#### **ABSTRACT**

In response to the increased emphasis on parent involvement in schools, the Parent Involvement in Education Project (PIEP) conducted a comprehensive six-year study of the attitudes and current practices of teacher educators, teachers, principals, parents, and school administrators in a six state region (Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas). This final report in the study describes a survey questionnaire distributed to over 1,000 parents in New Orleans, Dallas, San Antonio, and Houston. The previous parent survey (1982) did not obtain sufficient response from urban populations to provide a complete information base. Survey results support previous findings about parents' involvement and interest in educational matters. In addition, the report recommends actions for both parents and educators to increase and sustain parent involvement. Contents covered in the report include the following: background information; project plan; major activities and accomplishments; major conclusions and recommendations; significance of project accomplishments; deliverables; selected references; and attachments. Included in the attachments is a sample copy of the parent involvement questionnaire as well as extensive tables summarizing project data. (DST)

#### **ABSTRACT**

Parent involvement in the education of children school is being touted as a major component of reforms to improve schools and education. Despite this, there is not widespread information about what parent involvement embodies from the perspectives parents and educators. This lack of information has not diminished the calls for more involvement in the education, but has new questions raised concerning how how to do this.

This report describes our expanded parent survey conducted to help fill this gap. The survey was conducted in four large urban areas: New Orleans, Dallas, San Antonio, and Houston. The study concentrated in these cities because of a low response from large-size city parents previously surveyed. A total of 3103 parents (73.8%) returned completed questionnaires.

Survey results clearly support previous findings that (1) parents are very interested in participating in education; (2) parents feel teachers need training for parent involvement; (3) parents are interested in involvement with educational decision-making; (4) parents' involvement interests do not correspond to the ways they participate or are allowed to be involved (5) parents' interests in involvement with school and educational matters differs from how educators see such involvement; (6) there are clearly defined areas of involvement for parents and educators to initiate or expand upon; (7) there are other areas that could use parent involvement, but need more dialogue between parents and educators to occur.

Based upon results, a set of recommendations for parents and educators to consider then employ to increase and sustain parent involvement. These research-based recommendations should enhance (1) parents involvement in schools as well as education; (2) the partnership between parents and educators; and (3) both the quality as well as the effectiveness of educational efforts.

#### **ACKNOWLEDGEMENTS**

The Parent Involvement In Education Project expresses its sincere appreciation to the state and local PTA officials as well as building principals of participating schools who assisted in the arrangements for conducting our survey. We are particularly grateful to all of the parents who helped us by taking part in the survey. Their responses allowed us to strengthen the project's parent involvement data base and more accurately describe parents' feelings.

PIEP deeply appreciates the valuable contributions of its staff to help make each effort a successful one. Susan Deason was untiring in her efforts to ensure that travel arrangements, scheduled appointments, activity/product deadlines, general coordination of division office work and reproduction/dissemination of materials were done in a most efficient and timely manner. Sylvia Lewis, on several occasions, lent valuable assistance with project efforts that was deeply appreciated.

A special "thank you" is extended to Preston C. Kronkosky, David A. Wilson and other SEDL staff for their support, encouragement and participation regarding project activities.

#### A. INTRODUCTION

#### Al. <u>Overview</u>

Parent involvement in the education of their children both at home and at school is a key aspect of efforts to reform schools as well as to increase educational excellence. Parents and educators have equally important roles in the education of learners. To effectively carryout these roles, there must be close communication and collaboration between the two groups. In doing so, their concerted efforts will help ensure quality education, effectiveness of schools, and higher academic achievement.

Many of the recent educational reform measures have explicitly indicated what steps should be taken to improve our schools at the state and local levels. The enacted reforms call for fundamental changes in how basic educational experiences are provided for students and for higher standards regarding what students are expected to know, understand, and be able to do. For this to be accomplished, all of those involved in the educational precess have been challenged and required to create more viable atmospheres and/or conditions where maximum learning success can occur.

It has become increasingly clear that educators cannot accomplish the school/education reforms by themselves. There is a need for resources beyond those that educators have traditionally employed. The need expanded resources encompasses those that are not only human but material and financial as well. Although states have legislated mandates to increase the educational resource base, those mandates still fall short of what is needed to improve the caliber of desired schooling. As a result, educators are turning to sources for assistance that they have not fully used before.

One of the resources educators are calling upon is parents of the children in schools. The call to parents is not necessarily a new one, but it appears to be a different kind of appeal for help. Historically, parents have been involved in the education of their children. For the most part, this involvement has been limited to support of school educational efforts or activities. Most parents have limited their involvement to those roles or areas specified by educators. Some have taken the initiative to become more broadly involved, while others, for a variety of reasons, have not been involved at all. As a result, the heightened appeal from educators to parents has produced a mixed response but seldom at the level educators believe they need for improving schools.

The fact that parents appear to have not responded to the appeals of educators for more school involvement is not indicative of their interest in improving schools and education. More importantly, it is the school milieu that has the more profound effect on parents' involvement with the education of their children. In particular, this includes school atmosphere, school staff attitudes toward parent involvement, family/community variables, kinds of parent involvement opportunities available, district attitudes about parent involvement,

and parents' perceptions of schools as well as school staff. More needs to be known about these factors so that prent responses to the call for increased involvement from educators can be better understood.

SEDL's Parent Involvement In Education Project (PIEP) has conducted a series of surveys to obtain more information about different aspects of parent involvement in education from the perspectives of key stakeholder groups. Parents, teachers, principals, teacher educators, school administrators, and state education agency officials are the groups with which the surveys were conducted. The PIEP was interested in not only obtaining viewpoints about parent involvement from these stakeholders but also wanted to examine the similarities and differences of such feelings among them. This information will not only be useful in providing important parent involvement insights from different perspectives but also can serve as the basis for developing strategies to enhance the effectiveness of parent involvement in education.

Further, the insights provided by survey participants can underpin the development of ways to train elementary teachers and administrators for parent involvement. The three valuable uses of the survey data have aided the PIEP to become an important resource for those interested in or locking for methods of improving schools and education through parent involvement.

In order to ensure that the survey included a diversity of participants from the educational community in SEDL's region, this year's survey focused on parents in the larger cities of the six states. A population of 500,000 or more based upon the 1980 Census figures was used to designate a city for inclusion. The previous parent survey (1982) did not obtain enough responses from parents in these kinds of cities. PIEP staff could not speak with as much certainty about parent opinions concerning parent involvement without insights from parents in these locations. Having data from parents in large size cities increases the comprehensiveness of the parent involvement information base and the extent to which it has practical application for various school/community settings.

## A.2 Operational Definitions

For clarity, the following operational definitions are provided:

- 1. Parent Involvement any of a variety of activities that allow parents to participate in the educational process at home or in school, such as information exchange, decision sharing, volunteer services for schools, home tutoring/teaching, and child advocacy.
- Preservice Training preparation of students in teacher training programs, preparation of prospective teachers.
- 3. <u>Inservice Training</u> extended preparation of teachers employed in schools.

- 4. Stakeholders those persons most likely to be involved in parent involvement efforts (e.g., parents, teachers, principals, school board members, superintendents.
- 5. <u>Home Tutor Role</u> parents helping their own children at home with educational activities or school assignments.
- 6. Audience Role parents receiving information about their child's progress or about the school. Parents may be asked to come to the school for special events (e.g., school play, special program, etc.).
- 7. School Program Supporter Role parents involved in comingto the school to assist in events; for example, chaperoning a party or field trip, taking tickets at a fund-raising dinner, or such activities.
- 8. Co-Learner Role parents involved in workshops where they and school staff learn about child development or other topics related to education.
- 9. Paid School Staff Role parents are employed in the school as part of the school's paid staff (e.g., classroom aides, assistant teachers, parent educators, etc.).
- 10. Advocate Role parents serve as activists or spokespersons on issues regarding school policies, services for their own child, or community concerns related to the schools.
- 11. Decision-Maker Role parents involved as co-equals with school staff in either educational decisions or decisions relating to governance of the school.
- 12. <u>SEA Officials</u> persons in state education agencies identified as having program responsibility related to some aspect of parent involvement (e.g., director of federal programs, etc.).
- 13. LEA Officials persons in local education agencies identified as having program responsibility for some aspect of parent involvement training (e.g. inservice education directors).
- 14. IHE Officials persons in institutions of higher education identified as having program responsibility in some aspect of parent involvement training (e.g., chairperson of elementary education department).

#### B1. Previous Work

## a. Summary of Goals, Objectives, and Problems

In response to the increased emphasis on parent involvement in schools, the Parent Involvement in Education Project (PIEP) has conducted a comprehensive six-year study of the attitudes and current practices of teacher educators, teachers, principals, parents, and school administrators in SEDL's six state region (Arkansas, Louisiana, Mississippi, New Mexico, Oklahoma, and Texas). A major assumption of this study was that an increase in parent involvement would also increase the job demands on teachers. In addition to their duties related to classroom instruction, this expanded role focusing on parent involvement would require teachers to increase their interaction with parents. In order to determine whether and/or how teacher training should be changed to reflect this larger professional role, PIEP surveyed each of the stakeholder groups.

Year One: During the first year of the study, 575 professors in colleges of education were asked about their attitudes towards parent involvement and about their current practices in training teachers how to work with parents. The results of this survey indicated that teacher educators favored the general idea of parent involvement and thought teachers should receive training focused on working with parents. However, there was no clear consensus either about the most appropriate ways for parents to participate in the schools, or about the best methods of preparing teachers to work with parents.

Year Two: In the second year of the study, survey efforts focused on asking 873 elementary school teachers and 729 elementary school principals about their attitudes towards specific parent involvement activities in their schools. Both teachers and principals were also asked to make recommendations about training teachers to work with parents. The results of this survey indicated that teachers and principals had strong, favorable attitudes toward the value and importance of parent involvement. However, their descriptions of parent involvement activities revealed that their schools did not sponsor them in a wide variety.

Year Three: The fourth survey in the series focused on the parents themselves. More than 2000 parents were asked questions about attitudes and current practices in parent involvement, similar to the questions used with teachers and principals. Instead of questions about teacher training, parents were asked how schools might improve their parent involvement efforts. The results of this survey indicated that parents had very positive attitudes toward parent involvement and for increasing parent involvement. The responses of parents regarding their own participation in parent involvement activities corresponded closely with the description of current school practices obtained from teachers and principals. The overall responses from parents showed that there was a disparity between parents' high level of interest and their low level of actual participation.

Year Four: In the next three surveys, school governance persons were asked about their attitudes and current practices regarding parent involvement. Respondents included 1200 school superintendents, 664 school board presidents, and 30 state education agency officials. Respondents were in strong agreement about the importance of parent involvement, and they listed parent involvement practices similar to the other groups surveyed. School governance officials also supported teacher training in parent involvement.

Year Five: The fifth year's work focused on reviewing the literature on training teachers in parent involvement, asking experts with experience in parent involvement for their suggestions about training teachers for parent involvement, and developing a set of guidelines and strategies for training teachers in parent involvement. The guidelines and strategies were based on the research of the previous four years and used the recommendations of the key stakeholders (teacher educators, teachers, principals, parents, and school governance officials) in the region. Project staff also conducted an assessment of the suitability of the guidelines and strategies for use by teacher educators/inservice directors in training teachers to involve parents in education. The refined version of the guidelines and strategies was then disseminated to LEA's, IEA's, SEA's, and IHE's in SEDL's six-state region.

#### b. Summary of Major Findings

(1) Attitudes. Subjects in all the surveys were asked to indicate the extent to which they agreed or disagreed with a set of statements about parent involvement. Overall, a majority of the teacher educators were favorable in their responses to the general concept of parent involvement. In particular, they agreed strongest that (a) parent involvement in all school matters needs increasing, (b) teachers need extra training for parent involvement, (c) teachers should confer with parents about home life, (d) parents are usually cooperative with teachers, and (e) parents would help children more at home if they knew what to do.

Teacher educators strongly disagreed that (a) parents wanting involvement should get a college degree, (b) teachers are too overburdened to work with parents, (c) involving low-income parents is unrealistic, (d) training teachers for parent involvement should not be an undergraduate priority, and (e) parents do more harm than good by helping children with school work.

Principals and teachers also were positive in their general response to the importance and value of parent involvement. The majority were in strong agreement with (a) teachers providing parents with ideas to help children at home with school work, (b) teachers taking on too many parental responsibilities, (c) principals providing teachers with parent involvement guidelines, (d) involving teachers in school policy decisions and (e) requiring a parent involvement course for undergraduates in elementary education.

The <u>strongest disagreements</u> by principals and teachers were expressed with regard to statements about (a) teachers being too overburdened to work with parents, (b) teachers <u>not</u> needing to be trained for parent involvement, (c) teachers <u>not</u> conferring with parents about children's home life, (d) parents evaluating teachers, and (e) parents evaluating principals.

A majority of parents <u>agreed strongest</u> with such parent involvement ideas as (a) making sure their children do homework, (c) feeling at ease during school visitations, (d) taking responsibility for getting involved at school, and (e) wanting teachers to send more information home about classroom activities.

The strongest disagreement expressed by most parents was toward the ideas that (a) they have little to do with their children's school success, (b) they do not have time for involvement with school activities, (c) teachers are too busy to also work with parents, (d) homework consumes too much family time, and (e) they are not trained enough to help make school decisions.

Among the school governance persons (superintendents, board presidents, and SEA officials) surveyed, their strongest agreement regarding parent involvement in general was toward (a) teachers providing parents with ideas about helping children with school assignments, (b) teachers considering working with parents as part of their job, (c) including teachers in curriculum and instruction decisions, and (d) principals providing teachers with suggestions for working with parents.

Superintendents strongly agreed that parents need training before they are involved in school decision-making. Board presidents strongly agreed with parents taking the initiative for getting involved in schools. And, SEA officials voiced stronger agreement for school districts providing principals and teachers with guidelines for parent involvement.

Superintendents, board presidents, and SEA officials were unanimous in their <u>strong disagreement</u> with having (a) parent involvement in school administrative decisions, (b) parent involvement with either teacher or principal evaluation, (c) parent involvement only occurring through organizations, like PTA, and (d) parent involvement having little effect on their children's academic success.

(2) <u>Decisions</u>. Parents were asked to indicate the extent to which they had an interest in being involved with selected school decisions. Teachers, teacher educators, superintendents, board presidents, and SEA officials were asked to what extent it would be useful to have parents' input regarding these decisions. With the exceptions of teacher educators, a majority of all groups most favored having parents involved in such decisions as (1) amount of homework assigned their children, and (2) placing their children in special education. Teacher educators, along with teachers, principals, and school governance persons, indicated that it would be

most useful to involve parents in school desegregation/integration plans. However, parents <u>did not</u> indicate that this was a high interest area for their involvement.

A majority of the parents, superintendents, board presidents, and SEA officials considered it most useful to have parents involved in decisions about evaluating how well their children are learning and about disciplining of their own children. Neither teacher educators, teachers, nor principals viewed such involvement by parents as being useful. Teachers and principals indicated it was more useful to involve parents with decisions concerning (a) whether family problems are affecting school performance and (b) how to provide sex role instruction as well as sex education.

Participation in decisions about the selection of textbooks and other learning materials was of most interest to parents also but not considered useful by most of the other groups surveyed. Teacher educators indicated that parents should have input on such decisions as (a) multicultural/bilingual emphasis, (b) curriculum subject matter, and (c) setting student promotion/retention standards, but not final authority. Rather, teacher educators considered it most useful to have parents make final decisions only regarding whether family problems are affecting school performance.

Decisions with respect to the hiring/firing of school staff were those most parents were <u>least interested</u> in being involved with and most educators indicated this as one of the <u>least useful</u> decisions with which parents should be involved. Among other decisions teachers and principals also considered <u>least useful</u> for parents to be involved in were (a) assignments of <u>teachers in schools</u>, (b) evaluating teacher performance, and (c) selecting teaching methods. School governance persons, teachers, and principals indicated it would also be <u>least useful</u> to involve parents in decisions about setting priorities for school budgets.

Selecting teaching materials, deciding on curriculum emphases, helping to evaluate pupils, and selecting teaching methods were <u>least useful</u> areas for parent decision-making according to responses from most school governance persons and teacher educators. A majority of parents also were <u>least interested</u> in being involved with decisions about including <u>more multicultural/bilingual</u> education in education and decisions regarding school desegregation plans and <u>increased</u> sex role teaching.

(3) Roles. Subjects were provided with a list of seven parent involvement roles. Parents were asked to indicate the extent to which they had an interest in participating in such roles. Educators were asked to indicate the importance of having parents take part in these roles. The majority of parents and educators were strongest in their support for such roles as (a) "Audience," (b) "Home Tutor," and (c) "School Program Supporter." The role of least interest or importance, as indicated by parents and educators respectively, was that of "Paid School Staff." Most teachers, principals, superintendents, and board presidents indicated that having parents

in the role of "Advocate" was <u>not too important</u>. However, SEA officials considered this role as being very important, and parents were <u>very interested in such a role</u>.

A majority of the SEA officials, superintendents, and school board presidents consider parents in the roles of "Co-Learner" also as not being important. Teachers and principals indicated a more neutral response overall about the importance of this role. Most parents indicated that they were definitely interested in this kind of role.

A majority of the teachers, principals, superintendents, and board presidents indicated that the role of "Decision-Maker" was not an important one for parents. Conversely, most parents expressed a strong interest for participating in this role. Likewise, most SEA officials viewed this role as being a very important one for parents.

Overall, parents expressed a <u>much higher interest</u> in participating in the roles of "Audience," "Home Tutor," "School Program Supporter," "Advocate," "Co-Learner," and Decision-Maker" than educators considered such involvement roles as being important. SEA officials tended to indicate <u>more importance</u> for these roles for parents than did the other educator groups.

(4) Activities (Current Practices). A list of parent involvement activities was provided, and teachers, principals, superintendents, and board presidents were asked to indicate how typical these activities were of their schools. Parents had to indicate those they participated in most often. SEA officials indicated which were most likely to be a focus of the technical assistance they offered to school districts.

"Attending school activities" (e.g. open house), "Attending parent-teacher conferences," and "Helping children with school homework" were the activities most typical as indicated by educators, most likely to be offered as technical assistance according to SEA officials, and most often participated in as reported by parents. Teachers, principals, superintendents, and board presidents indicated that "Chaperoning for school activities" and "Holding school support fundraisers" (e.g. pot-luck suppers) were also common activities but neither parents nor SEA officials indicated the same.

Parents also considered "Visiting the schools" and "Taking part in PTA meetings" as most typical of the activities in which they participate. (It should be noted that parents completed their questionnaires at school PTA meetings). None of the educator groups reported these as being very typical. SEA officials also were most likely to offer technical assistance for "Getting parents to identify school needs" and "Getting parents to assist with establishing school goals." However, parents did not indicate these as being activities they most often take part in while educators did not view such activities as being most typical in their schools.

"Hiring/firing of school staff," "Evaluation of School Staff," "Planning curriculum and instruction activities," and "Assisting with school budgets" were the activities reported to be least typical in schools, least often participated in by parents, and least offered as topics of technical assistance by SEA officials. A majority of teachers and principals indicated the "Participation in pupil evaluation" was also least typical in their schools. Most superintendents and board presidents indicated that "Parent participation in home tutor training" was least likely to be offered in their schools.

(5) Other Findings of Interest. - Teacher Training for Parent Involvement: A majority of the parents and educators strongly agreed that not only should teachers be trained for parent involvement, but also that, where possible, the training should be in a course at the undergraduate level. While most teacher educators indicated that they most often dealt with parent involvement through such activities as role playing, laboratory experiences, participation in parent-teacher conferences, and having student teachers work with parent volunteers, most teachers and principals indicated that more is needed. This would include (1) talking with inservice teachers about parent involvement, (2) involvement in school activities with parents, (3) being involved with parent organizations, and (4) participation in principal-teacher-parent conferences.

Responsibility for Parent Involvement: A majority of educators and parents strongly agreed that teachers need to provide parents with ideas about helping children with school work at home and that principals should give teachers guidelines for parent involvement. However, school governance persons agreed most with principals, not teachers, taking the initiative to get parents involved. However, most principals agreed that parents should take the initiative to become involved.

A majority of the parents strongly agreed that they should be responsible for getting more involved in their children's schools. Most superintendents and SEA officials strongly agreed that school districts need to provide teachers and principals with parent involvement guidelines. However, neither superintendents, board presidents, nor SEA officials wanted state education agencies to provide parent involvement guidelines for school districts. Finally, most teachers saw increasing the involvement of parents in schools as the principal's responsibility.

Existence of Parent Involvement Policies: School governing officials were asked to indicate to what extent written parent involvement policies existed in their districts or agencies. A majority of these officials indicated that written parent involvement policies were available mostly regarding: (1) placement of children in special education, (2) informing parents about children's violation of the district/school's discipline policy, and (3) participating in some decisions regarding certain educational programs such as Bilingual Education, Follow Through, Head Start, etc.

Most officials indicated that few, if any, written parent involvement policies existed with respect to such areas as (1) teacher home visits, (2) participation in school budget matters, (3) participation in development of district handbook or school guide, (4) school administration, (5) curriculum and instruction activities, (6) development of promotion standards, and (7) parents visiting their children's schools.

Parent Involvement at Secondary School Level: Parents were asked to indicate the extent of their agreement with 10 items offered as reasons why parents become less involved at the secondary school level. A majority of the parents strongly agreed that the reasons for decreased participation are (1) school staff not asking them to be involved as much, (2) they (parents) not having a good understanding of the course work, (3) not as many conferencing opportunities, and (4) not as many PTA activities. Neither the long distances between homes and schools nor having lots of teachers to talk with were seen as reasons parents become less involved at this level.

Improving Parent Involvement at Elementary Level: Parents were given a list of 10 suggestions and asked to indicate the extent to which these would work in getting more parents involved. Among the suggestions that a majority of the parents indicated would work include (1) sending more parent involvement information home, (2) making parents feel more welcome in schools, (3) helping parents better understand subjects being taught, and (4) having more informal meetings where staff and parents can get to know each other better, and (5) asking parents how they would like to become involved.

## C. Summary of Recommendations and Implications

Parent involvement, overall, appears to be acceptable to most parents and educators. The results show that parents have a high degree of interest for being involved and that educators, generally, consider it useful to have parents involved in education. However, a closer examination of the findings reveals that educators and parents have distinctly different views about certain aspects of parent involvement. These differences represent barriers that can hinder the effective involvement of parents and educators as partners in education.

Educators appear to be more supportive of the traditional ways that parents have participated in children's education both at home and at school. This includes parents mainly receiving information sent home by the school, supporting or taking part in school activities prepared by school staff, and attempting to help children with their homework. On the other hand, while parents indicate a strong interest for being involved in these ways, they also are interested in helping with school governance matters, learning more about education jointly with educators, and serving as advocates for current educational needs, issues, or concerns.

The involvement interests of parents appear to extend beyond the boundaries of participation that educators indicate would be most useful. It seems that parents and educators have dissimilar views about the meaning of parent involvement in education. Although there are some mutual agreements about certain aspects of parent involvement acceptable to both groups, parents appear to be interested in much broader involvement than the more narrowly defined areas that educators consider as being useful.

In order for parent involvement to become more acceptable, viable, and effective, a clearer definition is necessary—one that all can agree upon. Otherwise, fundamental barriers will stand in the way of successful parent involvement. Thus, it appears that there needs to be a consensus concerning the definition and scope of parent involvement efforts between parents and educators before these can become more integral to the educational system and its processes. Such concordance is key to developing more of a partnership between homes and schools in dealing with the difficult issues that education faces today and tomorrow.

The lack of agreement between parents and educators regarding parent involvement's meaning appear to stem from the fact that neither group has had much formal training in the area of parent involvement. Both of the groups indicated that there is a definite need for teachers to be trained for parent involvement. It also seems that parents, other school staff, administrators, and even teacher educators might need such training for parent involvement to be most effective. Additional knowledge, understandings, skills, and experiences should enhance not only broader acceptance but also a smoother integration of parent involvement into the educational process. The guidelines and strategies developed in this Project to train teachers about parent involvement focus on meeting part of these needs.

Some of the differences in opinions about parent involvement in school governance matters may reflect a fear and/or reluctance on the part of educators (especially teachers, principals, and administrators) to share with parents those roles or activities that, in recent years, have been considered as the sole domain of educators. Further, many teachers appear to desire more of a say in educational matters or decisions. Most administrators appear unwilling to share governance because it may lessen their effectiveness and/or power. As a result, the possibilities of joint decision-making with parents may meet with resistance because educators still appear neither willing to share control nor able to see how, in practice, this might increase the effectiveness and quality of education.

Based upon the more preferred ways educators want parents involved and the ways parent are most interested in being involved, there appears to be a need for change in how parent involvement is perceived. Educators should capitalize on the wider involvement interests of parents and should expand the opportunities for increasing their participation in education. Much of this will

require educators to realize that many parents are far more sophisticated in their knowledge and skills than educators perceive them to be. As such, many parents can take part in more of a variety of roles or activities. To facilitate this broader and more collegial participation, will require attitudinal and perceptual changes on the part of educators as well as systemic changes with respect to the educational enterprise.

Parent involvement cannot be effective if educators continue to see it as an attachment or a supplement to mainstream educational activities. Rather, such involvement must be incorporated into the mainstream of education. The results suggest at least three steps to accomplish this. First, a clear, definitive statement about parent involvement must be developed and issued to all in a school system. Second, viable, written policies to help frame and implement parent involvement efforts must be established. Third, both staff and financial resources to carry out parent involvement activities need to be identified and then designated for such purposes. In doing so, the importance of parent involvement in education will be more evident from the perspectives of educators and parents alike.

The extent to which parent involvement can be improved appears to be directly related also to how "open" educators are to this concept. In addition, developing a broader range of parent involvement activities that are more related to parents' interests and strengths is a most important aspect of revitalizing their participation. Although parents will participate in slightly different ways, this should not deter educators from working with them to develop jointly the framework and components of an effective involvement program. Ultimately, educators will have to realize that the most effective parent involvement program, similar to the most viable educational program, must include participation from the entire school community rather than being limited to the school building.

Parent involvement should be perceived by educators and parents as a more encompassing concept in education. To do this, it appears that parent involvement may need to be framed within the concept of at least four broad domain areas. These would include: (a) public relations, (b) school support/learning, (c) home support/learning. and (d) shared governance. In doing so, parent involvement can become a catalyst, which helps parents influence as well as fully participate in the educational system. Further, such participation experiences will help enable parents to more effectively negotiate through community entities which, in turn can make family life more satisfying and successful. Finally, parent involvement that includes the partnership approach can serve as a useful resource for educators to enhance the effectiveness and success of schools and education.

A review and analysis of results from the survey of the seven parent involvement stakeholder groups has led PIEP to offer the following recommendations as a means of enhancing fuller parent participation in the education of their children at home and at school:

- Parent involvement skills should be taught at both the preservice and inservice elementary teacher training level in a developmental sequence that progresses from learning about the more traditional types of parent involvement where parents are asked to cooperate with school staff, to the types of parent involvement in which school staff provide assistance to parents, and then toward the types where parents and school staff work together essentially as partners in education.
- Preservice elementary teacher education as well as inservice teacher staff development must, as a priority, focus on providing participants with an overview of, or background about, the parent involvement movement as well as providing them with knowledge, understanding, and skills regarding major aspects of parent involvement in education (e.g., the personal, practical, and conceptual frameworks described in the guidelines and strategies).
- Parent involvement must be presented to elementary preservice and inservice/teachers so that it is viewed as an integral part of their preparation, rather than an attachment to it. As such, teachers will need to learn how to enhance teaching and learning success; how to develop better partnerships with parents; how to help develop broader community support for the schools; and how to make cooperation between home and school more synergistic.
- The parent-involvement teacher training sequence needs to address specific knowledge bases related to the various kinds and levels of parent involvement. For example: teachers should be taught the differences between teaching children in the classroom and teaching or working with their adult parents to become more involved as home tutors.
- After preservice and inservice teachers examine and identify their attitudes toward parent involvement, broaden their perspectives concerning the value/impact of parent involvement, and acquire the relevant knowledge and understandings regarding the main kinds of parent involvement, they should be provided practical opportunities or experiences to develop and sharpen skills in working with parents.
- Inservice parent-involvement teacher training--in order to more effectively enhance teachers' knowledge, understandings, skills, attitudes, and motivations for working more collegially with parents--will need to consist of a series of sequenced workshops rather than a one-day, one-time workshop effort.
- o Principals and other administrators must be included in parent involvement training, as they often set the rules and norms in the schools. If they are not aware of the benefits

of parent involvement or are not skilled in working with parents, they may set norms for teachers that discourage them from using the skills or knowledge acquired regarding parent involvement.

- To encourage all school staff in school districts to develop better relations as well as work with parents as partners in education, formal district policies need to be written that clearly spell out the commitment to parent involvement. Responses from our superintendents' and school board presidents' surveys indicate that existence of formal written policies encouraging parent involvement is directly related to increased levels of a variety of parent involvement activities in schools.
- In designing school district parent involvement programs, the various types of parent involvement must be viewed as a developmental sequence, from the teachers' and the parents' point of view. Increasing parent involvement in the role of audience requires comparatively less effort and skill on the part of both teachers and parents than would parent involvement as home tutors. Therefore, interests, skill levels, and estimates of available time, especially on the part of parents, must be considered when deciding which types of parent involvement are to be the focus of program efforts.
- School district, building, and/or classroom parent-involvement efforts need to establish program activities based on the premise that parents are as equally important to children's academic success as educators. This will require giving parents more of a participatory role in all educational matters.
- Parents need to be more fully involved at all levels of the educational system so that they can (a) strengthen the capacity of their families to establish appropriate learning environments, (b) provide meaningful home learning experiences, and (c) support/reinforce school learning activities.
- Parents should be provided with more educational information, more opportunities to share their insights/concerns, and more training, as needed, for the roles with which they can or wish to be involved in education. This can serve as a means of strengthening parents' ability and status as partners in the education of their children.
- Parents must be provided opportunities, through parent involvement, to interact with, be informed about, referred to, and learn how to deal with those agencies, organizations, resources, or networks available in their communities. This should enhance their abilities to arrange

for and/or care for family needs in a more self-sufficient and efficient manner.

#### B2. Need for Present Work

#### a. Need for Additional Survey Data

A recent review of parent involvement programs (Collins, Moles, and Cross, 1982) stresses the importance of parent involvement data from large cities because (1) they commonly have to deal with great numbers of students from low-income families and from more diverse ethnic backgrounds, (2) they may face more difficulties in enrolling these parents in parent-school programs, and (3) they have more resources available to develop and maintain more elaborate, innovative home-school programs. In summary, the parents in large cities have a perspective on parent involvement efforts that cannot be obtained from parents in smaller towns.

The survey data collected by PIEP from 1980-84 support this contention about the unique nature of parent involvement efforts in the large cities. These data indicate that parent involvement efforts in these urban schools include a wider spectrum of parent activities than efforts in smaller cities. For example, respondents from urban schools more often reported having parents participate in organizing parent volunteer programs and publishing a newsletter to keep parents informed. In summary, there are more different kind of parent activities serving a wider variety of purposes in urban schools. In addition, large urban schools tend to have greater problems and access to more resources. Therefore, they often develop parent involvement programs that serve as models and are later adapted for use in the smaller suburban and rural schools.

When the Project conducted its survey of parents, a stratified random sampling procedure was used to obtain comparable data from parents in small (15,000 to 50,000), mid-size (150,000-499,999), and large (more than 500,000) cities in SEDL's region. The rate of response was unusually high from parents in small cities (22%). This uneven rate of response produced a survey sample in which only 14.5% of the sample were parents from large cities while 32.6% were from mid-size cities and 52.9% were from small cities.

The characteristics of the sample in the parent survey do not correspond with the distribution of the population in SEDL's region. Although a considerable proportion of the population in these states live in small cities, 1980 census data indicate that an estimated 79.6% of the population in Texas lived in "urban settings," and that the combined population in the Standard Metropolitan Statistical Areas (SMSAs) of Houston, Dallas-Ft. Worth, and San Antonio accounts for 48.9% of the state's total population. A similar situation exists in Louisiana, where 68.6% of the state population is described as urban, with 28.2% living in the SMSA of New Orleans.

The additional data from parents in large cities will help improve parent involvement in several ways. First of all, it will

provide educators in the schools with more complete information about the attitudes and current practices related to parent involvement of parents in the major urban centers in SEDL's region. This information will be of use to educators in urban areas who are in the process of developing their own parent involvement programs, as it will help them anticipate the response of parents to specific activities that their program emphasizes.

The information is also potentially useful to educators in smaller cities who may decide to organize specific types of parent involvement activities because they seem to be well-received by parents in urban settings. The information about current practices and attitudes of parents will also be useful to teacher training professionals who are trying to help prospective teachers learn how to better work with parents. It will help them to train teachers for situations that they are most likely to encounter in the public schools.

In terms of the Project's data base, the data from the FY85 survey will enable Project staff to make more valid comparisons between the problems of parent involvement in small cities and those in large cities. Because the data base is being used to provide public school educators with recommendations for program design and implementation, the addition of these data from major urban areas will allow Project staff to describe possible differences between the problems of large and of small cities' schools. The additional data will enable staff to move beyond general recommendations and make specific recommendations that may be helpful in urban settings even if they do not apply to the problems in the smaller cities.

In addition, because the data base is being used to develop guidelines and strategies for teacher training, the inclusion of data from the major urban areas is critical if teacher educators hope to prepare teachers for the problems they will actually face when they get to the schools. As a significant proportion of new teachers will be employed by schools in these major urban areas, it is particularly important that Project recommendations be based on data that include those schools.

Finally, because large city schools typically have a higher percentage of students from low socioeconomic status families and from minority families, educators in these schools tend to see the parents of their students as difficult to reach with parent involvement efforts. Additional data from these urban parents will help describe parent involvement in these settings and will help determine whether the lack of participation is due to parent attitudes or due to factors in the school setting or in the parent involvement programs themselves.

#### Need for Collaboration with Other Research Institutions **b**.

During the past five years, the U.S. Department of Education has directly and indirectly sponsored a variety of projects focusing on different aspects of parent involvement in the schools. Federal

contracts created projects that have studied parent involvement in the National Follow Through Program (Gordon, et al, 1978; Olmsted, et al, 1980) as well as in Title I, ESEA, and Title VII Bilingual Programs (Lyons, Robbins, and Smith, 1982). Projects funded through the National Institute of Education at Southwest Educational Development Laboratory have focused on developing a data base that can be used to improve the design of parent involvement efforts and to improve teacher training related to parent involvement.

NIE has also sponsored project work at Appalachia Educational Laboratory (AEL) that has focused on developing materials to train parents for parent involvement in the schools. At the Center for Social Organization of Schools (CSOS), NIE has sponsored research in the public schools that has examined differences between teachers who implement parent involvement activities and those who do not. This research has examined relationships between parent involvement activities and teacher characteristics, school characteristics, student achievement outcomes, and even parent outcomes. In summary, a great deal of work has been done in the area of parent involvement, and the focus on effective schools suggests there vill be even more in the future.

However, there have been relatively few attempts to develop collaborative projects between the various research projects working in this field. Although Project staff have continually reviewed the literature to determine what is being done and have shared research reports with many of these other institutions, they have rarely had opportunities to meet extensively and compare notes with their fellow researchers.

These collaborative activities are needed to increase the exchange of ideas and experience among the various projects. This exchanging of ideas is expected to produce a better understanding of the work being done in parent involvement, to lead to a greater appreciation of the work of other institutions, to produce new ways of conceptualizing the problems in the field, and to reduce the amount of overlap or redundancy across projects.

The exchange of research reports will also make the work of each institution more widely available to educator in all parts of the country. The state-of-the-art report will benefit researchers by increasing their awareness of the contributions of others working in this field, and it will benefit educators by providing them with a quick and efficient way to find what research has learned about improving parent involvement in the public schools. In summary, these collaborative activities are needed to produce benefits for researchers, for teacher educators, for teachers who are working with parents, and for administrators who are responsible for parent involvement programs in the schools.

## c. Need for Dissemination Efforts

During the past 20 years, a consistent criticism of educational research has been that it has failed to bring about needed

improvements in the nation's educational systems. Educators have complained that researchers often look at abstract issues that are not relevant to day-to-day activities in the schools. Researchers have tended to define the problem differently; they suggest that educators and educational administrators are generally unaware of research findings and are simply slow to adopt any new techniques suggested by research.

From the beginning, SEDL's Parent Involvement in Education Project (PIEP) has gathered so gestions from each group—researchers and educators—before conducting surveys. This approach has been intended to help ensure that the questions posed in the surveys are questions of interest to the educators as well as to researchers. To improve educators awareness of research findings, SEDL has consistently disseminated summaries to each of the groups surveyed.

Because the data base created by the PIEP contains information relevant to each phase of the planning and implementation of parent involvement efforts in the schools, it is important to make certain that parents, educators, and teacher trainers are aware of the practical implications of this research. In FY'85, the PIEP needed to disseminate not only the results of the series of surveys, but also the implications of those results in the forms of suggestions and recommendations for teacher training, for changes in educational policies, and for implementing parent involvement programs at the LEA level.

These dissemination efforts are needed to facilitate the work of those in education who are already working to make schools more effective by increasing parent participation. The PIEP's goal has been to provide with research results and information about parent involvement work in other settings so that those working in this area can benefit from the experiences of others and improve the implementation of their own parent involvement efforts. Teacher educators will have research and program information enabling them to design teacher training for parent involvement that is based upon the experience of teachers in the field rather than upon rhetoric or the bureaucratic requirements of particular school districts.

The goal of these dissemination efforts has been to provide assistance to those working to improve schools by increasing parent involvement. Whether they are developing programs in school districts or training teachers to improve their skills in working with parents, the information disseminated will facilitate their efforts by providing an up-to-date view of the techniques and strategies used by others in the field.

#### C. Plan

#### C1. Goals and Objectives

The plan for FY85 was to augment PIEP's data base on parent involvement, to initiate collaborative activities with others conducting research in parent involvement, and to disseminate practical information based upon research and practice to parents, to educators in the public schools, and to those involved in the professional training of teachers.

The following goals and objectives summarize the proposed Project activities for FY'85:

- Goal 1: To strengthen the information data base concerning parent involvement in education at the elementary school level.
- Objective 1.1: To conduct a survey of parents with elementary school-age children at selected sites in four large cities within SEDL's six-state region.
- Objective 1.2: To combine the large city parent involvement data with existing data from medium and small cities in SEDL's region.
- Objective 1.3: To compare the expanded parent data base with data from other stakeholder groups previously surveyed.
- <u>Objective 1.4</u>: To refine, as appropriate, implications and recommendations based upon survey results for training elementary school teachers and for improving parent involvement programs.
- Goal 2: To conduct collaborative efforts with project staff at AEL, CSOS, and Far West Laboratory (FWL), regarding improvement of schools and education through parent involvement.
- Objective 2.1: To share information about results from the survey with colleagues having similar projects at the Appalachia Educational Laboratory, Center for Social Organization of Schools, and the Far West Laboratory for Educational Research and Development.
- Objective 2.2: To make joint presentations at national meetings as a means of further sharing the results of the parent involvement research in addition to the parent involvement training guidelines and strategies.
- Objective 2.3: To prepare a state-of-the-art report that describes research and current practices in parent involvement in public schools.

- Goal 3: To disseminate project results for use by professional and lay groups interested in parent involvement.
- Objective 3.1: To prepare three quarterly reports and one final report for NIE.
- Objective 3.2: To distribute executive summaries of the final report from the expanded parent survey to survey participants as well as to professional/lay individuals, groups, and organizations concerned with parent involvement.
- Objective 3.3: To provide information about the parent involvement training workshop evaluation results to participants as well as other related individuals and organizations.
- Objective 3.4: To prepare written documents for publication in appropriate newsletters, magazines, journals, monographs, and for books concerning parent involvement in education.
- Objective 3.5: To make presentations at local, state, and national meetings as a means of further sharing the results of the parent involvement research and parent involvement training guidelines derived from them.
- Objective 3.6: To assist in facilitation of expanded information exchange and network building among individuals, organizations, and institutions interested in improving schools and education.

#### C2. Key Staff

Susan Deason's major responsibilities include facilitating/coordinating the range of secretarial support services needed for the project. Among these are correspondence preparation; report preparation and mailing; supervision of secretarial staff; arranging staff travel; preparation/submission of travel expense vouchers; responding to telephone, written, or in-person inquiries regarding project matters; acquisition of necessary staff supplies; organization/maintainence of an effective filing system; monitoring designated project/division budget line items; and other duties as assigned.

Dr. Chavkin's major responsibilities include working closely with the Project Director on a variety of project matters. Among these are preparing segments of project reports; identifying, locating, reviewing, synthesizing, and keeping records of relevant resources for the project; organizing data for analysis; assisting in developing data collecting instruments; assisting with gathering project data; conducting analyses of project data; assisting in preparing written reports on data results and conclusions; assist in dissemination of project findings; making presentations regarding project outcomes at major meetings; and assisting in establishing and maintaining parent involvement networks and linkages in SEDL region.

Dr. Williams' major responsibilities are to direct, manage and administer project activities. This includes scheduling of activities to meet project deadlines; providing outlines and other directions for staff about written project documents; coordination of plans/arrangements for data collection; supervising instrument development; assisting with coordination of data analyses; assisting with interpretation of data results; coordination/supervision of the preparation of written discussion of results, conclusions and recommendations; coordinating data gathering efforts; supervising collaboration/dissemination activities; making presentation at major meetings, conferences, etc; assessing performance of staff; monitoring and approving project expenditures; providing general supervision for all project staff; and acting as spokesperson for project efforts.

### D. Major Activities and Accomplishments

## D1. Strengthening the information data base

## a. Conducting the survey of parents in four large cities

After identifying the large cities (populations over 500,000), project staff chose four cities as target sites for administering the parent involvement survey. The four cities chosen were those having a disproportionately low response from parent participants in the previous PIEP parent survey. The cities where either very low or no responses were obtained are as follows: Dallas, Texas; Houston, Texas; New Orleans, Louisiana; and San Antonio, Texas. The PIEP staff worked with state and city PTA officials to make the appropriate local school selections in each city.

The subjects for this survey were parents of elementary schoolage children in each of the four cities. All parents in each elementary school chosen for the survey were invited to participate in the survey. Parents were asked to take part in the survey at a scheduled PTA meeting held at the selected schools. Typically, many of these parents were members of the PTA. However, information about the survey was sent to all parents and their participation was requested.

Extending the selection to all parents addressed two issues raised with respect to the previous parent survey. First, it helped remove some of the bias associated with most of the parents being PTA members. Second, it provided an opportunity for non-PTA and perhaps non-active parents to share their perspectives regarding parent involvement. Approximately 1,400 subjects were sought for participation in the parent survey, or some 350 parents from each city. Attachment A shows the schedule followed in conducting the survey, who the PTA and school principal contacts were, what their addresses and telephone numbers were, the survey dates, and survey times.

The instrument used in this survey is called the Parent Involvement Questionnaire (PIQ). It is the fourth edition of six variations that have been used in previous PIEP surveys. The PIQ is a self-report instrument consisting of 100 closed responses items, and it is divided into seven parts. It was specifically reviewed and revised for the 1985 survey to assure it contained clear directions, was at the sixth-grade reading level and could be compared with the previous surveys (See Attachment  $\underline{B}$ ).

Section I contains statements on general ideas about parent involvement, and parents are asked how much they agree or disagree with each statement. Section II contains school decisions in which parents may be interested in being involved, and parents are asked how interested they are in being involved in each decision. Section III lists seven parent involvement roles, and parents are asked how much interest they have in being involved in each one. Section IV is made up of parent involvement activities, and parents are asked how much they participate in each. Section V offers suggestions for

improving parent involvement in the schools, and parents are asked how well each suggestion would work to increased parent involvement. Part VI lists reasons why parents become less involved in children's education when children enter high school, and parents are asked how much they agree with each reason. Part VII contains demographic items and requires respondents to check the appropriate response for each item or give a short answer.

As in previous versions of the PIQ, a Likert-type response scale is provided for Parts I-VI of the questionnaire. The scale varies in format for the different parts. In Parts I and VI a four-point scale of 1 = Strongly Disagree, 2 = Disagree, 3 = Agree, 4 = Strongly Agree is provided. In Parts II and III a five-point scale of 1 = Definitely Not Interested to 5 = Definitely Interested is used. In Part IV the scale was revised so that respondents first answered how much they took part in this activity. Part VII remained primarily a "check the box" or "short answer" format. In Part V the scale of responses ranges from 1 = Definitely Would Not Work to 5 = Definitely Would Work. The words "not known" were changed to "Don't Know" for clarity.

A total of 1020 completed surveys were collected from the four large-sized city school districts. In addition, there were 43 surveys returned that were less than 80% complete. This made the total of returned surveys 1063. The projected goal for the large-sized city school districts was 1300, which results in a return rate of 75.9%. Attachment C shows the results from each school, each city, and the total returns.

# b. Combining the large city parent involvement data with existing data

The first major task in meeting this objective was to prepare tables that described the expanded parent data base. The tables were organized into categories in order to facilitate the data analyses. These categories are: return rate of sample; characteristics of respondents; statements about parents; parent involvement decisions; parent involvement roles; parent involvement activities; suggestions about parent involvement; reasons why parents become less involved at high school; comparison of interest with participation and secondary analyses.

Exhibit  $\underline{1}$  shows the number and percent of completed surveys in the expanded data base. The addition of 1020 surveys in 1985 has made the return rate for the total survey 73.8% (3103 completed surveys out of a projected goal of 4205).

Exhibits  $\underline{2}$  and  $\underline{3}$  describe the sample in terms of city size and ethnicity. The sample approximates the projected goal of achieving equal representation among large, medium, and small-sized cities in the region. The sample also represents the region in terms of white and minority respondents, with 59% of the sample being white and 41% being minority.

 $\begin{array}{c} {\sf Exhibit} \ \underline{1} \\ \\ {\sf Number \ and \ Percent \ of \ Completed \ Surveys} \\ \\ {\sf Compared \ by \ State} \end{array}$ 

State	Sample Size	Completed Returns	Percent Returned

Size	Completed Returns	Percent Returned
Large	1321	42.6
Medium	680	21.9
Small	1102	35.5
Total	3103	100.0

	Nation	Region	Our Sample
White	73.3	61.9	59.0
finority	26.7	38.1	41.0

Source For National and Regional Data: V.W. Plisko, ed. The Condition of Education, 1984 Edition (Washington, DC: National Center for Educational Statistics, 1984): 18, Table 1.3.

Exhibit 4 is a composite of all the demographic characteristics of the parents in the expanded survey. The results show that 83.6% of those surveyed were PTA members, 84.1% were female, 50.1% were between 30 and 39 years of age, 83.5% were married, and 88% had a high school education or more. Blacks represented 22.6% of the respondents and Hispanics represented 36.8%. The results also showed that 67.8% of the respondents worked part-time or full-time outside of the home and 91.3% of their spouses worked outside of the home. The survey was evenly distributed among family income levels with 35.6% earning less than \$15,000, 26.5% earning between \$15,000-25,000, and 37.9% earning over \$25,000.

Parents' agreement with statements about parent involvement are depicted in Exhibit 5. The statements in Exhibit 5 are arranged in the rank order of strength of agreement with the statement. Overall there was a strong, favorable response to parent involvement in education. The statement "I want to spend time helping my children get the best aducation," received an "agree" or "strongly agree" response from 99.3% of the parents. The statement receiving the least amount of agreement (only 10.6%) was: "I have little to do with my children's success in school." The mean response to each statement was also obtained and appears as Exhibit 6.

Exhibit 7 shows the frequency and rank order of parents' interest in decisions about parent involvement. Fifty percent (50%) or more of the parents expressed interest in 13 of the 1 decisions. More than 80% of the parents expressed interest in four a sions: choosing classroom discipline methods, evaluating how well my children are learning, setting school behavior rules, and the amount of homework assigned. The mean response to each decision can be found in Exhibit 8. Exhibit 9 lists the frequency of interest in all seven roles. More than 90% of the parents expressed interest in the traditional roles of audience, home tutor, and school program supporter. Exhibit 10 presents the mean response to each parent involvement role.

Exhibit 11 shows the frequency and rank order of participation in parent involvement activities. The activities with the highest amount of participation were traditional activities such as going to open house, helping with homework, visiting the school, and going to parent-teacher conferences. More than 82% of the parents participated in PTA meetings. Only 11% of the parents helped to hire or fire teachers and principals. Exhibit 12 shows the mean response to each activity.

Exhibit 13 shows parents' agreement with suggestions about improving parent involvement: All of the suggestions received agreement from more than 82% of the parents. The suggestion receiving the most agreement from parents was that of giving parents more information about children's success in school. Exhibit 14 shows the mean response to each suggestion.

Parents' agreement with reasons why they become less involved at high school is shown in Exhibit  $\underline{15}$ . The top three reasons parents agreed with were: parents may not understand some of the courses

## Characteristics of Responding Parents

### Frequency and Rank Order of Agreement with Reasons Why Parents Become Less Involved at High School

Reasons (Total N=3103)a	Frequency of Agree- ment <sup>b</sup>	Adjusted Frequency (Per- cent) <sup>C</sup>	Rá
Parents may not understand some of the courses taken in high school. (N=2957)	2406	81.4	 
Teachers don't ask parents to be involved in school as much. (N=2917)	2221	76.1	2
There are not as many parent/teacher conferences. (N=2844)  There are not as many DIA activities 6	1997	70.2	3
There are not as many PTA activities for high school parents. (N=2829)	1948	68.9	4
Children do not want their parents involved when they get to high school. (N=2912)	1702	58.4	5
High school principals do not encourage parent involvement in the school. (N=2790)	1589	57.0	6
Parents can't leave smaller children alone at home. (N=2905)	1423	49.0	
Parents do not have time to be involved in school activities and work at the same time. (N=2933)	1268	43.2	7 8
There are too many teachers to talk to. (N=2935) The schools are too far away. (N=2942)	880	30.0	9
(N=2942)	637	21.7	10
Number of parents responding to the individual item.			

bFrequency of Agreement = The number of parents agreeing or strongly agreeing with the reason.

CAdjusted Frequency = The percent of parents responding favorably to the individual reason with missing data

taken in high school; teachers don't ask parents to be involved in school as much; and there are not as many parent/teacher conferences. Exhibit 16 shows the mean response to each reason.

In order to understand more about the expanded survey, comparisons were made between levels of interest in parent involvement roles and parents' reports of participation in related parent involvement activities. Exhibit 17 and Exhibit 18 show these comparisons. The most striking discrepancy between interest and participation appears in the role of decision-maker where 74.6% of the parents express interest in decision-making activities but less then 30% of the parents report any kind of participation in such decision-making.

Secondary analyses of the expanded survey were also conducted. Frequencies, adjusted frequencies, rank orders, and means were obtained by breaking down the survey into groups according to the following demographic characteristics: gender, ethnicity, educational level, marital status, family work status, city size, age, number of children, income, and year of survey. Tables were prepared to show the breakdowns using percentage and mean comparisons for each demographic variable. These tables are included as Attachment D through Attachment W.

To interpret these comparisons, a significance level of p<.001 was used to identify significant differences, and the eta square statistic was used as an estimate of the amount of variance that could be accounted for the difference. Attachment  $\underline{X}$  shows the breakdown of item responses according to each demographic variable. Income, ethnicity, educational level, and city size breakdowns contained the greatest number of items that varied according to the demographic variable, although there were items that varied according to each demographic variable.

Examples of items that varied according to income level are:

Helping to hire or fire teachers and principals (eta2=.18);

I have little to do with my children's success in school  $(eta^2=.15)$ ;

Helping to plan what will be taught in school (eta2=.15):

Working as part time paid staff in school (eta2=.15);

Helping to decide how well teachers and principals do their jobs  $(eta^2=.14)$ ;

Working parents do not have time to be involved in school activities (eta $^2=.13$ );

I do not have enough training to help make school decisions (eta $^2$ =11).

Examples of items that varied according to ethnicity are:

## C. Comparing the expanded parent involvement data base with previous surveys of other key stakeholders

The next major task was to prepare appropriate comparison tables from the other stakeholder group previously surveyed. Since the survey instrument was different for each group previously surveyed, tables were prepared using the current Parent Involvement Questionnaire (PIQ) as the guide. Items that asked for the same data from different respondents were used to prepare these tables. The tables followed the sections of the PIQ and were organized into the following categories:

- Parents' Agreement Compared to Educators' Agreement with Statements about Parent Involvement;
- Parents' Interest in Compared to Educators' Perceived Usefulness of Parent Involvement in School Decisions;
- Parents' Interest in Compared to Educators' Perceived Importance of Parent Involvement Roles;
- Parents' Report of Participation in Parent Involvement Activities Compared with Educators' Report of Typical School Parent Involvement Activities;
- Parents' Interest in School Decisions Compared to Existing School Policies that Encourage Parent Involvement in School Decisions.

The next step was to compare the expanded parent data base with other stakeholder groups. Exhibit 19 shows what percentage of each respondent group (parents, teachers, principals, superintendents, school board presidents, state education agency officials, and teacher educators) agreed with statements about parent involvement. The statement from the PIQ is used as the reference guide, although it was not worded exactly the same on the other surveys. Strong levels of agreement across all of the respondent groups is evident for these statements: (1.) Teachers should give me ideas about helping my children with homework; (10.) I should make sure that my children do their homework; (14.) I cooperate with my children's teachers. Low levels of agreement cross all of the respondents groups is evident for two statements: (3.) Teachers have enough to do without also having to work with parents; and (17.) I have little to do with my children's success in the school.

There was disagreement among the respondents on six statements. These statements are: (2.) Teachers should be in charge of getting parents involved in the school; (7.) I usually feel at ease when I visit the school; (9.) I do not have enough training to make school decisions; (13.) I should have the final word in decisions about my children's education; (15.) I should be responsible for getting more involved in my children's school; (2).) I should help evaluate my children's teachers and principals.

Having more multicultural/bilingual education in the school  $(eta^2=.10)$ ;

Teachers should be in charge of getting parents involved in the school (eta2=.08);

Going to "open house" or special programs at school (eta2=.08);

Helping to hire or fire teachers and principals (eta $^2$ =.08). Examples of items that varied according to educational level are:

Working parents do not have time to be involved in school activities (eta $^{2}$ =.14);

I have little to do with my children's success in school  $(eta^2=.10)$ ;

I do not have enough training to help make school decisions (eta $^{2}=.09$ ).

Examples of items that varied according to city size are:

Helping to hire or fire teachers and principals ( $eta^2=.06$ );

Evaluating how well by children are learning (eta $^{2}$ =.06).

Although it is inappropriate to generalize, it appears that parents in this survey differ in their responses to items on the survey according to demographic variables. When one looks at the significant differences and then at the percentage of respondents agreeing from each sub-group, statements such as the following can be made:

Parents in this sample with family income below \$15,000 help to hire or fire teachers and principals significantly more often than parents with income above \$15,000.

Parents in this sample with less than a high school diploma agreed significantly more often with the statement "working parents do not have time to be involved in school activities."

Parents in this sample who are Black or Hispanic expressed interest significantly more often in participating in decisions related to having more multicultural/bilingual education in the school than did Anglo parents.

Because these analyses are preliminary and not the central focus of the study, the above statements are listed as examples of the findings. More in-depth surveys are needed to confirm these findings. What this survey has done is point out the need for more intensive study of the relationship of demographic variables to parent involvement.

<sup>\*</sup> N=Number of respondents.

b Adjusted Frequency = The percent of persons responding favorably to the individual statement with missing data excluded in calculating the percentage.

Parents' interest in school decisions is compared to educators' perceived usefulness of parent involvement in school decisions in Exhibit 20. For two decisions--(1.) parent involvement in the amount of homework assigned and (4.) placing children in special education--there was response similarity in the level of interest expressed by parents and the perceived usefulness of parent involvement by educators. With regard to other decisions, a great deal of response dissimilarity was evident when comparing the level of interest expressed by parents with the perceived level of usefulness expressed by educators for parent involvement. For example, response differences between parents' interest and educators' perceived usefulness were evident in decisions about (3.) selecting school textbooks and other learning materials, (6.) hiring principals and teachers, (7.) evaluating how well principals and teachers do their job, (9.) firing principals and teachers, (13.) setting school rules for grading and passing children, and (14.) helping decide what to teach and when. In all of these decisions, parents expressed more interest in participating in school decisions than educators felt such participation would be useful.

Interestingly, for the decision about parent involvement in evaluating how well their children are learning, 82.1% of the parents were interested, and 87.3% of the superintendents, 83.9% of the school board presidents, and 89.7% state education agency officials concurred that it would be useful. However, only 38.5% of the teachers and 45.2% of the principals thought such involvement by parents would be useful.

Parents' interest in parent involvement roles are compared to educators' perceived importance of these roles in Exhibit 21. There was a match between parents' strong interest in the three traditional roles (school program supporter, home tutor, and audience) and educators' strong perceptions of the importance of those roles. There was disagreement about the role of decision-maker, with 74.6% of the parents expressing interest and only 44.8% of the teachers and 50.1% of the principals thinking the role was important.

Exhibit 22 shows parents' report of participation in parent involvement activities compared with educators' report of how typical the activities were in their schools. Two activities were consistently rated with both a high level of participation by parents and as a highly typical activity by educators. These two activities were: (4,) going to open house or special programs at school and (22,) going to parent/teacher conferences about children's progress.

Three activities were consistently rated low in terms of level of participation by parents and not being a typical involvement activity by educators. These activities were: (14.) helping to plan what will be taught in school; (18.) helping to decide how well teachers and principals do their job; and (21.) helping to hire or fire teachers and principals.

For several activities, there was a lack of concurrence between which activities parents reported participating in and educators

Adjusted Frequency=The percent of persons reporting parent participation in the individual activity with missing data excluded in calculating the percentage.

reported as not typical activities in their schools. Regarding two activities, (5.) going to classes at the school that help parents teach their children and (15.) helping children learn with materials at home, parents reported more participation than educators thought was typical at their schools.

In other instances there were differences among educators about what were typical parent involvement activities. These included the following: (2.) helping children with homework; (3.) visiting the school to see what is happening; (6.) helping with school activities such as coffees, pot-luck suppers, fund-raising, etc.; (17.) working to improve the schools through community groups like neighborhood associations, church organizations, LULAC, NAACP, etc.; (18.) helping decide how well school programs work (like Title I, Follow Through, ESAA, etc.); and (23.) giving ideas to the school board or school administration for making changes.

Exhibit 23 compares parents' interest in school decisions to school/district policies that encourage parent involvement in school decisions. Overall, there are few formal, written policies related to parent involvement in school decisions. Only in the case of placing children in special education do more than eighty percent (80%) of the superintendents report the existence of formal policies. The next highest percentage of reported existence of formal policies by respondents occurs in the area of multicultural/bilingual education in the school.

Informal policies for evaluating how well children are learning reportedly exist, according to more than fifty percent (50%) of respondents. No policies are reported by more than fifty percent (50%) of the respondents for: (1.) selecting school textbooks and other learning materials; (4.) deciding what is most important for the school budget; and (7.) helping the school decide what to teach and how.

### d. Refining the recommendations from the previous surveys

Implications and recommendations from the previous surveys were first re-examined to determine what changes were necessary after combining both parent survey results. Second, the combined results were studied to see what new outcomes have emerged.

Preliminary indications appear to support most of the implications that evolved from previous survey results, but certain subgroups of parents seem to feel more strongly about such aspects of parent involvement as (a) being responsible for getting involved; (b) ensuring children do homework; (c) wanting to help children get the best education; (d) participating more in curriculum and governance decision-making; (e) evaluating school staff; and (f) helping more with school/classroom discipline.

Stronger support also appears to be evident for the previously offered recommendations of (a) clearly defining parent involvement, (b) developing consensual, written parent involvement policies, (c) providing staff and financial resources for parent involvement

Exhibit 23 Parents' Interest in School Decisions Compared to Existing
School Policies that Encourage Parent Involvement in School Decisions

	Decisions (Total N=4994)a	Interest Adjusted Frequency (Percent)b	Formal Policies Adjusted Frequency (Percent)			I A	nformel Po djusted Fr (Percent	equency	Mo Policy Adjusted Frequency (Percent)b

Frequency=The percent of persons responding favorably to the individual decision with missing data excluded in calculating the percentage.

program implementation, (d) including parent involvement as part of teacher training, and (e) expanding the comprehensiveness and diversity of parent involvement programs. These implications and recommendations will be discussed in more detail in section E, Major Conclusions or Recommendations. Recommendations for each stakeholder groups were refined and prepared for dissemination.

#### D2. Conducting Collaborative Efforts

There were three major tasks involved in conducting collaborative efforts with project staff at Appalachian Educational Laboratory (AEL), Center for the Study of Schools (SCOS), and Far West Regional Educational Laboratory (FWL), regarding improvement of schools and education through parent involvement. First, project staff shared information about the survey with colleagues at the other Laboratories and Centers. Second, joint presentations were made at national meetings, and third the possibility of producing a state-of-the-art report was explored.

Information was shared with colleagues at the other Laboratories and Centers. An examination of the CEDaR Directory was made to determine which Laboratories and Centers have projects or programs that might benefit from receiving information about PIEP survey results. A total of 12 recipients were identified. Each of these received a cover letter (see Attachment  $\underline{Y}$ ) and executive summaries of reports from each survey's results. In response, PIEP has received related information in exchange from CSOS and AEL. A list of Labs and Centers to which PIEP has disseminated information thus far can be found in Attachment  $\underline{Y}$ .

Joint presentations with other Laboratories and Centers were made on three occasions during FY85. In March, PIEP's director made a presentation entitled "Parent Involvement: Is There a Consensus Among Parents and Administrators?" at the 1985 Convention of the American Association of School Administrators in Dallas. PIEP staff made a joint presentation at the Annual Meeting of the American Educational Research Association in Chicago in April, entitled "Parent Involvement: From Research to Practice." Other participants were AEL and CSOS.

In November, PIEP staff made a presentation entitled "Meeting Parent Involvement Needs Through Parent Educator Partnership: Is It

Possible?" at a national conference, Methods of Achieving Parent Partnerships, in Indianapolis. Other presenters included the Center for Early Adolescence, AEL, and CSOS.

Project staff have also worked to update PIEP's information/resource collection of parent involvement activities. Information was collected and reviewed for possible inclusion in a state-of-the-art report. Efforts to prepare such a report were deemed infeasible due to PAVAC decisions and the lack of moire information from other Labs and Centers regarding parent involvement. The information included in PIEP's FY84 Annual Report represents the most current state -of-the-art information with regard to parent involvement research.

#### D3. Disseminating project results

The tasks involved in the dissemination of PIEP's results included: preparing three quarterly reports and a final report for the National Institute of Education; preparing written documents for publication in appropriate newsletters, magazines, journals, and books concerning parent involvement in education; making presentations at local, state, and national meetings, and assisting in facilitation of expanded information exchange and network building.

In addition to the reports submitted to NIE, the following written publications have been prepared:
"Parent Involvement in Education." School Social Work Journal, accepted for publication.

"Enhancing Parent Involvement: Guidelines for Access to an Important Resource for School Administrators." <u>Education and Urban Society</u>, accepted for publication.

Developing Teacher/Parent Partnerships: Guidelines and Strategies for Training Teachers in Parent Involvement Skills. Austin, TX: Southwest Educational Development Laboratory, 1985. ED 225 289.

Research-Based Guidelines and Strategies to Train Teachers for Parent Involvement. Paper prepared for 1985 Annual meeting of American Educational Research Association. ED 255 524.

"Parent Involvement and the Elementary School Principal: Some Practical Guidelines." submitted for publication in NAESP's <a href="Streamlined Seminar Series">Streamlined Seminar Series</a>, 1985.

A Survey of Parents in Large Cities. Austin, TX: Southwest Educational Development Laboratory, 1985.

"Parent Involvement: Is There a Consensus Among Parents and Administrators." Paper prepared for 1985 Convention of American Association of School Administrators; Dallas, TX, March 1985.

"Parent Involvement: Is There a Consensus Among Parents and Principals?" Paper prepared for 1985 convention of National Association of Elementary School Principals; Denver, CO, April 1985.

Information has also been disseminated to several individuals and organizations for possible publication in their newsletters, journals, books, etc. Among the recipients of PIEP information are:

Local PTA's in Dallas, Houston, San Antonio and New Orleans

Robert Cole, Assistant Director,

Parent Development/Parent Involvement Programs, Southern University

Gene Ponthieux, Executive Director for Instruction, Louisiana State Department of Education

Dr. Lillian Katz ERIC

Dr. Oliver C. Moles Coordinator FAE/SIG AERA Presentations

Dr. Christianne Dean Family Matters Project Cornell University

Virginia Spatz Institute for Responsive Education "National Conference on Citizen Participation"

Ms. Elaine Stienkemeyer, President
National PTA
PTA Today
Dr. Ellen Lynn, Coordinator
Early Childhood Education Department
High Scope Educational Research Foundation

Dr. Richard Saxe, Professor Department of Education, Administration and Supervision University of Toledo

Mr. Dan Merenda National Coalition for Parent Involvement in Education

Ms. Diane Castle, Head Inservice Programs Kansas State Department of Education

Dr. Jerold Bauch, Professor George Peabody College for Teachers Nashville, TN

Ms. Eilene Raiden U.S. Department of Education Washington, D.C.

Ms. Amy Cloud Health Group 1330 Corporation

Mr. David Seeley, Author Staten Island, NY

Ms. Theodora Ooms, Director Parents As Partners Washington, D.C.

Ms. Izona Warner, Director Parents in Touch Program Indianapolis Public Schools

Mr. Alejandro Perilla National Council de La Raza

Secretary of Education's Office (Loye Miller)

<u>USA Today</u> (Sylvia Lang)

Education Daily (Susan Landers)

Boston Globe (Editorial)

Washington Post

New York Times (Fred Hechinger)

USA Today (Pat Ordovensky)

Mississippi Authority for Education TV (Michael Flanigan)

Institute for Responsive Education

Charles Steward Mott Foundation, Inc. (Pat Edwards)

Citizens Education Center Northwest, Seattle, WA (Lisa Shrestha)

New American School, New York City (Aaron Stern)

Emily Wurtz (NEI)

NEA Communications Division (Sam Pizzigati)

Coordinator of Guidance for Anne Arundel Public Schools (Maryland - Curley Johnson)

Focus on the Family, Pasadena, (California - Diane Keller)

Presentations were made at the following local, state, and national meetings as a means of further sharing the results of the parent involvement research and parent involvement training guidelines derived from them:

"Parent Involvement: Is There a Consensus Among Parents and Administrators." 1985 Convention of American Association of School Administrators, March 8, 1985.

"Parent Involvement: Is There a Consensus Among Parents and Principals?" 1985 Convention of National Association of Elementary School Principals, April 2, 1985.

"Highlights From a Survey of Parents and Educators Concerning Parent Involvement. "1985 National PTA Convention, June 18, 1985.

"Parent Involvement: What The Research Says For Teachers." Annual Inservice Meeting of Texas State Teachers Association, January 18, 1985.

"Improving Parent Involvement in Education and Schools." Winter PTA Meeting of the Thornton Elementary School, Dallas, TX; February 26, 1985.

"Impacting Local Government," Leadership Education Conference: Texas Government; May 5, 1985.

"Parent Involvement: From Research to Practice." Annual Meeting of American Educational Research Association, April 1, 1985, Chicago, IL.

"Strengthening Parent Involvement Through Collaboration between the National Coalition of Title 1/Chapter 1 Parents and the Parent Teacher Association." Twelfth Annual In-Service Training Conference of the NCTICIP, October 10, 1985, Houston, TX.

"Meeting Parent Involvement Needs Through Parent-Educator Partnerships: Is It Possible?" Methods of Achieving Parent Partnerships, November 18, 1985, Indianapolis.

Project staff have collaborated both within and outside the laboratory in order to assist in more information exchange and network building in the area of parent involvement in education. Within SEDL, Project staff have met with the Office of Institutional Communications to consider ways to share information about the Guidelines and Strategies for Training Teachers in Parent-Involvement Skills. A flyer was developed and other methods of information-sharing are being considered such as Project Briefs and press releases.

Project staff have provided information through the Office of Institutional Communications for sharing with other researchers and practitioners of NIE for use in its electronic bulletin board, "NEI News." Also, information has been provided for the Office of Institutional Communications to share with members of the CEDaR network.

Project staff also consulted with staff from the Regional Exchange and Regional Planning and Service Project. The major activity has been to help those staff and their advisory boards become aware of parent involvement activities both at SEDL and in the region. Project staff are exploring the possibility of sharing PIEP information with the Regional Exchange Project's Turnkey Workshop and Audiovisual teleconferencing efforts in the region.

Outside of SEDL, Project staff have helped facilitate information exchange and network building in several ways. Project MAPP (Methods of Achieving Parent Partnerships) in Indianapolis and the Family Matters Project at Cornell University have both utilized consultation from PIEP's director in developing their proposals about parent involvement.

Professor Gerald Brudenal of Florida State University requested PIEP assistance in field-testing a teacher training program utilizing the guidelines and strategies. Professor Jerald Bauch from the Betty Phillips Center for Parenthood Education also requested assistance in presenting approaches to training teachers about parent involvement at the National Association of Educators of Young Children Conference.

Information was mutually shared with Dr. Frank Montalvo of Our Lady of the Lake University and the Hispanic Secondary Education Project for the Ford Foundation. Jose Olive of National Association of Bilingual Educators also utilized PIEP's 1982 parent survey to help frame the questions for a NABE parent survey.

A list of additional activities that involve information exchange and/or expanded networking among individuals, agencies, organizations, and association is as follows:

- sharing survey executive summaries of our parent involvement research with the Mott Foundation in response to interest in parent involvement as an integral part of their community education projects.
- providing information via executive summaries of research reports to the Seattle Citizen Education Center Northwest in response to their request for survey data.
- forwarding executive summaries of our parent involvement research reports and a paper to the Mississippi Authority for Educational Television to assist in development of a series of TV programs regarding parent involvement.
- conducting a live radio talk show program in response to a request by Station KTRH in Houston for more information about the results of our parent involvement studies.
- sending information about parent involvement research outcomes and guidelines and strategies to the New American School in New York based upon a request for research based parent involvement teacher training materials.
- sharing executive summaries of our parent involvement reports to the Guidance Center for Anne Arundel County Public Schools (Maryland) as per their request for parent involvement research information.
- providing executive summaries of and paper about our parent involvement studies in response to request from the Office of Information at NIE.
- forwarding a copy of the parent involvement teacher training guidelines and strategies to reviewers who critiqued these materials in their draft stages (see Attachment Z for list of reviewers).sending executive summaries for parent involvement

- studies to Director of Planning, Round Rock, (Texas) Independent School District as followup to a meeting in which collaborative efforts with the Working Parents Project were discussed.
- sharing information with the National Council de La Raza in response to a request for information about parent involvement from the perspective of minority parents.
- sharing copies of the guides and strategies with college of education deans in region who accepted invitations to attend Nebraska College of Education Deans' Consortium Conference.
- providing summaries of expanded parent involvement survey results with participating PTAs in four large cities.

### E. <u>Major Conclusions and Recommendations</u>

Project staff have made a concerted effort to translate the research findings from the review and analyses of the expanded data base to practice-based recommendations for the key stakeholders in parent involvements. Although the recommendations are similar for each group because of the underlying general assumptions, Project staff felt that the recommendations would be more useful if targeted to specific stakeholders.

The assumptions underlying all of the recommendations are:

- 1. Parents are important participants in the education of children and youth. Parent involvement in a child's education is a major factor for improving school effectiveness, the quality of education, and a child's academic success. Family participation relates to the eventual success of learners because it helps reinforce school learning, allows learners to relate home/community experiences to school activities, and enables education to tap a rich potential of resources and experience bases for its learning program. Parents should be partners in the educational process.
- 2. The attitudes of teachers and educators are critical to the development of effective parent involvement programs and activities. It is not enough to have knowledge and skills about parent involvement; understanding is also important. Teacher training about parent involvement for both preservice and inservice educators is essential.
- 3. Parent involvement is a developmental process that must evolve over time. The traditional activities of audience or school program supporter are at the beginning of the continuum and shared decision-making is at the other end of the continuum. Effective parent involvement must include a range of opportunities on this continuum.
- 4. Certain sub-groups of parents seem to feel more strongly about specific aspects of parent involvement, and thus it is critical that educators ask parents how they want to be involved in their children's education. Educators need to expand the comprehensiveness and diversity of parent involvement programs.
- 5. In each building, school, and district educators, parents, and community members need to meet to clearly define parent involvement and to develop concensual, written parent involvement policies.
- 6. School districts need to provide staff and financial resources for parent involvement program implementation.

## Recommendations for Administrators for Enhancing Parent Involvement in Education

A review and analysis of results from the surveys has led us to

offer the following recommendations for administrators as a means of enhancing fuller parent participation in the education of their children at home and at school:

- Administrators need to look beyond traditional ways of working with parents. Superintendents and school board presidents need to be aware that parents are interested in both the traditional and the shared decisionmaking forms of parent involvement.
- Administrators need to collaborate with parents to develop a clear statement about the goals of parent involvement in their school. The statement needs to be based on the premise that parents are equally as important to children's academic success as educators.
- School district policies encouraging parent involvement need to be put in writing and formalized. Responses from the superintendents' and school board presidents' surveys indicate that the existence of formal, written policies encouraging parent involvement is related to increased parent activities at a variety of levels in schools.
- o In addition to providing induction, preservice, and inservice training for teachers, school administrators also should participate in parent involvement training activities. If administrators are not aware of the benefits of parent involvement and/or are not skilled in working with parents, they may set norms that discourage teachers from using the involvement skills and krowledge they have acquired. SEDL (1985) has developed a set of guidelines and strategies that may be useful in training teachers and administrators to develop partnerships with parents.
- Administrators need to ask parents how they want to be involved with their children's education. Survey results indicate that parents have a range of interests and may be more sophisticated than educators perceive them to be.
- Based on the interests of parents, administrators need to make certain that a variety of opportunities are available for parent involvement in the schools. Administrators should be sensitive to parents' skill levels, estimates of available time, work schedules, and individual preferences as they plan with parents to develop the most appropriate parent involvement activities.
- Administrators will need to help ensure that parents are more fully involved at all levels of the educational system. To facilitate this, administrators should make certain that parents are provided more information, more opportunities to share insights or concerns, and more training for partnership roles with school staff in the education of children.
- In establishing the framework for school district parent involvement programs, administrators will need to view the various types of parent involvement as a developmental sequence

from both schools/districts' and parents' point of view. Therefore, administrators should be sensitive to the fact that increasing parent involvement in the role of audience requires comparatively less effort and skill on the part of both educators and parents than increasing the involvement of parents regarding such roles as home tutors, decisionmakers, advocates, or co-learners.

Administrators need to make available the appropriate kinds of resources for parent involvement efforts. In particular, there should be staff, space, and monetary resources identified and allocated for the implementation of effective parent involvement efforts. The provision of these resources will help emphasize the importance of parent involvement in education and demonstrate a commitment to its success.

# Recommendations for Teacher Educators about Training Teachers for Parent Involvement

A review and analysis of results from the surveys has led us to offer the following recommendations for teacher educators as a means of enhancing fuller parent participation in the education of their children at home and at school:

- Parent involvement at both the preservice and inservice elementary teacher training level should be a developmental sequence that progresses from learning about the more traditional types of parent involvement where parents are asked to cooperate with school staff, to the types of parent involvement in which school staff provide assistance to parents, and then toward the types where parents and school staff work together essentially as partners in education.
- Preservice elementary teacher education as well as inservice teacher staff development must, as a priority, focus on providing participants with an everview of, or background about, the parent involvement movement as well as providing them with knowledge, understanding, and skills regarding major aspects of parent involvement in education (e.g. the personal, practical, and conceptual frameworks as developed by SEDL (1985)).
- Teacher educators must provide parent involvement training experiences, for elementary preservice and inservice/teachers that stress parent involvement as an integral part of their preparation, rather than an attachment to it. As such, teachers will need to learn how to enhance teaching and learning success; how to develop better, more of a partnership with parents; how to help develop broader community support for the schools; and how to make cooperation between home and school more synergistic.
- The parent-involvement teacher training sequence needs to include specific knowledge bases related to the various kinds and levels of parent involvement. For example: teachers should be taught the differences between teaching children in the

- classroom and teaching or working with their adult parents to help them become more involved as home tutors.
- After preservice and inservice teachers examine and identify their attitudes toward parent involvement, broaden their perspectives concerning the value/impact of parent involvement, and acquire the relevant knowledge and understandings regarding the main kinds of parent involvement, they should be provided practical opportunities or experiences to develop and sharpen skills in working with parents.
- Inservice parent-involvement teacher training--in order to more effectively enhance teachers' knowledge, understandings, skills, attitudes, and motivations for working more collegially with parents--will need to consist of a series of sequenced workshops rather than a one-day, one-time workshop effort.
- Teacher educators must include principals and other administrators in parent involvement training, as they often set the rules and norms in the schools. If they are not aware of the benefits of parent involvement, or not skilled in working with parents, they may set norms for teachers that discourage them from using the skills or knowledge acquired regarding parent involvement.
- To help school districts develop better relations with parents and work with them as partners in education, teacher educators should emphasize with leaders the importance of spelling out the commitment to parent involvement through formal, written policies. Responses from our superintendents' and school board presidents' surveys indicate that existence of formal written policies encouraging parent involvement is directly related to increased levels of a variety of parent involvement activities in schools.
- Teacher educators should help teachers view various types of parent involvement as a developmental sequence, from the teachers' and the parents' point of view. Increasing parent involvement in the role of audience requires comparatively less effort and skill on the part of both teachers and parents than would parent involvement as home tutors. Therefore, interests, skill levels, and estimates of available time, especially on the part of parents, must be considered when deciding which types of parent involvement are to be the focus of program efforts.
- Teacher educators need to advocate that school district, building, and/or classroom parent-involvement efforts establish program activities based on the premise that parents are as equally important to children's academic success as educators. This will necessitate working with parents to help increase their participation at all levels of the educational process.
- Teacher educators need to stress that parents need more involvement in education so that they can (a) strengthen the capacity of their families to establish appropriate learning

environments, (b) provide meaningful home learning experiences and (c) support/reinforce school learning activities.

Teacher training should include an emphasis on providing parents with more educational information, more opportunities to share their insights/concerns, and more training, as needed, for the roles with which they can, or wish to be involved in education. This can serve as a means of strengthening parents' ability and partnership status in the education of their children.

## Recommendations for Parents for Enhancing Parent Involvement in Education

The results from our surveys suggest that parents can do several things to become more involved in their children's education. These included the following:

- Ask teachers for ideas about things to help children learn at home and/or do homework.
- 2. Ask principal to provide involvement training for parents who want it.
- Tell your children how important it is that teachers and you help with their education.
- 4. Ask teachers to tell children how important parents are in their education.
- Tell principals and teachers what your skills and interests are regarding parent involvement.
- 6. Tell principals and teachers what your skills and interests are regarding parent involvement.
- Tell principals and teachers how much interest you have in making school decisions and which ones you would like to help make.
- 8. Ask principals and teachers to discuss with you their feelings and ideas about parent involvement.
- 9. Try to be involved in different school activities and not the same ones always.
- 10. Choose the parent involvement role or roles that are best for you.
- 11. Tell principals and teachers that you want to be a partner with them in improving schools and education for your community as well as the city.
- 12. Discuss ideas with other parents and citizens in the community about getting more of them involved to improve schools and education.

## Recommendations for Teachers for Enhancing Parent Involvement in Education

A review and analysis of results from the surveys has led us to

offer the following recommendations for teachers as a means of enhancing full parent participation in the education of their children at home and at school:

- Teachers need to look beyond traditional ways of working with parents. More awareness is needed on the part of teachers regarding parents' interest in sharing both the traditional and decision-making forms of parent involvement.
- o In helping to establish the framework for parent involvement programs, teachers will need to view the various types of parent involvement as a developmental sequence from both teachers' and parents' point of view. Therefore, teachers should know and understand that increasing parent involvement in certain involvement roles of will require comparatively less effort and skill on the part of both teachers and parents than increasing the involvement of parents regarding those roles with which they have had little or no opportunities for participation.
- Teachers need to work collaboratively with parents and principals to develop a clear statement about the goals of parent involvement in their school. The statement needs to indicate that parents are equally as important to children's academic success educators.
- Teachers also need to find out how they want to be involved with their children's education both at home and at school. Survey results indicate that parents have a wide range of interests and may be able to be more involved than educators think they can.
- Based on the interests of parents, teachers need to help make certain that a variety of opportunities are available for parent involvement in classrooms and schools. Teachers should know what the skill levels, time availability, work schedules, and individual involvement preferences or interest of parents are as they plan, with parents, to develop effective parent involvement activities or programs.
- Teachers can help ensure that parents are more fully involved at all levels of the educational system by providing them more information, giving them opportunities to share concerns/insights, and advocating more parent training for partnership roles with school staff in the education of children.
- Teachers can enhance parent involvement by participating in preservice and inservice parent involvement preparation activities that help develop better partnerships with parents.

- Teachers can help provide induction orientation in the area of parent involvement for new teachers. By modeling appropriate and effective ways of working with parents, teachers can help in developing and implementing effective parent involvement efforts.
- Teachers can advocate the need for formal, written school policies encouraging parent involvement. These policies can help teachers to explain the school's approach to parent involvement and to develop, then implement within the framework of the school and district.
- Teachers need to provide parents with ideas about things to help children learn at home and/or do homework. Teachers should also give parents suggestions about extending school learning activities in the home.
- Teachers should help children understand how important it is for both parents and teachers to be involved with their education. This will help children see parents and teachers as partners in their schooling.
- Teachers should work with principals and parents to better understand and then help overcome the barriers to open communications between parents and teachers or other school staff.

## Recommendations for Principals for Enhancing Parent Involvement in Education

A review and analysis of results from the surveys has led us to offer the following recommendations for principals as a means of enhancing full parent participation in the education of their children at home and at school:

- Principals must envision ways of working with parents that go beyond those of the traditional order. In doing so, principals must be aware that parents are interested in all forms and all levels of parent involvement regarding schools.
- or In establishing an atmosphere for broader parent involvement programs, principals must envision parent involvement as a developmental process on the part of teachers and parents. Therefore, principals should know and understand some parents will start with the more traditional kinds of parent involvement and grow or move into increasingly more sophisticated participation. Their skills and interest increase as they experience success and satisfaction from this level of involvement. Other parents can begin with higher order types of involvement and increase this to broader participation at the school, district or state level.
- Principals need to collaborate with parents and teachers in developing a clear statement about the goals of parent involvement in their school. The statement should clearly

- indicate that parents are equally as important to children's academic or school success as educators.
- Principals should advocate for and help develop formal, written school district policies encouraging parent involvement. School superintendents, Central Office staff, school board and state education agencies need such input to help ensure that such policies will facilitate increased parent involvement.
- In addition to providing parent involvement and inservice training opportunities for teachers, principals also should participate in such activities. Principals need to be aware of the benefits of parent involvement and be skilled in working with parents so they do not set norms or create environments that prevent teachers from involving parents and discourages parents from becoming more involved.
- Principals should ask parents how they want to be involved in their children's education. Survey results indicate that parents have a wider range of interests than principals deem useful or perceive them to have. Principals need to capitalize on these "unknown" parent interests as a way of improving their involvement in schools.
- Based on parents' interests, principals need to make a variety of home and school parent involvement opportunities available. This requires principals to be sensitive to the skill levels, time of availability, work schedules, and individual interests/preferences as they plan and develop with parents more meaningful parent involvement activities.
- Principals will need to help ensure that parents are more fully involved at all levels of the educational system. To facilitate this, principals should make certain that parents are provided more information, more opportunities to share insights or concerns, and more training for partnership roles with school staff in the education of children.
- Principals need to make available the appropriate kinds of resources for parent involvement efforts. In particular, there should be staff, space, and monetary resources identified and allocated for the implementation of effective parent involvement efforts. The provision of these resources will help emphasize the importance of parent involvement in education and demonstrate a commitment to its success.
- Principals can encourage teachers to provide parents with ideas for helping children learn at home and/or do homework. Principals can help ensure that teachers give parents suggestions for home learning activities.
- Principals need to stress with children how important it is for both their parents and teachers help with education. Principals need to make it clear that they want and encourage parents to visit the school and become part of children's schooling.

Principals should work closely with school staff and parents to reduce the barriers to more open communications and expand the opportunities for more partnership activities that benefit children's learning.

#### F. <u>Significance of Project Accomplishments</u>

The expanded date base of information from parents in large cities is significant for several reasons. First, the additional data has provided local school educators with more complete information about the attitudes and current practices related to the involvement of parents from rural, suburban and urban areas in our region. Local school educators in the region will find these results useful in developing or improving their parent involvement programs. These educators can also use the information as a guide to planning specific types of parent involvement activities that are directed toward the specific interests, skills and time/work schedules of parents. Teacher educators will find the information helpful in preparing prospective as well as inservice teachers to work more effectively in the area of parent involvement.

The expanded data base has made it easier to make more valid conclusions about the barriers to parent involvement in various geographic locations within the region. The attitudes of specific parent subgroups toward opinions about, and participation in, parent involvement activities. The expanded data base has been particularly successful in providing a description of parent involvement attitudes and activities among low socioeconomic status families and minority families. Information from these families is often not obtained, yet it is crucial to the development of more effective parent involvement programs.

The expanded data base has also facilitated the process of making more accurate comparisons among parents and educators. This updated information enhances the framework used in developing the guidelines and strategies for training teachers about parent involvement.

The collaboration with other research institutions has enhanced the PIEP's opportunities to meet and compare notes with research colleagues. The exchange of ideas has produced a better understanding of the current work being done in parent involvement and has led to a greater appreciation of the work of other institutions. The exchange of research reports has also made the work of all the Labs and Centers more widely available in all parts of the country.

The dissemination efforts of the project nave attempted to be relevant to the day-to-day activities in schools. The PIEP has disseminated not only specific research findings and analyses of the data base, but PIEP has also disseminated implications of those findings and analyses in the form of recommendations for educators and parents. Specific recommendations were targeted to each stakeholder group (teacher educators, administrators, parents, teachers, and principals). The information disseminated has been an up-to-date view of parent involvement in SEDL's region.

The significance of all of the project's activities is most evident in the expansion of parent involvement in education. The kind of interface and collaboration that the recommendations specify

for improving children's educational experience have helped increase the potential and opportunities for developing more effective family, school, and community partnerships to improve schools and education.

#### G. Deliverables

- Three quarterly progress reports submitted February 28, 1985, May 31, 1985, and August 31, 1985.
- One annual report of project work submitted November 30, 1985 (10 copies).
- 3. An executive summary of the <u>Parent Involvement in Education</u>
  <u>Annual Report</u> for fiscal year 1985.

PARENT INVOLVEMENT QUESTIONNAIRE

Winter, 1985

#### Dear Parent:

We are working through the state and local PTAs in six states to gather information from parents about parent involvement. So far, we have received the same kind of information from teacher educators, teachers, principals, and school administrators in these states. Now it is your chance.

We appreciate the support and cooperation from the PTAs and you in helping us get this information. Your answers will be kept confidential.

Directions for filling out the questionnaire are at the beginning of each section in this instrument. Remember, please answer based upon your own feelings and experiences. Thank you very much for helping us, and we appreciate your taking time to do so.

Sincerely,

David L. Williams, Jr. (Dr.) Director Division of Family, School, and Community Studies

### PARENT INVOLVEMENT IN EDUCATION

## PART I - GENERAL IDEAS ABOUT PARENT INVOLVEMENT

There are many ideas about parents being involved in their children's education. Some of these ideas are listed below.

How much do you agree or disagree with each statement which follows?

Circle the number of your answer.

	Statements	Strongly Disagree	<u>Disagree</u>	Agree	Strongly Agree
1.	Teachers should give me ideas about helping my children with homework	. 1	2	3	4
2.	Teachers should be in charge of getting parents involved in the school	. 1	2	3	4
3.	Teachers have enough to do without also having to work with parents	. 1	2	3	4
4.	Teachers need to be trained for working with parents	. 1	2	3	4
5.	Principals should be in charge of getting parents involved in the school	. 1	2	3	4
6.	I want teachers to send more information home about classroom learning activities	. 1	2	3	4
7.	I usually feel at ease when I visit the school	. 1	2	3	4
8.	I have a hard time teaching some skills to my children like reading, math, and writing.	. 1	2	3	4
9.	I do not have enough training to help make school decisions		2	3	4
10.	I should make sure that my children do their homework	1	2	3	4

LABORATORY AND CENTER DISSEMINATION LETTER AND LIST OF RECIPIENTS

March 19, 1985

Dear Colléague:

The Division of Family, School and Community Studies at the Southwest Educational Development Laboratory in Austin is comprised of three major projects: These are in the (1) Parent Involvement in Education Project, (2) Ways to Improve Schools and Education Project, and (3) Working Parents Project.

Although each project has a distinct focus, their overall goal is to help improve the quality of education and the effectiveness of elementary and secondary schools. Each project has been engaged in long term R&D efforts to generate information that can be used to accomplish this goal.

As part of the division's collaborative activities during FY85, we are sharing information about our project outcomes with persons in other Labs and Centers working on projects with emphases similar or related to ours. Enclosed please find executive summaries of work from one or more of our projects which we feel are related to those with which you are involved. Hopefully these will be useful in your research, development and/or dissemination efforts.

. We request that you send us information about any of your projects which could be of interest or assistance to our efforts here at SEDL. We will be glad to share this information with professional and lay educators through our dissemination activities in the SEDL region.

Look forward to hearing from you in the near future. Best wishes for continued success in your endeavors.

Sincerely,

David L. Williams, Jr. (Dr.)
Director
Division of Family, School and
Community Studies
