ABSTRACT

This publication is part of a series of self-instructional teacher training manuals designed to assist vocational-technical educators or industrial trainers to develop and implement competency-based vocational education (CBVE) programs in a school or industrial setting. The manual consists of the following sections: cover page that contains the task title, purpose and information block; a statement of performance objectives, micro-performance objectives, learning activities, information sheets, activity sheets (self-checks), a written examination, a product/performance checklist, and references. This manual, which explains how to determine student grades in a CBVE system, covers the following topics: identifying factors influencing grades, and exploring several grading systems already in use. (KC)

A LEARNING GUIDE

Task

ASSIGN GRADES

Purpose

Grades in a competency-based system must reflect the competency of the student. The grading system must be easy to understand and use, fair, and criterion referenced. This manual will explore the factors influencing a grading system and provide several examples of CBVE grading systems currently in use.

INTRODUCTION

This publication is part of a series of self-instructional teacher training manuals designed to assist vocational-technical educators or industrial trainers to develop and implement competency-based vocational education (CBVE) programs. Each manual addresses a different aspect of CBVE. The entire set is designed to enable instructors, administrators, or industrial trainers to develop the necessary skills needed to successfully develop and implement CBVE programs in a school or industrial setting.

Each manual contains the following sections: Cover page which contains the task title, purpose, and information block; inside pages of performance objective, micro-performance objectives, learning activities, information sheets, activity sheets (self-checks), a written exam, and a product/performance checklist.

Manuals have been developed for the following tasks:

- 1. Identify the Characteristics of a Competency-Based Vocational Education (CBVE) Program
- 2. Identify and Sequence Job Tasks
- 3. Write Measurable Performance Objectives
- 4. Construct Performance and Written Evaluation Instruments
- 5. Write Student Learning Guides or Competency Sheets
- 6. Adapt or Revise a Student Learning Guide or Competency Sheet
- 7. Identify Teaching/Learning Strategies and Management Techniques to Implement CBVE
- 8. Develop a Learning Resource Center
- 9. Orient Students to CBVE
- 10. Write a Student Performance Contract
- 11. Select and Design Print and Non-Print Resource Materials
- 12. Monitor Student Progress and Maintain Student Records

DEPT.	PROG	TASK	TPO	мро
	PTT	013	013	

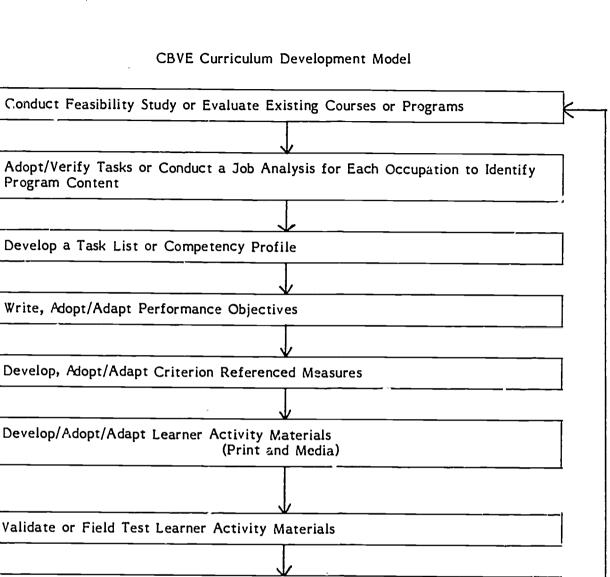

- 13. Assign Grades
- 14. Identify Administrative Support Necessary to Implement CBVE
- 15. Prepare a Staff Development Program

Using the following CBVE systems development model, instructors, trainers, or administrators can develop and implement CBVE programs.

The following institutions deserve credit for the use of some of their materials in the development of these manuals:

- District 916 Area Vocational-Technical Institute, 3300 Century Avenue North, White Bear Lake, MN 55110
- Stephenson Area Career Center, Pearl City Road, Freeport, IL 61032
- Maryland State Department of Education, Division of Vocational Technical Education
- University of South Florida, Division of Vocational Education, Tampa, Florida

FOREWORD

What does an "A," "B," "C," "D," or "F" mean? Often, they are an instructor's best guess as to how a student has performed compared to others in a group. If the group is poorly motivated, lacking prerequisites, or does not receive quality instruction, the "A" from that group may be only a "C" in another group. This norm-referenced approach is inappropriate for use in a CBVE instructional system.

Grading has often been portrayed as bad or demeaning. This is not true. What is bad about grading is the way it has been used. It is bad for a student to work up to his/her abilities and then receive a low grade because of a poorly constructed test or instructional techniques, an artificial grading curve, or any other reason which has nothing to do with measuring actual competence. It is good to evaluate student mastery of tasks and report progress regularly. This enhances learning, provides motivation, builds confidence, encourages excellence, provides accountability, and measures or evaluates the quality of instruction. So, while grades may seem to be in conflict with the strict concepts of CBVE, they are really a useful tool. The problem is not with grades as such, but rather, with how grades are assigned.

In any grading system, grades must be as objective and fair as possible. They must also be seen as fair and objective by students, administration, and the community. Instructors must base grades on a system known in advance to all and must provide appropriate documentation and records to verify that grades were assigned in a systematic, consistent, objective, and fair manner.

In a CBVE system, grades should eflect the actual competence of each student, not his/her relative competence as compared to fellow students. Successful task mastery is the goal of CBVE. Tests and checklists provide the criteria for task mastery. Each student is evaluated individually against the pre-set standards for each task.

This manual will explore the various aspects of grading, several systems in use, and define some parameters for developing a CBVE grading system.

	РТТ	013	013	

OBJECTIVES OF THIS MANUAL

1. TERMINAL PERFORMANCE OBJECTIVE

GIVEN:

An actual school setting

YOU WILL:

Identify how to assign grades

HOW WELL:

You must score 13 out of 14 or 93% on a written exam and 14 out of 14 on a

checklist.

2. MICRO-PERFORMANCE OBJECTIVE(S)

- 1. Identify factors influencing grades
- 2. Explore several grading systems already in use

PROCEDURES FOR COMPLETING THIS MANUAL

- 1. Review CBVE curriculum development model, page 5.
- 2. Read the learning steps and resources for each micro-performance objective.
- 3. Complete the activity sheets for each micro-performance objective.
- 4. Complete the written exam.
- 5. Complete the performance test and review with your school's CBVE resource person.

NOTE: The pages in this manual are color coded. The blue pages are the objectives and micro-performance objective pages; white = information pages; yellow = activity pages; green = answer key pages; salmon = checklist pages; and pink = criterion exam pages.

CBVE Grading Parameters

To develop a CBVE grading system, we must first lay the foundation for the system. This foundation consists of the following:

- Successful mastery of tasks is the goal of CBVE
- Cognitive tests and performance checklists provide the criteria for task mastery.
- Each student is evaluated individually against the pre-set standards for each task NOT
 against how well other students performed the task.
- Any student can master any task at a high level of competence if he/she is motivated to do so and is given the right kind of instruction and enough time to learn the task.
- The time it takes a student to learn a task has little to do with how well the task can be performed once it is mastered.
- Cognitive exams and activity sheets are used to signal cognitive mastery and should not be used to determine grades.
- The tasks to be learned, conditions of performance, and standards of evaluation are made known to all students in advance of instruction.
- Learning activities are not graded or assigned points toward a grade.
- Grades are earned for successful completion of tasks and <u>not</u> given for just attending school.
- Every student must know, in advance, the criteria for the grading system and what is required to earn each possible grade.
- Every student must have equal opportunity to earn each possible grade.
- At any given point ir time, each student should be able to compute his/her grade up to that point.

DEPT.	PROG	TASK	TPO	MPO
	РТТ	013	013	001

013-001-001 (Continued)

- The grade earned by a student is a measure of competence based on attainment of skills,
 knowledge, and attitudes needed on the job.
- The grading system must be as objective and fair as possible.
- The instructor must be systematic and consistent in the application of the grading system.
- Documentation and records must exist to verify that grades were assigned in a systematic,
 consistent, objective, and fair manner.
- The grading system should be evaluated regularly and perhaps modified based upon field test results.

With these foundations in mind, we will now look at the various options for creating a CBVE grading system.

CBVE Grading Options

In a pure CBVE system, the pass/fail option is the preferred one. The student receives, upon exiting a course/program, a list of tasks mastered. However, as a matter of policy, most CBVE schools award grades and supply each student with a list of tasks mastered.

Many different grading systems are in use in competency-based programs around the United States. These include systems which base grades on:

- The number of tasks attained during a given grading period
- The number of tasks to be mastered for each letter grade
- The mastery or achievement level reached for each task
- Pass/fail
- Any other systems or combinations in use

Each of the above systems will work in a CBVE program, however, the only one recommended, is the first one which is to base the grade on the number of tasks attained. Reports are available which outline the advantages and disadvantages of the other systems. If you are interested in these, contact your regional ICBVE consultant. For an in-depth review of grading, see the Handbook for Developing Competency-Based Training Programs by Dr. Bill Blank, Prentice-Hall, Inc.

Grading at Stephenson Area Career Center

The competency-based individualized instruction system used at the Stephenson Area Career Center directly involves the student in planning what will be studied. The student and instructor enter into a contract at the start of each grading period. This contract plans what learning guides will be completed, the amount of time it should take to complete each learning guide, and how many mastery hours must be completed to earn a letter grade.

The grading scale is based on the following percentage of mastery hours and daily performance points:

Α	95% or above
В	87% to 94%
С	80% to 86%
D	72% to 79%
F	71% or below

Mastery hours are the number of hours it should take to complete a learning guide, not the number of hours that it actually takes a student to complete the student learning guide (SLG).

At mid-term, a conference is held between the instructor and the student to check progress and possibly make adjustments to contract hours. If the mid-term grade is below a "C", an interim report is sent to the parents and home school. The student may request a grade conference with the instructor or the administrative assistant at any time.

As students master the tasks, the instructor records the actual time it took to master each task. At the end of the quarter, the hours are added up along with the daily points and a grade is determined.

NOTE: The following has been adapted from the SACC teacher training system. The student performance contract is the one you completed in PTT 010, MPO #2. The class record book was covered in PTT 012. Evaluating the affective domain was covered in PTT004, MPO #4.

DEPT.	PROG	TASK	TPO	мРО
	PTT	013	013	002

013-002-001 (Continued)

Grading

SACC grading is based on the information recorded on the student performance contract and the class record book.

This grading procedure permits each student to be graded on:

- Tasks mastered
- Daily performance points

At the end of each quarter, student grades will be assigned and reported to the attendance secretary on the forms provided.

A student referral must be on file with the administrative assistant for any student being given a letter grade below "C".

How to Determine Student Grades

The following steps are to be followed to determine the student's grade:

- 1. Compute the total planned hours for task mastery which includes:
 - A. Task mastery hours (from contract)
 - B. Hours into an SLG or task
- 2. Compute total daily performance points from class record book.
- 3. Determine letter grade from student grading scale on student performance contract.

 The following is an example of how to determine student grades.

013-002-001 (Continued)

DETERMINE THE STUDENT GRADE

STEP 1
COMPUTE TOTAL PLANNED HOURS
FOR SLG'S MASTERED

ADJUST %

80

TL DATE INTL Review the contract to the left and total the planned SLG's mastered (numbers circled).

QUARTER PLANNED ACTUAL MID-TERM PLANNED ACTUAL SLG HRS HRS H SLG HERS HRS 11 ထာ **⑤** 7 119 9 (P) 115 207 6 6 (5) 5 214 (4) 7 <u>წ</u> 316 **(3)** 8 AN (8) 6 90 (T 7 385 (3) 75 301 H α 6 (D) [UA

NOTE: Add total planned hours, not actual hours, plus any adjustments (ADJ) and actual hours in a SLG not mastered, see SLG #217.

This total will be 70 hours; enter 70 on total hours line for quarter. (See example)

DEPT. PROG TASK TPO MPO
PTT 013 013 002

013-002-001 (Continued)

Step 2 Compute Total Daily Points

Using your class record book, total the students daily points for the quarter and enter them on the line, total points for quarter.

Let's say these points total 180. Enter the 180 as shown below.

Step 3
Determine Grade From Grade Chart Figures on the Student Performance Contract

Compare numbers you have entered for total hours and total points to students grade figures and enter student grade. The 70 planned hours and 180 daily points tell you this student has a grade of "B" for the quarter. Enter the grade as shown in the example below.

DEPT.	PROG	TASK	TPO	MPO
	PTT	013	013	002

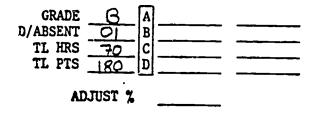

013-002-001 (Continued)

Attendance Reporting

When you report quarter grades, you will also show the number of days the student was absent for the quarter. Using your class record book, compute this total. Our student was absent one day.

When days absent are entered, your quarter grade and attendance information on the student performance contract for our student would look like the example below.

At the end of each quarter, each SPC will have the above information filled in.

Secondary Student Attendance at SACC

- Regulated by home school calendar
- Taken daily by block
- Forwarded to home school, daily
- All absences considered contract time lost

Attendance Adjustments

For student absences, the instructor may make student performance contract time adjustments.

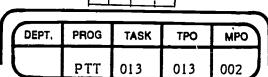

This is done by placing ADJ in the SPC planned column and the number of hours in the hours

SLC HRS HRS

VDJ S

column. At grade time, add this number with planned hours to adjust for student absences. See

example below.

013-002-001 (Continued)

There are three reasons the instructor makes attendance adjustments.

- Two-day quarter adjustment
- Medical
- Home school requests

Let's take a look at each of these items.

Two-day quarter adjustment

At the beginning of each quarter, each student is given a two-day adjustment when the SPC is entered into.

Medical

When a student is absent for medical reasons, adjustment must be made for time missed. To verify such absence, discuss with the student, call home, or check with the SACC attendance office.

Home school requests

Occasionally, the home school calendar may change or students will go on a field trip. For any home school request, the office will notify the instructor. It will be the instructor's responsibility to make the SPC adjustment.

- Attendance adjustment is <u>important</u> to the <u>student</u>.
- Attendance adjustment is the instructor's responsibility
- <u>Communication</u> with your students is necessary to make proper attendance adjustments

Grade Computation

What if the letter grade for planned, mastered hours and daily points are not the same?

You may use the weighted factor 25/75 and compute students grade by the four steps that follow:

DEPT.	PROG	TASK	TPO	мРО
	РТТ	013	013	002

013-002-001 (Continued)

1. Mastery hours
$$\frac{Mastery hours}{Contract Hrs.}$$
 X .75 = A

- 3. Add A + B = Percent of mastered hours and points
- 4. Compare percent to percentage on page 17 and enter grade

Example:

Mastery Hours
$$\frac{72}{80}$$
 X .75 = 67.5

$$\frac{\text{Daily points earned}}{\text{Total daily points}} \quad \frac{170}{185} \text{ X .25 = 22.9}$$

$$67.5 + 22.9 = 90.4$$

Letter grade B

Summary

Grading is based on the information recorded on the SPC and class record book. A studenreferral must be on file with the administrative assistant for any student being given a letter grade below "C".

To determine a student grade:

- Compute total <u>planned</u> SLG hours mastered, which includes:
 Task mastery hours
 Actual hours into an SLG
- Compute total daily performance points from class record book
- Determine letter grade from student grading scale on SPC

At the end of each quarter, all grade information will be recorded on the SPC.

HOW YOU ARE GRADED AT RIDGE

One of the major differences between a competency-based program and a traditional program is how students earn their grades. A competency-based grading system is being used at Ridge that utilizes the following ideas:

- You should know at the beginning exactly how you will be evaluated and graded.
- You should not compete with other students for grades; you should compete with a set standard.
- Your grade should be based on your attainment of tasks needed on the job.
- You should receive credit toward a grade for successfully completing tasks, not for just attending school.

You will receive credit as you attain competency in each task listed on the program task listing. You are either competent or you need to repeat part of the learning activities to attain competency. Grades are based on the number of tasks you attain during the grading period rather than on each task.

Competency-based programs do not normally issue letter grades. However, agencies that sponsor students sometimes ask to see letter grades and school districts require them for high school students. Therefore, at Ridge we have worked out a grading system that satisfies both our competency-based preferences and these other considerations.

At the end of the grading period, grades are computed for adults and high school students. Adults receive an S/U (satisfactory/unsatisfactory) grade. High school students require credits for graduation: therefore, the grading system is adjusted for the number of credits needed and a letter grade is given. The Guidance Office will discuss the grading procedure with each high school student.

BEST COPY AVAILABLE

HERE'S HOW IT WORKS...

Each task in your program is worth a set number of standard hours of credit toward a grade. For example, a particular task may be worth 12 standard hours of credit. When you successfully complete the task, you get 12 hours of credit toward your grade—no matter how many or how few hours it actually took you to attain the task. Remember this point! It's basic to understanding the grading system.

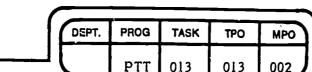

If you are a full-time day student, you receive instruction 5 hours a day, 5 days a week for a 6-week grading period, or 150 hours $(5 \times 5 \times 6 = 150)$. In this case you will be held responsible for accomplishing 150 hours' worth of learning.

If you are a part-time student in the vocational shop because you are out for one or more academic classes or attend the Individualized Manpower Training System (IMTS) program, you will be receiving instruction for less than 150 hours, let's say 130. In such a case, you would be held responsible for accomplishing 130 hours' worth of learning.

A CASE HISTORY or... How Tom Clark, a Typical Ridge Student, Got His Grades

Tom is a full-time adult student enrolled at Ridge in Automotive Mechanics. He is also attending IMTS to improve his math skills. Here are the steps Tom took in planning his program. You will see how he ultimately obtained his grades.

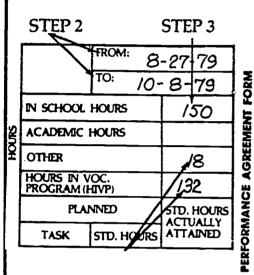

STEP 1. Tom and his instructor sat down at the beginning of the grading period to plan together the tasks that Tom would agree to attain during the grading period. The instructor gave Tom a student performance agreement form—the official form that students at Ridge are required to till out each grading period for the purpose of planning their work and figuring their grades. (See the sample student performance agreement form on the next page.)

013-002-003 (Continued)

STEP 2 The dates covered by this grading period were entered in the FROM and TO spaces of the form

STEP 4

STUDENT

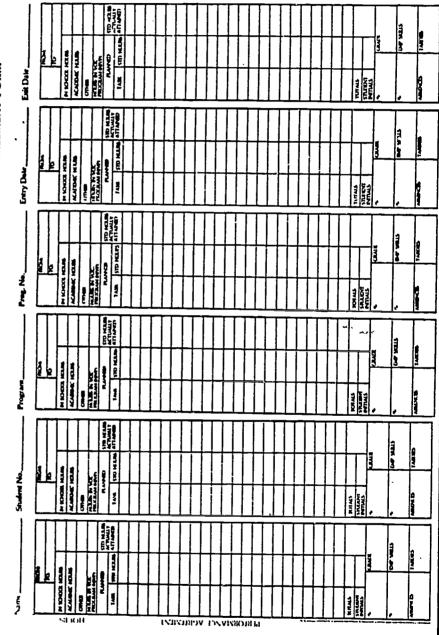

CENTER

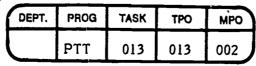

STEP 3 The total number of hours that Tom would be attending was entered in the IN SCHOOL HOURS space.

STEP 4 The number of hours Tom would be away from his vocational program was entered in the OTHER space. This number was subtracted from IN SCHOOL HOURS to obtain the number of HOURS IN VOC. PROGRAM (HIVP). Tont-planned to be in IMTS 18 hours during this grading period, so 150-18=132. From this calculation—the HIVP—we learn that Tom would be held responsible for 132 hours worth of learning during the first grading period.

STEP 5 Since he would be responsible for 132 hours of learning. Tom and his instructor agreed on a list of tasks Tom would attain that had a total of at least 132 standard hours.

- a. They selected the task numbers and standard hours directly from the program task listings and entered them on the student performance agreement form. See the example to the right,)
- b. The standard hours for these tasks were totaled, and were seen to exceed the HIVP minimum required. Had they been less more tasks would have needed to be added.
- c. Tom initialed the form to show that he was aware of what was expected of him during this grading period.

ح	STUDENT INITIALS	1c		

Tom and his instructor could have added or removed tasks from this list at any time during the grading period if they wanted to. Notice that work assignments not on the program task listing (like brake job) can be planned. Just remember you must agree to as many standard hours of work as you plan to be spending in the vocational program (HIVP)!

STEP 6 As the weeks progressed and Tom successfully attained task A-01 by completing the written test and the performance test, his instructor initialed and dated the space on the performance agreement to the right of task A-01. Each time Tom successfully attained a task, his instructor initialed and dated the appropriate space.

If you feel that you can pass the performance test on any of the program tasks based on your previous expensence, ask the in-

structor to give you the test. If you demonstrate competency, you will receive the standard hours assigned to that task without having to go through all the learning activities. If you do not demonstrate competency, you will be expected to go through the learning guides as usual.

STEP 7 At the end of the grading period, Tom and his instructor sat down to figure Tom's grade. They added up the total standard hours for those tasks attained. The instructor included 5 hours for C-03 during the grading period for a total of 109 hours.

Notice that Tom actually attained tasks A-01, 02, 03, B-01 02 04 05 C-01, and did a brake job. Also natice that Tom completed a substantial part of task C-03 and got 5 hours credit toward his grade. For edd not complete tasks C-10 and D-03

٠,,	GRAD	E .						

These hours were the standard hours assigned to each task taken from the program task listing, and not the time spent in attaining them that Tom recorded on his time card.

STEP 8 Tom and his instructor converted the standard hours that Tom actually attained into a percentage. The percentage reflects the proportion of hours attained (109) to the hours in the vocational program (132). To obtain the percentage, they divided the ACTUAL TASKS ATTAINED by the HIVP:

To see whether he obtained a satisfactory of the stooply concluded the Poll-County grading scale. A satisfactory goods is 65% or above.

Polk County Grading Scale

A (93 - 100%) Superior

B (85-92%) Above Average

C (73-84%) Average

D (65-72%) Below Average

F (0-64%) Failure

Tom saw that his 83% was a satisfactory grade. Had Tom been a high school student, his grade would have been a C.

The top grade attainable is 100%, but additional tasks beyond the 100% completed during the grading period will be applied toward early exit from the program. These extra hours cannot be used in the computation of the next grading period. Adults who complete all tasks in the program are able to exit early, ready to enter the job market. High school students who are still attached to their home high school until graduation may exit early from their vocational class through the Industrial Cooperative Education (ICE) program, provided they have completed all their academic requirements.

EMPLOYABILITY SKILLS

You are graded at Ridge not only on your attainment of tasks, but also on your performance of the employability skills listed below. The instructors and advisory committee members agree that these 14 items are an important aspect of a vocational student's preparation. The lack of these skills is often the reason why workers lose their jobs.

- 1. Reports on time.
- 2. Attends school daily.
- 3. Uses authorized equipment and supplies.
- 4. Avoids wasting materials and time.
- 5. Returns tools usable and in place.
- 6. Dresses as required by policy.
- 7. Keeps accurate records.
- 8. Works only on assigned tasks.
- 9. Leaves work area clean and orderly.
- 10. Follows safety practices.
- 11. Accepts supervision in a positive manner.
- 12. Works cooperatively with others.
- 13. Avoids interfering with others.
- 14. Stays in authorized areas.

Each grading period students will start with 193 points and will be marked down as they content violations of the skills on the list. Instructors will keep a reporting sheet on each

student's employability skills. The grade will be the number of remaining points after all the points have been deducted for undesirable be-

havior. Ridge has individualized learning materials on employability and complementary skills available to the student.

Editor's Note:

In the SACC and Ridge grading systems, students working at an average rate receive an "A" along with the faster students. These systems highly skew the grades to "As" and "Bs". These systems are highly defensible, but perhaps a better system might be to make the average equal a "C" grade. Under the proposed system and using the SACC example of 76 hours for an 80 hour grading period, the grading scale would be as follows:

Grading Scale per Hours	From SACC Grading Scale
A = 87	(1.15 X 76)
B = 81	(1.07 X 76)
C = 76	
D = 68	(.89 X 76)

DEPT.	PROG	TASK	TPO	мРО
	PTT	013	013	002

013-002-003 (Continued)

In addition, it should be pointed out that in the SACC system, daily performance points are used to determine a student's grade, while the Ridge system does not combine tasks completed with employability items. Dr. Bill Blank maintains that those who "goof off" or are absent will earn the appropriate letter grade and, therefore, as educators, we need not average the employability items with the tasks mastered.

CRITERION EXAM

TASK # 013

DIRECTIONS:

THE PURPOSE OF THIS EXAM IS TO DETERMINE WHETHER OR NOT YOU HAVE UNDERSTOOD THE INFORMATION ON developing a grading system and assigning grades.

Each of the questions or incomplete statements below is followed by several words, phrases, or a series of numbers. Choose the one which best answers the question or completes the statement correctly. Place the letter associated with that choice (A, B, C or D) in the numbered blank space on your ANSWER SHEET. DO NOT WRITE ON THIS TEST! To master this exam you must answer 13 out of 14 items correctly, (93 7).
