ABSTRACT

A study was conducted to determine the employment needs within the Palomar Community College District. Surveys were mailed to a stratified random sample of 600 North San Diego County employers, requesting respondents to provide information on type and rize of business, to rank the occupational programs offered by lomar according to employment needs, to recommend new programs to considered in the next 5 years, and to project the number of employees that would be needed in those fields. Study findings, based on responses from 256 (43%) of the employers, included the following: (1) of the responding companies, 16% were classified as construction/apprenticeship, 16% as manufacturing, 14% as hospitality and recreation, 11% as transportation, 10% as business and clerical, and 10% as public services; (2) 68.8% of the respondents represented small businesses, 21.5% medium-sized businesses, and 9.8% large firms; and (3) the programs rated as most important to the employers' needs were accounting, word processing, computer science, office management/clerical, mechanic/general, telecommunications, bookkeeping, banking and finance, escrow, nursing, quality assurance, nurse assistant, machine tool operator, and restaurant manager. The study report includes findings presented by vocational area, additional information from various sources regarding population and employment projections for the San Diego area, a list of responding employers, the goals of the state's 5-year plan for vocational education, and the survey instrument. AN EMPLOYER NEEDS ASSESSMENT

FOR VCCATIONAL EDUCATION

PALOMAR COMMUNITY COLLEGE DISTRICT

Under the Direction of Dr. Ed J. Muraski Dean of Vocational Education

Project Coordinator Cherie Barker Director, Gender Equity/ Student Accountability Model

May 19846

"PERMISSION TO REPRODUCE THIS MATERIAL HAS BEEN GRANTED BY

E. Muraski

TO THE EDUCATIONAL PESOURCES INFORMATION CENTER (ERIC)."

- This document has been reproduced as received from the person or organization originating it.
- Minor changes have been made to improve reproduction quality.
- Points of view or opinions stated in this document do not necessarily represent official NIE position or policy.

ACKNOWLEDGMENTS

The success of this project would not have been possible without the efforts of several Palomar employees. Words cannot adequately express appreciation for the many hours of hard work above and beyond the call of duty by those who participated. Among those who deserve thanks are: Bill Dedic, Staff Assistant, Vocational Education; Shirley Meyer, Gender Equity Program Assistant; Pat Riley, Student Help; Pacia Ryneal-Kitching, Student Help; the Vocational Education Directors and the Instructional Deans.

This project would not have been possible without the express approval of Theodore Kilman, Ph.D., Assistant Superintendent and Omar H. Scheidt, Ed.D., District Superintendent and President.

This acknowledgment would not be complete without a special note of thanks to the employers in the Palomar Community College District who took the time to reply to the questionnaire. A listing of these employers can be found in Appendix A.

The Data Processing Department at Palomar College provided the figures and graphs.

i.

ABSTRACT -

The planning process for education and vocational education specifically involves the gathering of data for analysis in formulating programs to meet upcoming needs. Palomar Community College has not had a vocational needs assessment in several years. In order to undertake a comprehensive plan for education in the college and the county, the first step mandates a current assessment of the employment needs in the community.

Although the State provides state-wide needs data and the California Occupational Information System (C.O.I.S.) does give us projected needs data, the data is a minimum of eighteen (18) months old by the time it reaches the college. With the census data projecting a 75% growth in population for North County in the next twenty years, Palomar Community College Office of Vocational Education felt additional data was necessary for planning.

with experience in educational planning and the implementation of an employer needs assessment in other colleges, the Dean of Vocational Education organized the Vocational Education staff to complete this task. The employer needs assessment was completed in the following manner: the employment population of North County was identified; employment development data was used to stratify the sample. The survey forms were sent to a stratified random sampling of 600 employers in the North San Diego County area which, after a follow-up effort, obtained a forty-three percent (43%) return. This percentage of return is considered significant

ii.

and a high percentage return for a survey of this nature.

Based on the information obtained we were able to isolate the occupations most needed in the employment community of Palomar Community

College District. In general, the following occupations were listed in the top quartile as having the highest need:

Accounting Word Processing Computer Science Office Management/Clerical Mechanic/General Telecommunications Bookkeeping Banking & Finance Escrow Nursing -Quality Assurance Nurse Assistant Machine Tool Operator Restaurant Manager LVN to RN Television Broadcast Electronics Drafting/Technical Electronics Computer Assisted Manufacturing

Emergency Medical Technician Dietetic Assistant Engine Tune-Up Analysis Diesel Mechanic/Auto Technical Photography Interior Design Surveying Chef Cook Apprenticeship Carpentry Apprenticeship Plumbing Plumbing & Pipefitting Carpentry Construction Technology Child Development Fire Science Geronotology Criminal Justice

Although other significant needs have been identified, the occupations which appear in the top quartile need to be prioritized by the educational agencies in the county. The findings in this surveneed to be studied and combined with other data regarding other delivery systems in the area of financial constraints, etc., before action can be taken.

INTRODUCTION

The California Community Colleges Board of Governors recognizes that within existing law, decision making for individual community colleges is a responsibility of local districts. The role of the Board of Governors in adopting vocational education policies is to set the direction for the comprehensive delivery of vocational education and to assist local community colleges in meeting the diverse and unique needs of their communities. Both the Board of Governors' Five Year Plan and the California Five Year Plan for Vocational Education recognize the potential benefits of needs assessments and encourage districts to utilize them in planning (Appendix B).

In the 1977-82 Five Year Plan for the California Community Colleges, the Board of Governors suggested the following criteria for program planning and development:

"Plans for program development should be oriented more to the future and based upon at least three criteria: (a) expected community interest and student demand, (b) employment opportunities and (c) other organizations and districts providing similar programs."

The Plan went on to caution districts not to rely too heavily on any one of these criteria, but rather to temper any dicisions with considerations of the needs of society. In this regard, the Plan concluded, districts should assess the educational needs of the community, "...in order to ensure properly balanced program development."

1.

Therefore, the Vocational Education Division undertook a needs assessment to determine potential employment needs in our community. The section entitled "Additional Information" addresses the other program planning criteria as suggested by the Board of Governors.

The term "needs assessment" is very familiar to most educators, yet may not be clearly understood. Consequently, a definition may be in order. According to Webster, "need" is "...something useful, required or desired that is lacking"; "assessment," (again per Webster) is "a way...of setting an amount on (something)." As Vocational Education is closely linked to job market demands, this needs assessment specifically addressed employers' PERCEIVED employment needs. The data obtained from the needs assessment should be one of the tools utilized in systematic planning of vocational programs.

As a word of caution, assessments are frequently interpreted as objectively determining needs. This interpretation can lead to some conspicuous errors in policy development and program planning. In fact, almost universally, needs assessments reflect perceived needs and wants and this should be kept in mind to avoid misinterpretation of the data.

Inasmuch as perceived needs may not only be quite different from "real" or "objective" needs, but also quite differently pursued, this definition is critical in analyzing and utilizing the results.

PROCEDURES

The purpose of this study is to determine the employment needs of employers in the Palomar Community College District. In order to achieve this purpose, a survey of the employment community was undertaken.

The survey instrument developed and utilized for the assessment is found in Appendix C. The first page of the instrument identifies the respondent, verifies purpose of the business and determines company size.

The second and third pages of the instrument list programs and/or occupational areas for which Palomar offers training or which are defined as occupational. Respondents were asked to rank employment needs by:

1 = low; 2 = medium; 3 = high, being reminded to indicate only those areas that applied to their own business.

Page three of the instrument provided space for respondents to indicate new programs that should be considered in the next five years with the same 1 - 3 ranking and also projected number of employees in that field.

A cover letter addressed to the employers surveyed, as well as a stamped addressed envelope was included with the instrument (Appendix D).

Based on information provided by the Oceanside and Escondido Employment Development Department (Images, 1983) it was determined that North San Diego County has the following employment breakdown:

Table 1
Employment in North San Diego County

Broad Occupational Classification	§ Of Employment
Agriculture/Construction	15
Finance	10
Manufacturing	38
Service	3 7

As these classifications did not align with occupational education classifications the classifications were recategorized into vocational areas as indicated in Table 2, with vocational programs/occupational areas clustered under each of these major areas (Appendix C [Survey]).

It was determined that a sufficient sample size for the District service area population would be six hundred (600). The stratified sample percentages are also indicated in Table 2.

Table 2
Occupational Classification

Vocational Area	% of Survey	Ramdom No. Surveyed
Construction/Apprenticeship	16	95
Business & Clerical	10	58

Manufacturing	16	97
Consumer and Homemaking	5	31
Hospitality & Recreation	14	82
Transportation	 11	66
Public Services	10	60
Totals	100	600

The 1984 North San Diego County Pacific Bell Yellow Pages was utilized to identify employers. The yellow page index, which is cross-referenced, was used to determine employers within program areas. In order to start the random selection, the numbers one through five (1-5) were placed on individual sheets of paper and put in a dish with the number three (3) being drawn. The numbers six through ten (6-10) were also placed in a dish with the number seven (7) being selected. The procedure identified the starting numbers for random sample.

When a vocational area had limited employers within the Palomar Community College District employers outside the District were included. When there were sufficient employers within the District, and the random number fell on an out-of-District employer, that employer was not included, with the random selection continuing as if the employer had been included.

This process was continued until the actual number quota was reached.

A listing of employers was made by vocational area. In addition, an alphabetical listing of employers was developed. Duplications were eliminated thereby assuring that an employer was only listed in one (1) vocational area. No single program or occupational title was listed with less than five (5) related employers in an attempt to assure an adequate response return.

Limitations. During the course of the project, as limitations were discovered, attempts were made to investigate the exceptions and control these factors in data analysis as follows:

- 1. Some employers completed only the first page of the survey, although they are listed as a return, no data will be reflected;
- 2. Although the employers were asked to only rank programs/occupational titles that applied to their own business, some block marked every area. In these instances data is only reflected in the vocational area appropriate to that business;
- 3. Efforts were made to obtain two (2) employer responses for each program/occupational title. However, a few titles only received one (1) response. That response is reflected in the "List of Occupations in Order of Preference," Table 3, but is not included in the "List of Occupational Preference by Vocational Area," Table 4;
- 4. This survey represents a sample of employers. The priorities listed can be of some meaning for planning purposes. In order to use the raw score, all employers must be sampled.

FINDINGS

Of the six hundred (600) employers surveyed, a total of two hundred fifty-six (256) returned the survey in time to be included in the data analysis.

This response was arbieved by two (2) mailings and represents an overall rate of return of forty-three percent (43%). Table 4 indicates the percentage of return within each vocational area.

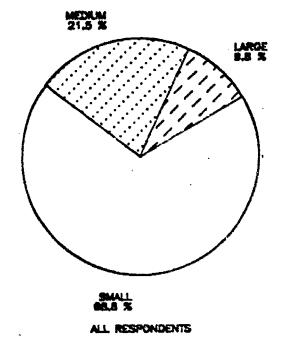

Table 4
PERCENTAGE OF RETURN BY VOCATIONAL AREA

Vocational Area	% of Return
Construction/Apprenticeship	32
Business & Clerical	50
Environment	63
Communication & Media	57
Health Services	55
Manufacturing	38
Consumer & Homemaking	26
Hospitality & Recreation	26
Transportation	39
Public Services	67

Figure 1 represents the percent of overall response as correlated with the size of the business. Small Business was defined as up to twenty (20) employees; medium business, twenty-one (21) through one hundred (100) employees and large business one hundred one or more (101+) employees.

Figure 1

FINDINGS BY VOCATIONAL AREA

The data collected was analyzed for each Vocational Area and is presented in Tables 5 through 14. Employer responses to employment needs in areas outside of the specific purpose of the business are also indicated as "Auxiliary" needs. The percent of responses within each Vocational Area as correlated with the size of the business are represented in Figures 2 through 11.

The Table for each Vocational Area provides an ordinal ranking by program/occupational title of all responses within that vocational area. The data to the right of each title indicates the following:

Column 1 Of all responses within the vocational area total percent of employers indicating a need;

- Column 2 I a actual raw number of all employers indicating that title within the Vocational Area;
- Colum. 3-5 Of the employers with the Vocational Area who marked the title the percent of employment need ranked by 1 low, 2 medium, 3 high.

For example: On Table 5, thirty-three percent (33%) of the employers within the Vocational Area indicated a need for apprentice carpenters. This percent represents a raw number of ten (10). Of the ten (10) employers who indicated a need for Apprenticeship Carpentry, twenty percent (20%) indicated a low need; twenty percent (20%) indicated a medium need and sixty percent (60%) indicated a high need.

In utilizing the Cluster data for program planning it should be kept in mind that by clustering businesses by vocational training area titles, in some cases very diverse company purposes may be included under the same major area. For example: Public Services includes Criminal Justice, Fire Science and Gerontology.

In analyzing the responses indicated as "Auxiliary" needs, caution is recommended. Based on evaluation of responses the following may be concluded: although employers were asked to rank employment needs many employers indicated what may be considered service needs, i.e., on Table 5, Auxiliary need of Bank Management for the Construction/Apprenticeship Cluster.

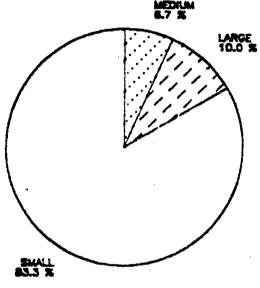

The figure for each Vocational Area represents the percent of all returns within that area as correlated with the size of the business. Small business was defined as up to twenty (20) employees; medium business twenty-one (21) through one hundred (100) employees and large business one hundred one or more (101+) employees.

CONSTRUCTION/APPRENTICESHIP

A total of ninety-five (95) employers were surveyed in this Cluster Area.

Thirty (30) employers returned the survey for a thirty-two percent (32%) rate of return. As displaced in Figure 2, a high percentage of responses in this Vocational Cluster was received from small business.

BUSINESS & CLERICAL

Fifty-eight (58) employers were surveyed in this Cluster Area. Fifty percent (50%) returned surveys (N=29).

As indicated in Figure 3, a large portion of the responses in the Business and Clerical Cluster were from small business.

ENVIRONMENT

A total of thirty-two (32) employers were surveyed in this Cluster Area. Twenty (20) employers returned surveys for a sixty-three percent (63%) response rate.

As indicated in Figure 4, there were no large businesses who responsed. However, there was a significant number of medium size businesses responding.

Figure 4 BUSINESS SIZE COMPARISON 20 RESPONDENTS

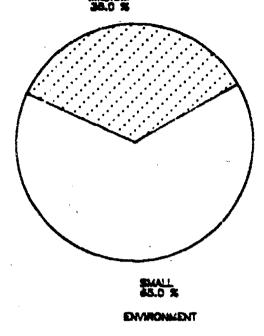

Table 7 presents an ordinal ranking of occupations as indicated by the employers. Although Solar Energy Technician received a low percent of return the high need should be noted. The Auxiliary need of Drafting should be considered as it appears several times by specific need.

COMMUNICATION & MEDIA

Thirty-seven (37) employers were mailed surveys in this Occupational Area with a response rate of fifty-seven percent (57%). The raw number of returns was twenty-one (21).

Although the largest percent of return came from small business, medium and large business each represent a fourteen percent (14%) return as indicated in Figure 5.

Figure 5
BUSINESS SIZE COMPARISON
21 RESPONDENTS

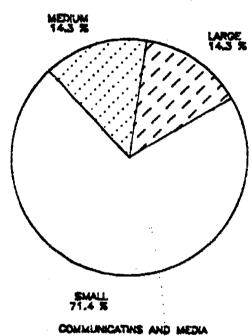

Table 8 provides an ordinal ranking of occupations within this Cluster

Area. Both Commerical Art and Graphic Communications had specialized

occupations listed for employer choice. The Graphic Communication specialities
all indicated a high need (100%).

HEALTH SERVICES

Of the forty-two (42) employers sampled in this area, twenty-three (23) responded to the survey. This represents a fifty-five percent (55%) response rate.

As indicated in Figure 6, fifty-two percent (52%) of the responses were from small business, thirty-one percent (31%) from medium business and seventeen percent (17%) from large business which is significantly different than the overall response rates for Size of Business (Figure 1).

Figure 6

BUSINESS SIZE COMPARISON 23 RESPONDENTS

The occupational titles in this Cluster are displayed by ordinal ranking in Table 9. Several interrelated occupations were included in this Cluster and any program planning should make note of this: i.e., Dental Assistant, Dental Receptionist, Dental Technician.

MANUFACTURING

The response rate for this Occupational Cluster was thirty-eight percent (38%). A total of ninety-seven (37) employers were sampled with thrity-seven (37) replies.

As presented in Figure 7, the largest number of replies were received from small business.

Figure 7

BUSINESS SIZE COMPARISON 37 RESPONDENTS

The ordinal ranking of occupational titles within this Cluster is presented in Table 10. A significant difference in the ranking of Auxiliary needs should be noted. It appears that computerization may be more prevalent in this Cluster than any of the others.

CONSUMER & HOMEMAKING

Thirty-one employers (31) in this Occupational Cluster were sampled. A total of eight (8) employers returned the survey for a twenty-six percent (26%) rate of response. Therefore, caution is recommended in drawing specific conclusions as this sample is small.

In correlating size of business it was determined that size of business varied significantly from the overall correlation as indicated in Figures 1 and 8.

Figure 8
BUSINESS SIZE COMPARISON
8 RESPONDENTS

CONSUMER AND HOMEMAKING

Table 11 presents an ordinal ranking of occupations within this Cluster Area. Although a small number of employers responded it should be noted they indicated a high need in those occupational titles listed (100%). These

occupational titles also appeared as Auxiliary needs in several other Cluster
Areas and this should be considered in planning.

PUBLIC SERVICES

This Cluster Area obtained a sixty-seven percent (67%) rate of return.

Sixty-one (61) employers were sampled with forty-one (41) of them returning surveys.

Figure 11 presents the correlation of size of business and those employers who responded in this Cluster Area.

Figure 11

BUSINESS SIZE COMPARISON
41 RESPONDENTS

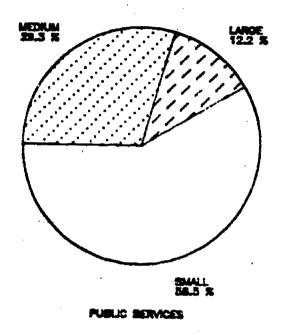

Table 14 provides an ordinal ranking of cluster occupational titles. The Criminal Justice area was broken down into several specific occupational titles. Although the raw number for these titles is the same, it should be noted that the responses were from several businesses and the total is coincidental. The long listing of Auxiliary needs can be related to the variety of business functions included in this Cluster Area.

OVERALL

Table 3 provides an ordinal ranking by program/occupational title of all responses. The data to the right of each title indicate the following:

- Column 1 Of all responses received total percent of employers indicating a need;
- Column 2 The actual raw r wher of all employers indicating that title;
- Columns 3-5 Of the employers who marked the title, the percent of employment need ranked by 1 low, 2 medium, 3 high.

For example: Fifty-one percent (51%) of the employers indicated a need for Accounting in their business. This percent represents a raw number of one hundred thirty (130). Of the one hundred thirty (130) employers who indicated a need for Accounting, eleven percent (11%)

indicated a low need; forty-two percent (42%) indicated a medium need; and forty-seven percent (47%) indicated a high need.

ADDITIONAL INFORMATION

According to the San Diego Association of Governments and the Department of Finance, State of California, the thrust of population growth in San Diego County from 1983 through the turn of the century will take place in North County. Table 15 indicates projected growth within cities in the Palomar Community College District.

PROJECTED GROWTH - PALOMAR COMPUNITY COLLEGE DISTRICT

- 1.01	<u> </u>	****			
	1970 (Census)	1980 (Census)	1933 (Est.)	2000 (Proj.)	1983-2000 (Est. % Chg.)
Escondido	36,800	64,400	72,200	88,900	23
San Marco	s 3,900	17,500	18,500	38,400	108
Vista	24,700	35,800	40,550	46,000	13
Poway*	14,000	34,300	35,300	61,400	74

^{*}Unincorporated prior to 1980, 1970 figure is an estimate.

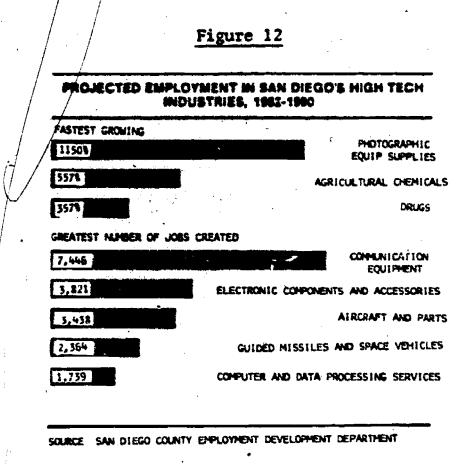

To ensure coordination of educational opportunities, the Dean of Vocational Education is a member of the San Diego/Imperial Counties

Occupational Deans Association and the North County Employment and Training Partnership. In addition, the Director of Regional Occupation Programs at Palomar College is a member of the ROP North County Planning Council.

As reported in <u>The Union Tribune Review of San Diego Economic Activity</u>
(Volumn XXXIII, Number 1, March 1984), employment in high technology industries will increase substantially faster over the next decade than will general employment. However, as these industries have a small employment base, numerically these jobs will be relatively few. The bulk of newly created jobs expected to be in the non-high-tech industries.

Of the more than 200,000 new jobs forecast to be added to San Diego's employment rolls by 1990, the San Diego County Employment Development

Department expects more than 26,000 jobs in the high-tech category. Thus, locally, high-tech will account for about thirteen percent (13%) of all new jobs created. Figure 12 represents projected employment in San Diego's high-tech industries:

Small Businesses Provide First Jobs. Small businesses are more likely than large firms to hire women, youths, older and part-time workers, and people who are out of work, a study says.

The Small Business Administration study, the first to view labor force characteristics by size of firm, found two of three workers' first jobs were in small businesses - those with fewer than 100 employes. The study, based in part on a 1979 Census Bureau survey of about 60,000 households, shows an estimated 14 million small businesses in the USA are concentrated in construction, retail and wholesale trade and services.

Among the findings:

* 11.9% of the workers in the smallest firms - those with fewer than 25 employes - were 16 to 19 years old, compared with 6.1% for businesses of 500 or more workers.

- * About 4% of employes in the smallest firms were older than 65; only 0.5% were that old in the big companies.
- * At the smallest companies, 56% of the employes were in the prime working age of 25 to 54; at firms with 500 or more employes, 67% were in that category.
- * 43.2% of workers at firms with fewer than 25 employes were women, compared with 36.3% for big companies.
- * At the smallest firms, 53.6% of the employes worked full time, compared with three-quarters of the employes at the biggest companies.
- * Pay levels vary with a firm's size. More than 60% of workers in the smallest firms earned less than \$5 an hour; about one-third were in that category at the big companies.

(Reprinted from USA Today, March 1984)

NEED FOR FURTHER STUDY

This Needs Assessment is one component in comprehensive Vocational Education planning. Further studies will need to follow as listed below:

- 1. A study to analyze the interest of students and potential students in occupational programs;
- A study should be undertaken to determine what areas may not have responded to the Needs Assessment and a follow-up survey conducted;
- 3. It is suggested that another Needs Assessment be conducted in three (3) years.

GOALS FOR VOCATIONAL EDUCATION IN CALIFORNIA

To provide leadership for vocational education in California, the following goals have been established for 1984-85 by the State Department of Education and Chancellor's Office of the California Community Colleges:

- 1. To stimulate the improvement of vocational education programs and services which incorporate appropriate basic and employability skills and new technological advances of business and industry
- 2. To implement a vocational education funding system that incorporates program/course approval and general and subject matter standards with appropriate minimum compliance criteria
- 3. To improve and expand linkages with the business and industry sectors, employment and training agencies, and other providers of vocational education programs and services
- 4. To ensure equal access to vocational education programs for all persons in all communities
- 5. To maintain and improve vocational education opportunities for special needs students
- 6. To develop instructional materials designed to prepare students for employment in existing, new, and emerging occupations
- 7. To develop the consumer and homemaking skills of individuals
- 8. To assist students in making occupational choices through improved counseling supported by an updated career guidance information system
- 9. To improve placement of students who have gained employable skills

- 10. To assist those already employed in the maintenance of previously acquired skills or in the development of new skills to advance or change employment fields
- 11. To broaden the participation of local vocational education personnel in the state vocational education agencies' planning and policymaking processes
- 12. To provide a comprehensive quality staff development program for vocational education personnel
- 13. To promote better coordination of federal and nonfederal funds in support of vocational programs and services
- 14. To increase the effectiveness and efficiency of the staffs of the Division of Vocational and Continuing Education and Chancellor's Office of the California Community Colleges in the administration of federal and state vocational education funds

NEEDS ASSESSMENT SURVEY

Directions: Please complete the questionnaire in as much detail as possible. If you have any questions, don't hesitate to call (see information at bottom). Upon completion please return the survey in the envelope provided.

7. Following is a list of the Programs and/or Occupational areas for which Palomar Community College offers training. Look at all the programs first and then rank them

Community College offers training. Look at all the programs first and then rank them according to their importance to your employment needs by circling either: 1 - Low, 2 - Medium, 3 - High. Remember to grade only those programs that apply to your own business. In addition, add any programs you feel we should consider in the next five

years and how many employees you would hire from that program.

Palomar College

San Marcos, California 92069-1487 Phone (619) 744-1150 DR. OMAR H. SCHEIDT, Superintendent/President DR. ED J. MURASKI, Dean of Vocational Education, Ext. 2276

March 6, 1984

Dear Employer:

You are probably aware that Palomar Community College provides many vocational programs designed to prepare employees for your company and others in the North San Diego County and the surrounding areas.

In order for us to determine the need for new programs or the revision or deletion of programs, it is very important that we have your company's suggestions and recommendations. You are, therefore, kindly requested to complete the enclosed survey form, which may be completed in approximately ten minutes. The success of the Needs Assessment depends, in a large measure, upon your response, especially since we are using a sample of companies rather than all companies.

A self-addressed envelope has been enclosed for your convenience in returning the completed survey.

Please take a few moments to help us help you in the future.

Sincerely,

DR. OMAR H. SCHEIDT
