALLY RETARDED)
  - 1. HYPOTHESES RE: L'ASES FOR LANGUAGE FUNCTION, CONTENT AND FORM, BASED ON OBSERVED BEHAVIOR SAMPLE
  - 2. QUESTIONS FOR FURTHER ASSESSMENT
  - 3. PROBABLE TARGETS FOR INTERVENTION
- D. STUDENT #4: HEATHER (& YEARS OLD; DEVELOPMENTALLY DELAYED)
  - 1. HYPOTHESES RE: BASES FOR LANGUAGE FUNCTION, CONTENT AND FORM, BASED ON OBSERVED BEHAVIOR SAMPLE
  - 2. QUESTIONS FOR FURTHER ASSESSMENT
  - 3. PROBABLE TARGETS FOR INTERVENTION

#### V. TREATMENT CONTEXTS

- A. GENERAL CHARACTERISTICS OF IDEAL COMMUNICATION TREATMENT CONTEXTS
- B. SPECIFIC EXAMPLES OF RICH CONTEXTS FOR COMMUNICATION TRAINING
- C. LIMITATIONS OF TRADITIONAL CLINICAL MODELS FOR NON-VEREAL CLIENTS
  - 1. THE "ISOLATED CLINIC ROOM"
  - 2. THE 30 MINUTES/WEEK THERAPY SCHEDULE
- D. ALTERNATIVES TO TRADITIONAL CLINICAL MODELS
  - 1. NOVE INTO STUDENT'S TOTAL ECOLOGY
  - 2. INVOLVE ALL SIGNIFICANT OTHERS AS CHANGE-AGENTS

#### VI. TREATMENT PROCEDURES

- A. HEED TO BE SYSTEMATIC
  - 1. INCREASE DENSITY OF LEARNING OPPORTUNITIES
  - 2. INCREASE CONSISTENCY OF APPROPRIATE MODELS AND CONSEQUENCES
- B. KEINFORCEMENT MUST BE CONSISTENT AND APPROPRIATE TO NATURE OF RESPONSE
- C. FODEL AND SCAFFOLD FOR NEXT HIGHER LEVEL OF RESPONDING IN ALL LONAINS
- DISPERSED-TRIALS, CONDUCTED IN INTERACTIVE CONTEXTS, REPEATED THROUGHOUT DAY

- E. BRANCH TO MASSED-TRIAL, INTENSIVE TRAINING FOR SOME RESPONSE DEVELOPMENT WORK
- F. NEED FOR A REALISTIC EVALUATION PLAN

# MODULE 8 ASSESSMENT AND TREATMENT OF LANGUAGE BEHAVIORS WITH SEVERELY LANGUAGE DEFICIENT CLIENTS

- I. THE VERBAL, SERIOUSLY LANGUAGE DEFICIENT CHILD
  - A. GENERAL CHARACTERISTICS
  - B. How SIMILAR TO THE NONVERBAL CHILD
  - C. How different from the nonverbal child
- II. ASSESSMENT TARGETS
  - A. FUNCTION DIMENSION
  - B. CONTENT DIMENSION
  - C. FORM DIMENSION
  - D. LANGUAGE TEACHING-LEARNING INTERACTIONS: QUANTITY AND QUALITY
- III. ASSESSMENT PROCEDURES
  - A. REVIEW OF GENERAL APPROACHES
  - B. THE LANGUAGE SAMPLE
    - 1. COLLECTION GENERAL PROCEDURES
    - 2. ANALYSIS
  - IV. REVIEW OF STUDENTS FROM VIDEOTAPE
    - A. STUDENT #1: KIM (5½ YEARS OLD, DEVELOPMENTALLY DELAYED)
      - 1. IMPRESSIONS RE: THE FUNCTION, CONTENT, AND FORM DIMENSIONS OF KIM'S LANGUAGE
      - 2. TARGETS FOR FURTHER ASSESSMENT
      - 3. Probable treatment targets
    - B. STUDENT #2: MARK (17 YEARS OLD; SEVERELY MENTALLY RETARDED)

- Impressions Re: The function, content, and form dimensions of Mark's Language
- 2. TARGETS FOR FURTHER ASSESSMENT
- 3. PROBABLE TREATMENT TARGETS
- C. STUDENT #3: LAURA (4 YEARS OLD; LANGUAGE DELAYED)
  - 1. IMPRESSIONS RE: THE FUNCTION, CONTENT, AND FORM DIMENSIONS OF LAURA'S LANGUAGE
  - 2. TARGETS FOR FURTHER ASSESSMENT
  - 3. PROBABLE TREATMENT TARGETS
- V. COMMUNICATION TREATMENT CONTEXTS AND PROCEDURES
  - A. GOALS AND OBJECTIVES
    - 1. CONSIDER ALL THREE DIMENSIONS
    - 2. VERTICAL AND HORIZONTAL EXPANSION
  - B. TREATMENT CONTEXTS
    - 1. How SIMILAR TO THOSE FOR NONVERBAL CHILD
    - 2. How different from those for nonverbal child
    - 3. Specific examples of rich language training contexts
  - C. TREATMENT PROCEDURES
    - 1. Systematic: Increased density + consistency
    - 2. APPROPRIATE REINFORCEMENT CONTINGENCIES
    - 3. DISPERSED-TRIAL, IN-SITU TRAINING
    - 4. LIMITED USE OF MASSED-TRIAL, INTENSIVE TRAINING FOR SOME RESPONSE DEVELOPMENT

APPENDIX B
Application forms

### Application for Participation in Leadership-Level In-Service Workshop

SEC	TION I: General Information						
1.	. Please indicate workshop for which you are applying:						
	Workshop #1: For teams serving handicapped infants and preschool children (April 24-29, 1983; application deadline: February 1, 1983)						
	Workshop #2: For teams serving school-aged severely handicapped children (May 15-20, 1983; application deadline: March 1, 1983)						
2.	Team Members:						
	SET: (Last Name)						
	S/LC: (Last Name)						
	Agency:						
	City & State:						
3.	Travel: Would you travel to Kansas City by:						
	Car: Estimated round-trip mileage:miles						
	Plane: Current round-trip air fare to KCI \$ (per traveler)						
4.	Hotel: Would you prefer:						
	2 Single rooms						
	l Double room						
5.	Credit Options: Please indicate your preference						
	a) 4.0 ASLHA, CEU's						
	2 hours, Speech Pathology, Graduate Credit						
	(name) 4.0 ASLHA, CEU's						
(name)  2 hours, Speech Pathology, Graduate C							

TION II:	To be completed by Special Educator:
Name: _

### COMMUNICATION TRAINING FOR THE NONVERBAL CHILD: A TRANSACTIONAL APPROACH

#### WORKSHOP EVALUATION

	NOTITION LINEON TON			- 1		<b>^:</b> —	
		best	ind	ircle icates tement	the n your	umbe read	r which
			ngly ýree	$\leftarrow$		$\rightarrow$	Strongly Agree
SE	CTION I: Regarding the information presented in this workshop:						
a)	The information presented in this workshop accurately represents the most current data available on child language acquisition and intervention	1	2	3	4	5	6
b)	The information presented is both useful and relevant to clinical work with non-verbal and severely language deficient children and youth	1	2	3	4	5	6
c)	The information presented, including take-home materials, will be sufficient to allow me to <a href="mailto:explain/teach">explain/teach</a> this intervention approach to my colleagues back home	1	2	3	4	5	6
d)	The information presented, including take-home materials, will be sufficient to allow me to work with my colleagues back home to <a href="implement this intervention approach with our students/clients">implement this intervention approach with our students/clients</a>	1	2	3	4	5	6
e)	I would agree that an effective intervention program for this population must include consideration of form, function and content of early communication and must focus on communication in the context of real interactions/social commerce	1	2	3	4	5	6

54

SECTION II: Regarding the format of this workshop:

Please circle the number that best represents your rating of

each item

Extremely Very
Unsatisfactory Satisfactory

		Unsat		tory		Satis	factory
a)	Overall organization and sequence of the material	1	2	3	4	5	6
b)	Scheduling and distribution of time	1	2	3	4	5	6
c)	Video-tape materials	1	2	3	4	5	6
d)	Trainee-text/reading materials	1	2	3	4	5	6
e)	Group discussion and lecture sessions	1	2	3	4	5	6
f)	Meeting and general hotel facilities	1	2	3	4	5	6

Comments re: the <u>information</u> <u>content</u> of this workshop:

Please add any additional comments or suggestions you may have regarding this workshop format:

# · APPENDIX E Sample Record form for Simulation Activities

Name/ID:	

SIMULATION #1: Curtis (SMR, 13 years old)

1. Briefly summarize your observations of Curtis, in terms of <u>current</u> status or level of performance in the domains listed below, and identify one behavior or response that justifies or illustrates each.

Domain	Current Status/Level of Functioning	Example/Response Observed
Function		
Content		
Form		
		•
What are to levels you	wo specific issues or questions regard might want to probe more directly in	ling Curtis' current skill future assessments?

3. Based only on the observations you have made at this point, write one behavioral objective for an appropriate horizontal treatment target for Curtis in the content dimension:

4. Based only on the observations you have made at this point, write one behavioral objective for an appropriate vertical treatment target for Curtis in the <u>form</u> dimension:

2.

#### COMMUNICATION TRAINING FOR THE NONVERBAL CHILD

#### A TRANSACTIONAL APPROACH

#### Follow-up Questionaire

1.	. Name of individual(s) completing this questionaire:				
2.	In the past six months, have you conducted any workshop(s) using the training materials provided by our project? Yes No				
3.	If you answered "yes" to Question #2, please complete the attached "Workshop Information and Feedback" form. (If you conducted more than one workshop, please complete a separate form for each.)				
4.	Do you have plans to offer any training using the materials provided by our project during the coming six-month period (i.e. between now and)? Yes No				
	If yes, please briefly describe your plans re: date(s), participants, and modules to be used:				
5.	Have you participated in any other training or consultative activities in your local agency, or region, which were wholly or partly a result of your participation in this training project?				
	If yes, please describe/explain:				
6.	Have you attempted to implement, or encourage implementation, of a transactional approach to communication training for the nonverbal (and severely language deficient) students/clients served by your agency in the past six months? Yes No				
	If yes, have your efforts been directed towards: (Check all that apply)				
	a. modifications of assessment procedures used with your own students/clients				

b.	modifications of treatment procedures used with your own students/clients
c.	modifications of assessment procedures used with students/clients assigned to your colleagues and/or subordinates
d.	modifications of treatment procedures used with students/clients assigned to your colleagues and/or subordinates
e.	modifications of the general service delivery model used by your agency for communication intervention with severely handicapped students/clients

- 7. If you answered "yes" to Question #6, we would like to know how you perceive the success and impact of your efforts to implement this model. Would you please respond briefly to each of the following questions? Also, please add any additional comments or supporting data that you feel would be helpful to us.
  - a. How successful have you been in actually achieving the changes you have sought to make in programming and/or administrative procedures and policies?

b. If you are not satisfied with the changes you have been able to bring about, what do you see as the major obstacles or barriers to these changes?

c. How have your colleagues reacted to your efforts to implement this model?

d. How have the student'/clients' parents reacted to implementation of this model?

e. Have you observed changes in your (or your colleagues'/subordinates') students'/clients' actual levels of performance in the area of early communication and language development which you feel are due, at least in some part, to your implementation of this model?

### APPENDIX I

Complete responses to Follow-up and Feedback Questionnaires

7b. If you are not satisfied with the changes you have been able to bring about, what do you see as the major obstacles or barriers to these changes?

I anticipate some of the staff discounting the information because they don't understand it. I have prepared a videotape to offset some of that.

Planning, scheduling and training the large numbers of staff who wish to and/or need to be provided with the workshop information. Our major obstacle in doing the above has been acquiring the needed videotape equipment. Hopefully this will be remedied. Another barrier has been the extremely high academic level of the videotape modules. Many of the people who could have the most impact (direct care and paraprofessionals) do not have the academic skills to master this material which is extremely difficult even for professionals. Attempting to develop presentations which would be meaningful to them is very time consuming.

More changes need to be made in the entire IU for assessing procedures. The changes need to be made at the administrative end.

I believe I could have been more successful with more consistency in promoting target behaviors. The obstacles over which I have little control, e.g. the autistic tendencies of the child, have been the greatest reason for difficulties in changing social behaviors.

Time should take care of obstacles of staff changes and reorientation for new staff to transactional approach.

- i) Who "owns" these students, lar classroom teacher or SPED.

  2) SPED staff have been taught to bring students to grade levels by removing them from classroom--it's hard to change.

Not sufficient time to plan and implement changes; educating staff and parents; keeping appropriate data.

The major obstacle I have in making changes in the administrative procedures is the lack of knowledge on the part of the administration and the fact I am not in an administrative role.

7c. How have your colleagues reacted to your efforts to implement this model?

The few that have seen our changes and the flow chart we developed are most interested. Also, they were most interested in my offering the modules again.

Very supportive and eager to be included in the workshops. Some however are overwhelmed by the information.

They have been very open to the information. Many expressing a need for the course after the introductory workshop.

They do not know that I am implementing this particular program.

High supportive and eager to learn.

It varies with individuals. If I can go in and model what I mean, it helps. Some people just resist.

They are very interested and anxious to learn more about the model.

Very positively.

My colleagues have been very receptive to the model. The teachers I work with directly have made many changes in their classroom program. Not only have they changed classroom activity, but communication I.E.P. have been changed.

Yes, with acceptance and enthusiasm. The Transactional Model is currently being used in some form by all Speech Pathologists and Speech and Hearing Department Staff.

7d. How have the student'/clients' parents reacted to implementation of this model?

I have no information on this as I don't work with any parents directly.

Our sampling of this is extremely limited. We have very little contact with parents. In at least one case, the reaction has reportedly been negative as she wants her daughters scheduled for individual language therapy as they were in the previous institution. However many of the students who will be directly affected through implementation of this model have never been considered candidates for service beyond annual screenings/evaluations.

The parents were satisfied in changes in their IEP goals. They felt that the goals were more realistic. However, I haven't gotten specific reactions after 3 months of implementation in the classroom.

The parents are unaware of what program is being used but they are happy with the language progress in their children.

To be tried soon.

l student did more initiating in l week of partial integration than in 2 months of 1/1 remediation. Parents like it.

Have just begun explaining approach to them.

Positive!

With some caution but generally very well. We have some parents who attended our presentation and they have responded very well and are excited about this model.

Parents that I have met with seem very receptive to the change of programming, although some don't see any difference from previous programming.

Positively, in general, although their comprehension of the material is limited due to lack of time for real consultation with them on the goals and objectives of the Transactional Approach.

7e. Have you observed changes in your (or your colleagues '/subordinates') students'/clients' actual levels of performance in the area of early communication and language development which you feel are due, at least in some part, to your implementation of this model?

Some of the instructors who attended the spring workshop have indicated that it has changed their perspective and emphasis in language programming.

Most definitely. Colleagues within the speech and hearing staff and other professionals and paraprofessionals report significant performance changes for some of their students after implementing this model. At this time, it is felt that many of these changes are attributable to a change of approach that encourages and allows experiences and opportunities to communicate rather than actual training based on this model. However that in and of itself is very exciting.

My assistants are more aware of the stages of normal development and how it relates to our students. Their language stimulates the children's language development. They are "holding out" more allowing more opportunities for the child to communicate.

I believe that the teacher in the classroom has increased her knowledge of language development. This is particularly true as the program is very logical and easy to understand.

Yes, I believe much of this notion also comes from my ability to assess and move a child along appropriate contin. rather than drastic changes in interactions. I would love any help and suggestions for developing play rituals like "washing the babies". (Especially for the low level and physically impaired child.)

Peer interaction has improved as well.

Hard to say at this point.

I definitely have seen changes in both my colleagues and students performance. Many of the lower functioning students are beginning to show more early communication behaviors due to the fact that I have worked with the teachers directly. I have discussed in detail many of the behaviors of early communication. I am quite pleased with the changes in many of my colleagues and the resulting changes made in IEP's and classroom activities. The transactional model has made a great impact in all of my classes and there has been changes in students performance.

7e. Have you observed changes in your (or your colleagues'/subordinates') students'/clients' actual levels of performance in the area of early communication and language development which you feel are due, at least in some part, to your implementation of this model?

- 1. Yes, definitely. All clients presently receiving services in my Unit have made some degree of improvement, some have made a significant improvement in 6 short months.
- 2. Another great improvement is in staff interaction style and interpretation of client behaviors. Most staff in the communication cottages actually see themselves as instructors and have taken pride in their work as a result of the in-service training. They have an understanding of communication development in their clients which approximates my own!
- 3. A final positive change is a student assistantship with the University of Connecticut in which two students each work 17½ hours per week under my supervision. They first receive in-service training on the Transactional Approach (See attached sheet on our presentations) and then work with clients from the Communication Cottages in a small workshop setting. This is a very positive step toward education of graduate students on this model.

7a. How successful have you been in actually achieving the changes you have sought to make in programming and/or administrative procedures and policies?

With a small percentage of the staff members the success has been very good and these staff members come and ask for new ideas and are trying to change their approach to communication in the classroom. The majority of the staff however have not really accepted the idea. They found it interesting but have not shown a great deal of interest in implementing it within their classes.

With a high level of consultant and direct services to teachers from communication specialist success has been encouraging for a number of students.

We have been very successfuly in involving our staff in the use of the transactional model particularly in the assessment of very young or severely delayed children. It has also changed the way in which we communicate diagnostic findings directly to parents and through diagnostic reports. These changes in programming have not necessitated any changes in administrative procedures and policies.

Changes in treatment procedures and programming have just begun.

It is still early in the application phase of our pilot project, but we are very optimistic that changes in communication programming will continue to be made as teachers and clinicians involved become more familiar and comfortable with this approach. All participants have completed assessments and several have already begun to implement changes in intervention strategies based on what they have found. The supervisors who are responsible for SPMR programs are supportive of our efforts and anxious to see any change implemented that will show increased communication skills in our students.

Since I work quite independently, the success I have had has been with my own client's programming goals. I have generally been very successful with these goals, and find them relevant and compatible with other programs I have used, particularly MacDonald.

Recognition by administration of our competencies (due to attendance at McLeans' workshop) give more weight to our opinions/suggestions. All s/p students will now receive the minimum of 4 hrs/mo. consultative services automatically ("consultative" means working with child and teacher), whereas, formerly the discrepancy between M.A. & L.A. had to be "significant" before service could be granted (anyone believe that?)

Changes in my own assessment and treatment procedures have gone smoothly and seems to have served to make understanding client conditions, evaluation, and record keeping simpler.

I feel that I have been very successful in helping other team members, become more comfortable and proficient in language programming. Also, the teachers are making goals more functional and developmentally appropriate. We are now working on using more dispersed trials and more appropriate contextual settings for our teaching. The approach has been very helpful in assisting our direct care staff to be more responsive to communicative behaviors.

7b. If you are not satisfied with the changes you have been able to bring about, what do you see as the major obstacles or barriers to these changes?

It seems that the teachers are concerned about the development of communication skills but that they still feel that the students need to be pulled out of class and into the therapists room. I feel this is still the case with many of the parents also.

Hopefully the major obstacle was level of training for the classroom staff. The August mini workshop resulted in a positive attitude but not a high level of information. The current class being taught should solve that problem.

Have not pressured implementation on wide scale. Concept presented to colleagues for evaluation and information.

In any program, carry-over is sometimes problematic as the home environment of the clients is in one language mode (i.e. sign) while many of my goals are in the verbal mode. Use of daycare and other such programs can promote carry-over in the verbal mode.

Dissatisfied with knowledge of direct service providers (teachers & aides). McLeans' videotapes not well received by these teachers due to their inability to perceive relevance to S/P children (too many normal students--too lengthy discussions--too technical language).

7c. How have your colleagues reacted to your efforts to implement this model?

Most have been very interested and have reacted positively.

Cooperation by staff and support by administration both in inservice expenses and purchasing materials.

Have been receptive.

They have been very positive and eager to incorporate this model into their work.

Overall we are extremely encouraged by the response of our colleagues. Most have shown extraordinary support by putting the additional time and effort needed to learn the material and adjust their programs, data sheets, etc. Of the additional 4 teachers and 3 speech/language clinicians involved, all but one clinician and one teacher have shown remarkable acceptance and eagerness in applying what they have learned. The clinician and teacher who have not responded favorably have had the following problems:

- 1. The teacher has changed classrooms and has had to make several adjustments already in the programming she is used to. She has also been preoccupied with problems concerning one of her students. Thus she has not had the mental energy and time needed to devote to this project. We bilieve she will later.
- 2. The clinician does not see the applicability of this approach to her adolescent population with behavioral problems. However, she is willing to try and has requested additional help in applying this approach.

Yes-teachers perceive its importance but negative about having to go through videotape sessions—two workshops cut short due to this (amongst other factors—administrative).

Many have been very interested in the program and sought to learn the model themselves.

Interested in approach, enjoyed workshop. Will add to repertoire but do not agree to totally adopt.

They have been very enthusiastic and willing to learn the new approach. The Special Education teachers were very excited because it gave them a place to start in the area of language with their profoundly multi-handicapped students.

7d. How have the student'/clients' parents reacted to implementation of this model?

The parents still are very concerned about IEP's that say their child will receive 1/2 hour of individual therapy 2x per week etc. and the ones I have had contact with recently seem to be becoming more concerned that this happen. This has been particularly true this year.

We have not presented the program to parents as a group formally. However, we are involving parents as team members for planning and implementing individual programs.

Students are making the adjustment to the new procedures and programming. Parents have not yet been involved.

They have been very positive since the model provides a way for them to observe and encourage communicative growth in their prelinguistic children.

Parents/guardians have not been involved at this point. They will be as changes in IEP objectives need to be made and we expect a favorable response.

Parents accept and see its value when it is explained at individual parent meetings. Nothing very formal done--only relating theory of model.

They have responded well although not all have been very aware of the objectives.

Our parents are happier that we have placed more emphasis on language programming. Also the parents of those students who are non-verbal, understood the "Generic Skills Assessment" and were pleased that the cognitive/social goals were aimed at the development of a communication program.

7e. Have you observed changes in your (or your colleagues'/subordinates') students'/clients' actual levels of performance in the area of early communication and language development which you feel are due, at least in some part, to your implementation of this model?

No. 7 I de la companya de la company

Yes I have found that when programming takes place at an appropriate level and in an appropriate context gains in communicative ability can be achieved.

Yes - with the most profoundly handicapped, including young adults. We will share our data with you when we are further into the program.

Yes, we have noted improvement in the students' ability to communicate. We have been particularly pleased with the changes we have noticed 'the area of function.

Our clients have made progress but it is impossible to directly state cause and effect.

Yes, in one student, the level of performance has increased; from reactive to proactive level of perlocutionary communication.

Changes have been observed in that progress and abilities are viewed and evaluated from a new perspective.

My clients have shown greater improvement under this model than any other I have tried this year.

Yes--teachers more perceptive to nuances of early communication; they rely heavily upon our consultative direction; easier now to see students' communication attempts and to feel progress is being made.

Our younger children (under 3 years) appear to be exhibiting more communicative behaviors to which the staff is consistently responding to. Also, 2 children are identifying objects who were not before. We have only made our changes in the last 3-4 months and I am anticipating much more progress over the next year especially in the skills necessary to language acquisition and the transfer of skills.

Reactions to Approach.	o any	changes you have made to reflect Transactional

II.

Directions: Please circle the number which best indicates your reaction to each statement.

		Not true	€	۷e	ry true
1.	Parents were very accepting and supportive of the changes we made in our programming approach as a result of participation in the Transactional Approach workshops	1	2	3	
2.	Colleagues and staff were very accepting and supportive of the changes we made in our programming approach as a result of participation in the Transaction Approach workshops			3	4
3.	Administrators were very accepting and supportive of the changes we made in our programming approach as a result of participation in the Transactional Approach workshops	l t	2	n	4
4.	Children/clients seemed to enjoy and be more actively engaged in communication programming which used Transaction Approach than in previous programming approaches	l al	2	3	4
5.	I found communication program- ming that incorporated Trans- actional Approach to be more satisfying and enjoyable	1	2	3	4

#### OBJECTS

## FOR USE WITH GENERIC SKILLS ASSESSMENT INVENTORY

- 1. Variety of interesting objects, texture or perceptually interesting e.g. Simon game, jewelery box that has music activated with opening, etc.
- 2. Some novel objects. eg. magic bubbles,
- 3. Objects for combinatorial activities; 2 or more as with blocks and a box, legos, food items as kool-aid, toast & butter, etc.
- 4. Objects with activation mechanisms (i.e., wind-up,)
- 5. Objects that can be used as primitive tools
- 6. Common familiar objects electric razors, etc.
- 7. Conventional tools, e.c. lock & key
- 8. Objects for sequenced actions, 2 or more (see #3)
- 9. Objects that make sounds and/or visual patterns
- 10. Matching objects
- 11. Matching objects and pictures
- 12. Objects whose <u>functions can be pantomimed</u>. hair dryer, jar with lid, brush & comb
- 13. Objects that can be matched based on perceptual class: color, size, texture, scent, etc.
- 14. Objects that can be matched based on functional properties (things that are worn, people in the environment, items on the cottage, etc.)
- 15. Objects that can be used for turn-filling/turn waiting games or activities

#### QUESTIONS?

#### ASSESS YOUR CLASSROOM ON FUNCTION OF LANGUAGE OPPORTUNITIES:

Does your class schedule allow students to:

- 1. Play and interact with peers?
- 2. Play and interact with adults? Are the adults describing or guessing what non-verbal child wants?
- 3. Initiate interactions by reaching or do you help too much? Do other students help <u>low</u> functioning students too much?
- 4. Request and describe needs during a snack activity or do you set up snack so child doesn't have to ask?
- 5. Take turns rolling ball; playing peek-a-boo; role playing in group; sharing Show and Tell?
- 6. Initiate communication throughout the day to request, describe?

### ASSESS YOUR CLASSROOM ON CONTENT OF LANGUAGE OPPORTUNITIES:

Does your class schedule allow students to:

- 1. Play with a variety of age appropriate toys or objects?
- 2. Investigate new unfamiliar objects and to attempt to manipulate and problem-solve how to use them?
- 3. Use objects in functional activity; i.e., stir with spoon; wipe table with sponge; sweep floor with broom; etc?
- 4. Interact with adults as playing with toys so adults can <u>define</u> actions (i.e. push, etc.).

# ASSESS YOUR CLASSROOM ON OPPORTUNITIES TO DEVELOP FORM OF LANGUAGE: Does your class schedule allow students to:

- 1. Practice within 1:1 or small group program specific receptive or expressive skills? (i.e. identify objects receptive; name actions expressive).
- 2. Interact with adult speakers to expand child's utterances or emend (correct) child's utterances.
- 3. Practice a variety of language forms: Prepositions (in, on, under); Actions (go, come); Adjectives (hot, cold); etc.

## ASSESSMENT OF STAFF FACILITATION STRATEGYES

	responds to apparent intent of cilent's signals
	Scaffelds for client in his interactions with the world
	Holds out for client response
	Talks about things that are meaningful to the client
	Marks dynamic segments of events
	Uses shorter length of utterances
	Uses simplified grammar
	Uses more complete grammar
	Uses simplified lexicon
	Frequently paraphrases and repeats client utterances
	Uses slower phrasing with pauses
	Clearly enunciates
	Uses exaggerated intonation and stress
	Expands and emends client utterances
	Directs client attention to referents of interest
***************************************	Follows client's visual/gestural indication of referent
	Demonstrates and encourages object manipulation and use
	Reinforces with appropriate consequences
	Models gesture/picture/sign use appropriately
	Generalizes program goals to other activities (Dispersed trial training)
	Conducts massed trial training as needed

**EVALUATIONS** 

Resident Name:

Resident Number:

Age: 2 years, 1 month

Date of Birth: 4-27-82

Date of Assessment: May 29, 1984

Test Instruments: Vulpe' Assessment Battery

Generic Skills Assessment Inventory

Diagnosis: Werdnig-Hoffman Disease

Reason for Assessment: The reason for assessment on Jerry today was to

prepare an annual review. The annual report will be part of an interdisciplinary team meeting where a new IEP and a new habilitation plan for

Jerry will be established.

Impressions:

Jerry is a handsome, nonambulatory, thin black male. He was tested in a quiet room with a variety of materials. He responded well to the examiner and the testing situation. He seemed highly motivated by the materials and examiner. He vocalized and interacted with materials and examiner throughout session. Test results will have a high degree of validity because of Jerry's response to testing.

Basic Senses and Functions:

Jerry seems to have acute capabilities in visual and auditory senses. He is able to name several primary caregivers by seeing or hearing them. Olfactory awareness seems to be normal because of movement and vocalizations. Jerry is aware of tactile stimulation and demonstrates awareness by laughing, touching area on body stimulated and looking at examiner.

Test Results:

In the Cognitive domain, Jerry was assessed in four separate areas: object corcepts, cause effect/means ends, combining schema, and attention and orientation.

In the object concepts area, Jerry scored at an approximate level. He is able to find hidden objects, point to a few pictures in books, match toys and identify parts of a face by pointing. Weaknesses include inability to identify objects by use and joining parts to make a whole.

In the cause effects/means ends area, Jerry scored at an approximate 18 to 24 month level. He shows the understanding that his own activity is an instrument to achieving desired ends. He also demonstrates activities which show knowledge of relationship of objects to each other and to his own motor activity. He is beginning to use objects to obtain other (i.e. pulling toy by string). At this time he is starting to search for parts of objects that will activate them.

In the combining schema area, Jerry scored at an approximate 16 to 18 month level. He recognizes the names of several body parts, objects, and people in his environment and is able to identify them by pointing. He repeats many vocalizations and actions which cause caregivers to laugh. Weaknesses include inability to combine concepts verbally.

In the area of attention and goal orientation, Jerry scored at an approximate 12 to 18 month level. Strengths in this area include selective attention abilities. Weaknesses include low persistence level in frustrating activities. Jerry's attention span is appropriate for his age level.

In adaptive behavior skills there are four areas: grooming, toileting, dressing and feeding. Jerry did not score in areas of grooming or toileting but he does brush his teeth when given a toothbrush with toothpaste on it. He also assists in diapering by raising his hips when requested by primary caregiver.

In the area of dressing, Jerry scores at an approximate 6 to 9 month level. He pulls off hats and socks and is passively cooperative during dressing.

In the area of feeding, Jerry scored at an approximate 9 month level. He does not exhibit tongue thrust, and aids in bringing cup and spoon to his mouth. Severe health and motor inability have impaired progress in this area.

Fine motor testing revealed that Jerry is at an approximate 12 to 14 month level. He is able to turn pages in a book, push small toys, grasp and release as desired, and push a crayon. Weaknesses include inability to demonstrate advanced pincer grasp, and stacking blocks. Jerry is not able to lift objects that weigh over 3 to 4 ounces. This is a factor in his decreased progress in this area.

In the Generic Skills Inventory there are five areas: object relationships, representation, dyadic interaction, expressive communication, and comprehension and imitation.

In the object relations area, Jerry used a few familiar objects in appropriate manner. He exhibits primitive tool use (touching string of see-n-say) and used combinatorial actions actions on objects.

In the representation area, Jerry was able to match identical objects, locate invisibly hidden objects and locate objects to auditory cue.

# MULTNOMAH EDUCATION SERVICE DISTRICT

ALIANUI THEDE, SUPERINTENDENT • 220 SE 102ND AVE • PIDIBOX 16657 • PORTLANDI OREGION 97216 • 503-255-1841

### SPEECH AND LANGUAGE REPORT

STUDENT:

B.D.:

1/4/81

AGE:

SCHOOL:

Highland Preschool

DATE:

5/23/84

CLINICIAN:

Nancy F. Shillingburg

#### TESTS ADMINISTERED:

On 5/23/84 the following tests were administered:

- McLean-Snyder/McLean Observation

#### LANGUAGE ABILITY:

#### RECEPTIVE DOMAIN:

Based on the results of the observation, Scott demonstrated the following skills:

- 1) Visually tracks desirable object up and down and to his left and right.
- 2) Found desirable item (car) hidden under paper and demonstrated skill several times.
- 3) Attempted to demonstrate a "Give me" response when paired with a gesture.
- 4) Put blocks in box when given a model and gesture.
- 5) Stacked blocks when given a model and gesture.
- 6) Pushed car with a model and gesture.

#### NEEDS WORK ON:

- 1) Attending behaviors: look, responding to name, hands down,
- 2) Unable to discriminate one-part commands with gestures.
- 3) Unable to match object to object.
- 4) Unable to identify common objects.
- 5) Attend to noisemakers and voices, by localizing to sounds or change in his position.

BEST COPY AVAILABLE

\*1\*\*\*

Your Public Schools . . . there's no better place to learn.

Page 2

### EXPRESSIVE DOMAIN:

Scott demonstrated the following expressive skills:

- 1) Parent reports indicate that he has said some words, but now says "kitty" and "car."
- 2) He spontaneously babbles while interacting with toys and was observed saying: wo-wo; ee; tuh; and a lot of high pitched sounds when he's excited.
- 3) Communicates by going to desired objects: car, bubbles, rattle, mirror, paper and pencil (he loved to scribble).
- 4) He goes to activities such as play, or when left alone will crawl to an adult as if to say "I want to play."
- 5) Attempts to reach for some desired objects held in teacher's hand, but not consistently.

#### NEEDS WORK ON:

- 1) Making choices by reaching/pointing.
- 2) Develop pre-linguistic communication skills to emphasize the functions of: request, protest initially.
- 3) Increase interaction skills with people and objects.
- 4) Develop motor imitation skills with actions on objects.
- 5) Develop functional gross motor actions to later form into functional sign/say communication system.

#### **HEARING:**

No formal hearing evaluation was done at this time. However, since Scott was unable to respond to noisemakers consistently, this may be an area in which to get some further assessment.

#### RECOMMENDATIONS:

It appears that the Multihandicapped Program is appropriate for Scott at this time. He should receive services in Speech and Language. The reporting Clinician will assist the family if they request a hearing evaluation.

#### SPEECH AN J LANGUAGE REPORT

STUDENT:

B.D.

2/13/80

SCHOOL:

Gilbert Heights Preschool

DATE OF REPORT:

5/14/84

CLINICIAN:

Nancy Freese Shillingburg

#### TESTS ADMINISTERED:

On 4/18/84, and again on 5/9/84, the following tests were administered:

- MESD Speech and Language Test, Level 1 and Level 2
- Test for Auditory Comprehension of Language
- Hejna Articulation Test

#### LANGUAGE ABILITY:

#### RECEPTIVE DOMAIN:

Adam correctly responded to the following receptive tasks:

- 1) Followed basic commands, i.e. look at me/give me/take/point.
- 2) Identified several body parts, i.e. nose/mouth/ear/eyes/leg/ arm/hand/hair/tummy/elbow/back.
- 3) Correctly matched object to object.
- 4) Correctly identified a variety of common objects.
- 5) Correctly matched object to picture.
- 6) Correctly identified common pictures.
- 7) Correctly identified an object when the function was described.
- 8) Correctly identified a picture of an object when its function is described.
- 9) Attempted to give two out of three objects sequentially.
- 10) Correctly followed a two-part sequential command.
- 11) Correctly identified a variety of action verb pictures.
- 12) Correctly identified items within the categories of eat/wear/play.
- 13) Correctly discriminated the pronouns my/your.
- 14) Correctly discriminated the prepositions in/under.
- 15) Correctly identified the polar pictures of big/little, up/down, fat/skinny.

Adam demonstrated difficulty on the following receptive tasks:

- 1) Was unable to follow two and three-part sequential directions,
  - i.e. "Give me the \_\_ and the \_\_ " when four objects are present.
- Was unable to identify the prepositions over/in front/in back/next to/on.

Your Public Schools ... there's no better place to learn.

- 3) Was unable to discriminate a variety of polar pictures.
- 4) Was unable to discriminate singular/plural.
- 5) Had difficulty with pronouns he/she/they.
- 6) Was unable to discriminate same/different, although the skil! seems to be emerging.
- 7) Was unable to discriminate first/middle/last.

#### RECEPTIVE I.E.P.:

Adam has made gains on the following receptive objectives. He correctly identified a variety of action pictures on 10/5/83 upon baselining this objective. He also was able to identify pictures by function on 10/5/83 at baseline. On 10/6/83, a program was initiated to match object to object and picture to picture, matching such items as colors/objects/shapes/sizes. He completed this program on 2/24/84. He also was asked to match a variety of non-identical matching items, and he met this objective on 3/2/84. On 3/2/84 the program to identify a variety of prepositions was initiated. As stated above, he correctly places objects in/under, and we are working on other positions.

Based on the results of the Test for Auditory Comprehension of Language, Adam's raw score is 53, yielding an age equivalency of 3 years 2 months. In comparing this test to the results of the ESD Speech and Language Test, the items he had difficulty on were tasks at the three to four year level. Therefore, it appears that Adam is functioning at approximately the 3 to  $3\frac{1}{2}$  year level in receptive language.

#### EXPRESSIVE DOMAIN:

Adam correctly responded to the following expressive tasks:

- 1) He correctly imitated fine and gross motor actions.
- 2) He imitates a variety of vowel-consonant and consonant-vowel chains.
- 3) He named a variety of body parts.
- 4) He names a variety of objects and pictures of nouns and verbs.
- 5) He correctly described action pictures using a noun-verb or verb-noun phrase.
- 6) He correctly named some polars, i.e. big/little, fat/skinny, tall/short.
- 7) He correctly answered a variety of yes/no questions. i.e. "do you want \_\_\_\_\_/is this a \_\_\_\_\_?"
- 8) He correctly imitated two digits or two unrelated words sequentially.
- 9) He correctly named objects when the function was described, i.e. scissors/cup/chair/pencil.
- 10) He correctly named the functions of pencil/knife/chair.
- 11) He correctly answered a variety of "wh" questions, i.e. "what is your teacher's name/where do you live/where do fish swim/ who is your friend/whose shoes are these?"

Adam demonstrated difficulty on the following expressive tasks:

- 1) Was unable to name a variety of prepositions.
- 2) Was unable to name some polars.

- 3) Was unable to name two and three digits or unrelated words sequentially.
- 4) Was unable to name items in the categories, i.e. "tell me what you eat/wear/play with."
- 5) Was unable to name plural forms.
- 6) Was unable to use pronouns consistently you/I/she/he/they.
- 7) Was unable to answer questions such as "Why/how many/how much/how far/when?".

Based on observation of Adam's spontaneous language, it appears he is using between two and three words in his sentences. In comparing his language sample from the beginning of the year to now, he is using a lot more verbs and subject-noun-verb phrases. He also uses some pronouns such as you/I, and asks some questions appropriately. In reviewing Adam's function of language, he does initiate a lot of communication and communicates pasic needs, i.e. request/protest/asking assistance/getting attention, etc. His communication interactions are with both adults and peers.

#### EXPRESSIVE I.E.P.:

Adam has made gains in the following expressive objectives this year. On 9/23/83, the program to have Adam use noun-verb or verbnoun phrases at snack or play activities was initiated. He met criteria on 1/6/84. He continues to expand and use a variety of different verbs.

On 1/13/84 a program to have him use a three-word phrase during snack or play was initiated utilizing the pronouns I/you. We are currently working on this objective and, with a verbal prompt at the beginning of the sentence, he will say a three-word phrase. We will continue this objective. On 3/5/84 a program to have Adam answer a yes/no question was initiated. As noted above during our evaluation, he can answer a variety of yes/no questions in response to "do you want this/is this a \_\_\_\_?" He also has opportunity during a language group time to practice describing action pictures and utilizing a variety of different descriptors. His goal is to use a three-word subject-verb-noun phrase. In reviewing Adam's expressive language over the past year, he has made tremendous gains from the one-word level last year up to the two to three-word level this year. He continues to develop language along a developmental continuim.

Although no standardized test was given to assess his expressive language score, it appears that Adam is functioning at approximately the 2 year level expressively.

#### ARTICULATION:

No formal articulation program has been ran on Adam this year since the emphasis has been on language development. However, on 5/16/34, the Hejna Articulation Test was administered and the following errors were noted:

Initial: th/f, w/y, w/l

Medial: th/f, b/m, w/l

Final: th/f, t/d

. : .

Final Omissions: ng, l

The Articulation Test was only given up to the 5 year level and it appears evident that articulation therapy is not a priority at this time.

#### **RECOMMENDATIONS:**

It is recommended that Adam continue to receive intensive speech and language services in the Fall of 1984. Adam is making nice progress in both receptive and expressive language and is learning his language through functional activities as well as structured programs to practice new concepts. Any opportunities that Adam has to interact with his peers should help enhance his communication skills.

SCHOOL:

Gilbert Heights Preschool

DATE OF REPORT:

5/15/84

CLINICIAN:

Nancy Freese Shillingburg

#### TESTS ADMINISTERED:

On 3/29/84 and throughout the month of April, the following tests and observations were administered:

- McLean McLean Communication Assessment Profile
- Teacher Observation

BACKGROUND HISTORY:

JoDon has attended the multihandicapped preschool program for the past two years. JoDon is a three-year old student with cerebral palsy affecting all limbs. While sitting in his wheelchair or barrel chair, he can perform a variety of motor tasks such as picking up a 2" block or pointing toward specified objects by reaching with his fist. He also has the motor skills to push buttons on/off on a switch to activate a tape recorder and to push small buttons on a Fisher-Price tape recorder. JoDon can adequately keep his head up to run programs and the more motivating the program is or the activity, the longer he will keep his head up. The teaching staff and the reporting clinician have found that JoDon seems to get easily bored by the same toys or the same activity every day so we have tried to find a variety of toys he can manipulate in a variety of different . activities for him to interact in. It appears that when he is tired of an activity or will not work, he puts his head on his tray and acts very tired. JoDon's parents have been very involved in developing toys for him to manipulate at home, i.e. trains that he can operate by pushing a switch, etc.

#### COMMUNICATION:

#### FUNCTION OF LANGUAGE:

Based on the results of the McLean McLean Observation, JoDon appears to be at the intentional stage of communicating, however he is nonverbal. This was demonstrated by putting food in a container and having

Your Public Schools... there's no better place to learn,

BONNER LE DAIRO DONGLAS CRENT CONTENNAL GRESHAN GRACE PARKROSE

3753H41/UNIC1, HGH

78 - NOLOS 7%, 970 468

him attempt to push it toward the examiner or lean over and touch the examiner. At one point, he was unable to physically reach and touch the examiner so he bent his whole body and touched the examiner with his head. Therefore, as far as specific functions that he is attempting to communicate non-verbally, he's trying to communicate a request and demonstrates this by making choices between two food items presented, by attempting to give the box with the hidden food in the container to ask for assistance. He is beginning to communicate a protest response or "no" response by pushing things away or turning his head away when an undesirable food is presented. He also demonstrates protests by crying or putting his head down when he doesn't want to work or do an activity that the teacher is requesting of him.

JoDon continues to need work on developing his functions of language skills at the pre-linguistic level. At this point, he doesn't consistently have a way of getting attention to himself or drawing a person's attention to a specific item. He continues to need to expand his ability to request/protest to a variety of different items. He also demonstrated limited interaction skills with the examiner or with other teaching staff. If he's given a toy that he is motivated to play with, he would rather play with it by himself rather than take turns interacting with the examiner to play.

#### CURRENT I.E.P. OBJECTIVE:

The objective this year has been to work on JoDon's pre-language communication skills. The first objective, which was initiated on 10/14/83, was to have JoDon vocalize, touch adult, or pull on an adult, to ask for assistance in obtaining an object. This program was met on 2/3/84, and, as noted above, he continues to maintain this skill. The program was taught by putting desired food items in a plastic clear box that he could see through and systematically teaching him to give the box to the teacher to ask for assistance to open it. This program was then generalized to a variety of activities at snack to have him learn to touch the teacher's hand that has food in it to request it, etc. We are continuing to work on this program through a variety of activities. In 10/83, a program to have JoDon participate in some recriprocal babbling with a student tutor was initiated. This program is also carried on throughout the day, trying to get him to say specific sounds like "mm" for more at snacks. The emphasis, however, this year has been on the pre-language gesturing while informally working on vocalization, as appropriate. On 2/7/84, a program to have JoDon indicate a yes/no response by shaking his head was initiated. At this point, he can indicate "no" when the teacher models it and gives partial physical assistance. His mother reports that he has indicated "no" by shaking his head at home. We have used undesirable food items, i.e. taco sauce, to elicit the "no" response. We plan to continue this program through the remainder of the year. JoDon can indicate "yes" for desired wants about 70% of the time.

BEST COPY AVAILABLE

#### CONTENT/COGNITIVE BASIS OF LANGUAGE:

Based on the results of the McLean McLean and teacher observation, the following was noted. When JoDon was given novel objects to manipulate, the following was observed: He can attend to novel objects, i.e. tape recorder or hair dryer, and does attempt to reach out and grasp at the objects. There are some objects that he has learned the functional use of, i.e. tape recorder by pushing the button, the Soft Sound Music Box by hitting it, pushing the lever on the tape recorder to make it go. He also did demonstrate knowledge of object permanence by finding hidden objects and means-end by understanding "if I push the button, the tape recorder will come on." JoDon does attempt to follow some commands, but relies heavily on the intonational patterns of the speaker as well as the gestures of the speaker.

He responds to the following with intonation and gestures: Arms up/stop crying then you can have toy/give me (with teacher's hand out). He also attempts to respond to his name, particularly when called from a familiar voice such as his mother. However, he has responded to his name from a variety of teaching staff. JoDon does attempt to match block to block when one distractor is present, but when we attempted to expand this program, he became very confused or uninterested in the task.

JoDon needs to continue to work on following a variety of one-part directions and discriminating intonational and gestural prompts. He needs to continue working on attending skills, i.e. look at me/wait/hands back, etc. It seems evident at this time that JoDon really needs to have a lot of visual gestures in order to decode messages and discriminate tasks.

#### CURRENT I.E.P. OJBECTIVE:

In the area of receptive language, we have been working on the content of cognitive basis of language. On 9/15/83, we started the progrm to have JoDon respond to his name from a variety of people. As stated above, our data shows that he is capable of responding to his name from a familiar person. however it appeared he was responding to the intonation or person's voice rather than his name. We discontinued this program on a formal basis and have informally been working on it during morning circle or language group time and he appears to be responding from a variety of people. However, this continues to need maintenance. On 1/12/84, we initated a program to have JoDon match objects to object. The first object we had him match was block to block and then bowl to bowl. However, as stated above, data was real inconsistent and we found he was having difficulty responding to the one-part direction, i.e. give me/put here/ which are skills he needed to understand prior to matching. Therefore, on 4/19/84 we decided to isolate specific commands for JoDon to follow emphasizing the command "put it in/give me it here/ with the goal being that JoDon would discriminate gestural prompts paired with the verbal prompts. As of 5/15/84 he is imitating, on cue, "put it in/give me \_\_\_\_." We will continue this program as needed.

BEST COPY AVAILABLE

#### RECOMMENDATIONS:

Based on the above results, it appears that JoDon continues to need intensive speech and language services. Up to this point, emphasis has been on the pre-line istic aspects of communication which are necessary in order to develop a functional communication system. In the area of receptive language, emphasis has been on following directions and discriminating verbal and gestural commands. JoDon is showing some nice progress in his pre-linguistic communication skills and upon mastery of a yes/no response, further investigation on a communication system would be appropriate.

om of CC: The second of the Company of the Company

#### I. Background Information and Observations:

Danny was seen for a joint speech and language update and educational assessment update during the months of April and May, 1984. He was referred by School Admission, Review and Dismissal Committee for a 3-year re-evaluation of skills, to include a psychological evaluation as well as this assessment. Danny has been a student at Green Holly School since September, 1976. Handicaps are listed as mentally retarded, speech/language impaired, orthopedically impaired, and other health impaired: Noonan's Syndrome. On a psychological evaluation administered in February, 1982 (P. Allen), Danny was functioning as a severely/profoundly retarded individual with I.Q. estimates below 30. Developmental range was 6 to 18 months, with average ability at a 12 month level; psycho-social profile was stable, and consistent with developmental range.

In the educational setting, Danny presents as a medically complicated child who requires multiple services provided in a highly coordinated, team approach. He appears smaller than his 12&1/2 years, and although he is an attractive child, he a's has obvious physical anomolies. Recent medical diagnoses (John F. Kennedy Institute, 4/84) include mild spastic quadraplegic cerebral palsy, significant equinovarus deformity, profound mental retardation, expanded Strauss syndrome, dental caries, and status post non-A non-B hepatitis. Danny is non-verbal, and uses few signs for communication. Limited eye contact, self-stimulatory behaviors, limited voluntary interaction with others, and non-compliant behaviors all contribute to his communication deficits. Motor skills are significantly impeded by orthopedic involvement. Services provided to Danny include Level V classroom instruction, speech/language therapy, occupational and physical therapies, and daily health services. II. Educational Update\_

Danny was rated on the Initial Communication Processes, which consists of 10 skill areas, developed to assess the skill levels of severely handicapped populations.

The following is a list of the skill areas assessed, Danny's percentage correct for each area, and a general description of his abilities within each area.

> A. Auditory Skills - 100% correct. Danny demonstrates differentiated response to environmental sounds.

Page -2-

Educational up-date (continued)

- B. <u>Visual Skills</u> 43% correct. Danny obtains an object that is hidden (10 to 12 month skill), yet he will not inspect objects held in front of his eyes (1 month skill), or held in his hand (4 month skill).
- C. Manual Fine Motor Skills 80% correct. Danny displays a controlled release of objects (15 month skill); he does not use neat-pincer grasp (12 month skill), or bang two objects together (12 month skill).
- E. Oral Vocal Motor Skills 13% correct. Danny vocalizes at least one sound other than cry (2 month skill), but displays no higher level vocal skills.
- F. Object Play Skills Manipulative 43% correct. Danny removes lids (14 month skill), builds a two-block tower (15 month skill), and put lids on containers (16 month skill). He does not place a form in a puzzle (13 month skill), take objects (pop-beads) apart, or match objects.
- G. Object Play Skills Symbolic 0% correct. Danny was unable to demonstrate any symbolic use of objects (15 to 24 month skills).
- H. Problem Solving Skills 50% correct. Danny demonstrates appropriate use of objects in actual situations, and he will make a detour in pursuit of an object (18 month skill). He does not reach persistently to obtain an object (6 month skill), and he does not release one object to obtain another (10 month skill). He also does not demonstrate foresight in problem solving (10 to 19 month skill).
- I. Affective Development 27% correct. Danny cooperates in the routines of daily living (13 month behavior, and demonstrates parallel play with peers (24 months behavior.) He does not smile in response to attention from familiar adult (2 month behavior) he does not indicate a desire for continued interaction with an adult (5 month behavior), and he does not give unsolicited affection to familiar adults (12 month behavior).

Page -3-

#### Educational up-date (continued)

- J. <u>Communication Skills Comprehension -33%</u> correct. Danny comprehends "No" (9 month skill), and comprehends at least two simple common phrases in highly familiar situations (13 month skill). He does not comprehend pointing; it cannot be documented that he comprehends 3 nouns when objects are presented out of context (14 month skill).
- K. Communication Skills Expression 40% correct. Danny requests or refuses items through total body action (11 to 19 month behavior), he uses two words (signs) as labels for a general class, and he uses at least two words (signs) as requests (18 month behavior). He does not seek attention by repeating a behavior that has earned attention (12 month behavior), he does not point to show needs or wants (15 month behavior), and he does not use a single word (or conventional gesture) to protest or to greet.

Danny's performance on the <u>Initial Communication Processes</u> is most comparable to the severely profoundly retarded and multiply handicapped normative populations, with mental age below two years. Relative to average expectations for these populations, Danny's better abilities were auditory skills and expressive communication; his weaker abilities were visual skills, oral vocal motor skills, and affective development. According to these test results, Danny is well described as severely/profoundly retarded and multiply handicapped.

In preparation for annual review of services, Danny was rated on "Developmental Pinpoints", from <u>Teaching the Severely Handicapped</u> (Haring and Brown). Danny had been rated on pinpoints, and results described in detail when evaluated by Schmitt and Taylor in December, 1981. The following is a comparison of performance levels displayed on the two ratings:

	Pinpoint 2/81	Pinpoint 5/84
fine motor skills	10 month	12 month
gross motor skills	12 month	18 to 24 month
receptive language	12 month	12 month
expressive language	9 to 12 month	9 to 12 month
social	not rated	12 to 24 month

Page -4-

According to these comparisons, Danny has made significant progress in motor development, with a six to twelve month increase in gross motor abilities. Language abilities remain essentually the same, although analysis of items shows that, in fact, some specific skills have been acquired. Overall development at this time can be summarized as at a 12 to 24 month level with gross motor skills a strength and expressive language skills a weakness.

Mobility and self-help skills were assessed through observation and by teacher report. Danny uses a walker. He no longer wears braces on his legs, but he does wear high top shoes. He walks on the outside of his feet. Danny is able to avoid obstacles when walking (with walker); he occasionally cruises and he can take steps alone, but is quite fearful of falling. He can go backwards if necessary, and he can stand alone momentarily. Danny can get down onto the floor and up off the floor without assistance; he can go up and down stairs with one hand held, he gets on and and off the school bus with an adult assisting by holding his hands, and he can climb on and off furniture. Danny can pedal and maneuver a tricycle, and he can throw a ball without falling. When Danny is relaxed, his gross motor movements are smooth; when he is not relaxed (i.e. hurried, anxious), his gross motor movements become very jerky. Danny can independently find his way to his classroom from the bus each day.

Danny is dependent in all self-help areas. He demonstrates a significant increase in toleration for having his teeth brushed. He will go to the sink independently, and he turns the water on to drink. He will attempt to brush by putting the brush in his mouth and moving it back and forth a few times, but continues to need an adult to actually clean the teeth. Danny displays no hand or face washing skills. He will place a cloth to his lips if given the cloth and told to wash his face. He all hold his hands under water, but does not manipulate them, hold or rub the soap, or dry his hands. Danny is not toilet trained (wears pampers), but he shows potential for training; however, when stood at the urinal he does not void. Danny is very cooperative in the dressing and undressing routines. He appears to be aware of what is happening and what will happen next, and he appears to anticipate what he needs to do next. He will pull off a shirt if it is up far enough to have his arms trapped, and he pulls his socks off. He will raise his feet up for an adult to put pants and shoes on, and he hold his arms out to have his jacket put on. Self-help skills are limited to a degree by motoric involvement.

Page -5-

#### III. Speech & Language Therapy Update

#### Therapy Program, and Progress

Danny has received speech and language therapy once per week, individually. In addition, he has participated in some classroom language groups conducted by the therapist, and has been observed during other classroom activities. There has been close consultation between teacher and therapist. Danny's overall progress this year has been very good, with some variation due to health problems, "mood swings", or changes in routine. Details of his performance level and progress will be described in the following section.

#### Testing Results

The Environmental Pre-Language Battery (EPB) and the Communicative Evaluation Chart (CEC) were administered in October 1981. He achieved a Non-Verbal score of 40% and a Verbal score of 0% on the EPB. On the CEC his language age was 9-12 months. Although Danny has made progress in communication, his scores on these two tests remain unchanged. The Pragmatic Abilities Checklist (Taylor and Troy) was given in May, 1983 and updated in May, 1984. Danny progressed from 48% correct on Level I of this checklist in 1983 to 59% correct in 1984. Items showing significant improvement included:

- --using and responding to different facial expressions
- --using physical force to direct others
- --seeking attention, giving affection
- --vocalizing to call attention to self
- --vocalizing to regulate the actions of others

A "Behavior/Language Sample" (a la McLean and McLean) was also completed. The following observations and data were obtained over the school year while Danny was engaged in a "transactional process" type task (making "Tang") and other therapy activities. While making "Tang", there were 20 distinct behaviors expected from Danny. He progressed from 2/20 correct in October '83 to 18/20 correct in March '84. Social Bases of Language

A. Level of Intentionality: Danny is operating at a "primitive illocutionary" level of communication primarily. He does intend to affect the actions of others to control his environment. However, most of the actions and gestures that he uses are not truly "conventional" --not rasily recognized by others. He does not use the conventional gestures of: request (gimme), point, show, greet; however, he does "give" objects if he needs assistance with them or wants "more" (eg. handing the music box to be turned on, or handing the cup to be filled). Other gestures that he 'as that he uses to initiate certain games are "Danny specific" (eg. pats his head if he wants

Danny

Page -6-

head rubbed). Danny does use two modified signs "eat/drink" and "music" convistently most of the time. On a recent sampling, Danny produced these 3 signs correctly 90% of the time to request the item presented. Another conventional gesture is "patting the chair" for "sit down". He has not made progress on two other modified signs "more" and "go".

- B. Specific Performatives: The only specific performative that Danny exhibits is "regulating the actions of others". He does this for food/drink items and for non-food items that he is highly motivated for. While making juice, he gestures for for the recordist to sit day the rates her hand on the jar lid to remove it and to put it back on; he forces the therapist's hand to sprinkle the powder, turn the water on, pour the water and pour the juice. He then forces the therapist's hand to open the door. Performatives that Danny does not exhibit are: calling attention to himself, objects or events; greetings and farewells; answering questions (even gesturally) or replying to comments; initiating activities with no cues present.
- C. Dyadic Interaction Skills: Although Danny's attending ability has improved markedly, it is still highly dependent on his mood, and how motivating the stimulus is. He still has several self-stimulatory and/or interfering behaviors. A "joint focus" can be maintained and Danny will "fill his turn" under carefully structured and highly motivated situations (eg. making juice).

#### Cognitive Bases of Language

- A. Skills for Relating to Objects: Danny exhibits some functional/conventional use of objects (eg. appropriate use of cup, spoon, ball, music box, tape recorder and headphones). He will play with some other toys for brief periods, given encouragement and supervision. He does not fully explore new items, and tends to resort to inappropriate actions on objects such as tapping or spinning.
- B. Means-Ends Skills: Danny has acquired some indirect means to ends skills. He knows to turn the handle on the water fountain to get water. Further he has demonstrated "tool use", by using the therapist's hand to turn the water on for him. He tends not to use object tools (e.g. spoons to scoop Tang, and stir juice), and has difficulty waiting for the "end" of the activity (e.g. the prepared juice).
- C. Level of Representation: Danny appears to be operating at the "Symbol" level tather than a "True-Sign" level. His use of gestures tends to "look like" or be

directly related to what he wants (eg. patting chair for "sit down", patting face for "eat/drink"). It is difficult for him to acquire a totally arbitrary sign (eg. "more"), although his "music" sign was established through years of training.

#### Structural Bases of Language

A. Receptive language: Danny knows his name, can follow several commands, can identify (by touching) a few body parts or clothing during familiar games. He consistently points to "Jeanne" (his therapist) when named. While making juice, he can get the spoon, pitcher and cup when requested at the appropriate time. During isolated activities, his receptive identification of objects is poorer. It is quite possible that he understands the spoken words, but chooses to get what he is most interested in regardless of what is requested. On a recent sampling of five familiar objects, Danny chose the correct item 18 out of 40 times, or approximately 50%. But, he correctly chose his "favorite" item (drink) 7 out of 8 times, or 88%. The breakdown of his performance is as follows:

item	drink	eat	music	ball	shoe	
#correct	7	6	4	1	0	
#chances	8	8	8	8	3	

It is interesting to note that when "drink" and "eat" were presented together, Danny discriminated between these two highly motivating items only 40% of the time which is less than chance.

- B. Expressive Communicative Forms: Danny relies on his idiosyncratic gestures, and tends not to combine them in any sequence, though he will repeat them over and over until his needs are met. While making juice, he does "hand cup", force Jeanne to "pour", and then sign "drink" in rapid succession.
- C. Mode Stimulability: Danny has a few specific vocalizations that he uses to express pleasures r displeasure. Occasionally a new sound is heard, but it is not often repeated. He does not imitate sounds or engage in true vocal turn-taking. His communication mode is clearly restures leading to signs. An additional system (eg. some simple picture cards) might be useful when Danny enters into more community based activities, where his gestures would not be understood by the public. Danny's pleasant vocalizations should continue to be encouraged, especially during social interactions.

#### IV. Summary and Recommendations:

Danny is a 12 year 5 month old student functioning as a severely/profoundly retarded, multiply handicapped individual. Mental age is below two

Danny Town

Page -8-

years, globally at a 12 to 24 month level. Danny exhibits a severe communication disorder, with profound deficiencies in his oral expressive ability. On the IOWA Severity Rating Scale, Danny's overall rating is 5. Recommendations are:

- 1. Continued placement in a level V special education facility, with related services.
- 2. Speech and language therapy, 1 to 2 times per week individually including a classroom component. A joint therapy/classroom communication IEP should be written, with objectives to be carried out by both therapist and teacher.
- 3. A toilet-training regieme should be considered.

### SPEECH AND LANGUAGE FINAL REPORT

8.0.: 7/2/81 Date: <u>5/14/84</u> Clinician: <u>Na</u> r	lighland Preschool Age: 2 years 10 months ICY Freeze Shillingburg ESD, Forthand, Okebow	LANGUAGE MODE:	INTERING STATUS:    X   Normal
GOAL/STO	PRE-IEST	POST-TEST	RECOMMENDATIONS
RECEPTIVE LANGUAGE  1) To follow basic one-part commands.	As of 9/83, David followed some one-part directions in a one-to-one setting, i.e. give/put/take. However, these skills were not generalized to a variety of people and a variety of settings.	On 3/9/84, David met objective He was observed to follow the commands /give me/point to/look/wait/come/ from a variety	It is evident through the year that David continues to need work on following
2) To match object to object.	but this skill wasn't firm.	On 10/5/83 - It was determined that David could correctly match shoe/cup/crayon/spoon/baby/ when given the cue Match spoon" etc.	objective was to work on a pre-step to identifying objects. It is recommended next year that David work on some other matching skills, i.e.
<u>IC</u> 208	BEST COPY A	1	natching object to picture Goor matching objects that aren't exactly alike and 9

some sounds.

to verbalize. He started consistently making sounds with his signs around March. 1984.

learning how to respond

this program be continued through the remainder of the year and be re-evaluated in Fall, 1984. At David could identify or make faster progress on this program, but he is and would rather imitate their behaviors. This is

taught during large group

the Fall, 1984 to determine the possibility of some sound imitation programs.

211

GOAL/STO	PRE-TEST	POST-TEST	RECOMMENDATIONS
3) To sign/say cheese, cracker and juice at snack.	9/83 - He was unable to make these signs.	1/13/84 - Met criteria for cheese, juice and cracker. He also says "chee" or "ee" for cheese; "oo" for juice, and "ca" for cracker.	See his Sign Vocabulary Book in his IEP for specific descriptions of signs.
4) To correctly sign/say 10 new food signs.	Program was initiated on 1/13/84, at which point he used 3 food signs - cheese/cracker/juice.	As of 5/14/84, in addition to those stated above, raisin, he says "er"; cup, he says "ku"; napkin he signs, but needs to work on verbalization; more - he continues to need work on.	It is recommended we continue to add to his sign list.
5) To sign/say 10 objects or pictures.	1/9/84 - Program initiated.	As of 5/14/84, David correctly signs and says the following: /book he says "bu"/bubbles he says "bu"/car he say "ca"/ shoe he says "ooe"/music he signs - we are working on saying it/puppet he signs - needs to work on saying it/block he needs work on/.	We will continue to add to his signs.
SUGGESTIONS TARGETED FROM PLANNING MEETING 5/1/84:	FUNCTION Possible Activities: 1) Structure environment to practice functions of request/protest/attention.	CONTENT Possible Activities: 1) Follow one-task directions with gestures.	FORM Possible Activities:  1) Increase use of verbs.  2) Use noun-verb/verb-noun phrases.  3) Imitate specific sounds.

GOAL: Visually focuses briefly on the face of a person who approaches within four feet and speaks.

MATERIALS/ACTIVITIES: Not specified; program may be run in conjunction with other programs or activities.

PROCEDURE: Prior to mealtime or snacktime, program implementer approaches client carrying glass of juice. Client may attend to glass of juice. The program implementer holds the glass of juice next to his/her face briefly, giving client time to focus on both the glass of juice and the program implementer's face.

TARGET RESPONSE: The client focuses on the face of the program implementer for at least 2 seconds.

<u>IF SCORE +</u>: Reinforce client with smile, verbal praise or other naturally-occurring consequence.

Repeat procedure again, using the client's name to gain his attention. If still unsuccessful, gently direct client's head/eyes to the face of the program implementer before giving the consequence.

ANY SECONDARY DISABILITIES:

PROGRAM MODIFICATION(S):

### EXPRESSIVE COMMUNICATION

2 A/B #1 Desire for specific actions or entities (proactive)

Client

Date Begun

Date Achieved

GOAL:

Produces apparently purposeful behaviors in attempt to act on or affect the environment: Desire for specific actions/entities.

### ENTITY

MATERIALS: Interesting objects, such as dolls, cars/trucks, book/magazine, kalidescope, Rubic's Cube, etc. (use edibles if client has no interest in objects).

PROCEDURE: Seat client at table in quiet area. Place interesting object out of his reach on the table. Observe his behavior.

TARGET ASPONSE: Maintains eyecontact with object and/or reaches for it.

IF SCORE + : Reinforce by assuring client obtains object and verbal praise.

in SCORE - : Direct client's attention to the object. Wait for him to make a move toward obtaining it. If he still doesn't try to obtain the object, generate his interest in it by moving to the other side of the table and manipulating the object out of his reach. While playing with it, keep talking to the client about it and alternating your gaze between him and the object. Wait for him to now try to obtain the item.

#### ACTION

MATERIALS: Interesting objects that move, such as wind-ups, jack-in-the-box, item with on/off switch, etc.

PROCEDURE: Stand at opposite side of table and produce object's movement for the client, but out of his reach. Make the movement stop. Look from the object to the client and wait for the client to try to make the object move again.

TARGET RESPONSE: Maintains eyecontact with the object, jiggles self while looking at the object (as if trying to make it move) or tries to obtain the item.

IF SCORE + : Assure that client obtains object and that it moves for him
and verbal praise.

IF SCORE - : Focusing on the object's action, direct client's attention to it. Talk about it, keeping it out of reach. Wait for him to try to obtain it. 219

EXPRESSIVE COMMUNICATION	(continued)
2 A/B Desire for specific actions or entities (proactive)	Client

#### REPRESENTATION

3 A	Locates	invisibly	hidden	Client
	objects			Date Begun
				Date Achieved

GOAL: Retrieves desired object after observing it being concealed in such a way that it might be found in any one of the limited number of possible locations.

MATERIALS: Small interesting objects, such as wind-ups, plastic cars, small dolls, etc. (use edibles if client is not interested in objects) and cups, small boxes, etc.

PROCEDURE: Seat client at table in a quiet area. Show the client the object to be hidden and say the name of it. Be sure the client is watching. Place the object on the table and place a cup (or box) over it. Put two or three other cups (or boxes) next to the one with the item under it. Shuffle them around several times. Then tell the client to obtain the hidden item. Wait for his response.

TARGET RESPONSE: Searches systematically for the object until he locates it. If it is not under the first cup or box, he <u>immediately</u> looks under the others until object is found.

IF SCORE + : Reinforce with verbal praise and allow the client to manipulate the object if he wishes to.

If the client doesn't search at all or else gives up after looking under the first cup, lift all the others until the item is located. Immediately repeat the procedure to see if the client will now search on his own.

If he still doesn't search systematically, point to each cup and have the client pick it up until the object is found. If the client doesn't pick up the cups as you point to them, physically assist him to do so until the object is located. Again, immediately repeat the procedure to see if the client will now search systematically for the hidden item.

### COMPREHENSION AND IMITATION

GOAL: The client will respond appropriately to five different conventional gestures.

MATERIALS Varied, as needed.

1. PROCEDURE: Approach client to within five feet. Call his name and beckon to him, using 'come here' gesture with hand or index finger.

TARGET RESPONSE: Client comes to you as requested.

IF SCORE + : Reinforce client.

IF SCORE - : Repeat gesture, say "Come here" and physically assist
the client in coming. Then positively reinforce.

2. PROCEDURE: Walk toward a table and chairs with the client. Say the client's name and point toward the place where you're going (table/chairs).

TARGET RESPONSE: Client looks in the direction you are pointing.

IF SCORE + : Reinforce client.

IF SCORE - : Repeat gesture, say "Look" and physically assist client to look. Then positively reinforce.

3. PROCEDURE: Pat the seat of the chair where you want the client to sit.

TARGET RESPONSE: Client sits on the chair as indicated.

IF SCORE + : Reinforce client.

IF SCORE - : Repeat gesture, say "Sit down" and physically assist the client to sit in chair. Then positively reinforce.

4. PROCEDURE: Hand the client an interesting object to manipulate and explore for a few minutes. Call the client's name and hold out your hand for the object.

TARGET RESPONSE: Client gives you object as requested.

IF SCORE + : Reinforce client.

IF SCORE - : Repeat gesture, say "Give it to me" and physical client to give it to you. Then positively

5. PROCEDURE: Say "We're finished now" and motion for the classing up one or both hands with palm(s) upward.

TARGET RESPONSE: Client stands up as requested.

IF SCORE + : Reinforce client.

$\underline{\infty}$	MPRE	HENSION AND IMITATION	(continued)
3	A	Responds to conventional gestures	Client

IF SCORE - : Repeat the gesture, say "Stand up" and physically assist
the client in standing. Then positively reinforce.

ANY SECONDARY DISABILITIES:

PROGRAM MODIFICATIONS:

#### OBJECT RELATIONSHIPS

B Complex combinatorial Client
actions Date Begun
Date Achieved

GOAL: Independently carries out a chain of behaviors requiring sequenced actions on two or more objects.

MATERIALS: 1) Bread, peanut-butter, jelly and knife, 2) Milk, instant pudding, bowl and spoon, 3) Doll and dollclothes, etc.

PROCEDURE: Program implementer presents materials to client and verbally prompts with directions, such as "Make a sandwich", etc.

TARGET RESPONSE: In the presence of appropriate items, client independently produces correct complex combinatorial actions to achieve desired ends, such as making a sandwich to be eaten.

IF SCORE + : Reinforce client.

IF SCORE - : Provide verbal prompts. If these are unsuccessful, demonstrate desired action(s). If demonstration is unsuccessful, give physical assistance to accomplish desired action(s). Then positively reinforce client, using verbal praise and/or letting him eat the food prepared, for example.

### Verbal Prompts for Sandwich-making activity:

Step 1: "Open bread."

Step 2: "Take out two slices."

Step 3: "Open the jar of peanut-butter."

Step 4: "Spread peanut-butter on one bread slice with knife."

Step 5: "Open jelly jar."

Step 6: "Spread jelly on other bread slice with knife."

Step 7: "Close sandwich."

ANY SECONDARY DISABILITIES:

PROGRAM MODIFICATIONS:

GLOSSARY

A priori presupposed by experience, relating to or derived by

reasoning from self-evident propositions.

Activity sequence a sequence of steps or operations requested to com-

plete an activity or task.

Amenable submissive, responsive, open to suggestion or advice.

Antecedent stimuli what precedes the stimuli (anteced at...a previous

thing or event; something happening before or leading

up to another.

Arbitrary based on ones own wishes, that can be determined as

the occasion arises.

Cognition is the generic term applied to all of the processes

by which an organism obtains and organizes information and knowledge about the external environment. It recognizes that organisms experience many aspects of both the physical and social environment; interprets these experiences; and transforms and internalizes them into some representational form. These representations of information and knowledge, then, are used to guide subsequent behavior of the organism. An individual organism's cognitive organization is both a repository of past experience and a complex information processing device which guides and

designs the differential behaviors of that organism.

Commerce business dealings, social dealings, things or messages

that represent such trade.

Context the immediate environment.

Contingent depending on something uncertain, conditional, i.e.

our plans for a picnic are contingent upon pleasant

weather.

Direct, Continuous

Response Data Training trainer decides in advance how many trials will be

presented to a student and what responses will be

collected on a continuous schedule. Teacher or

scored as correct.

Dispersed-trial

training

trials dispersed or distributed through-out the day.

Dyad a pair

Dyadic interaction communication between two people including turn-

waiting, turn-taking, turn-filling, establishing

joint focus, etc.

### Definitions

Ecologically valid

programs should focus on skills and behaviors which are functional in the student's daily living environment, and that the antecedent stimuli which evoke those behaviors, and the consequences which are contingent on those behaviors, should be those which occur naturally in the student's daily living environment.

Elicit

to draw forth, bring out, draw out in a skillful way.

Entity

something that has a real and separate existence, either actually or in the mind, anything real in itself: persons, mountains, languages, beliefs are distinct entities.

Extra-linguistic

information conveyed through cues outside the speech act/utterance itself, i.e. facial expressions, gestures, context.

Para-linguistic

surrounding speech act, but non-linguistic, vocal intensity, inflections, etc.

Function words

provide subtle shades of meaning and convention to our utterances but do not convey significant content information: articles, prepositions, sometimes called syntactic operators.

Generic or process skills

the very basic skills generic to all communication people of all ages; skills that are acquired at various ages (6 mos., 2 yrs., 3 yrs.) and that continue to serve us for the rest of our lives. Generic skills are important in every activity and every specific task we perform. Generic skills are both basic and constant. Such skills must meet two criteria: 1. must be generic to all environment, and 2. must be generic to all ages and developmental levels. Some generic skills: the ability to symbolize, to convey our thoughts, to pursue an object moving through space, to communicate by, to understand the meanings conveyed in gestures.

Grammatical morphemes and syntactic convention

understand differences marked by prepositions, recognize plurality, understand the first term in a declarative utterance represents agent of action, understand pronoun "she" indicates a female referent, etc.

Iconic (sign)

looks like the actual object.

In-situ

in its original place, in position.

Index level can represent entity/event by seeing some part of

that entity/event.

Massed-trial training block of pre-planned trials presented consecutively

within a short period of time.

Modes the manner or way in which a thing is done, method

or vehicle generally applied in terms of communi-

cation mode: gestures, speech, signs, etc.

Mutual felt by each toward the other, given and received.

Olfactory of smell.

Para-linguistic non-linguistic aspects of the speech act/utterance,

i.e. tone of voice, pitch, intensity, intonation.

Performatives or communication functions and intents of his emerging language system. Social intention or the

social functions performed by the child's language.

Presupposition refers to the speaker's inability to make an

utterance "appropriate: in terms of increasing its potential of being both understandable by and acceptable to a listener. Skill of not telling the listener more than he needs to know, or less than he needs to know, recognizing the listener's

information needs.

Probe data system alternative to the direct, continuous training

response data system. Can collect data from every training session, but only on a few trials within that session, or to record data on all of a student's responses in a given activity area but only at

intervals of 3, 4, or 5 days, or collect data from

a caregiver or staff member.

Product or setting- skills needed for a particular activity, i.e. specific skills knowing how to chew and swallow is critical but

only in context of food; knowing how to screw bolts on nuts if you're on the assembly line; knowing how to pull pants up and down only at toilet-time or

bedtime.

Proto-declarative intent to regulate receiver's attention.

Proto-dialogues alternating vocalizations with mother in vocal play

which may be referred to as pre-linguistic conver-

sations.

Proto-imperative (performatives) intent to regulate receiver's action.

### Definitions

intent to request information from receiver. Proto-interrogative ritualized sounds in context which function like Proto-words words but are not true words. Pure performatives existing on both sides, in return, mutual. Reciprocal a person or object referred to. Referent list of items that someone is prepared to do or Repertoires perform. a diagram, plan, scheme needed to realize knowledge Schemas or experience. words used in area that are specific to that area, Setting-specific i.e. words used in the kitchen/bedroom that refer lexicon to food and clothing. an item that is signified or indicated by word or Significate communication act. the business of interacting with others in a social, Social commerce communicative way. words that contain the main semantic meaning of the Substance words utterance: nouns, verbs, adjectives, and adverbs. where a person can represent an entity/event by a Symbol level symbol that retains feature(s) of the entity/event. another approach to systematic data collection and Teach-test data program monitoring. At prescribed and regular intervals, a more formal testing session is held, but no data are collected during the interactive, in-situ training session. of time, lasting for a time only. Temporal

- TRANSACTIONAL APPROACH: Language is treated as the basic and constant medium of social transactions which is learned in the child's daily world of things and acti
- SOCIAL BASES: Interactive skills which develop from the child's experiences with caregivers who foster and reward attempts at interaction and who give the child reasons for interacting.
- COMMUNICATIVE INTENTIONALITY: Child behaviors which carry communicative significance.
- PERLOCUTIONARY: Child behavior which functions as communication only because it has been assigned some communicative significance or meaning by an adult.

  Pre-Intentional Communication.
- NEACTIVE PERLOCUTIONARY: Reflexive behavioral signals (0 3 months).
- PROACTIVE PERLOCUTIONARY: Behaviors which are intended to effect the environment, but are NOT intended as communication to a listener. (3 8 months)
- ILLOCUTIONARY: Child secures the attention of the listener and very intentionally directs that attention to the object of his communication. Intentional Pre-Verbal Communication.
- PRIMITIVE ILLOCUTIONARY: Child uses ambiguous gestures to intentionally communicate to a listener. Listener must interpret gesture as meaning is unclear. (8-12 months).
- ONVENTIONAL ILLOCUTIONARY: Child uses unambiguous or more conventional gestures to intentionally communicate to a listerner. Little interpretation is required to listener as meaning of gesture is clear (12-18 months)
- OCUTIONARY: Child uses linguistic signals (true words/signs) to intentionally communicate to a listener.
- 'ERFORMATIVES: The intended function of or reason for a child's communicative behavior.
- YADIC INTERACTION/DISCOURSE SKILLS: Child's overall understanding of the most basic requirements of human interaction.
- OGNITIVE BASES: Sensori-motor abilities which develop from the child's experiences with objects and events in his environment and his subsequent knowledge of his world.
- KILLS FOR RELATING TO OBJECTS: Strategies for relating to people and things which exist in the environment.
- ANS-ENDS SKILLS: Strategies for using both direct and indirect means to obtain a desired end.
- PRESENTATION: Receptive decoding of information. Child understands that part of an entitiy, a concrete symbol, or an abstract symbol may be used to represent a referent.
- MANTICS: Manings encoded by child language.

STRUCTURAL BASES: Language skills which develop from the child's experiences with mature language users and his exposure to the communication mode he will use.

RECEPTIVE: Comprehension/Understanding of language.

EXPNESSIVE: Production of language.

PARALINGUISTIC: Features of an utterance which are part of the utterance itself, (i.e. intonation, stress, prosody, intensity of voice).

EXTRALINGUISTIC: Features of an utterance which are provided by cues outside of the utterance, (i.e., gestures, contextual cues, rituals).

MODE STIMULABILITY: Possible communication system(s) in intervention plan.

FACILITATION STRATEGIES: Adult's role in facilitating or scaffolding for the child as he learns about his world and interacts in it.

ACQUISITION STRATEGIES: Child's role as an active constructor of his learning on both pre-verbal and verbal levels.

SCAFFOLDING: Adult behaviors facilitate the child's learning by accommodating or accepting the child's own responses, while encouraging or modelling behaviors that are just beyond his current capabilities.

"UP THE ANTE": Once the child is consistently responding at a current level, make reinforcement contingent on responses at the next higher level of performance.

DISPERSED TRIAL TRAINING: Training trials are dispersed throughout a variety of situations throughout the day.

MASSED TRIAL TRAINING: Intensive training trials which concentrate on specific response development or refinement of responses.

VERTICAL EXPANSION: Program objective is performance at a higher level of skills development.

INCRIZONTAL EXPANSION: Program objective is expansion of meanings, forms, and functions that he can express at his current communication level.

PROTC-WORD, PROTO-SIGN: Word/sign used only in ritualized contexts with no real understanding of the true concept.

### RITUALISTIC ACTIVITIES

### BASIC COMPONENTS

- Activities scheduled daily for 1 to 3 weeks
- 2. Small groups; 2-4 students
- 3. Props must be as realistic as possible
- 4. Roles changed daily or weekly
- 5. Teacher establishes/directs activity in beginning; fades self out and "sabotages" for instructional purposes
- 6. Select materials appropriate to motor skills

### PRESCHOOL/ELEMENTARY/HIGH SCHOOL

1. Dress-Up & "Act Out" Role

Fireman
Cowboy
Policeman
Dr./Nurse/Patient
"Fast Food" Employee/Patron

Grocery Store Employees/Shoppers
Activity: swimming, baseball, going to dinner

2. Art Activities (process and product oriented)

Painting/Coloring/Chalk--frame & display

Play Dough making and creating
Cutting/Pasting -- collage, placemats, scrap book
Photography -- scrapbook, display cases

3. Theme/Activity Rituals

Beauty Parlor/Barber Shop
Going to movie, restaurant, post office
Birthday party
Wash the baby
Telephoning friends

4. Leisure/Play

Animal-People-Object Action Games

(Fisher-Price, Play Mobile, Star Wars, Masters-Of-The-Universe, Legos)

Blocks and cars

Sand (beans, rice)-Car-Containers-Tools

Table games, Motor games, Floor games

Video games

5. Daily Living Activities

Going Shopping: clothes, food
Cleaning: floor, table, kitchen, bathroom
Washing the dishes
Laundry
Setting the table
Gardening
Grooming: polish shoes, sewing, nail care, hair care, dental care, hand washing, face washing, make-up, shaving

# Materials or Ideas to help a student acquire skills not yet learned in the Generic Skills Arca

### **OBJECT RELATIONS:**

7

1. A. B. C. Orients, Attends, Trucks - any bright, fascinating, ranipulable object, or moving object or object with music/sound. Attending items: wind up merry-go-round wind up radio marble game kiddiecraft flipfinger smiley face apple-ball Christmas tree that opens, push plunger Fisher Price Music Box & Record Player Funny Faces Round-a-round Loop-a-chute Toot-toot Jack -in-the-box Remote control car Smurf radio Whirly wheel

**BEST COPY AVAILABLE** 

2. A. B. C. Alternates attention, reaches and configurates.
-any of items for 1 Λ, B, C
teddy bear/stuffed animals, rabbit, tiger
dolls
wind-up TV

3. A. Differential Action Schemas: examples: round object - rolling, rattling things - shaking ilut object stacking, horns - blowing, object with strings- pulling, squeeze toys for squeezing. squeeze toys bubbles to blow balls to roll/punch ball to hit pull train/pull fish horn noisy objects for shaking windmill truck blocks kiddicraft building beakers small wagon (6"x9") telescoping tower Fisher-Price 4 sided turn unit pull toys far to open & where bop bag wind-mill group for blowing push bell moveable up & down toys flip finger kiddicraft smiley face Fisher-Price Rock-a-stack hour glass rattle butterfly rattle roly poly duck red Santa Claus - pull to make arms & legs go up pound-a-round corn popper popper pistol Funny faces

BEST COPY AVAILABLE

3. B Combinatorial Actions on Object blocks
car & trailer & man dump truck & blocks
Play Family Jet Liner
Play Skool star links
Play Skool clown stack
milk carrier
popper pistol
Play Skool play phone
Fisher-Price record player

3 C. Direct means to end: cars to push bails pull toys car set telescoping tower 3 men in a tub school bus on string yellow planes puppets jar with lid & food play vacuum play Skool star links Binoculars Big mouth singers corn popper whirly wheel Funny Faces Smurf remote control car

3. D. Indirect means to end: wind up ralio gumball machine See & Say viewmaster wind-up toys wind-up merry-go-round pull-out speed car (needs batteries) radio-controlled racing car school bus with squeeze bulb gumball machine spinning marble top flaslite robot toy kay-car wind up loop-a-chute See & Say Farmer says toot-toot Jack -in-the-box Remote control car Fisher-Price record player

## REPRESENTATION

#### 2. A Locates Object to Auditory Cue

(Looks for and locates objects that are out of sight by responding to the auditory cue)

Musical wind up TV
Musical wind up Radio
Music box
Stove/Oven Timer
Hidden person shaking/ringing bell, shakers; playing
musical instruments

higher level—matching sound to picture:

DLM Auditory Training Familiar Sounds
Worksheets, Ideal Learn to Listen

2. B Locates Visibly Hidden Objects

(Retrieves hidden object when asked after watching while it is being concealed)

Any small toy, item, food, etc. and various barriers:

in an object permanence box behind a standing book under a washcloth, kleenex, book, cup

# 3.A Locates Invisibly Hidden Object:

(Retrieves hidden object after watching it being hidden, but in a way that it might be found in a number of different locations)

Place penny, token, food, small item or toy under one of several cups or in one of several boxes with lids, under one one of several colored bottles, in a toy car, etc. and then shuffling them about before asking them to locate the item.

3. B. Identity Match: Objects

(when presented with an item, selects an identical one from a group of 3)

school items:

artificial vegetables

rulers, pencils, crayons, small book, erasers, small scissors, etc.
small toys where you have two alike.
magnetic board and magnetic objects,
animals, persons, forms, etc. Place
one on the board and a matching one
plus two different ones in front of him.
Student will pick up matching one and
puts on board.
artificial fruits

#### 4. A. Photo to Object Match

(when presented with photo of an object, student will select equivalent object from a group of three; when given an object, student will select the correct photo in a group of three)

Box of photo cards
Numerous objects
2 sets of objects with matching realistic pictures
clothing items and pictures
artificial foods and pictures

#### higher level

miniature set of tools to match outline of tools picture to picture lotto cards.

```
4. B. Action to Object Match
```

(Student is able to select the correct object in a group of three after seeing someone pantomime its function)

comb

cup
toothbrush
small mirror
book
miniature broom
ball
scissors
jump rope
fan
etc.

4. C. Perceptual Class Concepts

(Match objects on basis of size, shape, or color) 2 different colors of construction paper for the identifying color base on which to sort the blocks, or different colored material, or colored boxes or cans.

5 blocks of each of the above colors 5 pencils of each of the above colors 5 crayons of each of the above colors

Do same for shapes and sizes:

large and small animals large and small balls large and small balloons large and small cars

large and small cups, etc.

use any two shapes in various colors and sizes to sort out on a large construction paper base o the identifying shape

The following can be used:

Educational chips

Colored tokens

Along this same line for auditory matching: Teaching Resource Shake and Match Sounds Auditory Perceptual Enhancement Program Jernand Nathan Logical Spotting Peg boards with shapes to match -- large, medium, small

4. D. Functional Class Concepts (Match objects on basis of their functional properties, i.e. things to eat, things to wear, things to write with, things to play with, etc. Set up match-to category task similar to 4C) group of various writing materials: chalk, pencil, pen, magic marker, crayons, etc. group of toys artificial fruits foods artificial vagetables group of toy vehicles group of miniature animals articles of clothing group of plastic dinnerware group of tools group of houses higher level: matching pictures on basis of their functional properties: Ideal Classification and Opposite Pictures for peg board (Ask Mary Fogg who is using the category board we bought a couple of years ago.)

# DYADIC INTERACTION

# 1. A.B Tolerates Proximity; Returns Gaze

(Stays near a person who approaches and talks to them)
(Briefly focuses or face of person who approaches within four feet and specks)

Games -- Button, Button, Who has the Button?
Ring Around the Roses
London Bridges Falling Down

Use of Puppets
Reinforcing toys such as used in object
delations 1. A,B,C, and 2. B, C

# 2. A. Attends to Speaker

(When person approaches and speaks to student, the student looks and maintains gaze as person continues to talk)

Puppets
Poems with action
Reinforcing toys used in 1. A, B that person demonstrates
and talks about
Picture books

2. B Releases/Accepts Object
(1. When offered an object)

- (1. When offered an object or if offered a person's hand, takes that object or holds person's hand.
- 2. When person extends an open palm, student will release held object into the extended hand.)

Circle games - play and then pass to neighbor head drums, tambourines, shake toys, etc.

Reinforcements - small toy, father, balloon, M&M, cookie, etc. ---Have in hand and ask,

"Do you want this? Take it."

yarn balls bean bags

dolls

rattles: smiling face, finger play

stuffed animals

2. C. Playful Interaction
(Seems to enjoy and participate in playful interaction)
Hide and Seek
Patty-Cake

Patty-Cake
Peas-Porridge Hot
Puppets
Wonder bubbles
Poems with action
Fisher-Price Play Family Farm
Look 'n Do
Shadow Play

3. A. Evokes Attention for Communication

(Prior to communicating specific need or information, the student gets person's attention)

tugging at sleeve of person vocalizing loudly waving at person establishing proximity, etc.

as soon as student gives such a signal, give <u>immediate</u> and <u>full attention</u> to him/her so student knows that you understand his action or behavior.

Praise student for appropriate evoking of your attention and elminiate inappropriate behavior such as crying, a tantrum harsh vocalizing. Work on developing more efficient and effective skills/behaviors that the student can do until he can verbally call for your attention.

Maintains Joint Focus (Maintains closeness and attention to an activity started by another as the focus of an interaction.) come over and watch Sue frost a cookie. See what she is doing with the knife. Mmm it looks good." or---"See\_ \_play with the marble game. Get right here and watch the marble rolling down. Here's another marble. Another marble, Fun." or-, look at this toy. Watch what I do. Wind, wind, wind, oh, see it go! It stopped. Wind, wind, wind, Oh, it goes." Wind up toys: Toot- Toot Loco Musical toy radio Musical TV Merry-Go-Round Helicopter Pound & Round Top Clown Stack Playskool Play Phone

Big Mouth Singers

## 3. C. Waits Turn

(When another person initiates a familiar turn-taking routine, waits for turn. Student must wait with object in hand until his turn if game permits this) target throw with velco balls fishing game

fishing game
marble game
candy land game
spin and see games
Ideal: Listen and

Frank Schaffer's Word Relationship

Gameboards: Cat Time
Frog Jump
Turtle Trot
Dog Days
Bunny Hop

Wonder bubbles
Musical instruments
Schoolhouse Fun in a Box
Schoolhouse Fish
Schoolhouse Going to School
two-sided pounding board

3. D. Fills Turn

(when partner concludes a turn in a familiar turn-taking game or routine, fills own turn.

See 3. ...

3. E. Establishes an object or activity as the focus of an interaction. May bring person to object or activity, or bring object to person.)

Help student establish joint focus by having him:

point to
look at
touching
show
give

"\_\_\_\_\_\_, look at all these toys. What do you like/want?

or
"Show me what \_\_\_\_\_\_ is doing?"
Use any materials listed elsewhere in the Dyadic Interaction

#### 4. A. Establishe Joint Referent

(More than just focusing upon, the child gets or labels object and acts upon it in same way to establish communicative interaction. The student uses conventional gestures or single words/signs to direct attention to object.)

Student points to or labels object and proceeds to bring object to teacher.

Student shows and gives broken object to person and waits for it to be fixed.

To develop this skill, provide a statement or simple question that will provoke such a behavior.

"Oh, oh, a toy is under the table. Will you bring it to me?---Thanks. What toy is it? Where does it go? ----Good. You put it away."

"Which toy do you want? That is a nice\_\_\_\_\_\_.

Show me how it goes. That is fun! Do it again."

or ———

"Will you take your over to show Jane?"
While watching TV, encourage student to touch or call another and point to something on TV.

```
4. B. Answers Simple Questions
         (Responds with appropriate conventional gestures, words, or
          actions to simple wh-questions; what, where, who, which.)
             Dolls
             Airplane
             Merry-go-round wind-up
              Band-aid
             Musical wind-up radio
             Target throw with velcro balls
             Battery operated hair styling kit
             Music box
             Toot-toot-loco
             Clown-stack
             Playskool Play Phone
             Big Mouth Singers
        "What do you want to play with?"
        "What is this?"
        "What does it do?" etc.
                    Pictures
                    Books
                    People
        "Who/what is
                                 _doing?"
        "Who are you?"
```

"Good."

4/ C. Maintains Joint Referent/Topic (Maintains joint referent/topic through at least three interactive turns) Play phones Fisher-Price Play Family Farm Fisher-Price Play Family Jetport Food reinforcers Books Pictures Tool kits Food projects -- frasting cookies, sandwich making, cutting, wrapping, making, pouring, drinking tang, peeling apple, carrot Tasco Binocular Big Mouth Singers Wind-up Merry-go-round Dolls Battery operated hair stayling kit 1. Student points to picture of cat. Teacher says, "I see cat."

1. Student signs "cat"
Teacher says, "I like cats." 3. Student signs "cat" again and pretends to pet picture of cat. or---"Would you like an M&M/cookie/drink?" "please." "Here it is." "Thank you." 3. "Is it good?"

# 4. D. Peer Interaction

(Responds appropriately to contact by peers and initiates positive interactions with peers)

Games listed previously
London Bridge
Making juice/drink together
Playing house
Dress-up play
Shadow play
Fisher-Price Play Family
Fisher-Price Play Jetport
Two-sided pounding boards
Routine with musical instruments

#### EXPRESSIVE COMMUNICATION

1. A. Reactive Communicative Behavior

(Produces responses in reaction to environmental stimuli that can be interpreted by caregivers as signals)

Example: Mother interprets crying and fussing after she puts baby down as need to be picked up.

1. B. Communicative Functions

(Behaviors are interpreted as signals of:

1. pleasure/comfort

2. displeasure/discomfort

3. other

2. A. Proactive Perlocutionary communicative Behavior

(Produces seemingly purposeful behaviors in attempt to act on or affect the environment-interpreted by caregivers as signals.

Example: Approaches favorite toy.

Pushes away disliked food or person

Van Dyk Resonance.

# Communicative Functions

- (Behaviors are interpreted as signals of:

  1. Desire for specific actions or entities from others
  - 2. Protest or rejection
  - Interest in actions or entities
     Desire for attention to self

  - 5. Other

3. A. Primitive Intentional Communication
(Tries to affect the attention or action of another
person and expects a response to primitive non-conventional
signals, often reflected in coordinated or alternating attention
between receiver and referents and persistence of signalling
behavior if receiver doesn't respond.)

Example: Looks briefly at receiver while reaching for object beyond reach.

Tugs on person's clothing and pulls person toward referent.

Looks up at adult, raising arms to be picked up.

# 3. B. Communicative Intents

(Intentions expressed)

- 1. Request specific entity (object) or action

- Protest or rejection
   Direct receiver's attention to self
   Direct receiver's attention to external objects or event.
- 5. Other

4. A. Conventional Intentional Communication
(Intentional communication now takes the form of conventional gestures & intonated vocalizations)

Example: Vocalizes and points to desired

object out of reach Vocalizes and holds up empty cup

for more.

Smiles, vocalizes & waves to familiar

person

# 4. C. Conventional Signals Used

(The following conventional signals are used:)

- 1. Point
- 2. Give
- 3. Show
- 4. Request (open palm; extend empty container)
- 5. Wave
- 6. Head nod or shake
- 7. Appropriately intonated vocalizations
- 8. Other

4. D. Emerging Linquistic Communication
(Produces a limited number (5) of true words (Manual or verbal). Still lots of conventional gestures.
(List specific words or signs)

## 4. E. Linquistic Performatives

(Intentions expressed by signs or words:)

- 1. Request specific action on entity (object)
- 2. Protest or rejection
- 3. Direct receiver's attention to self
- 4. Direct receiver's attention to external entity (object) or event
- 5. Greeting
- 6. Answer/reply
- 7. Request information or confirmation
- 8. Other

#### COMPREHENSION AND IMITATION: AVAILABLE LEARNING STRATEGIES

1. A. Responds to Intonation
(Inhibits behavior to "no" or negative tone of voice and maintains behavior to positive tone of voice)

Duso Kit

Puppets

Stories

Creative Drama

Appropriate discussion concerning extra-linguistic

(information conveyed through facial expression,

gestures, context) and

- Para-linguistics (non-word aspects of the speech act/utterance)

# 2. A. Anticipates Routine Events

(Recognizes environmental cues as signals for onset of familiar routines)

Teaching such routines:

Student stands up when handed coat and hat.

Van Dijk calendar box

Communication board sequencying daily routine

#### 2. B. Continues Movement

(completes familiar motion after being physically assisted through part of it)

clap student's hands; then let go and see if he will continue.

help student stir punch; let go and see if she will continue

help student stack blocks, let go and see if he will continue

help student color with crayon, let go and see if she will continue

help student wash hands, let go and see if she will continue

2. C. Responds to Ritualized Utterances

(Response appropriately to simple reitualized utterances in routine schedule when accompanied by gestural, facial and intonational cues.)

When student gets up and teacher says,

"Sit down," student sits down

Teacher points to door, "Let's go to lunch/
library,/music/PE/ etc" and student gets up
and walks to door

Teacher lifts arms and says, "Let's say our poem

"Up, down, In, out, etc." and student lifts up
arms and goes through the actions.

Responds to Conventional Gestures

(Responds appropriately to conventional gestures such as point, wave, becken, request by extending hand.)

Circle games using such gestures.

3. B. Imitates Action on Objects

(Reproduces adult's behavior with an object)
Start with simple imitations, "Do as I do"
Use simple motivating toys, adult manipulates it,
then assist student
Use toys where there are two of a kind, student has
one and adult has one.
You use yours, then encourage him to use his
push cars
rattles
balls
wind-up radio

3. C. Responds to Action Gestures
(Responds appropriately to gestures that mimics the functions 242

of an object or action to be performed.)

Student stirs spon in bowl after adult pantomimes the stirring action.

Student spreads butter on bread after adult pantomimes.

Refer to Representation 4B Higher level labels what person is doing in shadow play.

# 3. D. Imitates Motion

(Imitates gesture or simple vocal pattern
sounds or action not involving an object)

Give simple direction and then do it for them to imitate:

Arms up
Stand up
Turn around
Jump three times
Sit down
Blink your eyes
Say "aw"
Say "apa, apa"
Say "me, me, me."

Hold up poster and card and have student imitate:
DLM Position in Space Poster:
Trend Following Directions

3.	E.	Comprehends Label of Present Object
		(Responds appropriately to request for a few specific
		and familiar objects that are within sights - no cuing)
		Place a number of toys/objects in front of student
		Point to
		Hand me
		Show me
		For higher level students, use a selection task,
		probing all postions randomly.
		Put the by the .
		Put the
		Point to the toy beside the
		Put the under the .
		Give me the toy between the &

4. B. Comprehends Two or More Terms in an Unterance
(Responds appropriately to utterances that require
comprehension of at least 2 of the words)
Place doll, truck, box, small ball in front of student.

"Put the ball in the truck."
Put ball & truck in front of student.

"Put the block under the box."
Put nerf round ball and football before the student.

"Kick the football."
